The Post Office Savings Bank has decided to lower its deposit rate as from October 1st to 4.2 per cent. from 4.8 per cent., at which it stood since April, 1915. The other savings banks have agreed to follow its example: the Class A Tokyo joint-stock banks announced a reduction in the rate of interest on overdrafts as from next week from 7.3 per cent. to 6.5 per cent. Since the end of last month, however, there have appeared signs of monetary stringency with day-to-day loans quoted as high as 4½ per cent. The contraction of loanable funds is reflected in the bankers' deposits in the Bank of Japan, which are now down to 80 million yen, as compared with 158 millions at the opening of the year. Despite the lack of effective demand for credit, the effect of the drain of gold has begun to tell upon the monetary situation.

A further shrinkage in the value of foreign trade took place in August. Both imports and exports were the lowest for any August since the war. In comparison with the corresponding month of last year, imports fell by 61.3 million yen, or 39 per cent., and exports decreased by 90.6 millions, of 41.6 per cent. Imports of cotton fell by 24.8 millions, machinery by 7.3 millions, and iron and steel by 5 millions, while exports of raw silk declined by 47.7 millions and cotton manufactures by 19.9 millions. In addition to the fall in prices, however, the fact must be borne in mind that August, 1929, happened to be an exceptionally good month.

The slump in wholesale prices continued last month, though with much less severity. The wholesale index number of the Bank of Japan for August registered a further drop of 0.6 per cent. on the month, following the fall of 2.5 per cent. in July, and is now 19.7 per cent. lower than a year ago. The rises in rice, wheat, sugar, cotton, and cotton yarn did much to retard the pace of the downward movement.

Letters to the Editor.

INDUSTRY AND THE CITY.

TO THE EDITOR OF THE ECONOMIST.

SIR.—All who are watching the trend of events in Lancashire will have read with deep interest and grave concern the letter of Mr. S. S. Hammersley, which appeared in the issue of the *Economist* of September 27 last. The significance of the experiment that the Lancashire Cotton Corporation is conducting, of rationalising a depressed industry, is so great for industry in general that Mr. Hammersley's criticisms require either more explicit statement or withdrawal.

In his letter Mr. Hammersley, with a full knowledge of the conditions obtaining in the industry, stresses a point which, if accurate, requires explanation. After stating that the Lancashire Cotton Corporation is "an aggregation of the financial lame ducks of two years ago," and that "There are many more financial lame ducks now," he says that "Lancashire is experiencing the peculiar phenomenon of efficient mills being closed down while inefficient mills are being started up." Is there not a simple explanation of this?

Those relatively inefficient mills which are being started up are no longer being worked under the old, inefficient conditions as separate units, because they now form part of one large undertaking for which an economic programme is being worked out, so that the least efficient mills are remaining closed and the less efficient mills are being so developed as to become efficient. Moreover, it is not the case, as is implied, that the concerns nearest insolvency financially are the least efficient technically. On the contrary, in the recapitalisation boom of 1919-1920 the best price from the public, and, therefore, the largest promoting profit, could be obtained for the best-equipped mills; these, therefore, had most attraction for the company promoters of that period, and it was the newest and best mills that were involved in the most serious financial embarrassment. As Mr. Hammersley truly says, "For a correct understanding of the problem, it is important to appreciate the historic perspective." In fact, published information shows that the Lancashire Cotton Corporation has rejected one in three of the mills offered to it, and the average age of the mills it has accepted is less than the average for the American cotton-spinning industry as a whole.

Mr. Hammersley proceeds to base on his statement the deduction that "the mesh through which companies which the Bankers' Industrial Development Company is prepared to help must pass is the mesh of insolvency."

This deduction is contrary to the repeated announcement that the object of the Bankers' Industrial Development Company is to receive and consider schemes submitted by the basic industries of this country for the purpose of their rationalisation, and that in the case of schemes which may be approved, arrangements will be made for the provision in one way or another, and through existing agencies, of such moneys as may seem to be essential. And the case of the Lancashire Cotton Corporation is consistent with this. It is the first, and at present the only active attempt to help the industry, and it has received from the City the support it required. The insolvency of a large part of the American cotton-spinning industry was a condition with which the City was confronted when it was invited to take an interest in the industry's fortunes, and any scheme for assisting the industry had to take account of that condition. What the Lancashire Cotton Corporation has done has been to substitute an orderly liquidation of an insolvent position for a sporadic and chaotic series of bankruptcies, followed by the export of good machinery, bought at scrap prices, to our competitors. It has written down assets to their present-day value and assigned different categories of scrip in proportion to the previous claims of creditors and proprietors. No one under the scheme has got anything "for nothing"; no one has "made a good thing of it"; no one has been enabled to take out in cash capital that is essential to the industry if it is to recover.

Mr. Hammersley produces no evidence whatever to support his assertion that, through the association of the Government with the Bankers' Industrial Development Company, "all normal avenues of finance have been closed to the cotton trade." The prosperous companies, solvent and enjoying the best management, to which Mr. Hammersley refers, have open to them all the avenues of finance that would be open to them if the Bankers' Industrial Development Company did not exist, and they have open to them the Bankers' Industrial Development Company in addition. The latter cannot coerce them into rationalisation schemes.

The difficulty which has really troubled Mr. Hammersley and others is that which is so fully dealt with in the articles published in *The Manchester Guardian* of August 23rd and *The Times* of August 25th, and answered in *The Times* of August 29th and the *Economist* of August 30th, namely, the disinclination of the Bankers' Industrial Development Company to raise money for distribution amongst existing creditors and shareholders of mill companies. The fullest sympathy may be meted out to all those persons whose interests, whether as creditors or shareholders, are already so severely tarnished, but the payment of money to these persons, in order that they may withdraw it from the industry, can serve no useful purpose towards the re-establishment of the industry. Moreover, the demand for such payments might well be practically inexhaustible.

It is conceded by Mr. Hammersley that "on the face of it the attitude of the Bankers' Industrial Development Company seems so wise and reasonable that many people, whose knowledge of the intricate financial structure of the cotton industry is not great, have doubtless come to the conclusion that this quarrel is only another example of Lancashire's obstinate mindedness." But he appears to claim that some "economic righteousness" demands that an unlimited supply of money should be produced for meeting direct payments in cash to those individuals upon whom the burden of the depression in the industry has so cruelly fallen. Such economic righteousness would seem to require the attention of some charitable institution, whose aim is to benefit the needy.

It is perhaps unnecessary to pursue in much detail the suggestion made by Mr. Hammersley that the Bank of England, through the Bankers' Industrial Development Company or the Lancashire Cotton Corporation, is "only prepared to rationalise that part of the industry which it can get for nothing." No attempt has yet been put forward by the Bank to acquire the property of any cotton concern, either directly or indirectly. If assistance be given for enabling money to be borrowed, it is not unreasonable that a demand should be put forward on behalf of the lenders for some measure of control over the expenditure of the borrowed money and conduct of the business during the period of the loan. This demand has been made, and, in the case of the Lancashire Cotton Corporation, has been conceded; but it is surely misleading to confuse such a control with ownership of the business over which the control is exercised.

Finally, Mr. Hammersley speaks of "the difference of opinion between the City and Lancashire"; would it not be more accurate to speak of "the difference of opinion between the City and Mr. Hammersley"? The question is not unimportant, since the cotton industry is not yet rationalised.—I am, etc., London, October 3rd.

H. C.

THE TIN POSITION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I call your attention to an error which your correspondent made on this subject in your issue of October 4th?

The writer says, speaking of the voluntary restriction which the tin producers have put into force, that "Bolivia and the Dutch Colonies are definitely non-participants." This, as his figures show, is not the case; and, further, it was announced in the Press at the end of July that the Tin Producers' Association had received assurances of curtailment from the principal Bolivian producers and the Dutch. Still further, it is well known that the biggest Bolivian producer is the President of the Tin Producers' Association.

There is one other point in your correspondent's article which is misleading, namely, the measure of curtailment by the producers in the Federated Malay States. Surely the question to ask in wanting to know what curtailment of output has done in 1930 is:—

(a) What would they have produced in the first eight months of 1930 without any curtailment?

(b) What did they produce?

The answer can be based on the knowledge of new plants and dredges ready for operation during that eight months' period, or more simply by taking the first month of the year. This is a conservative measure, because with new dredges the January output could have been increased.

The figure for January was 6,128 tons, which in eight months would have been 49,024 tons of metal. As the output was only 43,377 tons, the curtailment amounted to 5,647 tons, or 11 per cent. Considering this 6,128 tons includes Chinese producers, it indicates clearly that the participating members are carrying out their full measure of curtailment. Another point to bear in mind is that curtailment on an international basis did not start until June.—Yours, etc.,

London, October 8, 1930.

A. B. C.

[Our correspondent writes:—"The President of the Tin Producers' Association is Señor Don Simon Patiño, head of Patiño Mines and Enterprises Consolidated. Although Don Simon holds this office, his firm has not, so far as I am aware, joined the Association. Reduction of output in Bolivia has been much more severe than was contemplated or recommended by the Association; in view of known conditions in Bolivia, this can only be attributed to financial stringency.

According to public announcements, Dutch co-operation has always been conditional upon the support accorded to the T.P.A. schemes; no promise has gone beyond that of non-expansion. An indefinite promise, subject to the same condition, was made when the production-holiday was first mooted; no announcement has yet been made regarding action proposed or taken under this promise. It is, therefore, legitimate to say that the Dutch promises have been fully kept, and would not be infringed by an expansion of the recent rate of output.

The remaining point raised in "A. B. C.'s" letter is fully covered by the article in question. Malayan output certainly promised new records this year, and this inopportune expansion has been averted by restriction. This merely serves to emphasise the excessive capacity of the industry. Despite a 20 per cent. cut in output, stocks have been accumulating; the inference is, in the words of the article, that "when capacity is excessive, the task of the restrictionists is impossible." The point is that at least 14,000 tons of the world's potential output will not be needed, even when 'normal' consumption reaches the abnormally high figures of 1929. In these circumstances, a reduction in capacity would seem to be the best solution of the problem; restriction will then be concerned with meeting the temporary stringency due to reduced consumption."—Ed., *Econ.*]

Books and Publications.

RUSSIA THROUGH THE EYES OF A HISTORIAN.*

VERY many books have been written about Soviet Russia by men of many different nationalities and opinions, after visits of a few weeks or months. Mr Feiler's book, the fruit of a "three months' journey of investigation, lasting from March to June, 1929," is one of the few which are free from partisanship and prejudice. It is the carefully-written work of an understanding economist, an accurate observer and an impartial historian.

* "The Experiment of Bolshevism." By Arthur Feiler. Allan and Unwin. 10s. 6d. pp. 253.

Mr Feiler seems to have approached Russian history since 1917, as a historical episode in the comparative study of revolutions, rather than as a battlefield of present-day politics. It is this impartiality that makes this a book worthy of serious study; and it will doubtless be valuable as secondary historical material, as a fairly detailed study of the industry, agriculture, government and social life of Russia in the summer of 1929.

There are many obvious advantages in writing history at first hand, but the still more obvious disadvantage is that even as the word is written, the facts are changed. This book was written in September, 1929. Mr Feiler saw the economic tendencies with a great deal of acumen, but already these tendencies have changed to such a degree that the conclusions he draws from them have lost some of their value. For instance, he cites Dnieprostroy as an example of Russian Americanisation. He is impressed by the works, but fears that there might be too much electric current generated for the work available. "The opportunities for its employment must, first of all, be created." Now, of course, the opposite is true: it is already clear that the current will be quite inadequate to the needs; and new power stations are already being projected to meet the growing demand.

Writing of the collective farms, hardly a year from the inception of the movement, Mr Feiler is most pessimistic as to its value and permanency; and does not seem to think that the economic advantages outweigh what he considers the undue victimisation of the peasants as a class.

In general, Mr Feiler deplores the abandonment of the New Economic Policy as a departure in the wrong direction, but even though he is describing an attempt at the formation of a society naturally distasteful and antipathetic to him as an individualist Liberal, he remains an impartial historian, true to the statement in his first chapter: "If you recognise the Revolution as a historical fact, then you must regard it as a whole, you cannot have one part of it, and not the others, you cannot choose what you will have. The result is still in the lap of the gods. But one thing remains: men hold their heads an inch higher—there is more pride among men." Though, on the whole, it cannot be taken as an up-to-date study of the ever-changing Russian conditions, Mr Feiler's book still remains valuable as an analysis of the cross-section of Russian life in the summer of 1929.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The National Debt. By E. L. Hargreaves. (London) Edward Arnold and Co., 41 and 43, Maddox Street. 15s. net.

A scholarly account of the British National Debt which constitutes a valuable contribution to financial history.

The International Bank. By Harry D. Gideonse. (New Brunswick) Bureau of Economic and Business Research, Rutgers University.

Contains a short history of the Reparations problem and of the movement towards international co-operation in the use of gold, followed by a brief study of the B.I.S.

The Money Machine. By Francis Whitmore. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street. 5s. net.

A useful descriptive account of the working of the London money market.

The Bankers' Place in Commerce. By W. F. Spalding. (London) Sir Isaac Pitman, Parker Street, Kingsway.

Reprint of a series of articles.

Present-Day Banking in India. By B. Ramachandra Rau. Third Edition. (Calcutta) University of Calcutta. A very comprehensive textbook.

An Introduction to the Money and Banking System of the United States. By John Percival Day. (London) Macmillan and Co., Ltd., St. Martin's Street. 4s. 6d. net.

A simple and clear description of the working of the Federal Reserve system.

The Age of the Chartist. By J. L. Hammond and Barbara Hammond. (London) Longmans, Green and Co., Ltd., 39, Paternoster Row. 12s. 6d. net.

Definitely not a history of the Chartist movement, but rather background for such a history, constituting a continuation of the author's earlier works "The Town Labourer" and "The Skilled Labourer."

The Life of Robert Owen. By G. D. H. Cole. (London) Macmillan and Co., Ltd., St. Martin's Street. 12s. 6d. net.

A second edition with an opening chapter in which the author has modified his estimate of Owen's position in the development of Socialist thought.

Land Settlement in Palestine. By A. Granovsky. (London) Victor Gollancz, Ltd.

A discussion of the most urgent questions of Jewish land policy.

Commerce Year Book, 1930. Vol. I. United States. (Washington) Superintendent of Documents. \$1 per copy.

An invaluable year book based on official statistics covering every branch of the economic activities of the United States.

Trends in the Foreign Trade of the United States. (New York) National Industrial Conference Board Inc., 247, Park Avenue. \$3.50.

An extremely elaborate analysis of the United States foreign trade statistics. The periods covered are, for the most part, 1912-14, 1925-27 and 1929.

Bulletin of the National Association of Wool Manufacturers. Nos. 1, Extra 1, 2, 3. (Boston) National Association of Wool Manufacturers, 80, Federal Street. 50 cents per copy.

Contains valuable statistics of the woollen industry of the United States. "Extra No. 1" is an annual wool review containing an unusually comprehensive collection of world statistics.

The Bankers' Magazine, October, 1930. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes a survey, illustrated with charts, of the silver situation.

Foreign Affairs, October, 1930. (New York) 45, East 65th Street. \$1.25.

An exceptionally interesting number, including articles on "The New American Tariff: Europe's Answer," by Percy W. Bidwell, and "The Economic Organisation of Peace," by Sir Arthur Salter.

The Stock Exchange.

THE FUTURE OF THE RATE OF INTEREST.

THE September issue of the Svenska Handelsbanken "Index," contained an article by Mr J. M. Keynes, entitled "The Future of the Rate of Interest," which has attracted some attention on the Stock Exchange. In it Mr Keynes predicted that the prospective course of the rate of interest would be steadily downwards, and the prices of first-class bonds steadily upwards, and that when belief in this tendency seized hold of the minds of the financial world—"perhaps in the comparatively near future"—things would move quickly. In Mr Keynes' own words: "Once the idea gets abroad that we are starting on a journey towards pre-war rates of interest there will be a tremendous hurrying and scurrying not to miss the bus."

On Mr Keynes' general proposition with regard to the trend of interest rates we are in agreement, and have from time to time put forward grounds for holding that the trend must be downward. But this view has also been fairly generally accepted for some time past in the City without any remarkable results being observed upon the price of long-term gilt-edged securities. Mr Keynes argues that the downward trend has latterly been arrested by special causes, and that now that these causes have ceased to be effective the downward movement will rapidly come about. The events of recent years, however, suggest that this thesis is an over-simplification of a complex situation. Before setting out a few of the relevant facts it is necessary to give a little more of Mr Keynes' argument.

In brief, Mr Keynes argues that long-term interest rates (comparing securities of approximately equal risk) are nearly 50 per cent. higher than they were twenty years ago. He declares that sundry special causes after the war (for example the repair of war damage and the making good of arrears in housing and public utility services) operated to maintain the actual rate of interest at an exceptionally high level, but that this phase was coming to an end in 1924-25. Two sets of events, however—the return to the Gold Standard and the settlement of Reparations and war debts—intervened at this stage to maintain market rates of interest above the level which productive enterprise could really afford, and to bring about in certain countries some measure of credit restriction. New borrowers also came on the market, who were prepared to pay rates not based on any calculation of the probable yield of new investment—"distress borrowers," such as Governments anxious to meet urgent liabilities; "banking borrowers," including State and central banking authorities seeking gold and foreign balances to protect newly restored currencies; and "artificial borrowers," such as speculators participating in the bull movement in equities in New York. By the middle of 1929 in most countries and in the autumn of 1929 in the

United States the genuine trade borrowers, on this argument, were already being squeezed out of the capital market. Mr Keynes therefore arrives at the remarkable conclusion that "the slump is due to a retardation of new real investment so that it is falling seriously behind the level of current saving—the natural and inevitable result of maintaining, year after year, a rate of interest which would have been considered high at almost any time during the nineteenth or early twentieth centuries, and is surely preposterously high in an environment so well equipped as is the contemporary world with fixed investments of every description."

Before accepting the argument, investors may pause to ask whether its premises are in accordance with known facts. The table below gives the average yields on a number of representative Government stocks, and industrial fixed-interest securities in 1910, 1914 and each year from 1925, and the yields at present market prices.

It will be seen from this table that the yields to-day are in no case 50 per cent. above those of 1910, much less above those of 1914. On the British Government stocks the present-day yields are about 48 per cent. above those of 1910 and only 27 per cent. above those of 1914. In the case of the long-dated Swedish Loan the yields to-day are even lower than they were in 1910 and 1914. In the case of the industrial fixed-interest securities the yields to-day vary from 6.9 per cent. to 42 per cent. above those of 1914. It will further be observed that, omitting 1926, which was the year of the coal strike, the decline in yields since 1925 has been slow but steady up to and including 1928, but that in 1929 the yields were forced up by the demand of what Mr Keynes calls the artificial borrowers, engaged in stock market speculation. Since the credit crisis in 1929, interest rates on Government bonds have declined as steeply as it would be reasonable to expect, but on fixed-interest securities with an industrial risk there has been no decline at all.

Mr Keynes is therefore not wholly accurate in the assumption on which his argument is based. If a further test is applied of the average yields obtained on issues of industrial and commercial debentures in the London capital market, his assumption that interest rates to-day are 50 per cent. higher than in pre-war days will be found untrue if we compare to-day's with those of 1913. An analysis of the yields obtained on debentures offered by industrial and commercial companies (excluding railways), based on our annual computations of new issues in the London market, shows that the average figures have been as follows:—1913, 5.5 per cent.; 1925, 6.43 per cent.; 1926, 6.48 per cent.; 1927, 6.21 per cent.; 1928, 5.75 per cent.; 1929, 6.1 per cent.; 1930 (nine months),

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT
October 21. October 23.

STOCK EXCHANGE conditions, while possibly falling short of a state of complete depression (with certain exceptions), were more trying than for many weeks past. The storm-centre was the market for Brazilian securities, which at times exhibited semi-panic symptoms, while German issues were another source of weakness in the bond market. British Government stocks, by contrast, were a satisfactory feature, their reaction after the exuberance which followed the Government's decision to redeem 4 per cent. War Loan being regarded as a healthy symptom—taken in conjunction with the excellent response to the week's new offerings of trustee securities. Industrials, however, made heavy weather after showing gratifying stability early in the week. London's estimates of the immediate future of New York prices continued to be framed on conservative lines. Finally, weakness in commodity prices, especially of base metals, again affected the psychology of the speculative markets. Altogether, the Stock Exchange had little on which to congratulate itself.

Gilt-edged stocks threatened at one time to develop mild "boom" characteristics, but profit-taking speedily ensued, affecting War Loan (after the latter had touched 105) and Four per Cent. Consols. The result of the Treasury Bond tenders was regarded as highly satisfactory to the Government. A certain amount of money was withdrawn from the market for new capital issue applications. India loans gained ground, despite a slight falling-away in mid-week. The names of the British representatives at the Round Table Conference inspired confidence. A smaller business was done in Dominion issues, but the success of the Ayr Loan stimulated interest in Home Corporation stocks.

The decline in Brazilian bonds is dealt with in an "Investment Note" on page 675. The absence of adequate news from Brazil was unfortunate, inducing numerous holders to put an unfavourable construction on events. Other South American stocks were sympathetically lower, though Argentines, for the most part, were an exception. Among Europeans, German bonds were again on offer for political reasons, numerous sales coming through Amsterdam.

For once, the week's batch of Home Railway traffic figures provided a favourable surprise, the decline in gross receipts being appreciably less than in recent weeks, except on the London, Midland and Scottish. Investment inquiry, however, again centred on the prior charge rather than the junior stocks. Undergrounds remained steady, the rapid over-subscription of the London Electric Railway and Central London Railway debenture issues affording fresh evidence of the contemporary favour with which the group is regarded. Among Foreign Railways, Brazilians were inevitably affected by the crisis, San Paulos falling as much as 13 points in a single day. Argentine railway stocks declined, though to no more than a normal extent, following further unfavourable traffic statements.

The Industrial markets opened with an uncertain air, and, after holding their ground fairly creditably for the first three days, suffered a measurable recession on Thursday. The week's dividend announcements were not, on the whole, unsatisfactory. The British Celanese figures (discussed on page 675) went beyond, and the Gramophone dividend was not much below market expectation. The announcement, however, of a cut in cigarette prices by Godfrey Philips—in opposition to the policy steadfastly maintained by the giants of the trade for years past—caused selling of a wide range of shares. Breweries were heavy on talk of new taxation. International counters showed uncertainty, merging into depression, Brazilian Traction being affected by political events, and other stocks by anxiety regarding the possi-

(Continued on page 674.)

6.2 per cent. These figures show a much smaller increase over the pre-war rate than Mr Keynes' 50 per cent., though the various factors which he mentions may recently have retarded their tendency to decline.

Our figures, again, do not bear out Mr Keynes' argument that trade has suffered from unduly high interest rates. Indeed, if genuine trade borrowers were already being squeezed out to some extent by the middle of 1929 in this country and by the autumn of 1929 in the United States, we should expect to have seen a decline in the amount of new capital raised for business purposes in the London and New York capital markets. What are the facts? The new capital raised in the London and New York markets by "trade" borrowers in 1913 and recent years is shown below:—

NEW CAPITAL ISSUES IN LONDON FOR TRADE PURPOSES.

(000's omitted.)

NEW CAPITAL ISSUES IN NEW YORK FOR TRADE PURPOSES.

(000,000's omitted.)

	1925.	1928.	1929.	1930. (8 mos.)
Bonds, notes	\$ 2,889	\$ 3,009	\$ 2,551	\$ 2,820
Stocks (including pref.)	1,211	3,071	6,098	1,370
Total	4,100	6,080	8,649	4,190

It will be seen that there is no evidence of trade going short of new money since 1925. The boom in common stocks in the New York Stock Exchange merely switched trade borrowers from bonds to issues of common stock or preference. Hence the "artificial borrowing" to which Mr Keynes refers did not force industry to go short of capital, but merely to raise it in a different form. Indeed, no one can seriously question that up to the time of the credit crisis in 1929 the boom in common stocks acted as a direct stimulant to the raising of large amounts of new industrial capital by the issue of "equity" shares.

We agree with Mr Keynes that the prospective course of interest rates is downward, and we have no doubt that investors for the most part endorse this view. But conditions in the gilt-edged market are to-day not identical with those of pre-war days. The supply of British Government stocks in 1910 was insufficient to meet the demands of trustees and other "safety-first" investors. To-day there is an enormous accumulation of war loans, while extensive borrowing by such Dominions as Australia, under the stimulus of the Colonial Stock Act, has further increased the supply of gilt-edged stocks available for trustees. As regards interest rates in other countries, bond prices are influenced to a much greater extent to-day by the political factor than they were in 1910, when world wars had not been contemplated. Civil wars in China, unrest in India, instability in Balkan and Central European States, demands for the revision of the Versailles Treaty and the Young Plan in Germany, not to mention minor revolutions in South America, are some of the factors which go to prevent a general rise in foreign Government bonds. In fact, it is probable that for some years there will be a considerable difference in interest rates ruling in different parts of the world, and that the 'bus on which Mr Keynes invites us to travel with such assurance may have not quite so high a horse-power, or so smooth a highway on which to run, as Mr Keynes would have us believe.

(Continued from page 671.)

bility of further selling from Wall Street. Electrical shares were steady on a small turnover, but motor shares were lower. Little interest was taken in textiles, the market being unaffected by the payment of a maiden dividend on Canadian Celanese preferred. Hudson's Bays continued their persistently downward course, shareholders having little expectation of good news in the pending report of their committee of examination. Insurance shares were firm on recent satisfactory announcements, and a moderate selective demand was in evidence for bank shares.

Rubber shares being no longer affected by minor variations in the price of the commodity, the stronger tone of Mincing Lane had little effect on an idle market. Tea shares were in some demand—in small amounts—over the week-end, but an easier tendency supervened. Dealings in oil shares were on a small scale, leaving the leading issues lower on balance.

Mining shares attracted much less than their normal share of attention. The Cape did little buying, and Paris, on the whole, was a seller. Among Kaffirs, "Finance" issues again came on offer. Northern Rhodesians fluctuated in characteristic fashion, with no weight of public interest behind them, quotations finishing lower on the week. The new break in tin produced no spectacular weakness in the shares, where the open position had long been reduced to very small dimensions. Tintos were easier on the further fall in copper.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Despite the authorities' threat of disciplinary measures against bear raiders, further selling depressed prices. The decline, however, was less extensive and more orderly than that of last week, and was accompanied by no signs of panic. Sentiment, none the less, is pessimistic. Some of the business forecasting houses are still advising the

purchase of sound securities on the ground that the next major change in general trade will be for the better, but they admit that this may be delayed, while the declines in steel operations and in car loadings are among numerous indications that the seasonal revival from the midsummer low point has been very modest. Confidence is wanting in the stability of commodity prices, especially of grain and non-ferrous metals. The largest declines in Stock Exchange quotations this week have been suffered by high-grade stocks like U.S. Steel, General Motors, and Standard Oil of New Jersey, which have hitherto stood up well against selling. Some large investors, indeed, are for the time being switching over to more speculative stocks, on the ground that these are more thoroughly deflated. Money on call has remained at 2 per cent. The foreign bond market has been unfavourably affected by the developments in Brazil.

* 2-hour session.

BERLIN.

Berlin Stock Exchange prices underwent, in the second half of September, their heaviest fall since last autumn. After mild fluctuations in the first half of this year July brought marked declines; subsequently a quiet tendency developed, which lasted until the elections of September 14th. The result of the elections came as a complete surprise to the Stock Exchange at

least, and gave rise to heavy selling by small investors. The selling pressure was considerably strengthened when the reaction of other countries to the election results became known. The fall in the Young Loan on the New York, London and Amsterdam Exchanges gave the keynote for developments on the Berlin Stock Exchange. The serious depreciation of German credit abroad, as expressed in the decline in the quotations of German foreign loans, greatly influenced opinion in Germany as to the duration of the present depression. The second great downward impulse came from the flight of capital, which has been intensified in recent weeks. The Reichsbank's losses of gold and bills, which have amounted to nearly Rm. 500 millions since the elections, are attributed to the export of capital rather than to the calling-in of foreign credits. Among the shares most severely hit by the last decline were bank and shipping shares. The shares of the big German banks are now quoted 40-50 per cent. below their levels at the beginning of this year. Among industrials, Salzdetturth Potash fell in a short time from 330 to 280, and Schultheiss Beer from 250 to 190. Coal, iron and steel securities also shared in the decline. Under heavy foreign sales, bond prices fell on the average 10 per cent. The average yield in first-class German loans has risen in the last few weeks to 8½ or 9 per cent.

Official "Cash" Quotations in all cases.

INVESTMENT NOTES.

The Outlook for Gilt-Edged.—It cannot be said that the market was wildly excited by the issue by tender of the 4 per cent. Treasury Bonds, 1934-36, this week. The terms, on the basis of the minimum tender price of 100½, less commission, were moderately attractive—the flat yield being £3 19s. 9d. and the redemption yields £3 17s. 9d. and £3 18s. 6d. per cent., allowing for redemption in 1934 and 1936 respectively. Nevertheless, a good response was elicited. Applications totalled £116,000,000, and £105,000,000 was allotted. Tenders at 100½ per cent. were allotted 56 per cent., and above in full. The Treasury has thus obtained more than sufficient for the redemption of the £75 millions of 4 per cent. tax-compounded War loan next January and for the £11 millions of 4½ per cent. Treasury bonds due in the following month. The anticipation that a large proportion of the £75 millions of the 4 per cent. tax-compounded War loan will be reinvested in long-dated stocks has already led to professional or speculative buying of the long-dated British Government securities. At the moment of writing, prices have not held their best, but the ground which has been gained by the Gilt-edged market since the end of December—when the 5 per cent. Conversion loan 1944-64 was issued at a period of deep depression

in Government circles—may be seen in the following table:—

	End Nov., 1929.			This Week.				
	Price.	Yield %*			Price.	Yield %*		
		£	s.	d.		£	s.	d.
5% War Loan, 1929-47	97½	5	2	2	104½	4	16	9

* Yields shown with redemption where necessary.

Some conservative brokers are asking what will be the attitude of investors next January, when the national accounts for the nine months are published. The shadow of the impending Budget will begin to fall on the market probably just at the time when the money from the 4 per cent. tax-compounded War loan falls due for reinvestment.

Brazilian Stocks and the Revolt.—The present revolt in Brazil is the most formidable movement since Don Pedro, Emperor of Brazil, was deposed in 1889. According to some reports, nine of the 20 States are involved in the revolt, which began in the State of Rio Grande do Sul. The direct cause appears to be the allegation of Dr. Getulio Vargas, who was defeated at the recent presidential election by Dr. Julio Prestes, that improper practices were employed. Dr. Vargas is stated to be leading an army on Rio de Janeiro and Sao Paulo. The Federal Government has requisitioned all food supplies and shipping, at the same time closing all business houses for fifteen days, which is to be regarded as a general "holiday." Owing to the "holiday," there has been no foreign exchange quotation on Rio this week, and Brazilian stocks have shown considerable weakness on the London Stock Exchange, where jobbers have endeavoured to protect themselves by the precautionary marking down of prices and the quotation of wide margins. The largest fall has been suffered by the 4 per Cents. of 1911, which have a sinking fund operating every six months. Other heavy declines were experienced by the 1888 4½ per cents. and the 6½ per cents. San Paulo loans all showed approximately the same falling off. The extent of the various declines is shown in the following table:—

	Oct. 3.	Oct. 6.	Oct. 8.	Falls since Oct. 3.	Fall %
Brazil 4½%, 1888	68	66	57	11	16.2
Brazil 5%, 1895	61	60	53½	7½	12.3
Brazil 4% Rescn.	58½	55	48½	10	17.1
Brazil 5%, 1903	81½	79½	72½	9½	11.3
Brazil 5%, 1908	98½	97	90	8½	8.6
Brazil 4%, 1910	47	45½	41	6	12.8
Brazil 4%, 1911	75½	74	57½	18	23.8
Brazil 5%, 1913	58½	55½	50	8½	14.9

Rio State 5½%	77½	76½	72½	5	6.4
San Paulo 7½%	82½	79	71½	11½	13.6
San Paulo 7%	91½	89½	83½	8½	8.9
San Paulo 6%	62	60	55	7	11.3
Leopoldina R'way ...	29½	29	25	4½	15.2
San Paulo Railway ...	163	161	142	21	12.8
Brazil Traction.....	35½	32½	29½	6½	17.6

Other South American stocks have been indirectly affected, Chile Sixes and Peru Sixes, for instance, falling sharply. Nearer home, German issues have again been offered owing to distrust of the National Socialist attitude towards the Peace Settlements. Altogether the foreign bond market has been making heavy weather.

British Celanese.—The report of British Celanese, for the sixteen months to June 30th last, shows an increase in trading profits, on a twelve months' basis, of 52 per cent. This, on the face of it, is a creditable achievement, but the detailed accounts continue to offer the investor many tantalising problems. The year's earnings approximately cover the dividend requirements of

the two classes of preference shares, but interest centres rather on the numerous charges and directorial allocations which reduce a total trading profit of £2,634,845 to a distributable surplus of no more than £514,535. These items are not shown on exactly the same basis as last year, but the following table affords as close a comparison as possible:—

	Year to Feb. 29, 1928.	Year to Feb. 28, 1929.	16 Mths. to June 30, 1930.	Same on 12 Months' basis.
Trading profit (incl. transfer fees and interest)	1,680,331	1,301,518	2,634,845	1,976,134

General expenses and non-trading charges have increased to a greater extent than is explained by the amount declared to have been set aside for writing-down values, though the directors may claim that the rise is no more than proportionate to the increase in trading profits. A new item makes its appearance under the heading "Research and Advertising Expenditure, 1928-30, proportion written-off: £161,454." Was any provision made in previous reports for this expenditure, avowedly incurred over the last three years, and if so at what rate? The balance sheet shows that a further £145,822 is outstanding under this heading. Depreciation, again, has been charged at a rate equivalent to the reduced figure of 1928-29. Although the directors decided, at the beginning of 1930, to curtail intended capital expenditure, as part of a policy of conserving the company's cash resources, expenditure on capital account during the sixteen months' period nevertheless amounted to the considerable sum of £896,982. The directors rightly take credit for the fact that the net liquid assets at June 30th last amounted to £2,691,010, but of this figure £1,765,226 is represented by stock-in-trade, and only £548,933 by cash, though the latter had been raised to £800,000 at the beginning of this month. The company has no investments outside the artificial silk business. Intangible assets such as goodwill, commutation of royalties and new issue expenses still stand at a total of £3,153,544. The investor, in short, cannot claim to understand all the ramifications of British Celanese finances from the figures presented in the last report. That the latest results are an improvement on their predecessors is, however, undoubted, and as they have been earned on a yarn production representing less than 40 per cent. of the company's available capacity, they are the more noteworthy. The report claims, indeed, that the output of the last sixteen months could be increased fourfold, if a relatively small additional capital expenditure were incurred, and the requisite demand were forthcoming. As the company, however, under these conditions would have a capacity equal to the maximum artificial silk consumption for the whole of Great Britain in the recent past, demand must obviously expand very considerably before such a plant-capacity can be fully employed, and the ordinary shareholders can receive the handsome dividends which for so many years have been waiting just round the corner. The first and second preference shares have risen to 12s. 6d. and 8s. 9d. respectively on the report, while the ordinary stand at 9s., against a maximum of 136s. 3d. in 1928 and a low point of 6s. 10½d. this year.

Pease and Partners.—The directors of Pease and Partners, the colliery owners and iron and steel founders, of Darlington, have for some time been considering the question of financial reorganisation. The last occasion on which any profits were earned on the ordinary share capital (which totals £3,000,000), after deduction of all charges, was in 1923-24. Since that year the company has accumulated a total debit balance to profit and loss of £1,155,782, and although the results for the twelve months to March 31, 1930, were the least unfavourable for some years past, the directors have decided that nothing is to be gained by further postponement of reorganisation. Accordingly, a strong independent Advisory Committee has been appointed to report on the necessary measures. It includes Mr. George Balfour (chairman of Balfour, Beatty and Company), Mr. John Ferguson (who is a member of the famous civil engineering firm of Sir Alexander Gibb and Partners and is associated with the Armstrong Whitworth interests), and Sir Gilbert Garnsey (of Price, Waterhouse and Company), whose experience of the salvage of depressed British concerns grows more and more extensive. The committee's report can scarcely fail to involve heavy sacrifices for shareholders. The company's fixed plant and assets, at March 31st last, totalled £4,115,424, and its interest in subsidiary companies £1,082,844, out of a balance-sheet total of £8,065,631. For the last four years an item, "Maintenance of Idle Establishments," has regularly appeared in the profit and loss account. The co-operation of Barclays Bank will be called for in the reconstruction. Six months ago the company was indebted to this bank to a total of £1,414,805 (of which £73,600 only was secured by an issue of debenture stock). Pending the receipt of the committee's report, business is being carried on as usual.

Rover Results.—The report of the Rover Company for the eleven months ended June 30, 1930, is disappointing. The results for 1928-29 suggested that this old-established motor concern, after its reconstruction in January, 1929, was making rapid progress under the managing directorship of Colonel Frank Searle. The period of extensive annual losses was brought to an end, and the company earned over 35 per cent. on its reduced capital, though only 5 per cent. was paid in dividends. This year's results suggest, not that the company has substantially lost ground, but that the prevailing economic depression has definitely checked its progress for the time being. Profits are sharply reduced and the dividend, prudently, is passed:—

	Year to Aug. 31, 1928.	Year to Aug. 31, 1929.	11 Months to July 31, 1930.
Total paid-up capital	1,050,000	420,000	420,000
Trading profits and interest	*	219,450	146,584
Depreciation and other charges	*	99,206	112,553
Net profit	501,799	120,244	34,031
Earned—per cent.	...	35.7	10.5
Dividend paid—Per cent. ...	...	5.0	Nil
Amount	...	16,800	Nil
Increase in carry-forward ...	†	102,393	34,031
* Not stated. † £630,000 debit written off by reduction of £1 shares to 8s.			

The reorganisation and development policy, initiated by the present board, has been continued, the company's programme for next year having been favourably received by the trade, where it is generally admitted that the new Rover models have a distinction which was not enjoyed by those turned out before the reconstruction. The balance sheet is reasonably liquid, and the company has avoided the tendency to pile up a large stock-in-trade. The 8s. ordinary shares, which reached 11s. last year, were dealt in this week at 5s. 6d.

Gillette and Auto-Strop.—The announcement that a merger has been concluded in the United States between the Gillette and Auto-Strop companies brings to a precipitate end the legal difficulties in which the Gillette Company had found itself involved. Early last spring the Gillette Company launched a gigantic advertising campaign to introduce its new razor and blade. On April 30th, Auto-Strop formally filed a suit against Gillette in the Federal Court at Wilmington alleging infringement of patents. A month later the Gillette Company filed its answer, in which it claimed that Mr. Henry J. Gaisman, chairman of the Auto-Strop Company and inventor of the Auto-Strop and Probak safety razors, to whom a re-issue patent on the Probak blade was granted last January, was not the original and first inventor. Auto-Strop's chances of winning the suit were considered good. The Probak blade is covered by three patents; whereas the new Gillette has not been and is not likely to be patented. A merger offered a convenient solution of the difficulty. Though Auto-Strop's assets are much smaller than those of Gillette it is not expected that when the terms of the merger are announced it will be found to be the underdog in a combination which will be dominant in its field. The razor industry all over the world is one in which competition is unusually severe the rise of Auto-Strop to its present commanding position is a monument to well-planned progress and clear-sighted merchandising. Gillette—the "original" safety-razor company, with assets at the end of last year of \$57,115,796—sustained a fall in net income during the first six months of this year (as compared with the same period of 1929) from \$8,407,518 to \$4,806,370. During the same period Auto-Strop increased its profit from \$370,655 to \$722,808. The earnings of the American Safety Razor Company, which until now has ranked second in the industry, rose slightly. Auto-Strop's expansion is the more significant, since it has been achieved solely in the safety-razor and blade field, while both Gillette and American Safety Razor sell a variety of other products. Auto-Strop is said to be producing almost 3,000,000 razor blades a day at present. Last spring the announcement that the Gillette Company would start manufacture of its new blade in Germany roused the entire German razor industry to combined action, and the Gemeinschaft Solinger Rasierklengen-Interessenten was formed at Solingen, the seat of the German razor-blade industry, chiefly in order to protest against the granting of patents to the Gillette company for the manufacture of a blade already in production in Solingen.

A New Telephone Combine.—It is announced that a new company, known as the General Telephone and Electric Corporation, is to be formed in New York. It will have an authorised capital of 5,000,000 shares of common stock. Its object is to develop the business of the Associated Telephone and Telegraph Company in countries outside the United States. The new company will be organised by Messrs. Theodore Gary and Co., and influential British and Canadian telephone companies, together with the Transamerica Corporation. No public issue of shares is at present contemplated, as the Transamerica Companies and the Gary group will take up \$20,000,000 of the stock and British and other interests \$6,000,000. The chairman will be Mr. H. L. Gary, and the president, Mr. A. F. Adams, both of the Gary group, while the British interests will be watched by Sir Alexander Roger. It is proposed to develop telephone systems in various countries where there is a great demand for improvement and extension. The Associated Telephone and Telegraph Company owns, or has holdings in, properties aggregating £15,000,000 in U.S.A., Canada, India, Australia, Belgium and many other countries. At the present time, negotiations are proceeding for the establishment of manufacturing facilities in France. Another company with which the new concern will be associated is the Automatic Telephone Manufacturing Company, Ltd., of Liverpool, which has a contract for the construction and installation of the automatic equipment for Greater London. Nearly 75 per cent. of the world's

automatic telephones are equipped with the Strowger Automatic Dial System, which is owned by the Associated Telephone group. Mr. Elisha Walker, one of the directors of the new enterprise, has stated that whereas in the United States the ratio of population to telephones was 5 to 1, it was approximately 100 to 1 in other countries. It is to exploit the possibilities of this field that the General Telephone and Electric Corporation has been formed.

The Fall in Metals.—The past week has witnessed the descent of the leading non-ferrous base metals to lower levels than witnessed for many a year, writes our mining correspondent. Copper has been cheaper than at any time since 1896, zinc since 1895, tin since 1907, and lead since 1911. The minimum quotations of the periods named and the closing prices at the first session on the London Metal Exchange on Thursday are contrasted below:—

	Lowest.	Oct. 2, 1930.
	£ s. d.	£ s. d.
Copper (1896)	40 10 0	43 5 7½
Tin (1907)	115 0 0	115 15 0
Lead (1911)	12 15 0	15 5 0
Zinc (1895)	13 10 0	13 18 9

The highest points of the recent past were attained by copper in 1929 (£97 11s. 3d.), the others in 1920—tin, £419 10s.; lead, £53 7s. 6d.; zinc, £62 10s. The quotations reached in the post-war boom, and in the industrial activity of 1926-27, stimulated production both in the shape of the exploitation of new properties and of the erection of additional plant at old ones. Moreover, great progress was made in metallurgy—that is, in the extraction of the various metals from their ores. In Australia, especially, great endeavours were made along these lines for the purpose of neutralising the ever-increasing cost of labour. The result has expressed itself in the provision of supplies substantially in excess of consumption. For a long time, in the case of copper, the position was masked by the operations of Copper Exporters Inc., which manipulated the price of the metal to an inflated level and maintained it by the purchase of surplus offerings. After a while this process was found to be too expensive, and prices had to come down. The current level of 10 cents per lb. is one offering only a moderate margin of profit to low-cost producers and entails loss to others. This is emphasised by the fact that—for example—from the seven dollars per annum rate paid in respect of 1929 and the first quarter of this year the Anaconda cut its rate to 87½ cents actual in June and to 62½ cents in September. In declaring an interim dividend of 10s. per share, as against 25s. a year ago, the directors of the Rio Tinto explained that during the first six months there had been a shrinkage of 34 per cent. in the company's gross profits and that a decline of even greater extent was likely to be shown during the second six months. Rio Tinto, of course, turns out pyrites as well as copper. In the case of tin, on the initiative of the Tin Producers' Association output has been restricted to a considerable extent; but this has so far failed to arrest the downward trend of values. As regards zinc, a European cartel was in operation for some years, while a selling agreement was

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper, Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name

Address

arrived at in London with respect to lead. But the tide could not be stemmed. The production of these two metals is now so unprofitable that the North Broken Hill company has closed down one section of its property, and unless the trade unions agree to a reduction in wages, three other concerns will cease work. In Mexico, the San Francisco Mines temporarily discontinued the production of zinc concentrates. Matters will doubtless right themselves in time; but the improvement seems more likely to arise from the elimination of the weak companies than from any early expansion in demand.

New Modderfontein.—In last year's notes, writes our mining correspondent, emphasis was laid upon the point that the main development of the mine was approaching completion. At that time the price of the shares stood at £4 17s. 6d. It is now £3 7s. 6d.—a shrinkage of 30s., less dividends, totalling 18s. 9d. gross. In his report to June 30th, the consulting engineer announces that the development of the main reef leader is now practically completed. Of the total ore reserves (including shaft pillars), amounting to 80,757,000 tons, value 8.3 dwts., this ore body accounts for 5,815,100 tons, value 9.3 dwts.; the remainder comprises the south reef and the various "leaders." The latter have been extensively exposed, and appear likely to provide a large tonnage of payable ore, the values in the western section being better than in the eastern. On the basis of a net extraction value of 34s., with costs at 16s. per ton, the latest ore reserve estimate may be calculated to represent a "profit value" of about £2 per share. The payable reserves actually available are equivalent to little more than three years' supply for the mill, but further considerable quantities of lower-grade material will doubtless be opened up. We contrast the results of the past three years:—

	1927-28.	1928-29.	1929-30.
Ore crushed..... tons	1,626,000	1,713,000	1,811,000
Revenue..... per ton	47/0	44/1	41/0
Costs..... per ton	19/5	17/9	16/10
Profit..... per ton	27/7	26/4	24/2
Total working profit.....£	2,241,760	2,252,430	2,138,180
Dividends.....£	1,890,000	1,960,000	1,925,000
Rate..... per cent.	135	140	137½
Carried forward.....£	317,370	302,060	251,980
Ore reserves..... tons	9,157,000	7,857,600	7,431,900
Value per ton..... dwt.	8.7	8.9	8.6

The additions made to the reduction plant are evidenced in the renewed advance in tonnage crushed: but this factor, with the saving in costs, proved insufficient to counterbalance the decline in grade. Although the dividend in respect of the second half of 1929-30 was reduced to 6s. 9d. per share, the year's disbursements entailed a substantial draft upon the carry-forward. Towards an estimated liability of £841,580 in respect of miners' phthisis, a total of £84,530 has now been provided. At the date of the balance sheet the surplus cash assets stood at £252,000.

Consolidated Main Reef.—The most interesting feature of last year's operations was the modification of the area held. On the one hand, 272 mining claims adjoining the south-eastern boundary were acquired from the Crown Mines for £39,900. This area, it is stated, can be exploited from one of the company's existing shafts. On the other hand, the undermining rights of 248 claims north of the outcrop (valueless from a mining standpoint) were abandoned in order to make the ground available for sale freehold "as opportunity offers." Thanks to some additions to the cyanide plant, an improved extraction was obtained; but the decrease in values shown by the 1929 ore reserve estimate resulted in a decline of 1s. 5d. to 30s. 10d. on the revenue per ton milled. Hence a further shrinkage in the profits, which, for the past three years, have been, respectively: £248,740, £215,930 and £178,800, the dividend rate

being 11½ per cent., 10 per cent. and 8½ per cent. After a period of disappointing values, the principal ore body last year showed improvement. Upon two subsidiary deposits, the South and Bird reef, a considerable tonnage of lower-grade material has been opened up. The net result is that the ore reserve tonnage is 146,600 up at 2,132,300, and the average 0.3 dwt. down at 7.2 dwts. In the current year the effects of the decline in grade should be largely counterbalanced by economies in costs due to the utilisation of electrical power. Moreover, heavy capital expenditure is now approaching completion. In 1929-30, £55,000 was disbursed upon plant and equipment.

CAPITAL ISSUES.

New capital issues to the public this week have reached a cash total of £5,940,150, bringing the figure for the year to £201,383,055, as compared with £199,787,795 for the corresponding period of 1929. The borrowers have been of influential status. The *Ayr County Council's* offer (giving a flat yield of £4 19s. per cent.) was a trustee issue by a borrower whose past finance has been conservative. Coming hard upon the improvement in the Gilt-edged market following the announcement of the redemption of 4 per cent. War Loan, the issue achieved immediate success, the lists being closed owing to over-subscription by 9 o'clock on Monday morning. Other trustee issues were also made by the *London Electric Railway* and the *Central London Railway*, both offering a shade over 5 per cent. The credit of the Underground group to-day stands high, and as the stocks were a first charge on the respective undertakings, and had the benefit of a Treasury guarantee and of the Common Fund of the group, their relatively high return proved attractive, both issues being over-subscribed in a quarter of an hour. The only industrial issue was that of *J. Darnell and Son*, a wholesale boot and shoe business which has grown from small beginnings in 1854. Profits were given for three years only, but the directors estimated that the 1930 results would be equivalent to 20 per cent. on the share capital, thus offering an earnings yield of 12½ per cent. at the issue price. This estimate is naturally dependent on the maintenance of profits, through the trade depression, at not less than their present level. The shares are a reasonable industrial equity, but prevailing conditions are not favourable to this type of issue.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to October 4, 1930, £195,055,440.

Four per Cent. Treasury Bonds, 1934-36.—In response to the offer by tender applications amounted to £116,310,000. Of these applications tenders amounting to £105,000,000 were accepted. Tenders at the minimum price of 100½ per cent. received about 56.8 per cent. of their requirements, while higher tenders were allotted in full. The average price was £100 11s. 6.89d. per cent.

Ayr County Council.—Issue of £1,250,000 in 5 per cent. stock at £101 per cent. Instalments payable £5 per cent. on application, £21 per cent. on October 23, 1930, £30 per cent. on December 4, 1930, and £45 per cent. on January 22, 1931. The stock will be redeemed on March 15, 1957, unless previously cancelled by purchase in the open market, or by agreement with stockholders, but may be redeemed on March 15, 1947, by giving three months' notice by post. This loan is to be applied to the repayment of existing loans of £498,982 and for authorised capital expenditure on water-works, sewage works, schools, county buildings, housing and roads. After deducting sinking and reserve funds, the debt due by the Council on May 15th last was £1,495,725. Interest will be payable on March 15th and September 15th of each year. The stock gives a flat yield of £4 19s. 1d. per cent.

London Electric Railway Company.—Offer of £3,450,000 5 per cent. redeemable debenture stock, 1985-95, at £99 10s. per cent. This stock is to rank *pari passu* with the existing 4 per cent. debenture stock, and will be a first charge on the undertaking of the company. Interest will be payable on January 1st and July 1st of each year. The company may redeem on January 1, 1985, or any half-year interest date thereafter. There already exists £5,000,000 in 5 per cent. redeemable debenture stocks, making a total £8,450,000. The total receipts of the common fund companies aggregated £16,177,595, and after providing for expenditure, interest, preference dividend and reserve allocations, there was a balance of £1,150,426 constituting the common fund. The object is to provide funds for extending present lines and improving present stations. Flat yield, £5 0s. 6d.

Central London Railway Company.—Offer of £850,000 5 per cent. redeemable debenture stock, 1985-95, at £99 10s. This stock is to rank *pari passu* with existing debenture stocks of the company. Interest payable on January 1st and July 1st of each year. The company may redeem, at par, on January 1, 1985, or on any half-yearly interest date thereafter. The loan is to provide funds for extending and improving present traffic facilities. Flat yield, £5 0s. 6d.

[Other Stock Exchange information, including the latest dividend announcements, summary of balance sheets, profit and loss figures and shorter notices will be found on page 686 under the heading "Company News."]

Total.....	2,070,045	Total.....	251,663
Net arrivals, £1,818,382.			

Messrs Samuel Montagu and Company write on October 8, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £155,618,965 on the 1st instant (as compared with £156,304,901 on the previous Wednesday), and represents an increase of £9,658,881 since January 1st last. In the open market yesterday bar gold from South Africa to the value of £958,000 was available. France was again the principal buyer, securing £890,000 at the fixed price of 84s. 11½d. per fine ounce. The home trade took £23,000, the Continental trade £30,000, and India £15,000. Movements of gold at the Bank of England during the week show a net influx of £1,856,051. Receipts totalled £2,070,045, of which £2,070,000 was in sovereigns from Australia, and withdrawals consisted of £189,994 in bar gold and £24,000 in sovereigns.

SILVER.

Prices recovered slightly from the level touched at the end of last week, sellers being disinclined to follow the market down. The Shanghai exchange at first showed a tendency to improve, and in response to demand from China quotations rose to 16½d., the quotation of the 3rd instant. Although subject to slight fluctuations, prices subsequently tended to ease, China selling and the Continent and America providing supplies too, although the two latter quarters also made purchases during the week. The Indian bazaars have given support, buying silver for shipment as well as to cover bear sales. At the moment the market shows no decided tendency.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 29th ultimo to mid-day on the 6th instant:—

IMPORTS.	£	EXPORTS.	£
Mexico.....	107,065	France.....	9,225
Canada.....	13,992	Other countries.....	8,150
Other countries.....	311		
	121,368		17,375

NOTICES.

The directors of Westminster Bank, Ltd., announce the appointment of Mr. Charles Lidbury as chief general manager of the bank in succession to Mr. John Rae. Mr. Walter Bentley, an assistant general manager of the bank, has been appointed a joint general manager.

Barclays Bank Ltd. announce the opening of a new sub-branch at Shipdham, Norfolk, attached to 34 Market Place, East Dereham branch, and at Newton Road, Great Barr, Birmingham, and at 37 Kenton Park Parade, Kenton, and at Fulbourn, Cambs. New branches have also been opened at 62 Pitshanger Lane, Ealing, W.5, 1073 London Road, Thornton Heath, and at 26 Borough Road, Burton-on-Trent.

The sub-branch of Barclays Bank (Dominion, Colonial and Overseas) at Hospital Hill (Transvaal) has been converted into a full branch.

A branch of the National City Bank of New York has been opened at 220 East 42nd Street, Manhattan, thus making seven new branches opened within Greater New York since January 1, 1930. The bank is ready to open six more branches and arrangements are also being made respecting sites in three other sections of the city; by the end of the year, we are informed, fifty branches of the bank will be in operation in New York. The National City Bank of New York also maintains 99 branches situated in 24 foreign countries.

Lloyds Bank, Ltd., announce that a branch of the bank is now open at 17 Highbury Corner, N.5. Sub-branches of the bank are now open at Bosham and East Wittering.

The Midland Bank have opened a new branch at 28 The Broadway, Southall, Middlesex, and at Eyre Court, 1 Finchley Road, London, N.W.8. The office at Queen's Hall Buildings, Station Road, Hayes, Middlesex, has been converted into a full branch.

The National Provincial Bank Limited announce that new offices of the bank are now open at 9 Warwick Road, Kenilworth, and at 39a High Street, King's Langley, Herts.

The Royal Bank of Canada regrets to announce the death, on October 2nd, of Sir George H. Gamblin, manager of their branch at Nassau, British West Indies.

Barclays Bank, Ltd., announce the opening of a new office of their Trustee Department at 61 Old Christchurch Road, Bournemouth.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks, with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Oct. 9, 1929.	Jan. 2, 1930.	Sep. 24, 1930.	Oct. 1, 1930.	Oct. 8, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	149	148½	74	74½	72½
Chicago (No. 2 Winter) —Cents per 60 lb.	116½	136½	130½	79½	80½	78½

The visible supply of wheat in Canada, at 69,487,000 bushels, shows an increase on the week of 3,573,000 bushels. Supplies a year ago stood at 77,112,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—The export trade for South Yorkshire coal remains steady, but new business is being checked by the uncertainty as to future subsidies and the effects of the new Act. Best steams are fairly firm at 15s. 3d. to 15s. 6d. f.o.b. Demand for industrial fuel tends to shrink, and prices are weaker, especially for the smaller fuels. House coal demand is quiet for the time of year. The position of blast-furnace coke shows no improvement and consumption is at a low level, but prices are firm at from 11s. 6d. to 12s. 6d. and 13s. for special brands.

Our Glasgow correspondent writes:—It has been a poor week in the coal market, as not only has the home demand been disappointing in view of the return to Greenwich time, but the shipping trade has been very depressed, with the tonnage handled at the ports the lowest this year except for the holiday periods. Easy prices are indicated for most qualities of large coal, exceptions being Lanarkshire prime splints and Hamilton ells, supplies of which are not plentiful, while trebles are the only firm spot among nuts. Shipping prices are approximately as follows (f.o.b. district ports):—LANARKSHIRE: Ell best, 13s. 9d.; splint best, 16s.; splint second, 14s. 3d.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d.-13s.; singles, 10s. 9d.-11s.; pearls, 10s. 3d.-10s. 6d.; dross, 9s. 6d. FIFE: Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 6d.-10s. 9d.; trebles, 13s. 6d.-15s.; doubles, 13s.-13s. 6d.; singles, 10s. 9d.-11s.; pearls, 10s. 3d.-10s. 6d. LOTHIAN: Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s.; doubles, 12s. 6d.; singles, 11s. 6d.; pearls, 10s. 6d.-10s. 9d. AYSHIRE: Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s. 6d.; doubles, 12s. 9d.; singles, 12s. 3d.; pearls, 11s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The general position on the Cardiff coal market remains unimproved. Sized grades, though many shillings per ton lower than they were this time last year, are still commanding prices above the minimum schedule, but for all other descriptions the current quotations are in accordance with the minimum scale of the Marketing Association. It is understood that subject to minor alterations the Board of Trade has approved the new scheme in the form in which it has been adapted to meet the requirements of the Coal Mines Act, and that therefore it will become operative as from the beginning of next month. Consultations are taking place between the Executive Committee of the new Association and the Group Committees concerning future prices and conditions of sale, but while no announcement has been made of any changes in the schedule, colliery owners are prepared to negotiate business over next year on the basis of the present minimum schedule, notwithstanding the certainty of some increase in costs of production as the result of the shortening of the working day. Advances have been received of increasing foreign competition in overseas markets, and offers from Poland and Holland to French consumers at the Bay ports are stated to be considerably lower than those of Welsh coals of corresponding grades. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubble culm, 10s. to 10s. 9d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 24s. 9d. to 25s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—After a short period of rather brighter trading the iron and steel markets are again passing through a phase of inactivity. Practically all departments of the market are affected. There is, of course, always a certain amount of buying taking place, but for the past week it seems to have consisted almost entirely of small orders for material for immediate use, and this throws the export burden upon manufacturers, who continually have to make plant adjustments to cope with the varying specifications, which largely increase production costs. The amount of business which has passed of late in pig iron has been disappointing, and although production has fallen considerably during the past few months, in some districts stocks are again increasing. On the other hand, there has been a fair demand for certain special sorts of pig iron, which have been exported in small quantities. Little

interest has been shown in semi-finished steel, and most consumers appear to have covered their requirements for the time being. Continental producers seem short of orders for this class of material, and are pressing cheap offers upon the market, but have failed to stimulate business. The demand for finished steel has also been quiet, and the recent improvement in export business has not been maintained. At the same time there is a fair amount of inquiry from some of the principal overseas markets.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is quiet, only a very small business being reported during the past week. Deliveries locally and to inland consumers are maintained on a fair scale, and stocks in the hands of makers are still being reduced. Some consignments of Continental foundry iron are in process of shipment to the Tees, and one cargo of about 900 tons has already arrived here for a large local firm of ironfounders. This is rather a disturbing feature, as the foreign iron is much cheaper than Cleveland, and the use of it may therefore extend, to the disadvantage of the local product. There was not a large attendance at the weekly market on Tuesday, and very little business in Cleveland iron was reported, prices being unchanged, viz.: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. per ton f.o.b. or f.o.t. The hematite market is steady in tone and orders are being booked at an improved rate. It is satisfactory to record that a fair demand exists from the Continent, in spite of the fact that prices on the other side are very much lower than East Coast iron. Makers are firm at 71s. for mixed numbers for delivery up to the end of the year, but odd lots for prompt are still changing hands at a trifle less. Shipments of pig iron so far this month are on a poor scale, the total clearances for the first seven days being 3,945 tons, against 4,128 tons for the same period of September. In the finished departments new orders are still scarce, and several plants are working very irregularly. As benefiting the North-East Coast, a cheering announcement was made last week-end by the Newcastle-on-Tyne Electric Supply Co., Ltd., that they had just placed two orders locally of the value of about £365,000 in connection with their new power station at Dunston-on-Tyne. Clarke, Chapman and Co., Ltd., of Gateshead, have secured one order for boiler installations at the value of £275,000, and Richardson, Westgarth and Co., Ltd., of West Hartlepool, the other, for condenser plant and auxiliaries of the value of about £90,000. It is hoped that Tees-side will derive some benefit indirectly from these orders. Prices for steel materials for home consumption under the rebate scheme are unchanged, viz.: Plates, ½ in. upwards, £8 15s.; joists, £8 10s.; angles, etc., £8 7s. 6d. Other materials for home use: Heavy steel rails, £8 10s.; crown iron bars, £10 15s.; 24-gauge galvanised corrugated sheets, £11 12s. 6d.; and 24-gauge black sheets, £9. The ore market continues neglected as far as new buying is concerned; best Bilbao rubio is nominally 18s. c.i.f., and freights to the Tees are round 5s. 6d. Coke of ordinary furnace qualities is quoted at 17s. for delivery up to the end of the year, but odd lots for prompt may be picked up at a trifle less. The number of furnaces in blast in the district is unchanged at 24.

Our Sheffield correspondent writes:—Conditions in the iron and steel branches remain as dull as ever, with some loss of ground at the lighter mills and forges. Producers of basic open-hearth steel are encountering very keen competition from the Continent. Some of the foreign prices are level with the pre-war standard in this country. Production of basic steel is very poor, but the position has not worsened further, and no reductions of price are announced this month. Acid steel is quiet. There is some activity in special light forgings and castings for the motor and engineering trade. Demand for ordinary steel continues to decline, whereas very special alloy steels are selling rather more freely. Home sales of tools, cutlery and plate have expanded during the past few weeks, but trade overseas has never been so bad for years.

Our Glasgow correspondent writes:—At the moment there are no signs that the prolonged period of inactivity in the iron and steel trades in the West of Scotland is nearing an end. There has been a further reduction in the number of furnaces in blast within the past few days, the last of the Coatbridge furnaces having been closed down. Business is very quiet in all branches and there is little buying either of raw steel or of semi-finished material. Makers of sections for the use of structural and other engineers are somewhat better than other departments of the steel trade. Tube makers do not report any improvement. Sheet makers are moderately well employed, but prices are very keenly out. Amongst recent orders placed in the Glasgow area are: An order for eight Garrett locomotives which the North British Locomotive Company, Ltd., of Springburn, have received from the Crown Agents for the Colonies; and an order which Messrs Barclay, Curle and Company, Ltd., are reported to have received for an 1,800-ton vessel for the Gart Line, Ltd., for their Mediterranean trade.

Our Cardiff correspondent writes:—Quiet conditions continue to prevail in the South Wales iron and steel industries. Manufacturers of tinplate are adhering firmly to the new minimum price and are restricting production in order to bring it into closer relation to the current effective demand. Good inquiries are reported to be current and the development of business is expected, particularly for the Far East trades. Galvanised sheets are still weak at the reduced price of £11 12s. 6d. per ton. Foreign tinplate bars have been ruling down to £4 2s. 6d. per ton, but local bars are still quoted at £5 15s. per ton. Tin is a shade easier than last week, and is £74 per ton less than in October, 1929. Notices

served on the employees of the British (Guest, Keen-Baldwins) Iron and Steel Company, Ltd., works at Dowlais are expiring this week-end, and Sir John Field Beale, the chairman, has informed the Mayor of Merthyr that there is little hope of the blast furnaces, steelworks, and various mills being re-opened owing "to the fact that the products of the works cannot now be sold to pay for the cost of operating them," and that "to meet modern conditions the re-opened works must operate on the seaboard so as to cut out the heavy transport charges which in past years have been such a handicap on the Dowlais works."

OTHER METALS.

TIN.—A firm tone prevailed at the week's commencement, and the market gained strength on a good general demand. This induced sellers to offer more freely, but buyers failed to respond, and values reacted sharply, while influenced by lower Eastern cables. Dealings were attended by a good deal of irregularity, comprising cash at £125 10s., £118 15s., £119 5s., and £116 5s.; three months £127, £120 to £120 15s. and £117 5s. Sales in the East were reported at £128 15s. to £125 2s. 6d. per ton c.i.f. Shipments from the Straits during September amounted to £5,324 tons compared with 7,905 tons in the preceding month. Total supply, 7,396 against 11,361 in August; total deliveries, 10,770 against 9,946; visible supply, 40,251 against 43,625; carry-over, 4,006 against 3,917 tons. Imports of tin ore for September totalled 4,310 tons.

COPPER.—Market irregular and easier, offerings being in excess of consumers' requirements despite a fair demand. Standard cash sold at £44 12s. 6d. to £43 5s.; three months, £44-£44 12s. 6d. and £43 6s. 3d. per ton.

LEAD.—Easier on selling pressure. Good soft foreign pig, October, sold £16 6s. 3d. to £15 5s.; November, £16 7s. 6d. to £15 7s. 6d.; December, also January, £16 7s. 6d. to £15 5s. per ton.

SPELTER.—In moderate demand, and, with sellers prominent, a weaker market resulted. October, sold £14 13s. 9d. to £14 5s.; November, £14 13s. 9d. to £14 2s. 6d.; December, £14 17s. 6d. to £14 6s. 3d.; January, £15 6s. 3d. to £14 7s. 6d. and £14 10s. per ton.

ALUMINIUM maintained. Home trade and export, £95.

QUICKSILVER steady. Spot, £22 2s. 6d. per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 17s. per box, f.o.b. Swansea.

ANTIMONY easier. English regulus, £38 to £45; Chinese ditto, spot, £26 10s.; October-November, £24 10s.; crude, October-November, £15 per ton c.i.f.

ANTIMONY OXIDE.—October-November, £27 per ton c.i.f.

ANTIMONY ORE.—60 per cent., October-November, 3s.; 50 per cent., 2s. 6d. per unit c.i.f.

WOLFRAM.—Firm and sellers reserved. Chinese, November-December, sellers 21s., buyers 19s. per unit, c.i.f. terms.

THE COTTON TRADE.

LIVERPOOL: October 8th.

Values show a fall on those of Wednesday last, but in the interim have touched a new low level for the season, quotations being: January, 5-51; March, 5-61; and May, 5-71. The markets have been very dull and inactive, with continued sagging of prices due to increased hedge selling and little offtake. The U.S.A. Bureau Report was published late this afternoon, showing an estimated crop of 14,486,000 bales. Condition, 53-5; yield per acre, 154-7; and ginned 6,305,000 bales. Prices immediately before this had touched the new low levels, but as the figures of production were about as expected, there was little change in prices. During the week, too much rain has fallen in the belt, and this will probably have the effect of lowering the grade of the cotton still to be picked. Some reports have come to hand that leaf worm in the Western and Central belts is reducing prospects of the top crop in these areas. Investment buying was noticeable to-day at the decline. Spot sales for the week 1st to 8th (inclusive) are: 39,000 bales, of which 15,750 are American, 5,000 Brazilian, 550 Argentine, 6,500 Peru, 2,900 Egyptian, 4,600 African, 3,400 East Indian, and 300 sundries. Imports for the same period are 34,034 bales, of which 19,494 are American, 1,403 Brazilian, 1,052 Argentine, 4,530 Peru, 5,302 Egyptian, 1,052 African, 922 East Indian, and 279 sundries. Quotations to-day are: American Middling, 5-46; Egyptian Sakel, 9-45; Uppers, 7-05; Brazil Fair, 5-61; Peru G.F. Smooth, 6-16; West African Middling, 5-56, and East African G.F., 6-61.

MANCHESTER: October 8th.

Favourable trade developments in the market continue to be checked by the falling tendency of prices, and buyers are afraid to operate with any freedom. Inquiry has continued fairly extensive, and a moderate business has been done in small lots. In sive, and a moderate business has been done for Madras, piece goods for India, most of the demand has been put through in light bleaching and some moderate lines have been put through in light bleaching and descriptions. Some support has also come from Karachi, but workable offers for Calcutta remain scarce. Some advices from China have been rather better, and a few more contracts have been arranged for Shanghai and Hong Kong in white shirtings and fancies. Very little has been done for Egypt, and reports from the other side have not been satisfactory. Further operations have occurred in printed and dyed goods for the Continent. Home trade

buyers remain cautious. In the yarn market there has been a good deal of irregularity in quotations. Although inquiry in American and Egyptian counts has been rather larger, the sales have not been at all important.

THE WOOL TRADE.

Our Bradford correspondent writes:—The fifth series of London sales for this year closed last Tuesday, and it can hardly be said that they have been as successful as importers and sellers would have liked, notwithstanding that 128,000 bales have been disposed of. The Continent took 70,500 bales, the home trade 58,500 bales, and America 1,000 bales, the quantity carried forward to the next series being 77,000 bales, including 53,000 not offered. The declines have been rather pronounced, the best merinos falling 5 per cent., medium greasy and scoured merinos 10 per cent., and faulty even more. Most greasy crossbreds declined 5 to 10 per cent., and shipes mostly 15 per cent. Such declines as these are very soon reflected in consuming centres, but wool having come down so much, should encourage consumption. The competition of the home trade and the Continent has been fairly good, though at no time has there been that confident tone which one likes to see. Many buyers have quite frankly stated that they were disposed to go slowly, their impression being that it will be possible to obtain plenty of cheap wool in Australia and South Africa. The result of all this is that wool values are not likely to recover much just yet, and the quantity carried forward means that there will be a large offering for the last series of the year, which will begin on November 25th. Topmakers report considerable sales, but at low figures. There is no real basis for tops, quotations being more or less nominal. Cables from Perth state that wool is selling on a basis of 25d. for good 64's tops, and 23d. for 60's. This shows that prices for the raw material overseas are very reasonable. Users feel that there is no need to rush to buy on forward account, though a steady demand may be expected. There is some talk of Australian pastoralists reducing production, but this could easily be brought about by six months of very dry weather, and it is very doubtful whether pastoralists would benefit by deliberately producing less wool for sale. After all, a good sized clip at a reasonable price is just as likely to be profitable as a small one sold at a big price. Current values will certainly encourage consumption.

HIDE, LEATHER AND ALLIED TRADES.

Prices for market hides and skins are rather weaker, and although no sales have been held at Leeds and Manchester this week the feeling seems to be gaining ground that lower values for raw material must be looked forward to. A similar state of affairs is to be noticed in regard to foreign hides; as compared with a few weeks ago business is difficult to transact, and although shippers and sellers are endeavouring to maintain the present level of values, the lack of interest on the part of tanners is such as to cause a feeling of uneasiness in most directions. In the South American market business in most classes of hides on account of the home trade has been small, with sales of Argentine ox on the basis of 6½d., with 6½d. realised for light ox; while Montevideo ox have sold up to 6½d. Dry River Plates have been sold at fractionally lower figures, B.A. Americanos making 7½d., and M.V. Americanos 8d. Business in African hides has only been possible at slightly lower quotations, the firsts and seconds in dry Capes making 8½d. and 7½d., while drysalted 20/30 lbs. have sold at 7½d. and 6½d. Australians are quiet, although offers are made at a shade under last prices. Trade in most descriptions of sole leather has been steady, with values generally maintained. English and wetsalted bends for repairing purposes still account for quite a respectable turnover, in addition to which there has been an improvement in the call for dry hide bends on account of the manufacturing trade. Orders come to hand regularly, and with no accumulations in the hands of either buyers or sellers there appears every prospect that the present firm tone of the market will be maintained for some time. This week the annual Shoe and Leather Fair is being held at Islington; so far no large deals have been negotiated, but buying has been

The prices in the following list are revised with the assistance of an eminent firm in each department.

going on steadily in slightly larger quantities than usual. Upper leather producers and distributors have experienced little change in the inquiry, the bulk of which is still in connection with box and willow calf in the better grades.

SUGAR.—Demand, both on grocery and manufacturing account, marked a sharp recovery and liberal quantities were absorbed, in which home-grown granulated figured prominently. The undertone of the commodity is less depressed, particularly in view of the fact that steps contemplated to reduce production become better defined. The releasing of "hedged" contracts against the

20,000 tons Cuban destroyed by fire gave the New York market a fallip. Messrs Tate and Lyle, Ltd., advanced quotations by 3d., with a similar rise registered for Anglo-Scottish granulated. Terminal sections higher but attended by slight irregularity at times, while business in raw proceeded with freedom. Sales include: December, 4s. 6d.; January, 5s. 6d.; March, 5s. 8½d. to 5s. 9½d., 5s. 9d. and 5s. 9½d.; May, 5s. 11½d. to 6s.; August, 6s. 2½d. to 6s. 3½d., 6s. 3d. and 6s. 3½d. Peruvian, 96 per cent., October shipment, sold 5s. 3½d.; November, 5s. 1½d.; 500 tons British West Indies, 96 per cent., October-November, at 8s. 9d. and 3,500 tons Mauritius refining crystals, 99 per cent., November-December, at 9s. 4½d. to 9s. 5½d. c.i.f. United Kingdom. The bulk apparently for outport refineries. Cuban receipts last week cabled 27,720 tons, 1,138,949, against 465,536. Messrs Willett estimate stock on plantations and in transit to ports of shipment at 1,251,000, against 495,302 in 1929. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending October 4th totalled 114,090 tons, compared with 137,604 last year.

COFFEE.—Demand, both on home and export account, continues good, and with more representative quantities, chiefly from East Africa, quite a firm market was experienced. Some bold mountain-grown Jamaica sold 20s. Brazilian varieties for shipment rendered more or less nominal owing to absence of definite offers, the outcome of political unrest.

COCOA.—Market, though irregular at times, is dearer on balance. Spot trade proceeded on quiet lines. Accra, F.F., October-December, London contract, quoted 27s. 6d. f.o.b.; and G.F. to Continent sold 28s. 6d. to 29s. 3d. November-January, 28s. 6d. to 29s. 3d. c.i.f. Terminal in fair demand at firmer prices. December sold 28s. 7d.; January, 28s. 3d. to 28s. 6d.; March, 28s. 6d. to 28s. 10d.

TEA.—Indian auctions during the week totalled 60,443 packages. These came to an irregular and somewhat weaker market. Fine and tippy teas were decidedly easier, with common and medium

sorts only just about maintained. Quite an active and well-distributed demand prevailed for the 21,576 packages auctioned. Full rates were realised, with the finer sorts frequently dearer. Export requirements were on a good scale. Java and Sumatra sales met a fair reception at steady prices.

RICE.—Market remains without new feature and there are only small inquiries on European account. Spanish weak on rate of exchange.

BEANS AND PEAS.—In beans there has been no material change in the position of butter or haricots, but business partakes of retail proportions. Peas: Buyers are more prominent with respect to Japanese and with sellers reserved, dearer prices were required in forward positions. There was a better movement with regard to spot. Current crop 18s. 6d.; sales in 1928 at 15s. 4½d.; September-October quoted 15s. 6d.

POTATOES.—Although the market in potatoes has been quiet, prices have been maintained at last week's level.

SPICE.—A subdued tone pervaded the pepper market and with sellers more in evidence, prices ruled weaker regarding forward positions. Lampong, August-October, sellers 6½d.; October-December, 6½d.; Muntok white, August-October, 9½d.; October-December, 9½d. Cloves very firm. Zanzibar, spot, ls. 4½d.; October steamer, sold ls. 1½d. October-December, ls. 2d. Madagascar spot held for ls. 4½d. Sago flour, October-November, sellers 8s. 7½d. c.i.f. United Kingdom. Ginger, tapioca and pimento quiet unaltered. London stocks of black reduced by 60 tons on the week to 726 tons, against 1,457 last year; white unaltered at 320, against 1,092.

FRUIT (Dried).—Currants: Interest is chiefly centred on new crop Greeks, of which larger quantities are arriving. Gulf, 38s.; Patras, 34s.-35s. Sultanias steady. Smyrna, 34s.-50s. Raisins firm for best quality. Dates and figs quiet. Evaporated fruits: Market quiet. Californian peaches, 40s.-47s. 6d.

CANNED GOODS.—Fruit: Californian varieties move off quietly despite reasonable offers of new pack for shipment. Apples, however, are attracting more attention both spot and forward. English fruits were in fair request at steady rates, but Australian met with limited support. Fish: The market in sardines is steady; demand being chiefly for best quality. Salmon in fair request. Meat: Market remains quiet, but late rates were generally maintained. Condensed milk and milk powders: Market dull. Quotations—Dutch condensed milk, full cream sweetened, 5-cwt. casks 33s. 6d.; machine-skimmed ditto, 21s. 6d. English condensed milk, full cream sweetened, 5-cwt. casks, 37s. 6d. Honey: Market steady with a fair demand for all the better grades. Jamaica white, 47s. 6d.-50s.; good amber to fine pale, 40s.-45s.; Californian 48s.; light amber, 40s. per cwt.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,236 tons, as compared with 9,145 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81·7 per cent. of the supplies, as against 78·6 per cent. a year ago, and imported mutton, mainly New Zealand, formed 75·4 per cent. of the total supply, as against 75·2 per cent. last year. Prices are scarcely changed on the week.

RUBBER.—A fair business was arranged and market ruled steady on balance, while assisted by more firmness in American centres. Standard sheet, spot, sold 3½d. to 4d. and 3½d.; November, 3½d. to 4d.; December, 3½d. to 4½d.; January-March, 4d. to 4½d.; April-June, 4½d. to 4½d.; July-September, 4½d. to 4½d.; January-December, 1931, at 4½d. to 4½d. London stocks declined 1,592 tons on the week, landings being 1,865, deliveries 3,457, stocks 81,544 against 43,478 last year. Liverpool stocks, 1,520 tons higher, landings 2,280, deliveries 760, stocks 36,387 against 10,795 same time last year.

HEMP.—Manila steadily held, but buyers as a rule were less frequent. J2, December-February, quoted £23 5s.; K sellers, £21 15s.; L1, £21 10s.; L2, £19; M1, £19 10s.; M2, £18 c.i.f. African sisal dull. No. 1, f.a.q., October-December, sellers, £21 10s. c.i.f. Receipts last week cabled 19,000 bales against 33,000 last year and 30,000 in 1928. Estimate for next week 21,000, and week after 20,000 bales. Manila shipments last week: 4,000 to the U.K., 1,000 Continent, 9,000 U.S.A., 8,000 Japan, 1,000 other countries, and 1,000 local consumption, making stocks 118,000 bales.

VEGETABLE OILS AND OILSEEDS.—Markets are irregular and generally there is a lack of confidence. Linseed is easy, in sympathy with lower Argentine options, current value of Plate on spot and passage being £12 10s., while new crop, December-January loading, has declined to £11 17s. 6d. Consumers, however, are still reserved. A considerable quantity of the unsold old crop is pressing on the market, supplies for October and November from Argentina being around a quarter of a million tons and much in excess of the shipments in the same period of last year. Favourable reports continue to come to hand regarding the new crop. Cotton seed is slow and low values do not seem to tempt buyers. New crop Egyptian (black) on passage and for shipment to January offers freely at £5 10s. without attracting trade. Linseed oil in near positions is fairly steady, current value of raw oil on spot being £27 6s. and for October delivery £26, with later positions at a discount of 25s. to 50s. Cotton oil is steady, crude Egyptian on spot being held for £22 and common edible for £25 ex Hull. Other seed oils are quiet and quotations difficult to maintain. The market for copra has been quiet, with prices in buyers' favour. Straits S.D., November to Rotterdam, sold £15 1s. 3d.; December also at £15 1s. 3d.; Dutch East Indies, November and December buyers, £15; Ceylon quoted £15 15s. Palm kernels dull.

(Incorporated in the Union of South Africa.)

THE MONEY MARKET.

THE heavy over-subscription of the new India loan on Wednesday took a certain amount of money, estimated unofficially at £4,000,000 off the market and diverted it to the Bank of England, and consequently a firmer tone was in evidence on Wednesday afternoon. Renewals continued to command 1½ per cent. outside the clearing banks, but

1½ per cent. had frequently to be paid for new money, and there was a general feeling that for the moment short loans were in better demand. This, however, is a purely passing phase, for so soon as the India Loan allotments are out, the bulk of this money will return to the market. In any case, the week's Bank return, made up after the receipt of these funds, shows practically no change in market resources. This suggests that in reality the diversion of the India Loan money did no more than offset counter-movements which had previously taken place.

* * * *

Thus the general tone of the market remains one of pronounced ease. Discount rates are practically unchanged. The banks are still buying November and December bills at 2 per cent., while the working rate for three months' bills is no better than 2½ per cent. Even long bills, of four and six months' maturity, have this week been dealt in at the low rate, for this class of paper, of 2½ per cent. More significant still, the clearing banks are now prepared to lend money up to the end of the year at their current rate for weekly fixtures of 2 per cent. This illustrates the extent to which the banks are now supplied with surplus funds for which they cannot readily find employment, and also shows that no change in Bank rate is expected before the end of the year.

* * * *

Several interesting gold movements occurred during the past week. On Tuesday, £750,000 of the new Cape gold arrived in the form of sovereigns and so went into the Bank. The bar gold on offer amounted to £859,000. Of this £255,000 had already been sold forward to France, while of the remaining £604,000 France took £294,000, the trade £105,000, and an "unknown buyer" £205,000. To the latter's identity no clue is available. As a result of sales by the Reichsbank authorities of part of the French balances acquired through their recent gold sales to Paris, the French exchange has recently risen to above the "normal" gold point of 123.90 francs, in force when the Bank of England was still delivering fine gold. Consequently Tuesday's Cape gold sold at only 84s. 11½d. per ounce, or below the fine gold equivalent of the Bank of England's statutory selling price for standard gold. On Monday, £370,536 of bar gold was withdrawn from the Bank. It is generally believed that this gold has been shipped to Switzerland, but as the Swiss National Bank is now refusing to buy gold, the shipment must have represented some special movement.

The September statements of the nine English clearing banks reveal a further contraction in their activities. Deposits have fallen by £3.3 millions, and acceptances by £3.9 millions.

	September, 1929.	June, 1930.	July, 1930.	August, 1930.	September, 1930.
Capital and reserves	130.8	131.8	131.8	131.8	132.1

Total assets	2,073.5	2,050.8	2,050.5	2,020.9	2,014.0

Among their assets, cash has shrunk by £2.8 millions and call money by £0.8 millions. The principal decline, how-

ever, is one of £8.9 millions in advances. This has left surplus resources in the hands of the banks, and, consequently, they have added £4.5 millions to their holdings of bills, and £4.8 millions to their investments.

NEW YORK.

Money remains extremely easy. Prime commercial paper is quoted at 2¼-3 per cent., and 90-day bankers' acceptances at 2-1½ per cent. Call money remains at 2 per cent. The September overseas trade figures are now available. Exports amounted to \$318.0 millions, as against \$300.0 millions in August last and \$442.0 millions in September, 1929. Imports were only \$227.0 millions, as against \$217.0 millions in August and \$392.0 millions in September of last year.

THE STOCK MARKETS.

After a fresh bout of liquidation, during which London acted as a shock absorber for New York, Paris and South America, a firmer tone obtained in mid-week. Mr Snowden's speech was well received, and gave opportunity to consolidate the limited, but welcome, recovery of prices. Gilt-edged again showed to advantage, and India stocks were firm on the success of the Government's new £12,000,000 issue. Selling of South American bonds gradually became less extensive, and slight support was perceptible for German loans. Industrial shares rallied partially after early liquidation. Rubber and tea shares were dull. Oils were affected, early in the week, by distress selling from Paris. Mining shares recovered, to some extent, after a discouraging start.

THE COMMODITY MARKETS.

The general situation remains depressed and uncertain. There is no improvement in the coal trade, and some districts find it difficult to dispose of their current output. Activity in the iron and steel industries is on a low level, and new orders are extremely scarce. Although outlets for Manchester goods are still difficult to find, there is evidence of an increasing demand from India. Steadier prices of raw wool have resulted in increased buying, but there is as yet no evidence of an improvement in the trade in manufactured goods. The jute trade continues depressed. Hides are weaker, but business in leather, although on a moderate scale, continues satisfactory. Wheat prices are scarcely changed on the week.

THE FOREIGN EXCHANGES.

Although the market was quiet during the past week, movements were distinctly more favourable towards sterling. The New York rate was steady, closing at 4.85½, as against 4.85½ last week. Montreal was also steady at last week's level of 4.85½. The Paris rate closed at 123.94, or 12 centimes higher than a week ago. Belgium also moved up to 34.85½. There was no change in Italy at 92.80, but the Dutch rate rose to 12.06. Switzerland remained unchanged. The Spanish Exchange underwent a further violent and rapid depreciation, this week's rate of 51.00 being a new low record. Reichsmarks touched 20.45 on Monday last, but rallied slightly at the close to 20.43. Among the Eastern exchanges the rupee improved to 1s. 5½d. as did the yen to 2s. 0½d. South American exchanges displayed a very heavy tendency, Buenos Aires falling rapidly to 36½d. on Tuesday, compared with 38½d. a week ago. The close was somewhat better at 38d. Rio was nominal at 4½d. In the forward market one month's dollars moved to par, and three months' to 1½ cent premium. Paris forwards were 4 and 7 cents premium. Forward Belgas were unchanged. Milan forwards were freely offered at discounts of 17 cents for one and 46 cents for three months respectively. Forward guilders moved to a premium of 1½ cents for both periods. Spanish forwards were erratic at a slight discount. Higher margins again ruled for forward Reichsmarks, one month being quoted 4 pfennigs, and three months 12 pfennigs discount. Silver rose steadily on Chinese buying to 1s. 6½d. per oz. for both spot and forward positions. Hong Kong was 1s. 3½d. and Shanghai 1s. 7½d.

MR BALDWIN'S PROGRAMME.

WITH every week that passes new aspects are opening up in the field of fiscal policy. Mr Bennett, the Canadian Prime Minister, whose proposals were discussed in these columns last week, has now explained that his offer meant even less than we had supposed. Not only is the tariff of Canada to remain at its new high level against Great Britain, but the extra parapet against the rest of the world is not to be 10 per cent. *ad valorem*, but 10 per cent. of the tariff. That is to say, if a duty against Great Britain is 30 per cent., the duty against foreign goods is to be not 40 per cent., but 33 per cent. It is little wonder that the directors of the Manchester Chamber of Commerce remark that "the Canadian proposals seem to the Board to call for sacrifices by Great Britain out of all proportion to the contributions proposed by Canada." Nevertheless, Mr Baldwin, without waiting for this explanation, promptly committed the British Conservative Party to approval of the principles put forward by Mr Bennett.

He has, however, followed this up by an important statement which is a summary of the policy on which the Conservative Party will go to the country. On its Imperial side, this statement is considerably less in accord with Mr Bennett's views than his first pronouncement seemed to imply. The features of this manifesto are (1) an emergency tariff on manufactured goods "which would preserve the home market while the necessary investigations and negotiations with other countries, incidental to the preparation of a more scientific scheme, were pursued"; (2) a guaranteed price for wheat accompanied by a quota system under which a definite proportion of the flour used for bread shall be from home-grown wheat. There is also to be a tax on malting barley; a preference is to be given to home-produced wheat and meat for the Army and Navy; and the dumping of foreign fruit and vegetables and foreign bounty-fed oats is to be prevented. Further, (3) negotiations are to be pursued with the Dominions for the development of a preference system, but, in the case of wheat, co-operation is apparently to take the form of a quota for Empire wheat, though, as distinguished from the scheme for British agriculture, there will be no guaranteed price. There are other important items in the manifesto dealing with economy, taxation and the need for reform of unemployment insurance, but from the political point of view perhaps the most important feature in the statement is that so far as the fiscal recommendations are concerned, Mr Baldwin now regards the matter of such urgency that he throws overboard any suggestion of a referendum or a second general election, and will go to the polls on this programme and ask for an immediate mandate to put it into effect.

The historian will recall with interest that it was in very similar circumstances seven years ago, when Mr Bruce had come to this country with a definite suggestion that we should tax wheat and meat, that Mr Baldwin, then in power, burned his boats and went to the country for a mandate to impose a general tariff. In the present manifesto Mr Baldwin asks for even more latitude in certain respects, but he is more wary with regard to the issue of food taxes. Not only Lord Beaverbrook, but the country, will require to know much more definitely whether Mr Baldwin is or is not prepared to put taxes on the chief articles of food, or whether this proposal for an Empire quota is all that he is prepared to offer the Dominions. Clearly a quota on Empire wheat may do little to help the Empire wheat grower. The figures which we quote in a "Note of the Week" show that the Empire is on balance a large seller of wheat to foreign countries; if the quota is fixed in such a way that the proportion of Empire wheat to be sold in Great Britain is larger than at present, the sale of Empire wheat in other markets will be subject to much keener competition. There is, in fact, no device that can overcome the old dilemma. If the Canadian farmer is to benefit, it must be at the expense of the British consumer, and the raising of the selling price in Britain above world prices is bound to accentuate the over-production of wheat. In any case, however,

whether the quota is used to divert the wheat trade or not, it is clear that Mr Baldwin intends the food bill of the country to be increased, at all events in respect of the home-produced supply; and whether the price is paid in the cost of the loaf or out of the Exchequer, we are to consume a larger, and presumably steadily increasing, proportion of wheat produced at a cost of, say, 50s. a quarter, when it could be available at a considerably lower figure.

We venture to doubt whether, in spite of his subtlety, Mr Baldwin will be able to stand on the ground which he has adroitly chosen. Mr Bennett will doubtless press for a solution giving him a better assurance of higher prices, while strong forces at home will push him in the direction of a more thorough-going protection for British agriculture. Lord Brentford has, for example, in disparaging terms already referred to the quota system as "founded upon thousands of inspectors, hundreds of committees and the general spread of a State system (thinly disguised Socialism) over the land." He cannot conceive that the quota of itself would meet the wishes of the farmer, and the fact that the present Prime Minister is friendly disposed towards the system makes him very dubious.

Mr Baldwin will also be pressed to take the country a little more into his confidence with regard to his emergency tariff on manufactures. Our own experience of the tendency of "temporary" tariffs to become permanent can be paralleled in many a foreign country. When Germany, for example, regained her fiscal freedom in 1925, she put into effect a provisional "Minor Tariff," which was to expire in twenty-two months, while a new, scientific tariff was devised. Only small modifications of this "provisional" arrangement have ever been made. Again, is Mr Baldwin thinking in terms of high protection of, say, 33 per cent., or an all-round revenue duty of 5 or 10 per cent.? Is he, like many of those who are bitten with the idea of a revenue duty on imports, concerned with raising indirect taxation, or is he aiming at a definite trade restriction forthwith? His words seem to suggest the latter, for, in spite of the fact that foreign imports of manufactured goods clearly touch only a fringe of our unemployment, which is predominantly in the exporting industries (where nothing that Mr Baldwin proposes can help), and to a very large extent in home industries which are not touched by foreign competition, he is confident that by his proposal "we should at once stem the advance of unemployment."

Thus, in all probability, Mr Baldwin will go into the electoral fight at the head of all the forces of Protection, horse, foot and artillery. But compared with the situation in 1923 there is undoubtedly this important difference, that after seven lean years there is a more widespread disposition to seek any refuge from our present troubles, and he may be able to rally to his banner—though with many misgivings—a great many who find it difficult to act upon the motto of Mr Monagu Newman at the Mansion House dinner on Wednesday evening: "Be patient, hold fast." A fresh indication of the tendency of our industrial and commercial leaders to incline to the idea that the only remedy for their troubles is State assistance in the form of shelter from the competition of foreign imports is given in the result of the canvass of the Federation of British Industries. It is, of course, easy to read too much into the result of this canvass. Of the total members 28 per cent. did not vote, and quite conceivably a large proportion of those who voted for "a change in our fiscal system" were either thinking fondly in terms of exclusive protection for their own particular industry, or intended little more than to seize an opportunity of expressing general dissatisfaction with the present state of industry. When such allowances are made, it becomes clear that the F.B.I. canvass cannot be taken, as in some quarters it has been taken, as an almost unanimous declaration in favour of Protection. Nevertheless, following the Bankers' manifesto and the declarations of Sir William Morris and his group of industrialists, it does afford fresh significant proof of a

substantial growth of opinion in the business world against our present fiscal system.

This swing is a perfectly natural phenomenon. It is the old familiar case of a sick man sending out for a bottle of a well-advertised patent medicine. Mr Joseph Chamberlain used to pray for two bad winters. We have had more than half-a-dozen. It is impossible to move in business circles without meeting men who want "a little dose of Protection (or inflation) to provide a stimulant and tide us over this period of depression." The argument—so reminiscent of the first stages of the career of the drug-addict—seems to us wholly fallacious. No one has seriously attempted to show that tariffs could permanently raise the level of employment in this country, or that we could maintain, still less raise, the standard of living if we reduced our foreign commerce. Protection is bound to increase the difficulties of our export trades and our international activities generally. As Mr Keynes has forcefully indicated in an article in last week's *Nation*, we are in an era of unexampled economic change, and it is generally recognised that one of the major causes of our troubles is that, whereas we have as great or even greater changes to make than other nations, we have been slower in adaptation. Our traditional methods of organisation and individualism in management, our rigid wage system and the lack of mobility of labour—fostered as they have been by our insurance system—are serious handicaps. Protection will inevitably accentuate these serious defects. The history of those of our industries which have been protected in recent years gives no ground whatever for supposing that British industries are only waiting for the protection of a tariff to rationalise themselves. On the contrary, Protection will give them the opportunity to avoid change a little longer. For a country dependent on international trade, the trend of world prices is of exceptional importance, and makes it essential that we face internationally the problems posed by the Gold Committee of the League. But if the price decline is not arrested, a national attempt to maintain prices in Great Britain by Protection must exaggerate the difficulties of our international trade.

It is worse than useless to minimise the difficulties of the times, and we propose to give next week an instructive study from an authoritative source of recent trends in British trade. But it is equally useless to ride off on false issues. It is idle to imagine that any Government can cure a world depression or that the present depression looks like passing quickly. What is wanted is not a fiscal "cure-all," but that the Government should do something to restore confidence. And one of the most effective steps it could take in this direction would be a Cabinet declaration giving an explicit promise, following Mr Snowden's speech at the Guildhall, that no additional taxation would be imposed in the next Budget, because the Government was going to cut its coat in accordance with its cloth. The Government can also assist industry in its internal organisation and reconsider very carefully the effect of its regulations concerning social services on the processes of adaptation. It must also play its rôle in tackling the difficulties in the international sphere with which Governments alone can deal, and use its powers to secure the greatest possible openings in markets overseas whether in the Empire or in foreign countries.

But behind this lies the effort which industry itself must make. We agree with the defeatists to this extent, that this country cannot go on indefinitely supporting two million unemployed. But we part company with them when they say or think that Britain is incapable of pulling herself through this sea of troubles on to the firm ground beyond. A big national effort is required. But if once confidence in the ultimate future were restored, we believe the country would prove itself as capable of such effort as in days past. The country will respond to any Government which gives it the lead. One thing is perfectly clear: no country—least of all a country like Britain, susceptible to every turn of world economic fortunes—can hope to cling with impunity to the otiose life in the midst of one of the deepest depressions the modern world has seen.

THE SWISS DISCOUNT MARKET.

CURIOSLY, it is a matter of common belief that the Swiss financial market is more international than any other. The origin of this belief is the general international character of the country with its population speaking four different languages; the hospitality with which international institutions are received on Swiss territory; the favourable geographic situation of the country; the great extent to which it has been used as a refuge of foreign funds during and after the war; and the large number of international bankers, arbitrageurs and foreign exchange dealers of Swiss origin who have established themselves in foreign banking centres. In spite of appearances, however, the Swiss financial market is essentially national in character. In this respect, it is in sharp contrast with Amsterdam which, if possible, is even more international than London. While in Holland the subsidiaries of foreign banks and foreign finance companies are welcome, in Switzerland they are discouraged by restrictions in law and in practice. While in Holland the issue of foreign loans meets with no opposition, in Switzerland there is a hostile public opinion against foreign loans, which often discourages Swiss banks from making public issues on foreign account. While in the Dutch discount market the authorities do not discourage bills financing trade between two foreign countries—provided they are genuine commercial bills—in Switzerland the central bank has adopted measures of discrimination against such bills.

We pointed out in an article on the Amsterdam Discount Market, which appeared in our issue of October 4, that an excessive expansion of the use of guilder acceptances is prevented by the discipline prevailing among Dutch banks, who are willing to submit every transaction to the preliminary approval of the Netherlands Bank. In Switzerland, the same end has been attained by a totally different method. The Swiss National Bank has laid down the rule that only bills financing Swiss trade are eligible for rediscount. As the volume of Swiss import and export trade is not very large, the amount of prime bills that may come to the Swiss market is thereby confined within comparatively narrow limits. The National Bank can thus discourage the flooding of the Swiss market by bills financing trade between two foreign countries. At the same time, it effectively prevents finance bills from benefiting by rediscount facilities. For it is easier to verify the genuine character of a bill that claims to represent the value of goods bought or sold by a Swiss firm than that of a bill financing alleged commercial transactions between two foreign countries. According to the experience of the London market, such bills are, as often as not, finance bills pure and simple. Thus, in addition to keeping the volume of bills down, the restriction adopted by the Swiss National Bank tends to improve their quality.

The policy of discrimination against bills financing trade between foreign countries does not, however, altogether prevent Swiss banks from accepting or acquiring such bills. While in Amsterdam bills that are not eligible are practically unmarketable, in the Swiss discount market there is active dealing in such bills. There is a keen demand for bills not only by the commercial banks, but also by the "Kantonalbanks," which control considerable liquid resources, and, not least, by foreign holders of Swiss balances. The volume of eligible bills is inadequate to satisfy this demand, and ineligible bills are, therefore, easily marketable—at a higher rate than that for prime bills. Those who acquire them usually intend to keep them till maturity; if they change their mind they can always find buyers for the bills, especially as the discrepancy between the rates of eligible and ineligible bills tends to be smaller for short-dated bills.

Normally, there is a discrepancy of at least one-half per cent. between the rates of a three-months' eligible bill and a three-months' ineligible bill. This has the advantage of preventing foreign borrowers from taking advantage of the low money rates prevailing in Switzerland. It is, thanks to this system, that the National

"BLUE AND GOLD TOURS" TO SOUTH AFRICA

The South African Railways, in association with the leading Shipping Lines on the African routes, have organised an attractive programme of sunshine tours to South Africa for the coming winter.

Sailings from British and Continental ports will be made at frequent intervals between 8th November, 1930, and 30th January, 1931. The steamer fares, on a liberal concessionary basis for the return voyage of 12,000 miles, are unique in travel values.

A comprehensive series of rail tours in South Africa has been arranged in conjunction with the steamship sailings, and the inclusive costs of the combined sea and land tours range, according to duration, class of accommodation, etc., from £70 to £205.

The full descriptive programme "Blue and Gold Tours" will be sent, post free, on request. Apply:—

The Director, Publicity and Travel Bureau,
South Africa House, 73 Strand, London, W.C.2,
and the leading Tourist and Travel Agencies.

Bank was able to maintain a low bank rate throughout the upward trend of international money rates during the Wall Street boom. As a result of this system, Swiss home trade benefited by low rates of interest, while foreign borrowers, so far as they availed themselves of Swiss credits, had to pay a higher rate, and thus contributed towards keeping up banking profits.

During the last few months, the discrepancy between the rates of eligible and ineligible bills has narrowed considerably. At present it is only about $\frac{1}{2}$ per cent., the three-months' eligible bills being quoted at $1\frac{1}{2}$ per cent., while the ineligible bills of the same maturity change hands at $1\frac{1}{4}$ per cent. This is the result of the world-wide increase of the demand for short-term investment, from which the Swiss market has not remained immune. At the same time, the very factors which resulted in the contraction of the volume of bills in every centre have operated also in Switzerland. Thus, the volume of eligible bills is less adequate than ever to meet the increased demand, and there is, in consequence, a keen demand for ineligible bills. The demand has become accentuated by the fresh inflow of German funds taking refuge in Switzerland. It appears that the discrepancy tends to be wide when it is important from the point of view of the Swiss home trade that foreign borrowing should not raise domestic money rates, while it tends to be narrow when there are ample resources available for foreign credits—an ideal system from a Swiss point of view, as the Swiss authorities do not attempt to develop a discount market of great international importance. If the decline of the rate of ineligible bills to $1\frac{1}{2}$ per cent. results in an excessive expansion of the volume of such bills this need not necessarily affect the rates paid by Swiss trade. All that would happen is that the discrepancy would become once more wider through a rise in the rate of ineligible bills, which need not affect the rate of eligible bills.

At present, there are no signs of an excessive expansion of the volume of ineligible bills. Although the rates are lower than in any other discount market Swiss banks are not extending their acceptance credits to any great extent. Conceivably, this is due to discouragement by the National Bank, which is in a position to influence the banks even in regard to bills which are ineligible for rediscount. There is no rigid rule preventing the National Bank from rediscounting bills financing trade between foreign countries. If its rediscounts decline to too great an extent it may, if it chooses to do so, rediscount such bills. In practice, it has given preference on such occasions to short-dated bills. If, at any time, it wants to increase the international rôle of the Swiss financial market all it has to do is to relax the self-imposed restriction. For the present, however, there is no intention to embark upon any ambitious expansion.

The Swiss discount market is essentially decentralised, owing to the existence of four financial centres of importance, viz., Zurich, which is considered the chief banking centre; Bern, where the headquarters of the National Bank are located; Basle, whose importance has been greatly increased by the establishment of the Bank

for International Settlements; and Geneva, with its French and Italian connections. This decentralisation may be detrimental to the development of an important Stock Exchange, but does not in any way handicap the development of the discount market. Owing to the proximity of the four centres, and to their excellent telephone connections, their banks can deal with each other almost with the same ease as if they were situated in the same centre. From an international point of view, the decentralisation of the discount market makes no difference, for the foreign banks desirous of buying or selling Swiss bills may get in touch with any of the four centres and find no difficulty in receiving a quotation of rates. As the market is active, it is comparatively easy to buy or sell fairly large amounts. In this respect, the Swiss discount market is decidedly at an advantage as compared with Paris. French banks can think only in terms of very small amounts, and are usually unwilling to grant an acceptance credit of a few hundreds of thousands of pounds, or to acquire a parcel of bills of the same magnitude unless they can form a syndicate to spread the risk. Swiss banks are much more enterprising, and do not hesitate to deal in large figures. But for the extreme conservatism of the authorities, the Swiss discount market could, therefore, develop into a strong rival of Paris as well as of other centres.

ECONOMICS OF THE MOTOR INDUSTRY.

(BY A CORRESPONDENT.)

THE Annual Show ushers in a new year for the motor industry and is, therefore, an appropriate time to consider what is the objective at which British manufacturers are aiming. A year ago there were great hopes of a development of the export trade—inspired by the drafting of a scheme by Mr J. H. Thomas and a few of the leading motor manufacturers to organise a strong export sales organisation through Rootes, Ltd., with the backing of the Prudential Assurance Company. The partial disappointment of these hopes is reflected in a reduction of British exports of private vehicles and chassis from 24,471 units, valued at £3,844,325, for the first nine months of 1929, to 17,067 units, valued at £2,907,305, for the corresponding period of 1930. This reduction, however, is mainly due to a general contraction in the world export trade in cars, partly accounted for by the economic position, and partly by the growing reluctance of the nationals of manufacturing countries to purchase any but the products of their own factories. The percentage of the world export trade held by British manufacturers is definitely, if slowly, increasing.

The considerable anxiety felt by the motor trade about the fate of the McKenna Duties a year ago was relieved by their retention in Mr Snowden's first Budget, while at a later date the fear that the American slump would be followed by the wholesale dumping of cars in Britain proved—as in the case of other products also—to be

unfounded. This had seemed a possibility in the winter, as new British registrations were still keeping fairly high, and the Continental manufacturers were discussing the feasibility of fixing a quota for American car exports to the Continent, while one or two countries, notably France, increased the tariff on imported cars to an almost prohibitive level. As things turned out, the continuing trade depression was felt particularly in the demand for large cars, and imports of American cars fell accordingly. Indeed, total imports of private cars for the first nine months of the year amounted only to 7,763 units, valued at £1,310,083, compared with 17,378 units, value £2,629,118, last year.

The total output of British cars for the "production year" which is just ending will certainly be below the figure for 1929, a record year, but seems likely to be not less than 150,000, or within a few thousands of the 1928 production. Under the circumstances this may be considered a very satisfactory achievement, although the outlook for the coming year is less promising owing to the slump in new registrations; these showed a decrease of 19 per cent. for June, 17 per cent. for July, and 24 per cent. for August, the last month for which figures have been published. More serious in the long run, however, than the fall in output, which is only temporary, is the complete failure of the British industry during the past year to make any move in the direction of rationalisation. There are exactly the same number of separate concerns genuinely engaged in manufacture this year as there were a year ago, while the number of models to be turned out for 1931 shows an increase. Last spring there were strong rumours of a merger to comprise two of the largest Midlands manufacturers and one other firm (a scheme with which the name of the British, Foreign and Colonial Corporation was associated), but the negotiations apparently fell through, and from the point of view of concentrating production into larger units, the industry is precisely where it was last year. And, with the present highly individualistic temper of the trade, there are no grounds for confidence that any progress in this direction will have been registered at the end of another year.

Not only has the tendency towards amalgamation in the motor trade received a setback, but the failure of British manufacturers to reduce the number of models they are putting on to a restricted market is a serious feature of the present situation. Of the 160 concerns in this country registered as motor manufacturers, 44 are actually producing either private cars or a considerable portion of cars. Of these only 14, controlled by eleven groups, are of any real importance from the point of view of output. Ignoring types between which there is no substantial difference, the total number of models to be produced by these groups for the 1930/31 season is 46, compared with 41 last year. The only important maker who has effected any reduction is Humber, who will manufacture only three models, against five last year. This is nearly half as many models again as are made by the eight large American groups, which among them have a capacity more than twenty times as great as the British group. The total output of many of these 46 models will be well under 1,000 units, a figure on which it is quite impossible to make use of mass production methods of manufacture.

British manufacturers other than the three biggest are thus placing themselves in a very exposed position, in view both of the Ford plans at Dagenham, with which we deal in a leading article in our Stock Exchange pages, and of the possibility of the repeal of the McKenna Duties or of any change in the horse-power system of taxation, either of which possibilities would involve serious price-cutting on the British market on a scale which they could not undertake. The McKenna Duties, which should be looked upon by the beneficiaries as a shield behind which the industry can shelter while effecting the amalgamations necessary to establish itself as a fully efficient unit capable of holding its own, are being regarded by a section of the manufacturers as a godsend which exempts them from the need of rationalisation. This section

intend on the eve of every budget to raise the cry that the removal of the McKenna Duties will spell ruin for them; and some measure of compulsion may be necessary before they will consent to put their houses in order. It is quite conceivable, nevertheless, that the ultimate effect of the repeal of the McKenna Duties would be to benefit the larger British manufacturers through the postponement of saturation point for cars by means of heavy reductions in prices which are still too high. It is difficult to see why, for instance, the largest British manufacturer of baby cars should be able to manufacture through his subsidiary company for the American market at \$450 when he charges £130 for his corresponding British model. The postponement of saturation point ought to occupy the attention of the industry to a growing extent during the next few years. Already total registrations of cars have passed the million mark, while incomes of £400 and upwards number fewer than 800,000.

There still seems to be a feeling of uncertainty among British manufacturers as to their proper policy with regard to the type of vehicle to be produced. The system of taxation puts a premium on cars of low horse-power capacity, while the comparatively small incomes of the newer car owners and most of the further potential owners suggest concentration on the cheaper vehicles. These two factors have contributed to make Britain the home of the baby car. Austin was well established in this field when Morris began to manufacture baby cars in 1928, and the rapidly increasing percentage of new registrations formed by baby cars during 1929 certainly seemed to justify the attention which was being paid to them. Recent experience, however, suggests that the boom in baby cars, at any rate on its recent scale, may be nearing its end.

NEW REGISTRATIONS.					
Nov., 1929-April, 1930.			May-August, 1930.		
	Number	% Inc. (+) or Dec. (-) over 1929.	Number	% Inc. (+) or Dec. (-) over 1929.	
8 h.p.	20,820	+ 16.8	12,721	- 20.2	
12 h.p.	13,455	- 22.2	8,569	- 9.9	
15 h.p.	11,179	+ 143.3	7,613	+ 121.3	
16 h.p.	10,337	+ 6.8	5,141	- 17.5	
Others	27,245	- 28.3	17,515	- 34.7	
Total	83,036	- 5.0	51,559	- 16.8	

There is evidence here of diminished demand in recent months for the baby car, although the Morris Cowley at 12 h.p. has itself been adversely affected by the New Ford and Morris Light Six at 15 h.p. It is still too early to prophesy whether the drift away from the baby car is going to be permanent, but it is quite possible that the relatively high initial cost of baby cars and their rather fragile construction, with the consequent risk of heavy expenditure on maintenance, may under existing conditions militate against their popularity continuing on the scale attained last year.

Price reductions this year are general and fairly evenly spread over the different categories; at any rate they are not such as to create any particular trend to or away from the various types of car. The Ford Company are introducing the novel idea of a £5 differential in favour of their 22 h.p. model as against the 15 h.p. New Ford, but it is doubtful whether this will have the desired result, as experience has proved that the great majority of British motorists are very shy about buying cars of more than 15 or 16 h.p. on account of the heavy annual tax.

During the last two years there has been a desire on the part of a group of British manufacturers, led by Sir William Morris, to educate the public away from the 12-14 h.p. car up to slightly larger models, which it was hoped would be big enough to compete successfully against American cars in the Dominion markets, and at the same time small enough to enable the manufacturers to catch the British market. This led to the production of "Light Six" models by many of the leading firms. These have neither been an outstanding success nor a complete failure; they have found a definite, albeit more limited market than had been hoped, in this country,

and they are also providing the Dominions with a possible alternative to the ordinary American car. For British motorists, however, their initial and annual costs are still too high to appeal to any but the minority who are prepared to pay for "power," and it remains to be seen whether in the export market they can effectively challenge the mass-produced 24-27 h.p. American models. In any event, it is clear that the future prosperity of British manufacturers will depend on the ruthless elimination of all non-paying models, on the amalgamation of firms making competitive vehicles and on the allocation of the models finally deemed necessary to separate factories. The present indication is that it will be necessary to wait a long time before these facts are realised by the trade.

BRITISH CAPITAL ABROAD.—I.

EARLIER this year we published two articles* on the capital invested in British companies operating abroad. The analysis showed that approximately £1,050 millions of British long-term capital is now invested overseas through the medium of such companies. Obviously that sum is only a part of the total commercial debt which the rest of the world owes to Great Britain; and had the inquiry stopped short at that point it would have been far from fulfilling its purpose of discovering the amount and distribution of all British capital abroad, and of elucidating certain items in the national balance of payments. We have, therefore, next endeavoured to estimate British participation in the capital of companies registered outside this country. The inquiry has been limited to securities officially dealt in on the London Stock Exchange, with the minor addition of the shares and bonds of some South African mining companies, and a few others, which are not accorded official recognition, but which are known to be largely held in this country.

Unfortunately, in this section of capital abroad much greater difficulties arise than in that previously examined. In the first place, there is a great deal of untraceable nominee holding; stock of a Canadian public-utility corporation, say, will be registered in the name of an American bank or stockbroking firm, although actually owned by a British investor. Again, many of the stocks and bonds are in bearer form, so that there are no lists of stockholders to analyse. Then, certain bonds, although issued on this market or at any rate dealt in without limitation here, are rendered more readily marketable by the fact that interest may be paid in any of several different currencies at the option of the bondholder. Sometimes the position of the exchanges will make it advantageous for the large investor to draw his interest in some foreign centre and re-invest it there, while no doubt similar action is also taken on occasion in order to avoid taxation. This somewhat vitiates evidence based on income-tax affidavits furnished through paying agents or coupon dealers.

Nevertheless, the evidence actually collected warrants the publication of estimates which, while subject to an appreciable margin of error, are probably about as accurate as it is possible to obtain without some radical and unforeseeable improvement in statistical method. We should like to take this opportunity to thank the companies who have, often at considerable expenditure of labour, furnished us with data; to them and to their officials we are greatly indebted. Reliable evidence has been secured with regard to about 300 different securities, covering an aggregate share and loan capital of over £1,750 millions (nominal). This is a 40 per cent. sample of the whole group, and, with one or two exceptions mentioned below, is well distributed among the various functional and geographical divisions, thus giving some indication of the statistical soundness of the estimates.

Iron, coal and steel	265,353	?	?	47,958	50.1	24,000
Mines	158,108	46.2	73,000	8,260	69.5	5,800
Nitrates	113,946	?	?	4,072	?	?
Oil	859	?	?	125	?	?
Rubber	9,350	98.0	9,200	3,540	93.0	3,300
Shipping	367,441	0.7	2,500	46,696	?	?
Telegraphs and Telephones	35,172	?	?	42,767	16.0	6,800
Tramways and omnibuses	2,715,555	?	?	1,608,681	?	?

It will be seen that estimates have had to be omitted under a few heads, notably the iron, coal and steel, tramways and omnibuses, and oil groups in the share capital column, and in the loan capital column principally the telegraphs and telephones group. The figures actually given show £327 millions out of a total share capital of £2,282 millions, or 14.8 per cent. to be held by British residents, along with £471 millions, or 30.3 per cent., of a total loan capital of £1,557 millions.

What estimates can be made with regard to the remaining groups? One company dominates the iron and steel group—the United States Steel Corporation—followed on a smaller scale by the Lake Superior Corporation; together their quoted capital amounts to \$752 millions. We possess data enough to justify an estimate of about 42 per cent. for the British holding in the remainder, and in the case of the two great American corporations, we should probably not be far wrong in supposing that 1.5 per cent. of their capital is held in this country (a percentage which appears to be applicable to American industrial and utility companies in general). This gives us a total for the group of £49.4 millions held by British residents. The difficulty in the oil group is that most of the important securities are in bearer form, the outstanding concerns being Mexican Eagle, Canadian Eagle, the Royal Dutch Company and the Pan-American Petroleum and Transport Company. Here we can do no better than hazard a guess, and suggest that 15 per cent. on the average is held by British residents; this gives a figure of £17.1 millions. It would probably be safe to apply the same percentage to the tramways group, where Brazilian Traction is the dominant item, and so to obtain an estimate of £5.3 millions.

The capital covered by all the remaining omissions in the share column totals only £19.4 millions, and no great error can be involved if we suppose 20 per cent. of this, or £3.9 millions, to be in British ownership. On the

debenture side, the only important vacancy is in the telegraph group. Some £25 millions of the securities included are dollar bonds, for which a small percentage, say 5 per cent., would be justified. The remainder was issued in terms of sterling, and 50 per cent. would probably be a fair estimate both for this and for the other groups. The outcome of the above sequence of guesses—for they cannot pretend to be much more—is a total estimate of £408 millions for the British holding of shares and £485 millions for the British holding of bonds and debentures. The latter figure, in particular, is probably an underestimate, as the evidence on which the percentage is based in the second largest group, foreign railways, is not really adequate, and general indications lead one to suppose that the figure for that group should be nearer 70 than 50 per cent., which would add a further £30-35 millions.

Allowing for the various qualifications above-mentioned, a number of interesting conclusions can be drawn from the individual items. The small size of the participation in American railroad securities is most conspicuous. The sample information, which covered \$3,166 millions of common and preferred stocks and \$1,022 millions of bonds (roughly 65 per cent. and 25 per cent. of the whole group respectively), showed almost exactly the same percentage of British holdings in each class, namely, 1.6 per cent., and this gives rise to estimates of £15,100,000 for the total of stocks held in this country and £12,800,000 for the total of bonds. When Sir George Paish made his estimates in 1911, he assessed British holding of American railroad stocks and bonds at £576 millions.

The immense drop is, of course, due to the fact that railway securities were made the chief subject of organised liquidation during the War in order to support the sterling-dollar exchange in the face of the enormous credits obtained in the United States. Other American securities were likewise disposed of, and the vast size of many of the companies concerned, and the smallness of the remaining British participation, accounts for the low percentages recorded in several other groups—notably commercial and industrial and telegraphs and telephones. The latter is dominated by the International and American Telephone and Telegraph Corporations, while the former contains a number of large American concerns, such as Victor Talking Machine, General Electric, and International Harvester.

One reason for dissatisfaction with the results presented in the first table is the mixture of securities mainly held in this country with others in which British participation, though in the aggregate considerable, is trivial by comparison. Many of the latter are leading American speculative stocks, which are given a quotation here because of their very volume and because trade in them is so active, not because they ever have been or may be expected to become predominantly British. For this reason, much better statistical groups, and therefore much more reliable results, are contained in the following table showing the geographical distribution of the securities. International companies, for want, really, of any better method, have been entered under their country of registration.

CAPITAL OF CORPORATIONS REGISTERED ABROAD.
II.—GEOGRAPHICAL DISTRIBUTION.

Area.	SHARE CAPITAL.			LOAN CAPITAL.		
	Total Amount Quoted and Paid up.	Proportion held by British Residents.	Amount held by British Residents.	Total Amount Quoted and Outstanding.	Proportion held by British Residents.	Amount held by British Residents.
Canada and Newfoundland	£'000. 313,380	52.6	164,800	£'000. 269,036	80.5	226,600
Australia and New Zealand	57,164	20.9	11,900	6,310	63.8	4,000
South Africa	88,965	51.9	46,200	10,255	74.6	7,600
India and Ceylon	10,371	45.2	4,700	5,762	91.8	5,300
Other British Possessions	41,534	78.4	32,500	12,548	63.2	7,900
Total, Empire	511,414	50.9	260,100	303,911	82.7	251,400
U.S.A.	1,933,200	1.5	28,900	929,866	2.8	66,500
Latin America	112,004	46.3	51,900	135,225	49.1	155,600
Europe	125,781	43.6	54,800	208,917	37.5	30,600
Asia and Africa	33,156	78.6	26,100	30,762	99.6	30,600
World	2,715,555	15.5	421,800	1,608,681	32.9	530,100
World, excluding U.S.A.	782,355	50.3	392,900	678,815	74.3	504,100

The reason why this table has no such blank spaces as appeared in the previous one is that the omissions of data

which were there concentrated are here spread, and thus, while the individual items are correspondingly less reliable, the aggregates are the more trustworthy. They purport to show that about £422 millions of the share capital and £530 millions of the loan capital (always under limitation of official dealings in London) of companies registered outside this country was held in the names of British residents at the date of the inquiry.

It will be seen that these estimates are in excess of those reached by grouping according to type of company, but, as has already been pointed out, there is reason to believe that the totals in the earlier table fell below the truth, and on the whole the estimate of £950 millions for this section of British capital abroad can be put forward with considerable assurance. The percentage which this represents is a low one, but the last line of figures in the table shows that this is principally due to the inclusion of American securities in which British participation is slight. If the U.S.A. is excluded, roughly one-half of the quoted share capital and roughly three-quarters of the quoted loan capital appear to be registered in British names.

One of the most striking facts about the figures in the second table is the comparatively low proportion of British holdings in companies registered in the Dominions and India. It appears that these companies have raised the majority of their share capital (even excluding securities not officially known here) in their own financial centres, and, in the case of Canada, doubtless in the United States. Bond issues, apart from those of the Canadian railways, have been comparatively insignificant, but have been largely retained in Great Britain. It is surprising to find scarcely one half of the capital of South African concerns, which are almost exclusively mining enterprises and finance companies primarily interested in mining, held in this country. Local residents (including a large volume of cross-holding by the companies themselves) no doubt account for a substantial proportion of the remainder, but it is likely that foreign interests are considerable too.

Once more, as in the statistics which we published concerning British companies abroad, a distinctly higher percentage of the debenture securities is still held in this country than applies to share capital. That is, of course, due in part to the greater mobility and greater interest to international investors of securities carrying the equity of a company. But it also illustrates the shortcomings of these figures in that they comprise blocks of securities issued and largely retained over here as well as issues which are primarily foreign or colonial in origin and ownership, but which for one reason or another have been listed on the London Stock Exchange. Apart from certain European and American bonds, the latter description applies mainly to shares. In spite of this defect, the £950 millions figure is probably accurate, subject to the limits of the inquiry, within a margin of £50 millions one way or the other. It excludes, however, a large volume of nominee holding which it is quite impossible to ascertain. Inquiries of the financial firms most intimately in touch with this aspect of international investment lead us to believe that the figure for the U.S.A. should be increased by anything from 50 to 100 per cent. on this account, but there is comparatively insignificant nominee holding in the other groups, and it would be unsafe to increase the grand aggregate by more than £50 millions, which would raise it to just £1,000 millions.

THE CO-OPERATIVE MOVEMENT.

(BY A CORRESPONDENT.)

ONE of the ideals of the working people who founded the modern co-operative movement in the old shop in Toad Lane, Rochdale, in 1844 was the "self-employment" of their members in their own shops and mills. The original premises in Rochdale have been acquired by the co-operative movement and are now being restored to their 1844 appearance with a view to their early opening as a museum and testimony of the co-operative faith. But the realisation of the idea of "self-employment" is not so near, for the 1,234 retail societies in existence in

this country only employ 4.03 per cent. of their membership. At the end of 1925 they employed 4.16 of their membership, so that the number of employees is not keeping pace with the rapid growth of co-operative membership during the last few years.

The returns of the Co-operative Union, which (owing to the delay of many societies in supplying detailed information) are only now available for 1929, are significant of the intense competition which faces the movement. This is being quickened by the merging of multiple shop concerns in close association with the sources of the supply of their stocks. Co-operative societies, too, are amalgamating. In 1903 there were 1,458 retail societies as compared with only 1,051 twenty years before. By 1923 they had fallen to 1,314. Since then a policy of amalgamation has developed and there were, at the end of 1929, only 1,234 retail co-operative societies. But there are now 6,168,904 members, as compared with only 4,509,256 in 1923. The tendency for amalgamation is growing; and although 757 have less than 2,000 members each, the advance of the others is encouraging the smaller units to link with their larger neighbours. Thus seventeen societies have more than 50,000 members; and two in London and the societies in Birmingham, Leeds and Liverpool have an aggregate membership that is as large as the total number of members in the 1,240 societies in existence in 1890. Thus the advance of the movement has been mostly gained in the last forty years; the first fifty years were hard years of struggle with many failures restricting the rate of progress.

The share capital of all types of co-operative societies is now £120,828,038. The total turnover in 1929 was £346,320,683 and there was a net surplus of £29,798,607 before the deduction of interest on share capital. These figures include the operations of the wholesale and productive societies as well as the retail societies. Those of the latter constitute the real position of the movement, as they are the market for the others. Here the share capital is £106,564,889, an average of £17 5s. per member; their loan capital is £21,157,279, or £3 4s. per member. To this can be added £4,817,112, being the amounts deposited in the small savings or penny banks of the societies.

During 1929 lower prices ruled than in 1928 and the increase in the volume of supplies is greater than is revealed in the increase in money value. The total retail sales were £216,967,099, an increase of £7,577,544. This represents an individual purchase per member of £37 4s. in 1929, about the same amount as that to which it fell in 1924 from the highest point of £56 10s. in 1920. Not only have the lower prices conduced to this result but the lower rate of purchase is also a reflect of the decreased spending power of the members. There is a great variation in the purchases in the various districts, ranging from £28 per member in Devon and Cornwall to an average of nearly £52 throughout Scotland, where the dividends on purchases are twice as high as those paid south of the Tweed. The restricted buying capacity of the bulk of the members is shown also in the increase of debts owing to the societies, these having increased to £5,209,469, an average of about 16s. per member—all the more significant when it is remembered that the co-operative movement was started on a ready money basis. The advent of the mutuality club and credit business has shifted the old advocacy of co-operation as a means of thrift and cash payments.

Of the total of 248,726 workers employed in the co-operative movement, 175,666 are working for the retail societies, their wages being £22,944,608 in 1929. The average annual wage of the employees engaged in production—baking, laundry, boot repairs, etc.—by the retail societies was £142 15s. The distributive wages per £ of sales has steadily increased from 1s. 4d. in the £ of sales in 1925 to 1s. 5½d. in the £ last year; on the other hand the average sales per distributive employee has equally steadily decreased from £1,875 in 1925 to £1,737 in 1929. This lessened turnover alongside higher labour costs is one of the overhead charges that the societies cannot reduce because of the need for a fully

comprehensive service and because the vigilance of the trade unions in the distributive trades has obtained concessions from the co-operative societies that they cannot demand from outside firms and retailers with similar success.

Despite these heavy standing commitments the retail societies have been able to charge sufficiently highly to raise the percentage of profit on retail sales from 9.8 to 9.9 in 1928 and 1929. On the share capital employed the surplus has reached 20.28 per cent. In Scotland, where dividends of 3s. and 3s. 6d. in the £ are often paid, the percentage of profit on retail sales is as high as 13.6 per cent.; in North Eastern and North Western England it is 10.8 per cent., while in the South (where the dividends range from 1s. to 1s. 8d.) the profit is 7.28 per cent. on sales. The surplus last year was £26,133,911. From this £4,525,186 was paid as interest on share capital.

Although the membership of the retail co-operative societies is over six millions, the number of families represented is probably less than four millions, owing to the membership of husbands and wives and, in many industrial centres, others of the household. Reckoning four persons to the family the membership of the societies probably reaches about sixteen millions, or a third of the population. The tea trade of the movement, which is the most completely organised of any section, is responsible for one-fifth of the national consumption. It is clear that not all members draw all their supplies from their own co-operative societies; and it is as clear that not many of the societies draw all their stocks from the co-operative factories and works. The dividend is a powerful influence in maintaining the interest of the members; but co-operators are still attracted, as are the public generally, by the commercial firms, companies and retailers whose competitive ways constitute an obstacle to the complete loyalty that co-operative committees expect from their members. In 1927 the membership increased by 7.5 per cent.; in 1928 by 5.4 per cent.; but last year by only 4.8 per cent. Such a slackened rate of progress, together with the steady rise in the debts owing by members are problems to which the leaders of the co-operative movement are likely to give serious attention. Already they have decided on a National Propaganda Campaign next February to quicken the membership and the recent International Co-operative Congress at Vienna discussed the growth of credit in order that it should be earnestly examined in England—the country from which the Continent took its idea of ready-money co-operation and which is now in danger of falling behind its followers by departing from that policy.

REVOLUTIONS.

REVOLUTIONS seem to be part and parcel of this post-war world. At the outbreak of the war it was prophesied that they would be the penalty of defeat. "What has begun here will end there," said a British diplomatist in Berlin, pointing in the direction of the Moabit as he took his leave of the Wilhelmstrasse at the beginning of August, 1914. That prophecy was fulfilled; but it would have demanded still greater insight and greater fortitude—to prophesy that, a dozen years after the end of the war, the post-war revolutions would be with us still. Yet so it is. In this year of grace we have been having half a dozen revolutions in Latin America. We are being told—with an emphasis that protests too much—that there are not going to be fresh revolutions in Germany, Austria and Spain. And we have been broken in to seeing revolutions in permanent session in Italy, Russia and a number of Oriental countries.

A future historian, reading the bare catalogue of these upheavals, may wonder how human life can have gone on at all in such a world. The answer which we contemporaries can leave on record for his benefit is that there are revolutions and revolutions. If revolution in Peru or the Argentine meant as much as it means in China or Turkey or Russia the world would certainly be in a bad way; while if it meant as little in Italy as it means in Latin

America the human race might go on peacefully marrying and giving in marriage without realising that the Flood had come and gone.

Usually—though events in Brazil seem to be a sterner business—your Latin American revolution is the most easy-going kind. It might almost be defined as the cheapest method of changing governments that has been hit upon in the modern world. If the cost per caput of a Latin American revolution were worked out and compared with the income, per caput, of the nation which underwent it, it would often prove to be a much less expensive operation than a general election in Great Britain or a presidential election in the United States. And it effects a further saving in another way. Elections in orderly constitutional countries tend to increase the overhead charges of political life by adding to the number of professional politicians, whereas Latin American revolutions bring welcome relief from this dead weight, since Latin American politicians, like Kilkenny cats, have a convenient habit, for which revolutions give scope, of eliminating one another.

But we will say no more of revolutions which your Russian or Italian or Turk or Persian or Chinese would not recognise as worthy of the name. A revolution in permanent session is a revolution indeed. It gives to private as well as public life the hectic tempo of one of those Babylonish department stores which can only be made to pay if the management keeps the public distracted with perpetual novelties, in and out of season. Such is life nowadays in Turkey or China or the U.S.S.R. One week the citizen has to accommodate himself to a new national head-dress; another week he has to learn to read and write in a new alphabet and make his appointments by a new calendar; another week he has to become an economic pilgrim, progressing towards salvation on a five-years plan. For the unfortunates whose lives have been speeded up to this revolutionary pace, a visit to contemporary Berlin would be a rest-cure. We can picture the Persian visitor, in his compulsory "Pehlevi cap," having the "Nazi cap" pointed out to him in the streets by his German cicerone. "So that is the cap which Herr Hitler is going to make you wear?" "No, he won't go as far as that. He only insists on wearing it himself." The Persian is at a loss to understand why his German friend pulls such a long face over it. "Why, if that is all," he exclaims, "I fail to see your grievance. In Persia, for all I care, the Shah might sport any hat he pleased, if only he would not insist upon making me wear it as well."

We have put our finger here upon a criterion by which revolutions can be classified. There are revolutions (like that at Buenos Ayres the other day) which leave the private lives of ordinary people almost unaffected; and there are other revolutions (like those which are now in full blast all day and everyday in Persia or Turkey or China) which do not leave their victims a soul to call their own. Revolutions of this latter kind have a shattering effect which it is hardly possible for us to conceive. In order to picture to ourselves how the universe is tumbling about the ears of our Turkish and Chinese contemporaries, we must imagine all our national crises of the last four centuries telescoped into the span of a single generation. Try to imagine an England in which the Reformation, the Civil War, the Industrial Revolution and "the economic blizzard" of 1930 are all raging and tearing at the same time. That is the kind of revolutionary tornado in which half mankind to-day is just managing to keep alive.

And there is another way in which revolutions differ. In England we have taken our revolutions one by one—first a religious revolution, then a political revolution, then an economic revolution, and so on, one at a time. We have always behaved like a careful walker who makes sure that one foot is firmly planted on the ground before he lifts the other foot to take the next step. What a much more comfortable form of progress than the fate of the Turks and Chinese, whom the whirlwind of revolution is sweeping across country, over hedges and ditches, head over heels. How is it that we have fared so much better than they? The secret of our success is that, so far, we have always taken our revolutions in good time, and have therefore been free to take them in small and manageable instalments. We have moved with the times,

and we have set the pace, while the Orientals, less wise in their generation, have dug themselves into untenable positions, and refused to budge until it required nothing less than a tornado to blow them into line again with their more provident fellow-travellers.

This suggests another characteristic of revolutions, which is perhaps fundamental. Revolutionary movements are seldom spontaneous or independent. They are nearly always evoked by something that has happened at a previous moment and in another place. The revolutionary spasm is a spurt put on by a runner who has fallen behind his competitors in a race. The revolutionary course is a short-cut by which the laggard hopes to overtake the runners who have kept to the orthodox track. If we survey, once more, the revolutions which happen to be going on round us to-day, we shall see that this formula fits them all. The revolutions in Russia and in the Oriental countries are frantic, because these revolutionaries have set themselves to catch up with the progress of Western civilisation in every sphere of life. These people cannot afford to lift one foot at a time; they must make a flying leap of it if they are to catch up at all. The Fascist revolution in Italy is a less desperate affair, because the Italians have less ground to cover. They are one of the great nations of the Western world, and they are abreast of their sister nations in most of the things that matter. The spur that has driven them into revolution is no more than a feeling that, in spite of the Risorgimento, Italy has not yet fully established her status as a Great Power. In Germany, the goal to which the National Socialists are seeking a short-cut is the restoration of Germany to the position in the world which she occupied before the war, and the removal of the discriminatory burdens and humiliations that have been laid upon her in consequence of her defeat. To many of us who have been contending for the rehabilitation of Germany for the last dozen years, the progress already achieved seems notable. To many Germans, it seems no progress at all. And so the National Socialist movement raises its head to denounce the Stresemann policy at the very moment when in our eyes that policy is being justified by its fruits—the acceptance of the Young Plan and the evacuation of the Rhineland. Finally, the Latin-American revolutions of this year seem, as far as we can divine their meaning, to be attempts at getting back, by short-cuts, to the prosperity which the whole world has lost for the time being.

This aspect of the Latin-American revolutions reveals the *côté faible* of revolutions in general. To the detached observer, it is almost ludicrously obvious that you cannot send up wages and profits by putting out a dictator and putting in a junta. The economic fortunes of South America are bound up with the whole infinitely complicated problem of the economic fortunes of the world. Latin-Americans cannot conjure back prosperity by a local short-cut, and certainly not if they take this short-cut on the political field. The notorious fact is that short-cuts tend to lengthen journeys, and spurts to diminish speeds; and this is why revolutions so very seldom succeed in their objects. Your revolutionary who promises to turn things upside down more often ends by looping the loop—a performance that leaves him where he started. The comedy, or tragedy, of all revolutions is summed-up in their common epitaph: "Plus ça change, plus c'est la même chose!"

Notes of the Week.

The Chancellor in the City.—The present troubled time is not one that a Chancellor, especially a Labour Chancellor, would choose for addressing an audience of bankers and financiers. But it is precisely the moment when the bankers and financiers listen with tense interest to what the Chancellor has to say; and, if they desired food for thought, Mr Snowden gave them a meal in his speech at the Mansion House on Wednesday. His remarks on revenue prospects were in hopeful vein, and a certain amount of relief will be caused by the emphasis which he laid upon

the hope that no new taxation would be necessary in the next Budget. Here is his peroration:—

I stated in my Budget speech that I hoped that probably next year we should be able to avoid any increase in taxation. I think that the psychological effect of any increase in taxation will be very bad indeed, coming, as it would be, upon many of the disappointments which industry and finance have experienced during the last few years. I cannot say, but I shall do everything possible to avoid having to impose new taxation. Possibly I shall have to outrage my strict financial principles, and maybe do things that I could not justify in ordinary circumstances.

Some of his audience may have jumped to the conclusion that Mr Snowden is contemplating a raid on the sinking fund, and it is perhaps a portent that, as our Paris correspondent reports on a later page of this issue, the Caisse d'Amortissement is to be made the means of balancing the French Budget. But without more to go on than this cryptic utterance, criticism would be premature. Whatever transgression Mr Snowden may permit himself, he will be judged on the general performance of his Budget, especially in relation to the observance of strict economy and the fulfilment of his desire that the insurance fund should be put upon an insurance basis. Mr Snowden's passage on economy was unconvincing. Like previous Chancellors, he laid the blame for extravagance upon Parliament. This is disingenuous. It is the Cabinet and not Parliament that controls policy. A strong Government, bent upon true economy, could carry the House of Commons with it. For the rest, the Chancellor's speech was notable for a declaration of his intention "to carry out a large Conversion operation when I think the time is favourable"—which tells us nothing new—and for a sturdy confidence in Britain's ultimate future, which serves as a welcome antidote to the "defeatism" that is too rampant to-day.

The Fighting in Brazil.—News of the Brazilian revolution has given rise to considerable nervousness in some quarters of the City, and there can be no doubt that the situation is sufficiently serious for the marking down of quotations for the Brazilian Government Bonds to be excusable in view of so many factors making for nervousness in the investment markets. It is, however, possible to view the situation without undue alarm. The Parliamentary system, as it exists in this country, is unknown in South America, and, in consequence, any widespread discontent, even though it may be due, as in the present instance, to external economic causes beyond the direct control of the Government, is liable to find an outlet through a political *coup d'état*. Strong action has been taken by the Brazilian Federal Government to suppress the revolutionary movement. Martial law has been declared throughout the country until December 31st next, while, in order to prevent speculation in the exchange or commodity markets, a national holiday for a period of fifteen days was decreed on October 7th, the banks being closed. The intention of the Government to preserve so far as possible the normal movement in trade is evidenced by the fact that exports of coffee from Santos are being permitted through the intervention of the Bank of Brazil, which is operating on the basis of an exchange rate of 5.516d. per milreis. Cables received from the localities directly affected by the revolution have so far been, for the most part, confused and unreliable, whilst official bulletins issued by the Brazilian authorities in London have reflected the usual uncertainty attendant upon the early stages of military operations. Unfortunately, it appears possible that the unsettlement may still continue for a considerable period, any decisive outcome of the present situation being rendered difficult by reason of the extensive nature of Brazilian territories. An underlying cause of the political discontent has no doubt been the difficulty of conciliating the conflicting interests, such as those of coffee producers in rivalling States, and of importers as against exporters in regard to exchange policy. Bearing in mind, however, the great difficulties in regard to the over-production of coffee, which have been surmounted in recent months largely as a result of the successful issue of the Coffee Realisation Loan in April last, it is to be hoped that saner counsels will prevail; and it is perhaps significant that,

immediately upon news of the outbreak, the Brazilian Congress placed at the disposal of President Washington Luis a credit of 100,000 contos of reis, so that the necessary urgent steps to restore public order could be taken forthwith. It is also to be noted that the Brazilian Government has declared closed all ports held by the insurgents, including Pernambuco. Thus, while the present position is obscure, there appears to be evidence that the Federal Government is capable of taking adequate measures to deal with the revolt. Moreover, whatever political results may ensue, there can be no doubt that extravagant rumours regarding the possibility of debt repudiation by any parties which may be called upon to direct the Administration of the Federal Republic should be discredited. The worst feature would be a long drawn-out campaign, and it is therefore to be hoped that whatever the issue, it may come quickly.

The Congress at Grenoble.—At the end of last week the French Socialist-Radical Party—better known, perhaps, in England as the party led by Monsieur Herriot—was in conference at Grenoble. It will be remembered that when Mr Ramsay MacDonald was in office in this country for the first time in 1924, Monsieur Herriot came into power in France a few months later, and that the two statesmen, between them, then secured the acceptance of the Dawes Report and made a spirited attempt to put through the Geneva Protocol. In France, Monsieur Herriot and his followers would still like to see the Protocol brought into force as being the best means yet suggested, in their opinion, for achieving the triple objective of "security, arbitration and disarmament" which was originally propounded by Monsieur Herriot himself at the opening of the fifth session of the League Assembly at Geneva. Their fidelity to the Protocol has been reaffirmed in the resolution on foreign policy which they have voted on the present occasion. The hope is expressed that the French delegates will make concrete proposals, on the lines of the Protocol, next month, at the next—and last—meeting of the Preparatory Commission for the long-heralded League of Nations Conference on Disarmament. The thesis of the French Socialist-Radicals is that the three points in the triple objective ought to be ensued simultaneously and embodied in one and the same diplomatic instrument—either the Protocol itself or some reincarnation of it. Their thesis, unfortunately, is unlikely to be accepted by the parties to the right of them, now in power, which insist that French security must be established before France disarms (another way of saying that foreign nations must disarm before their security, *vis-à-vis* France, may be established). If those who hold this latter view are still in power when the League of Nations Disarmament Conference eventually meets, the outlook for the success of the Conference will be unpromising. Yet, at the moment, it is difficult to see how the present *régime*, or another like-minded *régime*, based on a reshuffling of the same parties of the Right, can be supplanted. The Socialist-Radicals have no chance of defeating Monsieur Tardieu at the general election, eighteen months hence, except in co-operation with the Socialists, and such co-operation seems unlikely in the near future. Though the two parties agree substantially in their foreign policies, they are too far apart in their domestic policies; and they are both bound down, not only by tradition but by positive party rules, not to make marriages of convenience with parties from which they differ in principle. Thus we dare not hope that last week's Socialist-Radical resolution on foreign affairs (even in the watered-down form in which it finally passed) will either directly or indirectly inaugurate any new departure in French foreign policy.

Uneasiness in Spain.—The present situation in Spain is calculated to produce political malaise. Since the snuffing out of the Dictatorship, the best part of a year has passed, during which the country has remained in a kind of political limbo which is neither bare-faced autocracy nor healthy self-government. The sense of dis-

comfort seems to be increasing as the elections approach—nobody knowing whether these will produce a *dénouement* or will leave the situation very much as it is now. If the future depended on the zeal of the Monarchist parties, the prospects of the Dynasty would be poor; for the Monarchists are showing themselves remarkably apathetic. The factor that tells against the probability of any very striking change is the failure of the Republicans and the Socialists to join forces. In Spain, unlike most Continental European countries, the Socialists are the more constructive of these two groups. They intend to take part in the elections, and have been making overtures to the Republicans for co-operation, to which the Republicans, so far, have not responded. Meanwhile, labour disturbances of a semi-political complexion have continued in different parts of Spain; and last week the Prime Minister, General Berenguer, announced his intention of taking a strong line—taking the public into his confidence in a long *communiqué* after the manner of the late General Primo. On Saturday the 11th, a number of arrests were made, both in Madrid and in the larger provincial towns, particularly Barcelona. The persons singled out included not only politicians and editors belonging to the anti-dynastic parties, but several officers. To some extent, the Government's new policy of activity seems to have had the effect intended. A general strike appears to have been averted at Seville by energetic measures on the Civil Governor's part, and nothing seems to have come of a threat of a general strike at Barcelona. On the other hand, the fact that officers were included among the persons arrested, and that the Minister of Justice, in a statement to the Press, spoke of Spain "sitting on a powder mine," has set a rumour circulating that the Government have discovered a definite conspiracy for setting up a new Dictatorship. The rumour has been denied, no doubt with good reason, by the Prime Minister himself; but the sense of political instability (with consequent weakness of the peseta) has been enhanced. To a foreign observer, it looks as if by far the best thing that could happen would be for the Republicans to combine with the Socialists in order to bring into office a coalition government resting on a strong parliamentary majority. The recent Republican Congress at Madrid seemed to show that what the Spanish people really desire is an orderly, constitutional parliamentary government.

The Heimwehr and the Press.—The Heimwehr have lost no time in asserting their claim that they are the leading partners in the new Austrian Government, even though all the Cabinet offices except two are in Christian Socialist hands. On Thursday, October 9th, three bourgeois newspapers—two of them being none other than the *Neue Freie Presse* and the *Neues Wiener Tagblatt*—failed to appear because the entire editions had been confiscated. Their offence was "spreading rumours calculated to cause uneasiness"; and they had committed it by reporting certain charges of treason which had been made against a former "chief of staff" of the Heimwehr by the Agrarian Party. The present Minister of the Interior, the Prince of Starhemberg, has revoked an expulsion order which had been issued against this gentleman; and it is logical enough that he should also suppress the publication of charges against him which might make the expulsion order seem justifiable. At the same time, the action which the Prince has taken is more high-handed than anything that was done, within living memory, under the *ancien régime*. Even during the war, the Hapsburg Government confined its interference with the Press to excising paragraphs and columns which gave indiscreet or discouraging accounts of the military situation. It will be interesting to see whether the Heimwehr element in the Government follows this stroke up with others in the same manner, and whether, if it does, Austrian public opinion will tolerate it. It is hard to believe that, in these days, a minority Fascist element in a coalition government in the Austrian Republic can behave with impunity in a more arbitrary fashion than seemed wise to the Hapsburg régime in the old days before the loss of

the war, and the break-up of the Empire. No doubt the Austrian Fascists are exhilarated by the successes of the "Nazis" in Germany, and are playing the dangerous game of political surf-riding on this rather frothy wave. We doubt whether they will ride into power so easily as they seem to expect.

Nine Months' Overseas Trade.—The salient feature of the foreign trade returns for September alone, shown in the following table, is that they are in every case the worst for any single month of the current year. Compared with September of last year, imports, exports and re-exports, all show a uniform decline in value of as much as 20 per cent.

	MONTH OF SEPTEMBER. (000's omitted).					
	1930.		Increase or Decrease as compared with			
			September 1929.		September, 1928.	
Imports	£	£	£	%	£	%
British exports	78,652	—19,764	—20.1	—	9,027	—10.3
Re-exports	42,741	—12,364	—22.4	—	13,879	—24.5
Total exports	5,393	—1,343	—20.0	—	1,462	—21.4
Excess of imports over total exports	48,134	—13,706	—22.2	—	15,342	—24.2
	30,518	—6,058	—16.8	+	6,315	+25.1

As has been the case throughout all the year, part of this value contraction is accounted for by the simultaneous fall of 19 per cent. in wholesale prices. It must, however, be emphasised that these prices relate mainly to primary products, and that those of finished goods have fallen to a far less extent. Thus, taking our foreign trade in aggregate, including all classes of goods, there must have been a substantial decrease in volume. The nine months' figures are equally disappointing. It is true that the percentage fall in their value since 1929 is less than it was for September alone, but reference to the course of commodity prices during the past two years shows that their average fall between the first nine months of 1929 and 1930 was insufficient to explain entirely the fall in the trade figures. The volume for nine months has unquestionably contracted.

	NINE MONTHS ENDED SEPTEMBER 30TH. (000's omitted.)					
	1930.		Increase or Decrease as compared with			
			1929.		1928.	
Imports	£	£	£	%	£	%
British exports	785,194	—111,960	—12.5	—	100,881	—11.6
Re-exports	441,115	—102,296	—18.9	—	93,839	—17.6
Total exports	67,879	—16,759	—19.9	—	23,873	—26.1
Excess of imports over total exports	508,794	—119,055	—18.9	—	117,712	—18.8
	276,400	+7,090	+2.6	+	16,831	+6.5

How serious this volume contraction has become is shown by the third table, giving volume figures for certain important British exports. Comparing 1929 and 1930 (first nine months in each case), coal shipments have shrunk by 5 per cent., those of iron and steel by 23 per cent., and those of machinery by 12 per cent.

	SOME LEADING EXPORTS. (Quantities.)			
	First Nine Months.			
	1928.	1929.	1930.	
Coal	37,009,534	44,124,337	41,768,603	tons
Pig iron and ferro-alloys	320,345	423,289	251,516	tons
Railway material	486,726	357,805	337,723	tons
Total iron and steel	3,125,733	3,274,285	2,526,092	tons
Textile machinery	83,275	97,786	172,410	tons
Total machinery	426,243	416,441	366,997	tons
Cotton yarns	125,472,300	126,137,300	102,414,100	lbs.
Wool tops	2,910,694,200	2,848,350,500	1,995,959,300	sq. yds.
Woolen tissues	266,258	244,807	208,256	sq. yds.
Worsted tissues	102,881,000	84,771,300	62,701,000	sq. yds.
Linen piece-goods	30,175,800	37,365,000	26,845,700	sq. yds.
Boots and shoes	51,039,900	54,527,400	47,693,954	doz. pairs
Leather	826,031	714,026	194,665	cwt.
Paper and cardboard	317,863	265,727	3,342,107	cwt.
Locomotives	3,423,054	3,692,258	34,981	tons
Motor cars and chassis	32,863	28,746	22,289	number
	22,407	31,383		

The textile trades are still more seriously affected. Exports of cotton yarn have fallen in volume by 19 per cent., and of piece-goods by 30 per cent. Woollen tissues are 26 per cent. lower, and linen piece-goods 12 per cent. lower. The only trade, in fact, which has held its ground is that of locomotives. Here the 1930 results are relatively satisfactory.

Iron and Steel Production in September.—There was no further fall in the number of blast furnaces in operation during September, since the two furnaces that went out of blast were replaced by two blown in; and the production of pig iron (425,000 tons) actually registered a small increase over August. Steel production was exceptionally low in August (451,300 tons) owing partly to the holidays, but the September output (580,600 tons) did not return to the level of July (621,400 tons). As predicted last month, the import figures begin to reflect the increased buying from the Continent consequent on the price declines following the suspension of control by the International Steel Cartel. Imports increased to 223,800 tons, compared with 195,400 tons in August. Exports of iron and steel in September (200,300 tons) not only fell to their lowest level since December, 1926, but were actually less than the imports for the first time since April, 1927, when imports were exceptionally heavy on account of the orders placed during the coal stoppage of the previous year. There were few price changes during the month, and the Board of Trade price index for iron and steel products (1913 = 100) showed only a small decline from 112.0 in August to 111.6 in September. The following table compares the production of pig iron and steel and the import and export figures in each of the first three quarters of 1930 with the corresponding period of 1929:—

	PRODUCTION, IMPORTS AND EXPORTS OF IRON AND STEEL. (In thousands of tons.)							
	Output of				Imports.		Exports.	
	Pig Iron.		Steel Ingots and Castings.					
	1929.	1930.	1929.	1930.	1929.	1930.	1929.	1930.
1st qtr....	1,574.0	1,922.8	2,399.4	2,373.6	586.4	850.0	1,151.4	983.8
2nd qtr....	1,923.9	1,797.3	2,483.3	1,988.1	753.4	683.0	1,089.4	813.7
3rd qtr....	2,018.5	1,327.8	2,406.0	1,653.3	721.5	618.0	1,033.5	722.5
Total	5,516.4	5,047.9	7,288.7	6,015.0	2,061.3	2,151.0	3,274.3	2,520.0

It will be seen that production shows a progressive decline and that while, over the first nine months, production of pig iron was 10 per cent. less than in the corresponding period 1929, the output in the third quarter was 33 per cent. less than in the third quarter of 1929. In the case of steel the decline in production is 18 per cent. over the whole period, but ranges from one per cent. in the first quarter to 31 per cent. in the third quarter. Imports in the first nine months of 1930 are but little higher than in the same period in 1929, and in the second and third quarters this year have been actually less than in the corresponding quarters last year. This is due partly to the fact that imports in the first quarter last year were low on account of the severe weather experienced on the Continent which caused deliveries to be postponed and rendered the figures in the second quarter higher than they otherwise would be, while imports in the last few months were rather low, partly owing to the slackness of demand and partly to the refraining from purchasing in the hope that Continental prices would fall still further. Exports so far this year are 23 per cent. less than last year, and in the third quarter of the year were 30 per cent. less than the third quarter last year.

The Slump in Shipbuilding.—Events, unhappily, have borne out only too fully the correctness of the view which we expressed three months ago that the outlook for the shipbuilding industry was far from encouraging. The latest quarterly return compiled by *Lloyd's Register* brings out the severity of the slump which has occurred. At the end of September the total tonnage under construction in the world was 488,000 tons lower than three

OBLIGATION

is the important factor in saving. Set aside a pound a month for a monthly premium policy—you will not miss it. In 20 years' time you will have £342.

Head Office: 10 Fleet Street, London, E.C.4. Estd. 1836

months ago, and 275,000 tons of the aggregate decline were accounted for by the contraction of work in hand in Great Britain, where the total amounted to 1,116,746 tons, or 332,000 tons less than a year ago. Even in the depression of 1928, work in hand did not fall to a much lower figure; and the fact that only 161,000 tons were commenced during the quarter, against launchings totalling 379,000 tons, indicates that the unemployment of British yards is likely to be progressive. Moreover, it is noteworthy that the tanker tonnage under construction, though 93,000 tons less than at the end of June, still amounts to 540,000 tons, leaving only 576,000 tons for general shipbuilding—a figure which compares very unfavourably with 923,000 tons in the depth of the depression at this time two years ago. Until there are signs of a general revival of world trade there is little in the situation of markets to inspire shipowners with sufficient confidence to place orders for new tonnage except in cases where replacements are essential in order that existing services may be maintained. With this outlook, the problems of co-ordinating capacity with demand which confront National Shipbuilders Security, Ltd., are seriously aggravated.

Idle Shipping.—The latest quarterly return compiled by the Chamber of Shipping of the tonnage laid up idle in the principal ports of Great Britain and Ireland is an eloquent testimony to the depth of the depression which the industry is undergoing. On October 1st the vessels idle numbered 368, totalling 885,418 net tons. Net tonnage declined during the quarter by 33,435 tons, or 3.6 per cent., but this reduction was much less than that normally to be expected at this season, when the shipment of Northern Hemisphere crops usually absorbs a large proportion of the summer "slack." Thus even last year idle tonnage fell between July 1st and October 1st by 115,000 tons. The latest figure is 620,000 tons higher than a year ago.

Preference and Empire Wheat.—A correspondent of the *Manchester Guardian* has raised an important point which is too often overlooked in the discussion of Mr Bennett's proposals to secure the British market for Empire wheat. This is the fact that, when the wheat imports of British countries are set off against the wheat exports of the Empire, there remains a substantial export surplus, which means that the Empire wheat-growing countries are in a very considerable measure dependent upon foreign markets. The extent of this surplus in recent years is shown in the table below:—

Crop year	EMPIRE IMPORTS AND EXPORTS OF WHEAT (Million bushels).			
	Net Exports of		Net Imports of	
	Dominions exporting	countries importing	Export Surplus.	
Aug.-July.				
1923-4	451.8	248.2	203.6	
1924-5	353.8	237.8	116.0	
1925-6	409.3	222.7	186.6	
1926-7	406.7	246.0	160.7	
1927-8	411.7	238.8	172.9	
1928-9	539.6	233.0	306.6	

If, therefore, a tariff were placed on foreign wheat and Dominion wheat left free, the foreign wheat which was no longer able to enter the British market would tend to drive Dominion wheat out of the foreign markets, and

the position of the Dominions exporting would be in no way improved. Since, in fact, Dominion wheat cannot conveniently be used to replace foreign wheat entirely there would also be some rise in price to the consumer in this country. In view of the extreme inelasticity of the British demand for wheat we cannot, however, press very far the further argument of the *Manchester Guardian* correspondent that this would necessarily prevent the demand for Dominion wheat from expanding to the full extent of the curtailment of the consumption of foreign wheat, and so involve a slight net loss of markets to the Dominions. The main point is that there would be no gain. It may perhaps be argued that since the ousting of Dominion wheat from foreign markets could only be achieved by price-cutting, the ultimate effect of such measures would be a curtailment of foreign wheat production to the advantage of the British Empire. In view, however, of the expense and political difficulties involved in cutting down wheat production in countries where it is important, it is certain that any such development would be preceded by years of embittered and destructive economic warfare in which all the combatants would be losers.

Empire Tariff Troubles.—Our Ottawa correspondent writes:—Canadian motor manufacturers and subsidiary establishments are much disturbed at the recent increases of the New Zealand tariff rates on motors and their parts which were avowedly made by way of reprisal for Canada's behaviour in regard to New Zealand's butter exports. New Zealand butter is still coming in in large quantities, and keeping Canadian butter prices low, but the existing trade arrangements terminate next month, and Mr Bennett is faced with the delicate problem of negotiating with Premier Forbes a new commercial treaty which will simultaneously be palatable to the Canadian dairymen, and preserve the New Zealand trade of certain manufacturing interests. But obviously if New Zealand and Canada cannot reach a satisfactory trade arrangement, the prospects of any scheme for ringing the Mother Country and all the Dominions with the same tariff hoop must be exceedingly dim.

