International Bank Policy.—Mr Gates McGarrah, the President of the Bank for International Settlements, has delivered, to the New York Academy of Political Science, an important address on the experience and policy of the bank. He began by reviewing the inception of the bank, and in this connection gave an interesting summary of the allocation of the issued share capital to date. First of all, there were the 112,000 shares issued to the central banks of Belgium, England, France, Germany and Italy; to a banking group acting for the Bank of Japan; and to Messrs. J. P. Morgan & Co., the First National Bank of New York and the First National Bank of Chicago. Next, the directors, at their first meeting, invited the central banks of Sweden, Switzerland and Holland to become shareholders; and each took 4,000 shares. At a later meeting, a similar invitation was extended to the central banks of Austria, Bulgaria, Czechoslovakia, Danzig, Denmark, Finland, Greece, Hungary, Poland, and Roumania, each of whom also took 4,000 shares. Finally, the central bank of Esthonia has subscribed for 100 shares. Thus 164,100 shares out of the authorised capital of 200,000 shares have been issued, while applications from the central banks of Portugal and Yugo-Slavia have been declined until the currencies of those countries are stabilised. Mr McGarrah went on to observe that the transfer of reparations was already regarded as a routine work of secondary importance, and that reparations funds proper only represented 20 per cent. of the bank's total assets. This means that the B.I.S. is already embarking upon the wider functions of regulating and stabilising the international movement of funds envisaged by its founders. Here Mr McGarrah briefly defined the bank's policy at its present stage of development, though he made it clear that the bank was still to some extent feeling its way. It was not, he said, the function of the bank to earn large profits. The bank, however, had assumed the following duties:—(a) The maintenance of great liquidity, on the ground that a considerable portion of its funds constitute the foreign exchange reserves of central banks; (b) the transfer of capital to markets where it may be so needed, either to counteract a temporary efflux such as that experienced by Germany a few weeks ago, or to level out discrepancies in interest rates; (c) the movement of funds in aid of currencies which may be temporarily or seasonally weak; (d) assistance in the organisation of discount markets in countries where they may be needed. In conjunction with these duties Mr McGarrah defended the bank's refusal to publish details of the geographical distribution of its funds on the ground that, by so doing, it might advertise the existence of weaknesses it was endeavouring to correct. He said that in fixing deposit rates, one average rate was allowed for all currencies on the gold or gold exchange standard, but that they were unwilling to publish their rate, lest it should be given the significance of a world discount rate. Mr McGarrah gave a very encouraging account of the way in which the B.I.S. was becoming the focus of central banking thought and co-operation. The bank, he said, had already made certain re-discount agreements with banks of issue, whereby it was enabled to procure currency in various countries without putting pressure on the foreign exchange market. In addition, an examination was being made into the possibilities of organising a foreign exchange settlement fund and even an adjustment fund designed to prevent unnecessary movements of gold. These schemes obviously possess very far-reaching potentialities and will doubtless receive careful study before they can take definite shape.

Unemployment and Cost of Living.—The decline in employment continued throughout October. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at

October 27th was 18.7. This compares with 17.6* per cent. at September 22nd and 10.3 per cent. at October 21, 1929. The number of insured persons in work in Great Britain at October 27th is estimated to have been 9,533,200. This was 113,300 less than a month before and 732,800 less than a year before. The number of registered unemployed (excluding those normally in casual employment) amounted at the end of October to 1,551,095, as compared with 1,413,242 a month ago and 903,631 a year ago. Those temporarily stopped numbered 581,614 at October 27th. This was 15,159 less than at September 22nd but 323,477 more than a year ago. Of those normally in casual employment, 104,792 were registered as unemployed at October 27th, against 99,643 a month before and 72,620 a year before. The Ministry of Labour has this week announced that the total number of registered unemployed at November 10th was 2,261,777, including 1,623,540 wholly unemployed, 535,154 temporarily stopped, and 103,083 normally in casual employment. With regard to the cost of living in October, a slight increase was recorded, the index number of the Ministry of Labour at November 1st registering 57 per cent. above the level of July, 1914, as compared with 56 per cent. a month ago and 67 per cent. a year ago. For food alone the corresponding figures were 44 per cent., 43 per cent. and 59 per cent. respectively.

The Disarmament Conference.—As things now stand in the Preparatory Disarmament Commission, writes our League correspondent, the question of military effectives is more or less disposed of; the method to be applied is global limitation of effectives, together with limitation of categories of officers and non-commissioned officers. It has not, however, been explained how effectives are to be limited in conscriptionist countries without limitation of the annual contingents. The other essential question, limitation of material, has also been substantially settled. The German proposal for direct limitation of material received nine votes, and there were nine against. Those in favour of it were not opposed to the British proposal for budgetary limitation, but they considered that it should be combined with direct limitation, the budgetary method in itself not being sufficient. Lord Cecil argued that it was not possible to apply to fifty States direct limitation of guns, tanks, rifles, etc., such as had been possible to apply to Germany, and that the system would leave unlimited any new weapons or devices subsequently discovered. He pressed strongly for budgetary limitation, which was adopted by a majority of sixteen votes to three (Germany, Italy and Russia), with the United States abstaining; but he observed that it would not be possible for Great Britain to apply budgetary limitation to the Navy if other naval Powers declined to do so. M. Sato, of Japan, took the same attitude. So that while the general conference will be presented with a draft convention containing these methods of limiting effectives and materials, and although it may be possible for the time being, but not indefinitely, to proceed against German dissent, there remains still the fact that these are majority decisions affecting not only Germany's attitude but also that of Italy, Russia and the United States. Discussions have begun on naval questions, and the Italians have stated that it is difficult for them to express an opinion on methods before settling the proportions and the levels of maximum tonnage of the various countries. The smaller Powers are insisting upon some elasticity for transfers from one category of ships to another, and the reasonableness of this demand within proper limits is fairly generally recognised. Lord Cecil, however, emphasised the fact that should such liberty be granted, definite stipulations must be made regarding the construction of submarines. The Swedish delegate proposed the maximum of 100,000 tons within which to permit transfers from one category to another, but the general view seems to be that the fixing of the limit should depend upon the decision of the general conference. A sub-committee has been set up to seek an agreed formula.

* Revised figure.

Indian Cotton Duties.—Our Manchester correspondent writes:—The action of the Directors of the Manchester Chamber of Commerce in passing a resolution on the Indian cotton duties, and sending copies of it to the British delegates at the Round Table Conference, has caused some comment in Lancashire trade circles. During the last two or three years the Manchester Chamber has exercised considerable caution in expressing any opinion on the attitude of the Indian Government towards fiscal policy, the opinion being held that more harm would come from interference than from keeping quiet. It is evident, therefore, that the Directors of the Chamber have decided upon a change of policy, as the resolution asserts that the "true interests of British India, the Indian States and the British Commonwealth of Nations can best be served by recognition of the fact that Great Britain's industrial and commercial existence is of mutual and paramount importance to India and the rest of the British Empire." The directors, therefore, "call upon the Government and the delegates at the Round Table Conference in framing India's constitutional reform to uphold the supreme necessity of guarding the mutual trade between Great Britain and India against injury or suppression by penal tariffs and fiscal enactments." The President of the Chamber, Mr Herbert W. Lee, in a statement, says:—"It may be said that the resolution is a selfish one, dictated by self-interests. Our India Section, in my opinion, can justly reply, first, that their admitted self-interest is also the interest of this country as a whole, and is not contrary to the interests of the masses in India; and, secondly, that since the Indian side has been given every freedom to express their self-interested view, it seems not unreasonable for Lancashire and Britain generally to do the same with equal frankness."

LEAGUE OF NATIONS.

Economic Conference — Tariff Questions — The British Proposals.

(FROM OUR CORRESPONDENT.)

GENEVA, November 18.

TWENTY-SIX States are attending the Conference for Concerted Economic Action, which opened in Geneva yesterday, and the United States, China, Japan, Mexico, Turkey, Cuba and the Dominican Republic are represented by observers. The first object is to determine whether, and in what conditions, the Commercial Convention of March last shall be put into force. Ten States only have ratified, but other ratifications are shortly expected, including probably those of Germany, France and Italy. The convention provides for provisional stabilisation of commercial treaties and tariffs until April 1st next, so as to provide a proper atmosphere for economic negotiations designed to reduce, as far as possible, hindrances to international trade.

The countries, including Great Britain, which have ratified the convention are not ready to put it into force amongst themselves in view of the insufficiency of ratifications, but it has been agreed to extend the period during which ratifications may be deposited to the end of January next. The conference is concerned mainly with the programme of negotiations based on the report of the Economic Committee of the League, which provides for the resumption of efforts to secure the adoption of the convention for the suppression of import and export prohibitions and restrictions, the solution of the question of the treatment of foreigners, the progressive reduction of Customs tariffs, a study of preference in favour of Eastern European cereals, the British proposal for negotiations on two groups of articles—machinery and textiles—with a view to reduction of tariffs, and the Dutch proposal for

bilateral negotiations between countries with a liberal tariff policy and those with a system of protection.

The discussion has begun on the British and Dutch proposals. There are certain countries, including Germany, Belgium and Switzerland, which are prepared to make concessions to Great Britain for the maintenance of their present customs régime, Great Britain being the principal market for a number of Continental States. France takes a different attitude. Her delegate this morning stated roundly that circumstances were not favourable to concerted action for tariff reduction, that the French tariff was as a whole moderate, and was even considered insufficient on certain points. France, like other countries, was beginning to suffer from economic depression, and it was necessary to avoid creating a panic by precipitating a general action for tariff reduction. He favoured action on non-tariff questions, but, as was pointed out by several other delegates, they were not only particularly difficult to settle, but studies were not sufficiently advanced. This was the view of the German delegate, whose attitude to the British proposal was in marked contrast to that of France. He would be prepared to negotiate owing to the importance of taking Great Britain's difficulties into consideration, but he thought the Dutch proposal more practical.

The Roumanian and Italian delegates observed that both the British and Dutch proposals asked for concessions, but offered nothing in exchange. (What, one may inquire, is Britain asked to "offer"?) The British formula would be more likely to achieve success (said the Roumanian delegate) if it provided for dealing simultaneously, with textiles, which interested one group, and cereals, which interested another. This would establish compensation. The Swiss delegate expressed the fear that if Great Britain abandoned free trade, Holland would follow her example, and protectionism in France, Germany, Belgium and elsewhere would be reinforced. He made an interesting comparison, as an example of the prudence required in classifying countries as "free trade" or "protectionist." On machinery and textiles, two categories of wares important to the British export trade, the import duties into Switzerland varied up to, but did not exceed, 8 per cent., whereas, for the principal Swiss exports, watches and silk, the import duties in England were 33½ per cent. The Dutch representative spoke with some warmth of the negative attitude of France, and said that, unless something was accomplished, the strong current in Holland in favour of abandoning free trade would be accentuated.

The state of mind is generally one of looking for compensations in every stage, and of doing nothing without some return. This is explicable, but requires application with foresight and a broad view, of which there is not yet much sign anywhere in the world. All States seem to be hoping still to save themselves on their own terms, despite the fact that one by one they are getting caught in the general depression. France, beginning to feel the signs of it after a happy immunity, turns her thoughts, apparently, to the possibility of higher tariffs, and, at any rate, refuses to discuss reductions. The danger is that there will be an aggravation of the existing obstacles to international exchanges at a moment when most, if not all, States are becoming more and more dependent on economic conditions everywhere.

If the British proposals prove impracticable, it would be well for the British Government to begin to discuss possibilities on a more limited scale with States which are prepared to do business. Such an effort must be made by someone unless the world is to resign itself to the prospect of sinking deeper into the mire before it realises that "concerted action" is not a mere phrase, but a stark necessity. It applies to the gold problem in the same way, and the tendency to take refuge in isolated, but temporary, self-satisfaction is equally disturbing and short-sighted.

It should perhaps be noted that one speaker has to-day been bold enough to refer to the recommendation of the Economic Conference of 1927 that tariffs ought to be lowered.

UNITED STATES.

Public Expenditure — Money Market — Copper Output Agreement — Railroad Amalgamation — Steel Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 12.

THE completed tabulation of election returns leaves the Republican party with a slight majority in both Houses of Congress, but without effective control of either. It is apparent that for the next two years legislation along strictly party lines will be a difficult matter. From a business standpoint the situation is not without its advantages, for it probably will mean that interference from Congress will be kept at a minimum. So far as the tariff is concerned, no one had expected that the Democrats would elect sufficient new members to make any material change.

It is expected that the one per cent. taken off the income tax last December will have to be restored this year, to apply to 1930 earnings for which the first quarterly tax payments will be made on March 15th next. Personal and corporation incomes have dropped sharply this year, so that even with the restoration of the tax reductions the Government probably will obtain a smaller revenue from that source in 1931. Meanwhile, in carrying out the Administration's programme of large expenditures for public works, in the hope of relieving unemployment and stimulating a business revival, Government expenditure will be substantially higher. In addition to larger appropriations for building, the Government will be compelled to make larger outlays on its farm relief schemes.

This week the Treasury announced a discount bill offering of \$125,000,000, on which tenders will be submitted next week. The issue will provide for the maturity of another bill issue and give the Treasury \$5,000,000 extra. In all probability bids will be accepted at under 2 per cent. The last bill sale went at 1.85 per cent., and part of it was resold at a profit. Treasury financing at the December 15th tax date will be heavier than usual. A \$450,000,000 certificate issue falls due, bearing 3½ per cent., and on the two following days the Treasury must refund \$102,500,000 of non-interest bearing bills. With rising expenditure, income tax collections on that date will probably not be applied towards reducing the floating debt, so that new certificate and bill issues of \$550,000,000 to \$600,000,000 are likely.

Money is as comfortable as ever, and the flatness of the bond market during the past two or three weeks has been a great disappointment. New issues have been scarce and none of importance are on the near horizon. October financing totalled only about \$200,000,000, of which nearly half was for domestic refunding and foreign public utility bond issues. Federal Reserve banks continue merely to stand by and see the present volume of surplus credit maintained. The System statement of November 5th reflects month-end operations, which involved a rise of about \$20,000,000 in bill holdings and a similar gain in total Reserve Bank credit. Brokers' loans have declined further; last week's reduction of \$58,000,000 was the sixth decline in succession and left the total only \$50,000,000 above the lowest level since the weekly reports began four years ago.

No real improvement in industry is visible and no recovery is now expected before next year. It is, however, hoped that various measures which are being taken to alleviate distress will be of great value in hastening the return to more normal conditions. After daily meetings for the past few weeks, the leading American and Canadian copper producers have agreed with the Belgian representatives of Katanga to curtail output by approximately 20,000 tons a month. There is still some uncertainty as to just how this agreement can be made effective without violation of the Sherman Anti-Trust law of this country, but that the necessity for world-wide curtailment is great can admit of no doubt.

Stocks of refined and blister copper for North and South America rose 8,000 tons in October, and for the

past year or so there has been an average monthly increase of about 12,000 tons, in spite of steadily declining output. Canadian production has been on the increase, and the American trade was taken by surprise at the figures for Katanga's output, which turns out to have been about 16,000 tons a month. Most observers of the situation here feel that while the curtailment agreement is a step in the right direction, it is inadequate. To the published figures of stocks on hand and their monthly increase must be added unreported metal production and the heretofore unknown excess production of Katanga. Allowing for these items, the actual and effective reduction involved in a 20,000 ton a month cut may be no more than 12,000 to 15,000 tons, whereas it had been hoped that a reduction of nearly twice that could have been agreed upon. The larger figure would have meant a real inroad into stocks, instead of mere prevention of further increase.

Trade stagnation is also reviving the railroad merger question. With traffic lower than at any time since 1921, the weaker roads are having a difficult time of it and even the strong lines are taking more interest in ways of reducing operating expenses. It is understood that the Washington administration would welcome more activity in mergers, provided for under the Transportation Act of 1920, in order to combine the weak roads with the strong into a few systems of equal size and strength. Conferences among the heads of the four leading trunk lines in the East—Pennsylvania, New York Central, Baltimore and Ohio, and Chesapeake and Ohio-Erie-Nickel-Plate (the Van Sweringen lines), after being broken off four years ago, have been resumed. Most likely the Interstate Commerce Commission will approve any alignment which can be agreed upon by these roads for eastern territory.

The steel industry operations have receded further, the rate now being about 44 per cent. of capacity, and a further decline before the end of the year is anticipated. However, a firmer stand is being taken on prices and much hope is placed in the action of the United States Steel Corporation this week in announcing minimum quotations for leading products. Motor output continues at a low rate, October output having been approximately 156,000 vehicles.

FRANCE.

M. Péret's Resignation — Year's Revenue — October Revenue — Public Debt.

(FROM OUR CORRESPONDENT.)

PARIS, November 19.

THE week has again been filled with unusual incidents, chief of which has been the resignation of M. Raoul Péret, Minister for Justice, and thus vice-President of the Ministerial Council, following an extremely bitter and partisan attack launched against him by the Opposition. This was based on the facts that on June 23, 1926, a week after the resignation of the Cabinet in which he was Minister for Finance, but while the Ministry was still carrying on, pending the advent of its successors, the quotation was rendered possible on the Bourse of Snia Viscosa shares, one of the issues which constituted the basis of M. Oustric's meteoric rise to power as one of the outstanding figures of the Paris financial market; and that subsequently, after M. Péret had returned to the Bar, he acted as legal adviser to M. Oustric. M. Péret had no difficulty in demonstrating that there was nothing abnormal in his action in either case; and this his opponents have since privately admitted. M. Georges Bonnet, who was M. Painlevé's Minister for the Budget during the five weeks when the latter held the dual post of Premier and Finance Minister, nevertheless drove home the (Socialist) preliminary attack by accusing both the Bank of France and the Government of having facilitated M. Oustric's speculative operations, the former by discounting £1,200,000, of what it was alleged to have known were merely accommodation bills, and the latter by doing nothing to strengthen the law concerning auditors of

public companies and the publication of honest balance sheets. The critical situation of the Oustric group, M. Bonnet insisted, was perfectly well known to everybody, including the Finance Minister, during several weeks before the Bourse crisis, and a single word from the Minister to the Coullisse authorities would have enabled the trouble to be avoided; instead of which the Minister, on September 10th, formally authorised the quotation on the Bourse of 500,000 Holfra "parts" at an enormously inflated price.

The Finance Minister, in reply, pointed out that no real financial "crisis" of confidence between the State and the public had occurred, but only as between bankers and depositors. If there has been an Oustric in Paris, he said, there has also been a Hatry in London and a Gualino in Milan. He denied emphatically that the Government had in any way facilitated M. Oustric's operations, or that the Bank of France had ever discounted for him anything other than sound commercial bills. The Ministry, on a vote of confidence, obtained a majority of 47 votes. As a direct result of the attack, however, M. Péret felt compelled to resign his portfolio. "If M. Oustric's arrest follows the complaints made against him," he said, "people will accuse me of not having acted earlier, and if the proceedings take some time they will hold me responsible for not expediting them." The incident has again called attention to the complications that may result from practising lawyers occupying Ministerial posts. The Bar, however, as in most countries, is usually regarded as a stepping stone to political advancement, and it is widely felt that any barrier of the kind suggested would result, owing to the chequered nature of Ministerial tenure in France, in depriving Parliament of a substantial proportion of its best brains. The Bill prohibiting senators or deputies from holding posts as directors of public companies after their election to Parliament has still to secure the approval of the Senate, but it is possible, in view of recent events, that the Upper House may send it back to the Chamber for its scope to be widened.

Official figures are now available showing the actual revenue secured during the past financial year—which, it will be recalled, comprised 15 months, owing to the extension of the normal year by three months, with the result that the French financial year now begins on April 1st, as in Great Britain. The total revenue on account of the General Budget during the 15 months was 62,930,356,669 francs. Practically the whole of this was from "normal and permanent sources," the amount received from "exceptional sources" being only 242,516,700 francs (consisting of 225,761,500 francs from outstanding arrears on the now suppressed special tax on war profits, and 16,755,200 francs in respect of further liquidation of war stocks). The largest item in the return is the yield from the turnover tax, which produced 12,384,280,000 francs during the 15 months, or nearly one-fifth of the total revenue. Income-tax came second with 10,186,215,000 francs, followed by "indirect taxes" 8,689,743,000 francs (this item in France includes several important categories classified in Great Britain as "direct" taxes, and comprises only a portion of what you know as "indirect" taxes); registration, 6,536,554,000 francs; Customs, 5,432,115,000 francs; taxes on securities, 5,069,385,000 francs; stamp duties, 2,888,174,000 francs and taxes on petrol, 599,494,000. The actual yield from imports classified here as indirect taxes and from monopolies (exclusive of tobacco), was 45,696,711,000 francs, and was 7,438,000,000 francs, or over 16½ per cent., more than Budget Estimates. The foregoing figures do not include the amount recovered by the Caisse d'Amortissement from tobacco, and the special taxes devoted directly to debt extinction, the revenue of the Postal Department or the yield from local taxation.

The revenue returns for October, which were made public yesterday, indicate total recoveries of 5,487,154,000 francs (or 2,073,000,000 francs more than in September), against 5,987,500,000 francs in October, 1929, and 5,582,647,000 francs in October, 1928. The increase on the month is to be accounted for by the fact that the season for payment of income-tax demands begins here

in October. The drop of 500,000,000 francs, as compared with the corresponding month of last year may be regarded as due to the substantial reductions of taxation that have come into force this year.

Attention is being called to the fact that, although in the Budget proposals for 1930-31 provision is made for an estimated expenditure of 23,856,647,000 francs to meet the public debt services (or 47.8 per cent. of the total expected outgoings), it would be fallacious to regard this sum as entirely representing money required to pay interest and redemption charges. As a matter of fact 10,661,769,000 francs of the amount appearing under the heading of the public debt concerns civil and military pension and other annuities. The capital of the public debt (exclusive of these annuity payments, which will be automatically decreased by death, and of the political foreign debt placed at the charge of Germany under the Young Plan) amounted on May 31, 1930, to 264,426,000,000 francs, and was made up as follows:—

	Frs.
Irredeemable debt	96,855,000,000
Redeemable debt	106,236,000,000
Moderate and short term debt	22,175,000,000
Floating debt	33,818,000,000
Foreign commercial debt	5,342,000,000

The total debt on December 31, 1927, amounted to 302,203,000,000 francs. This had been brought down, so far as the internal debt is concerned, from 284,464,000,000 francs on December 31, 1927, to 259,084,000,000 francs on May 31st last, while the foreign commercial debt had been reduced in the same period from 17,739,000,000 francs to 5,342,000,000 francs. The annual charges of the public debt (exclusive of the various pension annuities) have been modified in ratio to the variations in the capital. The charge on the Budget, which was 15,534,000,000 francs in 1927, will total for 1930-31 only 13,195,000,000 francs. On the other hand the increases in the pension annuities, owing to the devaluation of the franc, have largely neutralised the substantial economies that have been effected in the annual expenditure on the rest of the debt. The credits necessary for these annuities in 1914 totalled less than 400,000,000 francs, and now total 10,662,000,000 francs, as stated.

The problem of the pending war debt conversion plans still remains unsolved. Pressed by an Opposition interpellation in the Chamber yesterday, M. Tardieu confined himself to stating that the question did not merely affect small *rentiers*, as many large holders of the issues existed, and that Parliament would be notified in advance, in any case, of the Government's plans. The recent striking success of the Crédit Foncier's 4½ per cent. issue of £17,600,000, designed to retire a previous 6½ per cent. issue, and absorbed within the day the lists were opened, was a happy omen for the Government's future plans.

GERMANY.

Price Reduction Campaign — Reichsrat — Budget — Film Industry — Steel Dispute in Saxony.

(FROM OUR CORRESPONDENT.)

BERLIN, November 18.

THE Government is doing everything in its power to bring about a reduction in the cost of living, and a special committee of the Cabinet has been constituted for the purpose. An attempt has been made, by a public appeal, to obtain strong moral support for the movement and to place both producers and traders under the pressure of a vigorous public opinion. Moral suasion apart, the only weapon at the disposal of the Government is the cartel law, but this is applicable only when prices are demonstrably being maintained by monopolistic agreements. Where that is the case, the Government has, indeed, very extensive powers. The emergency decree of July practically empowered the Government to dissolve any cartel whose effects they considered anti-social, without right of appeal on the part of the persons concerned.

At that time, the Cabinet asked the Federal Economic Council to pronounce upon the use to be made of these powers. The decision has now been issued. The Economic Council recommends proceedings in certain cases, on the basis of the emergency decree, against the coal, brick and tile, and carpet industries. It abstains from recommending action against the cement cartel only on the grounds that a price reduction has voluntarily been made during the last few days. Most strongly of all, the Council urges the necessity of a reduction in iron prices, though it recognises the great difficulties of the industry. The German iron industry undertook a thorough reconstruction and modernisation of its equipment in the years preceding the depression, and with this enormous expansion of its fixed capital the immense increase in its idle capacity at present is felt as a heavy burden. Nevertheless, in view of the importance of iron as a raw material, the Council is convinced that a further reduction of iron prices is indispensable to German economy. One fall was already brought about by the so-called Oeynhausen Award last June, when the wages of ironworkers in Westphalia were reduced.

The Economic Council was unable to agree as to whether the undertaking by retailers selling proprietary articles to charge the price fixed by the manufacturers—an obligation they are obliged to undertake in order to obtain the goods—should be prohibited by the Government or not. In some circumstances this binding of retailers to prescribed prices has the same effect as a retailers' cartel, and substantially increases the margin between the price at the works and the price paid by the consumer. As the trader cannot obtain from other manufacturers goods which are protected by a trade mark, he cannot even make price concessions to the consumer when he wants to do so in order to extend his own market. On the other hand, the lively competition between different proprietary goods helps to prevent too serious overcharging. At all events, the Council could not see its way to agreeing to a judgment requiring the Government to secure the relaxation or, in certain cases, the abolition of the price requirements for proprietary articles.

For the first time since stabilisation, the Budget for 1931 shows a fall in the estimates of expenditure. The estimates for 1931 are Rm. 10,500 millions, against Rm. 11,900 millions for the preceding year. Of these, Rm. 7,300 millions are for Federal expenditure, against Rm. 8,300 millions for the year before, while the rest is on behalf of the States and Communes. The share of the Reich is divided as follows:—

	Million Reichsmarks.
Reparations	1,793.8
War pensions	1,599.3
Other internal war burdens	271.8
Financial administration	542.0
Debt service	912.0
Defence	764.5
Social insurance subsidies	435.4
Unemployment relief	463.1
Other expenditure	553.1
Total	7,335.0

The raising of unemployment insurance contributions has transferred a heavy burden from the Reich to the employers and employees. The 463 millions for unemployment relief which are still included in the Budget go for the most part not to the insured but to those of the unemployed who have already exhausted their right to benefit but are not yet to be handed over to the Poor Relief of the local authorities.

Meanwhile, the Reichsrat, which represents the States, has been working on the financial and economic Bills prepared by the Cabinet. These Bills include such important projects as the reduction of the State participation in housing, the reduction in salaries of officials, the reduction of the industrial and real property taxes, and the raising of the tobacco tax. So far, the Cabinet and the State Governments appear in the main to have been in agreement. Only in connection with the tobacco tax do there appear to have been differences of opinion on the grounds of its effects on the cigar industry. The Reichsrat has decided—and the Government has acquiesced in the decision—that the reduction of official

salaries shall not wait for April 1st, but shall be brought into operation on February 1st. If the Reichsrat finishes with these Bills in the next few days, as is to be anticipated, the most difficult task of the Government will then begin—to secure agreement with a sufficiently large number of parties as to the next stage in the development of these proposals.

The local elections in Baden and Oldenburg have shown that the internal political situation is not improving. Although there are considerable local differences, while the small poll invalidates comparison with the Reichstag elections, the Social Democrats and still more the Liberal Parties seem to have lost ground everywhere. The National Socialists, on the other hand, have gained fresh successes. The impression of these election results will hardly make the political tasks which lie before the Reich easier.

The Universum Film A.G., which is by far the greatest film company in Germany, has published its first accounts covering the period of transition from silent to talking films. This transition has cost Ufa 19 million marks in the year. The company announces that, notwithstanding that it was only obliged to have recourse to bank credits for a few months, and already has restored its cash balances to over two millions, in the business year ended May 31st it still produced 54 silent films to 30 sound films, but it is of particular importance for the company that, during the last year in Europe, and the last two years in America, practically no silent films have been produced. In consequence, the large stock of silent films, which was, before, a financial burden to Ufa, has now become a valuable asset, as out of the 28,565 cinematograph theatres in Europe, only 3,763 were equipped for the exhibition of sound films by the end of May, and of these more than two-thirds were in Great Britain and Germany, as the following table shows:—

	Number of Cinematograph sound films at Theatres. May 31, 1930.	Number equipped for]
Germany	5,200	1,200
France	4,200	340
Great Britain	4,200	1,450
Italy	2,800	100
Scandinavia	1,772	141
Austria	870	72
Spain	3,000	40
Czechoslovakia	1,875	85
Hungary	524	50
Other European countries	4,124	285
Total Europe	28,565	3,763

During the last four months of the current business year the income from the renting of films has doubled, and 35 per cent. of the income was derived from silent films.

An interesting conflict has arisen in Saxony between the Saxon Government and Vereinigte Stahlwerke. Vereinigte Stahlwerke acquired, about a year ago, the Saxon foundry Döhlen. The purchase arose out of the renewal of the cartel agreements which made it important for Vereinigte Stahlwerke to acquire, not plant but quotas. The rapid deterioration of the market in recent months made the maintenance of production in this relatively small works uneconomic, so Vereinigte Stahlwerke announced at the beginning of November that it was to be closed. The Saxon Government has now protested, in its anxiety to prevent an increase of unemployment in Saxony. The Government maintained that Döhlen is of vital importance for Saxony and could even be made profitable. Vereinigte Stahlwerke thereupon offered the Government 3.6 millions out of the 9.69 millions share capital, and asked them to guarantee half any future credits raised on behalf of the foundry. The Saxon Government replied that it was prepared to accept the principle of participation, but demanded a majority holding and refused to give any guarantees. Thereupon the owners closed down the foundry. The Government, whose policy, it may be observed, is strongly anti-socialist, now threatens expropriation, but whether it could legally carry this out is not yet clear.

HOLLAND.

Depression — Foreign Trade — Prices — Revenues —
Money — Capital Issues — Shipping.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 8.

GRADUALLY the effects of the economic depression are becoming more and more apparent in the Netherlands. Unemployment is increasing, and in undertakings which are still in a position to work at full capacity profits are depressed by the low prices prevailing for the products. For a great many companies, therefore, shareholders will receive lower dividends. In the case of the Phillips Works, for instance, the prospectus of their flotation of 30,000,000 guilders 5 per cent. bonds at 99½ per cent. clearly shows that the satisfactory reports concerning this company which have been in circulation recently referred only to the extent of the turnover. The factories, in fact, are fully provided with orders, but the profits will be lower than last year, and shareholders will have to count upon the distribution of a lower dividend on the increased capital.

Considering that Germany and the Dutch East Indies are among the principal customers for Dutch products, it is only natural that the unsatisfactory economic situation prevailing in those countries is being severely felt here. The foreign trade returns accordingly reveal a less satisfactory state of affairs during the last few months. According to the official statistics, the value of imports in September was 196 million guilders, against 231 millions in September of last year, while the figures for exports were 147 million guilders in September, 1930, compared with 182 millions in September, 1929. For the period January-September, imports into Holland were 1,874 million guilders against 2,042 millions, and exports 1,324 millions against 1,495 millions. Exports covered 70.7 per cent. of the import value, against 73.2 per cent. in the corresponding period last year. In respect of the weight of imports and exports the first nine months of 1930 were comparatively satisfactory, the figure for imports being 23,928,000 tons, against 22,820,000 tons, while exports were 12,286,000 tons, against 12,028,000 tons the previous year.

Imports from and exports to England are summarised below:—

	Imports. (In million guilders.)	Exports. (In million guilders.)
January-September, 1928	192	328
January-September, 1929	194	307
January-September, 1930	178	294

In our imports from England declines are recorded in cattle food, which dropped to 4,700 tons against 15,300 tons, value 0.6 million guilders against 2 millions; in coal and coke, which dropped to 1,591,000 tons against 1,643,000 tons, value 17.3 million against 17.4 million guilders; in yarns, which dropped from 28.5 million guilders in 1929 to 21.7 millions in 1930; and in fabrics, which decreased from 31.5 million to 24.1 million guilders this year.

As regards our exports to England during the nine months under review, the value of bacon exported dropped from 39.6 millions to 34.1 millions, and of milk and milk products from 26.1 millions to 23.7 million guilders. The export of fresh vegetables recorded a pronounced increase as far as the weight is concerned, but the total value remained practically unchanged. This year England was a better customer for bulbs.

The effects of the general depression are distinctly reflected in the unemployment figures, and the seasonal decrease in unemployment usual during the summer months was hardly felt at all this year. The index figures of prices continue to move downwards, though the pace at which prices are falling is becoming slower. In January, 1930, the general index (1913 = 100) was 131, and this has gradually dropped to 112 for the month of

September, as compared with 141 in September, 1929. Prices have practically reached pre-war levels.

The economic depression is not yet being reflected to any extent in the revenue. This is only natural, as the reduced revenue will be felt later on when the taxes over the period of depression are due for collection. During the first eight months of the year the revenue was 5½ million guilders higher than in 1929, and remains about 16½ millions above the estimate.

The prevailing lack of commercial and industrial activity results in extremely abundant supplies of money. Quotations for prolongation money ranged from 1½ per cent. to 2 per cent. in October, while market rates of discount fluctuated between 1½ per cent. and 2 per cent. Developments on the foreign exchange market were such that there were imports of gold from Germany, but when it was seen that practically no troubles arose with the settlements on November 1st, which has often proved to be a particularly difficult settlement day, foreign exchange rates soon became firm again.

Very little activity indeed was manifested in the issue market. In October funds available for investment are particularly abundant, and the result is that October is usually a "peak" month for the issue market. Last year, in fact, October was only surpassed by January and February in the total of new issues floated, whereas October, 1930, has distinguished itself by being the smallest month of the year in that respect. The prospects are that this inactivity of the issues market will continue, but November at least, thanks to the new Phillips issue, will show a better figure. The total of issues in October, calculated according to the rate of issue and after deduction of amounts destined for conversion of old loans, was 11.7 million guilders, against 64.7 millions in October, 1929. Of these 11.7 million guilders, 4.2 millions were for foreign account, the remaining 7.5 millions represented domestic issues. Among the foreign issues, 2.9 millions for the Arbed was the most important item. The issues of shares were once more of very insignificant extent, which amply illustrates the lack of public confidence in the future development of industry.

ATHENS, October 31.

IN spite of the economic depression, revenue receipts by the Treasury for the first six months of the current financial year are on the whole satisfactory, and, if they continue to come in at the same pace, the Budget may be expected to balance. Receipts from the revenues assigned for the service of the National Debt for the period January-August, 1930, at Drs. 2,520 millions, show a decline of Drs. 219 millions, as compared with the corresponding period of last year. This difference, due principally to lower import duties and to diminished receipts from tobacco and alcohol, owing to a decline in consumption of these articles, is, in any case, of relatively small importance.

Rumours that the Government had received tenders for a big conversion loan have been officially denied. It is true that the conversion of certain loans has been contemplated for some years now, and is in principle feasible, owing to the improvement in recent years of Greek credit. The yield on Greek stocks quoted on the London market is now around 6½ per cent. But the opportunity to effect such a conversion is still not in view. Besides, the country has for the moment to borrow new money for completing its reconstruction programme. Thus it is hoped that early in 1931 the second part, £8,000,000, of the Productive Works Loan will be floated in London and New York.

There has recently been much discussion of the high interest on loans and discounts which prevails on the Greek markets. The Union of Banks has lowered, as from October 15th, the rate of interest allowed by its members on deposits and current accounts. On the other hand, the fixing of the rate of interest charged to their customers by these banks has been left to their discretion, and varies according to the nature of the accommodation and the security offered. The Government wishes to have the rates cut, and to this effect it approached the Bank of Greece to inquire how far the official rediscount rate could be lowered. It seems, however, that such a decrease would not at present be justified. The fact is overlooked that the level of interest rates at a given time is a function of numerous quantities, and cannot be arbitrarily fixed without unfavourable economic consequences.

In the face of the difficulties encountered by agriculture, owing to bad crops, falling prices, and lack of demand for certain products, the National Bank of Greece has acceded to a request of the Government to grant a moratorium to farmers for certain categories of short-term loans, payment of which will now be made in four yearly instalments. Payment of the loans granted by the Agrarian Bank is required regularly at maturity, though it would appear that many farmers show little disposition to repay even these loans punctually, constantly irritated and misled as they are by unscrupulous newspapers and irresponsible demagogues.

The area under tobacco this year is smaller, and, consequently, the crop is estimated also to be over 10,000,000 kg. less than that of last year. Notwithstanding this decrease, difficulties are anticipated for the sale of the crop of 1930, owing to the balance carried forward from 1929, and the large offers from the other tobacco-producing countries. It was recently announced that the Agrarian Bank obtained from the Bank of International Settlements a short-term loan of £200,000 at 6 per cent.

Imports for the first eight months of this year amounted to Drs. 7,126 millions, and exports to Drs. 2,891 millions. Both exports and imports are lower than in the same period of 1929, in quantities as well as in value, but the excess of imports is Drs. 261 millions less than last year. Proposals for the exploitation of the water power of Greece are being considered by the responsible Minister. Certain groups of foreign capitalists, including British financiers, are interested in the scheme, some of them in co-operation with Greek capital. While each group has made offers for a certain part only of the whole scheme, the American firm of Dwight J. Robinson is offering to undertake the utilisation of all the rivers and to supply the whole country with electricity. Should their proposal prove feasible and advantageous—a possibility about which doubts are expressed by responsible people—the Government seems to have decided to give them the contract. Otherwise, if a division of the scheme takes place, the tenders of the other groups will be examined, and accepted if their terms prove satisfactory. Offers are also under consideration for the construction of two big refugee quarters in the vicinity of Athens at an estimated cost of over £2,000,000. The competitors are a French syndicate and an English group co-operating with the National Mortgage Bank of Greece. Though the terms of the latter are more advantageous, the delay in their submission may result in their being rejected. Once more it is advisable to intimate from these columns to British firms desirous of working in Greece that they should display more broadness of mind and accommodating spirit if they are to hold their ground in this country in the face of the keen competition of other foreign interests.

Details have been published of the abortive new *coup d'état* of ex-dictator General Pangalos and a few of his friends. Public opinion strongly condemns this ridiculous attempt, and it is to be hoped that for once the authors of this plot will be severely punished by application of the laws. For it cannot be denied that non-punishment has made of revolutions in recent years an easy, enterprise for certain irresponsible elements.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 8.

THE Dominion Bureau of Statistics estimates the 1930 wheat yield of the prairie provinces at 362,000,000 bushels, a figure which is 27 million bushels below the estimate of the North-West Grain Dealers' Association. The crop compares favourably with the average for the last ten years, which amounted to 360,600,000 bushels. The Bureau also estimates the oats yield at 267 million bushels, which is 126 million bushels more than last year's, and the barley crop at 112 million bushels, which is a gain of 32 millions. Wheat, of which up to October 24 165 million bushels had been delivered by farmers as compared with 162½ million bushels at the corresponding date in 1929, has continued to grade high, but the later deliveries, which have suffered from exposure to rain and snow, will show a lower average grade. Grain prices have shown a slight improvement, but they are still far from satisfactory and this winter will see a regrettable prevalence of real hardship in many rural areas on the prairies.

All the three prairie provinces have now in operation organisations created to assist the farmers in the financial predicament into which they have been brought by low prices for grain and livestock. Saskatchewan and Manitoba have debt adjustment bureaux whose purpose is to assist needy farmers in their troubles and effect a fair distribution of credit and collections. Alberta has established an agricultural development board, which will act as intermediary between institutions supplying credit and farmers desiring assistance to purchase livestock. Every effort is being made to encourage farmers to feed as much of their cheaper grain as possible to livestock and to stabilise the livestock market by keeping cattle through the winter. The Federal Department of Agriculture has co-operated with a number of western ranchers in making a shipment of beef cattle to Manchester in order to determine whether ranch cattle will be saleable in Britain at profitable prices and what shrinkage *en route* can be expected; the ranchers have contributed the cattle without recompense or even promise of immediate returns and the experiment is being watched with interest in the West.

Hope of any real improvement in the business situation this year has now been abandoned and practically all the accepted indices show that the downward movement still persists. The decline in commodity prices is not arrested and the bank clearing figures and railway traffic returns record the contraction of trade which is still in progress. The car-loading figure for the week ending

October 18th, at 65,157 cars, was 6,122 cars below the figure for the previous week and no less than 17,470 cars below that for the corresponding week in 1929. The lumber industry is depressed and there was a further recession in September in the output of the newsprint mills. The iron and steel industry is also struggling with difficulties and is likely to be very short of orders during the winter, as practically all the industries using iron and steel as raw material are working well below capacity. For instance, the output of motor vehicles in Canada during September amounted to 7,957 cars, the lowest figure for any month of this year; it is also 19 per cent. under the total of 9,792 recorded for the previous month and 42 per cent. less than the 13,817 cars made in September, 1929.

In the industrial field, easily the brightest spot is to be found in the textile mills, thanks to the heavy increases in the tariff decreed at the special session of Parliament. So far, the cotton mills have experienced the greatest increment of business, but the silk and rayon mills are also well employed and there are signs of a revival in the woollen factories. There is a superabundance of shipping space available on both the inland waterways and the ocean routes, and the shipping interests complain that they never had a more unprofitable year. The expenditure now being undertaken upon a variety of public works will help to relieve the unemployment situation, but even so the problem will be serious during the winter months. Retail trade in the urban centres is well below the level of a year ago, but it is even worse in the country districts, and it is generally agreed that there can be no real revival of business until better prices for farm produce bring about an increase in rural purchasing power. The Bennett Government is apparently still convinced that higher tariffs will help matters, and it has just raised the duties on tin sheets and plates for the purpose of helping the establishment of a tinplate factory in Western Ontario. The new rates are British preferential $7\frac{1}{2}$ per cent., intermediate $12\frac{1}{2}$ per cent. and general 15 per cent., instead of free under the British preference and 5 per cent. under the intermediate and general tariffs.

The foreign trade returns for September again showed a decline. The Federal revenues are also falling in alarming fashion; in the first half of the fiscal year customs and excise duties are down by $36\frac{1}{2}$ million dollars and special excise taxes are down by $10\frac{1}{2}$ million dollars. The only revenue gain is in income tax, which is up by nearly $2\frac{1}{2}$ million dollars, but it is plain that a substantial deficit by the end of the fiscal year cannot now be avoided and that additional taxation will be necessary in the next Budget.

Efforts are being made to develop a trade interchange in fruit between Canada and South Africa. Shipments of oranges and lemons have reached Canada from South Africa and met with a good reception in the markets of Eastern Canada, and it is hoped that Eastern Canada at least will soon cease to be dependent upon California and Florida for citrus fruit. On the other hand Canadian apples are being shipped in increasing quantities to South Africa. There is a positive glut of apples in British Columbia owing to the decline in the demand in the prairie provinces and elsewhere and the growers are finding that the special protection recently granted them against American dumping is no guarantee of prosperity for themselves. The Committee of Direction appointed under the Marketing Act of British Columbia have taken steps to put large quantities of apples in cold storage in order to prevent the bottom being knocked out of the apple market. On the prairies the position of the wheat pools is still a source of anxiety and when wheat fell below 70 cents they felt it advisable to reduce the rate of their initial payment from 60 to 55 cents per bushel. The stock markets are still in a very depressed condition and the volume of trading has shrunk to small dimensions.

Letters to the Editor.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Sir Henry Strakosch, in his notable memorandum "Gold and the Price Level" (*Economist* of July 5th), described the sterilisation of £110 millions of gold by the U.S.A. and France in 1929 as "sufficiently explaining the catastrophic fall of the general level of commodity prices in 1929 and the beginning of this year." Lord D'Abernon, in his recent address at Liverpool, as reported in the *Times* of last Saturday, said that the present distress "should be considered rather as a crisis of currency in the first place, and a crisis of indebtedness in the second, the one complicating the other; both aggravated by defective lubrication through the money factor..." and that "if we wished for higher freights and more trade activity we would achieve these with greater certainty and greater speed by dealing with the gold and currency problem than by any other means."

It is not for a mere man in the street to question either of these authoritative pronouncements; but there is a real danger that, read together as meaning that our unemployment is due wholly to the price fall, and that in turn wholly to the shortage of gold, they may be understood by such a man to imply that our present critical condition, of which unemployment is the symptom, is attributable wholly to world-causes beyond our control—for we, at any rate, have neither cornered nor sterilised gold—so that there is nothing for us to do but "wait till the clouds roll by," unless it be to try to exorcise the Midas-complex of other nations.

Such an interpretation, though welcome to a Government with neither the vision to see our economic position clear of class prejudice, nor the courage to grapple with its realities, would be most mischievous; we are already far too prone to think that if only we hang on by our teeth the good old days will come back; but as the coming of the world-slump did not find us prosperous (as it did the U.S.A.), so its passing will not find us abreast of our competitors, unless meanwhile we have cured those faults in our system which are not world-wide but national. Of these, there can be little doubt that the gravest is the pegging of money wages (and salaries) irrespective of price movements. Mr Hilton's statistical researches, referred to in a Note of the Week in your last issue, have (it is true) failed so far to reveal a clear arithmetical relation between the unemployment percentages and the divergence of real from money wages—a result that should cause no surprise—but they do not call in question the conclusion that the pegging is one of the causes of unemployment. And the Strakosch diagram ("Coloured Annex I.") with its curve showing that, with no increase of productivity and a price fall of less than 20 per cent., constant money wages absorb the whole of the profits of enterprise, is eloquent of the importance of this cause, although the curve as drawn does not pretend to represent statistical facts. Our plight to-day is not the inevitable result of a price-fall, but of such a fall under a system of pegged money wages—a mad combination, under which, the weaker industry becomes, the larger is the toll taken by the wage and salary earners, just as a parasite may wax stronger and stronger as its host weakens, until death ensues. But our Prime Minister can find nothing wiser to say on this point than that money wages as covenanted—a retort full of fallacies that it would weary your readers even to enumerate. He shuts his eyes to the fact that the pegging of money wages inevitably results in post-short of some form of repudiation, is the only practicable way now open to us of lightening its real burden.

So little is the distinction between real and money wages appreciated by the public that it is rarely, if ever, referred to in the Press when the issues in our never-ending wages-scuffles are in question. The proposals of the railway companies have just been set forth as involving a reduction of roughly one-tenth in wages and salaries, without any reference to the fall of 6 per cent. (from 167 to 157) in the cost-of-living index during the past year, though there are many references to the famous temporary abatement of $2\frac{1}{2}$ per cent., now seen wages the case for its restoration had vanished.

A general system of constant real wages, increasing when productivity increased but not otherwise, would have far-reaching effects. It would tend to counteract trade depression, by carrying a fall of wholesale prices down to the retail consumer, so applying to consumption the natural stimulus of cheapness, whereas at present the money wages of the sheltered distribution industries (including transport), pegged high and

hard, absorb the greater part of the fall. It should even have a righting effect on the shortage of gold itself; for if the costs of gold mining fell, as and because the value of the metal rose, the share of the product remaining after costs were paid would increase as well as its value per unit, so that any considerable appreciation of gold should be doubly reflected in mining profits and the margin of extraction should be powerfully raised.

It appears from your Overseas Correspondence that our principal European competitors have grasped the importance of concentrating attention on real wages, and are already acting accordingly. In Germany, reductions in money wages, with corresponding reductions in retail prices of necessities, are being enforced; while from France, still prosperous by comparison, it is reported that "wage scales in many industries are now closely linked up with the cost-of-living indices and efforts are being made to develop this system further." Sooner or later, world industry will again get into full swing and commodities will be cheap, not for want of buyers, but because of abundant supply. If, when that happens, we in this country are still clinging to a system which is paralysed by a fall from the inflated price-levels of war, we shall still be found incapable of bringing our costs into harmony with buyers' limits in the world-markets, and unemployment will continue to avenge our political obstruction of economic laws. And from this fate does anyone believe that improved manipulation of international gold stocks is going to save us?—Yours faithfully,

C. HARRIS.

Cookham, November 19th.

RICARDO'S LETTERS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Royal Economic Society are preparing a definitive and complete edition of the works of David Ricardo, probably in seven volumes, under the editorship of Mr Piero Sraffa. This edition will include not only all his published works and substantial extracts from his speeches in Parliament and contributions to Royal Commissions and the like, but also so much of his correspondence as can be discovered and is of general interest.

May I, on behalf of the Society, ask for the kind help of your readers in tracking down any of Ricardo's letters which have not yet been traced by the editor? We have already had the good fortune, through the good offices of Mr Frank Ricardo, to discover the letters of Malthus to Ricardo, which give the other side of that famous correspondence, and also a small number of unpublished letters of Ricardo to various correspondents. We are all the more anxious, therefore, to obtain any further unpublished material that there may be.

Apart from his work as an economist, Ricardo was a stock-jobber and loan contractor during and after the Napoleonic Wars and a Member of Parliament from 1819 to 1823. Besides the published series of his letters, it is known that there must have existed regular correspondence with James Mill, Pascoe Grenfell, Jeremy Bentham, Edward Wakefield, Thomas Smith of Easton Grey, C. H. Hancock, Robert Torrens, Thomas Tooke, and many contemporary politicians. For any letters of Ricardo to these others we should be most grateful. We should also be obliged for any reference to items of Ricardian interest, especially to portraits and caricatures.

Any communication should be addressed to Piero Sraffa, Esq., King's College, Cambridge.—Yours, etc.,

46, Gordon Square, Bloomsbury. J. M. KEYNES.
November 12, 1930.

INTERNATIONAL MIDDLE-CLASS LIVING COSTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We are not surprised to see that our calculations on international middle-class living costs have been criticised. You, sir, are aware that such criticism was directly invited because it was only too manifest to us that this first attempt could be improved upon in many directions. At the same time, we are disappointed to see that your correspondent in his letter to you of November 11th does not seem to appreciate the difficulties in attempting to fix a series of index figures in respect of incomes as widely apart as £500 at the lower end of the scale and £3,000 at the other. The investigations of the International Labour Office deal with one income only, that of the workman in various countries. Even so, if Mr Halford will refer to the paper of Professor Richardson at the Royal Statistical Society on April 15th, he will see it stated that "a study of the problem soon leads to the conclusion that theoretically perfect comparison is not possible of attainment." If this is the case in respect of cost-of-living figures relating to the working-class income only, then *a fortiori* the problem becomes more complex in such an investigation as ours.

In some respects, however, our task may have been more simple. We have not had to deal, like the I.L.O., with people without any degree of mobility and whose dietary necessarily comprises those commodities which are the cheapest in their particular locality, such dietaries therefore differing from country to country, and even from town to town in the same country. We had to compile a budget for people, on the whole fairly well-to-do, whose travels bring them frequently into contact with colleagues in other European countries, and whose dietaries therefore become somewhat cosmopolitan. We felt, therefore, justified in fixing a certain dietary standard (the English) for each of the salaries in the scale and in proceeding to apply to these standards the food indices applying to the various countries. In this connection it is interesting to note that our food figure for a salary of £700 in Holland shows only a difference of approximately 5 per cent. from that which is given in the Dutch periodical *Economisch Statistische Berichten* of November 12, 1930, as applying to June, 1930, which was about the time of the preparation of our figures. (The dietary employed in the Dutch calculation refers to the period October, 1923, to September, 1924.)

In the case of servants and general household expenses we were, of course, careful not to assign full-time servants to the family of a man earning £500, but made provision for occasional help only. Here again, after establishing an English budget for each of the salaries in question, we compiled an index figure from information obtained from our Continental correspondents and applied this index to find the corresponding cost of service in the other countries.

As regards clothing, we appreciate Mr Halford's difficulties and would refer to our remarks on the same subject. We had no option but to use the empirical method as outlined in our remarks.

We gather that your correspondent is more satisfied with the rent and motor-car upkeep figures. In regard to these two items, of course, we were dealing with facts which are more or less capable of more definite measurement.

As to taxation, that shown in our figures as such is direct taxation, indirect taxation being necessarily included in the prices of commodities. It should be borne in mind that even direct taxation in most of the Continental countries is not so easy to calculate as it is in this country. There are in existence not only State taxes but Provincial and Communal taxes, or, as is the case in France, a general income tax plus a salary tax. Our taxation figures have been checked by competent authorities, and we are satisfied that they are correct. They refer, of course, to taxes in force at the present time, not to those of three or six years ago.

Education, we grant, is a difficult proposition with which to deal. The fact that education on the Continent is very largely a State affair makes the position in most Continental countries entirely different from what it is here. People who, in this country, would certainly not send their children to a secondary school do not hesitate in countries like Germany to use a "Lyceum" or "Gymnasium" which prepares the children for the university. Where exclusiveness is not desired, why provide for it?

We are sorry Mr Halford finds it "difficult to speak seriously of the surplus item." We did not state that entertainments, clubs, holidays, or recreations cost the same in all countries; but expenditure on these items affects savings to such an extent that we consider we were justified in treating these as a composite item. Your correspondent asks, "Why not on other items also?" The difference is just this—that the other classes of expenditure are of a more definitely essential nature, and, despite a certain amount of individual elasticity, they can be, and therefore have been, measured on a basis of typical expenditure. The allocation of the international officials' surplus as to entertainments, holidays, clubs, or life insurance or various forms of investment is not of an essential nature and defies any measurement. We know of no other method of dealing with this problem other than by an "approximation to uniformity," whether unprecedented or otherwise.

We have already dealt with one or two of the "oddities" or "irregularities." Another of these, viz., the expression "motor-car upkeep (including chauffeur if one is employed)," is due to our desire to retain the same description of items throughout the various statements. The "if" here is sufficient to indicate our meaning. As set out in our notes, the lowest salary at which the upkeep of a motor car has been provided for in England is £900 per annum. In other countries the first motor car enters into the budget at higher salaries, and in Norway not before £1,800 is reached.

After reading again some of Professor Bowley's remarks, at the discussion of Dr. Richardson's paper, on the merits of the I.L.O. figures, we do not feel unduly perturbed by Mr Halford's parting shot.—Yours faithfully,

London. November 17, 1930.

THE COMPILERS.

the "non-dividend payers" to 56 per cent., and that of the "shipbuilders" to 47 per cent. of the "book" figure, omitting those concerns whose ordinary stocks have no market quotations. The third group is heavily weighted by the low market value of Cammell Laird shares.

A closer study of the table suggests that, striking as are the differences between one group and another, those arising between company and company are even more significant. The investor, in short, must, in this industry, examine the record of every single company on its own merits. Depression in any industry sets a premium on good management and emphasises differential advantages due, e.g., to geographical position or the relative "elasticity" of demand for its various products. Under post-war conditions, for instance, the position of a concern like Guest Keen, whose activities culminate in the turning out of relatively small and specialised products like screws, has been found to be stronger than that of "vertical" combinations leading up to shipbuilding or armament work. Broadly speaking, the shares of companies which have reorganised are, *prima facie*, more attractive to the investor than those of concerns which may still be faced with that unwelcome necessity, but the onset of cyclical depression has tended to obscure the financial effects of rationalisation, even in the case of relatively well-situated concerns.

It is already evident, however, that reorganisation, on the lines on which it is at present envisaged, will fall short of setting up in Great Britain any industrial unit comparable in size and power with the United States Steel Corporation or with certain of this country's most formidable Continental competitors. "Rationalisation" has proceeded, so far, on sectional rather than national lines. Its most noteworthy achievements have been the Guest Keen-Baldwins heavy steel merger in South Wales, the Dorman, Long-Bolckow Vaughan fusion on the North-East Coast, the formation of the Lancashire Coal Corporation, and the Lancashire Steel Corporation, the Vickers-Armstrong arrangements, and the agreement in the tube industry between Stewarts and Lloyds and Tube Investments. Co-operation, however, has not yet been envisaged as between the larger groups which are emerging after reconstruction, or between different producing districts, or even within single districts, except, possibly, in South Wales. In the North-East, for instance, the compact and economical unit which might be formed by combining the Dorman Long-Bolckow Vaughan and South Durham-Cargo Fleet groups and the Consett Company remains an ideal and nothing more.

That the industry is experiencing a slowing down of activity, as a result of world depression, is clear from its recent output figures. Whereas British steel ingot production, in the first six months of this year was 10½ per cent. below that of 1930, the total for the last four months has been 34 per cent. below the corresponding figure for last year. Last month, the steel industry was working at approximately 50 per cent. of capacity. Difficult conditions are not, at the moment, peculiar to Great Britain as may be inferred from such phenomena as the breakdown of the European Steel Cartel, and the fall in the operating rate of the American steel industry, early this month, to no more than 43 per cent. of capacity.

British producers, it is true, have cut their costs to the bone, and, within the limits of their present organisation, should be in a position to compete at home and abroad, when better times return, on at least as favourable terms as they have enjoyed at any time since the war. The decision of Guest Keen to pass its interim dividend for the first time for many years is, however, one among many indications of the probable effect of contemporary depression on iron and steel company earnings. The question whether, or when, the iron and steel share market will regain something of its pre-war popularity with investors depends less on the passing of "cyclical" depression, than on what the future reveals as to the earning power of representative companies after reconstruction, and the extent to which rationalisation by big groups and areas within the industry, as distinct from rationalisation by separate companies, is likely to go.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. December 2.	ACCOUNT. December 4.
------------------------	-------------------------

DEALINGS this week were on a reduced scale, with an evident lack of interest inside and outside the "House." Though liquidation from the Continent was considerably reduced, the French position did not inspire complete confidence, while the failure of another American Stock Exchange firm provoked distrust in the "staying power" of the upward movement in Wall Street. While potential schemes of War Loan conversion continued to be canvassed in the City, the steadiness of this stock, concurrently with a definite check to the rise in long-dated gilt-edged securities, suggested that the week's events had not brought a definite proposal any nearer. Both industrial and "speculative" shares were affected by unfavourable developments in the commodity markets, particularly the relapse in copper prices after the ill-advised attempt of the American Copper Exporters abruptly to raise quotations, and the weakness of the wheat market.

Gilt-edged stocks again lacked support, partly as a result of the unfavourable foreign exchange position. Funding Loan was most affected, but Conversion Issues and Four per Cent. Consols also lost ground. War Loan, on the other hand, more than maintained its position. India Loans were steady, the opening "atmosphere" of the Round Table Conference being as satisfactory as could be expected. Despite the immediate success of the Cape Town Loan, South African stocks were a shade easier. Numerous advances were recorded in Australians early in the week, but the tone later became easier.

Foreign bonds were quiet, Brazilians suffering a sharp relapse on disappointment with the manner in which the sinking fund operations of the 1883 bonds were effected in the market. San Paulo stocks were also offered. The opening of a Conference at Nanking on China's debts (discussed on page 968), encouraged speculative buying of some issues, but a general reaction occurred in mid-week. Among European stocks, the Young Loan was subjected to further realisations, particularly from Amsterdam.

Home rails were dull and dispirited on fears induced by the companies' labour programme, though the tone was steadier towards the end of the week. The traffic figures showed a modest improvement except in the case of the London and North-Eastern, but remained below the level of last year. Undergrounds were bought on the good revenue returns of last week, which included the extra traffic of Lord Mayor's Show Day. Among foreign railways, the prices of Argentines were substantially lowered by dealers on an unexpectedly pessimistic speech by Lord St. Davids at a company meeting. The slump in wheat values induced a fair amount of selling of Canadian Pacifics.

Stagnant conditions prevailed in the industrial market, dealings being everywhere on a small scale. Monday's carry-over revealed a considerable reduction in the bear position. Motor shares, especially Leyland and Austin, declined on moderate selling. Nebulous reports of intended price-cutting caused further liquidation of tobacco shares, including Carreras. A fair investment business was done in electrical equipment and supply shares. The iron and steel group was quiet. The outlook for this market is dealt with in a leading article on the previous page. Textile shares lost ground. The maintenance of the Daily Mail Trust dividend caused a modest rally in the newspaper group, but the market became easier in mid-week. Hudsons Bays were a weak spot on the assumption that the pending report of the investigation committee would reveal an unsatisfactory position. Turner and Newall were sold from the provinces. Tate and Lyle relapsed sharply on the drop in the final dividend. Gaumont British and British International Pictures were active early in the week, but the rise brought out stock, and quotations eased. Among banks, Hong Kong and Shanghai were firm, but Bank of London and South America fell on the dividend

reduction. Dealings in insurance shares tended to broaden, with a fair inquiry for Royal Insurance.

Dealings in rubber shares were again on a meagre scale, prices showing no measurable change. Though business in the tea share market was even more restricted, values had an easy tendency. Jokai were pressed for sale, and Darjeelings fell on the announcement of a reduced interim dividend. The oil market remained in a sensitive condition. London, which had refused to follow the lead of Wall Street in putting up values early in the week, was later depressed by Continental liquidation, particularly of Royal Dutch and Shell.

The Mining share markets were practically featureless, and movements were insignificant. In the Kaffir section, Geduld and Springs Mines were moderately firm, and Sub Nigel also improved. Gold Fields, Union Corporation and "Johnnies" were a shade easier. Little business was done in Northern Rhodesian issues. Congo Borders lost a further fraction. Among diamond producers De Beers were heavy. Tin shares were again unpopular, but Kampar Malaya advanced on the publication of a fairly satisfactory report. Tinto and International Nickel rose on the early strength of copper prices, but quickly receded when the movement was seen to be a flash in the pan.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The trend of markets was not unsatisfactory, having regard to unfavourable external influences. The rise in copper was too sharp to last. The wheat position caused much uneasiness. News was received of banking difficulties in Tennessee and Kentucky. In New York, the firm of Bauer, Pogue, Pond and Vivian, members of the Stock Exchange, were suspended on a default. Despite all this bad news, a rally in prices made some headway after the liquidation of Monday, and was regarded as evidence that the technical position of the market was better than had been imagined. A certain amount of cautious buying by strong interests, in expectation of business improvement, was also reflected in the movement. Railroads had an advancing tendency and utilities showed strength. Motor stocks were also prominent, the 1931 models being regarded as having fair prospects. The industry was reported to be increasing its orders for steel. Production in the latter industry, however, was no more than 43 per cent. of capacity last week. Car-loading figures continued to decline, and the returns from the oil industry showed

an increase in gasoline stocks and crude oil production. Call money was steady at 2 per cent.

* 2-hour session.

AMSTERDAM.

The Amsterdam Stock Market has been in a particularly nervous mood during the past month, fluctuations of 20 per cent. to 30 per cent. having been recorded in certain share values on several occasions, particularly in those of Philips and Royal Dutch. The discouraging statements of the Philips directors at the general meeting of shareholders made a deep impression in exchange circles, especially as Philips will have to reduce their dividend from 21 per cent., and the result was a sharp decline in the shares, a contributory cause being the fact that, of the 20 million guilders of the recent 5 per cent. loan issue allotted to the Dutch market, only 14 million guilders were subscribed for. An almost greater rush to sell characterised the Royal Dutch market, and on a single day these shares dropped about 30 per cent., under the influence of the pronouncement by the directors at the meeting of shareholders. Later, when it proved that the statement had been misinterpreted and an unchanged interim dividend of 10 per cent. was declared, a pronounced recovery set in. Apart from these two instances, big fluctuations were also recorded in sugar shares, largely

in sympathy with the nature of the reports as to the new sugar conference and of Cuban intentions. At first there was a sharp recovery, but shares receded again rapidly when the V.I.S.P. once more reduced their prices after having raised them only a week previously, especially as this coincided with less hopeful news regarding Cuban restriction. Among industrials, Margarine Unies kept more in the background, with prices fairly well maintained. Rubbers were, if anything, slightly better. Tobacco and shipping shares were neglected. The United States elections and the financial difficulties in Paris connected with the crash of the Banque Oustric apparently had little influence on the market, these outside factors being overshadowed by local influences.

INVESTMENT NOTES.

War Loan Conversion.—The perplexed holder of 5 per cent. War Loan is receiving a variety of advice at the present time. Some brokers recommend his selling, others recommend his holding. Some even go so far as to say that War Loan is the cheapest stock in the gilt-edged market and should be bought. One or two Stock Exchange firms have recently compiled lengthy memoranda dealing with the historical aspect of debt conversion and elaborating their views as to the possibilities of the refunding of the £2,096 million of 5 per cent. War Loan. One firm regards the refunding of 5 per cent. War Loan as urgent and practical, and as a necessary prelude to a trade revival. The plan which they put forward is the offer to 5 per cent. War Loan holders of a 4 per cent. loan at or near par on which the interest is guaranteed for ten years, reduced to 3½ per cent. for a further 20 years, and then fixed at 3½ per cent. as from 1961, when the loan will be "married" with the 3½ per cent. Conversion Loan. The

plan takes its inspiration from the Goschen conversion scheme of 1883, when three issues of 3 per cent. Consols were converted into an equal amount of 2½ per cent. stock, the interest on which fell to 2½ per cent. after 14 years. It is declared, possibly with some optimism, that the experience of previous conversion schemes suggests that the number of holders who would not convert but would demand repayment in cash would not be excessive. The following table is given by way of illustration:—

	Amount.	Dissentients.	Per cent.
1822.....Navy's 5's	149,627,876	2,794,276	1.88
1824.....Old 4's	76,248,180	6,149,245	8.0
1830.....New 4's	150,790,176	2,880,915	1.91
1844.....3's	248,757,311	103,352	...
1888.....Consol 3's	557,993,508	about 19,000,000	3.35

The Goschen conversion operation in 1888 was remarkably successful, the holders of the old 3 per cent. stock, 1752, being attracted by the offer of a 5s. bonus on conversion. The national debt in 1888 was £705,575,072, and the budget £89,589,000. To-day the national debt is ten times and the budget nearly nine times as large. The Goschen scheme was applied to nearly 80 per cent. of the national debt then outstanding, while the amount of 5 per cent. War Loan to-day is less than one-third the amount of the present debt. But what Mr Goschen did not have to contend with was a large volume of foreign holdings. As the interest on 5 per cent. War Loan is paid without deduction of income tax, the loan has been popular with foreign or non-resident holders, who escape tax altogether. One firm of brokers estimates the amount of the foreign holdings at £500 millions. This, in our opinion, is too high a figure. Another estimate has been put forward of £100,000,000, which is said to be based on semi-official opinion. The actual amount, however, may be large enough to make it impracticable to call War Loan for repayment as a whole (it cannot be called for repayment in part) unless the foreign holder is offered stock on which interest is also paid without deduction of tax to residents abroad. Some firms of brokers favour the refunding of War Loan by instalments of, say, 10 per cent. or 20 per cent. in view of its size and the uncertain amount of foreign holdings. There is, however, undoubtedly a consensus of opinion in the City in favour of an early attempt to tackle this problem while monetary conditions are relatively favourable.

A Chinese Loan Conference.—A preliminary conference is now sitting in Nanking to discuss means of consolidating Chinese indebtedness. There are present at the conference, besides experts of the Kemmerer Commission, representatives of Belgium, Britain, France and other countries interested in China's finance, including Japan. The Chinese authorities state that they recognise all loans due to Britain, but the stumbling block will be the "Nishihara" Loans, made by Japan to the Pekin Government during the Great War and used to finance the latter Government's efforts to suppress the forces in Southern China. The National Government now in power not unnaturally resents efforts to enforce the recognition of a loan raised by its former enemies for its suppression. The Kuo-min-tang recognises that all Britain's loans were used for purposes of internal development of the country and does not object to the Customs revenue being applied to this purpose. The arrears on railway loans now amount to more than £4,000,000, but are largely due to the policy of various generals in commandeering railways for troop trains and raiding their cash boxes for money to pay troops. Whenever there is a reasonable prospect of permanent peace in China, the question of an early settlement of debts and arrears is eagerly canvassed. In February, 1929, the Chinese Government raised the Customs duties. The increased revenue, in taels, has enabled China to meet the heavier requirements for interest payments resulting from the fall in the exchange value of the tael. Every penny collected so far this year, however, is earmarked, by reason of the fall in value of the monetary standard. Some time ago there was some talk of China's

adopting a gold standard, based on a monetary unit valued at 1s. 7d., to be known as the "sun." But China, which is in debt at every turn, cannot afford to go to the tremendous expense of changing her standard from silver to gold. The present conversations between the Chinese President, General Chiang-Kai-Shek, and Marshal Chang Hsueh-liang, of Mukden, are progressing favourably, and afford some prospects of a return of normal internal conditions. The exact total of the Nishihara Loans is unknown, but is put at something between £10,000,000 and £20,000,000. Authorities in close touch with the situation believe that there is no likelihood of China's repudiating other loans on which interest payments are in arrears, and that if and when normal conditions are well established, the loans will be redeemed, and interest arrears paid off. The eventual dates of redemption, however, are likely to be considerably later than those announced when the loans were floated.

New Companies and the Investor.—A serious indictment of present-day methods of financing new companies was made in a speech last week by Mr. Henry Morgan, the President of the Society of Incorporated Accountants and Auditors. Mr Morgan declared that at least 75 per cent. of the public companies formed in the first half of 1929 to develop new inventions or to establish new businesses had failed. Speaking from practical experience as a liquidator, he declared his conviction that the odds were heavy against the successful establishment of any new industry by means of public companies offering their shares to the public and having a Stock Exchange quotation. He described the history of a company with a board consisting partly of directors interested as vendors, and partly of men with no interest beyond their share qualification, who lacked the capacity and experience necessary for the protection of shareholders' interests. While this company's shares were being run up to indefensible levels on the Stock Exchange, the money subscribed by some 13,000 shareholders was being frittered away on the acquisition of capital assets at grossly extravagant prices. The subsequent investigations of the liquidator showed that the books were in a state of chaos and the whole of the capital had been lost. Those of our readers who have followed both our criticisms of speculative company finance during the boom and the melancholy facts revealed by our subsequent post mortem examinations, will be well aware that this story is typical of far too many cases. As Mr Morgan pointed out, the state of affairs it illustrates has proved damaging to the interests not only of investors but of all new industries, whose task of raising capital for legitimate developments has been rendered extremely difficult owing to the lowering of their credit. We do not endorse Mr Morgan's view that new industries cannot be successfully started in this country without the protection of a tariff on foreign imports, nor are we impressed by his endeavour to make "speculation" the chief scapegoat for the disasters of 1928 and 1929. The remedy would appear to be rather the better education of the public in the principles of sound investment, and the placing of the task of securing capital for reasonably promising new industries and companies in more responsible hands than those of the individual speculative promoter. We may also venture to observe that during the next boom, whenever it may come, a stronger "lead" from the Stock Exchange and the general Press would be of invaluable assistance in preventing a repetition of some of the worst excesses of recent years.

Iron and Steel Reconstruction Schemes.—In a leading article on page 963 of this issue we show the extent to which the share capital of six large iron and steel companies has been reduced as a result of recent reconstruction schemes. To complete the picture, a brief summary is given below of the arrangements made in cases where the methods of reorganisation precluded a direct comparison between capital accounts before and after reorganisation:—

Cammell Laird.—Debentures revised. Repayment date of 5 per cent. first mortgage debentures to be extended for five years

from July 1, 1930, with redemption at 110 instead of 103, and interest 5½ per cent. instead of 5 per cent. Corresponding revision of conditions of 4½ per cent. stock. Certain steel interests have been transferred to the English Steel Corporation (representing a merger of the steel interests of Vickers, Vickers-Armstrong and Cammell Laird), and certain other businesses to the Metropolitan Cammell Carriage, Wagon and Finance Company.

United Steel and United Strip and Bar Mills.—Reconstruction scheme provides for formation of a new company, to be called United Steel Companies, with a capital of £6,650,000 in ordinary shares, most of which will be issued to holders of the share and debenture capital and unsecured obligations of United Steel Companies and of the preference capital of United Strip and Bar Mills, the whole of whose ordinary shares are held by the former company. The total share and loan capital of the two companies was £14,172,163, which is being exchanged for £5,022,884 of the new company.

South Durham Steel and Iron and Cargo Fleet.—In December, 1928, Cargo Fleet Iron was absorbed by South Durham Steel and Iron by the creation of 600,000 "B" ordinary £1 shares by the latter, which were exchanged for the ordinary shares of Cargo Fleet in the ratio 3:5.

Dorman Long and Bolckow Vaughan.—In November, 1929, Dorman Long and Company increased their capital and absorbed the issued capital of Bolckow Vaughan.

Pearson and Knowles and Partington Steel and Iron.—Two new companies, the Wigan Coal Corporation and the Lancashire Steel Corporation, formed to take over, respectively, the coal and colliery assets and the iron and steel assets of Pearson and Knowles, Moss Hall Coal Company, Wigan Junction Colliery Company, Wigan Coal and Iron, and Partington Steel and Iron. The Wigan Coal Corporation will have a nominal capital of £1,746,555 and the Lancashire Steel Corporation of £5,750,000. The existing concerns will become holding companies in the new companies.

Guest, Keen and Baldwins.—The British (Guest, Keen, Baldwins Iron and Steel Company, Ltd., was registered as a private company on March 24th, with nominal capital of £150. The objects are to take over as going concerns and amalgamate those branches of the undertakings of Guest, Keen and Nettlefolds and Baldwins respectively, which relate to the heavy iron and steel trades.

Stewarts and Lloyds and Tube Investments.—Closer co-operation by issue of "liaison" shares.

Reorganisation schemes are pending in the case of Pease and Partners and Richard Thomas. Among the companies which have not yet intimated their intentions, but may be presumed to have the question in mind, are Harland and Wolff and Ebbw Vale. For an analysis of the complex details of the Armstrong Whitworth reorganisation we would refer readers to a leading article on page 347 of the *Economist* of February 16, 1929.

The Nitrate Situation.—The publication in America of a relatively unfavourable report by the Anglo-Chilian Consolidated Nitrate Corporation has drawn renewed attention to the problems of the Chilean nitrate industry. The Corporation, which in March last finally shut down its remaining "Shanks" plant in favour of the new Guggenheim large-scale methods, reports income for the year ended June 30th last of \$4,803,798 (excluding a special receipt of \$485,000 for a patent licence), compared with \$4,485,699 last year. The net profit, before deducting depreciation, amounts to \$718,928, against \$148,984, but depreciation, amortisation of patents, and depletion of ore reserves require \$2,232,380, leaving a further debit of

INVESTMENT

by L. L. B. Angas

(Author of "The Coming Collapse in Rubber," 1926.)

A book which shows how to detect the beginnings and endings of slumps and booms in single industries, and how to exploit the fluctuations which take place in shares on the Stock Exchange.

Rules are laid down for the timing of both buying and selling, and directions are given for taking profits and losses.

A valuable feature of the book is the list of faults which must be avoided.

The Economist: "To the Stockbroker, and even more to the individual investor, this book will be a *vade mecum*, the mastering of whose principles will repay in hard cash many hours of study."

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."

Publishers: Macmillan & Co., St. Martin's Street, LONDON, W.C.1. 187 pages. Numerous Charts. PRICE 20/-

\$1,513,452 to be added to the debit balance of \$9,430,661 brought forward from last year. It seems clear that these results should not be taken wholly at their face value. The current year has been one of exceptionally heavy experimental costs of a non-recurring nature, and the experiment is declared to have been fully justified by the considerably lower costs of production achieved, particularly during the second half-year. The new processes are stated to require, for a given production of nitrate of soda, only 30 per cent. of the labour and about 18 per cent. of the fuel used under the old methods. Unfortunately, the period of highest overhead costs has corresponded with a world decline in consumption, and the corporation reports that it has been able to sell only 60 per cent. of its output. In the light of this fact, the present negotiations which are being conducted in New York for the launching of "Cosach," the new company which is to take over the whole of the Chilean industry, take on a new interest. Assuming, as seems probable, that the new £75,000,000 company will be able to produce large quantities of nitrate of soda at reduced costs, the shareholders of existing companies will, nevertheless, be inclined to question the advisability of undertaking large-scale production, which can only repay the capital invested in it on the assumption of large sales, at a time when the nitrate market is badly congested. Moreover, if the present negotiations with regard to the raising of some £20 millions of debenture stock are successful, and part of the proceeds is utilised, according to plan, to meet dividends and taxes guaranteed to the Chilean Government to the tune of £12,000,000 by 1933, Cosach will begin its career hampered with a burden of debt which the immediate market outlook can hardly justify. On the other hand, the amalgamation of the small producers will probably facilitate some rationalisation of the sales organisation, while the recent agreement with the "synthetic" producers allows the Chilean industry an unrestricted European market at prices which should tend to encourage the wider use of their product when normal market conditions return. Until it is possible, however, to assign a time limit to the present world depression, the prospects of Cosach will not be free from obscurity.

The Outlook for Tea Shares.—Few important primary commodities have made so favourable a showing as tea during the recent price slump. The average price realised in London has fallen only from 1s. 7.34d. in 1926 to 1s. 4.25d. in 1929 and to 1s. 3.24d. in 1930 to date, though medium and common teas have suffered more than the high-grade varieties. Tea shares declined steeply during 1929, but have this year been remarkably steady, with an upward trend in the earlier part of the year, a steady decline in the summer, and a modest subsequent gain. Early this year tea growers in the most important producing areas agreed to curtail output along the following lines:—

(000,000 omitted.)			
	1929 Crop.	Reduction Envisaged by Scheme in 1930.	
	lbs.	Amount.	Per Cent. of 1929 Crop.
Northern India.....	370½	32	8.65
Southern India.....	52½	4	7.65
Ceylon	251½	11	4.37
Java and Sumatra ...	158½	10	6.30

Unfavourable weather in some areas has helped the growers to live up to their bargain. The current issue of *The Rubber and Tea Quarterly** indicates that the Northern India crop figures, to the end of October, show a reduction of 39½ million lbs. this season, while the export figures for other areas show a decline, as compared with 1929, of 13½ per cent. in Southern India, 11½ per cent. in Ceylon and 5 per cent. in Java and Sumatra. Figures given in the same publication suggest that important changes have taken place as regards the marketing arrangements of this year's crops. Since the new season opened, offerings of Northern India tea in London have fallen off by 10 per cent. (as compared with the corre-

sponding period last season), but offerings in Calcutta by as much as 24 per cent. In the last five months the Ceylon tea dealt with in London has shown a decline of one-half per cent., but that dealt with in Colombo a decline of 14½ per cent. as compared with last year. Java and Sumatra, in the same period, have offered much the same quantity of tea in London, but their offerings in Holland have shown an increase of 10 per cent. These figures must be interpreted very broadly, since no centre publishes details of private sales. Visible stocks of tea in London are estimated to have been reduced by nearly 40 million lbs. over the last eight months, but their total is about 6 per cent. higher than at this time a year ago and 24 per cent. higher than two years ago. The trade still regards these stocks as pressing heavily on the market, and efforts are being made to prolong the restriction arrangements for at least another year. Whether Dutch support will be forthcoming remains to be seen. In Java and Sumatra the industry is "younger" than in India or Ceylon, and up to the beginning of this year was developing at a much more rapid rate. Some traders in London, however, have contended that Dutch exports in the past have included a proportion of tea of decidedly low quality, and that any scheme involving a cessation of the plucking of this low-grade tea must in the long run be to Java's advantage. In the meantime, shareholders in British tea companies can scarcely hope for better financial results in 1930 than in 1929, particularly in the case of those concerns in Ceylon which have rubber as well as tea plantations, and must necessarily be affected by the acute depression in the latter industry.

A New Index of Kaffir Shares.—In view of the suggestion made in a recent letter to the *Economist*—and current in many parts of the City—that gold-mining shares, under present economic conditions, offer sound investment prospects, special interest attaches to a new index number of "Kaffir" share values which has been forwarded to us by a correspondent. The latter has made a selection from among the Kaffir mines which declared dividends in December, 1928, of those having then estimated lives of ten years or more. The object of this selection was, firstly, to obtain, as constituents of the index, only mines of proved dividend-paying capacity; and, secondly, reduce the factor of mortality redemption, in the figures, to the lowest possible proportions. The sixteen companies eventually chosen were: Brakpan, Consolidated Main Reef, Crown, Geduld, Government Areas, Langlaagte, Modder "B," Modder East, New Modderfontein, New State Areas, Nourse, Springs, Sub Nigel, Van Ryn Deep, Village Deep and West Springs. The average market capitalisation of these companies in 1928 (taken at the end of each month) was approximately £70,292,000. If this figure be represented by 100, the index for succeeding months is as follows:—

End of	1929.	1930.	End of	1929.	1930.
January	95.7	87.7	July	88.8	81.4
February	91.5	82.7	August	87.5	81.4
March	86.9	88.8	September...	83.8	77.5
April	86.5	81.8	October.....	81.6	75.1
May.....	86.7	84.4	November...	81.6	...
June	89.8	80.2	December...	81.7	...

Apart from the well-defined seasonal fluctuations in prices, which tend to rise on the June and December declarations, and to drop when the shares go ex dividend, Kaffirs have shown an over-all depreciation comparable with that of industrial ordinary shares, as shown, e.g., by the *Financial News* index, which, on October 31st last, on the same basis, stood at 76.3. A purchase of the shares comprised in the Kaffir index, at the 1928 mean level, would have given a yield of 9.61 per cent. in 1928, 9.52 per cent. in 1929, and 4.62 per cent. for the half-year ended June, 1930. Of the 16 concerns, Village Deep has been absorbed, and of the remainder four have increased and six reduced their rates of dividend (that of Geduld being made on an increased capital which cannot immediately become fully remunerative). In the aggregate, however, there has been a slight though progressive diminution in the amount distributed, accentuated more recently by an increased deduction for tax. A purchase at present prices (with British tax at 4s. 6d. in the £, less the appropriate

rate of Dominion tax relief), not allowing for accrued dividend, would give a yield of over 12 per cent. net. Assuming the maintenance of the June declarations, allowance for accrued dividends brings the net yield figure, on current quotations, to over 14½ per cent. This, our correspondent observes, is not an unattractive figure for a group of speculative investments, though amortisation has to be allowed for out of it.

Gillette and Auto-Strop Developments.—In the *Economist* of October 11th last we referred to a merger concluded between the Gillette and Auto-Strop companies. This brought to an end the suit filed by Auto-Strop against Gillette for alleged infringement of patents, but no sooner had this been dropped than another suit was started. This was brought by certain stockholders of the Gillette Company against the company and its directors, its objects being (a) to restrain the company from reclassifying its capital and issuing \$20 millions gold debentures, and (b) to obtain restitution from certain directors for the sale of certain shares to the company. This suit has now been dropped on a full statement being made by the directors and certain sales of shares being rescinded. The statement of the directors, it is understood, showed that the cost of the acquisition of Auto-Strop was to be 310,000 shares of a new \$5 dividend preference stock convertible share for share into common stock, and 12,500 shares of common stock. The preference shares were to be created through the reclassification of 198,731 shares of common stock which had been purchased by the company mainly in July and August, 1930. Of the common stock shares so acquired 60,000 were purchased from a pool in which some of the directors were interested, at an average price of \$79.50 per share, while 46,500 shares were purchased direct from certain of the directors at market prices. The market price of the stock subsequently fell to about \$30. The sales of these shares by directors have now been rescinded, and the directors have repaid the company in full with the exception of 20,000 shares purchased from the chairman, Mr King C. Gillette, who is too ill at the present time to attend to business. The directors interested in the pool have also repaid a sum corresponding to their participation in that syndicate, together with interest, and the company's bankers have taken in hand the issue of \$20 millions ten-year 5 per cent. convertible gold debentures, subject to the purchase of Auto-Strop being completed. A new executive committee of directors has been constituted, with the chairman of Auto-Strop and representatives of the bankers as members. Further, a restatement of the accounts of Gillette Safety Razor has been made for the past five years. *Inter alia*, the directors explained that it had long been the practice of the company to "bill" its razors and blades to its selling subsidiaries in foreign countries, not at factory cost, but at prices a little less than selling prices. The parent company had thus taken a profit on such "billings" in the form of accounts receivable before the profit had actually been realised by final sale to customers. Assuming that final sales remained constant this practice would, of course, only swell the profit figures in the year in which it originated, but if sales fell off considerably in any year it would again show profits at a fictitious level. The accounts having now been re-cast, it has been found that the difference in net earnings between the new and old figures averaged about \$2,370,000 a year. The directors are now confident that the company will not only benefit from the large earnings of the Auto-Strop but from its substantial economies in manufacturing and distributing costs. The net earnings of Auto-Strop this year have been at a rate substantially above the dividend charge on the new preference shares. The earnings of Gillette have fallen from \$8,407,518 to \$4,806,370 for the first six months of the year, as against the first half of 1929, but it is believed that the combined earnings of the two companies are now showing an increase.

Bass, Ratcliff and Gretton.—The accounts of this old-established brewery for the year to September 30th last show a slight decline in profits. Trading profit stands at £1,207,405, compared with £1,247,958, and net revenue, at £538,969, is down by £3,662. In the circumstances shareholders will probably regard the cut of 1 per cent. in dividend as a precautionary and conservative "gesture":—

Year to September 30.	1928.*	1929.	1930.
	£	£	£
Net profit	716,903	542,631	538,969
Brought forward	173,487	246,480	273,983
Preference dividend.....	85,000	68,000	68,000
Rate %	5	5	5
No. of times covered	7.9	8.4	7.9
Ordinary capital:			
Earned £	631,903	474,631	470,969
Paid £	558,910	447,128	424,772
Earned %	22.6†	21.2	21.1
Paid %	20†	20	19
Carried forward	246,480	273,983	320,181

* 15 months.

† On 12 months' basis.

The carry-forward item is augmented by £46,198 to £320,181, though nothing is added to the satisfactory reserve item of £1,000,000. The balance sheet reveals the customary strong and liquid position, available assets at £2,456,374 greatly exceeding current liabilities. The reserve for property depreciation and reserve for contingencies together total £400,000, which the directors consider an adequate amount. At 3½, the £1 ordinary shares give a yield of about £5 17s. per cent., allowing for a final dividend of 14 per cent.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

* Issued by Messrs Wm. Jas. & Hy. Thompson, Produce Brokers, 38, Mincing Lane, E.C.3.

Peter Walker (Warrington) and Robert Cain.—The report of this north-country brewery for the year to September 30th last shows, like that of Bass, very slight variations, as compared with its predecessor:—

Year to September 30.	1928.	1929.	1930.
Trading profit	548,131	567,266	570,805
Net profit	398,131	416,266	418,005
Brought forward	53,207	66,088	98,104

Preference dividend.....	160,000	160,000	160,000
Rate %	8	8	8
No. of times covered	2.5	2.6	2.6

Ordinary capital:			
Earned £	238,131	256,266	258,005
Paid £	170,250	170,250	170,250
Earned %	10.5	11.3	11.3
Paid %	7.5	7.5	7.5

To reserve	50,000	50,000	50,000
Other allocations	5,000	5,000	5,000
Carried forward	66,088	98,104	130,860

The percentage earnings and payments during the past eight years are set out below:—

Year to Sept. 30.	Earned %	Paid %	Year to Sept. 30.	Earned %	Paid %
1923	10.0	9	1927	9.7	7.5
1924	11.5	9	1928	10.5	7.5
1925	12.9	9	1929	11.3	7.5
1926	11.2	9	1930	11.3	7.5

Some £50,000 has been added to reserve account, which stands in the balance sheet at £500,000. Staff Super-annuation Fund is further augmented by a contribution of £5,000, and £130,860 is carried forward, against £98,104 brought in. At 18s. 6d. the £1 ordinary shares yield £8 11s. 5d. per cent., allowing for a final dividend of 5 per cent.

Shell Union Oil Corporation.—According to the figures compiled by a London Stock Exchange house, the earnings of the Shell Union Oil Corporation for the nine months ending September, 1930, as compared with the nine months ending June, 1929, have been as follows:—

1929.	Net Income.	Depreciation, etc.	Fed. Taxes.	Deb. Int.	Net Profit.
First quarter	13,531,021	11,100,216	...	972,228	1,458,577
Second quarter	20,780,045	11,759,957	...	969,006	8,051,082
Third quarter	22,328,064	12,190,915	...	964,403	9,172,746
Fourth quarter	17,246,438	15,427,698	1,036,659	1,891,237	Dr 1,109,116
Total year	73,885,568	50,478,786	1,036,659	4,796,874	17,573,249

1930.	Net Profit.	Depreciation, etc.	Fed. Taxes.	Deb. Int.	Net Profit.

* Capital increased from \$10,000,000 to \$13,000,000.

"OLD 'MUM.'" Many friendless old women live in Church Army Homes. Here are details of one:

"At 7.45 each morning this brave old soul of 76 goes to work at washing-up. At 6 p.m. she returns—wears perhaps—but full of good humour which bubbles over to entertain the others." Nearly all "the others" are old age pensioners who earn a little extra by selling matches in the cold streets, washing-up, and so on. A very independent but worthy community. Freedom to come and go as they reasonably like is priceless to them.

CHURCH ARMY wants to give MORE COMFORT at prices within their scanty means. Will you help by gifts to Preb. Carlile, "Old People's Fund," 55, Bryanston St., London, W.1.

The disappointing results for the third quarter may be explained by the fact that in the Mid-Continent districts, where the Shell Union derives more than 50 per cent. of its sales revenue, gasoline prices have broken sharply. Further, 50 per cent. of the Shell Union production in California is shut in, so that half the capital invested in the Pacific Coast producing fields is temporarily not earning any profit. On account of the shut-in production the Shell Union has to buy crude oil from other producers instead of running its own crude in its refineries, and it may be presumed that its profits on purchased crude are far less than on crude drawn from its own fields. It will be seen that for the nine months to September 30th the preference dividends, which required \$1,650,000, were not earned, the available profits being \$826,684. The market fully expects the preference share dividends to be paid this year. Two quarterly dividends of 35c. have been paid on the common shares.

Burma Corporation.—Twelve months ago, writes our mining correspondent, hopes were entertained that the renewed decline in metal prices would, in the case of this undertaking be more or less offset by the projected increase of the treatment plant for dealing with the lower-grade ore. These expectations have not been realised owing to the decision of the directors not to proceed with the expansion programme, a decision impelled by the falling off in the demand for metals and the renewed depreciation in values. Actually, last year's output showed a modest increase in lead and copper, and a decline in silver and zinc. The average quotations having been lower to the extent of about 35s. per ton for lead, £5 for zinc, and 5d. per oz. for silver, a distinct set-back in the profits inevitably followed, although some further economy was effected in costs. The dividend rate was reduced from 16 to 13 annas. As will be seen from the following table, payment of the latter involved a heavy draft upon the carry-forward:—

	1927-28.	1928-29.	1929-30.
Ore mined	429,850	463,060	500,590
Yield refined lead	72,390	78,720	79,270
Yield fine silver	6,920,900	7,347,330	7,225,880
Working profit	1,191,750	1,488,680	1,059,560
Depreciation, &c.	246,150	253,900	225,650
Taxes	214,070	257,990	222,270
Net profit	788,290	1,054,842	693,600
Per cent. earned	7.76	10.38	6.8
Per cent. paid (free of Indian and British tax)	7.5	10.0	8.1
Reserve	235,640	235,640	235,640
Carried forward	164,031	203,246	71,650

Development has furnished the satisfactory feature of the discovery at Nos. 2 and 6 levels of the southern extension of Chinaman ore-body, the principal deposit in the mine. Drives are being put in to test the intervening levels. Exclusive of this discovery, the ore reserves stand at 4,265,670 tons, an expansion of 124,000 tons, although the values are slightly lower than before. The total represents fully eight years' supply for the mill. On the basis of last year's dividend, the yield shown is over 12 per cent. free of British and Indian income tax. The figures suggest, however, that the maintenance of the 1929-30 rate is unlikely during the current session, metal prices having shown a fresh decline since the date of the accounts.

Roan Antelope.—The position of this undertaking is of interest, as it will be the first of the new Northern Rhodesian copper companies to start production. The report now in the hands of the shareholders contains an estimate of ore reserves. These are placed at the globular figure of 102,000,000 tons, averaging 3.44 per cent. Obviously, such a quantity will represent many years' work for the treatment plant, which is to have a capacity of 5,000 tons per day. The compilation, however, is based merely upon drilling results. The value, of course, is moderate. The need for further financing was met by the creation of £2,500,000 debentures, of which £1,500,000 was issued at 99 per cent. On June 30th £618,700 had in all been received on account

of this issue, while the cash in hand amounted to £1,051,800. Up to the date of the accounts the expenditure on development and equipment amounted to £2,670,850. The directors refer in favourable terms to the progress made generally. What the future profits are likely to be depends upon various factors—including the price of copper, which has lately undergone sharp fluctuations.

CAPITAL ISSUES.

Apart from a small issue by tender, on behalf of the *York Gas Company*, and a larger issue by the same method on behalf of the *South Suburban Gas Company*, there were only two public offers this week. They were made by the *City of Cape Town* and *City of Bloemfontein*. The *City of Cape Town* issue brings the total net indebtedness of the Council, after deduction of accumulated sinking funds, to a little over £11 millions, equal to about five and-a-half times the annual revenue, against which the City has assets amounting to £17½ millions, together with considerable property and lands upon which no expenditure has taken place. Though not a trustee issue, the stock is a high-class investment giving a flat yield of £4 19s. per cent. and a redemption yield, allowing for repayment at par in 1961, of £4 18s. 9d. per cent. The *City of Bloemfontein* offer is for £500,000 in 5 per cent. stock, 1960 at issue price of 101 per cent. The method of private placing is being followed by more than one large borrower at the moment. The *Hertfordshire County Council* has issued a 4½ per cent. Loan of £750,000, redeemable 1955-65, on offer at 98½ per cent. The *Scottish Power Company* has placed a line of 6 per cent. Preference shares at 23s. 1½d., in connection, it is understood, with the proposed acquisition of the share capital of the *Scottish Southern Electric Supply Company*.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to November 15, 1930, £230,147,805.

City of Bloemfontein.—Issue of £500,000 5 per cent. Inscribed Stock, redeemable at par December 31, 1960, at issue price 101 per cent.

City of Cape Town.—Issue of £750,000 5 per cent. redeemable stock, 1961, at £101 per cent. The principal will be repaid at par on July 1, 1961, and a sinking fund of not less than ¾ per cent. per annum will be provided for the redemption of the issue. The net indebtedness of the Council in respect of loans outstanding at December 31, 1929, after deduction of accumulated sinking funds, was £10,689,975.

York Gas Company.—Issue by tender of £90,000 5 per cent. redeemable debenture stock, to be redeemed at par on December 31, 1950, at a minimum price of £97 per £100 stock, yielding at that price £5 5s. 5d. per cent., allowing for redemption. The net revenue of the company for the year ended December 31, 1929, was £18,194, covering interest on debenture stock, including the present issue, more than three times.

South Suburban Gas Company.—Issue by tender of £200,000 5 per cent. perpetual debenture stock, minimum price £99 per £100 stock, and £300,000 5 per cent. perpetual preference stock, minimum price £92 per £100 stock. The proceeds of the present issue are required for repayment of loan by the company's bankers and for development and general purposes.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction. **Bermuda Development Company.** Issued capital, £1,044,280 in £10 shares. Particulars are given of an issue of £500,000 5½ per cent. guaranteed first mortgage debentures at 97½ per cent. **South London Electric Supply Company.** Particulars of an issue of £300,000 4½ per cent. debenture stock at 92 per cent., redeemable at par on December 15, 1972. **Hertfordshire County Council.** Particulars of an issue of £750,000 4½ per cent. redeemable stock, 1955-65. The stock will be redeemed at par on April 15, 1965, or at the option of the Council on or after April 15, 1955, on six months' notice. The stock is a trustee security.

[Other Stock Exchange information, including the latest dividend announcements, profit and loss figures, weekly traffic returns, summary of balance sheets and shorter notices will be found on page 981 under the heading "Company News."]

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended November 12th: Venezuela, 35,512 barrels; Trinidad, 18,607 barrels; total, 54,119 barrels.

MEXICAN EAGLE OIL.—The production for the week ended November 8, 1930, was 225,000 barrels.

TOCUYO OILFIELDS OF VENEZUELA, LTD.—Oil produced during October, 1930, 2,904 tons.

THE VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended November 1st was: Bolivar district, 94,403 metric tons; Maracaibo district, 14,270 metric tons; total, 108,673 metric tons. Production for the week ended November 8th was: Bolivar district, 94,328 metric tons; Maracaibo district, 13,441 metric tons; total, 107,769 metric tons.

ECONOMIC CONDITION OF YUGOSLAVIA IN 1930.

STABILISATION of conditions—that is the chief success and the final balance of last year's work in the Kingdom of Yugoslavia, which gained its title officially by the measure of October 3, 1929. The same measure effected the division of the country into nine banovinas, and the decentralisation of the state administration, and by the creation of banovina councils laid the foundation on which to build up local budgets to cope with local needs.

But all these local ambitions can only be realised on the basis of unified State administration and unification of laws, and it was precisely in this sphere that nothing had been accomplished during the whole of the ten years since the Union by the body which was called the legislative body in spite of the fact that the work of legislation was its least activity.

The great need, then, was to catch up this lost time. It is difficult to estimate the gain to the whole national economy from the unification of the law of bills and cheques, that of court of justice procedure, the criminal law, &c. Very shortly work will be concluded on the preparations of the municipalities law, the law of economic co-operatives, &c. Foundations are being created on which normal economic life can develop and flourish.

Repercussion of World Crisis in Yugoslavia.