Government Cotton Report.—Our Manchester correspondent writes:—It is rather more than three months since the report of the Government Committee on the cotton industry was published. Since then the several organisations in Lancashire connected with the employers and the operatives have discussed the recommendations, and numerous sub-committees are making an exhaustive inquiry as to what action can be taken. So far, however, there has not been any joint conference of representatives of the masters and the workpeople. It is now announced that Mr William Graham, the President of the Board of Trade, and Mr J. R. Clynes, who presided over the closing sitting of the Government inquiry, will be in Manchester next week for the purpose of consultations with the several trade interests. It is understood that before the opening of Parliament the Prime Minister is anxious to ascertain the facts of the situation, and he has asked Mr Graham and Mr Clynes to prepare a report for the Cabinet. Although the arrangements in Manchester are being made by the Joint Committee of Cotton Trade Organisations it is understood that the two members of the Government will have separate conferences with the different sections. The only definite statement which has been made on behalf of Lancashire trade with regard to the Government report is that of the Master Spinners' Federation, and the reply of this organisation was that the Government Committee had ignored certain outside factors which were of vital importance, these being the effect of deflation, the fall in the price of silver, longer working hours in competing countries, the increase of tariffs and the heavy burden of taxation. The leaders of the industry are convinced that any action taken will have to be in the nature of reducing costs of production. On this point some progress has been made this week with

regard to the new system of more looms per weaver. A sub-committee of the Manufacturers' Association has prepared a wage list, and this is now being submitted to the district associations, and if approved will be placed before the trade unions. Of all the attempts which have been made in Lancashire to deal with the depression this proposal of more looms per weaver is likely to give more tangible results than any other scheme, as it is apparent the change proposed will mean a definite decrease in the cost of producing every kind of cloth which can be made under the revised conditions, whilst the operatives employed will receive a higher wage than previously. Such a development will, of course, mean some displacement of labour, but the employers have promised that this side of the question shall receive their careful consideration and everything possible will be done to prevent real hardship.

A Black Crop Season.—The distress suffered by the British farmer in consequence of the unsatisfactory state of the markets for agricultural produce is widely recognised. Less familiar, perhaps, is the fact revealed by a special report in the *Times* that this season the farmer will have pitifully little to bring to those markets. Until June the outlook was considered fair, but the following weeks brought weather which has ruined a very large part of the cereal harvests. Beans, potatoes and roots are in fair condition, but the state of the cereal crops is the worst in the last six years, as the following table shows:—

CONDITION OF PRINCIPAL CROPS ON OCTOBER 1ST.

	Wheat.	Barley.	Oats.	Beans.	Potatoes.	Roots (except Mangolds).
1925	92.48	86.95	87.11	90.18	92.96	77.53
1926	90.23	91.9	96.92	86.3	85.27	91.06
1927	86.87	84.72	84.31	88.87	83.24	85.81
1928	92.36	93.79	93	84.25	94.5	91.25
1929	95	94.89	91.56	78.12	91.45	75.25
1930	84.85	81.62	83.84	90.35	87.6	82.48
Ten years' average ...	91.16	87.32	87.74	84.03	87.38	83.5

Except in Kent, wheat is giving a poor yield; barley has been badly injured, and oats are sprouting in the stook. Individual farmers' reports make very painful reading, and the table of yields given below bears them out:—

ASCERTAINED AND EXPECTED YIELDS PER ACRE OF PRINCIPAL CROPS IN GREAT BRITAIN.

	Wheat. Bushels.	Barley. Bushels.	Oats. Bushels.	Potatoes. Tons.
October 1st:				
1925	32.54	33.6	45.15	6.98
1926	32.35	35.07	48.99	6.07
1927	31.77	33.83	43.21	6.02
1928	34.93	37.67	46.83	7.04
1929	36.25	38.09	47.76	7.15
1930	31.35	32.58	43.36	6.69

Not even the most ingenious devices of politicians will avail to prevent 1930 from going on record as one of the worst seasons British agriculture has experienced.

The Cloth Boycott in India.—Lancashire has been keenly interested this week, writes our Manchester correspondent, in the cables from India with regard to recent developments relating to the boycott of foreign goods. It is announced that the Bombay Native Piece-Goods Merchants' Association passed a resolution at the beginning of this week permitting its members to open their shops for the disposal of stocks of foreign cloth. It was agreed, however, that the members should maintain their previous decision not to buy further supplies. It seems, however, that when the time came for putting the resolution into operation there was considerable resistance from the representatives of the Congress party, who assembled in large numbers outside the bazaars. According to the latest information business has not been resumed and it looks as though the merchants are afraid to reopen their shops. This development, however, indicates that the boycott is weakening and Lan-

cashire manufacturers are looking forward to more business at an early date. In the meantime Manchester merchants are receiving more cables from India generally asking for prices to be wired out. In small lots rather more trade is now being done, but the political situation is still causing uneasiness. It must also be remembered that Lancashire manufacturers are now handicapped by the increase in the import duties, and in coarse goods it is more difficult than ever to compete against the products of the Indian mills.

The Central Collieries Association.—A Leeds correspondent writes:—It was announced after a meeting held in Leeds on Thursday of last week that several District Associations had decided to withdraw from the Central Collieries Commercial Association, the voluntary body which has operated the marketing scheme of the Midland counties since the early part of 1928. The seceding districts are Notts. and Derbyshire, Leicester, Warwickshire and Cannock Chase. This virtually means the closing down of the Association which the Yorkshire owners had hoped would be continued for the purpose of maintaining the subsidy. An essential part of the scheme was the levy on inland coal for the purpose of assisting export by means of a subsidy. The Yorkshire owners, who were the prime movers in the scheme, pointed to the necessity of relieving the home market by resuming an export trade proportionate to that done in pre-war days. In the year ending March, 1928, immediately before the Association started operations, the exports from the Humber totalled only 2,566,733 tons, exclusive of bunker coal. In the first year of the Association's working exports rose to 4,728,534 tons, and in the year ending March, 1930, to 7,018,712 tons. Now that the Coal Mines Act imposes upon districts a marketing scheme containing provisions for regulation of output and price, some of the owners, less concerned with export than those in Yorkshire, do not see the necessity of continuing the Association as a separate body for the sole purpose of continuing the levy. The levy and export subsidy ceased on September 30th, and this is bound to have a considerable effect both on export prices and on the volume of export from this area.

Medical Sickness, Annuity and Life Assurance.—This society, which since 1919 has been incorporated as a mutual society, finds its sphere of usefulness in the medical and dental professions, and the seven directors of the society are drawn entirely from these callings. The society maintains a sickness fund and a life assurance fund, and these now amount to £412,000 and £259,000 respectively. It is understandable that a permanent sickness contract offers particular attractions to doctors and dentists, and the society is in a position to offer these benefits coupled with an ordinary life assurance policy. Naturally the business is of small dimensions. New life policies were issued last year totalling £274,000, and the premium income in both departments amounts to just over £100,000. The weight of overhead charges bears heavily on such a small company, and, in spite of the fact that no commission is payable, the expenses work out at 15.4 per cent. of the combined premium income. The society is of the greatest assistance to doctors and dentists in assisting them to purchase houses by means of mortgages coupled with endowment assurance life policies as collateral security. In another direction the society breaks new ground in granting loans to young medical and dental practitioners for the purpose of the purchase of practices or shares in partnerships. The loans granted of this kind have risen by £27,000 in the last year, and now total £65,000, or nearly 10 per cent. of the total balance-sheet assets. For the rest the society pursues a very conservative investment policy, reflected in the relatively low rate of interest earned on the funds. The sickness fund, which is assessed to income tax on profits, earned last year £3 19s. 11d. per cent. net, and the life assurance fund earned in the same period £4 8s. 2d. per cent. net.

A course of six public lectures on "Newmarch and His Contemporaries" will be given by Professor T. E. Gregory, D.Sc., on Tuesdays, October 21st, 28th, November 4th, 11th, 18th and 25th, at 5.30 p.m., in the Department of Applied Statistics, University College, Gower Street, W.C. 1. The chair at the first lecture will be taken by Sir Basil P. Blackett, K.C.B., K.C.S.I. The lectures are open to the public without fee or ticket.

Money — Politics — Stock Exchange — Industry — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 8.

MODERATELY firmer short-term money is ruffling the otherwise placid surface of the credit market. Month-end dividend and interest payments account for much of it, but the trade expansion which normally reaches its peak in mid-October is partly responsible. Both day-to-day money on the Stock Exchange and funds up to six months' maturities are a trifle firmer, and the latest report of the member banks of the Federal Reserve System shows a substantial increase in commercial loans. However, there is no likelihood of any real tightness, and the seasonal credit demands of the interior will be easily satisfied.

More than usual interest has been attracted to the commercial bank statements of condition published as of September 24th, the first since the June 30th statements. Deposits fell sharply, the New York banks losing upward of \$1,000,000,000 since midsummer, but part of the decline was of a seasonal nature, and much of the remainder was due to a lower "float," that is, clearing house checks and exchanges in transit, the volume of which depends largely on stock market activity. The Stock Exchange was unusually quiet at the time the reports were made up, thereby cutting into gross deposits. There was only a moderate drop in net deposits. Moreover, the banks reported earnings above expectations. Nearly all the important City banks covered their dividend requirements with something to spare, in spite of lower deposits and the lowest interest rates in 15 years.

Low money rates and consequently declining yields on high-grade securities have borne heavily on the savings banks. For a long time the New York banks have maintained a 4½ per cent. deposit interest rate, but recently a number of them have reduced the rate paid to depositors to 4 per cent., and probably the others will fall into line before long. The immediate effect was to stimulate the market for high-class bonds, particularly municipal issues, on the idea that the savings banks could now afford to pay more for them. Savings banks have also been embarrassed by large offerings for deposit of cash which they regard as "business money" looking for employment and not savings cash, strictly speaking. Some have taken steps to cut down such deposits, fearing not only inability to maintain deposit rates if compelled to invest at current terms additional large sums, but also heavy withdrawals of deposits later on when trade improves and business men find other outlets for their surplus money.

Rather unexpectedly the Treasury has announced a fresh bill tender of 62 days to the total amount of \$100,000,000, half of which will be dated October 15th and half October 16th. A bill maturity of \$120,000,000 must be met next month, and, of course, the usual financing around the December tax date must be done, note maturities amounting to \$483,000,000. With the new issue there will be outstanding \$220,000,000 of Treasury bills, the largest volume at any one time since the Treasury began to make use of the non-interest bearing bills.

Concern over the situation in Brazil is considerable, and those who fear the worst are anxious lest the uprising result in cessation of interest on some of the bond issues, regardless of the final outcome. The expense of putting down the revolt will in any event be heavy and will probably hamper any Government in maintaining service on debts, especially in view of the interruption to trade incident to the closing of the banks and foreign exchange markets and the fall in coffee. Conditions in Cuba and elsewhere among our Latin-American neighbours are, on the other hand, improving somewhat.

No great interest in politics is being taken in the country at large. Primary elections late in the summer at which candidates for minor offices were selected were more lively than usual, owing to the multiplicity of office seekers, as usual in a year of business depression, but interest in the final voting to be done in November is milder. The Republicans are more or less reconciled to seeing gains by the Democrats, the party in power invariably losing seats at the Congressional elections held in "off" years—i.e., other than presidential years—when business is poor. The coming elections have not in any manner been a factor in the security markets, nor are the results likely to be.

Stock market prices have been settling down under the reluctant but positive realisation that no trade improvement worth mentioning is likely to be seen during the remainder of this year. Even seasonal gains are lacking in some directions. Steel ingot output in September dropped more than 7 per cent. below that of August, following a modest upturn in the latter month. It was the smallest for any month since December, 1927, and it is probable that the moderate rise in steel mill orders last month merely helped to keep down stocks, which apparently have been accumulating. Pig iron production also fell last month, the decline amounting to nearly 7 per cent., and the rate being lowest since 1924. At the same time, prices for pig iron are barely steady and steel is weakening. Steel scrap has declined 50 cents a ton for the second time in a fortnight. The motor trade is not increasing its orders nor are the railroads. Building is requiring more steel, but the oil industry is taking less, owing to further curtailment of drilling.

While numerous railroad executives as well as other business men are insisting that stocks of manufactured goods in the hands of consumers are low and that shortly the movement of commodities must quicken, no sign of it has come yet. Railroad traffic for the last week in September was the smallest for any corresponding week since 1921, and was below the preceding week. Complete returns of railroad earnings for August show a drop of 32.5 per cent. compared with a year ago, and it is unlikely that much more favourable results were obtained in September. The result has been further liquidation in all classes of railroad shares, which are now selling much lower than their worst prices in the autumn decline of last year. However, dividends for the majority of the strong roads are believed to be quite safe.

Building contracts awarded last month were 5 per cent. under the August total for the States east of the Rocky Mountains. The drop was 25 per cent. under a year ago. An encouraging development was a considerable increase in residential construction, a section of the industry which has been lagging for more than a year. For the first nine months construction undertaken in these States was only three-fourths that of the same period of last year.

The decline in wholesale prices, interrupted in August, was resumed in the following month. Dun's index shows a recession of 1.6 per cent. for the month, lower quotations for foodstuffs being almost entirely responsible. Conditions in cotton are becoming somewhat demoralised, and leaders in the trade as well as Government officials are considering relief measures, which will probably involve further extension of large credits by Federal agencies.

FRANCE.

Radical Socialist Congress — Budget — Industrial Activity — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, October 15.

THE effect of the proceedings in general at the Radical Socialist Congress at Grenoble has been to give the impression that the Party has distinctly veered slightly towards the Right, and that the possibilities of the arrival in power, in the near future, of a strong "Cabinet of Republican Concentration" have been appreciably strengthened. The texts of the resolutions themselves are as obscure and puzzling as usual, but are more eloquent by what they do not express than by the well-worn phrases designed for consumption by the mass of silent militant voters in the Party in the country districts, who still regard anti-clericalism as the main plank in the Party's political platform. As a sop to these unbending members, M. Dumesnil, who had the temerity to flout Party discipline and accept the portfolio of Minister of Marine in the present Cabinet, was formally expelled from the organisation. M. Herriot and the other leaders, however, were careful to refrain from any specific pronouncement that would preclude them from once more participating in a Coalition Cabinet, should the opportunity arise. Above all, care was taken to prevent any repetition of the fatal stampede by the wild men of the Party, at the historic Angers Congress, which brought about the enforced withdrawal of M. Herriot and his three Radical Socialist colleagues from the then Ministry.

The Party declaration of policy, at the same time, was appreciably strengthened in so far as its attitude towards national defence is concerned. Hostility to M. Tardieu in person was undisguised, but in this instance also the barking may be accepted as likely to prove much superior to the intention to bite. A strenuous effort to overthrow the Ministry is practically certain to be made when the Chamber reassembles shortly. There are indications, however, that even if this effort proves successful—which is no more than a bare possibility—M. Tardieu would be quite likely to be called on to succeed himself, either with or without the co-operation of the Radical Socialists. From the international point of view the return of M. Herriot and his friends to power, as members of a Coalition Cabinet, would ensure a continuance of the Briand policy of appeasement and reconciliation, while the presence of M. Tardieu (either as Premier, or as head of one of the principal Ministries) and several of his present Cabinet associates would be a guarantee of French security and of respect for treaty obligations.

The preamble to the Budget Bill for 1931-32 has now been completed and sent to the Chamber's Finance Commission, with a view to beginning the annual finance debate in Parliament towards the end of September. The document shows that since 1920 the national expenditure covered by the Budget has been substantially more than quadrupled (on the basis of the actual respective values of the franc ten years ago and in 1929), the total revenue having risen from 13,814,369,800 francs to 56,922,148,470 francs, which is equivalent to an increase of 312 per cent. The total credit opened for the financial year ending March 31st next was 50,398,167,195 francs, representing (after deducting credits representing reimbursements, etc.) 49,779,384,795 francs net. This total expenditure is distributed as follows:—

Public debt and allowances to war victims.....	23,856,647,917f.
Expenditure on national security	10,921,678,139f.
Cost of administration	6,478,667,475f.
Education and social expenditure.....	5,329,002,139f.
Expenditure on national economic equipment	3,089,325,760f.
Parliamentary and presidential salaries	104,063,365f.

For the coming financial year the Government has determined to limit total revenue from taxation and all other sources to 50,251,000,000 francs, or about 200,000,000 francs less than the sum budgeted for in respect of the current year. The estimated revenue for

the coming year includes the allocation for ordinary Budget purposes of a sum of 1,959,500,000 francs from the payments received from Germany on reparations account. This amount has been fixed, as in the current year, by deducting from the year's total payments from Germany the amount necessary to meet the annuities due to the British and United States Governments in respect of this country's debts to them, "but leaving at the charge of the Treasury the expenditure resulting from cash payments for the reparation of war losses."

Dealing with the manner in which the Government has succeeded in compressing next year's expenditure, without prejudicing necessary requirements, the preamble of the Bill explains that the credits asked for by the various Government departments would have involved, as originally drafted, fresh additional expenditure of slightly over 6,000,000,000 francs. The increased demands were drastically cut down by 4,200,000,000 francs, but this still left to be found 1,800,000,000 francs (representing additional expenditure that could not be avoided). It would have been impossible, the Finance Minister explains, to have arrived at a balance without imposing increased taxation "if we had not found a solution by means of a fresh modification of the distribution of charges between the General Budget on the one hand and the Caisse d'Amortissement on the other." Under a convention signed on September 30th last, the Caisse d'Amortissement undertakes to make itself responsible in future for the payment of 1,800,000,000 francs of annuities in respect of the public debt service that have hitherto been provided for under the General Budget. By this means estimated revenue and expenditure have been made to balance as follows:—

Estimated revenue	50,251,748,329f.
Estimated expenditure	50,145,286,389f.
Estimated surplus	106,461,940f.

The Opposition has already seized on the fact that, in order to balance the Budget, an additional charge of 1,800,000,000 francs a year has been transferred to the Caisse d'Amortissement, and lively attacks on the Government's financial methods are expected both in the Finance Commission and in the Chamber. The device adopted, it is argued, however advantageous it may be to the Government and the taxpayers, must inevitably reduce by 1,800,000,000 francs a year the Caisse's capacity for debt reduction, as furnished under the constitutional law which created it. A great deal was said at the time of the able manner in which M. Poincaré had placed the funds of the Caisse out of the reach of "predatory politicians," but it is practically certain that nobody then realised how easily the new debt extinction organism might yet be utilised, notwithstanding the precautions taken, to come still further to the rescue of the Budget in a time of stress.

The Finance Minister's argument is that the policy adopted is justified by the fact that—notwithstanding his permissible boast that "France, of all the Great Powers, has so far experienced neither unemployment nor a deficit in taxation"—the country's economic position, with decreasing exports and "a slight slowing down of revenue," renders any further increase of taxation imprudent. This view is to some extent supported by the industrial production figures for August, which have been issued this week. The general index figure covering the country's leading nine industries is 139, or a decline of two points on the month and of five since December. Industrial output, which now stands exactly at the average monthly level of 1929 and 12 points higher than the average of 1928, is still 39 per cent. larger than before the war, and there are indications that the bottom of such slump as this country has experienced has now been reached. More than one industry is already reported to be again on the upward grade, and it is expected that the October, if not the September, index figures will confirm this.

Wholesale prices as the end of September, according to the index figure returned by the Statistique Générale, show a drop of eight points on the month and of 75 since

the end of September, 1929. The principal general figures are as follows (base 100 in July, 1914):—

	No. of Articles.	July.	August.	Sept.
General index figure	45	548	543	535
French products.....	29	595	599	595
Imported products	16	460	444	428
Foodstuffs (general figure)	20	538	543	538
Raw Materials (general figure)	25	557	544	534

It will be noticed that while the figure for imported products has dropped 16 points on the month, that for French goods has declined only 4 points. French native products are now 167 points dearer than imported goods, whereas the difference a year ago was only 45 points. The Paris retail prices figure for September is 637, a rise of 11 points on the month, of 35 since September last year, and of 93 since September, 1928.

GERMANY.

Politics — Trade Unions and Young Plan — Reich Loan — Wage Dispute — Capital Market — Reichsbank Situation — Bourse.

(FROM OUR CORRESPONDENT.)

BERLIN, October 14.

CHANCELLOR BRUNING has found it no easy task to hold the groups of the Government bloc together even until the opening of the Reichstag. Last week the German People's Party threatened to break away, and tried to make Herr Curtius, who is a member of the Party, resign his portfolio as Foreign Minister. Herr Curtius' opponents in his own party belong for the most part to the section which would like the Government to take immediate steps to get rid of the Young Plan. They therefore object particularly to having this "colleague" in charge of Germany's foreign relations. The more reasonable wing of the Party was, however, successful in controlling these elements.

A similar attack came, immediately before the first meeting of the Reichstag, from the Economic Party. This curious group, which represents a conglomeration of particular interests, among whom owners of houses are largely represented, should really have been very much pleased with the Brüning Government, for no Cabinet ever before made such promises to house-owners. They were, however, not satisfied with these, and they were, moreover, uneasy because the Government was relying for support—against the vote of no confidence to be brought in by the National Socialists, the Communists and the Nationalists—upon the Social Democratic Party. They therefore determined to make their representative in the Cabinet, Professor Brecht, the Minister of Justice, resign. The President, however, immediately upon hearing this decision, informed the Minister of Justice that "the nomination and dismissal of Ministers belonged to himself and to himself alone," and that he could permit no such interference from fractions. Herr Brecht, therefore, did not resign, and his party accepted the situation for the time being. But even the energy of the President will scarcely be able indefinitely to prevent the desire of a group to destroy the Government Coalition from expressing itself in action.

For a moment there seemed to be a serious danger that the Social Democrats would go back upon their decision to support the Government. The metal trade unions have refused to accept the arbitral award reducing their wages by 6.8 per cent., and have determined, by a general vote, to strike, if necessary. If the Government had at once declared the award binding, it would have aroused the most violent opposition from the Socialists and greatly imperilled the parliamentary situation. The Minister of Labour has, however, announced that he proposes to invite the parties to the dispute to fresh negotiations, and it may be assumed that he will abstain from applying compulsion even if there should be a strike.

The Government has undoubtedly scored a great success with its loan, which is important not only from the point of view of the Treasury, but still more from the

point of view of the credit of the Reich. The loan amounts to 125 million reichsmarks and will cost 6.3 per cent. It is to run for six months in the first place, with renewal at the option of the Government for two years. The conditions include an accelerated redemption of public debt, and this is provided for in the Government programme already published, which includes the repayment of Rm. 420 millions of floating debt in each of the next three years. This means that Rm. 1,260 millions will be redeemed in three years, while the present loan only amounts to Rm. 500 millions for two years. It may be assumed that this redemption represents less a condition imposed by the creditors than the desire of the German Government itself, which may wish for political reasons to have the entire redemption scheme bound up with the granting of the loan.

The attitude of the trade unions to the Reparations question is expressed in such resolutions as this: "In view of the severe economic depression in Germany, the present reparation burden, which has long greatly exceeded what was required to make good the damage occasioned by the war, is imposing the severest strain upon German economic, social and political life." The unions further stress the fact that they only agreed to the Dawes and Young Plans under pressure of necessity. "They have never left room for doubt that the aim of German politics must be the revision of the reparation agreements and the restoration of the full sovereignty of the German people. It is indisputable that the milliards which Germany has to pay to her creditors is one of the causes not only of the immense amount of unemployment in Germany, but also of the disturbances in world economy. . . . The German workers, who have always stood for a just and lasting peace, now feel themselves justified in uttering, indeed morally obliged to utter, this solemn warning. The unions do not, like the Right, wish to force the Government to immediate action; they have, indeed, expressly emphasised the fact that they want not a moratorium but negotiations between the Governments with a view to revision. This decision from the Socialist ranks is, however, a particularly clear sign that the present solution of the Reparations question is not regarded by anybody in Germany as permanently tolerable.

Conditions have become more acute on the security and capital markets in recent weeks. The causes are perfectly clear. Though foreign credits were called in during the months following the elections, they were not very extensive and cannot be held responsible for the present development. The great demand for foreign exchange is explained first and foremost by the flight of capital: more and more Germans are finding it necessary to accumulate property abroad or to provide in advance for their exchange requirements of the future. The drain of gold and exchange from the Reichsbank, the consequence of this flight of capital, is intensifying the political nervousness which already existed.

As the foreign exchange holdings of the Reichsbank have fallen considerably in recent weeks, it has been obliged to export large quantities of bar gold to Paris and Amsterdam. On October 10th, Rm. 87 millions of gold left the Reichsbank, and the total reduction in cover from September 14th to October 14th was about 350 millions gold and 450 millions foreign exchange. The average note circulation is still covered to the extent of about 55 per cent., so that there is no ground for anxiety. The Reichsbank takes the view that it is impossible to begin too soon to take measures for protection of the currency, especially under present conditions, with the future demand for foreign exchange so unpredictable. These considerations explain the rise in the discount rate of October 9th. It makes very little difference to the flight of capital whether the rate is 4 or 5 per cent. The only effective device, and one which has frequently been tested in Germany, is a sort of joint credit restriction by the Reichsbank and the private banks. This requires so severe a tightening of credit that industry and trade have no chance of exporting superfluous funds. The Reichsbank would undoubtedly not hesitate to take this step, but it wished to give a warning first by raising the discount rate. Credit restriction has the advantage over further raising of the rate that legitimate credit is not made

dearer, so that the already difficult economic situation is not burdened by increased interest payments.

It would, of course, greatly ease the situation for the Reichsbank if it received in the near future \$120 millions in foreign exchange, from the new loan, for conversion into marks. But the loan will only become available after the passing of a law, so that it cannot come in time to relieve the foreign exchange difficulties of the moment. Rumours are therefore multiplying that the President of the Reichsbank has raised the question of an international credit in his negotiations in Bale. A credit from the foreign banks of issue to be drawn on if necessary by the Reichsbank no longer seems outside the realm of possibility.

The Bourse has been depressed during the last few days by the gold exports, the internal political difficulties and the threat of a strike in the metal industry. All German loans sagged in sympathy with the movement of the Young Loan in foreign exchanges. First-class 8 per cent. German bonds fell below 90, and the average yield almost touched 10 per cent. The movement of the share market is typified by the fall of A.E.G. from 122 to 106, Salzdettfurth from 280 to 244 and Reichsbank shares from 224 to 200, all in one week.

HOLLAND.

Public Finance — Capital Issues — Foreign Trade — Prices — Shipping.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 6.

In the Queen's Speech at the re-opening of Parliament the Government brought the prevailing economic crisis into direct relationship with the state of the Exchequer. The 1931 Budget presented by the Minister of Finance, in fact, closes with an estimated deficit of about 9 million guilders, as compared with surpluses in the preceding three years of 57, 50 and 7 million guilders respectively, and, in comparison with those figures, the 1931 Budget leaves a very unsatisfactory impression. The 1930 fiscal year will close with a surplus too, as was estimated, but for next year a deficit will have to be faced. According to the Minister of Finance, this deficit does not give rise to the necessity for taking any extraordinary measures. If, however, the depression continues, the situation will assume a more serious aspect.

To increase the burden of taxation in a period of declining prosperity would obviously only aggravate the situation, and would very likely impair the sources which provide the revenue. If the opinion expressed in some quarters proves true, that the prevailing world crisis must be regarded as a continuation of the post-war liquidation, and that the balance will only be recovered when a level of prices and wages much nearer the pre-war figures has been reached, an increase in taxation would certainly have the wrong effect. It is obvious that a progressive reduction in taxation would be more in conformity with such a general downward movement than a new increase in the burden of taxation. Further, not forgetting that the strictly cut estimates of revenue and expenditure will tend to make the new Budget far less flexible than many of its predecessors, and in consideration of all the factors of the present situation, the inevitable conclusion is that there are dark clouds hovering over our State finances.

The unsatisfactory general situation is also reflected in the statistics of the new issues floated in the Dutch market. New issues in September were only 18.2 million guilders, which amount hardly differs from the total for the preceding month. It is clear that, apart from the general economic situation, there must also be other factors at work to account for such a lack of activity as has been displayed by our issues market the last few months, especially as the unprecedented liquidity of the money market results in abundance of funds being available for capital investment. The direct influence last

month was undoubtedly the disturbed political situation revealed by the elections in Germany, which struck another severe blow at Germany's credit abroad.

In the Netherlands trade returns a further decline is recorded. According to the official foreign trade statistics, the value of imports in August, 1930, was 199 million guilders, as against 204 millions in July and 247 millions in August, 1929. The exports registered a slight increase, from 145 million guilders in July to 152 millions in August, but they declined 30 million guilders as compared with August, 1929.

SWITZERLAND.

Foreign Trade — Industrial Depression — Capital Market.

(FROM OUR CORRESPONDENT.)

GENEVA, September 21.

Economic conditions in Switzerland have grown worse during the summer, as shown by the unsatisfactory results of foreign trade, the decrease in the receipts of transport undertakings and the growth of unemployment. There was a rise in imports during July and August when the figures were respectively £9,537,153 and £9,611,245, compared with £8,032,728 in June, and with £9,776,499 and £9,446,418 respectively during the corresponding months of 1929. The increase in imports of foodstuffs, minerals, wool, chemicals and precious metals was particularly great. On the other hand, exports have been continuously dwindling, and in June they fell to £5,469,248. They rose slightly in July, when they reached £5,522,276, but they dropped to £5,215,681 in August, the lowest figure recorded for many years. Compared with 1929, the decrease was £1,471,156 in July, and £1,324,417 in August. All the exporting industries are more or less touched by the depression, but the cotton, silk and watchmaking industries, which are among the chief exporting industries of Switzerland, are suffering particularly.

During the summer months there was a rise in imports from Great Britain, mainly due to important gold purchases in England, and a continued fall in imports from the United States. British imports into Switzerland, which reached a monthly average of £526,561 during the first half-year, rose to £1,424,400 in July, and to £1,758,300 in August. There is no doubt that Great Britain has to some extent benefited from the reduction of Swiss purchases from the United States. Swiss exports to Britain totalled respectively £832,447 and £825,593 in July and August, compared with a monthly average of £864,319 during the first half-year. Imports from the United States, which totalled £650,935 in June, rose to £678,817 in July, but they dropped to £565,776 in August. During the first half-year, Switzerland imported motor-cars to a value of £1,664,000, as against £1,584,000 in 1929, but while the importation of European cars increased by 304 cars, that of United States cars fell by 594.

The number of unemployed, which was 9,002 at the end of June, rose to 10,161 at the end of July, and a further increase of a few hundreds was recorded in August. It may be noted that over 50 per cent. of the unemployed belong to the watchmaking and jewellery industry, and about 20 per cent. to the textile industries. There is no improvement in sight, and prospects for the coming winter are therefore very gloomy indeed.

On the other hand, the banking situation is very good, and money is so abundant that the banks have, since July 1, reduced the interest on short-term and long-term deposits. Since the war, Switzerland has acquired a great importance in the capital market. Apart from Great Britain, all the European States affected by the war, especially Germany, borrow from Switzerland, and the overseas countries—such as Brazil and Chile—do so equally. From the end of 1921 to the end of July, 1930, foreign loans subscribed in Switzerland amounted to more than £52 millions. During the first seven months of 1930, twelve loans have been raised on the Swiss market to a value of £9,340,000, four loans to Germany representing

£1,170,000, and four loans to Belgium totalling £1,000,000, while there were substantial loans to Chile, Austria and Italy, and a number of smaller loans to foreign industries, banks and Governments. That money is abundant in Switzerland is shown by the fact that a conversion loan of £600,000, issued by the Federal Government, was subscribed five times within a few days.

JUGOSLAVIA.

Crops — Foreign Trade — Assistance to Agriculture — Money — Stabilisation.

(FROM OUR CORRESPONDENT.)

BELGRADE, September 15.

PRELIMINARY official harvest figures read:—Wheat, 24,200,000 quintals; maize, 35,000,000 quintals; oats, 4,200,000; barley, 3,400,000; and rye, 2,400,000 quintals. On the whole, the yield per hectare is less than in 1929, but the area is sown greater and the quality excellent, wheat containing as much as 39 per cent. of gluten. The total export surplus for the 1930-31 season is consequently smaller, the amount, as judged by the Economic Congress, being 7,040,000,000 dinars, as against an actual export during the 1929-30 season worth 7,800,000,000 dinars. The chief items among goods ready for export are: Live stock and animal products, 2,264,000 dinars; forestry and mineral products, 2,118,150,000; foodstuffs, 970,000,000; industrial products, 646,750,000 dinars; fruit, 276,100,000; and miscellaneous, 745,000,000 dinars.

Thus, with a smaller harvest, a smaller export surplus, and a general European depression which has lowered the purchasing power of industrial countries, the immediate prospects are not very bright. The money obtained by the largest consumer, the peasant, from last year's harvest was altogether disproportionate to the increase in yield, and most of it has already gone for long deferred purchases, repayment of debts, interest and taxes. His purchasing power in the industrial market is therefore crippled, and industry and trade are languishing in consequence. Even foreign trade, which had evinced healthy signs during the first quarter of the year, has much shrunk in volume during the second quarter, as regards both export and import, although the total volume of export is still above that of last year. The figures for the first seven months are: Exports, 3,876 million dinars, against 3,610 million dinars in 1929; imports, 4,055 millions, against 4,334 millions in 1929; deficit, 179 millions, as compared with a deficit of 724 million dinars during the same period in 1929.

On the other hand, serious efforts are being made by the government to assist agriculture, both internally in credit conditions, improved types of produce, and organisation of sale, and abroad. During its ten months' activity the Privileged Agrarian Bank has lent over 600 million dinars to peasants, chiefly through co-operatives, at 9 per cent. and 10 per cent., as against the usual 24 per cent. charged by country banks. Including the last two instalments of shares which are to be paid up by the end of November, the bank possesses another 1,000 million dinars in cash or credit. The Government is doing much for the improvement and standardisation of types of products, and is also distributing better seeds. Finally, the Privileged Export Company is combating speculative depression of corn prices and buying up large quantities for shipment abroad, chiefly to new markets. Abroad, the conferences at Bucharest, Sinaia and Warsaw all point to the desire of Yugoslavia, as well as of other Central and East European agricultural States, to create satisfactory marketing conditions for agricultural goods. Taken as a whole, this work represents the first systematic effort of any Yugoslav Government since the war to help agriculture, and as such, even though not likely to produce quick or showy results, it is undoubtedly favourably affecting the agrarian industry.

During this stagnation of business money continues to be abundant, and the three large municipal loans to Belgrade, Zagreb and Osiek issued by home banks are considered a sign of the growing strength of national

finance. Of these, the Belgrade loan was 125 million dinars, the Zagreb loan 40 millions, and that of Osiek 70 million dinars, the respective rates of interest being 9 per cent., 10½ per cent., and 9.6 per cent. The first two are short-term and the last a long-term loan for 30 years.

The legal stabilisation of the dinar is generally considered a question of the nearest future, and this is confirmed by a recent declaration of the Minister of Finance. The time, he says, is very favourable, as the stocks of the National Bank amount to over one and a half milliard dinars (£5.5 millions), and the total cover is 2,764,000,000 dinars, or 48.49 per cent. of the note issue, which is 5,500,000,000 dinars. Stabilisation, according to his declaration, would not imply a return to the gold standard, but simply a legalisation of the state which has existed for the last four years. At the time of stabilisation the State will repay half its debt of four milliard dinars to the National Bank. One of these two milliards will be repaid from the State's share in the gain during stabilisation, and the other by payment in cash. The remainder will be paid off in annual instalments over a number of years. The purpose of the stabilisation, the Minister concludes, is to strengthen the financial credit of the country and to help the accumulation of the capital necessary for a fuller exploitation of the country's natural riches.

CANADA.

Business Conditions — Tariff Increase — Imperial Conference — Western Wheat Crop — Foreign Trade — Census.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 7.

AMONG intelligent Canadians there is no denial of an apprehension that the Dominion is facing a very difficult winter, and also that a period of lean years probably lies ahead. The whole country is at present in the grip of a serious economic depression, which affects practically every branch of industry and agriculture, and which at the moment shows no sign of lifting. With wheat selling on a basis of little more than 70 cents per bushel No. 1 Northern at Fort William, the average western farmer is receiving something between 45 and 55 cents per bushel for his crop, and this means that the purchasing power of the three prairie provinces has been reduced by at least 30 per cent., compared with the level prevailing a year ago, when it was lower than it had been for some years. The inevitable curtailment of orders from the West has been responsible for a marked slowing down of industrial activities in the Eastern provinces and the earnings of the transportation companies have suffered severely. Again the mining industry is for the time being almost flat upon its back; practically every silver and low-grade copper mine will be closed down this winter, and only the gold mines, which have substantial bodies of ore to work, are likely to show any profit. The difficulties of the newsprint industry have become aggravated during the summer months, as the depression in the United States has been forcing a steady reduction in the size of American newspapers, and, during August, the Canadian newsprint mills were only able to operate at 66.4 per cent. of their capacity, as compared with a ratio of 71.3 per cent. in July and 83.6 per cent. in August, 1929; the total output of the Canadian mills for August was 202,043 tons, as compared with 216,798 tons in July. The lumbering industry is also suffering from the diminished building construction, and the winter's cut is likely to be small.

The serious unemployment which prevailed everywhere was a large factor in causing the decisive defeat of the King Ministry in July, and the country is now awaiting evidence of the success or failure of the measures which the new Conservative administration formed by Mr R. B. Bennett took at the special emergency session of Parliament in September. Two separate methods were adopted for the alleviation of unemployment—the expenditure of money upon public works and the application of a higher tariff as stimulus to industries. In default of a system of unemployment insurance the Federal Govern-

ment could not, in view of its campaign pledges, avoid devoting a substantial sum to unemployment relief, and it will be supplemented from provincial and municipal funds. The new duties came into operation at once, and it is claimed that they have already created a substantial volume of new employment, particularly in the woollen and cotton mills, and they have had a psychological influence in stimulating confidence in business circles.

The increase of the level of protection is very unpalatable to the farming community in the West, who claim that it is bound to increase their costs of production and diminish still further whatever meagre margin of profit now exists in wheat growing; but the Government is getting some credit for living up to a pledge given by Mr Bennett that if manufacturers took advantage of the heightening of the tariff to raise their prices to the consumer, action of a punitive character would be taken at once. When it was demonstrated to the satisfaction of the Department of Finance that since the tariff on glass imports was raised the price of glass had also risen, the duty was at once restored to its former level.

The tariff changes will be useless if they do not provide more business for the Canadian manufacturers, but it is obvious equally that if imports are cut down, it will become even more difficult to market Canada's grain and other farm produce in Europe, and in some quarters it is being argued that, even if Canadian manufacturing plants secure a certain spurt from the higher duties, they will in the end find themselves no better off than before, as their western orders will continue to shrink. For the moment, however, industrial protectionist interests are in the saddle at Ottawa, for no less than 15 of the 19 members of the Bennett Ministry represent industrial constituencies, and this fact largely accounts for Mr Bennett's inability to offer at the Imperial Conference as the price of the acceptance of food taxes by Britain anything more than a comparatively modest increment of that general tariff which is applicable to goods imported from the United States and countries not possessing treaty arrangements with Canada. He was careful to avoid pledging himself to any inroad upon the preserves which the Canadian manufacturers have marked out for themselves, and, as a result, while the Conservative Press of Canada is warmly applauding his policy, the Liberal and agrarian papers are exceedingly critical of it. The *Ottawa Citizen* writes of "the fraud of first raising the Canadian tariff sufficiently high to keep out British goods under a policy of 'Canada First' and then adding another ten per cent. against other countries and calling it Empire preference," while the *Manitoba Free Press* thinks that Mr Bennett's offer will be summarily rejected, and that no sense of grievance will develop in Canada at such an outcome. However, the value of a high protectionist policy for Canada is now to be put to a clear test, and it is by no means certain that it will prove suitable to the economic needs of a country which in recent years has become increasingly dependent upon external markets and has met with some success in selling its manufactured goods in them.

The western harvest was completed under very favourable conditions, and the grading returns show that the wheat of 1930 is of very high quality, about two-thirds of the samples received in Winnipeg securing a grade above No. 2. But the price for October wheat has sagged to a point lower than has ever been known since the Winnipeg Grain Exchange opened for business, and with the export demand continuing very feeble, wheat is piling up in the elevators both at the lake ports and in the countries. The volume of the wheat crop of 1930 is estimated to be in the neighbourhood of 380 million bushels, and when the large carry-over from 1929 is taken into account, Canada will have more than 300 million bushels to dispose of during the present crop year. The co-operative wheat pools are still involved in great difficulties, but it is difficult for the private grain traders to hold them up to obloquy as one of the largest private grain traders operating in Winnipeg has lately come to grave disaster. Not only are his personal liabilities heavy but it is an open secret that as the result of his speculative operations the reserves of both a well-known milling corporation and a

leading grain company have been practically wiped out. The foreign trade returns show a steadily declining trend. For the month of August exports were only valued at \$69,290,228, as compared with \$96,264,517 in August, 1929, and imports were \$77,906,294, as compared with \$111,630,924, which means that the total foreign trade for August has shrunk from 208 to 147 million dollars. For the first five months of the present fiscal year the total value of the foreign trade is estimated at 779 million dollars, as compared with a total of 1,045 millions for the parallel period of 1929. In this five months' period there has been little change in the adverse balance which has only fallen from 77 to 74 million dollars.

Preparations are now going ahead for the taking of the decennial census of the Canadian people, and the actual work will be undertaken next June. At the last census the population of Canada was estimated at 8,788,483, and at the end of last June the Bureau of Statistics placed the provisional population figure at 9,934,500. One feature of the population returns in the last decade has been the steady decline in the natural increase; for the year 1921 it was placed at 156,573, but in 1929 it was only 121,465, the chief factor in the decrease being a fall in the birth-rate. It is now forecast that the forthcoming census will show a total population of roughly 10,250,000.

HONG KONG.

Imports of Cotton Goods — Woollen Goods — New Currency Regulations.

(FROM OUR CORRESPONDENT.)

HONG KONG, September 1.

THE feature of an otherwise dull month has been considerable activity in the fancy cotton piece-goods market. Normally the buying season for the following spring requirements opens in April, but this year dealers have been holding off in the hopes of exchange returning to a more reasonable level. These hopes have not been realised, and as soon as it appeared evident that further postponement of purchasing would mean missing the usual time for shipment, viz., December-January, dealers began to put forward firm offers. These offers, which in accordance with the custom of this market are in local currency, were a long way below the equivalent of Manchester prices, and at one time there seemed to be little prospect of business resulting. Eventually the offers were slightly improved, whereupon some importers, who had favourable exchange in hand, expressed a willingness to sacrifice their profit on exchange by fixing the business on the dealers' terms. As a result a substantial amount of business was booked, principally in shadow striped poplins, but barely half of what the market required.

After a short lull Manchester showed signs of coming down in price in sympathy with the fall in raw cotton. Simultaneously the exchange improved to 1s. 4d., and these two factors enabled further business to be booked on dealers' terms without the necessity for employing exchange higher than current rates. The total quantity of business booked is estimated at not far below 6,000 cases, the c.i.f. value being between £300,000 and £400,000. This business must be very welcome to Lancashire, but it is doubtful whether any of the parties to the transactions have made much profit, except perhaps the dealers, who appear to have bought very cheaply indeed. There is still some business to be done in other lines, such as mercerised cotton brocades and limbrics, but negotiations are more or less at a deadlock, the dealers being unwilling to improve their offers, while Manchester is unable to go below the very cheap prices which they have been asking.

Generally speaking, the piece-goods market here is in a healthy condition. Clearances during the past season were extremely good, and practically all old stocks from previous years have now gone into consumption. Woollen piece-goods for winter wear are now arriving, and clearances of these have already started. Here again dealers have bought well, for although exchange had fallen to

1s. 6d. at the time the buying season opened in January last it was offset by the big drop in raw wool. The further fall in exchange has, of course, sent up replacement costs, and no doubt dealers will take advantage of this in fixing their current prices. Piece-goods are reaching interior points of distribution quite freely, and although lines of communication are menaced by bandits and pirates, safe passage is secured on payment of "protection" fees to the various outlaw chiefs en route. The cost of the goods on arrival at a distributing centre is, of course, greatly enhanced by these levies, and naturally the volume of business with the interior is affected. It seems extremely improbable that the near future will bring any relief from illegal imposts, but the Chinese trader has adapted himself to what is now a normal state of affairs, and he can carry on provided no serious outbreak of civil war occurs. The Economic Mission, which sets out for the Far East in September, would find a trip to a big distributing centre such as Wuchow an experience both interesting and illuminating. They would see for themselves the insuperable obstacles which lie between the wholesale dealer and the ultimate consumer of Lancashire piece-goods, and they would probably realise that the Japanese selling organisations, adjusted to Oriental methods of business, have other advantages besides low cost of production. As, however, the Economic Mission proposes to confine its inquiries in the South to Canton and its immediate neighbourhood, it is probable that they will miss the opportunity (possibly carrying with it risk of capture and detention) of acquiring valuable information at first hand.

It is reported that, following the recommendations of the recent Currency Commission, steps are being taken to allow the authorised banks here to increase their note issues against cover of bar silver deposited in London instead of against minted dollars held here. With this in view large purchases of silver, stated to be at least 15 million ounces, have recently been made from the Indian Government at a price below the London market rate. It is expected that the further increase in note circulation, which will be made possible by this transaction, should bring the Hong Kong dollar down to the parity of its silver content. Despite efforts on the part of the banks here, Hong Kong notes are still at a high premium over the minted dollars which they represent, and it is hoped that the increase in note circulation will remove an anomaly which is a handicap to trade between Hong Kong and the coast ports of China.

Letters to the Editor.

THE FUTURE OF THE RATE OF INTEREST.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There are one or two comments I should like to make on the interesting article which you published last Saturday about my views on the rate of interest.

Taking British first-class securities as the test, you show that I should have been more accurate if, instead of saying that the yields to-day are nearly 50 per cent. higher than twenty years ago, I had said that they were more than 40 per cent. higher. But I was speaking in round figures.

I also accept the point that the fall in the yield of those bonds which are much affected by political considerations must lag behind. For I was dealing with the rate of interest after allowing for any unusual risk. But if many borrowers are ineligible in the opinion of lenders, this may accelerate the rate at which the yield on really prime securities will fall.

My main point relates, however, to the figures you adduce to show that there has not recently been any falling off in investment. I cannot accept the figures of new capital issues which you quote as having any direct bearing on the question. For by "investment" I meant, as perhaps I should have explained more clearly, "physical investment," that is to say the net increment of capital goods. It would be convenient if new issues were a satisfactory guide to this; but, unluckily, so many corrections have to be made, that they are, in my judgment, nearly useless for this purpose.

In the United States other, more direct, evidence is available as to the rate of physical investment. This shows that

such investment began to decline in 1929, some months before the Wall Street slump, and is now at least 20 per cent., and perhaps a good deal more, below the level of 1928. In other countries comparable statistics are not available. I only wish they were. But from indirect indications my judgment is that, taking the world as a whole, the rate of physical investment, in the broadest sense of the term, began to fall away earlier than in the United States.

Behind all this lies, of course, my general view (which you quote) that "the slump is due to a retardation of new real investment so that it is falling seriously behind the level of current saving." But it would need a long argument to justify this statement. I have done my best to do so in my forthcoming "Treatise on Money."—Yours, etc.,

46, Gordon Square, W.C. 1.

J. M. KEYNES.

October 14, 1930.

[If we have misunderstood Mr Keynes, we are sorry. Our readers will await his forthcoming book with interest.—Ed., Econ.]

GOLD AND THE PRICE LEVEL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The memorandum by Sir Henry Strakosch on Gold and the Price Level, in the Supplement to the *Economist* of July 5th, makes many valuable contributions toward a better understanding of cyclical depressions. Yet certain studies on similar lines made in the United States would indicate that the recent swift plunge of world prices is connected more with currency deflation than with basic gold distribution—although both have played an important part.

Briefly, Sir Henry Strakosch obscures an otherwise clear analysis of business cycles, first, by minimising the effects of currency inflation and deflation as distinct from gold inflation or deflation, and, secondly, by confusing currency with credit. He assumes that since 60 per cent. of the world's population live under the blessings of the gold standard, it follows that "the money they handle will buy either at home or abroad, what the weight of gold into which it is exchangeable will buy." He adds that "the purchasing power of all the currencies of the gold standard world is determined, within a slight margin, by what gold will buy." He refers in only one important passage to the need of maintaining a proportionate ratio of "currency and credit" to gold reserves. But this and other occasional references to the "currency and credit" structure built upon a given gold base make the confusion rather worse—by implying that currency and credit belong to the same monetary family.

In point of fact, they are quite dissimilar. Credit is the great world paradox—in the sense that it only exists on the assumption that it can be wiped out. If it cannot be wiped out, it becomes a "bad debt." Currency, on the other hand, is a clearance medium. To have a constructive value, it must relate to a standard—the present one being a given weight of gold. Currency (at least in its most important function in gold standard countries) is a measure of credit and a medium for clearing the balance of credit transactions. But it is distinctly not to be grouped with the thing it measures and clears, any more than a yard stick is to be grouped with a strip of the cloth it measures.

The liability created by the issue of currency redeemable on demand in gold differs radically from other banking liabilities. It cannot be balanced by general resources, but only by the specific resource of gold metal. As of July 1st of this year, for example, the combined currencies of the U.S.A. and the banks of England, France and Germany amounted to more than \$9,993,000,000, whereas the total gold stocks held to offset this liability were only about \$7,636,000,000. In other words, we had a banking demand liability without an equivalent assets, either actual or available within a reasonably short period. The facts of record seem to indicate that such excess of currency over gold reserves represents merely so much "flat" currency, and that, as it varies in extent, it brings about a minor inflation or deflation in the general price levels as inexorably as the historic price movements brought about by French assignats, American "green-backs" after 1864, or German paper marks after 1918.

Single facts are stronger than theory, an examination of prices over the eighteen months from January 1, 1929, to July 1, 1930, in relation to currency inflation may be useful. It may help to establish the point that uneven gold distribution alone does not adequately account for collapsing prices, and that the changing ratio of currency to gold is of vastly more importance in establishing an increased buying power for each currency unit.

Taking first the combined currency and gold figures for the U.S.A. and the banks of England, France and Germany during the above period, we find that the currency to gold ratio stood at 155 on January 1, 1929, at 146.9 on January 1, 1930, and at

130.9 on July 1, 1930. This represents a deflation of 5.22 per cent. in the first twelve months and of 10.8 per cent. in the last six months, with a total drop for the period of 15.5 per cent. It is an amazing coincidence, to say the least, that the drop in the wholesale price level of all commodities (U.S. Bureau of Labour Statistics) during this same period was exactly 13.58 per cent., and the drop in raw material prices exactly 17.84 per cent. In other words, the percentage of currency deflation was almost exactly the mean between the percentage price drop in raw materials and that in "all commodities." Moreover, there is the added coincidence that the raw material drop in the first twelve months was 4.76 per cent. and the "all commodity" drop 3.9 per cent.—compared to the currency drop of 5.22 per cent., indicating that currency deflation began to accelerate slightly before commodity prices, and that the steepest drop in commodities coincided with the last six months' down sweep in currency deflation.

Possibly the most striking phenomenon connected with this whole relation of prices to currency deflation is the fact that gold resources increased during the period by more than 12 per cent. In other words, the lowering of the ratio of currency to gold came about more because of gold increases than because of currency declines. Circulating currency, as a matter of fact, decreased only 4.47 per cent.

Nor can this general movement be ascribed to the gold accumulation of any one country. Composite figures are sometimes misleading, but in the present case Bank of England gold resources increased 2.94 per cent., those of the U.S.A. 9.49 per cent., and those of France 37.8 per cent. The Reichsbank was the only one to show a decline in gold—amounting to 4.08 per cent. On the other hand, Reichsbank notes declined 18.5 per cent., Bank of England notes 5.32 per cent. and U.S.A. currency 9.08 per cent. French currency was the only one to increase in volume—but at a rate less than half as great as the rate of increase in gold reserves.

It cannot be said, then, that declining gold reserves in the four major countries have accounted for recent heavy price declines—nor (on the quantity theory of money) that the decline in volume of circulating currencies showed even an approximate relation to price declines. But the declining ratio of currency to gold did bear an almost exact and mathematical relation to the percentage drop in world prices—a drop in currency to gold ratio of 8.02 per cent. in England, of 18.9 per cent. in France, of 15 per cent. in Germany, of 16.6 per cent. in the U.S.A. and of 15.5 per cent. for the composite of the four countries.

These striking facts make one pause to consider whether, after all, more thought should not be given to currency deflation than in Sir Henry Strakosch's otherwise excellent memorandum. It seems more than possible that the legal provision of gold redemption does not, of itself, bestow on paper currency a purchasing power equal to gold, and distinctly probable that the actual buying power of the currency unit depends chiefly on the degree to which it is backed by gold reserves. Gold itself may change over long periods in relative value—but hardly with the dramatic suddenness of the recent world-wide price collapse. Currency, on the other hand, may change, and has recently changed, its intrinsic value (in terms of gold backing) with just such suddenness. Redeemable currency can be a sound and stable measure for prices and for the clearance of credits only so long as it maintains a fairly stable quantitative ratio to the world's common denominator—gold.—Yours faithfully,

39, Broadway, New York, N.Y.

October 1, 1930.

JAMES C. WILLSON.

IMPORT BOARDS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Every time a member of the Government appears in public nowadays, he almost bursts into tears at the bare idea of anybody paying more for food.

But what would be the effect of their Wheat Imports Board? In Sweden, wheat imports are regulated by the Government as strictly as they are anywhere in the world. And there, according to the Board of Trade reply to a recent question in the House of Commons, the average price of the 4-lb. loaf is 1s. 7½d., compared with an average price of 9½d. in this country.

Tariffs, on the other hand, in my view, even if increasing the price of food at all, would do so only temporarily, and would very soon repay the increase by the stimulus they afford to home production and the check they put on unemployment.—Yours faithfully,

8, Wellington Court, Knightsbridge, S.W.

October 13, 1930.

A. C. N. DIXIE.

[We agree with Mr Dixie that if an Import Board for wheat were established there would be a grave danger of an increase in the price of breadstuffs. But does the thermal efficiency of the frying-pan make the fire less hot?—Ed., Econ.]

TRUSTEE SECURITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Arising out of the article in your issue of September 27th on the present unsatisfactory state of the law regarding trustee investment, it occurs to me that the criticism contained therein, whilst perfectly valid so far as it goes, by no means covers the whole ground.

The unsatisfactory nature of the Trustee Act arises not only from the fact that it confines trustee investment to an arbitrary and unnecessarily restricted field, thus reducing the average rate of interest obtainable thereon, but that it almost entirely ignores the fundamental need of this class of investment, which may be defined as the greatest possible security of capital and interest accompanied by the highest rate of interest compatible with such requirements.

The varying yields now obtainable on trustee stocks are some indication that not all satisfy this need for greatest security of capital and interest, and in fact it is obvious that losses of trustee capital on occasions of realisation do take place to some considerable extent.

It appears, therefore, that more fundamental changes than a mere extension of the field of investment (which incidentally would complicate the task of the trustee), and an avoidance of semi-political considerations in its delimitation, are required if the main needs of this class of investment are to be secured, and I would suggest that this is obviously a field for the application of the principles of insurance and of the investment trust.

Briefly, I would propose, therefore, that a corporate body should be constituted either by Parliament, or voluntarily, consisting of leaders of the banking and investment world. If formed voluntarily, statutory approval of its activities would be required. At the option of testators, their funds would be diverted into a common pool, which would be invested under the direction of this corporate body. The income derived from such investment would be distributed to the actual trustees in proportion to the amount contributed to the common pool.

The effect of such a scheme would be that all trustee funds so invested would receive the same rate of interest, which, considering that their requirements are the same, is theoretically justifiable. At the same time, the actual investments could be spread over a much wider field than at present (though probably there would still be a need to restrict them to high-grade prior charges), thus yielding a higher average rate of interest than that now obtainable.

It would be out of place to consider here the detailed working of such a scheme, but there do not appear to be any insuperable difficulties inherent therein. The most obvious difficulty, namely, that involved in the withdrawal of funds, could be overcome by an arrangement whereby funds withdrawn would be payable at a discount or premium proportionate to the difference between the aggregate market value of the pool's investments at the date of withdrawal and their book value, thus reflecting changes in what might be termed the "pure rate of interest."

The costs of operation of such a scheme would be negligible in comparison with the sums involved, and with the benefits which would accrue, both directly in a monetary form and indirectly from the reduction in economic effort, resulting from the specialisation in a few expert hands of the vast amount of investment work which is now performed, conscientiously no doubt, but none too well, by trustees whose duties are often thrust upon them, and who have neither the time nor the specialised knowledge required for the execution of their investment functions in the most efficient manner.—Yours, etc.,

24, Old Broad Street, London, E.C. 2.

October 15, 1930.

S. HAMBURGER.

[This suggestion involves a change in the legal conception of the duties of a trustee, since it would divest him of his present responsibility for exercising care and judgment in the selection of securities, despite the existence of the Trustee List.—Ed., Econ.]

SOUTH AFRICA AND SECESSION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I should like to express my appreciation of the Note of the Week about secession in your issue of August 30th. You will understand that there are here two sides. Secession under anything like present circumstances would mean civil war, being intolerable to all our English people and some of the Dutch. On the other hand, Imperialism, in the sense of dominance by England, is no less intolerable to the Dutch and some of the English. Campbell-Bannerman showed us a path in which we can walk together. This was confirmed in 1926,

when Balfour fell into line. If he had done so in 1907 there would have been no trouble, and he did enormous injury to England by forcing the Dutch to feel that the Empire means ascendancy, while it does not. Some of the harm he did he undid in 1926, but with a mettlesome people in a majority (not counting non-Europeans) it is easier to inject poison into the blood than to take it out again. The hankerings after secession here are a nuisance. The failure of England to respond to Campbell-Bannerman's appeal to make the grant of self-government here the grant of a nation, rather than of a party, resulted in our Conservative English here following suit, and is more responsible than anything else for the present nuisance, which is more serious than is generally supposed.—Yours, etc.,

Cape Town,

September 24.

Books and Publications.

SPECULATION AND INTEREST RATES.

IT HAS long been an accepted principle of City finance that Stock Exchange speculation is, to a large extent, governed by interest rates. According to the prevailing theory, low interest rates bring about increased borrowing for Stock Exchange speculation, and a consequent rise in stock values, while high interest rates check speculation and produce a fall in stock prices. It is the endeavour of *Interest Rates and Stock Speculation** to prove by an historical statistical analysis that there is no justification for this theory, and that it is impossible to correlate from available evidence either high rates and low stock prices or low rates and high stock prices with any certainty. The authors do not contend, however, that there is no relation between the money and stock markets, but feel that interest rates are only one of many factors which determine the course of stock prices, and that purchases of speculative securities made in order to obtain a margin of profit between the dividend yield and interest cost are of no importance whatever in determining the course of speculation. The data on which they base their argument are compiled from official American publications and various semi-official indices of New York interest rates and stock movements from 1866 onwards. With the help of a series of tables and graphs, the reader is asked to consider the historical relation between call loan rates and stock prices from the seasonal and cyclical aspect; between call loan rates and the volume of stock sales; between day to day variations in call loan rates and speculation activities; between short time loan rates and speculation; and between interest rates in general and speculative and non-speculative security prices. Only in the single case of high-grade preferred stocks is there found to be any satisfactory correlation between low interest rates and increased share market activity, and this the authors attribute rather to the investment of floating supplies of capital than to the utilisation of cheap money for speculation. The authors have been at pains to study the question of correlation from every aspect, and have certainly made a *prima facie* case by inductive methods against any consistent movements on the lines of the accepted theory. Concluding their argument, they bring deductive reasoning to bear in an endeavour to explain why it is unlikely that low interest rates should increase speculative activity. By hypothetical examples, they indicate that the possible earnings due to the difference between the call loan rate and the dividend rate are, in fact, negligible, in view of the costs of the transaction to the speculator who endeavoured to borrow cheaply and invest the proceeds in industrial securities, and in view of the fact that the spread between the bid and the asked prices would usually wipe out any possible gains from low call loan rates. They also contend that speculation based on the difference between a dividend yield and call loan rates would be fraught with more danger than any speculator would care to face. Moreover, since it is always possible to find stocks whose current dividend yields exceed the short-term interest rate, the authors maintain

* "Interest Rates and Stock Speculation." By Richard N. Owens and Charles O. Hardy, of the Brookings Institution, Washington. George Allen & Unwin. 10s. pp. 219.

that if the theory were sound, speculators would always be borrowing funds in unlimited amounts with which to purchase such securities. To those who have hitherto based their financial principles on orthodox tenets, this book should have considerable value if only as a stimulating influence.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Economic War. By George Peel. (London) Macmillan and Company, Ltd., St. Martin's Street. 10s. 6d. net.

This very interesting discussion of the war "on two fronts"—the war of Capital against Labour and the war of the combined Capital and Labour of one country against the combined Capital and Labour of another—leads to a plea for the closest international co-operation.

A Searchlight on America. By James Truslow Adams. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 12s. 6d. net.

An extremely critical essay by an American on the less desirable aspects of modern Americanism.

The Evolution of Industrial Organization. By B. F. Shields. Second Edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 10s. 6d. net.

A useful textbook which deals with industrial combinations, scientific management, trade unionism, methods of remuneration, vocational guidance, welfare work, etc.

The Structure of Modern Industry. By G. M. Colman. (London) Longmans, Green and Co., Ltd., 39, Paternoster Row. 6d.

This W.E.A. booklet of about sixty pages is an excellent descriptive introduction to economics for the complete beginner.

The Theory of Collective Bargaining. By W. H. Hutt. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 5s. net.

A critical account of the principal theories of the effects of collective bargaining upon distribution.

La Critica della Economia Liberale. By Ugo Spirito. (Milan) Fratelli Treves Editori.

A critique of classical economic theory. The principal economists discussed are Pareto and Croce, and there are also reproduced two discussions, with Umberto Ricci and Arrigo Serpieri respectively.

La Scienza Economica. By Achille Loria. (Padova) Casa Editrice Dott. Antonio Milani.

Two chapters on the history of economic theory, from Adam Smith to Marshall.

Sinon, or the Future of Politics. By E. A. Mowrer. (London) Kegan Paul, Trench, Trubner and Co., Ltd., 68-74, Carter Lane. 2s. 6d. net.

The thesis of this little book is that the alternative to war and revolution is more and better politics.

Bankers and the Property Statutes of 1925 and 1926. By R. W. Jones. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 6s. net.

Sets forth those principles in the Acts which particularly affect bankers in dealing with land as security.

Statistics in Social Studies. Edited by Stuart A. Rice, American Statistical Association. (London) Oxford University Press, Warwick Square, E.C.4. 12s. 6d. net.

A collection of papers on different statistical subjects, intended to show the nature of the problems encountered when statistical methods are applied to sociology.

Business Charts. By T. G. Rose. With a Foreword by Sir Francis W. Goodenough. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 10s. 6d. net.

A handbook on the various types of chart which are suitable for the graphic presentation of business statistics.

Questioni Economiche Politiche e Sociali nella organizzazione int. de Lavoro. By Giuseppe de Michelis. (Roma) Stabilimento Tipografico ditta Carlo Colombo. Reprint of three short speeches.

I Progetti di Unione Doganale Europea e l'Italia. By Prof. Jacopo Mazzei. (Firenze) Stab. G. Carnesecchi e Figli.

Employee Stock Purchase Plans and the Stock Market Crisis of 1929. (New York) National Industrial Conference Board, Inc., 247, Park Avenue.

Atti dell'Istituto Nazionale delle Assicurazioni. Vol. II. (Roma) Istituto Nazionale delle Assicurazioni.

Reprint of a number of lectures on various problems connected with insurance.

New York Insurance Report. Part I. Fire and Marine. (Albany) Insurance Department.

The Banker, October, 1930. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d. Includes an article by Mr Parker Willis on "The Federal Reserve System and its new Governor."

The Bankers' Magazine, September, 1930. (Cambridge, Mass.) Bankers' Publishing Company, 465, Main Street. 50 cents.

Includes an article on "The Problem of Banking Concentration," by Joseph Stagg Lawrence.

International Labour Review, September, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. net.

Includes an article on freedom of combination in Austria.

Interim Report of the Gold Delegation of the Financial Committee of the League of Nations. (Geneva) League of Nations.

Fully discussed in the *Economist* of September 27.

The Canada Year Book, 1930. (London) Canadian High Commissioner, Trafalgar Square.

An exhaustive collection of official statistics which no reference library can afford to be without.

Journal of the Royal Statistical Society. Part IV., 1930. (London) Royal Statistical Society, 9, Adelphi Terrace. 7s. 6d.

Contains Mr Flux's presidential address on "Our Food Supply, Before and After the War."

The Hibbert Journal, October, 1930. (London) Constable and Company, Ltd., Orange Street. 2s. 6d. net.

Jahrbuch 1929 des Allgemeinen Deutschen Gewerkschaftsbundes. (Berlin) 14, Inselstrasse, 6A.

An exceedingly comprehensive German year book of labour matters.

Indian Affairs. (London) Edson (Printers), Ltd., 8-9, Essex Street, Strand. 5s. net.

Contains a number of articles which are of particular interest in view of the forthcoming Conference.

Lettlands Wirtschaft und Wirtschaftspolitik. By Albert Saets. (Riga) Typografie des lettischen Bauernbundes, Elisabethstr., 14A.

An account of the economic and financial structure and activity of Latvia.

Statistical Year Book of the Kingdom of Siam (1928-29). (Bangkok) Department of Statistics, Ministry of Finance.

Tea Facts and Figures, September, 1930. (London) Fredc. C. Mathieson and Sons, 16, Copthall Avenue. 2s.

The Stock Exchange.

BRITISH MOTOR SHARES.

THE effort to talk up British motor company shares at the period of the Olympia Show has this year fallen flat, partly because the stock markets in general are in no mood to hear the voice of the charmer, and partly because the prospects of the trade itself are not clearly defined. The general trend of recent economic developments in the motor trade is discussed in a leading article on page 697. Broadly speaking, the industry has yet to make up its mind on such questions as whether there shall be many or few producing firms or many or few different models turned out. The problem of evolving a car which will be a winning proposition in the export as well as the home market has still to be solved. Over the whole future hangs the shadow of the new Ford works at Dagenham, which are to come into production in twelve months' time, with a capacity equal to the current output of the whole British private car industry. In view of these factors, what is the outlook for holders of motor shares?

Though the twelve months which have elapsed since last year's Motor Show have resolved few of the industry's major problems, they have tended to throw their main features into bolder relief. When the ding-dong competitive "battle" is joined between the existing British concerns and the new Ford Company, one can confidently predict which concerns will represent Great Britain in the lists. Leaving on one side companies like Rolls-Royce, which have a steady market for a specialised product, the really profitable British producing firms can be counted on one hand. Some 50 per cent. of the total output of private cars is produced by the two largest and 88 per cent. by the seven largest companies, excluding the Ford Company. In the equity of the biggest concern, Morris Motors, the public has no interest. The ordinary shares of the second largest, Austin, have had a spectacular rise in recent months, following the paying-off of preferential arrears and the resumption of dividends on a heavily written-down ordinary capital. A third concern, Singer and Company, after building up an extended business from small beginnings, has recently suffered a check in its programme of rapid development. Among the smaller companies are some, like Rover and Humber-Hillman, which, having been recently reconstructed or amalgamated, may have indubitable future prospects, though these cannot be assessed with confidence on the basis of recent results. The residue, however, includes a number of companies whose output is noticeably on a smaller scale than their capitalisation. From time to time, certain of them may evolve a successful model, with favourable results on their contemporary receipts; but, taking the group as a whole, it is generally agreed that under a "rationalisation" scheme on a substantial scale most of these companies would deservedly lose their separate identity.

Company.	Paid-up Capital (Preference and Ordinary).	Date of Last Balance Sheet.	Net Profits Earned for Dividend Last Three Years.

* After tax. (a) After reorganisation scheme of 1930. (b) After reorganisation scheme of January, 1929.

The table in the preceding column, which shows the earnings of 12 companies, suggests that while individual concerns may have recently increased their profits, earning power in the industry as a whole has been stationary rather than progressive.

Unless the numerous small-output companies show greater readiness than they have yet evinced to come under the wing of a big "rationalised" concern, the investor's future interests are likely to be concentrated chiefly on the four companies at the head of the table, though possibly the shares of a few reorganised companies like Rover, which have more than a chance of "making good," may possess a speculative appeal for some investors. The position of the ordinary shares of the four large-scale producers merits close attention. The relevant facts are set out in the next table. All the figures shown are subject to tax, except where otherwise indicated :—

	Morris* £2,000,000	Austin† 150,000	Singer 666,760	Ford 7,000,000

* Earnings shown after tax. † Earnings shown throughout on a twelve months' basis, at equivalent rate if no preferential dividend arrears had existed. ** Shares privately held. § Distributed in preference shares. ¶ 60% actual for seven months.

(a) After deducting profits of affiliated companies earned prior to their re-organisation.

Preference shareholders in Morris Motors, whose dividends require £225,000 each year, are comparatively well covered by earnings. The equity shares of the other three companies, which are available to the public, represent strikingly different proportions of total paid-up capital. They account for the whole of Ford's capital, more than half that of Singer, but less than one-tenth that of Austin. Fluctuations in trading profits will therefore have least effect in "moving" Ford ordinary earnings and dividends, and most in "moving" those of Austin. This fact partly accounts for the high yield shown by Austin ordinary shares, despite their sensational rise and the decidedly progressive trend of the company's recent earnings. The low yield on Ford shares represents a lively sense of benefits to come, when the new Dagenham works are in operation. The drop in Singer ordinary (despite the declaration by the directors, who hold one-third of the total capital, that "intrinsic values" justify a quotation nearly 70 per cent. higher) is due partly to general market depression, partly to the setback in profits, and partly to the directors' decision to pay the last dividend in scrip instead of cash.

What is likely to happen when the Ford works at Dagenham come into production? An intensification of the manufacturers' present policy of price-cutting would appear inevitable. Mr Ford's plans are understood to envisage more or less free competition between the Detroit and the Dagenham works for the European market. If it be reasonable to suppose that the average

price of a Ford car will then stand little above the current selling level in America—roughly £100—Dagenham will have only a £10 margin for Transatlantic freight as between its manufacturing costs and those of the Detroit plant. If the cost of production in America be put at about £75, the British Ford car may have to be turned out at a prime cost not exceeding £85. According to an estimate furnished to us by an outside observer, the present sale price of a Ford car in England (taking £200 as an average price for models ranging from £180 to £225) may be analysed somewhat on these lines: Material bought in England, £80; material imported from America, £15; English labour, £40; advertising (7½ per cent.), £15; agents' commission (15 per cent.), £80; company's profit (10 per cent.), £20. The largest British producers can show current figures at least as economical as these. As last year's Ford production at the Manchester factory has been put, however, at about 25,000 cars, while the Dagenham output may be 200,000 units a year, the enormous increase in output, plus the economies of self-contained production, may quite possibly bring down costs to something like the following basis: Total manufacturing costs, approximately £85; advertising, £7 10s.; agents' commission, £15; company's profit, £10—giving a total of £117 10s.

The total British private car output last year was about 170,000 to 180,000 cars. The potential Dagenham production itself exceeds this figure, but whereas existing British producers sell the lion's share of their output in the home market, there is reason to believe that only about one-quarter of the Dagenham output (say 50,000 cars) will be marketed in Great Britain, the remaining three-quarters being designed for the Continent. The ability of the largest British concerns to make the significant reductions in average selling prices inevitable under the new régime may demand not inconsiderable adjustments in their organisation, including, probably, concentration of their activities on fewer models. They are, however, generally speaking, much stronger financially to-day than they were three or four years ago. By the end of 1931, when the issue will be fairly and squarely joined, economic depression in this country may have been sensibly alleviated. For the present, however, even the largest British motor companies will best serve their shareholders' interests by paying moderate rather than generous dividends, and conserving their resources to the utmost extent. For many of the smaller companies, other than the "specialists," the future must remain obscure, so long as the present order, or lack of order, subsists.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 21.	October 23.

The London Stock Exchange continued to function as an international shock-absorber this week. All markets had a dull, and some a decidedly depressed aspect on Monday and Tuesday, attributable to uncertainty regarding the Wall Street position, forced selling from Paris, and unfavourable South American developments. At one time it was reported that some of the selling was coming from "special" quarters nearer home. The pace of the movement, however, slackened perceptibly in mid-week, when the market, in a mood to be grateful for good news from any quarter, was pleasantly surprised by Mr Snowden's hope that increased taxation might be avoided. Gilt-edged led the recovery on Thursday, but measurable gains were recorded in industrials and "speculative" stocks, though these were frequently insufficient to cancel the losses of the earlier days of the week.

Generally, faith in a speedy revival of activity in equity stocks is lacking at the moment. In the absence of any indications of an early end to trade depression attention is rather being given to sound prior-charge stocks, for reasons described in a Note on a later page.

Five per Cent. War Loan was the most important exception to the generally weaker tendency of Gilt-edged stocks early in the week. After initial selling on Mr Snowden's intimation of the possibility of an early conversion operation, the stock came into demand from wealthy short-term quarters and reached a new "record" level. The remainder of the Gilt-edged list was firm on the speech. The first announcement of the India Government's £12,000,000 Loan caused a marking down of prices of India stocks, but the excellent response to the issue produced an immediate recovery. Dealings in Australian loans were on a small scale. Home corporation stocks continued to attract attention, the new Ayr Fives maintaining a premium from the outset.

The Foreign Bond market was puzzled by conflicting reports of the Brazilian situation, but after further substantial markings-down a better tone ensued on the carrying out of the week's sinking fund requirements and a slackening of American selling. Argentines were steady after early liquidation on the recession in the peso, but Chileans remained a bad market. German issues remained out of favour, but slight support was noticeable before the end of the week.

Though the traffic figures of the Home Railways generally maintained last week's "improvement," the market was inclined to put a bearish construction on the possibilities of next month's wage negotiations. Some demand was in evidence for prior-charges, but further liquidation occurred of ordinary stocks, particularly of London, Midland and Scottish, which reached a new low level. Some improvement, however, was manifested towards the close of the week. Further buying of Under-grounds followed the publication of a good week's traffic returns. Among foreign rails, a slump occurred in Argentines, the effect of favourable crop developments being entirely swamped by the decline in the peso. After a fairly severe shake-out on Monday and Tuesday, however, a rally ensued. Among Brazilians, San Paulos showed an advance and Canadian Pacifics were better after early selling.

The bears had matters much their own way in the Industrial markets at the beginning of the week. International stocks were particularly heavy on American tendencies, while distress selling from Paris affected other counters. Mr Snowden, however, came opportunely to strengthen a firmer, though nebulous, tendency in the middle of the week, the beneficial effect extending through the greater part of the list. Among the worst sufferers in the early liquidation were Cables and Wireless, United Molasses, and Turner and Newall, which were all pressed on an unwilling market. In the subsequent recovery, textile shares obtained support with the exception of British Celanese. The position of this company, in the light of the chairman's speech, is discussed on page 724. Electrical manufacturing and supply shares regained favour after showing signs of lassitude. The opening of the Motor Show coincided with a better, though selective movement in the share market, after fair selling. Tobacco shares also improved after showing signs of weakness in the absence of any declaration of policy by the large companies. The position is dealt with in a Note on page 723. Demand, for the present, has veered away from brewery shares. The publication of the Gramophone Company's balance sheet (examined on page 724) added little to the preliminary dividend announcement, but the shares hardened under American influences. Bank shares were generally firm, and a steady, though limited demand was forthcoming for insurance shares.

Rubber shares were mainly unchanged, only small parcels coming on to the market, whence all immediate interest departed with the cessation of sensational movements in the commodity. Tea was inclined to be easier in Mincing Lane, and the shares were dull. The oil market was affected by heavy liquidations early in the week, Paris proving a particularly disturbing influence, though the declines in some of the best shares were disproportionate to the real volume of sell-

ing. The passing of the Trinidad Leaseholds final dividend (referred to on page 725) was badly received. As in other cases, the oil share market became noticeably firmer before the week ended, though professional operations played a larger part than public support.

The mining share markets made a poor showing at the outset, on liquidation from Paris and the Cape. In the Kaffir section, Crown Mines were better than the average, but Central Mining, Gold Fields and "Johnnies" were appreciably lower, while Union Corporation relapsed on the cut in the dividend. Northern Rhodesian issues were practically lifeless at first, but developed strength later and "Chartered" led a rally on professional buying. De Beers came on offer and receded sharply after the new capital announcement. Tin fell to £107½, the lowest since 1902, with a subsequent upward reaction. Tintos were sold in mid-week, but recovered substantially on Thursday.

We are officially informed that Messrs Henry Thomas Munro, Sydney Rowland Savill, Donald Connaughton Munro, Richard John Edward Daintree, trading as H. T. Munro and Company, and Mr Douglas Roy Dunn, were declared defaulters upon the Stock Exchange on October 10, 1930.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Events at the end of last week left nearly half the issues on the New York Stock Exchange selling considerably below the bottom point reached in the liquidation of last November. Many shares can now be bought to give yields, on the last dividends, of 10 per cent. or more. After Columbus Day, an accumulation of selling orders was worked off at the opening on Tuesday, but its completion was followed by short covering and a demand from a limited number of investors seeking bargains, which initiated a rally, particularly in high-grade utilities and rails. Over the whole market, a cautious policy still prevailed, and though prices continued gradually to move up in mid-week, intermittent periods of reaction were always liable to occur. Some of the soundest stocks like U.S. Steel, American Telephone and International Telephone, were over-sold, and showed at one time an appreciable recovery, but much disappointment remained at the absence of any indication of an autumn revival. The steel industry is now operating at only 50 per cent. of capacity, and car loadings are nearly one-fifth lower than a year ago. Broadly, the recent selling wave has left the market in an improved technical condition, but security loans at the bank provide the uncertain element in the situation.

A satisfactory feature of the week has been the stronger tone of Brazilian bonds.

AMSTERDAM.

Last month, attention on the Amsterdam market was chiefly focussed on the bonds section. German loans, in particular, under the lead of the 1930 Reparations Loan, underwent severe fluctuations. A pronounced decline was also registered by Brazilian bonds. The political difficulties with which both countries are having to contend, were, of course, responsible for the downward movement. For first class Dutch bonds, however, there was a satisfactory demand, and prices advanced. The Stock Exchange itself was more or less neglected. Trading was insignificant in extent, and the drop in quotations was fairly limited, considering the weak tendency on Wall Street. At the present very low level which most stocks have reached, holders are little inclined to consider selling, and offerings are, therefore, light, except for occasional short selling by bear operators, which causes a further depression of quotations. Reports coming in from industrial enterprises are in some cases quite satisfactory. The directors of Philips Works, for instance, announce that, owing to the good demand for their new

(Continued on page 722.)

wireless set, they are again working double shifts. There is talk of a 30 million guilder loan in 5 per cent. convertible debentures, to provide for their requirements of additional funds. The Holland Beton Mij. (Holland Concrete Company) has just paid an extra dividend of 50 per cent., while the Internationale Gewapend Beton Bouwmij. (International Reinforced Concrete Company) has declared an interim dividend for the first time, with a distribution of 6 per cent. Fluctuations continue in the plantations section. Sugar shares have benefited by reports of additional sales by the V.I.S.P. and satisfactory crop reports, although the V.I.S.P. has had to cut prices further. About 1,700,000 tons of sugar are still unsold, and within a few weeks the grinding season will be at an end. There has been practically no trading in tobacco shares, while oils fluctuated at around the lowest levels.

INVESTMENT NOTES.

Industrial Prior Charges.—In our leading article last week on "The Future of the Rate of Interest" we observed that industrial fixed interest securities did not appear to have appreciated in market value as the result of the lowering of interest rates this year. A closer examination reveals the fact that the yields obtainable on the prior charges of industrial companies are in many cases higher to-day than in 1929. For example, in the case of home railway prior charges it will be found that the debenture stocks, the intrinsic security of which is not in question, even in a deep trade depression, have appreciated as a result of the lowering of interest rates, while the preference stocks, whose dividend cover has been seriously attacked by the decline in railway earnings, have depreciated in market value. This is shown by the

following table giving the yields at 1929 mean prices as compared with the yields at present prices:—

HOME RAILWAY DEBENTURE STOCKS.				
	1929.		1930.	
	Mean Price.	Yield. %	Present Price.	Yield. %
L.M. & S. 4% Deb.	79 1/2	5.05	82 1/2	4.85
L. & N.E. 4% Deb.	75 1/2	5.30	78	5.13
G. Western 4% Deb.	82	4.88	84 1/2	4.73
Southern 4% Deb.	79	5.06	84 1/2	4.73

HOME RAILWAY PREFERENCE STOCKS.				
	1923	1929	1930	per cent.
L.M. & S. 4% Pref.	70	5.71	55 1/2	7.25
L. & N.E. 4% 1st Pref.	64 1/2	6.20	55	7.27
L. & N.E. 4% 2nd Pref.	55	7.27	39 1/2	10.6
G. Western 5% Pref.	94	5.32	94	5.32
Southern 5% Pref.	89	5.62	87 1/2	5.71
Southern 5% Pref. Ord.	73	6.85	64	7.81

The characteristics of the market in home railway fixed interest securities are to be observed also in other industrial prior charges. Well-covered debentures have bettered their prices, but have not benefited strikingly from the lowering of interest rates, while preference shares which have suffered a deterioration in security have declined in market value. The next table gives some selections which further illustrate our argument:—

INDUSTRIAL DEBENTURE STOCKS.				
	Mean, 1929.	Yield. %	Present Price.	Yield. %
Niger 5 1/2% Deb.	100 1/2	5.47	104 1/2	5.32
North Metropolitan Electric 5 1/2% Deb.	101 1/2	5.42	106	5.25
London Power 5% Deb.	99 1/2	5.03	102 1/2	4.87
Dunlop Rubber 5 1/2% 1st M. Deb.	100 1/2	5.47	104	5.36
Associated Portland Cement 4 1/2% 1st M. Deb.	84	5.00	87 1/2	4.8

INDUSTRIAL PREFERENCE SHARES.				
	Mean, 1929.	Yield. %	Present Price.	Yield. %
United Molasses 6% Pref. £1.	21/10 1/2	5.5	18/-	6.6
Imperial Chemical 7% Pref. £1.	24/7 1/2	5.75	22/6	6.23
Vickers' 5% tax-free Pref. £1.	19/4 1/2	6.4 gross	17/9	7.25 gross
Imperial Smelting 6 1/2% Pref. £1.	20/6	6.37	19/-	6.84
John Lewis 7% Pref. £1	22/-	6.37	17/9	7.87
International Nickel 7% Pref. (\$5)	25/1 1/2	5.52	24/9	5.82

In the case of the investment trusts, it will be found that the debentures of even the strongest companies have not improved greatly in market value, while the preference stocks in some cases are returning higher yields than a year ago:—

INVESTMENT TRUSTS PRIOR CHARGES.				
	Mean 1929.	Yield. %	Present Price.	Yield. %
General Investors and Trustees 4% Deb., 1975	76 1/2	5.23	77	5.2
Investment Trust Corporation 4% Deb.	77	5.19	78 1/2	5.09
U.S. Debenture Corp. 4% Deb.	76 1/2	5.23	76	5.25
Independent Investment 5% Pref.	85 1/2	5.85	80	6.25
Nineteen Twenty Eight 5% Pref.	87	5.75	85 1/2	5.86
Anglo Celtic 5% Pref.	88 1/2	5.66	85	5.87

When the revival in trade comes it may be found that the prior charges of industrial companies, whose earnings have been depressed, will improve in price concurrently with a rise in the equity shares. This movement may continue even after a rise in short-term interest rates. For the investor who finds equity shares too uncertain a holding at the present time, the prior charges of depressed industrial companies, which are themselves sound by reason of their ample cover, may invite some attention.

Brazilian Bonds.—The Brazilian revolution shows few signs of an early settlement. Reports have been conflicting, Buenos Aires and New York declaring that the rebels are marching on Rio de Janeiro and Sao Paulo, while Rio declares that the Federal Government is more than holding its own. With the exception of San Paulo Railway, which recovered 12 points, all Brazilian stocks showed further falls this week, though a partial recovery occurred on Thursday. Exceptions to the rule were the Brazilian 5 per cent. 1908's, which dropped a further 10 points to 80, and San Paulo 6 per cents., which, after an initial decline of 7 points, showed a further loss of 10 points. The San Paulo Railway, on the other hand, gained

				Fall since	Fall

Brazil Traction	35½	29½	24½	10½	30.28

13 points. The falling off in market values was generally held in check by the news that coupon payments would be made on the due date, November 1st next. This affects two loans, the Brazil 5 per cent., 1908, and the 5 per cent. Funding Loan of 1914. It was reported on Wednesday that a Bill had been passed whereby the right to deal in foreign exchange was confined to the Bank of Brazil. This not only restricts the activities of foreign banks, but enables the Government to control the remittance of funds abroad to legitimate commercial operations, payment of loan interest and dividends of foreign companies. All bonds on loans contracted before October 1, 1930, are automatically postponed for thirty days, as from October 5th last, and bonds due between October 5th and October 30th next are also affected.

The Tobacco Situation.—The decision of Messrs. Godfrey Phillips, Ltd., to make a "trial" reduction in the price of their "Army Club" cigarettes has had an immediate repercussion on the price of the shares of several leading tobacco manufacturers. Some investors, perhaps prematurely, interpreted the cut as the first move in a new "price war," and a fair amount of selling ensued, which was, however, checked on Thursday last:—

	Highest, 1930.	Price, Oct. 8.	Price, Oct. 13.	Price, Oct. 16.
British American Tobacco £1 ..	119/3	103/9	98/9	103/1 1/2
Imperial Tobacco £1	101/7	95/-	90/7 1/2	92/6
Carreras £1 "A"	13 1/2	6 1/2	5 1/2	5 1/2
Godfrey Phillips £1 pref.	17/3	15/7 1/2	15/6	20/-

In a statement to the Press Mr Arthur Phillips affirmed that the "cut" in "Army Club" prices was due entirely to the fact that wholesale prices of raw tobacco had declined, a view which certainly appears to be borne out by the available data. In the following table are shown the quantities of raw tobacco imported into the United Kingdom since 1924, the total retained for home consumption, the average value per lb. c.i.f. of all imported tobacco, and the aggregate net profits of the above four companies:

	Net imports (Million lbs.)	Total retained for home consumption (Million lbs.)	Average price per lb. of imports.	Net profit (four companies).
1924	163	128	1/9 1/2	13,792,805
1925	176	133	1/7 1/2	14,959,753
1926	186	135	1/8 1/2	16,393,871
1927	212	138	1/7 1/2	17,370,421
1928	206	141	1/6	17,463,116
1929	220	147	1/5 1/2	17,813,174
1930 (Jan.-Sept.)	...	...	1/3 1/2	...

Whereas net imports have increased in six years by about 35 per cent. and home consumption by about 15 per cent., wholesale prices have declined by roughly thirty per cent. On this showing, there is at least a *prima facie* case for a lower retail price. Hitherto, some manufacturers have preferred to adopt the "gift coupon" system as a means of passing on a portion of the reduction in wholesale prices to the consumer without interfering with retail prices which custom and trade practice have made almost sacrosanct. Experience has shown, however, that "gift coupons" are a two-edged weapon, favoured neither by the sellers of the articles "given away," nor by the retail tobacco distributors. If there is ground for giving something more to the consumer, a straight cut in price would seem to be the most desirable method.

Tube Manufacturing Agreement.—For some time past negotiations have been proceeding between Stewarts and Lloyds, Limited, and Tube Investments, Limited, with a view to achieving closer co-operation. Stewarts and Lloyds is one of the oldest-established companies in the business, with extensive international connections, while Tube Investments is a holding concern controlling the activities of numerous manufacturers in the Midlands, in which Babcock and Wilcox hold an important interest. Both companies have been successful dividend-payers, although the earnings of Stewarts and Lloyds were temporarily reduced during the coal stoppage of 1926. To some extent, their activities are complementary, Stewarts and Lloyds being concerned with bulk production while the activities of Tube Investments are directed rather to the finishing end of the business—the production of precision or highly-manipulated tubes. In some sections, however, their work is coincident, and co-ordination of effort offers a prospect of substantial economies. This particularly applies to the research and technical activities of the two companies. The *modus operandi* of the fusion of interest now proposed leaves the separate identity of the two companies unaffected but provides for permanent liaison without unduly swelling the issued capital. Stewarts and Lloyds will create 625 and Tube Investments 500 "liaison" shares, having the same denomination, but one thousand times the rights—as to voting power, dividends and surplus assets in a winding-up—as in the existing equity shares. Stewarts and Lloyds will subscribe for Tube Investments' liaison shares at £1 per share, and Tube Investments for Stewarts and Lloyds' liaison deferred shares at 25s. per share. The new shares will, in fact, be "privileged" securities in a class already existing. Such shares are not common among British companies, though they have been widely used on the Continent, where a good deal of attention has been given to their potential abuses. So long as the two companies hold the whole of each other's liaison shares, existing shareholders—who may naturally be reluctant to create a security with a

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

thousand times their own rights, pound for pound—will obtain a *quid pro quo*, since dividends received will approximately balance dividends paid out on liaison shares. If, however, any change of ownership of the whole or part of these shares were ever to take place a more equivocal position would be created. It has therefore been suggested that the directors might agree to an amendment to the proposed changes in the respective companies' articles of association, restricting changes in the ownership of the proposed liaison shares.

Gramophone Company.—It is natural to compare the results of the Gramophone Company for the year ended June 30th last with those of its greatest trade rival, Columbia Graphophone. Both companies increased their capital on the eve of the trade depression, and both found it difficult to put the whole of the new resources to immediate employment. While Columbia, however, has declared increased earnings, the trading profits of H.M.V. have fallen by 28 per cent., and only £648,000 is distributed in dividends against nearly £820,000 last year.

	(Years ended June 30)

petrol for quick starting

The balance sheet position remains extremely liquid, gilt-edged securities and cash having increased from £983,000 to £1,584,000. The company now has £1,419,000 outstanding with subsidiary companies, £847,000 of this representing accounts current. There has been an important extension of the company's outside interests, whose nature is not referred to in the report. Shares and undistributed profit of wholly owned subsidiary companies, and sundry trade investments total £530,000—an expansion of £140,000, so far as can be ascertained from the figures of the rearranged balance-sheet. The company last year enjoyed the benefit of an agreement with Marconi's Wireless Telegraph Company, whereby it acquired the factories and wireless business of the Sterling Telephone and Electric Company and the Marconiphone Company, with the right to use Marconi patents in all fields of public entertainment. The 20,000 ordinary shares authorised in March, 1929, have been issued to Marconi's in accordance with the contract. The company's connection with British and Dominions Film Corporation has been severed, but the company still associates itself with the making of talking pictures. How far these potentially important fields of activity have been productive of tangible earnings in the last twelve months may be made clear at the forthcoming meeting. Mr A. Clark has replaced Mr Trevor Williams, though the latter retains his seat on the board, while the appointment of Sir Landon Ronald to the board is an interesting example of the successful liaison between art and industry which has always been a feature of the company's policy. The shares, which became a popular counter during the Stock Exchange boom, have fallen heavily this year, and stand at 49s. 3d. against a maximum for 1930 of 109s. 6d. On the basis of last year's results the yield is 8½ per cent. on dividends, and over 10½ per cent. on earnings.

British Celanese Prospects.—The British Celanese meeting on Wednesday was not an over-cheerful affair, the chairman having reserved for it the announcement of a postponement of the second preference dividend, for the half-year to October 31st, which might have clouded the sunshine of the report, issued a fortnight ago. The speech of Dr. Henry Dreyfus left, indeed, a strong impression that while the chairman and managing director stands in the front rank as an artificial silk manufacturer and technician (as is shown by the real achievements of the company under his direction) he is temperamentally less interested in questions of salesmanship, or of finance. The company has made great progress in cheapening the production costs of the cellulose product, and the news that further economies, which are in prospect, will be passed on, is encouraging to the consumer. Unfortunately, the company's productive capacity is greater than the current consuming power of the market. Three-fifths of its yarn plant was idle last year, and a relatively small capital expenditure would bring the capacity up to four times last year's output. Unfortunately, a speedy expansion of demand, sufficient to bring anything like the full capacity of the plant into operation, can scarcely be looked for, in cold blood. Meanwhile, the company is called on to "bear the brunt of all the financial charges of the capital provided during the last two or three years." The time, indeed, would seem to have come for British Celanese to concentrate its main energies on marketing rather than production problems. On the financial side, the chairman gave no convincing answer to the criticisms which have been made of the company's policy as regards depreciation. Briefly, it is allowing depreciation, at the present time, at the rate of £200,000 a year on fixed assets (exclusive of goodwill and patents valued at £1,913,000), of £8,274,000. This depreciation ratio of approximately 2½ per cent. appears to many observers inadequate, in an industry where the obsolescence factor looms so largely. That the total of the depreciation reserve, including past allocations, now amounts to nearly 18 per cent. of the balance-sheet value of plant and buildings is reassuring so far as it goes, but shareholders would be more satisfied if the company's contemporary policy in this respect were more generous. All things considered, the decision to postpone the second preference dividend will be generally approved.

The Rubber and Tea Outlook.—The speeches of Mr Eric Miller at the annual meetings of Harrisons and Crosfield are widely read as expressing the considered views of an authority on the plantation industry. This year, with due deference to Mr Miller's wide experience, it may be suggested that he is unduly pre-occupied with restriction questions. Most producers regard organised restriction, at the moment, as an academic issue, and are concerned rather with the concrete problem of adjusting their production policy to a *régime* under which low prices are a very effective restricting agent. Mr Miller still thinks, however, in terms of co-operative effort with the object of keeping every British-owned acre under rubber in a position to produce, if not now, sometime or other. He goes so far as to suggest that the Governments of rubber-producing countries should offer "financial assistance on easy terms to growers who discontinue production." A much more promising line of approach to the industry's admittedly formidable problems is suggested by his reference to the concrete suggestions of the Rubber Growers' Association for furthering the campaign to popularise the use of rubber for road paving. Any development which tends to reduce the dependence of the trade on demand from a single quarter—the tyre-producing industry—will strengthen its tactical position in the long run. Mr Miller's review of the tea trade is, naturally, more optimistic. He does not look for a repetition in 1930 of the appreciable increase in tea consumption recorded last year, but expects a substantial reduction in the amount of tea coming to market in the next few months, as a result of the policy of "finer plucking" now being practised, under an agreement between the producers of India, Ceylon, and the Dutch East Indies. He rightly attributes, however, the relatively satisfactory outlook in the market, not merely to the quantitative factor but to the enhanced quality of the tea now available to the consumer as a result of scientific study of factory processes and the greater pains taken in the handling of the leaf in estate factories.

Uruguayan Railway Results.—In view of the decreased revenues of the Argentine railways the rise in the receipts of the Central Uruguayan Railway Company of Monte Video by £60,233 to £1,621,291 is eminently satisfactory. There was an increase of 3 per cent. in passenger receipts, but the revenue from freights was slightly lower, owing mainly to competition of road transport. The company's loss on remittances, however, rose by no less than £80,703. The results for the past three years are shown:—

	(Years ended June 30.)

* After adding interest received and deducting debenture and other interest paid by the company and £56,000 being rent paid, and accrued, on account of the North Eastern Railway.

† Amount returnable to Uruguayan Government for the year, on account of past advances.

In his report, the general manager states that the heavy loss on remittances was due to the Uruguayan exchange rate being affected by the financial situation in local

countries which "dominate River Plate quotations." He considered that the country's condition and resources did not justify the Hallgarten loan of \$17,000,000, which was raised to finance the immediate completion of certain public works. During the twelve months ended January 31st last, the number of motor lorries running in competition with the railways almost doubled. A successful year was also experienced by the Central Uruguay Eastern Extension Railway Company, Ltd., and the Central Uruguay Northern Extension Railway Company, Ltd. The Eastern Extension showed an increase of £19,973 to £382,556 in gross receipts, while the working profit was £10,985 greater at £210,406. The percentage of expenditure to receipts at 44.9 per cent. was the same as in 1929. The net profit was £10,998 higher at £151,346, but the ordinary dividend was reduced from 11 per cent. to 10½ per cent. Passenger traffic rose by 2 per cent., but the goods revenue drop of £5,133 or 3 per cent. was offset by the increase of £27,811 (28 per cent.) in livestock traffic. The Northern Extension's receipts rose by £2,329 to £19,563, the working profit being £1,881 greater at £105,964. The percentage of expenditure to receipts rose from 36.09 per cent. to 46.16 per cent. The net profit showed a slight increase of £578 to £68,604, and the ordinary dividend was reduced from 7 per cent. to 6½ per cent. At the time of writing the Central Uruguay Railway shows an increase of 12.4 per cent. in traffic receipts for the first 15 weeks of the current year, and the figures of the Eastern and Northern Extensions, both show increases of 8.7 per cent. At their present price of 74, Central Uruguay Railway's ordinary shares yield £8 2s. 2d. per cent.

Trinidad Leaseholds.—The directors of Trinidad Leaseholds, to the surprise of the oil share market, have decided to pass the final dividend (which last year was 17½ per cent., making 30 per cent. for the year), in view of "the conditions obtaining in the oil industry and the necessity for conserving the cash resources of the company." The company's financial year ends in June and the report should be published by the middle of next month. The only indications of an unfavourable report were the reduction in the interim dividend from 12½ per cent. to 7½ per cent. in May, the decline in production from 431,584 tons to 394,950 tons, and the increase in the oil purchased from 449,950 tons to 557,650 tons. It must be assumed that the company has been making less profit on oil purchased than on oil it produces in its own fields, while its sales revenue must have been reduced by the fact that its selling contracts are mainly on a sliding scale depending on market prices in America. Moreover, the company has made some additional investments during the year which may have depleted its cash resources. For example, in conjunction with Venezuelan Consolidated Oilfields, it has established a company to develop certain properties in the Palo Seco and other districts in Trinidad. It also purchased the petrol distributing business in Great Britain of Burt, Boulton and Haywood. Its interest in Tocuyo Oilfields of Venezuela is not yet revenue-producing. Whether the judgment of the management in thus ex-

SECURITY FIRST
ROYAL
INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

tending the company's interests will be vindicated, time will show. As far as the market is aware the company continues to hold its valuable contracts with the British Admiralty for fuel oil. The ordinary shares have declined this year from a high level of about 76s. to the present price of 21s. 6d., the fall last week being 10s. Meanwhile, the Apex (Trinidad) Oilfields has published a circular stating that its deliveries of oil to Trinidad Leaseholds are being fully maintained and that there is no reason to anticipate any decrease, either as regards the output or deliveries, from the present annual aggregate of round about 400,000 tons. Apex (Trinidad) also declares that though it has suffered a decrease in revenue, "substantial profits" have been earned, and the rate of its final dividend will be announced towards the latter part of December.

Sub Nigel.—Our mining correspondent writes:—The fears expressed in these columns, a year ago, lest the company should find it necessary to reduce its dividend, have, unfortunately, proved well-founded. The distribution this year totals 40 per cent. against 50 per cent. Thanks to the operation of an additional tube mill, a substantially increased tonnage of ore was crushed in the twelve months ended June 30th last; but the effect was more than counterbalanced by decline in grade, accompanied by a moderate expansion in costs. The former arose chiefly from the reduction in the percentage of ore taken from the estimated reserves (58 in place of 70 per cent.); the growth in costs was largely attributable to an advance of 1s. 1d. per ton in the development charge. We contrast the results of the past three years:—

	1928.	June 30 1929.	1930.
Ore crushed tons	251,300	291,400	323,800
Yield per ton	83/6	76/-	69/10
Cost per ton	41/8	42/3	44/-
Profit per ton	41/10	33/9	25/10
Total working profit ...£	525,580	491,160	418,760
Dividends, per cent.....	65	50	40
Development footage ...	22,560	42,367	45,290
Ore reserves tons	986,000	891,000	965,000
Average value ... dwts.	19.7	18.2	18.0

The carry-forward is now £53,600, or £36,700 less than was brought in; but £91,650 was absorbed by capital expenditure, which did not figure in the 1928-29 appropriation account. The balance sheet shows only a small cash surplus. For months past a steady and appreciable expansion in the monthly profits has been observable, giving warrant for the expectation of larger dividends, although it should not be overlooked that the Union Government is entitled to an increased percentage by reason of the extraction of ore from the "Lease" area. Highly encouraging developments here constituted the outstanding feature of last year's operations.

CAPITAL ISSUES.

A single borrower, the Government of India, raised the substantial amount of £12 millions in the market this week. One half of the proceeds are to be utilised to redeem Treasury bills maturing during December, the balance being required for capital expenditure on railways. The issue, which took the market by surprise, offered a generous yield, and was quickly over-subscribed. This is India's third offer of 6 per cent. stock in London this year, the earlier issues, made in February and May respectively, being made at a slight discount, against par in the present instance. Whereas these issues (having a maximum currency of three and five years respectively), were regarded definitely as short-term stocks, this week's offer falls rather into the medium-dated class and has been held in some quarters to suggest that what the market had previously interpreted as

a "stop-gap" rate of interest, may have a slightly longer currency in the view of the Government of India. In the absence of outstanding constitutional questions, it is probable that India would be borrowing to-day at nearer 5 than 6 per cent.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to October 11, 1930, £201,382,055.
Total, including conversion recorded, January 1 to October 11, 1930, £294,933,286.

National Savings Certificates.

Net sales, week ended October 11, 1930, £100,000.

Government of India 6 per cent. Bonds, 1935-37.—Issue of £12,000,000 6 per cent. Government of India bonds 1935-37 at £100 per cent. Trustees are authorised to invest in these bonds. If not previously redeemed, the bonds will be repaid at par on October 15, 1937, but the Secretary of State for India reserves to himself the right, on three months' notice, to redeem the bonds at par on or after October 15, 1935. The issue is made under the provisions of the East India Loans Act, 1923, and previous acts. The proceeds of the issue will be used for repayment of £6,000,000 India Bills due December 20, 1930, to provide funds for capital expenditure on railways, and for general purposes.

Colchester Gas Company.—Offer for sale by tender of £10,000 6 per cent. preference stock, minimum price par. The net revenue of the company for the year ended December 31, 1929, was £9,152, covering dividend on the preference stock, including the present issue, 2.8 times. The company was established in 1826 and incorporated by Act of Parliament in 1866.

Particulars of the following has been issued "for information only," with a view to Stock Exchange introduction:—**Scottish Mortgage and Trust Company, Ltd.** Issued capital £1,500,000, in £750,000 5½ per cent. cumulative preference stock and £750,000 ordinary stock. Particulars of an issue of £239,140 5 per cent. redeemable debenture stock, 1980-85. **Monte Video Waterworks Company, Ltd.** Issued capital £1,300,000 ordinary stock. Particulars of an issue of £250,000 of 6 per cent. five-year notes, to provide for the cost of extensions and improvements.

[Other Stock Exchange information, including the latest dividend announcements, profit and loss figures, shorter notices and weekly traffic returns, will be found on page 737 under the heading "Company News."]

BRAZIL—STATE OF SAO PAULO.

SUMMARY OF THE MESSAGE BY DR HEITOR TEIXEIRA PENTEADO, VICE-PRESIDENT OF THE STATE OF SAO PAULO PRESENTED TO CONGRESS ON JULY 14, 1930.

FINANCE.

In the latter half of 1929 our State felt the effects of the growing disequilibrium in the world's financial markets, which culminated in the violent crash which occurred on the New York Stock Exchange in October last.

At the same time that, in a few days, the fortunes of America diminished by about fifteen hundred millions of contos, England was going through the most serious crisis in her history with the £ down to below 4.85, compared with the parity of 4.86½.

France, Holland, Greece, Germany, Italy, and the Argentine, in their turn, were passing through a crisis not less accentuated, the gold money in the last-named country going down to 21 per cent. The Bank of England, according to the report of reputed authority on the matter, lost from June 20th to July 4th £9,125,000 of gold. As a result of these difficulties, which, with the passing of months, became more acute, the position in our State inevitably reached a climax. The banks withdrew, and, by raising their rates of interest, prevented the exodus of capital. The consequence was a sudden and unexpected shortage in the credits necessary for the financing of stocks, regularly made, with the approval of all the interested parties, by the State Bank. Coffee in particular, was affected by these unforeseen factors. A great shock might have been avoided if the said crash had not created, as it did, immovable barriers, and had not resulted in an immediate and sudden fall in the prices of all consumable goods. We must, in the meantime, point out that of all the products, coffee was the one that suffered the least depreciation, and it is also necessary to note that the effects of the world crisis were less noticeable in Brazil than in any other country.

The first tremors caused by the great upheaval which shook the American capital gave rise to apprehensions, particularly in the minds of those who were more easily dominated by the panic. This situation, however, lasted only for a very short time, because the Government took it in hand with its usual prudence, patriotism, energy and solicitude, and succeeded, by the means it adopted, in re-establishing confidence and thus enabling business to resume its normal course. The State Bank, with its own resources, and with those which were placed at its disposal by the Treasury, and the Bank of Brazil, with the balances it had available, commenced to take action in the same month—October; while the National Credit Institutions used their experience and resources to support agriculture. By these means the crisis was resisted. The efficacy of these measures is shown by the latest report of the President of the Bank of Brazil, in which he declares that during the period of the crisis, there were only two failures and ten arrangements with creditors registered in the coffee industry of Santos.

Exports, in their turn, in spite of the restricted conditions prevailing in consuming markets, which had been depressed by the crash, did not suffer any decrease, but, on the contrary, increased, as is shown by the following figures, which relate to the second half-year of the last two years:—

	1928.	1929.
Santos	Sacks 3,181,929	4,100,287
Stations and Railways	66,847	165,849
	3,248,776	4,266,136

The above figures show that from July to December, 1929, the period not long before the crisis, the exports of coffee amounted to 1,017,380 bags more than during the same period of the previous year, which was not affected by the crisis suffered in the financial markets.

Although the situation had become virtually re-established, the Government, which never overlooks the interests of agriculture, did not remain inactive. It continued its watchful and defensive attitude as devotedly as ever. Pledged as it was, and as it is, to defend production, and to procure for producers a quiet outlet, without disturbing stocks, it carried out a huge financial operation for which it had obtained authority by the Law of December 27, 1929, and which the Legislative Congress wisely confirmed, increasing the amount of the loan in May last from 12 to 20 million sterling. The success of this operation showed once again the confidence which the State of Sao Paulo inspires in the money markets of the world.

In spite of the depressing consequences of the great difficulties to which we have referred, the Government was able to punctually meet all its engagements.

REVENUE.—The general revenue of the State, which in 1928 amounted to Reis 404,607,350\$927, increased to 438,459,515\$879 Reis, showing therefore an increase of Reis 33,852,164\$952 in comparison with the previous financial year.

Of the revenue collected, the biggest item was, as it always is, that arising from the export duties, which provided Reis 146,457,251\$553. Next to this came the duty on the transfer of property *inter vivos* and through death, which amounted to Reis 45,907,700\$827. The tax on buildings in the capital and the drainage tax together yielded Reis 37,603,720\$990.

The official value of the goods produced by the State and exported abroad and to other parts of the Federation amounted to Reis 2,418,080,219\$700, namely:—

Coffee	1,616,191,682\$700
Other goods	801,888,528\$000

On these exports the Treasury collected by way of taxes the sum of Reis 152,389,513\$224, made up as follows:—

Export tax	146,974,082\$053
Office dues	5,415,431\$171

A comparison of the export tax receipts during the last five years, with the total revenue collected during the same period, shows:—

Year.	Export Tax.	Total collected.	Percentage.
1925	118,754,608\$617	353,270,978\$407	33.618
1926	129,653,363\$443	352,584,393\$452	36.800
1927	148,305,839\$368	404,044,404\$571	36.952
1928	120,952,435\$595	408,424,343\$700	29.614
1929	146,974,082\$053	438,459,515\$879	33.520

EXPENSES.

The Budget expenses amounted to Reis 457,564,939\$492, and the Extra-Budget expenses to Reis 160,870,690\$630. This latter was caused by the following charges and services to which the Government had to attend by virtue of laws and imperative contracts and the unavoidable necessities of administration:—

Service of the 1921 Loan (insufficiency of the super tax of 5 francs)	16,953,620\$541
Loan to the Benevolent Funds for Public Employees in accordance with Law No. 2038 of 1924	1,000,000\$000
Work at the Leper Settlement of St. Angelo	49,112\$100
Work at the Judicial Lunatic Asylum of the State	474,584\$100
Construction of the Building for the Animal Industry Board and the Biological Institute	7,991,427\$838
Construction of the Law Courts	2,953,887\$000
Supplementary works relating to the Water and Drainage Service of the Capital	36,314,905\$927
Construction of Roadways and Public Buildings	7,708,482\$079
Subsidy to the Electro-Metallurgical Company of Brazil	2,456,773\$116
Loan to the Sao Paulo Goods Exchange for the building of a Commercial Hall	1,270,000\$000
Subsidy to the Morro-Agudo Railway Co.	913,690\$410
Disappropriation and acquisition of land for the construction of the Congress Hall	2,006,250\$000
Construction of the Marrink Santos Line	80,776,959\$719
Total	160,870,690\$630

If we compare the Budget expenses paid with the revenue actually collected, it will be seen that there was a deficiency of revenue of Reis 19,105,423\$613; this was due, on the one hand, to the fact that revenue fell short of Budget estimates to the extent of Reis 15,147,464\$121, and, on the other, to the expenditure necessarily incurred by the sanitary works of the State in order to prevent the spreading of the yellow fever which had broken out in an epidemic form in other parts of the country.

The payment of these expenses compelled the Executive Power to open supplementary credits to the amount of Reis 9,500,000\$000 under the heading of "Public Assistance."

In addition, it should be borne in mind that in accordance with the Law No. 2344 of 1928 the Treasury was obliged to pay, in addition to the Budget amount provided for, the sum of Reis 8,611,053\$252 for the general increase in salaries granted to State employes.

Summing up what we have above stated, we arrive at the following figures:—

Budget Expenses paid	457,564,939\$492
Budget Expenses as fixed	453,606,980\$000
Excess Expenditure over Estimates.....	3,957,959\$492
Budget Revenue	453,606,980\$000
Revenue collected	438,459,515\$879
Revenue shortage	15,147,464\$121
Budget expenses paid	457,564,939\$492
Budget Revenues collected	438,459,515\$879
Actual Deficit.....	19,105,423\$613

The fixed debt of the State as at December 31, 1929, was Reis 1,252,947,219\$804, made up as follows:—

Foreign Funded debt	649,228,570\$661
Internal Funded debt	349,969,000\$000
Floating debt	253,749,649\$145

Total 1,252,947,219\$804

At December 31, 1928, the total debt amounted to Reis 1,278,077,430\$312, so that during 1929 there was a decrease of Reis 25,130,210\$508.

In order to lessen the disastrous effects of the shock to the economic and financial life of the State, during the last months of the year, the Government succeeded in obtaining from the banking house of Messrs. J. Henry Schroeder and Company, of London, a credit of two million pounds, the proceeds of which were applied to the financing of coffee.

THE STATE BANK.

Although the State Bank suffered the inevitable counter-shock of the great financial crisis, it was, nevertheless, supported, and continues to be supported, by the Government and by the Coffee Institute, and it was able, with the resources at its disposal, to come to the aid of the productive classes. As a result, the situation not only did not become worse, but gradually improved, and an undisturbed atmosphere of work, of resistance and confidence was restored. A valuable stimulus was the presence of the worthy president of the Bank of Brazil, Dr. Guilherme da Silveira, who, working harmoniously with the chief banks of this State, succeeded in devising measures for the alleviation of the effects of the crisis and of finding the most convenient means to deal with it. Consequently—and thanks to the new resources which were given to it—the Bank was able to carry on, although on a reduced scale, in its useful task; reforming the credits which it had granted to its clients, substituting its bills of lading for coffee, which had been given to it by way of guarantee; carrying out commercial operations, and making commercial and agricultural advances, protected by the necessary guarantees. It continued regularly to finance the coffee bills of lading, with the object of finding the necessary pecuniary resources for the coffee planters and the commission agents, to the extent of 604,396,391\$040—the value of advances carried out by our bank, guaranteed by 13,346,076 bags of coffee. The volume of mortgage loans amounted to 207,025,107\$270, namely, 163,869,906\$000 in rural loans and 43,155,201\$270 in city loans. At the close of the financial year 44,466,781\$400 had been laid out on agricultural securities. The balance-sheet total as at December 31st amounted to 3,612,554,179\$357, and the banking department showed payments in amounting to no less than 4,494,782,219\$275, and of 4,501,643,724\$653 of money paid out. The net profit of the Bank was 27,344,196\$820, which, added to the balance of 1928, gave a total of 49,732,494\$860 available. Of this sum, after deducting the usual appropriations, there remains the high balance of 41,177,749\$256, which is carried forward to 1930.

THE COFFEE INSTITUTE.

The Coffee Institute worked steadily and carried out faithfully the obligations assumed by it at the convention of the coffee-producing States.

On December 31st coffee stocks in the State of Sao Paulo, retained in the control depots or in transit in the hands of the various railway companies, amounted to 18,357,334 bags, which had been consigned to Santos. The transport to the export ports was carried

out without interruption and according to plan, and the Institute took the necessary measures to provide the ports, in the best possible manner, with the quantities required for the various consuming countries.

The revenue of the Institute was 13,152,587\$906, derived from the interest on their deposits in the banks, dividends on the shares of the State Bank of Sao Paulo, and the proportionate contributions from the other coffee-producing States towards the coffee propaganda.

With this sum, increased by the balance brought forward from the previous year to the value of 8,786,155\$413, the ordinary expenses for the financial year were duly met to the amount of 17,595,345\$420, the balance carried forward to the current year being 4,343,397\$899.

The total balance in cash at the Bank of the State of Sao Paulo and other banks on December 31st amounted to 232,251,916\$640, as is shown by the balance sheet made up to that date.

Foreign propaganda continued successfully, having for its object the stimulation of demand, the increase in knowledge of the qualities of our coffee, and the acquisition of new markets.

The shipping service into the interior was altered, the crop having been divided into 12 series designated by the 12 first letters of the alphabet. This new system proved itself very advantageous, and made it possible for the whole of the very large crops to be dispatched in the normal manner before April 30th.

The same system, with a few alterations as to the order of the dispatch of the various services, will be adopted in this year's crop. The new regulation, issued so as to operate as from July 1st, will obviate some of the shortages which occurred during the first year's working of the scheme, and will also do away with the abuses which unfortunately took place in spite of all the control which had been exercised. The Institute took measures to punish those none-too-scrupulous shippers who made use of unlawful means in order to obtain an advantage with regard to their shipments.

The port of Santos exported 9,311,508 bags of coffee valued, at 1,965,936,868\$000, as against 8,956,041 bags in 1928, with a value of 1,994,308,461\$000. Thus, although exports were larger in quantity by 355,467 bags than in the previous year, their value was 28,371,593\$000 lower. This was due to the fall in prices which took place during the last months of the year. If we reduce this value to £ sterling we arrive at, for 1928, £48,936,896, and for the following year £48,509,312, a decrease of £427,584. The Control Service of the Coffee, which is destined for consumption in the State, was intensified. The competent section carried out 9,946 inspections in the Roasting, Grinding and Tasting Factories.

THE BANKING TURNOVER.

The Banking turnover kept a high level, amounting to 10,004,596,880\$256, which is slightly lower than that of the preceding year. The proportion of the transactions carried out between the National and the Foreign Banks was practically the same as in 1928.

ASSETS.

With the incorporation of new Real Estate and with the investments in new works of the sums referred to in the various parts of this message, the assets of the State amount, as regards Real Estate, to 1,137,624,068\$571. If we add to this amount the sum which the State possesses in Bonds and other securities to the amount of 35,123,075\$855, we see that the total value of its assets amounted at the close of the Financial year to 1,172,747,144\$426.

TRAFFIC AND PUBLIC WORKS.

Railroads in general: Inauguration of new tracks.—The number of kilometres of new railway track laid down in the territory of the State and opened for public traffic showed an increase over the figure for the preceding year. The actual total was 138,628 kilometres, against 104,193 kilometres in 1928. The distribution, according to the various lines, was as follows:—

- 15,454 kilometres connecting Santo Antonio to the Itarare branch of the Sorocabana Railway;
- 36,029 kms. from "Alberto Moreira" to Colombia, in the Barretos extension of the main line of the Paulista Railway Company;
- 28,145 kms. from Aracatuba to Guararapes in the North Eastern Railway Company of Brazil;
- 40,900 kms. from Pontal to Morro Agudo, the complete line of the Morro Agudo Railway Company; and
- 18,100 kms. from "Campos Salles" to Barrerrinho, representing the whole of the line belonging to the Barra Bonita Railway Company.

Increase in Traffic.—The increase in the traffic on the Paulista Railway system reached, on December 31st last, a total length of 7,079,165 kilometres, including the above new tracks.

New Concessions.—In 1929 only one concession was granted—that sanctioned by Decree No. 4601 of May 5th to Giro Infant Marot for the construction, under the provisions of Law No. 30 of June 13, 1892, of the line between Ibitinga and Nova Horizonte.

Lines in Course of Construction.—The works of construction of the new railway lines on the Sorocabana Railway, on the Sao Paulo-Goyaz, on the north-east of Brazil, and the improvements in the Paulista and Mogyana Railways are progressing rapidly.

Suburban Railway Lines and Railroads subject to special privileges.—The road debts outstanding amounted, at the close of the financial year, to the sum of 12,041,707\$338, thus classified:—

S. Paulo Railway Company: (Campo Limpo to Braganca) for guarantee of interest	2,048,907\$758
Municipal Chamber of Piraju: Subsidy to the tramways from Sarutaya to Piraju	250,000\$000
Brazilian Electro-Metallurgical Company: Assistance referred to under the letters A and B of Clause 24 of Decree No. 4020 of March 4, 1926...	6,938,439\$916
Monte Alto Improvement Company: Suburban line from Ibitirama to Vista Alegre	592,938\$385
Morro Aguda Railway Company: Suburban line from Pontal to Morro Agudo.....	2,211,421\$279

Inspection of Railway Lines.—The competent department carried out inspections on those railway lines which had been granted a State concession, which included 12,188 kilometres of lines.

Accounts, Finances of the Lines.—The Government agreed during the year to the increase of 47,485,870\$579 in the construction account of the lines belonging to the Paulista, Itatibese e Dourado, and the Morro Agudo companies; the initial amount sanctioned was 4,961,693\$000.

The total receipts and payments of the railway lines of the State (excluding the Sao Vicente tramways) for November and December showed that there was no stoppage in the ever-increasing development of the State production. The figures were as follows:—

Receipts	410,834,043\$364
Expenses	294,814,155\$595
Balance	116,019,887\$769

THE SOROCABANA RAILWAY.

FINANCIAL MOVEMENT.

The Sorocabana Railway, owing to the excellent results it obtained in 1928, was able to carry out several improvements, the most notable of which were, in view of their effect on the revenue of the railway, the following:—

- 1.—Increase of salaries to an average monthly value of Rs.380,000,000\$000.
- 2.—The running of suburban trains between Sao Paulo and Sao Joao with a reduction of 50 per cent. on the fares.
- 3.—A reduction of 25 per cent. on the fares on the mixed trains, and on goods trains carrying passenger coaches, as well as on the trains P.3, P.4, and P.5 between S. Paulo and Sorocaba.
- 4.—The running of daily trains de luxe between Sao Paulo and Ourinhos carrying sleeping and saloon cars of the Pullman type.

Though fully justified by the net receipts earned in 1928, these measures inevitably affected, to some extent, the earning capacity of the railway line. Had it not been for the heavy storms and of the railway line. Had it not been for the heavy storms and, unprecedented floods in the zone served by the Sorocabana Co., which seriously disorganised the service, the above measures would have not greatly affected the ultimate balances.

The floods took place just at the place where the double line was inaugurated, the track of which in the Serr de Sao Joao was the one which suffered most severely from the rains, which were the most violent which have yet been registered, as is shown by the charts of the Meteorological Office of the State.

The tracks that suffered most were those of Fernao Dias to Maylasky, the damage to which took six months to repair and entailed very heavy work; and those from Rodovalho to Piragibu and from Sorocaba to Lopes de Oliveira, which took three months, and necessitated the use for several months of tracks of old lines which had been abandoned, and the construction of some side lines. As a result of these measures it was possible to resume the service of passenger trains.

Between Sao Paulo and Santo Antonio alone more than 1,000 workmen were employed in the repair work on the line.

At the Itarare branch, the waters of the river Tatuhy invaded the line at kilometre 189, flooding up to 180 metres, to a height of more than 60 centimetres. Several embankments between Santo

Antonio and Tatuhy, and between Boituva and Itapetininga, collapsed, compelling the railway to suspend its train service between those two stations.

On the Ituauna line the services between Mayrink-Itaicy and Itaicy-Jundiary were interrupted. A great number of railway level-crossings between Mayrink and Pirapitinguy were carried away. Between kilometres 18 and 83 about 20 level-crossings, some of them very large, collapsed, several embankments having crumbled away. The waters invaded the railway lines at several points, necessitating a suspension of the train service between Jundiary and Itupeva and between Monte Serrat and Quilombo. Between Pimenta and Itaicy the line was entirely under water.

On the Tronco Line, at kilometre 272, an embankment fell down, and at kilometre 256 another one crumbled away from a height of about 10 metres along a stretch of 50 metres, thereby blocking the line between Botucatu and Boituva. Traffic at this point was resumed in three days by the construction of two side lines.

In the vicinity of Sao Paulo, between Osasco and Quitauna, the line was entirely submerged for a length of 1,000 metres; for some days passengers had to be transferred from the trains by means of boats.

The waters of the River Sorocaba also invaded the station yard at Sorocaba, and it was necessary to remove all the locomotives which were lying in the local sheds.

In consequence of this damage, the management of the railway was compelled to employ on the repair work of the line a great number of locomotives and trucks, and the withdrawal of these from ordinary traffic caused a corresponding diminution in the receipts, on the one hand, and an increase in expenses on the other, during nearly the whole of the first half-year.

Thanks, however, to the efforts of the whole staff, who acted with the greatest solicitude, the services were soon restored to their normal running, and between the months of March and June small surpluses were shown, amounting, in the course of the second half of the year, to a considerable sum. The net results for September, October, and November placed the Sorocabana on a level with the most important railway lines of the State.

As a result of the above difficulties, the net balance, at 23,019,488\$392, was smaller than that in 1928, when the figure was 26,295,081\$141, there was thus a decrease of 12.45 per cent.

The gross revenue, including the accessory taxes of 10 per cent. for the "Special Fund" and 2 per cent. for the "Pensions Fund" was 92,410,915\$103, which represented an increase of 2,324,435\$899, as compared with that of the previous year.

GENERAL BUDGET OF THE RAILWAYS.

The State Law No. 2,343 of December 31, 1928, fixed the expenses of the upkeep of the line for 1929 at 60,437,000\$000, and estimated the receipts at 84,000,000\$000. Owing, however, to the reduction in expenses—despite the increase in salaries—the financial year closed with a sum of 360,076\$519 less than the fixed expenses.

The Management persevered firmly in its efforts to eliminate all factors that might tend to reduce receipts, as, for example, the granting of passes, evasions of rent, irregularities in the control of the stations, in the trains, &c., with the result that, although the annual receipts during the first months of the year were considerably lower, as has been seen, as compared with the estimated revenue, which was calculated at 84,000,000\$000, they showed a reduction of only 903,588\$127.

TRAFFIC.

In spite of the interruptions caused by the rains, a considerable traffic was carried, as can be seen from the table given below, in which will be found statistics of the carriage of passengers, tonnage of luggage and of goods, number of animals, tonnage of coffee, and other merchandise carried.

The following figures of the total tonnage carried by both the passenger service and the goods service during the last five years show a progressive increase of the traffic of this railway line:—

Year.	Traffic.
1925	375,294,536
1926	411,977,937
1927	480,529,214
1928	534,864,221
1929	547,237,838

There was thus an increase of 45.82 per cent. in general traffic in comparison with 1925. As regards goods traffic, the traffic which yielded the greatest receipts was coffee, the freight on which amounted to 12,455,240\$140; and, in the second place, timber, with freight receipts of 10,444,352\$550. Timber contributed 380,998 tons—more than double the tonnage of coffee carried (173,388 tons).

That is how we stand. We have shown a net profit this year of over 5 per cent. on our ordinary shares, and have, in addition, a substantial

Mr Nigel Bond seconded the resolution, which was carried. The retiring directors were re-elected, and the auditors reappointed, and a vote of thanks to the chairman terminated the proceedings.

Referring to new uses for rubber, Mr Miller urged the desirability of laying rubber surfaced blocks in City streets where traffic is heavy and excessive noise and vibration are almost intolerable. The price at which a dependable rubber roadway can be laid has now been reduced to approximately £2 10s. per square yard.

Director, C. MAGANO.

5th May, 1930.
Office: Jose Lisboa Dias.

MID-EUROPEAN CORPORATION, LIMITED.

DIVIDEND OF 8 PER CENT.

INVESTMENT TRUSTS AND INCOME TAX.

The sixth annual ordinary general meeting of the Mid-European Corporation, Limited, was held, on the 14th instant, at Winchester House, Old Broad Street, London, E.C.

Mr H. C. Hambro (chairman of the company), presided.

The Secretary (Mr Reginald J. Godfrey, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: As compared with a year ago the present accounts show several important changes, and in order that you shall be under no misapprehension as to what has taken place I propose to explain in some detail the nature of these changes and the motives of the board in adopting them. You are all aware that the business of investment trust companies is conducted in accordance with certain generally-accepted principles, and that they differ from finance companies in a number of respects. For instance, the revenue of a trust company consists solely of interest and dividends from investments and, in certain circumstances, underwriting commission, and excludes all realised appreciation made by the sale or redemption of investments, which is utilised only for capital purposes. The distinction between these two classes of companies is recognised by the Inland Revenue and investment trusts are not liable to income tax on their realised capital appreciation. Since the inception of the corporation its business has been conducted in accordance with investment trust company principles, and the greater part of our funds—over 80 per cent. indeed—has been invested in Stock Exchange investments such as are held by any trust company. A certain amount of our capital has, however, been invested in secured loans to Continental governments, municipalities, and a few of the more important industrial undertakings. These loans were arranged for periods extending from a minimum of five years to a maximum of twenty years and, in the view of your board, the only essential differences between these loans and similar loans raised by the public offering of bonds were that they had no Stock Exchange quotation and gave a rather higher rate of interest.

QUESTION OF INCOME TAX.

During the year which has elapsed since we last met the question of the corporation's liability for income tax has come before the tribunal specially appointed to deal with such cases. This tribunal decided that the corporation was liable for income tax on its realised capital appreciation, and, so far as can be gathered, based its decision to a large extent on its own view that the making of the secured loans, to which I have referred, constituted the business of a finance company and not a trust company. While your board does not by any means concur in this view, it was bound to recognise that as a result of the decision, so long as investments of this character were included in its holdings, the corporation would be hampered in the conduct of its business as a trust company. After having obtained the best possible advice it was clear to the board that in order to preserve the character of the corporation it would be necessary to abandon certain powers contained in the memorandum of association, to modify the articles to some extent, and to cease to hold these secured loans.

GENERAL TRADE DEPRESSION.

The accounts presented to you on this occasion cover a period of general trade depression which is by no means confined to this country. The whole world has its problems of unemployment, lower prices, and the restriction or cheapening of output to meet the lessened demands of consumers, and it is only to be expected that this should be reflected in the current prices of some of our investments. Your directors during this period have sold certain securities where the prospects of better conditions appeared rather remote, and have replaced them with investments for which the outlook is more promising.

I have now pleasure in formally moving that the directors' report and accounts for the year ended July 31, 1930, submitted to this meeting be and they are hereby adopted, and that the final dividend of 5 per cent. on the ordinary stock, making 8 per cent. for the year, recommended by the directors in their report, be and is hereby declared.

Mr. P. C. Crump seconded the motion, which was unanimously approved.

An extraordinary general meeting was subsequently held, when certain alterations in the articles of association were unanimously approved.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Ltd., was held, on the 10th instant, at Winchester House, London.

The Viscount St. Davids (the chairman) said that a year ago he gave the shareholders a report on the final of three consecutive years of record receipts, and he made a forecast for the then coming twelve months, and it was not a sanguine one. He told them that wheat had been affected by drought, and that there was a smaller acreage under wheat. He ventured to forecast that during the year they might have a decrease in receipts of £600,000, but that, in spite of that, he felt confident they could earn 7 per cent. They had actually not earned 7 per cent., although they were paying it. They had actually suffered a traffic decrease of £1,279,000, and, in addition to that, exchange had "gone wrong." As to the reasons for the further loss, the gross production of wheat showed a decrease of 563,000 tons, or 58 per cent. That was bad enough, but on the top of that more than half the maize crop was lost. He could find only one bright spot in the reports of the general manager and traffic manager, and that was that from their district exports of fresh fruit had gone up. He anticipated that that trade would be immensely valuable to the company in future years.

As to the outlook for the current year, there were some cheering signs. There was a larger area under fine cereals, and the area sown with wheat contained a larger amount sown with pedigree wheat. Last year he had to tell them that part of the wheat crop had been lost, and that more was in jeopardy. On the present occasion he was delighted to say that up to date the wheat crop throughout looked exceedingly good. There were also minor bright spots; irrigation was increasing steadily, and the population of Argentina was growing.

There were some bad points with regard to the outlook for the current year. They had started with a traffic decrease since July 1st of £478,000, and they could not disguise from themselves the fact that, unless things turned for the better very quickly, their losses on exchange during the current year were likely to be more than they were in the year under review. There was, however, a good point. The general manager wrote in his report that he thought that the gross traffic of the whole year would equal that of last year. That was written two months ago, but shareholders would be interested to hear that he had confirmed that statement only last night over the telephone. He hoped that the general manager was not over-sanguine.

In times like the present it was almost folly to prophesy, but he always told the shareholders things as he saw them, and he told them frankly that he did not believe that the company's next balance sheet could be as good as the one under consideration. On the other hand, if they looked at the amount carried forward, they would see that they still had there something very substantial to help them.

The report and accounts were adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Oct. 11, 1930, amounted to £8,065,900 against ordinary expenditure of £10,313,900. After allocating £843,300 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £28,700, the week's operations, as shown below, increased the National Debt by £3,120,000 to £7,675,000,000—

RAILWAYS.

CORDOBA CENTRAL RAILWAY COMPANY, LIMITED.—Converting Argentine currency into sterling at par, the results of the year's working to June 30, 1930, as compared with those of the previous year, were as under:—

	1928-29.	£	s.	d.	1929-30.	£	s.	d.
Gross Traffic Receipts	1	2	3,597,419	2,936,368	14	10		
Working Expenses	3	4	2,676,013	2,570,047	4	4		
Net Receipts	9	11	£921,405	£366,321	10	6		

74.39% Percentage of Working Exps. 87.52%

To £366,321 has to be added £10,549 credit balance from June 30, 1929, also interest, &c., £16,872, making £393,742, from which has to be deducted loss on exchange £41,793. Years 4 per cent. debenture interest paid £320,000, also six months interest paid on 5 per cent. second debentures £302,671, which leaves a debit balance of £270,722 to carry forward. The resolution to be proposed for increasing the directors' borrowing powers by £300,000 is for the purpose of covering temporary advances, and it is not the intention to utilise these powers for the purpose of creating any permanent loan. The report adds that during the past three months the company's traffic receipts have improved on the low standard of the preceding months, and the outlook for the coming cereal crops is promising.

MISCELLANEOUS

ATLAS ELECTRIC AND GENERAL TRUST, LIMITED.—The investments of this trust, apart from its holdings in the Montevideo Tramways, number 405. The market value at the date of the balance sheet (March 31, 1930) of the investments of the company which are quoted, and the estimated values of the remaining investments is in excess of £6,276,562, the total at which they stand in the balance sheet. Total assets are £9,497,295. Cash is at £319,888, and Indian Government Treasury bills (since paid off) are £198,722. Industrial securities form 39.03 per cent. of the company's investments, and Government securities and municipal loans comprise 34.20 per cent., thus forming 73.23 per cent. out of 100 per cent. Credit balance for the year is £283,819 comparing with £314,683 for previous year. Ordinary shareholders receive 5 per cent as before. The carry-forward is reduced from £39,428 to £35,123. Meeting November 6th (Winchester House, London), at 2.30 p.m.

QUICKTHO (1928) LIMITED.—The progress report dated September 24, 1930, deals with the position since January 31, 1930, when the financial year terminated. The increase in sales has been maintained and the directors report that output during current financial year has greatly exceeded that for any period in history of company. It has been necessary to increase staff to cope with demand for the company's products. The value of orders and contracts in hand assures a continuance of profit-earning activities for some months to come. The liquid resources continue to be adequate for current requirements, and the directors have paid an interim dividend 4½ per cent., less tax, on share capital.

SOUTH AMERICAN.

Name.

been centred on the news from India. It is quite evident that dealers in Bombay are tired of the trade restrictions, and an effort has been made to reopen the market. There has been strong resistance, however, from the Congress party. Rather more cloth orders continue to be booked from Madras and Karachi. Manufacturers, however, cannot secure any definite relief until there is freer buying for Calcutta, and so far offers for that outlet remain very poor. The demand from China continues rather more promising. Scattered sales have been put through for Shanghai and Hong Kong in grey and white shirtings and printed and dyed goods. Rather unfavourable reports have been received from Egypt, and the disturbances in South America cause anxiety. Further operations have occurred in printing and finishing styles for the Continent. Isolated cases are mentioned of manufacturers being enabled to restart idle looms without any definite increase in employment. Rates in American and Egyptian yarns have been rather steadier. Contracts of importance have been scarce, but the total sales rather tend to improve.

THE WOOL TRADE.

Our Bradford correspondent writes:—Cable information indicates the continuance of satisfactory selling conditions for wool in overseas markets, no further decline being reported. This is quite encouraging, and is probably one reason why the opinion has developed among certain members of the trade that prices have at last touched the bottom. This steadiness of values is all the more pleasing because it has been accompanied by somewhat more general buying interest. The quantity of wool in sight is not in itself too large for it all to be absorbed without any further fall. Dalgety and Company, Ltd., state that 116,000 bales were held over from last season in New Zealand, 28,000 bales being in the Wellington district. The owners will find that they made a mistake in not selling when they had the chance, for it will be a very creditable accomplishment indeed if there is no further fall in crossbreds when the new clip begins to be offered. Merino tops are steadier in Bradford than crossbreds. Business in the latter is very disappointing, though all round there is not the turnover in tops and yarns which is really necessary. Merino tops are being delivered fairly well out of contracts to spinners, but they are not at all keen to be placing new orders, and there is not the slightest improvement in the employment of machinery. Prices for merino tops seem to be stabilised around 25d. for warp 64's, but it is almost impossible to state the price for crossbreds. Export returns of piece goods show another serious decline, but that this is only part of a world retrenchment in trade is shown in the fact that our imports of fully-manufactured goods are also less.

THE JUTE TRADE.

DUNDEE, October 15th.

There is a great deal of irregularity and uncertainty prevailing in the jute trade. Attempts are being made in Calcutta to elicit Government support for the industry. It is understood, however,

that the Government of Bengal has stated that there will be no interference with the natural laws of supply and demand. Speculators in Calcutta are doing their best to keep up the prices for raw jute, while there is also a great reluctance on the part of the growers to forward supplies to Calcutta, with the result that arrivals at that centre are smaller than usual at this time of the year and shippers are experiencing difficulty in fulfilling their contracts. There is such a large crop in view, however, combined with a large carry-forward of old crop from last season, that members of the trade in general have little faith in higher prices for the fibre. Consumers of jute goods have lost all confidence, and the fluctuating tendency of the fibre prices, combined with a marked weakness on the part of Calcutta goods, in no way help to restore that confidence to operate in larger quantities for delivery some distance ahead. Sellers of raw jute are rather reserved and few offers are being made. The value of Daisee assortment has gone up to £15 15s. and come back to £15 10s., with threes at £15 and fours at £14, October-November. The lowest point previously touched for Daisee assortment was £14, and fours were sold down to £11 10s., same shipment. Tossa assortment rules at £17 15s. and First Marks from £20 10s., while Lightnings vary from £17 15s. to £18 5s., according to mark, October-November. Spinners here are buying very little jute, as they have not the slightest incentive owing to the dull state of trade. The production of jute yarns is very much curtailed, and it is quite a common occurrence to find works running only on alternate weeks, while some are working three and four days per fortnight. Spinners are adhering to their rates of 1s. 11d. for common 8-lb. cops and 2s. for 8-lb. spools, but 3-ply 8-lb. twist has been sold at 3½d. to 4d., 24-lb. sacking weft of good quality at 2½d. and 8-lb. chains are lowest at 3½d. Rove is easier at £26 for 48 lb. and £17 10s. for 200 lb., but fine yarns are steady, unchanged, though quiet. Carpet qualities are more or less nominal in the absence of business. Jute cloth business was slightly improved last week, but this week conditions are again quiet. There have been more numerous small orders placed, but manufacturers have not always been able to obtain their quoted terms of 3d. for 10½ oz. 40-in. and 2d. for 8 oz. Linoleum hessians have received some support, but not much, while heavy goods are slow in general. Occasionally, a good order is placed for quick delivery. Calcutta goods have failed to improve, and the position is even quieter at 18s. 6d. for 10 oz. and 15s. for 8 oz., October-December, with spot goods obtainable at 19s. 6d. and 16s. respectively.

HIDE, LEATHER AND ALLIED TRADES.

Prices for cattle hides were lower at the auctions held in the North during the early part of this week, several weights in ox and heifers making from ½d. to ¾d. per lb. less money. The market for sheepskins is poor. Foreign hides are quiet, with only a restricted amount of business passing at figures which, for the most part, show reductions. In the South American market business has been put through in connection with Argentine ox on the basis of 6½d., while second ox have changed hands at 5½d. Rather more interest has been taken in dry River Plates, and sales have been made of B.A. Americanos at down to 7½d., and M.M. Americanos at 7½d. Business in certain sorts of African hides has been very limited on account of the prices being asked by shippers, but in spite of this a moderate turnover has been done in dry and dry salted Capes. Prices for the first and second selection of the former are 7½d. and 6½d., while the same descriptions of dry salted are on offer at 7d. and 6d. for 20 to 30 lbs. A moderate trade has passed in connection with Australian hides, with a slightly easier tendency in regard to values. Although business at the Shoe and Leather Fair at Islington did not come up to the expectation of every exhibitor, quite a respectable turnover was done in sole leather by most firms. The market generally was very firm in regard to values. The strength of the position of sellers was, if anything, the feature of the fair, and the general opinion seems to be that although trade at the moment may not be up to expectations there is little to be feared in the way of losses by falling values. English and wetsalted bends have been a satisfactory market on account of the repairing trade, while shoe manufacturers have been interesting themselves more in the lighter dry hide bends. Upper leather business at the Shoe and Leather Fair was moderate.

OVERSEAS PRODUCE.

SUGAR.—The market gathered renewed strength, prices responding to a good trade, demand with sellers showing more reserve. Messrs. Tate and Lyle's standards advanced 6d., and home grown 3d. per cwt. T.L. granulated spot, London, 19s. Foreign and raw refining descriptions maintained. Terminal sections firmer, and a fair business transpired. Raw, December, sold 5s. 0½d. to 5s. 3¼d.; March, 6s. 4½d. to 6s. 6½d.; May, 6s. 7½d. to 6s. 10½d.; August, 6s. 10½d. to 7s. 0½d. per cwt. Cuban receipts for past week totalled 27,011 tons against 19,568; exports, 56,550 against 40,548; stock, 1,088,938 against 443,404 tons at same time last year. Factories estimates of 15 countries place European production at 5,496,000 tons, against an output last year of 5,510,000 tons. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending October 11th totalled 116,729 tons, against 162,393 last year. Imports into the United Kingdom during September were: 140,495 tons, against 119,163 at same time last year; consumption, 174,389, against 161,127; exports of home refined 45,183, against 7,521. Stocks of home grown 2,050, against 3,900; ditto, other kinds, 171,800, against 243,200 in 1929.

COFFEE.—Spot market firm on sustained inquiries, especially for fine grades.

COCOA.—Spot market steady, but business proceeded on quiet lines. Forward positions quiet and easier. Accra F.F., London contract, November-January, 26s.; January-March, sold 26s. 6d.; Liverpool sellers, 26s. 6d. f.o.b. G. F. to Continent, November-January, sold 28s. 3d. c.i.f. Terminal opened steady, but later assumed a quiet and easier tone. December sold 28s. 6d. to 28s.; March, 28s. 1½d. to 28s. per cwt.

TEA.—Indian offerings during the week totalled 55,658 packages, and encountered a quieter demand. Invoices of stand-out quality were readily taken at full rates, but common and medium grades displayed irregularity and weakness. 22,852 packages Ceylon brought forward also met a quieter reception. All finest liquoring was kinds realised steady prices, but considerable irregularity was noticeable amongst other descriptions, with frequent declines of ½d. to 1½d. per lb. Leaf teas, suitable for export, sold steadily. Java and Sumatra offerings moved off quietly, and prices tended in buyers' favour.

RICE.—A quiet tone prevailed for most descriptions. Rangoon, two stars, spot, London, 12s. 6d.; October-November, 10s.; new crop, January-February, 10s. 1½d. c.i.f. U.K.

BEANS AND PEAS.—Beans are dull of sale. Madagascar butters, October-November, 25s. 3d. Peas are quiet. Japanese, afloat, 16s. to 16s. 6d.; September-October, 14s. 6d. c.i.f.

POTATOES.—The market in potatoes has been firm and prices have been maintained.

SPICE.—Pepper quieter and trend of prices in buyers' favour, with sellers more in evidence. Lampong, black, August-October, sold 7½d.; October-December, 7d.; Muntok, white, August-October, done 10½d. to 10½d.; October-December, 10½d. to 10½d.

January-March, 4d.; April-June, 4 1/2d.; July-September, 4 3/4d.; October-December, 4 1/2d. per lb. London stocks increased by 701 tons on the week, landings being 2,158, deliveries 1,457, stock 82,245 against 44,339 at same period last year. Liverpool stocks 846 tons higher; landings were 1,327, deliveries 481, stock 37,224 compared with 11,571 tons in 1929.

HEMP.—Manila firmer on sustained inquiries and lighter offerings. J. No. 2, November-January, quoted £24 10s.; K. ditto, £23 15s.; L. No. 1, quoted £23 10s.; M. No. 1, £20 15s., with lower grades in proportion. African sisal steady. No. 1, f.a.q., January-March, £21 15s.; marks, £22 5s. c.i.f. Receipts for past week cabled at 17,000 bales against 18,000 at same time last year, and 33,000 in 1928. Estimates for this week, 22,000 and the following week 21,000 bales.

VEGETABLE OILS AND OILSEEDS.—Easier conditions in the seed and oil markets have returned, and with falling prices the volume of business is very small indeed. Linseed values have

followed the decline in the Argentine exchange rate and have dropped to the lowest levels recorded this year. Old crop Plate on passage to Hull has been done at £11 15s., and October shipment to London at £11 15s. and £11 17s. 6d., but has since rallied. A good deal of the old crop Plate remains still to be sold. Cottonseed is dull and new crop Egyptian (black) offers in all positions to February at £5 15s. In the oil section linseed oil is in poor request, consumers taking only urgent requirements. In sympathy with seed, raw oil on spot ex Hull mill has declined to £26 per ton, and for October delivery to £24 5s. Forward positions are easier. Cotton oil is quiet, and lower crude Egyptian ex Hull offering at £21 10s. and common edible at £24 10s. Other seed oils are easy without exception. The demand for oilcakes and meals shows some improvement at lower prices. The market for copra is quiet and barely steady. Straits F.M.S. to Rotterdam, October, sold £15 10s.; November, also December, quoted £15 10s.; Dutch Hamburg, November-December, quoted £11 ton c.i.f.

THE ROYAL BANK OF CANADA.

DIVIDEND NO. 173.

NOTICE IS HEREBY GIVEN that a DIVIDEND of 3 per cent, being at the rate of 12 per cent. per annum, upon the paid-up capital stock of the Bank, has been DECLARED for the three months ending 30th November, 1930, also Bonus of 2 per cent. for the year, and will be PAYABLE at the Bank and its branches on and after Monday, 1st December, 1930, to shareholders of record on 31st October, 1930.

By Order of the Board,

E. B. MCINERNEY, London Manager.

THE MONEY MARKET.

EXCEPT for a transient demand for funds on Wednesday afternoon, money has remained easy with 1 1/2 to 1 3/4 per cent. the ruling rate for day-to-day loans outside the clearing banks. Bill rates are slightly lower than a week ago, and this probably inspired rumours of an impending

reduction in Bank rate which were to be heard early in the week. On Wednesday, the ruling rate in the market for three months' bills was $2\frac{1}{2}$ — $\frac{1}{8}$ per cent. There was only a small Continental demand for bills, and when this was satisfied, it was at a rate of 2 per cent., thus leaving a market "turn" of $\frac{1}{8}$ per cent. Four and six months' bills are quoted at the low rate of $2\frac{1}{8}$ per cent., but few of these were in evidence. It now appears that only one of the clearing banks was prepared to lend money at 2 per cent. up to the end of the year, and that this was not a general offer by all the banks as suggested a week ago. Even so, it is clear that no upward movement in Bank rate is expected.

The slight stringency in evidence on Wednesday afternoon is explained by this week's Bank return, which shows an increase in Public Deposits of £15,535,608 to £27,932,990, and a decrease in Bankers' Deposits of £10,658,527 to £55,504,890. This last figure is low enough to account for the stringency that developed, and had these changes represented any permanent or special withdrawal of funds from the market, the stringency would have been much greater. There is, however, a very simple explanation of these movements. On Friday, October 17th, the prevailing ease induced the market to tender mainly for Treasury Bills to be paid for on the following Monday, Tuesday and Wednesday. Conversely, it so happened that the Treasuries issued three months ago, and maturing this week, were mainly Thursday and Friday bills. Thus on Wednesday night, when the Bank return was made up, the new bills had been paid for and the old had not yet matured. A position of this kind quickly rectifies itself, as was shown by the ease that had developed by Thursday.

The banks have continued to buy large quantities of short bills at 2 per cent., but this week's activity in the gilt-edged market suggests that the banks are also adding to their investments. At first sight, it seems better business for the banks to buy Government stocks, giving them a yield of over 4 per cent., rather than bills yielding a bare 2 per cent. It must be remembered, however, that the banks rightly rank bills as their third line of defence after cash and call money, and so are careful to lodge an adequate proportion of their resources in bills. In any case a reaction of two points in the market price of gilt-edged stocks in the course of the year would suffice to annul their extra yield over that of bills, and any further decline would involve the banks in loss. Hence the current low level of discount rates is not likely to drive the banks to forsake bills for investments beyond a limited extent.

	Oct. 2, 1930.	Oct. 9, 1930.	Oct. 16, 1930.	Oct. 23, 1930.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount (Call)	1	1	1	1	1½ (May 1, '30)
Houses (Notice)	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½—½	2½	2½	2½—½	...

Mainly owing to the arrival of another £1,000,000 in sovereigns from Australia, the Bank return reveals an increase of £1,104,390 in the Bank's gold stocks. The note circulation has also contracted by £2,532,813, so that the reserve is £3,637,203 higher. The Paris rate has appreciated sharply this week from 123.94 francs to 123.83 francs. This is due solely to the cessation of the German selling of francs against other currencies which was in evidence last week, and thus merely marks the return of the franc to its normal "status quo." France, however, was once more in a position to bid for the week's supply of Cape gold at a small premium, and last Tuesday secured £360,000 of the £453,000 on offer at a price of 85s. 0½d. per ounce, India and the trade taking the balance.

NEW YORK.

Money remains easy, with call money still quoted at 2 per cent., commercial paper at $2\frac{1}{2}$ —3 per cent. for prime names, and ninety-day bankers' acceptances at $2\frac{1}{2}$ per cent. \$2,500,000 of gold is reported to be on the way from Japan, while a week ago it was announced that

\$15,000,000 had been shipped from Brazil. According to the most recent reports, the fall business revival has been less than usual, and no substantial improvement is likely before the spring. Brokers' loans have also fallen to new low levels for nearly four years, last week's figure being \$2,752,000,000. Thus money may remain plentiful for an indefinite period.

THE STOCK MARKETS.

The better tone in the stock markets, which began in the middle of last week, was satisfactorily maintained, though prices showed only a limited rise in most cases. Gilt-edged stocks achieved further gains, though the pace of the first few days was too hot to be maintained. The downward course of Brazilian and German bonds was checked. Home Rails developed a better tendency, on a somewhat narrow buying movement. International equity stocks were affected by the volatility of the New York market, but domestic industrials more than held their ground. Rubber shares were unresponsive to the improved price of the commodity. Oil shares showed fresh weakness, and only a limited interest was taken in mining counters.

THE COMMODITY MARKETS.

Although the decreased output of coal is still in excess of demand, a slight improvement has become noticeable in Cardiff and Sheffield. In the iron and steel trades it was announced this week that a contract for building the bridge over the Zambesi river, at Sena, had been secured by the Cleveland Bridge and Engineering Company, Ltd., of Darlington. The number of inquiries for Manchester goods is increasing, but business is very slow in expanding. Although raw wool prices are steadier, the Bradford market shows no signs of an increase in activity. The demand for leather has improved, but hides are weaker. The timber market is irregular, but there is evidence that stocks, which are large at present, will gradually become smaller as a result of decreased imports. Wheat is steadier and prices show a slight advance on last week.

THE FOREIGN EXCHANGES.

Sterling maintained its strength at the outset of the week, but was later inclined to be dull. The New York rate went in our favour by $\frac{1}{8}$, closing at 4.85½ after touching 4.86½. Montreal was unchanged at 4.85½. Paris appreciated sharply from 123.94 to 123.83. Brussels was steady at 34.85½, while Milan lost $\frac{1}{4}$ at 92.82. The peseta improved sharply from 51.00 to 46.40 on the news of the Spanish Financial Mission to London. Amsterdam fluctuated within narrow limits and closed $\frac{1}{4}$ worse at 12.06½. Berlin, after touching 20.38, closed at 20.41, or a gain of two points during the week. Switzerland was rather weaker at 25.01½. Of the Scandinavian exchanges, Stockholm lost fractionally at 18.09½, Oslo gained $\frac{1}{4}$ at 18.16, and Copenhagen was unchanged at the same quotation. The South American currencies were again uncertain. Rio gained $\frac{1}{4}$ d. at 4½d. nominal, Buenos Aires was $\frac{3}{4}$ d. better at 38½d., and Montevideo also gained $\frac{1}{4}$ d. at 39d. In the Far East, the rupee was steady about 1s. 5½d., and the yen gained $\frac{1}{8}$ d. at 2s. 0½d. Batavia lost $\frac{1}{4}$ at 12.06½. In the forward market, dollars were unchanged at par for one month and $\frac{1}{16}$ cent premium for three months. Paris weakened slightly to 2 and 3 centimes premium. Brussels was at one centime premium for both periods. Milan improved to 13 and 36 centesimi discount. Madrid went from a slight discount for both periods to 1 and 2 centimos premium. The premium quoted last week for forward guilders was increased to $\frac{3}{8}$ cent and $\frac{1}{2}$ cent. Berlin was rather firmer at 3 and 8½ pfennigs discount. In the silver market, quotations fell by $\frac{3}{8}$ d. to 16½d. for both spot and forward, sellers rather outnumbering purchasers. The China exchanges reacted in sympathy, Hongkong losing $\frac{1}{4}$ d. at 1s. 3½d., and Shanghai $\frac{1}{4}$ d. at 1s. 7½d.

MONTHLY TRADE SUPPLEMENT.

With our Monthly Supplement, giving an appreciation of the trade situation at home and abroad, we publish this week a Memorandum by Mr A. Loveday, Head of the Economic and Intelligence Service of The League of Nations, reviewing the trend of British Trade in relation to World Trade since the war.

THE COMING SESSION.

THE second session of Parliament under Britain's second Labour Government opens next Tuesday, but reassembling members will not escape the feeling that, for once in a way, the most important political events of the autumn will take place outside the precincts of the Palace of Westminster. The Imperial Conference has yet to show whether it can eschew the pursuit of chimeras for some overdue hard work upon measures for practical economic co-operation. The Indian Round-Table Conference meets a fortnight hence, and upon its deliberations large Imperial, and even world, issues depend. Inevitably these great occasions will focus upon themselves a large amount of the public attention which normally would be given to a session quite adequately endowed with possibilities of political interest and more than adequately supplied with legislative work.

It is true, of course, that the progress of both Conferences will reflect itself in the proceedings in the House of Commons, and one or either might seriously influence the position of the Government. There are those who point out that a nugatory result from the Imperial deliberations would seriously shake the Cabinet; while another section of the Cabinet's critics reckons among the possibilities that a mishandling of the Indian problem might bring Mr MacDonald's rule to an end. But when such prognostications are examined in the hard light of probability, they are seen to contain little substance. The present Government's security in office continues to rest firmly upon the same two conditions as of late—namely the disorganisation of the Conservative forces and the lack of any bone of contention between the Government and the Liberals sufficient to cause the latter to defeat the former and plunge the country into an election which it does not want and for which, clearly, neither Opposition party is ready. With Mr Baldwin still equivocating over food taxes, and joining the Cabinet in the now fashionable flirtation with "quotas," and with the Liberals still practically solid in support of Mr Snowden's reaffirmed adherence to Free Trade, no deadly threat to the Government's life is likely to develop from the Imperial economic discussions. Again it is decidedly unlikely that in the matter of Indian policy the Government will develop policies sufficiently "advanced" to provoke a Liberal revolt. Although controversies over East Africa, Palestine and Egypt may cause embarrassment, there would seem to be no formidable danger lurking in the international sphere, and politicians of the astuteness and experience of Mr MacDonald and Mr Henderson will certainly not allow the Russian question to sign their death warrant for the second time.

If, then, any crisis in domestic politics is to occur in the near future, we must look to domestic problems for a possible cause. Some affect, not without plausibility, to see the distant storm cloud in the promise given by Mr Henderson on behalf of the Government to introduce legislation amending the Trades Disputes Act. Here certainly lies a test for the adroitness of the Cabinet; for it will be no easy matter to draft amendments to that Act which will succeed at one and the same time in placating the trade unions and in enlisting the wholehearted support of Liberal opinion. Nevertheless, Mr Henderson's pledge is confined to the introduction of this measure before the Christmas recess, so that even this potential source of trouble is somewhat remote. In the rest of the programme of projected legislation there is abundant room for fierce controversy. Much time will no doubt be devoted to Sir Charles Trevelyan's Bill for raising the school-leaving age to 15, but its passage should be fairly certain. Amid the wreckage of projected or initiated legislation abandoned at the close of last session are such important items as the Factory Bill, the Land Valuation Bill (upon which the fulfilment of Mr Snowden's full Budget plans depends), the Hours of Employment Bill (designed to ratify the Washington Hours Convention), and lastly, but certainly not least contentious, the Con-

sumers' Council Bill, which perhaps may have to be thrown overboard to lighten a ship which is in danger of being overloaded.