But the question obtrudes itself as to whether normal economic life can exist in any country at a time of world crisis. Even the biggest states are not capable of economic autonomy, while Yugoslavia, with its 13.5 millions of population is closely dependent on the world markets. Poor in home capital she has attracted foreign capital in order to enable her to exploit her natural wealth. The payment of interest on this capital, the paying off of pre-war and war debts can only be done in kind, and this obliges Yugoslavia to develop the export of her products.

Industry being as yet undeveloped she exports primarily raw and semi-manufactured goods to an amount of 44.12 per cent. Next, with 36.13 per cent., comes food and drink stuffs, and then with 11.07 per cent., live animals. This composition of the country's export trade is merely the expression of the condition that four-fifths of the population of Yugoslavia is engaged in agriculture. At the same time the very nature of her export trade exposes her to the effect of the world crisis.

Already in the first half of 1930 the weight of exported building timber is 6.3 per cent. less than in the same period of 1929. In later months the decrease is still heavier. There is no need to seek further than the decrease of buying power abroad and Russian dumping for the main causes of this falling off.

Comparing the export of eggs in the same period—the first half-year—we find that this export has increased in weight by 66.3 per cent., but in value only by 47.2 per cent. This relation is merely an illustration of the catastrophic fall in the price of agrarian products which, as is well known, most heavily affected cereal products—wheat and maize—which compose the bulk of Yugoslav exports.

The price of wheat fell in the course of a year from 195 to 145 dinars, and that of maize from 168 to 105 dinars per quintal, while harvest returns in these products were quite ample, and in tons amounted as follows:—

Year.	Wheat.	Maize.
1927	1,539,545	2,108,505
1928	2,811,236	1,819,057
1929	2,585,468	4,147,664
1930 (estimated return)	2,413,337	3,500,000

As is seen above, Yugoslavia had in 1929 a record harvest of maize and a very good wheat harvest, and the 1930 harvest falls very little short of this record. Unfortunately conditions were very unfavourable for the realising of this exceptional harvest and Yugoslavia was not able to reap full profit from her excellent offer.

Agrarian Policy.

The measures which it has been possible to undertake are of two kinds. On the one hand it was necessary to rationalise production, for instance, by reducing the rate on credit accounts, and help the agriculturist to proceed to the cultivation of the better-paying industrial plants, to exchange cereal production for stock raising, &c. Such steps involve the outlay of considerable capital, and this led to the opening on April 16, 1929, of the Privileged Agrarian Bank with a capital of 700 mil. dinars (about 2½ million £ sterling), which will be fully paid up by December 1 of this year, so that, in point of capital, this bank is the second financial institution in the Balkans. The State guarantees all bonds which the bank will issue on the basis of its mortgage loans, or amelioration works effected, or even on the credit of co-operative organisations. This will place at the disposal of agriculture the means necessary for complete reconstruction. An indispensable condition for mortgage credit has been created by the law of land records, which establishes a new basis for regulating deeds of ownership.

On the other hand, unfavourable agricultural conditions make it imperative to improve the conditions for the disposal of agricultural produce. But as Yugoslav export is too insignificant to be able to affect prices on the world markets, the need for combined action with other exporting countries became evident. The means

of such action were investigated at the conferences at Bucarest, Sinaja and Warsaw, in which Yugoslavia took part.

An agreement of this kind involves the export of standardised goods in large quantities, and this can best be achieved by the centralisation of export.

This aim has led to the foundation of the Privileged Association for the export of agricultural produce. In order to regulate the offer of grain, a system of silos must be created where grain can be collected and stored. The law of the building of these storehouses regulates at the same time the question of the issue of warrants and the lombarding of stored goods. And although it has not been possible to undertake the building of these silos, the Association has done a great deal for the improvement of the conditions for the export of agricultural products.

Industry and Mining.

The wood industry has suffered from the unfavourable conditions of the world market. The same is true of the cement, artificial manure and similar industries, whose products are mainly of foreign consumption. The contrary is true of the textile and other industries which supply the home consumption, and which are now to a great extent in a position to extend their plant.

New factories are springing up in the glass and artificial silk industries. Electric power stations of lesser and greater capacity are springing up on all sides creating the conditions for a wider utilisation of water power which holds out vast possibilities for industrial installations of all sorts.

After preparatory works lasting over a year the Trepča Mines, Ltd., has begun to produce chrome and lead, increasing at the same time its capital to £1,125,000. In the case of these home enterprises the low cost of raw materials helps to reduce cost of working and to some extent helps them to tide over the present economic depression. It is not pure chance that the number of bankruptcies for the first nine months of this year amounts to 508 as against 842 for the same period of last year.

Budget.

A time of trade depression is not a favourable moment for increasing the taxation burden. The budget for 1930-31, amounting to 13,348,013,160 dinars, is somewhat bigger than its predecessor, but this increase is due in no wise to a new levy, but purely to a real estimate of budget position. On the expenditure side the increase is primarily due to the automatic increase in the payment of war debts, as also to the inclusion in the budget of new expenditure on the basis of the agreement with the holders on the valorisation of pre-war debts.

The actual figures of payments of state taxes are the best proof that the budget estimates were real. Both Monopoly returns and revenue from direct state taxes show considerable increase on the budget estimates and on the actual amounts collected in the same period of last year.

And, besides, the integral lowering of prices automatically causes a rise in the taxation burden. In the same way the payment of the war debt grows heavier since it is based on agreements made when the index of prices was at least 15.20 per cent. more favourable. In view of the agricultural depression the Government has effected a decrease in the taxation scale for certain groups of agriculturists. In order to fulfil obligations abroad Yugoslavia is increasing her exports. During the first seven months of 1930 exports were 159,178 tons higher than for the same period of last year. The trade balance for 1929 showed a credit of 347 mil. dinars. But the first half-year of 1930 shows a deficit of 316.3 mil. dinars. This is a usual occurrence in an agricultural country where the bulk of export takes place in the autumn after the harvest. This year also, as happened last year, Yugoslavia has considerable surplus of wheat and maize which hardly finds a sale on the world markets and only at much reduced prices.

For this reason it may well happen that this year's trade balance will close with no surplus, but even with a considerable deficit in spite of increased quantities of export. Such an event is no menace to the stability of the currency considering the fact that the gold and devise returns at the National Bank exceed 2,280 mil. dinars, and the note covering amounts to 42.42 per cent. It is worthy of note that one of the causes of the reduced devise reserve (besides the deficit in the trade balance for the spring months) has been the sale in this country of the Yugoslav dollar loans from the American exchanges. It is estimated that 300 to 400 thousand dollars worth of these bonds came into the country. This is a clear proof that home buyers look with greater confidence on the state of the country than is the case with ill-informed foreign buyers.

Yugoslavia has not been able to escape entirely the unfavourable effects of the world economic crisis, but these effects are minimised by the nature of her economic conditions and the fact that she has not yet begun the intense utilisation of the natural wealth of the country. On all sides there is proof of the energy of the population, which is now realising the need for intensive work as the main factor towards the raising of its buying power. This has fallen as a result of foreign conditions on the world market, without any connection with home economic conditions, for these are secure on the foundations of rich soil, unified legislation and improved administration.

COMPANY MEETINGS, &c.

WANKIE COLLIERY COMPANY, LIMITED. INCREASED PROFITS.—DIVIDEND 17½ PER CENT.

The seventh ordinary general meeting of the Wankie Colliery Company, Ltd., was held, on the 20th instant, at the Liverpool Street Hotel, London.

Sir Edmund Davis (chairman and managing director) said in the course of his speech: We are pleased to report a satisfactory year's trading. Although coke sales show a slight falling-off as compared with the previous year, coal sales have increased by 38,792 tons, the total amounting to 855,088 tons, as compared with 816,296 tons for the previous year and 724,186 tons in 1928. The profit and loss account shows sales of coal, coke and other products amounting to £596,001, compared with £590,466 last year, an increase of £5,535. Cost of production amounts to £329,671, as compared with £388,613 last year, a reduction of £58,942 on a considerably increased output. This result is mainly due to the large capital expenditure we have incurred at both collieries in plant improvements to reduce costs and place the collieries in a position to meet increased demands as Northern Rhodesia develops. The balance of profit carried to the balance sheet is £189,808, as compared with £129,430 last year.

I would here like to say a few words in connection with our employees. The community at Wankie consists almost entirely of colliery employees, who are isolated some 7,500 miles from home, nearly 900 miles from the nearest seaport, and over 200 miles from Bulawayo, which is the nearest town. We have about 190 Europeans (45 being employed at the new colliery), and of these 61 per cent. are married. In such circumstances, it is obvious that unless such a community is able to create suitable social amenities, deterioration might ensue. In our case I think I can say without hesitation that on the whole no concern in South Africa can boast of a more loyal and contented staff, and in this connection we give unstinted credit to our esteemed general manager, Mr. A. R. Thomson, M.L.A., who is with us to-day, and whose popularity with his co-workers, and his human understanding of their needs, has been for the past 22 years one of our greatest assets.

CAPITAL EXPENDITURE.

At our last ordinary general meeting I stated that, with the two collieries opened out and producing, we were in a position to meet any likely demands for fuel we might be faced with, both in Northern and Southern Rhodesia, and to make this position absolutely safe we have, as you will have gathered from my remarks, incurred very heavy capital expenditure during the year under review, and we have found ourselves, for the purpose of placing the colliery in a safe production position, and to assure our customers of their supplies, obliged to incur further capital expenditure for the duplication of a very large portion of our power plant. The result of all this capital expenditure has meant a considerable reduction in our working costs.

It will interest you to know that the Rhodesian Railways are also dealing with the positions which will arise at no distant date through the continued growth in our northward-bound coal and coke traffic, and the fact that when the new copper mines in Northern Rhodesia start operations on a large scale there will be a further considerable increase. The railways have recently been considering what steps they should take to provide for the expeditious handling of this traffic. At present the traffic requires ten trains per day in each direction over the Wankie-Livingstone section, which, owing to many steep gradients, restricts the loads of such trains and results in congestion.

A NEW RAILWAY LINE.

The railways have, therefore, decided to improve this section, and they have recently obtained legislative authority for the construction of an entirely new line between Wankie and Livingstone. This new line will be 74½ miles in length, some 11½ miles longer than the existing line, but the ruling gradient for traffic going northwards will be 1 in 120 against 1 in 50 on the existing line. This improvement in gradient will enable trains of 1,100 tons to be hauled northwards instead of 440 tons on the present line. In other words, one train on the new line will carry as much traffic as 2½ trains on the existing route.

The railways will have to expend on this new line, which is being started at once, and which will take about two years to complete, about £500,000. When presiding at our meeting a year ago, I referred to the demand for coal which is bound to arise in Northern Rhodesia, and I see no reason to vary the estimates I then made, though I anticipate the demand for the Roan Antelope and the Bwana M'Kubwa's N'Kana Mine will arise at a much earlier date than originally anticipated.

The report and accounts were unanimously adopted.

DALGETY AND COMPANY, LIMITED.

CONDITIONS IN AUSTRALIA AND NEW ZEALAND.

The forty-sixth annual general meeting of Dalgety and Company, Ltd., was held on the 20th instant, at 65-68 Leadenhall Street, London.

The Hon. Edmund W. Parker (the chairman) said that the year under review had proved a very difficult period for all those whose operations were connected with Australia. They had had to contend against a bad season for most of the year, and a phenomenal fall in the price of the primary products of the Commonwealth. The income derived from wool alone would show a reduction of £30,000,000 or thereabouts, and that was an appalling drop in the resources of a country with a population of about 6,500,000 people which had to find some £36,000,000 annually in interest on its external debt. In addition to this tremendous fall in wool prices, there came an equally serious slump in the price of the Commonwealth's second most important industry, viz., wheat production. These movements had contributed in a great measure to the creation of a financial situation which could only be described as very serious. The Federal Government were doing their utmost to cope with the situation, and it was to be hoped that Mr. Scullin's Government would face the situation with a resolute front, and fearlessly take those steps which would restore the credit of the Commonwealth to the high pinnacle on which it had rested for so many years.

THE CURRENT SEASON.

At the moment it could be said that, excluding a few districts, the season in Australia gave every promise of being exceptionally good. This would greatly assist the company's clients to recover some of the leeway which they had lost owing to the drought, but here again they were up against the problem of finance. To re-establish themselves it would be necessary for them, in many instances, to re-stock, and it would be the duty of the company, in so far as could safely be done, to assist in this process. The recuperative powers of Australia were well known, and if only there was an improvement in prices for the primary products, it would not be long before many of those accounts which were causing the company anxiety to-day would again be in a flourishing condition.

New Zealand was suffering, too, from a big slump in the prices of its primary products. Wool and dairy produce had shown a great decline, and the situation as regarded returns to the company's clients was much the same as in Australia.

Last year he was able to report a substantial increase in the company's returns from New Zealand, but, owing to the fall in commodity values, this increase had not been maintained. Nevertheless, their business in the Dominion was a sound one, and he had no doubt that, given a reduction in the cost of production and a return to higher prices, they would continue to receive handsome contributions from this source.

He had the fullest confidence in Australia's ability to surmount all her difficulties, but he would warn the shareholders that he saw very little prospect of improvement during the current twelve months, and if the company was able to pay the same dividend next year he thought they would do remarkably well.

In New Zealand the past season had been a disappointing one from all sides of the trade, the growers having had to accept prices well under the cost of production, with buyers struggling against a falling top market since the season opened in November. Financially, the results of the past season had been a staggering blow from which it would take the industry some considerable time to recover, the Australasian wool cheque of £39,054,950 having shown a falling off of £30,284,479 as compared with the previous season.

WHEAT CROP AND PRICES.

With regard to wheat, although the 1929-30 crop had turned out larger than at one time seemed likely, wheat had been a most disappointing article in which to deal. The yield of 128½ million bushels was poor as compared with the previous season. Far more important, however, for the grower than the shortage of crop had been the very serious slump in prices. As regarded the coming 1930-31 season, never in the history of Australia had the outlook for a bumper crop been more favourable at this time of the year than at present, but what this wheat would fetch they could not predict and hardly liked to think. Crops everywhere were large and, with a surplus of wheat in the world, selling would be difficult.

The net profits showed a reduction of £186,643 on those of last year, and the directors recommended the usual dividend of 10 per cent. for the year, but, in view of the uncertain conditions ahead, they had deemed it prudent to discontinue the bonus payment. The present dividend, paid free of British income tax, was equal to a distribution of 12s. 11d. per share, which was a satisfactory return in these times.

The report and accounts were unanimously adopted.

JOHN I. THORNYCROFT AND COMPANY, LIMITED.

SATISFACTORY RESULTS.

The twenty-ninth annual general meeting of John I. Thornycroft and Company, Ltd., was held, on the 19th instant, at Winchester House, Old Broad Street, London.

Sir John E. Thornycroft, K.B.E., M.Inst.C.E. (managing director), said that the accounts showed a profit of £109,376 for the past year, and the directors recommended a final dividend of 3 per cent. on the cumulative preference shares, making 6 per cent. for the year; a final dividend of 5½ per cent. on the participating preferred ordinary shares, making 9 per cent. for the year, and being the maximum to which these shares were entitled; and a dividend of 13 per cent. on the ordinary shares. It was also proposed to transfer £20,000 to reserve and to contribute £5,000 to the benevolent fund. After giving effect to these recommendations the reserve account would stand at £275,000 and the special reserve at £50,000, so that, including the amount carried forward, £59,258, the total in reserve was altogether £384,258, as against £366,882 last year.

The shipbuilding and marine engineering side of the business had shown satisfactory results. Following the delivery of the six destroyers to the Chilean Navy, the company had been engaged upon the "Acheron," the special experimental destroyer for the British Navy, and the "Saguenay" and "Skeena" for the Canadian Navy. The company had recently delivered to the Bovril Company another motor-vessel for carrying 600 live cattle in the Argentine, and also three motor torpedo-boats for the Siamese Navy. In addition to the destroyers already referred to they had in hand a twin-screw passenger and cargo vessel for Trinidad, a number of motor-boats, and a twin-screw Diesel passenger vessel for the Isle of Wight-Southampton service.

It was disappointing to have to report a reduction in overseas trade generally, and no one was able to forecast the break in prices of such products as wheat, wool, rubber, coffee, and tin. The effect of that break in prices on the purchasing power of the countries in which they were produced was well known, and shareholders would realise the effect on the company's business when he mentioned that their best markets abroad were Australia, New Zealand, Malaya, and Brazil. In the Argentine and Uruguay they could report the opening up of a satisfactory business, and in South Africa also they had secured their share of the business placed.

The report was unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.," 8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GOLD.

Messrs Samuel Montagu and Company write on November 19, 1930, as follows:—

The Bank of England gold reserve against notes amounted to £158,920,423 on the 12th instant (as compared with £160,372,970 on the previous Wednesday), and represents an increase of £12,960,339 since January 1st last. Of the £16,000 bar gold which arrived from South Africa this week, £744,000 had been sold forward to France; thus only £72,000 was available in the open market yesterday and this was secured by India and the home and Continental trade at the price of 85s. 1d. per fine ounce. Withdraw

REPORTS AND NOTICES.

MISCELLANEOUS.

AGAR, CROSS AND COMPANY, LIMITED.—The Board resolved to pay a final dividend on the ordinary shares for the year ending June 30, 1930, at the rate of 6 per cent. actual, free of income tax, this distribution making a total on the ordinary shares for the year of 11 per cent., free of tax, as against a total of 16 per cent. for last year. In addition, the directors have transferred the sum of £100,000 from general reserve to exchange depreciation reserve account to meet the depreciation on exchange at June 30, 1930. It is proposed that this dividend should be payable on the date of the annual meeting, which has been fixed for December 15th next. A notice to be posted to shareholders will contain particulars of the alterations in the company's articles. The directors are also recommending an issue of 225,000 additional ordinary shares in the proportion of one in three to all holders on the register of ordinary members as at December 1st next, price of issue being 30s. per share. The price of the old shares on November 19th was 45s.

ANSSELLS BREWERY, LIMITED.—A net profit of £174,733 for the year to September 30, 1930, was secured, compared with £189,329 for preceding year. With the larger balance brought in, the sum available is £17,233 higher at £418,147. The directors have capitalised £200,000 of the reserve by allotting, *pro rata*, among the ordinary shareholders 40,000 ordinary shares of £5, leaving the reserve at £280,000. It is proposed to maintain the ordinary distribution at 15 per cent., tax free, but £17,500 more is now required by the final 8½ per cent., which includes 2½ per cent. as bonus. Reserve allocation is £10,000 less at £40,000, bringing this account up to £320,000, and £253,147, compared with £243,414, carried forward.

ALLIED STORES LIMITED—GROCERY MERGER.—A circular has been issued to shareholders of the International Tea Stores, Ltd., in reference to the proposed merger with other companies. The International Tea Stores, Ltd., state that, although the merger in its original form had become impracticable, the friendly trading arrangements between the International Tea Stores and those interested in the other group of companies will be continued, and it is hoped will be extended for the benefit of all the companies concerned. In the circumstances the directors will not proceed with the merger unless further authority is given by a representative majority of shareholders.

HUNGARIAN TREASURY BILLS.—The Bills have been placed at 5½ per cent. discount and brokerage. They are yearlings maturing November, 1931. The total amount is approximately £3,000,000, placed by Barings, Rothschilds and Schroders, of which £1,000,000 in London, £1,000,000 on the Continent, and \$5,000,000 in New York.

HARRODS (BUENOS AIRES), LIMITED.—Subject to completion of audit the accounts for the year ended August 31, 1930, after payment of salaries, advertising and all other working expenses, and including interest receivable, also dividends amounting to £357,258 (against £403,094 last year) receivable from the South American Stores (Gath and Chaves), Ltd., show a profit of £571,503. Less realised loss on exchange, £37,928; depreciation of installations, fixtures, fittings and plant, £31,248; to premises account, £5,000; to reserve for income tax, £27,000; leaving £470,329. An interim dividend of 4 per cent., less income tax, was paid upon the preference shares on June 17, 1930, absorbing £94,000; leaving £376,329. The directors recommend the following payments, less income tax:—Funding certificates, 5 per cent. interest, £13,790; preference shares, dividend of 4 per cent., making, with the interim dividend, 8 per cent. for the year, £94,000; funding certificates, redemption, £22,834; leaving £245,705; and the following appropriations:—To reserve, in accordance with articles of association, £24,570; to exchange reserve, £70,000; leaving balance of £151,135; to which must be added the undivided profits brought forward from last year, £122,029; leaving £273,164; and a dividend on ordinary shares of 5 per cent., i.e., 9d. per share, less income tax, £150,572; leaving a balance of undivided profits to be carried forward, £122,592. The profit of £470,329 for the year ended August 31, 1930, compares with £556,115 for the preceding year, a decrease of £85,786. Sums aggregating £158,633 in respect of realised losses on exchange have been charged against revenue in the accounts of the company and its controlled companies.

PERUVIAN CORPORATION, LIMITED.—The gross traffic receipts for year ended June 30, 1930, amounted to £1,865,519, as compared with £1,834,375 for preceding year. Working expenses were higher at £1,228,080, as compared with £1,205,409. Net receipts were higher at £637,439, as against £628,966, the rate of exchange of Peruvian Sol being again 20d. for the year. The preference stockholders receive 3 per cent. for the year. The carry-forward is increased from £129,749 to £188,989.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Climatic conditions were rather unsettled over the United Kingdom during the last week, with a fall in temperature, but field work proceeded actively, and there is every indication of a larger area being placed under winter wheat compared with last year. Small supplies of native wheat at the principal Statute markets met a poor demand, purchases being mainly for seed purposes, as millers are able to buy foreign wheat on more favourable terms, and prices consequently marked a downward tendency. Depressed conditions prevailed on the import market under heavy offerings from practically all exporting countries, and continued large shipments, in which Russia figured prominently, Soviet clearances last week at 944,000 quarters, being up to a pre-war level. Many cargoes arriving, including good milling wheat, are being stored, and with port stocks rapidly accumulating, millers are afforded little inducement to book ahead. Prices have slumped in Canada owing to the poor export demand and the uncertainty arising regarding financial support, but steadied later in unison with the United States, where values were stabilised by Governmental operations. Southern Hemisphere crops are nearing maturity under favourable climatic conditions, and pressure to market new supplies is likely to be felt in the near future, as harvesting has already commenced in the early districts. India also has a large quantity of wheat for export, and offers from this source were reduced sharply in order to attract demand before the Australian and Argentine movement is in full swing. The flour trade exhibited quiet features, and prices of home milled were easier in sympathy with the wheat position. Most imported makes were also obtainable on lower terms, but failed to arouse much interest. Of feeding stuffs, liberal offerings of Plate maize resulted in a downward course of prices, though trade proceeded on fairly active lines, with rather more interest shown by Continental consumers. South African descriptions are held above market parity, while Danubian shippers are not seriously competing. Barley remains dull of sale, and oats tend in buyers' favour.

WHEAT.—Depressed. No. 1 hard Manitoba, ex ship 28s.-28s. 3d.; No. 1 Northern Manitoba, ex ship 27s. 3d.-27s. 9d.; No. 2 ditto, 26s. 3d.-27s. 3d.; No. 3, 27s. 6d.; No. 4, 26s.; Barusso, 61½ lbs., ex ship to arrive, 24s.; Australian, 28s. 6d.; choice white Karachi, 27s.; Russian, on sample ex ship, 22s. 6d.-25s. 6d.; landed 22s. 9d.-26s. per 496 lbs.; English new, 6s. 5d.-6s. 8d. per 112 lbs.

FLOUR.—Quiet and easier. London straight run, 26s. per sack for country deliveries, and 25s. for London area. Of imported, 22s.-23s. ex store per 280 lbs.

MAIZE.—Easier. Plate, landed 18s. 3d.; ex ship, 17s.; November-December, 16s. 9d.; December-January, 16s. 9d.; January-February, 17s. 3d.; No. 2 white flat African, landed 18s. 3d. per 480 lbs. Yellow maize meal, £6 f.o.r. London. Yellow African, ex ship £5 5s.; white, £4 12s. 6d. per ton.

BARLEY.—Dull. Californian old, landed 30s.-35s.; new, ex ship 30s.-41s. as to sample; Chilean brewing, landed 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, ex ship 13s.; landed, 14s.; Danubian, ex ship 13s.; landed 14s.; Persian, landed 13s.; ex ship, 12s. per 400 lbs. English new malting, 6s. 3d.-13s. 9d.; feed, 5s. 6d.-5s. 9d. per 112 lbs.

OATS.—Quiet of sale. Plate, landed 12s. 3d.; ex ship 10s. 9d.; Chilean tawny, ex ship to arrive 12s. 3d.; landed 13s. 3d.; best whites, ex ship 19s.; landed 20s.; mixed Canadian feed, ex ship 9s. 3d.; landed 10s. 3d.; North Russian, ex ship to arrive, 13s.; landed 14s. 6d. per 320 lbs.; English new, 5s. 8d.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Nov. 15	Cwts. 124,662	Cwts. 231,816	Cwts. 288,752	Cwts. 233,350
11 weeks to Nov. 15	1,574,094	3,172,788	3,039,571	2,476,427
Average price of English wheat per cwt.	s. d. 6 9	s. d. 9 6	s. d. 9 11	s. d. 10 2

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.	Cwts. 124,248	Cwts. 526,468	Cwts. 55,204	s. d. 6 10	s. d. 9 8	s. d. 5 11
Nov. 8	124,248	526,468	55,204	6 9	9 8	5 11

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

WHEAT FUTURE.	Jan. 2, 1929.	Nov. 20, 1929.	Jan. 2, 1930.	Nov. 5, 1930.	Nov. 12, 1930.	Nov. 19, 1930.
Winnipeg (No. 1 Manitoba)	122	133½	148½	66½	65½	59½
Chicago (No. 2 Winter)	116½	121½	130½	72½	72½	73½

The visible supply of wheat in Canada at 63,953,000 bushels, shows a decrease on the week of 4,345,000 bushels. Supplies a year ago stood at 82,907,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—The South Yorkshire coal market develops no new features. Export business continues on a limited scale, but prices of best steams are firm at 16s. per ton f.o.b., Humber ports. All secondary qualities are in surplus supply and weak in price. The industrial demand still tends to shrink, especially as regards the iron and steel section, and there are considerable accumulations of smalls. The consumption of coke at the blast furnaces is declining, but there is a record demand for such fuel for central heating. Demand for best house coal is brisker.

Our Glasgow correspondent writes:—Shipment business shows little expansion, and owing to the uncertain outlook neither the collieries nor importers abroad are disposed to engage in extensive forward commitments. Prompt quotations, however, are definitely firmer, this arising from an increase in home demands, owing to seasonal influences and also to fears of trouble in the coalfields. Household coals have been raised 1s. 6d. per ton, and a further advance is under consideration. Shipment prices (f.o.b. district ports):—LANARKSHIRE: Eli best, 13s. 9d.; splint best, 15s. 3d.; splint second, 14s.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 11s.-11s. 3d.; pearls, 10s. 6d.-10s. 9d.; dross, 9s. 6d. FIFE: Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s.; third-class steam, 11s.; trebles, 13s. 6d.-16s.; doubles, 12s. 6d.; singles, 11s.; pearls, 10s. 6d. LOTHIAN: Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s. 3d.; doubles, 12s.-12s. 3d.; singles, 10s. 9d.-11s. 3d.; pearls, 10s. Ayrshire: Unscreamed navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s.; doubles, 12s.; singles, 11s.; pearls, 10s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Interest in the South Wales coalfield this week has centred in the negotiations for a new wages agreement. At a meeting of the Conciliation Board on Tuesday the sub-committee, which has been considering the question for the past three or four weeks, submitted its report, but the workmen's representatives rejected the conditions laid down by the colliery owners, and this decision was supported by a delegate conference of the miners on Tuesday. No further meeting of the Joint Board has been arranged, and the next step will probably be decided by the policy recommended to the workmen by the National Conference,

which was to be held in London on Thursday. The main proposal of the owners was that the workmen's leaders should consider with them the distribution of the balance of the proceeds remaining after the reduction of costs other than wages, but as this procedure involved a reduction in the present wage level, it has been resolutely resisted by the workmen's leaders. Apparently there has been no effort on either side to seek a way out of the deadlock through the adoption of the 90-hours spreadover arrangement. The colliery owners have declared emphatically that in view of the fact that they have suffered a loss of between £4 and £5 millions under the present agreement, that the industry is at present being worked at a loss, and that trade is continuing to decline, they cannot continue the working of the pits with the certainty of a further increase in costs of production of from 1s. to 1s. 6d. per ton as the result of the reduction in working hours. The outlook is very serious, and consumers are accumulating stocks in anticipation of a stoppage of work on December 1st. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 9s. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 24s. 9d. to 25s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—There has been more activity in the iron and steel markets during the past week than for some time. A more optimistic tone was noticeable at the weekly meeting of the Exchange on November 18th, and the hope was freely expressed that a definite change for the better had set in. So far the improvement has been principally in the Continental steel section of the market, but some of the British works report an expansion in the demand and more inquiry. The position in the pig iron department does not look so promising, as Continental iron has been offered in this country at much lower prices than of late. This is due to the collapse of the Pig Iron Cartel and the existence of heavy stocks of iron on the Continent. It was probably to meet this position that the British Midland pig-iron producers reduced their prices at the end of last week. Buying, however, has been quiet and the lower Continental prices do not seem to have attracted much business. In the semi-finished steel department rather more business has been moving. Prices of Continental semi-finished steel have become firmer and consumers have shown greater interest in the market. The British producers have also experienced a rather better demand. The improvement in the market, however, is more noticeable in the finished steel department, in which there has been a fair amount of buying. Some of the export markets also have shown a greater inclination to buy.

Our Middlesbrough correspondent writes:—Extremely dull conditions continue to prevail on the market for Cleveland iron, and business during the past week has been on a very limited scale. Local consumers' requirements are practically covered up to the end of the year and there is no disposition shown to make purchases ahead at present figures. This cannot be wondered at in view of the competition of outside irons. Midland prices were reduced 2s. 6d. per ton last week, and although the quantity used here is not large, the fact of a reduction having been made has some effect with local consumers. A matter of more serious importance, however, is the competition of Continental foundry iron, which is

Increasing Interest in South American Markets

THE Bank of London & South America Estd. 1862 experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. being delivered at considerably below the official local prices, and is still pressed for sale. In spite of these adverse factors makers decided to make no change at the weekly market on Tuesday, and very little business was reported. No. 1 therefore remains at 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. The demand for hematite is on a steady scale and fair quantities have been booked during the past week. Deliveries from works on the Tees are in excess of the small production and stocks continue to be drawn upon. Makers adhere to 71s. for mixed numbers for delivery over a few months, but 70s. 6d. is being accepted for prompt lots. Shipments of pig iron are on a disappointing scale, the total cleared to the 18th instant being only 7,512 tons, against 15,215 tons to the same date in October. In the manufactured departments there are no new contracts of importance reported this week, but a few moderate orders have been received in one or two departments which help to keep things moving. Prices for steel, for home use under the rebate scheme, are unchanged, viz.: Plates, $\frac{3}{4}$ -in. up, £8 15s.; joists, £8 10s.; angles, &c., £8 7s. 6d. Other quotations include heavy steel rails, £8 10s.; iron crown bars, £10 15s.; 24-gauge black sheets, £8 12s. 6d.; 24-gauge galvanised corrugated sheets, £11 12s. 6d., also for home consumption. There is no change in ore, consumers being entirely off the market. Best rubio is quoted nominally 16s. 6d. for prompt and 17s. for delivery a few months ahead. The freight Bilbao/Middlesbrough for early tonnage is about 5s. Coke is freely offered for this year's delivery at 17s. delivered furnaces, but there is very little demand and a few small prompt parcels have been sold at 16s. 9d. The furnace at Dinsdale Works on ferro-manganese is expected to be in operation this week, making the total in blast on the North-East Coast 25.

Our Sheffield correspondent writes:—Prices of Midland brands of foundry and forge pig iron were reduced 2s. 6d. last week, but the concession has not benefited the market as a whole, although users are now seriously considering the placing of forward contracts. Further weakness has developed in the open-hearth steel section so far as crude materials are concerned. Evidence of this feature is seen in the closing of the Redbourne Hill Works, Lincolnshire. Notices to several thousand workmen employed there expire at the end of the present week. The works have been producing mainly sheet and tinplate bars. All branches of the local steel trade continue to suffer from the international situation, which makes overseas business very difficult to negotiate. Home trade for tools of various kinds continues fairly brisk, whereas exports are below the average of the winter months. Sheffield firms have been able to reduce their prices of tools and are consequently in an improved position to compete for overseas business as soon as it recovers. The plate and cutlery branches are not experiencing much seasonal trade and the position is very mixed. Unemployment in Sheffield continues to increase.

Our Glasgow correspondent writes:—Although a number of contracts have been placed with Glasgow firms within the past week or two which involve a very considerable tonnage, there is not yet much improvement in the position at the steel works, and operations are being carried on at much below plant capacity. Buyers of semis are showing a little more interest, but not much business is being placed. At the tube works things are somewhat quieter. Sheet makers are still working only intermittently, but there is a slight improvement in the export demand for galvanised sheets.

Our Cardiff correspondent writes:—The outstanding events in the South Wales iron and steel industries this week have been the discontinuance of the minimum price machinery of the regulation scheme, which has been in operation in the tinplate trade since the beginning of last year, and a reduction in the price of South Wales steel bars from £5 15s. to £5. It is officially explained that one of the objects of the suspension of minimum prices is to facilitate the admission into the pool of non-associated manufacturers, and a meeting for this and other purposes is to be held in the course of the next few days. Market prices of tinplates have dropped to 16s. 3d. per basis box, which compares with an official minimum of 17s. the previous week, and 18s. 9d. to 19s. at the corresponding period last year. Galvanised sheet prices are unchanged at £11 12s. 6d. per ton. Tinplate shipments were very small last week, and stocks are now standing at the exceptionally high figure of 208,507 boxes.

OTHER METALS.

TIN.—Dealings in the standard market were attended by considerable irregularity, but prices easier on balance owing to selling pressure and weak Eastern advices. Standard cash changed hands at £117-£112 10s. and £115 10s.; three months, £118 10s.-£112 and £117 5s. Sales in the East were reported at £122-£112 10s. and £120 5s. per ton c.i.f.

COPPER.—Market easier in sympathy with reduced prices of electrolytic in America, and liberal offerings here, but business active at the decline. Standard cash sold at £49 12s. 6d. to £45 10s.; three months, £51 down to £45 11s. 3d. per ton.

LEAD opened firmer with dealings on a fair scale, but later prices exhibited weakness and irregularity on liberal offerings. Good soft foreign pig, November, sold £16 to £16 2s. 6d.; December, £16 17s. 6d. to £16; January, £16 18s. 9d. to £16 2s. 6d.; February, £17 to £15 15s. and £15 18s. 9d.; March, £17 to £16 1s. 3d. per ton.

SPELLER in fair support, but after a firm opening the market weakened in sympathy with other metals. November sold at £15 to £15 1s. 3d.; December, £15 6s. 3d. to £14 15s.; January, £15 10s. to £14 18s. 9d. and £15 1s. 3d.; February, £15 10s.-£15 16s. 3d. and £15 6s. per ton.

ALUMINIUM maintained. Home trade, also export, £85 per ton.

ANTIMONY firmer on stimulating advices from China. English regulus, £38 to £45. Chinese regulus, spot, £25 10s. to £26 10s.; November-December, £23 5s. Chinese crude, November-December, £14 12s. 6d. per ton c.i.f.

ANTIMONY OXIDE, November-December, £25 5s. per ton c.i.f.

ANTIMONY ORE, 60 per cent., November-December, 3s.; 50 per cent. ditto, 2s. 6d. per unit c.i.f.

WOLFRAM quiet and values tend in buyer's favour. Chinese, November-December, sellers, 16s. 6d. to 17s. per unit, c.i.f.

QUICKSILVER steady. Spot, £21 15s. to £22 per bottle.

TIN PLATES quiet and easier. I.C. coke, prompt and forward, 16s. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: November 19th.

Prices have been fairly steady during the week, but are about 13 points lower. The U.S. consumption during October was 444,000 bales, against 394,000 bales in September, and 641,000 in October last year, the rates per day being 18,100 bales for October, and 16,800 for September, 1930. The Garside Service estimates the stock in the U.S. of all kinds of cotton at the end of October, including unpicked portions of the crop as 15,367,000 bales against 12,976,000 bales last year. To-day the Garside Service issued an estimate of the ginnings figures to November 14th as 11,764,000 bales, and Fossicks as 11,850,000 bales. During the last few days the Farm Board has been supporting the market. Spot sales for the week 13th to 19th (inclusive) are 22,000 bales, of which 10,650 are American, 1,500 Brazilian, 650 Argentine, 5,500 Peru, 1,900 Egyptian, 900 African, 450 East Indian, and 450 sundries. Imports for the same period are 80,153 bales, of which 52,525 are American, 3,504 Argentine, 3,604 Peru, 17,412 Egyptian, 68 African, 110 East Indian, and 2,930 sundries. Quotations to-day are: American Middling, 5-97; Egyptian Sakel, 9-80, uppers, 6-74; Brazil Fair, 5-92; Peru G.F. smooth, 6-47; West African Middling, 5-97; and East African G.F., 6-92.

MANCHESTER: November 19th.

Business in the market is still very slow in expanding. Contracts of importance are few and far between, and buyers as a body are disposed to operate with caution and only place orders for limited quantities. There is rather more nervousness with regard to raw material prices, as it is recognised that present rates are only being maintained by the policy of the American Farm Board. With regard to piece goods for India, some exceptional sales have occurred in light bleaching descriptions for Karachi and Amritsar, certain merchants having bought speculatively. The other outlets of India, however, have given very little support, and the political situation does not improve. Demand for China has shown a tendency to fall off, and there is a little uneasiness as to the satisfactory absorption of the substantial supplies of poplins recently obtained for Hong Kong. Not more than a sorting up trade has been done for the Near East, South America and the Continent, and American and Egyptian yarns continues smaller than earlier in the month. Transactions of any weight have been quite exceptional, and spinners are experiencing more difficulty in preventing loss of ground.

THE WOOL TRADE.

Our Bradford correspondent writes:—Increasing competition is seen in all the markets where merino wool is offered, and there are indications that the lowest point has been passed. Private cable information received this week from Sydney stated that the market was active and excited, prices showing a definite advance. This advancing tendency is interpreted as indicating a desire to transfer money to England, extreme difficulty being experienced in getting remittances to this side. Considerable loss is involved even when banks undertake to remit, and rather than pay big interest, capital is being put into wool in the expectation of being able to convert it into cash at the January London sales. No doubt some of the buying is influenced by these considerations, but in any case there is an increasing demand for the raw material, due to greater confidence on the part of home and continental users. The advance in fine combing wool is now 5 to 7½ per cent. from the lowest point, and competition is broadening, the home trade being far more active than at any other time this season. It also seems that an increasing demand is coinciding very conveniently with increasing supplies. Everything seems to indicate an encouraging market for the raw material in every Colonial selling centre. The last series of London sales will commence next Tuesday. The quantity available (165,500 bales) is about 22,000 bales more than for the corresponding series of 1929, and about the same quantity less than for the fifth series of this year. The coming auctions have not aroused a great deal of comment, but it is generally agreed that the outlook is fairly encouraging. There has been some increase in the employment of machinery in the West Riding since the previous sales, and consumption of wool is proceeding in quite a healthy fashion. Topmakers are not doing a great weight of business at present, but their contracts are being taken up, and several are still prepared to sell merinos for forward delivery at reasonable prices. This description of raw material is expected to be fully 5 per cent. dearer in London, and greasy crossbreds about steady.

HIDE, LEATHER AND ALLIED TRADES.

A weaker tone for market hides was again noticeable at the auctions held in the North during the early part of the week: at Manchester all ox and heifers were from ¼d. to ½d. per lb. down in price, while cows made ¼d. per lb. less money. Calf skins were unchanged except for a slight reduction on ½ lbs. Sheepskins are a shade better market in face of a slightly improved enquiry for wool. Business in connection with foreign hides continues to be restricted to immediate needs. In the South American market parcels of Argentine ox have changed hands at the equivalent of 6½d., with light ox realising 5½d., and Montevideo ox 6½d. Business in dry South American skins has been restricted to small sales of B.A. Americanos at 7½d., and M.V. Americanos at 7½d., while with Capes quoted at slightly lower figures, business has transpired in dry at 7½d. and 6½d. for first and seconds, with 6½d. and 5½d. accepted for the same selections of drysalted 20/30 lbs. Mombasas have changed at from 6d. to 6½d., while for Australians the market is slow with lower prices being accepted for business. Orders for sole leather continue to show a falling off both in regard to size and the number of enquiries coming to hand. The better grade bends suitable for the repair trade have sold in moderate quantities particularly in the medium to heavy weights, but for the lighter averages the call has been poor. Shoe manufacturers' wants have been restricted to dry hide bends in the 10 to 12 lb. weights, but even in these the turnover has not been large, and there seems to be a feeling that present conditions will rule until the close of the present year. The position of the market so far as values are concerned is generally unchanged. A steady trade is being done with upper leathers, and over the week improvement has been experienced in the call for box calf and side leathers. Curriers have again experienced a trifle more activity, but the home demand is not sufficiently large to keep things going with a swing.

OVERSEAS PRODUCE.

SUGAR.—In the absence of some definite move on the part of Cuba and Java, in the matter of better regulating crops to requirements, the market remained quiet and weak. In fact, trade demand at the moment counts for little, and distributors seem to be more occupied in taking delivery of contracts entered into previously. It is generally thought in market circles, that early next month will witness the sitting of a Conference in Brussels to discuss the matter. Prices for British refined, also home-grown granulated, reduced 6d. Offers of actual raw refining sugars are still made with certain reserve, but against this buyers are reticent. Terminal sections weaker, with moderate transactions recorded in raw. December sold 4s. 9½d. to 4s. 8d.; March, 5s. 11d. to 5s. 11½d. and 5s. 11d.; May, 6s. 2½d.; August, 6s. 5½d. to 6s. 5d. and 6s. 5½d.; December, 6s. 9d. to 6s. 8½d. Foreign 96 per cent. centrifugal December held for 5s. 9d. c.i.f., and Continental 88 per cent. beet, 5s. 7½d. c.i.f. terms to the U.K. Cuba receipts last week cabled 46,500 tons, against 19,070 same time last year; exports, 82,440, against 41,300; stocks, 860,470, against 283,200. Quantity on plantations and in course of transit, 1,060,000 tons, against 384,770 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending November 15th totalled 109,770 tons, against 162,747 last year.

COFFEE.—Trade has been very quiet and prices, in several instances, ruled against the seller. Brazilian grades for shipment meet a slow sale at the moment.

COCOA.—Quietness again ensued, but prices held together fairly well. Small sales on the spot include fair Grenada at 46s. 6d. to 47s. Forward positions dull. Accra F/F, January-March, London contract, quoted 27s. f.o.b. G/F, January-March, to Continent, 29s. c.i.f. Terminal, December, sold, 31s. to 30s.; and May, 29s. 9d.

TEA.—Indian auctions embraced some 51,020 packages. Fair competition prevailed and clean common teas sold firmly, also the finer invoices. Plain medium and tippy kinds irregular. Leaf grades quiet on export account. Ceylon sales of 21,060 packages ruled firm for common and finer teas, but thin liquoring and orange pekoes marked irregularity. Java and Sumatra sales proceeded on steady lines, good competition being experienced. There is a steady trade passing in China teas at full rates, and supplies are in narrow compass.

RICE.—Market quite unaltered for most descriptions, but trade quiet. Two Stars, new crop, January-February, to London, sold 9s. c.i.f.

BEANS AND PEAS.—There is only a retail movement in beans at the moment, prices being unaltered. Peas continued in quiet request, but steady. Japanese, November-December, quoted 14s. c.i.f. and Dutch marrowfats 16s. 6d. f.o.b.

POTATOES.—The market in potatoes continued moderate at unaltered prices.

SPICE.—Pepper met with moderate attention and market disclosed steadiness. Lampong, October-December, held for 6½d.; January-March, 6½d.; Muntok white, August-October, quoted 10½d.; October-December, sold 10½d.; January-March, sellers, 10½d. Cloves steady. Zanzibar, spot, 1s. 5d. London stocks of black marked an increase of 34 tons on the week at 499 tons, compared with 1,119 at corresponding period last year. White, 45 tons higher at 203, compared with 1,103 tons at same time in 1929.

FRUIT (Dried).—Currants: Market remains steady with fair inquiries. Pyrgos, 30s. 6d.-31s.; Patras, 34s.-43s.; Vostizza, 48s.-58s. Sultanas firm on light supplies. Smyrna, 40s.-70s. Raisins in fair demand. Dates firmly held. Evaporated Fruits: Plums continue in request, especially large sizes, but otherwise the market remained quiet and without material change. Californian peaches, 1930 crop, re-cleaned, 47s.-56s. Almonds firmer.

CANNED GOODS.—Fruit: The general position remains unaltered, demand being slow to expand, especially for Californian varieties. English fruits, however, continue to sell well, and Australian also meet with attention. Fish: Sardines, best quality, firm and

scarce, but lower grades tend easier. Portuguese, 1/2 clubs, 3s. 6d. Meat: Market quiet, but sellers adhere to recent quotations. Condensed Milk: Supplies were less plentiful and prices firmer for prompt delivery. Dutch condensed milk, full cream sweetened, 5-cwt. casks, 34s. Honey: The market was well supplied and trade proved quiet on about former terms.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,623 tons, as compared with 9,476 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.2 per cent. of the supplies, as against 78.1 per cent. a year ago, and imported mutton, mainly New Zealand, formed 72.9 per cent. of the total supply, as against 72.2 per cent. last year. The price of pork showed a slight rise on the week, but that of beef and mutton remained unaltered.

RUBBER.—There is a fair business proceeding and market for the main part steady. Revised estimate of Straits shipments for present month, 43,000 tons. According to indications of landings and deliveries in London, also Liverpool, stocks next Monday will show quite a liberal increase. Standard sheet, spot and November,

sold 4 1/2d.; December, 4 1/2d.; January-March, 4 1/2d.; April-June, 4 1/2d.; July-September, 5d.; October-December, 5 1/2d.; and the week of 883 tons, landings being 2,093, deliveries 1,210, and stock 76,042 compared with 50,068 tons at same time last year. Liverpool stocks were 667 tons up on the week: Landings 959, deliveries 292, and stock 40,003 against 17,543 tons at corresponding period in 1929. American consumption of crude rubber for October, 27,270 tons; arrivals, 43,730; stock, 185,470; afloat, 51,120.

HEMP.—Manila qualities steadily held, moderate inquiries being met with some reserve. J2, November-January, quoted £24; K, £23; L1, £22 15s.; L2, £21 15s.; M1, £21 15s.; M2, £20 15s. African Sisal, No. 1, f.a.q., November-January, quoted £22 10s., and sales in No. 1 tow ditto at £18 10s. and further buyers. Receipts for past week totalled 21,000 bales, compared with 26,000 bales at same period last year and 35,000 bales in 1928. Estimates for this week 24,000 and the following week 21,000 bales.

VEGETABLE OILS AND OLSEEDS.—Markets again are easy, and in some sections prices have receded to new low levels. Considerable pressure to sell is the feature of linseed, of which large surpluses of old crop Plate remains to be marketed. Apparently, a substantial quantity will have to be carried over to the next season, during which excess supplies are promised. Old crop Plate on spot has declined to £10 7s. 6d., and afloat and December shipment to £9 12s. 6d., while current value of new crop, January-February, is around £9 6s. Cottonseed is dull and lower, black Egyptian on spot and on passage being quoted at £8, and November-January at £5 17s. 6d. Linseed oil has been irregular and a good trade reported at the lower levels. Raw oil on spot ex Hull has dropped to £25 15s., and November delivery to £25. Forward positions are easy, January-April offering at £21. Cotton oil is neglected and quotations easier: crude Egyptian, £21 10s., and common edible, £25 6s. Other seed oils are quiet and inclined easy. The market in copra has been dull and prices eased. F.M.S. Straits, December, to Rotterdam, sellers, £15 17s. 6d.; Dutch E.I., ditto, £15 17s. 6d.

THE MONEY MARKET.

MONEY proved extremely tight during the early part of the week. Rates for new money at one time ran up to 3 1/2 per cent., while renewals were effected at 2 1/2 per cent. Some relief was given by special buying of hot Treasury bills at 2 1/2 per cent., but as these had just been paid for at the tender rate of 2 3/4 per cent., the brokers concerned were involved in a loss. Even this relief did not prove sufficient, and on Wednesday it was reported that the market had had to resort to the Bank. Still, as Discounts and Advances increased during the week by

NATIONAL PROVIDENT INSTITUTION
DISTRIBUTION OF PROFITS
DECEMBER 31st, 1930.

INTERIM BONUSES INCREASED.

48 Gracechurch Street, London, E.C.3.

£1,682,443—an amount which includes bills sold to the Bank—it is clear that the amount borrowed was very small.

The immediate cause of the stringency was the fact that the application money received for the issue of Central Electricity Board stock was not released at once, but was paid into a special account at the Bank of England. The effect of this is illustrated by this week's Bank return, which shows a decrease of £3,559,678 in Bankers' deposits and an increase of £3,859,389 in "Other Accounts." Incidentally, this shows how useful, in elucidating the monetary position, was the decision, still comparatively recent, to divide Other Deposits into Bankers' Deposits and Other Accounts. Other and less direct causes of the stringency are to be found in the steady expansion in the number of Treasury bills outstanding—issues this week having been £10,000,000 in excess of maturities—and in the continued withdrawal of French balances. Next week, however, the War Loan dividend will be paid, and this should ease the situation. Unless there is a big Christmas demand for currency—and the depressed state of trade makes this unlikely—December should be a fairly comfortable month.

Discount rates responded on Wednesday to the prevailing stringency. December bills are regarded as being practically equivalent to "money." This meant that their rates were a matter for negotiation, and dealings at $2\frac{1}{2}$ to $2\frac{1}{4}$ per cent. were reported. January bills were dealt in at $2\frac{1}{4}$ to $2\frac{1}{8}$ per cent., while the market rate on three months' bills was given in one quarter as $2\frac{1}{4}$ per cent. Four months' bills were quoted at $2\frac{1}{4}$ per cent. and six months' bills at $2\frac{1}{4}$ to $2\frac{1}{8}$ per cent. On Thursday money, though a little more plentiful, was still wanted, and three months' bills were quoted at $2\frac{3}{16}$.

	Nov. 6, 1930.	Nov. 13, 1930.	Nov. 20, 1930.	Nov. 27, 1930.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)

Houses / Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½-¼	2½	2½	...

The pressure from Paris continues. Shipments of gold from the Bank for the week ended November 26th amounted to £1,636,338, making a total of £5,352,338 for the three weeks since the outflow began. In addition, France has taken, during the past three weeks, over £1,500,000 of Cape gold, and has also bought forward the bulk of the Cape gold due to arrive next week. It is clear that the French banks are in their turn being heavily pressed by their customers, and that the loss of confidence engendered by recent failures is leading the public to draw money from the banks and to hoard notes instead.

While the general effect of this upon the world monetary situation is sufficiently clear to need no enlargement, nevertheless, the Bank of England has been able to off-set part of its losses by acquisitions from other countries, so that the net outflow during the past three weeks has been only £3,800,000. Next week, too, the French gold withdrawals will be off-set to some extent by sovereigns amounting to £600,000, on their way from South Africa, while it is stated that a further £1,000,000 in sovereigns is shortly coming from Spain. The fact is that London has, to some extent, been acting as the channel or clearing-house between Paris and those countries whose current misfortunes are forcing them to part with their gold. If so, London is performing her natural function as the world's banker, and, in so far as London herself is concerned, undue anxiety need not be felt, even if, as seems likely, France continues to take gold up to the end of the year.

NEW YORK.

Money has remained easy, and on Wednesday there was only a small demand for loans over Thanksgiving Day, which fell on the following day. Call money is still quoted at 2 per cent., with commercial paper at $2\frac{1}{2}$ to 3 per cent. for

prime names, and 90-day bankers' acceptances at $2\frac{1}{4}$ per cent. Gold movements during the week include arrivals of \$3,750,000 from Japan and of \$6,000,000 from the Argentine, and a shipment of \$5,000,000 to Canada.

THE STOCK MARKETS.

Though the stock markets were affected by the weaker tone of New York, and further liquidations from Paris, prices were generally maintained. Gilt-edged stocks remained firm, though tighter monetary conditions precluded any further upward movement in quotations. Foreign bonds, including Germans and Brazilians, showed a modest recovery, and special interest was again taken in Chinese issues. Home rails were dull on the uncertain industrial and labour outlook. In the industrial markets electrical shares remained in steady demand, but little public interest was shown in other groups, and "international" stocks fluctuated widely. Dealings in rubber and tea shares were almost negligible. Oil shares were sold from Paris at the outset, but later developed marked strength. Mining counters were inactive.

THE COMMODITY MARKETS.

No improvement has become noticeable in the situation of the coal trade, and negotiations in order to prevent a stoppage in South Wales and Scotland have not yet come to a successful conclusion. Although activity in the iron and steel industries continues on a low level, the volume of transactions in pig iron and semi-manufactured materials has been slightly increasing. The market in Manchester goods continues quiet, and business in the wool trade has fallen off as a result of lower prices at the sales in London. The price of raw jute has been somewhat steadier, but stocks of finished goods are still increasing. Hides continued to fall, and business in leather was on a moderate scale. The decision of the Baltic countries and Russia to reduce their exports has had a steadying influence on the timber market. Wheat prices show a slight increase on the week.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was again very quiet this week, sterling being dull, with a tendency to improve towards the close. New York fell from 4.85½ to 4.85, but Montreal lost $\frac{1}{4}$ at 4.85½. Paris improved sharply from 123.66 to 123.60, and was at one time 123.57. Brussels gained $\frac{1}{4}$ at 34.82½. Milan lost a point at 92.77. The peseta was again erratic and weak, the rate rising from 42.90 to 43.70. Amsterdam gained $\frac{1}{4}$ at 12.06½. Berlin was $\frac{1}{4}$ better at 20.37½. Switzerland depreciated sharply to 25.07½, against 25.05½ last week, and at one time touched 25.08½. The Scandinavian exchanges all fluctuated within narrow limits, Stockholm and Copenhagen moving against us to 18.09 and 18.15½ respectively, whilst Oslo moved in our favour to 18.16½. Of the South American currencies, Rio was weak throughout, and lost $\frac{1}{4}$ d. at 43½d. Buenos Aires lost $\frac{1}{4}$ d. at 38½d., and Montevideo $\frac{1}{4}$ d. at 38½d. In the Far East, the rupee was unchanged at 1s. 5½d., as was the yen at 2s. 0½d. Batavia lost $\frac{1}{4}$ at 12.07½. In the forward market dollars were quoted at discounts of $\frac{1}{16}$ cent and $\frac{1}{32}$ d. for one and three months respectively. The discounts on forward Paris widened to 5 and 9 centimes. One month's Brussels was at $\frac{1}{4}$ centime premium, but the three months' rate remained at last week's quotation of one centime discount. Milan was firmer for one month at 14 centesimi discount, but unchanged for three months. Madrid was rather weaker for one month at 3 centimos premium, but better for three at 13 centimos premium. Amsterdam weakened to $\frac{1}{4}$ and $\frac{1}{8}$ cent premiums for the two periods, and Berlin was little changed at 3 and 10 pfennigs discount. Silver prices fell by $\frac{1}{16}$ d. for spot to 16½d. and forward to 16½d. as a result of India and China selling in a very restricted market. The Chinese silver exchanges displayed similar tendencies, Hongkong weakening by $\frac{1}{16}$ d. to 1s. 3½d., and Shanghai by $\frac{1}{4}$ d. to 1s. 7½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Boulevard Street, London, E.C.4.

THE DEVIL AND THE DEEP SEA.

UNTIL this country returns to a two-party system, which may well be never, it is likely to have a series of minority governments of one complexion or another; and it is therefore highly desirable that it should learn to work the minority system with greater smoothness than at present. That the present Government and Parliament are not adepts at the art is proved by the unceasing speculation as to the date of the fall of the present administration, and of the next general election. Such continuous and disturbing political uncertainty could be avoided by a Government which frankly recognised the implications of its minority position; restricted its legislative programme, after consultation with other parties, to measures certain to command a Parliamentary majority; and made it clear that resignation or dissolution would only follow a direct vote of censure by the House of Commons. In several speeches Mr MacDonald has shown his realisation of the position. But in practice he and his colleagues have proved to be dilatory in consultation and nudging in accommodation. When the Coal Bill was threatened with defeat, eleventh-hour concessions were made to the Liberals; and now again, at a late and critical stage of the Education Bill, compromise has been made "under protest" by Sir Charles Trevelyan. A little earlier consultation would have saved much time and much political uncertainty, and would have rescued the Government from the odium of "surrender."

Nevertheless, the Government's concessions to the Liberal demands that the operation of the School Age Bill should be deferred, and maintenance provisions revised, affords evidence that they do not intend to court a major defeat, and prefer to avert it at present by conciliation. Graciously, or ungraciously, they will allow Mr Lloyd George to keep them in power, and the chances of an early general election have consequently become decidedly smaller. This is to the good. A Government daily expecting its death warrant would lack the authority necessary for it to carry through the all-important Indian negotiations, nor could its attention be adequately concentrated upon them. Moreover, with difficult wage adjustments pending, and the possibility of disputes threatening in several major industries, it is probably to be national advantage that the Labour administration should retain responsibility.

We say this deliberately after full consideration of the important statement of policy made by Mr Baldwin at the Kingsway Hall on Tuesday to the Central Council of the National Union of Conservative Associations. The Conservative Party, he claims, is re-united. As applied to political parties unity is a relative term, but there is something to be said for Mr Baldwin's claim. Since both the Rothermere and Beaverbrook Press organs have refrained from comment, and let the claim go, as it were, by default, and since none of the various types of Imperial crusaders have come forward to oppose official Conservative candidates at the latest by-elections, it may at least be supposed that the internal party feuds have died down for the moment. "Grousing may break out elsewhere," as Mr Baldwin rather plaintively observed, but we may perhaps for the time being regard His Majesty's official Opposition as at least sufficiently cohesive to present a possible alternative to the present Government.

Since, then, Mr Baldwin is more firmly in the saddle than of late, his new statement of policy demands careful study. But such study unfortunately reveals that in substance it contains nothing new at all. Its central idea is Protection, and Mr Baldwin's first acts, if returned to power, would be to impose an "emergency" tariff (to do duty while the permanent tariff was being hatched), and to go to Ottawa and swallow whole the altogether unacceptable preference proposals recently made at the Imperial Conference by Mr Bennett.

The country, indeed, is between the Devil and the Deep Sea. It is passing through economic trials which call for a bold lead and for wise statesmanship, and the only political choice before it is between a Labour Party, whose avowed doctrine is Socialism, and a Conservative Party

which is ready to plunge unheeding into the vortex of fiscal revolution. It is a sorry choice, and that is presumably why the *Times* in its leading article on Wednesday utters a *cri de cœur* for a national Government with a national policy. The appeal evokes sympathy but not hope, for our esteemed contemporary's search for a national programme is sadly unfruitful. It starts well enough with national economy, unemployment insurance reform and an agreed constitution for India, but thereafter it stumbles hopelessly into the slough of fiscal policy. We agree that the present crisis is economic, and that the nation needs a Government that will carry through an enlightened economic policy which will be supported by as large a section of the community as possible. But facts must be faced, and the big politico-economic fact of the moment is that we have on the one side the advocates of Protection, the maintenance of artificially high prices and trade restriction, and on the other—in favour of Free Trade—the great vested interests of the consumer, the exporting industries, and those engaged in shipping and international commerce. Each group believes that the other's policy is disastrous to the country. It is, therefore, the first truism of the political situation that if Mr Baldwin or anyone else is searching for a more or less agreed national programme, the first thing to be recognised is that, as soon as Protection is included in it, political opinion in the country is hopelessly split in twain, and any talk of a "national policy" becomes a fiction.

The real truth about a "national policy" is that it is practicable only when the vast majority of the country is agreed not merely as to the objective to be aimed at, but also as to the means of achieving it. In time of war such agreement is comparatively easy. But when the enemy, as to-day, is the less tangible foe of economic depression, there is no such common agreement as to the most efficacious means of self-defence. Each party has its policy which, *pace* the cynics, it believes to be the best; and to talk of an agreed national policy is no more than a waste of breath.

Is there, then, no escape from the national dilemma? Under the existing system of politics, government, and administration there is none. But it may be that out of the present *impasse* will grow a realisation that Parliamentary institutions, suited though they are to the conduct of political and social affairs, are comparatively helpless when faced with the task of dealing with complex matters of economic policy. Mr Winston Churchill in the Romanes Lecture early this year, and again in a recent speech, has pleaded for the creation of an industrial Parliament. It should not be beyond the genius of this country for adapting itself to new situations to modify our democratic institutions in the way proposed, and we for our part should like to see an experiment tried in this direction. But let us be under no illusion. We cannot hope to take economic controversies permanently out of politics. The fiscal controversy in every country in the world proves this. Nor is there sufficient concurrence in the present distribution of wealth to make it possible to treat problems of industrial organisation and taxation as non-political. All that can be hoped is that from time to time there may be subjects on which parties are not too deeply pledged, and in respect of the practical handling of which there may be sufficient common ground to make it possible to remove them from the political arena. The setting up of the Economic Advisory Council was a tentative step in this direction; the experience of its working should help to make clear how far, and in what spheres it is possible to-day to devise a non-party national policy in economic affairs.

If this experiment produces promising results, a chance may arise for Mr MacDonald and his colleagues to make history. Meanwhile, we must possess our souls in patience, and, in the absence of any new alignments of parties, decide according to our various opinions and prepossessions, whether we prefer to commit the fortunes of the country to the Deep Sea or to the Devil.

ECONOMICS AND POLITICS IN TURKEY.

THE attempt to introduce the two-party system into the political life of Turkey has soon broken down. The former Turkish Ambassador in Paris, Fethi Bey, who came home a few months ago in order to found and lead an opposition to the ruling single party (called in Turkey "the Popular Party"), recently announced his decision to dissolve his new Liberal Republican Party, because it had become apparent that he could not keep it in being without coming into conflict with President Mustafa Kemal. Fethi Bey explained, in his statement, that he founded the Liberal Republican Party with President Mustafa Kemal's consent and help, and that he did not anticipate the possibility of a struggle occurring between the new party and the President of the Republic. The truth is that the party was founded after a consultation between Fethi Bey and President Mustafa Kemal last August at the watering place of Yalova, on the Marmora; and it was generally believed at the time that the President had welcomed Fethi Bey's move and had perhaps even suggested and initiated it. There is no reason to doubt that this was so; for the growing pressure of taxation and economic distress was then already making the Government unpopular; and in such a situation it was an obvious move for the President of the Republic to place himself "above the battle" and to leave the responsibility and the odium for an uncomfortable state of affairs to rest on the shoulders of the Prime Minister, Ismet Pasha.

Since August the Turkish Dictator has changed his tactics. The first symptom of a change was his retention of the presidency of the Popular Party, which he had been expected to hand over, as a *damnosa hereditas*, to Ismet. The dissolution of the new rival party indicates that the President has now gone a step further and has intimated that, henceforth, opposition can only be carried on under pain of his displeasure and of the dire consequences which that displeasure immediately involves for any Turkish citizen on Turkish territory.

What has made Kemal change his policy? Pressure from Ismet Pasha, who is a strong character and who cannot have welcomed the idea that he should be thrown to the wolves in order to save his master's skin? Or was the Dictator alarmed at the ovation which Fethi Bey received the other day when he visited Smyrna? Or at the vigour and ability with which the leader of the short-lived opposition criticised the Government's policy in the Great National Assembly? The President of the Turkish Republic must have just as much reason to-day as three months ago for wishing to retire from the political arena. The situation is no easier, the Government no more popular. We must infer that he has found this withdrawal to a position of sacrosanct aloofness a less simple manoeuvre than he had at first supposed. At any rate, he has abandoned the experiment of making that move in this way. And this has been enough to snuff Fethi Bey's party out of existence.

Thus, in her politics, Turkey is now back again where she was before this episode—for good or for evil. Meanwhile, in her economics, she is no longer where she was, and, in this case, certainly not for good. For it is significant that a strong point in Fethi Bey's programme was that Turkey should not fail to honour her obligations to her creditors. The announcement that he has gone out of Turkish politics has been followed immediately by the news that the Turkish Government has failed to provide in full for the payment of the coupons due on the twenty-fifth of this month in respect of the Ottoman Debt. The default is flagrant, since it is a breach of an agreement made no longer ago than June 13, 1928, under which the foreign bondholders made considerable sacrifices in the belief that they were arriving at an accommodation which the Turkish Government was able and willing to carry out for its part. Moreover, as the bondholders point out in a statement issued on the 22nd, an expert who had been appointed by the Turkish Government to inquire into its financial situation, reported on September 15th last that in his opinion Turkey was capable of paying the annuity due under the 1928 agreement in Turkish pounds. The default is surely as impolitic as it is unwarrantable;

for it destroys any possibility of Turkey obtaining the foreign financial support without which she cannot hope to establish her new central bank and stabilise her currency. *De facto*, the Turkish exchange had been stable for some time, so that the moment was favourable for stabilising it *de jure* and permanently. Not only has this opportunity been thrown away, but a serious depreciation of the Turkish pound now seems inevitable.

No doubt the Turkish Government will adopt officially a nonchalant attitude. (What else is there for it to do, now that the mischief is done?) It will proclaim that it intends to carry through the economic reconstruction of Turkey without assistance; and it will remind the world that it has had unfortunate experiences with foreign creditors in the past. In the second point there is truth—though it is also true that Turkey's early loans in the international market turned into millstones round her neck because the Turkish Government which contracted them was an irresponsible despotism, whose agents were both corrupt and inefficient. From 1882, when the Ottoman Debt was placed on a proper footing, down to the outbreak of the Great War, the Council of the Ottoman Debt administered the several sources of Ottoman revenue which were transferred to its control with such ability that it produced lucrative surpluses for the Ottoman Government after meeting the debt service and set an example of business integrity and efficiency which was just what the country needed at the time. The cordial and mutually profitable relations between the Ottoman Government and the Council of the Ottoman Debt were interrupted by the War; and thereafter the growing sense of nationalism in Turkey made the system of transferred revenues no longer practicable. The agreement of 1928 took account of the changes in the situation—psychological, political and economic. It is unquestionably a misfortune for all parties that this agreement should have been kept for so short a time.

And can Turkey really do without foreign financial assistance now and hereafter? That question is answered by the growing economic distress in Turkey during the eight years—counting from the end of the Greco-Turkish War in the autumn of 1922—during which the Turkish Government has sought to pursue this policy. The cry of this distress met Fethi Bey when he visited Smyrna and was received by a crowd shouting: "See, Fethi Bey, we have no coats on our backs, no shoes on our feet!" The fact is that this attempt at financial self-sufficiency has been made under altogether adverse conditions. It was inaugurated when Turkey had been almost continuously at war for eleven years, when the richest part of her homelands had been devastated by the Greek invasion of Asia Minor, and when her population had been more than decimated by the expulsion of the non-Turkish minorities, following upon an unprecedented destruction of life through casualties and massacres.

There remained, and remain, Turkey's great unrealised material assets: the vast extent of her territory, even after the loss of the Rumelian and Arabian provinces, and her undeveloped agricultural and mineral resources. The Turkey that has emerged from the War is virtually a virgin country, suffering from a dearth of equipment and a dearth of population. Her problem is the problem of the United States a century ago and of other overseas countries in more recent times. She cannot tap her potential wealth without calling in foreign help—increasing her population by immigration, and building her railways out of foreign loans. Where would the United States be to-day if she had refused to build her railways except out of current income or to fill up her empty spaces except by the natural increase of her existing population? And where will Turkey be to-morrow if she continues to pursue the economic and financial policy of the past eight years?

We prophesy that, sooner or later, Turkey will find herself compelled to redeem her promises to her old foreign creditors because she will find new foreign credits indispensable. According to its professions, the new régime stands for integrity and efficiency. Indeed, it has staked its reputation on its ability to inculcate these virtues into the Turkish people. But it must first re-establish confidence in its integrity in dealings with the outside world.

FOLLOW THE SUMMER SOUTHWARDS
"BLUE AND GOLD TOURS"

Follow Summer Southwards this Winter on a Blue and Gold Tour to South Africa, the Dominion of Blue Skies, Golden Sunshine and Health.

The refreshing ocean voyage, new scenes and interests, the delightful outdoor life, the social and sporting amenities, and, above all, the moderate travel costs, combine to make these tours the superb Winter Holiday. Excursion sailings throughout December, 1930, and January, 1931.

A full descriptive programme entitled "Blue and Gold Tours," will be sent immediately on request. Apply to:—

The Director, South African Government Travel Bureau,
73, Strand, London, W.C.2,
and all the leading Tourist and Travel Agencies.

THE COAL CRISIS.

ILL-FORTUNE dogs the British coal mining industry; for, as we go to press, the shadow of an imminent stoppage is hanging over at least one important district. The news that the National Industrial Board has unanimously recommended terms for adoption, apparently as a temporary working arrangement, on South Wales, raises hope that a last minute settlement may yet succeed in averting a stoppage, but the time left is dangerously short.

The date fixed for the coming into operation of Part 3 of the Coal Mines Act, reducing the statutory maximum hours of work from eight to seven and a half per day, is Monday, December 1st. The reduction affects all districts except Yorkshire, Notts, North Derby, Kent, and hewers (only) in Northumberland and Durham. When the Coal Bill was before Parliament the Government admittedly relied on the anticipation that by the time the shorter working day became operative, the coal industry would have begun to reap the advantages of the marketing schemes which other parts of the Bill instituted. In the event, those schemes have only just come into effect and their hoped for fruits, in the shape of higher proceeds per ton, lie still all in the future. In addition, the coal export trade has shared to some extent the general world depression. In the first ten months of 1930 coal exports amounted to 46.6 million tons, as compared with 49.9 million tons in the corresponding period a year ago, and October exports at 4.8 million tons showed a decline of about 970,000 tons, against October, 1929, accompanied by a fractional fall in the declared value f.o.b. per ton. Taking the industry as a whole, the Mines Department's summary of costs and proceeds for the quarter ended June 30th last, showed a debit balance of nearly twopence per ton, or only three-halfpence a ton less than the loss incurred during the corresponding quarter a year ago; and since June the financial position of the industry has undoubtedly worsened.

Under these circumstances it had been for some time a foregone conclusion that the mine owners in the districts affected by Part 3 of the Act would not only decline to admit any claim on the part of pieceworkers to be compensated for loss of earnings under the shorter day, but would also seek, by reducing the rates payable both to pieceworkers and day-wage men, to offset the increased production costs per ton involved in complying with the Act. The best hope of an agreed settlement lay in the proviso, fortunately incorporated in the Act at the instance of the Opposition, that, subject to assent by the Mining Association and the Miners' Federation, any district might agree to modify the rigid application of the seven and a half hour day by arranging to have a "spread over" of hours within the limits of forty-five hours per week or ninety hours per fortnight.

In certain districts a solution on these lines has already been reached. In Cumberland and North Wales it has been agreed that working hours shall be 7 hours 42 minutes on five days of the week with six and a half

hours on Saturday; and in Leicestershire eight hours on five days of the week, with five hours on Saturday. In both these districts there will be no alteration of existing rates of wages, though pieceworkers will automatically undergo a slight loss of earnings. In Northumberland and Durham new working agreements were concluded on Thursday; temporary arrangements have been made in Cannock Chase and N. Staffs; and though agreement in many of the lesser districts has still to be achieved, the outlook for a solution of the wage difficulty on "spread over" terms seems in many areas by no means hopeless.

The case, however, of Scotland and South Wales is much more difficult. The following table summarises financial results between March, 1929, and June, 1930, in these two areas:—

	SCOTLAND.			SOUTH WALES.		
	Costs.	Proceeds.	Balance.	Costs.	Proceeds.	Balance.
Quarter ended—	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
June 30, 1929	12 8	12 4	-0 4	15 1	14 3	-0 8
June 30, 1930	12 9	12 7	-0 2	15 2	14 11	-0 1
Sept. 30, 1929	12 4	13 1	+0 7	14 5	15 4	+0 9
Dec. 31, 1929	12 4	13 1	+0 7	14 5	15 4	+0 9
Mar. 31, 1930	12 7	13 2	+0 5	14 11	15 6	+0 5
June 30, 1930	12 11	12 4	-0 7	15 4	15 5	+0 1

In Scotland, where the extra cost of a 7½-hour day has been estimated by the owners at 10d. per ton, the offer made to the miners is that from December 1st the minimum percentage addition to the basis rate of wages (fixed in 1888) should be reduced from 110 to 95 if a "spread-over" of hours is accepted, or to 76 without a "spread-over." The miners have so far refused to accept either offer.

In South Wales the terms which the owners have posted for work as from Monday next are that the minimum percentage addition to basis rates (fixed in 1915) should be reduced from 28 to 10; that the minimum subsistence wage should be cut from 7s. 10½d. per shift to an amount represented by half the difference between actual earnings and 7s. per shift; that hours on Saturday should be lengthened from 7 to 7½; and that certain local privileges, such as the "bonus turn," should be abolished, and overtime payments considerably restricted.

Thus the Coal Mines National Industrial Board, which was constituted under Part 4 of the Act, was appointed on November 21st, and held its first meeting on Wednesday of this week, has been confronted with an imminent crisis. The board, whose chairman is Sir Harold Morris, K.C., has no compulsory powers; and the Mining Association, the Federation of British Industries and the National Confederation of Employers' Associations have most regretfully refused to nominate representatives to sit on it. On Thursday it began, as its first task, to consider the dispute in South Wales, and at midnight reached unanimously agreed conclusions not yet published.

It remains to be seen whether the South Wales owners who made no offer to the miners of better terms in the event of a spreadover being accepted, and who declined to attend the Board's proceedings, will accept these conclusions. So far, the attitude of the South Wales owners has made a disagreeable impression on public opinion which, however fully it may appreciate the present economic difficulties of the coal industry, will be

inclined to regard the wages offered as unreasonably low and to regard the uncompromising attitude of the colliery proprietors as that of men spoiling for a fight. No doubt it was tempting to demonstrate to a Government which had passed an Hours Bill in the teeth of the mine-owners' hostility that the Act could be operated only at the cost of drastic sacrifices of wages by the miners, and there is equally little doubt that the miners in South Wales would much prefer that both hours and wages should remain as before. But not by such wage-offers as that now posted in South Wales can industrial peace be preserved, and we hope that the National Board's findings will lead to wiser second thoughts.

Nor can we wholly acquit the Government of blame for indecision in face of the growing menace of a stoppage which, even if it were sporadic and left most of the Northern and Midland areas unaffected, would do grave damage to the national interest. Lacking a majority in Parliament, it could not hope to have recourse to legislative weapons in the shape either of a Minimum Wage Act or an Act to nationalise the mines (expedients with whose ultimate economic merits we are not here concerned); but there was one, and only one, alternative. Painful though it might be even to appear to "surrender" to *force majeure* on the mine-owners' part, it would, we suggest, have been a statesmanlike policy if the Government had made up its mind early this week to ask Parliament to postpone for, say, three months, the date of operation of Part 3 of the Act; and had determined in the breathing space to press forward amalgamation schemes as a matter of national emergency.

THE TARIFF PROBLEM IN EUROPE.

THE second Conference for Concerted Economic Action opened in Geneva last week. Twenty-six States, including practically all the European Powers, are participating. Meeting, as they are, at a time of unexampled trade depression, exceptional importance attaches to their deliberations. Of primary concern among the problems which they are called upon to examine is that of tariffs. Whoever would seek to understand the present situation—and it is one of great interest and complexity—would do well to study carefully the documents circulated in connection with the Conference.

These documents have particular reference to two separate, though organically related, groups of questions. In the first place, they bring together the replies which have been received from the various European Governments to questionnaires circulated last March. The object of these questionnaires is to discover means of concerted action, whereby full advantage may be taken of the Commercial Convention (the so-called "Tariff Truce") concluded earlier in the year. The Commercial Convention has not yet been ratified by all its signatories; but some progress has been made. Ten States have so far confirmed their adherence to its principles, and others—including France, Germany and Italy—are believed to be now on the point of doing so.

In the second place, reports have been circulated on certain recent activities of the agricultural States of Eastern Europe. The better to draw together the conclusions of our argument, these latter activities may conveniently be dealt with first.

The basins of the Vistula and the Danube form an economically homogeneous area, and, as the *Economist* has from time to time recorded, the pressure of common interests has tended to draw together the various political units therein comprised. The four States of Poland, Hungary, Roumania and Yugoslavia, in particular, are moving upon parallel, or rather upon converging, lines.

An International Agricultural Conference, held earlier in the year at Warsaw, reviewed comprehensively the commercial policies of these, and of certain adjacent, States; a more recent Conference at Bucharest has formulated a number of specific recommendations. The economic activities of the States concerned, in the immediate future, will be largely guided by these proposals. They illustrate somewhat strikingly the general drift of prevailing economic tendencies.

Briefly summarised, they are as follows:—

(1) A permanent Research Board is to be organised, which will collect and distribute information regarding agricultural imports and exports. Collaboration with the Rome Institute will be among its aims. (2) The problem of medium-term credits, which "may be to be carefully explored." (3) An international pool, for the allocation of quotas to the countries co-operating which would vary with the varying demands of importing markets. Direct negotiations between the group of States concerned, and other groups of States, are contemplated. (4) A draft Convention on the abolition of export bounties is to be prepared. (5) Draft veterinary Convention is also to be prepared, and submitted to the Economic Committee of the League. (The problem of veterinary regulations is of very great importance. Arbitrary administration works—for example, on the German-Polish frontier—in the manner of an unofficial tariff, and has the double effect of impeding trade and of the "Tariff Truce" was recommended (none of the four States concerned has as yet ratified it)—on the understanding, however, that the "truce" will not be extended beyond April, 1934, "unless tries"—with respect, particularly, to the marketing of their produce and the revision of veterinary regulations. Finally, (7) another international Wheat Conference is asked for, and (8) the problem of Eastern Europe, and of the application of the Most-Favoured-Nation Clause, is to receive immediate study. In regard to this resolution, the four countries already mentioned may presently be fortified by the adhesion of Bulgaria.

These developments are highly significant. They indicate that the tendency to economic nationalism, which has been one of the dominant characteristics of the post-war European situation, is developing a new phase: the common difficulties of a solid block of countries, under the pressure of economic duress, are compelling them to sink their individual differences for the sake of a more effective concerted action. The demand that preferential treatment (the Most-Favoured-Nation clause notwithstanding) should be conceded in adjacent markets to the agricultural products of these countries, is particularly interesting. It is based on the argument that their sales abroad of surplus produce are comparatively small; these sales, at the same time, forming but a small proportion of the total imports of produce into the countries which consume them. The table (opposite) prepared for the use of the Conference, gives the statistical basis of this demand.

Assuming that the preferences asked for could be granted (and the problem, in the light of existing treaties, States offer? Presumably some reduction of tariffs upon the commodities which they necessarily import. Such articles as machinery and textiles at once suggest themselves. And here, as we shall see, the special problems of Eastern Europe relate themselves to the wider questions now being discussed at Geneva.

Returning then to Geneva from Bucharest, let us glance now at the replies of the various Governments to the Economic Committee's questionnaire. The questions asked (they are worthy of a Torquemada) are as follows:—

"A. (a) In what agricultural products is there over-production in each country?"

(b) What are the normal outlets for these products?"

(c) What practical means can be employed to ensure the disposal and distribution of surplus production in the normal markets and in other countries with an insufficient production?"

B. What practical means can be employed to facilitate the disposal of manufactured products, particularly in the direction of increasing the extent to which it is possible for consuming countries to purchase them?"

C. In particular, what are, in the case of the products mentioned in A and B above, the Customs and administrative measures which seem likely to promote the extension of markets and the improvement of international trade?"

D. What practical means can be employed to ensure the movement of European raw materials amongst the different countries under more satisfactory conditions and their better utilisation?"

The answers to these interrogatories vary widely; we cannot do more than glance briefly at them here. (Nor, we may remark, is it possible to award first-class honours to all who have taken the examination.) The replies of the leading commercial countries raise a number of difficult issues, and in many cases refuge is inevitably sought in vagueness. In many cases, however, an attempt is made to deal with the special difficulties of Eastern Europe. As regards question A (c), for example, a number of specific proposals are put forward. Germany proposes (1) standardisation of products; (2) the formation of

general Customs Unions; alternatively, (3) reciprocal preference agreements or (4) the elaboration of systematic quota schemes. France emphasises the need for organised statistics, a "rationalisation" of production, and better organised marketing. Denmark deprecates the growth of tariffs, and also the granting of export bounties; she is opposed, also, to the granting of international credits to the grain-producing countries. Holland similarly deprecates the tendency to more elaborate tariffs, and is opposed to bounties and to minimum prices guaranteed by governments. Great Britain cautiously declines to participate in the agricultural controversy. Many countries are nervous of the effect of any preferential arrangement or trade relations with non-European customers.

Turning to B and C (manufactured products and extension of markets), Germany emphasises again the value of Customs Unions. "Indirect protectionism" (bounties, etc.) is denounced. France favours a long list of measures. Among them are points which she has harped upon during the discussions of the last three years, viz. the unification of Customs nomenclature, the substitution of *ad valorem* for specific tariff duties, and the early conclusion of a "plurilateral commercial convention." Switzerland, in dealing with the idea of negotiations between the industrial and agricultural groups of nations, points out that few countries are either purely industrial or purely agricultural. The complexity of their economic structure must not be lost sight of. The desirability of improving the purchasing power of Eastern Europe is recognised, but there stand in the way "particularly high Customs barriers and other obstacles to trade." Holland makes a definite proposal, in pursuance of which she is "prepared to enter into negotiations." Let the free trade countries, in return for an undertaking to maintain their

present policy, bargain with the high-tariff countries for "concessions such as would facilitate the sale of their products." This can be done, either through a series of bilateral treaties, or by means of a multilateral convention. The latter line of approach is recommended.

The Economic Committee, in submitting the replies to the questionnaires, recommends for discussion both the Dutch proposal (outlined above) and the British plan of attacking the problem of Customs barriers by considering in turn specific groups of commodities. Textiles and machinery, for example, are suggested as a starting-point. A progressive reduction in the tariff revenue derived by each country in respect of the commodities selected is contemplated. The obvious difficulty in the way of this proposal is that few commodities play an equally important part in the fiscal scheme of every country. It is evident from the reports from Geneva that this piecemeal method is encountering the same difficulties which hindered the attempts of the last two years to deal by general agreement with individual commodities, and is making no headway.

The Economic Committee has other important recommendations to bring forward. The Convention for the Abolition of Prohibitions has recently hung fire; "the abstention of a few signatories has involved that of most of the others." Technical co-operation, in regard particularly to veterinary services, is removing the difficulties that have hitherto stood in the way of ratification. Finally, there is the "Tariff Truce." The importance of bringing this effectively into operation is once again urged. The Committee again repeats that: "Apart from its immediate importance, the Commercial Convention forms a useful basis for future tariff negotiations. It may

Note.—The figures are approximate, the distribution as between European and extra-European countries being based on the proportion by weight shown in the detailed tables for each country.

(a) Wheat, rye, barley, oats and maize. (b) Milk, butter, cheese. (c) Beef, mutton, pork, bacon and hams.

* 1928 figures. † Distributed according to the 1928 proportion (except Denmark's import of wheat and exports of dairy produce and meats). For Denmark and Norway, the totals are approximate, having been calculated at 1928 average prices. ‡ Not shown separately. § 1926 figures, distributed according to the 1923 proportion. ** 12 months ending September 30th.

be added to and developed, and it can thus facilitate a further step forward in the international settlement of Customs questions."

In short, a point has been reached, as is everywhere half-consciously recognised, where the European States, in the impasse to which economic self-determination has brought them, must either go forward or go back. The sharply conflicting interests of the primarily agricultural and the primarily industrial States have given a new turn to the discussions. But to go back now spells disaster for Europe.

We have no space for extended comment on this situation. We would merely add that so far as Great Britain is concerned, the table we have given shows how important our market is to the agricultural States. It is claimed that already, with the slow recovery of these countries, their purchases of British goods have increased more than those of other nations, while Germany and some of the smaller States have expressed their willingness to make concessions for the maintenance of the present Customs situation. With an export trade at stake approximately equal to our whole Imperial trade outside that of India, it is evident that, whether the present discussions achieve practical results or not, we must constantly use our utmost effort to strengthen our trade position in Europe.

LONDON'S FORTY YEARS' PROGRESS.

THAT the capital city of the United Kingdom has always occupied a place apart in the popular imagination is evident in the extraordinary diversity of metaphor which has grown up around it, from the apocalyptic "streets paved with gold" of the mediæval provincial apprentice to Cobbett's pathological soubriquet "the great Wen." Therefore, when the survey, begun by Charles Booth in 1885 as an inquiry into poverty in the East End, developed in the course of eighteen years into a complete study of the social anatomy of the County of London, it was received at once, by virtue of its intense human interest, into the honourable place among economic literature which its importance as a pioneer work in scientific social investigation must anyhow have eventually gained for it.

As the first investigator in this field, Charles Booth had nothing with which to compare the results of his survey, but it was his hope that they would themselves become the basis for future comparative studies. The enterprise of the London School of Economics and the generosity of several benefactors have now enabled this hope to be fulfilled, and a new survey is now in process of completion, under the directorship of Sir Hubert Llewelyn Smith. According to the present provisional plans, the results of this investigation will be presented in eight volumes, two of which, illustrated by two volumes of maps, will give the results of the poverty survey, while two deal with particular industries and the remaining two will be devoted to the historical introduction and to the summing up of results.

The introductory volume, the object of which is to bridge the interval between the two inquiries by a statistical analysis of the changes which have taken place in the interval, is now published.* It is based on official statistics, the sources of which are everywhere indicated, and the authors have been most scrupulous in explaining their methods of applying these data, and most restrained in their interpretation. Broadly expressed, their object, a dynamic development of Charles Booth's necessarily static survey, has been to discover whether poverty and the ills which accompany poverty are diminishing, and, if so, at what rate.

The first question which had to be investigated was that of real earnings. Money wages and hours presented a comparatively simple problem, but the computation of earnings—with the necessary allowances for unemployment, short time, overtime and payment by results—and the calculation of changes in the cost of living necessary for reducing these money earnings to a comparable basis in terms of purchasing power, was a very much more

difficult and uncertain matter. The reader is furnished with the necessary material to form his own judgment as to the soundness of the methods adopted, as the result of which the authors conclude that the average workman in London can now buy one-third more goods than in 1886 in return for labour of one hour's less duration per day. They are fully alive to the fact that this tells us nothing of the dispersion of individual workmen about the average, and hold out promise of further light on the subject in later volumes. Meanwhile the fact that the advance of real wages since 1890 has been twice as great in the unskilled as in the skilled occupations suggests that the distribution of the increase has been favourable to the diminution of extreme poverty.

In these days of rapidly expanding social services, real earnings are an increasingly incomplete index of the material well-being of a working-class family. The discussions of health and unemployment insurance, and analysis of the statistics of poor relief lead to the conclusions that "the net effect of unemployment and sickness on the average income of a working-class family is less at present in the London area than it was thirty or forty years ago," and that "quite apart from any decrease in the number of those living below the 'poverty line' the most dreaded features of that life have been largely removed."

With the increase in the surplus of his income over the bare necessities of life the average London workman buys less and weaker beer, though at greater expense, but smokes more tobacco. His luxuries in general have risen much faster in price than his necessities, but on the other hand the amenities available for his recreation have greatly increased. Places of entertainment in ratio to population have increased about fivefold since 1890, almost entirely owing to the rapid multiplication of cinemas. Facilities for other forms of recreation, such as games, swimming, dancing, greyhound and dirt-track racing, have also grown more rapidly than population, but the growth in the acreage of open spaces has been by no means rapid enough. Over the whole of the London Survey Area, which includes a number of boroughs outside the County of London, the *per capita* acreage of open spaces has increased by about one-fifth; but in the outermost of the three rings into which the survey has been divided it has actually declined by more than one-fifth. It is, however, in the more central boroughs of Shoreditch, Southwark, Islington and Finsbury that the absolute shortage is most marked.

On the other matters that affect the well-being of the London working classes the Survey has many interesting chapters. A population analysis by Dr. Bowley shows that the density of the population of London has become much more uniform since 1891. Though the centre is still by far the most congested, it is becoming less so, while the population of the outer boroughs has greatly increased. This development is, of course, bound up with the great improvement in transport facilities, the very full discussion of which contains some amusing comments on its incidental effects. It is distressing to learn, from statistics based on the census result, that up to 1921 at any rate overcrowding actually increased in this outer area, while even in the middle ring there has been no perceptible improvement since the beginning of the century. In the inner ring some progress has been made, and the percentage of population living two or more to a room has declined from 44 in 1891 to 35½ in 1921. The housing statistics given do, however, suggest that some more substantial improvement in this respect may be expected in the next census results, though it is probable that less progress has been made in respect to the quality of houses and in their adaptation to the means of those who need them.

As an offset to the development of amenities in London, certain drawbacks to London life have been increasing, or failing to diminish, in a disconcerting degree. The statistics of deposit of grime are disgusting, and should be a cause of shame; of this evil and of the steady growth in the liability to death or injury from street accidents Londoners are only too painfully aware.

The chapter on education reports steady progress as far as this may be measured by statistics, and the conclusions

suggested by these are supported by figures showing the growth in the use of public libraries, though the rate of individual reading remains curiously stationary at twenty-nine books a year. To the fact that almost all present-day parents themselves received the benefits of elementary education is ascribed the success of the various public health services, whose development is described by Sir William Hamer. The London death rate, adjusted for peculiarities in the age and sex composition of the population, fell from about 20 per thousand in 1890-94 to about 13 per thousand in 1924-28; the infant mortality rate fell from 162 in 1890 to 67 in 1928; and there has been a marked decline in zymotic diseases and in phthisis.

The criminal statistics suggest a number of interesting reflections. Crimes of violence, malicious injury to property, the more serious cases of cruelty to children, and drunkenness have all diminished, though this last has diminished less in London than in the country as a whole. Sex offences, gaming and betting, and, naturally, Highway Act offences, have, on the other hand, increased, as have also frauds and obtaining by false pretences, owing, it is suggested, to the increased facilities for these crimes afforded by education. The effect of the motor car is apparent, not only in the increase in particular classes of crime such as handbag snatching and "smash and grab" raids, but also in the fact that the proportion of burglaries and housebreakings in London has diminished concurrently with an increase in the country generally. Burglars, like universities, are greatly developing their extra-mural activities, and as both the area of operation of the individual burglar and the number of "jobs" he can "pull off" in a given time are greatly increased by the motor car we may derive what comfort we can for the fact that the diminution in the number of London burglars is only apparent, from the reflection that more burglaries do not necessarily mean more burglarious-minded persons. In weighing up the evidence of this chapter, its author, Sir Edward Troup, comes to the conclusion that though there have been many influences tending to diminish the incentive to crime they must have operated mainly in counteracting contrary influences, among which he reckons the weakening of the religious sanction and the decline in parental authority.

Subject to the inevitable limitation that this volume deals, not with individuals, but with that statistical abstraction, the average workman, its conclusions suggest that the working-class Londoner of to-day is financially better off than his predecessor of Charles Booth's time, has more leisure and more opportunity of using it, travels far more, in greater comfort and at less expense, is better educated and healthier, and has less reason to fear the effects of the two great misfortunes which overshadow the lives of his kind—unemployment and sickness. On the other hand, he is not very much better housed, his city is infinitely noisier and not much cleaner, and the streets are far more dangerous. As to his moral standards, it seems impossible to generalise, for though Sir Edward Troup draws a few very tentative conclusions from his statistics, the statistics themselves seem to point rather to changes in the motives and opportunities for crime than in the disposition of the people themselves. No doubt many of the questions which this book raises in the reader's mind—and it is not the least of its merits that it raises so many—will be answered by the remaining volumes in this admirably-conceived series.

FORD AT DAGENHAM.

(BY A CORRESPONDENT.)

PLANNED long ago as an important link in the chain of Ford organisation—an organisation whose consistent aim has been to combine with the technical advantages of mass production the maximum savings realisable by diminution of transport costs—the new works under construction at Dagenham for the Ford Motor Company, Ltd., are being pushed forward rapidly on a scale whose magnitude is impressive. Already the value of the contracts placed for building and equipment total over

Branches and Agencies throughout the East.

£3 millions; and more than 90,000 tons of concrete, 2,000 miles of reinforced steel and 8 million wood blocks for floors have been used in the construction of the works.

The coming into production of the Dagenham factory will form another step towards completion of Ford's world distribution plans; there will then be three main sources of distribution—U.S.A., Canada and England. American production should not drop on account of the loss of the European markets, for this can probably be made good by a still more intensive sales campaign within the United States or, as is also anticipated, by development of the South American markets. Detroit output will thus be more than ever for American consumption, though China, Japan and Russia will continue to be served from this source. The Canadian factory, which produced in 1929, 87,796 vehicles for distribution in the British Empire through affiliated companies in Australia, Malaya, South Africa and India, will presumably continue to serve Canada and the Dominion markets. It is possible, however, that some rearrangement may be brought about by which the British company will acquire from the Canadian company the rights to territories which could be better served from Dagenham than from the Canadian plant. A precedent for this lies in the recent action of General Motors, Ford's great rival, who changed the source of supply of their New Zealand assembly works from their Canadian plant to their factory at Luton, England.

The British company at present holds the sole right to manufacture, assemble, distribute and market all Ford products in the following territories:—The British Isles, the Continent of Europe (excluding Soviet Russia), Asia Minor, including Palestine, Syria, Arabia (except Aden), Iraq, Persia, Afghanistan, Egypt and certain other parts of Africa, and certain parts of Turkey. In spite of these rights, the associated companies of Ford of England, operating each in its well-defined portion of the British company's territories, have so far imported most of their requirements direct from the U.S.A., though a fair proportion has been supplied from England. Clearly, since the British company holds 60 per cent. of the share capital of each of its subsidiaries, it has been in the interest of the British shareholder to allow them to purchase their requirements in the cheapest market.

It is with a view to providing the necessary supplies at lower cost and from a more economic centre that the construction of the Dagenham plant has been undertaken. Provided that the cost of British production is not greater than the cost in America, at least the transatlantic freight charges, which figure at about £10 in the selling price of each car, will be saved. It is even hoped that with lower wages and lower prices of raw materials British manufacturing costs may be brought near the Detroit figure, in spite of the fact that Dagenham capacity will be only 200,000 cars per annum, compared with an output of nearly 2,000,000 cars per annum in America. In this connection it should be appreciated that, apart from "overheads," the technical advantages of mass production are largely attainable in terms of a single set of 100,000 units turned out.

The prospectus of the Ford Motor Company, Ltd., issued in December, 1928, estimated the 1929 consumption of the markets allotted to it at 120,000. This estimate proved optimistic, results falling short by about 20,000. For this failure Great Britain was largely responsible,

* "New Survey of London Life and Labour." Vol. I. Forty Years of Change. P. S. King & Son. 17s. 6d.

Manchester having contracted for 40,000 deliveries and having had an actual output of 25,000 during 1929. An output at Dagenham of 200,000 would mean doubling the 1929 sales figures. Figures for 1930, when available, will give some idea of how far the preparation of markets for increased consumption has progressed. The indications are that while sales are increasing, and while Ford is claiming an increasing percentage of registrations in every country, it will be some time before Dagenham can work to capacity. Theoretically, there is no reason why the Ford percentage of European car registrations should stand at 18 when that of Ford registrations in the United States stands at 40. Given the same advantage in price, which is chiefly responsible for Ford predominance in America and which has not hitherto been available in Europe, there is no reason why Ford should not occupy a similar predominating position on this side of the Atlantic. In America, the price (£100) must outweigh almost every other consideration in the mind of the average potential car buyer; in European markets, chiefly owing to the enormous tariff barriers, the imported Ford car has to compete solely on its merits. It must be admitted that with the new "A" model, it has done this very successfully.

However, in order to dominate the European markets, the price advantage is vital and Ford prices can only be reduced in any one country as an increasing proportion of materials and parts is obtained locally and is not subjected to heavy import duties. The fact that the Continental companies will purchase their requirements from England instead of from America will not be very appreciably reflected in the selling price. In France, for instance, it will be offset by the recent increase in the tariff affecting imported cars and parts.

The doubling of sales in Great Britain presents far less difficulty since large-scale mass production within the tariff will make the all-important price advantage available to the British purchaser. The average price of the Ford range of models is at present £200; in a recent issue of the *Economist*, dealing generally with the motor industry a calculation was hazarded, and may be repeated here, indicating that the average price may, when Dagenham has been running a little time, be reduced to under £125. The present price may be analysed thus:—Material bought in England, £80; material imported, £15; English labour, £40; distribution costs and company's profits, £65. An intended output of 200,000 instead of 25,000, as at Manchester in 1929, will substantially reduce the cost of material per car; the Dagenham product is to be 100 per cent. British, thus cutting out all imported material and tariff charges. Moreover, with enormously increased sales, distribution charges and profit margins can be substantially reduced, so that eventually it should not prove impossible for Dagenham to work on the following basis:—Manufacturing costs, £85; other charges, £35-£40.