This legislative programme looks the more formidable when it is recalled that it will have to be carried through against stiff criticism by Ministers already loaded with the heavy responsibilities of two great Conferences. But, heavy as it is, it is only one part of the work that awaits Parliament. In this session, as in all its recent predecessors, the great predominating problem will be unemployment. To the public, if not to their individual elected representatives, the all-absorbing question of the day is the present difficult economic condition of England; and in the eyes of the country at large it is Parliament's ability to deal adequately and practically with economic problems which will once more be on trial. By two criteria in particular will its performance be judged. Mr Snowden lays the blame for high expenditure upon the House of Commons. Can the House assuage itself of this accusation and apply a stimulus to Mr Snowden's expressed predilection for economy? That is the first test, and past experience does not provide great hopes that the House will emerge from it too triumphantly. The second test is the handling of the problem of unemployment insurance. Here Parliament has a plain duty. Leaders of all three parties, representative business men, and economists of the highest standing have declared in unison that the present system must be overhauled from top to bottom. It is a measure of the general recognition of the urgency of the problem that representatives of both Opposition parties have been conferring with members of the Government on the ways and means of effecting drastic reform. Will the Government have the courage to propose, or Parliament to sanction, a measure of economy, efficiency and justice, which cannot fail to be unpopular with large sections of the electorate? If the coming session answers that question in the affirmative, it will have gone a long way towards restoring the prestige of the House of Commons.

As we observe in our monthly Trade Supplement, reports from industrial centres suggest that the psychological factor is of no little weight in prolonging the depression. This being so, the supreme task before the Government and the House of Commons is to restore that degree of public confidence which is essential to the re-awakening of enterprise, and the creation of an atmosphere in which industry and commerce will work with a new heart to raise themselves by their own efforts (as mainly they must) from the slough of despond in which they have fallen. In a speech of sturdy optimism this week Mr Snowden has said that the present economic clouds will automatically roll by. Perhaps. But it is possible to hasten the process by a little judicious blowing, and Mr Snowden occupies the key-position to start the blowing process. He told the City of London the other day of his hope that additional taxation in the next Budget might be avoided. Let him turn that hope into a certainty by setting himself and all his courage to the task of root-and-branch economy. Let him take a leaf out of the book of Dr. Brüning, whose economy measures in Germany are described in a subsequent article. Despite the inevitable opposition of vested interests, we believe that Parliament and the country are in the mood to follow any Chancellor of any party who sets his hand resolutely to this task.

No Government can cure unemployment resulting from world depression—no scheme of tariffs, no currency policy, no programme of relief works can do it. Though relief works of a remunerative type must, indeed, be pressed on, as Mr Lloyd George emphasises, and the red tape cut which impedes the fruition of useful work-programmes, by such means only the fringe of the problem can be touched. But if Governmental action can do but little to cure the physical troubles of the nation, it can and should take the line of strengthening the patient's power

of psychological resistance and predisposing him to assist in his own physical recovery. In circumstances like those of to-day such things are as important in the body politic as in the body human. It is high time for the initiation of this method of treatment. The popular Continental impression, which Mr Loveday describes in our Trade Supplement to-day, of the world sweeping by "while the British industrialist sat in hope and the banker in contemplation" must be effaced by a clear demonstration to the world that, if ever it was true, it shall be true no longer.

FIRST ROUND TO DR. BRÜNING.

DURING the last two weeks, the first round has been fought in the German political struggle. As a conflict, waged in the key-country on the Continent, between responsible parliamentary representative government and the Fascist-Communist style of dictation, this is something more than a drama in which the rest of us are mere interested spectators. It is an issue in which the political fortunes of many nations may be at stake; and it is a matter of profound satisfaction that, in this brief session of the Reichstag, which lasted from Monday, October 13th, to the small hours of Sunday the 19th, the Brüning Government has more than held its own.

There is no question yet of a definite victory. The very virtues of a policy of retrenchment condemn it to unpopularity; and the all-round reduction of private incomes—by cuts in official salaries and in industrial wages and by increases in taxation—will make itself felt just when the volume and the hardship of unemployment are being increased by the advent of winter. For these reasons, though we sincerely congratulate Dr. Brüning on his initial efforts, we cannot yet assume his success; and, indeed, from what the world has learnt about Dr. Brüning's character this week, we should judge that he himself would be the last person to rate the success of the moment too high or to underestimate the gravity of the contest that almost certainly still lies before him. Nevertheless, we now know that the cause of responsible government in Germany (in all senses of the word "responsible") possesses an asset which we did not fully appreciate when last we reviewed the German situation. We then laid stress upon the personality of Marshal von Hindenburg, the President of the Reich; and, during the last two weeks, this personality has twice been brought into play—once directly and once indirectly. We have since learnt to recognise Dr. Brüning, the Chancellor, as a man of power likewise; and his performance in this first ordeal encourages us to regard the future with sober but cautious optimism. For, in politics, two strong men in unison can work greater miracles than a host of irresponsibles in coloured shirts.

As our Berlin correspondent recorded in his letter last week, the Chancellor's difficulties with his own supporters lasted up to the moment when the Reichstag met. Two important members of his Cabinet—his Foreign Minister, Herr Curtius, and his Minister of Justice, Herr Brecht—were being pressed by factions in their own parties to resign their portfolios. Herr Curtius was saved by the good sense of the majority of his party (the German People's Party, which used to be led by the late Dr. Stresemann); Herr Brecht was saved from his own friends (the Economic Party) by the intervention of President von Hindenburg himself.

October 13, on which the Reichstag met, was a day of disorders in Berlin, both inside the Reichstag building and in the streets. The 107 National-Socialist members made a melodramatic entry and scored the easy success of lashing their Communist colleagues into a rage. But a motion for the discussion of a no-confidence motion was rejected, although one of the Government groups—the Landvolk—supported it, as well as the Nazis, the Hugenberg extremist Nationalists, and the Communists. This negative success for the Government in the Reichstag coincided with a positive success on the money market; for on the same day the public announcement was made

of the loan of \$125,000,000 from Lee, Higginson and Co., conditional upon the passage of a law to provide for the redemption of floating debt at the rate of 420,000,000 marks a year for three years. Meanwhile, a crowd of demonstrators were breaking shop-windows in the Leipziger Strasse, wherever they saw or thought they saw a Jewish name. These misdemeanours were brought home by the police to the Nazis; and this seems to have taken the edge off bourgeois sympathies for Herr Hitler, while the Austro-German "duce's" anxiety first to deny that the damage had been done by the Nazis at all, and afterwards to protest that it had not been done with his approval, seems to have done no good to his prestige.

On the afternoon of Thursday the 16th the Chancellor read out, in the Reichstag, the Government's declaration of policy. It was a difficult policy to frame and still more difficult to formulate; for Herr Brüning was really addressing two audiences at once—the German people and the Allied Governments. He had to convey to the rest of the world the German national demand that Germany should recover to the full her "national freedom and her moral and material equality of status with other nations." He had to make it clear (and this is a very important point for us to grasp) that this demand is universal, and that the moderates in Germany are as much in earnest about it as the extremists on either wing. He had to point out that, since the Young Plan was drawn up and given effect, "the ratio of value between gold and goods has changed to the disadvantage of the countries which have international obligations to discharge," and that this is likely to produce, sooner or later, a request from the German Government for a re-adjustment of the Young Plan figures in Germany's favour. He had also to point out that a potent cause of the Nazi movement had been the disillusionment of the younger generation in Germany at the persistent failure of the Allied Powers to disarm long after the disarmament of Germany had admittedly been completed in accordance with the terms of the Peace Treaty—and this in spite of the fact that the Allied statesmen, during the peace settlement, had solemnly declared that the disarmament of Germany was to be a first step towards disarmament all round.

On the other hand, Dr. Brüning had to make it equally clear that, while he regarded the policy of foreign governments as being partly responsible for the portent of Hitlerism in Germany, he had no intention of giving way to the Nazis when it came to action. The action which the Chancellor foreshadowed is statesmanlike. His Government intend to carry through their drastic programme of putting Germany's internal finances in order before they raise the question of Reparations. Until the execution of the proposed financial reforms has given the creditor Powers convincing proof of Germany's good will, the German Government do not intend (it would appear from the Chancellor's statement) to take advantage even of that discretion to declare a temporary Reparations moratorium which the Young Plan gives them. On the other hand, it is clear that, if and when the Government's measures have been put into force, they are prepared to make demands which may amount to asking for a revision of the Young Plan on the strength of the great changes in the financial and economic situation, all over the world, which have taken place during the past year.

An excellent foil to the Chancellor's statement was provided by certain fantastic motions, introduced at the same sitting of the Reichstag by the Nazis, for confiscating, without compensation, the property of those categories of people whom the Nazis dislike; for example, all Jews and, what is more, all bankers. The shock which these motions administered to bourgeois belief in the Nazis was increased on the same day by a declaration of sympathy with the Berlin metal workers—now on strike against a proposed wage-cut—which was published by the Berlin Nazi leader, Dr. Goebbels.

The Berlin metal workers' strike has an important political bearing because it may conceivably drive in a wedge between the Government and the Social Democrats. The wage-cuts are the result of an arbitrary award and they are also in line with the Government's general

financial policy, so that it will be difficult for the Government in the long run to avoid coming down decisively on the side of the employers, who have accepted the award, against the employees who are on strike to resist it. Yet, if the Government do take a firm line in this matter, that will make it difficult for the political leaders of the Social-Democratic Party to carry the rank and file of their followers with them in a policy of supporting the Government in the Reichstag. So far, this danger has been avoided by tact on both sides. There is no doubt that Dr. Brüning and Herr Hermann Müller (the Social Democratic leader in the Reichstag and ex-Chancellor of the Reich) are anxious to work together in face of the threat from the extremists on both wings; and it is not too much to hope that their joint statesmanship may continue to find ways and means of making co-operation possible. Meanwhile, in the Reichstag on the 17th, Herr Müller intervened on the Government's side and damaged the Nazi deputies who met him in debate by effectively turning their motions to ridicule.

These events strengthened the Government's position day by day; and the result appeared in the substantial majorities which the Government obtained for its measures when it put its fortunes to the touch on Saturday the 18th. On that afternoon, the Bill authorising the Lee Higginson transitional credit and the three-year redemption scheme with which it is bound up was passed by 325 votes to 237. The Chancellor's statement of policy was taken cognisance of, and the various motions of no-confidence were ignored, in a resolution, carried by 318 votes to 236, for proceeding to the order of the day. The July decrees for retrenchment and reform were referred to a committee by 339 votes to 220; and certain wild motions for repudiating the Reparations settlement and the Versailles Treaty were put out of harm's way by being referred to the Committee on Foreign Affairs. In the course of the debate, Dr. Brüning was given, and took, an opportunity of scoring a personal success, by an attack which was made upon President Hindenburg *à propos* of the recent trial of Reichswehr officers for high treason before the Supreme Court at Leipzig. Two speakers—one a Hanoverian Nationalist and the other an East Prussian Junker—criticised the President for having allowed the law to take its course; and this gave Dr. Brüning (who has a distinguished record of war service) the *beau rôle* of championing the President for his fidelity to his military oath.

In the small hours of Sunday, the 19th, the Reichstag voted an adjournment until December 3rd, leaving Dr. Brüning, at the end of this first encounter, with flying colours. Whatever battles may await him in the winter, he will at least find himself in better posture for fighting than he was when he set out, a fortnight ago, to win this first victory.

BRITAIN AND WORLD TRADE.

We publish with our Trade Supplement this week an authoritative memorandum by Mr Loveday, the Head of the Economic and Intelligence Service of the League of Nations, reviewing the trend of British trade in relation to world trade since the War. His monograph is concerned not with the effects of the present slump, but rather with the general trend of recent years; and the story which it tells is far from cheerful. It shows that our share of world trade has fallen; that this decline is chiefly noticeable in regard to countries outside Europe, but that there is also some evidence of a fall in Europe itself; and that the most ominous feature disclosed is our failure to secure an adequate proportion of world trade in the newer industries which are coming into being as a result of modern developments.

There are one or two qualifications that we must make in considering the picture which Mr Loveday presents. If, for example, the story had been continued to 1929, it would have shown some improvement owing to the better results which were obtained in some of our more depressed industries; and the analysis perhaps makes insufficient allowance for the effect upon Great Britain of the European setback resulting from the War. For, although Mr Loveday's figures show a recovery to have taken place, the trade of Europe is enormously behind the figure which it would have attained if the catastrophic interruption of the War had not occurred. Moreover, percentage figures of world trade are apt to overlook the fact that our proportion has been falling for fifty years, and must be expected to fall as other countries become commercially and industrially developed. When we were the only big exporter of manufactures our percentage was naturally vastly different from what it must be when we are one among many. Mr Loveday has also, we suggest, allowed insufficiently for the relatively greater modification of British industrial structure necessitated by the fact that we were interested to a much greater degree than other nations in those industries which, all the world over, have been surrendering some of their predominance to newer forms and methods of production.

These considerations, however, qualify, but do not impugn, the general accuracy of Mr Loveday's picture. Nor need they in any way modify the conclusions which he would have us draw. These we would commend to the careful consideration of those interested in current controversy. He shows, for example, that we have lost ground not merely or primarily to countries which have inflated their currencies, but also to countries which have deflated. One of his most striking tables indicates that in the case of five other nations which, like Britain, returned to the gold standard on a pre-war parity basis, the volume of exports in all cases but one recovered in the year succeeding stabilisation, and in the cases of Sweden and Denmark has subse-

quently recorded a rapid rise. The exposition also shows that headway has been made in varying degrees, both by low and high tariff countries, and that if tariffs had been the cause of our difficulties they should have curtailed the exports of other nations more than ours, for this country benefits both from most-favoured-nation treatment and from Imperial preference. "Relatively to other countries our position in this respect is more and not less favourable than it was in 1913." Nevertheless, we have been passed and outdistanced in many respects by our competitors.

Mr Loveday then proceeds to look for other causes of Britain's failure, and calls attention to the parallelism between the numbers unemployed and real wages—variations in the latter being due to the fixity of money wages at a time when prices are falling. He agrees with Professor Rueff's conclusion that the immediate—though not the ultimate—cause of widespread unemployment is the failure of wages to adapt themselves to the general level of prices. But, in Mr Loveday's view, lack of mobility and adaptability is not characteristic of labour and wages alone, and attention is drawn to the significant fact that in Europe and America the equipment and the organisation of industry has been much more radically remodelled and modernised than has been the case in this country.

Mr Loveday's emphasis on this rigidity of British economic organisation merits careful consideration in conjunction with the similar conclusions drawn by Sir William Beveridge in his recent book on unemployment. And, if it is true that we are here touching upon a real cause of Britain's difficulties, it is very relevant to the present fiscal controversies, for if there is one thing that can be said with confidence, it is that a tariff would tend to slow down the process of reorganisation, give additional excuse for avoiding the necessity for adapting wages and prices to world conditions, and weaken the chief stimulus which could bring Britain once more abreast of world development. A start now on the easy road of tariff "shelter" would be "to place a coping stone to false logic."

That we may be in danger, however, of taking this false step is very evident when we read the wildly extravagant claims which even ex-Cabinet Ministers are making for protection. Sir Arthur Steel Maitland, for example, whose official career has been closely associated with industry, speaking at Stirling on Tuesday last, declared that if a comprehensive tariff were imposed "the unemployment figures could be reduced by a million persons in eighteen months. Properly applied, a tariff should reduce prices and costs." One would have thought it hardly necessary to treat such arguments seriously. It must be perfectly evident that we could not reduce unemployment in this country by one million unless there were a substantial recovery in exports, and we have yet to hear Sir Arthur Steel Maitland explain how his tariff would stimulate exports. Such reckless promises as his, made by a responsible statesman to a democracy with whom the wish may only too readily be the father to the thought, are deplorable; and not the least merit of Mr Loveday's careful, objective study is that, by contrast with these recurrent effusions of fiscal charlatanry, it diagnoses the situation of Great Britain in the light of hard facts.

BRITISH CAPITAL ABROAD.—II.

THE statistics which were contained in last week's article on British capital abroad led to the conclusion that roughly £1,000 millions of such securities of foreign and colonial companies as are officially dealt in here are held by British residents, including an estimate of £50 millions for untraceable nominee holding. Along with the previous results regarding British companies operating abroad, this enables us to analyse our total commercial investments overseas in the form of stock exchange securi-

ties. The following table shows the distribution by type of company:—

Type of Company.	SHARE CAPITAL.		LOAN CAPITAL.	
	Amount Quoted.	Amount Held.	Amount Quoted.	Amount Held.
	£	£	£	£
Dominion and Colonial rails ...	145	83	242	213
American rails	963	16	809	14
Foreign rails	262	235	365	260
Banks and discount companies	85	20	22	11
Breweries	10	8	2	2
Canals, docks, waterworks	21	5	14	10
Commercial and industrial	348	115	85	55
Electric lighting and power	165	15	91	63
Financial, land and investment	183	137	78	49
Gas	10	9	14	8
Iron, coal and steel	275	56	50	26
Mines	253	157	13	10
Nitrates	12	10	7	5
Oil	220	115	12	12
Rubber	88	82	5	5
Shipping	19	18	7	7
Tea and coffee	38	37	2	2
Telegraphs and telephones	376	7	49	18
Tramways and omnibuses	62	14	63	27
Totals	3,535	1,139	1,930	797

It will be seen that the total of British capital included in this table is considerably less than the aggregate of £1,050 millions already suggested for British, plus £1,000 millions for other companies. In the latter case, £50 millions of nominee holding has had to be omitted as its distribution is unknown, and in any event it would be offset by some correspondingly disguised foreign holding of the securities of British companies operating overseas; but even then over £65 millions has to be accounted for. It was suggested in the last article that the figure for the bonds of foreign railways is an under-estimate to the tune of perhaps £30 millions, and the remainder should probably be added to the share holdings in the Commercial and Industrial, Iron and Steel, Tramways and Omnibuses, and Oil groups, where the evidence available has not been sufficient for very confident estimates.

In spite of the present insignificant size of British holdings in American railroad securities, the extent to which British exports of commercial capital have been devoted to railway development is most remarkable. No less than £821 millions out of the £1,936 millions included in the table appears in the first three groups. Not only has British capital served to open up new countries (notably Canada and the Argentine) in this way, but it has also played an important part in the growth of the European railway system. It must be observed that in this field the nominal figures, which appear in all the tables, probably exaggerate the actual value of British capital overseas, since much of the railroad capital was raised in periods when ruling long-term rates of interest were lower than at present, and some, in Mexico for instance, does not yield even the earnings expected. On the other hand, the value of exported capital in other industries must have been greatly enhanced by the construction and improvement of the great railway systems.

It must not be supposed that the table pretends to cover the whole amount of British long-term capital invested in commercial enterprises overseas. Not only is our estimate of £50 millions of nominee holding of stock exchange securities not included, but no attempt has been made to cover three important classes of exported capital, namely, holdings of securities not officially dealt in here (notably the stocks of many large American companies, in which British interest is considerable), direct investments in farms, real estate and other property, and the overseas assets of companies operating partly at home and partly abroad. The last group includes the fixed property of banks, merchant houses and shipping companies, and a great total of property belonging to such firms as Lever Brothers. British shipping companies have been excluded altogether unless their fleets are entirely confined to foreign or colonial waters. The capital covered by these groups is certainly of the order of £500 millions.

As to British holdings of government and municipal bonds, we have made no inquiry of our own, but have been content to make use of the work of Sir Robert Kindersley, to whom our thanks are due for allowing us to reproduce it. The results of his inquiry, which were published in the June number of the *Economic Journal*, are summarised in the following table:—

	GOVERNMENT AND LOCAL CORPORATION LOANS.		
	Amount Out-standing.	Percentage British Held.	Amount.
	£ million.	%	£ million.
Dominion and Provincial Governments	1,047	90.2	945
Dominion, Indian and Colonial Corporations	100	91.1	91
Foreign Governments	591	54.8	324
Foreign Corporations	53	76.3	40
	1,791		1,400

In Sir Robert Kindersley's compilations, the amount held by British residents was taken as equal to the amount on which interest was paid (in 1928) under deduction of British income tax, and for a number of reasons, one or two of which were suggested in our previous article, this method probably leads to an under-estimate of British holding. Those portions of loans on which interest is paid in overseas centres are excluded altogether, although an appreciable percentage of them may be held by British residents; this applies particularly to the foreign *tranches* of international loans. The table shows a total of £1,400 millions for the British holding, and this could be raised with some confidence to £1,500 millions, bringing the total sum invested overseas through the medium of stock exchange securities up to approximately £3,500 millions.

The following table shows the geographical distribution of as much of this sum as is accurately traceable:—

	BRITISH CAPITAL ABROAD.		Government and Cor-poration Loans.	Total.
	Commercial Capital.	Share.		
	£	£	£	£
Canada and Newfoundland	176	234	102	512
Australia and New Zealand ...	35	16	521	572
India and Ceylon	102	33	219a	354b
South Africa	74	9		
Other British Possessions	148	46	203c	380d
Total, Empire	535	338	1,045e	1,918d
United States of America	46	31		
Argentina	178	114	149	839
Other Latin America	188	133		
Europe	103	166	113	382
Rest of the World	102	57	93e	252f
Total, World	1,152	839	1,400	3,391

a Excluding Ceylon. b Excluding Ceylon Government and corporation loans. c Including Egypt. d Including Egyptian Government and corporation loans. e Not Egypt. f Not Egyptian Government and corporation loans.

It is unfortunate that Sir Robert Kindersley's classification does not precisely correspond with our own, or with Imperial boundaries. However, it is clear that about £1,900 millions out of a total of nearly £3,400 millions is invested in the British Empire; this includes nearly three-quarters of the government and municipal loans.

One of the most striking facts disclosed by the table is the paucity of commercial investment in Australia and New Zealand compared with the sums lent to the central, provincial and local governments of those Dominions, the ratio being over ten to one. No doubt a reason may be found in the public ownership, especially in Australia, of a large number of public utility services which elsewhere have been developed with private resources, but it must also be borne in mind that in each of the other Dominions, and in the Colonies as a whole, one outstanding industry—railways, tea or rubber planting, tin or gold mining—accounts for the bulk of commercial capital held in Great Britain, and that neither Australia nor New Zealand has any such single predominant industry. India, as might have been expected on account of the nature of

SKANDINAVISKA KREDITAKTIEBOLAGET

International Telephone Numbers

GÖTEBORG STOCKHOLM MALMÖ
71820 0101 8210

her government and the state of her industrial development, has likewise taken much more for public than for private purposes. The figures for Canada would look very different if the bonds of the Canadian National Railways, which are controlled by the Dominion Government, were included under the third instead of the second column.

It cannot be pretended that the results of this survey of British capital abroad are beyond question in statistical accuracy. The vastness of the field and the complication of the problems involved render a wide margin of error inevitable. Many of the incidental errors tend to cancel each other in the compilation of such large aggregates; those which do not would probably make our estimates somewhat too low. But it can be stated with some assurance that in 1929 British long-term capital overseas, excluding the bonds of defaulting governments and the securities of defunct or dormant companies, did not exceed £4,250 millions in nominal value, and was probably in the neighbourhood of £4,000 millions; and that the section of this total which took the form of securities officially bought and sold on the London Stock Exchange, along with other securities of British companies operating abroad and some securities of foreign and colonial companies which are known to be largely held over here, probably amounted to about £3,500 millions, and certainly not more than £3,750 millions.

EMPIRE WHEAT QUOTAS.

ALTHOUGH Mr Baldwin's quota scheme for wheat was rejected out of hand by the food-taxing section of his party, it is for the moment, at all events, a definite feature of the Conservative programme. What precise form it is to take is less clear. Mr Baldwin apparently intends that British millers should be required to use British wheat in such a proportion to imported wheat that the entire output of the British farmer would be absorbed each year; and that, granted a satisfactory agreement with the Dominions, a further quota of all wheat milled in this country should, by statutory requirement, have to be Empire-grown. The size of the proposed quotas has not been indicated, but Colonel Ashley, M.P., in a letter to the *Times*, gave what we must assume was an inspired explanation, in which he made the astonishing assumption that we shall exclude foreign wheat altogether. The question of the home-produced quota we shall reserve for later consideration; but, as the Government appear to have laid a similar proposal as far as Empire wheat is concerned before the Imperial Conference, the Empire quota scheme demands timely examination.

Under such examination four major difficulties present themselves. Firstly, it is legitimate to recall that one of the greatest benefits which the opening up of the New World, and the application of mass production methods to agriculture, have been hailed as conferring upon wheat-importing countries has been the evening out of fluctuations in the supply of staple foods, by the dovetailing of a wide range of sources of supply and by the compensation of scarcity in one quarter by abundance in another as month by month harvest succeeds harvest. This is illustrated by the following table, which shows wheat

production during several recent years in the principal wheat-exporting countries and in the British Isles:—

WHEAT PRODUCTION.
(Million Bushels.)

	United States.	Canada.	India.	Australia.	Argentina.	British Isles.
1920 ...	833.0	263.2	377.9	145.9	156.1	56.8
1921 ...	814.9	300.9	250.4	129.1	191.0	73.8
1922 ...	867.6	399.8	367.0	109.5	195.8	65.2
1925 ...	676.8	395.5	331.0	114.5	191.1	53.7
1926 ...	831.4	407.1	324.7	160.8	230.1	52.2
1928 ...	914.9	566.7	290.9	159.7	307.4	50.9
1930 ...	820.6	384.8	386.5	...	...	43.5

While good years and bad years are to some extent general, production in all the five leading wheat countries does not fluctuate in the same direction at the same time, and the extent to which the consuming countries take advantage of this by varying the sources of their purchases is well illustrated by the statistics of British imports shown below:—

BRITISH IMPORTS OF WHEAT AND WHEAT FLOUR.
(In equivalent weight of grain.)
(Million Cwts.)

From:	United States.	Canada.	India.	Australia.	Argentina.	Total.†
1920 ...	53.5	13.4	0.02	22.0	31.1	126.0
1921 ...	47.0	22.7	2.66	22.0	4.3	102.5
1922 ...	43.6	32.1	4.49	18.8	19.2	115.1
1925 ...	30.3	35.5	7.33	18.4	12.5	109.5
1926 ...	35.0	43.1	2.69	11.0	13.0	111.1
1927 ...	39.7	39.3	5.02	17.3	20.6	125.7
1928 ...	26.3	47.8	1.55	11.6	25.5	116.0
1929 ...	25.8	32.4	1.4*	14.6	46.4	125.2

* No flour figures available. † Including other countries.

In 1922 and 1928, for example, our total imports of wheat and flour were nearly the same, but the proportion derived from Canada and the Argentine in 1928 showed a heavy increase at the expense of the United States and Australia. Between 1926 and 1927, on the other hand, an increase of 14½ million cwts. in the total was accompanied by a decrease of 6.2 million cwts. in the imports from Canada. This means that British millers, under a free system, enjoy two advantages which would be lost to them under a quota system: they can buy wheat where they can obtain it most cheaply, and they can buy that wheat whose quality in any particular season best suits their blending requirements at the moment. Under a quota, whatever tricks our August weather might play on the condition of British wheat, the miller would have to use it, and however unfavourably the protein content of Empire wheat might happen in an unlucky season to compare with that available in foreign countries, it would have to be used. Further, the extent of the fluctuations in our imports as between British and foreign countries would make it extremely difficult to reach agreement as to the size of the Empire quota to be fixed. The miller would thus be deprived of the trader's privilege of choosing his market, and, at any rate as far as quality is concerned, this disadvantage would be felt by the consumer.

An even more serious difficulty would arise from the quasi-monopolistic position in which Canada would be placed. True, competition between the Dominions is apparently to be maintained, but over two-thirds of our imports of Empire wheat come from Canada. Proponents of the quota scheme allege that it would be easy to reserve to the British Government the right to suspend the quota if the "pools" attempted to raise prices above the world "parity" level, but the difficulty of determining precisely what ratio Canadian wheat prices should bear to those of other countries is formidable. Moreover, as less than half Canada's wheat is now sold outside the "pools" the "free" wheat, under the influence of the quota plan, would be subject to very wide fluctuations at the instance of speculators, and it would not be difficult for the "pools" to hold up the price and throw the blame upon market manipulation. If they did, or were even suspected of doing this, and the consumer put pressure upon the British Government to act in the matter, what sort of political situation would follow, in the Empire whose unity the quota is supposedly designed to promote?

Thirdly, to the extent that we cut off foreign imports of wheat, we reduce the ability of foreign countries to

purchase our manufactures. The Argentine is a friendly country with a taste for British goods. If we prevent her from acquiring, by the sale of her wheat, purchasing power in the British market, we give up the substance, several million pounds worth of exports annually, for the shadow of a preference over foreigners in, say, Canada—a market which is anyhow to be reserved for Canadians. In fact, we get an option on the core of an apple in which "there ain't goin' to be no core."

Finally, there is a serious weakness in the quota system which was discussed in last week's *Economist*. Since the Empire sells more wheat to foreign countries than it buys from them and as the world's demand for wheat would be broadly unchanged, and no outside interference with price is contemplated, all that could happen would be a different distribution of the available supplies. The Dominions would take the British market; the foreign wheat thence extruded would force its way into a larger share of the foreign market; and the Dominions would be no better off. Indeed, with the added complication of a guaranteed price for a statutory quota of British-grown wheat (the other current nostrum) they would be worse off, for the avowed purpose of such a measure is to increase the British output, so that world supplies would be higher than before in relation to demand. That could have only one effect on the price of all wheat which is not subsidised.

In short, a quota for Empire wheat would penalise the consumer and all who are interested in our export trade with foreign countries, while giving no advantage to the Dominion exporters except on the assumption, *ex hypothesi* excluded by the supporters of the scheme, that they could succeed in raising the price.

THE LANCASHIRE COTTON TRADE.

DURING the past quarter cotton spinners and manufacturers in Lancashire have not been able to lift their industry out of the depression which has prevailed for so long. If conditions are not any worse than three months ago, it cannot be said that they are any better. The orders available in yarn and piece-goods have been no more than sufficient to keep half the machinery running, and unemployment has continued on a serious scale.

The quarter has been notable for a further definite decline in prices for raw cotton. On July 1st the quotation for middling American on the spot in Liverpool was 7.50d. By August 1st the price had fallen to 7.22d., by September 1st there was a further drop to 6.43d., and on October 1st the figure was 5.70d. The downward movement has been due to favourable advices with regard to future supplies and depressing reports relating to world consumption. At the beginning of August the Government estimated the new crop at 14,362,000 bales; a month later the forecast was revised to 14,340,000 bales, and on October 8th there was a further revision to 14,486,000 bales. The carry-over at the end of last season was about 6,100,000 bales, so that available supplies for the twelve months will be about 20½ million bales. The world consumption last season was slightly above 13,000,000 bales, but during the last two months the takings of spinners indicate that world consumption at the moment is on a basis of only some 10½ million bales.

With regard to Egyptian cotton, the quotation for fully good fair Sakellaridis on the spot in Liverpool on July 1st was 12.20d. From August 1st onwards a downward tendency developed; 10.40d. was quoted on September 1st, and by October 1st there was a further drop to 9.75d. During the last few weeks less satisfactory news has been received with regard to the progress of the new crop in Egypt, but the Government has estimated the yield at 8,420,435 cantars, including 2,328,068 cantars of Sakel. This forecast was better than expected, and some authorities are of opinion that the growth will be of record dimensions at not far off 9,000,000 cantars.

The poor state of trade is reflected in the returns of shipments of piece-goods. The total for the nine months

ended September shows a reduction of 20 per cent., compared with the same period of last year:—

NINE MONTHS ENDED SEPTEMBER 30TH.

	Linear Yards.	£
1913	5,350,278,900	73,659,119
1928	2,978,747,100	80,680,982
1929	2,921,472,900	77,151,080
1930	2,054,600,400	50,979,312

The severe decline in our trade is largely due to the smaller exports to India and China. So far this year we have shipped to India 720,447,000 square yards, against 1,046,126,000 square yards in the same period of 1929, and to China we have exported 36,818,500 square yards as compared with 119,427,900 square yards a year ago. During the quarter, however, the prospects for trade with India have somewhat improved. The picketing of the bazaars by representatives of the Congress party has weakened, and clearances to the up-country districts are less restricted. Consequently, an increased business has recently been done by Manchester for Madras and Karachi, and more cables have been received from Calcutta asking for prices to be wired out, though the response in the way of firm orders has been very poor. Some improvement has also shown itself in the advices from China. Rather better clearances have been experienced at the auctions in Shanghai, but the bulk of the trade has been for Hong Kong, whence there has come a good demand for shadow stripe poplins and brocades. Some producers of these goods are now fully sold for nearly six months ahead, and this trade has been the bright spot in the Manchester market. On the other hand, Egyptian trade has been dull, and rumours of financial difficulties in that part of the world have caused anxiety. Buying for the West Coast of Africa has been patchy, and recently demand for South America has fallen off as a result of political disturbances. Some manufacturers have done rather better on the Continent, but home trade buyers have acted with caution, as is usual in a falling market. Stocks in the wholesale houses, however, are not particularly heavy, and when orders are placed with manufacturers the goods are wanted quickly.

It has been impossible for spinners of American yarns to obtain any relief from their troubles. Home users have purchased from hand to mouth, and it has been quite exceptional for contracts to be arranged for extended delivery. Prices for twist and weft have fallen with cotton, and margins remain very poor. There has been a good deal of interest in the coarse yarns which have been put on the market by the Lancashire Cotton Corporation, Ltd. These have attracted attention and been sold to an encouraging extent. Holders of mill shares scarcely know what to do, and the September stocktaking results were very disappointing. Conditions in the Egyptian spinning branch have not improved, and restriction of output continues on a large scale. Producers of fine numbers and specialties, however, are more favourably situated than spinners of common carded counts. The proposed Egyptian Spinners' Convention for regulating prices and production has not obtained adequate support and it is not likely that anything more will be heard of this scheme. A limited business has been done in shipping yarns.

The following table gives particulars of our export trade in yarns:—

NINE MONTHS ENDED SEPTEMBER 30TH.

	Lb.	£
1913	154,761,700	11,022,055
1928	125,472,300	16,849,599
1929	126,137,300	15,937,830
1930	102,414,100	11,184,733

During the quarter the various trade organisations have given close consideration to the report of the Government Committee on the Cotton Industry. Although three months have gone since the report was published, practically no action has been taken. Various sub-committees are going into the points raised, but so far nothing has been done in the way of a joint conference between representatives of the employers and the operatives to consider the recommendations.

The scheme of more looms per weaver is also still being discussed. During the last two months a special sub-

"Russia—Today, and Tomorrow"

Next week's issue of the *ECONOMIST* will include a special supplement surveying the political, economic and social situation of the U.S.S.R.

This Supplement is the result of the investigations of a Special Commissioner sent to Russia this summer, and is an objective and exhaustive study of the "New Revolution" commonly known as the Piatiletka, or Five Years' Plan.

committee of the Cotton Spinners' and Manufacturers' Association has been compiling a wage list to apply to the new system. It is understood that the work of this sub-committee has now been completed, and it remains to be seen whether the recommendations will be approved by manufacturers as a body. When this is done, the list will be submitted to the trade unions. Spinners of American cotton are now giving consideration to a scheme with compulsory powers for regulating prices for yarns. It is not thought likely, however, that this proposal will receive any better support than that recently put forward in the Egyptian spinning section.

This week Mr Clynes and Mr Graham have again held a series of conferences with representatives of the industry and representative bankers. Their visit gave rise to reports that the Government has some scheme to put before the industry, and that this will take the form of Government control of some kind. It has even been suggested that something on the lines of the old Cotton Trade Control Board, which was in existence during the war, might be formed with the idea of curtailing production so as to prevent a further period of ruinous prices being taken by spinners and manufacturers. It is recognised, however, that any artificial restriction of output would have the effect of increasing the cost of production and making goods dearer, whereas it is realised by leading authorities that what is required is a decrease in overhead charges and costs generally in order that Lancashire goods may be placed in markets abroad at prices which are competitive against those of other countries.

In fine, the trade revival in Lancashire is still deferred. The only encouraging factor in the situation is that prices are now on a very attractive level and it is believed that some merchants and dealers will before very long anticipate future requirements and place substantial contracts with manufacturers. Numerous operators, however, are not yet convinced that the bottom in prices has been reached, and a policy of caution, therefore, is being adopted. In the meantime the reorganisation of production is being slowly carried on. Recently, the Lancashire Cotton Corporation has been enabled to open some spinning mills and weaving sheds that have been closed for a long time. A policy of enterprise is certainly being adopted by the Corporation, but at what cost remains to be seen.

"RACKETEERS."

(BY AN AMERICAN.)

THE story of the shooting of Jack Diamond was overdone by the British press. Diamond himself is rather small fry in the gang world, a dealer in narcotics and liquor on a moderate scale, and not one of the major-generals of the fighting army of the gangs which, even if they do not dominate the affairs of a few American cities, undoubtedly are a disquieting part of them. But it gave rise to the natural question as to how the conditions which breed the Diamonds and Capones can be tolerated by the Americans themselves. The question occurs quite as often to Americans. But when Americans come to naming a solution, they confront a complex of difficulties and problems which perhaps time alone can change.

The gang, of course, is no new phenomenon. What is new is its modernisation, its expansion and its up-to-date armoury. Gangs came to America from Southern Europe, chiefly Italy. At first they functioned on a small scale, as gangs do in all countries; for example, in parts of London to-day. They went in for petty blackmail, intimidation and corruption. But ultimately they grew to new possibilities. One of those developments was to invade certain local trade unions in New York and Chicago (a minority of them), to levy tribute on a few branches of business and industry. And finally they spread themselves over much of the organised minor commercial life of these and other cities. Where organisations did not exist, they created them. They bullied those who remained outside, they extorted levies from those within.

The so-called protective organisations are what were at first known as "rackets." A gangster would take it upon himself, say, to organise the selling of fish in one district in Chicago. He would swoop down on the fishmongers, tell them they were to be "protected" at so many dollars per month, collect his money regularly, and otherwise leave his protected "member" alone. The fishmonger who did not care for protection would find his shop bombed, his delivery men assaulted, his supplies cut off. Either he conformed, or moved to another part of the city. But if he remained in the fish business he had to raise prices to make up the monthly levy, and so pass it on to the consumer.

Chicago a year ago, according to Mr J. Gunther, writing recently in *Harper's Magazine*, had sixty rackets; and thirty more had been in operation which were temporarily suppressed. A racket in the cleaning and dyeing business raised the price of pressing a suit of clothes from 4s. to 5s., and the revenue to the racketeers was enormous. At one time they had a treasury of £135,000—too tempting a sum to their rival gangsters. They were "hi-jacked"—intruders tried to steal their business—and a gang war resulted in which Big Tim Murphy, the chief hi-jacker, was duly assassinated.

Another typical racket was the "Midwest Garage Owners Association," with membership of 10,000 garages in the Chicago district. It existed to "standardise storage charges," and every garage in the association paid 4s. a month tribute for each car handled, not to speak of other levies, one for instance of £15 for permission to change the garage foremen. The racketeer in chief was "Cockeye" Mulligan, and he soon had to defend himself against hi-jacking. This he did by employing hoodlums to fight hoodlums, and bombs were thrown and arson resorted to. Mulligan finally was captured and "taken for a ride," but, though he was shot, he survived. Last year the racket was being conducted by usurpers.

Many of the rackets are devoid of spectacular fighting, and have to do with such contracts as excavations, paving, or supplying glass for new buildings. Some organisations simply see to it that the member contractor next in line for the job gets it. Mr Gunther has estimated the total number of gangsters in Chicago at about 600, and the annual cost to consumers in increased retail prices at about £28,000,000. In New York racketeering is not so far advanced, but there are well-known instances of it. The milk supply of the city is known to be under racketeer control; so is the supply of poultry, and to some extent of greengroceries.

These rackets are only loosely associated with the chief racket of all, bootleg liquor. It is well to bear in mind that they did not have their origin in prohibition. Nor are all of them hooligan rackets; many are on the borderline between legitimate economic co-operation and illegal exploitation. Some of them undoubtedly start out legitimately, and are pushed over into illegality at a time to suit the racketeer.

But they could not exist were it not for political corruption, and apparently this corruption, in turn, cannot be wiped out so long as prohibition remains. This can briefly be illustrated by a story told in Chicago. A respectable lawyer with a large corporation practice was being mentioned as candidate for the office of public

prosecutor. One day two unpleasant-looking strangers called at his office and asked to speak privately with him. He had them shown in. "Not to waste any time," began one of them, "my friend and I have the beer monopoly in the Loop (the down-town district of Chicago). And you are to be the new prosecutor." The attorney was surprised. He had been told he might be nominated, but it had not been decided. "Oh yes it has," went on the racketeer in beer. "And so we thought we ought to explain things to you. As prosecutor you could make things unpleasant for us—for a little while. And we want you to know that we don't think a monopoly is something to benefit only a few. We believe in sharing it. And your share is to be £120,000 a year. We've brought you your first two months' pay as a sign of good faith." The speaker removed a wad of bills from his pocket, and laid £20,000 on the table. The attorney sent them away and at once refused the nomination.

This story is well vouched for, and it gives a measure of the untold profits of racketeering and of the sums available to debauch municipal authorities. This corruption extends from the top to bottom, often including the elected judiciary, mayor, aldermen, public prosecutor, down to the rank and file of the police. It is not always corruption for a cash consideration; often enough "influence" is enough. It may be unfair to say it is general; but no one with a knowledge of three or four of the larger American cities will deny that it is widespread.

When it comes to election time, the racketeers, the gangs, the political organisations, all with their ramifications into the business life of the city, form a fairly solid front. Nominations are pre-arranged, or if by primary, the naturalised foreign vote is whipped into line to let the desired candidate win. It is the pre-condition of this situation that foreign elements far outnumber American stock in any great American city. And these foreign elements are usually on a low plane, economically and culturally. The franchise is neither valuable nor important to them.

It is futile to expect a house cleaning in cities where public spirit, or a unified civic interest, simply does not and cannot at present exist. Occasionally a great reform movement will sweep into office a group of honest and able men. But they cannot have the public support, essential over a long period of time, to work any permanent change. After the storm of reform, the corruption creeps back and thrives once more until the community somehow gathers enough force to register another protest.

Even so, there is an element in American life which could cleanse American cities if it chose, and that is big business. Even without the backing of any overwhelming civic spirit it would be strong enough to have its way. Not that business interests tolerate racketeering as such. No doubt they would welcome its complete suppression. The powerful men of American cities as a rule are enemies of prohibition, and are fighting it in the hope that bootlegging, and open lawlessness, will go with it. In the long run they have everything to lose and little to gain by an undermining of the respect for law in a whole generation of Americans. But these men do stand to benefit from weak city administrations. This was true a generation ago, it is even more true to-day, when the development and expansion of American cities is an almost incalculable source of wealth. Honest municipal bodies are always haggling over franchises, questioning corporation privileges, delaying public work. In a city like New York, where the board of aldermen could not command a high grade of membership, these corporations would be hampered not only by honest delays, but by innumerable attempts at petty blackmail. In a word, the present kind of administrations can be more easily handled. They are expensive to the taxpayer, increasing the cost of public works by 1, 2 or even 5 per cent. But in the main the community gets its work done expeditiously and well. If the system did not pay, big business would brush it away.

It is against a background of such problems that an Al Capone plays his rôle of picturesque banditry and a Jack Diamond can astound the world. But they are really creatures of the background, nor can the background be changed by an open war with them and their kind. The next generation will read about them as an exciting but closed chapter of American development. By then American-born children of foreign parents will have been assimilated; by then, too, the problem of prohibition will have been long ago solved. A wholesome public spirit will be possible, dominating civic affairs. Time may not be the only reformer to have his say in improving American cities, but he looks to be the only reliable one.

Notes of the Week.

The Paddington Comedy.—The internal differences within the Conservative Party have reached the stage of *reductio ad absurdum* at South Paddington, where, in the by-election to be decided next week three separate Conservative candidates have been nominated in addition to the Labour representative. Sir Herbert Liddiard is now the official candidate of the Conservative Party. He originated as such, was then drawn into Beaverbrookian indiscretions which caused him to be disowned by headquarters, but has now retracted and been forgiven, and goes into battle with the official forces behind him. No less chequered has been the experience of the representative of the United Empire Party, Mrs Stewart Richardson. Although she stands in the name of the party of Lord Rothermere, his Lordship has disowned her—the reason, according to her own account, being that she was not a titled lady—and she goes on alone, preaching her particular form of Imperialism and saying to all the Conservative Leaders, actual or potential, "a plague on all your houses." Meanwhile, Lord Beaverbrook, thrown over by Sir Herbert Liddiard, has put his own candidate, Admiral Taylor, in the field, and Lord Rothermere, not content with disowning Mrs Richardson, joins his brother Press Lord in supporting the Admiral. Pitiful and bewildering, indeed, is the plight of the Paddington voter who does not happen to be a Socialist. Even old campaigners are dreary of prophesying the result. But the result emerging from such a medley of electioneering cannot have much importance. What is important is the public display of the Conservative Party's differences, and there are signs of a growing demand by large sections of the party for definite action to end or mend an impossible situation. The present rather undignified interchange of letters between Mr Baldwin and Lord Beaverbrook cannot continue indefinitely.

Dr. Weizmann's Resignation.—On Monday three documents were published which, between them, are likely to have important effects upon the administration of the British Mandate for Palestine. The first is a Blue Book containing Sir John Hope Simpson's report on immigration, land settlement and development in the mandated territory. The second is a White Paper, containing a declaration of the Government's policy as it has been framed in the light of this report and of the earlier evidence which was taken in connection with the troubles of last year. The third is a letter addressed to the Secretary of State for the Colonies, Lord Passfield, by Dr. Weizmann, the President of the Jewish Agency for Palestine and of the Zionist organisation. In this letter, Dr. Weizmann deprecates the conclusions of the Blue Book and joins issue with the policy of the White Paper, which in his judgment "effects a profound change in the policy of 1922 as expressed in eight years' practice," and "goes a long way towards denying the rights and sterilising the hopes of the Jewish people in regard to the National Home in Palestine, so far as it is in the power of His Majesty's Government to do so." In consequence, Dr. Weizmann announces, he has decided to resign his presidency of the two organisations

in which Zionism is represented *vis-à-vis* the Mandatory Power. We do not propose to discuss the Government's Palestinian policy here. We shall take an early opportunity of examining it at greater length. But we can say at once that we regret Dr. Weizmann's decision exceedingly. Since the days when, as a professor of chemistry in the University of Manchester, he placed a valuable discovery at the British Government's service during a critical period of the war, he has been a good friend to Great Britain as well as to Jewry. He has done more than any other man to turn Zionism from an aspiration into a reality, and his personality has a charm and a power which must have made their impression on everyone who has ever had the pleasure of dealing with him. His combination of statesmanlike rationalism with poetic imagination eminently fits him to play the part of intermediary, and mediator, between the British Government and his own people. It is a thankless and a difficult rôle, for "a Jewish National Home" is bound to have quite different meanings in different minds, and experience has shown the hopelessness of trying to reconcile these incompatible meanings by definitions on paper. Yet we cannot believe that Dr. Weizmann will be assisting either Zionism or Palestine or Great Britain by abandoning a rôle which no other living Zionist is so well fitted to fill. We still hope that his decision to resign will not, after all, materialise. We are not inclined to take his unfavourable view of the Government's policy; but if this policy is to be opposed from the Zionist side, we should prefer to see the opposition led by a Zionist of his breadth of mind.

The Egyptian Electoral Law.—Little has been heard of the internal politics of Egypt since the suspension of constitutional government after the breakdown of the Anglo-Egyptian negotiations earlier in the year; but it was not difficult to guess that all was not well; and the incident which arose last week over certain proposed changes in the constitution and in the electoral law indicates that the present Government is not very confident about its tenure of power. Apparently the Prime Minister, Ismail Pasha Sidki, contemplated altering the electoral law by reducing the number of deputies by about 50 per cent., substituting elections in two degrees for direct elections, and making the Court of Cassation, instead of the Chamber itself, the arbiter of election petitions. He is also said to have contemplated creating a nominated instead of an elected majority in the Senate, and making the Ministry responsible to the Senate as well as to the Chamber. These points must be stated with reserve, for there has been no official *communiqué*, and the reports that have appeared in the Egyptian Press have been declared by the Government to be inaccurate. The significant thing, however, is not the substance of the scheme in detail, but the fact that the idea of altering the constitution has been abandoned owing to opposition from the Constitutional Liberal Party, which, together with the Ittihad (Unionist) Party, is by way of supporting the present régime against the Waft. For the Constitutional Liberals, the stumbling block seems to have been the possible effect of the proposed constitutional changes in diminishing ministerial responsibility. Ismail Pasha Sidki denies that this effect would have followed; but, in deference to this objection, he is apparently proceeding with the changes in the electoral law, and with these only. Such changes may be desirable in themselves. For instance, the system of indirect election may really be more effective than direct election for expressing the national will in a country where the mass of the population is illiterate and politically uneducated. It is useless, however, to tinker with the machinery of constitutional government if the machine is to lie rusting on the shelf. It may be true that the national will of the Egyptian people is not fairly represented by the Waft, whose efficient organisation has enabled them to return to power with a strong majority in the Chamber every time during the last half-dozen years when the constitution has been given free play. But the other parties are less representative still, and a "Palace Government," resting on these other parties' countenance and on King Fuad's personal

authority, is the least representative form of government that Egypt could have. To a detached observer, it is evident that the remedy for "the tyranny of the Wafd" is not the suspension of constitutional government in Egypt, but the practice of it. The Egyptians will never learn how to manage the parliamentary system except by trial and error; and, so long as this experience is withheld from them, we fear that they will continue to suffer under alternate bouts of "single-party government" by the Wafd and "Palace government" of the kind represented by the present administration.

The Norwegian Swing to the Right.—Various influences have combined to reduce the weight of the Socialist Party in the Storting, though this week's general election still leaves it the largest single group. A disastrous and short-lived attempt at Socialist Government in 1928, a clumsy flouting by the last Storting of the local patriotism of Trondhjem, and above all M. Mowinkel's record of two years' successful administration, won thirteen additional seats for the Conservative Party and three for the Radicals, while the Labour Party lost eleven seats and the Communists lost the only three seats they had. If, therefore, the Radicals, the Conservatives and the Peasant Party work together, as there is great hope that they may, M. Mowinkel will be able to continue in office with a greater sense of security than he has hitherto enjoyed. Such co-operation is, however, indispensable, as the Labour Party still commands 48 seats, against the Conservatives' 44, and the Radicals' 34. As the Storting does not meet until the beginning of next year, M. Mowinkel is expected to carry on his minority government in the meantime. Judging by the crude communism which appears to be rapidly penetrating the Norwegian Labour Party, there seems some likelihood that the situation will follow a similar course to that which affairs appear to be taking in Germany, where, according to the letter which we publish this week from our Berlin correspondent, disgust at the tactics of the extremist parties is kindling a more cordial spirit of co-operation among the moderate groups.

The Political Problem in East Africa.—When Parliament reassembles a Joint Committee of both Houses is to be set up to consider the main points in the Hilton Young Commission's report, and particularly the proposal that a High Commissioner for Uganda, Kenya and Tanganyika should be appointed—first with advisory and later with executive powers—to assist the Imperial Government in dealing with the problems of economic co-ordination and of relations between the races. The two White Papers, issued in June, in which the Government have dealt with these great questions have produced a wave of uneasiness and resentment among the White settlers in the various East African colonies and protectorates. They have also evoked declarations, from several very authoritative quarters in the Union of South Africa, that the people and Government of this self-governing Dominion of the Crown have an interest in the native policy of all Governments throughout Africa, and that in this matter South Africa intends to make her voice heard. This reaction to the White Paper which deals with the race question is disquieting, because no new departure in policy was suggested in that document. In substance, it simply repeated what all Governments of all parties in this country have said when they have had occasion to state their policy on this matter: first, that the Imperial Government is a trustee for the African natives in the British African territories for which it is responsible; secondly, that the native African population are not only the original inhabitants of the land but are, and will remain, as far ahead as can be seen, in an overwhelming majority over the European and the Indian settlers combined; thirdly, that the native African will not be capable, for a long time to come, of taking an effective part in any parliamentary representative system of government; and, fourthly, that for all these reasons, "responsible" government for these territories is not within sight of becoming practical politics. These points are maintained, and are bound to be maintained, by every successive Government that

comes into power at Westminster. It is a national and not a party policy; and as a national policy it is continuous. In fact, the pill that is administered to the settlers is always the same pill, whether it is given with three or four coats of sugar or with only one or two. Ostensibly, it is the sugaring that is in question. The settlers complain that the Government call them "immigrants," with the implication that they have no status or stake in the country. This is to quarrel over words. The settlers' real quarrel with the Government—and it is a serious one—is that the Government still stand where their predecessors stood, while the settlers are eager for a change of régime which will put the administration of the East African colonies into their hands. It is as natural for the settlers to cherish this desire as it is impossible for the Imperial Government to satisfy it.

Russian Wheat.—The so-called "dumping" of Russian wheat is in danger of provoking a controversy in which confusion of thought is apt to obscure the real issues. While there is no conceivable ground for objecting to Russia, whose need for foreign credits appears to be extremely acute, pressing forward the export of the available surplus in the Black Sea area, it is legitimate to complain that Exporthebe—the State organisation controlling wheat shipments—appears to have marketed this grain in a clumsy and reckless manner. That is to say, sales have been forced without regard to the market's day-to-day requirements and prices have been needlessly cut. Given the economic structure of the U.S.S.R., production costs in the capitalist sense are a nearly incalculable factor, and it is idle to ignore the fact that the development of Russian exports holds potentialities of serious unsettlement in the world markets for many commodities unless an understanding with the Soviet Government can be reached as to marketing methods. To seek such an understanding with provisions against "dumping" is a task which the League of Nations might properly undertake; but to proceed from this ground to the assertion that we should buy no grain from Russia and to criticise, for example, the C.W.S. for its large purchases this year of Russian wheat, appears to us to be ridiculous. We desire to export more to Russia, and the fulfilment of such a desire is conditional on our purchasing more from her.

Advertising and Empire Trade.—The Advertising Association has placed before the Prime Minister a petition that the Imperial Conference should be asked to recommend the complete removal of all restrictions to the free circulation within each part of the Empire of all newspapers, magazines, trade and technical journals, circulars, trade lists and other forms of advertising material coming from other parts of the Empire. Revenue from such sources must be negligible, since the duties effectually crush any attempt on the part of manufacturers to obtain overseas distribution for their products by means of overseas distribution of their sales literature. On the contrary, by restricting the activities of the importer, such duties deprive the exchequer of the revenue which would accrue from the normal functioning of the tariff. Again, the protection which these duties are designed to afford the Dominion printer is of little value, since the cost of printing catalogues, show-cards, etc., in each Dominion is usually prohibitive, and checking at such distance impossible. That this situation should persist in the Dominions while the Empire Marketing Board "boosts" the sale of Dominion products here is palpably ridiculous. The Empire Marketing Board was established to advertise Dominion products in Great Britain in return for tariff preferences granted by the Dominions to British manufacturers, and is supported to the tune of nearly £1,000,000 a year entirely by the British tax-payer. A sum of £360,000 was spent last year by the Board advising the British public through every conceivable advertising medium that if it buys Empire produce the Empire will buy British manufactures and create employment. However, should any British manufacturer wish to take advantage of the campaign and capitalise the goodwill it is intended to

create, he finds any attempt at reciprocal publicity heavily restricted by duties and innumerable formal complications. Restrictions on commercial travellers and the import of samples are equally vicious. In South Africa a traveller must pay £50 for his licence. Canada imposes a duty on the import of single copies of periodicals. Another aspect of interior obstacles to better Imperial relations is shown by the representations of the Empire Press Union to the Imperial Conference against the Australian terminal charge of a halfpenny per word on all incoming press messages, a distinct impediment to the potentialities of an Empire press to promote understanding of Imperial issues. The restrictions on imported advertising matter, samples and on commercial travellers are of world concern, and have always been energetically combated by Chambers of Commerce. The Economic Committee of the League of Nations has now enlisted the co-operation of the International Chamber of Commerce to secure some standard of practice if abolition is unattainable. The British Empire constitutes a group of States in which the existence of such barriers connotes a very short-sighted policy, and the Imperial Conference presents an unique opportunity for abolishing them and at one blow removing a very real technical obstacle in the way of the development of Empire trade.

Australian Tariff Board Report.—The Annual Report of the Tariff Board* always contains much good advice as to Australian tariff policy, and on this occasion is doubly interesting for the light which Australian experience can throw upon the fiscal problems which are at present confronting Great Britain. Since 1928 the duty rates have been so raised that whereas previously practically none exceeded 60 per cent. now almost 29 per cent. of the items and sub-items pay minimum rates of 65, 70 or 75 per cent. The Tariff Board's comments on the effect of this high protection upon prices are particularly interesting in relation to the contention of British Protectionists that a duty which secures the market to the home producer, by enabling overhead costs to be spread over a larger output, makes possible a reduction of price. In Australia this has happened with certain commodities, of which boots, concrete mixers, corsets, canned fruit and soap are cited as examples. But, the report says, "it is unquestionably a fact that many of the goods manufactured under the protection of the tariff are being sold at prices equal to the landed cost of similar imported goods, including the full amount of the duty." Moreover, the Board declare that in some of the cases where prices have been reduced this result could have been brought about without the aid of the duty. Another point which any country meditating a plunge into protectionism would do well to consider is the vicious circle which it is apt to engender. There are heavy duties on copper wire and copper and brass rods in Australia. "It is inevitable, therefore," says the report, "that the users of Australian copper rods, wires or tubes or brass rods as raw materials must be at a disadvantage, and it is not surprising that they are seeking further duties on the products of their industries." The next stage will presumably be further duties on goods made with copper and brass utensils, and so on *ad infinitum*. One sentence in the report unconsciously illustrates the criticism which has been widely levelled, even within the Dominions themselves, against the Imperial Preference proposals which are now before the British Government. "As stated in evidence," the Board say, "a duty of 45 per cent. under the British Preferential Tariff has secured the local market to the Australian manufacturers of concrete mixers"—a curious comment on the utility of Preferences.

"Transitional" Benefit.—The October issue of the *Ministry of Labour Gazette* contains a very elaborate analysis by sample of persons who were either in receipt of transitional benefit or who had no claims current immediately before and immediately after the passing of the Unemployment Insurance Act, 1930. The inquiry is

* Government Printing Office, Canberra. No. 110. F. 2445. 1s.

well worth study as throwing light both on the effects of the Act and also on the distribution and record of those of the unemployed who have not paid thirty contributions in the last two years. One noticeable fact which emerges from the analysis is the heavy increase in the proportion of married women—from 44.7 to 62.2—between February and May. This suggests that the widely current impression of an abuse of unemployment insurance by married women may have some foundation. The distribution by industries of the persons covered by the sample is as follows:—

Industry.	MEN.		WOMEN.	
	February 17, 1930.	May 26, 1930.	February 17, 1930.	May 26, 1930.
	No.	Per cent.	No.	Per cent.
Coal Mining	48,168	23.8	64,168	22.7
Building	16,878	8.3	21,435	7.6
Distributive	13,980	6.9	22,792	8.1
General and Marine Engineering ...	12,911	6.4	18,123	6.4
Public Works Contracting	11,702	5.8	16,640	5.9
Shipbuilding and Repairing	10,982	5.4	15,053	5.3
Local Government	9,014	4.5	12,546	4.4
Iron and Steel	7,275	3.6	10,994	3.9
Other Industries	71,250	35.3	100,839	35.7
Total	202,160	100.0	282,590	100.0

Industry.	MEN.		WOMEN.	
	February 17, 1930.	May 26, 1930.	February 17, 1930.	May 26, 1930.
	No.	Per cent.	No.	Per cent.
Cotton	5,315	22.7	16,296	29.3
Distributive	3,739	16.0	5,829	10.5
Hotels, Boarding Houses, &c.	3,343	14.3	6,086	11.0
Food, Drink and Tobacco	1,474	6.3	3,568	6.4
Metal Manufacturing and Metal Trades	1,427	6.1	4,256	7.6
Other Industries	8,142	34.6	19,533	35.2
Total	23,440	100.0	55,568	100.0

The proportion is naturally highest in those industries which have been longest depressed. Another interesting table is that which shows the average contributions paid and the average days' benefit drawn over a period of years, from which it appears that the contributions paid show for men in the May sample a decline from an average of 30 in 1923-24 to an average of 4 in 1928-29, and for women a decline over the same period from an average of 33 to one of 5. As many as 54.2 per cent. of the men and 63.9 per cent. of the women paid no contributions at all in the eleven months July, 1929, to May, 1930. Of the male claimants in the May sample nearly half had had no regular work for two years or more, and 68 per cent. had had no regular work for more than a year. Among women the corresponding percentages are 30.5 and 64.7 respectively. On the other hand, 20.6 per cent. of the male claimants and 22.6 per cent. of the female claimants had had regular employment within little more than six months. Owing presumably to the operation of the Unemployment Insurance Act, 1930, the percentage of the men covered by the samples who were on Poor relief fell from 22.1 in February to 5.6 in May and the percentage of women from 6.4 to 3.8. In February, out of 49,902 men on Poor relief, 5.5 per cent. were also in receipt of benefit. In May, out of 16,714 recipients of relief, 19.2 per cent. were also receiving benefit. These few extracts illustrate the urgency of the need for disentangling Poor relief and unemployment.

Employment and the Cost of Living in September.—Unemployment continued to increase during September. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at September 22nd was 18.1, as compared with 17.5 per cent. at August 25th and 10.0 per cent. at September 23, 1929. It is estimated that the number of insured workpeople in employment at September 23rd was approximately 9,646,500, as compared with 9,697,200 a month ago and 10,304,000 a year ago. The total number of registered unemployed (excluding persons normally in casual employment) at September 22nd was 1,413,242. This was 79,392 more than a month before and 586,371 more than a year before. Those temporarily without work amounted to 596,773 at September 22nd, and were 12,536 less than at August 25th but 335,167 more than a year ago. With regard to those normally in

casual employment, 99,643 were registered as unemployed at September 22nd, as compared with 96,543 a month ago and 74,463 a year ago. The Ministry of Labour has this week announced that the total number of registered unemployed at October 13th was 2,188,672, including 1,498,155 wholly unemployed, 585,156 temporarily stopped, and 105,361 normally in casual employment. With regard to the cost of living during September, the index number of the Ministry of Labour at October 1st stood at 56 per cent. above the level of July, 1914, as compared with 57 per cent. at September 1st and 65 per cent. at October 1, 1929. For food alone the figures recorded at the same dates were 43 per cent., 44 per cent. and 56 per cent. respectively.

South American Exchange Problems.—Mr Hose, in his address last Tuesday to the shareholders of the Anglo-South American Bank, made some very pertinent observations upon recent fluctuations in South American currencies, and on their causes and effects. He began by saying that while the trade depression was beyond the control of the different South American Governments, it was responsible for much of the recent political unrest, because it is when economic conditions are unfavourable that public attention is focussed most closely upon the way in which the national affairs are being conducted. The trade depression, he showed, had hit South America, in common with other producers of primary commodities, very hard indeed, as is shown by the bare recital of the fall in commodity prices, ranging from 25 per cent. for linseed to 50 per cent. for maize, oats and wool, since the beginning of 1929. In these circumstances, it was not surprising that South America's purchasing power had become restricted and that most of the Republics had experienced varying degrees of exchange stringency. At this juncture, Mr Hose made an extremely important point. He stated that those Republics operating freely on the full gold exchange standard had suffered the least. Thus during the period January, 1929, to August, 1930, South America lost gold to the aggregate value of £63,000,000. Of this sum, approximately £36,000,000 went from Argentina and £15,000,000 from Brazil, while those countries, such as Chile and Colombia, which were definitely on the gold exchange standard, only lost £11,000,000 between them, notwithstanding the fact that their export trade had been just as badly hit. Moreover, these last countries had rapidly adjusted themselves to compensate for their gold losses, with the result that the reserve ratios of their central banks still stood at a high level. Ecuador's central bank, in fact, had actually increased its gold reserve. It is clear that Mr Hose regarded these facts as a high testimony to the efficacy of the gold exchange standard in the face of a serious commercial crisis. He agreed that Argentina had no option but to close the Caja de Conversion, as was done nearly a year ago, but he insisted that the monetary system of the Republic stood in need of modernisation. The fluctuations of the peso, which are inevitable under the present system, gravely prejudice not only the trade of Argentina, but also the return on the huge amount of British capital invested in the Republic, and consequently upon Argentina's power to attract further supplies of foreign capital for development purposes. Thus both Argentina and Great Britain have an interest in the reformation of the currency on lines which have proved so successful in neighbouring Republics.

Peasant Co-operation in Bulgaria.—Our Sofia correspondent writes: One of the most important parts of the programme for assistance to agriculture is a scheme for reorganising the rural co-operative societies. The co-operative movement started in Bulgaria towards 1890, but its practical development begins after 1904. By the end of 1927 there were 2,171 peasant co-operative societies scattered all over the country. The main items of the combined balance sheet of peasant credit co-operative societies were, in thousand Levas: Capital, 199,654;

sundry funds, 71,496; deposits, 307,985; premises, 45,711; net profits, 23,370; net losses, 6,852. Having regard to local conditions these results are not negligible. Beyond their own resources, the peasant credit societies distributed to their members, in 1929, Leva 631,891,326 borrowed from the Agricultural Bank which lent, in the same year, a total sum of Leva 1,292,831,032 to all peasant societies. These figures, supplied by the Statistical Department of the National Bank, outline the general scope of the peasant co-operative system in recent years. Its importance lies much more in the potentialities it may contain if properly organised, supervised and directed. One of the main features of land property in Bulgaria is the wide predominance of the small holding: the maximum amount of land which may be owned by one proprietor is fixed by law at 75 acres. In the majority of cases the parcels constituting the property of a family are scattered over a large area. In these circumstances agricultural credit, badly needed in Bulgaria for financing the improvements of the land, the purchase of proper implements and for freeing the peasant from the money lender, cannot be organised. The individual holdings do not offer sufficient security for this kind of credit. The leading idea in the reorganisation scheme appears to consist in creating by new legislation a collective material responsibility of the order of the mortgage liability. The members of co-operatives will be thus responsible not only personally but their combined real property will serve as a security to the long-term loans which their co-operative societies are to obtain through the agricultural or other banks for distribution amongst the members. Foreign experts have been invited to study the position on the spot, and to give their advice as to the best way to carry out these plans in practice. Even if everything regarding the technical execution of the scheme is arranged, there remains a factor of primary importance which must, at any rate, be taken into account: the political, or more precisely, the electoral influences at work in the co-operative societies. Efficient control and a sound management will only be possible if these influences can be ruled out in a decisive and permanent way. Whether such an achievement is really possible remains to be seen.

"Nation Study" in London.—London is the door through which Great Britain communicates with the rest of the world; and it therefore comes within the special province of the University of London to organise a systematic study of foreign countries and peoples—especially those which are not ordinarily studied in a university curriculum. The war brought home the necessity for this extension of the traditional field of academic studies; and during and since the war this great work has been carried out on the initiative of a distinguished body of scholars, among whom we may mention the late Principal of King's College, Dr. Burrows; the late Professor of Arabic, Sir Thomas Arnold; the present Professor of Central European History, Dr. Seton Watson; and the present Directors of the School of Oriental Studies and the School of Slavonic and East European Studies in the University; Sir Denison Ross and Sir Bernard Pares. The work of the University in this new and important field is now concentrated in these two schools, and the two Directors have just jointly issued a leaflet setting forth the facilities for study which they are now in a position to offer between them. The basis of their studies is linguistic; but the courses which they offer range from elementary instruction in East European and Oriental languages up to post-graduate teaching for the University Doctorate; and in the higher ranges the linguistic study is reinforced by the study of other aspects of life; so that the student who takes the best that these schools can give will come away with a comprehensive knowledge of one or more peoples, or groups of peoples, in the modern world. This is just the training that is needed for a number of careers which young Englishmen and women follow: in the diplomatic and consular services, in journalism, in business. In the world of to-morrow, even more than in the world of yesterday, Great Britain will

depend for her prosperity on being the point at which the main lines of world communications intersect on every plane of human activity. In such a world the co-ordination of linguistic with regional studies is a noteworthy move in the right direction; but perhaps a further synthesis is needed; for many of the most important activities in the world to-day are conducted on a world-wide scale of operations, and therefore cannot be studied on a linguistic or regional basis at all. We venture to suggest that the Directors of these two enterprising schools should take this point into consideration and should meet it by co-operation with the Director of the School of Economics and Political Science. Together, these three schools of the University of London have the means of providing a complete study of the contemporary world.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during September amounted to 903,176 ozs. of fine gold, as compared with 921,081 ozs. produced during August. In September, 1929, the output amounted to 849,553 ozs. of fine gold. The following table shows the monthly output since the beginning of 1924:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	796,768	823,692	796,270	839,782	843,857	876,452	882,801
February ...	760,617	753,925	763,924	779,339	816,133	815,284	818,188
March	795,671	825,479	834,340	860,511	877,380	856,529	889,370
April	768,923	787,519	803,303	824,014	825,907	872,123	868,606
May	809,003	813,249	849,214	859,479	886,186	897,598	916,213
June	773,053	780,251	852,145	855,154	862,363	856,029	887,867
July	829,437	818,202	860,134	851,861	867,211	889,480	912,652
August	809,571	808,218	843,854	863,345	891,863	889,601	921,081
September ...	799,422	797,247	839,939	842,118	857,731	849,553	903,176
October ...	827,583	812,832	853,296	855,743	897,720	886,590	...
November ...	802,313	787,833	840,276	849,059	872,484	861,593	...
December ...	825,273	791,455	836,157	851,225	859,761	851,134	...
Total ...	9,597,634	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	7,999,954

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Jan. 1930.	Feb. 1930.	March 1930.	April 1930.	May 1930.	June 1930.	July 1930.	Aug. 1930.	Sept. 1930.
Gold mines	190,663	196,752	200,134	202,434	202,182	201,324	201,111	202,257	205,061
Coal mines	15,288	15,495	15,250	15,109	15,028	14,943	14,670	14,788	14,706
Diamond mines	5,889	6,584	7,002	5,565	5,340	5,126	5,490	5,754	5,767
	211,840	218,831	222,386	223,108	222,550	221,393	221,271	222,799	225,534

The number of natives employed at the gold mines shows an increase as compared with the preceding month.

Stock Exchange — Politics — Business Conditions — Foreign Trade — Profits.
(FROM OUR CORRESPONDENT.)

NEW YORK, October 15.

STEADY liquidation in shares, sending the prices of the majority of active issues below the lowest levels of November, 1929, has overshadowed all else. Pessimism has deepened and more talk is heard of a hard winter, of business and banking failures, of collapse abroad and all the other prophecies of calamity which invariably accompany a bear market. However, there are signs that the selling has, for a time, at least, reached a climax, and in reality the country is much more prosperous than the hard-pressed holder of common shares may think.

This week the president of the Stock Exchange conferred in Washington with President Hoover. For some time the Administration has shown concern over the decline in the share market and, with the activities of the bears in wheat as well as in shares. In a recent address the head of the New York Stock Exchange reiterated previous assertions that the exchange stands firmly in

favour of a free market, and approves of short selling as a general practice. In the past week, however, the exchange authorities have taken action to curb what they considered unwarranted "bear raiding" and excessive short selling by professional operators. Explanation of this stand, and some reassurance which the authorities doubtless were able to give the President on the market situation, presumably formed the subject of the interview.

Meanwhile the banks have made a thorough survey of the position of Stock Exchange and other financial firms, and, it is understood, have given all needed assistance, so that there should be no further rumours of failures, for a while, at least, in the absence of another sudden and sharp decline in share prices. This support for the market has turned prices for the moment and a broad covering movement is now under way. No pronounced buoyancy, however, is anticipated, inasmuch as the opportunity will doubtless be taken to liquidate the accounts of a large number of firms which, although solvent, have found that they cannot carry on profitably under present conditions.

Among the obvious measures taken to frighten the bears is the concerted calling of stocks lent for their use among the important Stock Exchange houses, and the threats from the business conduct committee of the exchange. The short interest which is probably not extraordinarily large, and is, of course, quite small in proportion to the total value of listed stocks, is being made uncomfortable by the placing of premiums on stock lent it. A premium means that the borrower of stock must pay something for the privilege, in addition to finding the money. This makes the maintenance of a short position an expensive affair. Last autumn the Stock Exchange induced enough calling by members of their stock lent to shorts to cause a brisk covering movement.

Liquidation of stocks held by interior banks as collateral for loans, and "technical" short sales by outright holders, who own stock but who sell in fear of a decline, with the intention of either "covering" their short sale later or delivering their actual stock, whichever may turn out the more profitable, have been the chief causes of market weakness. The extent of real liquidation may be measured by the sharp drop in bank loans on security collateral. These loans fell \$215,000,000 in the first week of October for reporting banks (about 40 per cent. of the country's banking resources). Some concern has been felt over the scanty collateral behind bank loans, but such conditions are found by a survey of the Federal Reserve Banks to be isolated and not to affect any important banks. They do, of course, constitute a source of supply of stock, both on the rallies and in times of sharp declines.

With a further decline last week of \$158,000,000 in brokers' loans, that item has fallen below \$3,000,000,000, for the first time in three years, and is much less than half the figure of a year ago. Security loans, however, are much larger than that. Reporting member banks in leading cities are lending \$8,268,000,000 on securities, or nearly \$600,000,000 more than a year ago.

Uncertainties in the share market and in commodities and the vagueness of the business prospect will clearly be factors in the Congressional elections to be held early next month. It is possible that the Democrats may gain enough seats in the House of Representatives to threaten regular Republican control, provided they make a working alliance with the radical group of western Republicans. Gains in the Senate also would not be surprising, but control of the Upper House is not probable. It is more or less expected that when elections are held in a period of business recession the party in power will lose votes, but actual loss of control of either branch of Congress by the Republicans would not be relished by business as a whole.

Some further improvement in trade has taken place, but certain industries are feeling seasonal recession. Motor output for September was only about 3 per cent. below that of August, and October production is running even with last month. The steel industry this week

dropped to around 55 per cent. of capacity, as compared with last week's rate of close to 60 per cent., and the recent weakness in the markets has dried up reviving inquiry. Prices for finished steel, for scrap metal and for pig iron have declined. Seasonally, the steel industry follows a gentle downward course during the autumn and early winter.

Railroad freight loadings have increased for two weeks in succession, although they are still below those of recent years. Cotton consumption also is higher, the September figures showing a gain of 12 per cent. over August, and there was another considerable increase in exports, which were about two and a half times as heavy as in the previous month and a fourth higher than a year ago.

Wheat exports also have been rising and the larger raw material shipments contributed largely to the rise in exports for September. Outward shipments at \$318,000,000 were \$18,000,000 higher than in August, and imports rose \$10,000,000 to a total of \$227,000,000. The improvement, although small, is gratifying; but exports are still around the lowest in the past ten years. The monthly trade returns show a net gain of \$2,500,000 in gold last month, reversing the trend of the preceding two months and bringing the increase for nine months to \$186,000,000 exclusive of releases from earmark of metal held for foreign account.

Corporations are now reporting their earning results for the third quarter. As anticipated, the showing is not very brilliant, but in comparison with the results of the same period of last year, it may turn out to be as good as, or better than, that of the second quarter. Actual profits, undoubtedly, were smaller in the past three months than in the second quarter, but in the third three months of 1929 trade had already begun to fall. The first dozen reports rendered average about 20 per cent. below the 1929 level, whereas profits in the aggregate for industrial concerns in the second quarter were 35 per cent. below last year. Some commodities are now moving into consumption at a somewhat quickened pace, and retail trade will have the benefit of the holiday business. Merchandising results in the current quarter will probably be better than for the third quarter, but the heavy industries are unlikely to do so well.

Employment improved in September, according to the Bureau of Labour Statistics, which finds a rise of 1 per cent. on August. Payroll totals increased 1.4 per cent. The figures cover thirteen major industrial groups. Excluding manufacturing, the gain was 2.8 per cent., while manufacturing industries alone report a decline of 0.3 per cent.

A better feeling has come regarding the outlook in foreign countries. South American securities are a trifle more stable and the early tendencies to grow excited over the German election results are no longer noticeable. Herr Schacht's address to members of the Bond Club on the German situation was well liked on the whole. A Spanish credit is being talked of, but bankers who usually act for Spain are unlikely to do anything until certain preliminary steps looking toward resumption of the gold standard are taken. Should a credit be established in advance of such steps, in all probability it will be the result of a desire to secure fresh connections on the part of other banks here.

FRANCE.

Politics — Moratorium Rumour — Foreign Trade — Tax Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, October 22.

It was decided yesterday that the Chambers shall re-assemble for the autumn session on November 4th. The Finance Commission of the Chamber has already begun work on the Budget for the financial year that will begin on April 1st, and it is hoped that its report on the measure will be completed in time for the House to begin consideration of the Government's proposals before Christmas.

Now that the real purport of the resolutions adopted by the Socialistic Radical Party at Grenoble has been interpreted, opinion in general is inclined to be more optimistic as to the probability of the Tardieu Cabinet being able to continue in power more or less indefinitely. The Hitler movement in Germany has certainly strengthened the Cabinet's hold on public confidence, and has at the same time rendered useless for some time, at any rate, any effort of the Opposition to press for further extension of the Locarno policy as between this country and Germany. The maintenance of M. Briand at the Quai d'Orsay now seems rather less doubtful, however, and the reiterated refusal of the Socialists to consider any Ministerial alliance with the Radicals, unless M. Herriot and his supporters are prepared to figure in the undignified rôle of the fifth wheel in the coach, seems to have removed all serious danger to the Cabinet from that direction. M. Blum is evidently basing his plans on the assumption that the general elections (early in 1932) will result in the gain by the Socialists of further Radical seats sufficient to make them the largest group in the Chamber. This would largely increase their capacity of initiative, by automatically raising them to the position of the first Party to be consulted in the event of future Ministerial crises, and thus greatly increase their chances of being able effectively to assume office. Meanwhile, the possibility of the Radical leaders resuming Ministerial collaboration with M. Tardieu is again being seriously discussed. The Press of the Left is insisting that M. Tardieu's weak spot is that he is not as popular with the Senate as he might desire, which may or may not be correct. In any case, thanks to Hitler and to the Ministry's very satisfactory record of accomplishment, the supporters of the Cabinet are now much less uneasy as to the outlook than they were three months ago.

The reports from Washington a few days ago regarding a possible moratorium for Allied debt payments were received here with scepticism. French opinion is now satisfied that the only ground for such reports lies in the fact that Dr Schacht has thought fit, for reasons of his own, to go to New York, on his own initiative, on a mission that was not desired either by the Berlin Government or by that of any of the Allied Powers. The French have insisted for many years that the only rational financial liquidation of the War, from the point of view of the economic health of all concerned—and particularly of the United States itself—is the general cancellation of all war debts. In this connection responsible French leaders have many times gone so far as to state that this country would be prepared, in the event of the United States seeing its way to reduce the amount demanded from France, to renounce an equivalent proportion of the amount due from Germany.

Factors in the situation which explain some of the indifference with which the reports of the Washington moratorium discussions have been received here are:— (1) That the Young Plan specifically provides that the unconditional annuities of the German reparation debt—which form one-third of the whole and average about £33,000,000 each—shall be exempt from all moratorium, transfer clause or revision of any kind; which appears to indicate that they could only be subjected to variation by another long-drawn-out "Hague Conference." (2) that as regards the remaining two-thirds of the debt, the annuities of which average about £66,000,000, the terms of the Young Plan provide for a moratorium of transfer without involving a suspension in collections but only for a period of two years. In other words, even if such a moratorium were applied, the German Government would still raise the entire annuity during each of the moratorium years, and would not thereby diminish the burden on the taxpayer. This potentially protective clause was embodied in the Young Plan, not only in the interest of the German exchange, but in order to stave off damage that might result to the rest of the world from a fresh collapse of the mark.

The foreign trade returns for September show an increase on the month, for the first time since February, in both exports and imports. Exports totalled 3,358,500,000 francs, or rather over 250,000,000 francs

more than in August (although still 847,456,000 francs, or over 20 per cent., less than in September, 1929; while imports were 4,205,516,000 francs, which was equivalent to 148,000,000 francs more than in August and about 100,000,000 francs less than a year ago. During the first nine months of the year there was an increase of 1,285,660,000 francs (or 16 per cent.) in imports of manufactured goods, practically all of the other categories of both imports and exports having been lower. Revised estimates of the present year's harvest, issued by the Ministry for Agriculture, indicate that, with careful handling, this year's yield of French breadmaking materials, in view of the stocks left over from the previous year, may be made to meet consumption requirements.

Taxation continues to come in satisfactorily and to produce more than Budget estimates. The revenue returns for September show that the total yield from "normal and permanent" sources during the month was 3,414,272,000 francs, or 48,000,000 francs more than in September, 1929, notwithstanding the recent substantial reductions in taxation. Exclusive of income tax and other direct imposts, and of the yield from tobacco, the yield from indirect taxation and monopolies was 204,618,000 francs more than Budget estimates, which brings the realised surplus under this heading to 1,004,000,000 francs for the first half of the current financial year. The yield from scheduled and general income tax during the month was 908,488,000 francs, or 118,691,000 francs (13 per cent.) more than in September, 1929. In view of the economic depression throughout the world and the unjustifiably pessimistic frame of mind of a large section of the French public as to its repercussion here, it is to be noted that the yield from turnover taxes of all kinds in September (which represents business done during August, the great French holiday month) was about only 13½ per cent. lower than in the corresponding month of 1929, notwithstanding the substantial lowering of these taxes under the last Budget Bill. The yield from the tax on motor-cars was 9,344,000 francs (nearly 70 per cent.) larger than in September, 1929, while excise duties on wines, spirits and mineral waters showed substantial increases. Registrations produced over 25 per cent. more than was expected, and stamp duties 12½ per cent. more. The weakest item was again the yield from Bourse operations, which was nearly 60 per cent. below Budget estimates and only one-third of the amount recovered in September, 1929.

GERMANY.

Politics — Metal Strike — Bata Negotiations Abandoned — Security and Exchange Markets.

(FROM OUR CORRESPONDENT.)

BERLIN, October 21.

THE Brüning Government were able to command a surprisingly large majority at the first meeting of the Reichstag, as the Social Democrats lent their support for the rejection of the votes of no confidence moved by the Communists, the National Socialists and the Nationalists, while the National Socialists adopted an attitude which destroyed any desire on the part of the German People's Party, or even the Economic Party, for co-operation with them. The right wings of the bourgeois parties have been cherishing the belief during the last few weeks that parliamentary responsibility would force the National Socialists to curb their nationalistic exuberance and above all to revise their programme of primitive socialism. At the very beginning of the Reichstag, however, the Hitler Party brought in resolutions demanding the abolition of the security markets, a limitation of the rate of interest to 5 per cent., and the expropriation of all "Bank and Stock Exchange kings." The tone they adopted in the Reichstag, and the unrestrained insults which their Press continually hurled against the Minister of Defence, Herr Groener, for resisting the penetration of national socialist ideas into the

Reichswehr, soon blighted any hope that the National Socialists would develop into a civilised party. Then followed the street fights in Berlin, which had every appearance of being organised by National Socialist groups, even if not in collusion with the leaders of the party. Nothing, therefore, was left, even for the right wings of the German People's Party and the Economic Party, but to resign themselves to the Chancellor's acceptance of the help of the Social Democrats in maintaining a "minority government of the Centre" and so to keep the National Socialists out of power.

It may be assumed that after these experiences the Centre Party at least has finally determined not to enter into a coalition with the National Socialists. The most difficult political test of strength will come in December, when the Reichstag reassembles to discuss the financial programme. Meanwhile, the Cabinet will be busy drafting numerous bills incorporating that programme. The Government hopes to get these bills through the Reichstag, but the great and possibly fatal difficulty is that many of them will be unpopular with the supporters of every party and will only be able to secure a majority if the parties which are to support them receive a *quid pro quo*. At present it does not look as though the Economic Party and the German People's Party were disposed to make such concessions to the Social Democrats as would be necessary to secure their support for the essentials of the financial programme. There is, however, some hope that this programme is not yet cast in its final form. If it could be so improved as to appeal to the imagination of the masses and arouse a conviction that with its help the hardships of the economic depression could really be overcome, all the problems of tactics would be rendered very much easier. The passing of the Debt Amortization Act, which makes possible the payment of the \$125 millions credit, has already shown that even this Reichstag is determined not to shrink from the hardest resolutions if they are necessary.

As in the Reichstag, so also in the Prussian Landtag the attack of the National Socialists, Communists and Nationalists upon the Government has been repulsed, though in this case the German People's Party is also on the side of the Opposition, and voted against the Government. The Social-Democrat Prime Minister, Herr Braun, therefore remains in office with his Catholic and democratic colleagues. The Prussian Cabinet is responsible for public order throughout the greater part of the Reich, and it is a great triumph that the Prussian police remains under energetic and reliable republican control.

The strike of the Berlin metal workers has begun, and is being prosecuted with great energy. It seemed at first as though some works, especially Siemens, would be able to retain a substantial number of workers, but after the first few days even their workshops were practically empty. A few groups of workers remained, according to the pledge given by the unions, unaffected by the strike: apprentices; very old workpeople who would have no chance of finding new jobs; and those hands who are absolutely indispensable for the avoidance of lasting damage to the equipment of the factories. The Communists wanted to call out even these. Although their members belong to the trade unions they have built up their own strike organisation, which acts in competition with the

official union leaders, and causes them a good deal of trouble. In particular, while the unions want to confine the dispute within its present limits in order that their funds may be adequate for its prosecution, the Communists, concerned less for the success of the strike than for its propagandist effect, wish to extend it by bringing in fresh factories.

So far, the award providing for an 8 per cent. reduction of wages, which was the cause of the strike, has not been declared binding by the Minister of Labour. Herr Stegerwald cannot avoid deciding whether he will declare it binding or not, but he is delaying as much as possible in the avowed intention of letting the combatants exhaust themselves a little first, in order that conditions for compromise proposals may be slightly more favourable. He will begin by once more inviting the leaders of both sides to a conference, and he will be very reluctant to declare the award binding since that would probably destroy all hope of social democratic support for the Cabinet.

The Czechoslovakian shoe factory Bata has now broken off the negotiations with the Prussian State for the purchase of land on which to erect a factory. The Prussian Government were very severely attacked for their willingness to allow the Czech "shoe king," whose competition is a matter of such concern to the shoe manufacturers of Germany, and of all Europe, to penetrate even within Germany herself, but they refused to shift from the position that they could not and would not prevent any foreigner from establishing himself in Germany if he was going to employ German workers and operate in conformity with German law. It appears that Herr Bata has found the German labour laws and tariff wages not sufficiently favourable for his plans, and though he has given out that the estate offered him by Prussia was not suitable and that he will build his factory in some other part of Germany, it is generally assumed that he has finally abandoned his project.

Since the debate in the Reichstag began to reveal the growing isolation of the National Socialists and the strength of the Government, the situation of the security and foreign exchange markets has eased considerably. Security prices, which had reached their lowest point on October 13th, have recovered in the course of a week the greater part of the losses they had sustained since the elections. The recovery is most marked in securities internationally dealt in, which had been most severely depressed by foreign sales and in which bear interests had been most active. This is illustrated by the following table:—

	Sept. 13.	Oct. 13.	Oct. 20.
I.g. Farben	151	126	148½
A.E.G.	136	106½	128½
Salzdetfurth	325	243	292
Siemens	195	170	191
Reichsbank	245	203	227
Stahlverein	76	60	71

The great recovery in security prices during the last few days has been accompanied by a small turnover, but the tide of mistrust which has been flooding Germany since September 14th has now turned.

The recovery is also reflected in the exchange market. The calling in of credits has virtually ceased, and substantial offers of credit have come from abroad, especially after Monday's division in the Reichstag. The latest Reichsbank return, for the 15th, reflects the conditions of the worst period, and that of the following week will also probably show no marked increase in exchange holdings, as the Reichsbank is not taking up the foreign exchange available on the market in order to keep down the rate. The low level of exchange rates is remarkable: the New York selling rate has fallen between October 14th and 19th from 4.2080 to 4.1980. The transfer of the foreign credit which will, after the deduction of the German quota, provide about \$100 millions of foreign exchange, cannot be expected before November.

SWEDEN.

Trade Depression — Industry — Foreign Trade — Balance of Payments.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 8.

THE effects of the depression, which reached Sweden nine months later than the United States and then spread rapidly to all the industries of the country, are now visible everywhere, but it has not yet assumed any alarming proportions. The sound development, the cautious financial and monetary policy pursued during more prosperous times, and the absence of exaggerated speculation have placed Sweden in a very favourable position to face a period of depression. Happily, labour peace has now been secured in the leading export industries for the coming year. Current agreements have been renewed in the engineering, pulp and mining industries, so that there is no fear of these industries being hampered by labour disputes if a revival should set in in 1930. It is the general opinion that in the winter the position will be still worse; the only question is how long it will last and how deep it will be.

The production index for August fell to 120. This is lower than any 1929 figure (in which year 129 was the lowest), and, moreover, the usual seasonal tendency at this season is decidedly upward. The diminution of production affected practically all the leading industries. In pulp, production fell to 139 per cent. of the 1923-24 figure, as compared with 158 per cent. a year ago and an average of 160 per cent. for the whole of that year. In the iron and steel industry the figures were 113 per cent., 152 per cent. and 138 per cent. respectively. Even the ore industry is now feeling the depression. The figure was 158 per cent. of the 1923-24 figure, as compared with 196 per cent. and 214 per cent. for the two first quarters of the year and 189 per cent., the figure for 1929. Mining was carried on during the first six months on a larger scale than was justified by the position owing to doubt as to the continuance of labour peace. An exception is to be found, on the other hand, in the sawmill industry, in which the figure was 102 per cent. of the 1923-24 figure, compared with 91 per cent. a year ago and 103 per cent., the average for the whole of 1929. It is uncertain, however, to what extent this was due to the forcing of production in view of favourable weather.

The August figures for the leading industries possibly exaggerated the depth of the depression, but it is striking that the production of such significant articles of consumption as tobacco and malt drinks fell heavily during that month. Developments in September, so far as they can at present be measured, indicate a continued decline. Almost every day there is news of further restriction of output, the most surprising being that of S.K.F. At the same time, the markets for the chief staples have grown worse. The Russian agreement with the English timber importing syndicate is too well known to require comment, and it is too early to say what the effects on the Swedish sawmills will be. Output will inevitably be reduced, and prices are already lower. Prices of pulp have been simultaneously forced down. From Kr. 200 per ton at the beginning of the year the price of strong sulphate has fallen to 155. Attempts are again being made to come to an agreement for restricted output between Sweden, Norway, Finland, probably Germany and possibly Czechoslovakia. Such an agreement has already been made for mechanical pulp. Conditions in the ore industry are similar. Exports by the Grängesberg Company of recent months have been considerably less than last year. Shipments during the third quarter amounted to 2.08 million tons, against 3.07 last year.

Exports, which in July amounted to 86 per cent. of last year's level, fell to 82 per cent. in August. The decline in imports from 114 per cent. to 93 per cent. is, on the other hand, not entirely due to depression. Here we have to take into account the favourable harvest and the obligation to mix native wheat and rye in milling. The reduction in imports is attributable mainly to reduced

imports of grain. Imports of raw materials were on the whole maintained at a relatively high level, though here, too, signs of the depression are visible.

Recent developments have left very little mark on the balance of payments. Net bank claims abroad during the first eight months have only fallen by Kr. 39 millions, a moderate figure for normal years. At the end of August they amounted to Kr. 545 millions, as compared with Kr. 515 and Kr. 427 millions one and two years ago, and this in spite of the fact that capital exports in June assumed large dimensions owing to participation in the Young Loan. During the first half-year they amounted to Kr. 96 millions net, as compared with only Kr. 33 millions a year ago. The tendency has changed since, so that in August there was a net import of capital of Kr. 8 millions.

It is evident that this reflects developments on the foreign capital markets. The reduction of the demand for credit has also been very marked in the Swedish money market, although it was not visible in the August bank reports, because it was concealed by the transactions in connection with the first payment of the Kreuger credit to Germany. During September the most conspicuous feature of the money market has again been the surplus of money in the commercial banks. This curious position has forced them to a large extent to abandon the usual means of procuring liquid funds by rediscounting at the Riksbank. The latter has, in fact, for a long time past lost its grip on the money market, very largely because it has maintained its discount rate too high. As the commercial banks could scarcely count on more than 2 per cent. on short-dated loans abroad but had to pay 3½ per cent. for rediscounting at the Riksbank, they have preferred to realise their foreign exchange as required. The consequence is that the Riksbank's portfolio has swollen abnormally. At the end of September it amounted to the, for Sweden, immense sum of about Kr. 400 millions. A year ago the figure was Kr. 221 millions, two years ago Kr. 118 millions and in 1927 Kr. 215 millions. At the same time, rediscounting has shrunk to next to nothing, whilst exchange quotations have sunk so low that the Riksbank has found it necessary to pay 18.09 for sterling in order to avoid gold imports. It is possible that in order to avoid this the Riksbank may be compelled to lower its discount rate to a level below that which would otherwise be advisable. It is certain, however, that it could safely lower it below its present level.

POLAND.

Election Campaign—Bank Rate—Gold Reserve—Budget Situation — Coal.

(FROM OUR CORRESPONDENT.)

WARSAW, October 11.

THE general election for a new Diet will take place on November 16th, and for the Senate on November 23rd. Marshal Pilsudski has decided to head the list of candidates classified as the Non-Partisan Bloc for Supporting the Government, his purpose apparently being to make of the election a sort of plebiscite on himself. At the dissolution of the last Parliament the Government bloc, with the support of a section of the Socialist Party, had a voting strength of about 120 out of a total membership of 444. The election campaign of the Opposition groups has been virtually stopped by the imprisonment of many of the leaders, by the refusal of the authorities to allow the Opposition parties to hold public meetings, and by a ruthless censorship of Opposition and even independent newspapers. In these circumstances, and in view of the state of apathy which seems to prevail throughout the country, it is believed that the Government bloc will at least double its membership in the next Diet. It would, however, be a hollow and worthless victory. An outright dictatorship would be more dignified and understandable than a fictitious Parliamentary Government elected in such circum-

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Branches throughout Greece.

New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL
FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

stances. The Government bloc and its supporting groups comprise individuals of all shades of political thought—from large landed proprietors and industrial magnates to peasants and revolutionary Socialists. The larger its representation in the next Diet, therefore, the more difficult it will be to secure agreement on a legislative programme.

At the beginning of the month the Bank of Poland raised the Bank rate by 1 per cent. to 7½ per cent., and the "lombard" rate from 7½ to 8½ per cent. Ample justification for the Bank's action is found in the loss of foreign exchange serving as cover, which amounted during the first twenty days of September to 50 million zlotys—despite the continued favourable foreign trade balance. This item in the Bank's balance sheet has dropped from 527 million zlotys on December 31, 1928, to 418 millions at the end of 1929, to 241 millions on June 30, 1930, and to 176 millions on September 20th. Gold bullion holdings during this time increased somewhat, but nothing like enough to offset the loss in foreign exchange cover. Towards the end of September the Bank sold gold held abroad to a value of 142 million zlotys, purchasing foreign exchange with the proceeds. There was a marked decline during the past month in zloty bond quotations; the 8 per cent. issue of the Credit Society of the City of Warsaw fell from 77 to 70, and similar Lodz bonds from 70 to 64. Holders, therefore, were clearly apprehensive about the future of the zloty, and the state of public mind in this respect has been further emphasised by the stiff premium recently charged on sterling and dollar currency as against the cheque transfer rate. Having twice suffered from currency depreciation within a comparatively few years, the general public is in no mood to be caught again, and this fact in itself might tend to hasten a flight from the zloty when the underlying situation did not justify immediate apprehension. The action of the Bank, therefore, in raising the rate a full 1 per cent. on October 8th for the protection of its remaining reserves was courageous and may have a reassuring effect on the public mind. It has been followed by an improvement of several points in the price of zloty bonds.

Treasury revenue during the first five months of the present budget year (April to August) amounted to 1,140 million zlotys and expenditure to 1,136 million zlotys—the corresponding figures for the same period of the previous year being 1,214 and 1,200 million zlotys. Budget revenue this fiscal year has steadily declined. Expenditure has so far been kept within the revenue collected, but there is nevertheless a considerable strain on the Exchequer, since the tax authorities are doing their utmost to bring in revenue (except where political expediency makes it advisable to ease the pressure here and there), while the outflow of Treasury funds is being closely guarded—again save where political considerations intervene. While the budget, therefore, continues to show a favourable balance, it is feared that the payment later in the fiscal year of obligations that at the moment are not being

met may disturb budget equilibrium especially with the continuance of the economic depression which is making it harder and harder to collect taxes, and bearing in mind that relief measures for agriculture (export subsidies, etc.) will continue to be a heavy drain on the Exchequer. The necessity for a complete revision of the system of taxation in Poland has at last been recognised by the appointment of a permanent Tax Committee of Experts who will, it is expected, not only produce a definite plan for tax reform, but bring about a certain measure of elasticity in taxation matters to meet fundamental changes in the economic situation.

Although there has been a decided improvement in coal production and exports during recent weeks, the figures for the present year to date compare very unfavourably with those of 1929. During the first eight months of 1930 coal production amounted to 23.6 million tons, of which 7.7 millions were exported. For the same period of 1929 production was 29.7 million tons and exports 8.9 millions. The Polish coal trade, however, is not so much concerned just now over the decreased exports so far this year as over the very unsatisfactory prices which are currently being obtained for shipments to the Baltic and Scandinavian countries—which markets take more than 75 per cent. of the coal exported from Poland. The prevailing quotation is 11s. 6d. per ton f.o.b. Danzig or Gdynia, of which a large part is swallowed up by freight and handling between Upper Silesia and the Baltic seaboard. The present quotation is several shillings per ton below the average which has prevailed during the past year or so, and the anxiety of the Polish trade has been further increased by the recent visit to Scandinavia of the British Coal Commission headed by Mr Shinwell. The Poles are still hoping that it will be possible in time to come to an agreement with the British coal trade in respect of the Northern markets, but it is realised that without the adherence of Germany a Polish-British agreement would be useless, and that Germany cannot be brought into such an agreement until the entire matter of Polish-German commercial relations is placed on a proper treaty basis. The chances that the commercial treaty between the two countries, signed last March, will ever be ratified seem to grow remoter.

BULGARIA.

Agriculture — Peasant Co-operative Movement — Foreign Trade.

(FROM OUR CORRESPONDENT.)

SOFIA, October 8.

THERE is not much left of the rather sanguine expectations with regard to the effects of this year's good harvest on the general situation. Crops have been satisfactory, almost in every part of the country. Unfavourable weather conditions prevailing in July, August and September have only partially impaired the yields of maize, tobacco, wine and fruits, and the results are on the whole good, insofar as output is concerned. The main trouble is the persistently weak tendency of world prices for most of the goods Bulgaria exports. It is difficult to make clear to the peasant the general and uncontrollable character of this trend of the markets. His reluctance to sell is therefore doubled by suspicions of cleverly organised speculation on the part of local grain merchants and exporters, and resentment and discontent are spreading in peasant circles. The political implications of this state of things are pointing towards a marked increase of feeling against the Government and its commercial and financial policy.

In spite of certain tactical errors such as the raising of customs duties and the failure to settle the question of treaties of commerce, the responsibility for the unhappy position of agriculture cannot be seriously placed to the Government's account. Nevertheless, this situation is giving much concern in official quarters. The whole attention of the Council of Ministers appears to

be directed towards finding a way out of the trouble. The problems connected with agriculture, export, credit conditions, etc., are extensively discussed and a great number of measures are under consideration. It has been decided that the Army and public administrations shall cover their needs of grain and fodder by direct purchases on the market in order to strengthen prices by a more active demand, but the idea of paying bounties to peasants selling for export has been temporarily abandoned. Another measure is the reduction of the interest rate on loans to peasants by the Agricultural Bank, from 12 to 10 per cent., and the stricter enforcement of the Moneylending Act prohibiting more than 16 per cent. interest for accommodation of any description.

Opinion in business circles is not much convinced of the practical effects of the official efforts undertaken up to the present. A much more important scheme has been under consideration for some time past, and careful investigations are being carried on with a view to throwing as much light as possible on the actual position. The scheme, which involves the reorganisation of the peasant production and credit co-operatives, is discussed more fully in a "Note of the Week."

In spite of the unfavourable conditions prevailing in foreign markets, the balance of trade remains quite satisfactory. According to preliminary data, the period January-August closed with an active balance of Leva 1,200,000,000, as against a deficiency of Leva 780,000,000 last year. If due regard is paid to the heavy depreciation of most of the goods exported, these results are remarkable. The excellent quality of this year's barley, millet and other secondary produce, as well as the large increase in exports of eggs are the chief reasons for this improvement in the foreign trade position. The consequences are already noticeable all over the country: increased peasant purchases, better payments, quickening of trade, especially of retail trade in leather, iron, rough textiles and other objects of peasant consumption. It must, however, be stated that the improvement observed is very much short of the general expectation, and that the uneasy position of the vast majority of peasants remains a very serious feature in the economic situation this year with possible implications with regard to internal political developments.

IRISH FREE STATE.

International Politics — Wheat — Budget — Savings — Municipal Protectionism.

(FROM OUR CORRESPONDENT.)

DUBLIN, October 22.

DURING the last few weeks political attention has centred upon the League of Nations Assembly and the Imperial Conference. The Free State delegates at both appear to suffer from an inferiority complex. They concentrate their whole energy on asserting the autonomy of the Free State, which nobody wishes to deny. At Geneva a seat on the Council of the League has been secured, and, doubtless, an advance on the constitutional front will be achieved in London. But this preoccupation with questions of national status is hard to understand. The Government's supporters are quite satisfied with the constitutional position as it stands, and would prefer to see Ministers using rather than talking about the liberty of the Free State; while its opponents are being convinced that their suspicions about the measure of independence conferred by the Treaty are not without foundation.

Mr McGilligan's speech at the economic discussion at the Conference was admirably frank and realistic. It must have come as a surprise to many of those present to learn what an extremely important customer the Free State is for British goods. Indeed, it is difficult to see in what way the economic intimacy between the two countries could be strengthened by any change of policy by the Free State, which already purchases by far the

largest part of its manufactured goods from Great Britain, to whom it accords numerous preferences in its protective tariff. Any development of trading relations must come from the other side. If the British Government takes the unlikely step of imposing duties on imported goods, the Free State will undoubtedly derive much benefit, but otherwise it would appear that Great Britain will continue to enjoy preferences and advantages in trading with the Free State for which nothing is offered in return.

The very wet weather has played havoc with the corn crops throughout the country. A deputation of large farmers waited upon the Minister for Agriculture last week demanding, first, an import duty on all cereal crops to raise the price of corn in the home market, and, secondly, a moratorium of two months in respect of their rent and rates. There is no denying the reality of the distress which is being experienced by farmers owing to the quite exceptional rainfall of the summer, and nobody could cavil at any reasonable measures of temporary relief which did not involve an increase in food prices. Taking a large view, however, it is possible to draw the conclusion that cereal cultivation is not really the best type of agriculture for the capricious Irish climate, and that farmers are wise in concentrating generally on products that are less sensitive to weather changes. This consideration is relevant in regard to the Fianna Fáil party's proposal to encourage wheat growing by a heavy subsidy.

The Exchequer Returns for the first six months of the current financial year show that revenue has increased by £102,860 to £11,188,148 and that expenditure has diminished by £225,919 to £11,379,611. Increases are shown in customs, excise, motor tax, estate duty and income tax, and decreases in stamps and miscellaneous revenue. The expenditure on Central Fund Services has increased by £143,699 owing to the further borrowing that has taken place. The capital account shows that £5,609,571 was received from the Third National Loan, and that £129,700 was spent on the Shannon scheme, £1,046,412 advanced to the Electricity Supply Board, and £3,124,000 used for the repayment of Irish Free State Bills and Ways and Means advances.

The growth of thrift among small investors is shown by the increase in the issue of Savings Certificates from £547,000 to £864,000, while repayments have not increased by anything like the same amount. There is now outstanding a sum of £5,463,028 in this favourite investment. The reasons for the increase of saving by the poorer classes are first, a certain measure of prosperity enjoyed by Ireland in spite of the prevailing depression and second, a growing confidence in the political stability of the country. The low rate of interest on bank deposits has doubtless diverted savings into Savings Certificates, which yield five per cent., at compound interest, free of income tax.

The spirit of protectionism has been carried a step further by a meeting of Waterford business men, who have passed a resolution calling upon their fellow townsmen to purchase goods manufactured in Waterford to the exclusion of the products of other localities, whether in the Free State or elsewhere. Our national protectionists can hardly complain if the result of this resolution is the loss of a certain amount of business by Dublin and Cork firms, because the proposers of the resolution are strictly logical. If the taking in of each other's washing is a sound policy for a national area why should it not be equally sound for a municipal area as well? Indeed, why should one stop here? Why should not each parish or street in Waterford refuse to trade with the neighbouring parish or street? It will be interesting to see if the end of the protectionist enthusiasm is a system of octroi duties in every townland in Ireland.

ECONOMICS OF EMPIRE TRADE

By DOUGLAS H. SMITH, B.Sc. (Econ.) 4s. 6d. net.

A clear and impartial statement of the facts and figures relating to the nature and direction of the trade of the Empire. A full summary of the arguments for and against a closer economic union of its constituent facts.

COLONIAL AND FOREIGN BANKING SYSTEMS

By KEITH LE CHEMINANT, B. Com. 6s. Net.

A rewritten and enlarged edition of this standard book on world banking and monetary conditions, in Canada, Union of South Africa, Australasia, India, Ireland, France, Germany, Italy, Switzerland, Holland, United States of America, South America, and Japan.

PROBLEMS OF MONOPOLY

By F. ZEUTHEN, Dr. Polit. 7s. 6d. Net.

An examination of prices where only a few enterprises compete. An analysis of the classical discussion among economists as to the stability of prices.

TARIFFS OR TRADE.

SHOULD we as a nation play for "safety first" even if it should mean a sacrifice of our standard of living, or are we right in our trade policy to run a risk in the quest of prosperity? This, in effect, is the issue raised in a little monograph* entitled "Free Trade or Protection." The author, engaged in business, comes forward nevertheless in his opening chapter as a doughty champion of the trained economist as against (supposedly infallible) "business men" in current fiscal controversy.

Mr Golodetz sketches briefly the case for universal Free Trade, based on the principle of division of labour; and declares the view, that by the stoppage of imported goods and the consequent manufacture of those goods at home one *ipso facto* raises national prosperity, to be superficial and entirely unsound. A longer chapter is then devoted to stating a case for isolated Free Trade, i.e., to showing that even in a world that has turned protectionist the interests of the United Kingdom may still lie in adhering to a policy of free imports, but the crux of the main argument seems to be reached when the author comes to state the case for Protection, as he sees it. He observes in Free Trade one inherent weakness, namely, that it entails dependence upon other countries; and thus carries with it considerable risks in the face of possible world disturbances. This is, of course, what makes Free Trade such a strong factor for world peace. The alternative policy would be, by tariff action, to develop a maximum home production of all the necessities of life, even though this should mean less opulence than could be secured by "going all out" for foreign trade.

* "Free Trade or Protection." By Arnold Golodetz. Williams and Norgate, Limited. 4s. 6d. net.

Germany is cited as an example of a country whose fiscal policy was shaped under the influence of the agrarian theory with the object of self-sufficiency; whereas England eighty years ago had already committed herself to a contrary policy, which has involved the development of her industries to a size calculated to supply the world at large with manufactured goods. In so doing she has called into existence an industrial population so large that the island cannot possibly provide the means for its subsistence and "England must trade to live." In the author's view, it is too late to reverse this policy with hope of success. Nevertheless account is taken of the present agitation for Empire Free Trade, as to which he decides that the short period effect might be of considerable profit to the Dominions and Colonies, but that the exporting industries of the Mother Country would not be likely to reap any compensating benefit for a long time to come. Would the policy yet be worth adopting for long-period insurance purposes in the interests of national security? This suggestion is in turn dismissed on the ground that the cost would be prohibitive and the external practical difficulties almost insurmountable.

The brochure contains a chapter on the Safeguarding duties which, no doubt in the main correct, is perhaps of too slight a character to convince anyone but the converted. Incidentally, in case a second edition of the book is called for, the dates in the footnote to page 65 should be corrected. The period during which the McKenna duties lapsed was August, 1924, to the end of June, 1925. Moreover, as the author has singled out for special mention the export figures of safety razors, we may remark that the imports of these goods during the years in question expanded at a very much greater rate than the exports, in spite of the duty.

Mr Golodetz points out that our so-called key industry duties stand on a different footing from the others inasmuch as, to quote Adam Smith, "Defence is more important than opulence." Here the only question that can arise is whether a direct subsidy would not be better than a tariff, but as to the general principle of "falling back on home trade," which really involves an attitude of defeatism towards our export trade, a short answer to the protectionists is that somewhere in the country we have to find a body of people who will devote themselves to foreign trade and will succeed in it, whatever the difficulties, to the extent at least of selling abroad enough British goods to pay for the bulk of the foodstuffs and raw materials which our population as a whole must import in order to live. Unfortunately the present acute unemployment complex tends to obscure this longer issue and is sending up the stock of the "quick-remedy" man.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Europe: The World's Banker, 1870-1914. By Herbert Feis. (London) Oxford University Press, Warwick Square, for the Council on Foreign Relations. \$5.00.

A most interesting critical study of the pre-war international movement of capital.

Stock Movements and Speculation. By Frederic Drew Bond. 2nd Edition. (London) D. Appleton and Company, 34, Bedford Street, Covent Garden. 10s. 6d. net.

This valuable little book, the background of which is American, has been partly rewritten in the light of the developments of the past year.

Securities and Their Transfer. By Lawrence R. Dicksee. (London) Gee and Company (Publishers), Ltd., 6, Kirby Street. 6s. net.

An account for the average reader of the procedure incidental to the investment of money.

Education for Business Management. By James A. Bowie. (London) Oxford University Press, Warwick Square. 8s. 6d. net.

A capable statement of the case for the development of facilities for the training of young men for administrative posts in industry. Use is made of American experience, but the book treats of the peculiar conditions of British industry, and fills a serious want.

L'Economie Mondiale et la Société des Nations. By Elémer Hantos. (Paris) Marcel Giard, 16, Rue Soufflot. 50 frs.

An account of the progress of world co-operation through the agency of the League of Nations.

The Crisis of English Liberty. By Sir John A. R. Marriott. (London) Oxford University Press, Warwick Square. 15s. net.

A history of the Stuart monarchy and the Puritan Revolution.

Comments and Criticisms. By the Right Hon. Sir John Simon. Edited by D. Rowland Evans. (London) Hodder and Stoughton, Ltd., Warwick Square. 8s. 6d. net.

A reprint of twenty-two speeches delivered by Sir John Simon over a long period of years, together with two hitherto unpublished papers entitled "Irrigation in India" and "A Village Panchayat" respectively.

Philip Snowden. By A. Andréadès. Translated from the French by Dorothy Bolton. (London) P. S. King and Son, Ltd., Orchard House. 5s.

A most interesting essay, intended originally for the French public.

The Servizi Aerei Civili. By Dr. Michele Schiavone. (Genoa) Stabilimento Tipografico Editore Bozzo and Cocciaello, Via S. Fruttuoso, 28.

An Italian study of civil aviation in most of the principal countries.

Die Staatliche Exportkreditversicherung Ein Mittel der Exportförderung. By Dr. Gustav Roeschli. (Zurich) Verlag der Haus A. Gutzwiller.

A German treatise on export credit insurance, illustrated by chapters on the experience of Great Britain, Germany and other countries.

Der Realkredit der deutschen Landwirtschaft. (Berlin and Leipzig) Walter de Gruyter and Company.

A very full account and discussion of agricultural credit in Germany.

Sindacati Industriali. By Francesco Vito. (Milan) Società Editrice "Vita e Pensiero."

Part I consists of a critical examination of Italian theories of industrial syndicates; Part II contains the author's own theories of industrial groups, including cartels and trusts.

The Stock Exchange.

THE ARGENTINE RAILWAY POSITION.

THE decline in the price of Argentine railway securities, which has reduced the market capitalisation of the ordinary stocks of the four largest companies from £92½ millions at the "peak" of 1929 to £60½ millions to-day, has been a continuous process over the last twelve months. Railway stockholders obtain earlier official intimation of fluctuations in earnings than investors in other industries, and the moral of the weekly traffic figures has been reinforced by the unfavourable publicity recently given to Argentine economic affairs. The reduced 1929-30 wheat crop, the loss of half that year's crop of maize, the world-wide fall in wholesale commodity prices (which was bound to prejudice Argentina, a primary producer *par excellence*), the decline in the national exports, the closing of the Conversion Office and the subsequent depreciation of the peso, and, finally, the extra-constitutional change of Government of this year—all these factors have combined to depress the market for Argentine railway stocks. What, in fact, have been the repercussions on Argentine railway earnings of a depression which, unlike that of 1921-22, has followed a period of "record" prosperity?

The first significant conclusion suggested by the accounts for the twelve months ended June 30th last is that the incidence of depression has varied considerably as between the different companies. Taking the four largest concerns, in order of magnitude, the Buenos Ayres Great Southern suffered a drop of 6½ per cent. in gross receipts; the Central Argentine a decline of 19 per cent.; the Buenos Ayres and Pacific of 14 per cent.; and the Buenos Ayres Western of 17 per cent. In no case were the managements able to offset more than a relatively moderate part of the decline by reductions in working expenses, but the consequent increase in the expense ratio was greater in the case of the Western and the Central than of the Pacific or the Great Southern:—

GROSS AND NET RECEIPTS.
(000's omitted.)

	Gross Receipts and Expense Ratio.				Net receipts.			
	1922-23	1927-28	1928-29	1929-30	1922-23	1927-28	1928-29	1929-30
Southern	£ 9,587	£ 13,271	£ 13,067	£ 12,215	£ 3,644	£ 4,214	£ 4,312	£ 3,432
Central	62.0%	68.2%	67.0%	71.9%	3,445	4,429	4,434	2,928
Pacific	67.7%	67.7%	68.9%	74.7%	3,186	2,483	2,698	139
Western	63.3%	66.0%	65.6%	76.2%	1,570	1,787	1,818	1,041

The most significant feature revealed by the above table is that a falling off which in no case reached 20 per cent. of the 1928-29 gross receipts wiped out all the ground gained in net receipts during the previous seven years. In no single instance did the net figures reach the level of 1922-23, the initial year of recovery after the post-war slump. Net receipts, in fact, fell 6 per cent. below the 1922-23 level on the Southern, 15 per cent. on the Central, 33 per cent. on the Pacific, and 33½ per cent. on the Western. The depreciation of the Argentine peso, further, caused the railways more considerable losses on exchange than for many years past, as the following table shows:—

EXCHANGE LOSS ON REMITTANCES.

	(000's omitted.)			
	1926-27.	1927-28.	1928-29.	1929-30.
Southern	£ 57.7	£ 33.9*	£ 27.1	£ 188.8
Central	57.1	41.0*	35.8	124.9
Pacific	44.6	Nil	Nil	69.7
Western	40.9	10.6*	14.4	76.5

* Profit.

Three of the four companies reduced their ordinary dividends, but all distributed "over the hilt," the Southern and the Central drawing on reserves and the Pacific and Western on their "carry-forward." The Southern earned approximately 4½ per cent. and paid 6 per cent. The Central earned 4½ per cent. and paid 5 per cent.; while the Pacific distributed 7 per cent. from earnings of 5½ per cent. and the Western 5 per cent. against 4 per cent. earned. The distribution of profits during the last three years is shown in the next table:—

DISTRIBUTION OF PROFITS. (000's omitted.)

		Total Earnings.*	Debentures and All Prior Charges	Prof. Dividends.	Ordinary Dividends.		To Reserves, Contingencies, &c.	Inc. in Carry-forward.
					Amount	Rate.		
Southern	1927-28	£ 4,538	£ 1,272	£ 575	£ 2,473	8	£ 200	+ 18
	1928-29	4,524	1,298	660	2,561	8	...	+ 5
	1929-30	3,647	1,329	807	1,920	6	Dr. 374†	- 34
Central	1927-28	3,994	754	706	2,030	7	390	+ 114
	1928-29	4,125	779	736	2,030	7	573	+ 8
	1929-30	2,841	930	736	1,450	5	Dr. 248†	- 27
Pacific	1927-28	2,602	1,617	110	700	7	150	+ 25
	1928-29	2,819	1,643	132	700	7	113	+ 231
	1929-30	2,362	1,643	202	700	7	...	- 183
Western	1927-28	1,985	490	130	1,214	7	100	+ 52
	1928-29	1,965	519	130	1,214	7	100	+ 6
	1929-30	1,361	532	130	857	5	...	- 108

* Including profit or loss on exchange.
† Taken from reserves, &c.

The net earnings' figures are not in themselves a true measure of the effects of last year's depression, since they are arrived at, in every case, after allowing reduced amounts for the upkeep of permanent way, locomotives and rolling stock. The reduction was least on the Southern and the Western, but amounted to over £840,000 on the Pacific and £1,000,000 on the Central, as will be seen from the following analysis:—

	Amounts charged for Maintenance.			Percentage of Total Gross Receipts.		
	Total 1929-30.	Compared with 1928-29.	Compared with 1927-28.	1927-28.	1928-29.	1929-30.
Southern	£'000. 2,796	— 75	— 474	24.6	22.0	22.9
Central	3,113	— 1,014	— 568	26.8	27.6	26.9
Pacific	1,803	— 542	— 317	25.9	29.0	22.9
Western	1,071	— 112	— 187	23.9	22.4	24.4

The reduction in maintenance allowances does not necessarily infer any "starving" of the systems as regards necessary upkeep. It is the practice of the Argentine railways to spend much more on maintenance in good years than in bad, this item having, in fact, some of the attributes of a "hidden reserve."

The note of caution sounded by the various chairmen a year ago has been reiterated with even greater emphasis in the speeches made this week. To attempt to frame reliable estimates of probable receipts during the coming year, is vain endeavour, as the chairman of the Pacific Railway has pointed out. This season's crops have still to be gathered in, and though, happily, they will largely exceed last year's meagre totals, they may be marketed at average prices 30 per cent. or more below the average for 1928-29. Certain significant conclusions may, however, be deduced from an analysis of last year's receipts. The following table shows the proportion of the total gross revenue of the four railways

obtained from various classes of traffic in 1928-29 and 1929-30:—

Proportion of Total Gross Receipts derived from	Southern.		Central.		Pacific.		Western.	
	1928-29.	1929-30.	1928-29.	1929-30.	1928-29.	1929-30.	1928-29.	1929-30.
Passengers	24.1	25.6	24.0	29.3	15.6	16.6	22.1	25.7
Luggage and parcels	7.3	7.8	4.0	4.8	6.4	7.1	7.5	8.3
Livestock	8.2	8.3	2.7	3.2	5.2	5.8	17.8	19.9
Wheat	12.0	9.1	12.5	7.7	9.5	6.6	13.4	10.3
Maize	1.0	0.7	13.4	10.7	6.9	4.7	5.6	3.2
Linseed	0.8	0.7	3.6	1.7	1.2	0.4	1.3	0.4
Wine	1.7	1.7	2.4	2.8	21.6	24.8	...	0.6
Hides and skins	0.5	0.6	0.4	0.5	0.6	0.7	0.7	0.8
Total goods traffic (a).....	52.0	50.3	65.2	58.6	70.4	66.9	49.4	43.1

(a) Including other items.

Three of the four railways draw approximately one-third of their total gross revenue from passenger and parcels traffic and two-thirds from livestock and goods transport. On the Buenos Ayres Pacific, passengers, etc., account for about one-fourth and goods and livestock for three-fourths of the total. The Western is more susceptible to fluctuations in the livestock traffic than the other three systems, while the Pacific, which is most dependent on the wine trade, is least affected by good and bad wheat years. No railway obtains much more than about one-eighth of its total revenue directly from the wheat trade.

A glance at the table shows that last year's disappointments arose mainly on the goods side, passenger receipts declining less than proportionately to the falling off in total receipts. The aggregate receipts of the four railways from passengers, parcels, etc., showed, in fact, a drop of only 3.2 per cent. last year, against a decrease of 18.7 per cent. in receipts from goods and livestock. This year the respective rôles may be reversed to some extent, if good crops are marketed under price and other conditions which involve a definite, if temporary, lowering of the standard of living of the Argentine people. It is possible, of course, that the Great Southern and the Central may be allowed to raise their charges to the level prevailing before the involuntary "cuts" made under the Mitre Law as from October 1st, 1928, and that the attitude of labour in demanding higher wage standards at a time of depression (to which Mr Follett Holt referred in strong terms at this week's Western meeting), may be sensibly modified. Stockholders, however, would be wise not to count unduly on these developments. By next June some recovery from world trade depression may be in evidence, but stockholders, at best, can look for only a "moderate" year so far as 1930-31 is concerned. What then, may be their situation eight months hence?

Investors may obtain some light on this question by a scrutiny of the table in the next column, which sets out the position of the various stocks (a) in a typical "good" year; (b) in a "bad" year; and (c) in the worst conditions which can be conceived. We do not, of course, anticipate a reduction of such dimensions in 1930-31.

The capital structure of the four railways is not identical. The burden of prior charges is heavier on the Pacific and the Western than on the other two lines, and the proportion of equity stock to the total capital appreciably lower. The Western, however, has relatively little in the way of preference stock, so that the cover for both its debentures and preference compares approximately with that on the Southern and the Central—a condition which does not, however, obtain as regards the Pacific, whose stocks have a larger "speculative" element than those of the other three railways. On the other three systems, debenture interest, which was well covered in the "good" year 1928-29 and had a satisfactory margin last year, would not be seriously threatened even if net earnings were to be reduced by a further 25 per cent. Such a contingency would leave preference requirements

* Allowing full year's interest on latest issue of £2,000,000 of 4 per cent. debentures.
† Taking debenture and preference requirements cumulatively in calculating "cover" ratio.

covered with a little to spare (except on the Pacific), but would leave earnings of only 1½ to 2 per cent. available for the ordinary stocks, which, by reason of the "high-gear" capital structure of the companies (which is not peculiar to railways in Argentina), must always bear the jolts and jars of trade fluctuations.

The conclusion suggested is that while debenture and preference holders, in three at least of the four companies, can regard, within limits, any conceivable fluctuations of earnings with equanimity, ordinary stockholders are much more intimately concerned with the future trend of events. At present prices, the ordinary stocks would offer handsome dividend yields, given a return of even moderate prosperity. Until the situation has cleared, however, they will remain largely speculative media.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
November 4.

ACCOUNT.
November 6.

THE Stock Exchange again revealed its capacity for feeding itself from within, responding to or ignoring outside news, favourable or otherwise, as best "suited its book." The better tone initiated during the preceding week persisted, though without uniformity as between different markets. Interest continued to be concentrated on high-grade fixed-interest stocks, though dealings in Gilt-edged were mainly in the hands of the larger financial houses. Unsubstantial outside rumours—such as the suggested moratorium for Reparation payments and Allied Debt remittances to the United States, or the possibility of an early 2½ per cent. Bank rate—aroused unmerited interest, while in the industrial markets minor reports, mainly of favourable tenor, served the same purpose of maintaining prices.

The firmness of Gilt-edged stocks was particularly marked early in the week as regards Funding Loan, Four per Cent. Consols and Three-and-a-Half per Cent. Conversion, but War Loan reversed the general trend, and Five per Cent. Conversion suffered a moderate reaction. India loans, including the new "Sixes," were uniformly good, but the uncertainty of the Australian position

(discussed in a Note on page 772) caused dullness in Commonwealth and State stocks.

Among Foreign bonds, the downward movement in Brazilians was checked, the market being more assured of the ultimate victory of the Federal forces. Chilean stocks also improved. The German Government's Reichstag vote of confidence was reflected in the better tone of German bonds. Fair speculative buying continued of Chinese issues on the prospective termination of civil hostilities.

Home railways were in less disfavour than for weeks past, though not even the whole of the dealers in the market, still less the outside public, participated in the upward movement. The traffic returns again showed relative improvement, while the wages discussions between the companies and the workers were regarded as likely to have, in the prevailing temper of both sides, a peaceful outcome. All prior-charge stocks were in demand, while among the ordinaries Southern received special attention. Among Foreign railways, Argentines made a better showing. The new Buenos Ayres Great Southern debentures established a premium despite the leaving of 56 per cent. of the issue with underwriters. The position of the leading Argentine railways is dealt with in a leading article on the preceding page. Canadian Pacific remained within the ambit of Transatlantic selling.

Industrial shares showed few marked advances, but commanded on the whole more support than at any time since the beginning of September. The least stable shares were those of international scope, which were affected by the volatility of New York sentiment. Motor shares were moderately active, Leylands being the chief beneficiaries from the Prime Minister's hint of a possible amendment of the horse-power tax, while Austins were firm on the chairman's announcement of increased turnover. Provincial investors showed a slight interest in textile shares on indications that the Indian boycott movement was dying of inanition, and on the visit to Manchester of two Cabinet Ministers to "sound" the cotton trade on reorganisation possibilities. Electrical shares—equipment and supplies—again showed to advantage. Breweries were in better demand, and the Imperial Company's attack on "free-gift scheme" advertising was the signal for a partial renewal of interest in tobacco shares. Gramophone issues moved with the changing currents of American opinion. Cables and Wireless showed a welcome improvement. The absence of any appreciable change in the component shares of Allied Stores, despite the hitch in the negotiations (dealt with on page 772), reflected the apathy with which the market viewed the scheme from the outset. Insurance shares reflected the sustained demand for first-class securities, and bank shares continued firm.

Though rubber had a distinctly harder tone in the commodity market, the rise in its price was insufficient to produce many quotable variations in rubber shares, though Trusts and Anglo-Dutch were quietly firm. Business in tea shares was again subdued, though the market was better in places. After a not unpromising opening, oil shares followed a disappointing course until Thursday, when a renewal of confidence produced an appreciable recovery in some of the leading stocks. A résumé of the oil industry's position will be found on page 774.

A certain amount of professional activity gave the mining share market a filip early in the week, but the improvement was not maintained. In the Kaffir section, Central Mining continued to advance on Paris buying, while Gold Fields and Anglo-American rose in mid-week. Northern Rhodesian issues had a dull tendency, though Bwanas and Rhodesian Selection held their ground. De Beers Deferred responded to inquiries from Paris, and Jagersfontein moved up in sympathy. Activity among tin shares was decidedly limited, but changes were mostly in favour of holders. Tintos advanced with a rise in copper. Australian descriptions went ahead on the report

of a gold bonus, but lost most of their rise when the rumour was denied.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets continued to disappoint those who argued that "deflation" had been fully completed. Early in the week, the forced selling movement appeared to be at an end. The week-end Banking Conference, at which important interests were represented, was rumoured to have decided that the prevailing level of prices was attractive for investment. Fairly considerable funds which had been waiting to hit the bottom of the slump were partially and tentatively brought into play, and, with commodity prices showing a slight up-turn, the whole market moved forward. Unfortunately, the improvement quickly brought out deferred liquidation, and though this was not large, prices rapidly approached the previous week's low levels. Though much of this setback was subsequently regained, the continued liability of the markets to spasms of liquidation was undoubtedly disappointing to many people. Prominent issues like U.S. Steel, Radio Corporation, General Electric, and Westinghouse, touched new low levels for the year, but subsequently regained their losses. Oil stocks were subjected to special pressure on misgivings as to the crude price situation, and copper stocks were sold on the continued unfavourable statistical position. Steel production again declined. Government bonds were steady, but railroad bonds irregular. Foreign issues, however, were better all round, particularly Brazilians and Germans on favourable political news.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Allied Stores—A Rift in the Lute.—Three months ago we discussed the details of a merger scheme—in which Unilever had a substantial stake—between the Home and Colonial Stores, Meadow Dairy, Maypole Dairy, Pearks Dairies, Liptons, and the International Tea Company's Stores. The necessary shareholders' meetings were held last July, the merger company, Allied Stores, was registered, and only the Court's sanction was required to make the whole scheme effective, when rumours of internal dissensions became rife in the market. Correspondence has now been published showing that the International Tea Company has decided not to proceed with the merger till the position has been explained to its shareholders. It appears that on September 23rd last, the board of the International Company sent a memorandum to the board of Allied Stores, Ltd., stating that it understood certain dissenting shareholders were intent on preventing the Court granting the necessary permission, as they considered that the merged companies would become "tied houses" of Unilever. The International Company therefore insisted that all purchases should be made in the open market and enumerated various other provisions designed, for the most part, to safeguard its position *vis-à-vis* that of Unilever. The remaining directors of Allied Stores, in their reply, expressed pained astonishment at the International directors' attitude, and passed on an assurance from Unilever that the latter's influence would be used to ensure "that the business of Allied Stores would be

conducted on the basis of freedom to buy in open competition." On October 3rd, the solicitors for the amalgamated companies notified the International Tea Company's solicitors that their clients had accepted virtually all the demands of the International memorandum. On October 15th the International Company's solicitors replied, querying a technical point in the Allied solicitors' letter, and declaring that the International Company, on reflection, believed that its previous demands "did not go nearly far enough." The Allied Stores solicitors replied, inviting the International Company's board to discuss the whole affair in the presence of a third party, Sir William Plender being suggested. On the International Company's solicitors declining this offer, and affirming their clients' intention to submit the issue to their shareholders, the Allied directors accused the International directors of a desire, deliberately, to evade their contract, and sent the whole amazing correspondence to the Press. The rights and wrongs of the dispute are, to some extent, *sub judice* at the moment. So far, however, as the practical effects of this regrettable episode are concerned, it is obvious that while the tactical position of Allied Stores will be seriously weakened in the event of the International Company's defection, it would be worse than useless to endeavour to include the latter company against its will. Further comment must await the unfolding of the International directors' case to their shareholders.

Australian Finance.—The course of financial reform in Australia does not run smoothly. Even if allowance be made for the effect of Mr Scullin's absence in London, the latest reports from Australia are not completely reassuring for holders of Australian stocks. The Federal Cabinet is now considering the proposals of the Australian Labour Party for meeting the trade depression. These proposals include "the nationalisation of banking and insurance, the maintenance of present wage rates, the utilisation of the nation's credit to stimulate industry and to liquidate loans, reduction of interest on bank credits and negotiation with Great Britain on war debts." It may be difficult for investors in this country to regard these proposals as serious attempts to extricate Australia from her financial and economic difficulties, but there is undoubtedly a body of opinion in Australia which views with disfavour any attempt to reduce the money value of wages. On the side of orthodox reform must be ranked the South Australian Cabinet's programme of economy and higher taxation. A good deal of importance will be attached to the results of the New South Wales elections to-day. If Mr Lang, whose financial and economic views are extremist, is victorious, the Federal Government may find additional difficulty in carrying through the financial reforms agreed upon at the conference of State premiers in the presence of Mr Scullin and Sir Otto Niemeyer. These uncertainties, so long as they remain, must inevitably handicap the improvement in Australia's credit in the gilt-edged market, which is so genuinely desired by all Australia's friends.

Tobacco Companies and the Consumer.—The recent "cut" in the price of a well-known brand of cigarettes has led to speculation in some quarters as to the chances of an all-round reduction in the retail price of tobacco. A correspondent points out that, owing to the unusual composition of tobacco manufacturers' costs, which consist of a small variable—raw material prices—and a large constant—the tobacco duty—the claim of the consumer to a price reduction on the strength of a fall in the wholesale prices of raw tobacco alone is less than is popularly believed. Whereas the average cost of imported tobacco leaf into this country has fallen since 1924 from 1s. 9 1/2d. to 1s. 3 1/2d. per lb., a "cut" of 1 1/2d. per packet of 20 cigarettes would mean a sacrifice of trade considerably more than the total cost per lb. of the raw tobacco. Thus, even though the price of raw leaf has fallen by 6 1/2d. per lb., or nearly 30 per cent. in six years, this decline represents a relatively

minor drop in total manufacturing costs. While it is always possible for an individual "outside" firm to cut its prices in one or two brands only, in the expectation of an increased turnover, such a move must be regarded as definitely competitive in character, and can only achieve its objective if other companies refrain from following the lead. If the inroads made by the policy of the "outside" firm on the sales of the "combine" are sufficiently great to outweigh the decline in profits which would result for the latter from an equivalent "cut," the ingredients are at hand for a first-class price-war, or possibly for an offer to the "outsider" to enter the "combine" on favourable terms. In the present case it is too early to forecast the reaction of the larger manufacturing interests to the recent "cut." It seems clear, at least, that if the consumer is to receive any considerable benefit in the form of reduced tobacco charges, the manufacturers must be prepared to make a certain sacrifice in profits, since the omens for a significant concession by the Chancellor of the Exchequer are anything but promising.

Some Recent Investment Trust Reports.—Recent investment trust reports reveal strikingly different results as regards capital depreciation, as the following table shows:—

Company.	Group.	Date of Report.	Total Investments.	Investment Depreciation.
Atlas Electric and General	Sir G. H. Touche	March 31	6,276,563*	Nil
Mid-European	Hambro	July 31	2,730,439	Nil
City and International ...	L. H. Kiek	Aug. 31	1,831,383	13.45
Second Edinburgh	Lawrie and Ker	Sept. 30	1,661,783	Nil
Second American	Shepherd & Wedderburn	Aug. 31	1,486,333	10.47
Southern Stockholders ...	Lake View	Sept. 15	1,252,884	15.16
Capital and National	Robert Fleming	July 15	985,501	5.09
London and Strathclyde ..	Grahams Rintoul	Aug. 31	953,552	16.34
London Irish	M. C. Harman	July 15	554,109	56.6
City and Foreign	Lord St. Davids	Aug. 31	531,988	13.7
London and Overseas	Lord St. Davids	Oct. 15	471,726	11.2†
Staveley Trust	J. D. Marks	March 31	325,000	8.0

* Excluding investment in subsidiary tramways company.
† According to valuation prepared by directors.

The most remarkable depreciation was that suffered by the London Irish Trust, of which Mr M. C. Harman is chairman. In this case the directors declared that they did not accept the market quotations as representing the intrinsic value of the investments "in numerous cases." As the resolution for the appointment of a shareholders' committee was defeated at the general meeting, shareholders have no means of verifying this expression of opinion. The best results are shown by Atlas Electric and General, which, consequent upon the sale of its Argentine properties, excepting two Monte Video electric traction companies, to the American and Foreign Power Company in 1929, has become a general investment trust; by the Second Edinburgh, which was formed as long ago as 1902; and by the Mid-European Corporation, which has a subsidiary company formed to invest funds by way of secured loans to cities and industrial undertakings in Europe. The Capital and National (Fleming group) showed a depreciation of only 5.09 per cent., and the Staveley Trust of only 8 per cent., but in the other cases the depreciation varied from over 10 per cent. to over 16 per cent. The earnings, dividends, market prices and yields of these companies are shown in the next table:—

Company.	Earnings.	Dividend.	Market Price.	Dividend Yield.
Atlas Electric and General	2.9	5	22/6	4.44
Mid-European	10.75	8	107	7.48
City and International	9.92	6.5	108	6.02
Second Edinburgh (Deferred)	23.2	15	152	4.61
Second American	12.3	7	17/6	5.71
Southern Stockholders	5.6	5	129 1/2	3.86
Capital and National	7.83	5	117 1/2	4.26
London and Strathclyde	Nil	Nil	7 1/2	Nil
London Irish	10.2	7	96	7.29
City and Foreign	9.15	7	117	5.98
London and Overseas	7.26	2 1/2	13/9	3.64

* Not quoted in London.

Only one of the above twelve companies—the London and Strathclyde—publishes a detailed list of its investments, despite the fact that an accurate knowledge of the position in this respect is more, rather than less, necessary to shareholders in a time of market depression.

Joseph Lucas.—The accounts of Joseph Lucas, the motor accessory manufacturers, afford evidence of a greater setback in earnings than appears at first sight. Though net profits have fallen by a mere 6 per cent., they would appear to include, for the first time, the financial returns from the controlling interest in Powell and Hammer. The £125,000 of new ordinary capital issued to the latter company ranks for a full dividend this year. The main cause of the temporary check is doubtless the falling off in British car production, which has been estimated at about 150,000 cars this year, against 180,000 last year. By every standard, however, the company remains prosperous.

	1928.*	1929.	1930.

of such concerns as C. A. Vandervell, Broth, Rotax, and Powell and Hanmer has given it a powerful strategic position in the motor trade. This, and a desire to secure the economies of rationalisation, have probably contributed in equal proportions to the willingness of another concern, S. Smith and Sons (Motor Accessories), to sell to Joseph Lucas the electric lighting, starting and magneto portion of its business (which was competitive with Lucas), while retaining its trade in clocks, speedometers, carburettors and pressure gauges (which was not competitive). Lucas £1 ordinary shares, which touched 80s. earlier this year, were dealt in this week at 68s. 3d. *cum* final dividend and bonus of 20 per cent. The yield at this figure is 9.4 per cent. on earnings and 7.8 per cent. on dividends.

Insurance Share Index.—During the three months ended September 30, 1930, insurance shares have exhibited a considerable degree of resistance to the prevailing depression. In the first three months of the year insurance shares enjoyed their customary rise in anticipation of the flock of reports commonly published at that time, but during the second three months practically the whole of the improvement was lost. There has, however, been some slight appreciation during the last three months, in striking contrast to the course of prices for industrial shares. The table which appears below exhibits the history of an investment in 1913 of £1,000 in the ordinary shares of each of 25 leading companies and an index of the total. The figures are based on the mean of the highest and lowest prices in each year, except in the last three columns, which relate to the middle market prices on the dates specified:—

¶ Yorkshire, 1929.—New shares £1, offered one new share for every 14 £5 shares held at £12 per share.

** Prudential, 1929.—New shares £1, offered one new share for every four shares held at £5 per share.

Although the continued failure of many companies materially to reduce their expenses, and the intensification of competition from foreign countries may affect the immediate outlook, the favourable trend of home fire losses and the increasing recognition that insurance companies are comparatively immune from the effects of a falling price level, have benefited the insurance share market. Some investors who have temporarily lost confidence in the industrial market, have turned their attention for the time being to the insurance share market, where the yield now obtainable is higher than for a long time past—being nearly 5 per cent. gross per annum on a representative selection. The appreciation in the last three months, although slight, has been part of a general

tendency. Out of the 25 companies represented in the Index, as many as 14 show an increase in value, while the shares of six show no change. Again the two outstanding companies are the General Accident, with a rise of some 6 per cent., and the Gresham Life, with a rise of some 5 per cent., the latter as a result of the recent favourable quinquennial valuation. The Northern has enjoyed a rise of over 10 per cent. during the past three months.

The Oil Position.—As long ago as August 9th we took occasion to point out that oil companies operating in America could scarcely be expected to make a good showing this year. This view has been confirmed by subsequent events—the breakdown of the control of the American Oil Exporters' Association over export prices and the cutting of retail prices in the gasoline markets not only in America but in Great Britain, France, Germany and Central Europe, not to mention the passing of quarterly dividends by the Shell Union Oil Corporation and of the final dividend by Trinidad Leaseholds. A downward trend in retail oil prices has developed in spite of the apparent success achieved in the restriction of crude oil production. In the United States the drastic curtailment programmes which have been enforced voluntarily in the oilfields of Oklahoma and California have brought down the crude oil output of the whole of the American oilfields from 2,722,050 barrels a day in February to 2,370,000 barrels a day at the present time. This 12½ per cent. reduction in the daily average output of crude oil has not, however, effected a balance between supply and demand. Stocks of all oils at the end of August were 685,857,000 barrels, as against 678,673,000 a year ago—equivalent to 7.4 months' supply, against 6.9 at the end of August, 1929. The consumption of oil has again increased this year—that of gasoline by 8.0 per cent. up to the end of August—but not at so rapid a rate as in the previous year. The statistical position cannot be regarded as healthy until consumption begins to eat into stocks. The American Petroleum Institute recently conducted a survey of the gasoline situation, and decided that the working stocks of gasoline on September 30th should be no more than 28,984,000 barrels. At September 27th the stocks of gasoline were actually reported to be 37,222,000 barrels—more than 8,000,000 barrels in excess of this estimate of trade requirements. Moreover, stocks of gasoline this month have begun to show their seasonal increase, so that the statistical position by the end of this year may well be worse than to-day. The prices of Oklahoma and Texas crude oils have recently been reduced, and it is feared that price-cutting in the retail gasoline markets will continue for some time. The American oil situation is liable to sudden changes, and if consumption of gasoline revives sharply again next spring, after a further restriction of crude oil output, it is possible that the markets will recover, but in the meantime the effect of the lower level of prices upon oil company earnings this year cannot fail to be severe. The holding companies like Royal Dutch, Shell Transport and, to a lesser extent, Burmah Oil, may not be so adversely affected as those which are directly producing and marketing oil products, such as Shell Union, Anglo-Persian and Phoenix Oil, but their earnings are none the less bound to show some decline. The producing companies, such as Venezuelan Oil Concessions and Trinidad Leaseholds, have suffered on account of the restriction of their own production and the lower prices realised. Apex Trinidad has maintained its output but has been compelled to take lower prices. The tanker companies have had to bear a sharp decline in freight rates. The rate for oil carried from the Gulf to this country, calculated upon a time charter basis, has fallen from 20s. to 3s. 6d. per ton per month in the last six months. This will affect the tanker subsidiaries of Shell, Anglo-Persian and Canadian Eagle. It is difficult, in short, to find any oil company which can confidently be counted on to avoid the results of this year's depression.

Rhodesian Copper Finance.—The reported sale of 800,000 Roan Antelope shares by the Canadian Selection Trust to the American Metal Company for a purchase consideration of 350,000 shares of the latter concern, plus \$1,000,000 in cash, carries the community of interests between what may be described as the Gull-Selection Trust-Lehman Corporation-American Metal Association a step further. It throws some light, writes a correspondent, on Mr. Chester Beatty's remark that the metamorphosis of the Selection Trust, registered in England, into the Canadian Selection Trust would put the company in a better position to avail itself of "international markets for future finance." The "group" has a majority of the directors of both the Roan Antelope and the Rhodesian Selection Trust, and the latter's promising interests at Mufulira, Chambishi, etc., presumably will in due course take their place as semi-detached members of the system. The other wing of the Rhodesian market is also apparently moving westwards, for it is reported that Sir Eric Geddes is in touch with Morgan and the American Smelting and Refining in connection with the further financing of the Rhodesia Congo Border section, in which Rothschilds, Rio Tinto and Rhodesian Anglo-American are largely interested. In view of the complex N'Changa ores, technical as well as financial considerations may have something to do with the renewed inclination in the direction of the American Smelting and Refining, but in any case the condition of the stock markets and the state of Rhodesian mining finances shows the necessity for further resources if development is not to suffer some curtailment. At the recent meeting of the Rhodesian Selection Trust it was stated that general development was being somewhat restricted in order to provide the company's share of the expenditure at Mufulira and to permit more extensive prospecting of the Chambishi deposit. The cash received by the Canadian Selection Trust as part consideration for the sale mentioned above may be required for the company's non-Rhodesian mining interests, for the balance-sheet, dated March 31, 1930, of its English predecessor, the Selection Trust, showed cash and debtors of £28,614, against creditors, advances, etc., of £183,000. How quickly money is absorbed is shown by the figures of the Roan Antelope, which showed a reduction in cash from £2,237,801 to £790,924 between June 30, 1929, and April 30, 1930. Resources were, however, augmented in June by a £1,500,000 convertible debenture issue. The Rhodesian Anglo-American showed cash resources of some £1,500,000 at March 31st last, but at the meeting held in June the authorised capital was increased by the creation of 3,000,000 10s. shares. This concern holds the principal stake in Bwana N'Kubwa. At the latter's meeting in August the capital was again increased, shareholders being informed that additional resources would be required "at no distant date" owing to the great development at N'Kana. Incidentally, shareholders were given a hint of the possible abandonment of the Bwana mine when N'Kana is on large-scale production. The fall in share prices has presumably checked the calling of options, which cover about 4,500,000 shares at prices from 5s. to 20s. Apart from prospecting, development and equipment

expenditure, a great deal of capital will be required in due course for the Northern Rhodesian Power Corporation and the copper refinery which is expected to be erected in this country.

Cam and Motor.—Our mining correspondent writes:—The sagging tendency displayed for some time past by the shares of this Rhodesian undertaking is fully explained by the annual report. Three lodes are worked, known respectively as the Cam, Motor and Petrol. Last year, at the 21st level, practically no payable ore was opened on the Cam lode; and the Motor ore body indicated only two payable stretches totalling 215 ft., although the values were good. The result, in conjunction with the elimination of 88,500 tons in pillars in the upper levels, is a shrinkage in both the quantity and value of the ore reserves, the tonnage now being placed at 875,400 and the value at 50.8s. The quantity represents about three years' supply for the mill; the "profit value" may be calculated at 12s. 6d. per ton, or, say, 10s. in dividends. Moreover, the balance sheet shows a cash deficit of £51,000. Consequently, should the directors decide upon a campaign with a view to the discovery of new ore bodies the expense would need to be met out of earnings. As regards last year's treatment operations, the milling of a somewhat increased tonnage was accompanied by some expansion in costs as well as decrease in yield per ton; the profit came out £31,120 lower at £203,840. Payment of dividends totalling 20 per cent., the same as before, entailed a draft of £8,600 upon the carry-forward, which now stands at £12,000.

Electrolytic Zinc.—In both 1927-28 and 1928-29 net profits somewhat exceeded £360,000, and dividends totalled 12 per cent. on both classes of shares. Last year the effects of the small increase in zinc production were considerably more than offset by the reduction in the output of lead with lower metal prices, the surplus amounting to £283,000. The final dividend was 4 per cent., making 10 per cent. for the period. On the present occasion the appropriation towards development and new plant at the West Coast mines is £25,000 (as against £50,000), leaving £105,300 to be carried forward, or £66,100 less than brought in. The construction programme at the West Coast mines is practically complete, but production will be postponed until metal prices improve. In conjunction with the Imperial Smelting Corporation arrangements have been made for the purchase of zinc concentrates from the Broken Hill North and South companies and the Zinc Corporation. Stocks on hand or under contract represent approximately eighteen months' supply. In view of the tendency towards accumulation, the work on the Risdon plant extensions has been suspended for the present. To meet existing conditions economies have been introduced throughout the company's organisation. Both the participating preference and the ordinary shares are now quoted at a discount. The prospects of recovery depend upon the course of metal prices.

BANK OF CZECHOSLOVAK LEGIONS PRAGUE

Statement of Condition as on September 30th, 1930, compared with the Statement of Condition as on December 31st, 1929.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Anglo-South American Bank, Argentine Great Western Railway, Assam Railways and Trading, Buenos Ayres Great Southern Railway, Buenos Ayres Western Railway, Central Argentine Railway, Central Uruguay Railway of Monte Video, Cam and Motor Gold Mining, and Raphael Tuck and Sons. At the annual meeting of the Anglo-South American Bank, the chairman stated that, in the case of Argentina, the sharpest shrinkage in Argentina's purchases from abroad during the first quarter of 1930, as compared with 1929, was suffered by the United States, which lost 37 per cent. followed by France with 20 per cent., while Great Britain's loss was only 6.8 per cent. Presiding at the meeting of the Central Uruguay Railway Company, Mr Frank Henderson said that the traffic in cattle and sheep, the breeding of which was the chief industry of the country, had improved considerably during the year, the increase in the returns from livestock being £54,000, or 20 per cent. The position of the Argentine railway companies is dealt with in a leading article on page 767.

CAPITAL ISSUES.

Only one issue was made this week, though various other fair-sized operations are in contemplation. The borrower was the Gas Light and Coke Company, whose £2,500,000 4½ per cent. redeemable debenture stock offered a flat yield of £4 18s. 5d. per cent., and a redemption yield of £5 0s. 5d. per cent. This *doyen* of the world's supply companies, incorporated by Royal Charter in 1812, has recently extended its sphere of operations very considerably, its area now extending from Windsor to Southend. The debentures are, of course, a first-rate security.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to October 18, 1930, £215,502,055.

Grace National Bank

Hanover Square, New York, U.S.A.

A thoroughly organized international bank, giving special attention to the requirements of European banking correspondents.

Special Representative

148 Leadenhall St. London, E.C. 3.

Gas [Light and Coke Company.—Issues of £2,500,000, 4½ per cent. redeemable debenture stock, 1960-65, at £91 10s. per cent. The principal will be repaid at par on January 1, 1965, or, at the option of the company, the whole or any part may be repaid at par on January 1, 1960, 1961, 1962, 1963 and 1964, on six months' notice. Profits in 1929 amounted to £1,845,717, sufficient to cover all debenture and loan interest, including interest on the present issue, more than three times. The proceeds of the issue are required for the redemption of sundry debenture stocks and mortgages, the repayment of bank loan, the provision of additional mains and plant, and for general purposes.

Colne Valley Water Company.—Issue by tender of £250,000 7 per cent. "E" ordinary shares, minimum price £120 per £100 stock, yielding at that price £5 16s. 8d. The company supplies an area of about 90 square miles and a population of about 250,000.

Bedford District Gas Company.—Offer for sale by tender of £20,000 5 per cent. perpetual debenture stock, minimum price of issue £95 per £100 stock, yielding at that price £5 5s. 3d. Net revenue of the company for the year ended December 31, 1929, was £13,402, covering interest on the debenture stock, including the present issue, more than four times.

[Other Stock Exchange information, including the latest dividend announcements, profit and loss figures, shorter notices and weekly traffic returns, will be found on page 786 under the heading "Company News."]

SULPHIDE CORPORATION, LTD.—During the four weeks ended September 20, 1930, 11,791 tons of Central Mine ore were milled at the Central Mine, producing 2,127 tons of lead concentrates (including 63 tons from the de-leading plant) which assayed 52 ozs. silver and 71 per cent. lead, together with 2,841 tons of zinc concentrates assaying 4 ozs. silver, 2 per cent. lead, and 53 per cent. zinc per ton.
BROKEN HILL SOUTH, LTD.—For the four weeks ended October 4, 1930, 30,250 tons of crude ore were treated and produced 5,958 tons of lead concentrates assaying 71 per cent. lead and 28 ozs. silver per ton.

NATIONAL ECONOMY OF LITHUANIA FOR 1929 AND THE FIRST HALF OF 1930.

By M. LIPCIUS, Director of the Lithuanian State Treasury.

The depression which prevailed throughout Europe during 1929 in all spheres of agricultural activity may be said also to have affected Lithuania's agricultural interests, as the greater part of her population (76 per cent.) is engaged in farming and allied occupations. Nevertheless, according to statistics, conditions during the latter half of 1929 and the first half of 1930 showed a tendency towards improvement, and this trend was first apparent in the field of foreign trade.

FOREIGN TRADE.

Foreign trade for the first half of 1930 increased from 275,860,000 lits to 304,800,000 lits. Exports for these six months exceeded those for the corresponding period of 1929 by 18,900,000 lits, and were 40 million lits more than for the same period of 1928. The value of imports, when compared with the first half of 1929, show an increase of 10 million, but in comparison with the corresponding period of 1928 are about the same.

Exports in 1929 exceeded imports by 23,400,000 lits. The first half of 1930 showed an increase in export over import to the amount of 11,870,000 lits, while during the same interval in 1928 exports exceeded imports only by 2,940,000 lits. Last year's active foreign trade balance has favourably influenced the balance of payments and the general financial situation in Lithuania.

An expansion of trade with Great Britain may be discerned from the following comparative statistics:—

Year.	Exports to Great Britain.		Imports from Great Britain.	
	(Tons.)	(Million lits.)	(Tons.)	(Million lits.)
1929	62,720	57,43	60,250	26,04
1928	39,720	52,26	39,840	19,25
Excess	23,020	5,17	20,410	6,79

From the above it will be seen that trade with Great Britain in 1929 increased 11,960,000 lits in value and 43,430 tons in volume over 1928. The excess of imports was made up largely of increased demands for manufactured goods, while substantial increases in veneer and cellulose shipments accounted for the excess of exports over the previous year.

The following are some of the more important items of import and export during 1929:—

export during 1929.—		(Million lits.)		
<i>Imported from Great Britain.</i>			<i>Exported to Great Britain.</i>	
Salt herrings ...	9,43		Cellulose ...	17,0
Cotton goods ...	3,57		Veneer ...	8,90
Tin ...	3,13		Flax ...	5,54
Sewing, knitting machines ...	2,18		Linseed ...	6,99
Coal ...	1,38		Eggs ...	1,74

Trade between the two countries for the first half of 1930, when compared with the same period of 1929, appears as follows:—

	Jan.-June, 1930.		Jan.-June, 1929.	
	(Tons.)	(Million lits.)	(Tons.)	(Million lits.)
Exports to Great Britain ...	30,300	30,8	26,500	26,3
Imports from Great Britain	13,800	11,9	27,500	12,8
Total ...	44,100	42,7	54,000	39,1

TRANSIT FREIGHT.

A considerable gain was realised in transit freight through Lithuania during the past year. In 1929 this reached 431,384 tons, against 280,839 tons in 1928, i.e., an increase of 150,995 tons for the year. A gain has also been noted in the transport of cellulose and wood products from Russia, Latvia and Germany, which in 1928 amounted to 19,874 tons and in 1929 increased to 173,442 tons. The first half of the current year indicates approximately 190,495 tons.

MONEY MARKET.

During the period under review the money market has retained its normal levels. Money in circulation amounted to an average of about 96,000,000 lits for the previous year. At the end of December, 1929, it reached 107,210,000 lits, of which 12,380,000 was in coins and 94,830,000 lits in banknotes. The banknote circulation throughout the year averaged about 90,000,000 lits, and was covered from 35 to 38 per cent. in gold (legal requirement, 33.33 per cent.) and up to 92-95 per cent. in gold and foreign currency. Therefore it can be said that the banknote issue was covered to a much greater extent than is required by law. The gold reserve at the beginning of 1929 amounted to 34,270,000 lits, and at the end of the year rose to 35,080,000 lits. The foreign currency reserve maintained a firm position throughout the year, which fact can be emphasised by a position throughout the year, which fact can be emphasised by a position throughout the year, which fact can be emphasised by a position throughout the year. The gain from 42,780,000 lits to 76,260,000 lits during the year. The money market shows even more favourable results for the first half of the present year. The gold reserve increased from 35,090,000 lits to 35,240,000 lits, and the banknote circulation from 92,350,000 lits to 97,370,000 lits, while foreign currency showed a tendency to decrease and dropped from 76,180,000 lits to 75,920,000 lits. In June, 1930, the banknote issue was covered by 36.1 per cent. gold and 116.1 per cent. gold and foreign currency.