The appearance in the British market of a car, with the merits of the new Ford, selling at anything like this price would be a phenomenon of considerable significance both for the car user and the competing British car manufacturers. The day of the £125 Ford may not come for a few years yet; but, as has been indicated, Dagenham will have a strong incentive, both for its domestic sales' sake, and for those of its subsidiaries abroad, to achieve the utmost economies in production costs realisable by maximum efficiency of plant and organisation.

REPARATIONS—A CRITICAL COMMENTARY.

A TANGLED chronicle of excessive demands and unacceptable offers—such has been the past history of reparations. Now that a new scheme has been introduced which it is fondly hoped may offer a prospect of a longer breathing-space than has been hitherto enjoyed, Sir Andrew McFadyen—whose qualifications for his task as Secretary-General of the Reparations Commission, Secre-

tary of the Dawes Commission, and subsequently Commissioner for the control of Assigned Revenues under the Dawes scheme, are unique—has, on severing his official connection, taken the opportunity to review the subject* in a timely critical study.

In his judgment, the initial inability of France and England to agree even between themselves arose from the fact that while France regarded the problem as political, England looked upon it as purely economic. The economic view, however, that it was senseless to demand more than Germany could pay, was thrown overboard in the Balfour Note. Taken in conjunction with our American settlement, the doctrine there enunciated in fact amounted to a fixed minimum demand. Though in comparison with the figure then under discussion, this minimum seemed modest, and involved large reductions in our claim, it was in effect a surrender to the French thesis of settlement on the basis of what the creditors must have rather than of what the debtor could pay. It was therefore not surprising that the new thesis was scarcely felt as a generous concession, but was "one of the milestones on the road to the Ruhr." The intransigence of the French people during the whole period, stimulated by the intellectual inconsistency of the British attitude on inter-Allied debts, was, in Sir Andrew's view, a main cause of the failure to reach a settlement; but no less to blame was the general inability of the Allies to grasp either the fundamental economic conditions in which alone the payment of reparations was possible, or the nature of the actual economic situation in Germany. Further, the composition and the lack of authority of the Reparations Commission prevented it from exercising the moderating influence in the execution of the Treaty of Versailles which its paper constitution might have entitled the critics of the Treaty to expect.

The chapters in which Sir Andrew McFadyen describes the framing and ultimate acceptance of the Dawes Plan and the subsequent steps towards the political rehabilitation of Europe are followed by an interesting discussion of Germany's foreign borrowings and of the transfer problem, the conclusion of which is that while the experts differed as to the nature of the transfer difficulty, if any, that may ultimately arise, the plain man realised that as Germany's credit had been so much better than was expected and had enabled her to replace her reparation payments by fresh borrowing abroad, the Dawes Plan as a laboratory experiment did not provide the data for a final conclusion.

When we come to the Young Plan, comparison between Germany's new obligations with those under the Dawes Plan is not completely possible, as the Dawes Committee never determined what was to happen to the Budget contribution after the amortisation in 1964 of the railway bonds and the industrial debentures. Taking the perpetual annuity after 1964 as about 1,450 million marks, the financial obligations compare as follows: under the Dawes Plan 2,500 million marks plus a supplement based on the "prosperity index" for 36 years followed by a perpetual annuity of 1,450 millions; under the Young Plan 2,050 million marks for the first 36 years and an average of 1,565 millions for 22 years after. Further, Germany gains under the Young Plan by paying very much less than the average during the early years.

In addition to the change in the amount of Germany's payments, the introduction of an unconditional payment in regard to which there is no provision for exchange protection is in a sense new, though, as Sir Andrew McFadyen points out, this is really an extension of the principle embodied in the German External Loan of 1924, the service of which had to be met unconditionally. As to the disappearance of "all forms of control, or so-called control," Sir Andrew McFadyen observes of the machinery for foreign control of the Reichsbank that "what was scarcely felt as a humiliation in 1924 has now become an intolerable anachronism." Regarding

* "Reparation Reviewed." By Sir Andrew McFadyen. Ernest Benn, Ltd. 8s. 6d. net.

the control of assigned revenues his judgment has all the authority of first-hand experience.

The control of the assigned revenues under the Dawes Plan was from the start mere window-dressing. The only circumstance in which the Commissioner could have exercised any important function would have been such as to betoken a revolt of the German Government against the Plan, and in that case the weapons with which he was armed would have broken in his hand.

The position of the Agent-General with "responsibility for the Plan as a whole" was of more vital significance, and Sir Andrew McFadyen speaks of his position as one of great delicacy and "at least as irksome to himself as to the German Government." It was one which came perilously near to constituting a system—condemned in the Dawes Report—which would involve directly or indirectly the virtual control of all Germany's revenue and expenditure. "That no serious trouble arose," Sir Andrew adds, "is at once a tribute to the skill of the holder of this office as a skater on thin ice and to the general justice of the criticisms which he felt called upon to make from time to time." The nations concerned have good reason to endorse this testimony to Mr. Gilbert Parker, for they owe a very great deal to his ability and tact.

The disappearance of control, however, has primarily a political importance. On the other hand, though so much has been made of the abolition of the Transfer Committee, Sir Andrew McFadyen considers the difference between the Dawes Plan and the Young Plan in this respect hardly more than formal. It is true that the German Government now has the responsibility for suspending the transfer, and can only suspend it for two years. But since in point of fact any suspension of transfers would lead to a revision, the limitation has no practical significance. On this vexed question of transfers, however, the greatest innovation of the Young Plan, the Bank for International Settlements contributes something towards a solution. The bank is empowered to ease the situation temporarily by paying Germany's creditors with funds borrowed against certificates of its own, while retaining for investment within the country the funds collected in Germany on reparation account. As a means of tiding over possible temporary difficulties, this innovation is of some importance. As far as the general international banking functions of the B.I.S. are concerned, Sir Andrew McFadyen suspends judgment.

As an example of what a few months may do to alter the proportions of any problem, the two differences between the Plans which are classed together as "minor changes" are instructive. One is the gradual abolition of payments in kind, an inevitable and overdue reform, the other is the absence of the provision contained in the Dawes Plan for modification of the obligations in the event of substantial changes in the purchasing power of gold. Writing in 1929 the author classed the latter as a minor change, but in a footnote he calls attention to the fact that it is likely to prove a major one. The subsequent course of prices still further strengthens this qualification, and already it seems not impossible that the Young Plan, which all but its most extreme opponents, thought had provided a solution, at least for some time to come, may have to be revised at a far earlier date than was ever anticipated, for the increase in the "real" burden due to falling prices has already largely wiped out the relief which Germany obtained in the Young Plan scale of annuities.

This brings us to the problem of the future. The great obstacle in the way of scaling down reparation payments in accordance with the increased purchasing power of gold is the fact that they were designed to cover the payment of inter-Allied debts which are independent of fluctuations in the value of gold. The key to that situation is held by the United States, and for two reasons, therefore, one the obverse of the other, it would appear that the Young Plan cannot offer a final solution. On the one hand, Germany cannot forever meet reparation payments indirectly out of the proceeds of foreign borrowing, which merely entails a vicious circle of more borrowing to pay the interest—and Sir Andrew McFadyen argues convincingly that, in the absence of a spectacular expansion in world trade, she can hardly hope to meet

them out of a real export surplus; on the other hand the United States cannot indefinitely continue to lend while refusing to accept payment of interest except in the form of more foreign promises to pay. The best hope for the future is that after ten years of political and economic warfare, the tangible fruits of which have been an increase in the German payments, from the Versailles offer of a present value variously estimated at from 30 to 36.1 milliards, to the Young Plan proceeds of at most 38.8 milliards, the final solution will be brought by a *deus ex machina*, descending in the shape of the United States to reduce, as much in her own interest as that of the rest of the world, the payments due to her from her former allies.

Sane judgment, a ready pen and a gift for taking the reader quickly to the essentials of a subject of which Sir Andrew McFadyen is a master, have combined to produce an admirable study of a problem the details of which have been thrust into the background by more immediate and urgent problems and by the passage of time. If, as seems probable, the subject once more becomes a living issue in the not distant future, we cannot do better than refresh our memories with this very readable survey.

Notes of the Week.

The Round Table Conference.—After the intense interest aroused by the full-dress debates in the Plenary Sessions last week, the progress of the Round Table Conference during the past few days has necessarily been less spectacular. All that has emerged from the week's proceedings is that the Federal Relations Committee, the focal point of the Conference, has been in effect wound-up and its place taken by the whole Conference sitting as a committee; and that to facilitate discussion of federalism and its cognate problems Lord Sankey has drawn up a list of "heads of subjects" to be considered. It is clear, however, that the important pronouncements made last week by representatives of the various Delegations have had far-reaching effects—for good. Not only has a helpful atmosphere been created within the Conference itself, but there are signs that opinion in India—at any rate outside extreme Congress circles—is becoming impressed by the Conference's potentialities and, encouraged by the evidence of sincere good will on the part of the British public, is watching the proceedings with keen attention. How far Congress can be induced to abate its attitude of stereotyped animosity is another question; but there are indications, even in Bombay Presidency, that the influence of the irreconcilables is ebbing. All this is eminently satisfactory, for it should greatly assist the proceedings of the Conference if the Delegates from British India can feel that their acts are being regarded, if not with positive benevolence, at least without pre-conceived hostility, by the bulk of more or less "advanced" opinion in their own country.

The Political Acts of the Imperial Conference.—The Imperial Conference of 1930 will, of course, be remembered chiefly for its discussion of economic matters. Its contribution to the development of inter-Imperial relations in the political sphere has been necessarily modest compared to the epoch-making work of the Conference of 1926. Still, the summary of proceedings,* which has now been published, contains certain points of interest in this sphere too. The British Commonwealth of Nations, paradoxical as ever, is working out the political relations between its States members on much looser and more old-fashioned lines than those on which the relations between sovereign independent States are developing to-day. For instance, the existence of the Permanent Court of International Justice has made it evident

* Cmd. 3717 of 1930.

that if the States members of the Commonwealth do not wish in their other capacity as States members of the League to avail themselves of the jurisdiction of the Court in their relations with one another, they must establish some kind of Commonwealth Tribunal of their own. This has now been agreed; but in order to secure "confidence" and avoid "rigidity," it has been decided "not to recommend the constitution of a permanent court, but to seek a solution along the line of *ad hoc* arbitration proceedings," and also not to make the resort to this system of arbitration obligatory. Thus, if a dispute arises, say, between India and South Africa over the interpretation of some convention regarding the status of Indians in South Africa, the juridical machinery for dealing with it will be less precise and effective than if the dispute had arisen between India and Siam. Again, if the boundary dispute between Canada and Newfoundland were to be reopened, the means for settling it would not be so ready to hand as in the case of a dispute between Great Britain and France over the interpretation of some boundary convention relating to Central Africa. It may be answered, of course, that States members of the British Commonwealth do not need any automatic, compulsory, "all-in" arrangement for the settlement of their disputes because they cannot in any event go to war with each other. Other points of interest in the summary of the Conference's proceedings are that Governors-General are to be appointed henceforth on the advice of His Majesty's Ministers in the Dominion concerned in each case; and that, under certain conditions, Dominion Governments are to instruct British diplomatic representatives in foreign countries direct, and not through the channel of the Foreign Office in Whitehall, where the Dominion Government in question is not represented on the spot by a legation of its own. But these points are little more than dots on the "i's" of the inter-Imperial constitution which was written four years ago.

Lord Cecil and His Critics.—Lord Cecil's policy on the Preparatory Commission for the Disarmament Conference has evoked a certain amount of criticism (we have been cautious, and we hope courteous, critics ourselves); and this, in turn, has put Lord Cecil's friends up in arms in his defence. It is unfortunate that the debate in this country on the momentous public question of disarmament, at this critical juncture, should have taken a personal turn. Lord Cecil is not in need of any personal defence or apologia. Nobody questions either his sincerity or his ability. We suggest, however, that the real issue is one of international psychology, and it is in this light that the current controversy should be viewed. The defenders of British policy at Geneva argue, in effect, that what has been happening at Geneva is all to the good, because it is going to help to get the general process of disarmament started; and "if we can once get the first move in the right direction, the whole state of the world will be improved to a far greater degree than can be measured by the mere size of the reduction." Now, granting Professor Murray's "if" (we are quoting his letter in the *Manchester Guardian* of November 24th), we quite agree with him. For example, this year's Three-Power Naval Treaty is assuredly improving the state of world relations, in spite of the fact that in some respects the figures at which the strengths of the three navies have been stabilised have meant limitation not downwards but upwards. Mere size certainly does not matter if there is a genuine agreement which consecrates a genuine intention and expectation of keeping the peace instead of going to war. This is the touchstone which proves the London Naval Treaty a success; but unfortunately the same touchstone seems to prove the work of this session of the Preparatory Commission at Geneva a rather serious failure. For the psychological outcome of the session is only too clear. France and her allies have agreed to nothing which will compel them to diminish their present military preponderance over the rest of Europe. Great Britain has been a consenting party to this. And we can already see the effects of this British policy upon the minds of the liberal, pacific

element in France and upon the minds of the other Continental European Powers. The Opposition in France has been profoundly discouraged by seeing the British delegation at Geneva play (as they feel) into the French Government's hands. The other Powers—Italy, Germany, Russia—have been exasperated. The effect, we fear, will be to give the French "diehards" an indefinite lease of power, and to consolidate Italy, Germany and Russia into an anti-French entente. The first-fruits of Lord Cecil's complacency towards Monsieur Massigli at Geneva may be seen in the meeting between Mr Litvinov and Signor Grandi at Milan.

The United States and International Solidarity.—Immense importance attaches to any indications that the mind of America is moving in the direction of international solidarity, and there are several such indications this week to throw a gleam of light from across the Atlantic upon the rather sombre clouds that have settled over Europe. It is reported that, about a year ago, the Secretary of State in President Hoover's Administration, Mr Stimson took the first step towards following up the Multilateral Treaty of Paris for the Renunciation of War by some provision for dealing with international disputes by positive pacific means. As the Multilateral Treaty had arisen from the joint initiative of the United States and France (a fact commemorated in its popular name—the Briand-Kellogg Pact), Mr Stimson naturally started the next move by approaching the French Government in the first instance. He appears to have suggested to Monsieur Briand that the Treaty for the Renunciation of War should "be given additional force by setting up machinery for consultation and the moulding of public opinion against an aggressor nation." This suggestion must have been made at the time when Mr Stimson, on the strength of the Treaty for the Renunciation of War, was taking energetic and effective steps to bring the united opinion of all States signatories of the treaty to bear upon the U.S.S.R. and China, in order to induce the two latter signatories not to allow their dispute in Manchuria to draw them into a breach of the peace in violation of the solemn engagement which they had so recently undertaken. Probably Mr. Stimson found by experience, at the time, that his diplomatic efforts in the cause of peace would have been easier to make if international consultation had been definitely prescribed in advance by an international agreement. At any rate, the proposal has been made on American initiative. No doubt the Secretary of State afterwards found it expedient to concentrate all his energies upon the negotiation of the Three-Power Naval Treaty; but now that this instrument is happily signed and ratified, its existence may enable him to take up the general question of a consultative pact with still better prospects of success than before. Perhaps the publication of the fact that a first step has already been taken means that the next step is at hand. Meanwhile, Admiral Pratt, the Chief of Naval Operations of the United States Navy, has pointed out, in a public address, that the attainment of "parity," while making it possible for the United States to preserve her neutrality more effectively than ever before, may have also made it morally incumbent upon her to take her part in ensuring that another war does not finally wreck our civilisation. Finally, President Hoover has been petitioned by a hundred eminent American citizens, including General Pershing, to submit to the present Senate, at its forthcoming short session, the arrangement which has been negotiated with the States Members of the League of Nations by Mr Elihu Root for the adherence of the United States to the Statute of the Permanent Court of International Justice. These things, taken together, give ground for hope.

Polish-German Tension.—We referred, last week, to accounts of questionable Polish "methods" in the conduct of the general election and in the "pacification" of the Ukrainian minority in Eastern Galicia. An official statement from the director of the Polish Press Bureau in London dealing with this election will be found on

page 1011. Last Sunday, however, there was another election in Poland—this time for the local Sejm or Assembly of Polish Upper Silesia; and the occasion appears to have produced grave complaints from another minority—this time the Germans. On election day and during the preceding week, the German electorate in Polish Upper Silesia is reported to have been terrorised by an organised campaign of personal violence, including savage beatings of the kind that have been reported, at the other end of Poland, in the East Galician villages. The German voters have apparently been deterred from polling, with the result that Marshal Pilsudsky's party has obtained 19 seats in place of their previous 10, whereas the number of German (bourgeois) seats has fallen from 15 to 7. These doings in Polish Upper Silesia, if the reports which have reached this country are not exaggerated, have obvious elements of danger. If Marshal Pilsudsky oppresses his fellow-Poles, that is primarily the Polish people's business. They can no longer appeal to the world as they could before the war, when the oppressor was not a home-grown dictator but a foreign Czar or Kaiser. Again, if he oppresses Ukrainians or White Russians or Jews, there is no Government outside Poland which is directly concerned to take up the cudgels on the oppressed minorities' behalf, though we are all naturally concerned with any allegations of barbarism in Europe, and we have a juridical *locus standi* in virtue of the Polish minorities treaty. On November 20th Mr Dalton stated in the House of Commons that the British Ambassador at Warsaw has been asked to report on the situation in the Ukraine (as the British Ambassador at Moscow was asked to report on religious persecution in the U.S.S.R. some months ago); and we warmly commend this move. It ought to lead up to a reconsideration of the whole question of the protection of minorities, which was raised by the late Dr. Stresemann several years ago in the Council of the League, and was then shelved by a committee on which Great Britain was represented by Sir Austen Chamberlain. If only some sincere and effective action had been taken then, the tension that is rising now between Germany and Poland might have been avoided. Meanwhile, though the German Government has very properly decided to bring the case before the League, which might well investigate the whole of these allegations, it is ominous that the Nazis and the Stahlhelm have been conducting reprisals against the Polish minority in Germany, which since the war has hitherto been treated well.

More Unemployment Borrowing.—Last week we noted a supplementary estimate requiring the taxpayer to produce an extra £10½ millions to finance Treasury payments of unemployment benefit to those who have passed outside the scope of insurance. This week the taxpayer is warned that yet another £10 millions is required from his depleted pocket, this time nominally in the form of a loan, whose purpose is to restore to a fictitious solvency the Unemployment Insurance Fund. The House of Commons is to be asked to pass a Resolution authorising the introduction of a Bill to increase from £60 millions to £70 millions the borrowing powers of the Fund. An explanatory memorandum* has been issued, which is by no means consoling. Borrowing powers were raised from £50 millions to £60 millions as recently as August 1st. At that date the Fund's debt was £44.7 millions, and the live register of unemployed 2,011,500. By November 17th the debt had risen to £55.2 millions and the live register to 2,286,000. The weekly expenditure, we are now told, exceeds income by about £700,000, and "at this rate the present borrowing powers will be exhausted by the end of December." This, of course, is entirely apart from the cost of transitional benefit, which falls directly on the Exchequer. So this incessant drain goes on. What are the Government doing about it? They did, at least, promise a Royal Commission—a dilatory and unsatisfactory process—but better than utter inaction. But even this promise has not been fulfilled as yet, and every day public

money streams away through a bottomless sieve. If we are not allowed to have anything better and more expeditious, we must at least have that Royal Commission, and have it at once.

The Education Bill.—At a meeting of the Parliamentary Labour Party last Tuesday the Prime Minister secured the promise of support, with only ten dissentients, for his agreement with the Liberal Party on the Education Bill. In return for the certainty of Liberal support for the Bill, Sir Charles Trevelyan has made several important concessions: the operation of the Bill is to be postponed "under protest" until September, 1932; local authorities are not to be hampered in any inquiries they may think fit to make in respect of parents' means; the Board of Education may vary the form of inquiry upon the request of a local authority; local authorities are to be free to make representations as to the peculiar economic conditions of particular areas, and the Board may modify the income limit in such cases. Within the income limit the allowances are to be universal and the Government is adamant upon the question of the flat rate, but the concessions announced do go some way towards meeting the principal objections to the Bill. The most important gain lies in the fact that education authorities now have a fair chance to make adequate provision for the extra accommodation and staff that will be needed when the Act comes into force.

British Production.—The Board of Trade index number of production for the third quarter of 1930 shows a decline of 3.5 per cent., as compared with the second quarter, and 10 per cent. as compared with the September quarter of last year. The detailed figures are shown below.

INDEX OF PRODUCTION (1924=100)					
Group.	Year 1928.	Year 1929.	September Quarter, 1929.	June Quarter, 1930.	September Quarter, 1930.
1. Mines and quarries	89.2	96.8	94.4	87.4	84.2
2. Iron and steel and manufactures thereof	102.3	114.0	113.7	95.5	80.3
3. Non-ferrous metals	119.3	120.5	114.6	123.7	128.6
4. Engineering and shipbuilding	113.1	121.0	119.3	122.6	111.6
5. Textiles	99.9	98.5	91.4	78.2	71.3
6. Chemical and allied trades	110.3	115.8	120.3	101.3	106.7
7. Paper and printing	(a)	(a)	(a)	(a)	(a)
8. Leather and boots and shoes	102.0	98.5	95.2	103.8	99.7
9. Food, drink and tobacco	101.9	106.0	111.8	104.9	108.3
10. Gas and electricity	126.0	135.8	(b)	(b)	(b)
Total of manufacturing industries (2-10)*	109.4	115.5	114.8	107.1	103.4
Total of all groups (1-10)*	105.5	111.8	110.7	103.1	99.5

* Including also various industries not specified above.
(a) Adequate information in respect of the paper and printing trades has not up to the present been available. The particulars received, which cover about 40 per cent. of the net output of these trades in 1924, have been included in the general index.
(b) No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index numbers.

The index has not been running long enough to allow of ascertainment of the normal relation between the second and third quarters, but comparison of the third quarter of this year with the corresponding period of 1929 is sufficiently striking. The index of manufacturing production shows a decline of 9.9 per cent., and the fall in the textile group, which was spread over all its components,

amounted to 22 per cent., while iron and steel and manufactures thereof showed an even larger decline of 29.4 per cent. The only groups which showed increases were non-ferrous metals, owing to a greater apparent absorption of copper only partly offset by decreased takings of lead, tin and zinc, and the boot and shoe group. Among the miscellaneous industries there was a greater consumption of rubber, but a decrease in the output of cement and tiles. Coal output was 9.8 per cent. less than last year. On a comparison of the same two periods, the German index, which includes coal mining, shows a fall of 20.4 per cent. The manufacturing index of the United States Federal Reserve Board for June-August shows a decrease of 23.5 per cent. as compared with the corresponding period of 1929.

A Subsidy for Opera.—Out of its percentages received from wireless licences the Exchequer is to subsidise the performance of grand opera at Covent Garden and provincial cities to the tune of some £17,000 per annum. Had this assistance been forthcoming from the funds of the British Broadcasting Corporation we should have had nothing but approval for the decision, nor in spacious and prosperous days would there be anything improper in the practical patronage of the Arts by the State. But times are not prosperous, and an impoverished Exchequer should be wary even of inexpensive luxuries. Moreover, to draw upon the revenue raised by wireless licences savours of a raid upon specific funds and creates a dubious precedent for future Chancellors. That the sum of money at stake is negligible does not lessen our objections on the ground of principle. The happiest result of Mr Snowden's little extravagance in these days of worklessness has been the coining of a political *bon mot*—"non opus sed opera." May we add the suggestion that in return for Treasury bounty B.B.C. opera producers should re-stage the "Ring," with the Chancellor of the Exchequer in the rôle of Fafnir—brooding dragon-wise over the tax-payer's gold.

Retail Trade.—The basis of the new retail trade index, published by the Incorporated Association of Retail Distributors and the Bank of England, discussed in the *Economist* of September 27th, has now been broadened to include 152 stores, as compared with 86 in August. The reported decline in sales in October, as compared with October, 1929, was 4.4 per cent., attributed partly to mild weather, and, in some districts, to the depression in farming, but mainly to the fall in retail prices, which is stated to be producing a tendency to hand-to-mouth buying and does not appear to induce consumers to take advantage of cheapness to purchase better qualities. London sales have declined more than those in other districts. In all districts, furniture seems to be one of the worst lines, while women's wear suffered least. It is significant that those sections concerned with inexpensive merchandise have, in many cases, shown an improvement.

Midland Coal Marketing.—A largely attended meeting of coal owners from the whole of the Midland area was held at Sheffield last Friday, writes a Leeds correspondent, for the purpose of considering the future of the Central Collieries Commercial Association, in view of the operation of the compulsory marketing scheme under the new Act. Invitations were issued not only to those recently members, but to Lancashire owners who were at one time members of the Association. Those present represented an annual output of more than 100,000,000 tons. Those who were mainly responsible for promoting the original Five-Counties Scheme, and have held office in the enlarged organisation, felt strongly that there is a need for the continued existence of the Association's marketing scheme. One of the main reasons for starting the Association was to encourage exports, and this the Association claims it has done successfully. During the year ended March, 1928, the shipments from the Humber ports totalled 2,566,733 tons; in the following year they were 4,728,584; and in the year ended March, 1930, 7,018,712.

The Association has also concluded agreements with the Humber and Mersey Exporters' Associations, has exchanged views with Continental importers, has made representations to the railway companies on coal breakage, and is conducting investigations into other important questions affecting exporters. The executive committee is of opinion that this work should be continued, and that it can best be done by a voluntary body such as the Association. In the first place the Act does not provide for a levy for the purpose of subsidising exports, and it is further felt that the Association can usefully perform other functions not provided for in the Act, by way of supplementing the provisions of that measure. Price regulation and grading are subjects with which, it is believed, the elastic provisions of a voluntary body will be better able to cope than the narrower regulations of the Act. The meeting on Friday by a large majority endorsed a proposal that the Association should continue in an amended form, but this has to be considered by the district associations, and a decision is not likely to be reached for some weeks.

Lancashire Cotton Corporation.—Our Manchester correspondent writes:—A general meeting of the Lancashire Cotton Corporation, Ltd., was held in Manchester on Tuesday last, when a further increase of capital by £567,589 was authorised. This is divided into £450,000 ordinary shares, £100,000 deferred shares, and £17,589 preference shares. The increase of capital is for the purpose of absorbing twelve companies when the legal proceedings are complete. The companies concerned own rather more than 1,000,000 spindles. It is announced that the shares will be allotted to creditors and shareholders as soon as the liquidators of the companies have completed their figures. Including this increase, the capital of the Corporation now consists of 235,662 £1 preference shares, 3,426,400 £1 ordinary shares, and 13,570,440 ls. deferred shares, the total amount being £4,340,584. It is understood that in round figures the Corporation has now absorbed about 80 mills containing nearly 8,000,000 spindles and some thousands of looms. During the last week or two an attempt has been made on the Oldham Stock Exchange to make a market in the shares of the Corporation. Rumours have been circulated of rather remarkable bids being made. It is now reported that with regard to the ls. deferred shares buyers are offering 1½d. and sellers want 4½d., whilst for the £1 ordinary shares holders are offering to accept 2s., but so far no bid has been made by buyers.

The Distribution of Labour.—Owing principally to the recent changes in the Unemployment Insurance Acts, about 185,000 males and 130,000 females have remained within the scope of the insurance scheme who would, if the average rate of exit of the years 1925-28 had been maintained, have passed out of insurance during the last two years. In consequence, the analysis of the numbers insured in the various industries, published as usual in the *Ministry of Labour Gazette* for November, loses some of its interest as a guide to the changes in the relative importance of different industries, but its place in this respect will be taken by an analysis of the numbers of insured persons actually in employment, which is now in course of preparation. Meanwhile, the article in question is not without an interest of its own. It shows that in many of the industries which, during 1928-29, received an accession of workers from other industries, namely, coke-oven and by-product works, pottery and earthenware manufacture, marine and constructional engineering, silk and artificial silk, rubber, musical instruments, road transport, laundries, dyeing and dry cleaning, this tendency has diminished or disappeared during the past year. Public works contracting and local government, under the influence of unemployment relief works, and also the various electrical industries and the hosiery trade, have received workers from other industries. New male entrants to industry have gone mainly to motor-vehicle manufacture, cycles and aircraft, electrical wiring, electric cables and lamp manufacture, bread, biscuit and cake-making, furni-

ture, printing, publishing and bookbinding and the distributive trades. The industries from which the transfer of men has been greatest were mining, chemicals, general engineering, motor vehicles, cycles and aircraft, the cotton and wool textile industries, leather and leather goods, clothing, woodworking, musical instruments, laundries and the distributive trades. Thus a number of trades seem to be attracting new entrants at the same time that their existing employees are leaving them for other industries. The analysis of changes since 1923, including that of geographical redistribution, does not, for the reasons already mentioned, necessarily indicate real changes in the trend. These, no doubt, will be revealed in due course by the promised figures of numbers actually employed.

Conference on Concerted Economic Action.—Our Geneva correspondent writes:—The British Government's decision not to renew the Dyestuffs Import Regulation Act, which expires on January 15th, was communicated this morning to the Conference for Concerted Economic Action. It may have some effect in extending the application of the convention for the suppression of import and export prohibitions and restrictions. The convention has only come into force between seven States. It provides for certain exceptions, and under this provision Great Britain maintained her import prohibition on dyestuffs; Germany declared she could not ratify in those circumstances, and also demanded the right to prohibit coal imports; France demanded an exception for her export prohibition on scrap iron, and other countries acted in a similar way. The President of the Conference has asked whether Japan, which also maintains a dye-stuffs prohibition, was prepared to follow Britain's example, and the Japanese observer said that he would bring the matter to the notice of his Government, which would inform the Secretariat. The President emphasised the importance of a favourable decision, as this would make possible the abolition of other exceptions. The Governments which have ratified may denounce the convention if the exceptions are still in force on January 15th next. A meeting has been arranged for some time in the New Year, when the States which have brought the convention into force between them will be able to examine the situation. The French delegate asked whether the British Government intended to substitute an import duty for the prohibition, and in reply Sir Sydney Chapman said that if Parliament upheld the Government's decision there would be neither prohibition nor import duties on dye-stuffs as such, but there would be duties on certain chemical products. The French delegate thought that in these circumstances it was probable there would be some protection of the British dye-stuffs industry. He could only foreshadow the possibility of the eventual abolition of the French export prohibition on scrap iron on condition that an export duty would be established. The German delegate gave no indication as to the effect of the British Government's action on Germany's coal import prohibition proposal, which is an obstacle to Poland's ratification. The President, who congratulated the British Government, appealed to governments to ratify the Convention as soon as possible. On the two main proposals before the Conference—the British proposal for negotiations for tariff reductions on two groups of articles, machinery and textiles, and the cereal preference proposals of the agricultural States of Eastern Europe—separate committees have been formed. The discussions in the committee on the British proposal has demonstrated that it is not practicable in present circumstances to enter upon multilateral negotiations. Certain States have declared themselves willing to negotiate, though some, more emphatically Italy, are against participating in anything but bilateral negotiations. It has virtually come to the point that the British Government will negotiate either separately or in groups with States prepared to consider the tariff situation on the lines of the British suggestion. The report of the committee on preference for cereals is to come up later before the plenary conference, which will probably finish on Friday.

Denmark and British Trade.—Among other interesting information relating to Denmark included in a supplement to be published by the *Financial News* next Monday, there is an interesting article on the position of British trade in that country. For a number of reasons sentiment in Denmark towards British goods is particularly favourable. In spite of Denmark's low tariff, Germany has recently put increasing obstructions in the way of Danish trade in cattle and dairy products, while similar obstructions are met with in Central Europe. On the other hand, British goods enjoy a high reputation. In the shops the word "English" is displayed as a sign of the acme of perfection, while British propaganda has opened Danish eyes to the fact that Great Britain does not consider herself fairly treated in the matter of imports into Denmark. The writer, however, raises grave doubts as to whether British manufacturers are really exploiting this very favourable centre. He quotes examples of the unwillingness of manufacturers to go to the trouble of supplying comparatively small sample orders; of the long delay in sending samples; of lack of enterprise in finding out "what continental people wear"; styles, weight, shades of material are wrong; in advertising Britain is far behind America in buying space; there are far too few resident agents or branches, and, of course, our English system of weights and measures is unintelligible to them. Moreover, Denmark is but a small part of Scandinavia, and the conditions throughout Northern Europe are not dissimilar. Clearly it is worth while for our manufacturers to take advantage of a friendly feeling and to cultivate the markets that are nearest to us.

A Bank Chairmanship.—With a regret which will be shared by his many friends in the City, the Westminster Bank announces that its chairman, the Hon. R. Hugh Tennant, will retire from this post on December 31st. Senior by age of the chairmen of the Big Five, Mr Tennant has earned his right to a comparative leisure by long service in the banking world, first as a director and deputy-chairman of Crompton and Evans Union Bank, Derby, then as deputy-chairman of Parr's Bank, and on the amalgamation of that bank with the Westminster Bank in 1918, as deputy-chairman, until he succeeded the late Mr Walter Leaf as chairman in 1927. His industrial interests are also considerable, extending from the brewing to the iron and coal industries. Among the concerns of which he is a director are the Bank of British West Africa, British-Italian Banking Corporation, and Stanton Ironworks. The benefit of his wide banking and industrial experience will remain at the disposal of the Westminster Bank, of which he has consented to remain a director. He will be succeeded in the chairmanship of the Westminster Bank by the Hon. Rupert E. Beckett, at present deputy-chairman, while Sir Malcolm Hogg will become a joint deputy-chairman. Like his predecessor, Mr Beckett has fortified his banking experience by industrial activities, and the directorships which he holds include those of the London and North Eastern Railway, Royal Exchange Assurance, and the Yorkshire Penny Bank.

The Royal Bank of Scotland.—As the Duke of Buccleuch well said in his speech to the annual general court of proprietors, held last Wednesday, 1930 has been an outstanding year in the history of this bank. In addition to the acquisition of the Bank of England's Western Branch, it witnessed the amalgamation with Williams Deacon's bank, and the Duke of Buccleuch was able to add that the Royal Bank's offer in connection with the amalgamation had already been accepted by the vast majority of Williams Deacon's shareholders, and that he confidently expected that the Royal Bank would acquire the whole of Williams Deacon's capital within a short period. In accordance with the terms of the merger which stipulated that two of Williams Deacon's directors should join the board of the Royal Bank, the Duke of Buccleuch further announced that the election to their board of Mr Dewhurst, the chairman of Williams Deacon's, and Lord Bradbury would be recommended to the proprietors of the Royal Bank, and this proposal was duly approved later in

the proceedings. As regards the position of the Royal Bank, the Duke of Buccleuch said that deposits had increased during the year by over £4,000,000, and that only part of this increase was due to the acquisition of the Bank of England's Western Branch. Advances were slightly lower. This not only reflected the trade depression, but also meant that the bank had resources available out of which to provide further advances on a considerable scale on sound banking lines so soon as trade needed them. He admitted that the margin of banking profit had not been so good as it might have been, and in view of the reduction in advances and the low level of discount rates, that does not come as a surprise. Still there had been a substantial increase in the bank's total net profits, and while the chairman held that the heavy burden of taxation was hindering the early revival of trade, he was confident that the time of recovery would come.

British Overseas Bank.—In view of the world-wide nature of its business, it was inevitable that this year's accounts of the British Overseas Bank should reflect the general effect that the trade depression is having upon those engaged in banking. This is brought out very clearly by the comparative figures for 1929 and 1930 relating to the principal items in the bank's accounts:—

	October 31, 1929.	October 31, 1930.
Deposits	5,113,907	4,549,187
Acceptances	4,659,312	3,927,317
Cash	278,234	293,712
Call money	2,281,669	1,820,321
Balances abroad	310,425	214,749
Bills discounted	1,000,397	1,071,400
Government securities	305,068	353,943
Advances	2,161,390	2,148,941
Net profit for preceding year	159,928	140,446

The fall in deposits and acceptances is explained only too readily by the contraction in world trade, with which the bank and its customers are chiefly concerned. The slight increases in cash, discounts and investments are also in accordance with recent common banking experience, for the more liquid and less remunerative ways of employing bank resources always tend to expand when trade is bad and demand for accommodation below normal. Thus the decline in profits, regrettable though it is, is also explained, and the proprietors of the bank must realise that they are the victims of general circumstances, and that their prosperity is bound up with that of the trading community at large. Fortunately last year's profits were sufficient to leave a large margin in hand, so that despite the fall in the earnings dividends have been maintained, and a fully adequate sum carried forward.

Banque Belge pour l'Etranger.—The report of this bank for the year to June 30th last reveals a satisfactory position. The net profit is 29,400,436 francs, making, with the amount of 1,454,162 francs brought forward, a sum of 30,854,599 francs available for distribution. This figure compares with 30,594,810 francs for the previous twelve months. The reserve fund is increased to 120,000,000 francs by the allocation of 10,000,000 francs; provision for taxation requires 1,500,000 francs; directors' fees 1,917,472 francs; and dividend on the 158,424,125 francs of paid-up capital absorbs 15,842,412, free of Belgian tax. The balance forward shows an increase of 140,552 francs at 1,594,715 francs. The bank's balance sheet makes a good showing, despite the difficult year through which its customers have been passing. Creditors are down by 528,297 francs at 3,770,511 francs, while debtors show a similar decline from 2,891,769 francs to 2,892,026 francs. Bills receivable have risen sharply from 667,345,135 francs to 935,751,994 francs, while acceptances have fallen off from 803,820,705 francs to 730,027,093 francs. The balance sheet total of 4,820,749 francs has declined by 638,187 francs in comparison with last year's figure. The directors report that the operations of their branches in London, Paris and New York have remained active and profitable, while even in China, despite the troubled situation of the country, branches had yielded substantial profits.

Overseas Correspondence.

IRISH FREE STATE.

Agricultural Protection — Labour Party Programme — Sweepstake — Banking Statistics.

(FROM OUR CORRESPONDENT.)

DUBLIN, November 22.

THE fall in butter prices has given rise to a widespread demand among farmers for some measures of protection and assistance. Mr Hogan, the Minister for Agriculture, is known to be very deeply opposed to any such expedients, which he deems powerless to confer any permanent benefit on the farming classes. In a recent speech his attitude was fully explained. With the single exception of wheat, no agricultural commodity is produced in the Free State of which there is not a large surplus for export. The total available home market is so small compared with this export surplus that no protective tariff could raise prices at home. Many articles for which protection is demanded, for example, oats, are raw materials for further production, and it is in the interests of farmers generally that they should be obtainable on the cheapest terms. Mr Hogan wound up his speech by warning his hearers not to be deluded into placing hope on false remedies. "There is one policy for the farmers," he concluded. "Leave them alone as far as possible and give them the lowest rates and taxes you can."

The Government has met the farmers' agitation by appointing a full-time Tariff Commission. The former Commission, though admirably composed, was somewhat slow in reporting, and the new body will be more expeditious. An application for a duty on butter during certain months of the year when Irish dairying is inactive has been presented to the Commission. Pending the hearing of this application an emergency duty, meant to be prohibitive, has been imposed on the import of butter in order to prevent the market being flooded with foreign supplies in anticipation of the Commission's report. This is as far as the Government is likely to go in the way of agricultural protection. A motion calling for an extensive system of import prohibitions and licences was heavily defeated in the Dail this week, and it is significant that the Farmers' Party voted with the majority against the proposals.

The Irish Labour Party, which has been reorganised so as to include sympathisers of all classes, has issued its new programme. As might have been expected, this document contains many far-reaching proposals of a highly protective character designed to "nationalise, rationalise and humanise" the essential industries of the country. An export tax on live cattle will provide a fund for subsidising the dead meat industry and insuring livestock, and minimum prices are to be guaranteed for barley and wheat. A National Development Board is to be established, part of the revenue of which will be derived from a differential income tax on "foreign" investments and from increased protective tariffs. It will be seen that the proposals of the Labour Party are not very revolutionary or advanced, and that there is nothing in them to cause any alarm even to the most profound conservative. It must be remembered that the Labour Party in Ireland is appealing for votes not to a population of wage earners but to one of small farmers and their relatives. This programme is therefore less concerned with redistributional ends than are the programmes of labour parties in industrial countries, and, indeed, it is objectionable not for its socialistic but for its narrow nationalistic outlook.

The sweepstake in aid of the hospitals has been an extraordinary success. The hospitals receive £131,724, and the first prize is £204,764. If the law of England is not changed to permit the holding of similar lotteries in favour of charitable causes, there is no doubt that the Free State will derive a large income from this source in

the future. Subscriptions were received from all parts of the world, and the whole affair was excellently organised so as to give general satisfaction to the subscribers. It is estimated that the sweep on the Grand National will amount to over a million pounds. It is really a brilliant idea to make foreigners pay for the upkeep of our hospitals, and the only danger is that of being copied by our neighbours, in which case the success of the Irish event would be considerably reduced. Meanwhile the sweep is providing employment for over a thousand clerks, and has provided the Free State with a new and valuable invisible export.

FRANCE.

Oustric Inquiry — Devilder Crisis — Sound Bank Situation — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, November 26.

THE Chamber has now settled down to useful work, and is steadily disposing of its heavy programme of proposed legislation. For the moment, however, the opportunity for party warfare that has been given by the more or less vague suggestions in circulation to the effect that certain (as yet unnamed) politicians have benefited from the gambling operations connected with the Oustric group of companies is the dominating factor. To-morrow's nomination of the members of the Special Commission which is to inquire into M. Oustric's operations will probably disclose what the practical value of the inquiry is likely to be. For the purpose of nominating the members, the deputies are divided, by means of a purely automatic lottery, into eleven groups of "electors," each of which will have the duty of nominating three of the thirty-three commissioners. These eleven groups were constituted yesterday, and it is reported to-day that at least six of them have a majority corresponding to the present majority of the whole Chamber. The situation is unusually interesting, not only because it is rumoured that most of the politicians who are alleged to be "suspect" are supporters of the Left, but also owing to the fact that the report of the Commission may either strengthen the Ministry's situation, or lead directly to its overthrow. Non-political opinion inclines to the view that the Commission, in view of all the circumstances, is unlikely to contribute in any way to the purification of the Bourse, while it may, on the other hand, assist appreciably in making it still more difficult to bring about any real reform.

The Oustric sensation has promptly been followed by the threatened collapse of another very similar Bourse group of issues, known from the name of its most active operator as the Devilder group. This group has for some years been interested in large-scale speculative operations in the shares of a large number of (principally Polish) oil, metallurgical and other companies which it controls, headed by the Compagnie Générale des Pétroles and the Malapolska Company. The widespread activities of the group are centred chiefly in holding companies (as in the Oustric system), and the method adopted has included in many cases heavy capitalisation and multiplication of shares, inextricable interlocking and extremely skilful manipulation of the market. It was recognised, immediately it became known that the principal companies were in difficulties in regard to their Bourse situation, that a second disaster of the Oustric kind would almost certainly result in far greater damage than did the first, and the Government promptly took the matter in hand, with the determination to prevent next Monday's Bourse settlement resulting in an even greater disaster than did that at the end of October. The danger was twofold:—(1) that French financial interests in Poland would be involved to such an extent that there might be serious political repercussions, and (2) that the whole Western European oil situation might be seriously prejudiced. As the result of the action of the Finance Ministry, M. Ernest Mercier, the chairman of

the Compagnie Française des Pétroles (which is a semi-governmental organisation, created chiefly to handle the French share in the Irak oil deposits), was induced to take charge immediately of the industrial side of the Devilder group of oil concerns. The banks have also for the second time within less than a month, been persuaded, in the general interest, again to come to the rescue. There now seems every likelihood that next Monday's settlement will be got over safely. The Coullisse authorities have seen their way, moreover, to prohibit stockbroking firms in that market from henceforward guaranteeing carrying-over facilities to "bear" speculators.

Figures showing the situation of the Great Paris banks at the end of the first half of 1930 reveal continued steady progress, notwithstanding the difficult general situation. The world economic crisis and the persistent universal decline in Stock Exchange business and share market quotations everywhere, coupled with the slowing down of industrial activity and the serious drop in raw material and other commodity prices, have naturally had a repercussion in this country; but this has been comparatively negligible, thanks to the prudent "policy of reserves" practised by all important French industrial undertakings. This has undoubtedly largely helped the banks, as a whole, to maintain their normally sound position, and even to strengthen it, during the past eighteen months.

The foreign trade returns for October show a small increase in both exports and imports. Exports for the month totalled 3,502,517,000 francs, against 3,358,530,000 francs in September, 3,108,292,000 francs in August (the lowest figure for some years), and 4,386,794,000 francs in October, 1929. Imports were 4,520,134,000 francs, against 4,205,516,000 francs in September, 4,067,977,000 francs in August and 4,955,855,000 francs in October last year. Part of the increase in imports is accounted for by the continued drop in British and other export prices, which continue to fall much more rapidly than French domestic prices. The effect of this is apparent in the statistics of British coal exports to this country. During the first ten months of the year the exports were 25,792,271 tons, against 23,043,323 tons in the corresponding period of 1929, but while the volume of these coal imports was about 750,000 tons greater, the value was only about 270,000 francs larger, the suggestion indicated by the bulk figures under both heads being that, during the current year, coal is entering France in the neighbourhood of 20 francs a ton lower. The outstanding feature of the ten months' exchanges was an increase of 1,369,400,000 francs (or 17 per cent.) in imports of manufactured goods, while exports in the same category declined 3,118,000,000 francs, or nearly 12 per cent.

GERMANY.

Reichsrat — Government Concessions to States — Prospect of Socialist Support — Wages Policy — Railway Rates — Coal Prices.

(FROM OUR CORRESPONDENT.)

BERLIN, November 25.

THE Reichsrat has accepted the 1931 Budget and the financial bills which comprise the programme of the Government. All were carried either unanimously or with a large majority. The Government have, it is true, apparently made very substantial concessions to the wishes expressed by the Reichsrat. To begin with, they have renounced 100 millions of the proposed reductions in the shares which the States and communes receive of the proceeds of federal taxation. In addition they have in the final Bill accepted so many exceptions to their original intention of limiting until 1933 the annual expenditure of Reich, states and communes to the amount of the Budget estimates for 1931, that there is practically nothing left of the rigid limits to expenditure for social purposes which were so stoutly resisted by the Social Democratic

Party. Further, they have reduced from 400 to 270 million the amount by which public credits for housing were to be curtailed. The abolition of the protection of tenants against eviction is not to be unconditional; safeguards against hardship are to be incorporated in the general legislation on landlord and tenant agreements.

Apart from the fact that some of these concessions constitute improvements, they are of importance for two reasons. In the first place they represent a great inroad on the rights the States and communes have hitherto enjoyed. In order not to wound too deeply the *amour propre* of the State governments, which, in some cases is very sensitive and was strikingly expressed on this occasion by the Prime Minister of Bavaria, Herr Held, the Government were obliged to make it clear that they attach the greatest importance to the wishes of the Reichsrat, the representative of the States.

The second reason is even more important. By receiving, for their financial programme, the support in the Reichsrat of the Prussian representative, the Government have forged a strong link with the Social Democratic Party, for the Prussian Prime Minister, Herr Otto Braun, is the strongest personality in the Socialist Party, and the concessions which he has won from the Cabinet through his representative in the Reichsrat will rightly be hailed by the Socialist wage-earners as a success for their party. Thus, the Government have a good prospect, if they now submit the Bills to the Reichstag, of receiving the support of the Social Democrats on all important points. True, there remain some differences of opinion between this party and the Government on the emergency decrees issued at the end of July, which dealt with communal taxes and social insurance, but if agreement has not yet been reached the prospect of it no longer seems remote.

A more profound difference exists on the question of wages policy, and the renewal of the miners' agreement in January will bring the question of wage reductions very much to the fore. Even that, however, will probably not become a *casus belli* between the Socialists and the Government. It seems likely that the Brüning Cabinet will be able to secure a simple majority in the Reichstag for its programme. Some of the proposals, however, involve constitutional changes and therefore require a two-thirds majority and it is impossible to see how the Government are to obtain that. They will, therefore have after all to renounce these parts of their programme, unless they continue to invoke the emergency clause of the constitution, which would hardly be permissible.

A lively controversy is at present in progress as to whether the Government policy of price reduction should be supported by a cut in railway freights. The railway company is trying to resist the proposal on the ground of its unsatisfactory financial position. It would have had a deficit of 700 million in 1930 but for its share in the Young Loan, and an additional short period loan of its own which was not provided for in its budget. As it had for some time been paying for capital improvements out of current income because it received no credit, it need now have no scruple in defraying out of loans expenses which were budgeted for as current expenses, but it can hardly repeat that process in the coming year. The Reichsbahn would, therefore, prefer to use for the balancing of its 1931 budget any savings which may accrue from the fall in the price of coal, a reduction in the salaries of officials, the anticipated further fall in iron prices and reductions in the prices of other materials.