BANKING AND CREDIT.

The total capital in all credit institutions on January 1, 1930, amounted to 260,000,000 lits, as compared with 221,500,000 lits on January 1, 1929, showing an increase of 38,500,000 lits for the year. Deposits also increased to 118,480,000 lits, as against 92,020,000 lits on January 1, 1929, making a gain of 26,460,000 lits over previous year. Discounted notes amounted to 41,390,000 lits at the beginning of this year, as compared with 35,790,000 lits for the previous year, showing a gain of 5,600,000 lits.

Loans increased accordingly, from 116,590,000 lits on January 1, 1929, to 138,520,000 lits on January 1, 1930, with a gain of 21,930,000 lits over the preceding year.

The combined capital of banks, totalling 59,430,000 lits on January 1, 1929, amounted to 75,260,000 lits on the same day in 1930, with a gain of 15,830,000 lits over the previous year.

Not much change has taken place in the interest rate for loans and deposits during 1929. Throughout that year from 5 to 12 per cent. was being paid on deposits in private banks, and from 8 to 24 per cent. on loans. The wide difference in interest rates, especially on loans, may be considered as normal for the present credit situation.

The Bank of Lithuania's interest rate on loans at present reaches 9 per cent., whereas private banks charge 14 and 18 per cent., some even 24 per cent. In this respect much improvement is anticipated for 1930, as all banks have recently entered into an agreement not to charge over 12 per cent. for loans. Interest on deposits has decreased accordingly, and the 6 to 12 per cent. up to the present being paid has been reduced to 5 per cent. and 9 per cent. At the beginning of this year the Bank of Lithuania reduced its discount rate from 8 to 7 per cent.

With cheaper credit available, building has been given a greater impetus. In 1929, 2,563 new buildings and 160 new business houses were erected in the towns alone. During this period capital amounting to 65,042,850 lits was involved in this construction work.

STATE FINANCES.

From the standpoint of national finances for 1929, it can be said that the year ended with good results, revenue having exceeded expenditure by 29,250,000 lits. Estimated receipts were 277,500,000 lits, whereas they actually reached 296,000,000 lits, or 6.7 per cent. over the estimate. Expenditure estimated at 280,200,000 actually reached 269,960,000 lits, or 5.5 per cent. less than the amount estimated.

The estimated revenue for 1930 is placed at 320,000,000 lits or 40,000,000 lits more than for the previous year. Actual expenditures are less than those estimated for the first half-year, while revenue on September 15, 1930, exceeded expenditures by 5,220,000 lits. Taking into consideration these results, it can be said that the Budget is satisfactorily realising expectations.

AGRICULTURE.

The agricultural situation in Lithuania has been somewhat affected by the general agrarian crisis in Europe, and farmers who were engaged mainly in grain production found themselves in a difficult position. But conditions have since been alleviated, and as a result more attention is now being paid to livestock and dairy farming, where gratifying progress has already been noted. The following statistics reveal the expansion in dairy farming alone.

BUTTER EXPORT.			
	1924	1925	1926
...	524 tons	932 "	1,747 "
...	...	...	2,051 "
...	...	...	...

Much greater improvement could have been expected in the field of agriculture had the Vilna territory seized by Poland been under Lithuania's control, for in this section are located some of the larger towns and industrial centres, and consequently a more extensive market for agricultural products. With the possession of this territory, Lithuania would be less susceptible to changes and crises in the European market.

In an effort to maintain grain prices, the Government has placed large orders for the use of the Army. This year's agricultural prospects are quite promising, as climatic conditions have been favourable, both to the raising of grain and its harvesting. The rye, wheat, peas and vetch crops have been larger than for the previous year, and the barley crop somewhat less.

The Government is annually expanding drainage work, and the following figures show the work already accomplished, and that yet in view. Area of land drained:

	1927	1928	1929	1930 (est.)
...	14,500 ha.	22,000 "	...	...
...	...	...	...	...

TRANSPORT AND COMMUNICATION.

The 1930 Budget provides 73,590,000 lits for improving transport and communication facilities, which is 12,740,000 lits more than the 1929 appropriation.

The most important project under consideration is the completion of the Telsiai-Kretinga railway, which will provide a connecting link with the Klaipeda (Memel) port. The Government also contemplates the construction of a modern dock basin at the port. It is expected that this work will be finished about 1932. The harbour will also be deepened so as to permit the entry of larger ships than have heretofore been able to enter.

Approximately 1,700,000 lits have been assigned for road building. Work has already started on two new highways, one between Kaunas-Panaveys-Birzai, and the other connecting Kaunas-Raseiniai-Klaipeda.

THE SWEDISH MATCH LOAN.

Apart from the foreign trade, credit, financial and agricultural situation, another important factor may be dwelled upon, i.e., the contracting of a 60,000,000 lit loan with the Swedish Match Company to mature in 35 years, at 6 per cent. interest. The Republic grants to the Swedish Match Company a monopoly for the manufacture and sale of matches in Lithuania, in consideration of which excise of 3½ cents per box is levied. The price of matches is to remain the same. The Swedish Match Company further proposes to erect a paper factory in Lithuania.

This loan is being utilised for advancing long-term credits to agriculture, and will markedly strengthen the credit market in Lithuania. The loan is absorbed by the Land Bank, which will adapt its organisation to this service by becoming a Hypothec Bank.

COMPANY MEETINGS, &c.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

FALL IN COMMODITY PRICES.

MR R. J. HOSE ON GOLD AND THE MONETARY PROBLEM.

The forty-second annual general meeting of the Anglo-South American Bank, Ltd., was held, on the 21st instant, at Winchester House, Old Broad Street, London, E.C., Mr R. J. Hose, the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: The whole world is at present experiencing a period of very acute business depression. Prices for commodities in international demand have suffered almost cataclysmic declines, resulting in a general lack of confidence and restriction in enterprise, with a corresponding paralysation of trade. The countries of Latin-America are, as you know, almost wholly producers of primary articles, and, therefore, they have inevitably felt the full force of present circumstances, the value of their exports having fallen considerably and their purchasing power having been correspondingly gravely diminished.

The Chairman, having dealt with the political position in the Argentine, Chile and Peru, continued: With regard to the very serious trouble which has recently broken out in Brazil, the enormous expanse of her territory and the consequent difficulty of communications must be borne in mind. We believe and trust that the wisdom of her leading citizens will bring about a speedy solution.

Before there can be a return to world prosperity it is urgently necessary that equilibrium in prices be restored. The persistent fall not only destroys trading confidence, but increases the real burden of both national and private debts, and renders it increasingly difficult for countries in course of active development, such as those of Latin-America, to finance their requirements in the internal money markets. The factors which have contributed to the fall in prices have been many. Undoubtedly over-production, combined with unsatisfactory conditions in consuming markets, notably in the East, has played a leading part, while much is attributed to the dislocation of the bases of credit. The world distribution of gold has become abnormal, and its uses in some directions diverted from the purpose of legitimate credit, while in certain quarters there has been a tendency for a large gold reserve to be regarded as an end in itself instead of a means to an end, although experience shows that even the largest holding of the metal is not necessarily a guarantee of stability for a currency lacking the support of modern credit machinery.

INTERNATIONAL MONETARY PROBLEM.

The international monetary problem is becoming increasingly prominent—especially in view of suggestions of a possible world shortage of gold—and undoubtedly much could be done towards economising the use of gold reserves. This would normally be achieved by co-operation between the various central banks, and, in this connection, the recent establishment of the Bank for International Settlements may be of great significance. The statutes of that bank, in addition to providing for the immediate functions in connection with Reparations payments, also hold out distinct possibilities for international monetary co-operation through the medium of the central banks, always provided that the capacity of the Basle Institution for manufacturing credit be strictly supervised, and that, like its component central banks, it remains free from political influence.

Special interest attaches to the remarks in the report of the Financial Committee of the League of Nations upon the traditional nature of minimum legal gold reserves, which, it is claimed, could be reduced, provided there were international understanding. On such a basis there would appear to be no fear of an inadequate supply of gold for the world's legitimate business purposes, leaving aside the unsound use of credit as a substitute for savings, especially in stock market speculation. Particularly applicable to Latin-America—of course, under appropriate legal safeguards—is the Committee's suggestion that economy in the use of gold would be assisted by means of the extended use of the cheque system.

STABILISING EXCHANGE.

By the preservation of the fixed link between national currencies and gold, stability of exchange between such currencies is ensured, and there is created a widespread mutual interest in maintaining the purchasing power of gold itself stable and free from excessive fluctuations. The machinery whereby such stability is maintained is a central bank operating on a free gold or gold exchange standard, the chief defensive weapon being an effective discount rate, and therefore the marked increase in the number of countries which have adopted or reverted to this system is one of the most encouraging post-war developments.

If any proof were needed of the benefit conferred by the system just described, it is amply to be found in recent events in those Latin-American countries where we operate. Emphatically, it can be said at once that, without the protection afforded by central banks operating freely on a gold basis, the position to-day would have been immeasurably worse, for we should have undoubtedly been faced with depreciated and violently fluctuating currency values in countries where, instead, the exchange has been maintained stable at around par value. On the other hand, during the twelve months covered by our accounts, the sterling value of the currency of Argentina declined by 15½ per cent., that of Uruguay by 12½ per cent., and that of Spain by 23 per cent., and it is certainly more than a coincidence that these countries are not working on a free gold standard.

To counterbalance the lessened exports of goods, the various official monetary institutions in South America parted with gold abroad during the period January, 1929, to August, 1930, to the total value of about £63,000,000 sterling. Of this amount, £36,000,000 went from Argentina and £15,000,000 from Brazil, while, on the other hand, those countries having a gold exchange standard, such as Chile and Colombia, lost only £11,000,000 between them—mainly from their existing gold deposits abroad—notwithstanding that their export trade was just as badly hit. Moreover, the respective circulating media have been adjusted accordingly, and the gold reserves of their central banks still remain at a very high proportionate level to liabilities. In the case of Ecuador, the gold reserve of the Central Bank showed an actual increase in the period mentioned.

The question of the international distribution of gold is of paramount importance to countries having a free gold market, such as Great Britain, and lends additional emphasis to the vital necessity of our national financial policy, embracing due regard for fostering our export trade. Criticism of the present Government's policy has been insistent and widespread, and the position has now become so grave that it would appear that this country will have to follow the example of Australia and Germany by adopting a financial programme of drastic retrenchment.

It may be said that the whole world is now experiencing a period of transition and adjustment to new circumstances precipitated by the war and its aftermath, especially the dislocation of normal commercial relations.

FOCUS OF WORLD ATTENTION.

For obvious reasons, international attention will continue to be focused upon developments in the United States, and not the least—from the point of view of Latin-America—on the interplay of policy in regard to the two questions of import tariffs and foreign loans. In the recent past, the balance of payments between the United States and the South and Central American Republics has been adjusted mainly by means of successive loan operations in the New York market, which have also enabled those countries to lay out funds in the development of their industries, transport systems, and public works. During the year 1929, however, the total of such loans increased enormously, and during 1930 has continued well below the 1928 figure. The Hawley-Smoot Tariff became effective on June 18th, and the feature of American trade figures for that month was the heavy falling off in commerce with South America generally—a movement which had already been noticeable for some time previously.

While Latin-America is necessarily purchasing less from abroad, there is every evidence that the loss of sales is being experienced most by the United States of America. Thus, in the case of Argentina, the sharpest shrinkage of sales from abroad during the first quarter of 1930, as compared with the same period of 1929, was registered by the United States, which lost 37 per cent., followed by France with 20 per cent., while Great Britain's loss was only 6·8 per cent. Apart, therefore, from the long-standing friendship between Latin-America and Great Britain, the present moment appears particularly opportune for an intensive British sales campaign in the southern continent, the necessity for which I have stressed so strongly in the past.

Finally, the South and Central American Republics are countries in an active stage of development, and are producers of primary commodities essential to mankind. According to computations by the League of Nations, both their population and production are increasing at a greater proportionate rate than those of any other part of the world. Periods of depression such as the present—for reasons which are beyond their control—must be expected in the normal cycle of events, but experience has shown that they, like all young countries, have strong recuperative powers, and when the world trade pendulum swings back to prosperity the Republics may be expected to recover more rapidly than older countries already having fully exploited resources.

The resolution was carried unanimously.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED.

ADVERSE CONDITIONS—CURRENT YEAR'S PROSPECTS.

The ordinary general meeting of the Argentine Great Western Railway Company, Ltd., was held, on the 20th instant, at Winchester House, Old Broad Street, London, the Rt. Hon. Viscount St. Davids (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: At our meeting a year ago we were in the happy position, not only that our company had record traffics, but that almost every single article we carried had increased in amount. To-day we are in the reverse position. For the past year, for the first time for nine years, there was a decrease in the total goods and livestock traffic which we carried, and, not only that, but in almost every single article there was a decrease. This has to be explained, not so much by particular conditions on our own line, as by the particular conditions in the rest of the country.

Turn to the past year on the Pacific and see what the record is. They had a bad wheat crop—58 per cent. of the wheat of that system was lost, and they lost, on the top of that, over half their maize. When you have heavy losses like that by the producers it means bad trade all round the country, and, as the article that is particularly produced on the Argentine Great Western system—wine—is, partly at any rate, an article of luxury, you can see that, when the conditions of trade of the whole country are in a bad way, you could hardly expect that the wine traffic would be particularly flourishing.

As far as our own line is concerned the prospects are good. But you have to face the fact that on our whole system—Pacific and Argentine Great Western together—we have a traffic decrease to date of £514,000, and, what is still more important, exchange is bad and is running against us. You remember that you are getting 6 per cent. on your 5 per cent. preferred and 6 per cent. on your ordinary stock. The dividend on your 5 per cent. preferred ranks for 5 per cent. with the dividend on the Pacific 5 per cent. first preference. The dividend on your ordinary stock ranks for 5 per cent. with the dividend paid on the Pacific 5 per cent. second preference. You have been getting an extra 1 per cent. on both your 5 per cent. preferred and your ordinary, that extra 1 per cent. depending on the fact that the Pacific is paying over 5 per cent. on its ordinary stock. I thought, gentlemen, I ought to remind you exactly what the contingencies are on which a part and the balance of your dividend depend, as I feel quite sure that the shareholders like to be told exactly what the position is, so that they can be as capable of understanding the position as their own directors.

The resolution was carried unanimously.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

BRITISH AND ARGENTINE TRADE INTERESTS.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Ltd., was held, on the 22nd instant, in London.

Mr H. C. Allen (the chairman) said that the less favourable results of the company's operations were due, broadly speaking, to decreased traffic, especially from the carriage of goods, slightly increased expenses in certain directions, and losses on remittances made to London from Argentina. They were all hoping great things from the new Government, which had been well received and with whom the company was on most friendly terms. Argentina was a country of rapid recuperation and he did not think they would have long to wait for brighter times. The most important decrease in revenue occurred in the carriage of goods, where receipts were £655,000 less than in the previous year, of which wheat alone accounted for £367,000. Various economies had been introduced, and their estimates showed an appreciable reduction in working costs.

Special interest attached at the moment to the economic relations between Great Britain and her Overseas Dominions and foreign countries. It was only doing a disservice to this country if those most active in the cause of Empire unity ignored facts and, made damaging attacks on British interests in what, technically, was a foreign country. Argentina had been for over a century consistently friendly to Great Britain, and amongst those who really understood the situation the opinion was generally held that in the best interests of this country the grain trade with Argentina should be maintained, and that large and regular supplies of Argentine chilled beef, which consumers in this country now enjoyed, were essential. It would be realised, he was sure, that Great Britain's interests in Argentina called for special treatment when the question of the import of prime commodities into this country was under consideration.

The report and accounts were unanimously adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED. RESULTS OF A DIFFICULT YEAR.

The forty-first annual general meeting of the Buenos Ayres Western Railway, Ltd., was held, on the 21st instant, at River Plate House, Finsbury Circus, London, Mr Follet Holt (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that at the time of the last general meeting it was believed that late rains had saved the crop situation. As it proved, the rains were too late; Argentina had to face a heavy set-back in production; and their railway had been as hard hit as any undertaking in the country. The reduction of nearly £900,000 in the revenue from transport was an indication of the immensity of the loss thrown upon the railway's clients and the country. In the circumstances the board felt deeply aggrieved at the attitude assumed by certain railway labour leaders in demanding a higher standard of wages when the country and the railways were face to face with calamity. To add to their troubles the fall in the value of the paper dollar caused a loss in net revenue of £76,531.

Through force of public opinion, Argentina possessed to-day a completely new government. They, themselves, took no participation in the political life of the country, but in its economic life they were deeply interested, and their good wishes went out to the statesmen who, at a most difficult time, had shown willingness to use all their power to help their country. The economic evolution of our country was in turn of great interest to Argentina, and it appeared that there might be some measure of protection at home, and some form of purchasing agreements with the Dominions and Colonies. Lord D'Abernon, during his visit to Argentina last year, had pointed the way, and whatever might happen in our own domestic family, reciprocal benefits would ensure continuance of our large trading with that very friendly country.

The windfall from the Petroleum Company having come to their assistance, the board felt entitled to recommend a 5 per cent. dividend, hoping that such an abnormally bad year would not recur until they had re-fortified the position.

For the first three months of the current year they found themselves down some £200,000, but prospects were much better, and except that the world-wide slump extended to Argentina, he knew no reason to be dispirited. They only required a smile from fortune to see the "Western" going strong again.

The report and accounts were adopted, and votes of thanks to the chairman, directors and staff terminated the proceedings.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.

SATISFACTORY JUBILEE YEAR.

The annual general meeting of the Assam Railways and Trading Company, Ltd., was held, on the 22nd instant, at Winchester House, Old Broad Street, London.

Mr James Mackenzie, the chairman, who presided, said that their fiftieth meeting marked a definite stage in the history of the company. To be able to look back on fifty years of steady progress afforded considerable satisfaction, and it was pleasant to think that after the trials and difficulties of the company's earlier years they had achieved a position of quite definite importance, in their own particular corner of the world at any rate. It was a matter for congratulation that on this occasion the board were presenting accounts showing the best profit the company had ever earned except in the year 1926-27. The railway accounts were particularly good; they showed the largest railway profit in their history, and they had realised their ambition of reducing working expenses to below 50 per cent. of the earnings—a very great achievement under present conditions. Their passenger traffic had again increased, and the growth in the last four years was practically 75 per cent. The company's general trading account was also satisfactory, with a bigger profit than last year and considerably improved sales. The net result of all was a balance in general revenue account of £169,757—an improvement of practically £14,000 on last year.

CURRENT YEAR'S PROSPECTS.

It was not possible to say yet with any degree of certainty how the current year would turn out, but whilst the board were not expecting as good a year as the last one, they had no reason to suppose at present that the result would be other than satisfactory. Traffics up to now were as good as last year—a position which he thought very few other Indian railways could claim. The company's coal output was up, and costs were down, and while coal sales were somewhat less, largely owing to the restriction of the tea crop in Assam, they were not down to any great extent.

In conclusion he would like to remind the shareholders that they could not have achieved such satisfactory results without the loyal co-operation of their staff in Assam, for whose services their thanks were due.

The report and accounts were unanimously adopted, and the dividend recommendations approved.

RAPHAEL TUCK AND SONS, LIMITED.

PROGRESS IN ALL DEPARTMENTS.

The twenty-ninth annual general meeting of Raphael Tuck and Sons, Ltd., was held, on the 21st instant, at Raphael House, Moorfields, London, Mr Gustave Tuck (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Your business is one of which you may well be proud, for its record of attainments is a long and continuous one. From its very inception it has led the way in the popularising of art, and, to quote the words of that eminent painter, the late Sir John Everett Millais, President of the Royal Academy, when he was judging one of our competitions, "Your firm has done more than the Royal Academy itself to improve the taste of the public."

We remember with pride the large part which Raphael Tuck and Sons have taken in the development of the Christmas card, which has not only spread art, but with it the message of fellowship and goodwill to millions of homes at Christmastide; of the art calendar, which has transformed a mere tabulation of dates into a beautiful adornment for the walls of the home; of the children's book, which, by reason of its beautiful and correctly drawn illustrations, engraves upon young and receptive minds true and lasting impressions of fables and bedtime stories, and with its A.B.C.'s provides the stepping-stones to the education of countless children; of the picture postcard, to all intents and purposes unknown in this country until we, with characteristic foresight and enterprise, put our strength and energy into it; and the other achievements in the world of art too numerous to mention.

I will now give you a short résumé of the work of our various departments:—

Christmas and New Year cards: This long-established and important branch of our activities, which devotes itself to the demand of the time-honoured custom of sending greetings to one's friends all over the world, has again shown good progress. I am glad to tell you, as I stated before, that the department is in a most sound, healthy, and progressive condition.

Book Department: We have not relaxed our efforts to produce books that appeal to all stages of youth—from the nursery to the school study. As you know, I have devoted a great deal of my life to the production of our books, and I frequently meet men and women who tell me that they have been brought up on Tuck's books. I am sure that the present generation will continue that refreshing diet.

Father Tuck's Annual is a greater favourite than ever, and Little People's Annual has also blossomed out into a larger volume.

I want to draw your special attention to the new Book of Adventure and Sport. This new volume, which has been compiled with great care and with the desire to cover all fields of sport and adventure, will find a ready welcome amongst girls and boys. It has many notable features, including an important article on the Prince of Wales as Scout written by the Chief Scout, Lord Baden-Powell.

We have this year a collection of 500 to 600 calendars, infinite in their variety and charming in their attraction. When it is remembered that these calendars can be purchased from a few pence to a few shillings, their popularity is not to be wondered at.

Pictorial advertising: This department continues to make great headway, and is rapidly taking a lead amongst the foremost producers of high-class pictorial advertising in this country.

I am pleased to tell you that on January 1st we were honoured by the Royal Warrant of Appointment as fine art publishers to H.R.H. the Prince of Wales. It will be interesting for you to know that since 1893, when we were first honoured by the Royal Warrant to Queen Victoria, we have been similarly honoured by each succeeding sovereign and heir apparent.

Your directors recommend the payment of a final dividend on the ordinary shares for the six months to April 30, 1930, at the rate of 9 per cent. per annum, making, with the interim ordinary dividend paid, a dividend of 7 per cent. for the year.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

CAM AND MOTOR GOLD MINING COMPANY (1919), LIMITED.

REVIEW OF YEAR'S OPERATIONS.

MR HOMAN ON THE PROSPECTS.

The ordinary general meeting of the Cam and Motor Gold Mining Company (1919), Ltd., was held, on the 23rd instant, at Winchester House, London.

Mr L. E. B. Homan (chairman) said that the revenue from bullion for the year was £564,803, compared with £584,568 the previous year, the gold recovery being £1 19s. 2d. per ton, compared with £2 1s. 9d., the reason being the lower average value of the ore milled, namely, 47.25s., compared with 51.67s. The working profit totalled £205,714, and the net result was a balance of £174,134 carried to the appropriation account, compared with £205,256 in the previous year. On the assets side of the accounts, development—represented by the 875,000 tons of ore reserves—stood at £113,817, compared with £115,037 the previous year. The financial position had improved by approximately £20,000, as compared with the previous year, and he trusted to see this position further improved.

DEVELOPMENT RESULTS.

Development results during the year had to be described as disappointing, not because of lower assay values, but because of the narrower widths of reef exposed, which meant less tonnage for ore reserves (for the corresponding footage) than on the levels from the 17th upwards. The total result was that, in spite of the record footage of 17,071 ft., they did not develop as much tonnage as they milled from ore reserves; consequently, the total ore reserves, after also writing off a further 88,500 tons from Pillars and from the upper level blocks, showed a drop of 151,100 tons in quantity, but the average value was only 5d. per ton lower.

Including broken ore in stopes, the total payable tonnage at the end of June was estimated to be 875,400 tons, so assuming they continued to mine 20,000 tons monthly from ore reserves, it would be seen that even if the arbitrary figure of 10 per cent. of the tonnage at present given as developed had ultimately to be left as "Pillars" in the mine, they could anticipate three years' life. Also, they hoped to be able to reclaim some of the doubtful tonnage arbitrarily written off in the last year or two. In addition, they might get payable values at the West End of the 19th level pay shoot on the Petrol Lode. The tonnage milled for the year was again a record at 288,000 tons. The drop in the recovery grade amounted to 2s. 6d. per ton milled, due to the detrimental effect of the larger tonnage and lower grade of rock from development.

The drop in profit at the mine was £32,109 to £232,083. At last year's annual meeting it had been anticipated they would again reach the profit level of £20,000 monthly. The average monthly profit for the period from that meeting to the end of the financial year was £17,000, after deducting B.S.A. royalty, so that if the abnormally high percentage of development rock milled, namely, 17.4 per cent, or over 4,000 tons monthly, had averaged its former value prior to the period mentioned of over 40s. per ton, instead of the 25s. per ton, or less, actually obtained, the profit figure anticipated at last year's meeting would have been reached. Nevertheless, the profits were sufficient to maintain the dividend at 20 per cent. for the year.

Development work since the end of June had been disappointing at the bottom of the mine. They were pushing the twenty-third

level south, motor lode to pick up the pay shoot at this horizon. Unless payable values were found on these levels, with an improvement in width, ore reserve tonnage could hardly fail to show a further drop at the middle of next year. Profits were being maintained at £16,000 a month, and were still affected by the large amount of low grade, but just payable, development rock.

RECENT EXAMINATION BY GEOLOGISTS.

A cable from Mr Bailey Southwell, one of the directors, from Rhodesia stated that he had discussed the position with the geologist who had examined the mines, who considered that all three lodes had further chances of successful exploitation.

Mr D. V. Burnett, representing the consulting engineers, described the development work taking place in the mines, and said that the ore reserves, computed at 870,000 tons, were actually more to-day than seven years ago. A considerable amount had been written off the reserves during the last three years as ore represented in pillars, and although it could not be definitely stated what percentage of this ore would be won back when reclamation operations started, it would be a considerable amount. It was hoped by the time of the next meeting they would have information to give the shareholders that other ore bodies had been discovered, not only in depth but on the strike as well.

The report was unanimously adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF
MONTE VIDEO, LIMITED.

RECORD GROSS RECEIPTS.

The ordinary general meeting of the Central Uruguay Railway Company of Monte Video, Ltd., was held, on the 21st instant, at River Plate House, London, Mr Frank Henderson (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts said that from the point of view of the earnings of the line they had much to congratulate themselves upon, as he thought he was correct in saying that of all the River Plate railways their company stood alone, not only in being able to report increased gross receipts, but better still in that these constituted a record in the history of the company. The breeding of cattle and sheep was the principal industry of the Republic, and it was the traffic in these animals that had been the outstanding feature of the past year, the increase in the returns from live stock being £54,000, or 20 per cent. Increases had also taken place in many other sources of traffic, resulting in a greater goods tonnage handled of 58,000 tons.

In regard to the results for the year, with an increase of £80,000 in gross receipts and of £69,000 in expenses, the decrease of £8,700 in the net profits was not unsatisfactory. The adverse feature was the low rate of exchange offering for the Uruguayan dollar, which had brought about a loss on remitting their funds to London of no less than £85,000, as compared with £4,000 in the previous year.

Recently there appeared a statement in the press that the Government had acquired their combined system of railways, and was taking them over as from January 1st next. This announcement was immediately contradicted, because the board had no power to sell the property without the consent of the shareholders, and no negotiations had taken place which could warrant such a statement.

The report and accounts were unanimously agreed to.

The ordinary general meetings of the Central Uruguay Railway Eastern Extension, the Central Uruguay Northern Extension, and the Central Uruguay Western Extension companies followed, and the respective reports and accounts were unanimously adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED.

BETTER CROP OUTLOOK.

The ordinary general meeting of the Central Argentine Railway, Ltd., was held, on the 23rd instant, at River Plate House, London.

The Right Hon. The Lord Forbes, P.C. (the chairman), said that when he was addressing them in October, 1929, there seemed no probability that they would have to present a report for the following year showing so great and sudden a change. It was only towards the end of October, 1929, that their receipts had begun to fall off. Owing to an exceptional drought the wheat and linseed crops had given meagre results, while maize had been only moderate in quantity and its condition had been adversely affected by rain. The railway had suffered an enormous diminution in traffic—approximately 2,500,000 tons of grain—as compared with the preceding year. Added to that was the disastrous effect of an unusual fall in market values. Those two untoward circumstances coming together had impoverished the country districts and their general traffic had thereby also suffered diminution. They were able to recommend a final dividend, making 5 per cent. upon the ordinary stock and 5 per cent. upon the deferred stock.

The completion of the electrification of their suburban lines would take place during 1931, and work in connection with improvement of the Villa Constitucion port was being carried out gradually. Those and other important capital works would add greatly to the value and income of the railway. More money was required, and the board proposed, ere long, to make a fresh issue. The claims of shareholders and debentureholders to preferred treatment would not be forgotten.

With regard to the prospect of the coming crops, they had received a telegram stating that the present condition of growing wheat and linseed was most satisfactory, while pasture lands were in an excellent state. The acreage under wheat and linseed had increased by 15 per cent. and 10 per cent. respectively over the preceding year; sowings of maize were in progress under favourable conditions, and nothing had so far happened to interfere with the abundant crops expected in November and December. Even if there was no immediate prospect of a material advance in the price of wheat, the increased quantity to be carried would give increased movement of traffic.

An important British Exhibition in Buenos Aires would be visited by the Prince of Wales in the month of March next year. The management of the company, along with others, was doing what was in its power to aid the success of the Exhibition, in connection with which there probably would be exceptional movement of passengers. If any shareholder proposed to visit the Exhibition the secretary would, on personal application, be pleased to give him a letter of introduction to the management of the railway in Buenos Aires in order that he might be afforded special facilities for seeing some part of the company's undertaking.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Oct. 18, 1930, amounted to £14,316,700, against ordinary expenditure of £13,370,800. After allocating £490,000 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £63,400, the week's operations, as shown below, reduced the National Debt by £392,000 to £7,674,608,000:—

(000's omitted.)

Treasury Bills	+ 6,276	Public Department Advances ...	— 6,950
National Savings Certificates ..	+ 300	Sundries	— 18
	+ 6,576		— 6,968

A complete analysis of the National Debt at the end of last quarter was printed in the *Economist* of October 4.

Messrs Samuel Montagu and Company write on October 22, 1930, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £157,823,667 on the 15th instant (as compared with £157,476,716 on the previous Wednesday), and represents an increase of £11,863,583 since January last. Gold from South Africa to the value of £453,000 was offered in the open market yesterday, and at the fixed price of 85s. 0½d. per fine ounce £360,000 was secured for France. Of the balance, £20,000 was taken for India, £33,000 for the Home trade, and £40,000 for the Continental trade. Movements of gold at the Bank of England during the week show a net influx of £1,113,934. Receipts totalled £1,250,319, of which £1,000,000 was in sovereigns from Australia and £250,000 in sovereigns from South Africa, and withdrawals consisted of £101,552 in bar gold, £14,000 in sovereigns and £20,833 in sovereigns "set aside."

It will be remembered that exports of gold from the Argentine were suspended in December last, when the Caja de Conversion in Buenos Aires was closed. It has now been announced that the export of gold may be resumed for purposes in connection with external loans. A message from the Buenos Aires correspondent of the Times, dated the 17th instant, states that: "A Government Decree authorises the Banco de la Nacion to export gold from the Caja de Conversion for the service of external loans. This will require about 12,000,000 gold pesos during the current year."

SILVER.

The week in the silver market has been rather quiet, but the tone has remained fairly steady, prices showing very little variation from those which ruled last week. There are no fresh features to report, China continuing to operate both ways, although more inclined to sell, whilst American operators have shown rather more interest and offered to sell freely at times. Support has been in the shape of buying to cover bear sales, and purchases have again been made by the Indian Bazaars for shipment, although holidays in India may have tended to restrict business in that quarter.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 13th instant to mid-day on the 20th instant:—

IMPORTS.	£	EXPORTS.	£
British West Africa.....	7,954	Germany.....	8,510
Australia.....	10,000	France.....	11,550

Silver coinage during the week ended the 15th instant amounted to nine lacs of rupees.

The stocks in Shanghai on the 18th instant consisted of about 95,700,000 ounces in sycee, 148,000,000 dollars and 4,320 silver bars, as compared with about 97,600,000 ounces in sycee, 147,000,000 dollars and 4,140 silver bars on the 11th instant.

5 per cent. A dividend of 3 per cent. was paid for the six months to July 31, 1929. Previous to this the last payment on the ordinary was 6 per cent. for the year to January 31, 1926. After deducting debenture interest, £94,250; preference dividends, £24,174; and the £109,088 required by the 5 per cent. dividend on the £2,815,172 of paid-up ordinary capital, the balance to carry forward is increased from £290,532 to £305,297.

BORAX CONSOLIDATED LIMITED.—A circular from the company to deferred ordinary shareholders, dated October 22nd states that the business of the company for the financial year to September 30th has been more satisfactory than for the preceding year, but the results so far as can at present be ascertained do not enable the directors to declare an interim dividend on the deferred ordinary shares. The actual results of the year's trading cannot be ascertained until the early part of next year. Some recovery in the prices of the products of the company occurred during the financial year, but a limited benefit only was obtained from this owing to contracts at lower prices which had to be completed. While competition was still very active, the tonnage of sales by the company held up well excepting during the last three months to September, when the general depression in business affected sales, especially in the United States. Every possible economy has been made at the mines and works and the cost of production brought to the lowest possible limit, the advantage of which will be substantially felt with a recovery in trade and a reasonable advance

in prices, but as the directors pointed out in their note of October 18, 1929, the recovery in profit will probably be gradual. The directors have arranged to take an interest in the production of further chemical products which they anticipate will be of considerable advantage to the company. Addressing preferred ordinary shareholders the company writes as follows:—"Referring to the notice sent on April 11th last, that the consideration of the payment of the dividend on the preferred ordinary shares would be postponed until the accounts for the full financial year ended September 30th are available, the directors anticipate that they will be in possession of the necessary information in the early part of next year, when a further notice will be issued."

COMPANHIA DE MOCAMBIQUE.—Customs receipts for the Port of Beira during August amounted to £36,706, as compared with £20,509 for the corresponding period of 1929.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The report for the year ended May 31, 1930, shows that the profits of the company and its subsidiaries, after deducting losses, and before charging depreciation, amounted to £208,616, to which is added £24,909 transferred from fire insurance reserve and £122,840 brought in, making a total of £356,365. In the previous year the profits of the Kern River and St. Helens companies were £103,033, and the total available £168,282. Amounts written off and depreciation absorb £221,357 and, in addition, £50,000 has been transferred to reserve for depreciation, leaving £85,008 to be carried forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions in the United Kingdom have favoured agricultural operations, and farmers are busily engaged on autumn sowings, the recent spell of dry weather enabling grain being drilled to a good seed-bed. Threshings, in consequence, are somewhat neglected for the time being, so that only limited supplies of native wheat are reaching the Statute markets. Good milling and seed samples continue scarce and command full rates. The import market presented a firm tone, prices responding to higher North American cables due to the interruption in Canadian threshings by adverse weather, while Russian offerings in near positions were also marked an upward tendency. Importers, however, were not prepared to follow the advance, in view of large world's weekly shipments and some 50,000 tons of Russian on passage. Liberal quantities are also arriving at United Kingdom and near Continental ports, and it is reported that steamers are being used for storage purposes. This may be correct in certain instances, but is by no means general, as Soviet wheat still finds a ready sale, and, in any case, the position cannot be compared with last year, when most European ports were filled with Argentine grain. Offers of new crop Argentine and Australian are on the market, which foreshadows increased competition in the near future. So far, these fail to attract much attention owing to ample quantities available, but will be an important factor in the international situation a few months hence. The Australian crop is estimated at 200 million bushels, the largest on record, while prospects are also favourable for a full yield in Argentina. Business in flour is proceeding on quiet lines, and although official mill prices remain unchanged, it is reported that trade has been effected at several shillings below these figures. Imported neglected, as values remain considerably out of line with home milled. Feeding stuffs were depressed, and pressure to sell Plate maize resulted in a lower price level, while adversely influenced by large clearances of Russian and Danubian barley. Shipments of maize, although lighter, are fairly substantial, but scarcity of spot and near supplies entailed a premium on these positions. Oats dull and lower to sell.

WHEAT.—Firm. No. 1 hard Manitoba, ex-ship, 32s.-32s. 6d.; No. 1 Northern Manitoba, ex-ship, 31s. 6d.-32s.; No. 2 ditto, 31s.-31s. 6d.; No. 3, 30s. 9d.; No. 4, 29s. 3d.; No. 6 Manitoba, 24s. 6d.; No. 2 mixed Durum, 30s.; Barusso, 61½ lbs., ex-ship to arrive, 27s. 9d.; Australian, 30s. 6d.; choice white Karachi, 30s.; Russian on sample, ex-ship, 25s. 6d.-28s. per 496 lbs. English new, 6s. 6d.-6s. 10d. per 112 lbs.

FLOUR. Quiet. London straight run, 28s. per sack for country deliveries, and 27s. London area. Of imported, Manitoba patents, 26s.-28s.; Buffalo ditto, 25s.-27s. 6d.; Australian, 23s. 6d.-24s. ex-store, per 280 lbs.

MAIZE.—Again easier. Plate to be landed, 22s. 9d.; ex-ship, 20s. 6d.; October-November, 19s. 6d.; November-December, 19s. 6d.; No. 2 white, Flat African, ex-ship, 19s. 6d.; landed, 21s., per 480 lbs. Yellow maize meal, £6 15s. f.o.r. London. Yellow African, ex-ship, £5 12s. 6d.; white, £4 17s. 6d. per ton.

BARLEY.—Easier. Californian old landed, 30s.-35s.; new, ex-ship, 30s.-41s. as to sample; Chilian brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, ex-ship, 13s. 6d.; Danubian, 13s. 6d.; Persian, new, ex-ship, 13s. 3d. per 400 lbs. English new malting, 6s. 3d.-14s. 6d.; feed, 5s. 3d.-5s. 8d. per 112 lbs.

OATS.—Weak. Plate landed, 13s. 3d.; ex-ship, 11s. 9d.; Chilian tawny, ex-ship to arrive, 13s. 3d.; landed, 14s. 3d.; Chilian mixed white, ex-ship, 17s. 6d.; best whites, ex-ship, 19s. 3d.; landed, 23s. 6d.; mixed Canadian ex-ship, 10s. 3d.; landed, 11s. 3d.; North Russian, 12s. 9d.; best, ex-ship to arrive, 15s. per 320 lbs. English new, 5s. 8d.-7s. 6d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28;—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat:				
1 week to Oct. 18	Cwts. 128,777	Cwts. 263,144	Cwts. 344,046	Cwts. 273,953
7 weeks to Oct. 18	1,036,919	2,228,577	2,175,464	1,693,891
Average price of English wheat per cwt.	s. d. 6 11	s. d. 9 5	s. d. 9 8	s. d. 10 7

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.						
Oct. 11	Cwts. 129,267	Cwts. 305,812	Cwts. 50,234	s. d. 7 0	s. d. 9 3	s. d. 6 0
Oct. 18	128,777	411,536	56,509	6 11	9 8	6 2
Oct. 16, 1926	416,071	584,315	111,378	11 3	12 4	8 0
Oct. 15, 1927	241,041	498,740	84,595	10 6	14 3	9 4
Oct. 20, 1928	344,046	673,614	86,539	9 8	10 9	8 8
Oct. 19, 1929	263,144	624,463	79,442	9 5	10 3	7 10

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Oct. 23, 1929.	Jan. 2, 1930.	Oct. 8, 1930.	Oct. 15, 1930.	Oct. 22, 1930.
Winnipeg (No. 1 Manitoba)	122	137½	148½	72½	72½	74½
Chicago (No. 2 Winter)	116½	124½	130½	78½	78½	80½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 70,067,000 bushels, shows an increase on the week of 1,923,000 bushels. Supplies a year ago stood at 78,790,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—The reduced quantities of fuel going into industrial consumption is a feature of local trade at the present time. This is due to the depression of the iron and steel trades. There are big accumulations of small coal at many of the collieries. The export position is unchanged, but the unsettled conditions of the industry mitigate against forward or substantial buying. The house-coal trade is quiet for the time of year. Conditions remain flat in blast-furnace coke. Many furnaces are standing and there is no news of restarting any of them.

Our Glasgow correspondent writes:—Business in the coal market has improved a little lately, both as regards home and export trade, but there has been little or no movement in prices. The market position is, in fact, weak, as outputs are still much in excess of demand and the collieries are being compelled to carry larger stocks than usual. Among large coal splints are about the only firm spot, while among nuts trebles are strongly held. Current shipping prices are approximately as follows:—LANARKSHIRE.—Ell best, 13s. 9d.; splint best, 15s. 6d.; splint second, 14s. 3d.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 13s.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 10s. 3d.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 6d.; third-class steam, 10s. 6d.; trebles, 13s. 6d.-15s.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 10s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s. 3d.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 10s. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s.; doubles, 12s. 6d.; singles, 11s. 6d.; pearls, 10s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The Cardiff coal market has hardened slightly this week under seasonal influences, while at Swansea the market for anthracite coals has been stronger than for many months past. Among bituminous grades the feature has been the improvement in the inquiry for sized descriptions, but there has been a better tone also in the market for large qualities, although the demand has not been active enough to move any of the prices for these qualities above the minimum schedule. Shipments have also recently been on a higher basis, and the Great Western returns for the past week give a total of 570,600 tons, compared with 485,600 tons the previous week. The volume of business, however, remains less than it was a year ago, when the exports for the corresponding period totalled 619,626 tons. The South Wales Marketing Scheme is being amended to meet the requirements of the board, and it is anticipated that official approval of the amended scheme will be given during the next few days.

Increasing Interest in South American Markets

THE Bank of London & South America experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request, and a Monthly Review of Market information is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8, Tokenhouse Yard, London, E.C.2
MANCHESTER: 36 Charlotte Street. BRADFORD: 33 Hustlergate.
Affiliated to Lloyds Bank Limited

The joint committee appointed to discuss the terms of the new wages agreement held another meeting on Tuesday and will meet again next week. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 9s. 9d. to 10s. 3d.; foundry coke, 29s. 6d. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 24s. 9d. to 25s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although the volume of business in iron and steel is below the average for the time of year, a slightly better tone is noticeable in the market. There was a good attendance of members at the weekly meeting, and the impression seemed to prevail that buyers both at home and abroad were taking more interest in the market. The recent decision of the British steel-makers not to reduce their prices, whilst it has occasioned some adverse comment, seems to have brought out a fair amount of business which was being held back in anticipation of lower rates. In the pig-iron department the demand is still unsatisfactory, and in several districts stocks are increasing notwithstanding the fact that production has been curtailed. Complaints are still heard of the competition of Indian iron in this country, and a certain amount of Continental pig-iron is also being imported. The demand for semi-finished steel has become quiet again, many of the consumers having covered their requirements for the time being. Recently, there was some buying in this department, but most of the business appears to have gone to French works at low prices. The market for finished steel is quiet, and keen competition is experienced from Continental sources. The slackness of the demand and the eagerness of producers to obtain orders gives this market a weak appearance; but it is probable that even a slight revival in buying would be quickly reflected in the position.

Our Middlesbrough correspondent writes:—There is no change to report in the market for Cleveland iron. Business is now confined to small sales to home consumers for early delivery, and there are no indications of any extensive buying for the present. The importation of Continental foundry iron is having an unsettling effect with consumers, and rather encourages the idea that local prices will have to be reduced. Makers, however, show no weakening, their position being fairly satisfactory for the present. The production is not large and is all absorbed against current contracts that extend some little time ahead, besides which stocks at the furnaces are being reduced to some extent. Tuesday's market was very quiet and only a few odd lots on home account were disposed of, prices being unchanged, viz.: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s., f.o.b. or f.o.t. In hematite there is more business doing. Deliveries to home consumers are on an improving scale, and further sales have been made on export account. Makers still quote 71s. for mixed numbers for delivery over a few months, and are obtaining this figure, but slight concessions are obtainable for prompt delivery. Shipments of pig iron have improved recently, the total cleared to 21st instant being 16,265 tons against 10,828 tons to same date last month. In the finished departments new business develops slowly, but it is extremely satisfactory to learn that the Cleveland Bridge and Engineering Company, Ltd., of Darlington, have secured the contract for the bridge over the Zambesi River at Sena. The value of the contract is given at £1,434,337 and work will be commenced immediately. The quantity of steel required in construction will be about 15,000 tons, and this will be supplied by local mills. Prices of steel materials to home consumers under the rebate scheme are, by decision of the British Steel Makers' Association last week, unchanged, viz.: Plates, $\frac{3}{4}$ in. up, £8 15s.; joists, £8 10s.; angles, etc., £8 7s. 6d. Other quotations include: Heavy steel rails, £8 10s.; crown iron bars, £10 15s.; 24-gauge black sheets, £8 15s., a reduction of 5s.; 24-gauge galvanised corrugated sheets, £11 12s. 6d., all for home use. The ore market shows very little improvement as regards new business, but deliveries against contracts are better. Best Bilbao rubio is offering at 17s. c.i.f. for delivery over a few months, and probably 16s. 6d. would be accepted for prompt cargoes. The freight Bilbao-Middlesbrough for early tonnage is lower at about 5s. Coke is slow of sale, and although producers quote 17s. delivered consumers' works for good average furnace qualities up to the end of the year, odd prompt lots can be secured at 16s. 9 $\frac{1}{2}$ d. The total number of furnaces in blast in the district is unchanged at 24.

NATIONAL PROVIDENT INSTITUTION

DISTRIBUTION OF PROFITS
DECEMBER 31st, 1930.

INTERIM BONUSES INCREASED.

48 Gracechurch Street, London, E.C.3.

Our Sheffield correspondent writes:—Conditions in semi-finished steel products have been a little brisker during the week, and it is hoped that the bottom of the depression has been reached and that the tide has definitely turned in an improved direction. The improvement is only slight at present, and it remains to be seen whether it possesses any stability. In some of the finished branches one notices some revival of confidence. The situation at the moment, however, is bad in all the principal sections, as there is no revival of export business. Depression continues in foundry and steel-making sorts. Consumers have not yet resumed buying beyond current needs. Prices of basic scrap have suffered a further slight decline. Tool makers are experiencing a moderate home demand from engineers, motor builders, and quarries. Exports are steady, but below normal. The seasonal trade in cutlery and plate is disappointing, but fortunately some substantial special contracts are on hand which provide a considerable amount of employment.

Our Glasgow correspondent writes:—There is still no increase in the amount of business being done at the iron and steel works in and around Glasgow. Manufacturers of sections and of semis are finding business exceedingly difficult at the moment, on account of the exceedingly low prices offered from the Continent, makers there evidently being willing to do business at hitherto unheard of prices in order to keep works going. We hear of joists being offered at about £4 lower than the British make, while semis are about £2 per ton below the British. The new work placed at the shipyards during the past week has been only for vessels of small tonnage. The situation at the tube works is unchanged. Export business in black and galvanised sheets remains very quiet, though the home demand is well maintained. Jobbing galvanizers are better employed than they have been for some little time past.

Our Cardiff correspondent writes:—In the tinplate trade conditions are stagnant and makers' prices are ruling at the minimum of 17s. per basis box, although some merchants are still offering supplies at slightly lower figures. There are inquiries from the Continent and South America, but it is reported that American tinplate prices have been reduced to 5 dols. per box, the lowest price at which they have been sold since 1923. Galvanised sheets are quiet and unchanged at £11 12s. 6d. per ton, while current prices for Welsh and foreign bars are unchanged at last week's figures. Imports of Belgian bars have increased considerably during the past few weeks. The price of tin is hardening, and on Tuesday was quoted on the Swansea Metal Exchange at £118 7s. 6d. to £120, compared with £109 10s. to £111 the previous week.

OTHER METALS.

TIN.—The week commenced with a dull and weaker market on realisations, but with buyers more in evidence values subsequently improved. Dealings, however, became more restricted at the higher levels, resulting in a good deal of irregularity at times, though Eastern advices were mostly on a firmer basis. The closing tone was weak on realisations. Standard cash changed hands at £115 10s., £114 12s. 6d., £119 5s. and £115 15s.; three months, £117, £116, £122 and £116 5s. In the East, sales were reported at £123 17s. 6d. to £126 12s. 6d. and £123 10s. per ton c.i.f.

COPPER.—In fair demand, chiefly forward positions, near metal being comparatively neglected, and prices marked an irregular advance, though top points were not maintained. Standard, cash, and £42 16s. 3d. to £41 15s.; three months, £42 17s. 6d., £43 15s. and £41 16s. 3d. per ton.

LEAD.—Slightly irregular, but easier on balance, and a fair business transpired. Good soft foreign pig, October, sold £15 17s. 6d. to £15 10s.; November, £15 11s. 3d. to £15 16s. 3d. and £15 10s.; December, £15 13s. 9d. to £15 16s. 3d. and £15 10s.; January, £15 10s. to £15 15s. and £15 13s. 9d. to £15 8s. 9d.; February, £15 13s. 9d. to £15 7s. 6d. per ton.

SPELTER.—Dull and easier on liberal offerings. November sold £15 2s. 6d. to £14 3s. 9d.; January, £15 12s. 6d. to £14 10s.; February, £15 11s. 3d. to £15 2s. 6d. per ton.

ALUMINIUM.—Dull. Home trade and export, £85 per ton. ANTIMONY.—Quietly steady. English regulus, £38 to £45. Chinese ditto, spot, £26 10s.; October-November, £24 5s.; Chinese crude, October-November, £14 10s. per ton c.i.f.

ANTIMONY OXIDE.—October-November, £26 10s. ton c.i.f.

ANTIMONY ORE.—60 per cent., October-November, 3s.; 50 per cent. ditto, 2s. 6d. per unit c.i.f.

WOLFRAM.—Inactive. Chinese, November-December, sellers' 18s. 9d. per unit c.i.f.

QUICKSILVER.—Steady. Spot, £21 15s. to £22 per bottle.

TIN PLATES.—Quiet. I.C. coke, prompt and forward, 17s. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, October 22nd. Prices on the week show very little change, and though the markets have been small, the undertone has been much better. The present halt in the movement of values has had the effect of opening up the questions: Has the peak of the selling been reached, and have values reached a level at which merchants are prepared to buy? The improvement in inquiry seen three weeks ago continues and seems to be expanding, but buyers are disappointed that prices have not moved upward. Reports of the United States textile trade also indicate an improvement there, but until a further expansion in consumption and a falling-off in hedge selling takes

place, prices look like being ruled by day-to-day supply and demand. Spot sales for the week 16th to 22nd (inclusive) are 33,000 bales, of which 12,090 are American, 6,000 Brazil, 1,450 Argentine, 6,000 Peruvian, 1,850 Egyptian, 4,050 African, 900 East Indian and 660 sundries. Imports for the same period are 52,017 bales, of which 21,619 are American, 140 Brazil, 925 Argentine, 11,053 Peruvian, 10,765 Egyptian, 1,878 African, 3,871 East Indian, and 1,866 sundries. Quotations to-day are: American Middling, 5-84; Egyptian Sakel, 9-40; Uppers, 6-85; Brazil Fair, 5-82; Peru G.F. Smooth, 6-37; West African Middling, 5-87; and East African G.F., 6-82.

MANCHESTER, October 22nd.

Business in the market is slow in expanding. In view of the better feeling last week the sales during the last few days have not come up to expectations. Trade in certain quarters has been helped by the steadier rates for raw cotton. With regard to piece-goods for India the outlook has experienced a setback as a result of the renewal of the boycott in Bombay. A little more inquiry continues to come through from Calcutta, but dealers there are very slow in making definite offers. A scattered business has been done for Madras and Karachi, chiefly in light goods. Demand for China continues rather more encouraging. Although most of the transactions have been in fancies some moderate lots have been put through in white shirtings. The Near Eastern outlets have given very little support and only occasional lines have been mentioned for South America. Special makes have been received from the home trade. Rather better reports continue to be received from the home trade. Quotations in American and Egyptian yarns have been more firmly held. The sales have been of fair extent, but it is very difficult for spinners to improve margins.

THE WOOL TRADE.

Our Bradford correspondent writes:—Cables received this week from all overseas markets indicate healthy conditions, values remaining steady for all good combing wool. It may now be said that buyers have got well into the selling season in both Australia and South Africa, and their response to the offerings is quite as good as anyone can reasonably expect in face of present trading conditions. South African wool inspected this week was splendidly grown, sound, and very light in condition. A few farmers' clips will be catalogued at the next series of London sales, and good competition may be expected, owing to the superior character of the wool. Generally speaking the outlook for merino wool is fairly encouraging. There is not likely to be any marked variation in prices during the next month or two. Certain depressing influences are seen, but requirements will have to be considered, and so long as these are maintained on the present scale, values cannot fall seriously. Crossbreds are a more doubtful proposition, and prices will have to be very reasonable to ensure a free movement of the South American and New Zealand clips. Conditions in consuming centres show no important change. Users are watching the course of values overseas, but tops do not move in harmony with what wool is realising. It is still possible to buy good average 64's for December delivery at 24d., though the raw material is not obtainable in any market on a corresponding basis. Importers will therefore be faced with a loss unless they can buy wool still more reasonably.

HIDE, LEATHER AND ALLIED TRADES.

Prices for ox and heifer hides were easier at the auctions held at Manchester on Tuesday. Business in connection with foreign hides has proceeded on fairly steady lines during the past week, and except for a slight easing here and there, values are unchanged. A fair amount of business has gone through for Frigorific hides, and Argentine ox have been sold on the basis of 6 $\frac{1}{2}$ d., light ox at 6 $\frac{1}{2}$ d., and M.V. ox at 6 $\frac{1}{2}$ d. On account of the cheapness of some sorts of dry River Plate hides, quite a respectable number of sales were made at one time, but with a stronger tone now in evidence business is inclined to fall off. B.A. Americanos were at one time to be had at 7 $\frac{1}{2}$ d., but sellers are now asking 7 $\frac{1}{2}$ d. for these. Dry Capes have found buyers at 7 $\frac{1}{2}$ d. and 6 $\frac{1}{2}$ d. for firsts and seconds, while dry-salted in the same selections have realised 7d. and 6d. for 20-30 lbs. With the slightly lower tendency of prices for Australian hides rather more activity has been experienced. A better feeling is noticeable in the market for sole leather, and although orders are confined to relatively small parcels, a fairly

steady trade has transpired during the past week. The repairing section of the trade has been responsible for some very good clearances of both English and wet-salted bends in the medium to heavy weights, and here business has been quite strong. Lighter averages have also come in for attention, but not to the same extent as those previously mentioned. Dry hide bends have changed hands in moderate quantities on manufacturing account, in addition to which there has been inquiry for suitable lines which it is hoped will ultimately result in actual sales. The outlook for upper leathers is also brighter, and for some lines there is a tendency for values to show a slight firming up.

OVERSEAS PRODUCE.

SUGAR.—There was a much larger movement on actual trade account, and spot parcels raised by 3d. per cwt. Undertone continues firm, and the chief feature just now is dearth of offers, not only from cane-producing countries, but also from Europe. Sellers naturally prefer to hold aloof pending developments of the Chadbourne-Cuban pact. Raw sugars dearer, but generally quiet. Terminal sections firmer, and sellers adopt reserved measures in face of sustained support. Raws, December, sold 5s. 4d. to 5s. 7 $\frac{1}{2}$ d.; March, 6s. 7d. to 6s. 8 $\frac{1}{2}$ d.; May, 6s. 9 $\frac{1}{2}$ d. to 6s. 11 $\frac{1}{2}$ d.; August, 7s. 1 $\frac{1}{2}$ d. to 7s. 2 $\frac{1}{2}$ d. per cwt. Cuban receipts last week cabled 22,435 tons, against 24,759 last year; exports, 72,837, against 54,195; stocks, 1,038,255, against 408,579. Estimated stocks on plantations and in course of transit to ports, 1,216,000 as compared with 451,242 same time last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending October 18th totalled 117,838 tons, against 154,047 last year.

COFFEE.—This market has shown certain irregularity. The chief feature has been the attention given to all the finer qualities. Only reserved offers made from Brazil at very high prices. Kenya varieties continue to enjoy quite a good market.

COCOA.—In spite of a firm market forward at certain periods, with the usual speculative uncertainty attaching to it, movement in spot parcels was confined to very moderate limits. Forward positions, after being driven upward, suffered a relapse. Accra F/F, November-January, London contract, quoted 27s. 6d. f.o.b.; G/F, November-January, to Continent, held for 31s. at one period but later business effected at 30s. c.i.f. Terminal, October, sold 31s.; December, 30s. 3d. to 29s. 9d.; January, 30s. 4 $\frac{1}{2}$ d. to 29s. 9d.; March, 30s. 6d. to 30s.; May, 31s.-30s. 6d.; July, 31s. 3d., 31s. 6d. and 31s.

TEA.—During the week, 57,365 packages Indian were submitted to auction. These passed with quite a good tone, and prices on balance disclosed no material change. Clean common and all useful liquoring teas in fair request at a steady range of prices. Ceylon auctions of 19,770 packages came in for good support at prices showing no essential change. Any irregularity was due to variation in quality. Java and Sumatra sales met with competition and a generally steady market resulted.

RICE.—Quiet and featureless regarding Eastern grain, but Spanish firmly held. Rangoon two stars, spot, London, 12s. 3d.; January-February, new crop, 9s. 6d.

BEANS AND PEAS.—Beans dull. Madagascar butters, October-November, 25s. 3d.; new, October-December, 23s. 6d. Peas quiet. Japanese green, afloat, 16s.; October-November, 13s. 4 $\frac{1}{2}$ d.; December-January, 13s. 4 $\frac{1}{2}$ d.

POTATOES.—Supplies have been in excess of demand, which resulted in a depressed market.

SPICE.—Pepper quiet and barely steady. Lampong black, August-October, also October-December, quoted 7d.; white Muntok, August-October, 10 $\frac{1}{2}$ d.; October-December, 10 $\frac{1}{2}$ d. Zanzibar cloves, spot, 1s. 5d.; October-December, 1s. 1 $\frac{1}{2}$ d. London stocks of black, reduced 37 tons on the week at 608, against 1,329 same time last year; white 40 tons down at 213, against 1,039. Pimento, spot, 7d. lb.; October, 51s. cwt. c.i.f. Tapioca steady.

FRUIT. (Dried).—Currants: Market steady with fair inquiries. Gulf, 37s.-43s.; Patras, 34s.-35s.; sun-dried, 40s.-42s. Raisins dull. Figs quiet. Evaporated fruits: Market steady with a fair trade passing. Californian peaches, 40s.-47s. 6d.; South African, 32s. 6d.-40s.

CANNED GOODS.—Fruit: The market generally displayed quiet features. Fish: Sardines steady but trade quiet. Meat: Market generally steady, but business proceeded on quiet lines. Condensed milk and milk powders: Market dull. Quotations: Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 33s. 6d.; machine-skimmed ditto, 21s. 6d.; full cream, sweetened, 56-lb. drums, 52s. 6d. English condensed milk, full cream, sweetened, 5-cwt. casks, 37s. 6d.; machine-skimmed ditto, 22s. 3d. Honey: Market quiet and values weak. Jamaica white, 40s.-45s.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 8,994 tons, as

day-to-day loans. A certain number of bills remitted from the Continent came to hand, and $2\frac{1}{8}$ per cent. was charged for these. The ruling market rates were 2 per cent. for short bills, $2\frac{3}{4}$ per cent. for three months' bills and $2\frac{1}{2}$ per cent. for four and six months' maturities. Little or no demand for bills on Continental account was in evidence.

* * *

Rumours of an impending reduction in Bank rate to $2\frac{1}{2}$ per cent. have again been heard, and the fact that discount rates have for some time now been adjusted to a $2\frac{1}{2}$ per cent., Bank rate has been brought forward as supporting evidence. On the whole, there seems to be little justification for the suggested reduction, unless indeed it is required to facilitate a conversion operation. Even if Bank rate were lowered, it is highly unlikely that the clearing banks would reduce their current minimum rate of 2 per cent. for loans to the market, for already it is too low to leave any margin of profit over the rates paid by the banks on a large proportion of their deposits. Nor would a reduction in Bank rate bring any relief to industrial and commercial borrowers, for the rate usually charged by the banks on their advances to customers has also been for a long time at its minimum of 5 per cent. Thus a $2\frac{1}{2}$ per cent. Bank rate would be of no use either to the country's trade or to the money market. In fact, if its effect were to drive market discount rates down still further, it would add to the difficulties of bill-brokers and might divert foreign balances from London to the detriment of the country's financial activities and the Bank of England's gold stocks.

	Oct. 9, 1930.	Oct. 16, 1930.	Oct. 23, 1930.	Oct. 30, 1930.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	$3\frac{1}{2}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount (Call)	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	...

The main change in the Bank return is a contraction of £6,962,544 in public deposits. It will be recalled that last week this item rose by over 15 millions as a result of heavy payments for Treasury bills early in the week. Conversely, this week's reduction is due to maturities which occurred late last week, and so possesses little significance. It is noticeable, however, that this week's return shows heavy reductions in the Bank's earning assets, and also—as a result of an expansion in the note circulation—a slight contraction in the reserve. Hence, notwithstanding the big reduction in public deposits, bankers' deposits are only £902,795 higher than they were a week ago.

* * *

It is now suggested that an appreciable proportion of the recent Treasury Bond issue was taken on behalf of a special quarter, where it has gone to replace Treasury bills. If this view is correct, it may be anticipated that when the final call on the Treasury Bonds falls due a large number of Treasury bills will be released early next year in order to permit of the payment of the call. In any case, as this payment will presumably coincide fairly closely with the redemption of the 4 per cent. (tax compounded) War Loan, some big movements of funds must be expected at that date.

* * *

France has again taken the bulk of the week's supply of Cape gold, the price paid being 85s. 0½d. On Monday she also took a small amount from the Bank of England, but this represented a transaction arranged for and covered some time ago. Against this, the Bank received during the week £1,000,000 in sovereigns from Australia, and further shipments are expected from that quarter. It is also believed that £3,000,000 of gold will shortly be sent to London from Spain.

NEW YORK.

Money has remained extremely easy, and while the official call rate still stands at 2 per cent., an "outside"

rate of 1 per cent. was quoted early this week. Recent gold movements include shipments amounting to \$6,000,000 to Canada, and arrivals of \$2,500,000 from Japan and \$15,000,000 from Brazil. This last sum is believed to represent a portion of a payment for munitions made by the Federal Government. This obviously raises several interesting questions which may have to be resolved.

THE STOCK MARKETS.

The Stock Markets failed to maintain last week's improved tendency, business becoming more restricted and professional, and prices undergoing a small decline. The chief exception was the gilt-edged market, where a large business was done at advancing quotations, with War Loan Conversion much in the air. Australians were depressed after the New South Wales elections, but Brazilians were marked up on the fall of the Washington Lias administration. Industrial shares were irregular, with little outside support. Rubber improved on the firmness of the commodity, and copper shares on the reported willingness of Union Minière to consider "co-operation" measures with other producers. Oil shares, however, were affected by further cuts in American crude oil prices, and business in gold-mines was on a restricted scale.

THE COMMODITY MARKETS.

No improvement has become noticeable in the situation of the coal trade. Continental competition in semi-manufactured materials is being increasingly felt in the iron and steel industries. The sharp rise in the price of raw cotton has stimulated demand, and business in manufactured goods has increased. Activity in the wool trade, although on a low level, has been maintained. The jute industry continues depressed. Demand for hides has not shown any signs of improvement, but the turnover in leather is still satisfactory. Wheat prices show a slight decline on the week.

THE FOREIGN EXCHANGES.

Business was rather dull this week, and several currencies were inclined to be irregular, though only moving within narrow limits. Sterling weakened against the dollar by $\frac{3}{4}$ to 4.85½. Montreal was $\frac{1}{2}$ better at 4.85½. Paris gained a point at 123.82. Brussels was rather firmer at 34.85½, and Milan gained two points at 92.80. The peseta was better than it has been for some time past, and hardened to 43.40, on the prospect of stabilisation being seriously taken in hand. Amsterdam, after some variation within narrow limits, was unchanged at 12.06½. Berlin touched 20.38½ at one time as a result of a demand for reichsmarks for the end of the month, but subsequently reacted to 20.30. Switzerland was rather weaker at 25.02½. With the exception of Rio, the South American currencies were again rather uncertain, Buenos Aires losing ½d. at 38½d., as did Montevideo at 38½. Rio, however, ceased to be quoted at a nominal rate, and now stands at 4½d. In the Far East, the rupee lost ½d. at 1s. 5½d., and the yen was unchanged at 2s. 0½d. Batavia lost ½ at 12.07. In the forward market, dollars were at par to $\frac{1}{2}$ cent discount for both deliveries. Paris was rather less in demand at lowered premiums of 1 and 3 centimes. Milan was rather firmer at 12 and 34 centesimi discount, but Madrid improved to 4 and 7 centimos premium against 1 and 2 centimos premium last week. Amsterdam was less wanted at $\frac{1}{2}$ and $\frac{1}{2}$ cent premium, but Berlin was firmer at discounts of $\frac{1}{2}$ and 10 pfennigs. The silver market was dull, though with a steady undertone. Prices advanced by ½d. to 16½d. for both deliveries. The Chinese silver exchange were seriously affected, Hong Kong remaining unmoved at 1s. 3½d., while Shanghai gained ½d. at 1s. 7½d.

RUSSIAN SUPPLEMENT.

We publish as a Supplement to this issue of the "Economist" an account of certain aspects of contemporary conditions in the U.S.S.R., contributed by a Special Correspondent who visited Russia this summer. Our comments on the picture he presents will be found in a leading article.

A LOST OPPORTUNITY.

THE King's Speech and the elucidation of it by the Prime Minister has caused general disappointment in the country at large as well as in all three parties. The actual legislative programme conforms to the forecast which we gave last week. It contains no surprises. So far as the business for the next few months is concerned it is mainly uncontroversial. We do not complain. But we do complain, sorrowfully and grievously, that neither in the Speech from the Throne nor in Mr MacDonald's statement of policy is there any sign whatever that the Government is facing up to a national emergency with courage, determination or imagination; nor is there one word to suggest that any lead will be given calculated to restore that confidence in the outlook without which enterprise will remain dormant and adequate preparation to seize the earliest opportunities of ultimately reviving trade will lag and languish. In spite of Mr Snowden's half-promises in his speech in the City last week, there is no mention of public economy. Indeed, although the apprehensions of trade and industry are so largely centred upon the next Budget, reference to any aspect of the present difficult position of national finance is very conspicuous by its absence. Although the leaders of all parties have declared that the unemployment insurance system must be overhauled, although everyone knows that the problem brooks no delay, and although a three-party committee has been examining the ways and means, the task of revision is relegated to the tortuous process of a Royal Commission. It is common ground that there are several wild bulls at large. Mr MacDonald refuses to take them by the horns or even to erect a fence to keep them within bounds.

In making this criticism we are by no means unmindful of the difficulties of Mr MacDonald's position. With the Imperial Conference sitting and the Indian Round-Table Conference pending, a change of Government, with all its attendant upset and confusion, would be definitely undesirable in the national and Imperial interest. Politically, too, he is obviously astute in adopting the policy of "hanging on" in the hope that the trade depression will begin to lift before any necessity arises for a challenge to Parliament or an appeal to the country. He is, therefore, perfectly justified in playing for safety and postponing as much as possible of controversial business, at least until the Conferences are over. But that does not excuse the failure of the Government to face the big problems of the day. Take the case of unemployment. The country looked for a practical statement to show that, in so far as workers can be absorbed by works of national advantage, such works would be expedited vigorously. This was the least that might have been expected to emerge from the Mosley Memorandum, the translation of Mr Thomas, the Prime Minister's conference with local authorities, and the Ministerial consultations with Mr Lloyd George. But in place of such assurance Mr MacDonald merely gave the House a laboured argument on the comparative weight of unemployment in this and other countries. Unemployment is not relieved or checked by the gentle art of statistical comparison. The handling of the Insurance Fund problem was equally unsatisfactory. Until the facts are made public it would be unreasonable to attribute the failure of the three-party conference to one party rather than to another. But to submit the problem to further and prolonged inquiry is to misjudge its urgency and can only be excused on the humiliating ground that politicians are so tied by party and electoral considerations that they cannot rise to the height of a national responsibility. Mr MacDonald, while practically admitting that the present system is a sieve through which public money is flowing, contented himself with saying that it is the fault of the Acts and not of the beneficiaries. Agreed: but that is

no consolation, nor does it mend the defects of the system. Public money is running away. What does the Government promise to do to stop the leakage? It appoints a Royal Commission, and proceeds meanwhile to ask the House for £20 millions more for the Insurance Fund—descending a little further, as Mr Baldwin put it, "into a bottomless pit of borrowing."

So Parliament starts on its second lap. It is to be asked to, and doubtless will, raise the school-leaving age, ratify the Washington Hours Convention, and pass a Bill for the valuation of land. It is to discuss legislation embodying the agricultural proposals roughly outlined by Mr Snowden at the close of last session. Later on (but in this matter the Government, quite intelligibly, is in no hurry) it is to tackle the vexed question of the Trades Disputes Act, whose amendment was referred to light-heartedly by the Prime Minister as a measure "to increase the chances of industrial peace." Then there is another item, which caused temporary surprise when it appeared in the programme, namely, a measure of electoral reform. The public naturally jumped to the conclusion that Mr MacDonald was preparing to make his position doubly secure by offering to the Liberals an olive-branch in the shape of a reformed electoral method. But when Mr MacDonald referred, again with levity, to this measure as a Bill "to deal with the escapades of parties who are too wealthy to observe the law with strict accuracy," it became clear that the Cabinet is confining its attention to a few reforms regarded as desirable in the party interest. A petty party measure has been substituted for a reform the need for which is generally recognised in the interests of justice and the good working of our institutions. This incident was a foolish jest, the effect of which was to destroy at a breath much of goodwill of the Government's Liberal friends.

In troublous times like this Mr MacDonald's performance can only be described as pitiful; and it is even more pitiful to reflect that, while the Government will not face the facts of national emergency or give a lead, that Government is secure in office in spite of its shortcomings, because the Opposition is rent by internecine strife and is equally bankrupt in constructive policy. Like Britain, Germany is facing an economic crisis. Dr Brüning, under circumstances of far greater difficulty than those which confront Mr MacDonald, has proclaimed a drastic policy framed in a spirit of bold imagination. A comparison of the performance of the two Cabinets is not conducive to British pride or complacency. Mr MacDonald has missed a great opportunity. He could have come to the House of Commons and said: "A national economic crisis exists. The Government cannot remove the causes, but it can and will face its implications. I am setting up immediately a new 'Geddes Axe' Committee. To them will be submitted the material and the conclusions of the three-party committee on unemployment insurance, and it will be their task to review the whole field of public expenditure and indicate to the Government how to cut its coat according to its available cloth. It is by private individual effort and sacrifice that the country can alone win through to salvation. But the Government will give a lead and set an example." Had the Prime Minister taken that line, he would, so far from jeopardising his Government's position, have won for himself and his Cabinet the respect and support of the country, and he would have put new heart into the whole business world. What an opportunity—lost. Instead, Mr MacDonald has preferred the rôle of a Nero fiddling to the economic flames, of a Canute stemming the tide of unemployment with statistics. Procrastination is the thief of more than time; it is, as the country will progressively learn, the thief of the nation's wealth and the nation's opportunity of early economic recovery.

POLICY IN PALESTINE.

THE statement of policy by His Majesty's Government in the United Kingdom, which was issued last week,* is by far the most precise and concrete exposition of its views and intentions in regard to Palestine which the British Government has yet published, under any administration, since the fortunes of war first made us responsible for the destinies of Palestine some thirteen or fourteen years ago. The present statement takes up and confirms that which was issued, under a coalition administration, in 1922; but it covers a great deal of ground which the earlier statement left alone. This wider range is inevitable and right, in view of what has happened in Palestine during the intervening eight years and especially during 1929. The unhappy outbreak of last September revealed in a flash that the admittedly delicate and difficult task of administering this mandate was not going well; and since then the situation has been thoroughly examined by special investigators on the spot and by the Government at Westminster.

The report of the Shaw Commission on the immediate causes of the outbreak, and on what should be done to prevent its recurrence, was published last April. And since the Shaw Report made it clear that, if we seek remedies and not mere palliatives for what is amiss, we must go behind the immediate causes of the recent outbreak to the deeper causes of the whole trouble, the Government proceeded to commission a distinguished and experienced Indian Civil Servant, Sir John Hope Simpson, to report upon the fundamental problems of immigration, land settlement and development. Sir John Hope Simpson's Report†, for which Mr MacDonald's Government waited before they made their present statement of policy, was published last week simultaneously. In view of all this, it has fallen to the present Ministry to commit His Majesty's Government to a policy in regard to Palestine which touches the interests of both the Jewish and the Arab community to the quick and raises all the controversial issues. Whatever Ministry might have happened to be in office at this moment, they would have been compelled to commit themselves, and therewith His Majesty's Government which they embody, to the same extent at this juncture. If the Ministry of the day had published a non-committal statement now, they would have been criticised (and with justice) every bit as severely as they are being criticised, as it is, for the definite policy which they have put forth. Indeed, they were criticised for being non-committal in the spring, when they published an interim statement pending the receipt of Sir John Hope Simpson's report.

The whole of the Government's present statement can be summed up as a sustained attempt to give practical application—in the circumstances as ascertained to-day—to two principles: first, that the obligations laid down by the mandate in regard to the two sections of the population are of equal weight; and, second, that the two obligations imposed on the mandatory are in no sense irreconcilable. These were the terms in which the Permanent Mandates Commission of the League of Nations summed up last June what it understood to be the British Government's attitude. The Commission has declared that, in its own view, these terms accurately express what it conceives to be the essence of the Mandate for Palestine. In its statement the British Government accepts the Permanent Mandates Commission's formulation of British policy, and the White Paper represents a systematic effort to draw the consequences which follow from these two propositions taken together. It is not fair to a State paper of this kind to give a précis of it. Every sentence counts, and whoever wishes to pass judgment upon it must do it on the justice of reading it in the original. We will confine ourselves here to noticing the various pieces of definite action which the Government announce their intention to take.

In regard to agricultural development, they submit that a more methodical agricultural development of the whole country is called for; that there must be a single authority in charge of this development; that this

authority must be the Palestine Administration; and that, while the development is being carried out, the control of all disposition of land must rest with the Administration acting in this capacity. With this preamble, the Government announce that, from now onwards, transfers of land in Palestine will be permitted only in so far as they do not interfere with the Administration's plans.

In regard to immigration, they submit that, in estimating the absorptive capacity of Palestine at any time, account must be taken of Arab as well as Jewish unemployment in determining the rate at which immigration should be permitted. They declare their intention of taking steps to ensure a more exact application of these principles in the future; and in this connection they declare that they regard as fully justified their suspension of immigration under the labour schedule last May.

In regard to security, they announce the size and composition of the force which they intend to retain in the mandated territory for the present and they declare that in this matter they propose to accept the guidance of their expert advisers without regard to any political considerations.

In regard to constitutional development, they submit that the establishment of a measure of self-government in Palestine ought to be taken in hand without further delay, and they announce their intention to set up a Legislative Council on the lines indicated in the statement of 1922. Since the application of the scheme was frustrated, on that occasion, by the non-co-operation of the Arabs, they propose to reintroduce the scheme in a form in which it will not be possible for non-co-operation tactics to wreck it.

These are the principal pieces of action which the Government is proposing to take. The remainder of the statement is an exposition of the lines of thought along which these decisions have been reached in the light of the facts—particularly those facts that have been brought to light by Sir John Hope Simpson. The statement has immediately evoked strong public protests not only in Zionist circles but from some of the leading statesmen of the British Commonwealth of Nations. The joint letter from Mr Baldwin, Sir Austen Chamberlain and Mr Amery, which was published in the *Times* on October 23rd, Mr Lloyd George's speech at Cowbridge on the 25th, General Smuts's cablegram to Mr MacDonald, which was published, with Mr MacDonald's reply, and General Smuts's acknowledgment, on the 27th—all these expressions of opinion that the Government's statement amounts to a repudiation of the Balfour Declaration, as embodied in the mandate, are as impressive as they are grave. So far as it goes, however, this opinion is negative and needs to be supplemented by a statement as definite as that of Lord Passfield as to what is the specific policy of settlement which these statesmen would regard as implemented or undertaken in the light of the facts as they have been ascertained to-day. The Prime Minister claims that "what has to be done is in the spirit of the mandate and sticking strictly to the letter of the mandate, to straighten out the differences between the contradictory parts of certain declarations." It is incumbent on those who criticise the Government's interpretation to show that there is an alternative practical policy which is consistent with all of our undertakings. In the meantime all that we can do is to call attention to one or two of the facts which Sir John Hope Simpson has brought to light for the first time.

Sir John Hope Simpson has ascertained "quite definitely" that there is at the present time, and with the present methods of Arab cultivation, no margin of land available for agricultural settlement by new immigrants with the exception of such undeveloped land as the various Jewish Agencies hold in reserve. While an area of at least 130 "dunums" is required in order to maintain an Arab peasant family in a decent standard of life in the unirrigated tracts, the whole of the cultivable land not already in the hands of the Jews would not afford an average lot in excess of 90 "dunums," were it divided among the existing Arab cultivators. The Arab population has increased with great rapidity, and the land available for its sustenance has meanwhile decreased by about a million metric "dunums" (that is, 60 or 70 per cent.

FOLLOW THE SUMMER SOUTHWARDS
"BLUE AND GOLD TOURS"

Follow Summer Southwards this Winter on a Blue and Gold Tour to South Africa, the Dominion of Blue Skies, Golden Sunshine and Health.

The refreshing ocean voyage, new scenes and interests, the delightful outdoor life, the social and sporting amenities, and, above all, the moderate travel costs, combine to make these tours the superb Winter Holiday. Regular sailings throughout December, 1930, and January, 1931.

A full descriptive programme entitled "Blue and Gold Tours," will be sent immediately on request. Apply to:—

The Director, South African Government Travel Bureau,
73, Strand, London, W.C.2,
and all the leading Tourist and Travel Agencies.

of the total cultivable area of Palestine, excluding the semi-arid Beersheba district) which have passed into the hands of the Jews. The terms on which the Zionist (though not the pre-Zionist Jewish) Organisation purchases and leases its land debar the Arabs in perpetuity not only from owning any of this land but from being employed on it by Jewish owners. If land development is undertaken in accordance with a definite plan, there will unquestionably be sufficient land both for Arabs and for additional Jewish settlement. The results desired will not be obtained except by years of work but, since the Jewish organisations are in possession of a large reserve of land not yet settled or developed, their operations can continue without a break while the general scheme of development is being worked out and brought into operation. With thorough development there will eventually be room, in Sir John Hope Simpson's belief, not only for all the present agricultural population on a higher standard of life than it at present enjoys, but for not less than 20,000 families of settlers from outside.

This last estimate is perhaps the most interesting thing in the whole Report, since it gives us a glimpse of what the final result will be if we accept the political postulate that the obligations laid down by the mandate in regard to the two sections of the population are of equal weight, and the economic postulate that the sole way in which these obligations can be reconciled is by the intensive agricultural development of the whole of rural Palestine. If the mandate were interpreted in that way, and settlement carried out accordingly, the census figures of 1922 indicate that we should eventually have a Palestinian population of something between a million and twelve hundred thousand souls, of whom about 85 per cent. would be Arab Muslims, 10 per cent. Arab Christians, and 25 per cent. Jews. Is this a reasonable conclusion of the whole matter? According to the terms of the mandate, none of these communities would have lesser or greater rights in the country than any other. Would these communities be willing or able to co-operate in governing their common national home for themselves when the mandate terminates? The term at which the mandate must give place to full self-government is set already by the political environment. Of Palestine's neighbours, the Najda-Hijaz is fully self-governing to-day; Egypt and Iraq will be fully self-governing to-morrow, and Transjordan, Syria and the Lebanon the day after. It will require the highest qualities of statesmanship to fit Palestine, with its dual character, into this setting of self-governing Arab states.

MINOR DISCOUNT MARKETS.

ONE of the most interesting features in post-War banking developments has been the popularisation of bankers' acceptances in minor financial centres. Before the War, this was considered an essentially British business, and London was practically the only discount market in the true sense of the term. Even Paris, which was the second important international financial centre of the world, had no discount market proper; its banks discounted the bills

—mostly domestic bills—of their own customers, and either held them until maturity or had them rediscounted by the Bank of France. A discount market in the sense of buying and selling bills did not exist; and this was equally true of other pre-War financial centres. Since the War, however, several financial centres—some of them merely of secondary importance—have attempted to imitate London in introducing bankers' acceptances and in developing an open market in them. Their banks have realised the advantages of the facilities provided by prime bills both as means of granting credit and as means of liquid investment; and the decline of discount rates during the last twelve months and the keen demand for good-class short-term investments provoked by the world-wide depression have favoured this tendency.

The development of the New York and Paris discount markets is a matter of common knowledge; and in our issues of October 4th and 18th we gave an account of the development of the Dutch and Swiss discount markets. Apart from these markets, the only lending centre is Stockholm, which has played an active part in international financial operations during the last few years, in association with Amsterdam and Switzerland. These three markets have participated in a large number of loans issued in London or New York, and have even undertaken to issue a number of small loans independently from any of the leading financial centres. Stockholm has undoubtedly succeeded in establishing itself as the banking centre of Northern Europe.

It would be a mistake, however, to take it for granted that Stockholm, like Amsterdam and Switzerland, has also developed a discount market in the same sense as those centres. There was no need for such a departure in the case of Stockholm. While the influx of foreign capital in Holland and Switzerland has made it necessary to provide extensive facilities for short-term investment, in the case of Sweden the influx was comparatively moderate and was mostly diverted to good-class industrial securities. It would be easy for the leading Swedish banks to adopt the practice of granting acceptance credits to their own nationals or to their customers in other Scandinavian States and in the Baltic States. Stockholm is the natural centre for these countries, and they make extensive use of its facilities. The Swedish banks have not, however, shown so far much inclination for following the fashion in attempting to develop a krona acceptance market in Stockholm. They follow the pre-War practice of discounting the bills of their customers, and they arrange for them acceptance credits in London, and to a less extent in other markets. As they enjoy a first-rate reputation abroad they are in a position to arrange acceptance credits on the basis of the minimum commission of $\frac{1}{2}$ per cent. for three months, which makes it possible for them to accommodate their customers at reasonable rates. It would be premature to say that the present situation is a definite one; but every party concerned is apparently satisfied with it, and it seems probable that the Stockholm discount market will remain within its present modest limits.

In Germany, the advantages of bankers' acceptances have always been appreciated and have been made use

of to an exceptionally great extent. In spite of this, no active discount market has been created either before or after the War in Berlin. This is due mainly to the fact that German banks were, and still are, in a position to meet the requirements of their customers in this respect at a much lower cost in foreign centres. Before the War, the London branches of German banks granted acceptance credits on a very large scale; their acceptances had a good market, and, notwithstanding the fact that they were not eligible for rediscount, their rates were only slightly above prime rates. After the War, part of this business was transferred to the Dutch subsidiaries of German banks, a change which contributed to a greater extent than any other factor towards the development of the Amsterdam discount market. London is still extensively used, however, for obtaining acceptance credits. Thanks to the reduction of the commission charged on credits arranged under the guarantee of first-class foreign banks, it has become in many cases cheaper for German business firms to arrange acceptance credits in London through the intermediary of their banks rather than directly with the London acceptance houses. Facilities offered by New York are also extensively drawn upon, and, since the development of Paris as a discount market, German banks have availed themselves also of French acceptance credits to a great extent.

In spite of their ample facilities abroad, the leading Berlin banks are none the less anxious to develop a discount market of their own. To a great extent, they grant acceptance credits for financing domestic transactions. For example, some time ago the Prussian State Bank (Seehandlung) announced its intention of making a new departure by granting acceptance credits to the enterprises controlled by the Prussian Government. The bills thus created were not of the same self-liquidating nature as those issued in accordance with the rule applied in London, i.e., that acceptance credits should be granted exclusively for financing goods in transit between two countries. In fact, the bills have never reached the Berlin market, as the Seehandlung has itself discounted them. The idea is presumably to popularise the habit of using acceptance credits, as the preliminary step to the creation of a really active acceptance market.

Bankers' acceptances have been introduced in the Vienna market mainly in pursuance of the aim of making Vienna the banking centre of the Succession States of the Austrian-Hungarian monarchy and of the Balkans. The new instrument of credit has soon become a popular kind of investment, and its market rate has declined about $\frac{1}{2}$ per cent. below the bank rate. There can be no question, however, of an active discount market in Vienna, any more than in Berlin. So long as a market is mainly borrower rather than lender it is not in a position to develop a proper bill market.

The Italian authorities have also endeavoured to create a discount market by means of encouraging the use of export bills. To that end the stamp duty on export bills has been reduced, and the Bank of Italy has provided special rediscount facilities for such bills. The main reason of the efforts to create a discount market is to provide a channel through which foreign short-term funds could penetrate into the country. As it is, the contact of foreign banks with the Italian market is negligible; in spite of the comparatively high rates of interest, the leading Italian banks do not receive foreign bank deposits on a large scale. The authorities hope that an active discount market would attract a certain amount of interest in foreign banking centres. It would be premature to form a judgment as to the success of the experiment.

It is difficult to see how it will be possible to create and maintain about half a dozen active discount markets on the Continent. The preliminary condition of a good market is a large and steady turnover; and while leading centres transact a sufficiently large volume of business to maintain an adequate turnover, it is doubtful if centres of a secondary importance will be able, in the long run, to maintain a steady supply and a regular demand. If dealings in bills are few and far between, and rates are a matter of individual negotiations, it is as well if banks revert to the old practice of discounting bills of their own customers. It is true that, by means of creating fine

bank bills, the secondary centres may possibly attract foreign funds—and especially the funds of the Bank for International Settlements. If, however, the market were not a good one, the rates at which foreign banking interests were willing to acquire bills would have to be unusually high so as to allow for the margin between buying and selling rates. Fewer and better discount markets are decidedly more desirable for every party concerned.

THE GAS INDUSTRY.

(BY A CORRESPONDENT.)

For years the gas industry has worked under a grievance. It is felt that the industry has long since outgrown the legal forms and limitations to which it was restricted in the period of adolescence, and that such restrictions are no longer in conformity with modern requirements. The first public gas undertaking came into existence in the year 1810. In those days gas was considered solely as an illuminant. To-day it is regarded rather as a source of heat and power. Again, in the early days of the industry little attention was paid to the production and disposal of residuals. To-day the production and disposal of residuals forms an important department of the business of gas undertakings, in which the undertakers enter into competition with other producers who are not subject to statutory restrictions. Moreover, gas no longer occupies the monopoly position which it enjoyed in its early days, and to-day the industry is confronted with the active competition of electricity. Yet it is a remarkable fact that, after more than a hundred years' growth, the gas industry is still rapidly expanding. In each year since 1921 for which statistics are available, the output of gas and residuals by authorised undertakings has shown a substantial increase; and—a fact which is even more striking—gas sales to each class of consumers have during the same period registered a substantial yearly increase. This is shown in the following table:—

QUANTITY OF GAS SOLD.					
	To Pre-payment Consumers.	To Ordinary Consumers, &c.	For Public Lamps.	Total Sold.	Total Number of Consumers.
1920 ...	77,911,168	150,562,911	6,928,745	235,403	7,448,685
1921 ...	80,285,658	141,768,032	7,023,422	229,077	7,559,310
1922 ...	78,224,063	146,174,788	8,203,938	232,603	7,672,146
1923 ...	82,404,187	150,256,712	8,965,704	241,627	7,810,350
1924 ...	88,539,752	158,748,918	9,603,252	256,892	7,993,876
1925 ...	92,747,287	163,059,081	9,950,985	265,757	8,200,455
1926 ...	99,301,381	168,104,527	9,162,739	276,569	8,404,561
1927 ...	99,520,075	170,754,134	9,927,353	280,202	8,686,339
1928 ...	102,235,541	169,694,121	10,499,429	282,430	8,901,271
1929 ...	106,338,830	175,468,476	10,790,634	292,598	9,137,581

It is evident that the gas industry, by a policy of energetic salesmanship and enterprising resources in devising new modes of utilising its product has succeeded in holding its own.

Notwithstanding these fundamental changes which have taken place in the economic conditions of the industry, little has been done until recently to bring the legislation under which the industry is regulated into line with modern requirements. The principal enactments under which gas undertakings have been constituted are the Gas Works Clauses Acts, passed in the years 1847 and 1871. The Clauses Acts reflect the view which Parliament entertained of the industry at the time when they were passed, namely, that gas undertakings, seeking monopoly rights, must, as a condition of the grant of such rights submit to special restrictions designed to safeguard their consumers, and to confine their operations strictly to the purposes for which they had been granted incorporation. The result has been that at the present time gas undertakings still find themselves severely hampered so far as their legal status is concerned in their relations with their consumers as well as with one another. Under the Clauses Acts, Parliamentary sanction was required before additional capital could be raised, restrictions were placed upon the formation of reserve funds and the distribution of profits, and dividends were regulated either by a sliding scale by which they were linked up to the price of gas charged to consumers, so that the rate of dividend

advanced as the price of gas was reduced, or by a system of fixed maxima for prices and dividends. Charges were made to depend upon the illuminating quality of gas supplied, and the methods of charge which were established disregarded calorific value.

The industry was carried on under these conditions until, with the coming of the War, the demands of the munitions industry for benzol and tituol induced the Government of the day to take measures to encourage the production of residuals, with disastrous consequences for the shareholders. Accordingly, after the War, the Gas Regulation Act, 1920, a measure of post-war reconstruction, was introduced with the object of remedying this state of affairs and reviving confidence in the industry. For the system of charge by cubic feet of gas supplied there was substituted the thermal system, under which the basis of charge depends upon the heating value of the gas rather than the bulk; and coupled with this system were revised arrangements for testing gas by public gas examiners.

Unfortunately, the Gas Regulation Act, 1920, failed to carry out effectively the objects which it was designed to achieve. The application of the thermal system of charge to any individual undertaking was made dependent upon an application being made to the Board of Trade by the undertakers concerned. Although the Board of Trade had power to make an order for the thermal system to be adopted by any undertaking which made no application within two years of the passing of the Act, some undertakings still retained the old system of charge. Moreover, the provisions for authorising the reorganisation of undertakings and for raising additional capital were subject to the expensive and cumbrous procedure by Special Order, requiring subsequent confirmation by Parliament.

Accordingly an attempt was made in the Gas Undertakings Act, 1929, to remedy some of the shortcomings of the Act of 1920, but while that Act provided a comparatively expeditious mode of raising additional capital and standardised the system of charge amongst the larger undertakings, it has left untouched many features in the existing structure of the industry which seem likely to prevent the industry from making any general appeal to the investing public. The Special Order procedure for effecting amalgamations and workings arrangements between undertakers is not modified, and no additional facilities have been afforded for co-operative working between undertakers. Moreover, nothing has been done to enable undertakers to adopt more modern and effective methods of salesmanship in marketing their product. The National Gas Council has pressed for powers to adopt the "two-parts" or "three-parts" system of charge, by which a consumer may be charged a fixed charge in respect of standing charges incurred by the undertaker in connection with his installation, the remainder of the charge being in respect of the actual quantities of gas consumed. Such methods of charge have been adopted with success in the electric supply industry and in the telephone service; but the gas industry is still restricted to the flat-rate method of charge established by existing legislation.

Furthermore, in the opinion of the National Gas Council, the investing public will not be attracted to the industry until some greater security of the dividend paid on capital invested in gas undertakings than that insured by the present methods of regulating permitted dividends in accordance with charges. It is suggested that power to pay a minimum rate of dividend, so long as funds are available, is necessary to attract new capital. The greatly increased cost of capital works as compared with the cost when the device of the sliding scale was adopted justifies this proposal. Indeed, the whole system of the modified sliding scale under present conditions is open to criticism. As it operates to-day, the basic figure is arbitrarily "pegged" by a percentage increase on the basic figure of pre-War days, and it is believed that this method of relating charges by a fixed percentage addition to the scales current before the War is an active handicap to the more efficient and better managed undertakings who have been successful in increasing their sales and thus reducing the production costs of their output.

Enquiries invited.

Finally, it has been suggested that the stocks of gas undertakings would, if the industry was placed on more modern foundations, and additional safeguards provided, be suitable for investment by trustees. This suggestion was rejected by the sub-committee of the National Fuel and Power Committee upon the ground that the security for trust funds rather than the interests of any particular industry should be the primary consideration in conferring trustee status. An examination of the present list of authorised trustee securities does not suggest that this principle has always been recognised as the determining criterion for admission to the list. The gas industry presents many of the features which are usually associated with trustee securities. It is a public utility of long standing, operating statutory powers and subject to public control. There seems no reason why adequate security should not be forthcoming if the industry is reorganised on modern lines, and the addition of its stocks to the trustee lists would do much to relieve the embarrassment of trustees who are at present confronted with a gradually narrowing choice of satisfactory trustee investments.

BRITISH CAPITAL ABROAD.—III.

THE estimate of British long-term capital abroad which we arrived at in our last article is lower than some which have been put forward. It is certainly small in relation to our total of overseas investments before the war, which even then were estimated at approximately £4,000 million, and to our position as an exporter of capital in the past ten years. But the extent to which we depleted our overseas assets during the war has probably not yet been fully realised, while many of our investments became wholly valueless as a result of war or revolution, and have had to be omitted from the present calculations. There has also been in many important cases a tendency for loans raised here to be purchased by investors in the borrowing country. But the gradual disposal of loans floated here, equally with the purchase of securities originating elsewhere, are movements which it is impossible to trace. Except when large concerns are purchased outright by foreign interests, the continuous and growing international interchange of existing securities is and must be statistically obscure, a fact which renders any deductions from figures of new capital issues highly precarious.

It is all the more important, therefore, to make certain that the figures in the annual estimates of the national balance of payments are as accurate as possible, so that the balance apparently available should represent our actual investment of capital abroad each year, both on long-term and on short-term account. Hence the most valuable outcome of any investigation of British capital abroad must be the light that it throws on the income annually drawn from that capital. In considering that question it is convenient once more to divide the whole group into British companies, foreign and colonial companies, and Governments and local corporations. The following table, which refers to the first section only, is based for the most part on sample information, but where the industrial group was especially large (foreign railways, for instance) or obviously unhomogeneous (like the debentures of mining companies) the inquiry was made comprehensive. The

figures for debenture redemption, which cover all companies, are based on a comparison between the amounts recorded as outstanding in the 1928 edition of the Stock Exchange Official Intelligence and those recorded in the 1929 edition.

VI.—BRITISH COMPANIES OPERATING ABROAD.

Average rates of Dividend, Interest, and Redemption of Debentures, 1927-28.

(Actual amounts paid, calculated on nominal capital.)

	Dividends.	Interest.	Repayment of Debentures.
	%	%	% p.a.
Dominion, Colonial and Indian Rails	8.58	4.13	2.52
American Rails	4.50	4.00	0.0
Foreign Rails	5.41	4.59	0.75
Breweries	8.87	4.73	6.01
Canals, Docks and Waterworks...	6.29	4.43	0.19*
Commercial and Industrial	6.82	5.30	2.53
Electric Lighting and Power	5.30	4.37	1.45
Finance, Land and Investment...	6.38	4.70	2.97
Gas	6.54	4.37	9.30
Iron, Coal and Steel	2.21	6.07	1.02
Mines	6.16	3.93	11.56
Nitrates	1.37	3.77	8.46
Oil	8.94	5.62	0.84
Rubber	5.21	5.95	1.74
Shipping	6.93	4.47	3.17
Tea and Coffee	16.60	4.23	1.39
Telegraphs and Telephones	6.69	5.03	7.60
Tramways and Omnibuses	4.37	4.72	4.68

* Excluding £1,519,500 of 4 per cent. debenture stock repaid to the Buenos Ayres Great Southern Railway Co.

There is a remarkable variation in the rates of dividend paid by the various industries, which range from 1.37 per cent. in the Nitrates group to 16.60 per cent. in Tea and Coffee. For many years tea plantations have formed a strong item in our capital abroad, many of the older and larger Assam companies having paid well over the average dividend, whereas the last few years have been very lean ones for the Nitrate industry, which has been forced to resort to drastic "rationalisation." Rubber concerns, while paying less than the average for all British companies abroad, still yielded a fair return after a violent boom. The figure for Mines is interesting, in that it represents the average reward of speculation; of the sample of 121 companies on which it is based, 86 paid no dividends at all in 1927-28, whereas one paid 50 per cent. The average would have been further depressed by the inclusion of those many mining companies, including a number in Russia, which have been forced permanently to abandon operations. Very much the same applies to the Oil group. The low debenture yield for Mines, representing as it must do the default of a good many concerns, seems paradoxical at first sight, in view of the average yield on mining shares, but very few companies in the group have issued debentures, and those which have seem on the whole to be among the less fortunate. The figure for iron and steel shares—as, indeed, is true of several other items—probably refers to too small a total of capital to be representative of the industry as a whole. It is noteworthy that Electric Lighting and Power, and Tramways and Omnibuses, two groups which showed exceptionally high ratios of resale to abroad, have a comparatively inferior dividend record.

The variation in the rate of debenture repayment is interesting, but must be viewed in relation to the amounts outstanding. The percentage for Mines, for instance, applies to less than £5 million of capital. The groups with the largest amounts of loan capital outstanding are Foreign Railways, Dominion and Colonial Railways, Financial, Land and Investment, Commercial and Industrial and Tramways and Omnibuses, in that order. The small percentage of repayment in the foreign railway group is therefore of special interest. The total amount repaid was £6,574,000, or 2.04 per cent., of which the British share amounted to about £6,282,000, again 2.04 per cent.

Details of the application of these percentages are shown in the following table:—

VII.—BRITISH COMPANIES OPERATING ABROAD.

British Share of Dividends, Interest, and Redemption of Debentures, 1927-28.

Industry.	£	£	£	£	£
	Share of Capital.	Share of Dividends.	Share of Debentures.	Share of Interest.	Share of Repayment.
Dominion, Colonial & Indian Rails	24,940	2,140	41,980	1,730	1,091
American Rails	800	40	770	30	...
Foreign Rails	205,230	11,100	141,770	6,510	1,069
Breweries	6,780	600	1,340	60	81
Canals, Docks and Waterworks	6,000	580	4,210	190	8
Commercial and Industrial	52,490	3,580	22,810	1,210	598
Electric Lighting and Power	7,220	380	7,690	390	111
Financial, Land and Investment	97,800	6,290	30,780	1,440	914
Gas	7,550	490	2,250	100	209
Iron, Coal and Steel	6,430	140	2,220	130	23
Mines	83,560	5,150	4,470	180	517
Nitrates	10,410	140	3,250	120	275
Oil	97,510	8,720	11,760	660	99
Rubber	81,070	4,220	4,770	280	83
Tea and Coffee	37,090	6,160	2,430	100	34
Shipping	8,490	590	3,820	170	121
Telegraphs and Telephones	4,100	260	1,760	90	134
Tramways and Omnibuses	9,030	390	19,740	930	915
Totals	746,500	50,970	307,730	14,320	6,282

The average rate of dividend over the whole field of shares was 6.83 per cent., and of interest on the debentures 4.67 per cent. Calculated on the whole capital, not merely on the British-held portion, these figures were 6.73 per cent. and 4.72 per cent. The average rate of dividend on the shares held outside this country was only 5.75 per cent., which bears out the observation above that on the whole the less profitable classes of enterprise have been disposed of; indirect profits have provided the attraction in many cases. It is worth noting that in a number of groups the repayment of loan capital during the year exceeded the interest on the amount outstanding, and that in the aggregate redemptions totalled about 44 per cent. of the interest paid. Sir Robert Kindersley has rendered great service in calling attention to the importance of annual redemptions in relation to the balance of trade.

In sum, then, British companies abroad accounted in 1927-28 for about £65.3 million of income and £7.8 million of capital repayments accruing to British residents (including the amount repaid by the Buenos Ayres Southern Dock to the Buenos Ayres Great Southern Railway). It would, of course, be improper to apply the same percentages to the British capital invested in foreign and colonial companies. The nature of the enterprises and the history of the investment have been quite different. However, it has not been found possible here to ascertain the average rates of dividend in the same detail, special investigation having been confined to the largest groups. The results, again for 1927-28, are as follows:—Dominion and Colonial Rails, dividends 7.92 per cent. and interest 3.95 per cent.; Foreign Rails, dividends 2.14 per cent. and interest 2.87 per cent.; Banks and Discount Companies, dividends 13.12 per cent. and interest 5.86 per cent.; Commercial and Industrial, dividends 10.09 per cent. and interest 8.09 per cent.; Electric Lighting and Power, interest 5.54 per cent.; Financial, Land and Investment, dividends 7.05 per cent. and interest 5.92 per cent.; Iron, Coal and Steel, dividends—excluding the United States Steel Corporation, which paid 7 per cent. on both classes of stock—1.56 per cent. and interest 5.40 per cent.; Mines, dividends 12.08 per cent.; and Oil, dividends, 13.75 per cent. These figures cover nearly 90 per cent. of the shares and over 80 per cent. of the bonds and debentures. To all the rest the average rates for the corresponding groups in the British companies table have been applied. The resultant estimate for the income received by British investors in foreign and colonial companies is £31.9 millions in dividends and £21.8 millions in interest.

However, these figures apply to only £888 millions of capital, whereas our estimate on a geographical basis, which we regarded as more satisfactory, was £952 millions. If we raise our figures to correspond with the latter estimate the amount paid in dividends appears to be £33.4 millions and in interest £23.3 millions. These represent averages of 7.9 per cent. and 4.4 per cent. respectively. The average of all information available indicated that the rate of redemption of loan capital in foreign and colonial companies was 1.2 per cent., so that the amount repaid to British residents may be estimated at £6.4 millions. It must be held a considerable demerit of these figures, as of those for British companies, that they refer to rates of distribution made in 1927-28 to amounts outstanding in 1929. This would suggest that as an estimate of income received in 1928 they are possibly too high, but with that warning they must stand as such.

The following table summarises our estimates of income and capital repayments from abroad, together with the corresponding figures ascertained by Sir Robert Kindersley for central and local governments:—

BRITISH INCOME FROM ABROAD, 1928.

	Dividends.	Interest.	Redemption.
	£	£	£
British companies	51.0	14.3	6.3
Foreign and Colonial companies	33.4	23.3	6.4
Governments	...	55.8	12.2
Local corporations	...	6.1	2.9
Totals	84.4	99.5	27.8

Thus our inquiries have brought us to the conclusion that £3,400 millions of British capital abroad yielded approximately £184 millions of distributed income in 1928, together with about £28 millions of capital repayments. All our overseas investments are covered in these estimates except property directly acquired, fixed property overseas of companies operating partly at home, and "private" investments in unlisted securities, though admittedly the figure of £3,400 millions may be a slight under-estimate. However, in 1928 our total investments overseas can scarcely have exceeded £4,100 millions in nominal value, and probably amounted to no more than £4,000 millions. Ten per cent. would be a generous allowance for the income received on the remaining £700 millions, but even on this basis the estimate for total income from capital overseas in 1928 would be only £254 millions. Of course, our figure does not include the undistributed profits of British companies which were not re-invested in the companies themselves but were used to build up security reserves at home; on the other hand a good deal of the capital included in the extra £700 millions did not yield any income in the sense applicable here, the profit which it produced for its owners being inextricably confused in the general profits earned on business at home as well as abroad, and probably to a great extent disguised in the visible balance of trade. The finance of British companies operating abroad is a subject which needs a great deal of further research if our balance of payments figures are to be rationalised.

The estimate of income on overseas investments in the official Board of Trade summary of the national balance of payments was £285 millions, a figure which is stated to exclude income on private investments, and which is net—that is to say, in order to render it comparable with our own estimate it must be raised by the amount of the income paid on foreign and colonial investments in this country. We are therefore forced to the conclusion that the official estimate was too high by something of the order of £30 millions, at least, and that the figure of £149 millions representing the net balance available for capital investment must be diminished by the same amount. On the other hand, £28 millions of capital repayments must be added to the net balance to give us the gross addition to our capital abroad. The results of this inquiry clearly raise most important questions regarding our national savings and our national balance of trade.

AN IMPRESSION OF RUSSIA.

In the spring of 1927, when an interchange of Notes between Sir Austen Chamberlain and M. Litvinoff was attracting attention in this country to the economic situation and international policy of the U.S.S.R., we endeavoured, in a Supplement to the *Economist*, to present to our readers an objective study of all the available statistical evidence relating to Russia's production, trade and social conditions. Since that date there have been no developments of outstanding importance in the course of Russian commerce with the rest of the world. Save that recently her exports of grain and timber have been to some extent "forced" under pressure of her acute need for foreign credits, Russia has remained, in her international relations, a more or less "insulated" economic phenomenon. But internally a great change has taken place. The period of slow, tentative and contradictory efforts at reconstruction, inaugurated in 1921 by Lenin's so-called New Economic Policy, has given way to a new régime of feverish expansion under the "Plan" for 1928-33, whereby an ambitious attempt is being made to develop Russia's industrial equipment and to revolutionise her agriculture on lines not of "pure Communism" but of what would be generally accepted in Western Europe as Socialist principles.

An account of the progress of this experiment is given in the Supplement which we publish this week, contributed by a Special Correspondent who gives a first-hand description of what he has seen in Russia this summer. The result of his investigations is obviously subject to the limitations that must attach to an individual's impressions. Since Russia is much bigger than the whole of the rest of Europe, the sample that one person can see is necessarily no more than a fraction of the whole; and a good deal of the picture which our Correspondent outlines is dependent on data derived from official sources whose accuracy could not in all cases be checked by personal examination. Nor has he attempted to submit an exhaustive report covering all the aspects of economic and social conditions in the Union. His aim has been to set forth the features which have struck him as being essential to an appreciation of the enigma of contemporary Russia; and the key to that enigma is the estimation to be placed on the prospects of the Piatiletka, or Five-Year's Plan.

On the success or failure of that Plan the whole future of Russia turns; and further, the intensive participation of the State in industrial, commercial and agricultural enterprises, combined with the fact that production and turn-over under the Plan cannot be accurately measured in terms of "capitalist" profit and loss accounts, renders it almost impossible to assess, in "bourgeois" terminology, the real implications of the official budgetary, banking and other economic statistics which the Government of the U.S.S.R. put forth. Hence our Correspondent has concentrated on what seem to him to be the crucial factors in the Five-Years' Plan, to the exclusion of many subsidiary questions, no matter how considerable their individual interest. Even so, his impressions are inevitably based on "sample" investigations and must be read with these limitations in mind.

But when all allowances are made, it is clear that a very remarkable experiment is being made within the

territories of the U.S.S.R. Russia is endeavouring to equip herself with factories and modern implements not by borrowing capital from abroad, but by "putting back into the business" an exceptionally large proportion of a national production which, though it has increased substantially from the nadir of ten years ago, is still exiguous in relation to her enormous and rapidly mounting population. What she appears to be doing is to organise a national accumulation of capital on a gigantic scale and at an extremely rapid rate; and this can only be done by deliberately depressing the level of domestic consumption, a policy which entails tremendous sacrifices, to which the country is being stimulated by intensive propaganda supported in the last resort by the methods of terrorism.

Will the experiment succeed? Our Correspondent, it will be found, refrains from any positive judgment, but his description of what he saw prompts many questions. Even with the help of the most "fool-proof" automatic types of machinery, does Russia possess, or can she train in time, the requisite skilled labour for her programme of mechanisation? Expert testimony suggests that many of the Russian socialised farms are being run much less economically, in terms of machinery and size of staff, than units of corresponding size in North America. Will there emerge in Russia the necessary organising ability to manage efficiently either industrial or agricultural enterprises planned on so large a scale, or will these vast organisations come to grief through megalomania? Above all, will results, even if achieved, come quickly enough to recompense for the deprivations which Russia is now enduring, or will the poverty and stress precipitate another disastrous collapse?

This last is perhaps the crucial question, for though our Correspondent was struck in some places which he visited by the extent to which the Five-Years' Plan has gripped the imagination and stirred the enthusiasm of Young Russia, he was equally impressed with the atmosphere of ominous strain among the older sections of the population, who had already suffered the misery of the Great War and the chaos following the 1917 Revolution, and who are now being asked to shoulder a burden little less onerous. Is the will, whether based on understanding or precariously stimulated by mass suggestion, strong enough to bear these sacrifices steadfastly when inevitable disappointments come? Is enthusiasm for the new order really widespread or confined to a relatively small number? In what appears to us to be a race against time, will a combination of faith in the future and subservience to what is ultimately a rigid dictatorship suffice to induce the masses of the population to persevere?

Our Correspondent does not attempt to foretell the future or pretend at this stage to answer these questions. Nor is it possible in this time of exceptional effort to form any opinion as to the sort of society which would be likely to emerge, if the present economic programme were achieved. At present many Russian institutions are repugnant to the mind of democracy in Western Europe, and it would be a rash man who would assert either that contemporary Russia is a pleasant place in which to live, or that the stability of her present régime is assured. Human nature being what it is, we have still to discover whether an attempt to create a completely new order of society, based on a curious blend of Americanised hustle, idealistic propaganda and methods reminiscent of those of the tyrants of Syracuse, can be crowned with ultimate success. The future of Russia, political, economic and social, appears to-day to depend on her leaders possessing high qualities of resource and adaptability to quickly changing conditions; and it remains to be seen whether Russia has yet grown out of her old genius for disorder. All that can be said at present is that, whether Russia breaks under the strain or succeeds wholly or partly on her present lines of development, she is making an experiment which is of intense interest not only to herself, but to the world at large.

Notes of the Week.

The Government and the Imperial Conference.—Having criticised on a previous page Mr MacDonald's statement of his Government's programme in the House of Commons, we hasten to welcome a passage in that speech, in which he referred to the work of the Imperial Conference. Nothing could have been clearer and more decisive than his analysis of the Preference issue and his statement of the Government's position. Here is the crucial passage:—

If it is going to be a single exchange, our imposing tariffs for the purpose of allowing a wider field of preference to be shown us, the only tariff that we can propose, that is worth anything to the Dominions, is a tariff on food. . . . The first thing that every Premier says, and in some cases not only the first thing but the last thing, is "Tax wheat." We cannot do it.

As for Empire Free Trade, it is, in Mr MacDonald's view, "an absolute fraud." "No honest man, after what has transpired at the Imperial Conference, can pretend that Empire Free Trade is an issue that ought to go before the electors of this country." Having thus rightly and truly disposed of dreams of grand-scale trade diversion, the Prime Minister hastened to emphasise that there are other ways than the tariff way of helping inter-Imperial trade, and in his tone we detect a hope of concrete achievement, which, we are glad to see, was echoed in the address broadcast on Wednesday night by Mr Scullin, the Premier of Australia, in which he claimed that the Conference "is giving a powerful impetus to closer economic co-operation." This means, we hope, that real progress is being made towards the establishment, in the form of a permanent secretariat, of the machinery for continuous consultation between the various members of the British Commonwealth. There is, as we have said before, a vast amount of common ground to be explored. The first step is to arrange for exploitation on systematic lines.

The Viceroy's Dispatch.—A few days ago a morning newspaper published what purported to be a summary of a despatch of the Government of India commenting on the Statutory Commission's report. The statement is presumably entirely unauthorised, and it is very much against the public interest that rumours of this kind should be given currency. The position is an unusual and delicate one. The Commission's report represents the unanimous opinion of Parliament's representatives. These opinions do not, of course, bind the Government, which has agreed to go into conference and discuss the situation freely with the representatives of India. But before taking a step of any kind the Government's first duty was to obtain the opinions of the Government of India on the recommendations that had been made and endeavour to harmonise the views of Whitehall and Delhi—whether on the basis of the Commission's report or on some modification of them; the second to ascertain if any such modifications would be acceptable to the other parties in Parliament, for without their concurrence the Government would be facing the grave risk of the Indian problem becoming a party question. The Prime Minister announced in the House of Commons on Tuesday that the dispatch is to be published, but the wording of his remarks suggests that the document may not be ready until after the Conference has met, seeing that "we are exchanging views with the Government of India on one or two points." This is a most essential procedure, for the Government could hardly place the views of the Government of India on the table as a contribution towards the discussion unless they were prepared to endorse them.

Mr Baldwin's Victory.—At a representative meeting of Conservative Peers, Members of Parliament and Parliamentary candidates, a secret ballot on the question of Mr Baldwin's leadership resulted in his favour by 460 votes to 116. Lord Beaverbrook was present and spoke.

Presumably Mr Baldwin will consider the vote as sufficient justification in continuing in the leadership. If he takes this decision, he will, in our opinion, be right. There is no satisfactory successor in view, and, what is still more important, his resignation would be interpreted as a victory for the Press Lords. Nevertheless, the satisfaction which Mr Baldwin derives from the result of the ballot cannot be complete. A hostile vote of 116 at such a meeting is substantial, and there is room for doubt whether even that figure adequately interprets the uneasiness felt with regard to his leadership. Many votes cast in his favour may perhaps be interpreted as anti-Beaverbrook rather than pro-Baldwin, and the unsavoury episode of the faulty and unauthorised publication of the 44 members' manifesto must have had some effect in swelling Mr Baldwin's majority. The voting, in a word, means that Mr Baldwin stays on with the partial confidence of the party, and, in any case, more confidence than would be placed in any of his would-be successors. But it would be premature to suppose that differences within the party, especially on the fiscal issue, will be early or easily composed, or that the rebels will relapse even into disgruntled acquiescence.

The Revolution in Brazil.—Events in Brazil have moved swiftly during the last week without its being quite certain, even yet, that the movement has come to rest. Owing to the immense size of the country and the number of different fields in which fighting between revolutionary forces and Government forces was taking place, it was impossible, for some time after the revolution had broken out, to obtain any real light on how things were going. Indeed, observers at Rio itself seem to have been almost as much in the dark, up to the last moment, as observers in New York or London. The first hint of a *dénouement* came on Friday, October 24th, when the revolt of the garrison of Rio itself, the Federal capital, forced President Washington Luiz Pereira de Souza to hand in his resignation to the officers of the garrison, who promptly constituted themselves into a Provisional Federal Government in the form of a local military junta. This, however, was by no means agreeable to the leaders of the insurgents in the northerly and southerly States. These revolutionaries had risked their lives; they had been engaged for days in heavy fighting with the Government forces, in which they had just achieved decisive successes, and they were in no mood to put themselves in the hands of men who had rushed to the assistance of the victors after remaining in the service of their adversaries until the eleventh hour. They were not even certain whether the *coup d'état* at the distant Federal capital might not be a "put-up job"—in which Dr. Luiz had officially ceased to reign in the hope of still governing *sub rosa*. Hence they showered ultimatums upon the new Junta at Rio, announcing that they intended to keep their forces in the field, and that they would proceed with their march upon Rio unless Dr. Getulio Vargas—the defeated candidate for the Presidency at the election which was held this last spring—were accepted by the Junta forthwith as provisional President for the unexpired portion of Dr. Luiz's term, with the understanding that thereafter he would be regularly installed as President on inauguration day. Whatever the original intentions of the Rio Junta may have been, they have bowed to the inevitable. On Sunday night, it was announced that they had issued an invitation to Dr. Vargas in compliance with the ultimatum. Meanwhile, two counter-revolutionary movements are reported to have broken out and been suppressed; and the revolutionary leaders are taking no chances. Pending the establishment of Dr. Vargas securely in power at Rio, they are remaining under arms and ordering the remainder of the late Government's armed forces to deliver up their arms and disband, under threat of a resumption of hostilities. Thus the internal situation in Brazil remains unsettled, and there are also certain foreign complications. In the course of the fighting, a German ship in harbour has been shot up and a number of casualties inflicted on the crew. This is the kind of regrettable

accident for which it is possible to make amends. There are possibilities of greater diplomatic difficulty in the fact that Dr. Luiz's régime has been supported during the insurrection, from first to last, by the State Department at Washington. In these circumstances, it is not easy to see how diplomatic relations are to be established between the United States and the new régime in Brazil—whatever that régime may prove to be.

Constitutional Changes in Egypt.—The prognostications of Ismail Pasha Sidki's intended changes in the Egyptian Constitution, which we reported last week, turn out to have been substantially correct. It was also true that the Constitutional Liberal Party, while favourable to the proposals for a change in the electoral law, in the sense of restoring the system of election in two degrees, was hostile to the proposals as a whole. Our announcement, however, that this opposition had led the Prime Minister to drop the main body of his proposals was premature. The whole set of changes is being put into effect; and for the moment Sidki Pasha—or, rather, King Fu'ad, on whose behalf he is acting—has scored a success. He seems to have secured the support of a minority of the Liberals; and although the majority, with Muhammad Pasha Mahmud at their head, have now come out into open opposition, overtures for co-operation between them and the Waft have apparently been rejected by the latter. Meanwhile, the King's Government have presented their case in a "Report on the modifications to be introduced into the Constitution and the Electoral Law" which is worth study, for it is an able document, and is full of common sense—a virtue that is sometimes an admirable cloak for special pleading. This exposé starts with two general contentions which are patently sound: first, that there is no reason to suppose that the latest style of European constitution (*e.g.*, the Belgian Constitution on which the Egyptian Constitution of 1922-3 was modelled) is necessarily suitable for a country which, like Egypt, is a novice in the working of parliamentary institutions; second, that a single-party government, of the type now in power in Italy and Russia and China, may be as autocratic as an absolute monarchy wielded by a single individual. We may go the length of agreeing that the Waft has arrogated to itself in Egypt, as far as it has had the chance, the same monopoly of power as the Fascist Party and the Russian Communist Party and the Kuomintang have acquired in their respective countries. We cannot, however, agree with the Egyptian "King's Friends" when they identify the Waft with autocracy in Egypt *sans phrase*, or when they represent the constitutional changes which they are introducing as being a bulwark against single-party government. As we see it, the present political conflict in Egypt is not between autocracy and national self-government, but between two rival autocracies—that of the Waft on the one side, and that of the Crown on the other; and the main effect of the Constitutional changes, as we see it, will be, and is intended to be, to give the Crown the whip hand. The remedy for "single-party government" is not "palace-government," but the slow process of building up a healthy political life in which alternative policies are represented by separate parties which alternate with one another in office. The healthy line of political progress would be, not for the Waft to be excluded from power by the Crown, but for the Waft itself to break up of its own accord into two parties or more, as soon as the settlement of Egypt's foreign relations has removed the chief incentive to the present *union sacrée*. Thus, though we recognise the ability of the State paper before us, and agree with much of its thesis, we do not sympathise with the policy which it is meant to commend.

The New South Wales Election.—The prospects of Australian financial recovery have been temporarily clouded by an exhibition in New South Wales of that greatest weakness of democracies, the readiness of the electorate to believe in promises which are flagrantly incapable of fulfilment. The extremist Labour leader, Mr Lang, fought the election on a policy of hostility to the pledge of retrenchment and balanced budgets taken

by the State Premiers at Melbourne last August, and gained a substantial majority. This result is particularly disappointing in that it reveals that many Australians have not yet realised that wages cannot be kept up and hours down merely by legislative action, and that the "standard of living" is not a thing which can be "defended" merely by digging in your toes and saying you will not have it touched. The effect of this election, highly disquieting to the investor in Australian securities, many of them trustee investments, and reflected in a sharp fall in these prices on the London Stock Exchange last Monday, has been to give a new impetus to the more extreme section of the Federal Labour Party. In the Party caucus last Monday the Cabinet proposals for balancing the Budget were sidetracked in favour of a long discussion on the nationalisation of banking and a motion was passed condemning the "interference" of Sir Otto Niemeyer in tariff and industrial policy. A movement has been started for the reinclusion of Mr Theodore in the Cabinet, and a proposal for financing both international commitments and home development by inflation is expected to come up for discussion. On the other hand a motion hostile to the Premiers' financial agreement was withdrawn, and moderate opinion is comforting itself with the reflection that the Loan Council will be in a position to apply the brake at a very early stage of Mr Lang's progress. It is, in fact, fairly clear that Mr Lang will be so soon checked by lack of capital in his attempt to fulfil his election promises that the voters of New South Wales will have an early disillusionment, and the cause of retrenchment throughout the Commonwealth may ultimately be the gainer from this interlude. But meanwhile the more moderate elements in the Federal Labour Party must continue their present policy of resisting all talk of inflation, more borrowing and the "maintenance of the standard of living," if Australian securities are to recover and hold the ground they have recently lost.

A Banker on Fiscal Policy.—From the week's many contributions to the discussion of the fiscal issue, two stand out as of peculiar interest. The first is a sturdy Free Trade declaration by Sir Charles Addis, who speaks with peculiar authority as a director of the Bank of England, the chairman of the Hongkong and Shanghai Bank, and a leading economist of wide international experience. The second is a speech by Mr Winston Churchill, in which he is at pains to reconcile the Free Trade proclivities of a life-time with the present fiscal policy or policies of his party. To this delicate task Mr Churchill addresses himself with his usual adroitness, but with a lack of success that was inevitable. In the main, his contention is that we must have a tariff for revenue purposes, and that, this being necessary, "he was all for carrying it out in a resolute and effective manner." Against the Free Trade answer that, if tariffs were imposed for revenue, countervailing excises should be levied. He defended himself with the novel argument that the cost of social services already imposed a countervailing tax on home industry. The only orthodox protectionist argument which Mr Churchill permitted himself was the "mass production" argument, which surely falls to ground before the spectacle of the failure of the motor industry, behind its high tariff wall, to rationalise its production and eliminate its host of uneconomic units. Mr. Churchill is also attracted by the idea of the tariff as a bargaining weapon, and here, it happens, Sir Charles Addis provided the conclusive answer:—"Retaliation will only tend to intensify and to extend the original injury and lead to more retaliation. Great Britain is nowadays in a peculiarly defenceless and ineffective condition to wield the weapon of tariffs as a weapon of offence." On the wider theme, Sir Charles holds that Protection "involves an interference with the national division of labour, which must tend to reduce aggregate production and diminish the national dividend available for distribution among the various economic groups." Nor, like ourselves, is Sir Charles able to see "how you are going to stimulate your foreign trade, on which you ought to

concentrate, by any policy which involves an increase in prices." Having enumerated the risks of entering into "the arena of competing tariffs on the Continent"—risks that are not confined to the economic sphere—Sir Charles reached this conclusion:—"For Great Britain, to whose continued national existence foreign trade is vital, the presumption is in favour of Free Trade, whatever other nations may do." In these days of shifting policies and shallow conviction it is good to see this *tenacem propositi virum*.

The Volume of Overseas Trade.—The misleading effect of the fall in prices upon the statistics of our foreign trade during recent years gives particular value to the recalculation of the trade the first nine months of 1930 at 1924 prices which appears in the *Board of Trade Journal* for October 23rd. The results are summarised below:—

OVERSEAS TRADE. JANUARY-SEPTEMBER.				
	£'s million.			
	Total Imports.	British Exports.	Re-exports.	
1930, as declared	785.2	441.1	67.7	
1930 at 1924 average values	997.9	544.4	83.7	
1924, as declared	909.3	593.1	102.8	

Imports were 9.7 per cent. greater in volume during the first three quarters of this year than in the corresponding period of 1924, but British exports were 8.2 per cent. less and exports of imported merchandise 18.6 per cent. less. If the third quarter of this year be compared with that of 1929, it appears that there has been an all-round decline. Imports fell from 108 to 102.5 per cent. of the level for the same quarter of 1924; British exports from 108.9 to 84.8 per cent., and re-exports from 92.7 to 84.6 per cent. During the past year, the price index for imports, which was substantially higher than that for exports, has fallen 12 per cent., as against a fall of just over 5 per cent. in the price index for British exports, and the price index for exports is now the higher. The volume of retained imports of nearly all raw materials, except raw wool, was less last quarter than a year ago, but there was a rise in the retained imports of many manufactures, including woollen and worsted yarns and manufactures, and oils and fats. Declines occurred *inter alia* in the retained imports of iron and steel, machinery, chemicals and vehicles. The fall in average import values affected manufactured goods much less than the other two classes. An increase in the volume of British exports of food was almost wholly due to an increase in the exports of refined sugar. The volume of manufactured exports in the September quarter was nearly 25 per cent. below last year's level, the only increase occurring in electrical goods and manufactures. Leather, textiles, iron and steel, and the non-ferrous metal groups showed the heaviest declines.

The World Depression.—The severity of the almost world-wide trade depression is well illustrated by the table below, in which we have converted the indices of the physical volume of production of the main industrial countries to a percentage of the average of 1924:—

INTERNATIONAL PRODUCTION INDICES. (1924 = 100.)					
	U.S.A.	Canada.	France.	Germany.	United Kingdom.
	Federal Reserve Board.	Monthly Review of Business Statistics.	Statistique Générale.	Institut für Konjunktur forschung.	Board of Trade.
	(a)	(a)	(b)	(c)	(c)
1929 Av. June qr. ...	130.2	168.3	128.1	158.0	112.0
1929 July.....	130.5	165.2	127.5	151.7	...
1930 Av. March qr. ...	109.8	148.8	131.9	136.2	110.9
1930 Av. June qr. ...	108.4	150.3	132.2	(2)131.5	103.4
1930 July.....	(4)100.0	138.5	129.3	(4)122.5	...

(a) Adjusted for seasonal variations.
(b) Partly adjusted for seasonal variations.

(c) Quarterly index.
(d) Provisional.

In North America and in Germany industrial activity reached its highest level in the early summer of 1929. After that, the volume of production began to decline in these countries, but it continued to expand in France

and even in the United Kingdom, where the highest point was reached towards the end of 1929. Since then, activity in the United Kingdom has shown a marked downward tendency, which became accentuated after the first quarter of 1930, but France, whose production costs are still lower than those in many countries, and whose home market continues to expand, has, so far, been able to maintain a relatively high level of production in the face of the acute and growing world depression. In the United States outstanding recent features are the heavy falls in the output of iron and steel, textiles and automobiles. The most depressed sections of the German industry are the coal and iron and steel industries. The only branches which show a slight decline in France are the coal-mining and rubber industries. Meanwhile the London and Cambridge Economic Service has published its index for the September quarter, which shows that the physical volume of British production in that quarter fell by 10 per cent. on the previous quarter, and was 17 per cent. below that of the corresponding period last year:—

	1927.	1928.	1929.	1930.
First quarter.....	110.8	105.7	108.3	109.6
Second quarter...	108.1	103.7	111.0	100.9
Third quarter ...	105.9	95.4	108.2	89.8
Fourth quarter...	107.4	105.2	114.8	...
Average.....	108.1	102.5	110.6	...

The progressive decline has spread to all spheres of industrial activity. Disregarding 1926, the index for the September quarter is lower than for any corresponding period since the post-war slump in 1921. The setback has been most pronounced in the iron and steel and textile groups, which show a decline on the last quarter of 18 per cent. and 27 per cent. respectively. Judging from the evidence available, it appears that the sharp increase in industrial activity which usually takes place from the third to the fourth quarter will be less pronounced this year, and that the volume of production for the whole year will be below the 1924 average.

The Stock Position.—We discussed last August the statistical position of various raw materials of foodstuffs. Since then the London and Cambridge Economic Service has produced a special memorandum on stocks of staple commodities, based on slightly more recent statistics. The authors' conclusions with respect to the different commodities surveyed vary very widely. The petroleum position is described as relatively good, since consumption has not actually diminished, and it is thought that production can be further restricted. Control of the lead market also has proved fairly effective, and that commodity is in a sounder position than other metals. The spelter position is still weak, and stocks showed a further increase in August. The section of the memorandum dealing with copper is particularly interesting, and the authors, who maintain that the industry will have to adjust itself to a lower level of prices, venture the forecast that the centre of the world's copper production may shift rapidly away from the United States, and that Europe's growing independence of American copper supplies may in future greatly weaken the influence of Copper Exporters, Inc. The tin situation is greatly complicated by the wide differences between costs of production in different centres. Many Malayan companies can produce at below £100 a ton, and therefore are not very eager supporters of restriction schemes when the price is £135 per ton (the fall to £110 took place since this memorandum was written), whereas that price seriously embarrasses producers in other centres and almost puts those in Bolivia out of business. The cotton position still appears thoroughly weak, with the available supply well in excess of the world's needs at the current rate of consumption. Rubber prices also are expected to go still lower, for whereas the increased yield of recent years is probably to be reckoned with as a permanent factor, consumption in the United States has declined, and the use of reclaimed rubber in that country to the extent of nearly half the consumption of crude, seems likely to continue. As for foodstuffs, some slight improvement in the wheat position is anticipated by the authors of the

bulletin, but they consider that equilibrium in the coffee trade will take years to restore and that prices will have to go still lower in order to force out of existence the excess capacity in Brazil. The sugar position they find more equivocal, and though they believe that a small improvement would at once start a recovery they appear to think a further collapse in prices more probable.

The Lancashire Coal Merger.—At a meeting of colliery owners held in Manchester last Monday, it was decided that all Lancashire and Cheshire coal-fields should join together in one common merger. No details are yet forthcoming, and, indeed, the decision is no more than an expression of opinion by the meeting, and can in no way yet be regarded as effective. At the same time, this move, following as it does the creation of several large unified concerns in this area, including Manchester Collieries and the Wigan Coal Corporation, is a logical development. The formation of the new organisation will, if carried out on proper lines, bring with it all the advantages of unified control, especially on the sales and distribution side, and should obviate much unnecessary movement of coal. The scheme is an ambitious one. It affects about £20,000,000 of capital, and in normal times 100,000 workers and an annual output of approximately 20,000,000 tons of coal, and many intricacies will be met with in putting it into operation. It is understood that much of the necessary detail work has already been done, but that while the undertakings to be absorbed will be given shares in the new merger, they will receive no assistance in dealing with their outstanding indebtedness, such as bank overdrafts. If that is correct, there are obvious possibilities of a hitch occurring, and even of opposition developing, but on the other hand, as certain cotton interests have lately discovered, there are obvious difficulties in the way of a new combine taking over all of its prospective constituents' liabilities. From the national standpoint, the proposal follows naturally upon the marketing provisions of the new Coal Mines Act, and marks an important step in the rationalisation which it was the purpose of that Act to promote. The consumer who may feel certain qualms at the possibilities inherent in these new large-scale combinations must pin his faith upon, and insist upon, the efficient working of the machinery which the Act provided for his protection.

Cotton Trade Wages.—Our Manchester correspondent writes:—At a meeting in Manchester of the Central Committee of the Cotton Spinners' and Manufacturers' Association, last Tuesday, at which were present representatives of the weaving section of the Master Cotton Spinners' Federation, it was reported that the District Associations had approved the new wages price list for application where the number of looms per weaver is increased. It was decided to communicate with the Weavers' Amalgamation, and it is expected that a joint conference between the employers and the trade union officials will take place at an early date. It is anticipated that the negotiations between the two sides will be rather protracted. The trade unions are not now against this revision of working in the weaving sheds, but there is likely to be some difference of opinion as to the terms of payment. Under the new system it will be possible for weavers to earn much higher wages when working six, eight or ten looms, but the trade unions are somewhat concerned as to the displacement of labour. Manufacturers contend that the saving in the cost of production will be of great benefit to the industry in the endeavours which are being made to produce goods at prices more competitive in world markets.

Advance in Cotton Prices.—Our Manchester correspondent writes:—During the last two or three weeks there has been a striking advance in raw-cotton prices. On October 10th the spot quotation for Middling American in the Liverpool market reached the low point of 5.54d. per lb. Since then there has been an almost uninterrupted rising tendency, the figure on Wednesday last

being 6.39d. This development in the situation has been due to greater determination on the part of farmers in the Southern States to hold their cotton on the promise of the Farm Board to give additional financial assistance in marketing the crop. The upward movement has been accelerated by the fact that users throughout the world have been caught short and there has been a rush to secure cover. As is usual in a rising market, demand for yarn and piece-goods has been stimulated. This has been particularly noticeable with regard to yarn, and it is apparent from the buying that has taken place that users in Lancashire were very much on the short side. During the last day or two there has been an inclination to anticipate future requirements, and spinners' order lists have been extended. There is some doubt in trade circles as to whether the advance in values is altogether justified in view of the continuance of very unsettled conditions throughout the world and the improbability of any big improvement in trade in manufactured goods. Raw cotton supplies are abundant, and so far this season the world consumption has been very low. Even with some increase in the deliveries to spinners there is every likelihood of a big carry-over of American cotton at the end of this season. The change in the outlook, however, is welcome as it has been a means of stimulating trade in Lancashire; it is a long time since the Manchester market was so active as it has been during the past fortnight.

Railway Wages.—With the impending expiry of the railway wages "truce" on November 12th, both sides have held meetings and prepared statements of a kind which mean that they are busy manoeuvring for position. On Friday, October 24th, a private delegate conference of the National Union of Railwaymen took place, at the close of which Mr. C. T. Cramp issued an official statement. This was to the effect that a minimum wage for all adult workers of £3 a week was to be sought, together with a guaranteed week for railway shopmen, the consolidation of the existing war wage into the basic rates in force in railway workshops, and a six-days' holiday with pay for all grades. Mr Cramp added that the Union's executive was left with the discretion of presenting this programme to the companies "at a favourable opportunity." This week the companies made their move, which consisted of inviting the union representatives to a joint meeting, to be held immediately after the expiry of the truce—very likely on November 13th. At this meeting, wages and conditions of employment are to be considered. There is no ground for supposing that these are other than early moves in the negotiations entailed by the expiry of the truce and by the serious position of the railway companies, or that any sudden crisis will arise. Nor does it follow that any questions that arise will not be settled by direct negotiation between the companies and the unions, without invoking the mediation of the National Wages Board instituted by the 1921 Act. The basic fact is that the railways have ceased to be a sheltered industry, and all parties to the discussion must be prepared to bear their share of the burdens thrust upon them, in common with other members of the community, by the prevailing trade depression.

European Stores Conference.—During the past week representatives of leading stores in nine European countries have been in conference at Harrods. This is the ninth in the series of international conferences to be held since the establishment three years ago of a scheme for the pooling of knowledge and experience among a group of departmental stores in different countries. This is the only group of its kind in existence, though, of course, there are in every country national associations of stores. The group of which Messrs Harrods, Ltd., is the British representative was founded under the auspices of the International Management Institute at Geneva, and includes the following firms:—France, Printemps; Belgium, Innovation; Holland, Byenkorf; Germany, Leonhard Tietz; Spain, El Siglo; Italy, Rinascente; Denmark, Magasin du Nord; Sweden, Nordiska Kompaniet. While giving consideration to general economic conditions, the

chief purpose of the tri-annual conferences is the exchange of practical knowledge and experience regarding methods of distribution, administration, stock-taking, book-keeping, display, advertising, collecting statistical information, etc. Conditions vary essentially in different countries, and a great department store is peculiarly dependent on a quick appreciation of local purchasing mentality; no attempt at collective action is made by the conference, which is purely a voluntary co-operative association, to each member of which it is left to draw from the mutual pool and capitalise the information offered in his own way. However, the existence of such an international pool of technical information marks a significant advance in the development of scientific distribution in Europe.

Railway Accidents in 1929.—The Ministry of Transport have lately issued their usual annual analysis of railway accidents to passengers, railway servants and "other persons (exclusive of trespassers and suicides)." On the whole, 1929 was a relatively fortunate year, for there was only one fatal train accident to passengers, namely, that at Ashchurch, when three passengers and one railwayman were killed. This contrasts very favourably with 1928, when—mainly owing to the Charfield and Darlington disasters—no less than 48 passengers lost their lives in accidents to trains. A complete examination of the returns, however, is less re-assuring, for in 1929 19 accidents in which trains were involved occurred, as against 20 in 1928 and 17 in 1927. It is difficult to resist the conclusion that the extremely light passenger casualty list of 1929 was, to some extent, a matter of luck, and this suspicion is strengthened by the fact that the toll levied last year upon railway servants was much the same as in 1928, and rather above the average of preceding years. If accidents of all kinds are taken into account, 1929 compares favourably with preceding years as regards fatalities, but unfavourably as regards injuries. Thus the year witnessed 417 deaths and 25,364 injuries, as against an annual average for 1918-27 of 470 deaths and 23,148 injuries. Admittedly, the majority of injuries were very slight, but in many cases the dividing line between whether or not an accident had a fatal termination must have been fortuitous. It follows that the main point of interest in the report is not so much the actual statistical details as the comments—all too brief—on the steps taken to prevent the recurrence of the accidents noted in the report. Here the Ministry's Inspecting Officer has a more encouraging tale to tell. The Committee on Automatic Train Control is about to report, and so it can be hoped that one fruitful cause of railway collisions will shortly be dealt with satisfactorily. As regards specific causes of individual accidents, in many cases definite recommendations were made by the Inspecting Officer and have since been acted upon. By far the vast majority of accidents, however, were the direct result of errors committed by the victims themselves. No automatic device can save the passenger who enters a train in motion, or the platelayer who goes about his work without taking the precautions already laid down in the companies' rules, and here the only remedy is better education of the passenger and worker. In short, while there is ground for hoping that constant vigilance and modern inventions are slowly but surely adding to the safety of the railways, there comes a point when the individual must be left to protect himself by the exercise of his own common sense.

Cost of Litigation.—In times of depression such as the present it is not surprising that the old question whether the cost of litigation is too high should have been raised afresh in business circles. The London Chamber of Commerce has been interesting itself closely in the question, and has prevailed upon the Lord Chancellor to receive a deputation. Lord Sankey, who, at the customary dinner to the judges at the Mansion House this year, expressed his sympathy with the action of the Chamber in calling attention to defects in our system of litigation, has now fixed November 6th as the date on which he will receive

the deputation. The basis of discussion will be a memorandum prepared by a committee of the London Chamber and circulated to various other representative bodies in the spring of this year. The memorandum has been widely discussed, and, while some of the further suggestions which have been put forward have been, in matters of detail, at variance with the London Chamber's proposals, the broad idea clearly is to simplify and shorten procedure and to economise both time and actual money expenditure. The establishment of the special procedure of the Commercial List in the King's Bench Division of the High Court and of a special "short cause" procedure in the Admiralty Division were, of course, moves in this direction. Technical rules of evidence are dispensed with, and decisions may be final and not subject to appeal. These arrangements have long been in operation, and apparently are now regarded as not sufficient. To the Admiralty procedure a new provision has just been added designed to enable the Court to act practically in the capacity of an arbitrator. This experiment may help to facilitate dispatch in the settlement of disputes, but meanwhile the London Chamber of Commerce is putting forward its proposals which would largely eliminate oral evidence, and in particular expensive expert evidence, and would also aim at simplifying and shortening the proceedings which precede the actual trial of a case. There is outstanding the further question of a Bill to assimilate proceedings involving the Crown to those in ordinary cases, and it would be interesting to know whether the Lord Chancellor can hold out hope of progress with this measure.

The Deep-Sea Fisheries.—The first-hand value of the wet fish landed by British and foreign fishing boats (including a proportion imported) in the third quarter of this year exceeded £6,000,000, and was rather less than in the corresponding period of last year. In England and Wales, as will be noted from the statistics given below, there was a substantial increase in the quantity landed by British-owned vessels while the aggregate sum realised was less, which would seem to indicate that demand failed to keep pace with supply. A summary of landings of British-caught wet fish for the September quarter, compiled from the returns of the Ministry of Fisheries, is as under:—

July-September.	Weight in Cwts.		Value.	
	1929.	1930.	1929.	1930.
British caught—				
England and Wales...	3,312,735	3,533,371	£ 3,396,461	£ 3,256,260
Scotland	3,075,470	2,358,699	1,822,437	1,602,673
Shellfish	...	...	116,562	104,879
Foreign landings.....	6,388,205	5,892,070	5,335,460	4,963,812
Imports	206,829	240,996	292,824	295,378
	274,111	244,979	818,493	813,254

The average value of British-caught wet fish was only 18s. 5d. per cwt. as compared with 20s. 6d. in the September quarter of last year. In Scotland there was a reduction in both volume and total value, though the average realised was higher, namely, 13s. 7d. per cwt. against 11s. 10d. per cwt. The figures for the nine months are as follows:—

January-September.	Weight in Cwts.		Value.	
	1929.	1930.	1929.	1930.
British caught—				
England and Wales...	8,710,562	9,584,047	£ 9,521,330	£ 9,543,719
Scotland	6,082,523	5,242,610	3,855,873	3,461,751
Shellfish	...	...	287,513	287,494
Foreign landings.....	14,793,085	14,826,657	13,668,716	13,292,964
Imports	1,086,079	1,251,384	846,377	895,006
	1,746,903	1,605,721	3,012,037	2,771,130

As a set-off against the imports from abroad we exported in the nine months 562,220 cwts. of wet fish, having a f.o.b. value of £778,865, as compared with 564,360 cwts., and £767,901 in the same period of last year. In addition we sent abroad fish cured or salted (chiefly herrings) to

the value of £3,549,788 against £4,154,151. Imports under this head were only £466,686, against £684,176. Imports of canned fish, however, were considerable and were valued at £2,888,775, as compared with £3,226,939. The British fishing industry is now about to make a bid in this direction. A large steamer is at present fitting out at Hull with a view to fishing for crayfish off the Coast of Africa. The fish will be caught by a fleet of small boats attached to the parent ship which has vats on board for boiling the fish, and facilities for canning it ready for market.

Stock Exchange — Foreign Trade — Gold Imports —
Credit — Industry — Prices — Profits.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 21.

WHILE the country at large is preparing for a winter of even greater unemployment than that which existed last year, Wall Street is finding some relief from the heavy liquidation of securities. Markets have shown no convincing rallying power, but the volume of selling has declined and the tone is steadier for the moment on intelligence that, pending eventual liquidation, financial aid has been extended to a number of Street houses. After all, the recent weakness in security markets, inducing a fresh wave of pessimism, is a consequence of the boom of last year rather than a reflection of an unfavourable turn in the business situation or of a keener realisation of the sort of business we are having. A large number of Stock Exchange firms went too far beyond their regular commission business by using their capital for stock promotions, the formation of the so-called investment trusts, the underwriting of new securities, and much of the other business usually performed by the securities affiliations of the banks or by houses of issue which concentrated on that sort of operation.

Trade statistics do not disclose or forecast any decided improvement. Foreign trade was larger in September than in the preceding month, but the usual large gains for the beginning of the autumn were not there. Merchandise exports of \$318,000,000 were \$18,000,000 higher than for August, but more than a third lower than for last September. Imports of \$227,000,000 were \$9,000,000 larger than in August, but also a third less than September, 1929. The usual increase of September exports over August is \$40,000,000 to \$60,000,000. For the nine months export trade is nearly \$1,000,000,000 less than in the corresponding period of 1929, and is the smallest since the post-war depression, but the export balance of \$558,000,000 is larger than that of recent years.

"Favourable" merchandise trade has been accompanied by a large gold inflow. The excess of imports for the nine months amounts to \$185,815,000. To this must be added a net gain in release from earmark at the Federal Reserve Bank of \$20,492,000. The Federal Reserve Bank has published no figures on gold held under earmark for foreign account since the end of 1928. At that time the amount was \$79,765,000. Periodic reports are made on changes, a recapitulation of which shows the figure above mentioned, and the amount now held under earmark is \$114,673,000. Considerable fresh supplies of gold are expected during the next few weeks. About \$18,000,000 is known to be under way or near consignment from South America, and some \$12,000,000 is understood to be ready for shipment from Japan, while no large outward shipments are in sight.

Because there has been no need for it the year's increase in gold supply has not been made the basis of credit expansion. Federal Reserve Bank credit outstanding is slightly above \$1,000,000,000, or 371

millions lower than a year ago. Loans of reporting member banks in leading cities are 533 millions below last year's level, though investments have risen by 1,144 millions. These reporting banks comprise approximately 40 per cent. of the country's banking resources. Federal Reserve Bank policy continues to be one of maintaining ease in the money markets without attempting to pump fresh credit into circulation. For the third consecutive week commercial loans by member banks have risen, the increase amounting to 56 millions. In the same period liquidation of loans backed by stock and bond collateral has amounted to 250 millions. Member bank borrowings at the Reserve rose nearly 40 millions for the week of October 15th, reflecting the mid-month settlements, but this bulge was partially offset by a drop of 25 millions in Reserve holdings of bankers' bills. The reserve ratio stood at 80.9 per cent., against 73.1 per cent. a year ago. Circulation, which usually begins to rise from the middle of August, has this year risen only 40 millions, and this, together with the gold imports, has made credit so redundant that the banks have been forced into the bond market on a large scale.

The new issue market was somewhat taken aback this week by the reception of the City of New York's corporate stock issue. Bids had been asked to cover an issue of \$75 millions, but the banks declined to submit bids for that sum, which was subsequently cut to \$50 millions. Only one large institution, the Chase Bank, made a bid for the entire amount. Reluctance of the other large banks to bid and the absence of bids from the small houses was due partly to the recent weakness in the municipal bond market. Dealers had over-bought the market in anticipation of larger demand than developed, while numerous houses have been compelled to dispose of bonds to support shares which they had sponsored. The incident does not reflect any change in the fundamental ease of the money market or in the robustness of the bond market.

Motor production in September, at 230,888 vehicles for the United States and Canada, was slightly below that of August and 46 per cent. below that of September last year. The totals, furnished by the Department of Commerce, correspond closely to recent estimates of the National Automobile Chamber of Commerce. The steel industry continues to recede, the operating rate for all mills now averaging about 55 per cent. of capacity. Railroad traffic is rising slowly, but is far below normal for this season. Commodity prices, on the other hand, are steadier. The Bureau of Labour statistics index stands at 84.2 for September, compared with 84 in August and 97.5 a year ago. Farm prices were up $\frac{1}{2}$ per cent. in spite of weakness in grains and cotton, the gains occurring in the livestock, egg and garden produce groups. Foods as a whole were up nearly $2\frac{1}{2}$ per cent. The changes by groups follow:—

Groups.	Sept. 1929.	Aug. 1930.	Sept. 1930.
Farm products	106.6	84.9	85.3
Foods	103.2	87.1	89.2
Hides and leather products	110.8	98.9	99.1
Textile products	93.1	77.7	75.5
Fuel and lighting materials	81.1	75.4	76.3
Metals and metal products.....	104.1	92.7	91.8
Building materials	97.5	87.4	86.4
Chemicals and drugs	93.9	87.3	86.6
House furnishing goods	97.1	95.9	95.4
Miscellaneous	81.7	71.2	69.7
Raw materials	98.9	81.8	82.1
Semi-manufactured articles	97.6	78.1	76.5
Finished products	97.0	86.4	86.8
All commodities	97.5	84.0	84.2

Corporation profits for the third quarter are about what was expected. The first fifty industrial concerns show net earnings about 34 per cent. below those for the corresponding three months of 1929, whereas in the second quarter the average drop was 35 per cent. Since earnings last year had begun to fall in the third quarter, the record indicates that this year profits declined during the summer and early autumn, making allowance for the season. As more and more companies report current earnings at less than present annual dividend rates, appre-

hensions of reductions are kept alive and anxiety among investors is increased by the continual hacking away of rates. At the same time, the yields on the soundest stocks with assured dividends are rising to a point at which they should offer increasing competition with the capital market.

It can be reliably stated that no conferences have been held by bankers or Government officials here on the question of a moratorium for foreign debt payments or German reparations. Dr. Schacht is now touring the country, delivering a series of addresses of which the theme is Germany's willingness but inability to meet the payments contemplated under the Young Plan and a plea for revision. However, in responsible quarters much more attention is being given to the strengthening of the present Berlin Government than to Dr. Schacht's ideas.

FRANCE.

Politics — Frontier Defence — Railway Finance.

(FROM OUR CORRESPONDENT.)

PARIS, October 29.

PARLIAMENT is to reopen on Tuesday, and there is every prospect of an unusually lively session. Socialists and Socialist Radicals both appear determined to spare no effort to bring about the overthrow of M. Tardieu, but exactly what kind of Ministry would follow the present Cabinet remains a distinctly open question.

A good many leading Radicals are generally believed to be now quite prepared to shake off all pretence of attempting to collaborate with the Socialists and to support a Cabinet of the Centre—even, possibly, with M. Tardieu as its leader—provided it were sufficiently strong to be able to exist without the support of the Louis Marin Nationalists. The key to the whole situation lies in the fact that, as old parliamentary hands are convinced, from careful analysis of the present Chamber, there are three possible majorities in the present House: (1) a majority composed of the Centre and the Right, which would comprise 327 units; (2) one consisting of the Centre and the Left, numbering 354 units and comprising the Socialist Radicals, but not the Socialists; and (3) a combination of the Left (the Painlevé-Briandists, the Radical Left, and the Socialist Radicals) and the Extreme Left (represented by the Socialists), numbering 322 deputies. M. Blum, who a year ago scouted the possibility of the second of these groupings, has now apparently, since the Grenoble Radical Congress, changed his opinion on this point; this may or may not be significant. M. Tardieu maintains an entirely satisfied attitude, notwithstanding all the shouting that is going on as to his "pending overthrow." He has reason to be content with his present majority, failing one composed of parties further to the Centre, as to which his attitude towards M. Herriot and his friends continues to be that of the immortal Barkis—with the difference that he insists that he himself, and not his potential Socialistic Radical associates, should have the deciding voice. The dark horse of the immediate situation is M. Briand, who is still on the sick list. The date of the important debate on the foreign situation, which usually opens the session and which on this occasion is expected in some quarters to result in a surprise, has consequently not yet been fixed.

M. Tardieu and the Ministers for the Budget, Finance and other departments appeared last week before the Finance Commission of the Chamber and were heard at length on various salient factors in the country's financial situation. Among the more important subjects on which information was asked by the Commission was the present situation of the national aviation defences, about the defective development of which there is a good deal of nervousness at present; the situation of the railways; and the Government's programme in regard to the pending "massive" conversions of war debt issues. On this last point, M. Reynaud, the Finance Minister, intimated that the Government would be the sole judge of the moment when it considered that the indispensable technical conditions for conversion had materialised, while he very

naturally evaded a reply to questions whether Parliament would be consulted before the conversion plans are applied. The question of the creation of a Ministry of Transport was also briefly discussed. The statements made by the various Ministers were, as usual, regarded as private.

With a view, apparently, to allaying the alarm that has been felt throughout the country since the German general elections, and to a much less important degree by the bellicose declarations of M. Mussolini, the Government has allowed the publication in the *Matin* of a remarkable series of articles setting forth in some detail the comprehensive plan of general reorganisation of the German and Italian frontiers that has been in course of completion during the past three or four years. The articles show that these two frontiers have been enormously strengthened by an intense and entirely modern system of defences, based closely on experiences during the last war. The old method of huge and more or less isolated fortresses at the various strategic points has been replaced by an entirely new system of underground defences, all linked up together and provided with vast subterranean shelters for the massing of first-line troops, the whole constituting an impregnable and more or less continuous line of strongholds, impervious to heavy artillery or aerial attack. Briefly put, the new French frontier defences may be described as a reconstitution, in permanent form—mostly in reinforced concrete, and deep underground—of the Allied defensive line on the Western Front by which the enemy was held at bay for nearly four years.

The financial situation of the railways appears from the details given in statements made before the Finance Commission to be much more serious than public opinion has hitherto realised. All the lines, both State and private, have been worked since 1921 under a National Council, the basic factor of the financial organisation being a common fund, contributed to annually by the paying companies, for the benefit of the lines showing deficits. With the application of the new system, the Government guarantee to the shareholders ceased, and was replaced by conventions under which the Government undertakes to come to the rescue in time of need. This, the Bourse quotations show, has been accepted as of equal value to a direct guarantee. The new system has so far worked well. The lines have been developed to a point never before reached, and have responded satisfactorily to the ever-increasing demands of the nation. The heavy annual deficit occasioned by the War (which in 1921 alone amounted to over £16,000,000) was transformed into a net profit of over £4,500,000 in 1926. Last year the profit was £2,400,000. Unfortunately, although the gross profit on working has risen from £2,936,000 in 1922 to £27,000,000 in 1929, increased capital charges and a still more rapid rise in the cost of efficient operating have nullified the benefits from larger receipts. The current year's working, it is now known, will result in a total deficit of between £12,500,000 and £13,500,000 (of which between £8,000,000 and £9,000,000 is accounted for by increased labour cost, owing to last year's substantial rise in the scales of pay). For 1931, when the new wage scales and national insurance and other obligations will come fully into effect, a total deficit of £25,000,000 is anticipated.

The real cause of this situation is that, although wages and other working costs have been raised to correspond to the new value of the franc, fares and goods rates have not. In view of the loud outcry already existing as to the "enormous rise" in railway charges, from the point of view of a public which persists in refusing to take into account the drop of the franc to one-fifth of its old value, no real increase in fares and goods rates is thinkable. Ministers explained to the Finance Commission that the alternatives favoured are a sufficient advance by the State to the railway common fund or an adequate issue of railway bonds, the interest and redemption service of which shall be a charge on the State. Another method suggested is the suppression of the transport tax, so far as the railway companies are concerned, leaving fares and goods rates at the present level, so that real increases would not be noticed by the public.

GERMANY.

Grain Duties — Demands for Other Agricultural Duties — Commercial Policy — Reich and State Politics.

(FROM OUR CORRESPONDENT.)

BERLIN, October 28.

THE Cabinet has raised the wheat duty from 185 Reichsmarks to 250 Reichsmarks per ton, and the duty on barley from 150 Reichsmarks to 200 Reichsmarks. No decision of the Reichstag was needed, as since last spring the Government has been legally empowered to raise duties by decree. Since this last rise German grain prices have reached a level which would have been regarded a year ago as fantastic. The world price of wheat is only about 110 Reichsmarks; the German duty alone amounts to more than twice that. Even the previous duties were so far prohibitive that only a relatively small quantity of foreign wheat for blending purposes was imported, and this can hardly be reduced very much further even by the new rates.

The raising of the barley duty is primarily intended to induce an extended use of rye and potatoes as swine fodder, but it is doubtful if this will be successful, for as the price of pigs is plainly approaching a record low level, the consumption of fodder is bound to decline, and as barley has great technical advantages there is no certainty that a rise in its price will benefit the competitive products to any extent. The Government therefore is only achieving a very doubtful measure of protection to agriculture while preparing serious political difficulties for itself.

The Government programme includes an attempt at a reduction of prices and wages. The very first important move in that direction produced the costly strike of the Berlin metal workers, which has now lasted a fortnight. The unions reiterate that they will only tolerate a reduction of wages when the Government has brought about a perceptible fall in the cost of living. They will not trust to promises, but insist on accomplished facts, and have no faith in index numbers, which show a fall of 7 $\frac{1}{2}$ points since the 1929 maximum, pointing out that falling prices of the means of production are only handed on very slowly, and that the prices of commodities of general consumption alone are relevant to wages policy. These, however, consist largely of foodstuffs, and if the Government now raises the cost of living far above the level in other countries by these immense tariffs, it will render impossible its task of reducing prices and wages to the world level.

The Cabinet has, of course, given due weight to this serious consideration, and its decision to raise the grain duties notwithstanding must be attributed to the fact that the agricultural situation in the Eastern provinces threatens to grow substantially worse. The price of rye is in the neighbourhood of 140 Reichsmarks per ton, about 20 marks below the pre-war price. Until the elections the Food Minister had maintained the spot price at 187 Reichsmarks by State purchases, and the futures prices at an even higher level. In order to make possible this policy he had exhorted the farmers to bring as little as possible to market at that price. Those who followed his advice have lost heavily, and the people who gained are the section of the trade which speculated from the beginning on the collapse of valorisation. It is therefore easy to understand the tactical considerations which are inspiring the desperate attempts of the Food Minister and the Cabinet to prevent a further collapse of rye prices and to secure in the satisfaction of the wheat growers some offset to the disappointment of the producers of rye.

From the purely economic point of view, however, there is ground for considerable anxiety. In addition to the fall in the price of rye, there has been a glut of potatoes following an exceptional crop, while a very substantial source of demand for potatoes, that of the distilleries, has shrunk considerably owing to the decline in the use of potato spirit. The Government brandy monopoly will this year allow the distilleries to produce to 70 per cent. of their capacity, and will take over the resultant output, whereas last year the proportion was 80 per cent., and in previous years has been 100 to 130 per cent. Even with a 70 per

cent. quota the monopoly will have to contend with great marketing difficulties, and it is proposed to attempt some mitigation of these by a legal compulsion to mix potato spirit with motor spirit. The consumption of potatoes as well as of rye is suffering from the decline in pig raising.

Germany is not likely to be involved in international political difficulties by her new grain tariff itself, but now that fodder grains are to be so much dearer in Germany than in the world market the Government will have to grant new duties to the cattle-raisers. This will touch German commercial policy at its most sensitive point—doubly sensitive now in view of the energetic attempts of the States of Eastern Europe to improve by political means their position in the Continental European markets, of which the German market is the most important. In the interest of German industrial exports it is urgently necessary to build up a system of stable tariff relations, on a basis of moderate duties, with those countries whose principal exports are butter, cattle and eggs. Roumania also exports a considerable quantity of wheat, and so is directly affected by the new scale of German grain duties.

The agrarian groups, however, show little disposition to take account of this consideration. The action the Government has so far taken, in connection with grain duties, meets only a small part of their requirements. The Agrarian Party, to which the Food Minister belongs, brought up in the short meeting of the Reichstag a set of new proposals as to commercial policy. It would like the Government to be empowered to raise by decree all duties on agricultural products, not only those on grain, and all treaty obligations affecting duties on agricultural products to be denounced. In place of the present more moderate requirements it would like to see a strict regulation that all wheat flour sold should contain 90 per cent. of home-grown grain, and it would like, further, a compulsory admixture of rye and potato flour. The inclusion in trade treaties of the most-favoured-nation clause would, according to this programme, be strictly forbidden except where agricultural products were expressly excluded from its scope. These proposals will presumably not be carried as they stand, but the farmers will be able to exercise extremely strong pressure on the Government when the Reichstag reassembles in December. The chances of the success of this new protectionist movement are increased by the fact that Germany feels that the rest of the world is shutting itself off more and more, so that there is no hope of maintaining the so far satisfactory development of German exports. Particular stress is laid, in support of this argument, upon the movement for closer tariff union within the British Empire.

The Prime Minister of Prussia has called for the resignation of Professor Waentig, formerly Minister of the Interior, and replaced him by Herr Severing, a former Reich Minister for the Interior. This does not mean any change in the political composition of the Prussian Cabinet for both Ministers belong to the Social Democratic Party. Nevertheless this appointment has attracted great attention and is generally regarded as a strengthening of Social Democratic influence, as, indeed, Herr Braun presumably intended it to be. By nominating the strongest available person to this office, and, consequently, to the command of the Prussian police, he intended to make it clear that he proposed to counter-balance the weakening of the constitutional parties in Parliament, which followed the Reichstag election, by an all the more energetic use of the forces at the disposal of the Government for the protection of the Republic. In this he was evidently supported by his Democratic and Catholic colleagues, for, ruthlessly as Herr Braun is accustomed to dealing with his opponents, he is exceedingly careful to keep in line with his allies, especially those of the Catholic Party, so that Herr Severing's appointment must have received the sanction of the latter. As the Chancellor of the Reich belongs to the Catholic Centre, the support by the Prussian Ministers of the Centre of this powerful gesture of Herr Braun might influence the policy of the Reich. Another member of the Centre Party, the Reich Minister of the Interior, Dr. Wirth, is showing himself hostile to the Brunswick Government

because it includes a National Socialist. In the second largest of the States, Bavaria, a *rapprochement* is being brought about, after years of bitter enmity, between the Bavarian People's Party, which is close to the Centre, and the Social Democrats. Signs are thus multiplying, even though there is no definite evidence, that the December meeting of the Reichstag may be characterised by a *rapprochement* between the Catholic groups and the Social Democrats.

ITALY.

Bonifiche Ferraresi — Warnings by Signor Mussolini — Bourse — Increasing Investment by Banks — Bank of Italy.

(FROM OUR CORRESPONDENT.)

TURIN, October 13.

THE Società delle Bonifiche Ferraresi affair discussed in my last letter has had a sequel. Several creditors, including a few important banks, opposed the sentence of the tribunal of Ferrara initiating the procedure of composition with creditors (*concordato preventivo*), alleging that the tribunal having jurisdiction over the case was that of Turin, where the company had its legal seat. The issue has been brought to-day before the Court of Cassation, Italy's highest court. In the meanwhile, other serious disclosures have been made. The chairman of the biggest Italian agricultural company, the Istituto dei Fondi Rustici, denounced to the magistrate two of its directors, Signor Anselmi, the managing director, and Signor Clerici, as guilty of having deflected to their private benefit a sum of seven million lire. The dividend was therefore passed and Signor Anselmi arrested. Signor Clerici, who was also a managing director of several other joint-stock companies, mostly in the hotel line, managed to escape. The fall of the Bonifiche Ferraresi threatened to entail the collapse of a co-operative bank (Banca del Piccolo Credito Novarese), which is said to have lent a sum of 50 million lire to the Bonifiche. To avoid panic spreading among 81,000 small depositors (the bank had at the end of 1929 166.6 million lire deposits and 235 millions due to correspondents), a merger was hurriedly arranged with the Banca Popolare di Novara, a big local bank with 70.6 million lire capital, 67.1 millions reserves, 536.9 millions deposits, and 788.8 millions due to correspondents. Thus the panic was stopped in time.

In the meantime, in his speech inaugurating the new Corporations Council, Signor Mussolini spoke strongly on the subject of bad finance. The Government have aided the reorganisation of the Cosulich Navigation Company, and allied concerns, of the Southern Cotton Company (Cotonerie Meridionali), a big firm with over 10,000 hands, the merger of some Catholic banks and of other banks; but were not prepared to lend their aid indiscriminately. Bad financiers should and would be severely punished. Every reader was able to fit the names to his very transparent allusions. A few days after the speech several directors of a Piedmontese bank, the Crédit Valdôtain, were sent to prison. A short *communiqué* of the official Stefani Agency announced that Signor Gualino, the former president of the world-wide rayon concern Snia Viscosa, had settled his debts with the Banca Agricola Italiana of Turin. This bank had, as of December 31, 1929, deposits of 646.7 million lire. It was rumoured that from 250 to 300 millions out of these deposits had been loaned to Signor Gualino and his many affiliated companies. Signor Gualino, until yesterday a big man with artistic leanings (he collected a wonderful gallery of paintings and subsidised the Turin Comedy Theatre), was obliged to hand over to the Bank of Italy his investments in industrial companies, for instance, in the Turin chocolate combine "Unica," his racing stable, landed property, picture gallery, etc. Through this settlement the Banca Agricola Italiana will

be able to meet the demands of its depositors and to turn its banking activity to the agricultural field, from which its name and most of its deposits are derived.

A pointed commentary on Signor Mussolini's warnings can also be found in the conclusion of a libel action which Signor Belloni, a former Mayor of Milan, brought before the Cremona tribunal against Signor Farinacci, a former secretary-general of the Fascist Party. Signor Farinacci charged Signor Belloni with having accepted, during his tenure of the mayoralty, bribes in connection with the American loan by Dillon, Read and Company to the Milan municipality, of having received a regular yearly fee of 250,000 lire (£2,700) from the Credito Italiano, etc. The Court, considering that the charges had been substantiated, acquitted Signor Farinacci. As a consequence, Signor Belloni was expelled from the Fascist Party.

It is no wonder that these ominous events, following in quick succession, together with the general unsettled state of the foreign stock exchanges and the wholesale crumbling of commodity prices, had a very bad influence on the bourses. Not a single security escaped the bears' attack. The general index of share prices published by the Milan Economic Council (basis 100 = December, 1925), which at the end of 1927, 1928 and 1929 was respectively 80.3, 88.3 and 81.2, and rose to 84.4 on March 1, 1930, fell to 77.2 on August 1st, to 73.8 on September 27th and to 27.8 on October 4th. The next index will be still lower. The only buyers left are the banks, their subsidiary holding companies and the interested groups.

How far this process of buying-in of joint-stock shares and debentures by other companies has gone may be gauged by some interesting figures contained in the twelfth issue of the "Notizie Statistiche" published formerly by the Credito Italiano and now by the Joint-Stock Companies Association. At the end of 1929 the 4,181 companies included in the statistics had a share capital of 42,555.9 million lire and debentures issued to the amount of 5,621.7 million lire. On the assets side, investments in securities total 15,454.9 million lire. This means much interchanging of securities between companies. The principal items in the balance sheets of 269 reporting banks and financial holding companies may be summarised as follows at the end of 1929:—

(Million Lire.)			
LIABILITIES.		ASSETS.	
Share capital	6,636.8	Cash and discounts	17,549.8
Debentures	841.4	Advances on securities and others.....	3,554.2
Total reserves and carry-forward.....	1,411.6	Investments (securities and participations).....	11,148.1
Deposits	9,791.2	Other debtors	14,107.4
Correspondent creditors	22,411.9		
Circular cheques	773.1		
Creditors	4,417.1		

It must be observed that Italian banks, like German banks, have always been in a much closer relation with industry than British banks. Current deposits appear to be very well protected by cash and discounts. During the present year the policy of the banks was one of reducing advances and improving the liquidity of their situation. Nevertheless, the heavy items of investments and other debtors require very careful handling.

Intervention by the Bank of Italy in aid of distressed industrial concerns and banks has so far left no trace on its balance sheet. On September 20, 1930, discounts of the Bank of Italy totalled 2,752.3 million lire, against 3,699.5 million lire at the corresponding date of 1929 and 2,997.8 million lire in 1928. The figures for advances were 1,301.5, 1,490.6 and 1,090.8 million lire on September 20, 1928, 1929 and 1930. On the same dates, the credit of the bank against the Istituto di Liquidazioni, a subsidiary body created for the winding-up of affairs of the rescued concerns, was respectively 1,237.1, 897.5 and 630.5 million lire. The position of the bank appears, therefore, to be steadily improving.

From the decline in the figures quoted above, it can only be inferred that assistance to concerns in difficulties is largely offset by decreases in current operations. This is to be expected during a period of falling prices and

restricted turnover. As long as Governor Stringher is at the helm of the Bank of Italy the public is confident that aid is given only against very strong collateral. Twice during his long tenure of office has Signor Stringher borne the brunt of bad times, and twice has the Bank of Italy emerged stronger from the struggle. Let us hope that his banking career will be crowned with a third success.

HUNGARY.

Politics — Monsieur Flandin in Budapest — Agriculture — Credit — Trade.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 13.

PARLIAMENT will reassemble after the summer recess on October 20th. Domestic politics are mainly centred on economic problems. The troublesome developments in the sphere of German and Austrian internal politics had practically no effect in Hungary, where Count Bethlen's Government in its tenth year of administration is as stable as ever. Discontent is naturally influencing Hungarian politics owing to the depressed economic conditions, but in spite of the passionate outbursts of the Opposition, agrarians, industrialists and bankers equally realise that no change of Government would improve the economic and financial prospects. Count Bethlen did well to remind the country at the beginning of the political season that the Government cannot produce prosperity by legislation, and that difficulties in the economic and financial situation brought about by the world crisis must be faced in Hungary as elsewhere. The Prime Minister declared that Hungary is willing to co-operate with the neighbouring agrarian countries to improve the agricultural situation because only concerted action of the interested States can bring relief to the farmers. Negotiations with Roumania and Yugoslavia have been going on for some months without much practical result, and the resolutions of the Warsaw Conference of the Central European States, to which Hungary was a party, did not amount, for the time being, to very much more than pious hopes.

The world-wide slump in the price of cereals is keenly felt in Hungary, where the farmers are suffering from American and Russian competition. Wheat prices have fallen below the Chicago quotations, and the export of the cereal surplus is hampered by the high tariffs of the neighbouring industrial countries. It is of paramount importance to the agrarian interests of Hungary as well as of Roumania and Yugoslavia that they should arrive at a definite agreement as to how to safeguard their interests against Austria, Czechoslovakia and Germany—States which are the natural outlets for the surplus wheat of the Danubian countries. Nothing but concerted bargaining can induce the industrial States to give preferential treatments to cereals and livestock.

The money market is easy. The rise of the German Bank rate did not affect the market. Short-term foreign funds are abundantly offered, but owing to the business depression there is not much demand for them. Owing to the scarcity of demand the rate for prime commercial paper is as low as 5½ per cent., that is to say a trifle lower than the official discount rate of the National Bank, which is 5½ per cent. The outstanding event of the money market is that for the first time since the war mortgage bonds have been successfully issued in Switzerland. Although the amount issued, Swiss fr 15,000,000, is comparatively small, with a rate of interest of 7 per cent. and an issue price of 98, the Hungarian Commercial Bank of Pest may undoubtedly be content with its transaction. On the other hand it is a great pity that negotiations for the centralisation of the mortgage loan issues in London and in New York with the Guaranty Trust Company of New York and Hambros Bank failed after several months of discussion. It is to be hoped that the centralisation scheme of mortgage issues, as far as New York and London are concerned, will not be abandoned, for the piece-meal borrowing of Hungarian financial institutions is against the interests of the country.

Foreign trade returns are very satisfactory. In the first eight months of 1930 imports totalled 550 million pengös, and exports amounted to 591.7 million pengös, leaving an export surplus of 41.7 million pengös as against an adverse balance of 149.3 million pengös in the corresponding period of 1929. The improvement in exports is mainly due to the increased export of livestock. As crops were not so favourable this year as in 1929, the export surplus of cereals will be considerably lower in the following months than it was in the previous year. The fall in imports is due to the diminished purchasing power of the population owing to the low agricultural prices. As foreign borrowing was very moderate in 1930, there was no stimulus to the importation of foreign commodities.

The prospects for the winter are not very bright. Unemployment is likely to increase, as there is little hope for an economic recovery so long as agricultural prices do not improve. The Government is anxious to help the depressed industries and the unemployed by placing contracts for public works, such as road building, railway improvements, electrical implements and housing. The Stock Exchange is dull, and quotations in all categories have declined, the chief sufferers being industrials and collieries.

SOUTH AFRICA.

Production — Swaziland — Railway Finance — Industrial Census.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, September 17.

THE gold-mining industry is once more to come under the official microscope; yet another commission is to "inquire into and report upon the mining of low-grade ore on the Witwatersrand, and matters in connection therewith." The formal business of the Commission has just been opened, and in view of the generality of the terms of reference the proceedings may easily be lengthy. It is rather freely commented, inside and outside the industry itself, that there can be very little new information to be got on the subject. Apart from purely technical difficulties with which the mines' officials are the best people to deal, the industry has to contend with an unwise labour policy, a tariff policy which is astounding for a country of small population and purely primary resources, and a level of real wages to skilled Europeans which exceeds both the producing capacity of the country and their economic value in relation to the rest of the community.

Almost at the same time as the gazetting of the Commission, there appeared the new volume of the Official Year Book of the Union of South Africa, containing a fresh estimate by the Government Mining Engineer of the future gold production of the Union. The statement refers explicitly to the Union, but appears to deal with the Witwatersrand—a point of no practical importance at present, although the distinction may be vital in years to come. The ore deposits in various parts of the Transvaal are but vaguely known so far. The estimate allows for an output of £43,500,000 in 1930, £39,000,000 in 1935, £25,500,000 in 1940, £15,500,000 in 1945 and £10,000,000 in 1949. The estimate is based on present costs, and assumes that six new mines (three on the East Rand and three on the West Rand) will begin crushing between 1935 and 1940. The Government Mining Engineer is careful to point out that the estimate depends for validity on the maintenance of present conditions. This is a severe but wholly unavoidable qualification of the value of the estimate.

In this connection the native labour position is by no means free from anxiety. At present the unusually large number of British South African natives available has obscured the effect of the operation of the 1928 Convention with the Government of Mozambique. The number of East Coast natives employed on gold mines has fallen from 91,034 in September, 1928, to 74,913 at August 31st, and when the British South African numbers return to

normal the position is likely to become serious. The Government are apparently not disposed to lift the ban on tropical labour for two reasons: they propose to exert pressure on natives who by preference or good fortune abstain from working in mines, farms or industries; and they are dallying with the idea of compelling employers to engage unemployed whites in industry and on mine surface work.

The question of the incorporation of Swaziland in the Union has arisen in an unexpected manner. The tobacco growers of Southern Swaziland have had difficulties—like growers elsewhere—in making satisfactory arrangements for the disposal of their crops. In particular, the Union Government, harried by its own tobacco growers, has asked for an agreement excluding tobacco from the free trade arrangements between the territories, and suggesting that Swaziland growers should enter the Union co-operative sales agencies. At a meeting at Hlatikulu, in southern Swaziland, the tobacco growers asked that in certain circumstances (including these complications in the tobacco trade), the Prime Ministers of Great Britain and of the Union should discuss terms of incorporation. The northern Swaziland Europeans are strongly opposed to incorporation at the present time. One extraordinary result of the position was that the Governor-General, on his last official visit to Mbabane, was presented with two official addresses of welcome from the respective sections. Friends of the natives and the natives themselves are, of course, strongly opposed to incorporation, whilst the Union Government would almost certainly welcome the idea.

The financial position of the South African Railway Administration is causing some alarm in official quarters. The figures for the first few months of the current financial year (from April 1st) show a heavy decline in revenue, and the deficit on working for the months of April, May and June approaches £500,000. For this there are various reasons—the depression in agriculture and trade generally, the amount of high-rate traffic which now goes by motor lorry, and the employment of European unskilled labour—the cost of which should, of course, be charged to consolidated revenue and not to the railways. One of the proposed remedies is the curtailment of "local allowances" in the interior, which railway servants are to share with servants of other Government departments. Although annoying to the officials concerned, some action of this sort has become inevitable. The local allowance system is an arrangement, long outworn, originally designed to counteract the high living costs which ruled in the interior of South Africa many years ago. Coastal costs have increased much more than others; the cost-of-living index figures town by town in relation to pre-war levels vary almost inversely with the distance from the coast. Had the Government found itself in a position to afford increases, the policy might well have been to level up the coastal salaries and consolidate the allowances. The scale of salaries in Government departments is hardly sufficient to attract to the service a fair proportion of able or outstanding employees. In present circumstances, however, the Government have retained the local allowance principle and reduced the up-country allowances.

The preliminary report of the industrial census for the year 1928-29 shows a continued advance in the output of industry. The total declared value of land, buildings and plant is now £65,500,000. Employees number 89,236 Europeans and 217,660 of other races, and their earnings amount to £19,630,000 for the former and £6,916,000 for the latter. The value of materials used was £59,000,000 and the value added to materials £54,500,000. These figures all include Government establishments. It may be mentioned in connection with our industrial progress that, at the recent Congress of the Federated Chamber of Industries, the Acting Prime Minister, Dr. Malan, uttered a warning in regard to the continued demands for further protection. He and some other speakers also dwelt on the wide dissemination and small scale of individual establishments in similar trades.

JAPAN.

Money Market — Agriculture — Crops — Foreign Trade — Prices.

(FROM OUR CORRESPONDENT.)

Tokyo, October 10.

ON Tuesday the Bank of Japan lowered its official minimum rate to 5.11 per cent. from 5.48 per cent., at which it had stood since October 9, 1927. The announcement came as a surprise, since the immediate monetary outlook is one of stringency rather than ease in view of the outflow of gold and the approach of winter. The court of the bank is understood to have thought it advisable to do something to relieve the growing apprehension about year-end negotiation in view of a further sharp fall in the price of rice and other commodities, the recent substantial depreciation in Japanese funds, the renewed slump in the stock market, and a continuous shrinkage in foreign trade. Though the lower Bank rate was generally welcomed, it has failed to inspire confidence, and a recovery in the stock and securities market has proved short-lived. The gloom that hangs over the business atmosphere remains undisputed.

The most disquieting feature at the moment is a further heavy fall of rice prices upon the official forecast of a bumper crop, which is accentuating still more the dire distress under which the agricultural districts are labouring. Rice is now quoted at around 15 yen per koku, or about 12 yen below the mean price during last year, and is the lowest since 1917. The farmers' loss of income from rice at the ruling price is roughly estimated at 350 million yen in comparison with 1929, together with a loss of 313 millions from cocoon. Such a substantial reduction in the purchasing power of the farming population, which represents the bulk of the nation, is a factor that is certainly operating to retard an early revival of trade. The Rice Board is going to buy the surplus on the one hand and try to market abroad part of its stock. The export of rice in any large quantity is a novel experiment in this country.

The Department of Agriculture and Forestry's forecasts of the rice crop for the country as of September 20th, made public on October 2nd, placed the year's crop at 66,867,000 koku, a heavy increase of 7,314,000 koku (+ 12.3 per cent.) upon last year's actual yield and 7,416,000 (+ 12.5 per cent.) above the five years' average. The Korean crop also promises remarkably well, and is put at 19,296,000 koku, or an increase of 40.8 per cent. upon the actual yield of 1929. The wheat, however, has been poor this year. The actual yield of wheat (except that of Hokkaido) totalled 18,952,000 koku, a decrease of 1,509,000 koku (- 7.4 per cent.) as against last year, and is 2,226,000 koku (- 10.5 per cent.) below the quinquennial average.

According to a report of the same Department the output of spring cocoon totalled 56,084,000 kamme, an increase of 5,489,000 kamme (+ 11 per cent.) against last year, but its value was estimated at 210,288,000 yen, disclosing a marked decline of 144,403,000 yen (- 41 per cent.). The estimated crop of summer and autumn cocoon was put at 45,797,000 kamme, a decrease of 5,701,000 kamme (- 11 per cent.) upon the actual output of 1929. The combined cocoon output for the year amounts to 101,881,000 kamme, as compared with 101,733,000 kamme for last year, the gain in the spring crop being nearly offset by the loss in the summer and autumn crops.

The foreign trade figures for September record no improvement in trading conditions. Both imports and exports have declined heavily as compared with a year ago, imports falling in value by 42.9 million yen, or 31.7 per cent., and exports by 60 millions, or 31 per cent. The shrinkage is more conspicuous in the case of staples: imports of raw cotton fell by 71.7 per cent., iron and steel by 59 per cent., and machinery by 35.6 per cent., while exports of raw silk decreased by 36.3 per cent. and cotton manufactures by 47 per cent. There was, however,

a small but welcome increase in imports of raw wool and in exports of rayon products.

The downward movement of commodity prices was again accelerated last month. Following the fall of 0.6 per cent. in August, the Bank of Japan's wholesale index number for September registered a further sharp drop of 2.4 per cent. on the month, and is now 21.2 per cent. lower than a year ago.

Letters to the Editor.

A POLICY FOR INVESTORS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In view of the depression which has been sweeping the commercial and stock markets of the world, it would appear opportune to survey the underlying features of the present economic stock market position.

Statistical analysis suggests that English business is now well advanced in the "collapse" phase of the typical business cycle, whose six main distinctive phases are normally:—

	Normal duration (about)		Normal duration (about)
Prosperity	2 years.	Collapse	1 year.
Boom	1 year.	Depression	1½ years.
Strained bank credit... 9 mos.		Revival.....	1 year.

The present trade collapse began early in 1929 and has now lasted approximately eighteen months. Business is 12 per cent. less in volume than in 1928 (American business is 22 per cent. less); wholesale raw-material prices (which measure general demand in relation to supply) have fallen 15 per cent. in the last twelve months; and there is as yet no upturn in any of the five main indices of trade, namely: Employment, railway traffics, bank clearings, imports of raw materials, commodity prices.

"Revival," as such, has clearly not yet begun, and the "collapse" stage of the business cycle appears hardly yet to be over. If the cycle pursues its normal course, depression as such will last another year.

The fall in raw-material prices, although causing consternation and losses on inventories, has done good by lowering manufacturing costs of production; but the immediate reactions are not favourable. It is true that the fall in the costs of production, coupled with intensified competition, is inducing manufacturers to lower their selling prices, but retailers have, in consequence, become nervous, fearing a further depreciation on their existing stocks. Retail inventories are therefore being allowed to run off below normal and few replacement orders are being given to producers.

Consumers, too, for similar reasons, are holding off the market. This is the paradox of the falling market: Falling prices tend to check demand, although low prices eventually stimulate it.

Forces, however, are at work to bring on the delayed consumptive purchases.

(1) In most cases raw materials are now selling well below average costs of production; little further fall is therefore likely. Indeed, rises are now becoming more likely than falls, and this is removing one source of nervousness.

(2) Retail prices are falling in the wake of wholesale prices, which is making the fixed-income classes automatically "really" richer; they are thereby enabled to buy a greater volume of goods (boots, textiles, cinema tickets, &c.), although they do not expend more money.

(3) The banking position in England has of late been made more liquid as a result of the trade slump. The decline in employment, in retail trade and in private incomes has reduced the public's requirements for legal tender for wage paying, pocket money and till-money purposes; legal tender has consequently flowed back into the banks and this has strengthened their cash positions. Banking ratios have thus improved and the bank rate has fallen from the 6½ per cent. level to which it was raised in October, 1929, to 3 per cent. in May, 1930. A further fall to 2½ per cent. is by no means impossible.

(4) The trend of long-term interest rates, too, is altering, which is a matter of vital importance in all trade slumps.

Although short-term interest rates have fallen a full 3½ points since November, 1929, long-term rates have not yet appreciably fallen. The gilt-edged index has, in fact,

only risen 5 per cent. from bottom, indicating a decline of not more than $\frac{1}{2}$ per cent. in the long-term rate of interest. This lag in the fall in long-term money is a typical phenomenon of the trade cycle.

THE PRESENT STOCK MARKET POSITION.

At the present moment the banks throughout the country are suffering from a glut of funds for which they can find no profitable outlet in the short-term market—i.e., bills. They are therefore likely gradually to switch the funds which they would normally have placed in bills and "trade advances" into "investments." This means an influx of money into the Stock Exchange and an accelerated rise in gilt-edged securities.

Another factor which will hasten the improvement in fixed-interest securities is the fact that approximately 50 per cent. of the total deposits of the joint-stock banks (see the Midland bank figures, which are the only ones published, but which are probably representative) are on fixed, as distinct from current, deposit; and the deposit rate in the banks is only 3 per cent. down to 1 per cent. As soon as the owners of these funds see a boom in Government securities maturing they will switch part of these funds off deposit into gilt-edged securities, where $4\frac{1}{2}$ per cent. can be obtained as opposed to the meagre 1 per cent. or 2 per cent. now being earned "on deposit." The total money in the country on fixed deposit is probably in the region of £800 millions, and only a diminutive switch of the foregoing nature is capable of causing a sharp upward movement in gilt-edged securities and a consequent fall in long-term interest rates.

Indeed, it is not impossible that on the first unexpected propitious economic or political event—for instance, a fall in the bank rate, a reparations moratorium, a political change, etc.—an upturn of five or more points will occur in the gilt-edged stocks and in leading industrial debentures within a few weeks, and that the Stock Exchange will suddenly experience an unexpected "fixed interest" boom.

This movement is likely to boil over rapidly into the ordinary share market. It will not, of course, be possible to say that the trade slump has definitely ended until the five main indices of prosperity turn upwards, i.e., employment, railway traffics, bank clearings, raw material imports and commodity prices. Ordinary shares, however, usually move upwards (and downwards) six to twelve months in advance of trade, partly because of intelligent anticipation, and partly because of the influence on all security prices of falling (and rising) long-term interest rates. The result is that any investor who delays buying ordinary shares until the above five chief indices of trade have turned upwards is likely to miss the bottom by about nine months, or, say, 30 per cent. To act, however, before these five indices turn upwards is to run the risk of buying too soon.

If the investor waits until the following conditions are fulfilled he is probably not running much risk in buying shares, although the trade indicators have not yet turned upwards.

(i) Until a fall has occurred in the index figure for ordinary shares of approximately 40 per cent. from highest. This is the normal fall in each cycle.

(ii) Until the fall in ordinary shares has lasted about 18 months—which is the normal length of most Stock Exchange crises.

(iii) Until the yield on ordinary shares is well above that obtainable on debentures—thereby making the former more attractive as soon as trade becomes likely to revive.

(iv) Until the long-term rate of interest has begun to fall (as indicated by a rise of say 5 per cent. in the index of fixed interest bearing securities), thus tending to make people buy gilt-edged securities for a further rise.

(v) Until the bank rate, and above all the bank deposit rate, has fallen to well below the yield on government stocks, thereby encouraging the taking of money off deposit and its investment in the Market.

(vi) Until most raw commodities have fallen to well below average costs.

(vii) Until retail prices have clearly started falling, thus stimulating purchases; and

(viii) Until the national index figure for ordinary shares has risen from lowest by something exceeding the normal short-run fluctuation, say 7 per cent. (thus indicating that general sentiment in favour of ordinary shares is once more reviving).

AN IMMEDIATE INVESTMENT POLICY.

If the investor waits until these conditions are fulfilled he will probably not be wrong in switching part of his funds out of fixed interest securities into ordinary shares, even though the chief indices of trade have not yet all turned upwards.

He should, however, at the present phase of the trade cycle, concentrate mainly, for safety's sake, on those industries which, because of their basic economics, are unlikely to suffer even if the present trade slump continues for longer than the investor has hoped or anticipated, namely:—

I. Rapidly expanding utilities—especially those of a monopolistic nature, and sheltered from both foreign and home competition, e.g., electric supply (preferably in rapidly expanding areas), underground railways, and life insurance (as distinct from industrial insurance).

II. Rand gold mining companies—which can sell the gold produced in unlimited quantities at the permanently fixed price of 85s. per ounce to the Bank of England; and which enjoy falling costs of materials as general commodity prices fall. Kaffirs also enjoy an increasing labour supply as agriculture and industry in South Africa become progressively depressed.

III. Companies producing foodstuffs, household necessities—whose consumption, in the nature of things, tends to fall little during trade slumps, and which, if they sell their product at a stereotyped selling price, enjoy the benefits of falling raw material costs (unless they are vertical combines). Such companies tend to enjoy a positively increasing demand if they cater mainly for the fixed income classes who become "really" richer as general retail prices fall.

For instance: matches, soap, dairies, margarine, food stuffs (sauces, biscuits, pickles, etc.), laundries, caterers (like Lyons), cotton, textiles, and (in England) breweries, which are largely government-protected local monopolies.

IV. Another favourable group to select is rapidly growing industries which are satisfying an ever expanding demand (provided that high earnings-yields are obtainable), e.g., aircraft, cinemas, electric cable makers, telephone manufacturers, cements.

V. A proportion of funds might also be put, as a long lock-up only, into the leading shares of established, though slightly depressed industries, provided they are bought only in a period of temporary Stock Exchange depression, and show high earnings-yields of say 8 per cent., even after allowing for a 20 per cent. drop in profits since 1928-29, e.g., stores, pharmacy, road transport, road making, printing, chemicals, electric manufacture, bricks, wall paper, paint and art silk. The shares should have strong finances, and should also be free markets.

Shares in heavily depressed manufacturing industries which are not yet showing signs of revival should probably be avoided until either the five chief indices of general trade turn upwards, or until the single industries concerned themselves show signs of reviving, e.g., railways, shipping, merchant companies, cable and wireless, constructional engineering, iron and steel, and super luxuries. Market price, however, must play its part in determining whether an immediate purchase is justified.

Raw materials (unless the products are selling well below average costs) should in most cases be avoided until either the five general trade indices turn upwards, or until there is some sign of revival in the individual trades concerned, e.g., rubber, nitrates, copper, platinum, lead, timber, cotton, etc.

Until trade has revived for about a year a proportion of funds should be kept as a reserve and for safety's sake, in fixed interest bearing securities with a low nominal rate of interest, standing well below redemption prices, since these securities will rise with the fall in long-term market rates of interest.

As regards the Stock Exchange as a whole, it is not impossible that the bottom of the present cyclical depression in shares as distinct from in trade, has already been reached (October, 1930), and that we may now look forward to four or five years of generally rising share prices. Industrial revival, as measured by the five main indices, may not occur before the Autumn of 1931, but share prices are likely to move some nine or more months in advance.

It is not impossible that the Stock Exchange index of ordinary shares will suddenly rise 30 per cent. within a short period of about six months (as in the 1921 recovery). Indeed, it is to be noted that in the majority of past trade cycles, the rise from bottom has been 40 per cent. in less than 18 months.

The boomlet will probably commence on small volume, initiated by professionals; but eventually the public, after a rise of about 12 per cent. in the index, is likely to come in and thus give a further fillip to the upward movement. After such a rise, caution will once more probably invade the stock market, for investors will realise that different industries will revive at different periods, and much analytic care will be exercised in selecting only those groups of shares where revival is clearly becoming probable. Indeed, a highly selective market is likely to commence after the first initial boomlet

(lasting, say, six months). Some groups of shares will then remain stationary or react, while others will continue to rise rapidly. For a period of up to two years from the present—after the first general upturn—a patchy market of this nature is probable; after which, general trade revival is likely once more to cause all markets to move up more or less simultaneously.—I am, yours, etc., L. L. B. ANGAS.

"THE BANKERS' MANIFESTO."

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I hope that the reference to "the Bankers' Manifesto" at the foot of page 695 of last Saturday's *Economist* was written *currente calamo*, and that the *Economist* is not prepared to dignify the Resolution of July 2nd at Hambros Bank as a manifesto of the bankers?

Mr Henry Bell, at Midhurst, very promptly denounced the document, prematurely published by the Protectionist Press, as "couched in the sloppiest English" he had ever read; and on September 1st a reply, in terms of the strongest arguments against tariffs, was made to the Hambro Resolution, bearing the signatures of Lord Grey, Lord Ashton, Lord Gainsford, Lord Bradbury, Sir Hugh Bell, Sir Charles Hobhouse and the following bankers: R. L. Barclay, Allan H. Bright, R. D. Holt (all of Barclays Bank), Henry Bell and Howard Fox (of Lloyds Bank), Sir A. A. Haworth and Hugh L. Roxburgh (of the Midland Bank), Walter Runciman (Westminster Bank), M. O. Fitzgerald (National Provincial Bank) and seven other well-known bankers, as well as fourteen eminent publicists and financial authorities, including Harold Cox, F. W. Hirst and Sir G. Paish. These weighty names were supported by the directors of more than three score famous mercantile and manufacturing firms.

But this later manifesto has been ignored by the Protectionist Press, who still frequently impress upon their readers the importance of "the Bankers' Manifesto," by which they mean the Hambro Resolution.

No effort should be spared to inform the electors of the fact, as stated by Mr Henry Bell, that "the bankers of the world, including America and every country in Europe, are in dead opposition to the Manifesto" of July 2nd last.—Yours very faithfully,
H. JAMES ROBINSON.
Southall, Middlesex.
October 20, 1930.

THE RETURN TO THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I draw attention to one point in Mr Loveday's essay, published in your current Supplement, as to which his argument, to an amateur, does not seem convincing? Dealing with the currency factor, he points out that Denmark, Norway and Sweden, in spite of deflation, have increased the gold value of their exports to an even greater extent than have those countries which debased their currencies, and also than ourselves. But should not the nature of the trade and the position of customers' currencies be taken into account? Without definite figures, I strongly suspect that the Scandinavian countries find their chief markets among countries which are also on a gold basis, whereas our customers, and which are also on a gold basis, are very largely countries those of France, Italy and Germany, are very largely countries whose currencies are unstable. For example, our Far Eastern textile trade is very much at the mercy of the relation between gold and silver. But Denmark sends her eggs and butter to us and is paid in gold. I am not able to estimate the effect of this difference, but pass on the suggestion for your consideration that such a difference must have a considerable effect.—Faithfully yours,
F. J. NEWBOULT.

17 Chesham Street,
Bradford.

PEPPYS AND PESSIMISM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—History repeats itself! Does the following amuse you?
Pepys' Diary, December 11, 1663:—
" . . . I to the Coffee-house, and there among others had good discourse with an Iron Merchant, who tells me of the great evil of discouraging our natural manufacture of England in that commodity by suffering the Swede to bring in three

times more than ever they did and our own Ironworks be lost, as almost half of them, he says, are already. . . ."—Yours, etc., J. A. HARRISON.

23 Ashtofts Mount, Guiseley, Leeds.

October 27, 1930.

[Had Mr Pepys been able to foresee the huge expansion of Britain's heavy industries under Free Trade, he would have added "And so to bed with better heart than of late."—Ed., *Econ.*]

Books and Publications.

THE AGE OF THE CHARTISTS.

In the three great social studies which began with *The Village Labourer*, Mr and Mrs Hammond drew the picture of the English working-class as it was at the time of the early industrial revolution, when it was being driven off the land and herded into the new towns and the new factories, of what it was feeling and what its masters were feeling about the Age of Gold. The result of their labour was to make plain the meaning, say, of Peterloo—to turn it from an isolated fact, noted in small type in a history book, into a phase of civilisation. In their new book,* they are performing the same service for the period immediately following, and trying to show what were the conditions and what were the thought and feeling of the second generation of factory-dwellers, the generation which followed on the Reform Act. The question which they set themselves to answer, in fact, is: How was it that the Reform Act, the emancipation of Trade Unions, the gaining, in effect, of many of the demands of those who met at Peterloo, seemed to satisfy them so little, so that the next twenty years are full of riots and strikes and movements of revolt? And, quite rightly, their book, in spite of the suggestion of its title, gives very little space to the Chartists themselves. It is not the details of these pitiful uprisings that matter, it is the sense of wrong and injustice that made them, or as the lines of Shakespeare have it:

Th' oppressor's wrong, the proud man's contumely,
The pangs of despised love, the law's delay,
The insolence of office, and the spurns

That patient merit of the unworthy takes.

What were the "spurns" which galled the spirits of the men who followed Owen and O'Connor?

In many respects, of course, the tale of woe is the same in this as in the early period. The squalor and filth of towns, the absence of education and amenities, the grinding hours of factory work, the harsh pressure of the law upon the poor, had not vanished, though some of them were modified. But the impression which this book leaves is that, on the whole, of less brutality, but more dreary, deliberate ugliness. The law was certainly less cruel to the Chartist rioters than it was to the early Radicals and the labourers of 1830; the whip-and-gang slavery of the factories had been mitigated; even to the colliers mercy was coming; and, in general, the worst brutalities, legacies mainly of the eighteenth century, were being mitigated by the growth of nineteenth-century humanitarianism. But this humanitarianism did not aim at making life any more pleasant or more beautiful for the poor; there was practically nobody who did not believe that a poor man who walked in a park, or looked at a picture, or listened to a piece of music, was not wasting his time; and, meanwhile, the new towns grew larger and uglier and more depressing every year. The difference can be best noticed by comparing the prison which Howard set out to reform with the prison which Charles Reade attacked: the former slew the bodies of prisoners with typhus fever and turned young offenders into criminals, but the latter slew their souls with solitary confinement and turned them into lunatics. Few episodes in this book are more revealing than that for which John Hullah sought some government assistance for the music classes which he was giving to adults in the evenings, only to be beaten by the combined forces of church and

* "The Age of the Chartists." By J. L. and Barbara Hammond. Longmans. 12s. 6d.

chapel—forces which also, to the best of their ability, withheld education from the children of the poor. There can be few episodes of history in which the fervour of religious persons was displayed more illiberally and to less human advantage than in the Battle of the Schools which this book chronicles.

For the rest, the telling is as vivid and the documentation as thorough as readers of Mr and Mrs Hammond have learned to expect from them; nor do they omit, through all the gloom of their picture, to draw attention to the slow beginnings of improvement, of which the passing of the Ten Hours' Act, in the teeth of the economists and business prophets, is not the least. All students of English history who desire to know something of the soil from which the Chartists sprang, will be grateful for this book.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Reparation Reviewed. By Sir Andrew McFadyean. (London) Ernest Benn, Ltd., 154, Fleet Street. 8s. 6d. net.

A critical history of the reparations question which differs from most other works on the subject in that it is designed—and successfully so—to be read and not merely used as a book of reference.

Bankers' Advances. By Francis R. Stead. Third edition. By C. R. W. Cuckson. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 6s. net.

A useful book for bankers, business men, and for advanced students of banking who wish to pursue the subject in more detail than is provided by general banking text-books.

Economics of Empire Trade. By Douglas H. Smith. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 4s. 6d. net.

Consists largely of an analysis of the import and export statistics of the various countries of the Empire.

South America. By Clarence F. Jones. (London) George Allen and Unwin, Ltd., 40, Museum Street. 21s. net.

A very useful and full text-book of the economic geography of the South American Continent.

More Points of View. (London) George Allen and Unwin, Ltd., 40, Museum Street. 4s. 6d. net.

A series of broadcast addresses by the Archbishop of York, Lord Grey, Sir James Jeans, Dame Ethel Smyth, Sir Josiah Stamp, Sir Henry Newbolt and Mr. Hilaire Belloc.

Number, The Language of Science. By Tobias Dantzig. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. net.

An attempt to expound the fundamental philosophical ideas behind mathematics.

The Principles and Finance of Fire Insurance. (London) Effingham Wilson, 16, Copthall Avenue. 7s. 6d. A convenient and compact text-book.

Bulletin de l'Institut International de Statistique. (The Hague) Institut International de Statistique, 2, Oostduin Can.

A record of the proceedings of the eighteenth session.

Snelling's Practical Income Tax and Sur-tax. Tenth Edition. By C. W. Chivers. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 3s. 6d. net.

A handbook in which compactness is combined with an unusual amount of helpful detail.

Planeuropa. By Andreas Fleissig. (Munich and Leipzig) Verlag von Duncker and Humblot. 7.50.

An interesting discussion of the future of European co-operation.

Annali di Economia. (Milan) Università Bocconi Editrice. Includes an article by Professor Mortara on the commercial relations between Italy and the British Empire.

Un Trentennio di Lotte Politiche. (1894-1922.) By A. De Viti De Marco. (Rome) Collezione Meridionale Editrice.

A collection of speeches and lectures grouped under the headings "Economic Liberty," "Political Liberty," and "The War and After."

The Stock Exchange.

THE STOCK EXCHANGE OUTLOOK.

We publish in our correspondence columns this week a letter from Mr L. L. B. Angas, which will interest all classes of investors. Mr Angas is the author of a provocative book on "Investment," which was reviewed in the *Economist*, of June 28, 1930. In this book Mr Angas was at pains to expound a "technique" of trading in shares for profit. We gather from the lengthy letter which he has written to us that he is endeavouring to apply the rules which he elaborated in this book to the present situation on the Stock Exchange. As he arrives at conclusions which to many investors will appear somewhat startling, we propose to submit this argument to some criticism, and perhaps to consider the stock market outlook from a more conservative point of view.

The recent course of security prices on the London Stock Exchange can best be viewed from the following chart showing the weekly average price indices of thirty British industrial ordinary shares as compiled by the *Financial News*:—

long-term interest rates have at last begun to feel the downward "pull" of short-term rates. For these reasons Mr Angas concludes that "it is not impossible that the bottom of the present cyclical depression in shares, as distinct from trade, has already been reached, and that we may now look forward to four or five years of generally rising share prices. Industrial revival as measured by the five main indices may not occur before the autumn of 1931, but share prices are likely to move some nine or more months in advance."

There are certain features of the stock markets which Mr Angas assumes to be in his favour. In the first place, the index for industrial ordinary shares, using the *Investors' Chronicle* figures, has fallen about 40 per cent. from the highest point reached in 1929, and Mr Angas regards 40 per cent. as the "normal" fall in each trade cycle. Secondly, ordinary shares have been falling for twenty-one months, and Mr Angas regards eighteen months as the normal length of a Stock Exchange cycle

WEEKLY AVERAGE PRICE OF THIRTY BRITISH INDUSTRIALS, 1930.

(*"Financial News."*)

It will be seen that the prices of British industrial ordinary shares, after a period of decline and recovery early this year, have been falling steeply since April, with only two breaks—first, a minor rally in the first part of July; and, secondly, a more substantial recovery in the last week of August and the first part of September. This latter may be regarded as a "bear squeeze" initiated by the hope that there would be some sort of trade revival in the autumn. Technically the recovery was justified, for there was no doubt that markets generally were at that time over-sold. When the bear squeeze had spent its force, prices resumed their downward course for the remainder of September, and a large part of October. Last week, however, a change of sentiment was noticeable, and prices again recovered. Is this third recovery likely to hold? Is it safe to say that the great "bear" market on the London Stock Exchange, which began in February, 1929, has at last run its course?

Mr Angas is inclined to believe that if the stock markets have not already seen their worst, they are very near the bottom of the depression. Forces are at work, he argues, making for a trade recovery. For example, raw materials are now selling well below their average costs of production—making price recoveries much more probable than price reductions—retail prices are following (if but slowly) in the wake of wholesale prices, money is plentiful and

of this kind. Thirdly, the yield on leading ordinary shares is well above that obtainable on debentures. Fourthly, gilt-edged securities have been active for some considerable time, the yield on some long-dated British Government stocks being down to 4½ per cent.

We suggest, however, that Mr Angas is assuming too much by way of premise, that he is ignoring political and business influences external to the Stock Exchange, and that he may be mistaking the influence of cheap and plentiful money on the Stock Exchange for the influence of market sentiment about trade. Why must one assume that the normal duration of a trade cycle is seven-and-a-quarter years? Economics since the war period have been so complicated by politics and currency problems that we have not really had enough experience to measure the probable duration of a trade cycle in the post-war period, or even to be sure that there is a "normal" period at all. Mr Angas may therefore be assuming too much when he argues that 40 per cent. is the normal fall of ordinary shares in a trade cycle, or that eighteen months is the normal period for a decline in ordinary share prices during a trade slump.

In the second place Mr Angas appears to ignore the possibility of adverse external influences such as politics or industrial strife. The only "political" event which he appears to take into calculation is a propitious one, which, he imagines, may cause a sudden up-turn of five or

more points in the gilt-edged market. But why should there not be an unpropitious "political" event? Though few observers desire an early general election, the "risk" is one which no analyst of market contingencies can afford to omit altogether from his calculations. What, again, would be the outcome if the railways pressed claims for a reduction of wages, or an attempt were made, in view of the recent fall in commodity prices, to lower money wages over a wider area?

Finally, what evidence is there to suggest that the recent recovery on the Stock Exchange has not been due mainly to the influence of plentiful money? The gilt-edged market has been enjoying a "money" boom for some considerable time, and each month, while the trade depression lasts, the money position becomes stronger. New issues, which absorb new savings that are not going into private business, have been somewhat below normal this year. Individual investors are bound to become dissatisfied sooner or later with an income of 1 per cent. from money left on deposit with their banks. Moreover there is still a fairly large "bear" account outstanding on the Stock Exchange, and, while dealers are short of stock, a little buying has a disproportionate effect upon prices. Mr Angas admits that the normal trade indices are not yet favourable for investment in equity shares, nor is there any evidence in the speeches of company chairmen to suggest that "insiders" may be taking an interest in the stock markets. We therefore conclude that the recent tone of markets is rather to be regarded as a monetary phenomenon than as a permanent change in the trend of market sentiment.

As regards the detailed suggestions which Mr Angas makes for an immediate investment policy, there are obvious points for discussion which our readers may desire to develop in our correspondence columns. Some observers may make out at least a theoretical case for the purchase of public utility shares in companies sheltered from foreign and home competition, or of the shares of leading gold-mining companies, whose output may be stimulated in a period of falling commodity prices. But when Mr Angas commends the purchase of the equity stocks of companies producing foodstuffs and household necessities, or breweries, "which are largely government-protected local monopolies," he is obviously inviting controversy, and the more numerous the individual recommendations he makes, the greater are his possibilities of error.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
November 4.	November 6.

The markets, if not exactly relapsing after last week's signs of increased activity, lacked vitality to carry on the movement. The public, which had begun to nibble at one or two issues, discreetly withdrew, leaving the more speculative markets to the professionals and the more solid to the larger financial interests. The outstanding feature was the strength of gilt-edged stocks, particularly during the early days of the week, when Five per Cent. War Loan conversion prospects were being somewhat eagerly canvassed, and a few optimistic persons were discussing the possibility of a Bank rate reduction. Political news, which has played a disproportionately large part in the bond market recently, was of mixed character, the turning out of a Government in New South Wales having precisely the opposite effect to the more violent overthrow of the *ancien régime* in Brazil. The day-to-day and week-to-week fluctuations of the markets, in short, reflect the uncertainties of an uneasy period, poised between stagnation and latent recovery, and afford a

happy hunting ground for the prophets. In this respect, the thesis put forward by a reader on page 813 may arouse interest.

After a quiet opening, the gilt-edged market developed considerable strength, especial support being forthcoming for 3½ per Cent. Conversion, 4 per Cent. Consols, and Funding Loan. A good demand was reported for India loans, but Mr Lang's victory in New South Wales was a bear point for Australians, which were extensively marked down. The market was at one time largely nominal, dealers quoting five-point margins. The position is discussed on page 822.

Brazilians were marked up all round on the overthrow of the Federal Government, but the gains were not fully held. Chinese bonds, especially those of 1912, were speculatively purchased, and Japanese obtained support.

Home Rails failed to consolidate last week's rise, the market being less sanguine regarding the wages outlook. The week's traffic returns were only moderately satisfactory, though revenue losses remained below the average of a few weeks ago. Undergrounds again ruled firm, satisfactory unofficial reports being current regarding the "Green Line" coaches. Argentine Rails experienced more cheerful conditions than for some weeks on the firmness of the peso and the better crop outlook. Canadian Pacific were irregular in sympathy with Transatlantic conditions, but strengthened on the improved revenue figures discussed on page 824.

Industrial markets were irregular, business shrinking appreciably, though prices suffered but a small decline. Electric supply shares again made the best showing, but equipment shares did not hold their gains. Scattered buying took place of textiles, but investors lacked courage, artificial silk shares being an uncertain quantity. Motor shares lost their exuberance, Austins falling off on the cryptic remarks of the financial director, at the meeting, regarding the necessity of retaining large cash balances against the possibility of bad times. Tobaccos sagged slightly and breweries moved irregularly. In the provision group, International Tea showed a small rise on the report that negotiations with Allied Stores were being resumed. The Gramophone Company meeting (reviewed on page 823), left speculators little to go for and the shares came on offer, while Columbias were sold on balance. Cables and Wireless lost their recent improvement. In the shipping group, P. and O. were sold on the return to the dividend level of 1925-27. Insurance shares were again a firm feature, but bank shares showed no decided trend.

Rubber shares began to respond to the improvement in the price of the commodity, the duration of which had taken some dealers by surprise. Rubber Trusts enjoyed quiet support, despite the passing of the interim dividend, and Anglo-Dutch benefited to a smaller extent. Business in tea shares was exceptionally small, even for that market. Budla Betas relapsed on the announcement of a further reduction in crop owing to bad weather. Idle conditions obtained in oil shares, developments in the industry in America being unfavourable. The V.O.C. interim dividend and profit announcement is dealt with on page 824.

The volume of trading in the mining share market was restricted, and the few changes which occurred were of little significance. In the Kaffir section, Sub Nigel was depressed, despite a good quarterly report. Modderfontein were prominent and moved up, while Randfontein also improved. With an almost complete absence of Paris or Cape support, however, several issues were lower. Northern Rhodesians were uninspiring, after a sharp rise in mid-week on professional buying in a market short of supplies. Rumours of negotiations in America regarding copper restriction, with Union Minière as a consenting party, were treated with caution, but a rise in the metal caused a firming up in Tintos. Tin shares were active, but prices showed no definite trend. De Beers advanced, and Ashanti were in fair demand.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The New York markets were in an undecided frame of mind, small-scale operations on both the "bull" and "bear" tack leaving prices somewhat better on balance. Some people were inclined to buy cautiously, but the possibility of forced sales of fair blocks of good-class issues was always present, and tended to limit any incipient recovery. The consensus of opinion was that the markets had before them an appreciable period of irregular price movements within a narrow zone. The U.S. Steel Corporation reported third quarter earnings of \$24 millions, against \$32 millions in the previous quarter, and \$51½ millions in the corresponding quarter of 1929. Only the regular dividend of \$1.75 was paid on the Common stock, but the absence of the \$1 extra dividend was not altogether a surprise to the market. The reduction in steel industry operations from 52 to 50 per cent., brought this group of shares under selling pressure. The weakness of Eastman Kodak came as an unwelcome surprise. Oils remained sluggish, further crude price cuts being announced in Texas and Oklahoma. Copper stocks, by contrast, were good, the market attaching considerable importance to the willingness of the Union Minière to discuss restriction, though not on Guggenheim lines. Leading railroad stocks enjoyed good investment buying, the September earnings being above expectation.

INVESTMENT NOTES.

Home Rails and Wages.—Stockholders in the "Big Four" railways have noticed with considerable relief that the precipitate decline in gross traffic receipts has received something of a check during the past few weeks. In the *Economist* of September 20th we showed that, if the eighteen weeks ended September 6th were divided into three periods of six weeks each, the total decline in receipts for the first period was £982,000, for the second period £1,814,000 (an "acceleration" of £832,000), and for the third period £2,103,000 (an "acceleration" of £289,000). For the six weeks ended October 18th, however, the aggregate decline was only £1,753,000, a "deceleration" of £350,000. In the following table, the results of the four railways for the first 43 weeks of the current year are compared with those of 1929 :—

	(000's omitted.)	L.M.S.R.	L.N.E.R.	G.W.R.	S.R.	Total.
43 weeks.	£	£	£	£	£	£
1929	60,415	45,648	25,774	19,146	150,983	
1930	56,389	42,944	24,604	18,638	142,575	
Decrease,	4,026	2,704	1,170	508	8,408	
Decrease, %	6.7	5.9	4.5	2.7	5.9	

Whereas at one time it seemed that the aggregate fall in receipts for 1930 would be little less than £12 millions, an estimate based on present tendencies would suggest £10½ millions as a more accurate computation. The improved "traffic" position, however, is accompanied by uncertainty as to the outcome of the forthcoming wage negotiations. The six months' truce, which followed the restoration of the 2½ per cent. cut made in August, 1928, is due to terminate on November 12th, and demands and counter-demands are now in process of completion. So far, of the three unions concerned, only the National Union of Railwaymen has formulated its policy—a claim, *inter alia*, for a minimum wage of £3 per week. At the same time, while no official announcement has been made, a rumour has been current in the markets that the companies may apply for a 5 per cent. cut all round, which would mean roughly £2 millions off the wages bill of the Midland and Scottish and something over £1,500,000 off that of the North Eastern. While in

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

general it is the practice of the unions, faced with forthcoming demands for wage reductions, to formulate a strong policy in the hope at least of maintaining the *status quo*, it seems probable that on this occasion the rank and file of the railwaymen may endeavour to press their claims with vigour. The companies are naturally anxious to achieve a settlement of differences as soon as possible, and have invited the unions to meet their representatives immediately after the truce expires on November 12th.

Australian Finance.—A week ago we pointed out that much importance attached to the results of the New South Wales elections. Mr Lang, with his extremist Labour views, has obtained an electoral victory, and Australian Government stocks have suffered a further depreciation in market value, bringing their yield in many cases well over 6 per cent. :—

	High, 1930.	Oct. 29, 1930.	Flat Yield.	Redem. Yield.
Commonwealth 5%, 1945-75 ...	95½	81½	6½	6½
N.S. Wales 4%, 1942-62	77½	62½	6½	7½
N.S. Wales 5½%, 1947-57	96½	80½	6½	7
Queensland 6%, 1930-40	100½	95½	6½	7
S. Australia 5%, 1945-75	91½	80½	6½	6½
W. Australia 4½%, 1935-65 ...	83½	78	5½	6½
Tasmania 5%, 1945-75	93½	88½	5½	5½

Mr Lang has declared that he has no intention of advocating repudiation, but the policy which he presented to the New South Wales electorate, carried to its logical conclusion, would produce a state of affairs which stockholders in London and Australia could scarcely view with equanimity. Mr Lang showed himself opposed to drastic curtailment of Government expenditure, and was emphatic that the standard of living must be maintained. Mr Lang is not the only disturber of the peace of markets. The Federal Labour Party Caucus is sitting at Canberra, and is considering such subjects as the nationalisation of banking and a measure of inflation. For Mr Scullin's Ministry, Mr Lyons, the Acting Treasurer, put forward proposals for balancing the Budget by special taxation on administrative salaries and "sheltered" incomes, by higher Customs and Excise duties, and by an increased property tax. Mr Lyons declared that an internal conversion loan for £22,000,000 would be necessary before the end of the year. The Caucus's acceptance of some, at least, of the Ministry's financial proposals, on Thursday, was in the nature of a personal victory for Mr Lyons and the Ministry. Mr Scullin, in London, stated in an interview that the newly elected Labour Government in New South Wales would honour its obligations, and it is hoped in responsible quarters that Mr Lang's Government will conform into the general borrowing policy which, through the Federal Loan Council, is operating over the whole of Australia.

Brazilian Stocks—A Partial Recovery.—The news of the overthrow of the Washington Luis Government, in Rio de Janeiro, reached the Stock Exchange shortly before the close of business on Friday of last week. Though the initial assumption of the "House" that the event provided a solution of the political problems of Brazil proved somewhat premature, the prospect it

afforded of a termination of protracted and costly civil war was hailed as a bull point for Brazilian securities. Though the final clearing up of the political position remains to be effected, at the time of writing, Brazilian securities have shown a welcome recovery :—

	Oct. 3.	Oct. 15.	Oct. 23.	Oct. 29.	Oct. 30.	Fall since Oct. 3.
Brazil 4½%, 1888	68	48½	51½	54½	13½	13½

Although the rally in numerous cases has been substantial, and most welcome, it will be seen that quotations in every case remain below those prevailing at the beginning of October.

The Ford Motor Company.—We are authoritatively informed, with regard to our article of October 18th last on "British Motor Shares," that it is not accurate to say that Mr Ford's plans envisage more or less free competition between the Detroit and the Dagenham works for the European market. The facts advertised in the prospectus of the Ford Motor Company, Ltd. (of Great Britain), at the time of its incorporation, showed that Mr Henry Ford and the Ford Motor Company of America sold, and the British company acquired, the exclusive manufacturing and selling rights in the Ford product, present and future, for all time, in respect of Europe (not including Russia), and certain other territories. We understand that it is not the intention that the Dagenham and Detroit works should compete for the supply of Ford product to European countries. In point of fact, the British company already is, and has been for some considerable time, exporting to Associated Companies engines and other portions of the complete Ford vehicle, the price charged to them being the same as they would have to pay were the article purchased from America. The Associated European Ford Companies have the right to buy their requirements in the cheapest market, subject to certain safeguards. The companies, indeed, are already purchasing many of their requirements from local markets, and, to safeguard the name of the Ford product and the interests of the British company, such purchases are co-ordinated, i.e., passed and approved by the British company. Expressed in terms of volume, the existing business acquired by the British company from the American company was approximately 125,000 vehicles per annum. The production capacity of Dagenham is 250,000. In order to employ this capacity, the former volume of business must be approximately doubled. Those closely concerned with the company, however, are optimistic that this result will be achieved when Dagenham is producing and selling vehicles at American prices, since the economies of the Associated companies as regards packing, inland and ocean freight, and other charges, when reflected in the retail price, will be very considerable. We would ask our readers carefully to note the facts in this article, which may remove possible misapprehension, and, concurrently, throw valuable light on the position of the British Ford Company in the motor trade of Great Britain and Europe.

Coal Company Profits.—The publication of encouraging results by a number of colliery companies during the past few weeks is welcome to shareholders, whose lot has not recently been an over-happy one. In the following table are set out the profits and dividends for this year and last

of eight companies which have issued their balance sheets since the beginning of September :—

Company.	1929. Net profits. £	Ord. Div. %	1930. Net profits. £	Ord. Div. %
Denaby and Cadeby Main Collieries	546	Nil	108,586	5
Fernhill Collieries	Dr. 3,323	Nil	17,767	Nil
Hamstead Collieries	25,488	10	26,316	13½
New Monckton Collieries ...	5,975	Nil	36,095	2½*
Old Silkstone Collieries ...	Dr. 4,643	Nil	22,361	Nil
Sheepbridge Coal and Iron	52,089	2½	93,723	5
Sneyd Collieries	31,372	7½	61,982	12½
Staveley Coal and Iron ...	266,118	5*	266,094	6*

* Tax free.

The aggregate profits of the eight companies this year total £631,924, compared with £973,622 in 1928-29, and six companies have paid a dividend, against four during the preceding year. Two companies have turned a debit balance into a profit, while one, Denaby and Cadeby Main Collieries, has recorded an advance in earnings from £546 to £108,586. In judging the significance of these results, however, it must be remembered that seven out of eight of the above companies closed their books on June 30th last, and in their financial year included a period of comparative prosperity which in 1930 has not been fully maintained. The tale should be read in conjunction with the figures of national production and export, which are given below :—

	Production (in thousands of tons).	Exports (excl. bunkers) (in thousands of tons).	Value of exports (in thousand £'s).
	Monthly average.	Monthly average.	Monthly average.
1927	20,936	4,262	3,794
1928	19,814	4,179	3,255
1929	21,393	5,022	4,051
1929 (Jan.-Sept.) ...	21,117	4,903	3,916
1930 (Jan.-Sept.) ...	20,249	4,641	3,881

Not only do the monthly average output and export figures show a general fall in 1930 as compared with 1929, but the actual monthly statistics are still exhibiting a steady downward trend. At the same time, the average price per ton of export coal, which in January of this year reached 17s. 8d. per ton, was down to 16s. 2d. in August. Shareholders will probably prefer to await the results of the Coal Mines Act before attempting to estimate the future earning power of the industry.

The Gramophone Company.—Mr Alfred Clark, the new chairman of the Gramophone Company, said nothing to encourage market speculators but much to encourage shareholders at the company's general meeting this week. It is evident that the company is being conservatively and skilfully managed. The new capital which was raised in July of last year was required mainly for the development of the company's business, but signs of the coming of the trade depression caused the directors to curtail their plans for expansion. As a result, the company to-day has a large cash balance. This, Mr Clark added, was none too large for the safety of the company, but it enabled the management to take advantage of any trade development when the right moment arrived. The dividend of 20 per cent. which the company had paid represented a distribution of some 74 per cent. of the year's profits. The average distribution over a period of 28 years, according to Mr Clark, was 61 per cent. of the net profits. The directors felt that by increasing the distribution to 74 per cent. they were going as far as conservative finance would permit. The net profits last year, although appreciably reduced, amounted to 15 per cent. on the increased net assets, an earning power which at the present time was not being equalled by many industrial concerns. Mr Clark made several interesting statements about the company's trading policy. The company had made a profit on the talking films it had produced jointly with a film company, but it had decided to withdraw from the film production field, which it regarded as too speculative for a company which did not own its own distribution. As a result of the

acquisition of the wireless manufacturing interests of Marconi's Wireless Telegraph, the company was developing a new line of business, but the percentage of profit on radio sets was not yet on a par with that earned on gramophones. Any idea that the mechanical type of gramophone had already been superseded by the electrical reproducer must be discarded when it was appreciated that out of some eight million homes in Great Britain only about two million were "electrified." Mr Clark saw no signs at present of a change in the general trade situation. He declared that there were just as many buyers to-day, but that they had less to spend. Consequently the higher-priced instruments and records had suffered, while sales in the more popular lines had increased. But there were still millions of homes without gramophones, all of which he regarded as potential customers.

Fairfield Shipbuilding and Engineering.—The report of this old-established Glasgow company for the financial year ended June 30th last, reflects the acute depression which prevails in practically all shipbuilding yards. The balance at profit and loss account, after providing for taxation, amounts to £12,503, against £52,192. After payment of debenture interest, requiring £23,750, there is a debit balance of £11,247, which compares with a net profit last year of £28,442. After deducting £15,000 for preference dividend, there remains £66,729, against £92,976, to be carried forward.

Year to June 30.	1928. £	1929. £	1930. £
Net profit	31,167	28,442	Dr. 11,274
Preference dividend	15,000	15,000	15,000
No. of times covered	2.1	1.9	...
Ordinary capital :			
Earned	16,167	13,442	...
Paid	12,500	12,500	...
Earned, %	6.5	5.3	...
Paid, %	5	5	...
Carried forward	92,034	92,976	66,729

In the following table the percentage earnings and payments on the £250,000 of ordinary capital are set out for the past eight years.

Year to June 30.	Earned %	Paid %	Year to June 30.	Earned %	Paid %
1923	8.1	Nil	1927	4.1	5
1924	Nil	Nil	1928	6.5	5
1925	7.2	5	1929	5.3	5
1926	Nil	Nil	1930	Nil	Nil

The auditors' report states that no depreciation has been provided on fixed plant and machinery for the year to June 30, 1930. The balance sheet fails to reveal a clear liquid position, available assets amounting to £158,105, against sundry creditors and reserves of £576,503. General reserve stands at £200,000. The cash item has shrunk from £194,973 in the last balance sheet to £66,612.

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL,
RAILWAY, PUBLIC UTILITY,
INVESTMENT TRUST AND
INDUSTRIAL FINANCING

Canadian Pacific Railway Prospects.—Two months ago, when reviewing the possibility that the Canadian Pacific Railway would earn as well as pay a 10 per cent. dividend this year, we declared that the most important factors in the problem were, firstly, the autumn crop position, and, secondly, the company's ability to make further economies in expenditure. Subsequent developments have been encouraging from the stockholders' point of view. It is now known that the Canadian wheat crop will be largely in excess of last year's meagre total, and as the process of reducing railway expenditure has made further headway, the September net revenue figures come out at a higher level than for some years past. The monthly gross and net receipts since 1927 are shown below:—

	C.P.R. EARNINGS. (Million dollars.)					
	Gross Earnings.			Net Earnings.		
	1928.	1929.	1930.	1928.	1929.	1930.
January.....	15.3	15.9	12.7	1.9	1.9	0.7
February.....	15.0	14.5	12.1	2.6	1.8	0.9
March.....	16.8	17.5	14.2	3.6	4.0	2.1
April.....	15.3	17.5	14.0	2.4	3.2	1.7
May.....	17.8	17.9	14.7	3.1	2.5	1.2
June.....	17.5	18.3	15.5	2.9	3.0	2.8
July.....	18.0	19.1	14.9	3.7	3.9	3.2
August.....	19.5	17.7	15.5	4.8	2.9	3.3
September.....	21.4	19.6	19.2	6.3	5.0	6.7
Total, 9 months	156.6	158.0	132.8	31.3	28.2	22.6
October.....	22.0	20.2	...	10.0	7.3	...
November.....	24.4	16.1	...	7.3	4.6	...
December.....	21.1	15.5	...	3.2	3.2	...
Total, 12 months	224.0	209.7	...	51.7	43.1	...

It is now more than possible that the Railway will offset in the last three months of this year at least a substantial part of the deficiency shown in the earlier months. If, for argument's sake, it be presumed that a further \$4,000,000 is recouped in this way before the end of the year, the total decline in railway revenue for the whole of 1930, as compared with 1929, will be no more than about \$1,500,000. On the conservative assumption that total "special" receipts from investments, steamship services, hotels, telegraphs, etc., merely attain last year's level, the total revenue available for fixed charges and dividends may be approximately \$57,000,000. Allowance must be made for increased debenture and preference requirements. The Canadian Pacific Railway, for instance, has placed £1,000,000 of 4 per cent. debentures and £2,500,000 of 4 per cent. preference stock in London this year, including £1,000,000 of the latter placed this month and available in the market at 80½, free of stamp. Allowing for this factor, the above figure would show earnings in the neighbourhood of 10 per cent. on the common stock. Business has been done in the latter at 176 this week, at which price a 10 per cent. dividend would yield 5.68 per cent.

Venezuelan Oil Concessions.—By declaring an interim dividend of 5 per cent. in respect of the financial year ending December 31, 1930, the directors of the Venezuelan Oil Concessions, Ltd., make good the promise of the chairman at the last shareholders' meeting. The announcement is also made that the aggregate profits for the year 1930 will be approximately the same as those earned in the previous year. The 1929 earnings amounted to 20.1 per cent on a preferred and ordinary share capital of £5,398,795. The capital has since been increased to £7,198,795 by the issue of 1,800,000 new shares at par in May, 1930, which rank for the 1930 dividend. The directors' announcement is, therefore, tantamount to a forecast of 15 per cent. earnings on the new capital. Whether the final dividend is to be 10 per cent. cannot, of course, be determined at this stage. Next month the interim dividends of the Royal Dutch, Shell Transport and Anglo-Persian are due to be announced. It is expected that the previous rates will be maintained, namely, 10 per cent., 10 per cent. tax free, and 5 per cent. respectively.

Gold Fields Rhodesian.—Our mining correspondent writes:—An interim dividend having been paid at the rate of 10 per cent. per annum, which has prevailed for some time past, considerable disappointment was aroused by the decision of the directors to make no final distribution for the year ended June 30th last. This course was necessitated chiefly by heavy depreciation in the company's holdings since the date of the accounts; but at £116,700 the net profit falls £64,900 below the 1928-29 total, while on the present occasion income tax swallows up £21,500. Hence the interim disbursement actually absorbed the bulk of the past year's earnings, the carry-forward being no more than £21,000 up at £71,800. As regards the balance sheet, advances and loans have expanded some £65,000 to £114,700. Apart from this item the surplus of cash and debtors over creditors stands at £154,000. One of the newer interests of the company is in the Wanderer Consolidated, whose first annual report has just been issued. This document shows an operating profit of £18,000 in respect of nine and a half months' running. Monthly profits of £6,000 are looked for, but the consulting engineer estimates that such an amount could be more than doubled by duplication of the treatment plant. The question is under consideration. Certainly, the existing reduction works are hardly adequate to the ore reserves, even though these, at 648,000 tons, show a decline of 102,000 tons upon the original computation, the value of 5½ dwts. being the same as before. Reverting to the Gold Fields Development, note may be taken of the acquisition of an interest in the Rhodesia-Katanga Company and in the Victoria Prospecting Syndicate—the latter formed to operate in Southern Rhodesia.

New Jagersfontein.—This diamond enterprise paid no final dividend for the past year. The accounts emphasise the point that developments since March 30th were chiefly responsible for this decision. Actually the earnings, at £253,400, showed an increase of £18,100; but after the date of the accounts the demand for stones fell off in a very serious degree, and the company's reserve fund of £100,000, plus £25,000, had been invested in the shares of the Diamond Corporation, a concern formed to nurse the surplus supplies. Irrespective of diamond stock at cost of production (£22,100) the cash surplus at March 31st, amounted to no more than £28,100. A renewed decline occurred in the average yield from the ground washed, and the average price received fell from 90s. to 70s. per carat. The latter figure, however, arose entirely from the washing of debris and old gravels, which yielded a much larger profit than the diamonds extracted from blue ground. At the meeting held in Kimberley, the chairman, Colonel Sir David Harris, indulged in some pointed criticism of the attitude of the Union Government towards the diamond industry of the Transvaal. The outlook during the current year cannot readily be forecast at the present moment.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Argentine North-Eastern Railway, Entre Rios Railways, Taltal Railway, Austin Motors, Gramophone Company, Goode Durrant and Company, and Kern River Oilfields of California. Presiding at the annual meeting of Austin Motors, Sir Herbert Austin stated that since the commencement of the new financial year on August 1st, the company's sales for the home market had exceeded those of the same period of last year by nearly 30 per cent., while practically the whole of the programme of production for next season's home sales had been contracted for by their agents. The company's financial director discussed the strength of the company's financial position, and the necessity for retaining a large cash balance. At the annual meeting of the Taltal Railway, Mr Frank Henderson referred to the fact that a national company had been formed under Chilean law to acquire the interests of all the nitrate concerns in Chile, and reorganise the industry from top to bottom. The abolition of the nitrate export duty, which was part of the scheme, would have a very important effect upon the cost of nitrate deliveries in consuming markets.

CAPITAL ISSUES.

The public offerings of the week were three in number, the borrowers being the *London and North-Eastern Railway*, the *Central Argentine*, and *Frank Myatt*. All took the form of debenture stock with a yield of 5 per cent. or more, and were well-received. Rather more than three-fourths of the proceeds of the Frank Myatt issue will be used to pay off existing debentures with a higher yield. There have, in addition, been various private "placings" of new capital, including £2,000,000 5 per cent. debentures of the Underground Electric Railways, £1,000,000 of 4 per cent. non-cumulative preference stock of the Canadian Pacific Railway (available at 80½, free of stamp), and £150,000 of 5 per cent. debenture stock of Edmundson's Electricity Corporation (available at 99½). The present is an unfavourable period for the Argentine Railways, the Central Argentine having to offer a flat yield of as much as £5 14s. 3d. on its debentures.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to October 25, 1930, £218,089,555.
Total, including conversion recorded, January 1 to October 25, 1930, £398,190,786.

National Savings Certificates.

Net sales, week ended October 25, 1930, £350,000.
Total receipts, April 1, 1930, to October 25, 1930, £4,350,000.

	Nominal Capital.	Conversions or Repayments.	New Money Cash Subscription.	First Payment.	Further Liability.

Central Argentine Railway.—Issue of £3,000,000 5 per cent. Debenture Stock, 1967-87, at 87½ per cent. Proceeds to be applied towards repayment of temporary advances from the Company's Banks, the cost of new works, the acquisition of further rolling stock, and general purposes.

London and North Eastern Railway Company.—Issue of £3,000,000 4½ per cent. Sinking Fund Debenture Stock at £90 per cent. A cumulative sinking fund will be set aside and applied each year in the redemption of stock by purchase on the market at or under par, or by drawings at par, so that the whole of the stock will be repaid by July 1, 1970. The first application of this sinking fund will be made in respect of the year ending December 31, 1931. The proceeds of the loan are required towards meeting the expenditure on works now being executed in connection with the Railway Passenger Duty Scheme and the Development (Loan Guarantees and Grants) Act, 1929. The issue offers a flat yield of £5 per cent.

Frank Myatt.—Issue of £400,000 5½ per cent. guaranteed Mortgage Debenture Stock at £98 per cent. The stock will be redeemed by means of a cumulative sinking fund of 1 per cent. per annum, commencing December 31, 1931, calculated to redeem the whole of the stock by December 31, 1966, by annual drawings at par, or by purchase in the market at any time at or below par. The company reserves the right on or after December 31, 1935, to redeem the stock, in whole or part, on six months' notice, at 101 per cent. if redeemed on or before December 31, 1955, and at par if redeemed after that date. The amount of £307,200 6 per cent. tax free First Mortgage Redeemable Debentures will be paid off out of the proceeds of this issue. The company was registered on June 30, 1920, to acquire as going concerns the businesses of Frank Myatt and Company, and the Old Wolverhampton Breweries.

Folkestone Waterworks Company.—Offer for sale by tender of £33,558. Five per cent. Perpetual Debenture Stock. Minimum price, £98 per £100 stock, yielding at that price £5 2s. per cent.

Particulars of the following are issued for information only with a view to Stock Exchange introduction. **Bank of New Zealand.** Particulars of an issue of £500,000 5 per cent. Long Term Mortgage Debenture Stock.

[Other Stock Exchange information, including the latest dividend announcements, profit and loss figures, shorter notices and weekly traffic returns, will be found on page 834 under the heading "Company News."]

OIL OUTPUTS.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—Production of crude oil by this company for the month of September, 1930, was 32,123 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended October 8th:—Venezuela, 35,835 barrels; Trinidad, 19,119 barrels; total, 54,954 barrels. Production for September:—Venezuela, 157,123 barrels; Trinidad, 77,375 barrels; total, 234,498 barrels. Deliveries for September:—Venezuela, 145,422 barrels; Trinidad, 82,827 barrels; total, 228,249 barrels.

DACIA ROMANO PETROLEUM.—Production for September 7,064 tons, this being the company's allowable quota under present restriction regulations.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of September amounted to 110,564 barrels, or approximately 15,795 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended September 20, 1930, was 236,000 barrels. The production for the week ended Sept. 27, 1930, was 230,000 barrels. The production for the week ended October 4, 1930, was 229,000 barrels. The production for the week ended October 11, 1930, was 230,000 barrels. The production for the week ended October 18, 1930, was 229,000 barrels.

SERVICE PETROLEUM COMPANY.—Production from the company's oil wells at Gura-Ocnitzei, Ceptura and Moreni for the week ended September 21st was 5,083 tons (35,581 barrels). Production from the company's oil wells at Gura-Ocnitzei, Ceptura and Moreni for the week ended October 12th was 5,017 tons (35,119 barrels).

STEAUA ROMANA (BRITISH), LTD.—Production of the Steaua Romana Company, Bucharest, for September was 60,100 tons.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during September was 21,288 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,597 barrels.

TRINIDAD LEASEHOLDS.—Oil produced September, 28,500 tons; oil purchased in September from other companies, 59,550 tons.

THE VENEZUELAN OIL CONCESSIONS, LTD.—Production for week ended September 27th was: Bolivar district, 99,780 m. tons; Maracaibo district, 12,414 m. tons; total, 111,194 m. tons. Production for the week ended October 11th was: Bolivar district, 94,088 m. tons; Maracaibo district, 13,462 m. tons; total, 107,550 m. tons.

ENTRE RIOS RAILWAYS COMPANY, LIMITED.**ADVERSE FACTORS DURING PAST YEAR.**

The ordinary general meeting of the Entre Rios Railways Company, Ltd., was held, on the 27th ultimo, at River Plate House, Finsbury Circus, London, Mr Follett Holt (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: When I addressed you last year I had just returned from Argentina and was able to tell you, after a personal inspection, that Entre Rios had not suffered from the drought so severely as other parts. The wheat crop, however, was affected and did not give a good yield either in quantity or quality, but, fortunately, the linseed turned out well. Our passenger and livestock traffics were satisfactory, but the commercial depression ruling throughout the country affected general receipts, although to a much less degree than it affected the larger railways operating in other parts of the Republic.

It is difficult to compare the happenings of the year with those of the previous period owing to changes which occurred in the origin and routing of part of our traffic. We were deprived of the important grain and other tonnage arising from the Hasenkamp line, which on the first day of the twelve months passed over to the State, although, on the other hand, we had the use of the money received as part of the sale price. Then, again, we placed into service the "Carmen Avellaneda," the third of the new Diesel train-ferry ships, and we had to carry the heavy cost of working this additional vessel as well as the expense of our important terminal in Buenos Aires.

In result the saving in the cost of working the fully developed Hasenkamp line was more than offset by the heavier cost of working the direct Buenos Aires traffic, which is only at the commencement of its development. If it had not been for these changes I have no doubt that the fall in our receipts would have been met, in some measure, by a reduction in operating expenses.

We are very satisfied with the preliminary results of the new terminal enterprise, and in its absence I doubt very much whether our receipts would have held so well during such a bad year for Argentina.

RESERVES AND DIVIDEND.

Although as the result of the twelve months' work we were able to allocate the usual proportion of the gross receipts to renewals reserve, we were not able to make a transfer to general reserve, which in the previous year, you will remember, received £100,000. We must always expect in a cereal district to have ups and downs in receipts; so I think that the only real adverse feature of our accounts is the loss of £31,717 on remittances, and this loss, with what it might mean in the future, had a considerable bearing on our recommendation to you to reduce the dividend for the year on the ordinary stock from 7 per cent. to 6 per cent., although the carry-forward is increased by some £8,000.

The present devaluation of the currency and its remedy is one of the urgent problems before the new Government. The country is faced also with other most interesting, but, I think, not too difficult problems, and in the new national determination to deal with these I need hardly say that Argentines will find ranged with them all those foreigners, if we can be so described, who, as a result of long and happy experience, share the fullest confidence in the future of their wonderful country.

The heavy rains in October and May helped to throw hundreds of miles of earth roads—and, incidentally, our competitors who use them—temporarily at least, out of business. To meet competition we are gradually increasing the use of Sentinel-Cammell self-propelled passenger cars for auxiliary services on the railway, with satisfactory results, and, in addition, have already some thirty cargo lorries on the roads serving our clients, and with these we are gaining valuable experience. Our observance of the laws of maintenance, coupled with the organising faculties possessed by our staff, will help us, I am sure, to continue to hold our important share in the transport world of Entre Rios.

I am pleased to be able to report that we have not lost ground for the first three months of the new financial year. A cable advice on Saturday from our general manager informs us: "Prospects generally to-day showing some improvement over those obtaining during several months past. Harvest coming along satisfactorily under favourable climatic conditions, but will be later than usual owing to delay sowing. Marked advance condition grazing camps and livestock; resumption shipments latter expected early December."

If the crops turn out well, as anticipated, then much will depend on the course of exchange, and here we must hope for the best, and I trust that when we meet you next year we shall be able to report that the company is still maintaining and even improving its position.

The resolution was carried unanimously.

TALTAL RAILWAY COMPANY, LIMITED.**DIVIDEND MAINTAINED—LARGE RESERVES.**

The forty-ninth annual general meeting of the Taltal Railway Company, Ltd., was held on the 27th ultimo, at River Plate House, London.

Mr Frank Henderson (the chairman) said that the gross receipts for the past year amounted to £162,336, as against £164,055 in the previous year, there having been a net reduction of 6,100 tons in the chief items of traffic, equal to about 3 per cent. While they had gained in bulk traffic at ordinary goods rates, they continued to lose small consignments at parcel rates and passengers. The working expenses at £95,397 showed an increase of £789, and the net receipts were £66,939. The directors recommended a final dividend of 4 per cent., making 6 per cent., free of income tax, the same as for the previous year. The actual earnings, including income from investments, represented just about 5½ per cent. on the capital, after providing for income tax, but the directors on this occasion felt justified in maintaining the dividend, firstly because they saw no reason to anticipate that the current year would not be as good as the past year, and secondly, because of the very large reserves shown in the balance sheet. If, however, the receipts should not be quite maintained, they did not think it would be wise again to recommend a dividend in excess of the rate actually earned.

Referring to the fact that a national company had been formed under Chilean law to acquire the interests of all the nitrate concerns in Chile and reorganise the industry from top to bottom, the chairman said that the abolition of the nitrate export duty—which was part of the scheme—would have a very important effect upon the cost of nitrate delivered in consuming markets; other economies should follow, and it was hoped that when the new company was fully established in control the Chilean nitrate industry would be given a new life in its struggle for existence.

It was rather difficult to give an idea of the prospects for the coming year, because there were many unknown factors. A bull point for the railway was the existence of an unusually large stock of nitrate in the interior, which must, of course, eventually find its way over the company's line, and this, coupled with the fact that the rate of production of the oficinas in Taltal still working was not diminished, made him hopeful that their receipts would not be less than in the year just closed.

The report was unanimously adopted.

**ENTERPRISE!**

¶ The intrepid enterprise of Columbus over four centuries ago opened up all the possibilities of an undeveloped Continent.

¶ Since then, the enterprise of succeeding generations has resulted in phenomenal development of the vast resources of the New World.

¶ To-day a great and growing volume of overseas trade is transacted annually by the Latin American Republics, and complete facilities for every description of modern banking business are afforded by

**THE ANGLO-SOUTH
AMERICAN BANK LTD**
117 OLD BROAD ST. LONDON, E.C2

ARGENTINE NORTH EASTERN RAILWAY COMPANY, LIMITED.**INCREASED NET EARNINGS.**

The forty-second ordinary general meeting of the Argentine North Eastern Railway Co., Ltd., was held, on the 27th ultimo, at River Plate House, Finsbury Circus, London, Mr Follett Holt, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: Unique among the Anglo-Argentine railways, our company, the Cinderella, is able to show not only increased receipts, but a small increase in net earnings for the year. Our traffic, although still small in volume as compared with other Argentine railways, is very diversified, and this fact has helped to carry us through a bad period for the country. We were able to hold our own with passenger and parcels, livestock, yerba, and even to increase to the somewhat amazing total of 61,000 tons the traffic in oranges. Cereals at present make up between them no very large volume, and it is here that we have hopes for the future. Traffic in total judged by ton-miles constitutes a record in the company's long history. As the result of the railway's earnings, after placing £53,000 to the renewal reserve, being £4,000 more than in the previous year and providing a non-recurring amount of £21,800 to cover a settlement of mileage charges for the past six years, also meeting a loss of £16,900 on exchange, we were able to meet our "A," "B" and "C" debenture charges in full and carry forward £30,780 to our next accounts. In the circumstances of the present times I think this is not a bad performance, though we do not lose sight of the fact that there is over 2½ millions of money invested in the ordinary stock of the company which receives no remuneration whatever.

To put this right is a somewhat difficult task you have set us to perform, and to succeed we must still, I think, have some years of grace and normal events. We know that as trade develops and traffics increase we must expand more on the railway, but we also know that in both Corrientes and Misiones there is ample room for more population and more enterprise.

The railway is quite an interesting proposition; when one remembers what a bad financial position it was in a few years ago, and its rather antiquated operating elements, the way it has extricated itself shows that not only the zone it serves but the property have merits. It is worked very closely with the Entre Rios Railways, and by degrees will reach, we hope, the same standard of physical condition.

The report and accounts were unanimously adopted.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.**UNREMUNERATIVE PRICES.**

The twenty-first ordinary general meeting of the Kern River Oilfields of California, Ltd., was held, on the 30th ultimo, at Kingsway Hall, London, W.C.

Mr William Ivey (the chairman) said that the year's working had resulted in a profit, which was appreciable but not sufficient to enable them to pay a dividend. In 1927 he had foretold the present condition of things. They were then on the eve of a price war, with over-production and almost a state of chaos in the oil trade, and, in his opinion, the only possible way to cope with the situation then was for all the oil-producing companies in the world to shut down their wells, stop drilling and producing, and simply to mark time until the production position had become normal. That would have meant, of course, that no profits would be made and no dividends earned. Of course, this company could not have done such a thing as that unless the whole of the producing companies in the world did the same thing.

Finally, the position had been arrived at when a restriction of output had to be agreed to. The difficult position was the result of the fact that more oil was being brought to the surface of the earth than people were ready to buy at a fair price. Some shareholders might ask them why they agreed to restrict at all and why they did not carry on and sell their oil for the best prices possible. That suggestion sounded all right, no doubt, and they could doubtless have refused to restrict output because it was only a voluntary undertaking. Indeed, there was now a question in the United States of America as to whether the agreement between the companies would hold good in law, but, supposing this company had decided not to agree to join in the restriction of output, they would have been treated as outcasts and they would doubtless have suffered a lot of damage to their wells.

In spite of the restriction, this company had produced nearly 200,000 more barrels of oil in the year under review than in the previous year, and, also in spite of restriction, there had come a time when they could not sell their oil at all, companies and persons

who had been taking oil from them for years under contract, telling them they could not continue to take it even at a reduced price.

As the result of a meeting of the whole of the independent producers in Los Angeles, a resolution was passed forming an association of the independent producers, and a meeting was arranged between them and the big companies. Three days afterwards the big companies issued a notice stating that they refused to sell gasoline to any company or person who did not agree to refrain from selling it at less than 19½ cents per gallon. Although he believed that everyone was not adhering strictly to that, it had the result of improving the position considerably.

The report was adopted.

GOODE DURRANT AND COMPANY, LIMITED.**DIFFICULT CONDITIONS IN AUSTRALIA.**

The thirty-second ordinary general meeting of Goode Durrant and Company, Ltd., was held, on the 28th ultimo, at 27 Milton Street, London, E.C.

Owing to the unavoidable absence of the chairman (Mr J. A. Williams), Mr W. E. Pennick (vice-chairman) presided, and, in the course of his remarks, said:—From the publicity which has recently been given to the conditions of affairs in Australia, you will know that the past year has been one of unprecedented difficulty. It is not necessary to review the economic condition of the Commonwealth, but reference must be made to the artificial prosperity enjoyed for some years, which was the outcome of the high prices received for their primary products.

Now, with world-wide depression, Australia has to face a serious adverse trade balance, due to the low prices of raw materials and the heavy commitments for interest on loans. When the present Government came into power they adopted drastic measures to remedy the situation by the imposition of higher tariffs, prohibitions and increased taxation, all of which have added to the difficulties of traders. We have no doubt that ultimately the Dominion will be established on a sound basis, but there is no indication at present of any improvement.

STRONG LIQUID POSITION

In the balance sheet you will notice that we continue to depreciate freehold and leasehold properties, furniture, fixtures and plant. Stock is £28,500 less than a year ago and has been discounted to market value. Sundry debtors and bills receivable are approximately the same. Bills payable and creditors are £12,000 less at £265,000 and with £160,000 notes outstanding make a total of £425,000, against liquid assets of £354,000. The small profit for the year is accounted for by contraction of trade, heavy discounting of stock and the high rate of exchange.

The directors' report and audited balance sheet for the financial year ended July 20, 1930, were received and adopted, and it was resolved that the transfer of the sum of £10,000 from the general reserve fund be sanctioned and that the payment of the dividend at the rate of 7 per cent. per annum on the preference shares be approved.

Mr J. A. Williams and Mr G. P. Schooler were re-elected directors of the company, and the auditors, Messrs Newman, Ogle, Ashworth and Bevan, were reappointed.

A vote of thanks to the chairman and the staff in London and Australia terminated the proceedings.

Government Returns, &c.**NATIONAL ACCOUNTS.**

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Oct. 25, 1930, amounted to £13,338,000, against ordinary expenditure of £10,447,700. After allocating £1,269,600 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £117,707, the week's operations, as shown below, reduced the National Debt by £1,402,000 to £7,673,206,000:—

REPORTS AND NOTICES.

BANKS.

THE INSTITUTE OF BANKERS.—The Inaugural Address of the President, Mr R. M. Holland-Martin, C.B., a director of Martins Bank, Ltd., will be delivered in the Goldsmiths' Hall (by kind permission of the Goldsmiths' Company), Foster Lane, E.C.2, on Wednesday, November 5th, at 5.30 p.m. A few visitors' tickets are available on application to the Secretary, 5, Bishopsgate, E.C.2.

MISCELLANEOUS.

ARGENTINE SOUTHERN LAND COMPANY.—Net profit for year ended June 30 amounted to £7,189, against £51,626 in the previous period and with £70,054 obtained in 1927-28. With £30,940 brought in, there is an available balance of £38,129, as compared with £78,640 a year ago, but of this the directors recommend a dividend of 4 per cent., less tax, absorbing £21,800, against a dividend of 6 per cent., less tax, requiring £32,700 previously. No allocation is made to reserve, against £15,000 last year, and the amount carried forward is £16,329, against £30,940.

ASSOCIATED BRITISH MALTSERS, LIMITED.—Profits for the year ended August 31, 1930, amounted to £133,883, against £114,938 for the previous year, and after providing for tax and preference dividends, an allocation of £20,000 to general reserve and a maintenance of the ordinary dividend at 15 per cent., less tax, the carry-forward is increased from £22,900 to £24,170.

BURBERRY, LTD.—Trading profits amounted to £174,366 for the year to March 31, 1930, compared with £205,985 for the previous year. Including interest and rents received, the total was £179,718. After deducting interest, depreciation, income tax and other charges, including loss on exchange of £9,239 (against a profit of £319 for 1928-29), the net balance works out at £127,153, as against £165,997. The directors have written £8,500 off freehold premises, while £25,000 (against £50,000) is placed to reserve. It is proposed to pay a dividend of 5 per cent. (last year 7½ per cent.) on the £650,000 of "A" and "B" ordinary capital. The fixed preference dividend absorbs £75,000, leaving £43,503 to carry forward, compared with £57,350 brought in.

SUDAN PLANTATIONS SYNDICATE.—The report covering the year ended June 30, 1930, shows that total profits were £442,007, against £933,795, and that, after providing for all outgoings, there remains a net profit of £227,347, a reduction of £429,009 from the previous year's net figure. A final dividend of 5 per cent. is recommended, making 10 per cent. for the year, against 25 per cent. paid for the past two years, and leaving £486,951 to be carried forward, against £484,605 brought in.

TRINIDAD LEASEHOLDS, LIMITED.—Oil profits for year to June 30 were £428,860, against £636,022, and after adding other income and providing for depreciation and expenses, there remains £252,514, compared with £432,840. The interim dividend of 7½ per cent. absorbed £98,367 and provision for income tax takes £70,000, while £75,000 is taken to reserve, leaving £106,730 to be carried forward, in contrast with £101,501 brought in. No final dividend is paid, so the year's dividend is 7½ per cent., as compared with 30 per cent.

WALLPAPER MANUFACTURERS, LTD.—The directors announce that the profit for the year ended August 31st last is £672,916 5s. 9d. After payment of debenture interest and preference dividend and providing for taxation, they recommend a final dividend of 5 per cent. on the ordinary shares, making, with the 5 per cent. interim dividend already paid, 10 per cent. for the year; a final dividend of 10 per cent. on the deferred shares, making, with the 5 per cent. interim dividend already paid, 15 per cent. for the year; an allocation to various staff and employees' pension funds of £20,000; and an allocation of £100,000 in reduction of the book value of goodwill, patents, processes and trade marks, carrying forward a balance of £260,996 5s. 3d. The general meeting of the company will be called for November 27, 1930. The report and accounts will be sent to the shareholders on November 17, 1930, and it is proposed to post the ordinary dividend warrants on November 29th and the deferred warrants on December 13, 1930.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions over the United Kingdom during the past week have facilitated field work, occasional showers providing sufficient moisture for ploughing and preparing seed-beds. The area under cultivation is expected to equal that of last year, despite the extremely low level of prices current, as farmers anticipate some measure of Governmental support before the next crops are harvested. Meanwhile, threshings proceed slowly and yields in many instances prove disappointing, consequently only light supplies were available at the Statute markets. Prices as a rule are well maintained, especially for good milling samples, which are relatively higher than foreign descriptions. On the import market, values have fluctuated within narrow limits in unison with overseas cables, and earlier attempts on the part of North American sellers to advance quotations were discounted by larger Russian shipments, and favourable prospects of new Southern Hemisphere crops. Soviet offerings have continued on a liberal scale, and while samples up to British standard moved off steadily, inferior lots were difficult to place. Competition from this source is likely to be maintained for some while ahead in view of a resumption in chartering for November loadings. In these circumstances, importers are assured of ample supplies of grain until new Australian and Argentine crops are in circulation. Business has already resulted in the latter at 29s. 3d. December to March shipment on Italian account, while offers of Plates are also on the market. Provided no serious damage occurs to these crops, extremely heavy supplies will be pressing on the market early in the New Year, resulting in a low price level. Home milled flour remained unaltered with a fair business passing, but firm offers from Canada, also the United States, were quite out of line with market parity here, and met with scant attention. Values of feeding stuffs further declined on selling pressure and continued large shipments of maize and barley to Europe. Buyers, however, were more in evidence at the lower levels, and a fair business resulted in maize on United Kingdom account. Oats dull and weaker.

WHEAT.—Quiet. No. 1 hard Manitoba, ex ship, 31s. 9d.-32s. 3d.; No. 1 Northern Manitoba, ex ship, 31s.-32s.; No. 2 ditto, 30s. 3d.-31s.; No. 3, 30s.; No. 4, 29s.; No. 6 Manitoba, 24s. 3d.; No. 2 mixed Durum, 30s.; Barusso, 61½ lbs., ex ship to arrive, 27s.; Australian, 30s. 9d.; choice white Karachi, 30s.; Russian on sample, ex ship, 25s. 6d.-27s. per 49½ lbs.; English, new, 6s. 6d.-7s. per 112 lbs.

FLOUR.—Quiet. London, straight run, 28s. per sack for country deliveries, and 27s. London area. Of imported, Manitoba patents, 26s.-28s.; Buffalo, ditto, 25s.-27s. 6d.; Australian, 23s. 6d.-24s., ex store, per 280 lbs.

MAIZE.—Weak. Plate, landed, 20s. 9d.; ex ship, 19s. 3d.; October-November, also November-December, 18s. 6d.; No. 2 white flat African, ex ship, 18s. 9d.; landed, 20s. 3d. per 480 lbs. Yellow maize meal, £6 15s., f.o.r. London. Yellow African, ex ship, £5 10s.; white, £4 15s. per ton.

BARLEY.—Easy. Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 44½ lbs.; Black Sea, ex ship, 13s. 3d.; landed, 15s. 3d.; Danubian, ex ship, 13s. 3d.; Persian, new, landed, 14s. 6d. per 400 lbs.; English, new, malting, 6s. 3d.-14s. 6d.; feed, 5s. 6d.-5s. 9d. per 112 lbs.

OATS.—Dull. Plate, landed, 12s. 3d.; ex ship, 11s. 3d.; Chilean, tawny, ex ship to arrive, 12s. 9d.; landed, 13s. 9d.; best whites, ex ship, 19s. 3d.; landed, 20s. 6d.; mixed Canadian, ex ship, 10s.; landed, 10s. 9d.; North Russian, ex ship to arrive, 12s. 6d.-14s. 6d.; landed, 13s. 6d.-15s. 3d., as to sample, per 320 lbs.; English, new, 5s. 8d.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Oct. 30, 1929.	Jan. 2, 1930.	Oct. 15, 1930.	Oct. 22, 1930.	Oct. 29, 1930.
Winnipeg (No. 1 Manitoba)	122	139	148½	72½	74½	72½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	116½	128½	130½	78½	80½	79½
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 69,017,000 bushels, shows a decrease on the week of 1,050,000 bushels. Supplies a year ago stood at 80,415,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Developments in connection with the new Act tend to restrict export business and few contracts are being fixed up. Prices, however, are firm at 15s. 6d. to 16s. f.o.b. for best South Yorkshire steams. Industrial consumption is unsatisfactory and has fallen off lately. There is still a surplus of small fuel which can be bought at cut rates. The household demand is below the normal, but the best qualities sell freely at high prices. No improvement can be recorded in the position of blast-furnace coke, consumption being at a very low ebb and no idle furnaces are being put into commission.

Our Workington correspondent writes:—The coal trade makes slow progress to normal seasonal recovery, the Scottish competition in the Irish market and that from Northumberland and Durham being severe. Cross-Channel shipments are lower than they usually are at the end of October, and several of the pits are working short at the time. Prices are steady. Best round is 20s. 6d.; washed doubles 19s.; washed singles 18s.; smalls 16s. 6d., all f.o.b. Best house coal is 30s.; house nuts 28s. 4d.; gas coal 28s.; West Coast coke is from 17s. 9d. to 18s. 3d. per ton.

Our Glasgow correspondent writes:—There has been no improvement in conditions in the coal trade. Demands generally run on quiet lines and prices are maintained with difficulty. In the home market household coals are still selling at summer prices. The shipping trade is depressed, and last week's total of 206,000 tons handled at the ports was one of the lowest weekly tonnages this year. It is understood that the committee dealing with the district scheme under the new Act have now remodelled their plans and that the revised scheme is now being considered by the coalowners. To-day's shipping prices are approximately as follows:—LANARKSHIRE.—Ell best, 13s. 6d.; splint best, 15s. 3d.; splint second, 14s.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 10s. 6d.; pearls, 10s. 3d.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 6d.; third-class steam, 10s. 6d.; trebles, 13s. 6d.-16s.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 10s. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s. 3d.; doubles, 12s. 3d.; singles, 10s. 6d.; pearls, 10s. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s.; doubles, 12s. 3d.; singles, 11s.; pearls, 10s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The general position on the Cardiff coal market is unchanged. The output of the coalfield is still averaging between 10 per cent. and 12 per cent. less than in the corresponding period last year, while in the export trade the decrease is slightly greater. Shipments of anthracite coal from Swansea are fairly active and prices are firmly maintained, but the market is weak for practically all classes of bituminous coals with the possible exception of sized grades. The new coal marketing scheme became operative on Tuesday, but it involved no disturbance of existing marketing conditions, and the first quota under the scheme will probably not be determined for some weeks. Meanwhile, the old minimum prices are being maintained. The

negotiations in connection with the new wages agreement are still in progress, but no definite proposals have yet been submitted by either side, although in the discussions which have so far taken place the owners have emphasised the need for wage economies to meet the extra cost of production which they say is temporarily inseparable from the shortening of the working day as from December 1st. Large contracts have been placed by the French railways for supplies over 1930, but it transpires that a larger quantity than usual has been bought from Newcastle. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; best anthracite large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 9s. 6d. to 10s.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 24s. 9d. to 25s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The demand for iron and steel is still lethargic, but at the weekly meeting of the Exchange on Tuesday there was a fair attendance of members and the impression seemed to prevail that some of the overseas markets which have been disturbed by political troubles are at length showing signs of settling down. Business in pig iron has been disappointing for some time, and although the quantities of Continental iron imported have been comparatively small, the fear is expressed that the foreign manufacturers are again beginning to find a foothold in the British market. The British producers, however, in spite of heavy stocks, show no inclination to reduce their prices in the present state of business. Comparatively few transactions have been reported in semi-finished steel. Competition for orders is exceptionally keen, and the prices of Continental material have steadily declined until now they are well below the pre-war level. This, however, has not resulted in stimulating much interest in the market. Business in the finished steel department has been disappointing and a certain amount of inquiry which came on the market last week did not result in much fresh business. Many of the works are badly off for orders in spite of the low rate of production. If, however, more settled conditions develop in the overseas markets, some improvement is anticipated, as stocks abroad are understood to be unusually low.

Our Middlesbrough correspondent writes:—The market for Cleveland iron continues quiet, although there is a feeling in some quarters that an early improvement in business may be experienced. The statistical position is satisfactory, the current make continues to pass into consumption and stocks are being reduced, so that any extra demand coming forward would have an immediate effect on the market position. Against this, however, the competition of Continental foundry iron, which is being offered at much below local prices, must be kept in mind. Very little business was transacted at Tuesday's market, and no change was made in the official prices, viz.:—No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. The demand for hematite maintains a steady improvement, both for home and export. The quantities that are being purchased are not of large volume so far, but cover a wider range, and are expected to expand further. Makers adhere to 71s. for mixed numbers for delivery over two or three months, but for very prompt delivery a little less would be accepted. Shipments of pig iron are ahead of last month, the total cleared to 28th inst. being 20,398 tons, against 14,130 tons for the whole of September. In the finished departments a few orders have been placed since the announcement by the British Steel-makers that there would be no reduction in prices, and more are expected to follow. More business is being placed in the electrical lines amongst which are the two important orders secured by C. A. Parsons, Ltd., of Newcastle, for electric generating plant, etc., of the total value of between £180,000 and £190,000, one for Copenhagen

representing about £150,000 and the other for the South African Railways estimated at between £30,000 and £40,000. Dorman Long & Co., Ltd., are expecting to receive confirmation of the contract for widening the Putney Bridge, for which they have submitted the lowest tender. The amount involved is estimated at £433,000. There is practically no new business in ore. Best Bilbao rubio is quoted at 17s. c.i.f. for delivery a few months ahead, but odd prompt cargoes can be secured at 16s. 6d. The freight Bilbao/Middlesbrough for prompt tonnage is about 5s. per ton. Coke is in very poor request, and although producers are trying to maintain 17s. as the price for good furnace qualities, delivered at consumer's works up to the end of the year, it would be possible in some cases to buy at 16s. 9d. The total number of furnaces in blast on the North East Coast is unchanged at 24.

Our Sheffield correspondent writes:—The general position of the local steel industry has not improved although there is somewhat increased activity in certain lighter and finished lines. If anything, the open-hearth steel department continues to recede and there is a great amount of idle plant, not only in the Sheffield area, but also in North Lincolnshire. Substantial improvement must await the revival of overseas trade and there is no sign of this at present, business being to a large extent suspended with the principal foreign and Colonial markets. Good business, however, is reported with the Irish Free State. Continental competition is keen in semi-manufactured iron and steel, but is easier in highly finished materials. Demand for shipyard steel continues to decline; work for the home railways is being maintained at former levels. Makers of alloy steels, including stainless, are showing activity in developing new types to suit special engineering requirements. This is one of the most hopeful branches of Sheffield trade. The tool branch is steady so far as the home demand is concerned, but quiet overseas. Increasing business is coming forward from the home market for cutlery and spoons and forks. Best silver and plated hollowware are very quiet.

Our Workington correspondent writes:—Demand has ebbed so considerably in the North West Coast hematite pig iron trade that only eight furnaces now remain in operation between Workington and Ulverston, and two of these are on alternate blast. East Coast competition has made the position very difficult for makers in this district. Customers have been temporarily lost in the Midlands and in Scotland. South Wales consumers are out of the market, and as Continental needs are small, the restricted production is considerably in excess of requirements. A further complication is that the two steel-making centres at Workington and Barrow are idle, with little prospect of having more than spasmodic employment for some months to come. Stocks are so heavy that a further curtailment of output may become necessary. Notwithstanding all the difficulties, makers present a firm front to attempts to further reduce prices, and Bessemer mixed numbers, quoted at 70s. per ton at works, are at the same figure as obtained before the slump set in. Low-phosphorus iron is the customary 2s. 6d. to 5s. per ton above the price already named. Malleable iron is unchanged at £6 2s. 6d. per ton delivered at Birmingham. Stocks of manganese alloys are considerable, and the last of the furnaces that was in draught at Oldside at Workington has been closed. It is stated that the smelting of manganese alloys will be transferred to the Derwent furnaces at Workington. The outlook in the steel trade is poor. What work may be done at the rail mills during the next two months will be yielded by unexecuted contracts. Native ore at 16s. 6d. to 18s. 6d. per ton is in fairly steady local request. Scottish and East Coast demand is meagre.

Our Glasgow correspondent writes:—In the West of Scotland business remains very quiet and in no department is there any decided improvement discernable. While there has been no further reduction in the number of plants in operation, it has in many cases been found difficult to find sufficient work to justify a continuance. The Continental competition in semis is still keen and prices quoted for immediate delivery are exceptionally low. Local structural engineers keep fairly well employed and during the present week a considerable tonnage has been booked locally for Colonial requirements. Export business in both black and galvanised sheets remains poor, but there is no falling off in the home demand.

Our Cardiff correspondent writes:—Depressed conditions continue in the Welsh tinplate market and the political disturbances in South America have increased the difficulties of trade in that market. Conference prices for tinplates have ruled between 17s. and 17s. 3d. per basis box, but makers outside the Conference are reported to be offering supplies at slightly less than 17s. Welsh and foreign bars are unchanged, and quotations for galvanised sheets are stable on the basis of £11 12s. 6d. per ton.

OTHER METALS.

TIN.—Movements in the standard market displayed a good deal of irregularity, prices advancing under a better demand and improved Eastern cables, but with sellers subsequently showing more disposition to press sales, top points were not maintained. Dealings in standard cash were on a small scale at £118-£118 15s.-£118 5s. and £118 15s., forward positions being mostly in request, and three months fluctuated between £121 and £119 5s. and £120 5s. In the East, sales were reported at £125 10s.-£125 15s. and £124 7s. 6d. per ton c.i.f.

COFFEE. Market generally firmer with rather more inquiry for near positions. Standard cash changed hands at £41 13s. 9d. to £43 13s. 9d., and three months £41 5s. to £43 15s. and £43 10s. per ton.

LEAD opened firmer, but later prices became irregular on larger offerings. Good soft foreign pig, December, sold £15 10s. to £15 8s. 9d.; January, £15 10s.-£15 6s. 3d. and £15 12s. 6d.; February, £15 7s. 6d. to £15 5s. per ton.

SPelter irregular but closed firm. November sold at £14 7s. 6d. to £14 5s. and £14 15s.; December, £14 10s. to £14 8s. 9d.; January, £14 15s. to £14 12s. 6d. and £15 2s. 6d.; February, £14 15s. to £15 3s. 9d. per ton.

ALUMINIUM maintained. Home trade and export, £85 per ton.

ANTIMONY steadier, and a fair demand was reservedly met. English regulus, £38 to £45. Chinese regulus, spot, £26 10s.; October-November, £24 per ton c.i.f.

ANTIMONY OXIDE, October-November, £26 10s. ton c.i.f.

ANTIMONY ORE, 60 per cent. October-November, 3s.; ditto 50 per cent., 2s. 6d. per unit c.i.f.

WOLFRAM quiet and barely steady. Chinese, October-November, sellers 18s. 6d. per unit c.i.f.

QUICKSILVER maintained. Spot, £21 15s. to £22 per bottle.

TIN PLATES steady, with moderate inquiries. I.C. coke, prompt and forward, 17s. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: October 29.

On the week prices show a smart advance, mainly due to a good demand from the trade overtaking hedge selling. Rains have interfered with picking and marketing of the crop and offerings in consequence have been light. There is still a considerable short interest in the market, but there is also a large portion of the crop still to be sold. Spot sales for the week 23rd to 29th (inclusive) are 30,000 bales, of which 14,250 bales are American, 2,150 Brazilian, 800 Argentine, 5,500 Peru, 3,150 Egyptian, 2,300 African, 1,450 East Indian and 400 sundries. Imports for the same period are 58,491 bales, of which 49,135 bales are American, 500 Argentine, 684 Peruvian, 4,271 Egyptian, 486 African, 1,430 East Indian and 1,976 sundries. Quotations to-day are: American Middling, 6-39; Egyptian Sakel, 10-05; Uppers, 7-18; Brazil Fair, 6-34; Peru Smooth, 6-89; West African Middling, 6-39; East African G.F., 7-34.

MANCHESTER: October 29th.

The feature of the market has been the sharp rise in raw material prices, and spinners and manufacturers have been compelled to advance their quotations. This development in the situation has stimulated demand and the market has been more active than for a long time back. The upward movement in values has caught numerous traders short and there has been eagerness to secure cover. In piece-goods for abroad freer operations have occurred for China in standard makes and fancies, there being rumours of some big contracts. On the other hand, India has been disappointing. A steady business has been done for Madras and Karachi, but there are few indications of more activity for Calcutta and Bombay. Buying has increased for several minor outlets, including the Near East, the West Coast of Africa and South America, and more orders have been booked in home trade fabrics. Demand in American and Egyptian yarns has been on a bigger scale and an extensive business has been done.

THE WOOL TRADE.

Our Bradford correspondent writes:—There is a healthy demand for wool in all the Colonial selling centres, and this is particularly gratifying, as big sales are taking place regularly. All good straight combing wools are maintaining their selling value, and the only cause for complaint is in respect to dusty, burry, badly grown clips. Perhaps this partly arises from the fact that there is a fair proportion of this class of staple in the Australian wool this season. On the whole, however, withdrawals are small, and prices are now keeping steady. This is certainly needed, for all classes of wool are now quite cheap enough. Meanwhile, there are steady offerings in South Africa, French buyers being keen. The current clip of combing will be much less than last year, many sheep being shorn in March and April when they had only six months' wool on their backs. Probably there will be a good deal of shearing in autumn. The most pleasing feature in connection with the consumption of

wool is that during the past two weeks larger sales of crossbred tops have been effected. It has been possible to buy 46's carded at slightly under 1s., but fully that price is now wanted, and for spot delivery quotations are exceedingly firm. Quite another tale would have to be told about prices for delivery next year. Importing topmakers apparently expect to be able to lift the New Zealand and South American new clips very cheaply, and there is no doubt that at the present time there is more encouragement for the consumption of merinos. Stocks of this quality of tops in Bradford are not large, and the output from the combs is steadily maintained. The demand for yarn does not exactly correspond, but even here there is just a fair turnover.

THE JUTE TRADE.

DUNDEE: October 29th.

Depression still continues in the jute trade, and business is so small in volume in all sections that lower prices are inevitable. The reducing of values, however, proves no inducement for consumers to increase their wants. Demand is simply not there, and no matter to what extent prices may be cut, spinners and manufacturers cannot find an outlet for even their greatly curtailed output. Spinning works are being closed down owing to the unprofitable state of trade. The Indian jute mills are off all this week in accordance with their agreement to work one week less each month, which goes on till the end of March next year. The whole trade is in a miserable state of depression, from the raw material down to the finished article. Sellers of the fibre were showing some reserve, owing to supplies being held back up-country in India, but now that the imports into Calcutta have increased, there is again more disposition to sell, and at lower prices. The value of First Marks is down to £19 to £20, according to mark, and Lightnings vary from £17 to £18, while Daisee assortment rules from £14 10s., threes from £14, and fours from £13 5s., with Tossa assortment offered at £16 10s., threes at £16, and fours at £15, and even £14 10s. named for good marks of the last named, all November-December shipment. The nominal values of hessian yarns are 1s. 11d. for common 8-lb. cops and 2s. for 8-lb. spools, and fair ordinary spins are not obtainable at less. Only the merest trifles are being bought. Twist is from 3½d. to 4d. for 3-ply 8-lb. Rove is weakening to £25 for 48-lb. and £17 for 200-lb., but fine yarns remain steady and unchanged. Carpet qualities are occasionally dealt in at from 3½d. for 14-lb. warp. Sacking yarns are slow at 2½d. for 24-lb. weft and 3½d. for 8-lb. chains. Disappointing results are still in evidence in the cloth market and prices are really dependent upon the size and suitability of the orders placed. These are usually for only small quantities, for which 2½d. is generally paid for 10½-oz. 40-in. hessians and 1½d. for 8-oz. Linoleum hessians are dull and nominal and makers of heavy goods are still grumbling of a lack of trade. Calcutta hessians are offered at 17s. 3d. for 10-oz. and 14s. for 8-oz., November-December, and 17s. 6d. and 14s. 3d. for January-March. Heavy goods have declined to 54s. 6d. for Liverpool twills and 46s. for "B" twills for shipment November-March.

HIDE, LEATHER AND ALLIED TRADES.

There has been no improvement in the position of values in connection with hides and skins, and at the sales held in the North during the earlier part of the week further reductions were recorded in connection with ox and heifers in the clear class, together with cows. Calf skins were steady at the previous week's figures. Although a moderate amount of business has been done in connection with imported hides the turnover has not been sufficiently large to maintain prices for all descriptions, and while the market is best described as steady, a weaker undercurrent is apparent. In the South American market B.A. Frigorific ox have changed hands on the basis of 6½d., with cows sold at 6½d., and Montevideo ox at 6½d. Business has been difficult in connection with dry River Plates, but a few sales have been negotiated in B.A. Americanos at 7½d., and M.V. Americanos at 8d., and Cordobas at 5½d., with only a trifling interest taken in other classes. With steady prices ruling for Capes, a fair amount of business has been put through, drys having sold at 7½d. and 6½d., for firsts and seconds, and dry salted 20-30 lbs. at 7d. and 6d. There has also been rather more life in the market for Australian hides, with a moderate amount of trade done. Slightly less business has transpired in connection with sole leather this week, but at the same time prices remain firm, and any falling off in the demand is considered to be of a temporary character. The enquiry for dry hide bends for manufacturing purposes has been up to the average of recent weeks, and some good business has been effected in weights of 7 to 10 lbs. average. English and wet-salted bends have not been quite so good a market, particularly so far as concerns the repairing section of the trade. Regular day to day orders is the experience of most producers and merchants of upper stock, with the bulk of the enquiry still concentrated on willow calf and black and brown glacé kid.

OVERSEAS PRODUCE.

SUGAR.—A subdued tone was observable, business on consumption account being comparatively small in the main, as trade buyers operated with freedom for several days past. British standards were advanced 3d. per cwt. Pending ratification of the Cuban scheme, the market has little else to go upon, and the speculative side of the commodity, while sensitive, manifests a good deal of irregularity at times. Raw sugars still sparingly offered. Terminal sections unsettled, but business in raw proceeded

with fair freedom. December delivery, sold 5s. 6½d. to 5s. 8½d.; March, 6s. 8½d. to 6s. 9½d. and 6s. 9½d.; May, 7s. 6s. 11½d., 7s. 0½d.; August, 7s. 1½d. to 7s. 2½d.; December, 7s. 5½d. Parcel foreign, 96 per cent., November, to the United Kingdom, sold 6s. 4½d. c.i.f. Cuban receipts last week 29,510 tons against 21,807 same time last year; exports, 59,837 against 55,756; stocks, 1,007,346 against 374,364 last year. Messrs. Willett estimate stock on plantations and in transit to ports at 1,185,000 tons. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending October 25th amounted to 100,923 tons against 151,706 last year.

COFFEE.—Stability continues regarding the spot market, and chief inquiry is for the finer mild liquoring qualities. These realise full rates owing to only limited quantities available. Brazilian kinds for shipment largely nominal.

COCOA.—The small transactions on spot proved at mostly unaltered prices. Forward positions steady, though business moved quietly. Accra F/F, December-February, London contract, quoted 26s. 6d. f.o.b.; G/F, November-January to January-March, sold 29s. 6d. to 28s. 6d. c.i.f. Continent. In Terminal section, December delivery sold 29s. 9d.

TEA.—Indian auctions during the week amounted to 59,365 packages. There was quite a good demand for commoner qualities which realised full prices, but otherwise market disclosed some irregularity, while frequently easier except for really fine leaf teas. These cleared readily at full rates, partly on export account. Java and Sumatra met a fair demand at about steady rates. Owing to late shipments of new season's China, there is a good demand for old import at full prices. Lapsang souchong in request at 2s. 4d. to 2s. 6d. lb.

RICE.—Previous prices held good for all qualities, but trade slow.

BEANS AND PEAS.—Market in beans dull. Butters, new crop, afloat, quoted 24s. 9d. Peas experienced moderate support and market firmer forward. Spot quiet. Japanese current crop, spot, London, 16s. 9d.

POTATOES.—The market has been depressed, and prices show a decline on last week.

SPICE.—Pepper in generally quiet request, but prices tolerably steady. Lampong, August-October, also October-December, quoted 6½d.; Muntok white, August-October, 10d.; October-December, 9½d.; and January-March, 9½d. London stocks of black reduced 40 tons on the week to 568 against 1,273 same time last year, white being 57 down at 156 against 1,107. Zanzibar cloves, spot, 1s. 5d.; forward, 1s. 1½d. Pimento and tapioca nominally the same.

FRUIT (DRIED).—Currants. Market firm on light supplies. Pyrgos, 30s. 6d. to 32s.; Australian, spot, 35s.-40s. Sultanias steady. Smyrna, 34s.-50s. Raisins quiet. Valencia, quarter-

Appreciation

Appreciation is the subtle element in industry and business that leads to higher achievement.

No man ought to be in executive control of a business until he has learned to appreciate the value of the efforts of others.

Success in industry is never due to an individual effort; it is the co-ordination of a combined effort. The modern burglar appreciates the degree of security offered by The Chatwood Safe, for recently a gang of burglars, over a period of a fortnight, attacked in neighbouring towns five different shops owned by the same firm.

At each of the first two shops the burglars failed after a strenuous effort to open The Chatwood Safe, and at the remaining three shops attacked by them, they did not even try to open The Chatwood Safe, but devoted their limited time to safes of other makes.

boxes, 38s.-63s. Dates maintained. Evaporated Fruits: Firm for plums, but other descriptions move off quietly on about former terms.

CANNED GOODS—Fruit: English continue in good request and a better demand was in evidence for Australian varieties. Californian descriptions move off rather quietly, but quotations remain steady, and signs are not wanting if an improvement in the near future, as traders stocks are reported to be running low. Fish: Sardines steady, but trading restricted apart from some inquiry for lower grades. Salmon in better supply. Lobsters and crab unchanged. Meat: Market generally unchanged and demand quiet.—Condensed Milk and Milkpowders: Market steady. Quotations: Dutch condensed milk, full cream, sweetened, 5 cwt. casks, 34s.; machine skimmed ditto, 22s.; full cream, sweetened, 56 lb. drums, 52s. 6d. English condensed milk, full cream, sweetened, 5 cwt. casks, 36s.; machine skimmed ditto, 22s. 3d. Honey: Market dull, with ample supplies on offer. Jamaican white, 40s. to 45s.; San Domingo, good to fine, 32s. to 37s.

MEAT—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,598 tons, as compared with 9,111 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.5 per cent. of the supplies, as against 80.0 per cent. a year ago, and imported mutton, mainly New Zealand, formed 77.7 per cent. of the total supply, as against 72.6 per cent. last year. The prices of beef and pork show a slight advance on last week, but those of mutton are scarcely changed.

RUBBER—Stability was the distinguishing characteristic, and a fair amount of business was effected. Deliveries from London and Liverpool wharves are proceeding apace, in fact, signs are not wanting, as to a high level record being established this week. French destinations figured largely in same, against the contingency of a higher import duty on the commodity in that country. Standard sheet, spot, and November, sold 4½d. to 4¾d.; December, 4½d. to 4¾d.; January-March, 4½d. to 4¾d.; April-June, 4½d. to 4¾d.; July-September, 4½d. to 5d.; October-December, 5d. to

5½d. London stocks reduced 884 tons on the week: landings, 2,000; deliveries, 2,884; stocks, 82,218, against 46,819 last year. Liverpool stocks 1,134 tons higher; landings, 1,373; deliveries, 239; stocks, 38,345 tons, against 12,665 last year.

HEMP—Manila qualities held with more reserve and market the turn firmer. For K grade, November-January, buyers at £22; January-March, £22 5s. c.i.f. African sisal, No. 1, f.a.q., October-December, sellers £21 12s. 6d. c.i.f. Receipts last week cabled 25,000 bales, against 32,000 last year and 22,000 in 1928. Estimate for next week 24,000, and week after 25,000. Shipments from Manila last week: United Kingdom, 8,000 bales; Continent, 3,000; United States, 5,000; Japan, 7,000; others, 1,000; and local consumption, 1,000; making stocks 120,000.

VEGETABLE OILS AND OLSEEDS—Steadier conditions prevail and there is more desire to do business. Linseed is in better demand by crushers both here and on the Continent, and old crop Plate in near positions is firmer, up to £12 1s. 3d. having been conceded for first-half November shipment to Hull. Current value on spot and for October is around £12 2s. 6d. Later positions are at a discount and business in new crop Plate to Hull, January loading, is reported at £11. The second official estimate of the area under linseed in Argentina varies only slightly from the original estimate, and a yield of two million tons is generally anticipated. Demand for cottonseed has revived and a good trade in black Egyptian for shipment has been done at £6 5s. to £6 7s. 6d., while other oilseeds also show some appreciation in value. In the oil section linseed oil for near delivery is scarce and firmer, current quotation for raw oil on spot ex Hull mill being £27 5s., and for November-December £25 10s. Cotton oil is firmer, crude Egyptian having advanced to £23 10s. and common edible to £26. The demand for oilcakes and meals is improved, but still below normal for the time of year. A fair demand for copra was reservedly met and prices responded. F.M.S. Straits, November, also December, to Rotterdam, quoted £17; Dutch E.I. ditto also £17; Ceylon, £17 17s. 6d. Palm kernels, November-December £9 Hamburg, £11 15s. c.i.f.

THE MONEY MARKET.

EARLY in the week there was a definite shortage of money. On Tuesday up to 2½ per cent. was paid, and it was thought that the market narrowly escaped borrowing at the Bank. The common explanation of the shortage was that, owing to its being exactly three months after August bank

holiday, there were no Treasury bill maturities, and so the market was deprived of the funds it normally obtains in that way, and on the other hand, it had the normal quantity of new bills to pay for early this week. If this were the sole explanation, however, it would have been natural for money to have become more plentiful later in the week, but this was not the case. Money was still wanted on Wednesday and Thursday, as is shown by the fact that, on the latter day, $2\frac{1}{2}$ per cent. was commonly paid.

Discount rates remained fairly steady during the first part of the week, $2\frac{1}{8}$ per cent. being the ruling rate on Wednesday for three-months' bills, with 2 per cent. still quoted for shorter bills, and $2\frac{3}{8}$ for those with four and six months to run. On Thursday, however, rates hardened as the result of the news of impending gold shipments to France, discussed below. $2\frac{1}{2}$ per cent. consequently was quoted in some cases for three months' bills, with the ruling rate $2\frac{3}{8}$ per cent. It is believed that early in the week the Bank bought some bills at $2\frac{1}{2}$ per cent., and this was possibly done to help the market over the stringency then prevailing. It was also reported that some American banks had been buying gilt-edged stocks heavily, and that this helped to account for their strength.

	Oct. 16, 1930.	Oct. 23, 1930.	Oct. 30, 1930.	Nov. 6, 1930.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	$1\frac{1}{4}$ (May 1, '30)

Houses (Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	...

The French banking troubles, noted upon a later page, have had a speedy and pronounced effect upon the London Money Market. Many French banks have felt it necessary to strengthen their cash resources, in view of any possible trouble, and so have drawn heavily upon their foreign balances. This has driven sterling down to Frs. 123.65, which is a rate low enough to permit of gold withdrawals on French account from the Bank of England. No gold was withdrawn on Wednesday, but late on Thursday afternoon a report was current to the effect that withdrawals amounting to £3,000,000 had been arranged, to be spread over ten days, in order to permit of its refining.

In interpreting this report, it must be remembered that, even if it is correct, all or part of the arrangements can be cancelled at any time, if the exchange improves sufficiently to warrant it. In actual fact, similar arrangements have been made on occasions before, and then cancelled after only a small amount of gold had been withdrawn. Still, as £295,337 of bar gold was withdrawn from the Bank on French account on Thursday afternoon, it is clear that initially the arrangements have held good. In any case, the Bank is well equipped to withstand the loss of the full amount mentioned. Mainly owing to the arrival of a million sovereigns from Australia, the Bank's gold holdings have risen by £875,000 to £161,542,000. Furthermore, in addition to the shipments being made from Spain, £1,506,000 of gold is known to have arrived during the week from Brazil. This gold has as yet been neither turned into the Bank nor disposed of on the open market, and so may be regarded as at the moment constituting a hidden reserve, out of which Paris demands, if necessary, can be satisfied.

The only changes of note in the week's Bank return are contractions of £1,593,000 in Public Deposits, and of £2,576,000 in Government securities. The latter movement, following a decline of nearly £4 millions last week, has resulted in bankers' deposits falling by a further £61,000 to £55½ millions, notwithstanding the disbursement of interest on Government stocks at the beginning

of the month. The increase in the Bank's gold stocks has been almost entirely off-set by an expansion in the note circulation, and the Reserve is consequently unchanged.

NEW YORK.

Call money has remained easy, with 2 per cent. the ruling rate. The New York Stock Exchange reports a contraction during October of \$925,329,000 in brokers' loans. The current figure is \$2,556,124,000, as against \$6,108,825,000 a year ago. Immediately after the election, a report, attributed to Senator Glass, was current that the proposed investigation into the Federal Reserve system would be begun early in December.

THE STOCK MARKETS.

The leading feature in the stock markets was the continued strength of the longer-dated gilt-edged stocks, on sustained demand from the large financial institutions, and, to some extent, from the general public. The slight reaction which occurred in the middle of the week was regarded as healthy. Australians lost ground on the announcement of Mr Fenton's intention of budgeting for a deficit, but foreign bonds were firmer all round. Home Rails received discriminative attention. Business in domestic industrials was sufficient to maintain values, but Internationals were affected by further liquidation from New York. Insurance shares were a strong and active market. Dealings in tea and rubber shares were reduced to small proportions. Oil shares showed effective resistance to depressing influences from New York and Paris. Mines were inactive by reason of the irregularity of base metal prices.

THE COMMODITY MARKETS.

There has been an improvement in the market for house coal, but the demand for industrial fuel continues restricted, and exporters show no signs of an early expansion. Activity in all sections of the iron and steel industries is still on a low level. Raw cotton values have not been maintained, and business in manufactured goods have been less in volume. The steadier tendency of wool prices has resulted in a slight improvement in the Bradford market. The downward movement in the price of hides continues, although the consumption of leather has not fallen off appreciably. Wheat prices suffered a sharp decline.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was very quiet this week, with sterling weak against several currencies, notably the franc and the dollar. New York went from 4.85½ to 4.85½, Paris, for reasons discussed in the preceding column, improved by 16 points to 123.66, and Brussels also went against us to 34.83½ from 34.85½. Milan lost a point at 92.81, but the peseta again improved, gaining 30 points at 43.10. Amsterdam weakened a little at 12.06½, but Berlin gained ½ at 20.88½. Switzerland was weaker at 25.03. Stockholm lost ½ at 18.10½, Oslo gained ½ at 18.15½, and Copenhagen lost ½ at 18.16½. The South American currencies improved all round, Rio gaining ½ d. at 5d., Buenos Aires ¾ d. at 38¾ d., and Montevideo ¾ d. at 39¾ d. In the Far East, the yen lost ¾ d. at 2.04¾ d., and Batavia gained ¼ at 12.06½. In the forward market, New York went to discounts of ¾ and 1½ cent. Paris was quoted at discounts of 6 and 8 centimes, whilst Brussels went from 7 premium to par for both periods. The discounts for forward lire widened to 16 and 40 centesimo, while the premium on forward Madrid narrowed a little to 2 and 4 centimos. Amsterdam was more wanted at ½ and ¾ cent premiums, but Berlin was weaker at 3½ and 10½ pfennigs discount. Silver improved by ¼ d. for spot and ½ d. for forward delivery, as a result of Indian and Chinese buying, coupled with limited supplies. Of the China silver exchanges, Shanghai improved by ½ d. to 1s. 7½ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Boulevard Street, London, E.C.4.

A CHALLENGE TO INERTIA.

To make no bones about it, the salaries which our six hundred legislators, leaving out of account ministerial emoluments, have earned during the first fortnight of the Parliamentary Session, represent very poor value to a heavily-taxed nation. The whole tenor of the debates on the Address, with their atmosphere of artifice and unreality, recalls irresistibly Plato's myth of the Cave. As one reads in Hansard (little need is there of the cynic's "crib to read it with") the sorry tale of dull Governmental apologia, futile and self-contradictory criticism from two disunited Oppositions, all fencing for tactical advantage, one is reminded by our Parliamentarians of the conversation of the prisoners who could see nothing but the shadows cast on the Cave's inner wall by the "manufactured objects" passing between them and the artificial light. Yet all the while, outside the Cave, daylight beats on the cold, hard fact of 2,300,000 unemployed.

Chiefly, therefore, because its authors are not afraid to face, nor are blinded by, that daylight, we commend to our readers a careful and unprejudiced study of the brochure* setting forth the findings and proposals of the three Liberal representatives who have conferred with the Cabinet, on the Prime Minister's invitation, with a view to framing jointly, on a non-party basis, policies directed to alleviating the grave unemployment crisis. To whatever criticism in detail they may be open, whatever room there may be for difference of opinion regarding some of the assumptions on which they depend, these findings and proposals are the sole constructive contribution which has been vouchsafed, since Parliament re-assembled, towards the betterment of our economic troubles; and, as such, they deserve close examination.

The salient features of the brochure can be summarised briefly enough. It begins with an analysis of the composition and causes of unemployment in Great Britain. Following (though with undue emphasis, we suggest, on the "deflation" factor) the broad lines of the study by Mr A. Loveday, published recently as a Supplement to the *Economist*, the pamphlet reaches the conclusion that, setting aside the cyclical unemployment directly attributable to the world-wide trade depression, the hard core of peculiarly British unemployment—the "refractory million"—is a consequence of our attempt "to ensure to the nation a standard of life higher than our present relative national effort and efficiency justify." Given the hide-bound conservatism of British managerial practice, the rigidity of trade union rules of work, the inelasticity of nominal wages, and the grievous dead-weight of rates and taxes, it is difficult to gainsay the correctness of this diagnosis. Nor do we think that there is any convincing answer to the next proposition in the brochure—that, however superficially attractive may be the conception of an "insulated" home market, entertained (with a variety of reservations) by the Conservative Party and the Labour Left, no salvation in quotas, import boards, or protective tariffs, all entailing necessarily an increase in domestic costs of production, is to be sought by an island like ours, so densely populated and so dependent on competitive exports for the maintenance of life.

The unpalatable truth, therefore, logically emerges that, if we are to regain lost ground, British costs of manufacture must be reduced. This postulate necessitates, on the one hand, drastic retrenchment of unproductive State expenditure and a lightening of the tax-burden. The outlay on social benefits, "pursued on a scale appropriate only to times of real and increasing prosperity," must be curtailed; the costs of inflated departmental staffs must be subjected to a new "Geddes Axe"; the abuse of the principle of insurance against unemployment must be stopped by restoring the Fund to a sound actuarial basis;

and, in short, the Government must give a courageous lead to a proportionate sacrifice of income all round.

This negative prescription, however, of abstinence from unnecessary spending is rightly regarded as representing only one side of a sound economic policy. On the other side the proposals are made (1) that "self-help" on the part of industrialists should be encouraged by the creation of an "industrial bank" (if the Big Five, after careful consideration, consider it improper or impracticable to widen their activities in financing new or smaller concerns), the restoration of the Trade Facilities Act, and the establishment of an Institute to "bridge the gulf between science and industry"; (2) that, in order to establish "a better balance in the national economy, by employing a larger proportion of our total population in food production upon our own soil," the State should acquire land and establish thereon "family farms" of the 3-10 acres size, should facilitate financially the reconditioning of farming estates, and should promote cheaper transport and better marketing for agricultural produce; (3) that the vigorous development of roads, regional planning and housing, telephones (for whose administration a body similar to the B.B.C. is recommended) and electricity should be pursued rapidly on the lines proposed in "We can Conquer Unemployment"; and (4) that, to begin with, a national development loan of £250 millions should be raised to finance the foregoing projects.

This bald summary does scant justice to a thesis which no one concerned with the situation of this country can afford lightly to dismiss. Relief works, as such, obviously afford no cure for the obdurate ills in the economic structure of the country; and though we do not accept the extreme view that even in times of depression, when huge sums are being paid out to the unemployed, all capital expenditure by the State, no matter how "productive" the objects, or how negligible the consequential increase in the rate of long-term interest, must entail a corresponding diminution in the activities of other enterprises, we are alive to the danger lest money expended by the Government on "development," with unemployment relief as the immediate aim, may be spent with prodigal haste. Moreover, the brochure is inclined to burke the question whether wages should, in fact, be reduced proportionately to the decline in the price of commodities. There are also some assumptions made that we should hesitate to accept, and there is ample room for difference of opinion in regard to particular suggestions. Also, though we have a task to do at home, the present crisis is most evidently an international one, and national action, though it may palliate, cannot cure it. Nevertheless, when all is said, the signal merit of the Liberal "plans" is that they recommend, with clarity and courage, a re-focusing of national expenditure—from the easy road of "doles" to that of reconstruction and concerted effort. Questionable details apart, their authors aim at the key solution of our troubles—a national "drive" towards greater efficiency.

The tragedy is that, as matters stand in the political arena, these proposals are put forth with little hope of positive results. To judge by this week's debates in the House, Mr Chamberlain and Mr Baldwin, recognising, but reluctant for electoral reasons to avow, the truth about British wages and production costs, intend to cling to the singular fallacy that a predominantly exporting nation can save itself by a price-raising tariff; the Liberal Party, self-immolating in Division, are content, for tactical reasons, with the *quos ego* type of classic threat; and the Labour Left Wing, divided curiously between ambitions to outdo Lord Beaverbrook in "controlling" foreign imports, and zeal to outrun Mr Lloyd George in "progressive" capital investment by the State, beats vainly against the inertia of the Government.

For it is idle to pretend, as the authors of the Liberal brochure do in their Preface, that their schemes have been "accepted in principle" by the Government, and that differences are limited merely to the relative "speed

* "How to Tackle Unemployment." By D. Lloyd George, The Marquis of Lothian and B. Seeborn Rowntree. 6d.

of progress" to be realised. In truth, neither this Government nor this Parliament shows any sign of having the capacity to mobilise (and rapidly would be an essential condition of such mobilisation) anything like the sort of national effort which the Liberal plans contemplate. The extenuation of inertia by spending "just a little more"—most fatal of all forms of extravagance—is all, we fear, that can be expected; and Mr Aneurin Bevan, in a forcible, brief speech on Tuesday night, said truly that Parliament's attitude of hopeless ineffectiveness in face of a great emergency is steadily impairing public confidence in the political institutions of this country.

Inertia is the enemy; and to that inertia the policy sponsored by Mr Lloyd George and his colleagues comes as a challenge. We believe we do not exaggerate if we assert that on the reception of that challenge (we speak not of debatable details but of the broad principle of an organised national "drive") depends ultimately the issue whether Britain, "from lack of imagination, lack of initiative, lack of leadership," is gradually to decline or is to regain firm hold of the greatness, economic and political, which may so easily slip her grasp.

TOWARDS PEACE OR WAR.

THIS week, the Preparatory Commission for the League of Nations' Disarmament Conference is meeting again, and meeting for the last time—for good or evil. If the Commission's work this time enables the Council of the League to convene the Disarmament Conference, well and good. The first landmark on the road to international peace, towards which we have been directing our steps since the Peace Conference of Paris, will then at last have been reached. On the other hand, if the Commission fails to make any better progress in this session than it has made in the many sessions that have gone before, it is recognised on all hands that it will be useless to make any further attempt, on these lines, to agree upon the technical bases for disarmament, and that the Disarmament Conference itself will then have to be postponed *sine die*. If this happens, it will mark the close of the "post-war" epoch of European history. It will mean that we have taken a wrong turning out of the road to peace and that our feet are once more set on the same paths that brought us to destruction in the epoch which ended in August, 1914. At this grave moment, it is worth noting what is being said and done by some of the statesmen who find themselves responsible for the conduct of European international relations.

The speech which was delivered on October 24th, at Newcastle, by our own Secretary of State for Foreign Affairs commends itself by its clear thought and its sober, non-partisan spirit. Mr Henderson's theme was the continuity of British foreign policy through adaptation to the new circumstances of the "post-war" international situation. We are still pursuing our traditional policy of protecting the liberties of the weaker peoples. We still believe that, in this policy, British interests coincide with the cause of peace and civilisation. But since the Great War, the interdependence of interests between the peoples of the world has been enshrined in an international instrument, the Covenant of the League, and the method by which Great Britain has to pursue her permanent international aims has been transformed in accordance with the transformation in the international environment. "The conception of a policy of splendid isolation has for all time been abandoned by formal treaty."

Mr Henderson went on to lay down three parallel lines along which our traditional policy, now adapted to the new circumstances, has to be carried on. First, we have, as always, to work steadily towards diminishing specific points of friction between us and this or that country in particular. We achieved this *vis-à-vis* France in 1904 and Russia in 1907. As illustrations of our "post-war" efforts along this line, Mr Henderson cited our dealings with China and Egypt, our settlement of our debts to the United States, and the liquidation of the reparation question and the Rhineland Occupation *vis-à-vis* Ger-

many. In the second place, we have to promote all those movements towards international co-operation and solidarity in the economic, social and cultural spheres which have gained a fresh impetus since the war and have been crystallising round the various organs of the League of Nations. The last and most important line of advance, as Mr Henderson pointed out, is to strengthen, improve and complete the machinery of the League.

Speaking three days later, at Rome, Signor Mussolini took up the tale in a very different tone. Referring to his speeches of last summer, which had such an adverse effect upon the prospects of an Italo-French naval understanding, he explained that these gestures had been intended to tear the mask off the face of a hypocritical Europe which "babbles of peace at Geneva and prepares for war everywhere." The most interesting—and ominous—feature of this part of Signor Mussolini's speech was his conscious, and indeed emphatic, equation of the present position of Fascist Italy with the pre-war position of Imperial Germany. He drew the excruciatingly familiar picture of a young nation, bursting with life and rightly demanding that "place in the sun" to which she is entitled, and who finds herself surrounded by a hostile ring of old effete nations determined to crush her by force because they cannot hold their own against her by fair means. Moral war had been declared against Fascist Italy long ago—a war of calumny—and here the Duce prognosticated that the Italians would soon be accused of the atrocities of which the Germans were accused in 1914. This war of slander might prove to be the preparation for a war of arms; and here Signor Mussolini referred to military preparations on the French side of the Franco-Italian frontier which have been in progress (according to his statement) since 1927. In this context, there is not much comfort to be got out of the Duce's assurance that "Fascist Italy will never take the initiative in making war"; for, on his showing, if Italy went to war with her neighbours to-morrow she would claim to be fighting a war of defence as stoutly as Germany made the same claim in 1914-18.

Such language in the mouth of a European statesman with Germany's example consciously in his mind makes one almost despair of the human capacity to learn from the experience of others. Yet there were points in the speech—and points which have a permanent place in Italian foreign policy—which will command the approval and support of that very element in European public opinion which is most alienated by the thumping jack-boot and the clanking sabre. Signor Mussolini once again declared—and we have no right to question his sincerity—that "Fascist Italy is arming relatively to the others, because all are arming," and that "she will disarm if all disarm." Further, he repeated his previous declarations of faith in treaty revision; and we can echo his sentiment that this is "not a predominantly Italian interest, but an interest of Europe and the world." Here he made a telling point by bringing treaty revision and disarmament into relation. The real violators of the Covenant, he suggested, are those who have created and sought to perpetuate at Geneva two categories of states—the armed and the unarmed. "What juridical or moral parity can exist between an armed and an unarmed man? How can this comedy be prolonged indefinitely?" Some who usually deprecate Signor Mussolini's vigour of speech would be inclined to use even stronger language here—substituting "fraud" for "comedy," in view of the assurances which were given to Germany by the Principal Allied Powers that the unilateral disarmament of Germany and her allies was to be the prelude to disarmament all round.

Two other points in Signor Mussolini's speech are significant. First, Fascism is of universal application in its ideas, doctrine and realisations. Second, the pacific expansion of Fascist Italy will be eastward. When we take all these points together, how are we to interpret them in concrete terms? Do they portend a military alliance against France between a Fascist Italy and a Fascist Germany, with a bevy of East European satellites—Bulgaria, Albania, Hungary, Austria—to balance Poland and the Little Entente? No doubt there

is a real danger to-day of Continental Europe being once again divided into two hostile armed camps, as it was during the quarter of a century ending in 1914; and, if this situation takes shape, we shall once again have to fear a European war in which the whole world may be involved. Fortunately, we are not at that point yet. The rigidity of French policy may relax; the bellicosity of Italian policy may be moderated; the Nazis may never come into power in Austria and Germany; and, finally, the weaker countries of Eastern Europe may not prove willing to lend themselves again as pawns in the game between the Great Powers. While Italy and France are competing for hegemony in the Balkans, as Russia and Austria competed in the past, the Balkan peoples themselves have been meeting in conference at Athens; and, from the account sent by our Athens correspondent, which we publish in another column, it looks as if the foundations for a Balkan co-operative system may have been laid. The organisation that has been set up is partly on the lines of Monsieur Briand's wider scheme for the whole of Europe, and partly on the lines of certain non-European developments such as the Institute of Pacific Relations. Like the latter, the new Balkan organisation is unofficial; and this may prove a source of strength in a movement which has influential people behind it in all the participating countries. Moreover, the Balkan statesmen have been doing their part. Half-a-dozen years ago, who would have dreamed that in 1930 Monsieur Venizelos would be visiting Angora in order to bury the hatchet between Greece and Turkey? If the small countries of Eastern Europe show this kind of wisdom, there is hope for Europe after all.

THE EXTRA YEAR.

SIR CHARLES TREVELYAN's new Bill for raising the age of compulsory attendance at school from 14 to 15 in the main follows the lines of a previous Bill introduced into the House of Commons last May and debated there for two days. Like its predecessor, the present Bill will arouse acute controversy. Dispute, however, will centre not on the desirability of extending educational facilities, but on the present capacity of the Exchequer to bear the cost, and still more, upon the principle involved of giving maintenance grants to parents to enable them to obey the new law.

Fortunately, many long years have passed since any considerable body of opinion ranged itself against the idea that the provision of equal educational opportunity to all children is a proper aim of the State and one on which expenditure is, on the broadest grounds, reproductive. Scoffers at systematised education there will always be, and even Mr Winston Churchill (whom, of course, we do not rank among them) has recently told the world of his own unsatisfying experiences at the hands of pastors and masters. Nevertheless, we may assume in these days a

fairly general agreement that, be the faults of all public education systems what they may, it is a wise function of the State to give the best it can provide, and the best it can afford, to all its citizens of the future. Nor can there be many who would aver that 14 is the magic age at which the education of a child is satisfactorily and properly completed.

The desirability of the main aim of the Bill is, therefore, scarcely in dispute. But in hard times like the present, with the taxpayer depressed by his burdens and apprehensive of an increase, it is very proper to ask the question, "Ought we to do this desirable thing now, or ought we to wait for better days?" In attempting to answer this question, let us leave out of the argument for the moment the vexed question of maintenance allowances. The extension of the school age by one year involves the provision of extra teaching staff and accommodation. For these services a financial memorandum attached to the Bill estimates that the cost would eventually be stabilised at about £2½ millions after 1938. (The immediate cost is not estimated.) We say without hesitation that if this were the sole expenditure involved, it would be right to incur it, without further ado, though it remains to be seen whether it is administratively possible to inaugurate this extension of educational services by April 1, 1931. That the extended education should in itself be socially reproductive is not the only consideration. Although much extravagant talk has been current as to the large absorption of older labour to which the reduction of juvenile entrants to the labour market would lead, there is no doubt that it would result in some substantial diminution of the unemployment total. The State would therefore actually get back a considerable part of its expenditure through a decline in the burden of unemployment relief, and it would have the satisfaction of holding back the youngest of its would-be workers from the risk of starting workaday life with a period of demoralising idleness.

But, unfortunately, this is only a part of the cost which the Government proposes to place upon the shoulders of the taxpayer and ratepayer—chiefly the former. It is further proposed that the parent of any child in the 14 to 15 class shall be compensated, in cash, for the postponement of his child's earning period, and shall be entitled to claim five shillings per week during the extra year, provided his means do not exceed a scale prescribed by the Board of Education. The income test ranges from £3 per week for a claimant who has not more than two children, to £5 5s. per week where a claimant has seven or more. Since no provision is made in the Bill, or can well be made, for checking claimants' statements of income, this means something very much like universal provision of maintenance grants.

This raises two vital questions, one of principle and one of cost. The cost is estimated at £3½ millions for the first full year (1932-33), rising to £5,375,000 in 1934-35 and £5,500,000 in 1935-36. There is also the ominous admission that the cost of maintenance allowances is "not

susceptible of close estimation," and long experience reminds us of the frequency of under-estimates in rough initial estimates of this kind. It appears, therefore, that if the Bill passes in its present form, an item of at least £8 millions and possibly £10 millions will be added to the public cost of social services. It is a formidable addition and we take the view quite definitely that, in the present state of the Exchequer, the nation cannot afford it.

What, then, is the alternative? Can we not have the extra year at school at a more modest cost? The proponents of the Bill argue that maintenance grants are essential. We agree to this extent, that to force all parents to keep their children at school for an extra twelve months might create many cases of hardship, and that the State should take cognisance of these where they arise. This, of course, could be done by a system of exemption in difficult cases; but such a course is unsatisfactory because it might debar from the new facilities many children who might benefit the most. In a proportion of cases, then, relief to parents must be granted. In one shape or another,

through scholarships, bursarships, sizarships, and other methods, assistance is already arranged for needy scholars through the whole range of education right up to the universities. We believe it to be possible to arrange some scheme in connection with Sir Charles Trevelyan's Bill which would provide for hard cases without imposing an intolerable burden upon the taxpayer. Nor is the saving of public money the sole merit of a restricted scheme for the relief of hard cases. We support the principle that the State should be expected to compensate for exceptional hardship which it creates. But we cannot subscribe to the principle that it is morally or socially right for the State to offer universal (or almost universal) grants to any section of the community to enable it, or encourage it, to observe the laws enacted by Parliament. Electorally, no doubt, it is expedient to do so. But that is another matter, and one that cannot be taken into consideration in examining the merits of the Bill from the point of view of the national advantage.

INTERNATIONAL MIDDLE CLASS LIVING COSTS.

In the hope that it will prove of interest to readers of the *Economist*, we print below a study prepared for Unilever Limited, and aimed at the ascertainment of the comparative cost in various European countries of maintaining "typical" English standards of life corresponding to English "earned" incomes ranging from £500 to £3,000 per annum.

The conclusions at which the authors of this study have arrived should be read with a number of qualifications in mind. In the first place, the difficulty of the task of constructing an "average" English budget obviously increases progressively in proportion to the rise in annual expenditure, and a number of the items making up each of the sample budgets given below may be open to criticism. In the second place, it should be appreciated that, as the authors of the study admit, many objects of middle-class expenditure in England are not available abroad in precisely corresponding form. For example, differences in forms of educational institutions render it impossible to calculate the "equivalent" cost abroad of typical English education costs. Thirdly, an element of statistical inaccuracy is introduced into the calculations by the fact that the items of rent, etc., and taxation are estimated on the basis of the calculated "equivalent" salary.

A final and more important qualification lies in the fact that the study cannot be regarded as providing in any way true indices of comparative middle-class living costs in different countries. That is to say, it should not be supposed that it costs a professional worker in France 1.2 per cent. more to maintain a social status and standard of comfort *relatively to normal accepted conditions in France*, than it costs his "opposite number" in England. The truth is that, within the range of incomes covered by the study, social habits differ so profoundly in various countries, that comparative living costs as between *natives* of each country cannot be statistically measured. Thus, what the study really does is to analyse

—within such limits of accuracy as are possible, given the amount of estimation and approximation necessarily entailed—the comparative amounts which would be spent in various countries by a member of what may be described as the "international salariat" who moved from one capital city to another and endeavoured in each to maintain, subject to some local variations, more or less the kind of life which, with his particular income, he would live in London. If these qualifications be borne in mind, the results of the investigation which Unilever Limited have caused to be carried out disclose many interesting features.

Equivalent Salaries in European Countries.

Of recent years there have come into existence large concerns conducting business on an international scale, with many employees in well-paid positions who may be frequently in touch with one another. In such a case the necessity arises to fix scales of remuneration for various posts of equivalent standing and responsibility, and to do this reasonably and equitably the question of comparative costs of living at once arises. Considerations such as these induced Unilever, Ltd., to ask the writers to carry out an investigation into the comparative cost of living in various European towns, and in respect of a scale of incomes ranging from £500 to £3,000.

The unit we have taken is the married couple with two children—a boy of 15 and a girl of 11. We have included in our calculations the cost of food, servants, clothing, rent, rates, etc., direct taxation, motor cars, education and sundry items, including expenses of travelling to business, of medical attendance, subscriptions and charities, etc. We have assumed that the income is entirely earned, and have, therefore, eliminated all income from investments. The information forming the basis of our calculations was obtained from a number of sources. In respect of England the figures were compiled partly by reference to authoritative statistics and partly (where no such statistics are available) by estimation based on fairly well-known social and economic facts. To obtain the necessary data for the Continent a questionnaire was sent to the various Continental offices of Unilever, and the information so obtained was checked in various ways.

* Includes:—Travelling (to business, &c.), doctor, chemist and dentist, subscriptions and charities, and other items, such as expenditure on tobacco, beverages, &c., &c.

We have endeavoured to estimate the comparative salaries required to maintain in various European countries given English standards of life, except in so far as certain objects of expenditure usual in England are not available abroad. Thus, the dietary standard adopted for foreign countries is that of the English family budget for the various incomes concerned. A similar method has been adopted in arriving at the figures under the heading "Servants and General Household Expenses." Wages of servants in the different countries have been obtained from Unilever's Continental offices.

The comparative expenditure on clothing (both male and female attire) in the several categories has been a difficult item with which to deal. The figures obtained from the Continental offices did not give much assistance. We therefore consulted several international distributive clothing firms and associations and, whilst they were not able to provide us with an index of comparative international clothing costs, based on definite statistical analysis, yet the information they gave, taken in conjunction with estimates we received from other authoritative sources, enabled us to estimate fairly closely the cost of maintaining in the different countries the average English style of dress, adjusted to suit special local conditions—e.g., in Scandinavia a fur coat is a necessity, in France a luxury.

With regard to the items of Rent, Rates, Taxes, Heating, Lighting, Water, etc., information has been received from Unilever's Continental offices, supplemented from other sources. The type of house inhabited is estimated in each case on the basis of the calculated "equivalent" salary.

Estimated taxation, in respect of England, is based upon the scale salaries, and in respect of the other countries is calculated so as to leave a "net" income sufficient for the maintenance of the "equivalent" standard. The amounts shown are those assessed according to the tax laws and regulations existing in the countries in question. We understand, however, that in some countries these regulations are not strictly applied.

With regard to "Motor-car Upkeep" we have consulted a well-known international motoring authority, and have received information from them relating to the minimum salary at which the "average" person living in the countries under consideration with two children, purchases his first motor car. Motor car depreciation has not been included in the upkeep expenses. Since the minimum salary at which the average person first becomes the owner of a car varies in the different countries, the comparison of the total figures relating to expenditure, and before dealing with the "Surplus," becomes to some extent distorted. Certain adjustments have, therefore, been made in the "Surplus" item, as described below.

In respect of Education, the estimates for foreign countries are necessarily based on what typical families in the various income grades would spend.

With regard to "Sundries," the Continental figures corresponding to the English basis have been arrived at by a somewhat arbitrary combined index of the individual items so far as information is readily available. Obviously, these items are so heterogeneous in character that a more thorough treatment would entail much more research than the item warrants, at least so far as its effect on the final results is concerned.

It will be observed from the specimen tables that the difference between (a) the annual English salary, and (b) the annual expenditure in England on the items enumerated above as constituent parts of the standard of living budget, has been shown separately under the heading of "Surplus for Savings, and such items as Life Insurance, Entertainments, Clubs, Recreations and Holidays."

This "balance" in the English column has been repeated throughout for the other countries in the respective salary grades, but with certain adjustments as described below. The items included under this heading are to such a large extent a matter of individual taste and inclination that we think this course will be found justified.

The adjustments relate to the anomaly which presents itself in connection with the upkeep of a motor car (see above). Experience proves that at the lower salaries the maintenance of a motor car causes some restriction in other branches of expenditure, particularly in such items as entertainments, recreation, etc., included in the "Surplus." A motor car enters into the English budget at the £900 per annum grade, and if the above method for dealing with the surplus were followed strictly, a somewhat anomalous position would arise for most of the European countries, where the equivalent salaries of £900 and even £1,000 do not carry an allowance for the upkeep of a motor car. To surmount this difficulty we have calculated what the surplus item would have been in England had there been no expenditure on motor cars, and inserted such adjusted item for the salary grades and the countries in question in those cases where no provision is made for such expenditure.