The Reichsbahn would, however, probably be prepared to undertake a reduction in freights if it might in return receive more Government protection against road competition. This competition is especially effective in Germany because the Reichsbahn tariff is very steeply graduated according to the value of the goods to be transported. Raw material rates are especially low, and those on finished goods relatively very high. That was all very well as long as the railway had virtually a monopoly, but as soon as motor transport

became a practical proposition vast quantities of goods on which the rates were very high were deflected to it from the railways. Road transport thus not only attracts that traffic for which it is technically the most suitable means of transport (that is to say, goods for which rapidity of transport is a primary consideration, and short-distance traffic, where the saving of terminal charges is important), but it has taken also the long-distance traffic in valuable merchandise because the railway tariff rates them too highly. It is for many reasons impossible for the Reichsbahn suddenly to change its system of rating. As long ago as last winter the Ministry of Transport prepared a Bill which was intended to check this economically unjustifiable long-distance motor transport, and the Reichsbahn calculated that this would increase its income by 200 million marks. It is not unlikely that the Government will now return to this plan.

The 9 per cent. reduction in Ruhr coal prices decided upon by the Syndicate is greater than that which the mining companies promised some weeks ago to the Government. At that time it was only to be 6 per cent., but the larger reduction was evidently made principally on account of the danger that otherwise there would be a still further decline in the consumption of coal. There may also have been some idea of placing the Government, by voluntary compliance with its wishes, under a more pressing obligation to effect a reduction in wages when the miners' tariff is renewed in January. The price reduction will only apply in the so-called "non-competitive area," as in those parts of the market where Ruhr coal comes into competition with English or Upper Silesian coal or with German lignite the prices are already very low. In consequence, the average fall in receipts is not expected to exceed 6 per cent.

SWEDEN.

Progress of Depression — Foreign Trade — Balance of Payments.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 12.

THE position in Sweden continues to be more favourable than in most other countries, but things have become decidedly worse. Though there was no serious increase in unemployment in September, when official figures showed 6,300 seeking relief, as compared with 5,800 in August and 4,800 in September, 1929, the number has risen slightly since, and it is almost a daily occurrence for works to restrict production. This was especially true at the end of last month when the Skefko Company, the Grängesberg concern, the pulp industry and the sawmills resolved upon a considerable reduction of output.

This is the third step of the kind taken by Skefko since the beginning of the depression. At the end of last year 600 men were dismissed and in September another 650. For the remaining 2,400 men work is restricted to four days a week. The Grängesberg Company has hitherto kept its mines fully employed, but has now introduced the five-day week, a measure which affects 3,500 to 4,000 workers in the Norrland mines and 700 to 800 in the Central Swedish mines. The pulp industry, in combination with the industries in Norway, Germany, Czechoslovakia and Memel, has resolved to reduce the output of sulphite cellulose by 15 per cent. Finally, the sawmills have agreed with the Finnish exporters to reduce exports for next year by 20 per cent. of the 1929 figure.

These are by no means isolated phenomena. The effects of the depression are becoming more and more pronounced, though the decline has so far been very moderate in extent. This may best be seen by the figures of production which are now available for the first three quarters of the year. The most striking thing in these figures is that developments in industrial production show a remarkably varied picture until June, when the effects of the depression seriously began to appear. Principally in consequence of varying conceptions of

future prospects the curve of production fluctuated sharply month by month. After the surprisingly active tempo of production in the winter and spring months it began to slacken. For June-September the average of *Svensk Finanstidningen's* index of production was 125 against 130 a year ago (1923/24 = 100). This decline is very moderate, and it is remarkable that a comparison of the first three quarters is still more favourable. The average figure was 136, the same as for January-September, 1929, the previous record. Among the leading branches of industry only two show a lower production than last year—iron and steel and the paper mills, and of these the latter had a two months' strike in the second quarter, which reduced output. On the other hand there was a decided increase in the pulp industry, sawmills and iron mines. Generally speaking, this result is surprisingly favourable, though it was due partly to an unusually large reserve of orders which was gradually worked off, and partly to considerable price reductions which will show their effects in the profit and loss accounts.

These developments were reflected in foreign trade. For the period January-May, before the full effects of the depression were discernible in the staple industries, both imports and exports showed an increase compared with previous years. From June to September, the best shipping months, the tendency was reversed. Both imports and exports for the first three quarters are less than a year ago. A detailed examination of the figures shows, moreover, that the effects of the depression are increasing in magnitude. Even in August they had been very unevenly distributed and the balance of trade was still decidedly active. In September the decline was more general. Moreover, the normal seasonal export surplus was changed into a pronounced import surplus. This is the more remarkable since the large item of grain imports was considerably lower than a year ago owing to the good harvest and the quota system for wheat and rye.

If one calculates exports on the values of 1929, they fell from 86 per cent. in July to 82 per cent. in August and 77 per cent. in September. Exports of the leading articles were reduced all round, timber by 32 per cent., iron ore by 23 per cent., pulp by 8 per cent., paper by 3 per cent. Exports of matches fell by 25 per cent. and the decline in iron and steel was still greater, for pig iron fell by 48 per cent. Some of the engineering industries, on the other hand, showed a welcome resistance. Though exports of ball bearings were 52 per cent. below 1929, for motors and separators the fall was inconsiderable. Telephones maintained their good position with a rise of 9 per cent., and electrical machinery increased by 18 per cent.

The cutting down of imports has not kept pace with this setback. From 114 per cent. of 1929 July figures they fell to 93 per cent. in August, but remained at the same level in September. It should be noted, however, that the fall in prices affected imports in a higher degree than exports. Whereas *Svensk Finanstidningen's* wholesale price-index sank from 128 in December, 1929, to 109 in October this year, Svenska Handelsbanken calculates the fall for export goods from 142 to 132 (September) and for imports from 120 to 96.

These developments are also reflected on the money market. Demand for credit has continued to shrink, and the consequence has been a pronounced surplus of cash in the commercial banks. Their independence of the Riksbank has been further emphasised, and the curious interest conditions have reduced rediscounting to a minimum, while realisation of exchange holdings has been pronounced. Against these developments may be set the improvement which has occurred in the balance of trade. During September the net bank claims abroad were increased by Kr. 33 millions, which is more or less normal for the time of year, though it has been accentuated by movements of capital. With the general development of the depression, accompanied by economic and political disturbances and interest rates remarkably low abroad in comparison with those in Sweden, the

normal excess of capital exports has recently been converted into an import surplus. The net capital import amounted to Kr. 8 millions for the third quarter, whereas last year there was a corresponding export surplus. The flight of capital from Germany evidently played a part in this. In this way, the net bank claims abroad at the turn of the last quarter had reached Kr. 578 millions, or Kr. 16 millions more than a year ago. This strong position may be of great importance if the depression should have more serious consequences to the country than can at present be foreseen.

POLAND.

New Parliament — Foreign Loans — Match Monopoly — Budget — Prices.

(FROM OUR CORRESPONDENT.)

WARSAW, November 22.

THE election for a new Parliament which took place last Sunday resulted in Marshal Pilsudski's party securing a safe working majority in the Lower House with 250 seats out of 444. It is without precedent in Polish politics for a single party or bloc to have an outright Parliamentary majority; but it must be remembered that the Government bloc is not a political party but a collection of citizens supporting the Pilsudski Dictatorship for a variety of reasons. The merit of the Dictator's victory is greatly discounted because of the tactics employed by the Government towards the Opposition throughout the campaign. With from 70 to 80 former Opposition Deputies in gaol, the Press muzzled, election lists annulled, and political opponents not allowed to hold demonstrations, the arguments against a Dictatorship could not be effectively presented. The sole appeal from the Government's side to the voters was "Do you want Marshal Pilsudski and a strong Government, or chaos?"

It is perhaps unfortunate that the Government did not permit a "free" election. As public opinion crystallised during the campaign it became evident that serious-minded voters with no pronounced political leanings, and the business community in particular, were in favour of giving the Dictator a Parliamentary majority to see how it would work. The Opposition now claims that the election was ruthlessly "made," and so of no value in estimating the desire for a Pilsudski Government; but it is not at all sure that the Government would not have obtained a majority in a "free" election. The spectacle in prospect of a military Dictatorship working through a Parliamentary majority composed of members of all shades of political thought promises to be interesting.

Now that an appearance of political stability has been achieved, it is expected that foreign loans will be less difficult to obtain. The result of the election was no sooner known than the Government announced the signing of an agreement with the Kreuger concern of Sweden for an extension and revision of the Match Monopoly contract against a new 6½ per cent. loan (to be issued at 93) in the amount of \$32,400,000. This agreement must be approved by Parliament before becoming effective. The Swedish concern obtained the Polish Match Monopoly in 1925 on a twenty-year lease against a 7 per cent. loan of \$6,000,000. The outstanding balance of this loan, it is believed, will be converted into the new issue of \$32,400,000, which would account for the odd amount. The Match Monopoly lease will be extended for a further period of twenty years, and the contract revised—it is reported—so as to provide for a considerable increase in the price of matches, no further obligations as to export, and the elimination of Polish control over the operations of the Monopoly.

A loan is also being discussed with French bankers for an amount of not less than £4 millions sterling for the completion of the new railway line for transporting coal from Upper Silesia to the port of Gdynia. Two sections of this line, covering a distance of more than 300 kilometres, were opened in the early part of this month, and about 250 kilometres remain to be constructed. Loan discussions, it is furthermore reported, are now being

carried on with American bankers, and include 3 millions sterling for a new railway station and other improvements in Warsaw, and a much larger amount for electrifying certain districts of Poland.

When the new Parliament assembles early in December, immediate consideration will no doubt be given to the Budget estimates for the fiscal year beginning April 1, 1931. The preliminary project approved by the Cabinet fixes revenue at 2,890 million zlotys (about £65 millions sterling). Revenue for the present year was estimated at 2,943 million zlotys, but this figure is unlikely to be realised, only 1,363 millions (or 46 per cent. of the estimates) having been obtained during the first six months of the fiscal period despite the unremitting efforts of the tax collecting authorities. Since it is most improbable that tax revenue next year will be equal to the present year's (what might be called the law of diminishing returns is now in operation), the Minister of Finance is presumably counting on "plugging up the hole" by means of foreign loans. The Government's conception appears to be that the present is an exceptional period, and that long-term foreign loans can be utilised for current spending in the expectation that a year or two hence economic conditions will so improve that the tax revenue of 1928-9 and 1929-30 (3,008 millions and 3,030 million zlotys respectively) will again be realised. It would seem sounder finance to impose a policy of decreased expenditure during the depression, rather than to attempt to maintain a current rate of spending that is beyond the country's immediate tax resources.

The heavy burdens of taxation on business, it is argued, are making impossible the reductions in wholesale and retail prices that are becoming imperatively necessary, if industry is not to be brought almost to a complete standstill. Whether taxation or "cartellisation" is mainly responsible is a moot point, but it is unquestionable that industrial prices are now out of all proportion to agricultural prices, and that no concerted attempts are being made to bring down the former. Official ideas on the subject, in fact, centre solely upon expedients for raising farm prices. The November issue of *The Polish Economist* (an official publication) shows that retail prices for all products are still above the 1927 average; while the latest wholesale and retail prices of manufactured goods (1927 = 100) are respectively 93.4 and 111.1. The comparative wholesale price of agricultural products, however, is now 68.2 per cent. of 1927, and the retail price 92.2. Clearly, therefore, agricultural prices are at a serious disadvantage with industrial, and, whether or not taxation is mainly responsible, the fact remains that with the farmer unable to buy—or even to meet his outstanding obligations—there is no hope for an industrial revival. It remains equally clear that the farmer cannot be further taxed, and as industry must apparently resort to cartels in order to support the present burdens of taxation, the Government will sooner or later have to recognise that a considerable reduction in taxes must precede any fundamental improvement in Polish trade.

SWITZERLAND.

Foreign Trade — Employment — Budget — Banking.

(FROM OUR CORRESPONDENT.)

GENEVA, November 21.

SWISS economic conditions showed no great change during the third quarter, though foreign trade returns seem to indicate that there is a slight improvement. During the third quarter, imports reached a value of £28,020,589, compared with £25,839,281 during the previous quarter, and with £28,136,783 during the corresponding quarter of 1929. There was a small rise in the imports of raw materials, a sign of renewed activity in industry. That improvement was emphasised in October, when imports rose to £10,049,787, the highest monthly total of the year. Exports during the third quarter aggregated £16,489,673, as against £18,427,381 during the previous quarter, and £21,155,082 during the third quarter of 1929. A small rise in exports was recorded in

October, when they totalled £5,961,685, against £5,751,716 in September and £5,215,681 in August, the lowest monthly figure of the year.

Commercial exchanges with Great Britain improved during the third quarter, when imports from her totalled £3,977,392, compared with £1,380,971 during the first and £1,778,398 during the second quarter, thus bringing the monthly average to £792,973, compared with £559,404 for the year 1929; on the other hand, exports to her reached £2,616,977, as against £2,434,167 during the first and £2,751,752 during the second quarter, the monthly average being £866,988, as against £960,330 in 1929.

Though unemployment again increased slightly in September, there are a few signs of a real revival. Some improvement was noticed during the past two months on the home market which had hitherto been very slack; activity is greater, though hardly normal, in some industries, the goods traffic on the railways has increased since the end of August, and the receipts of the railways were higher in September and October.

The Budget of the Federal Government for 1931 estimates receipts at £15,820,000 and expenditure at £16,128,000, thus leaving an estimated deficit of £308,000, while it had been expected that the Budget would record a surplus. The estimated deficit does not result from a drop in receipts, but from an increase in expenditure, which is £840,000 higher than last year owing to certain extraordinary subsidies for the regularisation of the Rhine (£170,000), for military aviation (£160,000), for the Polytechnic High School (£56,000), for primary schools (£80,000), for national defence (£112,000), unemployment insurance (£112,000), and professional education (£30,000). The accounts for 1930 are likely to show a surplus, and it had been hoped that the era of deficits would now be closed. The proposed Budget is, therefore, disappointing, though it is realised that all the supplementary expenses are necessary and can neither be curtailed nor avoided. It is hoped, on the other hand, that receipts will be higher than estimated, thus enabling the accounts to be at least balanced, but this depends on the economic situation. Should receipts not exceed the estimates, the necessity will be contemplated of setting up new taxes, which would undoubtedly cause much dissatisfaction in the country. The 1931 estimates include, among others, a sum of £3,948,770 for the service of the Debt, £280,000 less than in 1930 owing to the repayment of the Debt and the Conversion of some 6 and 5½ per cent. loans into 4 per cent. loans. The instalment for the repayment of the Debt will be increased by £220,000, and reach £752,324, compared with £535,720 in 1930.

The banking industry continues to be very active, as money is abundant on the market, and many advantageous conversions have been effected. A Federal loan of £4,000,000 at 4 per cent. was subscribed ten times over, a great number of subscriptions coming from abroad.

There are now 306 large banks in Switzerland, 26 being State concerns, 164 limited companies, and 91 co-operative banks. Seven banks have each a capital of more than £4,000,000. Of a total nominal capital of over £120,000,000, 40 per cent. belongs to financial societies, 30 per cent. to the large banks, 15 per cent. to the State concerns, and 15 per cent. to the other banks. While at Zurich and Basle the larger banks predominate, the private banks of Geneva created in 1890 the "Union Financière de Genève," a great society which does not directly deal with the public, but only with the banks, putting large sums at their disposal when required, and specialising in the issuing of securities and the creation of syndicates. With an initial capital of £480,000, the "Union Financière de Genève" developed very rapidly in the post-war period, it increased its capital to £800,000 in 1927, to £1,200,000 in 1928, to £2,000,000 in 1930. It recently admitted two new members, a bank of medium size and a large Swiss bank, so that it now includes thirteen banks, most of which are private concerns. This will enable Geneva to compete on equal terms with Zurich and Basle in the domain of finance.

JUGOSLAVIA.

Trade Depression — Assistance to Agriculture — Privileged Industrial Bank.

(FROM OUR CORRESPONDENT.)

BELGRADE, November 18.

JUGOSLAVIA is now suffering from the general European trade and business depression, and her symptoms are therefore similar to those of other countries, namely, relative over-production, under-consumption through lack of purchasing power, desire for tariff barriers, growing economic nationalism and increased Government intervention.

Something of the depression may be gleaned from the following foreign trade figures:—

FIRST NINE MONTHS.		
(Million Dinars.)		
	1929.	1930.
Imports.....	5,625	5,276
Exports.....	5,338	5,005

The full meaning of these figures becomes clear only if we remember that exports for the first half-year exceeded those of 1929 by 373 million dinars, and that the third quarter is responsible for a deficit of over 700 million dinars as compared with last year. Indeed, were it not for an excellent fruit season and lively trade in sheep, goats, poultry and eggs, the figures would be even more discouraging.

The first effects of the crisis are naturally felt in agriculture, especially in the corn trade. There are fairly large stocks left over from last year, so that, with this year's harvest, the country is full of wheat and maize which it can only dispose of with difficulty even at the present low figure of 127-145 dinars (ten shillings) for 100 kilogs. of wheat, and 97-102 dinars for maize. With such prices, which barely cover costs of production, the future of the peasant, whose finances showed slight signs of improvement last year, and who still bears the double burden of taxes and debts with difficulty, appears precarious.

Government intervention has manifested itself hitherto in two ways. The Privileged Agrarian Bank has distributed between 700 and 800 million dinars of cheap credit to farmers, while the Privileged Export Society, which virtually enjoys a monopoly in corn export, combats speculative depression by paying the peasants on the basis of international prices. Conscious, however, that such alleviation as is offered by these two bodies cannot relieve the effects of a world crisis, the Government is making efforts to create a selling cartel for agricultural goods with countries similarly affected, i.e., Roumania, Hungary, Bulgaria and Poland. The Belgrade conference of representatives from these countries has formulated several concrete proposals of which the chief two are (a) that a central office for joint sale of agricultural products be created by July 1, 1931, and (b) that the national organisations forming part of the central office should have unlimited control over the export of goods for which co-operation is agreed. Thus, we have here the inception of an agricultural cartel sponsored by Governments in opposition to the private cartels in industry.

Industry, which is affected by the low purchasing power of agriculture, is clamouring for further protection, arguing that thus more home labour will be employed and the circle of consumers enlarged. Promise of relief is given in a speech of the Minister of Trade and Industry, who holds forth hopes of subsidies, bonuses, special railway tariffs and a revision of the entire scale of Customs duties. At the same time, the Government has drawn up a law for the creation of a privileged industrial bank with a capital of 150 million dinars (£550,000), whose chief aim it will be to provide industry with cheap credit on the basis of bonds and pledges. The character of the bank, similar to that of the agrarian and mortgage banks and the export society, would be that of a semi-State institution which enjoys a Government guarantee and many privileges in exchange for Government control.

In addition to problems of agriculture and industry, the Government is faced with those of taxation and unemployment, though the latter is not so severe as in industrial countries. Realising that the present greater returns from indirect taxation are only due to stiffer assessment based on a prosperous year, it has promised a number of measures to ease the burden of taxation. Finally it has invited tenders for the construction of 400 kilometres of rail and 700 kilometres of road on a credit system, offering the contractors bonds redeemable within ten years, and bearing 7 per cent. interest, with an issue price of 90.

Letters to the Editor.

THE FUTURE OF THE RATE OF INTEREST.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The "controversy" which appeared in your columns, following Mr J. M. Keynes' article on "The Future of the Rate of Interest," has been so thought-provoking that perhaps some additional comment and figures bearing on the American side of the problem may be of interest.

Mr Keynes has stated that "the (world) slump is due to a retardation of new real investment, so that it fell seriously behind the level of current saving." This observation seems to be admirably substantiated by statistical evidence which has recently become available on this side of the Atlantic. According to a compilation by Moody's Investors' Service, new capital issues for undeniably productive purposes (or "real," to use Mr Keynes' vocabulary) have in recent years been as follows:—

NEW PRODUCTIVE CAPITAL FLOTATIONS IN THE UNITED STATES.

Year.	Total Productive Issues.	Per cent. of Productive to All Issues.*
(Millions of dollars.)		
1921	2,166	76.6
1922	2,721	76.4
1923	2,954	77.1
1924	3,446	76.1
1925	3,318	63.2
1926	3,168	61.8
1927	3,259	53.3
1928	2,947	43.8
1929	3,176	36.3
1930	2,821 (9 mos.)	55.9 (7 mos.)

* Ratio of 5 months' moving averages.

The amount of productive issues has been determined by selecting from the total of domestic flotations of new capital (less refunding) only those issues which were obviously destined solely for capital expansion and improvement. Issues of indefinite purpose or those floated for working capital purposes or for acquisition of other companies or investments were eliminated from the compilation.

When an examination of the monthly figures is made, it becomes strikingly apparent that the volume of new "real" investment started to fall sharply below its normal, or expected course at the beginning of 1928. While, as your editorial comment in the issue of October 18th rightly states, the raising of new capital since 1925, instead of being curtailed, merely assumed a different form through the issue of "equity" shares, it nevertheless appears true on closer analysis that the "productive" use of the new share flotations failed to offset the decline in debenture financing. Unfortunately, this was not so apparent while the boom lasted.

This fact, combined with other evidences in the field of banking statistics, would seem to confirm what Mr Keynes has in mind when he speaks of "real" investments falling below current savings (including, no doubt, undistributed corporate profits) and the disproportion between the demand for long- and short-term investment media. There is little doubt but that maldistribution and misdirection of capital, credit and purchasing power (whether it be a structural or cyclical evil, or both) was at least one of the major causes of the current depression, and probably of some past depressions as well.

On the other hand, it is difficult, from the point of view of American data, to agree with Mr Keynes' quantitative statement of the problem, in its world aspect, at least. Throughout his article in the September issue of the Svenska Handelsbanken's "Index," Mr Keynes pictures the long-term interest rate as being "maintained" by a set of artificial causes, at

a preposterously high level during the entire post-war period and as being now (in round figures) 50 per cent. higher than before the war.

A weighted average of yields on newly-issued bonds and preferred stocks in the United States (Moody's Price of Capital), which is similar to the *Economist's* compilation for London financing, reveals the following trends:—

PRICE OF CAPITAL.

(A Weighted Average of Yields on New-Issued Bonds and Preferred Stocks.)

Quarterly Data.

	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Yearly Average.
1921	6.68*	...	6.85†	...	6.77
1922	6.79	6.45	6.23	6.12	6.39
1923	6.10	6.03	6.10	6.09	6.08
1924	6.08	5.98	5.86	5.78	5.93
1925	5.77	5.82	5.79	5.82	5.80
1926	5.77	5.70	5.76	5.74	5.74
1927	5.60	5.51	5.50	5.38	5.50
1928	5.34	5.28	5.63	5.47	5.43
1929	5.61	5.64	5.89	5.65	5.69
1930	5.54	5.40	5.29	...	...

Yearly Data.

1903	5.00	1909.....	4.79	1915.....	5.27
1904	5.03	1910.....	4.89	1916.....	5.28
1905	4.65	1911.....	4.89	1917.....	5.43
1906	4.73	1912.....	4.81	1918.....	5.74
1907	5.17	1913.....	5.05	1919.....	6.01
1908	5.25	1914.....	5.23	1920.....	6.04

* First half.

† Second half.

It can be seen that the "Price of Capital" fell from the peak of 6.85 in the second half of 1920 to 5.28 in the second quarter of 1928. During the stock market boom it rose again to 5.89 in the third quarter of 1929, and at this moment is back again to 5.29. This compares with 4.87 on the average for the years 1909 to 1912, and with 4.93 for the years 1903 to 1912.

It is true that the above "Price of Capital" is affected to some extent by the "quality" of bonds issued and that the discrepancy between long- and short-term interest rates at the present time is still very abnormal. A study of past records, however, will show that this is due not so much to the relative abnormality of long-term interest rates as to that of short-term interest rates. The former are much nearer their long-time average than are the latter, if it is at all permissible to speak in terms of long-term "normals" in this case. A return of confidence in the business world will correct the unusual spread between long- and short-term rates by simultaneously reducing somewhat the former and raising the latter.—Yours faithfully,

ADAM GOSTOMSKI.

INTERNATIONAL MIDDLE-CLASS LIVING COSTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The reply of the compilers of the Unilever report does little to resolve the doubts I expressed. It is difficult to make matters plain to compilers who appear not to know what it is they have been attempting to do; but I will try again.

There are three objective methods of making an international comparison of costs of living. For simplicity I will describe them in terms of two countries. One is to take the English budget of some selected class and find out what the items cost in England and in Norway; another is to price the English budget in Norway and the Norwegian budget in England and take a combination or a choice of the two results; the third is to make up an international average budget and price that in the two countries.

These methods aim at telling what the same budget costs in different countries. There is, however, another quite different question. What does it cost in Norway to live as the Norwegians do and what does it cost in England to live as the English do? That, followed out, leads simply to a statement of the differences between what people of corresponding classes spend in the various countries. In outcome, it is not a cost inquiry at all, but an expenditure inquiry.

To provide an answer to the first of these questions (i.e., what does the same budget cost in two or more countries?) is difficult; to provide an answer to the second is simple, though not very helpful. But to try to mix the two is to reach nothing but subjective confusion. According to the allowances one makes or does not make for differences in national habits—e.g., motor-cars and fur coats—one can produce at

will a result anywhere between a cost comparison and an expenditure comparison. It is clear that the compilers of the report have tried to blend a relative cost calculation with a relative expenditure calculation. In so doing they have inevitably produced nothing but confusion.

These are the fundamentals of the matter. They are illustrated by the details. The food, servants, clothing and sundries items at all three levels of income appear to have started with an attempt to price the same things, at each income level, in all the countries. This is the justification advanced for the "approximation to uniformity." Into this procedure there has been introduced the idea of allowing for fur coats in cold countries, and other appropriate garments in other countries. That is not pricing the same things in all countries. Once a compiler starts on that he must go through with it. He must allow for different national needs and habits in everything—food, drink, housing and what not. And inevitably he arrives, if he does his work thoroughly, at a comparison not of what things cost but of what people spend.

If the uniform budget is the method, he must keep firmly to it. Once he begins to disallow a car to anyone under £1,800 a year in Norway, to allow for different preferences in the matter of education, and to make amusements, &c., expand or contract according to some hypothetical balance, his basis has gone and his results are meaningless.

These are principles. The taxation question is a question of fact. Now one knows that by "taxation" direct taxation (State and local) is meant; the facts can be ascertained by anyone, but it will take some time. In the meantime, the opinion of even "competent authorities" should be held in question.

The compilers' reply leaves four other disquieting aspects of the tables unresolved. I will not occupy space in re-stating them.

Perhaps I should say that I am well acquainted with Dr. Richardson's paper and with Dr. Bowley's comments; otherwise I might not have doubted the substance and method of the Unilever inquiry.—Yours faithfully,

JEREMY HALFORD.

London, S.W.1.

THE DIRECTION OF OVERSEAS TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Last week I happened to refer in conversation to a statement in the article in your issue of November 22nd, entitled "The Direction of Overseas Trade" to the effect that in the first nine months of 1930 the value of British exports to Australia "had fallen below our exports to France." I am so accustomed to accept statements in the *Economist* as authoritative that I was somewhat surprised to find this assertion strongly challenged. Yet on verification, I think, the challenge was reasonable.

Reference to the October Trade and Navigation Returns (p. 202), shows that the totals given in the article for British trade with several European countries include such trade with their Dependencies. Consequently in the tables given in the article, the figures of British trade with the Netherlands, Belgium, France, Italy, Spain and Portugal are inflated by the inclusion of figures relating to British trade with many far-scattered foreign countries such as Java, French Indo-China, Syria, large portions of Africa and parts of the West Indies. As the writer's analysis purports to be "an examination of the geographical distribution of the decline" in British trade, I was hardly prepared to find trade with countries in other continents described as trade with "Europe."

The method of computation adopted by your writer has a direct bearing on the quotation I made from your article. According to the October Trade Returns the values of British goods exported to the principal importing countries in the first nine months of 1929 and 1930 were as follows:—

EXPORTS—JANUARY TO SEPTEMBER.
(000's omitted).

1929.	£	1930.	£
India.....	59,091	India	43,246
Australia	39,729	Australia	26,322
United States	33,742	Irish Free State.....	26,187
Germany	27,996	France	22,273
Canada	26,544	United States	21,969
Irish Free State	26,526	Canada.....	21,700
Union of South Africa	24,267	Germany	20,449
France	22,854	Union of South Africa	20,170
Argentina	22,118	Argentina	19,112

Thus arranged according to geographical conception, France is not above Australia, but below both Australia and the Irish Free State. The foregoing table shows, in fact, that the value of British exports to the nearby countries—the Irish Free State and France—have been substantially maintained in a period of general fall, and that exports to the United States and to Germany have fallen to practical parity with those to Canada and to the Union of South Africa respectively.

I am, Sir,

Your obedient Servant,

DAVID CHADWICK.

Bickley, Kent.

November 25th.

[We plead guilty; and are obliged to Sir David Chadwick for calling our attention to this point. For many years during which the *Economist* has compiled its quarterly analyses of the Direction of our Overseas Trade, it has been our practice to shorten tables which would otherwise be unwieldy by including French and other "Dependencies" with the European country to which they belong. By an oversight a note to this effect was omitted from the article in question. The challenged sentence should, of course, read: "had fallen below our exports to France (including French Dependencies)". Our general conclusions as to the "centres of depression" are not otherwise traversed.—ED., *Econ.*]

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have so great respect for Sir Charles Harris as a financial authority that I am sorry to see him embarking somewhat irresponsibly upon economic controversy.

In his letter to you of the 19th instant—and I seem to have seen elsewhere a similar expression of his views—Sir Charles appears to be mixing up cause and effect to a serious degree. Moreover, having taken a violent dislike to those persons who, in the diagnosis of the present depression, give pride of place to "monetary causes," he himself is proceeding to erect a case for yet another "primary" cause of our present troubles. Real wages maintained irrespective of price movements are now offered as the difficulty. We should adjust wages to prices, and then all will be well—or in other words, depression can proceed on its course, be followed by boom, and then the same all over again.

The question which Sir Charles Harris (with others who adopt the same argument) chooses to ignore is, What caused prices and wages to diverge? Obviously it was not primarily the movement of wage rates which set prices in the downward direction.

All that this argument about real wages does is to point out that cyclical fluctuations cause economic damage by upsetting at intervals the equilibrium necessary for the smooth working of the economic world. Divergence between wages and prices is only a manifestation of this disturbance. The mathematical calculation applied to wages in order to evolve "real wages" might be applied with advantage to other factors with interesting results.

If the problem at issue were, "How can we best carry on with cyclical fluctuations," then the adjustment of wages would be an obvious necessity when prices are falling (and, of course, in the opposite direction, when they are rising); but as I understand the recent contributions of Sir Henry Strakosch, Lord D'Abernon and others, they are concerned with the removal of the causes of the depression, and not merely with how to make the best of it.—Yours faithfully,

199, Pithanger Lane,
Ealing, W.5.
November 26th.

G. W. TURNER.

ELECTIONS AND VIOLENCE IN POLAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with great regret your observations on the elections in Poland which you published in your issue of the 22nd. You quite fairly admit that they are based upon certain accounts which appeared in the *Manchester Guardian*. I have no desire to enter into any controversy over those accounts, but I hope that you will allow me to meet your question with another, fundamental one.

You say: "It is indeed disheartening that Poland, once partitioned and now precariously restored, should have set her feet on a path which can lead nowhere but to her own re-destruction—and to the destruction of Europe into the bargain." On what facts do you base this despondency? Is it justified by the fact that for the first time since 1918 the Polish Parliament contains a clear majority to support the Administration, and that instead of a precarious conglomeration of microscopic parties with their ever-changing fluctuations of allegiance and parliamentary acrobatics, a party with an

independent majority of 52 (not 25, as you seem to assume) is able to form an efficient administration and give the country five years of internal peace, so necessary for a constructive collaboration of the Executive with the representatives of the nation in Parliament?

That Polish democracy was able to produce this happy result after but twelve years of the restoration of the Republic should be a matter of profound satisfaction to every lover of peace, considering what it means for the stability of that part of Europe. Naturally, this internal consolidation of Poland has infuriated all her enemies, but, knowing your fairness, I am sure that if you eliminate the hostile, unfair and inaccurate accounts published by the *Manchester Guardian*, you will yourself make the proper deductions, which will reverse your previous judgment.

In conclusion, may I illustrate by a practical instance the value of the *Manchester Guardian* accounts of the Polish elections? In his article, written from Katowice and published on the 18th instant, the *Guardian's* correspondent describes how, in order to test the "freedom of elections," he approached a number of Poles near a polling booth and asked them in German for a German ballot number, which was refused him with grins. From this he became convinced that the Germans in Poland were being denied political franchise.

What the *Manchester Guardian* correspondent really did may be understood by an identical example in an English setting. If I, declaring myself to be a Labour voter at an election in this country, were to address a Conservative organiser and ask him to drive me in a Conservative car to the polling booth, I should certainly be treated as an imbecile. Yet this is exactly what the *Manchester Guardian* correspondent did in Katowice. For those ballot numbers are nothing but slips of white paper on which any voter can print or write the number of the party list for which he desires to vote. Party organisers supply the lazy voter with slips on which their party number is already printed, but, naturally, they have no interest in assisting their opponents in the same way.

Here is an instance of the kind of *prima facie* evidence which the *Manchester Guardian* so assiduously collects in order to attack Poland.—I am, Sir, etc.,

F. B. CZARNOMSKI,

Director, Polish Press Bureau.

Polish Embassy,
47 Portland Place, W.1.
November 25th.

[We are glad to give publicity to this official reply. Further reference to the Polish attitude towards minorities will be found in a Note of the Week. The accuracy of the allegations regarding Terrorism, whether in Eastern Galicia or Upper Silesia—allegations which, if true, amply justified our "despondency"—is a matter which, we hope, the League of Nations will fully investigate.—ED., *Econ.*]

Books and Publications.

COMMERCIAL GOODWILL.

AMONG the more difficult problems with which business accountancy has to deal is that of the proper treatment of commercial goodwill. Mr. P. D. Leake, who is an acknowledged authority on the subject, and whose book* now appears in its second edition, approaches the subject, in which he includes the values placed upon patent rights, trademarks and copyrights, mainly in its practical as distinguished from its economic aspect, and describes it as the value of future super profit after providing all charges necessary to earn it, including management, remuneration, interest on outlay and depreciation.

The book starts with a careful sketch of the legal incidents of business goodwill, patent rights and trademarks; it then discusses, among other things, its valuation in relation to private businesses and public companies, and its treatment in accounts. The progress of the author's argument may be summed up by the following propositions:—1. Outlay of this nature should not figure permanently as a substantial asset on a commercial balance sheet. 2. Properly viewed the sum usually paid for goodwill includes two principal elements, interest and a capital sum for expired capital outlay. 3. The annual interest factor should rarely be taken at less than 10 per cent., and frequently much more.

* "Commercial Goodwill: Its History, Value and Treatment in Accounts." By P. D. Leake. Sir Isaac Pitman & Sons. 15s.

THE COTTON REPORT

ITS VALUE TO LANCASHIRE

by

W. S. ASCOLI

Price One Shilling

After reviewing the principal features of the Government report upon the present conditions and prospects of the Lancashire Cotton Industry this pamphlet invites public opinion on the neglect of the Government to consider or support certain independent efforts which assure the restoration of complete competitiveness.

WILLIAMS & NORGATE, LTD.

THE NATIONAL DEBT

By E. L. HARGREAVES, M.A., Ph.D. 15s. net.

"A scholarly account of the British National Debt, which constitutes a valuable contribution to financial history."—*Economist*.

London: EDWARD ARNOLD & Co., 41-43 Maddox St., W.1

4. The "goodwill" amount should be written off in a much shorter term of years than is often adopted, and this can most conveniently be effected by means of a short-term annuity, constant or diminishing in amount according to the circumstances of the case.

The book is well furnished with arithmetical illustrations of the matters discussed, and reprints in an appendix the provisions of relative statutes. It is clearly written with ripe judgment, and is of undoubted excellence; it deserves the careful attention of all who are interested in public company finance; the chapter on "Public Companies and Goodwill" might with advantage be considered by those who are tempted to fashion investment practice on calculations based on jobbing backwards.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Survey of International Affairs, 1929. By Arnold J. Toynbee. Assisted by V. M. Boulter. (London) Oxford University Press, Warwick Square. 21s. net.

Particularly important are the sections on disarmament, economic co-operation, reparations and the international relations of China.

Documents on International Affairs, 1929. Edited by John W. Wheeler-Bennett. With an Introduction by Lieut.-General Sir George Macdonogh. (London) Oxford University Press, Warwick Square. 16s. net.

Among the many important documents reproduced in this volume are those relating to the Hague Conference, the Evacuation of the Rhineland, the adherence of the United States to the Permanent Court of International Justice, the Vatican State and the Sino-Soviet dispute.

Oil Conservation and Fuel Oil Supply. (New York) National Industrial Conference Board Inc., 247, Park Avenue. \$2.50.

A most valuable statistical analysis of the sources and uses of fuel oil.

Oil: Its Conservation and Waste. By James H. Westcott. Fourth Edition. (New York) Beacon Publishing Company, 25, Broad Street.

A new edition of one of the best books on mineral oil. This is more technical than the National Industrial Conference Board's study.

The Changing Fabric of Japan. By Captain M. D. Kennedy. (London) Constable and Co., Ltd., 10-12, Orange Street. 16s. net.

An interesting discussion of the social and economic changes in progress in Japan.

What is the Position of British Industry? By Hugh Butler, reprinted from *Harvard Business Review*, October, 1930.

A discussion by an American qualified by long residence in England to write with appreciation of English difficulties. He accounts for our comparative backwardness in rationalisation by the exceptional diversity of the markets for which we cater.

England's Industrial Salvation. By Frank Hillier. (London) George Allen and Unwin, Ltd., 40, Museum Street. 3s. 6d. net.

A sane little book by a clear-sighted observer with a wide knowledge of British industry and commerce.

The Bankers' Almanac and Year Book, 1930-31. (London) Thomas Skinner and Co., Gresham House, Old Broad Street, and Waterlow and Sons, Ltd., Great Winchester Street. 42s. net.

An indispensable work of reference on banking, currency, foreign exchanges and the money market.

Finanzen und Steuern. (Berlin) Verlag von Reimar Hobbing. Rm. 10.

A very remarkable book of reference. The German Federal Bureau of Statistics has brought together, in a volume of nearly 900 pages, at the very moderate cost of ten marks, an immense body of financial statistics, federal, State and local, and has grouped them, analysed them, and provided an explanatory text which renders them as accessible and intelligible as such statistics can possibly be made. There is a very substantial international section which should prove a valuable source of comparative statistics of taxation and public debt.

International Labour Review, November, 1930. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes articles on "The Present Status of the Wool Textile Industry" and "Labour Legislation in India."

Anuario del Comercio Anglo-Sudamericano. (London) British South American Trade Annual, 74, Victoria Street.

An illustrated collection of articles by prominent business men on subjects connected with Anglo-South American trade. The volume, which is in Spanish, should help to prepare the ground for the forthcoming British Trade Exhibition at Buenos Aires.

The Stock Exchange.

THE OIL OUTLOOK.

THE oil industry lends itself to dramatic treatment in the Press. Whenever the price of petrol is cut, whether it be in this country, the Continent, or America, the headline repeat, with mournful iteration, that another "oil war" has been declared. There are, of course, a number of "wars" which could break out in the oil industry at any time. The Standard Oil interests fought the Royal Dutch-Shell group and Burmah Oil in the Eastern and Indian markets in 1927-28, a truce being signed, after nine months' struggle, in June, 1928. The Soviet Government waged intermittent war with the international oil groups up to the spring of 1929, when it signed an agreement with the Anglo-American Oil in regard to certain exports and its trade in Great Britain. Again, the big oil combines have often fought the independent oil companies whenever a market has been threatened with excessive competition from independent sources. But at the present time there is no "war" of any description being waged. The Standard Oil and Royal Dutch-Shell groups are at peace in the Eastern markets as well as in this country and America. The Soviet Government has adhered to its quota agreement in Great Britain, and has not so far found it profitable to expand its marketing facilities in view of the heavy outlay on plant that is required. The prices of oil products in the markets are far too low to encourage any oil group to indulge in open hostilities with its rivals. Of course, price-cutting by the large American independent companies is going on in the United States and Great Britain, while the Soviet Government is undercutting the market in Central and Northern Europe. But wholesale price-cutting in these days of trade depression does not make an "oil war."

In the United States, the oil industry has hitherto been saved from the evil effects of chronic over-production by an extraordinary resilience in the demand for gasoline and other oil products. The stocks of all oils in the United States have increased year after year from a level of 187,000,000 barrels in January, 1919, to 689,181,000 in January, 1930, the present level being slightly below the latter figure. In other words, the American oil industry (which, with its own production and its imports from Mexico, Colombia and Venezuela, is responsible for over 70 per cent. of the world's oil trade) has been over-producing every year (except in 1926) for the past 12 years. Yet, reckoned in terms of days' supply at the yearly rate of consumption, the increase in stocks has not been so alarming, as the following table will show:—

U.S. OIL SUPPLY AND DEMAND.*
(In Thousands of Barrels.)

	Supply.	Demand.	Excess or Deficiency of Supply.	Stocks of All Oils at end of Year or Period.	Stocks in Days' Supply (at Yearly Rate of Consumption).
1927	1,014,084	943,981	+ 70,103	Barrels, 597,143	231.47
1928	1,038,166	1,015,584	+ 22,582	619,725	222.73
1929	1,171,359	1,103,203	+ 68,156	689,166	228.01
1930 (9 months)	810,943	821,601	- 10,658	678,508	225.42

* Supply = domestic production and imports. Demand = domestic consumption and exports.

It will be found that total demand in 1928 was 7.06 per cent. greater than in 1927, and in 1929 8.63 per cent. greater than in 1928. In terms of days' supply, at the current rate of demand, stocks of all oils are, in fact, slightly below the level of 1927. The persistent annual increase in consumption has so far preserved equilibrium without any sacrifice being required on the part of the American oil industry.

This year, however, sacrifices have, in fact, been demanded and made. The American oil industry has set

about meeting the problem of over-supply, inherited from previous years, by co-operative measures of restriction. In the field of crude oil production it has applied restriction of output with remarkable effect. With the help of a State Conservation law the output of California has been brought down by 25.3 per cent. this year, while State Commissions have organised restriction of output in Oklahoma and Texas so successfully that the production of those States has been reduced by 31½ per cent. and 14 per cent. respectively, as the next table will show:—

DAILY AVERAGE CRUDE OIL PRODUCTION IN OKLAHOMA, CALIFORNIA AND WHOLE OF U.S.A.

	(In barrels.)		
	Oklahoma.	California.	U.S. Total.
Peak for 1929	748,700	890,500	2,973,450
	(Sept. 14)	(Sept. 21)	(Aug. 31)
Peak for 1930	707,550	806,000	2,722,050
	(Jan. 11)	(Feb. 22)	(Feb. 22)
Nov. 15, 1930	506,000	602,000	2,304,550
Nov. 22, 1930	484,200	607,000	2,281,850

That the independent producers of crude oil in America would co-operate to such an extent as to effect a 16 per cent. reduction in total output would have been considered impossible a few years ago. Production last week was lower than it has been since 1926.

In the refining sphere restriction of output has not been applied with such regularity or organisation as in the sphere of production. Nevertheless, the runs of crude oil to refinery stills within the last two months have been greatly reduced. For example, in the week ending November 8th crude oil runs to stills amounted to 2,274,600 barrels a day, as compared with 2,638,100 barrels a day at the same time last year, a decline of 13.8 per cent. As a result of this restriction of refinery output, it will be found that up to the end of September this year the amount of gasoline produced and imported was actually less than the amount consumed domestically and exported.

U.S. GASOLINE SUPPLY AND DEMAND.
(In thousands of barrels.)

	9 Months to Sept. 30, 1929.	9 Months to Sept. 30, 1930.	Per cent. Increase 1930 over 1929.
Domestic production	323,713	336,166	+ 3.85
Imports	6,108	13,264	+117.16
Total supply	329,821	349,430	+ 5.95
Domestic consumption ...	283,996	303,215	+ 6.77
Exports	45,736	51,223	+ 12.00
Total demand	329,732	354,438	+ 7.49
Stocks at end of September	33,181	38,254	+ 15.29

On the whole, it may be said that the American oil industry has so far met its problems this year with commendable determination. It has succeeded in restricting crude oil output to below the level of demand. It is to its credit that it has allowed the prices of crude oil and refined oil products to find their own levels. It made one abortive effort artificially to control the prices of refined oil products for export, but this failed ingloriously when the American Oil Exporters' Association abandoned its price schedule this month. Gasoline prices are now being allowed to look after themselves. The "U.S. motor" grade of gasoline has fallen to 4½ cents per gallon from 7½ cents. Following a 2d. cut in the price of petrol in Great Britain reductions have been made in France and Germany. Crude oil prices in America have also been cut in spite of the further restriction of output. The following table shows the chief reductions in crude oil and gasoline prices which have been made in the United States this year as compared with 1929.

	Gasoline. (Cent. per gallon.) "U.S. Motor" Grade ex Oklahoma Refinery.	Crude Oil. (\$ per barrel.) Mid-Continent 36° Beaumé.
	1929.	1930.
Beginning of year ...	8½	7
End March	7	6½
End June	8½	6½
End September	7½	5½
November	7½	4½

It remains to estimate the effect of lower prices on oil company dividends. The following table shows the dividends, last year and this year, so far as they have been declared, by the leading oil companies:—

Company.	Year Ending.	Dividends %.				High-est Price, 1930.	Present Middle Price.	Approx. Yield % on last Year Divs.
		Last Year.		This Year.				
		Inter-im.	Final.	Inter-im.	Final.			
Anglo-Persian Oil (£1)	30 Dec.	5	15	5	*	4½	3	£ s. d. 6 13 4

* Not yet declared. † Free of tax. ‡ On basis of 15% dividend.

Certain reductions in dividends have already been made, notably by Trinidad Leaseholds and Apex Trinidad, Venezuelan Oil Concessions has declared an interim dividend of 5 per cent., the directors announcing that the aggregate profits for 1930 would be approximately the same as those earned in the previous year. As the capital has been increased this implies earnings of 15 per cent. this year, as against 20.1 per cent. last year. The final dividend cannot, therefore, be larger than 10 per cent. The Shell Union Oil Corporation, having paid two quarterly dividends of 35 cents each this year, passed the dividend for the quarter ended September 30, 1930. It is expected that the dividend in respect of the final quarter will also be passed.

There remain to be considered the possible dividends of the four leaders—Royal Dutch, Shell Transport, Burmah Oil and Anglo-Persian Oil. The interim dividends of the Royal Dutch and Shell have been maintained at the usual rates. The final dividends in respect of 1930 are not declared until June next year and if the oil situation by that time has not improved it is possible that even these rates will have to be reconsidered. The Anglo-Persian has announced its interim dividend, which is maintained at the 1929 rate of 5 per cent., but in view of the reductions in retail petrol prices in this country and on the Continent, its final dividend, which last year was 15 per cent., may be subject to revision. The 2d. cut in British petrol alone is equivalent to over 12 per cent. on the Anglo-Persian capital in a full year. The Burmah Oil Company holds 1,000,000 ordinary shares in the Shell Transport and Trading Company and 3,560,985 ordinary shares in the Anglo-Persian Oil Company of which 700,000 have been transferred to the B.O.C. Anglo-Persian Share Trust, Ltd., to meet the exchange rights of the debenture holders. If the Shell Transport and Trading reduced its dividends to 20 per cent., tax free, as against 25 per cent., tax free, and the Anglo-Persian cut its 20 per cent. dividends to 15 per cent., the loss in revenue to the Burmah Oil Company would be approximately £187,988 (after tax). If a 10 per cent. decline were shown in net trading profits in India and a decline of £187,988 in revenue from investments, there would be a loss of revenue of approximately £536,500, equivalent to 7.8 per cent. on the ordinary share capital. As the company earned 51.3 per cent. last year to cover dividends of 30 per cent. it seems that dividends could be maintained in respect of 1930. On the whole the present market prices of the leading oil shares appear to discount the possible reductions in final dividends.

FRANCIS LORANG AND THE BLUE BIRD COMPANIES.

THE sentence on Francis Lorang of seven years penal servitude for fraud in connection with the Blue Bird group of companies removes another of the mushroom company promoters whose wanton activities marred the new issue boom of 1928-29. Lorang was found guilty of fraudulently converting monies amounting to £817,000, and of publishing a false statutory return. Commercial life, as Mr Justice Swift said in passing the sentence, could not continue in London or in any other community, if such crimes went unpunished.