The results of our investigations are shown in tabular form. Three detailed tables for the salaries of £500, £1,500 and £3,000, respectively, indicate the way in which the index numbers, given in the final table, have been computed.

LOMBARD STREET AND ITS RIVALS.

WHAT changes has the past decade brought in the London discount market? Will London retain her position as the world's leading banking centre? In a series of three articles, appearing in the October 4th, October 18th, and November 1st issues of the *Economist*, we gave an account of the endeavours of a number of Continental banking centres to develop a discount market of their own. We showed that, although both Amsterdam and Switzerland have succeeded in introducing the use of bankers' acceptances and in establishing a market in them, the possibilities for the expansion of both these markets are restricted, both on account of the limitations of their resources and also because the conservative policy of their authorities is opposed to a spectacular expansion. As for the other minor discount markets, they are of a local character and are not likely to rise to international prominence. None of these centres—not even Amsterdam—can be regarded as serious rivals to London. Although they may divert a certain amount of business from this market, the major part of their business is of a type which does not appeal to London in any case. They specialise largely in smaller countries of Central and South-Eastern Europe, whose credit facilities are comparatively restricted in the London market.

The only new discount market which has proved to be, so far, a strong rival to London is New York. Although it is essentially a post-war creation, the volume of its outstanding acceptances has already grown to a figure approximately equal to that of London. The dollar bill has undoubtedly proved to be a dangerous rival to the sterling bill as a means of financing overseas trade. At the same time, it is beyond doubt that, though the amount of outstanding acceptance credits in New York may be as high as the corresponding figure in London, the turnover in the New York market is much inferior to that of the London market. Dealing in bank bills is not nearly as active in Wall Street as in Lombard Street. Notwithstanding the propaganda activity of the American Acceptance Council, the market for brokers' loans remains a more important section of the New York Money Market than the discount market. Whenever there is a boom, liquid resources are diverted to loans on securities, and the discount market shrinks into the background. The American authorities themselves do not seem to be particularly anxious to encourage the development of the New York discount market. The demand made by the Acceptance Council and an important section of the banking community for the introduction of fortnightly settlement on the Stock Exchange—which would divert liquid funds from brokers' loans to the discount market—has met with no response in official quarters. Nor has the special tax on interest earned by foreign corporations on funds employed in the United States been repealed, so as to encourage foreign demand for dollar bills. New York is thus handicapped in her competition with the London discount market. In spite of this, she is a formidable opponent.

Paris is the youngest, but the most ambitious of the rival discount markets. French banking interests and the authorities have realised the necessity of creating adequate facilities for investing the liquid resources of the French banks, and have set themselves the task of establishing a discount market. Some of the leading banks have taken up the acceptance business, and a new institution has also been created for specialising in acceptance credits. Although the movement is of too recent origin to enable us to form a definite judgment as to its prospects, there is reason to believe that Paris as a discount market will never develop into a serious rival to London. In spite of its substantial resources, it is not likely to rise much beyond the dimensions of either Amsterdam or Switzerland. The chief obstacle lies in the mentality of the French bankers themselves. In London the executive officials of banks are in a position to take decisions as to granting acceptance credits or discounting bills of a comparatively large amount. In Paris, decisions as to much smaller amounts have to be deferred until the next board meeting, after which those

who approached the French bank will probably be told that it is prepared to undertake, say, one-fifth of the amount suggested, or that a syndicate will be formed, if possible, to deal with the whole amount. The habit of French bankers to think in small figures—irrespective of the fact that one million francs to-day are only equal to 200,000 pre-war francs—together with the slowness of their procedure and delays in their decision, is decidedly a handicap in international competition. An even more important handicap is the influence of political considerations. On two occasions within less than two years—in April, 1929, and in September, 1930—French banks called in German credits on a large scale owing to considerations of a purely political nature. Other things being equal, would-be borrowers will always prefer to deal with a market where they are not exposed to such surprises.

Both Paris and New York confine their activities almost entirely to acceptance credits under the guarantee of the local banks of the borrowers. London still enjoys practically a monopoly as to credits given direct to overseas customers without the guarantee of foreign banks. French and American banks realise that they do not possess a sufficient amount of experience to dispense with the guarantee of a leading foreign bank, which, of course, reduces the profit on the transactions to no slight extent. The London joint stock banks, which have taken an increasing interest in acceptance business since the war, have adopted the same policy. On the other hand, accepting houses have continued to carry on business on pre-war lines; thanks to their specialised knowledge of foreign countries, and to their well-established connections with leading foreign firms, they are at an advantage as compared with the newcomers in acceptance business.

It is to be regretted that, in their efforts to expand their acceptance business, London banking interests should have adopted a policy of rate-cutting which is calculated to do more harm to the London accepting houses than to the foreign rivals of the London market. If the object of reducing the acceptance commission charged to first-class banks for three months' credits—a reduction to $\frac{1}{8}$ per cent., against $\frac{1}{4}$ per cent. before the war—was to divert business from New York and other rival markets to London, those responsible for the change have certainly failed to attain their end. American and other foreign banks engaged in acceptance business have promptly followed their example, and $\frac{1}{8}$ per cent. has become the standard rate for acceptance credits granted by commercial banks under the guarantee of leading foreign banks. The result of this rate-cutting was that foreign firms found it in many cases cheaper to conclude acceptance credits in London and elsewhere through the intermediary of their local banks than to deal direct with a London accepting houses. On balance, the reduction of the acceptance commission has resulted in a loss of business for the London market as a whole; while part of the business lost by accepting houses was acquired by London banks, part of it was captured by foreign banks, to the detriment of the London discount market.

Fortunately, the London accepting houses are able to hold their own in spite of cut-throat competition both at home and abroad. They are likely to retain a great part of their *clientèle*. Leading foreign business houses are proud of being able to obtain direct acceptance credits in London; they are anxious to remain independent of their local banks. Those who believe that eventually all acceptance credits will be transacted through the intermediary of local banks seem to overlook these two facts. So long as our rivals confine their activities to acceptance credits under the guarantee of foreign banks, London will retain a monopolistic position in regard to a highly important part of acceptance business, which in itself is sufficient to secure for this bill market a considerable activity.

It would be idle to pretend that the development of a number of discount markets, large and small, has left the position of the London discount market unaffected. Although the rival markets are fed to some extent by new kinds of business—especially by accepting and discounting finance bills—they have certainly captured some of our pre-war customers. At the same time, not-

financial concerns

withstanding keen competition abroad, London has remained the only really good bill market, where the margin between buying and selling rates is fractional and where large amounts of bills can be bought and sold at a moment's notice. In this respect, the London discount market of to-day is by no means inferior to the pre-war market. Nor is it to the interest of other financial centres to undermine the superiority of London. If the volume of activity of this market were divided up among several centres, as a result none of the centres would have a sufficiently large volume to secure a steady supply of bills and to attract a regular demand. Instead of one good market, there would be three or four inadequate markets. This would be anything but desirable from the point of view of foreign banks desirous of maintaining part of their idle reserves in a highly liquid form. So long as the total volume of good-class bills is not sufficiently large to be able to keep several markets adequately active, and so long as the rival centres are unable to capture the greater part of London's business, it is to the interest of all parties concerned that the bulk of the activity should be concentrated in the hands of London.

THE BALKAN CONFERENCE.

(FROM OUR ATHENS CORRESPONDENT.)

THE importance of the First Balkan Conference, held recently in Athens, may be grasped if it be remembered that for the first time in history representatives of Albania, Bulgaria, Greece, Roumania, Serbia and Turkey, hitherto divided by age-old racial struggles, sat together around a conference table in a sincere effort to forget the past and co-operate in the future. In a resolution of the meeting, the necessity of a union of the Balkan States is recognised with a view to consolidating peace, furthering the work of the League of Nations—in the spirit and within the frame of which it is declared the projected union should be established—and promoting the economic and cultural interests of the Balkan countries for the good of their peoples.

An imposing number of subjects was contained in the agenda of the Conference, and was apportioned among six permanent committees: (1) for the organisation of the Balkan Union, (2) for political questions, (3) for intellectual co-operation, (4) for communications, (5) for economic and financial subjects, and (6) for social policy. The principal difficulty, however, in the way of a *rapprochement* of the Balkan nations is the problem of minorities. For the present, this stumbling block has been circumvented by a declaration of the Conference that nationalism should be respected, that all the obligations devolving upon each State from the peace treaties, including, of course, those regarding minorities, should be honestly fulfilled, and that the Balkan Union should have the character of a group of independent nationalities, with the sovereignty of the States composing it remaining unimpaired.

As a beginning it was decided that the way should be paved for this union by eliminating all obstacles and bringing the peoples concerned closer to each other. To this end, and with a view to making fuller investigation of all the problems presented in this connection, the Balkan Conference organised itself into a permanent body.

governed by a Council composed of three delegates from each country. According to its statutes a general meeting shall be convened once every year in each of the Balkan States in rotation, and the Conference shall be composed of the various national groups to be constituted from the delegates of each State and from a number, as large as possible, of representatives of the political parties, the professional organisations, the intellectual institutions, the Press, and the women's organisations in each country. The Secretariat of the Conference shall be its executive organ, and shall be divided into various sections corresponding to the functions of the Conference. These sections may be transformed into separate institutes, especially those concerning intellectual co-operation and economic and financial matters.

Parallel with this yearly meeting, the Conference resolved that the Foreign Ministers of the Balkan States should meet once every year in order to exchange their views and consider the means of bringing together their respective peoples. The Council of the Conference has been instructed to address a questionnaire to the various national groups on the form and the details of organisation of a Balkan Union, while a special committee of the Council has been authorised to consider a draft scheme of a Balkan Covenant proclaiming war unlawful, and providing for the solution by peaceful means of all disputes arising among the participant States, and for mutual assistance in case of violation by any State of its obligation not to resort to war. The replies of the various national groups to the aforesaid questionnaire, and the report of the special committee, shall be laid before the next assembly of the Conference.

The Conference has adopted an ambitious programme for economic co-operation between the Balkan countries, including such aims as (1) abolition of hindrances to trade and the transport of goods; (2) unification of the nomenclature of tariffs, and of the classification of goods; (3) study and elaboration of commercial agreements among the Balkan States themselves, and between them as a whole and other States; (4) investigation of the possibility of common digression from the "most-favoured-nation" clause in favour of Balkan States; (5) adoption of a commercial policy with a view to finding outlets for Balkan products; (6) institution of a committee of experts to suggest measures for the protection of oriental tobacco; (7) promotion of the co-operative movement and pursuit of close collaboration among the co-operative organisations of Balkan States; (8) study of the measures indicated for bringing about a Balkan monetary union; and (9) collaboration of the credit institutions of the Balkans for facilitating economic intercourse, particularly through the expansion of bank credits. In addition, most of the suggestions of the Committee on Communications aim also, directly or indirectly, at fostering the economic intercourse of Balkan States and improving their economic situation.

Encouraging as all the resolutions and aims are, however, their immediate practical importance is somewhat dimmed by the rather academic character of the Conference which, though composed of statesmen and prominent persons, is none the less a private movement, and is not, therefore, legally binding upon the governments concerned. On the other hand, it is consoling to recall that the Conference was convened with the assent, and almost with the support, of the Balkan Governments, and that the constitution of the Conference and its future programme of action have been laid down in such a way that it is likely gradually to develop a more and more official character.

Another encouraging sign is the goodwill, with which the proceedings of the Conference were carried out from beginning to end, and, last but not least, the hearty welcome granted by the Athenians to the delegates of all the Balkan States, and also to the athletes, especially the Turks, who visited Athens for the Inter-Balkan games. On leaving Greece all these delegates without exception expressed their high satisfaction at the results of the Conference, and the great hopes they carried away with them for the future co-operation of the Balkans.

Notes of the Week.

The American Elections.—Though the complete results of the Congressional elections in the United States have not been published at the time at which we go to press, the effect of the election is already clear. In the new Senate, the strengths of the Republicans and the Democrats will be equal; in the new House of Representatives, the Republicans will, at best, retain a bare majority, but since this cannot be of more than ten, they will no longer be in a position to control the House, let alone the Senate. The Democrats have won a signal victory; for, with these gains in Congress, they will be in a position to paralyse the Republican Executive. In fact, President Hoover, during the second half of his term of office, will find himself in the same predicament that President Wilson suffered from during the second half of his second term. Presumably the present remarkable turnover in North American party politics is a reaction to the world-wide economic malaise—a malaise which is resented more keenly in the United States than elsewhere because the American people had come to feel that in this matter of prosperity they were "not as other men are," but were somehow miraculously destined to go on from strength to strength while the rest of the world went under the harrow. President Hoover personified this semi-religious faith in American economic impregnability—for Presidents are always emblematic figures as well as cogs in the political machine. For this reason, the break, when it came, shook his prestige and reduced his chances of winning personal popularity to a peculiar degree. The situation is one which will try President Hoover's mettle. His task will be to conjure constructive measures of economic relief and reconstruction out of the moves which are certain to be made by his opponents in Congress with anything but a constructive intent. The constitution of the United States will be on trial too; for the present situation is an outcome of the checks and balances which were deliberately introduced into the constitution by its designers. Under the stress of the same world-wide economic crisis, the Latin-American countries react in revolutions which change the whole personnel of Government and Congress at one fell swoop; the Central European countries put the fear of God into their bourgeois Governments by returning strong contingents of Communists and Nazis; while the United States elects a Congress which checkmates the executive without having power to give the executive the *coup de grâce*. This "Anglo-Saxon" reaction is very respectable, and unrevolutionary; but how is it going to work during the next two years?

The Round-Table Conference.—On Wednesday of next week the King himself, as is most fitting, will inaugurate the proceedings of the fateful conference between the representatives of the Imperial Parliament, British India and the Indian States on the future constitution of India. With the problems which confront the conference we shall have ample occasion to deal in due course, for no one can expect that in such a complicated and far-reaching issue the negotiations can be brought to any useful conclusion in a few weeks. Here we desire simply to emphasise what is true of all conferences, and particularly true of this, that on the wise and careful choice of procedure, on preliminary preparation of concerted plans, and, perhaps above all, on the exercise of high qualities of chairmanship, much depends. It is essential not only that Mr MacDonald should be free to devote to the conference the whole of his time and energies, but that he should keep in the closest possible touch with all the members, irrespective of party, composing the British delegation, and that that delegation, under his leadership, should endeavour, so far as possible, to act as a corporate body, representing Parliament, but "seconded" for special duty in a sphere whose atmosphere should be kept as far re-

moved as possible from Parliament's domestic troubles and factions. The conference will work the better, the more the British representatives succeed in forgetting how near St. James's Palace is to Westminster, and in focusing their minds on Delhi.

Paddington and After.—Orthodox Conservative cheers after Mr Baldwin's victory at the party meeting had hardly died down when the gilt was rudely removed from that victory by the success of Lord Beaverbrook's candidate at the South Paddington by-election. It is perhaps too much to say that the latter event completely neutralised the former, for some recent rebels, notably Sir Henry Page Croft, have accepted the Caxton Hall verdict and renewed their allegiance to Mr Baldwin. Nevertheless, the Paddington result is significant and important. It has proved that in a certain type of constituency it is possible for a whirlwind platform and Press campaign to "put over" the Empire Free Trade "stunt" in spite of the unpopularity of the food taxes which it involves. It is possible that had the electors known of Mr Baldwin's victory before and not after the poll had opened, the result would have been different, but, even so, their success will doubtless encourage Lord Beaverbrook and his "Crusaders" to redouble their efforts and attack any constituency except those where food taxes might be presumed to be too crippling a handicap. So the Conservative split continues, and neither the end nor the upshot is visible.

The Liberal Party Split.—In spite of all efforts to close the ranks, unity has never in recent times been more of a reality in the Liberal Party than in the other two political camps. But the depth of the split has this week been revealed in a dramatic manner. Mr Lloyd George carried the majority of his Parliamentary party with him when he decided upon what one might call a malevolent neutrality towards the Government. His view, in a word, is that the Government is ineffective and disappointing, but that a change of Government just now is undesirable. So his tactics are to stimulate the Government, but on no account to turn it out. These tactics were translated into a Party decision to abstain from voting on the Conservative amendment to the Address. But nine Liberal members strayed from the fold. Mr Runciman and four colleagues showed their anxiety lest the Government should be defeated by voting in the Labour Lobby. The other four, among whom were Sir John Simon and the Liberal Whip, Sir Robert Hutchinson, registered dissatisfaction with the Government by voting with the Conservatives. The latter has promptly resigned his post, while Sir John Simon has written a letter to Mr Lloyd George in which he disapproves of the Party's decision, and expresses the view that the Government's record is so bad and its new programme (especially the projected repeal of the Trades Disputes Act) so unsatisfactory that Liberals should no longer support it, even if defeat is threatened. Sir John's attitude is intelligible, and it is in keeping with a career noted for courage and integrity. We share his view of the Government's record, and his anxiety as to the proposal to repeal the Trades Disputes Act. But we do not consider that, with such alternatives as there are in sight, a change of Government would in any way serve the national interest. As it happens, the recent developments do not carry any immediate threat to the life of the Government; for the opposite reactions of the Runciman and Simon groups more or less cancel out.

Fiscalities.—Not a day passes without a substantial addition to the vast volume of discussion on the fiscal issue. The debate on the Address yielded a full measure of the interchange of hard-worn party arguments, relieved by the intervention of Sir Hilton Young, who, in his alarm at the failure of our new industries to keep pace with world expansion, would, if we read him aright, class them as "infant industries" and shelter them with a tariff. (But is it not just some of these newer industries that are enjoying and have in recent years enjoyed high

protection under the Safeguarding machinery?). Mr Baldwin, intent upon his policy of "a free hand," emphasised his concern over Mr Graham, with his Tariff Truce activities, and was comforted by the latter's answer that, if the Truce does not fulfil hopes of tariff reductions, we shall be free to give notice of withdrawal on February 1st to take effect (*absit omen!*) on April 1st. Of deeper interest was the debate, raised on a private member's motion, on the iron and steel industry. A plea from the Conservative benches for a subsidy was refused by the Government, on the grounds that if it were granted the claims of other industries to similar help would be irresistible; it will be remembered that in 1925 Mr Baldwin refused to propose a tariff for iron and steel, partly on similar grounds and partly because of the repercussion on other industries. Less directly concerned with the fiscal issue, but by no means less welcome on that account, are the representations made to the Imperial Conference by the Federation of Chambers of Commerce of the British Empire. Following in the footsteps of the Federation of British Industries and Council of Trades Union Congress, this important body lays main stress on the institution of an "Imperial Economic General Staff," or in other words, for a permanent secretariat for continuous study of the problem of inter-Imperial markets and for effective liaison between the members of the British Commonwealth. We welcome this weighty support for an important and practical proposal and hope to find that the Conference has not turned a deaf ear.

The Municipal Elections.—This year's municipal elections are noteworthy for the fact that they have broken the steady run of Labour gains that began as long ago as 1923. How great was the progress made by Labour during this period is indicated by the following brief table, which also shows the extent of the present setback:—

Year.	Labour Gains (+) or Losses (—).	Year.	Labour Gains (+) or Losses (—).
1923	+ 69	1927	+ 114
1924	+ 53	1928	+ 127
1925	+ 75	1929	+ 149
1926	+ 148	1930	— 84

Unlike the other parties, the Labour Party has always fought as such in municipal as well as in parliamentary elections, and, indeed, it is one of the fundamental principles of Labour strategy that the parliamentary and municipal battlefields are complementary. This, of course, cuts both ways, and it is impossible to avoid the belief that the present Labour setback in the municipal field springs largely from the growing feeling of disappointment at the Government lack of success in the national field. It may be, too, that depressed trade and the increasing financial stringency the depression is inflicting upon large numbers of ratepayers has assisted to swell the anti-Labour vote, while it is further suggested that the revision of assessments under the 1925 Valuation Act has led many to scrutinise more carefully the way in which the rates are spent, and to view with greater disfavour candidates whose policy will add to their burdens. Apart from this, it would be unwise to dogmatise too much, especially as the results of municipal elections are notoriously an unsafe guide to the prospects of political parties in the parliamentary field.

The Coronation at Addis Abeba.—The coronation of the Emperor of Ethiopia last Sunday does not inaugurate any change of *régime*; for, as the Regent Ras Tafari, the present King of Kings has been governing Abyssinia with remarkable ability and success for many years. Long may he remain on the throne which he now occupies with the full style and title of the Ethiopian Monarchy; and meanwhile, the pageant of his coronation may serve to remind the world what a remarkable country Abyssinia is. To begin with, it is the only Oriental Monarchy of the traditional type that survives intact in these latter days when the Manchu Son of Heaven and the Ottoman Padishah have passed into limbo, while other Oriental potentates have learnt to reign without governing—some under the agis of European protectorates and others under

the shadow of native parliaments. Again, Abyssinia is the only completely independent State, of any constitution that can be found, at this moment, on the map of Africa. In the third place, Abyssinia is the only indigenous Christian country in Africa (for Liberia and South Africa have both been Christianised by modern immigrants). Surrounded on all sides by Muslims and Pagans, Abyssinia has maintained her Christianity for no less than sixteen centuries. During this long span, the vicissitudes of her relations with Muslims and Christians have been curious. Islam owes Christian Abyssinia a permanent debt of gratitude because the first disciples of Muhammed were given asylum by the Ethiopian Emperor of the Prophet's generation when the infant Islamic community was being persecuted in its native Mecca. On the other hand, the Abyssinians have little reason to be grateful to their fellow-Christians; for they have twice been compelled to resist an attempt at domination on the part of Christian Powers by force of arms—a Portuguese attempt in the seventeenth century, an Italian in the nineteenth. The Abyssinians' salvation has lain in their mountains, for the Abyssinian plateau is a vastly larger edition of the Kenya highlands—a temperate country in the equatorial zone. But no mountains would have saved them if they had not been lusty men-at-arms. It is not for nothing that the Negus Negusti calls himself "the Lion of the Tribe of Judah." But, alas, these splendours are doomed, and this week's coronation ceremony has perhaps hastened their disappearance. Have we not read that the streets of Addis Ababa were illuminated for the occasion with electric light and thronged with motor-cars? The alien mechanic is destined to conquer, with spanner and magneto, those Ethiopian hills which no foreign soldier—Christian or Muslim—has ever conquered with sword and bow.

Australian Finance.—This week's news makes it clear that Australia is finding it easier to preach than to practise economy, and that the Government in its wish to implement the decision taken at the Premiers' Conference last August is meeting with much opposition from its own supporters. The New South Wales elections, on whose results we commented last week, provided the first definite sign that much educative work in the country remained to be done, while the decisions taken within the last few days at the Federal Caucus of the Labour Party are somewhat disquieting. The Caucus appears in the first instance to have proposed that the Commonwealth Bank should create sufficient credit to finance (a) all Commonwealth Government requirements in connection with services covered by Parliamentary appropriations; (b) such proportions of internal loans maturing within the current year as have not been otherwise provided for; (c) State and Commonwealth loan works programme up to £20,000,000; and (d) the provision, through the banks, of accommodation for State financial institutions for the productive purposes of primary and secondary industries. Other proposals were apparently made to the effect that credit under the various heads should be available at a rate not greater than 5 per cent. and that external exchange rates should be fixed so as to give primary producers the full benefit of the exchange premium on their exports to compensate for diminished market prices. Subsequently, the Caucus carried, against the wishes of the Acting-Premier and the Commonwealth Treasurer, a resolution that the repayment of the internal loans maturing this year shall be postponed—except as regards small investors—for twelve months. This must precipitate a crisis in the Government and make it extremely difficult for Mr Fenton to carry on until Mr Scullin returns. The story shows that the Caucus is living in a complete atmosphere of unreality, and that, regardless of the post-war experience of Germany, Austria and other countries, they are relying upon a policy of naked inflation. It is in such circumstances and backed by such supporters that the Government, further handicapped by the absence of Mr Scullin, has had to do the best it can; and the financial recommendations published last Thursday illustrate the difficulties under which it is labouring. In brief, to meet a deficit of £8-10 millions, economies of only £2,230,000 are to be effected this year.

New taxation, to yield in a full year £4,820,000, is to be imposed at once, while a sinking fund adjustment is to release this year £1,950,000. Even so, and admitting for the moment the Government's justification of the reduction of the allocation to the sinking fund, this year will end with a deficit, amounting at the best to over a million. So partial a measure of success will hardly be deemed good enough, and until full success is attained it will be vain for Ministers to complain, as they are doing, of the flight of capital from Australia or to threaten to take measures to prevent it. In short, the Australian Labour Party is still living in a fool's paradise, which means that there is a danger that the good work accomplished by the Niemeyer mission may be seriously impaired.

Our Index Number.—At the end of October our index number of wholesale prices, at 72.4 (1927 = 100), registered a further decline of 1.1 per cent., as compared with a fall of 3.8 per cent. in September, 1.9 per cent. in August, and 1.5 per cent. in July. The current level of the index figure is 19.7 per cent. lower than a year ago.

AVERAGE, 1927 = 100.

End of	Oct., 1929.	July, 1930.	Aug., 1930.	Sept., 1930.	Oct., 1930.
Cereals and meat	94.4	84.2	82.5	79.5	76.8
Other foods	85.0	76.3	75.2	74.5	73.7
Textiles	85.2	63.6	61.7	56.9	55.8
Minerals	94.6	82.1	81.5	79.5	79.1
Miscellaneous	90.7	81.5	79.7	76.7	77.7
Complete Index	90.2	77.6	76.1	73.2	72.4

It would be premature to conclude that last month's retardation in the rate of fall indicates that the long and catastrophic decline is definitely reaching a turning-point. At the same time, the next table, which shows changes in the price of each of the individual commodities embraced in our index number, reveals one or two encouraging features. Such important commodities as sugar, cotton and rubber appreciated substantially during the month; the fall in the price of imported wheat was at least temporarily arrested; and though lead and tin prices weakened again, copper was firmer. Other movements were irregular, declines predominating. Thus maize, rice and meat cheapened considerably, and the price of wool, silk and jute fell still further; but English barley, Danish bacon, hemp and house coal all rose.

The next table shows the trend of our index number converted to a percentage of the average level of 1913:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168.5	215.8	214.7	149.3	122.6	166.2
" 1928	152.9	189.7	165.0	115.2	111.2	140.9
" 1929	143.0	173.5	144.7	119.6	105.0	132.8
End Oct., 1929	139.3	171.9	133.7	118.3	105.3	129.6
" Sept., 1930	117.3	150.7	89.3	99.4	89.0	105.2
" Oct., 1930	113.3	149.0	87.6	98.9	90.2	104.0

If 1924 be taken as 100, the current figure of our index numbers works out at 62.6, as compared with 63.3 at the end of September, and 78.0 a year ago. Whether the recent diagnosis of the F.B.I., that "the forces responsible for the world collapse in prices appear almost to have spent themselves" is correct, the trend of the next few months should demonstrate.

The Scandinavian Coal Market.—The report of the British Coal Delegation to Sweden, Norway and Denmark represents an attempt to recover for the British coal trade a market over which in pre-war days it possessed a virtual monopoly. The reasons why this market has been partially lost are traced in the earlier portions of the report. The Peace Treaty transferred to Poland the major portion of the Upper Silesian coalfield and also gave her free access to the Baltic, and in 1925 the outbreak of a tariff war with Germany forced Poland to seek in Scandinavia new markets for coal which previously had been consumed in Germany. By an unfortunate coincidence, the following year witnessed the great British coal stoppage, and this gave Poland her chance not only to gain a footing in Scandinavia, but to consolidate her position. How serious her competition has become is shown by the Scandinavian coal import statistics for 1929, which disclose that Great Britain's share of the trade was 6,072,298 metric tons, and Poland's 5,154,156 metric tons. In 1913 it may be noted British coal exports to Scandinavia came to almost exactly ten million tons. To-day Poland is able to hold her trade mainly because lower production costs, preferential railway rates, and cheaper dock charges enable her to quote lower prices. The intrinsic quality of British coal, the report adds, is not in question; but there is an allusion to certain complaints regarding grading and cleaning, to the growing desire among consumers to purchase coal on a guaranteed analysis, and especially to the excessive breakage that occurs in loading coal on board ship, and to the delays caused to vessels by unsatisfactory arrangements at the docks. As regards recommendations, the Delegation obviously regrets the disappearance of the export levy provisions contained in the original Coal Bill of last year, though it admits that now that the Bill has become law, the establishment of a Central Council of Coal Owners should facilitate negotiations with kindred national organisations abroad. The Delegation alludes to the possibility, now being explored by the Economic Committee of the League, of establishing some form of international co-operation in the coal trade, but holds that this is at present a remote and uncertain remedy. Among more practicable remedies, the Report calls for the overhaul of loading arrangements at the docks, of grading and cleaning arrangements at the pits, for the improvement of marketing arrangements, and for the adoption of standard methods of coal analysis and sampling of a kind acceptable to users of British coal. On the all-important question of price, the Report unfortunately can find little useful to say, beyond an expression of opinion as to "the advisability of affording assistance to the export trade by means of legislation in a manner fair and equitable to the industry as a whole." If by this the Delegation means that it is still hankering after the levy, it does not carry matters much further. The relative level of British and Polish costs is clearly the chief and most difficult obstacle to be overcome.

Scotland and the Coal Act.—A Glasgow correspondent writes:—Alone of the twenty-one districts defined under the Coal Mines Act, Scotland has failed to agree to a voluntary marketing scheme, and, the period for the approval of such a scheme by the Board of Trade having expired, it now rests with that Department to formulate a scheme. This, the coalowners state, they will do their utmost to operate successfully for the benefit of the trade. Events leading to the present situation have been interesting. Like those in most other fields, with the notable exception of South Yorkshire, the Scottish coalowners, rightly or wrongly, resented the intervention in their industry. On the passing of the Bill, however, they set about the preparation of a marketing scheme; and—with the 1929 proposals as a basis—so well did the committee carry out their duties that producers responsible for over 84 per cent. of total output gave support to their plans. These plans, however, and the voting therefor, were based on a misconception; proposals were included for the adjustment of home and export prices so that the former should be maintained 20 per cent. above the latter. This difference normally exists between the two classes of business, and it was merely its formal recognition that was desired, the coalowners' view being that, as Scotland was more dependent than, possibly, any of the other districts, on the maintenance of the customary margin between inland and export prices, the inclusion of these special supplementary provisions was not unreasonable. The Board of Trade, however, took the contrary view—the Government having been defeated in debate on the export levy proposal—and, accordingly, the scheme was re-submitted for the consideration of the owners minus the offending clauses. Only 44 per cent. support for the amended scheme was, however, obtained. A meeting has been arranged between the Minister for Mines and the coalowners in an effort to reach agreement, and it is probable that the rejected scheme will be put into operation, although the owners are far from sanguine as to its success.

The Banque Adam.—The suspension of payment by the Banque Adam, a well-known institution, operating mainly in Northern France, has caused widespread feelings of apprehension. Perhaps the most spectacular consequence of the failure was to be found in the inability of the Boulogne fishing fleet to obtain funds in order to put out to sea, and, as this episode received full publicity in the French Press, it unquestionably helped to spread the alarm. While French banks as a whole have so far not been subjected to abnormal pressure, only one other bank failure having been so far reported, they have felt it necessary to strengthen their immediate resources, and with this purpose in view they have drawn heavily upon their foreign balances. This explains the week's depreciation in sterling, further comment upon which will be found in the "Money Market" columns. The cause of the Banque Adam's failure lay in the collapse of the ostrich group, to which it is believed the bank had made extensive advances. On this subject our Paris correspondent writes:—"The outstanding event of the week in the Paris Bourse has been the sudden collapse of the ostrich group of issues, estimated as having a total nominal value of over 1,000,000,000 francs, and representing a large number of mostly quite sound French industrial concerns, ranging from linoleum, artificial silk, and boots and shoes, to

silver, mining, motor-car construction and cement undertakings. The central financial organisation of the group was a concern known as the Société pour l'Extension de l'Industrie Française, which was originally constituted to finance the hire-purchase sales of the Peugeot motor-car construction company. For some time past large parcels of "Oustric issues" had been persistently thrown on the market, and the climax came last week, when the Coulisse authorities, in order to prevent the entire market from going to pieces, suddenly ordered quotation of five of the leading issues in the group to be summarily suspended. The effect was enormous disorder throughout the whole market, and only prompt intervention by the Government prevented, in all probability, a financial disaster of far-reaching effects. As matters are now developing, it is becoming evident that the Oustric collapse was perhaps one of the best things that could have happened at the present juncture. It has had the effect of purging the Coulisse market of some of its worst features, and has opened the way for many reforms which, in spite of all that has been attempted recently in the way of better regulation of this section of the Bourse, have hitherto appeared unlikely to be translated into accomplished fact." It is clear from the above that our Paris Correspondent believes that the situation has been taken in hand, and this view is confirmed by the fact that little selling on Paris account has been in evidence this week on the London Stock Exchange.

Cotton Trade Wages.—Our Manchester correspondent writes:—The cotton employers of Lancashire have now made a definite application to the Operative Weavers' Amalgamation for the establishment of a fresh wages list under the new system of more looms per weaver. The scale proposed is rather complicated, but where firms decide to institute the system of eight looms per weaver the wages will vary from 49s. to 58s. 9d. per week. The weavers under the new system will, of course, have assistance in weft and cloth carrying. At the present time the four-loom weaver earns about 40s. per week. An important feature of the employers' scheme is that up to the end of 1931 the adoption of the new system shall be limited to the following percentages of a firm's total looms: 10 per cent. from January 1st to March 31, 1931; 15 per cent. from April 1st to June 30, 1931; 20 per cent. from July 1st to September 30, 1931; and 25 per cent. from October 1st to December 31, 1931. It is held on behalf of the employers that this arrangement will restrict the displacement of labour and will enable manufacturers to adopt the new system gradually. The employers suggested that a joint conference on the proposals should be held in Manchester on Friday this week, but it has not been possible to make the necessary arrangements, and the conference will probably take place on Friday next. It is feared that the negotiations between the two sides may be rather protracted, but many manufacturers are determined to establish the new system, as the experiment at Burnley has proved that there is a considerable saving in production costs.

Montreal and the Grain Trade.—Our Ottawa correspondent writes: Last year the port of Montreal experienced the poorest year for grain shipments since 1920, but this year up to October 8th the grain deliveries have been twelve million bushels less. Many steamers arriving with coal from Wales, Scotland and Russia have had to sail in ballast for other ports in the hope of obtaining cargoes. Indeed, two vessels have actually proceeded from Montreal to the Pacific Coast in order to get grain cargoes. One of these is said to have been chartered by the western co-operative wheat pools, and there are apprehensions in Montreal that the pools which own elevators at Vancouver but have none in Montreal intend henceforth to route as much of their grain as possible by the Pacific coast ports. There is also looming up in the near future for Montreal the competition of the new Hudson Bay route, which, it is hoped, will be open for traffic next autumn, and the question is now being asked what is to become of Montreal harbour and the elevator and other

equipment which has been installed at enormous cost, if the grain export trade steadily shrinks. Montreal shippers are complaining that the water rate of grain from the head of the Lakes to Montreal is too high at the present time, and is largely responsible for the decline in grain export shipments.

German State Railways. — A Correction. — In the *Economist* of October 4th our Paris correspondent, in reporting the issue by the German State Railway of prospectuses of a new 6 per cent. loan, mentioned certain allegations which current Paris gossip was circulating in regard to it. We have been asked by the President of the German State Railways to state that these are due to misapprehensions. In the first place, the President points out that the terms of the prospectus cannot be taken to mean that the railway has entered into any special guarantee of the loan, since a debtor cannot be his own guarantor. Secondly, he states that the authorisation of the Prussian Minister of Commerce has nothing to do with the security of the loan, but is merely formal, and was probably superfluous, as the law requiring authorisation of bonds issued by a State Government probably does not apply to the Reichsbahn. As to the "allegation" referred to by our correspondent, that the revenue from the State Railways forms the guarantee for the Reparation Loan, the President points out that this is not the case, as the security, as far as it concerns the railways, consists only of the Rm. 660 millions tax. Lastly, the criticism quoted by our correspondent as circulating in Paris, that the security offered to purchasers of the bonds is valueless unless the Prussian Minister of Commerce had behind him the formal authority of the Governments of the Reich and of the eight States who formerly owned the lines, rests upon a misunderstanding of the Convention of 1920, which only requires such authorisation when alienation or mortgage of the railways is in question. Actually no such alienation or mortgage is contemplated, and even if it were it would, the President of the Reichsbahn informs us, be covered by the approval given by the States to the National Railway Law. In reporting these rumours our Paris correspondent remarked on the desirability of an official correction, and we are very glad to have this authority for stating the true facts of the case.

Overseas Correspondence.

UNITED STATES.

Unemployment — Politics — Corporation Earnings —
Trade — Money — Capital.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 28.

LIFTING of pressure on the share market, resumption of the advance in bond prices and the cumulative effect of confident predictions of an early turn in the trend of trade have combined to produce a more cheerful sentiment. Commodity markets also have recovered moderately, and speculation in them for higher prices is beginning to increase. In sum, no one ventures to say that business is yet on the up-grade, but hope is stronger than no further ground will be lost.

Meanwhile municipal, State and national organised effort for the relief of unemployment is taking a fresh start, under the direction of President Hoover. It is realised, of course, that the only real remedy for the malady is improving business, but even the sharpest critics of the Administration's policies are inclined to agree that some good may be accomplished as a result of combined efforts of Government, corporations and individuals to spend money wherever practicable and to spread out wage distributions among as many as possible.

Publication of third quarter earning statements completes the rather drab picture of poor business during that

period. Profits of industrial, public utility and railroad corporations turn out to have been nearly 30 per cent. under those of the same period of last year. Industrial concerns have the worst record, with a drop of nearly 37 per cent. for the first hundred to report. Public utilities are down only slightly, while the railroads dropped by 30 per cent. The railroads, however, made a better comparative showing in September than they have done in any month this year. The improvement was due entirely to sharp pruning of expenditures for equipment and maintenance of roadway, and furthermore comparison is made with a time last year when decline already had begun to set in. On profits and losses actually taken, the investment trusts report a decrease of 20 per cent. in income.

Results of the United States Steel Corporation for the third quarter were generally better than those of manufacturing companies. With \$2.06 earned on the common stock the dividend was more than covered. Net earnings were down a little over 20 per cent. from a year ago.

They fell sharply in September, and fourth quarter profit is expected to be no more than sufficient to bring share earnings for the year up to about \$10. No extra disbursement on the common shares is looked for, despite talk of one among those who would very much like to see it. General Motors, it has been stated on good authority, will both earn and pay its regular \$3 annual dividend. With the exception of Ford, General Motors has done the best of any motor company. Some of the best earners in the last few years are finding it difficult to show any profits at all. Improvement is looked for next year, but the leaders of the industry are expecting only moderate recovery.

Retail and wholesale trade results for September are better than those of the basic industries. Federal Reserve Bank reports for the New York district department store sales are 8 per cent. under a year ago, chain store sales 5.5 per cent. lower, and wholesale business 16 per cent. down. These decreases were smaller than those of the previous month.

Announcement:—

Bank of Italy National Trust and Savings Association and The Bank of America of California have been merged as of November 3, 1930, to form:—

Bank of America

NATIONAL TRUST & SAVINGS ASSOCIATION
Chartered under the National Bank Act of the U.S.A.

THE principal offices of the Bank will be at San Francisco and Los Angeles. The combined resources of the Bank of America N.T. and S.A. and of an affiliated Bank, also entitled The Bank of America, chartered by the State of California and under joint management, will exceed \$1,200,000,000, and the two institutions will operate banking offices at 438 points throughout California. The combined capital investment, together with that of a wholly owned subsidiary, Corporation of America, and an affiliated securities organisation, Bankamerica Company, will exceed \$230,000,000.

In scope of territory covered, in the extent of its branch system and in the number of its customers, the new organisation is the largest in the United States.

The world-wide facilities of the former Bank of America of California and the Bank of Italy will be maintained and extended by the enlarged:—

Bank of America

NATIONAL TRUST & SAVINGS ASSOCIATION

London Representative . . . 13, Moorgate, E.C.2.

So far as the calendar is concerned, the peak of the seasonal gains in trade, such as they were, has been passed. The steel industry is steadily losing ground, mill operations now being down to 50 per cent. of capacity, or about as low as they were at any time last summer. Steel scrap prices, looked upon as a barometer of the trade, have weakened further, but there has been no change in finished prices. Movement of goods over the railroads continues to be a keen disappointment. Freight loadings have dropped to the lowest weekly totals since 1918. Disappointing consumption of copper and oil are other unpleasant features of the situation. In spite of curtailment efforts the press of new production and the burden of excessive stocks of crude petroleum and gasoline have resulted in all-round cutting of mid-continent and other grades of crude. Copper prices also have sunk to the 9½ cent level and may go down further.

Credit is easier than ever, following a slightly firmer tone around mid-month. Banks are having great difficulty in employing all their funds even at 1 per cent. in the call market, although the official Stock Exchange rate is maintained at 2 per cent. A small shipment of gold has gone to Canada, and bankers would not be surprised to see more leave, but the inflow from South America and the Far East is far in excess of any export probability. Funds withdrawn by interior banks in late summer are now returning to Wall Street, and Federal Reserve policy continues to be that of favouring the present state of affairs, without attempting to contribute further credit to the already overflowing reservoir.

Member banks are finding a sharply declining demand for commercial loans, after a brief period of expansion last month, and their loans on securities are being steadily whittled away. Funds thus released are going into the bond market, which has resumed its advance with the steadier tone in the share market. In some quarters it has been hinted that the new Governor of the Federal Reserve Board is using "moral suasion" on member banks to force them to reduce further their loans on securities—an item which still is higher than a year ago in spite of a decline of over 600 millions in brokers' loans in the past four weeks—but these assumptions are without foundation. Reserve authorities, it can be stated, see no cause whatever for alarm in the situation, and while liquidation of shares from that source has been considerable, it has been entirely voluntary and dictated by the attitude of individual banks and the resources of the borrower on share collateral.

New capital flotations have fallen to a low ebb this month, in spite of easy money. The rather unreceptive mood of the new issue market has been due to a variety of causes, chiefly the distrust of foreign borrowing owing to political unrest and the selling in the local market by investment trusts, dealers and others crippled by the drop in share prices. Foreign financing in the third quarter was only \$153,000,000, according to estimates of the Department of Commerce, compared with \$466,000,000 in the second quarter and \$338,000,000 in the first quarter. In the third quarter of last year the total was \$80,000,000, but at that time bond issues were brought to a standstill by the suction of capital into corporation and investment trust share offerings.

Weeding out of weak brokerage and investment firms continues. Another Stock Exchange failure was announced this week, but no important house is believed now to be in trouble, and the majority of the liquidations are voluntary. They are expected to continue. Mortality among investment houses and dealers not members of the Exchange has been especially high, estimated at between 500 and 600 in the city alone since the beginning of the year.

FRANCE.

Autumn Session — Development Programme — Industry.
(FROM OUR CORRESPONDENT.)

PARIS, November 5.

THE Chambers reassembled yesterday and, if the Senate marked the occasion with characteristic dignity, it cannot be said that the Lower House were equally decorous. It had been generally understood that the nine interpellations on the Government's foreign policy—the debate on which, at the opening of a new session, is usually regarded as a means of indicating the real feeling of the House towards the Ministry of the moment—should not begin until Thursday. The Opposition, however, suddenly insisted that the debate should begin forthwith. The outcome was that M. Franklin-Bouillon and two of his fellow interpellators had to confess they had not their *dossiers* with them and were not prepared to proceed, as they had understood they would not be called on before Thursday. M. François Albert, whose adventures as M. Herriot's Minister for Education may be recalled, was in the same case, but he courageously decided to spring into the breach and launched a cleverly improvised attack on the Ministry. The serious portion of the debate will begin to-morrow, and will turn mainly on the question of how far M. Briand's situation at the Quai d'Orsay has been affected by the blow dealt to his Locarno policy by the sudden menace to European tranquillity represented by the progress of Hitlerism in Germany and—to a much lesser extent—by Signor Mussolini's unfortunate sabre-rattling.

The programme for the autumn session, although now relieved from the burden of budget-making, owing to the later beginning of the financial year, is exceptionally heavy. First and foremost is the first portion (of £40,000,000) of the Government's 17,000,000,000-franc project, spread over five years, for the development of the national economic equipment. This first portion will involve no further direct expense to the taxpayer, as the £40,000,000 which the Government proposes to spend will be furnished as to £12,000,000 from realised surplus revenue already in hand from last year, and as to the balance of £28,000,000 from other available Treasury funds. The object of the scheme is to assist in staving off economic depression, to improve means of communication, and to foster the nation's commercial exchanges. Agriculture will benefit from the expenditure of 874,000,000 francs on electrification, water supply, re-afforestation, scientific research, etc. A sum of 617,000,000 francs is allotted for the improvement of the national health, including 95,000,000 francs for the purpose of reducing infant mortality. Civil and commercial aviation are to benefit from a new airport for Paris and a long list of additional aerodromes. Public works involving an expenditure of 1,290,000,000 francs will be carried out for road, port and waterway improvement. The country's mercantile fleet is to have 190,000,000 francs spent on it, particularly for the purpose of improving communication with the North African territories. The Education Department has been allotted 930,000,000 francs for developing elementary, higher and technical instruction. Other large sums are to be used to finance developments of various kinds and for substantially improving the supply of commercial information (particularly statistical).

Another important project for national development down for early discussion is the plan for the launching of a number of huge colonial loans, with the double object of (1) increasing the economic value of the French colonies as furnishers of raw materials which the Mother Country is now obliged to obtain from foreign sources, and (2) for finding an alternative outlet for French savings, to replace investments in foreign loans, in view of the fact that these latter have in the past not only been utilised by the borrowers to the detriment of French interests, but have only too frequently—however profitable they may have been to French banks—resulted disastrously for the small French capitalist. The cry of

"French money for France" is slowly but surely growing stronger every day, as is also the evidence that this country, notwithstanding the enormous pressure still being exercised by the banking industry, and the superabundance of spare capital vainly seeking employment here, is less and less inclined to favour foreign investments of the kind which absorbed such enormous masses of French money before the war.

Coal production figures for September show a total output of 4,603,000 tons in the 26 working days, against 4,441,000 tons in August (25 days), and monthly averages of 4,577,000 tons in 1929 and 4,369,000 tons in 1928. To this must be added the output from the Saar area, which through 1929 averaged 1,132,000 tons per month. The average daily output in September was 177,054 tons, as compared with 177,654 tons in August, although the effective labour force in September was 298,562 units, against 297,783 in August. The production of metallurgical coke by the colliery plants in September was 418,347 tons, against 422,256 tons in August and 380,469 tons in September, 1929. According to the *Usine*, the journal of heavy industry, demands for domestic coal throughout the Continent in general are still small, in spite of the approach of winter, and the slackening of demand for industrial combustibles is increasing, owing to the extension of economic depression. "Stocks are piling up and registering record figures. Restriction of output has so far brought no improvement." France has so far suffered little from the general depression, but there is now some nervousness as to whether the French collieries may not suffer in their turn from over-production. Down to the present no reduction in labour has occurred, as in England, Germany and Belgium, but some of the pits have begun to accumulate stocks. Imports of British and other coal show no signs of diminution. Reports of German origin state that the French Commission of Mines in the Saar has agreed in principle to a cut of 6 per cent. in selling prices, as in Germany. The *Usine* suggests that "a simple lowering of selling prices by the French collieries would certainly be sufficient to improve the situation by rendering foreign competition more difficult."

Iron and steel production figures for September show a slight diminution under both headings. The output of pig iron totalled 801,000 tons, against 845,000 tons in August, 901,000 tons last May and monthly averages of 871,000 tons in 1929 and 841,000 tons in 1928. The output of crude steel was 767,000 tons, against 775,000 tons in August, 855,000 tons in May, and monthly averages of 805,000 tons in 1929 and 783,000 tons in 1928. Steel production figures may be expected to be appreciably lower in November, as they will reflect the further cut of 15 per cent. of the October, 1929, totals which was agreed to at the recent Luxembourg meeting of the members of the European Steel Cartel. It is unlikely that the French steelmasters will prefer to maintain their present production level and pay the tonnage fines to which they have agreed to submit in the event of their exceeding their quota, as in that case they would not only be compelled to raise domestic prices but would lose the increased freedom of their home market, which the recent agreement concedes.

GERMANY.

Termination of Strike — Wages Policy — Council on Foreign Loans — Reichsbank — Mining Companies.

(FROM OUR CORRESPONDENT.)

BERLIN, November 4.

THE Berlin metal workers' strike has been brought to an end by an agreement between the unions and the employers' associations. The agreement, brought about by the intervention of the Minister of Labour, has not itself settled the wages question, but has set up an arbitration tribunal which is to settle future working conditions. Both parties have agreed to accept the award, which is to be given this week or next. The tribunal is to be composed

of a representative of each of the parties to the dispute, with Dr Brann, an ex-Minister of Labour, as an impartial member. The content of the award will in effect be determined by Dr Brann, who is sure to be guided by the Minister of Labour, of whose party he is a member. The Minister of Labour, Herr Stegerwald, recently announced once more the principles of his wages policy: he is aiming at a reduction in nominal wages, which is as far as possible to be achieved without a fall in real wages, so that it can only be embarked upon with great caution. It is, indeed, hard to believe that the original award, which reduced wages by 8 per cent., was not inspired by the Minister of Labour; but it looks almost as though Herr Stegerwald had meanwhile decided that this reduction was excessive. Anyhow, the Brann award will determine the official wages policy towards other industries in which wages agreements are due to expire shortly.

The great national organisations of employers and workers differ as much as ever in their views on wages policy, and nothing is yet known as to the impending negotiations between them. The unions cling to their idea of providing work for more of their members by a reduction in hours accompanied by practically unchanged hourly wages, and are demanding legislation to enforce this. The employers have rejected this demand in a manifesto in which they quote the opinion of an English commission of experts: "The only means of dealing with the unemployment which has burdened industry for years is an increase in production and trade." Such an increase, in their view, can only be brought about by making industry more profitable.

The unions have been severely attacked by the Communists for terminating the strike. The Communists had set up a rival organisation called the "revolutionary union opposition," but as they had no strike funds their only success was among unorganised workers, and it was only a fleeting success even with them. The non-unionists, who form 60-70 per cent. of the Berlin metal workers, were ready to listen to the most radical utterances at first, but as the strike proceeded and they had no strike pay, they began to show evidence of weariness, and the union leaders feared that the strike would dwindle away. This had an important influence on the attitude of their representatives in dealing with the employers. The Communists have realised that they can in future do little with non-unionists alone, especially as in other important industries they form a smaller proportion of the workers. As they can hardly hope to get command of the unions in the near future, they are apparently preparing to organise unions of their own, and the Communist Press is beginning by a campaign for the formation of a "Red Union of Metal Workers." A similar attempt some years ago was a complete failure, but in the interval the political position of the Communists has improved.

For some time the law governing the Council on Foreign Loans has been in need of revision. The Council's consent is needed for the raising of foreign loans by the communes, and the municipalities have always complained that their credit policy is hampered by a tribunal which is not in a position rightly to appreciate the communal needs. On the other side it is complained that the Council is not concerned either with internal loans or with short-period borrowings, whether internal or foreign, so that it deals only with a section of communal credit policy, which is really an organic whole. An attempt was made in July to extend the competence of the Council to all communal loans and credits with the sole exception of transitory bank credits. This attempt at reform failed, however, as the Finance Minister's proposals were not accepted by the Governments of the States, and the present situation was prolonged to allow of a solution being worked out.

It now appears that even the Communes have realised how very much it is in their interest that the use of credit facilities should not remain completely unorganised, and a compromise will probably be reached according to which the control of credit will be handed over to a body on which the communes themselves will be represented, as well as the Federal and State Governments and the Reichsbank. In return for this, control will probably be extended. At the moment the question is not of immediate importance, as the foreign capital markets are not open for German communal borrowing in any form, but as this situation may change at any moment, it is essential that the reform be carried through at an early date.

The Reichsbank return for the end of October shows an increase of 641 millions in credits. That is a normal amount; the increase in the corresponding week of last year was 620 millions. Since the crisis which followed the election, the position of the Reichsbank has developed fairly normally, but the effects of the crisis are far from being completely overcome. The gold reserve is still low, and the visible holdings of foreign exchange have only risen 36 millions on the week. On the assets side there have been various abnormal developments. The bill portfolio only rose by 372 millions, against 744 millions in the last week of September and 468 millions in the last week of October, 1929. Advances, on the other hand, have risen from 62 to 318 millions in a week. Both these circumstances suggest that a shortage of German commercial bills is setting in. This is the result of the trade depression, but it may also indicate a deterioration in the quality of the banks' bill holdings, which are no longer sufficiently liquid to be offered to the Reichsbank. When money is needed, it is obtained by the pledging of securities, especially in the case of certain public bodies, such as communes, for whom it becomes more and more difficult, as their budget deficit increases, to obtain money by normal methods. A substantial decline in public balances is another indication of the urgent need of money on the part of public authorities. The note circulation, including Rentenbank notes, has risen by 740 millions, in correspondence with the rise in discounts and advances.

The first of the great mining concerns of the West to publish its balance sheet for 1929-30 is the Klöckner-Werke. Net profit amounts to 6.85 against 8.09 million, and the dividend is reduced from 7 to 6 per cent. The output of pig iron has fallen from 732,000 tons in the previous year to 628,000 tons, and that of finished products from 858,000 to 756,000 tons. Coal production has risen from 4.09 to 4.16 million tons. Receipts have fallen more than turnover, though the balance sheet, as of June 30th, does not reflect the severe decline in prices and the market difficulties of the last few months. Nevertheless this balance sheet gives rise to a hope that the other mining companies will not show such a catastrophic decline as had been feared. If there are dividend reductions, they will be confined within narrow limits.

AUSTRIA.

Politics — Trade Depression — Agricultural Relief — Share Market — Vienna Municipal Loan — Money.

(FROM OUR CORRESPONDENT.)

VIENNA, October 26.

THE position in party politics has tended within the last few weeks to render economic difficulties still more acute. Although there is no longer any doubt that public peace will in any event be preserved, the resignation of the Federal Chancellor, Dr. Schober, and the entry of two prominent Fascist leaders into the Cabinet has not had a favourable influence upon feeling in economic circles. For the present, at least, the attempt to create a bourgeois bloc under the leadership of Dr. Schober has not been successful. It is very evident that a large number of industrialists sympathise with the strong tendency towards the Right, especially in the provinces. In purely financial circles divergent views are held.

The first effect of changing the government and the necessity for a general election is that all measures for the amelioration of the crisis have been postponed. Reduction of taxes can only be effected by resolution of a new parliament. It will be all the more difficult of execution, because revenue from taxation is bound to decline on account of the reduction of incomes, of the liquidation of companies and of unsatisfactory balance sheets. The plan to valorise pre-war rentes has been deferred, as have also the preparations for a division of taxes, whereby the present quota of Vienna was to have been curtailed and the share of the provinces increased. Trade-treaty negotiations have come to a halt. In consequence the Minister of Finance is keeping down expenditure, and the Municipality of Vienna has made a cut in its housing programme by slowing up the work and by issuing fewer new contracts. The banks and private capitalists are also refraining from making investments.

The new order of things in the Federal Railways is also having effect. A new chairman and a new general manager have been appointed, and most of the members of the management have been changed, and though undoubtedly justifiable reproaches were made against the previous management of the Federal Railways, it still remains to be seen whether the new management can cope with the difficulties. It will be all the more difficult to do so, because revenue from transport is declining as a consequence of the general depression, while passenger traffic is also much lighter.

The balance of foreign trade is still more unfavourable. In the first eight months of this year exports have fallen from 1,406 to 1,223 million schillings, exports of finished goods alone showing diminution by 180 million schillings. It is true that this is partly accounted for by price fluctuations, but the main reason for the drop is the serious check to production in general. The Alpine Montangesellschaft (iron trust) has lately extinguished a furnace. In most of the heavy industries clerks and workmen are being discharged, and even the electric industry, which for a long time was the very backbone of what prosperity there was, complains of sluggishness.

Special attention is being devoted to the movements of the Elin A.G. The Elin A.G. has made competitive offers in several of the markets of the big German electricity works, and has also worked with success abroad, so that efforts have for some time been in progress to bring the majority of the shares of the concern under German influence. These efforts are causing the company employees considerable anxiety, as they fear that success in this direction would lead to reduction of staff, and they have laid before the Government their objections to the company's being absorbed by a German electric concern. The slackness in the textile industry still continues, and the purchases which are usually made at this time of the year have not yet been made. There is improvement in the leather factories, while the timber industry still complains of falling prices. The retrogression in general business is reflected in the increase in insolvencies. In September of this year there were 192 legal compositions and 49 bankruptcies, against 132 compositions and 36 bank-

ruptcies last September. Distraints for private claims and overdue taxes for the first eight months of this year figure at 218,221 against 179,315 for the corresponding period of last year.

Trade and industry cannot count upon such measures of relief as the farmers, whose plight is unquestionable, were able to secure through political influence. Out of 96 million schillings raised from the public for the farmers, 78 millions is to be distributed among grain farmers, while the farmers in the mountain districts are to get a special subsidy. In view of the drop in wine and grain prices, a great number of farmers are only enabled to keep on by the profit they make on their dairy produce. All agriculturists are therefore opposed to a reduction in the price of milk. Whether the present price can be maintained is another question, for both the wholesale index and the index of the cost of living fell three points in September.

In spite of the low level of most shares, the stock market has sagged again. The banks, which for a long time have been obliged to take up very large batches, no longer desired to intervene, and took up the securities offered only when they had depreciated considerably. On the other hand, it is noticeable when a better tone prevails on the market that the slightest inquiry suffices to raise quotations considerably. The fall in Alpine Montan shares, which are now below 20 schillings, was followed with great attention. Pre-war rentes have also weakened since the dissolution of Parliament, which naturally means postponement of their valorisation. However, the statement of the Minister of Finance that the Government is prepared to do something in regard to the question of valorisation, and that they feel themselves morally bound in this connection by the previous declaration at The Hague has caused a slight rally. Austrian stocks bearing fixed rates of interest are maintaining their level. League of Nations Loan scrip has gone still further above par, and the mortgage institutes are seeing to it that prices in which they are interested are kept up. The public have further reduced their holdings of shares; at the moment they show a distinct preference for investment in mortgage business, which brings as much as 11 and 12 per cent. for a first mortgage. Savings bank deposits are also growing, though not at the same pace as formerly. During September deposits with the Vienna banks and savings banks rose by 8 million schillings to a total of 1468.4 millions.

Within the last few days representatives of the Belgian, Dutch, French and Swiss creditors' protection associations have been in Vienna, and negotiated with the Municipality in regard to further improvement of the agreements made several years ago concerning the redemption of the loan of 1902. Settlement of these outstanding differences is also an important matter for the Municipality of Vienna, for it would clear the way for a loan which the Municipality will be obliged to conclude, since it cannot continue indefinitely to finance its housing scheme and its other investments exclusively from the taxable strength of the present generation. The Credit-Anstalt has contracted with the Continental Company for Banking and Industrial Values in Basle for the latter to float a loan in Switzerland, the proceeds of which are to be used to take over valuable holdings of shares in the possession of the Credit-Anstalt. In this way the share holdings of the Credit-Anstalt will be reduced, its liquid funds increased and at the same time the possibility be created of being able to wait quietly for an improvement in the price of shares, which at some time will surely come to pass. As is well known, the Credit-Anstalt had to administer not only the industrial interests of the Boden-Credit-Anstalt, but also those shares of its own enterprises which have been put upon the market in recent years as a result of the crisis on the Stock Exchange. A portion of these shares will now be taken over by the Investment Trust which is being formed. For big banks and leading firms monetary conditions are still very easy. Offers of credit from abroad are adequate and the tumult in domestic politics has made no difference in this respect. As the requirements of the business world are slight, the National Bank is in a position to retain the present rate

of 5 per cent., in spite of the increased Bank rate imposed by the Reichsbank in Germany. The bill portfolio of the Austrian National Bank is at the low level of 82,892 million schillings, and it is not likely to increase quickly, for there is but little demand for accommodation from commercial and industrial concerns. The Vienna banks and savings banks have reduced the rate of interest on deposits which can be withdrawn without notice to 3½ per cent. Although this is a relatively low rate, it has not caused the enormous transfers to better paying investments which many people anticipated.

ROUMANIA.

**Cabinet Crisis — Budget — Agricultural Debt —
International Agricultural Conference — Petroleum
Restriction.**

(FROM OUR CORRESPONDENT.)

BUCHAREST, October 22.

THE Cabinet crisis caused by the resignation of Mr Maniu has been solved by the re-establishment of the Nationalist-Peasant Party Government under the presidency of Mr Mironescu, who has retained also the conduct of the Ministry of Foreign Affairs, which he held under the former administration. The only other resignation of importance was that of Mr Vaida Voievod, Minister of the Interior and personal friend of Mr Maniu. The principal elements of Transylvania which figured in the old Cabinet have thereby disappeared, and the new Government presents itself as an almost exclusively Old-Roumanian combination. Practically all members of the new Government held office in the previous Nationalist-Peasant administration. The predominance of this party in the present political constellation is indeed once more conclusively proved. It could not be otherwise, as the Liberal Party under Mr Vintila Bratianu and Mr Duca is not sufficiently united at the moment to venture the experiment of a general election. It appears, moreover, that the programme of the Nationalist-Peasant Party has the full support of the King. There is no doubt, however, that by Mr Maniu's resignation a steadying influence on the slightly demagogic inclinations of certain of his former colleagues has been removed, and it will be interesting to watch if the two wings of the party will continue to work with that harmony which has characterised their political activities since they came together.

The only cause of the change, according to the Government Press and the public declarations of Mr Maniu and his friends, is the ill health of Mr Maniu, who has been ailing for some time. This, however, is not the opinion of his opponents, who state that on various questions, such as army and civil administration, he was not in agreement with the King. They look upon the new administration as only provisional, and predict that in the early

part of next year a change must come. It need hardly be said that this version is strongly denied in Government circles. Mr Mironescu, in a statement to the Press, points out that the present Government is only a reconstruction of the old one and that its programme remains in all essentials the same. He dwells on the necessity of political stability at the present time. Alluding to his immediate programme, he mentions the impending budget, the necessity for economy in administration, the economic problems of the day, and in particular the question of reducing interest in order to encourage the development of industry and commerce. He states in reply to questions that the negotiations for the Agricultural Credit Bank are near completion.

Meanwhile, the opening of Parliament has been adjourned to November 15th. One of the first measures which will come up will be the Budget. It is reported that the Budget proposals of the Minister of Finance are already completed. The reductions are to amount to about 6,500 million lei. On the other hand, there will be certain increases in the expenses: the public debt will absorb 220 million lei more than last year; the increase in the expenses for the army will amount to 1,750 million lei, to which must be added a sum of 850 million lei for equipment, part of which has already been ordered this year; and a further amount of 200 million lei will be required for the purchase of certain private railways. Consequently, the Budget for 1931 will probably amount to not less than 34,000 million lei, a reduction as against this year of only about 3,500 million. As in view of the unsatisfactory economic conditions the yield of taxation cannot be expected to show any increase, and may even diminish, there is no likelihood of a reduction in the taxes.

The question of the agricultural debts continues to preoccupy the country. A *communiqué* was issued recently by the General Council of the Agrarian League, insisting on the urgency of finding a solution to this burning problem. It recommends the suspension of the interest payments for three years pending the application of its plan of arrangement. This plan, which is not to be applied by means of coercive legal measures, provides for the conversion of the debts by reduction of interest and the payment of the capital within ten years, at the same time granting to the creditors who agree to the conversion an advance of 30 per cent. of the debts with a guarantee for the payment of the interest on the remainder. The portfolio of 25 per cent. of the debts accorded to the agriculturists by the National Bank through the intermediary of various credit institutions is to be distributed only through the agricultural and land credit banks. All profits obtained by the National Bank from a discount rate of over 5 per cent. are to be turned over to the agricultural credit institute. Furthermore, the Government is to pay to the agriculturists war indemnities as and when the State receives them from former enemies. The *communiqué* recommends, besides, the reduction of the heavy provincial and communal taxation, as well as the entire removal of the export taxes on agricultural produce.

Another international agricultural conference has now begun to sit in Bucharest. It is the fourth of its kind and is attended by the representatives of the eight Eastern and Central European countries which met in Warsaw some time ago, and its task is to elaborate the results then obtained. Permanent collaboration among the agricultural countries, unification of statistical methods, agricultural credits, common measures for the better organisation of the export of agricultural produce and preparation of international veterinary conventions are among the problems which will be discussed. The importance of these conferences can hardly be exaggerated. Although great difficulties stand in the way of the attainment of really tangible and valuable results on account of the diversity of the aspirations and situations of the countries concerned, it is perhaps not too optimistic to hope that dire necessity, which has brought the countries together, will force them eventually, step by step, to come to an agreement on essentials so as to present a united front to the competition from overseas, the present Russian methods and the industrial countries of

Europe. This, however, will take a long time yet to achieve, and no immediate easing of the difficult agricultural situation must be hoped for from these negotiations.

A new circular letter has been sent to the petroleum companies by the Astra Romana and the Romano-Americana, the two companies representing the Royal Dutch and the Standard Oil interests in Roumania. It invites the producers to conclude a convention for the suspension of boring operations for the purpose of exploration. The proposal is a logical consequence of the convention for the limitation of production which was concluded last summer at the suggestion of the two companies mentioned, and is based on the fact, proved in September last, that the potential production of crude oil in Roumania surpasses considerably the requirements for a long time to come. It aims at the realisation of economies so necessary for the maintenance of the petroleum industry in Roumania in view of the present conditions of the world markets. Every three months the potential production is to be tested so as to determine when the work of exploration can be resumed. No doubt is entertained that an agreement will be reached on the lines proposed by the two companies, and it is probable that this will be followed when exploration is to be resumed by a further convention regulating the work of exploration.

CANADA.

Crops — Grain Situation — Business — Glass Duties — Russian Coal Imports — Prices — Federal Bond Issue.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 20.

CANADA is now making preparations for the winter conditions which will be upon her within the next month. Threshing is not yet completed and the unthreshed grain has been considerably damaged by the weather; but generally speaking, although the yields in many places are disappointingly low, the grades are very good. A large proportion of the wheat has already been delivered by the western farmers, who are now busy with their autumn ploughing. In the eastern provinces the harvest has been long ago completed. The farmers have been busy garnering root, fruit and sugar beet crops; rain is urgently needed to facilitate ploughing and improve pastures. In the maritime provinces the potato crop is poor and the yield is now estimated at from 60 to 75 per cent. of the average. In British Columbia heavy frosts at the end of September did considerable damage, but the greater part of the apple crop has been successfully harvested, and, while it will only be about 90 per cent. of the average, the quality of the fruit is unusually high.

There is no improvement to record in general business conditions, and obviously a very difficult winter lies ahead. The car-loading figure for the week ending October 4, 1930, was placed at 70,897 cars, a gain of 100 cars over the previous week, but represents a decline of 8,535 cars compared with the figure for the same week of 1929; the cumulative total for car-loadings for the year up to October 4th is 2,336,882, which represents a decline of 292,288 cars compared with the figure for the parallel period of 1929. It is quite plain that no improvement in general business can be hoped for until the problem of satisfactory marketing for the western grain crop and increasing the purchasing power of the prairie farmers is solved. With the export demand very feeble, the price of wheat and other grains remains deplorably low, and the margin between the sum fixed as an initial payment by the co-operative wheat pools and the ruling price of wheat is dangerously narrow. It is true that the stocks of wheat in store in Canada and the United States on October 3rd were only 156,414,104 bushels, as compared with 178,955,269 bushels at the corresponding date a year ago, but the export movement of grain is even smaller than it was then.

Strenuous efforts are being made to revive the export trade to Britain in Canadian cattle, but the shipments

to date have not been large. However, it is anticipated that the low price of grain will induce farmers to use their surplus as cattle feed, and that more cattle will be available for export next year.

Autumn business is well below the level of a year ago, and the effects of the agrarian depression and unemployment in the cities have been felt all along the line. Retail trade in seasonal wearing apparel has been fairly active, but in most other lines it has required liberal advertising and special sales at attractive prices to stimulate any demand. Most of the country merchants are reported to be carrying very low stocks of goods, but in view of the general uncertainty they are only buying from hand to mouth. The programme of new building construction has been steadily shrinking and, as a consequence, there is a restricted demand for paints, varnish, lumber, hardware and building supplies of all kinds. Little change is noted in industrial operations, except that the President of the Dominion Textile Company recently declared that, as the result of the additional protection afforded by the tariff changes in September, the current operations of his company were at the rate of 75 per cent., as compared with 50 per cent. before the tariff revision. He claimed that the changes had resulted in the employment of 1,200 additional hands on a ten-hour basis, and that the company's ratio of operations would be near the 100 per cent. mark by the end of the year. He also declared that the prices of the products of his company had not been increased and were lower than those shown on the price lists of May 1st of this year.

The action of the Bennett Ministry in regard to the import duties on glass has attracted great interest. In recent years the Canadian glass industry had been seriously affected by underselling on the part of a Belgian syndicate and a number of plants have been closed. In order to rehabilitate the Canadian glass industry the Bennett Government, instead of an *ad valorem* duty of 12½ per cent. under the general and intermediate tariff and a 7½ per cent. duty under the British preference, imposed what was the equivalent of an *ad valorem* duty of 100 per cent. At the same time an undertaking was secured from the glass industry that immediate steps to resume operations would be taken, and that prices would not be raised. However, the price of glass at once jumped upwards sharply, and the Government, in face of the protests of the leaders of the glass industry in Canada, has restored the duty to its old level. The action of the Government is being severely criticised by protectionist papers. The *Montreal Gazette* says that the object of the recent tariff revision, as far as it concerns the resurrection of the Canadian glass industry and the employment of Canadian labour, has been defeated, but elsewhere the Government has strengthened its position by affording evidence that it intends to prevent exploitation of the consumer by the beneficiaries of the tariff.

A sharp controversy is proceeding about imports of Russian coal. On the one hand, representatives of the coal-mining interests in the maritime provinces are demanding that the Government exercise the authority which it secured at the special session of Parliament to exclude Russian coal from the Dominion. It has been coming into Montreal in considerable quantities, and the coal interests of Nova Scotia are afraid that it will compete with their products not merely in the Montreal market, but in northern and north-western Ontario. On the other hand, certain Canadian firms, like the Massey-Harris Company, which are doing a substantial business with Russia in agricultural implements, are opposed to any such ban, for they urge that the Russian coal imported into Canada competes only with American coal and that it is practically the only commodity which Russia can export to Canada to pay for a substantial amount of agricultural implements and other machinery now being purchased. Against this the advocates of the ban retort that Canada is committing commercial suicide by selling agricultural implements to Russia and helping that country to increase its grain exports. Canadian trade with Russia is still of comparatively modest dimensions, but the balance is in Canada's favour, for in the twelve months ending August 31st last Canada's exports to Russia

were valued at \$2,333,288, as against imports of \$1,641,989 from Russia. But in the previous twelve months the exports were \$2,983,629, and the imports only \$372,548, the large increase in the latter being accounted for almost wholly by the increase in the imports of coal.

The decline of commodity prices still continues, and the Dominion Bureau of Statistics index number of wholesale prices (1926 = 100) fell from 84.1 in August to 82.5 in September. 44 quotations were higher, 111 were lower, while 347 remained unchanged. The most serious decline was in vegetable products, which fell from 75.5 to 70.6. Only in connection with foods do retail prices show a parallel fall. In September the index for 46 food items was down from 96.3 to 93.5, but the general index number covering all retail prices, rents and costs of services only fell in the same period from 98.9 to 98.1.

No improvement in the Canadian stock markets is looked for in the immediate future, and episodes like the passing of its dividend by the Massey-Harris Company have had a very depressing effect. The \$100,000,000 bond issue of the Canadian Government, which was floated in New York on October 7th, was heavily over-subscribed and books were closed by the banking syndicate handling the issue shortly before noon on the day that they were opened. The issue was of 30-year 4 per cent. gold bonds, and, as the price was 95½, the interest yield is about 4.28 per cent. Part of the money will be used to meet a bond issue maturing on December 1st, amounting to \$45 millions, and some \$20 millions will be employed for the unemployment fund recently authorised by Parliament. Satisfactory agreements have been reached between Ottawa and all the provinces for the allocation of these moneys.

Letters to the Editor.

THE RUSSIAN ENIGMA.

Inflation and its Dangers.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The particularly well-informed and judicial survey presented in THE ECONOMIST Russian Supplement covers almost every significant aspect of Soviet Russia's economic position, progress and prospects except that of currency and its partial reflex, retail prices. The greater part of the information given in the survey (acreage sown, volume of yield, buildings erected, yards of tissue produced, tons of coal raised, &c.) stands unaffected by currency and price; but wherever a quantity is expressed in terms of rouble value the question arises: what is the value of the rouble? This question, while not within the scheme or content of the Survey, is fundamental to its interpretation. It is also vital to any interim judgment of Russian affairs. It is not merely a matter of adjusting money values to fluctuations in the purchasing power of the monetary unit, though that has its importance. It is a matter of whether the Soviet economic system, however well planned and vigorously developed, can survive the rapid depreciation of the currency that appears to be taking place.

In October, 1925, the currency in circulation in Russia amounted to 1,143 million roubles. It increased during the next three years at an average rate of 14 per cent. per annum. In view of the increase in population and the growth in economic activity, this rate of currency increase could perhaps be justified. In 1929, however, the rate of net output of currency took a sudden turn upward. Between October 1, 1928, and October 1, 1929, the currency in circulation increased by 34 per cent. From the information given in THE ECONOMIST's Supplement, it is clear that this is far in excess of any growth in the volume of consumption goods. What had driven the Soviet authorities to this dangerous expedient remains obscure, but the course of official figures indicates that in November, 1929, they took alarm. During the next five months the torrent of currency was stemmed; and in January and February, 1930, a reduction in volume was actually achieved. But in March the position could no longer be held; the printing presses were set to work at a greater rate than ever; and during the next five months the volume of notes issued was such as to increase the currency in circulation by a further 65 per cent. of the already swollen volume. The amount in circulation at September 1st was approximately

4,750 million roubles; and on the average of the five months ended September 1st the currency had been increased at the rate of 155 per cent. per annum.

As to the visible reflexes of this outpouring of notes, in the shape of the disappearance of silver coins and the illicit market in stable foreign currencies for which higher prices are paid, no more need be said for present purposes than that the first is setting up considerable friction in the wheels of the economic machine and the second is causing loss of revenue to the Treasury and locking up wealth out of its reach. These are serious; but much more important are the implications with regard to the solvency of the Soviet economic order and the stability of the Soviet régime.

Why is the Soviet Government pouring out paper money at this disastrous rate? Certainly not to finance foreign trade operations, for Russian paper has little value outside Soviet Union territory. Not to facilitate the trading relations of one State Trust with another; for these transactions are a matter of book-keeping only. It is printing notes for one reason only: the Central and the Local Soviets are not receiving in revenue enough to pay small producers for the commodities acquired from them and to pay state and co-operative employees their wages. There is a heavy deficit in the revenue account; and notes are being printed to make it good.

If the rate of net issue of currency exceeds the rate of consumable goods coming to market prices will rise. The survey presented in the Supplement gives little ground for believing that the supply of consumption goods has increased in the past twelve months. The great bulk of retail commodities come under the four heads of food, house-room, clothing, and fuel. The output in Russia of coal and oil is increasing, but the increase is earmarked for capital uses, not for ultimate consumption. The output of woollen and linen goods is up, or was intended to be up, by 8 and 12 per cent. respectively this economic year as compared with last, and the supply of boots is said to be rapidly increasing; but the output of cotton goods, which dominate the textile total, was down by nearly 17 per cent. No one claims that living accommodation has increased *pro rata* with the growth of population; indeed the ration has lately been cut down from 8 to 6 square metres of floor space per person. The position of the food supply is set out with judgment and precision in the Supplement. Available breadstuffs may be just keeping pace with the increase of population, but even that is doubtful; as for meat, vegetables and dairy products the supplies have fallen off catastrophically. No one except the Soviet authorities, and probably not even they, can put these figures together into an index of consumption goods available on the market, but it is as certain as anything in this realm of fact can be that such an index, could it be compiled, would show not an increase but a substantial decline.

Then, if the currency in circulation has increased by 65 per cent. in five months, as it admittedly has, and supplies of consumption goods have been on the decline, what has happened to prices? The price position in Russia is complicated by the fact that a substantial proportion of consumption goods are sold at controlled prices, in Soviet and Co-operative Stores, to persons with workers' permits and workers' ration cards. Another substantial proportion is sold in free markets to anyone at any price. The Soviet statisticians claim to know the proportion of goods sold in the one market and the other, to know the prices current in the free markets, and consequently to be able to compile a retail prices index number for all goods over the whole of the Soviet Union. It may be taken as quite certain that they cannot know these things, and that any all-over retail price index is worthless. The most they can know with certainty is the prices ordained for controlled-price goods, and perhaps the prices actually charged at certain of the larger State and Co-operative Stores in the larger towns. One has only to reflect upon the low level of literary, let alone accountancy, among the mass of Russian people in small towns and villages to imagine the task of compiling an accurate index-number from the tens of thousands of returns furnished by such persons. It can be taken as fairly certain that even the controlled-price indices are based on ordained prices and not on prices actually charged, which may be very different.

The official retail price index-numbers of goods sold in Soviet and Co-operative Stores show a movement of only one or two points up or down. No index numbers of prices in the free market have been issued since May last. In all markets together, prices have certainly doubled in the last twelve months. (Any doubt as to that must rest on a belief that the circulation of money has become sluggish, or that paper roubles are being hoarded; but who wants to hold or hoard a paper rouble?) The supplies available for sale at controlled prices have diminished; the supplies offered openly or surreptitiously for free-market sale may have increased;

certainly the prices asked have increased enormously. How, then, is the wage-earner faring?

If money earnings have really increased at no more than the rate shown in the Supplement, the lot of the wage-earner must by now be hard and his economic position desperate. As his nominal ration contracts, and his actually obtainable ration contracts still more, he must either go without or supply the balance of his basic needs in the free market at five or ten times the permit price. And, if he follows the currency figures, he sees no end to the process.

Why cannot the Soviet Government rake off enough margins and surpluses from private gains and State enterprises to pay its way without resort to the printing presses? The State Budget, as set out in the Supplement, should be examined from this standpoint. It proposes to derive from taxation, this year, 5,500 million roubles, as compared with 4,000 million roubles last year. This is a heavy increase on an already gigantic sum. Has it reached the limit of taxable capacity? It proposes to make a "profit" this year from State enterprises of 4,810 million roubles, as compared with 3,233 million roubles last year. Has it been over optimistic? Soviet Russia is, in effect, one gigantic industrial concern. The relations between the departments, which have varying degrees of autonomy, are complicated, and there is a certain amount of free dealing; but in effect it is substantially a single concern under centralised management. Whatever else a manager fails to do, whatever debts he incurs, however ruinous his management, he must, if his works are to keep running, find money for wages. The Soviet Government-employer has not been able to find money to pay wages. Having the note-printing presses in one of its departments, it has ordered that department to print more notes.

As regards the programme and achievement of capital production expressed in terms of so many million roubles, one must always ask, "At what value has the rouble been estimated?" Until this point is cleared up, one must remain in doubt whether, for example, the 321 million roubles' worth of agricultural machines and implements to be turned out in 1930 is to be attained by a real physical increase in production, or by the simpler process of reckoning the output in terms of a depreciating rouble.

It would be foolish to under-rate the strength of the fervour and determination with which the Soviet programmes are being conceived and prosecuted. The bright and the dark side are faithfully presented in the Supplement. One would have to be phlegmatic even beyond the repute of the English not to be stirred by the burning idealism that inspires much of Soviet faith and purpose. But people must have food, fuel, clothing and shelter; and by currency and price tests these are failing in Russia. Will passionate purpose succeed in providing them, if not this year, next year? Will promises and hopes serve meanwhile in their stead? Will the Soviet régime collapse with the Soviet currency? The next six months will tell.—Yours faithfully,

TRAVELLER.

BRITAIN AND WORLD TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is perhaps presumptuous of me to comment on the article which you have published in your Monthly Supplement for October, written after close study by so able a man as Mr A. Loveday, but I must plead as excuse my great interest in what the research work of the economist reveals to us.

Mr Loveday's article strikes me as being pervaded with an air of detachment. It is said that the looker-on sees most of the game, but I suggest that he views the arena from too great a distance. In this case I think he has missed points which at least qualify his conclusions—conclusions so unfavourable to the team which appears to be losing. The view "that the world swept by while the British industrial sat in hope" is no doubt true in part, but what one calls "sitting in hope" may by others be regarded as "watchful waiting." Experience in Germany and elsewhere suggests that caution in choice of method of reorganisation is very important; but may not the choice of time for carrying it into effect be found to have been equally important, especially under the world market conditions as we have known them since the war?

One of Mr Loveday's points is that we have exaggerated the effect of depreciated exchanges. Quite true, the hurdles which they placed in our path have been removed, or almost removed; but during the period for which he gives his figures they were a more serious handicap than he allows. He bases his argument upon the fact that Denmark, Norway, and Sweden in particular showed such rapid recovery in spite of

their return to the old gold parity. I submit that his figures are capable of a different explanation. He takes the year 1927. In that year 73.6 per cent. of the exports of this country consisted of manufactured articles, the percentage in the case of the above-mentioned countries being: Denmark, 10.7 per cent.; Sweden, 44.9 per cent.; and Norway, 25.5 per cent. Great Britain was thus in a much more exposed position. In the case of Denmark the reason for the rapid expansion was probably the nature of her exports, and because the structure of her agricultural industry was such that the deflation took place from top to bottom simultaneously, including the workers. The exports of Norway consist to a large extent of fish and fish products. The fisherman had to accept such prices for his catch as international markets would allow. He had to take the full effect of deflation at once. The chief industrial exports are based on timber. In that case organised labour in Norway, like organised industrial labour in Great Britain, has been able to maintain a standard of living too high in comparison with that of fellow citizens. The reason why the export of wood manufactures nevertheless shows such expansion is, I am afraid, due to the fact that the burden of the deflation has been placed on the shoulders of the forest owners who have been deprived of their income, and on those of the workers in the country-side who have been felling and carting the timber at very low wages. Other Norwegian industries which show great progress are the chemical and aluminium industries financed from abroad and based on cheap water-power where labour costs are relatively unimportant. Sweden, of course, presents a somewhat different picture; industrially she partakes to some extent of the same nature as Norway, but her success favours Mr Loveday's conclusions more. But in her case, as well as in that of Norway, the staple industries are based on home-produced raw materials, which is quite a different proposition to that faced by the most important British industries.

Mr Loveday gives the relative indices of gold value of exports in 1927 of the following countries as compared with 1913 (100) as:—

Denmark 226	Italy 169
Sweden 198	France 163
Norway 173	

In the light of the difference in conditions as outlined above, is not the progress of Italy and France the more striking seeing that French exports are industrial to the extent of 70 per cent.? Anyhow, I do not see how the juxtaposition of the figures can be made to prove that debased currencies did not materially increase the difficulties of this country. In the long view it may not work out to our disadvantage, but that it has done so for a time is undeniable. One phase of it came before me very prominently; that was when the debased currencies enabled German and French yards to obtain Norwegian shipbuilding orders. Before the war Norway placed all her work here. Now that the franc has been stabilised, the French yards, although paying, I believe, only 60 per cent. of British wages, are demanding subsidies, as they cannot meet the British competition.

The next point to which I should like to draw attention is Mr Loveday's statement that if this country had maintained her position relatively, her exports in 1927 would have been at least £160,000,000 higher. As far as I can see, coal, cotton goods, and woollen goods account for about 80 per cent. of that £160,000,000, and in these cases very special forces were at work which other countries had not to face, and the major portion of that loss was surely inevitable.

My object in writing is not to weaken the effect of Mr Loveday's demand for reconstruction coupled with re-adjustment of money wages to the fall in prices of all that wages have to buy. I merely wish to suggest that a closer view reveals special difficulties and circumstances peculiar to Great Britain which have delayed the necessary reorganisation of her industries. It seems unwise, therefore, on the basis of figures relating to a comparatively short period and capable of another explanation, to paint a picture of such hopelessness that people feel justified, in despair, "in placing a coping stone to false logic."—I am, Yours faithfully,

The Norwegian Chamber of Commerce, K. F. KNUDSEN.

GOLD AND THE PRICE LEVEL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I think that the theory which asserts that the present depression is due to the decrease in the annual rate of increase of gold,—a theory which seems to be gaining ground,—has neglected a factor of considerable importance.

Sir Henry Strakosch explains the fall in prices by drawing attention to the fact that the ratio between the annual rate of increase of gold and the annual rate of increase of production is no longer a constant. In so doing he is inclined to overlook, as has been pointed out, the importance of changes in the ratio between monetary gold and circulating money; but he also neglects what for the present we may call the velocity of circulation of money. In terms of the Fisher form of the quantity theory, he correlates *p*, *m*, and *t*, while tacitly assuming that *v* remains unchanged.

Now it seems possible that a change in *v* has been an important cause of the recent fall of prices. A slower velocity of circulation will, other things being equal, depress prices. If there should then be a decrease in the rate of increase of gold, this depression of prices might be accelerated; that would depend upon changes in the ratio of monetary gold to money in circulation, and upon whether the demand for credit (*i.e.*, for money not to hold but to sell in exchange for other things), had not already decreased with the economic depression and fall in prices. If the demand for credit, *i.e.*, for a definite volume of credit, had decreased, then even at lower interest rates a smaller volume of money would probably be demanded, so that any decrease in the volume of money due to gold shortage would, in this case, have no effect in further depressing prices. Thus while we must admit that if there should be an increase of confidence, the comparative shortage of gold might very easily prevent a revival of trade, the fact that this comparative shortage has been the original cause of the fall in prices, does not seem to me to be proved until the velocity of circulation has been shown to be constant when the depression started.

The difficulty is that the "velocity of circulation" is not a proper phrase for that factor in the quantity theory, as expressed by Fisher, for which it must stand. Changes in the volume of bank clearings are quite inadequate to account for what must be changes in *v*. This was particularly manifest in the post-war inflations. To understand what we mean by *v* we must look for the reasons for its changes. *v* decreases, because what Dr. Cannan has called the desire "to hold money" has increased,—because there has been an increase in the demand for money to hold (not to buy things with), in terms of goods, at any given price level. The desire is to sell rather than buy.

I suggest that this may have happened. Maldistribution of resources, and errors in knowledge and forecasting may have given birth to pessimism and a sluggishness of trade. This would have caused a fall in prices through an increase in the demand for money at the price level then reigning, and it is quite possible that a decrease in the rate of supply of gold would then not make itself felt.

I cannot say whether this is what actually happened. I only suggest it is a theoretical possibility that may have been neglected.—Yours, etc.,

Ravenhurst, Eastbourne.

October 30, 1930.

A POLICY FOR INVESTORS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My letter which you published last week on the present Stock Exchange outlook was criticised in your leader on the ground that it was too optimistic, and too much based on historical precedent and guesswork. In my own view, the forecast which I advanced of an early Stock Exchange revival was based on a careful analysis of the two quite separate sets of economic factors which jointly govern Stock Exchange revivals, *i.e.*, those appertaining to industry as such, and those relating to the Stock Exchange pure and simple.

General trade, I agree, has not yet turned upwards, and probably will not for about a year; but the Stock Exchange habitually moves in advance of the main trade indicators in each and every trade cycle.

As a rule, however, Stock Exchange revivals do not get under way until certain conditions "appertaining to the Stock Exchange pure and simple" have matured. These conditions have all been fulfilled, and the stage is now set for Stock Exchange revival. The factors which determine the moment when the Stock Exchange turns upwards between such time (a) as the pre-requisite Stock Exchange conditions have been fulfilled, and (b) as the five main trade indicators turn upwards, are sentiment and hope, either about trade or politics. Good politics can accelerate the upturn long before trade has shown signs of revival; bad politics conversely may cause a delay. If, however, economic factors are working to bring about an early trade revival, the Stock Exchange begins to turn upwards as soon as these factors become apparent. My contention is, they will soon be apparent. The fall in retail prices is making the fixed income classes automatically

"really" richer. Their increased purchases from the shops will soon lead—because stocks are already low—to replacement orders being given to producers. Increased production in some lines of business will then be reported in the Press, and confidence in trade will begin to revive. Investors will then rush to buy shares in the hope of getting in at the bottom; delayed purchases will rapidly occur; the market will enjoy a general upturn.

It is, I know, easy to attack any economist who risks his reputation in economic forecasting, but the whole utility of economic study is that forecasts should be made. One reason why I suggest that we are already near bottom is because the majority of people (like the writer of your article) seem at present only able to envisage unpropitious, as distinct from "propitious," eventualities both in industry and politics, despite the factors I have mentioned. The bottom can only occur when the mass of people are thinking pessimistically.

This is not, of course, the place to prove to you that incipient general revival in trade is not far off, nor that the normal sequence of events such as habitually creates general revival is already in evidence. These matters, however, can be proved, or shall I say, convincingly demonstrated.—I am, Sir, yours, &c.,

L. L. B. ANGAS.

55 Onslow Gardens, S.W.7.
November 5, 1930.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Anyone ignorant of Stock Exchange movements who read Mr. Angas' letter in your issue of November 1 may have assumed that there has not yet been a boom in gilt-edged securities. "The total money on fixed deposit," says Mr. Angas, "is probably in the region of £800 millions and only a diminutive switch is capable of causing a sharp upward movement in gilt-edged securities. . . . The Stock Exchange will suddenly experience an unexpected 'fixed interest' boom." But there has been a boom in gilt-edged securities for a long time—since June—and it has now overflowed into industrial prior charges. The £800 millions of fixed deposits have, of course, long been employed by the banks in the ordinary course of their business—partly in the gilt-edged market. Hence the boom that gilt-edged stocks are now enjoying. Until new issues revive in sufficient volume to absorb new savings and idle money, the boom will continue and may even overflow into some ordinary shares, but I see no reason to buy even half the ordinary shares Mr. Angas holds out as attractive. For example, the investor's confidence in business management has had a rude shock. Why should he buy ordinary shares where the management risks far outweigh any other attraction? An ill-considered boom in industrial ordinary shares at the present phase of the trade cycle would do no good to the Stock Exchange.—Yours, etc.,

The Athenæum. E. H. DAVENPORT.
November 6, 1930.

TO THE EDITOR OF THE ECONOMIST.

SIR,—After reading Mr. Angas' letter, and his book, one is somewhat at a loss to know which of his many maxims are to be regarded as essential to sound investment policy. Upwards of thirty conditions are mentioned as offering maximum safety in investing for capital appreciation, but most of the important ones must necessarily be broken if purchases of ordinary shares are made at the present time. Even disregarding the special difficulties of the day, it is open to doubt whether circumstances ever combine in such a happy way as to come close to Mr. Angas' requirements. It must indeed be a red-letter day when one perceives an ordinary share—preferably a market leader—of a "strong and promising" company, in a "depressed but reviving" industry, offering "high yields and earnings (8 per cent. to 10 per cent.) on market price," with "strong finances" and "good management," in the "second year of revival." *Inter alia*, it is also important that long- and short-term factors should be simultaneously favourable.

It would be unfair to suggest that Mr. Angas considers it possible to attain the theoretical maximum of favourable points, but the letter in your issue of last week seems to me to admit tacitly that a great deal has to be taken for granted in a practical investment policy. In other words, it is possible to string out the points which may be favourable almost indefinitely, but when it comes to choosing a stock to buy the difficulty is, always, to judge in which direction the balance of probability lies, so many are the factors for and against.

Yours faithfully,
Monk's Way, Radlett, Herts.
November 5, 1930.

HAROLD C. COWEN.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

A Treatise on Money. By J. M. Keynes. In two volumes. (London) Macmillan and Co., Ltd., St. Martin's Street. 15s. net per volume.

The publication of this work marks an epoch in the history of monetary theory. Mr. Keynes has virtually reconstructed both the pure theory of the subject (in Volume I.) and the applied theory (in Volume II) in the light of the very extensive new knowledge opened up by the revolutionary experiences of the last fifteen years.

New Imperial Ideals. By Robert Stokes. With an Introduction by the Right Hon. Lord Lloyd. (London) John Murray, Albemarle Street. 10s. net.

A stimulating criticism of the accepted attitude to inter-Imperial relations, the keynote of which is a plea for the association of the Dominions in the government of the dependent part of the Empire.

Economic Prosperity in the British Empire. By Stephen Leacock. (London) Constable and Company, Ltd., Orange Street.

Dr. Leacock's infectious enthusiasm makes his book very agreeable reading. Whether it can carry the reader away to the point of accepting his conclusions is another matter.

Hire-Purchase Accounts and Finance. By C. W. Ashton. (London) Gee and Co. (Publishers), Ltd., Kirby Street. 10s. net.

A textbook on a branch of accountancy which is of growing importance.

Amalgamation Schemes. By A. E. Cutforth. Second Edition. (London) Gee and Co. (Publishers), Ltd., 6, Kirby Street. 3s. 6d. net.

A paper on amalgamation which, though written from the point of view primarily of the accountant, is of interest to a much wider circle of readers.

Annuaire de la Société des Nations, 1930. (Geneva) Editions de l'Annuaire de la Société des Nations, Rue d'Italie, 14.

The official book of reference of the League of Nations, containing the text of the Covenant, a history of the League, an account of its constitution and of the auxiliary organisations, a gazetteer of States members and of States non-members, and a Who's Who of representatives and persons connected with the League.

The Banker, November, 1930. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Includes articles on "The World's Gold Supplies," "Mr. Snowden and the City," and "The Middleman's rôle in International Banking."

Bankers' Magazine, November, 1930. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes articles on "Gold Shortage and Industrial Depression" and "The American Banking System in Transition."

Lloyd's Calendar, 1931. (London) Corporation of Lloyd's. 3s. 6d. net.

This book of reference, indispensable to anybody concerned with navigation or even indirectly interested in shipping, is most remarkable value for the money. Its range of information is exceedingly catholic; such headings as shipping statistics, the Royal Family, prevailing winds, fumigation of ships, the development of the oil industry and hints on first aid, give only a very inadequate idea of the ground covered.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

AMERICAN INVESTMENT TRUSTS.

WE have lately been examining the reports of British investment trusts which, while presenting widely different results, have on the whole maintained the reputation of their managements for conservative finance and sound investment practice. Several inquiries have reached us as to the position of American investment trusts and the manner in which they have met the catastrophic fall in security values in the New York stock markets. Considerable light has been thrown on this subject by two publications which have recently been forwarded to us—*Keane's 1930 Manual of American Investment Trusts** and *Investment Trust Organization and Management*,† by Leland Rex Robinson, lecturer in investment trusts at Columbia University and a director of several investment trust companies. Keane's Manual is a complete directory of the companies operating in the American investment trust field. It distinguishes 608 trusts, as against 414 trusts in the 1929 manual. On December 31, 1928, the total financing of investment trusts amounted to \$891,188,841 (stocks \$695,318,316, bonds \$195,870,525). At the end of April, 1930, the corresponding figures were, stocks \$2,501,050,314, bonds \$340,317,325, a total of \$2,841,367,639. Of the trusts gone out of existence 40 were merged, 13 dissolved, two terminated, 17 changed their name, five did not get beyond the organisation stage, and 10 were failures, a total of 89. Of the 10 failures seven were of questionable intent, or were guilty of unethical practices and were put out of business by the proper authorities—a small ratio, as Mr. Keane observes, having regard to the rapid increase in investment trust enterprise.

In his "Investment Trust Organisation and Management" which, for all practical purposes, is a new book as compared with the first edition which appeared in 1926, Mr. Robinson clearly defines the different types of American investment trusts. There is, as yet, no such uniformity as obtains in Great Britain. There are evolving in the United States several varieties of investment trust which bear the stamp of that originality which often accompanies American adaptations of European methods and institutions. The first effort to introduce the investment trust into the United States along British lines was made by the International Securities Trust (now Corporation) of America, established in 1921, and by its fiscal agent, American Founders Trust (now Corporation), dating from 1922. From the first these two trusts excluded from their field of operation any financing or issuing business and confined their purchases to marketable securities, distributing their investment risks geographically and by types of securities in the approved manner. These were the forerunners of American trusts of the general management type which differ from their British relatives only in their greater efforts to make capital profits and in the keener interest they have shown in the purchase of common stocks.

Apart from these general management trusts other varieties of trust have grown up in America which are designed primarily to facilitate joint investment in equity stocks. The simplest is that known as the "fixed trust." Unlike other investment trusts the fixed trust is not a going concern engaged in converting its raw material, i.e., the capital paid in by its subscribers, into the finished product of carefully selected and diversified investments. It holds a fixed number of common stocks and participation in the trust takes the form of certificates authenticated by a trust com-

pany and specifying a fractional interest in a block or unit of the fixed common stocks held by the trust company. These fixed investment trusts first came into public notice about 1924. On account of the conveniently small units in which participation in them is available, the fixed investment trusts have enjoyed a considerable degree of popularity since the collapse of the stock markets in the autumn of 1929. An offshoot of the fixed trust is the "limited management" trust, which provides supervision for certain securities held by trustees in order that changes may be made therein in the light of altered conditions. Another offshoot is the "uniform trust fund," which gives the management power to vary the securities in accordance with certain rules and gives the participant the privilege of presenting his certificate of participation for redemption. An example of the uniform trust fund is the Irving Investors' Management Corporation Fund A and Fund B, sponsored by Irving Trust Company, New York, the second being known as the "accumulative fund," inasmuch as it pays no dividend whatever. Among other well-known companies, Diversified Trustee Shares is an example of a fixed investment trust; Insuranshares Corporation of Delaware of a company specialising in American insurance and bank stocks, and Incorporated Investors of a company issuing only common stocks and buying only leading American equities.

With regard to the general management type of American trust, we have examined the accounts of some of the leading groups—American Founders, which was responsible for the formation of United Founders' Corporation; Goldman Sachs, which were responsible for the Shenandoah and Blue Ridge Corporations; Prudential Investors, which was formed under the auspices of the J. Henry Schröder Banking Corporation, and other banking houses; and Tri-Continental Corporation, which was sponsored by J. and W. Seligman. The United Founders now owns 77½ per cent. of the outstanding common shares of American Founders, which in turn controls four subsidiary investment trust companies—International Securities Corporation, Second International Securities Corporation, United States and British International and American and General Securities Corporation.

It is sometimes said that the difference between American and British practice is that the British companies make safety of income and American companies capital profits their first consideration. To some extent this comment is true. The following analyses of the profit and loss accounts for the six months ended June 30, 1930, of the groups we have selected, show how large a proportion of the total income is represented by capital profits in some cases:—

FOR 6 MONTHS ENDED JUNE 30.
(000's omitted.)

Name.	Year organised.	Income from Capital Profits.	Total Income.	Net Income.	Prof. Divs.	Earned per common share.	Shares outstanding.
American Founders†	1922	\$ 3,717	\$ 9,057	\$ 5,892a	\$ 431	\$ 0.63	\$ 8,732

* Financial Publishing Company, Chicago and New York; George Routledge and Sons, Ltd., London.

† The Roland Press Company, New York.

A complication arises in the case of Shenandoah in view of the extent—over 40 per cent., based on market value—to which the investments of the corporation are represented by companies paying stock dividends. It is, however, claimed in this case that the actual cash dividends received (\$3,362,951) were sufficient to cover the preference dividends (\$2,773,633). The next table is also of considerable interest, showing the net assets value at June 30th per preferred stock and common shares as compared with the market prices ruling on October 1st:—

Name.	Net Assets Value per Pfd. Stk. at June 30, 1930.	Present Market Price, Pfd. Stk.	Net Assets Value per Common Sh. at June 30, 1930.	Common Sh. Prices. High, 1929.	Oct. 1st.
American Founders....	454.4	46†	11.58	34	7½
United Founders.....	*	*	21.41	...	13½
Prudential Investors ..	*	*	21.39	41½	17½
Tri-Continental	171.98	95	15.45	57	10½
Goldman Sachs Trading.....	*	*	30.16	121½	15
Shenandoah	122.75	36½†	10.49	39½	8

* No preferred stock outstanding.
† \$50 par value.

It will be seen that in all cases the common stocks are now selling at figures below the net assets values. It must, however, be borne in mind that the net assets value is somewhat theoretical, as the trusts could never realise on their holdings at the quoted market prices. Further, unless the American trust company has been long established it is not in a position to withstand a lengthy period of depression in common stock prices. The high levels to which the common stocks of these investment trust companies were carried in the 1929 boom is a mournful reminder of the extent to which speculation can run riot. In a common stock boom no purchase appears so attractive as the equity of an investment trust which is concentrating on common stock holdings. Contrariwise, nothing is more unpopular when equity stocks in general are slumping.

It is evident that new American investment trusts are going through a testing period similar to that to which the British investment trust companies were subjected in the 1890's after the Baring crisis. To quote Mr Leland Rex Robinson: "Upon so sound a basis has the investment trust business of Great Britain been conducted since 1900 that neither the late war nor the present disturbed condition of the world commodity and security markets has been able to check the constant growth of public confidence. It may be predicted with assurance that the present situation of investment trust companies in the United States will be followed by the same constructive developments. Instances can be cited in our own country of every kind of mistake and abuse which beset the early path of the British companies. But the mistakes and abuses have been in proportion much less extensive, and there are many indications that public interest will be rehabilitated here in not many more months than it required years in Great Britain." We hope that Mr Leland Rex Robinson is right. It is a matter of congratulations that most of the leading American investment trusts are sponsored by banking groups of financial strength and integrity.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
November 18. November 20.

INTEREST centred this week on the gilt-edged market, where many of the larger investment concerns continued up to Wednesday to switch from War Loan into longer-dated securities. The public showed a disposition to participate in the upward movement, and the ranks of dealers in the Consol market were swollen by temporary adherents

from other parts of the "House." Dominion and Foreign Bonds were stronger, with the melancholy exception of Australians, but the voice of cheap money was insufficiently stentorian to penetrate to the industrial markets—where prices maintained, without substantially improving on, last week's level—or the mining markets, which continued to wait in vain for signs of firmer commodity prices.

Despite the tighter condition of the short-loan market, and the easier exchange tendency, gilt-edged maintained a high degree of activity, though the early pace was too hot to last, and a healthy reaction occurred in the middle of the week. Special support was given to Funding Loan, 3½ per cent. Conversion and Victory Bonds, but War Loan was at first sold, and came into the picture only when other stocks were reacting. The gilt-edged position is discussed in an Investment Note on page 870. India stocks were easier in mid-week, but South Africans remained firm on the success of the new issue. The improving tendency of Australians was sharply checked by Mr Lyons's budget proposals, which were regarded as driving a carriage-and-four through the Melbourne agreement.

Brazilians continued to show improvement on the assumption that political developments would henceforth follow a "normal" course. San Paulo Coffee Bonds received support, coffee deliveries continuing more or less in accordance with schedule. Demand for German issues, particularly the 7 per Cents., was steady throughout the week. Turkish Unified were sold from Paris on the non-payment of the November coupon. Far Eastern stocks continued to rise.

Home Railway stocks were firmer, North Easterns, in particular, showing a welcome recovery on a traffic return recording an unexpectedly small decline. Argentine Rails maintained their position, current traffic figures suggesting that the period of declining receipts was nearing its end. Leopoldinas hardened on the news that little damage had been suffered in the recent disturbances. Havanas were bought up to the eve of the issue of the report (which is analysed on page 872), but were subsequently offered on a considerable scale.

The carry-over disclosed a reduced bear position in industrial shares. The week's dealings revealed a steady inquiry in some directions, but no real impetus towards increased business. Provincial investors continued to favour selected textile shares like J. and P. Coats and English Sewing Cotton. Courtaulds were in request, on market advice, but reacted slightly in the middle of the week. Electrical shares remained in steady demand, but motor shares reacted after finding a few buyers at the outset. The announcement of the reduction of the board of directors of Cables and Wireless from twenty-two to fourteen produced a short-lived improvement in the stock, though the market was unable to follow the reasons for some of the resignations. The reconstitution of the Waring and Gillow board was taken as an indication that the new arrangements were proceeding smoothly. International Teas were again in request, though no further announcement was made regarding the reopening of negotiations with Allied Stores. Thornycrofts were sold on the reduced dividend. A large business was done in Turner and Newall, the directors' announcement being regarded as ambiguous but not unsatisfactory. Distillers were an exception to the general uncertainty in the brewery share market. Tobaccos showed no decided trend. Internationals, including gramophones, were dull under American influences. The firmness of insurance shares provided one of the week's main features, the volume of business showing a considerable increase, with sound investment support behind the market. Bank shares were higher where altered.

Rubber shares lost ground at the first check to the rise in the commodity; the volume of business was reduced to small dimensions. Dealings in tea shares were of the negligible proportions which have become characteristic of this market. The further reduction in American crude oil prices was not conducive to activity in oil shares, and the repercussions in Paris of the Oustric failure were expected at one time appreciably to affect this market. Actually, neither factor produced the results anticipated,

the market having a firmer tone, though business was somewhat restricted. Royal Dutch and "Shell" showed some recovery after declining on the bad third-quarter earnings figures of the Shell Union (72 per cent. of whose common stock is understood to be owned by the Dutch—"Shell" group).

Business in the mining share market was again restricted, and movements were irregular. Among Kaffirs, Gold Fields and "Johnnies" were subjected to Paris selling, but Springs Mines were in some demand, and West Rand were well supported. Wankie Collieries improved in anticipation of an increased final dividend. In the Northern Rhodesian section no significant changes were recorded. De Beers weakened on lack of support. Business in tin shares was insufficient to affect quotations. Rio Tinto lost ground on the further relapse in copper.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Liquidation continued in a market which had been shaken by recent events, and saw no indication of an early change for the better. The results of the elections were received with mixed feelings. Wall Street, though Republican in its sympathies, has been far from satisfied with the record of the present administration. Much speculation took place as to the probable situation if, following historical precedent, the election results portended a change of President in 1932. It was recognised, however, that the intrusion of the Prohibition issue rendered uncertain the extent to which the week's results could be regarded as evidence of a reaction against the business policies of the administration. The week's stock market liquidation was carried out on orderly lines, United States Steel, General Motors, New York Central and Eastman Kodak being among the stocks chiefly affected. Public utilities were depressed by the fear that the new Legislature would be "unhelpful," and that more stringent regulation might be enforced in States whose new Governors had been elected on an anti-utility ticket. Increased difficulty was experienced in borrowing stock, United States Steel, Bethlehem and Westinghouse being among the fourteen stocks lent at premiums. The expulsion of two partners of the large Stock Exchange firm of Prince and Whitely, on the latter's failure, has created a bad impression, some \$12,000,000 of the firm's capital having been largely used to support the market. The figure of brokers' loans to members has now been reduced to the lowest level since returns were started four years ago. The outlook remains uncertain, the weakness of wheat and copper, and the fear that the steel industry may fall to a 40 per cent. operating basis having produced an atmosphere thoroughly uncongenial to market activity.

PARIS.

The Paris Bourse was peculiarly nervous during the month of October. The uncertainty was due not only to the very low levels registered during the first fortnight, but also to rumours put into circulation that certain houses of the second rank would shortly encounter difficulties. The Government has been moved by this fact to investigate the source of the rumours and prosecute the originators. After a slight improvement at the beginning of the month, the tendency became distinctly heavier, and shares on October 15th reached the lowest level of the year. Subsequently, prices slowly rose, despite disappointing news from New York. This fact was the more interesting since on few occasions has there been noticeable on the Paris Bourse a uniform tendency independent of the waywardness of New York. During the last sessions of the month, fairly considerable offerings on American account and other factors of a technical character weighed heavily on prices, which on October 31st were perceptibly below those of September 30th. On October 30th the "Chambre Syndicale de la Coudisse" decided to suspend the quotation of three counters of a group whose shares have recently been the subject of violent speculative movements. Brazilian and Roumanian funds reflected the instability of the

INVESTMENT NOTES.

The Gilt-Edged Boom.—At the moment of writing the boom in the gilt-edged market has slackened its pace, but the ground which it has already covered is remarkable. Taking the indices of the *Investors' Chronicle* (100 = December, 1923), British Funds have risen from a low level of 97.1 at the end of September, 1929, to 104.5 at the end of October, 1930, a rise of nearly 8 per cent. The following table gives the figures of the Actuaries' Investment Index* (December 31, 1928 = 100), which is based on prices for the last Tuesday in the month, to which we have added an estimate for the figure on November 4th:—

Date.	Price Index Dec. 31 1928=100.	Average Yield(%)
1928 December 31st	100.0	4.51
1929 March 26th	97.0	4.65
June 25th	96.2	4.69
September 24th	92.8	4.86
December 31st	94.7	4.76
1930 February 25th	96.0	4.70
March 25th	102.0	4.42
April 29th	99.1	4.55
May 27th	100.2	4.50
June 24th	98.8	4.56
July 29th	100.5	4.49
August 26th	101.3	4.45
September 30th	100.9	4.47
October 28th	103.7	4.35
November 4th	106.2*	4.25*
	(est.)	(est.)

It may be recalled that in March gilt-edged stocks enjoyed their first steep rise, to the accompaniment of rumours of a coming conversion offer. As the

* For further information regarding this index, see note below.

Budget approached and no conversion scheme was announced, activity died down, and from April to June the market reacted under the influence of the higher taxation imposed in Mr Snowden's Budget. Since June, however, the general trend has been upwards, the steepest climb being registered in October. Prices in some cases have surpassed the high levels of 1923, which saw the peak of the last gilt-edged boom. The comparison of prices at the 1923 high levels and to-day is shown in the following table, together with the yields obtainable at present prices. We have added the leading Government stocks issued since 1923, namely, 4½ per cent. Conversion, 4 per cent. Consols, and 5 per cent. Conversion:—

	High, 1923.	Present Buying Price.	Flat Yield %	Red. Yield.
5% War Loan, 1929-47	103½	102½	4 17 3	...
3½% Conversion after 1961	81½	82½	4 4 6	...
4% Funding, 1960-90	94½	95½	4 3 6	4 3 9
2½% Consols perpetual	60	59	4 4 6	...
4½% Conversion, 1940-44	...	102½	4 8 9	4 6 6
5% Conversion, 1944-64	...	105½	4 14 3	4 8 3
4% Consols after 1957	...	93½	4 6 6	...

It will be seen from the earlier table that the yield on long-dated British Government securities has fallen from 4.86 per cent. to 4.25 per cent. since September, 1929, when Mr Snowden, in somewhat of a panic at the state of the Government's finances, considered that 5 per cent. was not too high a yield to offer to investors in the 5 per cent. Conversion Loan, 1944-64. It does not appear that the force of the boom in gilt-edged securities has yet spent itself. Money continues to be plentiful. The gold position at the Bank of England has been strengthened by recent shipments from Australia; gold is coming from Spain; and though the renewed withdrawals on French account following the Oustic crash may check the market's optimism, the Bank's total gold stock, at about £160 millions, affords a comfortable margin. On account of the trade depression and the shortage of trade bills, there seems to be no prospect of a serious stiffening of money rates. Until new capital issues have assumed greater proportions and have begun to use up a larger proportion of available investment funds, the rise in gilt-edged securities may well continue. At what point Mr Snowden may decide to issue his half-promised conversion scheme to 5 per Cent. War Loan holders is, of course, a matter of conjecture. It is notable that 5 per Cent. War Loan has been an uncertain market since it was marked ex-dividend.

Investment Trust Reports.—Two investment trust reports recently published present a contrast of policy as regards publicity. The Second Scottish Investment (with offices in Edinburgh) gives no list of its holdings, and does not even declare whether there is depreciation or appreciation on its investments of £4,140,473. The Second Industrial Trust (with offices in London and Sir George Touche as chairman) gives a complete list of its investments, numbering 383, and states that the amount at which they stand in the balance sheet, namely £1,104,863, is "more than represented" by market values. The dividends and earnings of the two companies over the past two years are as follows:—

	Second Scottish. Year to October 1, 1929.	Second Industrial. Year to September 30, 1929.
Net profits	£128,290	£142,066
Per cent. earned ...	33.7	33.3
Per cent. paid	20*	20

* Plus capital bonus 20 per cent.

The Second Scottish increased its debenture debt during the year by £283,815, and the dividend of 20 per cent. is payable on an ordinary share capital increased by the 20 per cent. bonus issue in November, 1929. The ordinary stock is quoted at 23s. per 5s. share to yield 4.45 per cent. on dividends, and 7.4 per cent. on earnings, and that of the Second Industrial at £13½ (per £10 share) to yield 5.45 per cent. on dividends, and 7.98 per cent. on earnings. In the case of another trust—the Independent Investment—a circular accompanying

the interim dividend of 2 per cent. disclosed the fact that at September 30th, after deducting the ordinary and preference stock dividends, the break-up value of the net assets was £75,612 below the value of the paid-up capital of £420,000. The directors gave the following information regarding the distribution of the company's investments:

	Mar. 31, 1930.	Sept. 30, 1930.	Mar. 31, 1930.	Sept. 30, 1930.
British	40.0	25.6	Bonds and de- bentures ...	10.7
American ...	48.8	51.8	Preference ...	34.5
Foreign	11.2	22.6	Ordinary	54.8
	100.0	100.0		100.0

The heavy depreciation which the company has suffered may be due in part to its large holdings of American securities, to which it has added since March. It is surprising to find so small a proportion of the company's funds invested in bonds and debentures at the present time and so large a proportion in preference stocks which, on account of the narrowness of their markets, are not generally favoured by investment trust companies. The original directors of the Independent Investment Company were Mr O. T. Falk, Mr J. T. C. Gifford and Mr J. M. Keynes. It is stated that Mr J. T. C. Gifford has resigned and Mr Ian Macpherson has been elected in his place. The Independent Investment Company was formed in 1924 with the ostensible purpose of profiting from fluctuations in security prices arising out of the influence of money cycles. The results achieved so far, however, suggest that the practical difficulties of such a policy are greater than is generally realised.

The Actuaries' Investment Index.—In May last the Institute of Actuaries and the Faculty of Actuaries in Scotland, acting jointly, decided to inaugurate a series of indices, for issue by subscription, suited to the requirements of "corporate" investors, such as insurance companies and investment trusts. The initial results suggest that The Actuaries' Investment Index—which is compiled partly on a weekly and partly on a monthly basis, and includes yield as well as price figures—is a thoroughly workmanlike achievement, which has avoided many of the pitfalls which await the constructor of index numbers, and is likely to be of service to all large-scale investors. It is based, unfortunately, on December 31, 1928—the top of a boom in equity shares—but doubtless opportunity will be taken to widen its foundation later on. The published figures may be usefully compared with those of other indices, as in the following table:—

(End December, 1928 = 100.)						
Class of Securities.	Index.	No. of Securities.	Sept., 1929.	Dec., 1929.	July, 1930.	Sept., 1930.
Industrial ordinary shares	"Actuaries"	123	95.6	81.9	72.3	70.1
	"Fin. News"	30	97.9	84.3	75.9	74.3
	"Inv. Chron."†	...	88.8	75.9	68.1	66.8
	"Bankers' Mag."‡ (a)	278	104.2	92.7	86.5	84.8
British Government	"Actuaries"	3	92.8	94.7	100.5	100.9
	"Inv. Chron."	...	93.4	93.5	97.7	98.6
Industrial debentures	"Actuaries"	41	95.1	94.1	95.5	96.1
	"Inv. Chron."	...	95.8	93.5	94.7	93.8
Industrial pref. shares	"Actuaries"	11	98.7	96.6	97.8	98.8

* High-class industrial debentures. † "General business." ‡ "Variable dividend." (a) All "Bankers' Magazine" figures are calculated on prices in the middle of each month.

The comparison is approximate, as the scope of the various indices is not identical. The original choice of securities was made for the *Bankers' Magazine* index, nine years ago; for the *Investors' Chronicle* index, seven years ago; for the *Financial News* and Actuaries indices, early this year. All the indices agree as to the main trends of security values in recent months—that ordinary shares

have been falling and gilt-edged stocks rising steadily, and that while industrial debentures have enjoyed a recovery, they have not yet regained the end-1928 level. The indices, however, show significant differences in the amplitude and timing of fluctuations in values. Thus, as regards equity shares, the Actuaries' index, which is based on a geometric average for all companies operating in Great Britain with a market capitalisation over £2,000,000 on December 31, 1928 (i.e., on the largest concerns, or those most inflated at the top of the 1928 boom), shows a total depreciation of 30½ per cent. since the end of 1928. The *Financial News* index (which is an arithmetical average of the "market leaders") shows a decline, in the same period, of 26 per cent. The *Investors' Chronicle* index (based on a selection of securities made before the last boom began) shows a decline of 34 per cent. in the last 22 months, and the *Bankers' Magazine* index, which is still more "old-fashioned," a drop of only 20 per cent. Clearly, the problem of choosing sample stocks which are really "representative" in every sense of the word, is decidedly formidable.

National Flying Services: An Obscure Proposal.—Debenture-holders in National Flying Services, Ltd. (which was formed in April, 1929, to establish flying facilities in various towns, run flying schools, and act as a general aircraft agency), have received a circular from Mr Arthur G. Cousins, one of their trustees, which contains a number of unusual features. The company has not so far been successful, its accounts for fifteen and a half months to July 31st last showing a net loss of £49,563, after paying debenture interest and crediting a Government subsidy, but before allowing for losses sustained by two subsidiary companies. The circular states that at least £50,000, and possibly £60,000, is required to finance the company through the winter season. It asks the debenture-holders to consider the advisability of allowing up to £30,000 to be raised by prior-lien debentures, ranking in front of their present holding, on condition, *inter alia*, that the directors guarantee to find another £25,000 to £30,000 ranking after the debentures, that the company's board is reconstructed, and that "the further funds provided by the directors and their associates are not to be repaid until the whole of the prior-lien has been repaid." This last clause is either unnecessary—since any funds provided by the directors on such terms could not in any case be repaid until both the prior-lien and the existing debentures had been repaid—or is in conflict with the rest of the circular if it implies that the directors' contribution is to rank immediately after the prior-lien. It would appear also that part of the money raised will be used to meet current expenses, since the circular elsewhere states that "it is proposed that at least half of the additional amount . . . be used for the purchase of further assets." The company has a board which includes names of distinction in aviation, but the management has shown itself less successful in the counting-house than in the air. Messrs Whinney, Smith and Whinney, who were asked for an opinion as to further finance, questioned whether the closest supervision of expenditure had in the past been exercised. The present debentures (which total £150,000) have no more than £191,698 of ordinary capital ranking after them, of which certain directors and their associates hold approximately £100,000. A firm of valuers has put the company's assets at £248,305, but whether anything like this amount would be realised on a forced sale is uncertain. Before, however, the debenture-holders should be asked to agree to a modification of their rights, they would seem to be entitled to much more definite evidence: (1) That

Stock Exchange Statistician, wide practical experience, desires position of responsibility with Investment Trust or Financial House of standing.
Box 81, The Economist Office, 8, Boulevard St., London, E.C.4.

they would gain more by agreeing to the terms than asking for a receiver; and (2) What the company's prospects are really likely to be next spring, when the suggested new funds will have been exhausted.

Earnings of the "Harman" Companies.—Certain companies in what is generally known as the "Harman" group are finding it necessary to raise fresh capital. The London Irish Trust, for instance, has announced an issue of £100,000 6½ per cent. Convertible Debenture stock, at par, redeemable in 1940 and giving holders the right to exchange, in the interim, into stock at par. The proceeds of the issue are to be used to repay bankers' loans and other indebtedness and "to take advantage of the general fall in prices for investment in suitable securities." Another company, Oceana Consolidated, proposes to issue 3,906,364 participating preference shares of 5s. at par, subscribers having an option on further shares of the same class. The Rock Investment Company, Limited, is asking shareholders to sanction an issue of £300,000 in 5½ per cent. £10 cumulative preference shares, ranking ahead of the existing preference capital. The subscribers will have an option, exercisable before September, 1940, of conversion into ordinary shares, while existing preference holders may exercise a similar option—the whole representing an unusual type of financial operation. Recent reports suggest that companies in the "Harman" group are making somewhat heavy weather. The following table may serve as an indication of the experience of some of the more important concerns with which Mr M. C. Harman, or his supporters, are, or have been, directorially connected:—

Company.	Total Paid-up Capital (excluding debentures).	Total Net Profit or Loss, Last Report.
	£	£
Branston Artificial Silk	1,360,000	Dr. 134,850
British Bank for Foreign Trade	340,000	Dr. 8,498
Chosen Corporation	496,460	10,113*
Dublin Distillers	320,000	Dr. 21,048
Gas, Water and General Investment...	560,000	Dr. 26,858
John Hetherington	799,571	Dr. 53,343
Kirklees	500,000	Dr. 24,428
London Irish Trust	500,000	Dr. 4,291
Oceana Consolidated	976,421	Dr. 59,254
Rock Investment	250,400	Dr. 27,079
Total	6,102,852	Dr. 349,536

* Year to June 30, 1929.

In view of these figures, shareholders are entitled to clear evidence from the sponsors of further capital issues that the new money can be profitably employed under the difficult conditions obtaining, at the present time, throughout the business world.

United of Havana Results.—The accounts of this once prosperous Cuban railway for the financial year ended June 30th last make depressing reading. Gross receipts are down by 15.7 per cent., while railway expenses have decreased by only 2.6 per cent. Net railway profit is £383,599, compared with £898,969 last year. The addition of interest and deduction of taxes and other charges bring the total net profits to £337,633, a decline of £559,147. After debiting a full year's debenture interest (of which only £273,422 has been paid) amounting to £663,910, and the interim preference dividend of 2½ per cent. paid in January, there remains to be carried forward a deficit of £294,993, against £120,140 brought in.

	1927-28. £	1928-29. £	1929-30. £
Railway receipts	3,610,219	3,802,998	3,207,177

* Includes Regla warehouse.

† Interim.

The general manager attributes these unhappy results to the further severe setback which the sugar industry suffered in the second half of the year, to unregulated road competition, and to the fact that, whereas during the past three years carriage of material for the construction of a central highway helped to swell gross receipts, during the current year the highway in the company's zone has almost reached completion, and traffic has fallen off in consequence. On July 8th the board announced that, owing to the heavy and continuous decline in receipts, a scheme of arrangement had been prepared providing *inter alia* for the suspension of the existing sinking fund provisions for debenture redemption and for the issue of certificates for arrears of interest. This scheme was subsequently sanctioned by the Court, and at the annual meeting, on November 25th, shareholders will be asked to alter the articles of association accordingly. In the circumstances, debenture holders may be inclined to question the wisdom of the interim preference dividend announcement, which was made on December 5th last. While it is true that traffic returns some time prior to the decision had shown small increases, the figure for November revealed a decline of £14,298, and in conjunction with the uncertainties connected with the sugar situation, and potential road competition, might well have suggested reasonable cause for postponement. The present prices of the ordinary 5 per cent. preference and 5 per cent. irredeemable debenture stocks are compared below with the prices twelve months ago:—

	November, 1929.	November, 1930.
5% Irred. Debentures	71	23½
5% Preference	54	11
Ordinary stock	32	8

The extent of the fall in prices shows how completely the market was taken by surprise by the reversal of the company's fortunes.

United Steel Companies.—The reorganisation of United Steel Companies, under the facilities provided by the Companies Act of 1929, has now been completed, and a new company, with the same name, has taken over the assets and uncanceled liabilities of the old. As the new company was registered only in August last, the directors have issued a report, pending the publication of the accounts for the twelve months ended June 30, 1931. In a *pro forma* statement, share capital is now shown at £6,622,884, while a loan of £1,300,000—introduced because of the failure of Austin Friars Trust to provide the funds for the repayment of bank indebtedness—is to be secured by debenture if not repaid before June 30, 1931. Debentures of subsidiary companies total £1,322,962, mortgages and loans £339,319 and preference shares of subsidiary companies, not held by United Steel Companies, £123,194. Debts by the company amounting to £1,493,822 are covered by available assets of £1,972,172. The fixed assets of the company now stand at £7,371,682, which the directors consider a conservative figure. Trading profit on this written-down capital figure totalled £651,019 for the year to June 30th last, compared with £520,006 for the previous twelve months, and £374,672 for 1927-28. Interest payable, dividends on preference shares of associated companies, and reserve for taxation require £167,436, leaving £483,583 to be carried to profit and loss account. The report states that interest charges payable under the scheme of arrangement and "B" and "C" debenture interest, amounting to £251,779, have been deducted from the profit for the year, but that in future the interest chargeable on loan capital will be £78,000 per annum. Shareholders will be glad to learn that the company may gradually return to a sound earning basis.

Sudan Plantations Syndicate.—The fall in cotton prices and the diversion of labour on works at Zeidab and Gezira affected the results of this company for the year ended June 30th last. Altogether £202,947 was spent at Gezira and £26,743 at Zeidab in development, canalisation and equipment. This caused a large decrease in liquid assets. While the area under cultivation was 20.1 per cent. higher on June 30th last as compared with June 30, 1929, the number of bales produced was 32.9 per cent. lower at 75,230. Gross profit was consequently £491,787 less at £442,007, and net profits dropped by £429,009 to £227,347. The dividend was sharply reduced from 25 per cent. to 10 per cent.:—

	1928. £	1929. £	1930. £
Gross profit	833,880	933,794	442,007
Net profit†	587,401	656,356	227,347
Ordinary dividend:			
Earned %	26.10%	29.17%	10.10%
Paid %	25%	25%	10%
Amount	562,500	562,500	225,000
Increase or decrease in carry-forward	+ 24,901	+ 93,856	+ 2,347

† Before deducting directors' fees of £31,825 in 1926-27, £8,484 in 1927-28, and £12,886 in 1928-29.

During the period under review stocks fell by £1,175,042 to £1,512,538. The heavy capital expenditure was reflected in a decline in cash of £130,003 to £620,515, and in British Government securities by £339,274 to £1,015,944. The Kassala Cotton Company, in which Sudan Plantations has £273,750 invested, completed its first cultivating season and obtained a satisfactory crop. Sudan Plantations' £1 shares yield £5 9s. 7d. per cent. at the present price of 37s. 6d.

Lewis Berger and Sons.—In view of the extent of trade depression, the latest accounts of this company of paint and varnish manufacturers are not unsatisfactory. Trading profits for the year to July 31 last totalled £50,980, against £57,878, and dividends received £63,563, against £72,626.

Net profit, at £106,634, shows a decline of £14,959. The £527,275 of ordinary capital again receives 10 per cent. out of 14.9 per cent. earned.

Year to July 31.	1928. £	1929. £	1930. £
Trading profit	44,109	57,878	50,980

Other allocations	20,000	...	...
Carried forward	23,759	39,634	65,540

No further allocation is made to reserve fund, which stands at £75,000. A satisfactorily liquid position is revealed, available assets totalling £172,493, compared with potential liabilities of £132,096. The present price of the ordinary £1 shares is 36s. 3d., which, allowing for a final dividend of 5 per cent., shows a yield of £5 16s. 3d. per cent.

United Dairies Meeting.—At the annual meeting, on October 31st, Mr J. H. Maggs, the chairman and managing director of the United Dairies, vigorously combated the suggestion that the company enjoyed, or exploited, anything like a "monopoly" position in the Greater London milk trade. He stated that, in the area served by the company there were over 2,000 independent dairymen. Of the season's output of milk, only 10 per cent. came under the control of United Dairies. Referring to the suggestion that there had been no falling off in retail prices despite cheaper wholesale prices paid for milk, Mr Maggs said that, compared with 1926-27, the wholesale price had fallen by only one-twelfth of a penny. Though a Member of Parliament had declared that a margin of 100 per cent. existed between the retail and wholesale price, Mr Maggs stated that the figure was only 78 per cent. The Board of Trade allowed a difference of 13d. per gallon of "loose milk," while the company's difference was 11.6d. per gallon. In New York the margin was 195 per cent. per gallon bottled in quart bottles, and 276 per cent. on sales by the pint. He strongly opposed the introduction of the Consumers' Council Bill.

INVESTMENT

by L. L. B. Angas

(Author of "The Coming Collapse in Rubber," 1926.)

A book which shows how to detect the beginnings and endings of slumps and booms in single industries, and how to exploit the fluctuations which take place in shares on the Stock Exchange.

Rules are laid down for the timing of both buying and selling, and directions are given for taking profits and losses.

A valuable feature of the book is the list of faults which must be avoided.

The Economist: "To the Stockbroker, and even more to the individual investor, this book will be a *vade mecum*, the mastering of whose principles will repay in hard cash many hours of study."

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."

Publishers: Macmillan & Co., St. Martin's Street, LONDON, W.C.1. 187 pages. Numerous Charts. PRICE 20/-

New Capital Issues in October.—In the following table we show the new capital raised in London by issue to the public and to shareholders in October, and in recent periods.

October, 1930 ... 850	11,839	12,000	1,480	26,169

The autumn reopening of the new issue market, in a period of cheap money, has been signalled by a number of successful operations by borrowers of good standing. Mr Snowden's offer of 4 per cent. Treasury bonds, 1934-36, provided him with £19,000,000 over and above his requirements for conversion purposes. As no official announcement has yet been made as to the manner in which these additional funds will be employed, we have regarded them as being "in suspense" for the purpose of our calculations. They do not, therefore, appear in the figures shown above. The largest of the remaining issues was made by the Government of India, whose offer of £12,000,000 of 6 per cent. bonds, on generous terms as to yield, was greatly over-subscribed. There is as yet no sign of a large-scale resumption of the demand from home corporations which was a feature of the market up to the end of May, the only borrower falling into this category last month being the Ayr County Council. The London Underground Railway group again borrowed, both by public issue and private "placing," on advantageous terms. Public utility companies have been represented by the Gas Light and Coke Company in the public issue market, and by the Midland Counties' Electric Supply Company in respect of capital offered to shareholders only, but issues by general industrial concerns have been few and far between. New foreign bonds, similarly, have been conspicuous by their absence. Broadly speaking, the supply of new securities, of the highest grade, has not fully kept pace with demand at a time when the maintenance of cheap money has been regarded as assured for some considerable time—a fact illustrated partly by the rapid over-subscription of the majority of issues of high status and by the "overflow" of surplus resources into the gilt-edged markets.

Trinidad Leaseholds.—The shareholders of Trinidad Leaseholds were disturbed by the passing of the final dividend in respect of the year ending June 30, 1930, which left the distribution for that year at 7½ per cent., against 30 per cent. in the preceding year. The accounts which have now been published show that the company

earned 15.3 per cent. on its capital after allowing for taxation. The net trading profit before allowing for overheads and depreciation showed a reduction of 34 per cent. at £452,637. This reduction was due, according to the directors, to the lower prices realised on their oil products. Sales on satisfactory terms, they declared, had been increasingly difficult, and as a result stocks of oil had increased. Since the close of the financial year revenue had suffered from a further fall in prices. Substantial amounts had been expended on capital account during the year, chiefly on the installation of revenue producing plant and distribution facilities. As conditions had not been favourable for an issue of shares the funds required had been provided out of revenue, £75,000 being allocated out of profits to the reserve account. The results for the past three years are shown in the following table:—

Year to June 30.	Net Profit.	Depreciation.	Taxes.	Earned.	Paid.		Reserve.	Carry forward.
					Int.	Final.		
1928	£ 581,094	£ 183,805*	£ 25,000	28.6	10.0	17.5	£ Nil	£ 81,803
1929	544,603	231,436	Nil	31.9	12.5	17.5	Nil	101,501
1930	426,871	179,275	70,000	15.3	7.5	Nil	75,000	105,730

* Includes £101,985 written off all wells on Forest Reserve, Bernstein and Barrackpore Fields, less £100,000 transferred from depreciation reserve.
† After overhead expenditure.

The directors reported that in order to broaden the market for the company's motor spirit, they had acquired the petrol distributing business in this country of Burt, Boulton and Haywood. The company also made a new investment in Trinidad, the Siparia Trinidad Oilfields being formed in conjunction with the Venezuelan Consolidated Oilfields. The result of these acquisitions and of the expenditure on capital account has been to reduce the company's cash from £226,000 to £75,000, and its Government Securities from £544,000 to £96,000. Excluding stocks of oil, which have increased from £164,000 to £276,000, the surplus of quick assets over current liabilities has fallen from £375,000 to £37,000. Whether the company has been wise to extend its commitments in motor spirit distribution at the present time remains to be seen. The company's shares have fallen from a high level of 78s. 9d. this year to the present price of 25s.

CAPITAL ISSUES.

THE only publicly-advertised issue of the week in London was that of the *Union of South Africa*, the stock being a trustee security giving a flat yield of £4 14s. 3d. per cent., and a redemption yield, on the latest possible date, of £4 14s. 11d. per cent. South Africa is a popular borrower in London and, in the present condition of the new issue and gilt-edged markets, the immediate over-subscription of the loan was a foregone conclusion. The *Agricultural Credit Corporation* (of the Irish Free State), made an issue, in Ireland, of 5 per cent. State Guaranteed Mortgage bonds at 101. These also were rapidly over-subscribed.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to November 1, 1930, £223,849,355.
Total, including conversion recorded, January 1 to November 1, 1930, £404,564,986.

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1 to October 25, 1930, were £4,828,491, of which £4,745,000 was remitted by purchases of sterling in India and £83,491 was transferred from the paper currency reserve in England to the Treasury account of the Secretary of State for India in Council to meet sales of sterling in India.

BULLION.

The following statistics of imports and exports of gold for week ended Nov. 6, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From—	To—
Brazil.....	Poland.....
British S. Africa.....	Germany.....
Australia.....	Netherlands.....
Other countries.....	France.....
	Switzerland.....
	British India.....
	Other countries.....
Total declared value of imports.....	Total declared value of exports.....

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1930. ARRIVALS.			1930. WITHDRAWALS.		
Oct. 31	Sovs.	£ 1,000,000	Oct. 31	Bar gold	£ 3,423
	Bar gold	69		Sovs.	2,000
	Foreign gold coin	18			Nil
Nov. 1		Nil	3	Sovs.	16,000
3		Nil		Bar gold	5,142
4		Nil	4	Bar gold	34,673
5		Nil		Sovs.	21,000
6		Nil	5	Bar gold	26,021
				Sovs.	22,000
			6	Bar gold	295,333
				Sovs.	25,000
Total £1,000,087			Total £450,592		
Net arrivals, £549,495.					

Net arrivals, £549,495.

GOLD.

Messrs Samuel Montagu and Company write on November 5, 1930, as follows:—
 The Bank of England gold reserve against notes amounted to £159,503,672 on the 29th ultimo (as compared with £158,941,667 on the previous Wednesday), and represents an increase of £13,543,588 since January 1st last. The South African bar gold offered in the open market yesterday amounted to £1,104,000. The price was fixed at 85s. 0½d. per fine ounce, at which France secured £765,000 whilst £255,000 was taken for a destination not disclosed. £50,000 was taken for India and £34,000 for the home and Continental trade. Movements of gold at the Bank of England during the week show a net influx of £864,674. Receipts totalled £1,000,095, of which £1,000,000 was in sovereigns from Australia, and withdrawals consisted of £74,421 in bar gold and £61,000 in sovereigns.

SILVER.

The week under review opened quietly but with a steady tone owing to reluctance on the part of sellers. Following an improvement in the Shanghai exchange, China was less inclined to sell and a demand from the Indian bazaars both for shipment and to cover bear sales, carried quotations on the 3rd instant to 16½d. and 16½d. for cash and two months' delivery respectively. There was a further rise of ½d. yesterday, but the higher level thus reached attracted China selling, the respective prices reacting to-day to 16½d. and 16½d. America has both bought and sold. Cash silver was quoted at ½d. premium on the 3rd instant owing to Indian demand for near delivery. The premium has been since maintained. With regard to the projected coinage of French silver 20-franc and 10-franc pieces, it is understood that the mintage is being commenced, but that the operation will be gradual, extending over a considerable period, and that the coins will probably not be in circulation before some time in 1932. As regards the necessary silver, it is believed that the French Treasury already has sufficient, as they repurchased from the Bank of France the stock of silver coins held by that institution when the new monetary law came into force in June, 1928.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 27th ultimo to mid-day on the 3rd instant:—

IMPORTS.	EXPORTS.
Mexico.....	British India.....
Other countries.....	France.....
	Other countries.....
£120,303	£54,669

INDIAN CURRENCY RETURNS (in lacs of rupees).

	Oct. 31.	Oct. 22.	Oct. 15.

follows: F. R. S. Balfour, Esq., D.L., J.P.; Sir Charles C. Barrie, K.B.E., D.L.; Sir Basil P. Blackett, K.C.B., K.C.S.I.; Col. the Hon. A. G. Brodrick, T.L., A.D.C.; J. C. Denison-Pender, Esq.; Admiral H. W. Grant, C.B.; H. C. Hambro, Esq.; the Rt. Hon. the Earl of Incheape, G.C.S.I., G.C.M.G., K.C.I.E.; the Rt. Hon. Lord Inverforth, P.C.; the Rt. Hon. F. G. Kellaway, P.C., J.P.; the Marchese Guglielmo Marconi, G.C.V.O., LL.D., D.Sc.; the Rt. Hon. the Earl of Middleton, P.C., K.P.; the Hon. George Peel, D.L., J.P.; L. G. Sherlock, Esq., LL.D. The changes will take effect as from January 1, 1931, and will bring about an annual saving of £35,000.

DENNIS BROTHERS, LIMITED.—We are informed that of the 152 new motor vehicles and tractors which are being supplied to the Great Western Railway (as announced in the General News Bulletin of the B.B.C., on Wednesday night last), no less than 108 are being manufactured by Dennis Bros., Ltd., of Guildford.

GUEST, KEEN AND NETTLEFOLDS, LIMITED.—The Directors have declared interim dividends for the six months ended September 30th last at the rate of 5 per cent. per annum on the first and second preference shares, free of income tax, to be paid December 19th to shareholders registered on the books of the company on November 12th. In view of the menacing industrial outlook at home and abroad, the board consider it prudent to postpone a decision as to a dividend on the ordinary share capital of the company until the accounts are made up for the full financial year ending March 31, 1931, and not to declare an interim dividend. The interim dividend a year ago was 5 per cent., free of income tax, and a final dividend of 5 per cent., free of income tax, was paid, making 10 per cent., free of income tax, for the last financial year.

LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES LIMITED.—Interim report for half-year ended September 30, 1930, states that assets at September 30, 1930 (including subsidiaries), were £5,296,740 (the purchases completed during the half-year amounted to £657,470); liabilities on debentures, loans and creditors at September 30, 1930 (including further borrowings of £595,411 during the half-year), £2,975,117; leaving a surplus of assets over liabilities to represent the issued share capital of £1,500,000; £2,321,623 (an increase of £82,389 over the surplus at March 31st last after the payment of the final dividend of £70,928). The revenue balance for the half-year ended September 30, 1930, was at the rate of £210,000 per annum on the share capital of £1,500,000, as against £175,025 for the year ended March 31st last. This leads to the conclusion that the final dividend should be at the rate of 5 per cent. with a bonus dividend of 1 per cent., making 11 per cent. for the year and leaving a substantial surplus. The year's revenue will be augmented by the net income from the recent and contemplated purchases.

WARING AND GILLOW, LIMITED.—It has been officially announced that four of the members of the old board of Waring and Gillow, Ltd., including Lord Waring, had resigned, and the following gentlemen had been elected to the new board: Mr. Ivan C. Sanderson (chairman), Mr. W. J. Jennings (deputy-chairman), Mr. J. H. Brackenridge (managing director), Mr. Angus Campbell and Mr. S. H. Gillett, F.C.A. (representing the creditors). Lord Waring, with the consent of the new board, will assume the title of president of the company.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

A spell of colder weather and ground frosts was experienced over the United Kingdom during the past week following recent rains. Drier conditions and a fair amount of sunshine will tend to put the land in good tilth and facilitate sowing operations. In Southern districts, new winter barley and oats are above ground and present a healthy appearance. Threshings of native wheat are still on a small scale and yields unsatisfactory, both as to quality and weight, consequently only limited supplies were available at the principal statute markets. Millers, however, remain indifferent, as prices compare unfavourably with overseas varieties. Trading on the import market was on a reduced scale following recent liberal purchases of Canadian, Australian and Russian descriptions. The falling off in export demand was reflected by the weakness of overseas cables, and prices generally moved in a downward direction. Weekly shipments are maintained at a good level, and Russian offerings still dominate the immediate situation. The recent estimate of six million quarters for export has almost been accounted for, and a renewal of chartering on fairly extensive lines points to further large quantities available. This will keep the trade busy for some while ahead, particularly in view of the Soviet authorities' intention to keep the Black Sea ports open for navigation during the winter months. Competition from Argentina will be prominent

early next year, and prospective liberal shipments from this source constitute a depressing factor in the future situation, while increased quantities will also be available in Australia. Crop prospects in both countries are favourable, apart from occasional complaints of excessive rains and rust in some districts. With ample supplies on hand, and a heavy statistical position, importers refrain from purchasing beyond immediate needs. There is a good consumption demand for home-milled flour, and prices were advanced slightly, despite the weakness of wheat, but imported neglected, though offers are now coming more into line with market parity. Feeding stuffs are depressed, and owing to acute competition, prices for maize were driven down to new low level records, 15s. 10½d. being accepted for a Plate cargo, November-December shipment, and parcels at 15s. 4½d. per quarter of 480 lbs. c.i.f. terms.

WHEAT.—Easier. No. 1 hard Manitoba, ex ship, 30s. 3d.-30s. 9d.; No. 1 Northern Manitoba, ex ship, 39s. 9d.-30s. 3d.; No. 2 ditto, 29s.-29s. 9d.; No. 3, 28s. 9d.; No. 4, 27s. 9d.; No. 6 Manitoba, 23s. 3d.; No. 2 mixed Durum, 28s. 6d.; Barusso, 61½ lbs., ex ship to arrive, 26s.; Australian, 30s. 3d.; choice white Karachi, 29s. 9d.; Russian on sample, ex ship, 25s. 6d.-27s. 6d. per 496 lbs.; English, new, 6s. 6d.-7s. per 112 lbs.

FLOUR.—Quiet. London, straight run, 28s. 6d. per sack for country deliveries, and 27s. 6d. London area. Of imported, Manitobapatents, 26s.-28s.; Buffalo ditto, 25s.-27s. 6d.; Australian, 23s. 6d.-24s., ex store, per 280 lbs.

MAIZE.—Declined sharply. Plate, landed, 19s.; ex ship, 17s.; November-December, 16s. 9d.; December-January, 16s. 9d.; January-February, 16s. 9d.; No. 2 white flat African, ex ship, 17s.; landed, 18s. 3d. per 480 lbs. Yellow maize meal, £6 10s., f.o.b. London. Yellow African, ex ship, £5 7s. 6d.; white, £4 12s. 6d. per ton.

BARLEY.—Dull. Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample; Chilian brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s., per 448 lbs.; Black Sea, ex ship, 12s. 6d.; Danubian, ex ship, 12s. 6d.; landed, 14s. 3d.; Persian, landed, 13s. per 400 lbs.; English new, malting, 7s.-13s. 9d.; feed, 6s. 3d.-6s. 9d. per 112 lbs.

OATS.—Quiet. Plate, landed, 12s. 6d.; ex ship, 11s.; Chilian, tawny, ex ship to arrive, 12s. 6d.; landed, 13s. 6d.; best whites, ex ship, 19s. 3d.; landed, 20s. 3d.; mixed Canadian feed, ex ship, 9s. 6d.; landed, 10s. 6d.; North Russian, ex ship to arrive, 13s. 6d.; landed, 14s. 9d. per 320 lbs.; English new, 6s.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Nov. 6, 1929.	Jan. 2, 1930.	Oct. 22, 1930.	Oct. 29, 1930.	Nov. 5, 1930.
Winnipeg (No. 1 Manitoba)						
—Cents per 60 lb.	122	130	148½	74½	72½	66½
Chicago (No. 2 Winter)						
—Cents per 60 lb.	116½	120½	130½	80½	79½	72½

The visible supply of wheat in Canada, at 68,295,000 bushels, shows a decrease on the week of 722,000 bushels. Supplies a year ago stood at 82,985,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—In the absence of a subsidy, new export business for South Yorkshire coal is very flat, but there are fair deliveries of best steams under contract. Medium qualities are neglected. The industrial demand for fuels continues restricted and does not expand. There are great accumulations of smalls.

Sales of coke are steady at previous low levels, but a good demand for domestic heating. With 104 blast furnaces in the country idle, industrial consumption is abnormally small. Best qualities of house coal sell readily, but the supply is limited. Best steam coals for export are quoted at 15s. 9d. and 10s. f.o.b.; blast-furnace coke, 12s. to 12s. 6d. at ovens.

Our Glasgow correspondent writes: Shipping business has improved a little during the past week, but it is still largely made up of prompt orders, forward trading being more or less at a standstill in view of the uncertainty created by the proposed marketing scheme. This has, of course, not been decided on so far as Scotland is concerned. In fact, the plan which their committee submitted has been rejected by the Scottish coalowners and it now remains for the Board of Trade to bring forward a scheme. To-day's prices for the shipping trade are approximately as follows (all f.o.b. district ports):—LANARKSHIRE.—Ell best, 13s. 6d.; splint best, 15s. 6d.; splint second, 14s.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 10s. 6d.; pearls, 10s. 3d.; dross, 9s. 6d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 6d.-12s.; third-class steam, 10s. 6d.; trebles, 13s. 6d.-16s.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 10s. LOTHIANS.—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s. 3d.; doubles, 12s.; singles, 10s. 6d.; pearls, 10s. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s.; doubles, 12s.; singles, 11s.; pearls, 10s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Extremely quiet conditions continue on the Cardiff coal market. The French railways have placed contracts for small coals over next year, but not to the same extent as in previous years, for they have diverted a substantial proportion of their requirements to Newcastle. There are few current inquiries and collieries are almost entirely dependent on their contract commitments. Fortunately, these are fairly heavy and shipments from the South Wales ports last week showed a substantial increase over those of the previous week. The legal Marketing Scheme has been operative since last Thursday, but the statutory meeting at which the quotas and prices will be decided has not yet been held. No reductions are expected in the present minimum figures, but in view of the recent fall in production and the prevailing slackness it is anticipated that the quota permitted for the first quarter of 1931 will represent an output substantially less than that produced in the corresponding period this year. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 46s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d. rubbly culm, 9s. 3d. to 9s. 9d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 24s. 9d. to 25s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Unsatisfactory conditions continue to rule in the iron and steel trades. Nevertheless, the tone of the weekly meeting of the Exchange on Tuesday was somewhat brighter than for some time. This may be due to a certain amount of buying for stock replenishment. In the present state of the market any increase in the limited number of orders promotes a better feeling amongst dealers. In the pig-iron department the dull conditions which have ruled for so long still prevail. Little business has been transacted of late in semi-finished materials. The British makers are finding keen competition from the Continent; but, nevertheless, buying of foreign semi-finished steel is light as the consuming industries are experiencing an indifferent demand for their own manufactured products. The prices of Continental material have now reached the lowest level known for many years past and some of the Continental works are declining to accept business at current prices. The volume of business in finished steel, also, has been disappointing except for a few stock replacement orders. Although competition in this department is keen, the British manufacturers apparently have managed to secure a fair share of the orders passing, notwithstanding the low prices quoted by Continental makers.

Our Middlesbrough correspondent writes:—There is little new to report in regard to Cleveland iron, and business is confined to small lots for early delivery. Consumers show no inclination to purchase ahead at present prices, and as they are not getting many new orders for their products they prefer to wait until their present purchases approach termination before making any move in regard to buying further, particularly as Continental iron is offering at prices several shillings below Cleveland and this competition threatens to become more severe. Tuesday's weekly market was very quiet and little business was reported. No change was made in the official prices, which remain: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s., f.o.b. or f.o.t. The prospects in regard to hematite are slowly improving. Stocks held in one or two cases are rather heavy, but as the make is very small they are being gradually reduced to meet current requirements. Makers adhere to 71s. for mixed numbers for delivery over a few months, although prompt lots can still be secured at a little less. Shipments of pig iron for October showed a gain of 8,814 tons on the

previous month, but there was a loss of 2,672 tons in manufactured materials. The details are as follows:—

	October, 1930.	September, 1930.
Pig iron	22,944	14,130
Manufactured iron	3,654	3,446
Manufactured steel	37,070	39,950
	63,668	57,526

In the finished departments no new orders of importance are reported this week, and short-time working is being experienced in several departments. Prices for home under the rebate scheme remain: Plates, ½ in. up, £8 15s.; joists, £8 10s.; angles, &c., £8 7s. 6d. Other quotations are: Heavy steel rails, £8 10s.; crown iron bars, £10 15s.; 24-gauge black sheets, £8 15s., and 24-gauge galvanised corrugated sheets, £11 12s. 6d., also for home use. The ore market remains very quiet, and it is only on rare occasions that an odd cargo is purchased. Best Bilbao rubio is quoted at 17s. c.i.f. for delivery over a few months, but prompt cargoes could still be got at 16s. 6d. The freight, Bilbao-Middlesbrough, for early tonnage is about 5s. The total imports of all kinds of ore into Middlesbrough for October amounted to 91,485 tons against 65,312 tons in September. Coke is in full supply, but the demand is on a very restricted scale. Producers generally quote 17s. delivered works for good furnace qualities for delivery up to the end of the year, but 16s. 9d. would be accepted in some cases. The number of blast-furnaces in operation in the district is unchanged at 24.

Our Sheffield correspondent writes:—There is no perceptible change in local iron and steel trade conditions except that, internationally, some of the leading industrialists discern signs of an improvement, and the general tone is slightly better. Activity at the works remains at the former low level. The heavy branches are extremely depressed, and the lighter industries are in like case as regards overseas business. The home market is steady, and taking fairly good quantities of tool steel and tools. Production of steel ingots and castings in the Sheffield area in September amounted to 75,700 tons, which is nearly 2,000 tons more than in August, but 47,000 tons less than in September last year. The seasonal trade in cutlery and plate is meagre, but large quantities of goods are being bought for the cheap bazaars and the coupon gift trade.

Our Glasgow correspondent writes:—In the West of Scotland the continued absence of specifications from the shipyards and the very small amount of export business being done combine to keep things exceedingly quiet in the iron and steel trades. In the pig-iron and semi-finished markets business is very poor, even inquiries being few. Tube makers also are finding a very poor demand. Buyers

"TRANSAT"
the Open Season
to
**ALGERIA, TUNISIA,
MOROCCO, THE SAHARA**

To have visited North Africa without having seen the great oases of the Southern Sahara, is to have not seen the country at all.

Intense sunshine. Cloudless skies. Oceans of golden sand. Flower-decked oases. "Arabian Nights" cities of Central Sahara. Imperial cities of Morocco. Palaces and Fountains. Mosques and Minarets, an unfolding panorama of bewildering sights—more Eastern than the East.

**NORTH AFRICAN
MOTOR TOURS**

Whether you wish to arrange an independent private tour or a grand luxe tour of your own devising, to use your own car, to take seats in the fixed itinerary coaches, to make a combined Rail and Car tour, to make a desert crossing—the "Transat" has irreplaceable arrangements—and its famous 44 "Transatlantique" hotels that have made all this possible.

Write for booklet: "The Magic of Islam."

Compagnie Générale
TRANSATANTIQUE Ld.
FRENCH LINE.
20 Cockspur St., London, S.W.1

are evincing more interest in the sheet market, but actual business does not show much expansion. Prices all round are maintained at recent levels.

Our Cardiff correspondent writes:—There has been no improvement this week in the position on the South Wales tinplate market. Prices have been easy on the basis of the minimum of 17s. per basis box, but notwithstanding a slowly-expanding home market the outputs are in excess of the current effective demand, and it is anticipated that the quota under the pooling scheme will be further reduced. Galvanised sheets are unaltered at £11 12s. 6d. per ton, while both local and imported bars are stationary at last week's figures. The price of tin continues unstable, and on Tuesday quotations were between £6 and £7 per ton less than a week ago. Shipments last week were very inactive, and stocks have consequently increased to over 200,000 boxes compared with 178,000 boxes at the corresponding period last year.

OTHER METALS.

TIN.—The standard market displayed a good deal of irregularity, but with sellers well to the fore prices were generally lower on balance, while a fair business transpired at the decline. Shipments from the East during October totalled 7,342 tons, embracing 4,760 tons to the United States, 670 to United Kingdom, 1,270 Continent, and 642 other countries. Stock and landing in the United Kingdom on October 31st, 23,836 tons against 25,177 in the previous month; total visible supplies 39,272 against 40,251 in September, and 25,594 compared with the same period last year. Standard cash changed hands at £115 10s. to £111 7s. 6d. and £113 5s.; three months, £117-£112 and £114 12s. 6d. Sales in the East were reported at £123 7s. 6d. to £117 15s. and £119 5s. per ton c.i.f.

COPPER opened active and firmer, but later irregular on selling pressure. Standard cash sold £43 17s. 6d. to £42 17s. 6d. and £43 5s.; three months, £44 2s. 6d. to £42 16s. 3d. and £43 5s. per ton.

LEAD in quiet support, but market fairly steady as sellers refrained from pressing. Good soft foreign pig, December, sold £15 15s. to £15 17s. 6d.; January, £15 15s. to £15 17s. 6d.; February, £15 15s. to £15 16s. 3d.; March, £15 17s. 6d. per ton.

SPELTER.—Market quiet but generally firm. November sold at £14 13s. 9d. to £15 1s. 3d. and £14 17s. 6d.; December, £15 5s.; January, £15 2s. 6d. to £15 10s.; February, £15 5s. to £15 12s. 6d. per ton.

ALUMINIUM steady. Home trade, also export, £85 per ton.

ANTIMONY steady with a better demand. English regulus, £38 to £45. Chinese regulus, spot, £26 10s.; November-December £23 15s.; Chinese crude, November-December, £14 10s. per ton c.i.f.

ANTIMONY OXIDE.—November-December, £26 10s. ton c.i.f.

ANTIMONY ORE.—60 per cent., November-December, 3s.; 50 per cent., 2s. 6d. per unit c.i.f.

WOLFRAM quiet and easier. Chinese, November-December, 18s.; Burmese, 17s. 6d. per unit, c.i.f.

QUICKSILVER steady. Spot, £21 15s. to £22 per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 17s. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, November 5th.

The past week has seen a falling off of purchasing by the trade, which looks to have taken its requirements for the immediate future. There has been no pressure to sell by the South. Prices on the week show a fall of about ½d. per lb. Fossicks' Bureau to-night issued its estimate of the crop as 14,186,000 bales against 13,975,000 bales in October, with ginnings 11,050,000 bales. The United States Agricultural Bureau will issue their estimate for condition and ginnings on Saturday next. Spot sales for the week October 30th to November 5th (inclusive) are 36,000 bales, of which 17,720 bales are American, 4,000 Brazil, 400 Argentine, 8,500 Peru, 2,800 Egyptian, 1,600 African, 650 East Indian, and 330 sundries. Imports for the same period are 65,356 bales, of which 35,683 are American, 3,138 Brazil, 1,188 Argentine, 12,182 Peru, 8,229 Egyptian, 1,083 African, 3,335 East Indian, and 518 sundries. Quotations to-day are: American Middling, 6-14; Egyptian Sakel, 9-90; Uppers, 6-96; Brazil Fair, 6-14; Peru G.F. Smooth, 6-69; West African Middling, 6-19; and East African G.F., 7-14.

MANCHESTER: November 5th.

The market has presented a much quieter appearance than in the previous week. There are indications of buyers having satisfied their more important wants for the time being, and owing to a tendency for raw material rates to decline there has been more disposition to act with caution. A fair amount of cloth inquiry has come through for India, and although most of the transactions have again been for Madras and Karachi a few more lines have been booked in dhooties and similar cloths for Calcutta. Many merchants, however, are depressed by their advices from India, the boycott on the whole being still acute. Operations for China have been patchy and the latest auction news from Shanghai is not encouraging. White shirtings, however, and poplins have been sold in moderate quantities. Demand for Egypt and the Near East has fallen off, but printing and finishing styles continue to be sold for South America, the West Coast of Africa and the Continent. The better

reports from the home trade are being maintained. A slower feeling has prevailed in the yarn market. Spinners, however, of American and Egyptian counts are presenting a rather firmer front to buyers, there being less pressure to sell.

THE WOOL TRADE.

Our Bradford correspondent writes:—The information received this week from Australia is encouraging. There is indication of a firm tendency in raw material values, and private information also leads to the conclusion that merino wool is selling very well in South Africa. The most important sales held in Australia this week are those which have taken place in Brisbane, 50,000 bales being catalogued. This is a fairly big quantity to offer in a short series. Continental and Japanese representatives were the principal buyers, and there were some operations by Bradford when anything of good combing style was submitted. Most of the cables received here gave 19d. as the clean scoured basis for good average 64's wool, and 21½d. for good warps 70's. This leaves 5½d. to cover the cost on conversion in the case of the former quality, if the selling price of the top is taken at 24½d. At the end of the first day of the Brisbane series Bradford buying brokers had cables from their representatives asking for 1d. increase in their limits. This shows how things have been moving in merino wool, and a continuance of current values, along with a steady absorption of supplies should induce more of the confidence which is needed in all sections of the industry. Prices for crossbred wool are becoming steadier, and it is now fairly easy to forecast how things will go when the New Zealand clip begins to be offered. Prices will certainly be much too low to give satisfaction to the selling end of the trade. A slight improvement is seen practically all round the Bradford market. More business has been done in merino tops, and prices are quite firm. There is also increased interest in crossbreds, with scarcely the same pronounced "bearing" tendency. This is partly due to the progress made towards an establishment of the basis of cost of the raw material. Fine tops are being delivered freely to spinners, and the fact that these are able to keep their spindles running fairly well indicates that manufacturers are taking up their contracts.

HIDE, LEATHER AND ALLIED TRADES.

Tanners in this country seem determined to bring the price of raw material down to a lower level, and at the auctions held at Manchester this week most weights of ox and heifer hides made from ½d. to ¼d. per lb. less money. Although a moderate number of sales have transpired in connection with imported hides the enquiry is not sufficient to sustain values on a level basis, and the balance of change has been in favour of buyers. In the South American market business has been done on account of the U.S.A., Russia and the home trade at 6½d. for Argentine ox, with light ox selling at 5½d., and Montevideo ox at 6½d. With a quiet market for dry River Plates little alteration in price has transpired; B.A. Americanos being quoted at 7½d., M.V. Americanos at 7½d. Cape hides are weaker, drys having been sold at 7½d., and 6½d. for first and seconds, while dry salted have been taken up 6½d., and 5½d., for 20/30 lbs. Australians are steady, and sales have been made at full prices. Business in connection with sole leather moves on steady lines, and although in some quarters the turnover is not considered up to the average of recent weeks, consumption for the most part is maintained at a fair level. The shoe manufacturing section has been in the market for dry hide bends, and some respectable sales have been negotiated, the size in some instances suggesting that buyers are covering requirements further ahead than has been the case hitherto. Medium weights in English and wet-salted have been taken up on repairing account, in addition to which a better enquiry has been noticed for heavier weights. A steady turnover continues to be done in upper leathers, with the bulk of the enquiry centred on box and willow calf. Curriers are finding trade just a shade better, but at the same time most of the orders coming to hand are for small lots.

THE TIMBER TRADE.

Stocks of European building woods have been considerably relieved from pressure owing to the lighter imports from Finland, Sweden and Latvia during September, following on smaller receipts also in August. On the other hand, the receipts of Russian sawn

timber have increased, and to the end of September amounted for the nine months to approximately 368,500 standards, as against 296,451 standards for January-September, 1929. Some of this year's supplies of Russian wood—sent over on consignment—are still in shippers' hands, but should the provisional agreement between the British consortium and the Soviet timber representatives be ratified, as seems assured, Russia has only some 131,500 standards to send to make up the, greatly reduced, full complement this year of half a million standards. Last spring some of the other principal timber-shipping countries announced a reduction of their output for this year; if that has been carried out, the end of the season should not see imports much larger, if any, than in 1929. The consumption of general building timbers cannot be regarded as unsatisfactory. But although costs of buildings outside the L.C.C. area for which plans were passed in September were nearly double those of the previous month and slightly larger than a year ago, there is more unemployment amongst building trade operatives. The forward market, c.i.f. and f.o.b., is very nervous; shippers seem to be unduly hasty to sell, hence the low offers accepted. Considering the small Russian supplies to come forward, and the possibility of the Swedish and Finnish available supplies being reduced this year, with United Kingdom importers' and merchants' determination not to hold largely, stocks at end December should not be too heavy, and the market ought to become more steady. The hardwood department of the timber trade has not freshened up this autumn so much as in previous years; receipts, however, have declined of recent weeks. As regards American lumber supplies, even after some nine months or so curtailment of import and recent closing down of mills in the States, there are still low offers coming over, especially for Southern wood—in the cotton areas—which confirm recent reports of the bad state of industry. Of the American woods, however, pitchpine (a hard softwood) is keeping up well in value on this side, especially for large dimensions. Mahogany logs are of very light import this year. Teak is a very firm market, especially for good lengths and quality, but logs of other hard and fancy woods are difficult to move into consumption. Larger supplies of plywood came forward last month, and imports are now seven million sq. ft. short of those of last year to date. Demand is disappointing, but with early promise of improvement.

OVERSEAS PRODUCE.

SUGAR.—Business was again confined to very moderate limits, both on grocery and manufacturing account, but signs are not wanting as to increased interest being shown at reduced prices. As an outcome of quite a dearth of offers from cane-producing countries, refiners in the United Kingdom now turn their attention to the larger quantities available of Continental beet. Colder weather there soon gives rise to fears of interrupted navigation, and this fact tends to steady affairs. Germany has now become quite prominent in the matter of export. The result of the Cuban elections is awaited with interest. Terminal markets steadier inclined and a fair amount of business resulted in raw. December sold 5s. 5½d. to 5s. 5½d. and 5s. 5½d.; March, 6s. 6½d. to 6s. 6½d.; May, 6s. 9d. to 6s. 9½d.; August, 7s. to 6s. 11½d. and 7s.; December, 7s. 3½d. to 7s. 3½d. Foreign, 96 per cent. centrifugal, November, quoted 6s. 4½d., with business in Continental, 88 per cent. beet, at 6s. 1½d. to 6s. 0½d. c.i.f. Czecho granulated ready to the United Kingdom, sellers 7s. 6d. f.o.b. Cuban receipts last week 33,000 tons against 10,700 last year, exports 81,710 against 63,860, stocks 957,760 against 326,920. Stock on plantations and in transit estimated at 1,150,000 tons. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending November 1st amounted to 104,789 tons against 165,612 last year.

COFFEE.—A generally subdued tone pervaded the spot market. A few really fine grades fared well, but in a general sense, trend of prices ruled weaker.

COCOA.—Only a retail movement occurred on the spot. Forward positions also met with a poor reception.

TEA.—Quantity of Indian amounted to 52,148 packages. A rather large part consisted of plain and medium teas which were frequently withdrawn, valuations not being reached. Prices ruled irregular and occasionally weaker except for really fine grades. Ceylon sales of 18,500 packages proceeded on rather quiet lines. Fine and finest qualities generally steady. Java sales quiet and without material change. Of new season's China, there is a good demand for Lapsang souchongs, which are in limited supply and held for high prices.

RICE.—Sellers required steady prices, but general trade moves slowly. Two Stars Rangoon, spot, London, 11s. 6d.; Spanish, 14s.

BEANS AND PEAS.—Butters tend firmer. October-December quoted 24s. c.i.f. Rangoon haricots, spot, 10s. 3d. to 10s. 6d.; forward, 8s. 9d. c.i.f. Peas: Market steadier forward. Japanese current crop, spot, London, 16s. 6d.; November-December, also December-January, 14s. 6d. c.i.f.

POTATOES.—The market in potatoes has been steady at unaltered prices.

SPICE.—Pepper met with quiet attention and trend of prices ruled weak. Lampung, August-October, sold 5½d.; October-December, quoted 5½d.; January-March, 6d. London stocks of black reduced 74 tons on the week at 588, against 1,196 last year; white, 10 tons down at 156, against 1,082. Cloves slow, but prices unaltered. Pimento dull.

FRUIT (Dried).—Currants continue in demand and market steady. Pyrgos, 30s. 9d.-31s.; Patras, 34s.-35s. Sultanias steady

A Referendum on British Fiscal Policy

The question, what change, if any, British Fiscal policy needs has been put this year to business firms and industrialists by Chambers of Commerce and the F.B.I., to Trade Unionists by the T.U.C., and to bankers, politicians and others. Only the consumer has not been asked, yet it is with the consumer that the decision of the electorate must rest.

Readers of the *Week-end Review* form probably as independent and intelligent a constituency as could readily be found, and the *Week-end Review* is therefore conducting during the next three weeks a Referendum on British Fiscal Policy. Care has been taken in the framing of the questions to avoid restriction to the formulae of current party politics, and there is special provision for the dissident from all parties to make his voice heard. The questions have been set in consultation with a number of well-known economists. The object of this Referendum is not to prove a case, but simply to obtain and make public information which we think is needed and which seems not at present to exist.

The form of questions appears in to-day's issue of the *Week-end Review*, together with full particulars. If you are interested in this question, get a copy from any bookstall or newsagent and fill in your replies.

though conditions were slightly easier, $2\frac{1}{2}$ per cent. was paid. Discount rates responded, and three-months' bills are now quoted at practically $2\frac{1}{2}$ per cent. in contradistinction to the rates of $2\frac{1}{8}$ per cent. and under ruling only three weeks ago. On Thursday, money was a little more abundant, with rates running from $2\frac{1}{2}$ down to 2 per cent., but discount rates remained unaffected, and there is no doubt that the extreme ease noticeable earlier in the autumn is momentarily interrupted.

Various explanations of this stringency have been heard, none of which entirely fit all the known facts. The first is that of sales of the new Treasury bonds, either by Government departments or by the Bank. In support of this theory is adduced the belief that in order to ensure the success of the original issue, large numbers of the bonds were applied for by "special quarters" last month, and the subsequent weakening of their price to its present small discount is regarded as confirmation. Against this, while previously the item "Government Securities" in the Bank Return had certainly been declining, this week there is an increase of £1,787,280.

	Oct. 23, 1930.	Oct. 30, 1930.	Nov. 6, 1930.	Nov. 13, 1930.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount of Call	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Houses (Notice	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{2}$ - $1\frac{1}{2}$	$2\frac{1}{2}$ - $1\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ - $1\frac{1}{2}$	...

This week's Bank return is not easy to reconcile with the prevailing stringency. For example Public Deposits are £2,398,696 lower, which contradicts the view that Public Departments have been selling Treasury bonds. Bankers' deposits also are £4,788,726 higher, and at their present level of £60,321,291 hardly justify any stringency at all. Thus the probable explanation lies in the steady out-flow of gold to France and in the recent withdrawals of French balances from London. Most of this French money has been on deposit with London banks, and its disappearance—with the threat of still more to go—may have caused bankers to think it advisable to take funds off the market. In any case, the gold losses themselves, which last week amounted, according to the Bank return, to a net £1,461,697, represent a definite contraction in the market's basis of credit, and the week's stiffening in the three months' bill rates is a natural reaction to immediate developments.

In view of certain statements that have appeared regarding the amount of gold "engaged" to be taken from the Bank for shipment to France, it may be advisable to repeat the fact that as the Bank is bound to sell standard gold on demand no previous "engagements" with the Bank are necessary. Arrangements, of course, have to be made with the refiners, and these have duly been made, though the total sum of £5,000,000 already mentioned with some freedom is probably, so far, in excess of the facts. The real position is that so long as the exchange remains at its present level of Frs. 123.68, gold will continue to go, and any arrangements made for refining will not be cancelled unless and until the exchange improves practically to Frs. 123.80.

It is now reported that steps have been taken to rehabilitate the Banque Adam, but there is grave ground for fearing that these have come too late. The rates allowed by French banks upon their deposits are now so low, that even the slightest shock to confidence is sufficient to induce the public to withdraw their deposits and hoard notes instead. This has actually happened, and it would not be surprising if the French banks had to continue drawing upon their foreign balances. In fact, it is predicted that the French Exchange will remain at its present level at least until the end of the month, and that France will continue taking gold from the Bank at the rate of £300,000 a day. Even a loss on this scale should not call for a higher Bank rate here, but it will certainly make the present Bank rate effective.

NEW YORK.

Money remains easy, with call rate still at 2 per cent., and commercial paper at $2\frac{1}{2}$ -3 per cent. for prime names. Heavy gold arrivals were reported during the week, including \$8,700,000 at Pacific Ports from Japan, \$5,000,000 from the Argentine, and \$5,000,000 from Brazil. The Federal Reserve system's latest weekly statement of brokers' loans records a decline of \$58,000,000 to \$2,454,000,000, or a new low point for the year.

THE STOCK MARKETS.

Though dealings were restricted, and prices tended slowly to decline, the Stock Markets showed the responsiveness to good news, and the resistance to bad, which have been the distinguishing features of business during the autumn season. Gilt-edged were less active, but recovered after a dull opening. Foreign bonds were irregular, with the Continent alternately a seller and buyer. Home rails were dull on a worsening of the traffic position. Industrial shares had a slow downward trend, tobacco, motor and steel shares losing further ground. Rubber and tea shares, though quiet, had a slightly better undertone. Oil shares, after marked initial weakness, improved on the maintenance of the "Shell" and Royal Dutch interim dividends, and the cessation of Paris selling. Kaffirs were quiet, but copper shares hardened appreciably on the sharp rise in the metal following the reported agreement of the leading producing interests on a somewhat drastic policy of output restriction.

THE COMMODITY MARKETS.

The general situation remains depressed. Apart from a slight improvement in Glasgow, coal markets are weak, and there is much uncertainty about the effects of the new legislation on the industry. Although production of iron and steel has been severely curtailed, makers find it difficult to dispose of their current output in face of the keen Continental competition at low prices. There has not yet been any definite improvement in the Oriental markets for Manchester goods, and business continues quiet. Raw wool prices have been steadier for some time, and the market in Bradford is firm. An increase in the demand for jute goods has become noticeable, and raw material prices are somewhat higher. Hides are weaker, and business in leather has been on a smaller scale. Wheat prices are scarcely changed on the week.

THE FOREIGN EXCHANGES.

Quiet conditions prevailed this week, with considerable irregularity in the franc and an improvement in the peseta as the principal features. New York went from 4.85 $\frac{3}{4}$ to 4.85 $\frac{1}{2}$, after some hesitation. Montreal was fractionally weaker at 4.85 $\frac{1}{2}$. Paris, after touching 123.56, lost two points on balance at 123.68. Brussels was better at 34.82 $\frac{1}{2}$. Milan gained three points at 92.78. The peseta improved, and went from 43.10 to 42.15 after touching 41.90 and 42.30. Amsterdam weakened to 12.06 $\frac{1}{2}$, Berlin lost $\frac{1}{2}$ at 20.38 $\frac{1}{2}$, and Switzerland a point at 25.04. Stockholm and Oslo both weakened by $\frac{1}{2}$ to 18.11 and 18.16, but Copenhagen gained $\frac{1}{2}$ at 18.16. The South American exchanges were again irregular, Rio losing $\frac{1}{2}$ d. at 4 $\frac{1}{2}$ d., Buenos Aires gaining $\frac{1}{2}$ d. at 38 $\frac{1}{2}$ d. after hesitation, and Montevideo losing $\frac{1}{2}$ d. at 39 $\frac{1}{2}$ d. In the Far East the rupee was weak at 1s. 5 $\frac{3}{4}$ d., and the yen lost $\frac{1}{2}$ d. at 2s. 0 $\frac{1}{2}$ d. In the forward market, dollars were quoted at $\frac{1}{8}$ cent and $\frac{1}{2}$ cent, or half the discounts of last week. Paris was at 5 and 15 centimes discount, after being much higher. Brussels went from par for both periods to one centime premium for one month and $\frac{1}{2}$ centime discount for three. The premiums on forward Madrid rose to 3 and 9 centimes for one and three months respectively. Amsterdam at $\frac{1}{8}$ and $\frac{1}{16}$ premium, and Berlin at $2\frac{1}{2}$ and 9 pfennigs discount, were both rather better than last week. Silver prices fell by $\frac{1}{2}$ d. for spot and by $\frac{1}{4}$ d. for forward to 16 $\frac{1}{2}$ d. and 16 $\frac{1}{4}$ d. respectively as a result of China sales. Hongkong remained at 1s. 3 $\frac{1}{2}$ d., but Shanghai lost $\frac{1}{4}$ d. at 1s. 7 $\frac{1}{2}$ d.

THE ROUND TABLE CONFERENCE.

THERE is little need to emphasise the momentous character of the Conference which His Majesty the King-Emperor inaugurated on Wednesday in the Royal Gallery of the House of Lords. Never before, as His Majesty observed in his opening speech, have British and Indian statesmen and rulers of Indian States met round one table to discuss the future system of government for India. Notwithstanding the absence from the proceedings of figures so notable in different ways as Lord Irwin, Sir John Simon and Mr Gandhi, never before has so representative a body of Indian opinion met an all-party delegation of the British Parliament. The issues to be debated at this meeting transcend all considerations of party interests at home and in India. Indeed, it is not too much to say that the results of the Conference will determine whether India is now to proceed in an orderly fashion towards full nationhood, maintaining the unifying influences in the spheres of social order and justice that have been contributed by the British Raj, or whether she is to slip backward—via disintegration, diminished material prosperity, the gradual straining and ultimate breach of the partnership between East and West—to an obscure and uncertain destiny fraught with possibilities of grave misery.

Few of the delegates could have failed to share the feeling, which His Majesty expressed, of profound consciousness "how much depends for the whole of the British Commonwealth on the issue," and, complex though the problem may be of reconciling, in His Majesty's words, "the just claims of majorities and minorities, of men and women, of town dwellers and tillers of the soil, of landlords and tenants, of the strong and the weak, of the rich and the poor, of the races and castes and creeds of which India's body politic is composed," the speeches on Wednesday of the Princes and Indian statesmen gave welcome evidence of good will and determination to seek agreement. Clearly, the Indian representatives, and particularly those from British India, may have difficulties in "putting over" a settlement, if such can be achieved, and this means that Great Britain must try to understand their difficulties and listen with the utmost sympathy to their points of view. On the other hand, these delegates from India, many of whom have shown high courage in coming here at all, have a grave responsibility imposed on them to use their utmost endeavour to prevent a failure. As the Maharajah of Kashmir remarked, "Neither England nor India can afford to see this Conference end in failure. . . We needs must give and take. If we succeed, it is England no less than India which gains. If we fail, it is India no less than England which loses."

The questions with which the Round Table Conference will have to deal are so complex and far-reaching in their scope that we do not propose to re-state them here. The exhaustive and masterly report of the Statutory Commission stands as a unique and sufficient description of their character. Nor do we propose to attempt to forecast the course of the Conference itself. At this juncture all that we can usefully do is to note briefly the new factors that have arisen since the report of the Statutory Commission was presented to Parliament. That document, it will be recalled, provided for a very large measure of autonomy in the provinces, whose legislatures should have very wide functions and, as far as possible, adequate financial resources. With regard to the Central Government, the Commission, though modifying the method of election to the Assembly and removing the Army from its purview, proposed no change in the direction of responsibility to the Assembly of the Governor-General's Council. An important reason for this was that while the Commission considered that the final solution of India's constitutional problem must be on federal lines, they were not in a position to produce a fully-fledged federal constitution; in the meantime they could not foresee what form the Centre would finally take, and proposed only provisional steps for consultation with the Indian States.

The reception of the report of the Statutory Commission made it clear that it was round the question of the Centre that the main controversy would turn. Indeed, the abortive attempts made by Sir Tej Bahadur Sapru and Mr Jayakar as intermediaries to conclude "peace terms" between the Viceroy and Mr Gandhi last September broke down primarily on the crucial demand of the Nationalist leader for "a complete National Government responsible to the people, the Government to have full control of the defence forces as well as full economic control"—a demand which the Viceroy properly rejected as being of an impossibilist character under the existing conditions inherent in the position of India.

This same burning question, the nature of the central executive and its relations to the legislature, figures prominently in the Despatch, a full summary of which we print on a later page, wherein the Government of India have put forward their views "on the further progress which might now be made towards the development of responsible government in India as an integral part of the British Empire." Whether the Government have been wise in publishing this Despatch before the Round Table Conference has got down to business, and in giving no indication whether or not the Cabinet endorses the views which it expresses, is open to serious doubt; but at least the prevalent and damaging rumours as to the attitude of the Government of India have now been set at rest. We now know that the Government of India, approaching the problem from the very practical standpoint of the authority that will have to work the new constitution, accept broadly, with minor qualifications, the Statutory Commission's scheme for provincial autonomy, but envisage certain difficulties in the functioning of the proposed Central Government.

The essential difference between the views of the Government of India and those of the Statutory Commission is that the Viceroy and his Council do not think that an "irresponsible" executive could in practice run the government smoothly with a Legislative Assembly in which the elected element had enormously increased relatively to an official membership reduced to almost negligible numbers. Other points of difference are revealed. Notably, the tentative suggestion of the Statutory Commission that control of the Army should be removed from the Government of India is not endorsed; and (with questionable wisdom) the Government of India dissent from the proposed principle of indirect election to the National Assembly. But the nature of the Centre is the crux of the whole matter.

The Central Government, the Despatch submits, must be strong; and the conditions precedent of a strong government are that it should be "unitary" and that it should be in harmony with the legislature. They consider that that harmony would not be achieved by adopting the Commission's suggestion that the Governor-General's Council, appointed in future by him and not by the Secretary of State, should include certain Indian members of the Assembly, who would cease on appointment to sit there as elected representatives. If the requisite amount of "responsiveness" to the legislature on the part of the executive is to be achieved, "heads of parties" should be included in the Council as Ministers whose salaries would not be subject to vote, and who would not necessarily retire if their policies were disapproved by the Assembly, but whose authority in the "unitary" Council would not be limited to matters connected with their particular portfolios. In form, the Despatch disclaims the intention of establishing dyarchy at the Centre; but the Viceroy, it is suggested, should retain full rights of veto and certification, and Parliament should "define with some precision the purposes for which it would wish to exercise its constitutional right of interference with the policy of the Government of India"—e.g., defence, foreign relations, internal security, financial obligations, protection of minorities and the Services, and the prevention of "unfair discrimination."

For this system, intended to combine as far as possible the conflicting principles of a "unitary" Centre and shared power, the Despatch coins the phrase "dualism." The phrase, we suggest, is open to the charge of obscurantism, for the form of Central Government proposed would not be "responsible" in the British sense and would really be a form of dyarchy. Whatever words may be used, and however unpopular this term may be, so long as such vital subjects as those listed above are excluded from the effective control of the Legislature, there is in fact a limitation of full responsibility. It is obvious that the scheme is one in which the degree of "responsiveness" would be difficult to define; and it would be workable only with general goodwill. Indeed, the Government of India goes so far as to say that if it would help the position of the Assembly members in their "unitary scheme" they would be prepared to "sacrifice the form of unity" by a formal recognition of "the conventional division of responsibility."

Whether these suggestions meet, on the one hand, the Statutory Commission's criticism that dyarchy at the Centre would weaken the Government and render the position of the Viceroy "so embarrassing as to be almost intolerable," or satisfy, on the other, the demand that the Central Legislature shall have real control, is open to doubt. Moreover, it is evident from the whole of the Despatch that the Government of India have in mind mainly the situation in British India, and that they attach less importance than the Commission did to the conception of an All-India constitution. Implicit in their proposals, which they choose to describe as an "amplification of the plan put forward by the Commission," is their view that while they accept the idea of an ultimate federation, that ideal is still distant. "Without indulging in remote speculation," the Despatch remarks, "we think it more profitable and necessary to examine the concrete proposals . . . for immediate action."

The developments of the past fortnight, however, emerging from the discussions which the Indian delegations have had in London, lead us to think that the premises from which the Government of India appear to have started require modification. In the first place, they are at pains to make it clear that they "have endeavoured to point the way to action that may now be taken to place upon the constitution the first but definite impress of Dominion Status." It is evident, however, that on the important issue of communal representation the Hindu and Moslem delegations in London have not yet been able to reach an understanding. The British Indian delegates are, therefore, not yet in a position to put forward an agreed scheme for a Dominion Constitution. Still more important is the attitude of the Princes. Not only have they shown themselves quite definitely in sympathy with British India's aspiration for full nationhood, but it is significant that whereas the Simon Commission looked to a very tentative advance in the direction of an All-India federation, the Princes seem ready to take their part in a federal constitution forthwith, provided that the terms on which they enter are satisfactory.

Thus it looks as if the main task for the Round Table Conference—a task on whose successful achievement the whole results of the Conference may depend—will be to prepare a real All-India constitution. If this be so, several important points at once arise. Are there to be separate organs at the Centre for the federation and for British India? Is the federal legislature to consist of members appointed by indirect election from British India (or from a British Indian Parliament) on the one hand, and of nominees of the Princes, on the other? What is to be the responsibility of the federal executive to this body, if it is to deal with the Army, the major part of India's central finance, probably communications and, some other central subjects? Could such a constitution run parallel with a central parliament for British India dealing with the remaining central subjects and appointed by direct election—a principle to which the most advanced sections of Indian opinion evidently attach great importance? And should there be a separate British India executive responsible to this Parliament? Alternatively, should the constitution of All-India and of British India be combined under a two-chamber system, and if so, to which

chamber should the executive be responsible, if it is to be responsible at all? In short, are the delegates thinking of Dominion status as applying to British India or to All-India?

With such problems confronting it, and demanding an even wider sweep of view than that taken by the Statutory Commission, it is evident that the Round Table Conference cannot get very far if it allows itself to get entangled by controversial terms and phrases. We come back, in fact, to Sir John Simon's dictum of long ago that he knew of no model in the British Empire that would serve for India. It is difficult to envisage the British system of political institutions being applied unchanged, even to British India, where the party system does not yet exist in any real sense. If an All-India constitution is a practical possibility to-day, we may have to look elsewhere for our precedents, drawing perhaps on the experience of the United States and other federations, or even build entirely afresh. This, at least, is clear—and it may well be that had the Government of India, whose Despatch is dated September 20th, foreseen the alignments which seem to exist to-day in the Indian delegations, they would have said as much—the best hope for the Conference is that a broad All-India view will be taken, and that no attempt will be made to devise a constitution of such a character as to widen still further the differentiation between the two Indias which are territorially, racially and in outlook so closely interwoven.

THE ELEVENTH HOUR.

At the eleventh hour of the eleventh day of the eleventh month the eleventh organised celebration of Armistice Day was observed throughout Britain and the Empire and the Allied and Associated countries. The spontaneous universality of the observance throughout this country proves that, though memories fade, though the poignancy of grief be assuaged, though a new generation has arisen that can only dimly have apprehended the horrors of the world in which their childhood was passed, the day and the hour retain a deep meaning for the multitude. It is well that it should be so. Mourning has passed into remembrance, and it is because of the new generation that is arising that the fostering of remembrance becomes of supreme importance for the future. As the Prince of Wales said at the Albert Hall on Tuesday night, history teaches us that one of the dangers to peace is that new generations, who know not what war is, are ready to take up arms with a light-heartedness that can only be born of ignorance and illusion. And in these days of material troubles, the hour of remembrance must have brought sharply to the minds of many the lesson that, though wars may be made swiftly, their trail of ruin and impoverishment extends through decades of suffering and reaches to the confines of the earth. So once every year let us in silence stand aside from the pressure of our daily tasks, and remember—remember, by all means, the greatness of the sacrifice, the heroism of the dead, the needs and claims of the survivors, but remember also the greatness and the bitterness of the lesson and the blackness of the future if that lesson be not learnt.

The coincidence of the time of signature of the Great Armistice has given a hallowed meaning to the eleventh hour. But the phrase, we cannot forget to-day, has, in ordinary English, another and more sinister connotation—that of a last chance of escape from threatened failure or evil, of a sandglass running low. And this is the connotation of the phrase which forces itself upon us this week, as we watch the efforts of the delegates of the nations now assembled at Geneva to find sufficient common ground to justify a further full-dress attack on the problem of disarmament. If these efforts fail now, who can say how many years will pass before any real attempt can hopefully be made to travel along this arduous road towards the goal of international security? President Hoover found himself able to say in his Armistice Day address at Washington that "the outlook for peace is happier than for half a century." On the short view that may be true. Memories of 1914-18 have not died—yet. No

FOLLOW THE SUMMER SOUTHWARDS "BLUE AND GOLD TOURS"

Follow Summer Southwards this Winter on a Blue and Gold Tour to South Africa, the Dominion of Blue Skies, Golden Sunshine and Health.

The refreshing ocean voyage, new scenes and interests, the delightful outdoor life, the social and sporting amenities, and, above all, the moderate travel costs, combine to make these tours the superb Winter Holiday. Regular sailings throughout December, 1930, and January, 1931.

A full descriptive programme entitled "Blue and Gold Tours," will be sent immediately on request. Apply to:—

The Director, South African Government Travel Bureau,
73, Strand, London, W.C.2,
and all the leading Tourist and Travel Agencies.

potential aggressor is sufficiently recovered in material resources to face the financing of another war—yet. But time is the essence of the matter, and, if the present negotiations at Geneva were to fail (and our Geneva correspondent's account of the proceedings, printed on a later page, is hardly hopeful), Mr Hoover's dictum would have to be revised as regards the longer view. It is the eleventh hour.

In quite another connection the phrase is reminiscent of the prophecies of those who believe that in Britain the Government is wobbling and tottering to an early fall. Has the Government reached its eleventh hour? At the Shipley by-election last week the Conservative Party won the seat for the first time in history. Is that perhaps the writing on the wall? Many members of the Labour party are restless over unemployment. Sir John Simon, intolerant of the patience prescribed by his political leader, has declared open war upon the Government over the Trade Disputes Bill which they are pledged to introduce, and finds the Government so bad that to turn them out regardless of consequences is in his eyes a patriotic duty. With the tide of unemployment still rising, the supineness of the Cabinet provokes a progressive unrest within all parties. The pre-occupation and aloofness of the Prime Minister excites a growing dissatisfaction in his own ranks. Will a relatively unproductive Imperial Conference impair the prestige of the Cabinet beyond mending? In all this are there not abundant germs of collapse, whether by disintegration or external circumstance? When the ship is labouring under a prolonged storm, which shows no signs of ceasing, how long will the passengers trust themselves to a captain and a crew whose chief occupation is apparently to wait till the clouds roll by?

However much we may discount all these threats to its life no one could by any stretch of imagination depict the Government as either lying in a bed of roses or seated firmly in the saddle of a tractable steed. Yet political developments seldom follow logic. Even though it be true that the country is wearied and disappointed with the Government, and that the majority of the House of Commons is of the same mind, it does not follow that the Government will be turned out. Even if more Liberals were converted to Sir John Simon's view, are the Conservatives in a position to relish the opportunity to seize the reins of office or to face the electorate with confidence? On the whole we are inclined to think that the Government has some considerable spell of life in front of it. Although Mr Lansbury's cheerful prediction last week of three more years seems extravagant in the light of present circumstances, Mr Thomas can claim credibility for his statement that for the time being he will remain at his post because no one dares to turn him out. Nor is there anything surprising in the story that Mr Snowden is quietly engaged in exploring the possibilities of the next Budget undisturbed by any suspicion that he may not introduce it.

For our part, we have stated our position clearly. In a word it is this. We sympathise with those who are disillusioned by the Government's record. But, in spite of everything, we regard it to be definitely in the national interest that the present Government should remain in office, not only during the period of the fateful Indian discussions, but until some prospect appears of an alternative Government with something more helpful in the way of policy than a haphazard emergency tariff, which by raising production costs, would intensify the most serious of existing difficulties. The country is therefore under the unfortunate necessity of possessing its soul in patience for a while as best it may. But this makes it all the more incumbent upon the Prime Minister and his colleagues to realise the implications of the position, the chief of which is that they remain where they are on sufferance; and realisation can best take the form of translating into fact the ideal propounded by Mr MacDonald in his first speech to the present Parliament, namely, that the House of Commons should be regarded more as a Council of State than as an arena for the propagation of party aims. Success in that direction postulates, of course, co-operation by the Opposition parties, but the lead and the initiative can only come from the Government.

But what of the further outlook, when the Indian Conference is over, and the supreme argument against changing horses no longer operates? Then, we believe, the length of the Government's life will be conditioned by one thing, and one thing only—namely, the ability of Mr MacDonald to awaken himself and his colleagues to the sense of national emergency and to give to Parliament and the country proof of bold leadership and the effective drive which the head of the Government and no one else can supply. In this week of remembrance, should not one of our most prominent memories be of the great united effort which the whole nation put out to meet its greatest emergency? The characteristics of the people, that made that effort possible, have not changed, but they will not be harnessed to the task of meeting the new emergency of to-day, unless the stimulus of bold and imaginative leadership is supplied. It is to Mr. MacDonald that the country looks at this eleventh hour for a statesman's lead.

THE TREND OF OVERSEAS TRADE.

THE October trade returns are less unsatisfactory than those for recent months, for, compared with September, imports show an increase of £12.2 millions, British exports one of £4.2 millions, and re-exports one of £1.8 millions. These movements, it is true, are at any rate partly seasonal, but even so they suggest that the downward trend is perhaps coming to an end. Still, as the following table shows, the October results, when compared with those of preceding years, show a heavy reduction

to a figure which is far below a level that we could regard with equanimity:—

MONTH OF OCTOBER.
(000's omitted.)

	1930.	Increase or Decrease as compared with			
		October 1929.		October, 1928.	
Imports	£ 90,860	£ 19,378	— 17.6	£ 11,821	— 11.5
British exports	46,922	17,668	— 27.4	17,391	— 27.0
Re-exports	7,209	1,920	— 21.0	1,679	— 18.9
Total exports	54,131	19,587	— 26.5	19,069	— 26.0
Excess of imports over total exports	36,729	+ 1,209	+ 0.5	+ 7,248	+ 24.6

The only modicum of satisfaction to be derived from this table is that the visible import surplus is practically unchanged.

The corresponding figures for the ten months to date are as follows:—

TEN MONTHS ENDED OCTOBER 31st.
(000's omitted.)

	1930.	Increase or Decrease as compared with			
		1929.		1928.	
Imports	£ 875,785	£ 1,314,112	— 13.0	£ 1,122,942	— 11.4
British exports	488,037	1,119,963	— 19.7	1,111,229	— 18.6
Re-exports	74,888	18,679	— 20.0	25,552	— 25.4
Total exports	562,925	1,138,643	— 19.8	1,136,782	— 19.6
Excess of imports over total exports	312,860	+ 7,231	+ 2.3	+ 23,840	+ 7.1

Regarding this period of ten months as a whole, it is clear that in comparison with 1929 total exports have fallen more than imports. Again, exports in the main consist of manufactured goods, whose prices have notoriously declined less than those of foodstuffs and raw materials, of which the great preponderance of our imports consist. This means that, if measured in volume, the disparity between the shrinkage in our import and that in export trade would be even more marked. In fact, the shrinkage in the volume of retained imports was, according to official calculations for the first nine months of this year, less than 5 per cent.

In so far as principal foodstuffs and raw materials, as defined in the trade returns, are concerned, details will be found in the next table:—

RETAINED IMPORTS.
Quantity (000's omitted.)

		First Ten Months.		
		1928.	1929.	1930.
Wheat	cwts.	84,106	94,796	79,741
Beef	cwts.	11,162	10,423	10,367
Sugar	cwts.	32,160	36,181	31,679
Iron ore	tons	3,728	4,778	3,872
Raw cotton	centals	10,072	10,707	8,148
Sheep and lambs' wool	centals	3,990	3,993	4,083
Raw silk	lbs.	42,969	3,744	3,311
Flax, hemp and jute	tons	231	242	201
Wood and timber, sawn, soft	loads	3,673	4,213	4,024
Rubber	centals	82	2,294	2,534
Crude petroleum	thousand galls.	1,378	1,470	1,692
Wood pulp	tons	991	1,308	1,261
Hides, wet and dry	cwts.	1,015	703	900

These figures are better than might have been expected. The worst disappointments are iron ore and raw cotton. The increase in raw wool imports is surprising when the depressed state of the industry is taken into account, and the remaining items have on the whole displayed a fair degree of resilience in view of the depth of the trade depression.

There remain retained imports of "manufactured goods," as defined in the trade returns. These were valued at £254.2 millions in 1929 (first ten months), and at £239.3 millions for this year to date. The shrinkage is one of 5.9 per cent., which may be explained by the fall in prices, that is to say, their volume has been maintained. In interpreting this fact, however, an essential point to remember is that many items in this group are virtually raw materials. Prominent examples

are non-ferrous metals, chemicals, petrol and paraffin, and leather. It is unwise to make too definite and dogmatic a sub-division of this group according to this line of argument, but it would not be far wrong to say that in 1929 about £97 millions and in 1930 about £92 millions of what are officially called retained imports of manufactured goods are in reality raw materials. On this basis, retained imports of raw materials, whether classed as such, or as manufactured goods, were really £328 millions in 1929 and £272 in 1930, and those of manufactured goods only £157 and £147 millions for the two years respectively.

Thus, comparing the two years, retained imports of raw materials have fallen by 17 per cent., a figure which is not overwhelmingly greater than the corresponding fall of 13.5 per cent. in wholesale prices. This suggests that the volume of our raw material imports has been main-

VALUES OF EXPORTS OF COAL, IRON AND STEEL,
AND COTTON TEXTILES.

tained in a far greater degree than is generally supposed. It also shows that our imports of finished goods are in reality far smaller than many people appear to think.

Coming now to exports, the story told by the figures is much less reassuring. Regarding, first of all, the ten months of 1928, 1929 and 1930 as a whole, it will be seen that the textile trades are particularly disappointing, that the heavy industries show up badly, and that only the exports of coal, locomotives and motor cars are better than two years ago.

SOME LEADING EXPORTS.

Quantity (000's omitted.)

		First Ten Months.		
		1928.	1929.	1930.
Coal	tons	41,640	49,885	46,566
Pig iron and ferro-alloys	tons	364	466	278
Railway material	tons	522	406	363
Total iron and steel manu- factures	tons	3,503	3,665	2,784
Textile machinery	tons	104	106	81
Total machinery	tons	470	466	411

The final question is, what is the general trend of our foreign trade? Some answer to this will be found in the two charts published with this analysis, which are supplemented by a final table, showing the trend of six important exports:—

THE TREND OF EXPORTS.
(000's omitted.)

	Coal.	Iron and Steel.	Machinery.	Cotton Piece-Goods.	Woolen Tissues.	Motor Cars.
	Tons.	Tons.	Tons.	Thousand Sq. yds.	Sq. yds.	Number.

The real question to be answered is whether the rebound of the October figures is the beginning of a genuine improvement, or whether it is only seasonal or accidental. The table shows that in any case it has not yet spread to the textile trades, while the other improvements look suspiciously like a seasonal movement. Moreover, the October iron and steel production statistics, referred to upon another page, are so disappointing as to suggest that little hope can be based on the better export results recorded in that month.

The main conclusions of this analysis are two. The first, and least palatable, is that the general trend has been consistently downwards since the end of last year, and that the most that can be said is that the curve may

VALUES OF IMPORTS AND EXPORTS.

be beginning to flatten. The other, and more encouraging, conclusion is that the maintenance of the volume of our raw material imports shows that even in these days of depression and unemployment the majority of our factories are still at work. The size of our foreign trade, especially on the export side of the account, is to-day far from being adequate to the nation's needs and capabilities. But the similar movement in the trade figures of our chief industrial competitors is sufficient evidence that the heavy falls shown in the charts are part of an international phenomenon. The problem before us is our ability to make up lost ground when the tide turns.

BRITISH CAPITAL ABROAD.—IV.

Our inquiry into British capital abroad has been designed to build up an estimate of our overseas holdings in 1929. The inquiry has been necessarily incomplete, and information on certain important aspects of the problem—notably the movement of short-term capital and the amount of long-term capital in Britain held by residents abroad—is almost entirely lacking. Nevertheless, incomplete as the story is, it may be of interest to consider how far our results are consonant with other figures relating to such matters as the international balance of payments.

In a previous article* we pointed out that the figures emerging from our investigation into British capital abroad suggest that the Board of Trade estimates of net long-term income from overseas are too high by about £30 millions. In 1929, these estimates were revised, largely on the basis of the material collected by Sir Robert Kindersley. A figure of £285 millions was given for each of the three preceding years; and it was estimated that the income was £250 millions in 1925, £220 millions in 1924, £200 millions in 1923, and £175 millions in 1922. Any adjustment of these interest earnings affects to the same extent the estimate of the net balance available for overseas investment each year. If we diminish the interest figure by £30 millions for each of the three years 1926-28, by £25 millions for each of the three preceding years, and by, say, £20 millions for 1923 and for 1922, the estimates of the net balance of capital exported will be reduced to the following figures:—For the four years 1922-25, net outward balances of £135 millions, £133 millions, £38 millions and £3 millions respectively; for 1926, an inward balance of £21 millions; and for 1927 and 1928 outward balances of £84 millions and £119 millions. The sum of these balances amounts to £491 millions. The Board of Trade made no estimate of our invisible exports in 1921. For 1920, they reckoned that we had a net balance available of £290 millions, but on the basis of later material this figure appears to have been considerably too high, and in any case the greater part of it was sent abroad on short-term account. On the whole, we are inclined to think that net British long-term investment abroad in 1920 and 1921 together amounted to about £100 millions. As a result, it appears likely that in the post-war period Great Britain had available for capital exports a net total of approximately £600 millions, up to the end of 1928.

In order to arrive at the increase in the total of our overseas investments, we must first add to this figure the sum invested by overseas residents on long-term account in this country during the same period, for such investments enable us to make equivalent investments abroad over and above those which we can make from the surplus of the income and outgo items included in the Board of Trade account. We have been unable to make any real estimate of these investments, but they are certainly on a much smaller scale than our own foreign investments, and we therefore suggest very tentatively a figure of £100 millions. We must also add the difference between the nominal amount of new capital issues and the sums actually received by the borrower or used abroad by British companies—perhaps another £50 millions. This figure includes not only commissions, but the difference between the issue price and par. Thirdly, an adjustment should be made for the movement of short-term capital, but we have no means of ascertaining what this has amounted to, if anything; and as there are no strong grounds to the contrary we can only assume, as a first approximation, that on balance between 1921 and 1929 inward and outward movements have been equal. On the other hand, part of the net increase since the war must have been absorbed in "direct" investments. This figure can hardly have exceeded £100 millions, and if the ratio between "direct" investments and investments in marketable securities was the same as before the war, it was probably rather less. In round figures, therefore, we

* *Economist*, November 1, 1930, p. 799.

may put the post-war increase of British long-term investments overseas at approximately £750 millions, of which £650 millions took the form of marketable securities.

If this is an accurate estimate, and if our figure of £4,000 millions* for the capital sum outstanding in 1929—of which £3,500 millions represented marketable securities—is also sound, then at the end of the war period British long-term capital overseas cannot have been more than some £3,250 millions, of which £2,850 millions represented marketable securities. Sir George Paish estimated the amount of marketable securities held abroad at the end of 1913 at about £3,700 millions. On the basis of these estimates, our marketable securities representing capital abroad must have fallen during the war by £850 millions.

Of what was the £850 millions loss composed? Attention has already been called to the almost complete disposal of United States railway securities. The pre-war estimate for this group was £617 millions, and our own 1929 estimate no more than £30 millions. Our estimate of about £80 millions for all United States securities (excluding nominee holdings) compares with £755 millions before the war. Most of these securities were officially mobilised in support of the dollar sterling exchange. Our own figures for 1929 are on the low side owing to the growth of nominee holdings in recent years, but the figures were certainly very low indeed at the end of the war. A further large group to vanish almost to nothing was our investments of all kinds in Russia, which were estimated by Sir George Paish at £67 millions, though other competent observers have assessed them as high as £110 millions. The 1913 total also included some £40 millions of investments in Central and Eastern Europe, the greater part of which was likewise lost.

The comparison between Sir George Paish's figures for 1913 and our own is summarised in the following table:—

BRITISH CAPITAL ABROAD.
(Marketable Securities only.)

(a) Excluding Ceylon Government and corporation loans.

(b) Including Egyptian Government and corporation loans.

It will be observed that the figures given above for the end of 1929 total less than £3,400 millions; a further £100 millions, whose distribution can only be guessed at, and which largely arises from an accumulation of comparatively small errors, must be added. The two columns are therefore only roughly comparable one with another.

* Economist, October 25, 1930, p. 751.

One of the most striking changes, as between Sir George Paish's estimates and our own, is the reduction of the sums invested in mining companies and in the financial, land and investment group, which comprises many firms primarily interested in mining. This loss, which aggregated about £150 millions, may in part be accounted for by war-time disposal—since these were highly marketable securities—as well as by capital redemptions, local repurchases and an apparently more rigorous exclusion of dormant companies in the compilation of our figures. A further large change occurs in Dominion, Colonial and Indian railways, for which our figure is £150 millions below that put forward by Sir George Paish. Approximately £100 millions of this drop is in the Indian railways group, and may be ascribed to the gradual acquisition of the railways by the Secretary of State; an approximately equal amount would be added to the total of Indian Government securities. The greater part of the remaining £50 millions probably represents war-time sales, especially of Canadian railway securities.

The depletion due to the war may thus be accounted for, roughly, as follows:—United States securities, mostly railways, £650 millions; Russia and other belligerents, £100 millions; Canadian railways, say, £40 millions; and mining securities not already counted, £60 millions.

Other large variations between Sir George Paish's figures and our own may be ascribed mainly to post-war movements. Oil companies show an increase of £96 millions, whilst the capital invested in rubber and tea plantations has doubled. The loss of £40 millions of banking securities has been largely accounted for in the above figures of war sales. Additions of £55 millions to iron and steel and of £50 millions to electrical investments have been largely concentrated in Europe; other public utilities show an aggregate drop of over £50 millions. Investments in commercial and industrial concerns amount to £30 millions more than before the war.

As for the geographical changes, the share of the Empire has increased by about £100 millions; some net addition to investment has taken place in the Crown Colonies, but the largest rise is that of over £150 millions recorded for Australia and New Zealand, the remaining Dominions and India showing each a net fall. The unfortunate inclusion of Egypt with the Empire in Sir Robert Kindersley's figures, however, renders comparison rather difficult. The huge reduction of investments in the United States has already been noted. The figure for Latin America has shown practically no change. The rest of the world, other than Europe, shows a rise of about £40 millions. But the most remarkable change of all has occurred in Europe. Omitting Russia, Sir George Paish's estimate for that continent was £108 millions. Our own, referring to 1929, was about £380 millions. Thus our net post-war investments in Europe, other than "direct investments," and excluding short-term capital, totalled nearly £300 millions up to the end of 1928, or nearly one-half of all our new investments. This is probably the most striking fact about our international capital position to-day.

THE AMERICAN ELECTIONS.

(BY AN AMERICAN.)

THE mid-term elections in the United States were a setback, not a defeat, both for President Hoover and the prohibition forces. Otherwise the Democrats and the "wets" could claim a victory, which they cannot do. The setback in both instances was significant, and it would be foolish to underestimate it; but it would be as foolish to exaggerate it. Though the Republicans will have to share power in the new Congress on equal terms with the Democrats, it is by no means a foregone conclusion that they will lose to the Democrats two years hence. They probably would, if economic conditions in 1932 were to be as discouraging as this year. But if business revives, and the Republican party does not split, there is no reason to anticipate its certain defeat. President Hoover remains leader of the party, and there is no

open revolt against him, despite the amazing amount of dissatisfaction about him among the professional politicians. If he chooses, he can be the candidate in 1932.

The "drys" have lost rather more ground than the President. They have not lost so much in Congress, where they still have a preponderant strength, but they can no longer boast that the majority of the voters which has been theirs since the ratification of the Eighteenth Amendment is behind them. The States containing more than half the population of the country have now either elected "wet" candidates or voted for a change of prohibition laws, and it seems likely that a national referendum would reveal a majority for modification of some sort. No such national referendum can be held; and the influence of last week's vote will probably be seen in the policies of both parties at the next election, and not in any tampering with the Volstead Act, or any drive for repeal of the amendment by the new Congress. Here the "drys" are able to hold their own. In any case, the amendment cannot be repealed so long as any thirteen states refuse to reject it, and most students of America agree that the South and the Middle West can easily muster this number, probably for another generation.

As a rule, the mid-term elections in America are sectional affairs, in which candidates' personalities are more momentous than national policy, and in which voters, to a measure, escape from a sense of national responsibility. This year the elections appear to have been more national than usual—partly because of the prohibition issue, even more so because of the slump. Discouragement over business conditions is acute in America. In times of any slump the party in office gets the blame, and it was a foregone conclusion that the Republicans, despite their long and somewhat lucky reputation as a party of prosperity, were going to pay heavily for the bad times of 1930. Among a comparative few, no doubt, dissatisfaction with the Republicans was translated into concrete criticism of the President, for failing to fight the tariff bill, and then for signing it, and for doing nothing to curb the speculation in Wall Street early enough to have warded off the present collapse of the market. But, among the rank and file of voters, the motive of changing from the Republican to the Democratic candidate was clearly emotional rather than intellectual. The voters had been promised prosperity under a Hoover who was to be a superman averting the disaster which has come. The factor of disillusionment must have been present in every local contest, and it obviously accounts for a good many Democratic gains. But if there is any surprise about the outcome, it is that the Democrats did not gain a clear majority, for the election was held in the worst month so far of the slump, and in the season of the worst discouragement and distress.

The new Congress does not normally assemble until December, 1931, as the old one has another session which ends next March. If the President calls a special session, the new Congress will convene as soon as the old one has dispersed; and this now appears likely. The two parties will be on almost mathematical parity. The Senate has 48 Republicans, 47 Democrats and one Farmer-Labour member—a situation which might give the deciding ballot to Vice-President Curtis. In the House of Representatives (subject to recount), the Republicans have 218, the Democrats 216 and the Farmer-Labour Party one. Deaths and retirements, with subsequent by-elections or appointments for the unexpired term—in certain cases by Democratic governors—may change this by next year to an absolute Democratic majority in both houses. This slight alteration would not mean any great change, for neither party can carry out a policy with a majority of less than thirty. This winter the President still has his working majority, but the session is too short to deal with more than routine. And already the Democrats have pledged themselves not to make partisan opposition to measures designed to alleviate the economic crisis. So the effect of the election on legislation will be seen at once, and it will be the same this year as in the new Congress, namely, a restriction of activity to measures on which general agreement will be easy. The Democrats will institute a policy to remedy rather than repeal the Reed-Smoot

Tariff Law, and, in view of the election, there should not be much trouble in cutting out some of the worst schedules.

The election may have some slight influence on foreign policy. The Administration does not change, and the word of Mr Hoover will still be the word of the master in the State Department. But the election has strengthened the Republican Progressives, both numerically and by giving them the balance of power in Congress. And the Progressives should have a more generous hearing on foreign questions when they call at the White House or on Secretary Stimson. That is not to say the change will be marked, for in foreign affairs President Hoover has evinced somewhat more liberalism than in his domestic policy. He has not been isolationist enough to suit Senator Borah, but other Progressives in Congress would like to see him still more courageous. It would be reassuring if the election had given a mandate for an international approach to problems of the business depression, but it seems vain to seek for it. Republican campaigners took pains to stress the international nature of the depression, but did not draw the logical conclusion that it would have to be treated internationally. There is talk at Washington of careful preparation for a change in the debt settlement in the event of the inability of Germany to continue payments under the Young Plan. It may be that Washington is seeing ahead and making ready for possible emergencies, but revision of European debts was not broached during the campaign, and it would have been a fatal campaign cry. In that respect America remains obdurate, and, if changes come, they will have to be prepared carefully by the executive and be privately sanctioned by party leaders before Congress and the public get to hear of them.

The Democrats have found their presidential candidate for 1932 in Governor Franklin Roosevelt, who carried New York State by the largest majority in its history. This cousin of the late Theodore Roosevelt is a man of ability and irreproachable character, and the Republicans in Upper New York State evidently were convinced of this despite the support he was being given in New York City by Tammany. They voted for him not because he was "wet"; Mr Tuttle, his Republican opponent, was also opposed to Prohibition. Governor Roosevelt is another Al Smith in his liberalism and courage, and would not have the campaign handicap of being a Roman Catholic. In fact, it seems not impossible that America may have a liberal revival in the next campaign. Governor Roosevelt would be a strong man to oppose President Hoover, who has been too friendly to the power interests to rally liberal backing. He is reported as saying now, with natural caution, that he is not aspiring to the presidency; but presidential candidates who aspire too early usually are eliminated early.

Mr Dwight Morrow, elected to the Senate from New Jersey as a "wet," is also being mentioned as Republican candidate for the presidency. This is on the assumption either that Mr Hoover would be too unpopular to run again, or that he would decline to lead a party which abandoned the "noble experiment." Both assumptions seem hasty. Mr Hoover is not so unpopular in the country as he is among the articulate professional critics, and with the power of the Federal machine he might well control the next Republican Convention, and have himself nominated. Nor is he a fanatical Prohibitionist. The very words "noble experiment" allow for failure. He can say

it has failed. Moreover, in many American eyes Mr Morrow is, perhaps, too much of a kind with Mr Hoover to be of sufficient contrast to him. His background is banking, not engineering, and his talents lie in negotiation rather than administration. He may be a better politician, though it is early to judge of that. But the appeal of each of them is the same; they would be proclaimed as sane, practical men who understand the world. The one great difference between them is that to-day Mr Morrow is "wet" and Mr Hoover is "dry." But this difference might become very much narrower in another two years.

THE GOVERNMENT OF INDIA'S DESPATCH.

The Despatch (Reforms Office, No. 1 of 1930), dated September 20, 1930, which the Government of India have addressed to the Secretary of State, is a document of considerable importance. With its salient features, in their bearing on the proceedings of the Round Table Conference, we have dealt in an earlier column. We give below a condensed summary of its principal contents. Fuller examination of many chapters of great economic and financial interest we reserve for a later occasion.*

THE purpose of the Despatch is to forward for the consideration of H.M. Government the views of the Government of India "on the further progress which might now be made towards the development of responsible government in India as an integral part of the British Empire." These views have been framed in the light of the report of the Indian Statutory Commission ("the most convenient, and, indeed, the inevitable method of approach"), the work of the Indian Central Committee, and contemporary opinion in India.

The Despatch begins with a brief account, which does not appreciably differ from or add to the Statutory Commission's analysis, of the political forces at work in India and the strength of opinion behind them. On the one hand, though recent "political agitation of remarkable intensity and fervour has left the rural districts but little affected," it is clear that the nationalist demand for self-government and Dominion status is obtaining "a substantial measure of support from educated Hindus of all classes." On the other hand, the minority communities, while sharing "these broad nationalist aspirations," are "not without apprehensions of their position in a self-governing India, and are concentrating attention on the protection of their rights and interests." Finally, non-official European opinion, which till recently displayed an increasingly liberal spirit towards Indian aspirations, has been moved by civil disobedience and boycott tactics into "some consequent stiffening of its attitude towards political advance."

From this analysis of a "steadily expanding" area of political interest the conclusion is reached that "the time has passed when it was safe to assume the passive consent of the governed."

"The new system must be based as far as possible on the willing consent of a people whose political consciousness is steadily being awakened. . . . We are convinced that the time has come when the broadest considerations of Imperial policy demand that we should spare no efforts, and even take some risks, in order to arrive at a constitutional solution which will give reasonable scope to the ideas and the aspirations that are moving India to-day."

Governing Principles.

The Despatch then proceeds to explain the Government of India's general outlook on the constitutional problem and the principles which guide their conclusions. They agree with the Statutory Commission that the aim must be to establish a constitution "which should, as far as possible, contain within itself provision for its own development." The ultimate ideal of an All-India Federation, including not only British India but also the Indian States, is fully accepted, but "the ideal is not likely to realise itself, save in its own due time"; and "there is a certain danger that if we direct our gaze too fixedly to a distant future we may tend to overlook the

needs of an urgent present." For the time being, the main problem is "how British India may be developed in a manner not only consistent with the wider vision, but appropriate to its own immediate requirements."

Agreement is expressed with the broad aim of the Statutory Commission to give to the Provinces "the maximum autonomy consistent with the interests of India as a whole." At the same time, emphasis is laid on "the need for a vigorous central authority capable of sustaining the heavy burdens which necessarily fall upon it." Indeed, the Despatch submits, the form of central government is essentially the most difficult problem. The extreme logical alternatives of (a) an executive responsible solely to the British Parliament, and (b) an executive responsible exclusively and entirely to an Indian legislature, vested with complete rights of self-government, are both rejected.

"The conditions suggest to us the importance of defining as clearly as possible the purposes which Britain must continue to safeguard in India and making it plain that where those purposes are not concerned India should be free to manage her own affairs. . . . Whatever may be the plan adopted, we are convinced that no scheme of Government at the centre can work with success unless it is recognised that Parliament and the Indian Legislature have each their special contribution to make to the welfare of India, which is the joint purpose of both. Our aim should be a partnership in a common cause."

With these prefatory observations, the Despatch goes on to give the Government of India's detailed views and proposals with regard, first, to the Governors' Provinces, and then to the Centre.

The Provinces.

In the provincial sphere the Government of India endorse, with full recognition of "the risks inherent in so great a change," the crucial recommendation of the Statutory Commission, that dyarchy should be brought to an end.

"Subject to the necessary safeguards which the Commission have suggested, we are prepared to see provincial administration in all subjects entrusted to responsible Ministers, linked together in a common accountability for their policy, and operating in relations with popular legislatures from which the official element will have disappeared, and in which the nominated element will have been reduced to the smallest proportions."

As regards the franchise, the recommendations of the Statutory Commission, with the exception of their proposal to discontinue the representation of landholders by means of special constituencies, are in the main accepted. Unitary provincial Cabinets, as proposed by the Statutory Commission, are approved; and though provincial Governments are stated to incline to the view that "official" Ministers would be difficult to maintain in office against the wishes of their colleagues, the Government of India are reluctant to dissent from the principle that provincial Governors should have the discretionary power to nominate Ministers "should circumstances so require."

With regard to the overriding powers of the Governors, it is agreed that it would be "neither practicable nor desirable at once to create the position that the Governor should be bound on all subjects by the advice of his Ministers," but the use by the Governor of his overriding powers will, it is anticipated, be "infrequent and reserved for exceptional occasions when no other course seems appropriate." Not the least of the relevant considerations for giving the Governor overriding powers is stated to be "the reliance which the minority communities will repose in the Governor for their protection."

The proposal that Burma should be separated from India is supported, "assuming that an equitable financial settlement will be made between the two countries and that their respective economic interests will be safeguarded. For the North-West Frontier Province, the Government of India would modify the Statutory Commission's recommendations to the extent of proposing—on "somewhat more liberal" lines—that the responsibility for executive government should be shared by the Chief Commissioner with two Ministers, of whom one should be non-official."

The Despatch concurs generally in the proposals of the Commission regarding the powers of the Provinces in re-

gard to finance. Considerable space is devoted to the details of the financial scheme proposed by Sir Walter Layton. The general line taken here is that while accepting the general principles of that scheme, the Government of India regard the figures used to illustrate the working of the scheme as too optimistic, having regard to the economic conditions with which India and the world in general are likely to be faced in the years immediately before us. They are, therefore, unwilling to commit themselves to a ten-year programme for the transfer of resources from the Centre to the Provinces. They are disposed to think that any general adjustment between the Provinces on the basis of needs must be ruled out, but reserve judgment as to whether some special preliminary adjustments may not have to be examined before the scheme comes into effect. They emphasise the objections to a "terminal" tax and consider that the subjecting of agricultural incomes to income tax "is a form of taxation which should only be imposed by a representative and responsible Government."

The Despatch then comes to its most important and controversial section—that embodying a suggested scheme for the Central Government.

The Centre.

Here the conclusions of the Government of India derive from three premises on whose realisation the desideratum of a strong Central Government seems to them to depend: that there must be internal unity in the executive; that there must be harmony between the executive and the legislature; and that the executive must have a sufficient backing from public opinion. Under existing circumstances there is unity in the executive, but the position of the legislature, able admittedly to influence profoundly the policy of the executive, but with no direct responsibility for policy "which it can call its own," and tempted consequently to seek relief in destructive criticism, tends "to generate feeling and friction."

The Statutory Commission insisted that "dyarchy at the Centre, or any system of divided responsibility resembling dyarchy, is quite impossible. Unity in the central executive must be preserved at all costs." The Government of India suggest that the Statutory Commission's recommendations (a) that members of the executive should be nominated by the Governor-General (in lieu of appointment by the Crown), and (b) that in a central legislature (henceforth indirectly elected) the official element should be reduced to a small percentage, offer no assurance of a legislature calculated to work harmoniously.

"Under the proposals of the Commission we fear . . . that the difficulties inherent in the situation would be greatly enhanced by constituting the executive and the legislature on principles which would widen the gap between them."

At the same time, given the internal and external situation of India, a necessary sharing of power between the British Parliament and the Indian Legislature involves in the Central Government an "inevitable duality." How is that "duality" to be constitutionally expressed? One method would be to exclude certain functions from the purview of the Indian Legislature and administer them in unqualified responsibility to the will of Parliament. "The objections to any considerable extension of this system are obvious. . . . If the excluded sphere were appreciable there would really be two Governments." Another possible method would be the dyarchic division of functions which the Statutory Commission condemned. The Despatch expresses the opinion that though defence and foreign relations could conceivably be separated from the other functions of the Central Government, and though dyarchy, by relieving Ministers of responsibility for unpopular decisions on the "reserved" side, might enable them to continue in office where this would be difficult if they were members of a unitary Cabinet, nevertheless the system, "when one part of the Government can openly disclaim responsibility for the decision taken by the other," must fatally weaken the Government's authority. Moreover, dyarchy offers no possibility of an extension of the sphere of responsibility except by way of an abrupt decision.

"Dualism."

By these stages the conclusion is reached that an attempt must be made to combine the principle of "inevitable duality" with that of a unitary executive by creating a Government which, "while containing a definite official element and not formally responsible to the Indian Legislature, would yet include an appreciable popular element consisting of elected members of the Legislature, who might command sufficient support in that body to afford in normal circumstances the promise of reasonable harmony between the executive and the Legislature." It is not considered sufficient that, as proposed by the Statutory Commission, the Governor-General's nominations to the executive should include some members of the Legislature, who should cease, on nomination, to hold their seats by virtue of election. "Leaders of parties"—if they are to be consulted—had better be "inside the Government," as Ministers, though their salaries should not be votable, and they should not be obliged to resign on a vote of censure by the Assembly.

The question how the elected members of the Government associated with an official element are to retain their following is answered in these words:—

"They must be able over the widest field that circumstances permit to frame policy in accordance with the views of their supporters. This in turn implies that Parliament will be willing to define with some precision the purposes for which it would wish to exercise its constitutional right of interference with the policy of the Government of India, and that so long as the policy pursued does not menace the objects which Parliament declares its intention to safeguard, the Government of India would be at liberty to manage the affairs of India in close association with the Indian Legislature."

The purposes which, it is suggested, His Majesty's Government must safeguard, are briefly summarised as defence, foreign relations, internal security, financial obligations, financial stability, protection of minorities and of the rights of services recruited by the Secretary of State, and the prevention of unfair economic and commercial discrimination. The primary responsibility for seeing that these purposes were not impaired would rest with the Governor-General, assisted by the three "official" members, "who would naturally hold the portfolios in which the questions of more particular interest to Parliament would presumably arise." At the same time—

"The official members would be part of a Government containing if the system were working successfully, a considerable popular element in intimate relations with the legislature. In these circumstances it seems certain that the official members would not press their views beyond the real requirements of the situation, and that the popular view would receive the fullest consideration. In most cases we should anticipate that the Government would be able to reach united conclusions, which would not infringe the responsibilities which Parliament would look to the Governor-General and the Secretary of State to discharge. When, however, there was an irreconcilable difference of opinion between the two elements in the Government, it would be for the Governor-General in consultation, where necessary, with the Secretary of State to decide which view was to be supported."

On these lines the Government of India suggest that unitary "dualism," unless there were deliberate obstruction, should be workable. The Governor-General would retain all his power of certification and of making emergency ordinances, but gradually "the necessity for retaining the official element in the Executive Council would diminish."

With regard to the legislature, the proposals of the Statutory Commission that the Upper House should be indirectly elected are endorsed, but with regard to the Assembly, it is stated that the provincial governments are divided on the merits of indirect *versus* direct election, and that the Government of India, in opposition to the Statutory Commission, are inclined to the view "that a method whereby the Assembly would be wholly or mainly constituted by indirect election would not be suitable."

Administrative Problems.

Having thus outlined their views as to the form of central government desirable, the Government of India proceed in conclusion to deal with the chief consequential problems of administration involved.

The Army.—The Government of India agrees with the Statutory Commission that the Commander-in-Chief

should no longer be a member of the legislature; and that military expenditure from Indian revenues should henceforward take the form of an annual total sum fixed for a period of years. They consider, however, that nothing is to be gained by removing the Army, as suggested by the Statutory Commission, from the control of the Government of India.

Finance.

With regard to central finance, the special difficulties inherent in a transfer of responsibility are fully set out. Emphasis is chiefly laid first on the vital importance to India of the maintenance of credit in the widest sense, and secondly on the magnitude of the interests which have hitherto been safeguarded under the responsibility of the Secretary of State. Reference is also made to the unusual responsibilities now carried by the Government in relation to currency and to the special difficulties created by the immediate financial and economic situation, partly as a result of the disturbance and mistrust caused by the recent subversive movements and the talk of repudiating debts. After a review of these main factors in the present position the conclusion is drawn that "the occasion for a transfer of financial responsibility cannot be reached apart from the fulfilment of certain conditions such as the restoration of normal economic conditions, the re-establishment of credit and confidence and the inauguration and successful working for some time of a reserve bank with adequate sterling reserves. . . . It would be the task of the Government to do all in its power to expedite the fulfilment of such of the conditions as it can influence." At the same time the leaders of Indian opinion must give convincing proof of willingness to assure the national financial position; and even after responsibility for finance is transferred, certain safeguards—notably provision for resumption of control by the Secretary of State in the event of a threatened default—must be retained.

Commerce and Railways.—With regard to commercial policy, there should be "no outside interference with India's management of her Customs tariff," provided that in the internal sphere the important revenue aspect of Customs has due consideration, and that, externally, Britain is given most-favoured-nation treatment. The question of unfair discrimination against British commercial interests in India is somewhat lightly dismissed with the hope that the Round Table Conference will give this important issue full consideration and that agreement as to a fair *modus vivendi* can be reached. With regard to railways, "if in the future the control of commercial and industrial policy is to rest with the Indian Legislature, the general direction of railway policy should be placed in the same hands." It is, however, recognised that there are certain aspects of railway policy in which Parliament must continue to be interested, particularly so far as concerns defence and finance. Emphasis is laid on the necessity of separating commercial management from direction of policy. "It seems to us clear that there could be no material change in control . . . until a system of administration has been set up which, while leaving the Government and the Legislature the control of broad questions of policy, would locate the commercial management elsewhere." The suggestion is accordingly made that an authority for the administration of the railways should be set up by statute and that detailed inquiry to that end should be made by a committee or commission to be constituted as soon as possible.

The Services.—The question of the Services which are still recruited by the Secretary of State on an all-India basis is "one of great importance for the future administration of the country, and, we think, for the successful working of the new constitution which it is proposed to set up." With regard to the Indian Civil Service and the Indian Police Service, the Government of India state that they have "no hesitation in supporting the proposal that recruitment should be continued on an all-India basis by the Secretary of State and under the guarantee of his protection." On the other hand, "the continuance of recruitment for these two Services must not be taken as implying an intention that they should be retained indefinitely."

Paramountcy and the Crown.

The Despatch concludes with a discussion of the future relationship of British India to the States and to the Crown. In the first issue, the ideal of an ultimate federation of all-India is accepted, but "we hesitate to assume that the relations existing between the provinces of British India and the Centre will not necessitate a permanent central legislature for British India . . . to which the States could not appropriately be admitted."

"We think that the way should be left open for the continued existence, if necessary, of the British India legislature for British-India purposes, and for the possible creation of an all-India Legislature. . . . A federation of all-India is still a distant ideal."

Agreement is expressed with the Statutory Commission's recommendation that paramountcy should henceforth be vested in the Viceroy, as such, and not in the Government of India. The proposal for the establishment of a Council for Greater India to discuss "matters of common concern" is supported. The existing India Council may, it is suggested, be allowed to disappear, giving place to expert advisers at the Secretary of State's disposal. Constitutionally, "the exercise of the functions for the government of India, which reside in the Crown, should be directly devolved upon the Governor-General."

"We think it right to state clearly that if this were done, the Government of India would no longer merely be the agent of the Secretary of State. For the first time it would possess a distinct individuality. It would, it is true, be within specified limits under the control of His Majesty's Government, but it is of the essence of our proposals that that control should be of such a nature as to establish partnership in place of subordination. The Government of India would then be a distinct entity, capable of acting in domestic matters on its own initiative and, within the ambit of its uncontrolled powers, free to pursue its own policy."

Finally, we have the observation that while the Report of the Statutory Commission represented "a generous response to the popular demand for provincial autonomy," the Government of India, in its proposals for the Centre, has sought "to point the way to action that may now be taken to place upon the constitution the first, but definite, impress of dominion status."

Notes of the Week.

The Imperial Conference.—Almost as soon as these words appear in print the achievements of the Imperial Conference will be known. Unofficially, enough is already known, or deduced, to show that those results will not be spectacular. On the constitutional side useful work will prove to have been done in dotting the i's and crossing the t's of the "equal Dominion Status" solution reached at the last Conference four years ago. But it is on the economic side that public attention has been concentrated, and those who looked for momentous decisions will be disappointed. On the very first day it became clear that grandiose schemes of the Beaverbrook type were ruled out by common consent. Mr Bennett's offer of higher Canadian tariffs with slightly increased British preference in return for the complete reversal of British fiscal policy was, of course, doomed to rejection from the outset, in spite of Mr Baldwin's hasty acceptance. The most that is in any way likely to emerge from the preference discussions is an undertaking not to change existing preferences for a period—that is, a sort of inter-Imperial tariff truce. From the preference question the Conference turned to alternative methods of stimulating Empire trade, such as "quotas" for wheat and other primary products, import boards, and bulk-purchase schemes. It is not believed that any agreement will be possible on the "quota" system, while little progress has been made with regard to bulk purchase. If these estimates prove true, many people will doubtless write down the Conference as a complete failure. We are not inclined to agree. Before the Conference opened we gave our view that its success would be measured by its ability to eschew the spectacular, and to "stick to the humdrum last of practical organisa-

tion." By that criterion we are content to judge the work of the Conference, and if its deliberations prove to have led to the establishment of machinery for close and continuous consultation in the economic field, its labours will by no means have been in vain.

Clouds on the Horizon.—At different points on the industrial horizon clouds betokening possible wage disputes have been appearing for many weeks past, and this week they have collected in a somewhat threatening mass, for Thursday was the day fixed for meetings between the employers and employed of three important industries. The employers of the boot and shoe industries are demanding wage reductions and their employees demand an increase, but there seems no need as yet to anticipate a failure of the conciliation machinery. The situation on the railways is far more threatening. The period within which the companies and the unions were pledged not to give notice of any change, after the restoration of the 2½ per cent. cut, has now ended, and at the meeting with the unions on Thursday the companies put forward demands for reductions of 6s. a week, with a minimum rate of 38s., in the wages of the adult male staff, of 3s. a week for the junior male and female staff, and for reductions ranging from £10 to £20 a year in salaries up to £350 a year. The demands also include payment at the ordinary rate for Sunday and night duty, and a clause—"payment to be made only for time actually worked"—which is understood to mean the abolition of the guaranteed week. The conference adjourned immediately upon the presentation of these demands, in order to enable the union representatives to discuss them, but there can be no doubt that they will meet with determined resistance. The drastic nature of the proposals suggests that the companies wished to leave themselves plenty of margin for bargaining, and if this is the case there is hope that a compromise may be reached. A still more lowering storm-cloud upon which all eyes will be anxiously fixed during the next few days arises from the coal situation. On December 1st the 7½ hours' day comes into force, and in districts other than Yorkshire, Nottingham and Derbyshire, where it already obtains, the miners demand an adjustment of piece-rates which will leave earnings unchanged, while the employers maintain, and are likely to maintain obdurately, that they cannot support the increase in costs which will follow the reduction in hours without some diminution in their wages bill. On their behalf it is, for example, argued that in South Wales, where the latest profit ascertainment amounted to 0.73d. per ton, half an hour off the working day will increase costs by 1s. 6d. per ton. Whatever the detailed figures in the various districts may be, it is patent that the coal industry is in no state at present to pay more wages for less work, and it is greatly to be regretted that, owing to the boycotting by the Employers' Associations of the proposed National Wages Tribunal, no conciliation machinery at present exists by means of which the facts of the situation can be brought home to the miners. Representatives of the Mining Association have, however, accepted Mr Shinwell's invitation to meet representatives of the Miners' Federation, and it is to be hoped that the disastrous events of 1926 are still vividly enough remembered to cause wiser counsel to prevail.

The Education Bill.—After the second reading of the Education Bill had been carried by the comfortable majority of 67, the House of Commons on Tuesday night passed by 271 votes to 242 the money resolutions providing for the maintenance grants to parents whose children are compulsorily retained at school for an extra year. Thus the Bill is now transferred to the Committee stage, in which opposition is likely to be more sustained and effective. The debates in the House of Commons and the accumulating testimony of educational authorities confirm us in the view, which we expressed in these columns last week, that, however excellent the aims of this measure may be, its projected date of operation is inopportune and its maintenance clauses in need of

drastic revision. To imagine, as Sir Charles Trevelyan still seems to do, that between now and April 1st arrangements can be made to bring this extension of education into force without congestion of schools, disorganisation of classes and shortage of competent teachers, is surely unwarrantable optimism; and Sir John Simon's measured but trenchant criticism of the maintenance grants "administered with this very loose hand, without inquiry"—in significant contrast to inquisitorial investigations by the Inland Revenue authorities into the means of the direct tax-payers who are to find the money—reflects a weight of opinion which the Government can hardly afford to ignore. Moreover, as the Duchess of Atholl pointed out on Tuesday night, this country is to-day spending £93 millions a year on education. All things considered, this cannot be described as niggardly, nor can enthusiasts for the Bill legitimately complain if it be suggested that the depths of an industrial depression are scarcely the psychological moment in which to embark on fresh expenditure somewhat vaguely estimated at £8 millions a year, and almost certainly underestimated at that figure. If the Bill is to pass, it is incumbent on the House of Commons to amend the maintenance clauses in Committee so as to limit assistance to really necessitous cases and, we strongly suggest, to defer for at least twelve months the date on which the Bill shall come into force.

The Preparatory Commission for Disarmament.—On Thursday, November 6th, the League of Nations Preparatory Commission for the intended General Limitation of Armaments Conference resumed at Geneva, under the presidency of Monsieur Loudon (Netherlands), the session which was suspended in 1928 in order to give the Naval Powers an opportunity to make headway, on their own element, by private discussions among themselves. Some headway has been made. This year's three-Power naval treaty of London is the monument of it. And, during these last few days at Geneva, further progress in this limited sphere has been made in bringing French and Italian views into line with American, British and Japanese views in regard to the "yard-stick" by which relative disarmament is to be measured. To construct a comprehensive "yard-stick," for measuring all arms, is, of course, the task of the Preparatory Commission, while it is left to the future Disarmament Conference, equipped with this "yard-stick," to grapple with the question of actual strengths and numbers. As far as the naval part of the "yard-stick" goes, we may be content with the progress that is being made; but unhappily the crux of armaments—notwithstanding the naval rivalry between Italy and France—arises over armaments on land. And here one position after another has had to be abandoned by those who are striving to bring the scale of armaments in general down to something like the scale that has been imposed by the European peace treaties upon the States which suffered defeat in the war. Our League correspondent discusses more fully in another column this gradual retreat from the Treaty position. First, we have had to abandon the claim that trained reserves ought to be taken into account in estimating relative military strengths. This last week, we have had to abandon, in turn, the milder suggestion that States which practise conscription should consent to put only a certain proportion of their annual "classes" of young men, coming of military age, through the mill. The last suggestion to be made, and defeated, has been that the period of training should be reduced to a uniform minimum figure. On this point, all that has been obtained from the military Powers is an agreement that each Government shall state its own maximum period of training which it does not propose to exceed. Thus far, we have really got nowhere. The policy of the British Delegation is evidently to make the utmost concessions to the military Powers rather than risk a breakdown which would prevent the General Disarmament Conference from ever meeting at all. Whether that policy is wise, or whether it would have been better, in our League correspondent's words, to "stand for the things that matter," the event will prove.

The Austrian Elections.—The results of the general election which was held in Austria last Sunday, November 9th, are reassuring. The Prince of Stahremberg's Heimat bloc has gained only eight seats, while the Austrian "Nazis" proper have gained not a single seat in the Reichsrath, though they succeeded in securing a hundred thousand votes in the country. Nor will the Communists be represented in the Austrian Reichsrath. In fact, in Austria there has been no kaleidoscopic change in favour of the extreme parties of violence at either end of the political spectrum, such as occurred in the German general election a few weeks ago. This is remarkable, and it may have some effect upon the course of events in Germany itself. There were several reasons why the Austrian elections might have been expected to turn out on the same lines as the German elections: there was the force of precedent; there was the attraction which a greater mass is apt to exercise upon a smaller; and there was the fact that Fascism, north of the Alps, has so far been a specifically South-German product, emanating from Munich; and Munich might have been supposed to have more influence over Vienna than over Berlin. In spite of all this, the Austrian elections have gone a different way. The polling was heavy, which indicates that the composition of the new Reichsrath will fairly reflect the present state of feeling and opinion in the electorate. And the proceedings were quiet and orderly, which suggests that the Prince of Stahremberg's henchmen have little stomach for a fight, when it comes to the point, and that, in spite of all the fire and slaughter which they have been breathing, they do not really feel strong enough to override the will of the electorate by force. In fact, the results of the election are a victory for political moderation and common sense, and for parliamentary institutions. While the Heimat bloc have secured eight seats, their partners in the present Ministry, the Christian Socialists, have obtained 66, as against 73 in the former Reichsrath. The Social Democrats have held their own by obtaining 72 seats against their former 71; but the real victors are Dr. Schober's new National Economic bloc, who have obtained no less than 19 seats, though they only organised themselves a few weeks before election day. As things have turned out, Dr. Schober holds the balance, and it looks as though the next Ministry will be formed by a coalition between him and the Christian Socialists, with the Heimat bloc, as well as the Social Democrats, in opposition.

Venizelos at Angora.—Last week the Prime Minister and the Foreign Minister of Greece visited the new capital of Turkey and signed five diplomatic instruments with their Turkish colleagues—a pact of friendship, a protocol for an agreed limitation of Greek and Turkish naval armaments, a commercial treaty, and two conventions, one regarding sojourn and the other regarding navigation. The proceedings were apparently of the most cordial character on both sides. Monsieur Venizelos and President Mustafa Kemal each took pains to make it clear that this was the end of the century-long feud between the Greek and Turkish states, and the still older feud between the Greek and Turkish peoples. The Turks have renounced their aspirations to reconquer their lost provinces in Europe; the Greeks have renounced their aspirations to win Constantinople and Smyrna. Both nations have accepted the present frontiers between them as permanent; and, having buried their political feud, they are now ready to embark upon economic co-operation. This is an event of real international importance, which must be set on the credit side of the sheet to balance the tendency for the Powers to divide again into two camps, which is showing itself in Western Europe. Nothing has encouraged the Great Powers in their ambitions so much as the knowledge that they could use the small countries as pawns in their game. And there could be no more effective check upon the old game of diplomacy than for the former pawns to agree with one another that they will no longer play—or, rather, will no longer be "played" by others. This is the international significance of the present reconciliation between Greece and Turkey, a reconciliation for which high credit is due to M. Venizelos. What an extra-

ordinary career! He came to power at Athens in 1910, and made his reputation between 1910 and 1912, as a peace-minister. Fate involved him in wars and civil dissensions from 1912 to 1920; and, when he fell in the latter year, it seemed as though his career had come to a tragic end. And then, after a few years' retirement, he comes out as a peace-minister again, to accomplish, in old age, what may go down to history as his greatest achievement.

Palestine Immigration.—It is announced that the Colonial Office has empowered the Palestine Government to issue 1,500 permits under "the Labour Schedule" for Jewish immigrants to enter Palestine during the next six months. Critics of the Government's policy have interpreted this announcement to mean that the Government have abandoned their attitude in face of the opposition which it has encountered. But this is hardly fair to Lord Passfield; for there was nothing in the White Paper to suggest that the temporary suspension of immigration was to be maintained indefinitely. The White Paper merely says that "His Majesty's Government regard their action in the suspension of immigration under the Labour Schedule last May as fully justified in the light of the examination to which immigration and unemployment problems have been subjected." But the suspension was only in respect of the half-year ending September 30th last. The general principle which the present White Paper reaffirms—by quoting the White Paper which was issued in 1922, when Mr Churchill was in Lord Passfield's shoes—is that, in estimating the absorptive capacity of Palestine at any time, account should be taken of Arab as well as Jewish unemployment in determining the rate at which immigration should be permitted. The present White Paper announces that "it is the intention of His Majesty's Government to take steps to ensure a more exact application of these principles in the future." But it also mentions, on the excellent authority of Sir John Hope Simpson's report, that "the Jewish organisations are in possession of a large reserve of land not yet settled or developed," so that "their operations can continue without break, while more general steps of development, in the benefits of which Jews and Arabs can both share, are being worked out." Presumably the Palestine Government has assured itself, since May, that there will by now be employment for 1,500 Jewish immigrants on these unsettled and undeveloped lands which are already in Jewish possession. In fact, the present decision and the policy set forth in the White Paper are perfectly consistent with one another. So much in justice to Lord Passfield.

Australian Developments.—Australian financial affairs have this week taken a turn for the better. The subversive resolutions of the Labour Caucus, including a demand that the redemption of the £27,000,000 of internal debt, due to be carried out next December, should be postponed for a year were met by a threat from Mr Lyons, the Acting Commonwealth Treasurer, to resign his office, and by an emphatic statement by Mr Scullin, who, in answer to the question whether the Government would repudiate the payment of the debt maturing in December, replied, "Decidedly not." This was followed by a meeting of the Loan Council, at which it was decided to proceed with the issue of a conversion loan in order to provide for the debt maturities referred to above, and apparently at this meeting the only opposition came from Mr Lang, the Premier of New South Wales. These developments made it clear that if the Labour Caucus held its ground the only result would be a split in the Labour Party, and as Mr Scullin would have the support of the Opposition in his determination to uphold Australia's credit, his position would be secure. Faced with this fact, the Caucus hastened to issue a statement to the effect that any attempt to construe their resolutions as implying the repudiation of any financial obligation was false and designed wilfully to mislead the public and prejudice the Australian Labour movement. In other words, thanks to the courage of Mr Scullin and many of his colleagues, the Caucus's demonstration in the direction of unsound finance has been frustrated, and the task of carrying into effect the recom-

mendations arising out of the deliberations with the Niemeyer mission last August should be rendered much easier. The most disconcerting consequence of these recent episodes is Mr Lang's reported withdrawal from the Loan Council. The implication of this is that henceforward New South Wales may attempt to resume borrowing operations on her own account. This threat, however, should not be taken too seriously. For one thing, if Mr Lang and his colleagues really tried to put it into operation, they would quickly find themselves beaten by the cost and difficulty of raising loans, and by the reception which they would receive in London and other overseas financial centres.

The Berlin Wages Award.—The tribunal set up to arbitrate in the dispute in the Berlin metal industry has issued an award very little more favourable to the workers than the award which originally provoked the strike. The immediate reduction in wages is to be only 3 per cent., but as from January 18th the full reduction of 8 per cent. is to come into force. The probable political consequences of this decision, which both parties to the dispute pledged themselves in advance to accept, are discussed in our Berlin correspondent's letter on a later page. As the award was based on the assumption that the Government would carry out their policy of reducing retail prices concurrently with reductions in wages, so that real wages would be substantially unaltered, the Government are now straining every nerve to extract concessions from retailers by peaceful persuasion. Some small measure of success has already been achieved, but a vigorous prosecution of the campaign will be necessary if the expiry of the numerous wage contracts which run out during the remaining weeks of this year is to find the Government armed with a sufficiently low retail index to persuade the workers to the necessary reductions in money wages. All the same the policy is worthy of consideration by other industrial countries which are finding the pressure of the upper millstone of falling wholesale prices on the nether millstone of rigid costs well-nigh intolerable. Unfortunately in the case of Great Britain, where a reduction of nominal wages accompanied by stationary real wages might prove a blessed way out of an impending impasse, the relations between the Government and the retailers have hardly been rendered cordial by the attempted introduction last session of the ill-conceived Consumers' Council Bill.

Insuring the Cunarders.—Last Monday, the financial resolution authorising the Board of Trade to enter into an agreement with the Cunard Steamship Company, Ltd., for the insurance of the proposed new liners, was approved in Committee. Mr Graham made it clear that the company would be required to exhaust the resources of the open market before calling upon the Government to make up the deficiency, and he expressed the hope that the market would take a large part of the risks, though on the basis of his present information he was only able to name a figure of £2-2½ millions out of the total of £4-4½ millions which represents the probable cost of the first vessel. To avoid any suspicion that the Government is competing with the market, the premium in respect of construction risks is to be at a fixed rate "of 1½ per cent. for three years plus an additional 2½ per cent. on that rate." If the vessel is not delivered within three years there is to be an addition of 6d. per cent. per month. Insurances against subsequent marine risks, if undertaken by the Government, are to be at the market rate plus 2½ per cent. The insurance of a second vessel is provided for on similar terms, on condition that her keel be laid within six years. The debate proceeded smoothly, and members on both sides of the House welcomed the proposed agreement as an indispensable step taken in a businesslike manner. If the agreement, as we assume to be the case, is to be based upon Clause X of the Institute's Building Clauses, and the full contract value is the basis of insurance, the premiums proposed would seem to be at about the right level to induce the maximum of recourse to the market without unduly penalising the company in respect of the balance of insurance to be placed with the Government.

Shipping Freight Index Number.—After rising from 90.8 in July to a minor seasonal "peak" of 97.3 in September, our index number of whole-cargo shipping freights last month took a definitely downward turn; the current figure, 95.1, which compares with 108.5 a year ago, represents a fall on the month of 2.3 per cent.

AVERAGE 1898-1913=100.

	Average, 1913.	Oct., 1929.	Aug., 1930.	Sept., 1930.	Oct., 1930.
European Waters	110.0	130.4	86.7	87.3	91.1
North America	113.1	98.3	94.2	91.2	85.6
South America	123.4	103.1	99.7	95.7	93.3
India	106.3	117.4	104.5	103.0	101.3
Far East and Pacific	117.4	95.1	84.7	89.2	85.2
Australia	127.9	106.8	106.8	117.5	113.9
Total	116.3	108.5	96.1	97.3	95.1

Outward coal freights, except for Mediterranean ports of discharge, were relatively firm during October, and home-ward rates in European waters were well maintained. The principal overseas grain markets, however, suffered a fresh severe set-back, and homeward quotations from the Plate and the United States fell heavily. Business in the East, apart from a moderate Australian demand for tonnage, was very dull. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade.....	81.4	+ 5.3	South America—out-	94.6	+ 4.9
Bay—outwards.....	110.1	+ 9.2	wards		
Bay—homewards	96.8	+ 3.3	South America—		
Mediterranean—out-	83.8	- 2.6	homewards	92.1	- 9.5
wards			India—outwards	120.0	- 2.1
Mediterranean—	93.4	+ 2.7	India—homewards	82.7	- 1.2
homewards	85.6	- 3.6	Far East, &c.	85.2	- 4.0
North America			Australia.....	113.9	- 3.4

Expressed as a percentage of the average for 1913, the total figure of our index number for October works out at 81.7 as compared with 83.6 in September and 93.3 a year ago.

American Cotton Crop.—Late last week the Department of Agriculture of the United States Government published a revised estimate of the cotton crop for this season, the figure given being 14,438,000 bales, against 14,486,000 bales a month earlier. It also stated that the amount of cotton ginned up to the end of October was 10,864,000 bales, against 10,892,000 bales same time last year. The statistics were rather less favourable than expected, as the market anticipated a slight increase in the crop estimate compared with a month ago, and according to private advices the ginnings were expected to be fully 11,000,000 bales. On the reports being issued there was a slight advance in prices, but the rise was soon lost. On the whole these official reports did not indicate any particular change in the amount of supplies, and market operators are now more inclined to watch demand as a price factor. It is significant that so far this season from August 1st the deliveries of American cotton to world spinners are 30 per cent. smaller than in the same period of last year. The substantial decrease is largely due to smaller takings of users in the United States and Great Britain. Owing to present low prices an effort will be made next spring to reduce the acreage under cotton, but in trade circles there is some doubt as to whether the decrease will be very heavy.

October Iron and Steel Production.—The returns for last month, issued by the National Federation of Iron and Steel Manufacturers, are extremely disappointing. The number of furnaces in blast was reduced during the month from 104 to 96, while output of pig iron amounted to only 415,000 tons, as against 425,000 tons in September, and 688,700 tons in October, 1929. Steel production also contracted, the October figure being 512,500 tons, as against 580,600 tons in September, and 889,800 tons in October of last year. To those who were beginning to hope that the better October trade returns and the greater stability of commodity prices were the first signs of the end of the depression, these results will come as an unpleasant shock.

Real Wages and Unemployment.—A paper prepared for the International Institute of Statistics Commission on Real Wages and Employment by its rapporteur, Mr John Hilton, contains an interesting study of statistics bearing on the question whether changes in the price level affect the volume of employment not only directly (this relation is taken for granted), but also indirectly, through their effect on the level of real wages. Researches by M. Rueff and Professor Bresciani-Turroni had led to the conclusion that the lag of money wages behind falling prices, with the consequent increase in real wages, was a cause of unemployment. Mr Hilton points out that in order to explore the problem scientifically, data, unfortunately not yet obtainable, as to changes in national and *per capita* output are necessary. Further, he makes the interesting point, too often overlooked, that the effect of price-changes on the purchasing power of wages cannot satisfactorily be examined apart from their effect on the purchasing power of other incomes, and he quotes the figures of national distribution given by Sir Henry Strakosch in his supplement to the *Economist* of July 5, 1930, to show that in 1924 26.4 per cent. of the national income was absorbed by interest on fixed money obligations, in addition to the 49.8 per cent. paid in wages and salaries. With every fall in the price level this share increases, and, as the national income has not increased in proportion, it is inferred that the additional share has been secured at the expense of entrepreneurs' profits. The argument under examination is that this has been the immediate cause of the discharge of workpeople. Mr Hilton has two qualifications to the inference that if wages had fallen *pro rata* with the fall in prices there would have been no increase in unemployment: first, that there would still remain the automatic rise in the value of fixed-interest payments; second, that buyers tend to hold up their purchases in a time of falling prices irrespective of the movement of wages. Thus, while there is probably some relation between the course of real wages and the level of employment, it cannot be expected to be proportionate. When curves are plotted, for both England and Germany, showing the movement since 1924 of money wages, wholesale prices, cost of living, volume of employment, the ratio of wages to the cost of living, the ratio of wages to wholesale prices, and the unemployment percentage, no very close correlation appears. The German figures are very much disturbed by changes in the inflow of foreign investments, and until such peculiar national circumstances can be allowed for, together with differences in the rate of increase in production per head in the respective countries, all traces of any uniform law which may be operating are bound to be obscured. Meanwhile, all that appears is that the fall in prices has been accompanied by a fall in employment, and since money wages have hardly changed over the period Mr Hilton arrives at the conclusion that "little, if anything, can be revealed by a correlation of unemployment with real wages except what can more directly be found in a correlation of unemployment with prices." There is much force in this comment; much more complete data would be required to reveal statistically how far unemployment is to be attributed to the fall of prices alone; to the more rapid fall of profits if money wages remain stationary; or to other disturbances which occur when prices fall. It is the intention of the committee to search for additional data, covering a larger number of countries, in the hope of bringing to light fresh correlations which are at present obscure. The publication of these results will be awaited with interest.

The Midland Coal Scheme.—As anticipated, writes a Leeds correspondent, the marketing scheme which has been approved by the Secretary for the Mines Department for the Midland area includes the whole of the district recently included in the activities of the Central Collieries Commercial Association, the voluntary marketing organisation of the Midland owners. There will be five separate sections, South Yorkshire, West Yorkshire, Derbyshire and Nottinghamshire, South Derbyshire, and Leicestershire, for the purpose of facilitating the working

of the scheme. The Midland scheme, covering an output of approximately 70,000,000 tons per annum and 800,000 workmen, will in all probability be the largest in the country. While the powers conferred upon each district committee are limited by the Act, there is some elasticity in the organisation put forward by separate districts; and it is in this respect that the experience of the Midland owners in running their own scheme has been of considerable value. There will be a Standard Tonnage Committee to fix, and, when necessary, revise the annual standard tonnage for every mine. A Quota Committee will determine the proportion of standard tonnage to be raised each month, and an Export Committee will have as its object the promotion of the export trade. The newly-created sales organisation will have a Central Committee and Committees for each Section, whose purpose it will be to classify all coal and determine the minimum price below which it must not be sold. Standard tonnage will be based on the output returns for the four years 1923, 1924, 1925, 1927, the year of the stoppage being omitted. To arrive at the annual standard tonnage for each mine, the aggregate for each section will be divided among the mines in that section, having regard to the proportion which the output of each bears to the total output for all mines in that section for the year ended March 31, 1928. The committee may increase the standard tonnage of an expanding mine, or reduce that of a diminishing mine. Such factors as the efficiency and economic working of the mine may be taken into consideration when fixing, revising or varying the annual standard tonnage. The committee is authorised to substitute monthly for annual tonnage for any undertaking which has an increasing or diminishing output, and to fix at its discretion the standard tonnage of any concern which does not make the returns necessary to facilitate the task. Under the scheme of monthly permitted output, a coalowner may carry forward part, as the balance to be raised in subsequent months, although it may not be carried beyond the end of the current year. Provision is also made for a Tonnage Pool, whereby an owner may exceed his quota for any period by mutual arrangement with another owner whose tonnage for the period shall be proportionately reduced. Unraised portions of a firm's quota which are not carried forward may be passed into the Pool or may be purchased therefrom by owners desirous of a greater output. In order that this may not interfere with output regulations, the committee has power to decide what quantity of pool tonnage shall be distributed in a given month, and also to fix the price at which it shall be sold. The Export Committee is empowered to confer with British coal exporters and others concerned in the export of coal, and with representatives of foreign coal purchasers and importers. It is also authorised to establish a Shipping Bureau to act on behalf of the coalowners in the export markets, to collect and circulate information on matters affecting the coal export trade, and generally to advise coalowners engaged in the sale and supply of coal for export.

Inter-Imperial Trade.—A White Paper (Cmd. 3691) has recently been published containing a useful analysis of the external trade of the United Kingdom, the Dominions and India with British and foreign countries. From it we have compiled the following table showing the origin of the principal manufactured goods imported into the larger Dominions and India in the last year for which the statistics are available:—

Origin.	Canada.	Aus- tralia.	New Zea- land.	South Africa.	Irish Free State.	India.
	1928.	1928-9.	1928.	1928.	1928.	1928-9.
United Kingdom....	21.5	42.0	15.1	25.6	18.0	70.3
Other British coun- tries	1.4	8.6	3.6	2.8	...	3.7
U.S.A.	90.5	23.9	6.0	10.5	1.1	9.6
Other foreign coun- tries	14.3	18.6	3.1	12.2	2.0	42.6
Total	127.8	93.1	27.8	51.2	21.1	126.2

New Zealand, South Africa and India all buy one-half or rather more than one-half of the their manufactured imports in this country. The Irish Free State alone buys a much larger proportion; Australia buys rather less than half; while Canada buys only one-sixth of her imported manufactures here, against nearly three-quarters from the United States. The next table shows the distribution of markets for Dominion and Indian food exports as between British and foreign countries:—

To.	Canada.	Aus- tralia.	New Zea- land.	South Africa.	Irish Free State.	India.
	1928.	1928-9.	1928.	1928.	1928.	1928-9.
United Kingdom....	74.6	24.7	26.1	4.7	18.5	19.7
Other British coun- tries	5.8	11.9	2.3	0.1	...	13.3
U.S.A.	11.5	0.1	0.8	...	...	0.6
Other foreign coun- tries	40.3	13.7	0.3	1.9	0.1	14.1
Total	132.3	50.3	29.4	6.7	18.6	47.7

Here the proportion of the total trade which is transacted within the Empire is much larger. The Irish Free State exports practically all its food to the United Kingdom, and the British market is overwhelmingly preponderant in both the New Zealand and South African food trades. We take over half Canada's exports of foodstuffs, but most of the other half goes to foreign countries. She sells less to "other British countries" than either Australia or India. Australia sends about half her food exports to this country and a further fifth to the rest of the Empire. A similar analysis for raw materials is given below:—

To.	Canada.	Aus- tralia.	New Zea- land.	South Africa.	Irish Free State.	India.
	1928.	1928-9.	1928.	1928.	1928.	1928-9.
United Kingdom....	5.7	23.5	12.7	8.9	1.6	17.3
Other British coun- tries	1.1	1.4	1.8	1.0	...	2.9
U.S.A.	38.1	4.5	2.7	0.7	0.1	8.3
Other foreign coun- tries	5.2	44.5	4.1	10.2	0.2	85.2
Total	50.1	73.8	21.3	20.9	2.0	113.7

This presents a different picture. The Irish Free State and New Zealand still stand out as dealing mainly with the United Kingdom, but South Africa sends more of her raw materials to foreign than to British countries, Australia sends only about one-third of hers within the Empire, India only about one-eleventh, while Canada deals almost exclusively with the United States. Great Britain buys a little over one-third of her raw material imports from British countries. It is evident that if the British Empire is to work towards a predominantly British trade in raw materials, it must be prepared to face a seismic upheaval in trade routes, in international payments and in all the complex relations which result from a given orientation of international trade.

Third Party Insurance.—On January 1st next the section of the Road Traffic Act which requires motorists to be insured against third party risks will come into force. Drivers of mechanically-propelled road vehicles other than invalid carriages or trams will be required to carry a certificate of insurance, supplied by their insurance company, which must be shown on demand to a police constable or, in the case of an accident involving a third party, to any person who has reasonable grounds for requiring to see it. The certificate will also have to be produced on application for a Road Fund licence. Provision is made for the production of alternative forms of evidence (a) where the policy does not relate to any specified vehicle; (b) in the case of persons or organisations of substantial resources who have either deposited £15,000 or have obtained a "security" guaranteeing to meet any default on third party claims; (c) in the case of motor vehicles owned by local authorities or police authorities. Policy holders who are covered when

driving other vehicles than those specified in their policy may demand an additional certificate to that effect from their insurance company. The regulations further make the necessary requirements as to the keeping of records and the destruction of certificates when the vehicles to which they relate are disposed of. Section II provides for the issue of certificates to persons bringing into Great Britain, during a temporary visit, vehicles insured abroad. Such certificates may be obtained from the Royal Automobile Club, the Automobile Association, the Royal Scottish Automobile Club or the London County Council.

Trade Unions' Political Funds.—In reply to a question in the House, the Minister of Labour has supplied figures of trade union membership and contributions to the political funds from which we extract the following:—

	1925.	1927.	1928.	1929.
Membership at end of year	4,492	3,947	3,809	3,827
No. of members contributing to political fund at end of year	†	2,224	1,634	1,668
Contributions of members to political fund.....	155	137	100	107
Total political fund income	163	146	113	133

† Not available.

While the decline in membership shows plainly the effect of the events of 1926, the decline of more than a quarter in members contributing to the political levy, and in the amount of their contributions, which took place between 1927 and 1928, shows still more clearly the effect of the Trade Disputes and Trade Unions Act, 1927, for it is out of all proportion to the decline in membership. On the other hand, the small increase in membership in 1929 was accompanied by a slightly larger increase in the numbers contributing to the political fund, which indicates some small degree of success by the union organisations in overcoming the force of inertia which the Act transferred into the opposite side of the scale. The fact that contributions are still scarcely over two-thirds of what they amounted to in 1925 is a sufficient explanation of the eagerness of the Labour Party to secure the repeal of the Trade Disputes and Trade Unions Act.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during October created a fresh record amounting to 926,561 ozs. of fine gold, as compared with 903,176 ozs. produced during September. In October, 1929, the output amounted to 888,690 ozs. of fine gold. The following table shows the monthly output since the beginning of 1924:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	796,768	823,692	796,270	839,782	843,857	876,452	882,801
February ...	760,617	753,925	795,324	779,339	816,133	815,284	818,188
March ...	796,671	826,479	834,340	860,511	877,380	866,529	889,370
April ...	768,223	787,519	803,303	824,014	825,907	872,123	868,606
May ...	809,003	813,249	849,214	859,479	886,186	897,598	916,213
June ...	773,053	780,251	852,145	855,154	862,363	856,029	887,867
July ...	829,437	818,202	860,134	851,861	867,211	889,480	912,652
August ...	809,671	808,218	843,854	863,345	891,863	889,601	921,081
September ...	799,422	797,247	839,359	842,118	857,731	849,553	903,176
October ...	827,583	812,832	853,396	855,743	897,720	888,690	926,561
November ...	802,313	787,633	840,276	848,059	872,484	861,593	...
December ...	825,273	791,455	836,157	851,225	859,761	851,134	...
Total ...	9,597,634	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	8,926,515

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Feb., 1930.	March, 1930.	April, 1930.	May, 1930.	June, 1930.	July, 1930.	Aug., 1930.	Sept., 1930.	Oct., 1930.
Gold mines	196,752	200,134	202,434	202,182	201,324	201,111	202,257	205,061	206,778
Coal mines	15,495	15,250	15,109	15,028	14,943	14,670	14,788	14,706	14,482
Diamond mines	6,584	7,002	5,565	5,340	5,126	5,490	5,754	5,767	5,032
Total	218,831	222,386	223,108	222,550	221,393	221,271	222,799	225,534	226,292

The number of natives employed at the gold mines showed a further increase on the month.

At the meeting of the Royal Statistical Society, on November 18th, at 5.15 p.m., the President, Sir J. C. Stamp, G.B.E., will deliver his Inaugural Address—"The National Capital." The meeting will be held in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C.2.

Overseas Correspondence.

LEAGUE OF NATIONS.

Preparatory Disarmament Commission — Trained Reserves — Limitation of Material — American Attitude.

(FROM OUR CORRESPONDENT.)

GENEVA, November 10.

THE Preparatory Disarmament Commission is now occupied with its final struggle to complete the draft convention which is to be the basis of the first general Disarmament Conference, or, more accurately, the first General Conference for the Limitation of Armaments. It is premature even to add "and reduction." There will be no general agreement on some of the substantial points, and the Commission will take its decisions by majority votes. It is inevitable that a draft convention thus arrived at will have a number of reservations, and, if no accommodation is reached before the general conference is summoned to fill in the figures, then whatever is accomplished will have to be done in the teeth at least of German protests.

The prospect is by no means encouraging, but it is just as well to recognise that there is no intention whatever on the part of one set of European Powers to agree to any convention which will deprive them of their military stranglehold on another set of Powers. Any present analysis must start from that naked assumption. We are nowhere near political conditions likely to change that determination, and, pending some approach to sanity before disaster ensues, the best to hope for is the fixing of some high-water mark of armaments not to be exceeded. That is little enough. There is some hope that progress may be made towards accepting principles of naval limitation—it should be emphasised once again that figures are left for the General Conference—but it is hard to see what can be accomplished in the essentials of land armaments. It has been decided, after years of fruitless struggle against French and Little Entente resistance, that trained reserves are not to be included in the computation of military effectives. Great Britain, the United States, and the Scandinavian countries fought hard, but finally surrendered, getting nothing in return. Now at this meeting the Germans tried to approach the matter from another angle by proposing the principle of limitation of the annual contingent of recruits in conscriptionist countries. This was defeated by twelve votes to five, America and Great Britain not voting. The argument, as represented by the French, is that this would be against the principle of equality of military obligations, but this was described by the Dutch representative as a principle which made an obstacle to disarmament. In other countries, including Holland, the annual contingent is limited, and those called upon to serve are decided by lots—an entirely practicable and equitable system. On the French thesis, armies automatically increase where population increases.

If, therefore, there is to be no limitation of trained reserves, and no limitation of the annual contingent, there can be no real limitation of effectives in conscriptionist countries. The only point left is the limitation of the period of service with the colours, which would mean that the shorter the period of service the less effective would be the trained reserves; the quality but not the quantity would be diminished. It has been agreed to fix a limit, but, until the Conference meets, it stands at *x*. So much for effectives.

The other increasingly important consideration is that of material. The controversy here is between direct limitation of material, budgetary limitation of material, and simple publicity. The last point is harmless enough, and no one objects. Lord Cecil this morning strongly advocated budgetary limitation as the most feasible and effective, considering that direct limitation was fraught with too many technical difficulties. Budgetary limitation is a plan to which the United States has always objected, and Mr Gibson this morning said they could not give way, maintaining their preference for direct limitation, which is also the policy of Germany, Russia, and probably some of the ex-neutral States. Count Bernstorff asked why, if direct limitation was imposed on Germany (together with the abolition of conscription), it could not be applied all round. General de Marinis, of Italy, was also in favour of reconsidering the question of direct limitation, but the French and their friends are unalterably opposed, and there is no chance of acceptance.

Budgetary limitation is also difficult in view of American opposition, and, as Lord Cecil properly explained, it would be difficult for a number of countries to accept it if other Powers, including a first-class Power like America, stood out. To this Mr Gibson replied that the United States, if the other countries accepted budgetary limitation, would apply to itself the system of direct limitation. How this would work it is hard to see. It would obviously be absurd for the United States to fix its own limits directly. The only alternative would be for the General Conference to fix a limit; but how would it be possible to fix directly a limit of material for one country comparable with a limit of material fixed by budgets in others? On materials, therefore, there will probably only remain simple publicity.

This is the point so far reached by the Preparatory Commission, and when it has gone laboriously through the many other points which remain it will present a nice problem to the Council. It is a grave prospect, very little reflected in the complacency which characterises some of the delegates. Germany and Russia will probably wash their hands of all responsibility for the preparatory work—they have already more than hinted as much—and yet Mr Gibson smilingly informs the Press correspondents that his policy is mainly one of "grand silence." That is not exactly an heroic method of "implementing" the Kellogg Pact. It might have been expected that Mr Gibson and those who desire progress would take a last stand not less obstinate and determined than that of those who want to do little or nothing. An agreed draft convention is not possible; so why not stand for the things that matter and give a definite lead? That would surely be preferable to what may turn out to be largely a pretence, only, of doing something.

UNITED STATES.

Trade Stagnation — Industrial Profits — Money — Election Results.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 5.

CONGRESSIONAL and State elections have detracted somewhat from interest in financial markets this week, and stagnation is generally prevalent. Basic industries continue to lose ground. Corporation earnings and industrial employment will in all probability be less in the final quarter of the year than for any three-months' period since the business recession began. No one now looks for much improvement before spring, but the view generally held by economists now is that, in view of the severity and duration of the slump already experienced, it must be touching bottom.

While the steel industry may, as its leaders assert, be close to bottom, it is still losing ground. Operations are now down to 48 per cent. of capacity, and last month brought another sharp recession in pig-iron production. The daily rate was 8 per cent. below September and was, in fact, lower than that for any month since October, 1921.

Prices are a trifle steadier, though scrap steel is still weakening. The steel trade's principal customers—the railroads, the motor trade and the building industry—are small takers at present. Railroad buying is at a low ebb, reflecting the falling earnings for the carriers. Motor output, which last month is estimated at not more than 200,000 vehicles for this country and Canada, is not likely to expand before the turn of the year. Structural steel projects, however, are growing and will expand further as a result of the elections.

Bond issues involving construction of approximately \$400,000,000 were voted on in the various State, county and municipal elections yesterday, and while most of the proposed expenditure was carried, the effect will not be felt immediately in the building industry. Much of the money, anyhow, will go toward road construction and improvement, designed largely to relieve unemployment, and offerings will be made piecemeal.

With the publication of the bulk of earning statements from industrial corporations of importance, covering the third quarter, it is possible to get a clearer view of the scope of the trade depression. A compilation of the accounts rendered by about 200 industrial corporations made by the National City Bank indicates a drop of 45 per cent. in profits compared with a year ago. For the nine months the decline was 33 per cent. Profits have progressively declined throughout the year, but in the current quarter the results, as compared with 1929, may be more favourable, owing to the sharp recession last year.

In the nine months only a handful of corporations did better than last year, and no important group was able to take as large profits. For the third quarter the motor manufacturing and motor accessories trades fared the worst, with declines of 58 and 73 per cent. respectively. Iron and steel dropped 62 per cent. and oil company earnings were 57 per cent. under the same period of 1929. This ranking was about the same for the nine months, but the percentage of losses was, of course, smaller. In extenuation of poor earnings the point is made that most corporations have taken advantage of the lean year to write off possible losses and to deflate balance sheets. Moreover, when considered on the basis of return on capital investment, the year turns out to have been fairly good. The companies noted above earned in the nine months a return of 10 per cent. on their capital and surplus, against 17 per cent. in the first nine months of last year.

Declining trade, liquidation in the share market and further gold imports have inevitably weakened money rates. In the day-to-day market the banks are experiencing the greatest difficulty in placing loans at 1 per cent., although the official Stock Exchange call loan renewal rate has been unshaken from its pegged position at 2 per cent. throughout October. No impression was made by month-end dividend and interest payment of three-quarters of a billion and by holiday currency demands. Time money rates have fallen one-quarter of 1 per cent. all round, the thirty-day rate now being 1½ per cent. A reduction of one-eighth of 1 per cent. has also been made in the longer maturities of bankers' bills, the supply of which is not increasing much, while the demand for them is. This is a reversal of conditions applying in the early part of last month.

In the past five weeks, brokers' loans, as reported by the Federal Reserve Board, have dropped \$710 millions. During October the Stock Exchange report showed a decline of \$925.3 millions. The total as shown by both compilations is now approximately \$2,500 millions, the smallest since the summer of 1926, and but little more than a third of the peak of last year. Loans made by reporting member banks in leading cities continue to drop, but commercial loans rose in the last week of October. The former are down \$1,122 millions and the latter \$1,048 millions on the year. Funds released from loans are steadily going into the bond market. The week's increase of \$64 millions in member bank holdings puts the total at \$6,731 millions, or \$1,235 millions above a year ago. These figures are for banks with about 40 per cent. of the banking resources of the country.

Questions of an international political nature, such as war debts and reparations, will, it is believed here, be kept in the background at the conferences which Governor Harrison, of the New York Federal Reserve Bank, is about to hold with Governor Norman, of the Bank of England; Governor Moret, of the Banque de France; and President Luther, of the Reichsbank. When these central bank heads met last February and March they laid the foundation for co-operative action looking toward the lowering of short-term interest rates and the consequent cheapening of long-term capital. It is still highly desirable, in the view of Reserve Bank officials, that the long-term capital market be assisted as a means of improving the bond market and promoting trade recovery. Another topic for discussion will probably be the distribution of central bank gold reserves.

Congressional and State gubernatorial elections proved to be something of a landslide in favour of the Democrats. Such a result did not take the country wholly by surprise, since a revulsion from the party in power during a period of business depression always has taken place. However, the extent of the Republican losses was perhaps greater than many had looked for, as the prohibition issue was added to other complications.

The new Congress will not sit for over a year, but the moral effect of the election will, doubtless, weaken the Administration and encourage legislative attempts by the opposition. Numerous bills looking toward restrictions on stock market operations, and affecting Federal Reserve Bank and Farm Relief activities will be proposed, but the markets have done very little worrying on those scores. The poor business this year, and the uncertain prospects for the coming year, overshadow political changes, since no one hopes for any curing of the patient by means of a legislative nostrum. Moreover, neither party has suggested any such remedy. The ordinary citizen, who had hoped for indefinite continuance of prosperity under the present Administration has merely expressed his disappointment.

FRANCE.

Foreign Policy Debate — Prices — Wages — Industrial Production — Railway Traffic.

(FROM OUR CORRESPONDENT.)

PARIS, November 12.

SINCE the serio-comic incidents of a week ago, all parties have been marking time, pending the resumption tomorrow of a discussion which is expected to take the form of an acid test of the Ministry's real situation. The result of the first test of strength of the new session is generally regarded as an open question, though it seems to be generally expected that the proved combined ability of MM. Tardieu and Briand may be fairly well relied upon to ensure a Ministerial success. Meanwhile, the Government's prompt intervention for the purpose of preventing the collapse of the Oustric group from spreading to an extent that might seriously prejudice the non-speculative investing public, and the other steps that are being taken for the better protection of the small capitalist, have had an excellent effect in reviving confidence and are believed to have appreciably strengthened the Ministry's situation.

The nervousness felt here as to the possibility that Austria—as well as Germany—might, by her support of Hitlerism, prove to be a danger to European peace, has been largely removed by the results of the elections in that country, and there are also hopes that, thanks to the careful handling of the matter at this end, a way is being opened for an improvement in Franco-Italian relations that will enable an end to be put to any danger from that direction.

Outside Parliament, attention is now chiefly focussed on the country's economic situation, which, in spite of the insistence of the nation's leaders on the fact that France is suffering substantially less than practically any other country, there is a widespread tendency here to regard as much worse than the usual test factors suggest.

The general index figure of wholesale prices at the end of October is 519, a drop of 16 points since the end of September, and of 83 since October, 1929. This works out in gold at 105, giving French prices a level of 5 per cent. higher than in July, 1914, against differences in September for the United Kingdom (Board of Trade figures) of 10 per cent., United States 21 per cent. (base 1913), Germany 23 per cent., Italy 9 per cent., Belgium 3 per cent. The difference between wholesale prices of French products and of imported commodities continues to widen, the figure for the former being now returned as 580, against 409 for imported goods, or a difference of 171 points. Prices of French products fell 15 points on the month, and those of imported commodities 19 points. The difference a year ago was 61 points. The continued comparatively high level of prices of French products, as compared with those of imports, is considered to be due not only to constantly increasing price-cutting by importing countries, in competition for the French market, but to the necessity for the French producers to maintain selling rates at a high level owing to the continued heavy burden of taxation and steadily-rising labour costs. Both these handicaps are expected to be appreciably larger during the coming twelve months, and especially in connection with the coming into full operation of the national insurance system.

Wage scales in many industries are now closely linked up with the cost of living indices and efforts are being made to develop this system further. So far there has been no serious movement on the part of either employers or wage-earners to modify the present scales of pay, with the exception of those of certain categories of public servants. Certain disturbing factors are now beginning to make their appearance, however, and there is some nervousness as to whether this country will not, before long, begin to feel the general depression much more acutely.

Industrial production figures for September, which are issued this week, show fractional declines in seven of the nine principal industries. The general index figure (1913 = 100) is returned at 137, or a drop of one point on the month and of seven points since July. The declines are of one point in the building and mining industries, four in leather, five in metallurgy and in paper, and of thirty in motor-car construction, which shows a seasonal drop of 80 points on the month to 600, against 587 in October, 1929, and a monthly average of 610 last year—the monthly average for the first nine months of the current year having been 655). Textile production for the month is returned unchanged at 80, against an average of 92 for last year, and of 97 for 1929. The figure representing the output of rubber products in September shows a rise of 9 points (from 847 to 956), against an average of 861 in 1930, and 587 in 1929.

Railway receipts in September totalled 318,000,000 francs a week, against 317,000,000 francs in August, 306,000,000 francs in July, an average of 297,000,000 francs in 1929, and of 284,000,000 francs in 1929. The average daily number of trucks loaded during the month was 60,200, against 56,700 in August, and averages of 65,100 in 1929, and 63,500 in 1928. Outward shipping tonnage was 4,607,000 tons (against an average of 4,363,000 tons in 1929), and inward 4,869,000 tons (against 3,868,000 tons).

The recent fractional increase in unemployment is causing a certain amount of nervousness, as might be expected in a country where returns revealing a total of from 90,000 to 100,000 workless, as in 1921, are apt to give rise to little short of panic conditions. The total number in receipt of unemployment pay last week was 1,663 for the whole country, of whom 1,303 were in the Paris area, against 1,898 in the previous week, and averages of 988 in September, 856 in July, 909 in 1929, and 5,067 in 1928. Whereas in 1929 the number of workers unable to find employment averaged 10,192, and the number of jobs left unfilled was 19,228—which ratio was preserved down till last July, although on a diminishing scale—there was an average of 12,262 unsatisfied workers during September, with 13,922 vacant jobs for which labour was lacking.

The index figure for retail prices in Paris for October remains unchanged at 637 (July, 1914 = 100), against an average of 611 in 1929, and of 549 in 1928. The figure representing the cost of living for a Paris working-class family of four persons at the end of the three months ending on August 31st is 592, as compared with 676 for Marseilles, 665 for Grenoble, 628 for Bordeaux, and from 550 to 592 in the great urban centres in the more markedly agricultural areas. In view of the present rather unsatisfactory methods adopted in working out the index figures representing the cost of living in the varying districts of the country, a new and uniform system has been drafted by the Statistique Générale, and it is proposed to bring it into application towards the end of 1931, or the beginning of 1932.

GERMANY.

Metal Wages Award — Government Campaign for Retail Price Reduction — Oil Activities of Prussian State.

(FROM OUR CORRESPONDENT.)

BERLIN, November 11.

THE arbitration tribunal has given its award on the wages of Berlin metal workers: they are to be reduced by 3 per cent. in the first place and by 8 per cent. as from January 18. This restores in essentials the original award against which the workers struck. The position of the unions is now most embarrassing. They agreed beforehand, as did also the employers, to accept the award, and they did so in the expectation that the tribunal would decide upon a smaller wage reduction. Now they have to admit to their members that the strike served no purpose whatever, and that it is impossible to reject the award because they tied their hands in advance. Their position is made more difficult by the unanimity of the award: even the nominee of the unions, Professor Sinzheimer, of Frankfurt University, voted with the chairman and the employers' nominee in favour of the reduction, though only, he declares, in order to secure for the workers the two months' respite.

The defeat of the employees will have a very embittering effect, and there is a grave danger that it will make the settlement of other wage disputes more difficult. Between now and the New Year a large number of current wage agreements are due to expire, and though the metal trades tribunal stated that their award was based entirely on conditions in the Berlin metal industry and that they did not consider it suitable for application to other industries, the efforts of employers, in connection with future arbitration proceedings, and no doubt those of the Government too, will be directed towards securing wage reductions, and the workers, after the experience of the metal trades dispute, will be exceedingly suspicious of any attempts at compromise. The position of the Government in the parliamentary debates which will take place at the beginning of December will also be difficult, as the Socialists will attack their wage policy and the leaders of the Social Democrats will have great difficulty, in view of the radical frame of mind of the workers, in keeping down the opposition to the Brüning Cabinet in their own ranks sufficiently to prevent the parliamentary basis of the Cabinet from being destroyed from the Left.

The metal wages award was expressly based on the Government's promise to bring about a reduction in the cost of living, so that the responsibility of the Government for executing this part of their programme has become very urgent. They have lost no time in bringing their influence to bear upon retail traders to induce them to reduce the prices of the necessities of life. So far the heavy fall in the prices of agricultural products has not been satisfactorily reflected in the prices paid by the consumer; for example, about 3.50 marks per centner are asked in Berlin for potatoes, while the farmers in the district receive 70 to 80 pfennigs for the same quantity. The retail trade pleads the heavy fiscal and social burdens which it has to carry, but there can be hardly any question, even allowing for these, of a justification of the present level of profits. The determined efforts of the Chancellor and the

Minister of Labour to induce retailers to lower their prices is the more commendable in that the present Cabinet includes, as Minister of Justice, the parliamentary leader of the Economic Party, Professor Bredt, and this party, in addition to the championship of houseowners, has made the representation of the interests of artisans and shopkeepers its special task. In the interest of retail traders it secured the inclusion in the President's emergency decrees of a special tax on consumers' societies and department stores.

Some initial success has been achieved by friendly negotiations. The price of bread in Berlin has been reduced from 50 to 46 pfennigs for the 1,250-gramme loaf; the price of pork is to be reduced by 5 pfennigs throughout the Reich; milk will be a pfennig per litre cheaper in Berlin; potato prices have not yet been dealt with. The Government is undoubtedly anxious to effect a substantial reduction in the cost of living before January, in order to be in a strong position when the very important coal-mining wages award, which has been postponed until the end of the year, falls due. If they can point to a heavy decline in the index, their wage policy may possibly succeed, otherwise it will only increase the social tension and probably end in failure.

The Prussian Landtag has just given its consent to the acquisition of the boring and working rights of the Anton Raky Oil Company in Salzgitter, Hanover, by the Preussische Bergwerks und Hütten A.G., all of whose shares are held by the Prussian State. The purchase price is about eight million marks. Great interest has been shown for some years, and especially during the last few months, in the Hanover oil deposits, and the American Sinclair group in particular has long harboured designs on them. In order to prevent the formation of a foreign monopoly the Prussian State has now entered the field. The North European Oil Company has acquired boring rights in many parts of Germany, from the State in Oldenburg, Mecklenburg-Schwerin and Brunswick, and from private interests in Hanover. Negotiations with Bavaria and Baden are still in progress. The Americans have begun boring operations in various places, but have so far not succeeded in starting production anywhere. The Prussian State has co-operated before with the Raky A.G., which is Germany's largest boring undertaking.

On the fields just acquired by the State, which are considered the best, four borings have already been successful, and the Preussag intends to build a new refinery in the neighbourhood. In spite of the unfavourable state of the market, the sale of the benzine output is secured by agreements with the postal and railway authorities. The Preussag will bring other groups into the business; offers are said to have been made by Otto Wolff and perhaps also by the Americans, but in any event the State will retain a majority holding. In proportion to the consumption in Germany the anticipated output of the new wells, estimated at 25 thousand tons of crude oil, is negligible. The entire German output of crude oil in the current year will only amount to 170,000 tons in spite of an increase of almost 70 per cent., and the German consumption of fuel oil and spirit amounts to 1.7 million tons annually. Of this, in addition to the quantity derived from domestic oil, there are produced in Germany some 100,000 tons of synthetic benzine by the I.G. Farbenindustrie and 300,000 tons of benzol; the rest has to be imported.

BELGIUM.

Unemployment — Agriculture — Industry — Wages — Postal and Telephone Changes.

(FROM OUR CORRESPONDENT.)

LOUVAIN, November 7.

THE number of unemployed has steadily increased, though it is still much below that of other countries. There were at the beginning of October 24,000 workmen totally and 61,000 partially unemployed. These figures cover approximately 600,000 workmen insured against

involuntary unemployment; a further million are not insured, but though there may be some partially unemployed among these, there are few totally unemployed.

Unemployment insurance in Belgium is voluntary; the State allows aid through its Emergency Fund when the unemployed have exhausted their right to benefit from their insurance association. The State and Communes also make voluntary grants to the insurance societies, but these are not very large. The total benefit which an unemployed paterfamilias can obtain from his insurance society amounts to 24 francs (about 3s.) a day.

For 1930 the above-mentioned Emergency Fund will absorb the relatively small amount of about 17 million francs, but for 1931 this item in the Budget is expected to be nearer 30 millions, especially as the period for which a workman must have been insured in order to qualify him for benefit is to be reduced from twelve to six months. Unemployment will very likely increase during this winter from both seasonal and general trade causes, and the peak may not be reached before the winter 1931-32.

In spite of increasing unemployment, Belgium is obliged to import some foreign labour. In the mines and for the public works under construction unskilled labour (mainly excavators) is needed, but the country's labour force being composed in general of skilled men, the native supply of unskilled hands is insufficient to meet the demand, and foreign labourers, among whom may be found even bank clerks from Hungary, are still recruited daily for digging waterways.

The depression has extended to the big agricultural enterprises. Farmers who grow wheat, oats, flax and sugar beet are closing this year with heavy losses. Fortunately these crops do not constitute more than one third of Belgium's total agricultural output, the remainder of which consists of dairy products and cattle. Owing to the fall in the price of fodder these undertakings still enjoy very reasonable profits. Evidence of this is to be found in the progress in the deposits of the banking department of the Boerenbond (Belgian peasant league), which will probably show a further advance of 100 million francs in 1930.

Complaints have been vehement in sugar-producing quarters. Belgium produces yearly 250,000 tons of sugar; its domestic market consumes about 220,000 tons and 30,000 tons are exported at very low prices. Imported sugar pays 60 centimes customs per kilog., and agriculturists are demanding a 50 centime increase in the import duty. They protest against the current foreign dumping and point out that in Belgium sugar is sold to the consumer at a very low price, namely, refined sugar at 3.60 francs per kilo. and household sugar at 2.50 francs (say, respectively, 2½d. and 1½d. per lb. avoirdupois). The Government referred the sugar question to the Economic High Council, which has almost unanimously rejected the proposal to raise the sugar duty by 50 centimes. A motion for an addition of 20 centimes was afterwards passed by nine votes to eight, but in view of its aversion from protectionism it is doubtful whether the Government will meet this small majority even half-way.

The general industrial situation is unsatisfactory; industrialists are at present trying to reduce costs, including wages. It has been reported that in the coal mines wages have been cut 9 per cent. A similar agreement has been entered upon in the diamond industry; in the textile industry, where wages are fixed partly with reference to the price index, a reduction of 5 per cent. has been effected. In the metallurgical industries employers have proposed a reduction of 5 per cent.; the employees have so far resisted, but they will very likely have to give way.

Though the settlement of next year's Budget has been difficult, the question of reducing the salaries of Government officials and railway employees has not yet been seriously taken up. As from December 1st the postage rates will be raised, as there is a deficit in the running of

the postal service. The inland postal rates will be 70 centimes against 60 for letters, and 40 centimes against 35 for postcards. The foreign postal rates will not be raised. At the same date the telephone service will be reorganised and compelled to cover expenditure of all kinds by its own receipts without recourse to the Exchequer; its tariff will also be raised moderately and 40 centimes will be charged for a local call.

SOUTH AFRICA.

Miners' Phthisis — Native Policy — Imports and Customs Revenue.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, October 8.

THE chairman of the Miners' Phthisis Medical Bureau (Dr. L. G. Irvine) has just published his Annual Report (U.G. 30/30) for the year ended July 31, 1929. Compensation is on an exceptionally liberal scale, owing to the political manoeuvres of many years, with the result that the disease is costing the shareholders in the industry about £1,250,000 per annum, or 10d. per ton milled at the present time. It is therefore very satisfactory, from the economic standpoint as well as on humanitarian grounds, to be able to learn from official sources that there has been "a definite decline in the true production-rates of the disease," and that this has taken place in spite of a continued increase in the number of miners of fairly long periods of service. It is stated that there has been a fall in the production-rates of 36 per cent. since the period 1920-23. As the effect of exposure to mine dust is cumulative, and as many beneficiaries are pensioners, there will not, of course, be a decrease in that proportion in the cost of compensation; that fact, however, does not mitigate the importance of the improvement. In 1928-29 there were 7,737 candidates for the certificate of the Bureau to entitle them to work underground. Of these 6,566 were South African born and 1,171 were born overseas. Of the former, 2,450 obtained the certificate and of the latter 564. It may be mentioned that the present system of examination dates back to 1916, and that of the 270 new cases of "simple silicosis" detected during the year only 29 had at any time passed the initial examination of the Bureau—the others being all men who were at work in the mines prior to the year 1916. It is understood that the Commission which sat a few months ago to inquire into the working of the Act of 1925 will recommend that the Government should contribute £250,000 per annum to the funds of the Miners' Phthisis Board. At present the Board is financed entirely by the mines, although the State draws some £2,150,000 from the various leased areas, and £1,100,000 in normal income tax from the companies, apart from super-tax from individual shareholders and other consequential revenue.

It is a not uncommon complaint in this country—and it is understood to be the same in other Dominions—that affairs of even major local importance do not receive much attention in Great Britain. Mr P. G. W. Grobler, the Minister of Lands in the Union Cabinet, seems therefore to have been distinguished by the reception of his enunciation of a new sort of Monroe Doctrine dealing with the Native question in African States generally. Mr Grobler's central idea may be summarised as "Our positive belief is expressed in the word segregation." In addition, he expects Governments beyond our borders to agree with him. He has an overwhelming majority in numbers on his side, including, as he says, English-speaking South Africans. In this country, those who do not support his view are commonly regarded as dangerous lunatics rather than as political opponents. It is to be doubted, however, how far the majority realise the sincerity of feeling of their opponents, and also whether the individuals composing that majority have, in any considerable numbers, placed themselves in a position to appreciate the stupidity and

ultimate hopelessness of plans for segregation. In another aspect, Mr Grobler's warning to England not to govern her African territories in her own way is a little amusing. If England may not, according to the good Nationalist, interfere in South Africa, why may South Africa interfere with England? And exactly how is the Union going to put pressure on the British Government, and on all the native races between Capetown and the Equator?

The South African Reserve Bank reduced its rate from 6 to 5½ per cent. from September 29th. It is stated that this step is due to the steady improvement in the banking position in recent months, and the fact that imports have fallen in consonance with the value of exports, thus maintaining a satisfactory exchange position. The reduction in imports, although satisfactory as maintaining a sound exchange position, brings its own problems in its train. For the first five months of the financial year (period ended August 31st) the revenue of the Union was £9,932,710, against £11,486,780 in the corresponding period of last year. This diminution was mainly due to a decline of nearly £1,200,000 in Customs revenue. The Acting Minister of Finance informed the Cape Nationalist Party Congress that a deficit at the end of the financial year is inevitable.

ARGENTINA.

Financial Reform — Exchanges — Currency.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 18.

CLOSE upon two months have elapsed since the Provisional Government was installed, and one may therefore attempt to give in summarised form an idea of what has been accomplished in the way of financial and commercial improvement. Errors, waste, and even worse economic offences, committed by the late Government, have daily come to light, but, very wisely, these things have been recorded, and leakages stopped, without undue fuss being made. In some cases matters have been brought to the notice of the criminal courts, and efforts will be made to punish individuals for what is neither more nor less than common embezzlement, although conviction is likely to be difficult as many of the accused have left the country.

Throughout the Ministries loose screws are being tightened, with the result that many important economies have already come into effect and there has been an immediate increase in the revenue collections, especially in the Customs House, where "irregularities" costing the country millions of dollars have for the past eighteen months been common form. The Ministry of Finance is fortunate in that its affairs are in the hands of Dr. Enrique S. Perez, who knows the departmental ropes and has also a sound knowledge of men and affairs, having held the portfolio in 1913. He is ably seconded by his sub-Secretary, Dr. Raul Prebisch, a leading Argentine economist and statistician, who has held a chair in the Faculty of Economic Sciences, and was responsible for the Bureau of Economic Investigations established by the Banco de la Nacion Argentina in 1923.

To this happy combination may be attributed the sound methods that have marked the proceedings of the Ministry of Finance during what has been a most critical period for Argentine financial and mercantile affairs. After the satisfactory settlement of the \$50,000,000 United States loan, due on October 1st, came an unexpected weakness in the exchanges, accentuated by the news from Brazil. Small cereal shipments, rumours of heavy deficits in all government departments, and a general sense of reaction, all contributed to depress the market, with the result that the Argentine dollar fell gradually, until it touched 36½d. No panic measures were adopted. The Ministry of Finance first announced that it had struck a provisional balance showing that the present year would close with a deficit of \$698,000,000 paper, and a few days later issued a decree, on the authority of Article 62 of the current

Budget Law, whereby the Banco de la Nacion Argentina is allowed to export gold, against the deposit of equivalent sums in paper with the Conversion Office, for the purpose of meeting foreign debt services. Five million dollars gold will be shipped to New York on October 24th, and further remittances will follow; it is expected that some \$12,000,000 gold in all will be thus exported between now and the end of December. At the same time the banks have been given to understand that they will help the present situation considerably by abstaining from purely speculative exchange transactions and doing all they can to discourage such business. The situation has been tactfully handled, and there is good reason to believe that the upward movement of the Argentine dollar will be gradual, but free from extreme oscillations, during the next month, and thereafter, when reinforced by the new crops, carried to still higher levels.

Low prices for all cereals—November wheat is \$7.45 paper per 100 kilos; maize, \$5.05; linseed, \$14.40—and general world conditions do not encourage exports at the moment, but by the end of the year a healthier tone may be present, especially if anything comes of the proposed agreement between Argentina and Australian cereal interests to limit shipments.

As far as can be ascertained, it is the intention of the Government to study the whole question of Argentine currency from a new and present-day angle. The supposition is that this will eventually mean the drafting of a scheme for the abolition of the dual currency—paper dollars and gold dollars—as being anomalous, and the establishment of a single issue with a gold backing on a percentage basis. This naturally implies a change in the banking arrangements, and the readjustment of the Banco de la Nacion in such a manner as may best enable it to exercise influence upon the money market through the use of the discount rate, but exactly what system will be adopted is not yet known. Indeed, the probability is that no decision can be come to until the question has been considered from every possible angle. It bears upon the deficit above-mentioned, since, of the \$698,000,000, an amount of \$395,000,000 corresponds to unissued bonds for public works carried out at the expense of current revenues, while \$303,000,000 corresponds to actual administrative deficits, which *La Nacion* details thus: 111 millions deficit in 1929, 130 millions deficit for 1930, 25 millions State Railways deficit, 30 millions National Council of Education deficit, and 7 millions deficit in Posts and Telegraphs. These are all estimates, and are likely to be over rather than under the final figures. They are not as bad as it was feared they might be, and, inasmuch as the question of the outstanding bonds is as old as 1913, the position though unpleasant, is not one of any danger. There are two possible methods which would, in combination, help to bring about a permanent improvement in the financial situation—reconstitution of the currency system, which would free some \$200,000,000 gold, and the flotation of an external long-term loan, would conjointly dispose once and for all of what is in effect an old outstanding floating debt. At the same time thorough reorganisation of the budgetary system, with economy in administrative outlay—\$100,000,000 paper per annum has been named as a practicable figure in this connection—would enable the necessary administrative duties to be carried out without undue increase of taxation.

This very general survey of an intricate and complex problem may serve to show that Argentina's financial outlook is brighter than was at one time believed to be the case. All national bonds are firm, and those bearing 6 per cent. interest are but a couple of points under parity. Although pessimists insist that this is largely due to the investment of money here pending an improvement in the exchange which will enable remittances to be made without loss, it may be doubted whether such sums are, in the aggregate, as large as the pessimists would have us believe.

Letters to the Editor.

INTERNATIONAL MIDDLE-CLASS LIVING COSTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The results of the inquiry into Comparative Middle-Class Living Costs made on behalf of Unilever, Limited, and published in last Saturday's *Economist*, embody information which would be of very real value if one could feel sure of the soundness of the material on which it was based and of the treatment the material has received. But a scrutiny of the tables and notes reveals features which give rise to serious misgivings.

To take one example: In four of the eight budgetary groups (food, servants, clothing and sundries) the increased expenditure as income rises is almost exactly proportionate in all the foreign countries, except Norway, to the increase in expenditure on those items in the English Budget. This is either an extraordinary phenomenon, or it is a sign that all these items in two of the tables have been derived by simple proportion from those in the third.

An equally remarkable proportionality reveals itself as between the "food" and "servants" items. In all countries alike (except Norway, where an adjustment has avowedly been made) the expenditure on servants is almost exactly one-fourth the expenditure on food at the £500 level, five-sevenths at the £1,500 level, and equal at the £3,000 level. Such an approximation to uniformity is unprecedented in international statistical comparisons.

It is important to know whether the tables are really based on ascertained data or have been in large part constructed one from the other with the aid of a slide rule. Internal evidence suggests the latter.

The information as to the relative costs of food in the different countries would be of value did not much more comprehensive information exist. The International Labour Office publishes twice yearly the comparative costs of foodstuffs in most of these countries. Their bases are far wider than any open to private inquirers, and their sources, data and methods open to detailed inspection. Where the Unilever figures differ from those of the International Labour Office (for France and Holland they are too low, in Norway too high) the difference is more probably due to error than to differences in the income scales. Indeed, the possibility of income levels affecting the food-cost differences as between country and country is ruled out by the proportionality already remarked.

As regards clothing, one may accept or reject the Unilever figures, or suspend judgment, according to taste. For seven years the expert statisticians of the International Labour Office have been seeking a way of adding the clothing item to their biennial comparisons, but have hitherto been baffled by the inherent difficulties of differences in national habits, needs and tastes. Anyone who has faced up to the problems involved knows their complexity, and knows the arbitrary decisions that must be taken to produce any international comparisons. No series such as that given in these tables is of any value unless the data and methods are disclosed.

"Rent" and "Motor-car upkeep" are not similarly proportional. But if the expenditure on food, servants, clothing and sundries move up proportionally with the rise in English expenditure, why not rent and motor-car upkeep? If a man can control his food, service, clothing and sundries expenditure by the slide rule, why not his rent and car expenditure? Why the aberrations shown in these items in the tables?

There survive this general scrutiny only two of the eight internationally-variable groups—taxation and schooling. The first is labelled simply "taxation." What taxation? Direct only? If so, where is the indirect in the taxation comparison? State income tax only? or State and Local? The manner of distribution of taxation varies greatly from country to country. The British figures are for income tax only; those of most of the other countries appear to include local taxation. The only official figures on which I can lay my hands at the moment are for Norway, where in 1927-28 persons with an average income of £600 a year paid 8.3 per cent. of their income in "taxation," which would make £41 10s. instead of the £100 in the first Unilever table, and for Amsterdam, where in 1923-24 persons with an average income of £520 a year paid 13.9 per cent., which would make £69 10s. instead of the £30 in the table. These discrepancies may be quite explicable according to the definition of "taxation," but they demonstrate that, without definition and detailed exposition of method, the "taxation" figures are meaningless.

The education item, as the *Economist* properly suggests in its preamble, raises the whole question of what it is that is being compared. In three countries (Sweden, Norway and Germany) a man apparently spends the same on the schooling of his children whether his income be £500 a year or £3,000.

So one can in England, if one chooses. If we spend more, it is because we choose to pay for our fancies. It is not education we pay for, but exclusiveness. In Sweden, Norway and Germany you do not get exclusiveness; you merely get education. If you want exclusiveness you pay for it at much the same rate as in England. Why, then, regard the Swede, the Norwegian and the German as getting for £40, £35 and £30 what they do not get at all at that price? What is it that is being compared?

Of the "Surplus" item it is difficult to speak seriously. On one interpretation it assumes that entertainments, clubs, holidays and recreation cost the same in all countries. But that is precisely what is supposed to be undergoing measurement. On another interpretation it assumes that net savings are determined solely by the balance of expenditure on these items. Why? Why not on other items also? Are these the only elastic items? And why must a man on a given income save or spend on these things the same amount in all countries? The only rational explanation of "Surplus" is that it has crept in by inadvertence from some other tables to which it properly belongs.

Examination of any tables at any point reveals some oddity or irregularity. Who gets a servant in England for £30 (less household expenses) a year? Who runs a car, with chauffeur, on £102 a year? Is it suggested that they are averages of people with and without servants, with and without motor cars or chauffeurs? Then, if averaging is the process, why is the average of motor-car expenditure of Norwegians on salaries of £1,600 nil? Is there a law in Norway that no one with a salary of £1,500 a year shall own a car? And why is there not a small figure for the average at the £500 level of people in all countries with and without cars or motor cycles.

Data from which one could attempt an estimate of the relative cost of living of middle-class families on various scales of income in a number of European countries would be of very great value, but it must be real data obtained and treated in accordance with recognised statistical technique. The Unilever inquiry has merely added confusion to uncertainty.—Yours faithfully,

JEREMY HALFORD.

London, S.W.1. November 11, 1930.

ACTUARIES' INVESTMENT INDEX.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your Investment Note on the new Actuaries' Investment Index Number you cite various authorities for purposes of comparison, and conclude by saying that the problem of choosing sample stocks of a really "representative" character is decidedly formidable. I should like to endorse that view from four years' practical experience. The first point to be settled is exactly what it is the compiler is setting out to measure. If he is purposing to measure changes in the fortunes of an active operator he must regard each week as a separate time-unit of measurement, and be prepared to change his list of shares so as to include those that are most active each week. If he does this, he must be prepared for very wide fluctuations in his index over a period of months and years, and must also realise that in times of boom at least "active" shares are synonymous with "rising" shares. This will give his index an upward tilt, which at the end of a few months will become sufficiently pronounced to need correction.

On the other hand, if he proposes to concentrate upon "representative" shares, as determined by their general importance or by the total number outstanding, he must realise that even a list of this kind cannot remain fixed for more than a few years at the most. His only course of action is to regard himself as an investment trust, and must "buy" and "sell" shares from time to time, being guided in his operations, not by the usual considerations that influence trust managers, but by changes in the "importance" of different shares. This is a task calling for some delicacy, if his index is to remain an honest reflection of the situation.

I have compiled two independent index numbers of industrial shares. One is the sensitive operators' index, and appears regularly in the *Financial Times*. The other, which has not yet been published in England, is based on a list of fifty ordinary shares, compiled from companies with the largest capital. To illustrate my points, I give them below, together with those for industrial ordinary shares cited by you last week:—

	End December, 1928 = 100.				
	End Sept. '29.	Dec. '29	July '30	Sept. '30	Oct. '30
Actuaries ...	95.6	81.9	72.3	70.1	69.5
Fin. News ...	97.9	84.3	75.9	74.3	74.2
Inv. Chronicle ...	88.8	75.9	68.1	66.8	65.9
Bankers' Mag. ...	104.2	92.7	86.5	84.8	80.0
Crump (50 im- portant shares) ...	92.3	85.1	76.1	73.3	71.7
Fin. Times (operators') ...	80.2	48.9	40.4	37.2	34.8

The decline in my index of fifty shares is 28.3 per cent. The decline in the *Financial Times* operators' index is 65.2 per cent. This both illustrates the greater sensitivity of the operators' index, and also shows how the more active (and (?) speculative) shares are affected by a slump in comparison with those of large (and (?) well-established) companies, whose shares change hands less on the market.

I may add that I have plotted the last two index numbers week by week on the same chart over a period of years. Although the slope of the operators' index, both up and down, and also the amplitude of its long-term fluctuations, are much greater than those of the other index, both curves display a striking parallelism in respect of their minor fluctuations between one week and the next.

The upshot is that the compilation of a stock index number demands a very different technique from that of a commodity index number. I am not sure whether on theoretical grounds the geometric is the best average to use; in fact, the conception of the investment trust requires the "weighted aggregate" (I reject the simple arithmetic, as being now theoretically obsolete). In any case, I suggest, the compiler must have a clear idea of what he is measuring, and must approach his problem accordingly. Finally, I agree with you in your criticism of December, 1928, as a base. The lack of precision inherent in these calculations means that there are grave objections to fixing the base at a date that falls either at the peak or the trough of the curve.—I am, Sir, yours faithfully,

NORMAN CRUMP

(Statistical Correspondent, *Financial Times*).

Books and Publications.

BANKING ABROAD.

MANY readers and reviewers instinctively distrust books whose preface bears the name of some *personnage magnifique*. The book* written on central banking by Mr Kisch and Miss Elkin is calculated, however, to allay this prejudice. Although its foreword was contributed by no less authority than Mr Montagu Norman, the book would stand well also on its own merit, and fully deserves the favourable reception which enabled its publishers to bring out three editions in less than eighteen months.

Although the authors are not afraid of expressing opinions as to central banking principles, they endeavour, wisely enough, to keep aloof from currency controversies. Their principal aim is to compare the existing central banking legislations and practices of various countries, and they certainly carried out this arduous task with an immense wealth of knowledge of the existing material. The material they have collected—a great part of which would be unattainable to anybody but the specialist with ample time for research—certainly contains controversial elements; but the authors leave it to others to explore the possibilities thus provided. Their work is, nevertheless, more than a mere book of reference. It has a thesis to support; the ideal to be attained is the greatest degree of uniformity of central banking system compatible with the differences between conditions prevailing in various countries. In the pursuance of that ideal the authors are occasionally inclined to be somewhat dogmatic. For instance, by implication they suggest that the reason of the suspension of the gold standard in the Argentine and Canada during 1929 was the absence of central bank. The case for the establishment of a central bank in every country is surely strong enough to make such over-statement superfluous. The authors lay, also, too much stress upon the conflicting interests of commercial banks and central banks. Although our system is based upon the exclusion of commercial banks from the control of the central institution, in other countries where commercial banks have their say in the management of their banks of issue the system produces equally satisfactory results.

One is inclined to regard central banks as semi-official institutions, throning on their Olymp, and to overlook the

* "Central Banks." By C. H. Kisch, C.B., and W. A. Elkin. With a Foreword by The Right Hon. Montagu C. Norman, D.S.O., Governor of the Bank of England. Macmillan & Co. 1930. Third Edition. 18s. net.

essentially "human" aspects of their activities. Chapter VII., describing the business activities of central banks, fulfils, therefore, an exceptionally useful task. Possibly it could have gone somewhat further in giving details of actual practice as to various operations. While the gold transactions to which the banks are compelled by their statutes are described, nothing is said in this chapter about gold transactions in which the banks take the initiative. To some extent this omission is made good in the following chapter on co-operation of central banks.

Another recently-published book* which deserves the attention of those interested in banking systems abroad is a monograph by Mr Whale on the German joint stock banks. In connection with the present inquiry into the relations of banks and industries in this country, this book is of great topical interest, for Germany is often quoted as the classical example of how banks should help industries. Mr Whale gives a detailed account of the useful work done in this respect by the German joint stock banks. Although in favour of the system—which justified itself in pre-war Germany by its success—the author does not fail to point out its weak points.

The book provides valuable historical and statistical material on the activities of German banks before, during and after the war. We could well do with similar thorough works on the banking systems of other countries. Mr Whale gives some indications as to the extent to which German foreign trade was financed in London, especially before the war; considering the great interest of this part of his subject, a more detailed examination of the means by which German banks are able to finance in this market long-term export credits would have been welcome. In dealing with the decline in the volume of acceptances of German banks after the war, he overlooks the fact that acceptance credits granted before the war by London branches of German banks (which were naturally included in balance sheets) were replaced to a great extent by acceptance credits granted by their Amsterdam subsidiaries, which are not included in the balance sheets of the parent institutions. Another minor omission is that of the names of London banks from the list of foreign banks in which German banks hold a participation.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The World's Economic Dilemma. By Ernest Minor Patterson. (London) McGraw-Hill Publishing Company, Ltd., 6 and 8, Bouverie Street. 17s. 6d. net.

A discussion of various phases of the world economic situation, built round the central problem presented by the growth of international economic interdependence concurrently with an intensification of economic nationalism.

Federal Reserve Policy, 1921-1930. By H. L. Reed. (London) McGraw-Hill Publishing Company, Ltd., 6 and 8, Bouverie Street. 12s. 6d. net.

A discussion of the Federal Reserve System, with particular reference to the adaptation of its policy to meet specific situations.

Selected Documents submitted to the Gold Delegation of the Financial Committee. (Geneva) League of Nations.

Includes eight memoranda on subjects relating to gold, stabilisation, and international price levels, by Sir Henry Strakosch, Mr O. M. W. Sprague, M. Jacques Rueff, Dr. L. J. A. Trip, and Dr. Feliks Mlynarski respectively.

Legislation on Gold. (Geneva) League of Nations.

A complete work of reference on the legislation on gold in seventy-one countries.

Oro e Prezzi. By Giuglio Scagnetti. (Rome) Tip. Terme, Piazza Terme, 6.

An article in Italian on monetary conditions, the international distribution of gold, and the relation between gold and prices.

Colonial and Foreign Banking Systems. By Keith Le Cheminant. Second edition. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 6s. net.

The new edition of this very useful text-book has been brought up to date, and enlarged to include Holland and Switzerland.

The Canons of International Law. By T. Baty. (London) John Murray, 50A, Albemarle Street. 21s. net.

The purpose of the author, as stated in the preface, is not to embark on questions of detail, but to ascertain and reinforce certain guiding principles. His book is an interesting discussion of live problems.

The Mandates System. By Norman Bentwich. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 15s. net.

As an international lawyer with practical experience of the working of the Palestine Mandate, Mr Bentwich is exceptionally well qualified to write of the legal and administrative aspects of the system of mandates. The treatment is of necessity descriptive rather than critical.

Papers on Indian States Development. (London) East and West, Ltd., 3, Victoria Street. 5s. net.

Six papers on the economic future of the Indian States.

The Economic Prospect before the Indian States. By John de la Valette. (London) East and West, Ltd., 3, Victoria Street. 2s. 6d. net.

This paper is also included in the collection above.

Population Problem of India. By B. T. Ranadive. (London) Longmans, Green and Co., Ltd., 39, Paternoster Row. 10s. 6d. net.

A study which is equally valuable for the student of Indian economics and for the student of population problems in general.

Silk and the Silk Industry. By Joseph Schober. Translated by R. Cuthill. (London) Constable and Company, Ltd., Orange Street. 21s. net.

An account, with illustrations, of the technique of the silk industry, from the rearing of the worm to the testing of the finished fabric.

A Manual of Rating. By S. R. C. Bosanquet and Percival Frere Smith. (London) Chapman and Hall, Ltd., 11, Henrietta Street. 25s. net.

A detailed guide to the principles which should govern the rating and derating of all classes of property, and the practice to be applied in each instance. It is very conveniently arranged.

International Labour Review, October, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes an article by E. B. Dietrich on "The Present Status of the Cotton Textile Industry," with interesting international statistics, and one on "Land Reform in Roumania," by Dr. Olindo Gorni.

British Russian Gazette and Trade Outlook, October, 1930. 1s.

This tenth anniversary number, of which rather more than half is printed in Russian, contains a number of interesting articles and some useful statistics.

The Stock Exchange.

THE OUTLOOK FOR AMERICAN SECURITIES.

THE recent course of the American security markets has been disappointing and disquieting. Twelve months after the onset of the great "bear market," liquidation is still in progress, to the accompaniment of failures and rumours of failures, reduced industrial activity and lower company earnings. In London share values have lately been bumping along the bottom, with "secondary" rallies and, possibly, a slight gain on balance, while gilt-edged stocks have shown a firm tendency. In New York, on the other hand, stocks have fallen steeply and more or less continuously, while the bond market (after a rise which carried values back to the level of mid-1928) has suffered an appreciable reaction.

The last few months have, in fact, done much to reveal the American stock market situation in its true colours. A year ago, American authorities were well-nigh unanimous in regarding the slump as a purely Stock Exchange phenomenon which, once unhealthy speculative influences had been eliminated, would leave prices free to resume the upward trend of 1927 and 1928. The rise of values in the early part of 1930 was the logical outcome of this view. By the latter part of April, however, it became evident that American industry was in

AMERICAN SHARE VALUES AND INDUSTRIAL PRODUCTION.

(Average 1926 = 100.)

the grip of depression, and that all estimates based on current earnings must be revised downwards. Throughout the summer, increasing evidence accumulated as to the severity and extent of the economic depression. To-day, when it is only too clear that the autumn has not brought even a normal seasonal expansion in industry—much less an upturn in the long-term curve of activity—the inevitable and cumulative disillusionment of a whole nation has induced a mood of pessimism scarcely less pronounced than its converse of 1928-29.

Broadly speaking, the most striking conclusions which this year's events have suggested to the American people have been, firstly, that the growth of prosperity in their country was neither inevitable nor independent of world-wide forces; and secondly, that, even before the Wall Street boom of 1928-29 "got out of hand," the rise in security values was progressively outrunning the growth of industrial activity. The line marked "Industrial Production" on the annexed chart shows the course of the index number of production, compiled by the Washington Department of Commerce and adjusted for seasonal fluctuations. While average security prices

were 82 per cent. above the datum level (1926) in May, 1929, before the final upward surge in prices began, at no time was the average level of American productivity more than 18 per cent. above the 1926 datum point. The chart further shows that industry turned downwards in November last year, precisely at the same time as security prices suffered their first break. To-day, despite the accentuation of industrial depression since the spring of this year, the two curves are closer to each other than for many months past.

While the shares of every important American industrial group have slumped heavily in the last twelve months, the movement has been by no means identical in all cases. For instance, while industrial and railroad shares are, to-day, practically at the level of 1926, public utility stocks are still approximately 70 per cent. above the latter figure. As between the shares of different industrial groups, the "spread" is very considerable, as is shown by the table given below, based on data supplied by the Standard Statistics Company:—

(1926 average = 100.)

	Highest, 1929.	Lowest, 1929.	Highest, 1930.	Oct. 29, 1930.	Nov. 13, 1930.

* Including General Motors. † Including gramophone industry.
‡ Including U.S. Steel Corporation.

At the end of last month the shares of representative concerns in the electrical equipment, chemical, radio and telegraph and telephone industries were well above the datum level of 1926 (though the decline from the highest point touched after recovery in the early part of this year was severe in some cases). Other groups, however, like coal, textiles and building equipment, showed considerable depreciation below the base figures.