The trial did not bring to light many fresh details of Lorang's frauds. On the base of a small petrol and garage business promoted by Mr Brandon Trye, Lorang built up an incredible edifice of petrol companies—a Blue Bird Motor Company to take over the garage and pump business, a Blue Bird Petrol Company to buy a "secret petrol process" and "certain pump installations" from Blue Bird Motor, a Blue Bird Oil Importers to buy the wholesale importing business from Blue Bird Petrol, a Blue Bird (Foreign) Company to take over the "foreign" business of distribution from Blue Bird Oil Importers, and finally a Blue Bird Holdings Company to hold shares in all the other concerns.

The disclosure had already been made by the Official Receiver (at the statutory meetings of the Blue Bird Petrol and Blue Bird Oil Importers, in May, 1929), that the agreement to acquire a "secret petrol process" and "certain petrol pump installations" from Blue Bird Motor was not a genuine document, but was prepared for the specific purpose of covering up payments purporting to have been made for the consideration money, which amounted to £117,375. The Blue Bird Motor never received this sum, and was never even in a position to commence business. A resolution in the minute book of Blue Bird Motor showed that Lorang had been authorised to receive this money, except for £1,000, in his own name and to dispose of it at his entire discretion. From the minute book of Blue Bird Oil Importers, it also appeared that Lorang had been authorised to receive considerable sums.

In the case of Blue Bird (Foreign), the Official Receiver stated at the creditors' meeting, in October last year, that no business had ever been done, and no statutory meeting had been held. Although the company had filed returns showing it had received £405,000 in capital, it had, in fact, received only £76,031. With the exception of £50, the whole of this sum had been exhausted in six months. In the case of Blue Bird Holdings, which had issued £750,000 capital for cash, no business of any kind had ever been done, and the whole of the funds, except a meagre sum of £515, had been exhausted when the Official Receiver took control.

The defence was that Lorang used the money he had received in the interests of the company, mainly in the purchase of shares. Mr Justice Swift, in his summing up, stated that if he had purchased shares he had used the money for an illegal purpose, for the law absolutely prohibited a company from dealing in its own shares.

The whole Blue Bird episode reflects little credit on those who ostensibly acted as directors—a position of trusteeship towards shareholders—and were content to leave the affairs of the company in the hands of one man of uncertain reputation. As the Official Receiver stated at the Blue Bird (Foreign) meeting, they "absolutely failed to fulfil even the elementary duties of their office." Had they shown even a modicum of concern for the interests of the shareholders they represented, many of Lorang's cruel frauds might never have been perpetrated. The punishment of Francis Lorang may vindicate the stern majesty of the law, but it does not put back in the pockets of shareholders a single pound of the heavy losses they have suffered in this disgraceful episode.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
December 2.

ACCOUNT.
December 4.

The markets showed little change this week. The industrial situation promised no change for the better, to counteract the effect of the reduced earnings reported by important companies. In the gilt-edged market, the effect of the success of the Central Electricity Loan was overborne by an uneasiness regarding the drain of gold to France. As the money market was much tighter, with a certain amount of borrowing at the Bank on Wednesday, the firmness of gilt-edged stocks was the more gratifying. The oil share market remained active, further liquidation from Paris at the beginning of the week being followed by strong buying on Thursday. Elsewhere, business was restricted, but prices showed a reassuring stability.

Though a firm tendency obtained generally among gilt-edged stocks, few outstanding price changes were recorded. Conversion Fives attracted buyers, and Victory Bonds and Local Loans were in demand. War Loan had no decided tendency, though a setback on Tuesday was quickly recovered. India Loans were harder, especially the Three per Cents. Australians were quiet, the discrepancy between the prices of Commonwealth and State issues becoming, if anything, more marked. Subscriptions to the new Bloemfontein Issue were below expectation, large subscribers obtaining 88 per cent. of their requirements. Dealings opened at ½ discount.

Business in foreign bonds showed a slight expansion. The conclusion of arrangements for the granting of financial accommodation to the new Government caused a moderate rise in Brazilians. Chinese were consistently firm on political possibilities, but news of an earthquake induced moderate selling of Japanese. European stocks, particularly the Young Loan, were steadier on the cessation of liquidation by holders with commitments in other directions.

A meagre business was done in Home Rails. The traffic figures revealed no change in underlying conditions, and both the industrial and the labour outlook were bear points. Argentine railways enjoyed a sizeable recovery. The revenue returns made a poor showing, but cables from the Argentine suggested that the crop position was much better than pessimistic publicists had been willing to allow. Other South American railways, however, were dull, Antofagastas showing particular weakness. Canadian Pacific started firm but became irregular.

The week opened doubtfully in the industrial market, Wall Street being unsettled while Paris liquidated its favourites on a fair scale. Subsequently the market became steadier, without, however, attaining even a semblance of activity. Investment demand again centred mainly round electrical shares, particularly the issues of the London supply companies. Motor shares tended to lose ground, steady selling of Dennis occurring after the issue of the report, which is analysed on page 1020. Gramophone shares were affected by the mood of New York. A fractional recovery in textiles was attributed mainly to bear closing. Breweries and tobacco were slightly better on balance, Carreras being bought in advance of the report. The final intimation of the breakdown of the Allied Stores negotiations was followed by an improved demand for some of the constituent company shares, particularly Homes and Colonials, which were considered to have made somewhat disproportionate sacrifices under the merger terms. Little was done in iron and steel shares, apart from special buying of Weardale Steel. Kreuger and Toll were again sold from the Continent. The full report of Tate and Lyle (discussed on page 1019), induced a slight recovery in the shares, the figures suggesting that the heavy decline in profits was due mainly to the writing-down of sugar stocks. Cables and Wireless were better, temporarily, on the latest returns of the Communications Company, though the figures afforded comparison with a relatively depressed period of 1929. Hudsons Bays again receded on uneasiness regarding the forthcoming dividend and the possible results of the special investigation. Banks were irregular, the shares

of home institutions being slightly firmer while Dominion and foreign shares were lower where changed. A fair business in insurance shares left prices mainly unaltered.

Rubber shares were again featureless, being as difficult to buy as to sell. Rubber Trust was steady, but Anglo-Dutch failed to maintain a slight improvement. Transactions in tea shares were almost negligible, and prices easier. Oil shares suffered considerably at the outset, on fresh liquidation from Paris. The tone, however, hardened considerably in subsequent dealings, and on Thursday the market became decidedly active, Shells and Royal Dutch being in particular demand. Mining shares were slightly harder, but price changes were few. Central Mining and Gold Fields exhibited a certain weakness at first, but Kafirs generally became firmer in mid-week, despite the apathy of Paris. Randfontein improved on Cape support and Robinson Deep B were better. Few alterations were recorded in Rhodesians, slight credence being given to the revival of an old rumour of amalgamation between Congo Border, N'Changa and Bwana. Chartered were dull, but subsequently recovered their loss. Tin fluctuated in uncertain fashion, and share movements were irregular. Rio Tinto had a better week after being sold from Paris at the outset.

INVESTMENT

by L. L. B. Angas

(Author of "The Coming Collapse in Rubber," 1926.)

A book which shows how to detect the beginnings and endings of slumps and booms in single industries, and how to exploit the fluctuations which take place in shares on the Stock Exchange.

Rules are laid down for the timing of both buying and selling, and directions are given for taking profits and losses.

A valuable feature of the book is the list of faults which must be avoided.

The Economist: "To the Stockbroker, and even more to the individual investor, this book will be a *valde mecum*, the mastering of whose principles will repay in hard cash many hours of study."

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."

Publishers: Macmillan & Co., St. Martin's Street, LONDON, W.C.1. 187 pages. Numerous Charts. PRICE 20/-

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

to hold aloof. Definite bear selling however, was limited to certain groups of stocks, such as amusement issues, which came in for special attention on the Government's victory in the Courts against block-booking film contracts. Trade news remained unfavourable. A further decline in steel operations brought the rate down to 40 per cent. of capacity. Car loading figures showed a more than seasonal decline. October automobile production was returned at 150,044 cars and trucks against 216,877 in September and 380,017 in October last year. Railroad stocks were heavy, the October figures running approximately 25 per cent. below those of 1929. Call money ruled at 2 per cent. with a slightly firmer undertone, though outside loans were still available at 1½ per cent.

INVESTMENT NOTES.

A Plethora of Private Issues.—A significant recent development in the new issue market has been the large number of offers made by way of private "placing" rather than of public issue. The list of loans floated in this way includes numerous borrowers of high standing :—

Borrower.	Stock.	Amount.	Opening Price.
Monte Video Water Works	6% five-year notes.....	200,000	100
Bank of New Zealand Auckland Harbour Board	5% mort. deb. stock red....	500,000	100
Kingdom of Iceland	5% loan, 1950	155,000	97½
Joseph Terry & Sons	5½% 40-year sterling bonds	540,000	96½
Hertfordshire County Council	7% cum. pref. £1	116,040	23s. 9d.
Bermuda Development Company ...	4½% loan red., 1955-65...	750,000	98½
Bootle Corporation...	5½% stock	500,000	98½
City of Carlisle	4½% stock	500,000	98½
South London Electric Supply Corp....	4½% stock	500,000	99
Rhodesia Land Bank	4½% stock	300,000	94½

Edison Swan Cables	6% cum. pref. shares, £1...	700,430	21s. 6d.
	5½% guar. first mort. deb.	125,000	100*

Total 5,513,470 ...

* Price at which stock placed.

The 15 issues in the above table account for a nominal total of over £5½ millions of new capital. One reason for the contemporary popularity of the method is, doubtless, impatience with the heavy "staggering" of recent public offers, to which a Stock Exchange correspondent drew attention in our columns a fortnight ago. The development, however, is indicative of a profound change of opinion, in recent years, regarding the merits of the "private" method. At one time, this procedure was left almost entirely to borrowers of doubtful or speculative status, but the progressive tightening of the Stock Exchange's procedure, particularly as regards publicity of material facts, has materially changed its character. Presumably, its adoption by some of the authorities in the above list, whose reputation is beyond cavil, will serve to give it the cachet of complete respectability. The method has undoubted future potentialities. It affords, for instance, the most advantageous means of introducing British investors to the shares of sound foreign companies. On the whole, however, it offers Stock Exchange members the prospect of more widespread commissions than the public issue procedure. On certain occasions in 1928 and 1929, the intermediary finance houses took profits on their handling of "private" issues, whose extent was somewhat unfavourably criticised. If continuing resort is had to the method in the next few months, the public will be inclined carefully to examine the terms of each issue, to ensure that the margin between the price at which the stock is sold to intermediaries and the prices at which it is made available to investors is of no more than reasonable dimensions.

Royal Mail Developments.—Two recent developments are of interest to stock and debenture holders in the Royal Mail Company. The first is the announcement that Mr Walter Runciman has been appointed deputy-chair-

man of some thirteen additional companies in the Royal Mail group—including the White Star Line, Union Castle, Nelson Steam Navigation, and Elder Dempster—and that Lord Kysant's projected early departure for South Africa will necessitate the relinquishment of a number of his duties. In other words, the responsibility for the reorganisation of the group's trading and financial position will be left entirely in the hands of Mr Runciman and the Committee appointed some months ago, whose period of office was recently extended from December 31st next to December 31, 1931. The second development is, unfortunately, of a regrettable character. The loss of the *Highland Hope* last week, off the Portuguese coast is calculated to involve the marine insurance market in total payments of £800,000 to £900,000. The vessel was delivered to the Nelson Line only this year, being one of a new class of 14,000-ton motor ships specially equipped for the trade between Europe, Brazil, and the River Plate. Practically the whole of the capital of the Nelson Steam Navigation Company is owned by the Royal Mail, and it would, obviously, be regrettable if the maintenance of a regular fortnightly service by the company, to and from South America, instituted only during the present year, were interfered with by reason of this casualty. It may be trusted that every effort will be made to minimise the effects of last week's loss. By no possibility, however, can the task of Mr Runciman and the Committee be an easy one. Mr Runciman has, however, denied the statement attributed to him by a Press representative, this week, that the Lampport and Holt subsidiary would necessarily "have to go." The company's services are being conducted regularly and punctually under the receiver and manager appointed last August, who has, in addition, put into force very substantial economies.

Rubber Production Costs.—Though rubber remains fairly steady around 4½d. per pound, world conditions do not suggest that any well-marked rise is at all probable in the immediate future. The American returns show that while consumption in that country was slightly higher in October than in September last, it remained nearly 22 per cent. below the level of October last year. American stocks continue to increase, being equivalent, in October, to 6.8 months' supply at the present rate of consumption, against 2.5 months' supply in October, 1929, at the consumption rate of that period. On the other hand, the restriction of output in the tyre industry, initiated early this year, has appreciably reduced inventories of finished goods. At the beginning of last month, each American dealer had, on the average, 60.4 outer covers in stock against 68.4 a year earlier, and 87.2 inner tubes against 103.4. On the whole, a moderate rise in prices might not be unwelcome to American manufacturers. The larger factories have bought a good deal of rubber at price levels which, despite frequent "averaging," are above those prevailing to-day. The smaller factories, in some cases, are less well covered, and might be tempted to buy nervously on the first signs of a definite rise. Meanwhile, well situated and managed rubber estates in the East are achieving economies in production costs which a few years ago would have been deemed impracticable. The Malaya General Company, for instance, whose report for the year ended August 31st last has just been issued, last year reduced its estate cost to 5.37d. per pound, the lowest figure in its history. After charging an adequate amount for depreciation of buildings and machinery, this company was able to pay a dividend of 5 per cent. out of earnings of 6.2 per cent. The manager's estimates for the current year, based on a production rather higher than that of 1929-30, come out at as low a figure as 3.36d. per pound, though, as the directors are proposing to restrict production to about 70 per cent. of the potential crop, the cost will be slightly, though not seriously, increased. This company is in a stronger position than some of its competitors, since it has a reserve account of £93,000, represented by Government securities standing in its books at £94,932. It

would be distinctly helpful to shareholders if directors in all cases would follow the example of this concern in giving full particulars of costs and selling prices. The decision taken, in many cases, to suppress these figures after the termination of the Stevenson Scheme was a retrograde step. At the moment, they are clearly indispensable to shareholders who are called upon to decide their future investment policy.

British Oxygen-Allen Liversidge Fusion.—The proposed fusion between Allen-Liversidge and British Oxygen carries to its logical conclusion the policy of co-operation between the two companies, though it is possible that the immediate cause may have been the advent of new competitors in the industrial gas world. Owing to the weight of the containers for compressed gases, transport charges are large in proportion to the value of the contents, and to any company in this industry much depends on the possession of compressing stations at strategic points. The position of the new combine in this respect will be superior to that of its smaller competitors, and it may now be worth while for the merger concern to open joint depôts in new districts where an individual venture would have been speculative. This fusion should also afford an opportunity for real economies in expenditure. For example, in such towns as Liverpool, Manchester and Sheffield, where both companies have stations, there may be duplication of delivery organisations. According to the published terms, British Oxygen ordinary shareholders will receive a one in six bonus in £1 6½ per cent. cumulative preference, and Allen-Liversidge £1 ordinary shareholders will be offered an exchange into an equal number of British Oxygen shares (ex bonus). The Allen-Liversidge 6½ per cent. cumulative preference holders will be offered an exchange into an equal number of British Oxygen 6½ per cent. preference. Present shareholders in British Oxygen and those Allen-Liversidge shareholders who accept the offer, will have the opportunity to subscribe for 122,250 6½ per cent. cumulative preference with the right to subscribe for an equivalent number of £1 ordinary. The British Oxygen 8 per cent. debenture will be redeemed out of the proceeds of this issue. Consequently, after April 1, 1931, there will be no charge on the properties. The issued capital of British Oxygen will be £500,000 in £1 6½ per cent. cumulative preference and approximately £1,194,120 in £1 ordinary. The offer may be expected to commend itself to all the shareholders concerned.

Tate and Lyle.—The directors' report of Tate and Lyle, Limited, gives no explanation of the heavy fall in trading revenue. For the year to September 30, 1930, the trading profit, before allowing for directors' fees and debenture interest, amounted to £393,452, as compared

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

with £916,864 in the previous year, a decline of 57 per cent. After provision for directors' fees and debenture interest of £46,354, as against £22,500 in the previous year, but not for depreciation and investment reserve, which in the previous year took £150,000, the amount available for dividends was £339,584, as compared with £736,582. The payment of the ordinary dividend of 10 per cent. involved the taking of £80,000 from the dividend reserve. The actual earnings on the ordinary share capital amounted to 7.9 per cent. The sharp decline in profits is presumably due in large measure to the writing-down of stocks in the trading account. Further, in the previous year the company was able to keep its factories in full operation, whereas in the past year refinery costs must have been increased by a lower throughput. A comparison of the trading results for the past three years is shown below:—

	(Years ended September 30th)		
	1928.	1929.	1930.
	£	£	£
Net revenue, after tax and debenture interest	724,852	886,582	339,584
Allocation to depreciation and investment reserve	110,000	150,000	...
Earned for dividend	614,852	736,582	339,584
Preference dividends	71,500	71,500	71,500
Times covered	8.60	10.30	4.75
Earned for ordinary, per cent.	16.4	20.1	7.9
Ordinary dividend	17	15	10
General reserve	150,000	150,000	*26,651
Carried forward	41,735	59,417	40,850

* £80,000 taken from Dividend Reserve.

The balance sheet presents some interesting changes. In the first place, bank loans of £3,210,000 have disappeared, this feature being apparently explained by the issue of £1,250,000 of 5½ per cent. mortgage debenture stock in March last at 97½, and by the realisation of Government and other gilt-edged securities which appeared in the last balance sheet at £1,274,606. Stocks of sugar and syrup, etc., have fallen from £2,619,111 to £1,667,971, a reduction of £951,000. This may reflect a reduction in volume as well as in market values. The balance sheet reveals a liquid position, cash and debtors showing a surplus of £512,000 over creditors, and interest accrued. Investments in associated companies have increased from £579,000 to £611,000. The ordinary shares are at present quoted at 34s., having been as high as 44s. this year.

Dennis Bros.—This company, which claims to be the leader of the British commercial vehicle industry, reports a falling off in earnings for the year ended September 30th last. Gross trading profit at £296,514 has declined by approximately £50,000. Net profit, after deducting depreciation and fees, totals £286,805, compared with £336,585 for the previous twelve months:—

	Year to September 30,		
	1928.	1929.	1930.
Trading profit	359,156	346,356	296,514
Net profit	360,840	336,585	286,805
Brought forward	74,791	97,739	96,391
Ordinary capital:—			
Earned £	350,840	336,585	286,805
Paid £	237,892	262,933	212,851
Earned %	480.3	448.0	381.8
Paid %	316.6	350.0	283.6
To reserve	100,000	75,000	75,000
Carried forward	97,739	96,391	95,345

The trend of percentage earnings and payments on the ordinary capital during the past decade can be seen from the following table:—

ORDINARY CAPITAL.*					
Year to	Earned	Paid	Year to	Earned	Paid
Sept. 30.	%	%	Sept. 30.	%	%
1921	14.5	13	1926	58.5	25
1922	14.5	13	1927	134.1	50
1923	17.4	13	1928	480.3	316.6
1924	24.4	18	1929	448	350
1925	40.4	25	1930	381.8	283.6

* Capital in £1 shares to 1926, when 10s. was repaid to holders, followed by further repayment of 7s. in 1927, the resulting 3s. shares being sub-divided into shares of 1s. each.

A further £75,000 is being carried to reserve account, which now stands in the balance sheet at £650,000—approximately 8½ times the present share capital. The financial statement reveals a high degree of liquidity. At their present price of 34s. 3d., the ordinary 1s. shares give a yield of £8 17s. per cent. allowing for a final dividend of 2s. 2d. per share.

Tube Investments Report.—The accounts of this prosperous concern for the year ended October 31st last suggest that further progress has been made in rationalising and expanding the company's interests. Net profit totals £245,998, compared with £225,053 for the previous year, and £121,278 for 1928. The ordinary dividend is maintained at 10 per cent., less tax:—

	Year to October 31,

Reserve	...	65,000	75,000
Carried forward	63,293	70,652	76,943

In the following table the percentage earnings and payments on the ordinary capital are set out for the past ten years:—

ORDINARY CAPITAL.					
Year to	Earned	Paid	Year to	Earned	Paid
Oct. 31.	%	%	Oct. 31.	%	%
1921	10.0	8.0	1926	18.0	10.0
1922	0.5	Nil	1927	18.1	10.0*
1923	16.5	7.0	1928	11.7	10.0
1924	16.9	7.5	1929	16.3	10.0
1925	17.7	10.0	1930	16.5	10.0

* And capital bonus of 33½%.

The sum of £75,000 is allocated to Reserve Fund, which, together with £91,412 premium received on the new issue of ordinary shares, now amounts to £266,412. The carry forward item is increased from £70,652 to £76,943. During the year, the share capital of the Talbot Stead Tube Company was acquired by exchange of shares, and "another important interest" (whose identity is not disclosed) has been purchased for cash. An agreement has also been made with Stewarts and Lloyds providing for an exchange of "liaison" shares in order to achieve closer co-operation, as described in the *Economist* of October 18, 1930, page 723. The present price of the fully-paid £1 ordinary shares is 30s., at which the yield allowing for dividend is £7 2s. 9d. per cent. gross.

Combined Pulp and Paper Fiasco.—In the *Economist* of September 20th last (page 536) we criticised the position revealed by an investigation of the affairs of the Combined Pulp and Paper Mills, Limited. This concern, formed in October, 1927, to acquire various German companies producing pulp for the paper and rayon industries, has a capital of £790,000 in 700,000 ordinary shares of £1 and 1,800,000 deferred shares of 1s. In 1929 the ordinary shares were run up to 36s. 3d., and the deferred shares to 6s. 6d. To-day both classes of share have little more than a "rubbish" value, the ordinary having been last dealt in at 8½d. and the deferred at 3d. The reconstructed board has endeavoured to save the company, but its efforts have ended in failure. In September the directors announced that unless £240,000 was quickly forthcoming to complete the purchase of certain shares in two Silesian companies, the company would be in danger of losing the greater part of its assets. In November an arrangement was made

under which the pledgees of the Silesian shares agreed to accept part payment in debenture stock. Shareholders were then asked to subscribe to a debenture issue of £986,667 in 10 per cent. stock at 90, with a minimum subscription of £200,000. It is now announced that the response has been insufficient to allow of the completion of the Silesian share purchase and the redemption of pledged securities. Accordingly, application monies are being returned in full, and a meeting of shareholders will be held next month to consider the position. The company appears to be in a desperate position, and shareholders may find it necessary to take advice as to whether any means exist for calling the former board to account for a policy which has brought the company into its present straits.

British Ropes.—This rope and wire combine was registered in 1924, and has paid no ordinary dividends for the last five years. The results for the year to August 31st last are described by the directors as "not unsatisfactory" in view of the heavy and sustained fall in the price of all fibres and the extremely difficult general trading conditions. The trading profit amounts to £130,140, compared with £171,409 for the previous twelve months. Directors' fees account for the not inconsiderable sum of £2,333, and interest on debentures and loans for £66,402. Net profit before depreciation stands at £61,405, compared with £84,880.

	Year to March 31.		
	1928.	1929.	1930.
Trading profit	Dr. 69,887	171,409	130,140
Income tax	Nil	25,000	Nil
Directors' fees	Nil	2,550	2,333
Interest	24,000	58,979	66,402
Net profit	Dr. 93,887	84,880	61,405
Brought forward	9,735	Dr. 84,152	727
Debenture premium reserve	...	...	6,859
Carried forward	Dr. 84,152	728	55,273

The directors state that though they had hoped to be in a position to submit with the balance sheet a scheme for the reorganisation of the company's share capital, they consider the present moment inopportune for such a project. The balance sheet, naturally, is by no means strong. Goodwill stands at £473,535, preliminary expenses incurred by the issue of notes and debentures total £98,948, and a suspense account (being excess of book value over amounts realised on the sale of fixed assets) accounts for £223,939. Cash totals only £6,526. The auditors state that "with the exception of sums amounting to £11,711, no provision for depreciation has been made since August 31, 1926, on the freehold and leasehold lands, buildings and plant," whose "value as stated appears to be largely in excess of present values." A scheme of reconstruction clearly cannot be avoided, and the directors will doubtless appreciate the necessity of acquainting the shareholders, at the meeting next Tuesday, with more detailed reasons for its postponement.

Gordon Hotels.—A scheme for the consolidation of the debenture debt of Gordon Hotels, Ltd., has been put forward by the company and is recommended by the trustees for the debenture holders. The financial year of this company ends on December 31st and for the year 1929 it earned 10.8 per cent. on its ordinary share capital. There are three existing issues of debenture stock—£1,028,422 of 4½ per cent., £360,000 of 4 per cent. and £234,531 of 3½ per cent. perpetual stock. The company proposes to consolidate these issues into one issue of 6 per cent. stock redeemable by the operation of a cumulative sinking fund of ½ per cent. at 102 per cent. in forty-five years. The offer gives the debenture holders

a smaller amount of nominal stock but a larger income as the following table will show:—

Class.	Holding.	Market price existing Deb. Stks. at 1930.*	Amount of 6% Deb. Stks. to be issued.	Interest receivable on existing Deb. Stks.	Interest receivable on 6% Stock proposed to be issued in exchange.	Increase in annual interest.
4½% deb. stk.	£	£	£	£ s. d.	£ s. d.	£ s. d.
4% deb. stk.	100	75	82	4 10 0	4 18 5	8 5
3½% deb. stk.	100	66½	74	4 0 0	4 8 10	8 10
		57½	70	3 15 0	4 4 0	9 0½

* These prices include accrued interest as from July 1, 1930.

The advantage for the company in this consolidation is that a separate leasehold redemption fund will be rendered unnecessary and the trustees will be enabled under the terms of the new trust deed to reinvest the securities held in the leasehold redemption fund for the benefit of the company. The debenture stockholders benefit from the increase in income, and have only the remote disadvantage of missing a potential capital appreciation on their old stocks if a substantial fall in world interest rates occurs in the next twenty years. The ordinary shareholders benefit, seeing that, as against the increase in debenture interest and sinking funds of £14,000 a year, ordinary share earnings will be increased by £22,500 a year, by the cessation of yearly contributions to leasehold redemption fund and by the release of interest on that fund. Further, the assets, to secure the new debentures will have to provide cover for only £1,299,356 stock, as against £1,622,953. The company appears to have put forward a fair scheme, which should meet with the acceptance of the debenture stockholders.

The Dalgely Meeting.—An illuminating survey of contemporary conditions in Australia was made by the Hon. E. W. Parker at the annual meeting of Dalgely and Company last week. Mr Parker showed that extended drought had lowered the quality of last year's wool clip, which had perforce been marketed at decidedly low

"Achievement is but another milestone along the highway of progress—the end of the journey lies ever beyond."
THE CHATWOOD TRADITION.

Knowledge

It is one of the tragedies of this life that we accumulate so much knowledge which appears to be of little direct value to us.

The value of knowledge lies in its application, although material currency is not always its reward.

Those who utilise their knowledge to amuse the world appear to receive more than the statesmen who control its destiny, but the payment is not in the same currency.

The leader of men has knowledge, sound judgment, and a love of work. To him achievement and the knowledge that the world is better for his labours is ample payment.

It is applied knowledge that is the all-important factor in The Chatwood Security. The design is the result of knowledge acquired during an experience of three-quarters of a century.

prices. Last March the extraordinary price of 6½d. per lb. was reached at Wellington, New Zealand. Australia's "wool cheque" in 1929-30 was £39,054,959, which was no less than £30,284,479 below that for the 1928-29 season. Taking New Zealand and Australia as one unit, each bale brought an average of £13 2s. 2d., a falling off of £8 8s. 4d. on the previous year's figures. A loss of £30½ million, spread over a population of over 6,000,000 in Australia, was extremely formidable, particularly as it coincided with a big drop in wheat prices. Last year, the chairman declared, a return of 4s. 2d. per bushel was unsatisfactory to the grower; to-day, however, the market level may be below 3s. per bushel. Mr Parker stated that the carry-over of 108,318 bales of wool, at the end of last season, included 70,000-odd bales disposed of in Brisbane in July, reducing the actual carry-over to 38,000 bales. Australia's 1929-30 wheat crop, at 126½ million bushels, had shown a decline of 33½ million bushels as compared with 1928-29. The Australian manager of the company had cabled, however, that a crop of at least 200 million bushels was assured for this season. The extent to which the falling off in the wool clip, the drop in the wheat crop, and the fall of world prices have contributed to Australia's present difficulties will be readily apparent from these figures.

Rhenish-Westphalian Electricity Company.—The Rheinisch-Westfälische Elektrizitätswerk (R.W.E.), Germany's largest public utility company, has maintained a 10 per cent. ordinary dividend this year on an increased capital. The concern has expanded enormously in the last two years. Its output of current has risen from 1,449 million k.w.h. in 1927-28 to 2,782 millions in 1929-30, exclusive of the output of affiliated concerns, which bring the total to 3,500 million k.w.h. In the absence of depression this year the company's output would have been, probably, about 220 million k.w.h. higher. The R.W.E. supplies a long strip of territory in western Germany, extending from the Ruhr to the Rhine and from Württemberg to the Alps. The power stations, with an aggregate capacity of 1,000 million k.w., have three sources of supply. The R.W.E. possesses power stations in the Ruhr which are situated on its own coal mines, the Goldenbergwerk station, near Cologne, supplied with lignite from the Rhine Valley, and two large water-power stations recently erected in the Vorarlberg. The Ruhr is connected with the Alps by a line almost 1,000 kilometres long carrying 220,000 volts: The system was completed in April, 1930. The construction of this system and the affiliation of numerous electricity companies have called for the expenditure of large capital sums. Most of the works are now completed, and further new construction on a large scale will be undertaken only if trade improvement results in a further heavy increase in the demand for current.

Consolidated Gold Fields.—On each of the past two occasions, writes our mining correspondent, the announcement of this company's dividend has been preceded by pessimistic rumours, and each time these have been falsified by events. It is true that the profits for the year ended June 30th last fell appreciably below those for the preceding period. Nevertheless, having regard to the conditions which have prevailed, they are better than

could have been expected, and permit the payment of 7½ per cent., or 1s. 6d. per share, instead of the "nothing to 1s.," which had been suggested in some circles. The dividend falls to be paid upon a capital increased by the absorption of two allied undertakings. The results of the past three years are summarised below:—

* Gold Fields Company. Other figures relate to the New Consolidated Gold Fields.

Depreciation to date has been dealt with by the transfer, on the part of the New Consolidated Gold Fields, of £300,000 from reserve, reducing that entry to £606,050. The expansion in the investments is, of course, accounted for by the amalgamation already referred to. A feature is the strength of the financial position. On June 30th the surplus cash assets, allowing for dividend requirements, amounted to £1,200,000. The current quotation of Gold Fields ordinary shares is just over 20s.

The "Johnnies" Meeting.—In the unavoidable absence of Mr S. B. Joel, the annual meeting of the Johannesburg Consolidated Investment Company, of which a full report has been received by cable, was presided over by Mr W. S. Webber. In the course of his remarks, the chairman emphasised the improvement in South Africa of the company's gold-mining interests, and in this connection he expressed the hope that the Government Commission would prepare the way for such a reduction in costs as would permit the working of large areas of low-grade ore which would otherwise be lost. The present ample supply of native labourers was due to temporary conditions, and did not obviate the need for fresh sources of supply. After throwing a needed light upon the position at the Potgietersrust Platinum, Mr Webber dealt with the important question of the diamond trade. This he described as "exceptionally sound," and pointed out that the Union Government, although not a party to the new sales agreements, intended to limit its own sales proportionately to those of the companies concerned. Referring to copper in Northern Rhodesia generally, and to the N'kana mine of the Bwana M'Kubwa company in especial, Mr Webber stressed the progress which had been made and the favourable working conditions.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Royal Bank of Scotland, Johannesburg Consolidated Investment Trust, Charterhouse Investment Trust, Trans-Oceanic Trust, Consolidated Tin Smelters, India Rubber Gutta Percha and Telegraph Works, Wall Paper Manufacturers, Anglo-Ecuadorian Oilfields, Peter Walker (Warrington) and Robert Cain and Sons, and Timothy Whites (1928). Discussing the immediate trade outlook, Sir Arthur Marshall pointed out at the Charterhouse Investment Trust meeting that the fall in the price of raw materials and in the wholesale prices of commodities had in some cases reduced values to the 1914 level, while in others, such as cotton, wool and rubber, prices were actually lower than in pre-war days. At the annual meeting of Peter Walker (Warrington) and Robert Cain, the chairman said that during the years 1925-30 alone they had expended on the improvement of 380 houses a sum of approximately £370,000. At the Wall Paper meeting, Mr A. V. Sugden referred to the board's policy of linking up, with the direction of the business, young and progressive men who had made their mark as managers, and the resulting strong element of "younger blood" on the board.

CAPITAL ISSUES.

The numerical majority of the week's new issues have taken the form of private "placings," under conditions which are described on page 1018. Among "public" borrowers, the *Central Electricity Board* has offered £6,000,000 stock, giving a flat yield of £4 14s. 3d. per cent. and a redemption yield at the earliest maturity of £4 17s. 9d. per cent. The earlier issues of this borrower (made in May, 1929, and January, 1930) were floated on a redemption yield basis of 5.18 per cent. and 5.27 per cent. respectively, the present operation thus being much the cheapest since the board's inception. The stock is not a Trustee issue, but its appeal to the long-term investor—presuming a further decline in the trend of general interest rates—is undoubted. The issue was heavily oversubscribed. The *New Goldfields of Venezuela* debenture issue is a speculative proposition, of a nature somewhat inappropriate to present capital market conditions.

Central Electricity Board.—Issue of £6,000,000 Central Electricity 4½ per cent. stock, 1951-73, at £95½ per cent., to rank *pari passu* with the existing 4 per cent. stock, 1959-89, and 5 per cent. stock, 1950-70, as a first charge on the net revenues of the board. The present issue will be redeemed by means of a sinking fund commencing not later than 1937, to be applied in the purchase of stock when the price does not exceed par. Any stock not previously redeemed will be repaid at par on January 1, 1973, but the board reserve the right to redeem at par at any interest date on or after January 1, 1951, on three months' notice. The proceeds of the issue will be used to provide further funds for the construction and acquisition of main transmission lines, the cost of standardisation of frequency, and other authorised purposes.

New Goldfields of Venezuela.—Issue of £130,000 7½ per cent. first mortgage debenture stock at par. The company may purchase debenture stock in the market at any price less than par; and reserves the right to redeem any of the outstanding debenture stock at a premium of £5 per cent. at any time after December 31, 1931, on three months' notice. Any stock outstanding will be redeemed at par on December 31, 1935. Option certificates will be issued with the stock conferring the right at any time on or before December 31, 1933, to subscribe at the price of 5s. per share for four shares of the company for every £1 of debenture stock allotted. The company was formed in November, 1926, to acquire gold-mining concessions in Bolivar.

Tunbridge Wells Gas Company.—Issue by tender of £25,000 5½ per cent. perpetual debenture stock, minimum price of issue £105 per £100, yielding at that price £5 4s. 9d. per cent. The net revenue of the company for the year ended December 31, 1929, was £27,818, covering interest on the loan capital, including the present issue, more than five times.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction:—**Manchester Brewery Company.** Particulars of an issue of £650,000 5½ per cent. guaranteed mortgage debenture stock at £98 per cent. **Auckland Electric Power Board 5 per cent. 1951 Loan.** Particulars of an issue of £100,000 in debentures to bearer of £100 each. **Rhodesia Land Bank.** Particulars of an issue of £225,000 5 per cent. guaranteed debenture stock, 1940-60, repayable at par on December 1, 1960. **Aberdeen Trust Company.** Particulars of an issue of £200,000 5 per cent. redeemable debenture stock, 1960. The company was incorporated in Edinburgh in July, 1911, and carries on the ordinary business of an investment trust. **Colony of Sierra Leone.** Particulars of an issue of £202,500 4½ per cent. stock, 1955. Trustees are authorised to invest in this stock.

[Other Stock Exchange information, including the latest reports and notices, weekly traffic returns, dividend announcements, oil outputs and profit and loss figures will be found on page 1035 under the heading "Company News."]

NEED FOR ECONOMY AND REDUCED TAXATION.
THE DUKE OF BUCCLEUCH'S SPEECH.

The annual general court of proprietors of the Royal Bank of Scotland was held at Edinburgh on Wednesday, November 26th, His Grace the Duke of Buccleuch, K.T., Governor of the Bank, presiding.

In moving the adoption of the report, His Grace said :—
I presume it will be your pleasure that the annual report and balance sheet with the auditors' report, which have now been in your hands for some days, shall be taken as read. The directors are pleased again to submit a statement of so satisfactory a character, evidencing as it does the important developments which have taken place during the year.

INCREASED DEPOSITS. WESTERN BRANCH, LONDON.

The deposits and other credit balances show an increase of over four million pounds—the total now topping the fifty million point. Knowing of our recent acquisition from the Bank of England of the private business conducted by them at their Western Branch in Burlington Gardens, London, you would, no doubt, be prepared for a substantial increase, but various circumstances have contributed to the large addition. It is gratifying to record that the transfer referred to has been attended with a full measure of success. I am again glad to report that the introduction of the system of small deposit accounts and home safes has been justified in every way, the figures being still on the increase from week to week. Our note circulation is well maintained, there being a slight increase over last year's figures. Acceptances show a reduction, reflecting the condition of foreign trade.

LIQUID CONDITION: INVESTMENTS.

On the assets side the strong liquid position to which you are accustomed is again well sustained. There is a large addition to our investments in British Government securities—the total holding being nearly £14,000,000—arising from the increased resources of the bank; whilst consistently with our policy of keeping a good bill portfolio, bills discounted amount to considerably over £8,000,000—including £2,740,000 of British Government Treasury bills.

ADVANCES.

For the first time for a period of years the advances on cash credit and current accounts are slightly down, at nearly £22,000,000. This amount is substantially within the ratio which good banking practice permits in relation to deposits, and the decrease has no special meaning except perhaps as an indication of the slackness of trade; but when handling such large sums there must always be considerable fluctuation. It is satisfactory from the point of view of our trading and manufacturing friends to note that we have resources available for further advances on a considerable scale on sound banking lines for the long-looked-for trade revival.

PROFITS.

The margin of banking profit has not been so good as it might have been, taking the year as a whole. The volume of our business is, however, always growing, and I am glad to say that we are able to show a substantial increase in our net profit. This is all the more satisfactory seeing that under our arrangement with the shareholders of Williams Deacon's Bank, Ltd., we have to pay them at Christmas a full half-year's dividend on the new stock issued to them. A certain amount of dividend has accrued upon the shares acquired from them, but this has not been taken into account in arriving at the profits of the year. Next year, the position will be quite different, as we shall receive a whole year's dividend, payable in January and July, and be responsible in like manner for a full year's distribution on the corresponding amount of stock issued.

APPROPRIATIONS.

Bank buildings and pension reserve fund have received the customary appropriations, and after providing a dividend at the

same rate as last year on the largely increased amount of capital stock, there remains a sum of over £70,000 which has been carried to rest.

LARGE ADDITIONS TO CAPITAL AND RESERVES.

I went so fully into the subject of the acquisition of the shares of Williams Deacon's Bank, Ltd., at the special general court held on August 20th last, and my remarks on that occasion received so much publicity in the press, that I do not propose to say more to-day than to refer you to the report in your hands which shows that the Royal Bank's offer was accepted by all but a few of the shareholders, and I may add that we quite expect to acquire the whole capital within a relatively short period. The full effects of this operation and the disposition of the premium upon the issue of new stock, which was computed for the purpose of the purchase at 345 per cent., are set forth in the report, which shows that after writing down the value of the shares and contributing materially to the strength of the inner reserves of the bank, sums amounting to £800,000 are available as additions to the rest or reserve fund. On completion of the transactions set forth in the report the capital of the bank will appear as £3,770,344 fully-paid, and the rest will stand at £3,780,926.

WILLIAMS DEACON'S BANK, LIMITED.

The year has been an outstanding one in the long history of the bank. As I have said, the shareholders of Williams Deacon's Bank have, practically as a whole, evinced a desire to become associated with this institution, which is all to the good, as the great majority of them are resident in the districts from which Williams Deacon's business is drawn. The customers and other connections of that bank have accepted the new position, which really involves no change so far as they are concerned, in the most agreeable way. There has been no disturbance of business. On the contrary, we trust that the new association may lead to increasing connections for both concerns and result in a forward movement both in the north-west Midlands and in London. In looking for the fruits of a development such as this, it is the long view that we must take, and await that gradual recovery of trade which is so much desiderated by all.

TRADE DEPRESSION AND THE REMEDIES.

We are passing through a period of world-wide depression on an unexampled scale. Much has been spoken from the platform and written in the press, and many specifics have been put forward for dealing with this situation. Without trenching on political and controversial topics, which would be out of place here, one may venture to mention certain remedies which seem to be not only necessary but obvious, however old-fashioned they may look. First and foremost, I would put the urgent need for public economy and the reduction in the burden of taxation, imperial and local, which is weighing heavily upon all enterprise and by diminishing available funds is hindering the making of adequate provision for grasping the earliest opportunities of reviving trade when the proper time arrives. Much of the growing expenditure of the present time is not merely wasteful. It is demoralising. It is essential that the seriousness of the country's position should be realised so as to bring home the necessity for proper measures being taken to face with determination what is tending to become a national emergency. But this does not mean that we are to give way in any degree to pessimism or to cease for a moment to believe that, as has happened again and again in our past history, the time of recovery will come. This country greatly needs better methods and equipment, harder work, and something of the spirit of co-operation and of sacrifice which prevailed during the war. By such means, and by the return of confidence and of that sense of security which is essential to all trading enterprise, we should be in a position to bring about the lowering of our costs of production, and thus

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

enable British goods again to compete successfully in the markets of the world.

THE DIRECTORATE.

Suitable notice is taken in the report of the loss sustained by the death of Mr Maconochie, our senior director, who not only rendered valuable service to the bank, over a long period, but by his personality endeared himself to all his colleagues. As you know, part of the arrangement with our friends of Williams Deacon's Bank was that two members of their board should join the court of directors of the Royal Bank and, as you will observe from the report, the directors recommend the election of Mr Dewhurst, the chairman of that bank, and Lord Bradbury, one of their directors. In order to admit of this it is necessary to increase the number of our ordinary directors from nine to ten, and a motion to this effect will come before you at a later stage of this meeting. I am confident that these arrangements will meet with the unanimous approval of the stockholders. Steps are being taken for the appointment of three representatives of the Royal Bank as directors of Williams Deacon's Bank.

The stock of the bank which has hitherto been officially quoted on the Stock Exchanges of Edinburgh, Glasgow, and London, is now also quoted in Manchester.

THANKS TO OFFICIALS AND STAFF.

The directors desire to express their thanks to the officials and members of the staff at head office, London—the City and West End offices, Glasgow and Dundee, and all the other branches for their loyal and willing co-operation.

I again desire to place on record our high appreciation of the valuable services which Sir Alexander Wright, the general manager, has rendered to the bank. Our thanks are specially due on this occasion in connection with the important developments which have taken place during the year, which have necessarily thrown on Sir Alexander a large amount of extra work.

As stated in the report, Mr Adshead has resigned the position of secretary after long and valued service, and we desire to extend our cordial good wishes to him in his retirement.

APPROVAL OF ACCOUNTS: DIVIDEND.

With these observations, I beg to propose that the report now submitted, containing a statement of the accounts and balance sheet, be approved, and that out of the profits of the year a dividend at the rate of 17 per cent. per annum for the half-year, under deduction of tax, be now declared in conformity therewith.

The report was approved, the two new directors elected, and the governor, deputy-governor, extraordinary directors, and the retiring ordinary director were re-elected, and auditors were reappointed for the ensuing year.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

THE TRANS-OCEANIC TRUST, LIMITED.
SATISFACTORY RESULTS IN A DIFFICULT YEAR.

The third ordinary meeting of the Trans-Oceanic Trust, Ltd., was held, on the 27th ultimo, at the company's office, 41 Threadneedle Street, London, E.C.

The Hon. W. B. L. Barrington (the chairman), said :—Gentlemen, The gross revenue, consisting of dividends actually received, underwriting commission and transfer fees, totals £84,157, an increase of £4,879 over the previous year's figure.

Full details of expenditure are shown on the debit side of the revenue account, and the various items, with the exception of bank and debenture interest, show little change as compared with the corresponding amounts of the previous year. It is, of course, unnecessary for me to state that the increases in bank and debenture charges are the natural outcome of a growing company.

The surplus revenue, including the amount brought forward from the previous year, is shown in the appropriation account, and amounts to £51,512. From this figure must be deducted : Payments made in May last in respect of the interim dividends of 2½ per cent. on both the preference and the ordinary stock, totalling £19,375; "subsidiary depreciation reserve," £10,540, to which I shall refer later; and "debenture stock discount and issue expenses," totalling £2,202, which need no explanation.

After appropriating the sums enumerated above, your directors recommend that of the balance of £19,395, the sum of £19,375 should be utilised for the payment of final dividends of 2½ per cent., less tax, on the preference and ordinary stocks, bringing the total distribution on each class of stock up to 5 per cent. for the year, and leaving £20 to be carried forward.

Revenue, after deducting all expenses, including "debenture interest" and "preference stock dividend," was at the rate of 8.69 per cent. on the ordinary stock.

BALANCE-SHEET ITEMS.

I would now draw your attention to the balance sheet. Taking the liabilities first, "issued share capital" remains unaltered at £1,000,000. "Debenture stock" shows a small increase of £8,238. "Bank overdrafts" amount to £95,709 against nil for the previous year. These changes reflect the policy which your directors adopted of taking advantage of low interest rates for bank loans in financing the purchase of certain additional investments instead of attempting to finance these purchases by forcing the Trust's debentures at reduced prices on a somewhat disinterested market. It was felt that low money rates would eventually result in a renewed demand for investment trust debentures. This policy has already proved justified. Since the close of the financial year under review, £33,000 additional debentures have been sold, and owing to the obvious attractiveness of the security we do not anticipate any difficulty in placing the remainder in due course.

The other liabilities as shown by the balance sheet, "Purchases made for future delivery," and "Sundry creditors," require little explanation. The latter consists entirely of reserves for income tax and the audit fee.

On the other side of the balance sheet, the book value of our chief asset, "Investments," exceeds the previous year's figure. The report contains full details of the holdings and other particulars as to analysis, distribution, etc., and therefore I will confine my remarks to values.

You will recall that last year, when addressing you, I referred at some length to the abnormal conditions then prevailing. Depression has since become intensified—and as a result, a valuation of the investments of your company taken as at October 31st last, showed, after deduction of all reserves, a depreciation of 14.31 per cent. The remaining assets, "Sales for future settlement," "Sundry debtors," and "Debenture discount and issue expenses," are self-explanatory.

As the analysis which I have just given you reveals, your company, in common with all investment trusts, has passed through a most difficult year, but when the universal extent of the political and economic disturbances are taken into consideration I believe you will agree that the final results are not unsatisfactory. The depreciation of the securities held by the subsidiary on October 15th last has been written off so that this company is now well placed to take advantage of any revival of interest on the Stock Exchange.

Whilst your board are hopeful that the depression which has now lasted over 18 months may be nearing the end, they are also aware that general recovery must be slow. There will possibly be several false starts and in times such as these we must not allow fluctuating investment valuations to overshadow the fact that orthodox investment trusts must be judged primarily by their earning power.

The results of your company to date satisfy this test, and from estimates calculated on a conservative basis we hope in November next to be able again to report a satisfactory income.

The report and accounts were unanimously adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED.

EXCELLENT GOLD MINING RESULTS.

STRONG FINANCIAL POSITION.

COPPER DEVELOPMENTS IN RHODESIA.

MR W. S. WEBBER'S REVIEW OF POSITION AND PROSPECTS.

The Johannesburg Consolidated Investment Company, Ltd., announces the receipt of the following cabled report from Johannesburg of the proceedings at the annual meeting of shareholders held on November 25th, at which Mr W. S. Webber presided.

The Chairman said:—I am sure that you all share with me in regretting that our permanent chairman, Mr. S. B. Joel, has not been able to preside at this meeting. As you know, Mr Joel has passed through a very severe illness since we last met; happily, he has made an excellent recovery and he has come out to South Africa to escape the rigours of the English winter and is now in Cape Town. I was a fellow-passenger of his on the voyage out, and am pleased to be able to inform you that he has benefited very much by the change of climate, and that when I left Cape Town less than two weeks ago he looked quite his old self.

Throughout his convalescence, and even on the voyage out, Mr Joel continued to keep in very close and active touch with the affairs of this company, and on his arrival in Cape Town he was met by your general manager, Mr Crosby, with full material for this speech. He was very anxious to preside at this meeting, but his doctors thought that it would be unwise for him to make the long railway journey at this time of the year. You will be pleased to know that the progress of his health is such that he looks forward with eagerness and confidence to presiding over you at our next annual meeting. I am sure that you will wish me on your behalf to promise him a very hearty welcome.

The report and accounts for the year ended June 30th last were unanimously adopted.