The American stock markets have undoubtedly suffered severe "deflation" in the last few months. When is the tide likely to turn? The hesitancy of the professional forecasting agencies to answer this question is typical of the uncertainty which clouds the immediate outlook. The two most relevant factors are firstly, the technical condition of the market and, secondly, the state of industry. Under the first heading, much has undoubtedly been done by way of liquidation, forced or otherwise, of stocks held on borrowed money. The figure of New York brokers' loans has now been reduced to the lowest level since the returns were started four years ago, and the total volume of bank credit involved in Stock Exchange operations has declined materially. It is generally believed, however—not without circumstantial evidence—that a number of weak houses are being supported in order to prevent the damaging moral effect of further failures, and that some of the country banks still have their funds tied up in loans on securities to a not altogether healthy extent.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
November 18.

ACCOUNT.
November 20.

THE markets showed the same tendencies as in earlier weeks—a sullen acquiescence in unfavourable developments and a willingness to put the best possible construction on good news. Gilt-edged stocks, for instance, early in the week were irregular rather than markedly easier on the tightening of money market rates and the weakness of the franc, but speedily strengthened when these depressing factors became less prominent. At the other end of the scale, oil shares, depressed by sales from Paris, showed unexpected powers of recovery on the maintenance of the Royal Dutch and Shell dividends. Altogether, the impression that London has seen the worst of its internal liquidation has been strengthened by the week's movements. No international centre, however, can calculate probabilities with reference merely to its own conditions, and it is possible that certain overseas centres are at a somewhat less advanced stage than London, as regards technical readjustment after prolonged depression. In this connection, special interest attaches to the detailed review of the Wall Street outlook which is given on the previous page.

The dullness of gilt-edged securities at the beginning of the week reflected a temporary withdrawal of support rather than selling on any appreciable scale. Conversely, the better tendency of mid-week was not accompanied by any considerable expansion of business. Funding Loan obtained special attention, while Four per Cent. Consols and all Conversion issues made a satisfactory showing. Australian loans, after becoming largely a nominal market on the proposals of the Caucus for an enforced extension of maturing internal liabilities, showed a measurable recovery (as described on page 920) on the victory of sounder opinion. Indian loans were steady before the opening of the Round Table Conference.

Foreign bonds showed considerable day-to-day fluctuation, Germans, for instance, being alternately sold and reabsorbed by Amsterdam and other Continental centres. Brazilians were irregular, and other South Americans undecided, reports being current of a new revolution in Peru. San Paulo loans had a weak appearance.

Last week's partial recovery in home rails was not maintained, the week's batch of traffic figures making a less satisfactory showing, while the prevailing attitude towards the wage negotiations was pessimistic. Rumours that the Argentine crops had been seriously affected by rust caused an all-round marking down of Argentine railway quotations, but the market subsequently regarded the news as greatly exaggerated. Antofagastas were out of favour. Canadian Pacific hardened on the improved tone of New York and Montreal on Thursday.

INVESTMENT

by L. L. B. Angas

(Author of "The Coming Collapse in Rubber," 1926.)

A book which shows how to detect the beginnings and endings of slumps and booms in single industries, and how to exploit the fluctuations which take place in shares on the Stock Exchange.

Rules are laid down for the timing of both buying and selling, and directions are given for taking profits and losses.

A valuable feature of the book is the list of faults which must be avoided.

The Economist: "To the Stockbroker, and even more to the individual investor, this book will be a *vade mecum*, the mastering of whose principles will repay in hard cash many hours of study."

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."

Publishers: Macmillan & Co., St. Martin's Street, LONDON, W.C.1. 187 pages. Numerous Charts. PRICE 20/-

The industrial situation shows all the outward symptoms of a depression of unquestionable severity. The earnings' figures of the larger companies for the third quarter of this year have generally made a poor showing. To take but a few examples, the third quarter's earnings of Du Pont showed a reduction of 37 per cent. as compared with the same period of 1929; those of the National Cash Register a decline of 75 per cent.; those of the Westinghouse Electric, of 53 per cent.; while those of the Shell Union show a drop of no less than 88 per cent. The tendency, moreover, has been accentuated rather than relieved in the last few months. Available returns for two hundred companies reveal a decline in net earning of 33 per cent. for the first nine months of this year compared with 1929, but of as much as 45 per cent. when the comparison is confined to the last three months. The autumn seasonal revival has not come up to expectation. Car loadings have been running 3½ per cent. under the seasonal estimate, building contracts 1½ per cent., exports of merchandise 8½ per cent., and mail order sales 11½ per cent. Coal production has shown more than a normal seasonal gain, but pig-iron output has fallen short of its expected autumn recovery by about 6½ per cent., and steel production by 8½ per cent. It has even been reported that the steel industry which has been operating recently at about 50 per cent. of capacity, may fall to no more than 40 per cent. This year's crops have been of satisfactory volume, but as they will be marketed at prices considerably below those of a year ago, they are unlikely to contribute to a speedy revival of purchasing power from the South and Middle West.

There are, however, some observers who maintain that less than due attention is being paid to certain reassuring features. The heavy falling off in industrial production is, they maintain, itself calculated to hasten the dawn of eventual trade revival. Manufacturers are deliberately letting their stocks run down, and the repercussions of increased demand, whenever it comes, will be calculated to spread quickly through the whole industrial system. In some of the textile trades low prices have already stimulated demand to some extent, while the automobile and tyre industries, among others, have kept production so strictly in check that the end of the "consumers' strike" may have a disproportionately sharp effect on their activity. The readjustment of retail prices to the reduced level of wholesale values is slowly but surely getting under way, but in any case, retail trade, if allowance be made for price changes, has shown a smaller decline than manufacturing activity. The relatively bad showing made by the mail order houses reflects mainly the greatly reduced purchasing power of the agricultural areas. Sales by chain stores, however, have in recent weeks actually exceeded those of last year. The building industry, which has been among the most depressed, is now showing signs of increased demand, which is not entirely due to State-inspired works, but is very noticeable in the field of residential building.

Against these indications must be set the absence of any reassuring evidence regarding the position of some of the raw material-producing industries, and the probability that some groups, like oil and copper, may be faced with costly readjustments on the breakdown of attempted price control. Unemployment is widespread—the American Federation of Labour had 21 per cent. of its members unemployed in September.

Nevertheless, a feeling is gaining rather than losing ground in conservative quarters that Stock Exchange values have been brought into a closer relation with hard facts than for years past, and that the problems of American industry and the Stock Exchange alike are tending to hinge less on internal factors and more on a recovery of national confidence. There may still be a certain amount of "cleaning up" to be done, which may exert an unfavourable influence on the immediate future of security values. Broadly speaking, however, the Stock Exchange is now waiting upon industry, and its recovery may well date from the first tangible indications of increased productive activity.

(Continued from page 915.)

Business in the industrial markets was restricted, public and professionals alike finding no reason to lighten their commitments and numerous reasons for refusing to extend them. New York, as in previous weeks, was an uncertain influence, but came in more strongly towards the end of the week, when internationals became harder than for some time past. Among domestic industrials, electricity supply shares made the best showing. The motor group was heavy, the Thornycroft report (discussed on page 921), being regarded as disappointing, while the reduction in the Dennis dividend was not put down to conservatism alone. Textile shares moved within narrow limits, the recent slight spurt of buying from the provinces having died down. The passing of the Fine Cotton Spinners' interim dividend was unwelcome, but not unexpected. Tobacco shares came again on offer, and breweries were irregular. Little business was done in the iron and steel group, where the decision of Guest, Keen and Nettlefolds to make no interim payment caused a setback to confidence. A slight hardening of Cunards was associated with parliamentary developments in connection

with the insurance of the company's new super-steamers. Newspapers were firm on the maintenance of the Daily Mail Trust dividend. Kreuger and Toll were offered from America. Though insurance share prices were maintained, dealings were on a smaller scale than last week. Bank shares were more irregular, apart from those of the Indian banks, which obtained special support.

Dealings in rubber shares were of narrow dimensions, though the market's tone was better on the steady price of the raw material. Business in tea shares was even more meagre, but feeling showed a noticeable improvement on the end-October figures, which revealed that Eastern tea-producers were acting fully up to their engagements under the output regulation scheme. A considerable business was done in the oil market, where prices were weak at the outset, on Paris selling and other influences described in a special note on page 921, but strengthened subsequently, though the recovery was not held.

Dealings in Mining shares were again, with a few exceptions, on a narrow scale. Despite a record monthly output from the Rand, Kafirs were largely neglected by the Cape. Gold Fields improved on the 7½ per cent. dividend, which was above expectation. Rhodesian shares had a dull week, but Chartered came into request from Paris and Wankies improved on an increased final dividend. The statement by the Union Minister of Mines that effect would be given to a diamond sales agreement, in accordance with which the Government would regulate its sales, caused a strengthening of De Beers. Rhodesians were subject to selling pressure, but improved on the news of the copper agreement in America, which was hailed as an event of first-rate importance. A more cautious view is suggested by a trade correspondent on page 923. The advance in the price of copper caused a sharp recovery in Tintos, which had been sold from Paris earlier in the week.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The continuance of fairly heavy liquidation in the early part of the week, which puzzled some market experts, was explainable by moderate forced selling and considerable bear activity. Weakness was particularly noticeable in railroads, while in the oil group Standard of New Jersey was carried for a time below 50, the point at which the famous Rockefeller buying order was placed last year. Amusement shares were the object of numerous bear drives, Warner Brothers and Fox showing particular weakness, despite the statement that the latter would earn and pay a \$4 dividend. Later, there was a good deal of bear covering when the effects of the announcement of a new restriction agreement spread from copper shares to many other markets. The industrial situation developed according to expectation.

Steel production has fallen from 47 to 43 per cent. of capacity, and no upturn is prophesied before January. Car loadings are down by a further 2½ per cent., but retail business still keeps up well and the textile industries have shown a further slight improvement. In the stock markets the best rises in the latter part of the week were shown by Anaconda, New York Central, America Smelting, Allied Chemical and Ingersoll Rand. The bond market was steadier, sales to support stock positions tending to dry up. Call money remained at 2 per cent., but was usually available outside the market at 1½ per cent. or less.

* 2-hour session.

BERLIN.

Selling pressure set in on the Berlin Bourse immediately after the elections, and lasted until October 13th. The vigorous upward movement which succeeded the decline was due to the sudden improvement in the foreign exchange market. On October 9th the Reichsbank raised its discount rate, and by creating stringency in the money market put an end to further withdrawals of gold and foreign exchange. A revival of German borrowing in foreign markets, and the end of the decline in quotations of German internal loans, marked the improvement. During the last ten days of October, however, the Bourse became quiet once more on news of unfavourable develop-

ments in German industry and on the foreign stock exchanges. Early in November the depression grew more profound, uneasiness being felt regarding possible developments on the resumption of the Reichstag session early in December. Inter-group share movements last month, however, were far from uniform. While most bank shares were depressed, for example, Reichsbank shares rose considerably. A few industrials, like Farbenindustrie and Karstadt, were firm, while others fell substantially. Hapag and Lloyd lost a few points in anticipation of a dividend reduction; and A.E.C. dropped about 10 per cent. on rumours of a lower dividend. The declines in Zellstoff-Waldhof (the greatest German paper company) and Selzdetfurth (one of the leading potash companies) attracted particular attention. The most marked fall was shown by Deutsche Linoleumwerke, owing to the company's serious losses over its policy of expansion in France and Holland. Bonds have recently shown improvement, chiefly as a result of the stringent limitations of new internal issues.

INVESTMENT NOTES.

Are Long-Term Interest Rates Falling?—Although London has had the benefit of cheap money for the last eight months, there has been no rush of new issues, the total new money raised this year up to the present being, in fact, no more than £230,000,000, an increase of only £19,000,000 over the same period of last year, when money market rates were approximately 2 per cent. higher. The Actuaries' index figures (which were set out on page 871 of last week's *Economist*), show, indeed, that up to the end of October, the market prices of sound fixed-interest

stocks were (apart from gilt-edged) little if at all above the level reached in December, 1928, when the "equity boom" was at its height, and Bank rate stood at 4½ per cent. Long-term rates have, indeed, been slow to adjust themselves to the fall in short-term rates, partly through the tendency of the public, at the beginning of a depression, to include all industrial shares, equities and fixed-interest alike, in the same urge to sell. Within the last few weeks, however, evidence of the beginning of a better adjustment between long- and short-term rates has been observable, and borrowers of high standing can float issues to moderate amounts giving yields anything up to ½ per cent. less than before the summer holidays. It may be asked how present rates compare with those prevailing during the last spell of cheap money, in 1922-23. An approximate answer is given in the following table:—

LONDON BORROWINGS AT FIXED INTEREST, 1922-23, AND 1930.
(000's omitted.)

	Year 1922.		Year 1923.		First nine months, 1930.	
	Amount.	Average Yield.	Amount.	Average Yield.	Amount.	Average Yield.
British Govt. loans ...	369,628	5.59	77,536	5.30	43,790	5.03
Colonial Govt. loans...	58,582	5.66	69,409	5.06	27,295	5.98
Foreign Govt. loans...	14,254	7.85	26,462	6.96	21,330	7.11
British municipalities	5,555	5.74	Nil	...	32,971	5.00
Colonial municipalities	7,024	5.88	4,741	5.45	1,739	5.15
Foreign municipalities	7,088	6.78	Nil	...	Nil	...
British railways	6,523	4.95	6,849	4.75	9,140	5.16
Colonial railways	Nil	...	1,200	4.95	2,513	5.95
Foreign railways	14,722	6.92	5,483	6.00	3,510	5.70
Industrial and commercial bonds, debentures, &c.	43,846	6.72	40,504	6.4	14,958	5.76
Preference stocks and shares.....	30,808	7.17	15,778	6.59	12,146	6.20

Analogies between the two periods cannot be pressed too closely, owing to differences in the average type of borrower. The particular "Foreign railways" and "Colonial railways" which entered the market, in 1922, for instance, were of a much more speculative character than those which have borrowed this year. Industry and commerce, again, have been far less active in raising new money by debenture issues. Broadly speaking, however, the table suggests that long-term capital rates are, in fact, ½ to ¾ per cent. lower to-day than they were seven years ago. The chief exceptions to this rule occur in groups affected by political risks, which were not envisaged in 1922-23, the outstanding examples being the high rates paid, in the "Colonial Government" group by the Government of India, and in the "Foreign Government" group, by San Paulo, Germany, and Austria. It may be that history will repeat itself, and that, if cheap money continues for some months, long-term rates will show a further fall broadly comparable to that which occurred in 1923, after cheap money had been inaugurated in the middle of 1922.

The Professional "Stag."—A good deal of comment has been aroused by the heavy and successful "staggering" of recent new issues. Since the days of the South Sea Bubble, writes a Stock Exchange correspondent, the practice of "staggering" has always been popular. When George Hudson was throwing a network of railways over England, some eighty-five years ago, the companies he promoted proved so popular with the stag division that it was thought desirable to introduce special legislation for the protection, not only of a company, but of the genuine investor. To-day the stag is once again becoming unpopular. An investor desirous of obtaining, say, £2,000 of a Gas Light and Coke 4½ per cent. debenture issue, and applying for rather more than he expects to get, may receive an allotment of £100 stock. The stag, on the other hand, who has no desire to take up the stock for investment purposes, boldly writes for £50,000 stock, and receives £600. If he is successful in obtaining one

of the preferential allotment forms that are issued to shareholders, he does still better. On allotment, the capitalist with £2,000 finds that he will have to pay a premium of two points, or more, in order to obtain the other £1,900 of stock that he requires for permanent investment. The stag is unconcerned with the character of the security that happens to offer a chance of a profit, and will just as willingly write for gilt-edged securities as for rubber or mining shares. The only requisites for his trade are a small office, a few rubber stamps, an intelligent errand boy, and the ability to control relatively moderate sums of money. It may be replied that he runs no little risk of being left with stock that he does not want. At this retort, the stag will undoubtedly smile, because a very little training in the business is required in order to develop a kind of instinct which is all but unerring in its sense of what new issues should be left alone. The stag makes an occasional mistake in not applying for issues that go to a premium, but he very rarely "goes for" an issue that is not promptly oversubscribed. He does not merely rely on instinct. He may stand at the door of an issuing house on the morning of a new loan offer, to see the extent of a possible rush for the shares. He gets to know what kind of mail the bank has received on the morning in question, and has means of judging when subscription lists are likely to close. If the lists remain open for longer than he expects, he has no hesitation whatever in withdrawing his application. Many an issue appears to be "oversubscribed" at the start, but is subsequently left largely with underwriters owing to hasty withdrawals by stags. Many expedients are adopted to checkmate the activities of the stags, but their greatest standby is the lurking and perfectly natural desire of issuing houses that their operations shall command the dramatic success signalled by the immediate closing of subscription lists. That staggering is expensive and annoying to the genuine investor is widely admitted. Probably, however, even the latter might acknowledge, if he were pressed, that when times are quiet and money-making opportunities few, he derives, on occasion, a certain mild diversion, if nothing else, from small-scale staggering on his own account.

A Recovery in Australians.—British investors have found the events of the last few days in Australia reassuring, so far as they go. It is clear that Australian public opinion, confronted with the possibility of an overt act of default as a result of a decision of the Labour Party Caucus, has ranged itself behind Mr Scullin and Mr Lyons in support of the view that Australia's internal and external credit must be maintained at all costs. The sequence of events, which is detailed in a "Note of the Week" on page 902, has accordingly been reflected in a measurable recovery in quotations for the majority of Australian stocks:—

	Yield at Last Prices (including demp.)			
	High, 1930.	Oct. 29, 1930.	Nov. 7, 1930.	Nov. 12, 1930.
Commonwealth 5%, 1945-75	95½	81½	79½	82
N.S. Wales 4%, 1942-62.....	77½	62½	59½	59½
N.S. Wales 5½%, 1947-57 ..	96½	80½	77½	79½
Queensland 6%, 1930-40 ...	100½	95½	89½	89½
S. Australia 5%, 1945-75...	91½	80½	74½	77½
W. Australia 4½%, 1935-65.	83½	78	74½	70½
Tasmania 5%, 1945-75	93½	88½	83½	83½

A further recovery must await the issue of the decisive trial of strength between the Commonwealth Government and the Caucus, which, apparently, has been merely postponed and not averted. Meanwhile, holders of Australian stocks will hope, firstly, for an early announcement that satisfactory arrangements have been made with regard to the £10 millions of Commonwealth Government Treasury bills which fall due, in London, as to one-half on December 31st and half on March 2nd next; and, secondly, that the recent signs of increasing firmness in

the Australian wool markets can be taken as presaging better times for Australia's most important export industry.

Investment Trusts in Holland.—In our issue of last week we dealt with the rapid post-war growth in popularity of the investment trust in America. In other countries, however, the investment trust, on British lines, has been slow to make headway. In Holland, for example, a few companies whose objects are ostensibly those of an investment trust, have been formed in recent years, but few have attained outstanding success. Within the last few weeks, however (writes our Amsterdam correspondent) the so-called "fixed trust" has made its appearance on the Netherlands market, and has been accorded a cordial welcome by the financial press. The Société Internationale de Placements (founded by an international banking group, with the Bank-Associatie holding the Dutch interest) has issued certificates and the North American Trust has offered shares. The former are based on a choice of thirty prominent international securities and the latter on a selection of first-class American stocks. These introductions have been decidedly successful and have been followed by a purely Dutch offer, the Nationaal Beleggingsdepot (National Investment Depot), with certificates based on twenty-one Dutch securities, including some which are not traded in very regularly. Finally, yet another "fixed trust" is being offered, comprising units of 300 different stocks, all American with the exception of Royal Dutch shares. A factor in the success of these issues has been the appeal made by the low nominal value of the individual certificates to the small investor. Shares of low denomination are practically unknown in Holland, where shares with a nominal value of 1,000 guilders are usually traded in on the American market, shares of 100 guilders being regarded as exceptional.

The Oil Position.—The annual convention of the American Petroleum Institute at Chicago this week has focussed attention on the economic problems of the oil industry. Stocks of gasoline in America have now begun to show their seasonal increase. On October 18th they amounted to 36,655,000 barrels compared with 32,160,000 barrels a year ago. Gasoline prices have weakened to levels never previously recorded. The bulk price of the "U.S. Motor" grade of gasoline ex Oklahoma refinery has fallen from 7½ cents earlier this year to 4½ cents per U.S. gallon. Stocks of all oils have increased year after year from the level of 187,000,000 barrels in January, 1919, to 689,000,000 barrels in January, 1930, an amount equivalent to about 7½ months' supply. Restriction in the Mid-Continent, California and Texas fields has brought down the output of the American oil fields this year from 2,722,050 barrels to 2,378,200 barrels a day, a decline of 12.6 per cent. The danger is, however, that restriction may break down among the independent producers now that crude oil prices have been reduced. There has been considerable liquidation of oil shares in London, though a firmer tone obtained on Thursday last. The following table shows the highest prices this year, as compared with those of November 7th and November 12th, of numerous market leaders:—

	High, 1930.	Nov. 7, 1930.	Nov. 12, 1930.	1929. Divs.	Yield on Old Divs. % s. d.
Anglo-Persian Oil	95½	3½	2½	20	6 16 2
Burmah Oil.....	95/7	4½	3½	30	7 18 8
Royal Dutch	35½	27½	25½	24	7 15 1
Shell Transport ...	5	4½	3½	25	6 12 3
(tax free)					
Shell Union	\$25½	\$10½	\$8	\$1.40	8 10 8*
Trinidad Leaseholds	78/9	1½	1	7½	7 10 0
V.O.C.	62/9½	1½	1½	20	10 8 8†

* On basis of payment of two quarterly dividends of 35c. each.
† Assuming dividends of 15 per cent. on increased capital equivalent to 20 per cent. on old capital.

The interim dividends of the Royal Dutch and Shell Transport companies have been maintained, as was generally expected. The final dividends will not be decided upon until May next year and no doubt the directors will be guided by the economic position of the oil industry at that time. In the meantime price-cutting in the retail oil markets must be expected to continue, and it is doubtful whether any widespread improvement in the oil situation generally can be expected before next spring.

Guest, Keen Interim Dividend Passed.—Something of a shock was administered to the "heavy" industrial markets on the announcement that the board of Guest, Keen and Nettlefolds, "in view of the menacing industrial outlook at home and abroad," had decided to postpone consideration of a dividend on the ordinary shares until after the end of the financial year (March 31st). For the past eight years these shares have received a regular 10 per cent. tax free, of which 5 per cent. has always been paid as an interim. A reduction on this occasion was expected, the shares having fallen from 35s. six weeks ago to 28s. 9d. on the day before the announcement. The company's statement gave no indication whether profits sufficient to meet a dividend on the ordinary had, in fact, been earned. In past years Guest, Keen policy, so far as it has been revealed by published figures, has tended towards profit distribution "up to the hilt," and in times like the present there is everything to be said for the conservation of resources. The company's interests are far-flung, and profits would appear to be increasingly dependent on its light, small and specialised products, rather than on its heavy steel departments or coal interests. So far as heavy steel is concerned, the policy of the new company, which acts as a joint subsidiary of Guest, Keen and Baldwins in South Wales, has rightly been to concentrate production on the works near the coast, thus cutting out the double rail freight charge, inward on imported ore and outward on the finished steel. This has involved no less a step than the closing down of the great Guest, Keen steelworks at Dowlais, and the only blast furnaces operating to-day in the whole of South Wales are one at Cardiff and one at Margam, both owned by the joint company. In view of the interim dividend decision, it is to be hoped that at the end of the year the directors will consider the case for taking shareholders as fully as possible into their confidence as to the real position of the company. Guest, Keen is now principally a holding company, properties standing in the balance sheet at some £2,000,000, whereas investments in subsidiary companies are valued at over £14,600,000. An explanatory statement as to the present composition of this last item would be helpful to investors generally.

John I. Thornycroft.—The accounts of these vehicle and marine engineers for the year to July 31st last make disappointing reading. Net profit at £95,876 reveals a decline of £33,624, trading profit having fallen from £145,639 to £112,229. The dividend on the ordinary

It is clear from the available data that the fact that "sales of commercial vehicles, marine motors and motor boats showed an increase as regards the home market, but a reduction as regards overseas markets," to which the directors' report apparently attributes the decline in profits, cannot be explained wholly by the prevailing world depression. Total exports of commercial vehicles from the United Kingdom for the six months to June 30, 1930, while revealing a numerical decline of 1,197 to 8,743, compared with the similar period last year, were valued at £1,660,349, against £1,660,878. During the same period, however, the export of Thornycroft vehicles to such important markets as New Zealand, New South Wales and Queensland are understood to have fallen considerably. The national exports of marine motors have risen in value from £210,313 to £418,645. In the circumstances, shareholders will welcome a reassurance from their directors that their company's competitive position has not been affected. The price of the £1 ordinary shares fell 10s. on the publication of the report. At 1½ the shares yield £8 per cent., allowing for the dividend of 13 per cent.

Joshua Hoyle.—Continued depression in the cotton textile industry is reflected in a further drop in Joshua Hoyle's gross profit by £33,714, to £99,176. After payment of debenture interest of £71,636, net profits were £29,896 lower at £27,540. This sum represented less than half the preference dividend requirements, and was carried forward.

The balance sheet disclosed a total decline in assets of £186,496. Stocks and stores at £554,646 were £81,232 lower, while debtors were £121,834 less at £221,454. Although loans to subsidiaries declined by £98,863 to £338,768, there was a rise of £200,054 in investments in subsidiaries. During the year £28,170 of debentures were redeemed, and ordinary loans at £49,817 showed a reduction of £36,975. Creditors were £119,900 less at £369,724. The directors state that conditions have become increasingly difficult, and provision has been made in the accounts for the fall in the price of cotton. The present price is 3s. 1½d. per £1 ordinary share.

Hay's Wharf.—The continuous extension of this company's properties, which now have an almost uninterrupted frontage on the south side of the Thames, has necessitated a considerable increase in capital during the past two years and has brought about a consequent reduction in current percentage earning power. For the year to June 30th last, net profits totalled £248,387, a new high record since the company's incorporation as a public company in 1923 and an advance of £19,290 on the previous year's results. The preference capital requires £89,400, against £74,400 in 1929, while the sum of £158,987 earned on the ordinary capital, increased last year by a bonus issue of £140,000, compares with £154,697, and represents 17.6 per cent., against 18 per cent. earned :—

Year to June 30.	1928.	1929.	1930.
Net profit	225,063	229,097	248,387
Brought forward	46,338	66,001	56,297

To reserve	60,000	70,000	50,000
Carried forward	66,001	56,297	65,284

The sum of £50,000, compared with £70,000 last year, is placed to reserve account, which now stands in the balance sheet at £300,000, while £65,284 is carried forward, against £56,297 brought in. The company's investments in allied and subsidiary companies, which are given in detail, are shown at cost, £1,077,322. Sundry debtors and cash together total £277,807, while sundry creditors stand at £624,641. The 6 per cent. preference shares are quoted at 23s. 3d., to yield about £5 3s. 3d. per cent.

Dalgaty and Company.—In view of the depression in Australia and elsewhere, shareholders may congratulate themselves on receiving a dividend of as much as 10 per cent. Though the company's main business is to act as selling agent for the wheat-grower and wool-grower, it owns several stations of its own. Gross profit fell by £206,669 to £927,222 last year, and net profit was £186,644 lower.

Over 75 per cent. of the company's business is concerned with the pastoral and grazing industries. The other odd 25 per cent. includes shipping agencies and motor-car agencies, both of which have been affected by the world-wide depression and the high tariff. Despite the falling away in earnings, the surplus of liquid assets has shown a considerable rise of £764,169 to £6,893,064. This growth only just falls short of the additional £826,000 debentures issued during the year. This, with the proceeds of sales of Government securities (which were £245,967 lower at £26,372) accounts for the growth of

£700,827 to £6,904,290 in "advances on land," and of £232,040 (to £688,272) in actual cash in hand. The increase of £384,936 in debtors is due to several causes, the chief of which is probably the granting of extended time by the company to "the man on the land" to tide him over the effects of depression and drought. In their report the directors state that conditions in Australia improved during the year, good rains falling in all States except the northern portion of West Australia where rain is badly needed. Conditions in New Zealand are described as patchy, but, after two years of drought, heavy rains resulted in satisfactory crops in Kenya. A smaller wool clip in Australia, together with falling prices, made the wool season a trying one, and a lighter clip is expected this year. At the wool sales at present taking place in Australia, prices are down by 25 per cent., and the wool is finer and lighter in texture. A bumper wheat season is expected as an increased acreage has been planted, and good rains have fallen in places where, in recent years, wheat growers have encountered most formidable difficulties. The £10 preference shares are secured by net tangible assets of £74 15s. 6d. per share, their dividend being covered 9.44 times. The yield on the ordinary shares at their present price of 8½ is £6 1s. 4d. per cent.

Copper Restriction Plans.—Reports of an intended curtailment of 20 per cent. in the world's copper output have been responsible for a scramble to secure supplies and a rise in values during the past few days, writes a trade correspondent. In round figures the cut in production has been foreshadowed at 30,000 tons per month, which would no doubt be the beginning of a scaling down of the huge reserves above ground. So long, however, as consumption continues at its present meagre rate, months must elapse before the results are seen in a real reduction of the 600,000 short tons held in America (North and South) alone. In pledging themselves to any world agreement for cutting down production, the combination of American and other producers would have to tread warily in view of the Sherman Anti-Trust Law, but doubtless this difficulty will be overcome. At 10 cents a pound, at which sales were made on Wednesday, copper is undoubtedly very cheap. If the price fell lower, by reason of the absence of policy, high cost producers would no doubt bow to the inevitable and close down. African interests are said to have been a stumbling block to any agreement regarding curtailment, but their share of the "cut" is now being mentioned at 5,000 tons per month. To many this figure sounds incredibly high.

Daggafontein.—The courage displayed by the sponsors of this undertaking in making a second attempt appears likely to be well rewarded. It may be recalled that the expenditure of a large sum upon development was attended with very indifferent results; and work was suspended for a number of years. Then the idea was conceived of testing the property at depth through the lower levels of the adjoining Springs Mines. Results proving encouraging, the financial reorganisation of the undertaking was decided upon, and early in 1929 further working capital to the amount of £340,300 was provided. Options at par over 622,100 shares are current until November 24th; they will doubtless be exercised. This week the shareholders have received a circular giving an estimate of ore reserves. The total is placed at 1,033,800 tons, averaging 8.64 dwts. over a stopping width of 43 ins. In view of these results, and of the prospects, the directors consider that the erection of a reduction plant of "substantial capacity" is warranted. They have accordingly requested the consulting engineers to proceed with the design. Nevertheless, shareholders will still need to exercise patience.

Broken Hill South.—Our mining correspondent writes :—The full text of the report to June 30th emphasises the extent to which the company's investments contribute towards the earnings. Of last year's net profit of £282,300, about £175,100 came from the mine and £107,200 from the investment section. The total compares with £358,800 in 1928-29 and £208,400 in 1927-28. In respect of 1928-29 the directors were content to repeat the previous year's dividend total of 22½ per cent., carrying forward the largely increased surplus of £232,100. For the past session the distributions total 32½ per cent., leaving £181,700 to go forward, after appropriation of the somewhat increased sum of £130,000 for new plant, etc. Why, in view of the declining tendency of metal prices, a liberal line should have been taken in the distribution of the profits, it is difficult to explain. The latest dividend announcements have been on a distinctly lower scale—1s. in June and 6d. in October. At £727,900 the surplus and cash assets show a shrinkage of £218,000 on the twelve months; the difference, however, is almost accounted for by the increase in shares in other companies, which are excluded from the computation. The amount of £727,900 represents about 18s. per share, consequently the current price of the share (25s.) makes little allowance for the plant, property and other interests. The following table vividly indicates the extent to which metal prices have fallen during recent years :—

	Lead.	Silver.	Zinc.
	Per ton.	Per oz.	Per ton.
	£ s. d.	s. d.	£ s. d.
Average for 1926-27	28 15 7	2 4 6	31 17 9
Average for 1929-30	20 19 6	1 10 9	20 15 5

Lead has since further receded to barely £16, zinc to £15, and silver to 1s. 5d. Hence the reduction in the dividend rate referred to above. At 1,250,000 tons the ore reserves display no change. The quantity represents about twelve years' supply for the mill.

CAPITAL ISSUES.

Individual borrowers this week have been more numerous, and less "exclusive." *The Assam Railways* offer was largely a conversion issue. The terms were calculated to attract holders of maturing stocks, while cash subscribers were offered nearly £5 13s. per cent. on a well-covered security. *The Second British Steamship Trust* is in excellent hands. Its appearance is an interesting indication that at least one well-informed group considers the present time opportune for extending investment trust interests. *The Long Acre Press*, over 80 per cent. of the capital of which is held by Odhams Press, publishes *The People* newspaper, which has increased its weekly circulation in the last five years from 526,000 to 2,558,000 copies. This week's issue will repay maturing stock. A yield of 7½ per cent. on a debenture is an indication that an "industrial risk" is present. *British Cinematograph Theatres* is a relatively small company, whose profits have increased in the last three years from £11,806 to £14,344. Its issue of 8 per cent. participating preference shares is to be used to repay loans. On the figures for the relatively short period of the company's existence, the minimum dividend is fairly well covered, but the times are still out of joint for speculative issues of this nature.

ISSUES OF THE WEEK.

Assam Railways and Trading Company.—Issue of £1,000,000 5½ per cent. mortgage debenture stock at 97½ per cent. Holders of the 4½ per cent. and 5 per cent. mortgage debenture stocks have the right exercisable up to November 19, 1930, to surrender their holdings for an equivalent amount of 5½ per cent. mortgage debenture stock and to be paid a cash payment of £2 10s. per cent. on January 1, 1931, in addition to accrued interest. The 5½ per cent. issue will be redeemed on July 1, 1971, at 100 per cent., or at 105 per cent. in the event of voluntary liquidation or other intermediate contingencies. Net profit for the year ended March 31, 1930, totalled £169,757, covering interest on the present issue over three times.

Second British Steamship Trust.—Issue of 50,000 shares of £10 each at par. The shares forming the initial capital, when fully paid up on June 1, 1931, will be converted into preference and ordinary stock, in the proportions of 50 per cent. of the former and 50 per cent. of the latter, the former to carry a fixed dividend of 5 per cent. The company is formed for the purpose of carrying on the business of an investment trust company under the same direction and management as the British Steamship Investment Company. No underwriting contract has been entered into.

Long Acre Press.—Issue at par of £200,000 7½ per cent. debenture stock. Holders of "B" debentures have the right, exercisable up to November 17, 1930, to convert their holdings into 7½ per cent. debenture stock. The balance of the "B" debentures not so converted will be redeemed out of the proceeds of this issue at 105 per cent. on June 1, 1931. The issue is to be redeemed annually by purchase or drawings by means of a sinking fund commencing in 1934, or in any case not later than December 1, 1953. The company reserves the right to redeem the stock in whole or part at any time after December 1, 1935, at 102½ per cent. Net profits for the year to December 31, 1929, totalled £76,631, covering interest on debenture stock, including the present issue, 2.7 times.

British Cinematograph Theatres.—Issue of 40,000 8 per cent. participating preference shares of 10s. each at par. The issue is being made in order to reduce the company's indebtedness on loans raised to extend and improve the company's theatres. The average net profit for the past three years, after allowance for depreciation, totalled £10,050, covering dividend on the present issue more than six times.

West Hampshire Water Company.—Issue by tender of £33,000 five per cent. perpetual debenture stock, minimum price of issue £98 per £100 stock, yielding at that price £5 2s. per cent., and 1,000 £10 5½ per cent. preference shares, minimum price £10 10s. per share, yielding at that price £5 4s. 9d. per cent., and 1,000 £10 ordinary "B" shares, ranking for a maximum dividend of 7 per cent. equally with the existing similar shares, at a minimum price of £11 15s. per share, yielding at that price £5 19s. 2d. per cent. Net revenue of the company for the year to June 30, 1930, totalled £17,245, covering debenture interest, including the present issue, 4.1 times. The dividend on the preference shares, including the present issue, was covered 2.7 times.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction. **Auckland Harbour Board** 5 per cent. 1950 loan. Issue of £155,000 debentures to bearer of £100 each. **Joseph Terry and Sons.** Issued capital, £812,490, in 464,370 first 7 per cent. cumulative preference shares of £1, 116,040 second cumulative preference shares of £1, 19,340 preferred ordinary shares of £1 and 212,740 ordinary shares of £1. The company was incorporated in 1895 to take over the business of wholesale and retail confectioners. **Kingdom of Iceland.** Particulars of an issue of £540,000 5½ per cent. 40-year sterling bonds of 1930. Redemption will be effected by a cumulative sinking fund, sufficient to complete redemption by November 1, 1970.

COMPANY MEETINGS, &c.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK, LIMITED.

GRATIFYING RESULTS OF A DIFFICULT YEAR.

MR ANDREW WILLIAMSON'S INTERESTING REVIEW.

The thirty-eighth ordinary general meeting of the English, Scottish, and Australian Bank, Limited, was held, on the 12th instant, at the head office, 5 Gracechurch Street, London, Mr Andrew Williamson (chairman of the bank), presiding.

The Chairman, in moving the adoption of the report and accounts, said: As you are aware, the last year has been one of very considerable difficulty in Australia. After four years of severe drought in Queensland, New South Wales suffered severely from the same cause last year, and there then supervened a very heavy fall in the price of wool, Australia's principal primary product, together with the cessation of the inflow of borrowed money. All these factors combined to hit Australia heavily, and the year represented in our accounts has been a very difficult period, especially during the later months. In these circumstances I think you will agree with me that the results of the working of the bank for the period under review have been gratifying.

Before going through the accounts I will this year first give you a brief review of the general finance and trade of the year, as I think in that way you will the more easily appreciate an examination of our figures.

exportable surplus, which is estimated at between 150,000,000 and 160,000,000 bushels, or nearly three times that of last year.

BUTTER.

Butter is also an important item in Australian exports, and the following are the figures for the last three years to June 30th each year:—

1928	99,164,900 lb. :	in value £6,905,900
1929	102,442,800 lb. :	" 7,545,400
1930	104,982,500 lb. :	" 6,698,100

the average price for the respective years being 1s. 4.7d., 1s. 5.6d., and 1s. 3.31d. The seasonal outlook for the current year is excellent, and last year's quantities should be maintained and possibly exceeded. Australia consumes locally nearly twice as much butter as she exports.

SUGAR.

Coming now to sugar, the production of cane sugar is an important industry in Queensland. In this case I will take the last two years, as previously the figures were brought in on a different basis. The exports during the last two years to June 30th were:—

1929	199,496 tons :	in value £2,390,810
1930	181,746 tons :	" 2,217,176

The shrinkage in quantity and value from the preceding year was in this case negligible.

FROZEN MEAT.

The exports of frozen meat for the last three years have been:—

MUTTON AND LAMB.		
To June 30th		
1928	46,363,000 lb. :	in value £1,188,000
1929	84,929,000 lb. :	" 2,166,000
1930	100,411,300 lb. :	" 2,386,000

BEEF.

To June 30th		
1928	169,098,400 lb. :	in value £2,377,800
1929	189,090,400 lb. :	" 2,883,300
1930	156,748,700 lb. :	" 2,564,500

With the excellent rains which have fallen, and the good seasonal prospect, the current year promises the maintenance of quantities available for export.

METALS.

With regard to metals, the values of all minerals exported, including coal but excluding gold, for the last three years were:—

To June 30, 1928	£8,843,952
1929	7,281,733
1930	7,832,322

The strike in the coal mines in New South Wales kept the mines affected closed altogether for some 14 months, eight of which applied to the past year and told against the exports of coal last year, and in fact involved the importation of coal, though the total of all metals shows an improvement over the preceding year. Copper, lead, spelter, and silver have all had disastrous falls in common with all primary products throughout the world, and in this direction also Australia is an acute sufferer.

From the figures I have given you of the overseas trade as a whole, and in these principal departments, you will appreciate how severely Australia has suffered in the diminution in profits from her exports. This eventually has a corresponding reaction on the internal trade and commerce of the whole of the Commonwealth, but the full force of this is not felt at once, and did not affect our profits last year to the same extent as it must affect them in the current year. The adverse influence, however, on the year ended June 30th last was sufficiently depressing to make the year a very difficult one for all the banks, and one which placed a heavy responsibility and strain on our executive officers, both in Australia and London.

DIVIDEND MAINTAINED.

While the difficulties of the past year are reflected in our accounts, it is a high tribute to the management, both in Australia and here, and to the widespread and sound nature of our business, that we are able to recommend out of the profits of the year the same dividend as before, and then, bringing in the amount brought forward from last year, to carry to various reserves and to bank premises account so large a sum as £200,000, and still carry forward an accumulated undistributed balance of as much as £305,477. (Hear, hear.) With regard to the dividend recommended of 12½ per cent., tax free, on the paid-up capital, it is only right to point out to you that to earn that dividend not only your paid-up capital is employed, but also your reserve funds of over £3,000,000 and the undistributed accumulated carry-forward profits of past years. Thus, taking into

account the reserve and the carry-forward, a dividend of 12½ per cent., tax free, on the paid-up capital is in fact only equivalent to less than 6 per cent., tax free, on the actual capital employed.

MAIN FEATURES OF THE ACCOUNTS.

I will now turn to the accounts. I will not weary you by going through each item, but will only touch on the main features. If you will look at the balance sheet you will see on the liabilities side that the paid-up capital is unchanged at £3,000,000. There is also no change in the perpetual stocks, which amount to £1,872,966. These stocks, carrying as they do a low rate of interest, are, as they were intended to be when they were issued and taken up, a source of special strength to the bank. Deposits at interest stand at £20,165,726, and are less by £986,372. This has arisen from two main causes: first, the shrinkage in the earnings of the people, necessitating a certain measure of drawing upon their deposits; and, secondly, the higher interest obtainable on Government loans which have been floated in Australia during the year and on the securities of municipal and local bodies which caused the transfer of a considerable amount from our deposits. The effect of this is seen in a marked degree when we come to the movement in current accounts, which you will observe stand at £10,115,966, against the corresponding figure last year of £12,582,397, a decrease of £2,466,430. Taking the deposits at interest and the current accounts together, which last year stood at £33,734,496, and in the present balance sheet at £30,281,692, these show a combined decrease of £3,452,804. Much as we regret this decrease, especially in the current accounts, it can cause no surprise that our customers, in a time of depressed trade and poor profits, should transfer a portion to Government loans carrying 6 per cent.; indeed, in the circumstances we may congratulate ourselves that the decrease is not greater, and that our total deposits still stand at over £30,000,000. (Hear, hear.) Bills payable, which in the previous balance sheet stood at £2,891,324, now stand at £1,867,457, a decrease of £1,023,866, due to the reduction in the exports from this side to Australia, which you will remember shrank during the year by over £12,000,000, and reflects also a decline in trade generally and the difficulty exporters experience in obtaining payment in London.

THE ASSETS.

Turning to the assets side of the balance sheet, you will notice that we have slightly altered the form of the first two items in order to set them out more fully and clearly.

Cash in hand and bullion, and cash at bankers, including cheques in course of collection, together with money at call and at short notice, amount to £6,777,738, against £7,380,670, a decrease of £602,932. When you remember that our call liabilities are less by approximately £2,500,000, this comparatively small reduction in our most liquid resources is very gratifying, and leaves our liquid resources in the ratio of 13s. 4½d. to the £ of our call liabilities.

Our investments at £1,780,762 are greater by £159,593, and are all in British and Colonial Government securities at or under cost. Our cash and investments together at £8,558,500 represent the high ratio of 16s. 11½d. to the £ of our demand liabilities, disclosing a very strong position.

Bills receivable and remittances in transit naturally show the largest shrinkage. They stand at £2,679,697, against £5,911,166 in the previous balance sheet, or a decrease of £3,231,469, which reflects the heavy fall in the value of wool and the shrinkage in the value of other exports, as well as the diminution in imports. In normal times we have fully our proportionate share of this department of business, and in lean times the loss of it is the more apparent.

PROFITS AND APPROPRIATIONS.

I will now take the profit and loss account. On the first page of the report you will find the movements set out very clearly. The profits for the year, after making provision for bad and doubtful debts and contingencies, amount to £1,587,758, a shrinkage from the previous year of £32,165. Management expenses at £817,940 show a small decrease of £481. Income and other taxes are heavier at £227,081 by £26,842. After deducting these two items there is left £542,736, from which has to be taken the interim dividend of 5 per cent. paid in May, and the sum of £15,000 carried to reserve, in accordance with our Articles of Association. Deducting these, we are left with a balance of the profits of the year of £377,736. Add to this the balance of undistributed profits brought forward from June 30, 1929, and we have available for further appropriation a balance of £725,477.

The appropriations we recommend are as follows:—

To reserve fund an additional £65,000, making £80,000 for the year, when the fund will stand at £3,160,000.

To E.S. and A. Bank officers' provident fund, £10,000.

To a further dividend of 7½ per cent., free of income tax, making 12½ per cent., free of income tax, for the year, payable out of the profits of the year, £225,000.

To contingency account, £70,000.

To reduction in bank premises account, £50,000, making a total of £420,000, leaving the large, even though slightly reduced, balance of £305,477 to be carried forward to next year.

Out of the profits of the year alone, apart from the carry-forward, the dividend takes just over 69 per cent. and various reserves and bank premises 36.85 per cent., and the provident fund the remaining 1.84 per cent.

I trust that I have succeeded in explaining all the figures, and that you are satisfied that in a time of exceptional difficulty we have been able, with care and economy, to maintain our profits as well as we have done. (Hear, hear.) As I have so often observed when addressing you from this chair, the prosperity of the bank is inter-linked with the prosperity of Australia, and the drastic reduction that has been found necessary in the imports into Australia, and the automatic shrinkage in the value of the exports from Australia caused by the great fall in prices, and the general depression and large scale of unemployment at present prevailing there, cannot but adversely affect the earnings of the current year, but I hope that by careful administration we shall be able, when next we meet, to lay before you a satisfactory report, though we can hardly expect the same dividend.

AUSTRALIA'S DIFFICULT POSITION.

From the figures I have given you it is seen that from the fall in commodity prices, especially in Australia's principal export—wool—there was a decrease in exports of approximately £44,000,000. Synchronising with this there was a cessation of fresh borrowing in London, which for the previous five years has averaged rather over £20,000,000 a year. These two factors signified a shortage of Australian money in London of over £60,000,000. When you realise that Australia has to pay annually on this side for services and interest on Commonwealth and State loans, and municipal and similar obligations over £30,000,000, besides finding the money here to finance the exports from this country to Australia, which for the last ten years has averaged over £142,000,000, it is at once clear that a very difficult situation had arisen.

To safeguard the position, and to provide the necessary funds to duly meet the Government's obligations on this side, there was exported from Australia, as I have already said, approximately £27,000,000 of gold, and to curtail the flow of exports from here they drastically raised the tariff rates on imports into Australia. The exchange rose sharply against Australia, which also acted as a check on exports from this side, and, in addition, the banks, owing to the reduced funds available on this side, had to limit the amount of exchange they could provide for their customers. Shipments of gold, increase of duties, tightening of exchange rates, and limiting of facilities were obviously emergency measures and not permanent remedies.

POOLING OF LONDON EXCHANGE.

The whole position received the most careful consideration from the Commonwealth Government, in consultation with the Commonwealth Bank and the trading banks, and an agreement was come to for the pooling of London exchange whereby the trading banks between them have undertaken, for the present financial year, to give to the Government of Australia the first call on London exchange to the extent of £36,000,000 for the year. This serious call on a diminished amount of total exchange available necessarily compels the trading banks to ration the amount of exchange they can give to their regular customers, and has, for the time being, held up in Australia a good deal of money that otherwise, in ordinary course, would have been transferred to London.

The trading banks have throughout done all in their power by co-operation with the Government and the Commonwealth Bank to assist in surmounting the difficulties in the best interests of Australia.

In view of the depression all over the world, and the practically universal fall in world prices of all commodities, especially the products of the primary industries, on which, to meet her full obligations in London, Australia in the final resort has to depend, the situation that had arisen was a serious one, especially as there was no ground for anticipating any rapid recovery in world prices.

SIR OTTO NIEMEYER'S MISSION.

In these unprecedented and difficult circumstances the Bank of England, at the invitation of the Commonwealth Government, sent out some months ago Sir Otto Niemeyer and two colleagues to confer with the authorities in Australia as to the best way of dealing with a very difficult position. As you know, for some years the chairmen of the various banks and of the leading financial companies have pointed out certain uneconomic and therefore dangerous lines on which the various Governments in Australia have been proceeding, which if persisted in were bound to lead to trouble, but their warnings were unheeded.

Sir Otto Niemeyer, after exhaustively examining with his two colleagues the whole position, has urged upon the Commonwealth and State Governments similar advice.

There was a prolonged conference between the Commonwealth and State Ministers, attended by the Prime Minister, Mr Scullin, and Sir Otto Niemeyer, the result of which was an agreement between the Commonwealth and State representatives upon measures necessary to correct the Australian economic and financial position.

In order to give effect to those arrangements, and to watch their operation in all States, a committee consisting of the Treasurers of the Commonwealth, New South Wales, Victoria, and South Australia was appointed to represent the conference for the purposes of the agreement. This committee will have power to consult outside financial and economic authorities, and it will be in continuous touch with the directors of the Commonwealth Bank.

If these resolutions, with all that they imply, are faithfully carried out and the Budgets balanced, not by excessive and crippling taxation but by economy in administration, and if that is supported by reduction of expenditure in public and in private, with the requisite reduction in the costs of production, then the acute troubles of to-day may yet prove rich blessings to Australia in the future.

COSTS OF PRODUCTION.

I would like to add one word regarding the question of costs of production. These it seems to me will never be adequately dealt with until either the present unhappy system of compulsory awards by the Arbitration Courts, based on what the worker can consume, and with no relation to what he can produce, is radically changed or altogether abolished. The Economic Mission which visited Australia at the request of the previous Commonwealth Government in their report said:—"Most vexed and important of all Australian questions is that of the cost of production, with its effect upon export industries, and of the combined effects of the tariff and arbitration Acts." Australia is suffering from this compulsory award system, as we in this country are suffering in a somewhat similar way from the dole as at present administered. This compulsory arbitration system has automatically forced employer and employee into hostile camps, and it has brought about a state of things where the workmen are more concerned about the increased nominal wages and curtailed working hours than with the old pioneer spirit of keenness to excel in producing. In addition, these compulsory awards fixing minimum legal wages, which it is often impossible for the employer to pay, have been the fruitful source of unemployment, which in its turn is the main obstacle to immigration—one of the most vital needs for Australia's true development. What in general is needed more than anything else is a return to hard work and simple living, which applies with equal force to all classes and both to this country and to Australia. (Hear, hear.) The Australians are a singularly virile British race, and the Australian working man is as good as any in the world, but he is handicapped by a system established on an unsound economic basis, from which his best friends long to see him set free. (Hear, hear.)

THE PRESENT SITUATION.

My faith is unshaken in Australia's determination punctually to fulfil to the letter all her obligations—(hear, hear)—and in her power to do this provided she will support the various Governments in giving effect to the resolutions unanimously agreed to by them. In this connection Sir Otto Niemeyer said: "The situation is difficult and calls for a considered programme and united action, but I wish to make it quite clear that given determined action it is in no way beyond control. The difficulties of Australia are not comparable with those from which many other countries have successfully emerged, and have only to be squarely faced to be capable of solution."

The results of the election in the State of New South Wales and the recent attitude and pronouncements of the Federal Labour caucus make the task of Mr Scullin, the Prime Minister, a peculiarly difficult one, and are most damaging to Australian credit here and throughout the world. (Hear, hear.) In addition to those hostile influences, Mr Scullin has also opposition from some members of his Cabinet, further hampering him in his great task, the magnitude of which we fully realise. Mr Scullin, in courageously pursuing, in spite of the opposition of a section of his party, the one sure path to emergence from the present difficulties, and towards placing Australia on a secure position of financial and trade equilibrium, can rest assured that he has behind him the great body of Australian opinion and the full sympathy and hearty good will of the Old Country. (Hear, hear.)

The resolution was carried unanimously, and votes of thanks to the chairman, directors and staff terminated the proceedings.

LONDON MARITIME INVESTMENT COMPANY, LIMITED.

DIVIDEND OF 6 PER CENT.

LORD KYLSANT ON THE SHIPPING DEPRESSION.

The thirty-third annual general meeting of the London Maritime Investment Company, Ltd., was held, on the 11th instant, at Winchester House, Old Broad Street, London.

Lord Kysant, G.C.M.G. (chairman of the company), presided.

The Secretary (Mr O. A. Hall) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—The report of the directors and accounts of the company for the year ended September 30, 1930, were circulated to the stockholders 10 days ago, and I presume that, as customary, you will agree to take them as read. This company was formed in 1897, and with very few exceptions I have had the pleasure to preside over all its annual meetings, of which this is the thirty-third.

PROFIT AND DIVIDEND.

The accounts now before you set out the position very clearly. The net profit for the year under review amounted to £50,688, which, with the balance of £5,998 brought forward from last year, makes a total available sum of £56,686. After paying the dividend for the year on the five per cent. preference stock and writing off £7,248 towards depreciation of investments, the directors recommend a final dividend of 2 per cent. on the ordinary stock (making with the interim dividend already paid a total distribution for the year of 6 per cent., less income tax), and that the balance of £6,000 be carried forward. The reserve fund stands at £250,000.

The company's investments are, as hitherto, shown in the balance sheet under their respective categories at or under their cost price. A valuation of these investments as at September 30, 1930, taken on the basis of the middle price of the London Stock Exchange quotations for that date, shows a net depreciation of approximately £63,000, or, say, 6 per cent. Against this depreciation, however, you will note that under the item of reserve fund investments the company is a considerable holder of British Government securities, which, at September 30 last, exceeded £270,000 in value. This company has no debentures, and, looking to the difficult conditions through which all business has been passing, the position may be regarded as not unsatisfactory.

TRADE CONDITIONS AND CARGO TONNAGE.

As you are aware, this company, as indicated by its name, has, throughout its career, been largely interested in maritime undertakings. Owing to the reduced volume of the trade of the world and the ample supplies of cargo tonnage, shipping is passing through the most acute period of depression that has been experienced in that industry in the history of modern cargo shipowning. Within the memory of those who have been longest engaged in business, there has never been a time when so many factors contributed to depress industry and commerce. Many of these adverse conditions are world-wide and not confined to this or any one country, and must inevitably change for the better in due course.

THE OUTLOOK.

The heavy decline in commodity prices appears at last to have about touched bottom, and with greater world stability conditions should become more favourable for a general improvement, which I, personally, believe will come about sooner than many people anticipate. When this long-looked-for improvement takes place, this company, with its well-spread interests, should benefit therefrom.

I now beg to propose: "That the report and accounts as submitted be received and adopted, and that the dividend as recommended therein be declared and paid." I will ask Mr Arthur Baumann to second that.

Mr A. A. Baumann seconded the resolution, and it was carried unanimously.

The retiring director, Sir F. Vernon Thomson, K.B.E., was re-elected; and the auditors, Messrs Fookes, Hickman and Company, having been reappointed, the proceedings terminated.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

SUDAN PLANTATIONS SYNDICATE, LIMITED.

REVIEW OF PAST YEAR'S OPERATIONS.

The ordinary general meeting of the Sudan Plantations Syndicate, Ltd., was held, on the 12th instant, at Winchester House, Old Broad Street, London.

Mr Alexander MacIntyre (the chairman and managing director), in moving the adoption of the report and accounts, said that all their investments were entered in the balance sheet at cost. Judged by market prices at June 30th, there was a considerable depreciation in their holdings in other companies, but this was more than offset by appreciation in the quoted shares of their subsidiary company and in British Government securities. They held £1,003,000 of British Government securities, against £1,346,000 last year, and in cash they had £620,500, against £750,500 last year.

There was a net profit for the year of £227,000, and the directors recommended a final dividend of 5 per cent., making 10 per cent. for the year. The whole balance of last year's stocks of cotton and cottonseed had been disposed of at prices above last year's balance-sheet figures, and all this year's cottonseed had been sold. On the other hand, owing to market conditions, sales of this season's cotton had been exceptionally slow. Some headway had been made with the disposal of their cotton since the date of the accounts, but, although sales had considerably increased recently, they had not been able to dispose of as much of their cotton as usual at this date, and unless trade improved they must expect to have still unsold, when the harvesting of the new crop commenced, a larger proportion of their stock than they had last year. They were carrying forward £486,951, as against £484,604 last year.

PAST YEAR'S CROPS.

Reviewing the field work and conditions for the past year, the area planted in cotton at Zeidab was 5,230 feddans, which produced a good crop of excellent quality, the total being 18,609 kantars, or an average of 3,558 kantars per feddan, the resulting bales shipped being 3,845, against 3,855 bales for the preceding year. In the Gezira the area planted under cotton was 158,585 feddans, under durra 68,634 feddans, and under lubia 86,860 feddans, showing an increase of 27,234 feddans under cotton, 2,983 feddans under durra, and 32,280 feddans under lubia, compared with the previous year. The cotton crop amounted to 336,425 kantars, compared with 466,169 kantars. The average per feddan was 2.12 kantars, against an average of 3.54 kantars for the previous year, and an average of 3.72 kantars for the previous five years.

At the last meeting shareholders were informed that there had been extraordinarily heavy rains, which had lasted right into October, and that this meant an exceptionally late crop, but that, granted normal winter weather, prospects were still promising. Instead of having normal winter weather they experienced exceedingly cold weather in December and January, and the effect of this combination became evident in the pickings. Late rains, moreover, tended to increase pests.

They had now had experience of cotton growing in the Gezira for the past nineteen years, and although, from past records, it was unlikely, except at very long intervals, that they would have in combination all the unfavourable conditions which they had last year, it was quite possible in certain years to have one or other of these conditions. Everything humanly possible was being done to meet such an eventuality.

Considering that they had had their worst crop in a year of general world depression, he thought that the figures shown in the accounts were much better than might have been expected. In their past experience they had encountered exceptional rains, occasional cold winters, poor yields, and low cotton prices, but they had never previously suffered from all these unfavourable factors occurring in combination. If prices improved they had no cause for anxiety, and even should there be no improvement in present prices for some time, he looked to their increased areas in the west and north, together with the larger percentages which they received in the northern extension, to make up a substantial amount of the reduction shown in the profits.

The Kassala Cotton Company picked a good crop, and when this was marketed they looked to receiving a return upon their large holding of shares in that company.

CURRENT SEASON'S PROSPECTS.

With regard to the present growing crop, in the Gezira they had under cotton 175,000 feddans, under durra 72,000 feddans, under lubia 94,000 feddans. Last year's crop was very late, sowing not being completed until October. This year the cotton crop was all planted within the normal sowing dates, between July 20 and the end of August. Until the middle of September rainfall was about normal. In the latter half of September rainfall was heavier than usual, and in October, which should be an absolutely dry

month, they experienced rain on one day varying from light showers to nearly 1½ in. in places. In those areas where most rain occurred there was considerable leaf fall, but so far the area affected appeared to be limited to about 10,000 feddans.

With regard to the Northern Extension, which he anticipated last year would be about 80,000 to 90,000 feddans, they now found that the area would be about 100,000 feddans. For the whole of this extension the ginning factories had now been completed, and the ploughing machinery had been supplied. On 50,000 feddans of this area the development and canalisation had been completed, the necessary buildings erected, and one-third of the area—16,000 feddans—was planted in cotton. On the remaining 50,000 feddans most of the development and buildings were well ahead of programme, and the area was being canalised, and they hoped to complete the area in time for next season's crop. This would add a further 16,000 feddans of cotton to the existing crop figure, so that in the season 1931-32 they hoped to have under cotton a total of about 190,000 feddans.

At Zeidab this season they had about 5,700 feddans under cotton, and the crop promised to be an exceptionally good one. They had already picked on the Syndicate's land over 4 kantars per feddan, and the total picked to date amounted to 21,000 kantars, which was most satisfactory.

With a view to more economic running and to bring down cost, a new Diesel plant running on crude oil had been substituted for the remaining steam pumping installation, also the Zeidab ginning factory had been remodelled and enlarged. Humidifiers and other improvements had been introduced, and they should benefit from these improvements in their next accounts.

The resolution was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Nov. 8, 1930, amounted to £8,444,200, against ordinary expenditure of £12,629,600. After allocating £615,000 to the Sinking Fund, and having allowed for a reduction in Exchequer Balances of £429,100, the week's operations, as shown below, increased the National Debt by £4,371,000 to £7,690,983,000:—

(000's omitted.)

Treasury Bills	£ 4,443	Road Fund	£ 370
National Savings Certificates	250		
Sundries	48		
	£ 4,741		£ 370

A complete analysis of the National Debt at the end of last quarter was printed in the *Economist* of October 4.

OIL OUTPUTS.

ATTOCK OIL COMPANY.—Production for October : 12,633 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for October, 1930, as 32,668 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended October 29 : Venezuela, 37,492 barrels; Trinidad, 20,613 barrels; total, 58,105 barrels.—Production for the week ended November 5th : Venezuela, 35,233 barrels; Trinidad, 20,336 barrels; total, 55,569 barrels. Production for October : Venezuela, 162,469 barrels; Trinidad, 88,230 barrels; total, 250,699 barrels. Deliveries for October : Venezuela, 144,643 barrels; Trinidad, 16,781 barrels; total, 161,424 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Restricted production for October, 6,894 tons. Piscuit perimeter 10-1,826 tons.

MEXICAN EAGLE OIL.—Production for the week ended October 25, 1930, was 229,000 barrels. Production for the week ended November 1, 1930, was 225,000 barrels.

SERVICE PETROLEUM COMPANY, LIMITED.—Production from the company's oil wells at Gura-Oenitzi, Ceptura and Moreni for the week ended October 26th was 4,851 tons (33,957 barrels).

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

A spell of fine weather over the United Kingdom during the past week enabled farmers to push ahead with winter sowings, an excellent seed bed being prepared. Supplies of native wheat continue in small compass at the principal statute markets, and, with a slow demand, prices generally moved in buyers' favour. In the floating and forward cargo section the general tone remained depressed by liberal offerings and a falling off in demand from most importing countries. Large shipments and increasing supplies on passage afforded millers little inducement to operate beyond actual needs, and in sympathy with weak overseas cables prices were marked down for all descriptions. Large quantities of Russian wheat arriving unsold are being stored, and considerable difficulty is experienced in placing samples below milling standard. Reports of rust in Argentina were officially confirmed and tended to arrest the decline temporarily, but the damage does not appear to be serious, and finer weather subsequently led to freer offerings of new crop. While Russian shipments still dominate the immediate situation, it is extremely doubtful if the movement can be maintained at the same high level. It is significant that freight bookings from the Black Sea ports have come to a standstill for the time being, due, no doubt, to the inability to sell cargoes already shipped, and it is felt that the full weight of Soviet competition has now been met. Canadian grades are offering readily, but the lack of export demand is keenly felt in the Dominion, while Argentina continues to ship old crop wheat in order to make room for new supplies. In these circumstances, millers have no anxiety regarding future prospects, particularly as Southern Hemisphere crops will be available early in the New Year, and, meanwhile, current supplies are in excess of requirements. A fair business was reported in home-milled flour, and prices were reduced slightly in sympathy with wheat. Imported makes, however, move off slowly. The demand for maize has improved following the recent spell of colder weather and reduced prices, which encouraged shippers to show more reserve. A better tone for feeding stuffs was also reported from Continental centres.

WHEAT.—Easier. No. 1 hard Manitoba, ex ship, 30s. 6d.; No. 1 Northern Manitoba, ex ship, 29s. 6d.-30s.; No. 2 ditto, 29s.-29s. 3d.; No. 3, 28s. 6d.; No. 4, 27s. 6d.; No. 6 Manitoba, 23s. 6d.; No. 2, mixed Durum, 28s. 6d.; Barusso, 61½ lbs., ex ship to arrive, 25s. 6d.; Australian, 30s.; choice white Karachi, 29s. 8d.; Russian, on sample, ex ship, 25s. 6d.-27s. 6d. per 496 lbs. English, new, 6s. 6d.-7s. per 112 lbs.

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £74,000,000. Annual Income £10,500,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY
75-76 King William St., London, E.C.4
D. E. WALKER, Manager for the United Kingdom.

FLOUR.—Quiet. London straight run, 28s. per sack for country deliveries and 27s. London area. Of imported, Manitoba patents, 25s. 9d.-27s. 6d.; Buffalo ditto, 25s.-27s. 6d.; Australian, 23s.-24s. ex store per 280 lbs.

MAIZE.—Easier. Plate, landed, 18s. 6d.; ex ship, 17s. 6d.; November-December, 17s. 3d.; December-January, 17s. 3d.; January-February, 17s. 9d.; No. 2, white flat, African, landed, 18s. 6d. per 480 lbs. Yellow maize meal, £6 5s. f.o.r. London. Yellow African, ex ship, £5 5s.; white, £4 12s. 6d. per ton.

BARLEY.—Dull. Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s. as to sample; Chilean, brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs; Black Sea, ex ship, 12s. 6d.; Danubian, ex ship, 12s. 6d.; landed, 13s. 9d.; Persian, landed, 13s. per 400 lbs. English, new, malted, 7s.-13s. 9d.; feed, 6s. 6d.-5s. 9d. per 112 lbs.

OATS.—Weak. Plate, landed, 12s. 3d.; ex ship, 11s.; Chilean, tawny, ex ship to arrive, 12s. 3d.; landed, 13s. 3d.; best whites, ex ship, 19s.; landed, 20s.; mixed Canadian feed, ex ship, 9s. 3d.; landed, 10s. 3d.; North Russian, ex ship to arrive, 13s. 3d.; landed, 14s. 6d. per 320 lbs. English, new, 6s.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Nov. 8	Cwts. 124,248	Cwts. 216,554	Cwts. 288,752	Cwts. 233,350
10 weeks to Nov. 8	1,449,432	2,940,972	3,039,571	2,476,427
Average price of English wheat per cwt.	s. d. 6 10	s. d. 9 5	s. d. 9 11	s. d. 10 2

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.						
Nov. 1.....	Cwts. 156,055	Cwts. 543,898	Cwts. 54,868	s. d. 6 11	s. d. 9 10	s. d. 6 0
Nov. 8.....	124,248	526,468	55,294	6 10	9 8	5 11

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Nov. 13, 1929.	Jan. 2, 1930.	Oct. 29, 1930.	Nov. 5, 1930.	Nov. 12, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	124½	148½	72½	66½	65½
Chicago (No. 2 Winter) —Cents per 60 lb.	116½	114½	130½	79½	72½	72½

The visible supply of wheat in Canada at 68,298,000 bushels, shows an increase on the week of 3,000 bushels. Supplies a year ago stood at 82,157,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Business in South Yorkshire coal remains sluggish in view of the uncertainty regarding marketing schemes. Not much tonnage is being booked on export account, although best steams are firm at 16s. per ton f.o.b. Small fuels continue to be a drug on the market and can be bought at cut rates. Best quality house coals command a ready sale at high prices, but secondary qualities are quiet. The demand for blast-furnace coke for central heating is larger than ever before and is reducing surplus output due to the poor consumption of the iron-smelting furnaces. The price for good qualities is 12s. per ton.

Our Glasgow correspondent writes:—The market has firmed up a little this week as a result of a broadening of the household demand. There has, however, been no material increase in prices so far as shipping business is concerned. With the exception of prime steam qualities, all-round coals are quite easily obtainable for prompt shipment. Among nuts, trebles are fairly well stemmed and doubles are moving off a little better than recently. Shipping prices are approximately as follows (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 13s. 6d.; splint best, 15s. 3d.; splint second, 14s.; navigation, 15s. 6d. to 16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 10s. 6d.; pearls, 10s. 3d.; dross, 9s. 6d. **FIRE.**—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s.; third-class steam, 10s. 9d.; trebles, 13s. 6d.-16s.; doubles, 12s. 6d.; singles, 10s. 6d.; pearls, 10s. **LOTHIAN.**—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s. 3d.; doubles, 12s.; singles, 10s. 6d.; pearls, 10s. **AYRSHIRE.**—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s.; doubles, 12s.; singles, 11s.; pearls, 10s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Business on the Cardiff coal market has shown no improvement this week, and some anxiety is felt as to the position which will arise at the end of the month when the present wages agreement expires. The sub-committee which has been during the past three weeks considering the terms of a new agreement is to report to a full meeting of the Conciliation Board next Tuesday and a miners' delegate conference is to be held on the following day. No definite proposals for wage reductions have yet been submitted by the owners to the miners' representatives, but it has been clearly indicated by them that a reduction in labour costs is considered imperative. It is impossible to anticipate what attitude will be adopted by the delegates. A national conference is to be held in London later in the week. Collieries have been dependent almost entirely on their contracts, but shipments continue approximately about 20 per cent. less than at this time last year. Prices for most grades are nominally on the minimum basis. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; ruffly culm, 9s. 3d. to 9s. 9d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 24s. 9d. to 25s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—A somewhat steadier tone has developed in the iron and steel markets. Business is still restricted to hand-to-mouth buying; but there seems more activity in most departments of the trade. The pig-iron market is disturbed by cheap offerings of foreign iron which have followed the collapse of the Continental Pig-iron Cartel, and fears are entertained that the anxiety of the foreign producers to dispose of their stocks may lead to increased competition to obtain British orders. In the semi-finished steel department, Continental competition is keen, but prices have become somewhat steadier. The figures quoted by Continental makers, however, are at the lowest point known for many years, and as a result a fair tonnage of orders has gone overseas, particularly to French and Belgian works. The demand for finished steel has been rather more active of late, and this has imparted a somewhat brighter tone to the market; but in this department, as in other sections of the iron and steel trade, the pressure of Continental competition is keen, as the prices of all Continental steel materials have fallen to a very low level. The export demand, however, remains sluggish, although there has been a fair amount of inquiry of late.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is very depressed; Continental competition at low prices is keen, and there are no signs of an early expansion in business. Only a few small home sales of Cleveland iron were reported at Tuesday's market, and the official prices were unchanged, viz.: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. In hematite a fair demand is being experienced, and although stocks are heavy in one or two cases, there is a steady reduction overhead. Home consumers are taking more iron and moderate sales continue to be made for export. Makers remain firm at 71s. for mixed numbers for delivery over a few months, but prompt lots can still be got at threepence to sixpence less. Shipments of pig iron are only poor, the total cleared to the 11th instant being 2,748 tons against 7,774 tons to same date in October. In the finished departments there is a little more doing, and it is very satisfactory to learn of the orders placed with the two local firms of Dorman, Long and Company, Ltd., of Middlesbrough, and Ashmore, Benson, Pease and Company, Ltd., of Stockton, of the approximate value of £1,500,000 and £300,000, respectively, in connection with the new steel plant at Pretoria for the South Africa Iron and Steel Industrial Corporation. In the case of Messrs. Dorman's, they are to construct steel-melting shops and rolling mills which will entail about 15,000 tons of constructional steel, while Messrs. Ashmore are to build a large blast-furnace of a capacity of about 500 tons per day. The whole work will extend over two or three years. Head, Wrightson and Company, Ltd., of Thornaby, have secured orders for three coal hoists for L.N.E.R. at Alexandra Docks, Hull, and seven at Cardiff, Port Talbot and Swansea for the G.W.R. Company, Ltd., the total value of which is about £100,000. Prices of the different steel materials are unchanged at this week. The ore market is idle; best Bilbao rubio is offered at 17s. per ton c.i.f., for delivery over a few months, but odd prompt cargoes can still be bought at 16s. 6d. The rate of freight Bilbao-Middlesbrough for early tonnage is about 5s. Coke is weak, and although the general market quotations for ordinary furnace qualities up to the end of the year is 17s. delivered, it is possible to pick up odd lots at a trifle less. The number of furnaces in blast on the North-East Coast is unchanged at 24, but one is going in on ferro-manganese at the Dinsdale works of the Linthorpe-Dinsdale Smelting Company, Ltd., next week, which will increase the total to 25.

Our Sheffield correspondent writes:—No appreciable change in the conditions of the heavy steel and pig-iron branches has manifested itself. Parcels of low-grade Continental semi steel are being offered in this country at pre-war prices, and this competition tends to accentuate the depression here. Steel production remains at the level of the last few weeks. Dullness continues to charac-

terise the pig-iron situation. There is little or no bulk buying of iron and steel materials. The international situation is no better, and this is responsible for the paucity of export business. As regards the home market, demand is now fairly brisk for many kinds of tools, chiefly machine knives, twist drills, saws, spades and shovels. Quality tools are in demand. Shipments of tools to Australia and other overseas markets, however, remain at a low level. The seasonal trade in cutlery, silver and electro-plate is unsatisfactory, and compares unfavourably with a year ago.

Our Glasgow correspondent writes:—In the West of Scotland business remains dull and, although at times the greater number of inquiries would seem to indicate more interest on the part of buyers, there is actually little new work being placed and at most plants there is some difficulty in finding an outlet for even the present reduced output. Continental competition is keen, prices quoted being exceedingly low, especially for semis, which have touched a lower level than for many years past. In the sheet trade the export demand for both black and galvanised continues unsatisfactory. During the present week Messrs Yarrow and Company, Ltd., of Scotstoun, have received an order for ten water-tube boilers for the Tramways Department electric power station at Greenwich from the London County Council. This order is estimated to be worth over £200,000 and will afford employment to a large number of workers.

Our Cardiff correspondent writes:—No improvement has taken place in the condition in the South Wales tinplate and steel industries this week; on the contrary, demand has been less active and prices easier. Nominally, however, quotations for tinplates, galvanised sheets and tinplate bars are unchanged.

OTHER METALS.

TIN.—The standard market displayed generally quiet features, and with sellers more in evidence a weaker tone resulted, with slight irregularity at times. Closing tone strong on increased buying. Eastern advices were firmer. Standard cash changed hands at £112 2s. 6d., £110 10s. and £115; three months, £113 10s., £111 18s. and £116 10s. Sales in the East were reported at £117 10s. to £117 5s. and £118 10s. per ton, c.i.f. terms.

COPPER.—Market firmer, and a good demand was reservedly met, forward positions being chiefly in request. Small sales in standard cash were reported at £44 8s. 9d. to £49 5s.; and three months sold from £44 to £49 10s. per ton.

LEAD dull and trend of values in buyers' favour, offerings being in excess of requirements. The close was firmer on active support. Good soft foreign pig, December, sold £15 11s. 3d. to £15 10s. and

TIN PLATES steady, with a moderate business passing. I.C. coke, prompt and forward, 17s. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: November 12th.

The markets have been dull and featureless. The Bureau report issued on Saturday gave the indicated crop as being 14,438,000 bales, against their last month estimate of a crop of 14,486,000 bales. The figures were a little less than expected and prices advanced some 15 points. On the week, however, prices are about 10 points down. To-day the New York Cotton Exchange Service published their estimate of consumption in the United States for October as 441,000 bales, against 385,000 last month and the daily rate as 18,000 bales, against 16,100 bales last month. The official figures of consumption for October last year were 641,000 bales. Spot sales for the week 6th to 12th (inclusive) are 33,000 bales, of which 14,630 bales are American, 1,400 Brazil, 1,350 Argentina, 7,500 Peru, 4,450 Egyptian, 1,400 African, 1,900 East Indian and 370 sundries. Imports for the same period are 64,159 bales, of which 53,388 bales are American, 2,108 Peru, 6,125 Egyptian, 1,167 African, 1,080 East Indian and 291 sundries. Quotations to-day are: American Middling, 6-02; Egyptian Sakel, 9-85; Uppers, 6-82; Brazil Fair, 6-02; Peru G.F. Smooth, 6-57; West African Middling, 6-07; and East African (G.F.), 7-02.

MANCHESTER: November 12th.

There have been very few indications of increased activity in the market and business in yarn and cloth has been confined to miscellaneous lots. The fluctuations in raw material rates have been disconcerting, but on the whole traders hold bearish views at the moment and there is a distinct fear of lower values. Cables continue to be received from India asking for cloth prices to be wired out, but the response in the way of definite offers is poor. Producers of dhooties in Blackburn and district are still without relief. Light bleaching descriptions have been sold in moderate lots for Madras and Karachi. The latest news from China has not been encouraging, and owing to rumours of some change in the settling day for the native dealers there has been a slump in prices for goods at the auctions in Shanghai. Some exporters to the Near East have displayed rather more interest in Manchester goods, but comparatively little has been done for South America and the Continent. Some falling off is showing itself in the demand for the home trade. In American yarns for home use there has been rather more irregularity in quotations. Spinners have sold much less freely than a fortnight ago. A fair business continues to be done in Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent writes:—Generally speaking, the wool market is sound. Some encouraging information has been received from Australia this week, there being a hardening tendency in all good wools in Melbourne and Sydney. From private information, it is evident that there were fairly large operations on home trade account, and though there may still be some misgiving about the future of faulty merinos, practically none need be entertained about anything with quality and good combing style. The free movement of wool in Australia having been accompanied by substantial turnover here, has created the belief that merino wool is

a sound proposition, there being more safety in buying the raw material than in selling tops on forward account at current prices. Similar opinion is also understood to be held by some of the leading Continental houses whose stocks of wool are small, and who are prepared to go on operating freely. Considerable quantities of South American wools have been bought for Bradford. The clean-scoured cost of both merinos and crossbreds is very reasonable, but it is believed that a basis has been established for the latter from which there will not be much deviation when the New Zealand season commences at Auckland towards the end of this month; 7½d. clean for low Buenos Aires crossbreds and 15½d. for good Monte Video combing merinos indicates a cost at which increasing turnover should be possible. The Bradford market is quite firm. The turnover in tops is not now very large and, following the tendency in wool, merino topmakers are quoting slightly higher prices for any business offered on both spot and future account. Quite a substantial amount of business has been done in botany yarns. Prices seem to have given rather more satisfaction, though spinners of white yarn are still disposed to sell on a basis which does not allow for any advance in wool and tops. Crossbred tops are steadier, but it is still possible to buy medium and low qualities very cheaply.

THE JUTE TRADE.

DUNDEE, November 12th.

Brighter prospects are in store for the jute trade, and buyers of jute cloth are displaying considerably more interest. Though business is still very much under normal and insufficient to warrant the putting on of more machinery, orders have been more numerous for small quantities and inquiries are being received for fair lots for delivery some distance ahead. Prices have come down to such a low level that there is no room for a further fall if spinners and manufacturers are to keep their works open. The raw material is keeping at a level of value that is higher than the comparative rates obtainable for jute yarns and cloth, so that with the improvement noticeable in the market there is a tendency to raise prices of productions. The Indian mills have been purchasing moderately of raw jute during the past week, and this, combined with speculative operations, has caused prices of the fibre to harden. Good quality jute is none too plentiful despite the large crop forecasted, and First Marks and the better qualities are seldom offered for sale. The nominal value of First Marks is £20 10s. to £21, and good Lightnings have been sold this week at from £17 5s. for five mark group to £18 for Red H. November-December. Daisee assortment rose to £15 10s., and threes have been sold at £15 for long group, with fours offered at £14. Tossa assortment is quoted at £17 5s., threes at £17 and fours at £16, November-December. Spinners have purchased fairly freely during the past week, because of the incentive received in the better sale of jute yarns, which have commanded a good deal of attention from manufacturers. The price of common 8-lb. cops is more often 2s., and for 8-lb. spools 2s. 1d. is wanted, though business has not yet been reported at more than 1s. 11d. and 2s. respectively. Transactions have been recorded forward into the first few months of next year. Twist is from 3½d. to 4d. for 3-ply 8 lb., according to quality. Sacking yarns are in moderate request at 2½d. lowest for 24-lb. woft and 3½d. for 8-lb. chains, while rove is very steady at £25 for 48 lb. and £17 for 200 lb. Fine yarns are firmer at 3s. for second quality 8 lb. Rio warp, 2s. 8d. for third, and 2s. 5d. for fourth. Business in jute cloth has increased to some extent, and manufacturers are trying to get away from the uneconomical level at which prices have been ruling for some time. There is, however, the inclination to first consolidate the position, and any business being done is at last prices for the heavier weights, viz., 2½d. to 3d. for 10½ oz. 40 in., and 2d. is now the lowest for 8 oz. Linoleum hessians continue dull and nominal, and heavy goods remain quiet. The Calcutta goods market has firmed up in sympathy with the raw jute market. The value of 10 oz. 40 in. is 18s. 6d. for November-December and 18s. 7d. for January-March, with 8 oz. at 14s. 9d. and 15s. respectively. Spot prices are up to 18s. 9d. for 10 oz. and 15s. 3d. for 8 oz.

HIDE, LEATHER AND ALLIED TRADES.

The downward tendency of prices for hides from home-slaughtered cattle was again in evidence at the auctions held at Manchester on Tuesday, all first clear and warbled ox and heifers, with the exception of the two bottom weights, making ½d. per lb. less money. Calfskins were from ½d. to ¾d. per lb. cheaper, while cows and bulls sold at the previous week's figures. Sales of imported hides have again been on the small side, and although a regular trade is being done, turnover is not sufficiently large to make for a firm market, with the result that values for most descriptions are again slightly lower. In the South American market, parcels of Argentine ox have changed hands on the basis of 6½d., with light ox sold at 5½d., and cows at 6½d. Dry South Americans have been a poor trade with B.A. Americans still quoted at 7½d., and M.V. Americans at 8d. Capes have been inquired for and sales of drys have been made at 7½d., and 6½d., for firsts and seconds, with the same selection of drysalted on offer at 6½d. and 5½d. for 20/30 lbs. Prices for Australians are inclined to be easier. Sole leather business has not been up to the average and in some directions the turnover is considered below what might normally have been expected for the time of the year. English and wetsalted bends have been the best feature of the trade done, and the inquiry for these on repairing account has covered all weights. In regard to dry hide bends the only inquiry of any consequence has been that for the heavier weights for the production of men's winter footwear. In the upper leather section a moderate turnover is done from day to day in most of the stale lines, with willow calf still the best seller.

OVERSEAS PRODUCE.

SUGAR.—Trade demand shows no appreciable revival and is still largely measured by immediate requirements, but no further change occurred in quotations. In view of the satisfactory progress of the Chadbourne plan which, having passed the Lower Cuban House by a large majority, awaits ratification by the Senate, sellers naturally adopted a good deal of reserve. In spite of this, however, an extensive business was arranged in raw terminal section at higher prices. It is understood that a meeting of Cuban European interests to discuss mutual crop restrictive measures will be held in Brussels on the 29th instant. Cane raw sugars offered very sparingly. Terminal section for raw manifested activity and prices responded. December delivery sold 5s. 4d. to 6s. 5½d.; March, 6s. 6½d. to 6s. 7d.; May, 6s. 9½d. to 6s. 10d.; August, 7s. 0½d. to 7s. 1½d. and 7s. 1d.; December, 7s. 3d. to 7s. 4d. Foreign, 96 per cent. centrifugal, in odd parcels for November, quoted 6s. 3d., and representative quantities, 6s. 6d.; Continental, 88 per cent. beet, 6s. c.i.f. United Kingdom. Imports into the United Kingdom last month, 150,554 tons, against 165,869 last year; consumption, 148,939, against 139,885; exports, 13,305, against 26,237; stocks, 176,450, against 276,850; stocks of home-grown, 24,550, against 29,450 same time last year. Cuban receipts last week cabled 38,720 tons, against 9,160 same time last year; exports, 99,300, against 30,000; stocks, 896,670, against 305,670. Messrs Willett estimate quantity on plantations and in course of transit 1,109,000 tons, against 403,813 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending November 8 totalled 19,623 tons, against 21,172 last year.

COFFEE.—Quiet conditions continue and prices show a weaker tendency, except for attractive quality, of which supplies are scarce.

EXPORTS OF PRODUCE and MANUFACTURES of the UNITED KINGDOM (Value F.O.B.).

11s												

9½d.; October-December dealt in at 9½d.; and January-March 9½d. London stocks of black reduced 29 tons on the week to 465, against 1,142 same time last year; white 12 tons higher at 158, against 1,054. deliveries 4,681, stocks 75,159, against 49,302 last year. Liverpool stocks 395 tons higher, landings 697, deliveries 302, stocks 39,336, against 18,158.

FRUIT (Dried).—Currants: Market firm with a fair trade passing. Pyrgos, 30s. 9d.-31s.; Vostizza, 50s.-60s. Sultanas move off freely at full rates. Smyrna, 40s.-60s. Raisins sell readily. Valencia, quarter boxes, 38s.-65s. Dates firm. Figs steady. Genuine, 26s.-30s. Evaporated Fruits: Market quiet and prices tend easier for apricots, but plums firm, especially large sizes. Californian peaches, 40s.-47s. 6d.

CANNED GOODS.—Fruit : A steady demand continues for English fruits and Australian varieties also sell fairly well, peaches being chiefly favoured, but large quantities of Californian available meet with limited attention, though prices are at a reasonable level. Fish : Sardines in moderate demand, chiefly for the cheaper grades. Meat : Market quiet and prices barely maintained. Condensed milk : Steady on reserved offerings. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 34s. Honey : Generally quiet at late rates.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,304 tons, as compared with 9,225 tons in the corresponding week last year. Imported beef, principally Argentine, formed 79.9 per cent. of the supplies, as against 76.9 per cent. a year ago, and imported mutton, mainly New Zealand, formed 73.6 per cent. of the total supply, as against 69.6 per cent. last year. With the exception of South American beef, which shows a slight fall, prices are scarcely changed on the week.

RUBBER.—After a firmer opening, buyers adopted more reserve and prices became fractionally easier. Standard sheet, spot and November, sold 4½d. to 4½d.; December, 4½d. to 4½d.; January-March, 4½d. to 4½d.; April-June, 4½d. to 4½d.; July-September, 4½d. to 4½d.; October, 5d.; October-December, 5½d. to 4½d. To New York, estate sheet, December-January, sold 4½d. c.i.f. London stocks reduced 2,321 tons on the week, landings being 2,360.

deliveries 4,681, stocks 75,159, against 49,302 last year. Liverpool stocks 395 tons higher, landings 697, deliveries 302, stocks 39,336, against 16,158.

HEMP.—After fair activity, subdued conditions governed the market for Manila descriptions. J2, November-January, quoted \$24 6s.; K, sellers, \$23 10s.; L1, \$23; L2, quoted \$22; M1, \$22; M2, \$21. Sales: H grade, November-January, at \$23 10s.; African sales unaltered. Receipts last week, 21,000 bales, against 25,000 last year; estimate for next week, 21,000, and week after 21,000. Manila shipments last week: 3,000 to the United Kingdom, 9,000 Continent, 7,000 U.S.A., 7,000 Japan. 2,000 other countries, and local consumption, 1,000.

VEGETABLE OIL AND OILSEEDS.—The easier conditions have become accentuated, and business further restricted. Linseed is in poor demand and on lower Plate options values have again declined. A large quantity of old crop Argentine is still unsold, and with considerable pressure to sell, prices have got down to the lowest levels for many years. Seed on passage and for November shipment offering at £10 12s. 6d. without finding buyers. New crop, December, is quoted £10 5s. and for January and February, £9 17s. 6d. Baltic linseed is offering at £11 12s. 6d. on spot at Hull. The quantity of linseed on passage to Europe is now 80,700 tons, against 50,200 tons a year ago, while the estimated balance (including India) for shipment to the end of November is 219,000 tons, against 143,000 tons. Cotton seed is slow and neglected, black Egyptian on passage and loadings to January quoting £6 3s. 9d. Linseed oil is in moderate demand and not too plentiful in near positions, current value on spot being around £26 10s., ex Hull, and November delivery £25 10s. Forward delivery is lower, and January-April is reported done at £21 17s. 6d., and May-August, £21 5s. Cotton oil is quiet, with crude Egyptian offering at £22, and common edible at £25 5s., ex Hull. Sellers of copra exercised more reserve, and the market improved slightly, while moderate inquiries circulated. Straits S.D., December, to Rotterdam, sold £16 1s. 3d.; Dutch East Indies, December, sellers £16 2s. 6d.; Ceylon, £17 2s. 6d. Palm Kernels, November-December, to Hamburg, quoted £11 2s. 6d. c.i.f.

THE MONEY MARKET.

MONEY was again in demand early in the week, and on Tuesday rates of $2\frac{1}{4}$ and $2\frac{1}{2}$ per cent. were paid. On Wednesday easier conditions prevailed, with rates running down to 2 per cent., while the three months' bill rate, which previously had been up to $2\frac{1}{4}$ per cent., also eased to a weak $2\frac{3}{8}$ per cent. The cause of this change was believed to be extensive buying of three months' bills by one of the clearing banks. In view of the general desire to bring discount rates up to a level which would leave brokers with a bigger margin, this operation excited some comment.

Apart from the effects of this operation, there is a general impression that rates higher than those of a month ago will exist for some time to come. The volume of outstanding Treasury bills is steadily expanding, and brokers are beginning to have large numbers of bills left in their hands—especially January bills, which are not a very useful or popular maturity. December bills have now passed mainly into the hands of their permanent holders, who need them to meet their requirements for the end of the year, and February bills also have their uses, as they mature at the time when tax collection is normally taking money off the market. The number of January bills held by brokers means that there is a larger demand for loans, and this is accentuated by the French withdrawals of funds, which still continue, and by the absence of any Continental demand for bills. Thus, although the banks continue to have money offered to them which in better times would be needed to finance trade, it is possible that there will not be more money about than is required by the market.

	Oct. 30, 1930.	Nov. 6, 1930.	Nov. 13, 1930.	Nov. 20, 1930.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount / Call	1	1	1	1	1½ (May 1, '30)
Houses / Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½-½	2½	2½-½	2½	...

The gold drain to France continues. All Tuesday's Cape gold was bought forward on Paris account, and this week's withdrawals on French account from the Bank amount to £1,835,000, making a total of £3,716,000 for the fortnight since the outflow began. Against this the Bank has obtained during this fortnight £500,000 in sovereigns from South Africa and £940,000 in sovereigns from Brazil, so that, allowing for minor movements, including the shipment of sovereigns for Spain for Customs duties purposes, the net efflux is only £2,475,000. As this week's Bank return records gold stocks in the Issue Department of £157,913,000, the gold position so far is not such as to arouse any anxiety.

The October statements of the nine English clearing banks reveal an expansion in deposits nearly to the level of last July. Cash, too, is appreciably higher than in September.

	October, 1929.	July, 1930.	August, 1930.	September, 1930.	October, 1930.
Capital and reserves	130.8	131.8	131.8	132.1	132.1
Acceptances	203.2	124.5	121.7	117.8	116.4
Deposits (including undivided profits, &c.)	1,764.7	1,794.2	1,767.4	1,764.1	1,791.2
Total Liabilities	2,098.8	2,050.5	2,020.9	2,014.0	2,039.7
Coin, notes, balance at bank, and cheques in course of collection	247.1	242.6	235.4	232.6	239.3
Money at call	144.9	141.7	133.7	132.9	141.9
Investments	265.5	267.0	276.5	281.3	283.3
Discounts	226.9	284.5	279.3	283.8	296.0
Loans and advances	974.0	950.4	934.3	925.4	922.3
Over for accept., premises, &c.	240.4	164.3	161.7	158.0	156.9
Total assets	2,098.8	2,050.5	2,020.9	2,014.0	2,039.7

The contraction in advances has for the moment been checked, for the shrinkage between September and October is comparatively insignificant. Notwithstanding the relatively unremunerative level of discount rates, the October averages bear witness to a further large increase in the banks' holdings of bills.

NEW YORK.

Money has remained easy, with call rate unchanged at 2 per cent. The usual Federal Reserve statement says that reporting member banks' loans on securities fell during the latest week by \$181,000,000, but that other loans, including those for commercial purposes, rose by \$42,000,000. The October trade returns show that exports were valued at \$328,000,000. This is slightly better than the corresponding September figure of \$312,000,000, but

is exactly \$200,000,000 below that for October last year. Imports at \$248,000,000 display similar trends, as the September figure was \$226,000,000 and last year's October figure \$391,000,000. The numerous bank failures, especially in the South, announced during the week are regarded as evidence of the dangers of chain banking. In some cases the banks may be reopened, and in any event only a few banks of importance are concerned.

THE STOCK MARKETS.

The Stock Markets were quiet, business everywhere tending to contract, though prices showed only a small decline. Long-term gilt-edged stocks were easier, though War Loan remained firm. Apart from speculative buying of Chinese issues, foreign bonds made an unsatisfactory showing. Home railway stocks declined on the publication of a drastic wage-reduction programme by the companies. Dealings in industrial shares were of narrow dimensions, although the carry-over showed that the bear account in numerous stocks had been considerably reduced. The tea and rubber share markets remained in an idle condition, and oil shares showed sensitivity to selling pressure from the Continent. Mining descriptions were featureless, apart from a decline in the leading copper shares on the failure of the metal to consolidate the higher price level of last week-end.

THE COMMODITY MARKETS.

Apart from an increase in the demand for house coal and coke for heating purposes, the coal trade continues depressed, and it is feared that the negotiations for a new wages agreement in South Wales may reach a deadlock. Business in the finished steel department has been slightly more active, but the pig-iron and semi-manufactured departments, in which Continental competition is severe, show no signs of an early revival. Raw cotton prices are again lower, and business, which is confined to deliveries for immediate requirements, continues on a low level. The upward trend in wool prices has resulted in increased activity in Bradford. Demand for leather continues to fall off and hides are weak. Wheat prices are erratic and Canadian grain shows a sharp decline on the week.

THE FOREIGN EXCHANGES.

Dull and irregular is the best description of conditions in the Foreign Exchange market this week. Several currencies fluctuated within narrow limits, whilst internal conditions in Spain operated adversely on the peseta. Sterling on New York remained at about 4.85½ throughout, but closed better at 4.85½. Montreal improved by ½ to 4.85. Paris, after touching 123.63 gained three points on balance at 123.66. Brussels weakened fractionally to 34.82½. Milan was better at 92.76. Madrid after touching 42.05 and 45.20, settled down at 42.90. Amsterdam was irregular, and moved in our favour to 12.07 after having been higher. Berlin gained ½ at 20.38, and Switzerland rose sharply from 25.04 to 25.05½. Of the Scandinavian currencies Stockholm fell from 18.11 to 18.09½, Oslo gained ½ at 18.15½, and Copenhagen was weaker by the same margin at 18.16½. South American exchanges were again uncertain, Rio after fluctuating, was unchanged at 4½d., Buenos Aires was decidedly weak at 38½d., and Montevideo ½d. worse at 39d. In the Far East the rupee was weak at 1s. 5½d., and the yen lost ½d. at 2s. 0½d. In the forward market dollars were quoted at 1.64 cent discount for one and three months, while Paris was firmer at reduced discounts of 2 and 13 centimes. Brussels was quoted at one centime premium for one month, and at one centime discount for three months. Milan went to rather wider discounts of 16 and 45 centesimi, whilst Madrid was rather better at premiums of 4 and 11 centimos. The premiums on Amsterdam rose from ⅞ cent and 1½ cent for one and three months to ½ cent and 1½ cents, respectively. Berlin was ½ weaker in each case, at 3 and 9½ pfennigs discount. Business in the silver market was featureless and narrow, and spot and forward prices both fell by ⅞d. to 16½d. and 16½d. The Chinese silver exchanges reacted differently, Hong Kong falling ½d. to 1s. 3½d., whilst Shanghai gained by the same margin at 1s. 7½d.

FEDERALISM AND RESPONSIBILITY.

The Round Table Conference, so far as can be judged from the plenary sessions held this week, has begun well. The conception of a federal constitution, not as a remote ideal, but as an achievement capable of realisation in the immediate future, has been brought to the forefront by the speeches of the representatives both of British India and the States, whose tenour has fully confirmed the anticipations expressed in these columns a week ago that the task of preparing a real All-India constitution would prove to be the crucial item on the Conference agenda. At the first session on Monday, Sir Tej Bahadur Sapru, having made it plain that, subject to reservations necessary in a transitional period, he stood firmly for real responsibility at the Centre, stated that he was a very strong believer in the federal form of government.

I believe that therein lie the solution of the difficulty and the salvation of India; and if I were to express my opinion freely, I would welcome the association of the British States with British India mainly for three reasons—that they will furnish a stabilising factor in our constitution; that the process of unification will begin at once; and that, in regard to matters of defence, they will furnish a practical experience which is as yet wanting in British India.

The Maharajah of Bikaner, who followed, gave it as his view that the starting point in the deliberations of the Conference must be sought "not in the dead hand of impossible uniformity, but in an associated diversity." The establishment of a unitary State with a sovereign parliament at Delhi was, to his mind, impossible. In such a constitution there would be no room for the Indian States, and a government on this basis would "crack under its own ponderability."

We of the Indian States are willing to take our part in, and to make our contribution to the greater prosperity and contentment of India as a whole. I am convinced that we can best make that contribution through a federal system of government composed of the States and of British India.

On the following day, the Moslem attitude was set forth with equal explicitness by Sir Muhammad Shafi, who suggested that a self-governing India side by side with an Indian India, having its relations with the Crown, would be "a hopelessly impossible conception." In his view there was "only one form of government, one basis for the future constitution of India which will suit the circumstances of the case, and that is the federal system."

These declarations in favour of federation, which received further support from the Maharajah of Rewa, who spoke for what he described as "the conservative element in the Indian States," and from Lord Peel, as spokesman for the Conservative members of the delegation from the British Parliament, are impressive in their unanimity. But though the principle of federation in India may be endorsed on all sides as affording the most hopeful lines on which to pursue agreement with regard to the various issues which confront the Conference—and above all the dominant issue of the completeness and rapidity with which responsibility at the Centre is to be transferred—a number of debatable points, as we pointed out last week, remain to be cleared up before the federal idea can take clear concrete shape. There are, as the Maharajah of Bikaner remarked, several kinds of federation; and it is evident that before much progress can be made the Conference will have to choose broadly between two alternative lines of constitutional policy.

On the one hand, there is the possibility of what might be described as a "single" All-India federation. Under this constitution the Governors' Provinces, enjoying autonomy in all "provincial subjects" of legislation and administration, and with executives responsible (subject to the Viceroy's over-riding powers) to elected legislatures, would send representatives in common with the States to a federal legislature whose purview would cover all the "central subjects," and to which the Central

Executive—subject to agreed reservations—would be responsible. That is to say, except in spheres wherein Provinces and States alike were autonomous, the federal legislature would make enactments applicable both to States and Provinces. This would imply two things—firstly, the disappearance of the existing elected legislature of British India and, secondly, the surrender to the new federal legislature by the Princes of a certain measure of the sovereignty which they now hold.

There is no reason to suppose that the difficulties involved in satisfying this second condition need prove insurmountable. On Wednesday the Maharajah of Patiala made it plain that the Princes would not abandon any of their claims to complete "internal autonomy, without any interference on the part of British India, whatever the constitution of British India may be"; but, even though the States preserved their "internal autonomy" intact, and though their internal constitutions might continue to differ substantially from that of the Provinces of British India, there should be no insuperable obstacles to agreement as to where sovereignty should be vested in matters of "common concern." On the other hand, the possibility cannot be overlooked that the delegation from British India may regard the abandonment of a central British Indian Parliament as a serious setback to national aspirations. Indeed, we believe that some, at least, of the delegates adhere strongly to the view that a solution is to be sought in a bi-cameral system whereby there would be a central legislature (preferably by direct election) for British India, and, side by side with it, a federal legislature for All-India. We do not say that such a system would necessarily be unworkable, but it appears to raise points of considerable difficulty. Unless the functions of the British Indian central legislature were to be confined simply to the co-ordination of "provincial subjects," it is not easy to see how the operations of the two legislatures could be prevented from conflicting with one another; nor, unless there were to be in effect two central executives—one "minor" and one "major"—can we readily conceive how the Viceroy and his Council could accord to two legislatures, the larger of whose orbits would include the lesser, the desired degree of responsibility.

In any event, it is clear that much hard thinking and, we hope, a helpful lead from the British Government, will have to be given to the task of shaping, at least in the rough, the broad lines of a federal constitution before public opinion in this country can usefully be asked to make up its mind on the crucial question how far "responsible government" is to be established in the immediate future at the Centre.

In this connection there are two main points to be considered. The first is that of the Army. From the trend of the speeches at the Round Table Conference it is evident that there should be no insuperable difficulty to an arrangement under which defence is reserved, provided the process of Indianisation, as indicated in the Viceroy's Despatch, is really pressed forward. The other, and more difficult, problem relates to the transfer of responsibility for finance.

This lies at the root of the matter, and the section dealing with it is perhaps the most penetrating and realistic in the Government of India's lengthy statement. If defence, which absorbs the greater part of the central budget, is reserved, and if Parliament cannot divest itself of all responsibility with regard to the existing loans of India and the status of the Services, Parliament, the Despatch observes, must be satisfied as regards items which cover nearly the whole of central expenditure. While, therefore, it will inevitably be provided in the new constitution that the sums required under these headings should be a statutory first charge on an Indian

consolidated fund, payable independently of any vote of the Indian Legislature, such a charge is of no use unless the necessary taxes are levied to produce it. Again, India's credit is of vital importance, not merely because of the Government loans involved, but having regard to the enormous investment of British capital in the country, to say nothing of the additional capital which is still needed for India's full development. Moreover, a shock to credit would affect not only British but Indian capital, which would undoubtedly seek investment abroad. Thirdly, it is well known that the remittance of funds to meet foreign exchange requirements is an important feature of the Indian situation, and it is clearly desirable that India should fall into line with the general trend of recent years, and that these important functions should be conducted in accordance with the dictates of sound finance and be free from political influence. The establishment of a Reserve Bank is, therefore, regarded by the Government of India as a necessary condition precedent to any transfer of financial responsibility at the Centre. Finally, the Despatch concludes, the present is a very bad time to make such a change, because of the economic depression, the disturbing effects of political agitation and of boycott, and the fact that the amount of existing loans to be redeemed in the next few years is exceptionally heavy. "It would indeed hardly be possible to imagine a combination of circumstances more unfavourable to an immediate change of policy, which might result in shaking public confidence in the credit of India."

The Despatch, however, does not find in these circumstances a final obstacle to a transfer which is a necessary condition of the policy on which we are embarked. It urges that both sides should endeavour to work towards a condition under which transfer would be made possible, and notably "rational and normal economic conditions, the re-establishment of credit and confidence, and the inauguration of the successful working for some time of a Reserve Bank with sterling reserves." It is suggested that the Government must be the judge as to whether some of the less definable of these conditions are fulfilled, but that definite steps might be taken towards creating the necessary conditions, and that we should forthwith embark upon a period of preparation for the transfer. The creation of a central bank is a definite step, another is a clear statement by leaders of Indian opinion disposing of any suggestion of repudiation; while a still more tangible proof would be if Indians would show their willingness "to mobilise their private resources for the sake of establishing the national financial position." Clearly, if national enthusiasm could be diverted to the raising of a great internal loan for launching the new constitution, it would be the best possible guarantee of the maintenance of India's credit.

When the conditions have been achieved, however, and the transfer made, it is suggested that safeguards will still be necessary, and they will include the creation of a consolidated fund as suggested above, some power of supervision and control to be vested in the Governor-General to maintain financial stability, and provision for the resumption of control by the Secretary of State in the event of an actual breakdown or a default of the consolidated fund. The Despatch attempts to envisage how the operation of these powers would work with an Indian Chancellor of the Exchequer, and proposals are made which clearly envisage something like a time-table in the process of transfer, fixed in terms not of years, but of fulfilment of certain conditions.

If we have emphasised the importance of finance in connection with any scheme which may be devised for Central Government in India, it is for the reason that, just as the Statutory Commission recognised that provincial autonomy depended essentially on the Provinces having effective control over revenue, so, at the Centre no measure of "responsibility" can be considered as real, without the transfer—under whatever transitional safeguards may be necessary—of financial responsibility. It is by this test, above all, that the Conference's proposals will be judged in India.

EUROPE'S ARMED CAMPS.

THE present and final session of the Preparatory Commission for the Disarmament Conference is turning out like and unlike the previous sessions—like them in making little or no headway in the direction of its proper objective, but unlike them in producing a positive result. This positive result is not an agreed basis for a general limitation and reduction of armaments throughout the world; it is something quite different. It is a redivision of the Powers of Continental Europe into two opposing camps, a reconstitution of the Continental European Balance of Power, which, it was hoped, had been overthrown by the Great War and the peace settlement.

As far as the ostensible business of the Commission is concerned, it will be seen from our League correspondent's message on page 953 that the principle of the direct limitation of war materials has been defeated. On Friday, November 14th, a proposal for direct limitation, moved by Germany, was lost on an equal vote of nine to nine. The United States, the U.S.S.R., and Italy, as well as one state-member of the British Commonwealth, the Dominion of Canada, were among the states that voted for the German proposal; France and her European allies, Belgium, Poland, and the three members of the Little Entente, were among the states that voted against. If the British vote had been cast in favour of the German proposal it would have given it its majority; but the British delegate, Lord Cecil, abstained from voting. On the same day, Italy moved a proposal for a combination of the two methods of direct limitation and budgetary limitation. This was defeated by eleven votes to nine, Lord Cecil's vote being among the eleven. A Russian proposal on the same lines as the Italian proposal obtained only five votes in its favour. Thereafter, Lord Cecil made a motion to record that the majority of the Commission associated itself with the principle of limiting war material for land warfare by budgetary methods, while recognising that certain members of the Commission would prefer the direct method by specific enumeration and that certain members would desire to see some combination of the two methods. Lord Cecil's motion was carried by sixteen votes to three; but the three dissentients were important. They were Germany, Italy and Russia—an ominous combination.

This week, the Commission has been giving its attention to the limitation of naval armaments; but the grouping of Powers which was revealed in the course of last week's proceedings seems likely to be the substantial result for which this session will be remembered. For the plain truth is that France and her European allies cannot bring themselves voluntarily to renounce that decisive superiority of land armaments on the European Continent which they have secured through the outcome of the war and the terms of the peace treaties. At Paris, in the small hours of the morning of November 14th—that is, a few hours before the German proposal for the direct limitation of war materials failed to secure a majority of votes in the Preparatory Commission at Geneva—the French Chamber, by 323 votes to 270, reaffirmed its confidence that Monsieur Tardieu's Government would "persevere in the organisation of peace by guaranteeing national security and the observance of the treaties." And in the course of the preceding debate, both Monsieur Tardieu and Monsieur Briand vehemently denied that the ex-Allied and Associated Powers were under any obligation to reduce their armaments.

It is difficult to see how this thesis can be maintained, considering that, in the peace settlement, these Powers solemnly declared that the immediate compulsory unilateral disarmament of Germany and her late allies was intended as the first step towards an eventual voluntary reduction of armaments in all countries. But it would be idle for us to enter into a controversy with our own late allies over this matter. The important—and lamentable—fact is that, when it comes to the point, France and her allies are unwilling to renounce their present superiority of military force over the other military Powers of Continental Europe. Instead of discussing whether they are legally or morally justified in taking this line, it will be more useful to consider what the consequences of this policy are likely to be.

The first consequence, as the terms of the resolution in the French Chamber show, will be to set up a vicious circle of inequality in armaments and intangibility of treaties. The preservation of the precise dispositions of the peace treaties, which are so greatly to the advantage of this group of Powers, is the object for which they desire to maintain their superiority in armaments. But the very effort to maintain this superiority in armaments compels the French Group, conversely, to insist more than ever upon the sacrosanctity of the treaties. France dare not assent to the diminution of Poland's present political assets by one jot or tittle, for fear that Poland might abandon the French alliance, and vice versa, for the same reason, Poland dare not approve any revision of the peace treaties which might not be agreeable to France. Thus the refusal to disarm and the refusal to revise the treaties are bound up with one another, and each, under the influence of the other, is bound to grow ever more intransigent with the passage of time.

Now, if this situation sets hard, there is only one possible outcome. The armed force by which it is maintained will evoke a counter-accumulation of armed force; and this counter-accumulation will gradually grow until it is powerful enough to overthrow the present French "system of Europe" by violence in another general war. In the long run the French side is bound to be the losing side, because it stands for the past against the future, for fixity against change. In other words, it is an attempt to arrest the course of Nature; and Nature, which consists of change, cannot be bound permanently in any chains of human forging. Thus the French "system," if it is not relaxed at an early stage by persuasion and agreement and common sense, is doomed to be broken at a later stage by war. In which of these two ways is the French "system of Europe" to come to an end? The answer to that question will make the whole difference to the future of Western civilisation; and it looks as though the question were being settled—and settled in favour of future war—at Geneva now.

Is it too late to prevent the question of the future from being given this fatal answer? May it not still be possible to save the peoples of Europe from being herded again into two mutually hostile camps from which, in the fullness of time, they will be led out to slaughter one another? In concrete terms, this is equivalent to asking whether it may not be possible to secure a change of policy in France. For the prevalent policy does not represent the feelings and opinions and wishes of the entire French nation. There are people in France who desire to turn her feet away from the path of destruction and to explore the road of disarmament all round and of a moderate revision of the peace treaties by agreement. Why is this element in France—an element which is neither numerically nor politically negligible—apparently impotent at this moment? Is it because they have been looking for en-

couragement and support from those who think and feel like them in Great Britain, and have been perplexed to see the British delegate at Geneva pursuing a policy which, in their eyes, is simply strengthening the hands of their own opponents at home in the Chamber and the country?

Lord Cecil's tactics at Geneva have indeed been puzzling to English as well as to French observers. One knows that the art of statesmanship is to give way on minor points in order to secure agreement on essentials; yet this time it almost looks as though the British Government had allowed its eagerness for agreement to betray it into doing something quite different. It looks as though it has been letting vital points go in order to secure an agreement on minor matters which is of little value in itself and which only throws into sharper relief the real and growing division of hearts and minds between the French group of Powers and the rest of Europe.

THE NATIONAL CAPITAL.

THAT branch of statistical science which concerns itself with estimating the national wealth is still in its early adolescence, and since the outbreak of war in 1914 its growth seems to have been arrested, owing to the rapid changes in conditions which never remained stable long enough to allow such an estimate to be attempted. Fortunately the recent election of Sir Josiah Stamp to the Presidency of the Royal Statistical Society, has provided the occasion for a fresh attack upon the subject in an inaugural address delivered last Tuesday.

The two accepted methods of approach to the subject are the Giffen method, which attempts to value the assets of the country as a going concern by capitalising incomes, and the "multiplier" method, which obtains the result from the annual value of estates subject to death duty by multiplying by a figure representing the ratio between estates passing on death annually and the total capital. This method takes no account of property in public ownership, but includes the national debt. Sir Josiah Stamp works by the Giffen method, and then checks his results by the "multiplier." His principal sources of material are the income-tax returns for 1928. Under Schedule A, the net annual values of houses, after allowing for repairs, reductions and discharges, amount to £220 millions for England and Wales, and £23.5 for Scotland and Ireland. Capitalised at 17.5 and 11.7 years' purchase respectively, these give a total value of £4,125 millions. The addition of the new houses built in 1928 brings the total to £4,238 millions, which Sir Josiah Stamp raises to £4,500 millions to allow for the effect of rent restriction in reducing the capital value of house property and giving rise to a corresponding increase, which is not capitalised, in the

real incomes of tenants. Land, after an allowance for the value of undeveloped sites, is valued at £950 millions. Owing to the exclusion of the Irish Free State, and to the very much lower rates of interest, this is less than the 1914 figure. Farmer's capital is put at £450 millions.

Trading profits assessed under Schedule D form the largest category to be dealt with. After the necessary deductions for wear and tear and overcharges, the net profits from manufacturing, mining, distribution, transport and communications, less profits from retail trade and businesses not run by limited companies, amount to £480 millions. The distribution of these, assumed to be in the same proportion as in the case of the large sample of industrial profits analysed in the *Economist*, relating to the year ended June, 1928, after setting off debenture interest as being about equal to the annual value of property, and the income from outside securities (which do not enter into the assessed profits of Somerset House, though they do come into the samples), is as follows: Distributed on preference capital, £91 millions; on ordinary, £289 millions; reserve, £100 millions. In order to find a multiplier for the capitalisation of this group of incomes, Sir Josiah Stamp has carried out a most interesting classification according to yield of a large sample of stock exchange securities, from which he arrives at 11.88 years' purchase as the overall multiplier for capitalising these incomes.

To the figure of £5,700 millions thus arrived at must be added £950 millions for the retail group. This is composed of £50 millions companies' profits capitalised on the same basis as the other industrial profits, giving a capital figure of £600 millions, and an estimated capital of £350 millions in the hands of a large number of very small business people. Profits from finance and professions are capitalised at £1,450 millions, bringing the total of capitalised profits so far to £8,100 millions.

These capital values of profits have been arrived at simply on the basis of stock exchange valuations. From a large personal experience, Sir Josiah Stamp estimates the magnitude of the "unrevealed value" representing the excess of assets over market capitalisation as $7\frac{1}{2}$ per cent. When $7\frac{1}{2}$ per cent. is added to £7,700 millions (since it does not apply to professional and small traders' profits) the total of £8,100 millions becomes £8,675 millions. Railway capital is estimated at £860 millions, the capital value of interest on Government securities at £4,866 millions, and Dominion and foreign securities and possessions at £1,290 millions. An allowance of 5 per cent. is allowed for losses and evasion, amounting to £475 millions, so that the total capital value of profits and interest amounts to £16,166 millions. Profits below the income-tax level and national savings certificates add a further £475 millions, and moveable property is estimated at £1,500 millions. In estimating the value of the property of Government and local authorities, Sir Josiah Stamp points out that his predecessors have made a mistake of double counting in including profit-making concerns, since these are already allowed for under industrial profits. He estimates the national wealth under this head as £900 millions.

The gross capital thus amounts to £24,945 millions, from which must be deducted £500 millions estimated to be held abroad. In arriving at the net national capital Sir Josiah Stamp decides, after some discussion, to deduct the entire national and local debt, but he says that "There is room for discussion, with a nice balance of argument, whether these valuations should not also be made on a present-price basis, and not a face-value basis, inasmuch as a large part has been included as wealth on the former basis in the gross figures." Since he decides against valuation on a present-price basis, it would have been interesting to know the arguments composing the "nice balance" which determined him upon this course, since the *prima facie* more natural procedure would appear to have been the other. The choice is important, since Sir Josiah Stamp goes on to show that the net figure is the more important for general reference.

The results of the estimates are summed up in the following table:—

THE NATIONAL CAPITAL. (Million £.)			
		Statistical Approximation.	
Real property—Buildings	4,500	300	200
Land	950	75	75
Farmers' capital	450	40	40
Capitalised profits and interest	16,170	875	875
Capitalised profits below income-tax level	475	50	50
Furniture and moveable property	1,500	100	300
Government and local property	900	300	100
	24,945	1,740	1,630
Less belonging to people abroad	500	150	150
Gross wealth	24,445	1,890	1,780
Deduct debt charges	6,400	200	200
Net wealth	18,045	2,090	1,980
		say $\frac{1}{2}$ rds.	
		±1,350	

When the gross total is compared, after making deductions for death duty evasion, unrevealed profits, Government, charity, and other corporation property, with that reached by the "estate multiplier," it emerges as £21,275 millions, against Mr J. C. Wedgwood's multiplier calculation (brought up to date) of £20,050 millions. The reason suggested for a part of the difference is inadequacy of the deduction for war loan held abroad.

It can hardly be too strongly emphasised that exact comparison between different estimates of the national capital is not possible, as there have been wide differences in the rate of capitalisation and the treatment of the national debt, and other differences of treatment have been imposed by changes in the presentation of official statistics. With this reservation, Sir Josiah Stamp's result and those of earlier inquiries may be set out side by side:—

ESTIMATES OF NATIONAL CAPITAL OF UNITED KINGDOM.
(Million £.)

Year.	Amount.	Author.
1845	4,000	Giffen.
1868	6,115	
1875	8,548	
1885	10,037	
1895	10,663	Economist.
1905	13,036	
1909	13,986	
1902	11,413	
1912	16,472	Money.
1914	14,300	E. Crammond.
1914	16,000	Stamp.
1928	18,045	Money.
		Stamp.

In the fourteen years immediately before the war our national wealth, on these estimates, grew from about £11,000 millions to somewhere between £14½ and £16 thousand millions, an increase of from 32 to 45 per cent. In the next fourteen years it increased to £18,000 millions, an increase of from 11 to 28 per cent., according to which estimate we accept for 1914.

It is, however, a very complicated matter to make any intelligent comparison between pre-war and post-war figures owing to the change in the price level. The valuation of many material things, such as houses or plant producing commodities which have responded to the movement, has risen, though not necessarily in proportion to the rise in prices. On the other hand, property giving rise to fixed income, including, for example, Sir Josiah Stamp's railways, the Act governing which only pretends to give them the same percentage on capital as before the war, has fallen in value as a result of rising prices and the rate of interest. It would, therefore, require a much more detailed comparison—which perhaps Sir Josiah Stamp will give us at a future date—to follow the effect of the price movement on the change in valuation.

Looking at the matter very broadly, it is perhaps at first sight surprising that the increase is not greater in view of the rise in prices, for some seven years ago it was estimated that our post-war annual savings were at the rate of some £500 millions a year. But even if this rate has been in existence for a decade—giving a net figure of new savings of £5,000 millions—there has to

to be set against this the loss of the war period when no real savings were being made at all and capital was depreciating. This more modest rate is in keeping with the facts that the method of computation makes no allowance for the accumulation of capital investment in persons and the tendency in post-war years for a larger proportion of the national income to be consumed than before the war. We are indebted to Sir Josiah Stamp for his new essay in this field on which, however, there is clearly still ample room for further work.

THE RAILWAY OUTLOOK.

(BY A CORRESPONDENT.)

ATTENTION is at present focussed on railway wages, the revision of which is now the subject of negotiations between the railway managements and their employees. To prophesy the course of these negotiations would be futile, but it may be assumed with safety that the final agreement will take the form of a middle course between the demands proposed and discussed at recent union meetings and the drastic reductions of pay and alterations in the conditions of service which were put forward by the railway managements at their recent meetings with the union leaders. Quite obviously both sides are, so far, only manœuvring for position, but in view of the close relationship of the country's trade and industry to the financial well-being of its main transport system, it is especially important at this time that the general public should appreciate the fundamental considerations of the existing railway situation.

Turning, therefore, from future probabilities to financial facts, it has to be remembered that the $2\frac{1}{2}$ per cent. voluntary deduction from all fees, salaries and wages of railway directors, officers and employees, terminated in May last, and the present negotiations have been inaugurated immediately after the conclusion of the six months' "truce" which was agreed upon in 1929 when railway revenue was on the up grade and before the full effects of the present world-wide depression in trade had been felt. During the first forty-five weeks of this year the gross traffic receipts of the four main-line railways had fallen by £8,889,000. When it is remembered that in 1929 the Great Western Railway only earned 4.85 per cent. on total capital invested, the Southern Railway 4.26 per cent., the London Midland and Scottish 4.00 per cent., and the London and North Eastern Railway only 3.80 per cent., the gravity of the situation will be realised.

Net revenue in 1929 amounted to approximately £45,000,000, divided between the companies as shown in the following table:—

Railway.	Net Revenue, 1929. £	Reduction in Gross Traffic Receipts for First 45 Weeks, 1930. £
G.W.R. ...	8,198,644	1,245,000
S.R. ...	6,547,966	536,000
L.M.S.R. ...	17,175,283	4,292,000
L.N.E.R.	13,061,250	2,816,000
	44,983,143	8,889,000

Gross traffic receipts, however, only apply to revenue from railway working, and it can hardly be hoped, in view of existing trade conditions, that the gross revenue from docks and other ancillary services will attain figures equivalent to those of 1929. Hence the actual reduction is probably greater than the above figures demonstrate, nor does it seem possible to expect any material improvement in railway traffic returns before the end of the year. It may be that the dividends from large investments in motor-bus operating companies will offset to some extent the reductions in revenue sustained under the heading of passenger traffic, which for the first forty-five weeks totalled approximately £2,750,000, but an increase of revenue from this source approaching the size of the passenger traffic decline cannot be expected.

It has, in fact, been patent for some years that the future salvation of the railway industry in Great Britain must depend upon decreased expenditure rather than

SKANDINAVISKA KREDITAKTIEBOLAGET

Swedish stocks
and bonds

upon increased revenue, and, thanks largely to the policy of amalgamation, reductions in expenditure have been achieved during the last few years which would hardly have been considered possible, even by the best informed, six years ago. Taking the London Midland and Scottish Railway as an example, gross expenditure fell from about £70,300,000 in 1927 to £65,800,000 in 1929, and on the London and North Eastern from £53,670,000 to £50,890,000 during the same period. It is a point to be noted that in both these cases reduction of expenditure over the two years exceeded the reduction in gross receipts, and in the case of the London and North Eastern Railway exceeded it to the important extent of over £1,000,000. No similar example can be quoted of any railway overseas, serving highly industrial areas and with its employees strongly organised in trade unions, yet succeeding in effecting economies on a comparable scale.

These reductions, admittedly, could not have been attained without the voluntary $2\frac{1}{2}$ per cent. reduction. The wages bill of the British railways amounted to nearly £115,500,000 in 1929, as compared with £118,000,000 in 1928 (these figures include the staff of the Underground Railway and the Metropolitan, which together number about 14,000, out of a total of about 656,500 persons). Of the saving of about £2,500,000 shown above, approximately £2,000,000 was due to the $2\frac{1}{2}$ per cent. all-round deduction, but the bearing of these figures should not be emphasised too strongly in view of the variations in numbers employed as a result of such changes as the operation of road passenger vehicles. The peak figure of personnel was reached in the 1925 census with 702,000, which fell to a minimum of 642,000 in 1929, followed by a small rise to 656,500 in March, 1930, well spread over all the railways, and partially due to increased traffics in 1929 and the extension of road services. The next census to be taken in March, 1931, will almost certainly yield a much lower figure of persons employed, but it must be borne in mind that the application of the eight hours' day and guaranteed week has served to increase the number of employees and the wages bill in the railway industry far more than similar regulations would have affected manufacturing industries.

The present wage negotiations, conducted against this general background, but with the difficulties of the immediate depression in the forefront of the picture, are likely to be influenced more by the circumstances of the moment than by probabilities of the future. The question arises, however, whether the present railway situation is primarily of a permanent nature, that is to say, due to road and other competition, or whether it is of a temporary nature and mainly due to the international trade depression. Obviously, if trade had been normal, the incidence of road competition would not have been felt so severely; and it is unfortunate that the period of flux and instability as regards inland transport created by the rise of road motor transport should have occurred in a period of national trade depression accentuated further in 1930 by a world-wide international depression. It is significant, however, that British railway traffic receipts have not slumped to anything like the extent to which those of the United States and Germany have; and trade recovery should be quickly reflected in rising gross revenue. Moreover, the fact that the last five years have forced upon the rail-

ways the strictest study of operating and other economies, such as improved signalling and reduced fuel consumption, augurs well for the future.

Whatever may be the outcome of present wage negotiations (the companies' suggested reductions are estimated to amount to approximately £9,500,000), it will be argued by shareholders, who have been, and are, passing through a very lean period, that the entire benefit should accrue to them. In support of the contention that there will be no margin available to pass on to the railway users, it may be pointed out that the average receipt per passenger mile has now fallen to just over three farthings, or a little over 50 per cent. of the average fare paid by the tramway passenger, while the average receipt per ton mile is under three-halfpence. It is evident that lower fares or freight rates could be established, without injustice to shareholders, only if the volume of traffic expanded considerably. The railway trade unions have recognised in the past, and doubtless still recognise, that in their own interests the prior charges of the railways must be met; and, moreover, it can reasonably be claimed that savings in labour costs previously made have in fact been passed on to the consumer and have helped to check the decline in traffics. At the same time, if further sacrifices are asked of the railwayman, he is hardly likely to agree to make them solely for the benefit of holders of the equity stocks of the companies. Wage readjustments in the "sheltered" industries will be greatly facilitated if representatives of capital can satisfy the trade unions that reductions accepted by labour will be passed on to the consumer.

THE DIRECTION OF OVERSEAS TRADE.

WITH the October Trade and Navigation Returns the Board of Trade includes its usual quarterly analysis of our foreign trade by countries of origin and destination. The trade figures for the first nine months of this year, discussed in the *Economist* of October 18th, showed very heavy falls as compared with the corresponding returns for 1929. Imports had fallen from £897 millions to £785 millions, British exports from £543 millions to £441 millions, and exports of imported merchandise from £84 millions to £68 millions. Thus, imports fell by £112 millions and total exports by £118 millions—a case of close parallelism between imports and exports. The Board of Trade analysis makes possible an examination of the geographical distribution of this decline.

The first table shows imports from and exports to the principal European countries:—

	Imports from				Exports to			
	1913.	1928.	1929.	1930.	1913.	1928.	1929.	1930.
Russia	28,592	15,632	17,285	19,641	12,942	2,890	2,880	5,030

France	37,526	51,077	47,877	41,966	24,187	23,177	28,083	26,749
Switzerland	8,458	10,764	9,977	9,280	3,163	6,138	4,794	4,061
Portugal	2,771	3,347	3,657	3,372	4,660	6,482	6,127	5,795
Spain	11,562	15,905	15,752	14,700	7,545	8,685	10,080	8,529
Italy	6,046	11,637	12,130	11,371	11,151	10,644	12,049	10,990
Austria	5,632	1,692	2,373	...	3,378	2,051	1,946	1,704
Hungary	...	291	318	549	...	774	815	600
Czechoslovakia	...	6,367	4,851	4,472	...	1,663	1,631	1,736
Greece	1,043	1,327	1,106	794	1,678	3,844	3,773	2,736
Romania	1,000	1,251	1,424	3,807	1,340	2,408	1,727	1,576
Turkey in Europe	905	1,141	635	509	1,684	1,575	1,944	1,243
Other European countries	55	1,440	1,571	1,593	278	2,414	2,742	2,026
Total	233,950	328,346	339,259	320,202	145,034	167,741	175,501	154,408

This group accounts for only £19 millions of the decline of £112 millions in imports. The heaviest diminutions were those of £6 millions in our imports from France, £5 millions in our imports from the Netherlands, £3.6 millions in those from Belgium and £2.1 millions in imports from Germany. These were partly offset by increases of about £2½ millions each in imports from Russia and Roumania and smaller increases in those from Poland and Austria; all these four countries had also shown increases as between the same periods of 1928 and 1929.

Of the decline of £102 millions in exports, Europe accounted for only £21 millions, i.e., about a fifth, though exports to Europe in 1929 were nearly one-third of our total exports. Of the decline of £21 millions, £7½ millions occurred in our exports to Germany, while exports to the Netherlands and to Belgium fell by £4 millions and £3 millions respectively. Exports to Russia were £2.3 millions higher, and there were small increases in our exports to Norway and Sweden. In most cases there were declines as compared even with the 1928 level. It will be noted that France again takes the place of our best European customer instead of Germany.

The next table shows our trade with foreign countries outside Europe:—

	Imports from				Exports to			
	1913.	1928.	1929.	1930.	1913.	1928.	1929.	1930.
Turkey in Asia	2,241	£ 722	£ 836	£ 700	£ 3,792	£ 559	£ 557	£ 216
Egypt	13,541	18,243	16,789	10,219	7,170	8,324	9,293	7,641
Iraq	...	1,177	1,062	700	...	2,063	1,861	1,316
Persia	329	7,000	6,314	7,234	518	1,229	1,559	2,198
China	3,519	8,812	8,805	7,492	11,250	10,364	11,058	6,797
Japan	3,237	6,519	6,221	5,928	12,119	11,280	10,134	6,779
United States	95,385	132,154	140,689	113,906	21,467	35,645	34,692	23,658
Cuba	3,288	7,779	6,698	6,180	1,698	1,234	1,655	1,069
Mexico	1,560	1,669	2,071	2,237	1,825	2,185	1,856	1,824
Colombia	798	1,689	1,806	1,110	1,277	2,617	2,701	1,108
Peru	2,070	4,522	4,411	5,046	1,109	1,434	1,478	1,155
Chile	4,412	7,184	8,159	6,303	4,610	3,707	6,152	4,638
Brazil	7,790	3,659	4,820	7,235	9,705	11,839	10,381	6,442
Uruguay	2,362	6,201	4,490	6,001	2,314	2,335	2,639	2,572
Argentina	34,175	60,129	60,790	43,170	16,899	23,736	22,118	19,152
Other foreign countries (non-European)	6,113	14,715	13,049	10,944	5,201	7,544	8,923	6,723
Total	180,820	282,174	287,010	232,405	100,954	126,095	127,067	92,288

Imports from this group, which were £54.6 millions lower than in the first three quarters of 1929, were responsible for more than half the decline in the total imports. Our purchases from the United States show a spectacular drop of £26½ millions, or nearly 19 per cent. Of this no less than £12 millions was due to the diminished volume and the much lower prices of our imports of raw cotton. Of the decline of £17½ millions in our imports from the Argentine, £9½ millions is attributable to wheat imports, which were very much lower even than in 1928. Imports from Egypt declined by £6½ millions, almost entirely due to the decline in the cotton trade. The only increases were shown by Persia, Brazil, Mexico and Uruguay.

On the export side, this group contributed £85 millions to the decline. Here again, the United States shows the sharpest decline, of £12 millions. The most marked diminutions among other countries were those of £3.3 millions, £4 millions and £3 millions in exports to Japan, Brazil and Argentina respectively. The only increase was a continued expansion in our exports to Persia.

Trade with British countries, shown below, underwent a greater relative decline than that with European countries, but less than that with non-European foreign countries:—

	Imports from				Exports to			
	1913.	1928.	1929.	1930.	1913.	1928.	1929.	1930.
Irish Free State	£ 3,871	£ 32,014	£ 31,788	£ 31,219	£ 26,248	£ 26,526	£ 26,187	£ 26,187
West Africa	9,026	8,923	8,911	7,020	16,506	16,589	8,796	8,175
South Africa	39,614	18,141	17,902	14,729	28,990	24,468	20,170	19,829

A reduction of £38 millions in imports was felt most in our purchases from Australia, India and Canada, which declined by £8 millions, £7½ millions and £6 millions respectively. The decline in exports amounted to £17 millions in the case of India and £18½ millions in the case of Australia. These are the heaviest falls of all. The

Indian figure shows the effect not merely of trade depression but also of the political boycott; while the Australian figure has fallen below our exports to France. Exports to Canada, South Africa and the Straits Settlements also fell off considerably. Only our trade with the Irish Free State was maintained almost unimpaired. In the last three years our sales to the Empire have fallen from 45 per cent. of the whole to 44 per cent., while our purchases have fallen from 31.1 per cent. to 29.6 per cent.

The last table shows our exports of imported merchandise to the principal destinations:—

	1913.	1928.	1929.	1930.
Russia	£ 7,231	£ 1,640	£ 1,999	£ 1,871
Sweden	794	891	841	694
Norway	388	346	354	261
Denmark	484	554	627	554
Germany	15,384	20,667	18,534	13,375
Netherlands	3,976	3,553	3,976	3,312
Belgium	5,195	8,192	7,259	5,342
France	8,512	14,211	13,950	17,583
Italy	684	1,674	1,289	728
China	134	92	82	69
Japan	231	215	164	121
United States	23,180	17,092	13,112	9,156
Irish Free State	...	7,201	7,495	7,464
South Africa	1,425	1,160	1,174	943
India and Ceylon	1,144	1,038	986	1,104
Australia	707	565	611	607
New Zealand	2,699	1,860	1,741	1,456
Canada	7,605	8,864	8,552	7,863
Other countries	...	...	...	...
Total	82,364	91,552	84,437	67,679

The most marked declines, as compared with 1929, are those of over £5 millions in our re-exports to Germany and of £4 millions in those to the United States. Both countries are now taking a smaller quantity of re-exports from us than in 1913. Re-exports to France and Belgium have also declined substantially, and the only slight increase is shown by re-exports to India and Ceylon.

These tables show fairly clearly where the centres of depression are to be found. So far as our export trade is concerned, the world's industrial centres, Germany (with Holland and Belgium) and the United States, have bought between them £28 millions less than a year ago, the economic crises in India and Australia account for £30 millions, while the Far East is responsible for another £8 millions. The reduced purchases in Malaya bring the total fall in the countries named to no less than £70 millions of the total decline. In every one of these cases, except that of the United States, our imports have fallen less than exports. In other words, the trouble is an internal one to the buyer. On the other hand, there are a number of countries whose main products have slumped heavily in price, notably Egypt, the Argentine and the United States. In the first of these two cases, the fall of exports is comparatively small. The same is true of France, whose sales to us have fallen by £6 millions, but whose purchases from us have fallen by a very much smaller amount. Thus the exceptional depression of certain industries, the fall in commodity prices, and political and financial embarrassments are responsible for the particular movements shown, and in these circumstances it would be rash to draw any conclusions from the figure of 1930 as to any permanent change in the trend of British trade.

THE IMPERIAL CONFERENCE.

SHORTLY before the Imperial Conference met, Mr Ramsay MacDonald expressed his surprise, which sounded curious at the time, that it was upon the economic side of the Conference that public opinion was concentrated; and went on to emphasise the importance of the constitutional issues which it would be called upon to decide. This speech by the British Prime Minister is recalled to our minds by the official report* of the deliberations. On the economic side little has been done, except to adjourn discussions to a further meeting at Ottawa next year; but

on the constitutional side much necessary, if unspectacular, work has been performed. Such work, it is true, consisted mainly in rounding off the really important achievements of the 1926 Conference in this sphere. But it had to be done, and could only have been done by a representative Empire gathering, and the way is now fairly clear for the expression of the 1926 decisions on Dominion autonomy in statute form. Some of the hasty indictments of the futility of the Conference, to which politicians and Press have treated us, therefore bear the stamp of petulant exaggeration.

The report shows that scores of minor economic subjects were deliberated, ranging from such old friends as the double income tax, research, standardisation, forestry, statistics, communications, aviation and overseas settlement; and although no startling decision has anywhere been taken, the discussions and interchange of opinions were presumably helpful. But no one can read through the document without agreeing that the Conference has been disappointing. The one piece of solid work which we hoped to see accomplished on the economic side was the establishment of a permanent Commonwealth Economic Secretariat, and, through it, the machinery for continuous liaison and consultation, which might prove of inestimable value. This step, it will be remembered, was jointly recommended by the official representative bodies of British employers and trade unions, and was also supported by the Federation of British Chambers of Commerce throughout the Empire. Indeed, home opinion appeared to be unanimous as to the advisability and practicability of action on this line; and since the proposal has apparently been dropped, the only logical assumption is that it was because of objections raised by the Dominion representatives. What these objections may be, we shall be interested to hear. The Report does not tell us, and it would appear that the nearest that the delegates got to considering it was to recommend some slight reconstitution of the existing Imperial Economic Committee.

Disappointment must, nevertheless, be tempered by relief; for the Conference has parted without taking any of the far-reaching and mischievous economic schemes which were so freely pressed upon it. Nor can we join with the chorus of critics who lay the blame for the smallness of achievement upon the shoulders of the British Government. It may be that Mr MacDonald and his colleagues entered the Conference without adequate preparation and forethought. But if the major blame must be apportioned, and the reason stated why the Conference did so little in the practical field of organisation where so much waits to be done, the blame clearly lies most heavily upon Mr Bennett. For the Prime Minister of Canada rushed in at the very start of the proceedings with the obviously unacceptable proposition that Britain should agree at once to a complete reversal of her fiscal system in return for the very problematical recompense of slightly increased preference margins on heightened Canadian import duties. This ill-considered attempt to stampede the British Government diverted the attention of the Conference from its most useful sphere of work. In giving Mr Bennett's proposal an unqualified rejection, the British Government were impelled to soften this inevitable negative by showing the maximum willingness to discuss alternative methods of diverting trade into Empire channels by means of "quotas" for wheat and other primary commodities, of bulk purchase schemes, and of import boards. All these discussions, which seem to have absorbed most of the time and energy which the delegates were able to devote to economic questions, appear so far to have been abortive. Mr Bennett's egregious red herring drew the Conference clean away from the trail that might have led to solid work in the sphere of organisation.

We are told in some quarters that the Dominion Premiers have gone away "empty-handed." This is hardly accurate. True, the promise of the maintenance for three years of existing preferences, conditioned, as it is, by the reserved right of the British House of Commons to remove any duty altogether, carries no great weight. But they have got something more. They have secured the adjournment of the economic discussions until next year, and, after studying the political position here, they are

*Cmd. 3717. H.M. Stationery Office. 2s.

probably buoyed up on their journey homewards with the hope that before discussions are resumed at Ottawa the present occupants of Downing Street will have made way for those who are ready to barter away this country's fiscal freedom. That their hope will be fulfilled is unlikely, for we do not believe that the British electorate will empower any Government to impose those taxes on foodstuffs and raw materials which must be the basis of any real scheme of Imperial Preference. Nevertheless, there is just the chance, and Mr Lloyd George is afforded one more reason for keeping the present Government in power so long as madcap fiscal policies are to be apprehended as the most likely result of a change.

There are reasons, too, for thinking that the Conference has been more useful than is generally supposed. The Dominion Premiers have taken a hand in exposing the impossibility of that grandiose plan of wholesale trade diversion, which Lord Beaverbrook euphemistically describes as Empire Free Trade. Again, there may be a compensatory blessing in the mere fact that the main fiscal issue has been raised and faced. All the constituent States of the Commonwealth, including the Mother Country, have made it quite clear that each is bound to pursue its policy primarily in conformity with its own needs. "Canada first," says Mr Bennett; "Australia first," says Mr Scullin; "Britain first," echoes Mr MacDonald. This plain speaking should surely convince all the Governments of the Empire of the strict limitations imposed upon the fiscal method of Empire trade propagation; so let us hope that, with the air cleared, the delegates at Ottawa next year will settle down to the organising work that should have been done in London. If that happens—and we are inclined to hope that it will, unless the fiscal revolutionaries achieve power in this country—there will be eventual compensation for all the time wasted in the starting and killing of hares at the Imperial Conference of 1930.

Notes of the Week.

Another Ten Millions.—This week has brought a new shock to the taxpayer in the shape of a supplementary estimate of £10½ millions for unemployment. It would be a million more if it were not for a grim saving caused by the fact that fewer people are employed and Exchequer contributions in respect of employed persons are therefore reduced. Actually "transitional benefit" which, on the optimistic basis of a live register of 1,200,000, was estimated to cost £10½ millions in the current financial year, is now to cost, "so far as can now be estimated," no less than £22 millions; and there is something ominous in the official warning that the figure "cannot be forecast with any certainty." Perhaps the most disquieting thing about the figures is that £4 millions of the new vote is required because the latest Unemployment Insurance Act has brought new classes, such as "married women and seasonal workers," within reach of transitional benefit; and disquietude is heightened by the analysis of unemployed benefit recipients in the current issue of the *Ministry of Labour Gazette*, which computes that the new Act has retained within the insurance system 315,000 persons who would otherwise have passed outside it. This may be right and proper, but it is impossible to read the *Gazette's* analysis without feeling that the new Act has so widened the holes in the benefit sieve that public money in large quantities may be improperly leaking through. This official analysis, coinciding with the supplementary estimate, underlines with new emphasis the urgent need for an immediate and thorough review of the whole system. It is, in our opinion, the biggest blot on the Government's escutcheon that they refuse to face this need, save by promising a Royal Commission and making no haste even to appoint that.

The Land Bill.—On Tuesday the Agricultural Land (Utilisation) Bill secured its second reading by 297 votes to 216; but though Dr. Addison's measure received powerful support from Mr Lloyd George, the vigour of Conservative opposition augurs badly for its progress through Committee, and the House of Lords will undoubtedly be hostile. The justification for this opposition is not easy to discern. The Bill provides, briefly, (a) that an Agricultural Land Corporation shall be established, with power to acquire land by purchase (compulsorily if Parliament approves) for experiments in large-scale farming (limit of sanctioned expenditure £1,000,000); (b) that the Minister of Agriculture may similarly acquire land for demonstration farms and for reclamation and subsequent letting or resale (expenditure limited to £5,700,000); and (c) that the Minister shall be empowered to train unemployed persons who wish to be resettled on the land, to finance small holdings and allotments for this purpose, at an estimated capital cost of £1,100 per small holding, and £640 per allotment, and to provide loan capital, where needed, for settlers. To argue that this measure is calculated to produce a wholesale "back to the land" movement would be absurd, and it obviously represents only one side of the Government's agricultural policy. But the attempt to foster the small holding and the allotment on the lines proposed is sound enough, as indeed all parties in the House conceded; and though all expenditure in present circumstances requires careful scrutiny, outlay might be directed to purposes much less useful and ultimately productive than the reclamation and reconditioning of neglected land. The large-scale farms to be run by the Land Corporation are an experiment whose justification must be tested by the results, but the expenditure sanctioned here is of relatively modest dimensions. There is, moreover, one all-important point in favour of the Bill. In seeking "to redress the balance" by lending State support to certain agricultural activities, it avoids the easy and fatal road of artificial price-rigging, whether by tariffs or quotas. This merit, we fear, accounts for much of the somewhat captious criticism directed against it.

The Dyestuffs Act.—On January 15, 1931, the Dyestuffs (Import Regulation) Act, 1920, is due to expire, and Mr Graham informed the House of Commons on Wednesday that it will be allowed to lapse. This decision of the Government, assailed though it inevitably will be by the bigoted Protectionist, is sound from every point of view. The Great War disclosed that this country was dependent upon Germany for supplies of aniline dyes; and the demand arose that a strong British dye industry must be built up. Hence the Act of 1920, which established a system of prohibition of imports subject to licensing. It was sanctioned by Parliament on the strict understanding that the period of this protection should be limited to ten years, and many Free Traders accepted it on the basis of the "infant industry" argument. British dye users have had to pay for this decade of protection, and it is unreasonable, especially in view of the textile depression, to expect them to continue doing so. On the other hand, we can see nothing in the dye industry's case for an extension of time, except that it is mere human nature; for, if the industry has not used its monopolistic opportunity during the past ten years to build itself up into a position of independent strength, there is no reason to think that it would do so in another ten years of shelter. Moreover, the report,* published in September, of the Dyestuff Industry Development Committee, leaves one with a feeling that the time has come when the tonic breeze of competition would do no harm.

The Palestine Debate.—On Tuesday, November 18th, the Government's Palestine policy was debated in the Commons on a motion of adjournment. The ablest and wisest speech was made by Sir Herbert Samuel, who contributed to the debate his broad liberal outlook, as well as

* Cmd. 3658. Stationery Office. 1s. 6d.

his experience as the first British High Commissioner in Palestine. That a statesman of his eminence, who is both an Englishman and a Jew, should have laid down publicly the four maxims which he did lay down in regard to British policy towards the Arabs, was an important political event which may have a happy effect on the relations of the two Palestinian communities. Mr Amery, in his speech, played a *beau rôle* (too seldom played by politicians) when he reminded the House of his responsibility for the reduction of the British armed forces in Palestine in 1925-26—a reduction which proved to have gone beyond the limits of safety, in the light of what happened in August, 1929. But the most important thing that came out in the debate was Dr. Shiels's announcement that, in order to put in hand the land development scheme which has been recommended by Sir John Hope Simpson and approved in the much-abused White Paper, the Government propose to arrange for a Palestine loan of two and a-half millions sterling under the guarantee of His Majesty's Government in Great Britain, and that during the first years of the development scheme it will be necessary to provide from British votes such annual amounts as may be required to meet the interest and sinking fund charges on the loan. If development is to continue, this is perhaps inevitable, however unpleasant it may be in the present state of British finances; for the financial situation in Palestine in Dr. Shiels's view would not permit so large a loan to be raised on Palestine's credit alone. We have pledged ourselves to establish in Palestine a national home for the Jewish people without prejudicing the rights and position of the existing inhabitants of the country, that is, the Palestinian Arabs. The time has now come when the Jews cannot acquire more land for Jewish settlement in Palestine without dispossessing Arab cultivators, and the only way out of the dilemma is to develop the agricultural capacity of the whole country systematically. It is to be hoped that this tangible evidence of goodwill, at a time when it means much more to the Exchequer than in days of plenty, will stimulate a fresh co-operative effort on the part of the two parties concerned.

The Strikes in Spain.—On Saturday, November 15th, a forty-eight hours' general strike was declared at Madrid on account of the shooting, on the previous day, of certain workmen who were attending a fellow-workman's funeral. The strike duly came to an end on Monday morning without any untoward incidents having occurred. On the other hand, general strikes were started on Monday, on the same account, at both Granada and Barcelona; and the Barcelona strike, at any rate, has certain dangerous possibilities, since the two forces of Catalan nationalism and the semi-communistic form of syndicalism which is endemic in the capital of Catalonia may come into play at any moment. General Berenguer has issued a proclamation to say that revolution is impossible because a general election is in prospect and because the Army is loyal to the Monarchy. This assurance can only be tested by the event; but the fact that the Government has thought it desirable to issue it is a further indication of the fact that the idea of revolution has been constantly in Spanish minds ever since the collapse of the Directory. It remains to be seen whether the Dynasty can permanently keep its footing, for it has to face opposition from at least three quarters: the Catalans, the Syndicalists and the bourgeois Republicans. The elections may bring things to a head—it is to be hoped, in a peaceful and orderly way.

Elections and Violence in Poland.—The Polish General Election has produced the results which it was intended to produce. The Dictator's party has gained about 120 seats, and has thus secured a clear majority of about 25 over all the other parties in the aggregate. It is not surprising to learn that the national parties of the various non-Polish minorities have been even more heavily hit than the Polish parties that are in opposition, and that the Government's successes have been most overwhelming in the provinces along the eastern border. These provinces are inhabited almost entirely by non-Polish popu-

lations; and they are relatively remote from the observation of the world. Hence, the methods of force and fraud by which the elections appear to have been "made" throughout Poland can be carried to extremes, with impunity, in these eastern marches. Indeed, to judge by the accounts published recently by the *Manchester Guardian*, the force used during the elections, is here merely one incident in a permanent *régime* of force which has been manifesting itself latterly in the "pacification" of Eastern Galicia. Eastern Galicia is an ex-Austrian territory—a country of Ukrainian peasants and Polish landlords—which the Allied and Associated Powers allowed Poland to annex by force of arms against the will of the great majority of the inhabitants. The subsequent "Polandisation" of this country has aroused a resentment among the Ukrainian peasantry which has latterly found vent in sporadic agrarian outrages—rick-burnings and the like—of the kind which occurred in Ireland in the nineteenth century. The Polish retort, according to the *Manchester Guardian's* correspondent, is to send troops into an Ukrainian village, seize a batch of peasants at a venture without attempt to ascertain their guilt or innocence, and castigate them. Many of the victims have received permanent injuries, and several have died. Thus minorities in Poland are suffering the same violence, oppression and injustice to-day, as they suffered in the days of Partition before the war. Indeed, the situation in Eastern Galicia under Polish domination seems to be unhappier than it was under the Austrian *régime*. Was it for this that the political map of Europe was redrawn at the peace-settlement, at the cost of all the suffering and destruction of the war? And there is an even more devastating question: Is not the present state of Poland just the kind of thing that will produce war in Europe again? The present state of Poland is very like the pre-war state of Hungary, and we know how deeply responsible the pre-war *régime* in Hungary was for producing the European catastrophe of 1914. It is indeed disheartening that Poland, once partitioned and now precariously restored, should have set her feet on a path which can lead nowhere but to her own re-destruction—and to the destruction of Europe into the bargain.

Imports and Foreign Investments.—At the conclusion of the debate last week on wages and tariffs, Mr Gillett and Mr A. M. Samuel had a rough and tumble on the subject of whether we can reduce imports without reducing our exports. Mr Samuel provoked the discussion by observing that "we were short in exports last year by £134 millions to meet our imports." He arrived at this conclusion from the fact that our interest on foreign investments (£285 millions) exceeded our net investments of capital abroad (£151 millions) by that amount. In other words, we imported goods in part payment of the interest due to this country on its foreign investments. Mr Samuel seems to think this most reprehensible, and asserted that we ought to stop this amount of imports and reinvest this £134 millions overseas in addition to the £151 millions which we actually invested in that way. But many who use this sort of argument are misled by the way in which for convenience we often speak of reinvesting abroad our interest from overseas. In fact, of course, we do no such thing. Interest or profits from overseas investments is part of the income of individuals, companies and concerns in this country and forms part of the annual income of the nation. The new resources which we invest overseas may in some cases come from foreign interest, but this is accidental. From whatever source they come they are part of the savings of individuals and concerns in this country. There is no direct relation between interest from overseas sources and the capital we invest abroad; nor is the amount which we can afford to invest abroad in any way governed by the interest on our foreign investments, any more than it is governed by our shipping or finance profits or any other single item by means of which our nationals acquire foreign assets. The amount which we invest abroad, being part of our annual savings, depends on two factors:—(1) Our total savings, that is the surplus of our national income from all sources over

our consumption; and (2) the proportion of this surplus which we invest at home. If an additional £134 millions is to be added to our foreign investments it must be saved by somebody, i.e., consumption must be reduced, unless we can continue to invest overseas this additional amount out of our existing savings. If by reducing consumption, savings are increased and invested abroad, the country goes without the imports which it formerly consumed—it does not replace them by home-produced goods. Whatever else may be said regarding the balance of our imports and exports, we see nothing whatever to be said for the idea that there is any merit in investing abroad precisely the amount due to us on our foreign investments. We might add, in this connection, that we have not normally reinvested abroad our total foreign interest for a long time past. Mr E. D. Simon, in a recent article, makes the assertion that the post-war situation in this respect is different from that before the war, on the ground that in former days we not only invested our foreign interest, but some additional savings as well. This is not the case. In only three years between 1880 and 1914 did we invest abroad more than our foreign interest. What has happened is that since the war, with reduced savings and a larger need for capital at home, our foreign investments have recently amounted to about half our foreign interest, whereas during the thirty or forty years before the war, we normally reinvested abroad 62 per cent. of our foreign interest.

The Wheat Collapse.—Although commodity prices in general have lately displayed greater stability, it is clear from this week's sharp fall in wheat prices that the world is by no means yet out of its troubles. The extent of the fall is shown in the following table:—

WHEAT PRICES, "NEAREST FUTURE."

	Chicago. Cts. per bushel.	Winnipeg. Cts. per bushel.
1930—July 30th	83½	87½
October 29th	79½	72½
November 18th	73	55½

The table shows that during the autumn a divergence between Chicago and Winnipeg has developed, and the higher price now quoted in the former centre can be attributed directly to the support given to the American market by the Federal Farm Board. It also illustrates the grave plight in which the Canadian wheat pools must now be finding themselves, especially as a few months ago they authorised an initial payment to their members of 60 cents a bushel. Finally, the divergence between Chicago and Winnipeg, which now amounts to 17½ cents a bushel, represents a position of extreme artificiality and danger, and shows clearly the trouble that arises when organised attempts are made to hold up prices in the face of dwindling purchasing power and huge and world-wide surplus stocks. It is, indeed, questionable whether the actions of the Canadian wheat pools and the Federal Farm Board have not aggravated the very disease they set out to cure.

Trade Depression and Gold.—Two important speeches were delivered on this question at the end of last week. The first, by Sir Josiah Stamp at the Eighty Club, consisted mainly of a broad exposition—to a mainly lay audience—of the implication of the gold standard. In the course of his speech Sir Josiah was careful to say that the operation of the gold standard was not the only cause of the trade depression—in fact, he half-seriously added, he could name no fewer than eighteen different causes. He gave it as his opinion, however, that another fall of 20 or 30 per cent. in the price-level, coming on top of that of last year, would strike at the roots of all contractual relations throughout the world, and would even prove a serious danger to democracy itself. Having thus shown a lay and political audience how serious and fundamental a question it was, he proceeded to discuss the gold standard from the standpoint of what was the way out of the world's present troubles. He made the

obvious point that it was a case for international action, and then added some well-timed words of warning. It would be, he said, worse than useless to seek to impute blame against any particular country for the difficulties that had arisen. Progress must be slow, and could not be hastened by bullying tactics directed against any nation or nations. The first task was to create a well-informed body of public opinion, and he welcomed the hard thinking being done at Geneva, in London and in America. One of the great advantages of the B.I.S. was that it provided the world's central bankers with a "club," where they could meet together quietly, naturally and unostentatiously. On these lines, especially if the gold question were kept out of party politics, there was hope that a common policy could be developed. The second speech was that delivered on Saturday by Lord d'Abernon to the Liverpool Chamber of Commerce. Lord d'Abernon was able to speak with greater freedom than Sir Josiah Stamp could, and in addition to covering part of the ground explored by the League Gold Delegation's interim report, he was critical of the United States policy of demanding repayment of her debts, and at the same time impeding the entry of goods by building up high tariffs. His arguments, it is generally agreed, are incontestable, but they mostly relate to ancient history, and are not likely to lead to any useful results at the present juncture. His address became more constructive when he urged that the British Government should initiate, without delay, negotiations with the principal gold-holding and gold-using countries with a view to arresting the excessive enhancement in the price of gold which had already occurred and threatened to proceed farther. Even here, however, it is well to remember that Sir Josiah Stamp in another passage of his Eighty Club speech had misgivings about the holding of an international conference, because of the publicity which would beat upon such a gathering.

Royal Bank of Scotland.—The accounts of this bank for the year to October 11th last reveal a net profit, after providing for bad and doubtful debts, of £533,665, compared with £504,532 for the previous twelve months. An interim dividend at the rate of 17 per cent., less tax, required £164,688, while it is now proposed to pay a dividend at the same rate on a capital augmented by the new stock issued up to October 11th in respect of the transference of certain shares of Williams Deacon's Bank, and to be issued in respect of further shares to be acquired. This will absorb £248,371.

	Twelve Months to		
	Oct. 13, 1928.	Oct. 12, 1929.	Oct. 11, 1930.
Net profit	£ 502,561	£ 504,532	£ 533,665
% of capital	20.1	21.8	21.9
% of total resources	0.91	0.91	0.87
Dividends { Amount	340,000	340,000	413,059
Rate %	17.0	17.0	17.0
Written off buildings and property	20,000	20,000	20,000
To Pension Reserve Fund	30,000	30,000	30,000
Added to "Rest"	112,561	114,532	70,606

A further sum of £20,000 has been written off expenditure on bank buildings and rentable property, and £30,000 has been again added to pension reserve fund. The balance added to rest totals £70,606, against £114,532 last year. Additional capital stock was created and issued by the bank during the year to the shareholders of Williams Deacon's Bank, in exchange for transfers of their shares, amounting as at October 11th last to £862,442, and increasing the bank's capital to £3,362,442, but of the premium emerging on the transaction, a sum of £600,000 has been added to rest, bringing that item to £3,580,926, or more than the total capital. A further issue of capital amounting to £407,902 will raise the total issued capital to £3,770,344 and the rest to £3,780,926. The balance-sheet, printed in summary form on a later page, shows that deposits have increased from £46,235,129 to £50,387,090, while drafts and acceptances reveal a moderate decline.

British Government securities have advanced by nearly £3 millions and shares in Williams Deacon's Bank form a new item of £2,084,141. Total assets, at £61,561,346, show an expansion of £5,073,474.