The net profit for the year was £565,193. Dividends paid totalled £592,500, and the balance carried forward was £154,190.

A PERIOD OF UNEQUALLED DEPRESSION.

The Chairman explained that it was merely on account of abnormally heavy depreciation that the net profit did not greatly exceed that of the previous year, and said the world was experiencing a period of depression unequalled in memory of living men. South Africa did not feel this depression until much later than other countries, and even then not to such an acute degree. This was due entirely to the fact that the gold mines had been worked to full capacity, and that demand and price for products had not been affected as in the case of other commodities. As an investment company with large interests in diamonds and base metals the company was bound to feel the effects of the world-wide depression, but on the whole the position disclosed in the accounts was a matter for congratulation.

The strong financial position of the company has been maintained. The company's holding in new interests in Rhodesia, referred to last year, had been substantially increased. The book value of the assets, £6,331,914, showed a surplus of £5,104,190 over liabilities to the public.

SATISFACTORY YEAR FOR GOLD MINING.

Dealing with the gold-mining industry, the Chairman said the year had been very satisfactory and a record gross profit of £4,794,480 had been earned by the gold mines of the group. The group hold the premier position of profit earners on the Rand for the year. The total profit of the Witwatersrand for the year was £12,695,088, of which the group's proportion was 38 per cent. The mines of the group were responsible for over a quarter of the Rand gold output. The group's working costs were 18s. 6d. per ton, and the group's average cost per fine ounce was 53s., a reduction of 11d. per ounce over last year. Dividends for the year ended June 30, 1930, from the group's gold-mining companies were £2,138,548. The total dividends from the present producing companies of the group from their inception amount to £30,749,260. The amount paid to the Government in respect of leased areas was £1,837,683 for 1929, compared with £1,794,859 in 1928.

IMPORTANCE OF GROUP'S MINES TO SOUTH AFRICA.

The chairman emphasised the importance of the group of mines to South Africa by stating that during the twelve months ending

June 30th £3,463,614 had been paid in wages and £3,392,506 in stores. In addition, £241,736 had been expended on capital account, practically the whole of which represents wages and stores. Approximately one-third of the figures mentioned had been spent on Randfontein Estates, a mine existing on low-grade ore, which during the four years 1926 to 1929 had expended £9,585,621, of which £4,571,168 was wages and £3,954,746 stores, nothing being distributed to shareholders. It was hoped that the Government Commission now sitting would prepare the way for such a reduction in costs as would enable large areas of low-grade ore which would otherwise be lost to be worked at a profit.

MOZAMBIQUE CONVENTION.

One of the chief reasons for the excellent results was that the native supply had been satisfactory and stable during the year, proving the truth of the statement made by the Government Interdepartmental Committee that an adequate labour supply was essential not only to make possible the most economic mining, but also to derive the greatest quantity of gold from the mines.

Referring to the Mozambique Convention, the chairman said that, owing to restriction of period of service and opportunities for re-engagement provided for in the Convention, it had not been possible to maintain the number of East Coast natives allowed. The present plentiful supply of natives was accounted for by British South African natives coming forward to mines more readily, but this must be considered temporary, as due to the general depression in other industries, with consequent decreased demand for native labour, and low prices obtainable by natives for their agricultural products. When the general economic conditions improved a decrease must take place in the number of British South African natives employed, and with the reduced number of East Coast natives coming forward, unless Government granted permission for fresh sources of supply for recruiting, a serious shortage of native labour on the gold mines must follow. Mechanization was being carried out to a great extent on the mines; drilling was almost entirely done with machines; handling ore underground by mechanical methods was coming into more general use to overcome periodical shortage of natives, but this would not overcome the necessity for a large and stable native force on which the industry depended.

GOVERNMENT GOLD MINING AREAS (MODDERFONTEIN) CONSOLIDATED, LIMITED.

In 1929 2,416,000 tons were crushed. The amount paid to the Government under its lease was £1,448,863. Dividends totalling 90 per cent. and absorbing £1,280,000 were paid to shareholders. The operations during the current year continued on a similar scale, and a dividend of 45 per cent. was distributed in June last. The ore reserves at the end of 1929 were estimated at 10,876,000 tons of an average value of 8.9 dwt. over a stoping width of 63 in.

NEW STATE AREAS, LIMITED.

The results for 1929 constituted a record, and operations were in every way satisfactory. Working costs showed an improvement of 2d. a ton and the yield 7d. a ton. Dividends totalling 12½ per cent. were paid to shareholders, absorbing £189,255. A sum of £384,974 was paid to the Government under its lease. The monthly profits for the current year showed a progressive improvement, the first ten months averaging £75,125. A dividend of 7½ per cent. was declared in June last. The improved results reflected the very sound position of the mine, and the future was contemplated with every confidence. The ore reserves at the end of 1929 were estimated at 2,696,000 tons, with an average value of 8.9 dwt. over a stoping width of 50 in.

VAN RYN DEEP, LIMITED.

Seven hundred and forty-eight thousand tons were crushed in 1929, resulting in a working profit of £502,217. An amount of £418,912 was distributed to shareholders, equalling 35 per cent. A dividend of 15 per cent. was declared in June last. The ore

reserves were estimated at the end of 1929 to amount to 3,022,000 tons, with an average value of 7.3 dwts. over a stoping width of 50 in.

WITWATERSRAND GOLD MINING COMPANY, LIMITED.

Six hundred and forty-one thousand tons were crushed during 1929, resulting in a working profit of £15,347. A dividend of 2½ per cent. was declared in 1929. The gross profit for the first six months of the current year totalled £32,702, enabling the company to declare a dividend of 5 per cent. in June last.

LANGLAAGTE ESTATE AND GOLD MINING COMPANY, LIMITED.

During 1929 968,500 tons were crushed, showing a working profit of £311,832. Dividends totalling 15 per cent. were distributed to shareholders. The results for the current year showed an increase over 1929, enabling a dividend of 10 per cent. to be declared in June. The ore reserves at the end of 1929 were estimated at 1,596,000 tons, with an average value of 7.4 dwts. over a stoping width of 42 in.

RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED.

During 1929 2,528,000 tons were crushed, resulting in a working profit of £246,705. The results for the current year showed a decided and progressive improvement. Excellent progress was being made with sinking the old Randfontein Deep shaft, which was expected to reach its final depth in April next and to be brought into commission in the latter half of the year. This shaft would greatly facilitate the working of the Main Reef section of the mine. The reefs in the main section had a steep dip, approximately 60 degrees to the east, but recent development indicated that a progressive flattening might be expected in depth, having the effect of adding very considerably to the economic life of the mine. The outlook was better than it had been for years past. The expenditure on debenture redemption and interest was drawing to a close; the final sum of £47,000 was payable in March, 1933. Taking this expenditure and capital charges in connection with the Randfontein Deep shaft into account, the chairman stated that if no unforeseen circumstances arose the company would re-enter the dividend list next year. The ore reserves at the end of 1929 were estimated at 4,505,000 tons, of an average value of 5.8 dwt., over a stoping width of 41 in.

COAL.

For the financial year ended September last, the New Springs Colliery and the Consolidated Collieries distributed dividends of 5 per cent. and 8½ per cent. respectively. The output of the Natal Cambrian showed an increase over the previous year.

SOUTH AFRICAN CARBIDE AND BY-PRODUCTS COMPANY, LIMITED.

The production of excellent grade carbide was maintained, and sales were increasing. The debt to the company had been liquidated, and a distribution would shortly be made to the cumulative preference shareholders.

COPPER.

Copper had not escaped the severe and rapid decline in price of commodities now being experienced, and the price was now the lowest known for many years, being little more than half the value of a year ago. From 1900 up to a year ago the price had averaged over £70 per long ton, the average annual price never having been below £54. These figures emphasised the severity of the present depression. Few copper companies were making a profit at present and a considerable amount of copper was being produced at a loss. If there was no improvement in consumption and price within a reasonable time many companies now producing must cease production.

Last year the chairman reviewed the copper outlook of Northern Rhodesia in detail, and in the light of recent progress his considered opinion that conditions generally would be favourable to cheap production and that no undue difficulties were to be expected in mining and metallurgy and native labour supply had proved correct.

WORK AT N'KANA MINE.

The company's consulting engineer visited the copper fields recently and an up-to-date impression was therefore possible. Rapid progress had been made in actual construction work; native labour supply was satisfactory; surface construction work at N'Kana mine, belonging to Bwana M'Kubwa Copper Company, in which this company was particularly interested, was well advanced. Since the railway reached the property in May last progress had been rapid and sufficient underground work was completed

to indicate what mining conditions might be anticipated. The particular ore body being developed was a stratified deposit with strike of 8,000 ft., average width 27 ft., average dip 45 degrees, copper content, which averages 4.3 per cent. Noticeably regular deposit. Development was proceeding rapidly on 300-foot and 450-foot levels, and the 600-foot level would be started shortly. This development had exposed an ore body in many places, and the information gained fully confirmed the estimates of value and width made from borehole data.

The ore body itself and country rock in the vicinity was of medium hardness, compact and readily drilled and easily broken. Development work and excavations for pumps, &c., needed no support. A moderate amount of water only had been tapped. The cost of developing the ore in ore body, which was all payable and had a width of 27 ft., was small. Rock breaking under the same conditions was simple and cheap. Trimming along good haulages direct from stopes boxes to shaft bins was an ideal condition, and hoisting and pumping from shallow depth, which would obtain for many years to come, would be small items.

LOW UNDERGROUND COSTS INDICATED.

Conditions were all favourable and indicated very low total underground costs. A pilot reduction plant having a capacity of some 7,000 tons of sulphide ore per month had been operating for some time with very satisfactory results. High percentage extracts had been obtained and rich concentrate containing over 50 per cent. copper produced. The ore was easy to crush and grind: crushing and grinding units thus having good capacity at moderate power consumption. The ore responded readily to flotation process with low consumption of chemicals, consequently the cost of crushing, grinding, and concentrating would be very low.

In the large-scale plant, in spite of geographical position, production and marketing costs would be substantially below average world cost, and in course of time the Rhodesian copper industry would compare favourably with the most favoured low cost producers. The present indications were that one large mine would be in full production well before the end of 1931, and the N'Kana mine would be into its stride within the first few months of 1932.

PRODUCTION IN 1931.

The present low price was a matter of concern to all copper mines, but low cost producers might look forward to the future with every confidence. It had been fully demonstrated that Northern Rhodesia could if need be meet the unlikely contingency of even lower prices, and in the near future would be in a position to take full advantage of a recovery towards normal.

World conditions demanded an ever-increasing amount of copper, and the consensus of opinion was that approximately an additional million tons would be required annually in ten years' time. In the light of past years' development and experience there was no need to modify the opinion expressed at the last annual meeting that copper discoveries in Northern Rhodesia constituted the greatest base metal development the world had experienced for years past, and that the company's investments in copper would be of great value to the company.

POTGIETERSRUST PLATINUMS, LIMITED.

The pilot plant at Potgietersrust, having fulfilled its object as an experimental unit for the study of metallurgy of platinum, was shut down in May, as owing to a considerable drop in the price the plant was not large enough to produce platinum at a profit. In January the reduction plant at Rustenburg was put into commission—first the gravity section, and subsequently in May the flotation plant, which was designed to treat the tailings from the gravity section. As originally designed, the plant produced crude platinoids and concentrates, which later were sent to the company's chlorination plant on the Government Areas property. Owing to the low price now obtained it was unprofitable to treat gravity tailings by flotation and subsequent chlorination; therefore it was decided to close down this section of the plant, the flotation plant during August and the chlorination plant during October, when the whole of the accumulated concentrates had been converted into crude platinoids.

With the closing of this section it was decided to rely on production of crude platinoids only, and to augment the output of this product as far as possible 40 additional stationary corduroy tables were added to the gravity section. When prices increased, the flotation and chlorination sections could be restarted at short notice. As at present constituted the plant was capable of dealing with 10,000 tons of oxidised ore per month, of which there was an adequate supply available. The entire production was now in the form of crude platinoids, which were dispatched to Messrs. Johnson,

Matthey and Company, who had been refining and selling the company's product. Throughout the year the company had been able to work profitably at present prices of the metals; costs had been reduced to a low figure, and it was anticipated that further economies would be effected, together with improved extraction. The Canadian output was a by-product from nickel-copper mining, but apart from Canada it was doubtful if platinum was being produced profitably elsewhere. Platinum, along with other commodities, would benefit with a return to normal world conditions.

POSITION OF DIAMOND TRADE.

It was only to be expected there should be a distinct falling off in the demand for diamonds in consequence of the financial crisis in America, and the real revival in the trade must run concurrently with the passing of the general depression, but he wished to emphasise that the intrinsic position of the diamond trade was exceptionally sound. They would have noticed from the statement recently made by Mr. Fourie, Minister of Mines, that a new interproducers' agreement and new sales agreements were in course of preparation; these would take the place of the existing arrangements which terminate by effluxion of time at the end of the year.

It was important to remember that the Minister stated that the Union Government, although not becoming a party to the agreements, intended to limit its own sales of diamonds proportionally to the sales of the companies named—namely, De Beers Consolidated Mines, Limited, New Jagersfontein Mining and Exploration Company, Limited, Premier (Transvaal) Diamond Mining Company, Limited, and Consolidated Diamond Mines of South-West Africa, Limited; further, that when selling diamonds to South African cutters, to charge prices which worked out on a parity with London prices and assortment, so as to avoid the possibility of unfair competition; and, further, that the Union Government's sales other than to South African cutters would be made only to the syndicate.

PURPOSE OF THE DIAMOND CORPORATION.

He might mention that in authorising the conclusion of the new agreements the Minister of Mines gave his approval to their being ceded to the Diamond Corporation at a later date. The chairman explained the purpose for which the Diamond Corporation was formed. In the first instance it was confined to the purchase of outside diamonds, but it was now proposed to increase its capital and extend its operations to the purchase and sale of all diamonds, both producers' and outside. The members of the Corporation were:—De Beers Consolidated Mines, Limited, New Jagersfontein Mining and Exploration Company, Limited, Consolidated Diamond Mines of South West Africa, Limited, and the present members of the Diamond Syndicate.

The importance of the announcement by the Government referred to was that the control of diamonds had once again been established, and that the Government were co-operating with producers in maintaining and stabilising the diamond trade. With that co-operation, now that the Lichtenburg danger had passed, and the alluvial production was again normal, while Namaqualand production was jointly in the hands of the Government and the Diamond Corporation, it would be seen that stability of trade was greater than ever before, and the industry might look forward with confidence to the resumption in demand for diamonds.

SOUTH AFRICAN BREWERIES, LIMITED.

The South African Breweries Company was again able to announce a record year, with increased dividend to 17½ per cent. The company was in an excellent position, with capital ample for its requirements, and looked forward with confidence to continued expansion of its activities throughout South Africa.

The Chairman referred with great regret to the loss sustained by the directors in the death of their colleague the Earl of Birkenhead.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

INDIA RUBBER, GUTTA PERCHA AND TELEGRAPH WORKS COMPANY, LIMITED.

IMPROVED OUTLOOK.

The 67th ordinary general meeting of the India Rubber, Gutta Percha and Telegraph Works Company, Ltd., was held, on the 27th instant, at the Cannon Street Hotel, London.

Sir John Ferguson, K.B.E., M.P. (the chairman), said that the directors very much regretted the result of the year's trading and the consequent appearance on the balance sheet of a debit to profit and loss account of £72,161. The gross profit for the year was £96,702, as compared with £208,396 for the previous year. A large proportion of that loss was attributable to the phenomenal fall in the prices of raw materials. The very low figure to which rubber had fallen was well known. As a consequence the values of their stocks had suffered accordingly.

In addition, while sales of Palmer tyres had increased, the cost of selling had been much heavier, resulting in a greater loss for that section of their business. Owing to insufficient turnover the Burton factory again showed a loss. While recording an increase in sales, Persan had not yet returned to a profit-making stage. The 1930 result was approximately £700 worse than that for 1929, due to an increase in their proportion of general overhead expenses.

The profit earned by their foreign branches during the year under review showed an increase of £702, but sales were less owing to the unsettled conditions in the Argentine and depression in India and Australia.

At Silvertown they had again to report a decrease in sales, although the amount of the decrease was not so large as for the previous year. At their Burton works they had to report a lower turnover than for the previous year. The total output of cycle and motor-cycle rims had been maintained, but owing to lower selling prices the turnover had been less.

Taken together, their foreign branches showed an increase in profit over the previous year, the greatest improvement being shown in the New Zealand branch. With regard to Persan, the main features of the year had been an expansion of sales and progress in the modernisation of factory equipment.

BENEFITS OF REORGANISATION.

Two years ago certain changes had been made in the constitution of the board and they had immediately begun to examine the position of every department and section of the business. When they had arrived at a full appreciation of their trading position they had immediately taken steps to put into effect a rigorous scheme of reorganisation. The accounting and clerical sections had been amalgamated; office machinery of the most up-to-date kind had been installed, and the amount of work had been reduced to a minimum compatible with efficiency. In the producing departments unprofitable shops had been, or were being, closed down where it was considered that their products could not be profitably manufactured within a reasonable time.

In all shops efforts were being concentrated on reducing the cost of manufacture. That was being accomplished by the introduction of time- and trouble-saving devices, simplifying the methods of production, and by providing a better incentive for the workpeople to co-operate with them by an extension, wherever possible, of the system of payment by results.

It was not their policy to reduce wages. They believed that the quickest way to reduce the cost of production was to secure the co-operation of their workpeople by allowing them to share in the results effected; that was to say, that lower cost of production and higher wages went together. The large number of dismissals which the various schemes of economy had necessitated applied to the clerical staff and not to those engaged on production, whose numbers were actually being increased. They were easing the burden of dismissals as far as funds allowed.

With regard to service to their customers, programmes of work were being arranged at their factories in such a way as to reduce times of delivery, while improvements were being made in their products by the use of better quality materials and better workmanship. Turning to their selling organisation, territories allocated to their various branches were being modified so that they might be worked more economically. Certain branches had been amalgamated in order to reduce expenses, while at the same time the number of salesmen was being increased. The net effect of the changes that had been and were being made in their selling organisation was to reduce the cost of selling, and at the same time increase the strength of their sales force.

The results of the changes that had been made in their selling organisation were already evident. Their sales were increasing on a declining market. Much more had yet to be done, but the results already achieved convinced him that the outlook for the company had very much improved and they were confident that before long they would be employing more workpeople than they were at present.

The report and accounts were unanimously adopted.

CHARTERHOUSE INVESTMENT TRUST, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

The fifth annual general meeting of the above company was held, on the 26th instant, at the Cannon Street Hotel, London.

Sir Arthur H. Marshall (chairman of the company) said:—Practically every item in the accounts reflected the shrinkage in business which the company had to suffer. The only increase is the amount set aside for income tax, and the following figures have been prepared. During the past five years, out of a total trading profit of £903,223, 24½ per cent. had been provided for income tax, 34½ per cent. distributed as dividend, 39 per cent. put to reserve, and 2 per cent. to preliminary expenses. Assessment to income tax was upon previous year's profits; therefore, the tax payable is not necessarily proportionate to the period under review. The company have always provided for this by allocation to reserves. A noticeable feature is that all securities in the balance sheet are quoted, and that their value on November 11th was only 0.73 per cent. below book value. In former years, emphasis had been laid on the fact that appreciation of securities must not be regarded as a potential profit, but as an insurance. One of the worst price collapses in history has found this insurance adequate.

BOARD'S SOUND DIVIDEND POLICY.

To the regret of the directors they have had to recommend a reduction in dividend from 10 per cent. to 7½ per cent., but they felt that it was essential to pursue a cautious policy in these times. The depressing conditions of world trade have continued for so long that the financial conditions of every nation now reflect them. Under such conditions finance houses obviously have to face a very definite restriction of opportunity. However, the fall in the price of raw materials and commodities has now, in some cases, reached or gone below the 1914 level. Manufacturers' stocks have been greatly reduced and a period of cheap money has been reached. It was reasonable, therefore, to anticipate a change of outlook. When a revival comes, as it surely will, capital now in low yielding securities will again be attracted to sound commercial investments. He claimed that, from its past experience and its present financial position, the company was stronger than ever and fully able to take advantage of the general revival.

The report and accounts were adopted.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.

AN ALL-ROUND IMPROVEMENT.

The twelfth annual ordinary general meeting of the Anglo-Ecuadorian Oilfields, Ltd., was held, on the 27th instant, at Winchester House, London.

The Rt. Hon. Lord Forbes, P.C. (the chairman), said that the directors were glad to be able in these depressing times to present a report which was better than that of the previous year. The figures showed an improvement all round. The production of oil was 189,000 tons, as compared with 160,000 tons for the preceding year.

Concentration on shallow drilling had enabled them to maintain, and in fact raise, production—in spite of the fact that the productive volume of these wells was less than that of the deeper ones—because the wells were drilled in about one-fourth of the time. Four crews drilled about the same footage as previously obtained by six. The shallow area was, therefore, especially suitable for exploitation when the sales value of crude oil was low as at present.

In previous years he had mentioned that during the earlier stages before they had a surplus of income over expenditure, the development account for well sinking had mounted to upwards of £500,000. Adopting the view of the value of this wasting asset taken by all the best companies, it was the policy of the board, when it was possible, to write off the expenditure—namely, the wages involved in well sinking in any year—at the end of the succeeding year. This policy was enjoined by the vicissitudes of the business, and to maintain working capital for the sinking of new wells. To reduce the original outlay they recommended that a further special allotment of £23,456 should be placed to the credit of development account, bringing it down to £550,000, that a dividend of 3½ per cent., less tax, should be declared, and that the remaining £77,621 should be carried forward. It would be recognised that this was a conservative handling of the financial situation, but he could not come before the shareholders without alluding to the depressing outlook which at the moment faced the oil industry. There might be in their case exceptional reasons why they should escape some of the worst of the debacle in oil prices, but in the main they must suffer with the rest. At the present time there was no indication whatever of better prices being obtained for oil, in view of over-production of the world and the large stocks which existed. In these circumstances it was essential to conserve the resources of the company. There had been a further increase of sales of refined products in the local market, but this only absorbed a small portion of their production of crude oil.

The report was unanimously adopted.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED.

IMPROVED YEAR'S WORKING.

The ninth ordinary annual general meeting of Peter Walker (Warrington) and Robert Cain and Sons, Ltd., was held on the 24th instant, at Winchester House, Old Broad Street, London.

Sir Charles A. Nall-Cain, Bart., J.P., D.L. (chairman and managing director), who presided, in moving the adoption of the report and accounts, said: The balance of profit for the year is some £750 more than last year. After meeting prior charges there is a balance of £258,005.

To this we add the amount brought forward from last year, £98,104, making £356,110. We have transferred £50,000 to reserve; £56,750 has been paid by way of an interim dividend on the ordinary shares, and there remains an available balance of £249,360. We recommend the usual grant of £5,000 to the staff benefit fund, the payment of a final dividend of 5 per cent., which with tax will absorb £113,500, carrying forward to next year £130,860. All trades in our area have been depressed during the past year, and the spending power of our customers has naturally decreased. Coupled with that, we have had the increased burden imposed on the trade by the Chancellor of the Exchequer in April last of 3s. per standard barrel, the whole of which is borne by the brewer; thus, the year's accounts before you do contain 5½ months of the higher duty. Against this extraordinary burden we have had the benefit of cheaper materials, with the result, already indicated, that we have maintained our profits and strengthened our resources against the leaner times that may be in store.

We have steadily followed our policy of modernising, improving, and rebuilding our houses at a very considerable cost to the company. During the years 1925–30 alone we have, in addition to our large outlays on maintenance and renewals, expended on the improvement of 380 houses a sum of approximately £370,000. This expenditure, as you know, cannot yield immediate profit, for it is true that the improvement of houses and the provision of increased space benefits the public more than it does the brewer.

It will, however, safeguard our interests by entrenching us in the goodwill of the public, on which the continuing prosperity of our business depends. It is common knowledge that improvements and additional space do not mean that more drink is sold, but that more people avail themselves of the facilities both for food and drink which we are able to provide.

The resolution was carried unanimously.

TIMOTHY WHITES (1928), LIMITED.

SATISFACTORY EXPANSION.

TRADING STILL WELL MAINTAINED.

The annual general meeting of Timothy Whites (1928), Ltd., was held, on the 27th instant, at the Hotel Victoria, Northumberland Avenue, London, S.W.

Mr Philip E. Hill, the chairman of the company, who presided, said that the difference in the trading profits for the twelve months of £2,247 was more than accounted for by a mild winter free of epidemics and an unusually wet summer; it was only reasonable to assume that in normal times profits would have been materially increased. When the company acquired the business in 1928, they owned 105 branches. At the end of the coming year, including the 32 branches of Hopes, Ltd., hardware merchants, since acquired, the total number of shops owned by the company would be 176.

The bank overdraft of the Property company had been entirely wiped out, but they still had £211,000 of capital not fully employed, a large portion of which would be in that position until the expansion programme had been completed at the end of the current year. It would be realised that the equipping and opening of a large number of shops had entailed a great deal of work and expense. It was reasonable to assume that under normal conditions 27 of the new branches would have reached profit-earning capacity by the end of 1932, and the balance by the end of 1933.

It would be more than foolish to hazard any opinion as to next year's results in view of the existing depression, as to which, while certainly temporary, he was not prepared to express an opinion as to its duration. That the world would return to normal conditions, however, he had no shadow of doubt. In the past they had earned a profit of about £1,500 per branch, and, as many of the new shops were larger, these profits should be increased. As the month of July was the busiest part of their year at their seaside shops and most inconvenient for stocktaking, the directors had decided that in future the company's financial year should end on the 30th of September. He was a firm believer in the future prosperity of the business; wherever they put up the name of "Timothy Whites," they were certain to make a reasonable profit, as the public appreciated that they always received good value for money. Since the beginning of the current year, trade at the shops had been reasonably well maintained.

The report and accounts were unanimously adopted.

CONSOLIDATED TIN SMELTERS, LIMITED.

MR R. J. HOSE ON BENEFITS OF RATIONALISATION.

The first ordinary general meeting of the Consolidated Tin Smelters, Ltd., was held, on the 26th instant, at Princes House, 93 Gresham Street, London.

Mr R. J. Hose (the chairman), in moving the adoption of the report and accounts, said: We are pleased to report that the acceptance of the scheme by the shareholders of the subsidiary companies has been most satisfactory, shareholders in three of the companies having accepted the exchange of shares in full and those in the remaining company to the extent of over 99 per cent. of their holdings. The small number of shares still outstanding and held by non-assenting shareholders is being dealt with under Section 155 of the Companies Act of 1929.

The debit side of the profit and loss account includes payments made from July 1, 1930, but the dividends on investments and loan interest shown on the credit side include dividends received from only two of the subsidiary companies in respect of their profits to March 31st and June 30, 1930, respectively.

The profit for the period amounts to £229,338, which has been allocated as set out in the directors' report, and the whole of the preliminary expenses, amounting to £40,320, has been written off.

The balance sheet shows the shares which we hold in the subsidiary companies and other investments together with the other assets as set out. It will be noted that the issued capital is 1,258,876 7 per cent. non-cumulative preference shares of £1 each fully paid, and 1,997,925 ordinary shares of £1 each fully paid.

The annual output capacity of the subsidiary companies constituting the combine is of the order of some 100,000 tons of tin, which is the largest tin-smelting capacity under one control in the world.

Tin differs from many of the other commodities essential to modern conditions of life in that world supplies are limited, and it is a matter of universal interest that these resources should not be dissipated by uneconomic production. Taking a superficial view, it might be supposed that the interest of smelters would be to see the greatest possible amount of tin produced and sent to them, irrespective of economic conditions. We take a different and, we think, a longer view in regarding the interests of the producer and the smelter as interdependent and have, therefore, welcomed the efforts which have been made to rationalise production in the industry and to obtain an equilibrium between supply and demand; we shall certainly continue to help in any way we can to achieve that common objective.

The report and accounts were unanimously adopted.

THE WALL PAPER MANUFACTURERS, LIMITED.

CHAIRMAN'S SPEECH.

The annual general meeting of the Wall Paper Manufacturers, Ltd., was held, on the 27th instant, at the Venetian Room, Holborn Restaurant, High Holborn, London, W.C., the Chairman (Mr Alan V. Sugden) presiding.

The Chairman, in the course of his speech, said: Ladies and gentlemen,—

THE ACCOUNTS.

The following are some of the relevant figures for the year:—

	1930.	1929.
	£	£
Balance brought in	295,795	302,178
Profit on trading, &c.	672,916	794,198
Balance for appropriation	680,996	795,795
Land, buildings and plant	2,367,984	2,126,676
Goodwill	1,223,815	1,374,365
Investments	993,046	1,202,123
Subsidiaries	1,778,820	1,717,243
Stock-in-trade	830,245	782,144
Debtors	181,406	226,755
Bills receivable	66,817	71,544
Cash	2,684	128,766
Issued share capital.....	4,600,000	4,600,000
Debentures	1,014,214	1,016,484
Creditors	359,337	491,681
Reserve fund	1,000,000	1,000,000

ORDERS AND SALES.

It is with regret, though it cannot occasion surprise having regard to the present trade depression, that I must refer to a decline in sales which set in about the end of May and has been in evidence practically every week up to the present.

The largest decrease is in our export trade where unsold supplies purchased last year militate very seriously against anything more

than very small purchases to freshen up stocks. This decline is manifest in every overseas market though the degree varies as between one and another.

We experience a good deal of competition in wallpaper both from abroad and from other manufacturers at home, and the prevailing depression has resulted in a good deal of price-cutting, mainly from foreign sources, which partake of the nature of dumping and represent an effort to keep plant running, regardless of cost. During the past twelve months about 15 million pieces of foreign wall-paper have been sold in this country to the displacement of home production.

We are, however, in the happy position that whilst the bulk of our eggs may be said to be in the wallpaper trade basket, we have an averaging element through our interests in the manufacture of paints, and other articles.

These secondary products are rallying well to the support of the parent industry.

WALPAMUR.

This company continues to increase both its trade and variety of its products, and makes steady progress in the industrial paint section of the trade.

The laboratories carry on an unceasing campaign to improve still further the high standard of the company's paints, and in addition to the testing by chemists at every stage of manufacture, the paints undergo exposure tests, and also accelerated weathering tests by ultra-violet rays and other means.

This policy of intensified research and testing provides our customers with real safeguards and in exchange brings us their confidence and support.

The company has throughout the year given the greatest attention to developing its "service" to both merchant and decorator customers.

The Walpamur Company is not interested in and does not touch wallpapers.

CRETONNES.

Our cretonne factory at Uxbridge makes satisfactory progress and the products, known on the market as "Eton Rural Fabrics," are appreciated for their distinctive qualities of design, colour and technique.

SUBSIDIARIES.

The figure at which these investments stand in our balance sheet is more than represented by tangible assets.

CANADA.

A dividend of 10 per cent., amounting to £27,788 against 6 per cent. last year, or £16,593, has been received, and 7 per cent. interest on our gold bonds, whilst the proportion due for cancellation, has been repaid to us.

At the moment Canada is feeling the prevailing depression acutely, but it is our belief that, according to the normal experience of the Dominion, she will probably recover sooner than we shall.

RESERVE FUND.

The absence of a recommendation to add to this fund does not imply that your directors consider £1,000,000 an adequate reserve for a company of this magnitude for all time, nor do I wish to forecast what the board may recommend to the shareholders in future years, in relation to the two questions of goodwill and reserves. It would appear sufficient to deal with the matter each year as it arises, and having regard to existing circumstances at the time.

An ample reserve fund is highly necessary, and the retention of considerable sums in the form of quickly realisable securities is very desirable not only for business contingencies, but for expansion on the lines of past developments.

PENSIONS.

We recommend an allocation further to strengthen the schemes of £20,000, as against £50,000 last year.

DIRECTORATE.

In the changes which occur on the board, a strong element of younger blood is in evidence. This is in accordance with the board's deliberate policy of linking up with the future direction of this great business, young and progressive men who have made their mark in the ranks of its managers. Such promotion is a recognition of merit, and as such it is valued.

Your directors are in the main whole-time managers of mills, businesses or departments, and their qualification to sit on this board is their actual personal knowledge of and ability in the business.

It is through their personal direction and ability that profits are won, and it is in their collective wisdom round our board-room table, that policy is laid down.

Whatever results we have been able to give in the last decade (during which period the aggregate profits have been in the region of 5½ millions), it is my belief that this principle of direction by highly trained specialists has been a large contributive factor.

The directors and their relations hold one-fifth of the share capital of the company, which supplies evidence of their financial interest in the continued success of the undertaking.

I would like to take this opportunity of expressing in your name, our grateful thanks to the retiring directors for their long and honourable service.

ACKNOWLEDGMENTS.

I wish to refer again to the loyal and intelligent co-operation we have had during the year from the whole of our employees and staff, and to acknowledge our indebtedness to the Wall Paper Industrial Council for its activities in facilitating the smooth running of our relations with labour.

Mr Harold W. Sanderson seconded the resolution for the adoption of the report and accounts, which was carried unanimously.

The retiring directors were re-elected, and the proceedings terminated with a vote of thanks to the chairman, directors and officials of the company.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Nov. 22, 1930, amounted to £14,806,200, against ordinary expenditure of £6,299,900. After allocating £1,361,000 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £74,200, the week's operations, as shown below, reduced the National Debt by £7,071,000 to £7,684,555,000:—

(000's omitted.)

Treasury Bills	+ 2,889	Bank of England Advances	- 2,750
National Savings Certificates	+ 300	Public Dept. Advances	- 7,100
		Road Fund	- 410
	+ 3,189		- 10,260

A complete analysis of the National Debt at the end of last quarter was printed in the *Economist* of October 4.

		Net withdrawals, £1,399,115.	

GOLD.

Messrs Samuel Montagu and Company write on November 26, 1930, as follows:—

The Bank of England gold reserve against notes amounted to £157,913,216 on the 19th instant (as compared with £158,920,423 on the previous Wednesday), and represents an increase of £11,953,132 since January 1st last. £361,000 of bar gold arrived from South Africa this week, but as £346,000 had already been sold forward to France, only £15,000 was available for disposal in the open market yesterday. The price was fixed at 85s. 1½d. per fine ounce, at which the small amount on offer was taken for India and the Home and Continental trade. Withdrawals of gold from the Bank of England on French account have continued and movements at that institution during the week show a net efflux of £1,365,598. Receipts totalled £370,740, of which £350,000 was in sovereigns from South Africa, and withdrawals consisted of £100,000 in sovereigns (mostly for Spain), and £1,636,338 in bar gold, the bulk of which was for export to France after refining.

THE CORN TRADE.

Mark Lane, Thursday morning.

Heavy rains over the United Kingdom during the past week hampered field work, but an extensive area has been laid under winter cereals and germination is proceeding satisfactorily. Latest reports tend to confirm larger sowings of wheat compared with last year. There is only a small business passing in native wheat, owing to light supplies marketed and the more attractive prices of foreign descriptions. On the import market, prices have fluctuated a good deal following variations in overseas cables. Strong early advices from North America and Argentina, and the official estimate that the probable loss of new Plate crop would total about 2 million tons owing to rust, proved a stimulating factor and prices marked a sharp upward movement. In market circles doubt is expressed as to the extent of the damage stated, particularly in view of subsequent favourable climatic conditions, consequently buyers were slow to respond to the higher selling limits. Russian descriptions were obtainable on more attractive terms, and large sales were reported, some 30,000 tons being disposed of on one day alone to United Kingdom millers. It is also felt that any loss in Argentine yield will be set off by a larger acreage, and that at least a normal quantity will be available for export. The United States has lifted prices by further Governmental grants to the Farm Board, enabling the authorities to keep supplies off the market, thus adversely affecting exports. This must result in accumulated stocks, which sooner or later must be sold at a loss. Canada is inclined to follow the policy of her near neighbour, and it is reported that the Dominion Government has agreed to assist the Wheat Pool by granting growers a domestic price of 70 cents per bushel, basis No. 1 grade Northern Manitoba. Australia is dissatisfied with the low prices current, and there appears to be a growing tendency on the part of great exporting countries to reduce offers until European demand improves, and Russian competition, in particular, becomes less pronounced. Soviet shipments were considerably lighter this week, at 549,000 quarters. Argentine sellers, however, are pressing offers of new crop, and it is doubtful whether Russian supplies can be absorbed before new Southern Hemisphere wheat is available. Feeding stuffs ruled firmer on lighter offerings, and a good demand, maize especially showing increased activity.

WHEAT.—Quiet and easier. No. 1 hard Manitoba, ex ship, 29s. 3d.-30s.; No. 1 Northern Manitoba, ex ship, 28s. 9d.-29s. 6d.; No. 2 ditto, 28s.-29s.; No. 6 Manitoba, 23s.; Rosafe, 62 lbs., 27s.; Australian, 29s.; choice white Karachi, 27s. 6d.; Russian on sample, ex ship, 23s.-25s. 6d.; landed, 22s. 9d.-26s. per 496 lbs.; English, new, 6s. 3d.-6s. 11d. per 112 lbs.

FLOUR.—Quiet. London, straight run, 27s. per sack for country deliveries and 26s. London area. Of imported, Manitoba patents, 24s. 6d.-26s. 6d.; Buffalo ditto, 24s. 6d.-26s. 6d.; Australian, 22s. 6d.-23s. 6d., ex store, per 280 lbs.

MAIZE.—In demand and firmer. Plate, landed, 19s. 9d.; ex ship, 18s. 6d.; December-January, 18s. 9d.; January-February, 19s.; No. 2 white flat African, landed, 19s. 9d. per 480 lbs. Yellow maize meal, £6 5s., f.o.r. London. Yellow African, ex ship, £5 5s.; white, £4 12s. 6d. per ton.

BARLEY.—Dearer in sympathy with higher c.i.f. offers. Californian old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, ex ship, 15s. 3d.; landed, 16s. 6d.; Danubian, ex ship, 15s. 3d.; landed, 16s. 6d.; Persian, landed, 15s. 6d.; ex ship, 14s. 6d. per 400 lbs. English, new malting, 6s. 3d.-13s. 9d.; feed, 5s. 6d.-5s. 9d. per 112 lbs.

OATS.—Firm. Plate, landed, 13s.; ex ship, 11s. 9d.; Chilean, tawny, landed, 13s. 6d.; best whites, ex ship, 19s.; landed, 20s.; mixed Canadian feed, landed, 10s. 9d.; North Russian, ex ship to arrive, 13s. 9d.-14s.; landed, 14s. 9d.-15s. 6d. per 320 lbs.; English new, 5s. 8d.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Nov. 22	Cwts. 145,502	Cwts. 215,048	Cwts. 322,998	Cwts. 273,435
12 weeks to Nov. 22	1,719,596	3,387,836	3,684,741	3,035,010
Average price of English wheat per cwt.	s. d. 6 7	s. d. 9 3	s. d. 9 1	s. d. 9 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Nov. 27, 1929.	Jan. 2, 1930.	Nov. 12, 1930.	Nov. 19, 1930.	Nov. 26, 1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	135½	148½	65½	59½	61½
Chicago (No. 2 Winter) —Cents per 60 lb.	116½	123½	130½	72½	73½	75½

The visible supply of wheat in Canada at 62,355,000 bushels, shows a decrease on the week of 1,598,000 bushels. Supplies a year ago stood at 78,424,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Owing to uncertainty regarding subsidies under the marketing scheme South Yorkshire coalowners are not pressing for overseas forward contracts. Shipments of best steams are being maintained at about 16s. f.o.b. Hull, which price is firm. A brisk demand for smalls has developed from public utility undertakings. Industrial demand for fuel still tends to shrink. House coal is more active with a ready sale for the highest qualities. Sales of blast furnace coke for domestic heating are brisk, but demand for furnaces is as poor as ever. Prices remain at from 11s. to 11s. 6d. at ovens.

Our Glasgow correspondent writes:—Something in the nature of a transitory firmness has characterised the coal shipment market this week. Overseas demand has undergone no expansion, and the improvement is attributable to an understandable desire on the part of utility undertakings to anticipate their requirements in view of the threat of a coal stoppage. The Board of Trade has now issued its scheme for the regulation of Scottish production, &c., which is virtually the same as the amended plan drawn up by a committee of Scottish coal-owners and rejected by the main body. Shipment prices are approximately as follows:—LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 15s. 6d.; splint second, 16s. 6d.; navigation, 15s. 6d.-16s.; navigation second, 14s. 6d.; Hartley, 15s., all per ton f.o.b. Glasgow; steam, 12s. 6d.; trebles, 12s. 9d.; doubles, 12s. 3d.; singles, 11s. 6d.; pearls, 11s.; dross, 9s. 6d., all per ton f.o.b. Grangemouth. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 6d.; third-class steam, 11s. 6d.; trebles, 13s. 6d.-16s.; doubles, 12s. 6d.; singles, 11s. 6d.; pearls, 10s. 9d., all per ton f.o.b. Burntisland or Methil. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 9d.; trebles, 13s. 3d.; doubles, 12s.-12s. 3d.; singles, 11s. 6d.; pearls, 10s. 6d., all per ton f.o.b. Leith. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s.; steam, 13s.; trebles, 13s.; doubles, 12s. 6d.; singles, 11s. 6d.; pearls, 10s. 6d.; dross, 10s. 6d., all per ton f.o.b. Ayr or Troon.

Our Cardiff correspondent writes:—The South Wales colliery owners posted on Wednesday at the colliery pit heads the terms and conditions on which the pits will be open for work under a 7½-hour shift, as and from December 1st next. They include a reduction of the minimum wage percentage on the 1915 standard rates from 28 to 10; the abolition of the bonus shift to men employed on the afternoon and night shift; the substitution for the present uniform from 6s. 3d. to 7s.; and the discontinuance of the payment to continuous shift workmen of overtime rates for regular week-end shifts. It is roughly calculated that these terms, on the basis of recent prices and of the increased cost of production for the shorter working day, will leave the owners a very small margin of profit, but that they shift. The miners have appealed to the National Board to deal with the dispute, and the hearing of their appeal was fixed for Thursday, but the owners had previously written to the Board declining the invitation to attend on the ground that they are "definitely opposed to the terms and conditions of work at the South Wales collieries being dealt with in any way by either owners or workmen's representatives from other districts." Neither side proposed terms based on the 90-hour spreadover, and in view of the fact that the question of the postponement of Part III. of the Coal Mines Act has been greatly complicated by the agreements already reached in two or three of the smaller districts based on the spreadover, the fears of a stoppage of work in South Wales next month have increased. There has been little expansion, however, in the current volume of trade, and prices have remained practically unchanged. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best smalls, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 9s. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex ship, 26s. to 26s. 3d.

Our Workington correspondent writes:—The position of the coal trade is a little more satisfactory. The Irish demand has improved, despite the fact that Scotland is selling coal 12s. per ton North of Ireland have risen considerably. Local landsale is a more vigorous market, but industrial fuel is poor. Stocks of small coal plants, but some sales of 2,000 tons lots to the Balkan States have been effected. Prices:—Best round, 21s. 6d.; washed doubles, 20s.; washed singles, 19s.; all f.o.b. Smalls, 16s. 6d.; best house coal, 30s.; house nuts, 28s. 4d.; gas coal, 28s. West Coast coke is from 17s. 9d. to 18s. 3d. per ton.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The brighter tone noticeable in the markets of late is still in evidence. At the weekly meeting of the Exchange on November 25th the general view was that more confidence was being shown by buyers, although there was still a scarcity of forward buying. In the pig iron department there has been rather more business passing, but the British producers are experiencing stronger competition from Continental sources, and of late there has been an increase in the tonnage of foreign ore sold in this country. The recent reduction in the price of some brands of British iron, however, may stimulate buying in this department. The demand for semi-finished steel has improved somewhat and there has been a considerable expansion in the volume of business transacted, although most of the orders have gone to Continental works. This was largely due to the efforts of buyers to cover their requirements of this description of steel in a rapidly rising market. Buying, however, has decreased somewhat at the higher levels in the case of semi-finished steel as well of finished steel materials. In the latter department business has been more active than for some time past, but the works are still badly off for orders. Inquiry, however, has strengthened, and home buyers are showing greater interest.

Our Middlesbrough correspondent writes:—There is no improvement in the position of Cleveland iron, business being at an extremely low ebb. Many of the contracts now running terminate at the end of December and producers are anxious for new business to follow on, but consumers refuse to enter into negotiations at present price levels, feeling confident that local prices will have to be reduced in view of selling pressure from the Continent and the very low prices that are being accepted. Notwithstanding these adverse conditions, no change was made in the official quotations at the weekly market on Tuesday and there was practically no business doing. No. 1 remains 66s.; No. 3, 63s. 6d.; No. 4 coudry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. Hematite iron continues to show steady improvement and a fair number of transactions are recorded this week. Makers are securing 71s. for mixed numbers for delivery a few months ahead, but are willing to accept 70s. 6d. for prompt lots. Shipments of pig iron continue extremely poor, the total cleared to the 25th inst. being only 9,343 tons, against 20,759 tons to October 25th. In the finished departments it is satisfactory to learn that Dorman Long and Company, Ltd., have secured an order for a road bridge and approaches at Rhyl at a total inclusive cost of £66,000. Although not more than about 600 tons of structural steel material will be used in the work a lot of labour will be absorbed during the contract period of fifteen months. This firm have also secured an order

for a large steel-frame building for the Newcastle Electric Supply Company, Ltd., for their new power station at Dunston-on-Tyne. About 4,800 tons of structural steel material will be absorbed, and the value of the contract is about £129,000. Other important bridge and constructional schemes are under consideration in which local firms are interested, and it is expected that further bookings will be announced very shortly. Prices for steel materials under the rebate scheme are unchanged. Iron crown bars remain at £10 15s., and heavy steel rails £8 10s., but 24-gauge galvanised corrugated sheets are now quoted at the reduced official minimum of £11 5s., and 24-gauge black sheets are £8 12s. 6d., all for home use. The ore market continues idle. Best rubio is nominally 16s. 6d. c.i.f. for early delivery and 17s. for delivery a few months ahead. The rate of freight Bilbao-Middlesbrough for early loading remains about 5s. Coke is in poor demand. Supplies are offering freely for delivery up to the end of the year at 17s. delivered furnaces, and this price is being shaded in some instances. With the restarting of one at Dinsdale Works the number of blast furnaces in operation on the North-East Coast is now 25.

Our Sheffield correspondent writes:—In the pig iron department a belief is widely held that a revival of trade is likely in the new year, but conditions to-day are unchanged. Offers of Continental basic and foundry pig at extremely low rates have been received in this country, but these are not evoking much interest. Speaking generally of the Continent, steel prices are hardening. The steel situation in the Sheffield district is neither worse nor better. Only a few considerable contracts have come in during the week. The Redbourne Hill works, Lincolnshire, comprising blast furnaces, steel smelting and rolling plant and coke ovens, have now been closed as foreshadowed last week. The two blast furnaces are only damped down, and a general resumption three months hence is talked about. The scrap market is as depressed as ever with the price of basic scrap weak at 47s. 6d. or 48s. In the lighter steel section and tools, home trade keeps on a moderate level. Exports keep low with occasional increased orders. The outlry and plate branches are unsatisfactory.

Our Workington correspondent writes:—Disagreeable developments have taken place in the hematite pig iron trade in the North-West of England. They are due largely to the depression in the steel trade. The mills at the steelworks at Workington and Barrow that produce railway and other material are idle for weeks at a time, the books being bare of orders, and the utmost that can be expected during the remainder of the year are one or two weeks of activity. There is, therefore, very little local absorption of metal, and the curtailed make is more than ample to satisfy the

A BINDING-CASE

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are now able to offer our readers a new binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, its special cork spine does away with tags, laces, and metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

Price 5/- each, post free (Lettered Back & Front) from

THE ECONOMIST,

8, Bouverie Street, London, E.C.4.

Midland, Scottish and Continental demand. Though only five furnaces are in full blast, one of these being on spiegel, stocks are still increasing, and it seems doubtful, therefore, whether production can be maintained. East Coast competitors have cut into Cumberland and North Lancashire smelters' business in two or three of their best markets. Nevertheless, prices are fairly steady. Bessemer mixed numbers being quoted at £3 18s. 6d. per ton at Glasgow; £4 4s. 6d. per ton at Manchester; £4 6s. 6d. at Sheffield; and £4 8s. 6d. at Birmingham, with an extra 2s. 6d. to 5s. per ton for special and semi-special descriptions of iron. Malleable iron is a fair market at £6 2s. 6d. per ton delivered at Birmingham, but there is little demand for ferro-manganese at £12 per ton export. The steel trade is exceedingly poor, and even small orders are few and far between. The native iron ore industry is slackly employed, local requirements being below normal and those of East Coast and Scottish smelters meagre. The metal is quoted at 17s. 6d. to 18s. 6d. per ton.

Our Glasgow correspondent writes:—In the pig iron market things remain quiet and the limited number of furnaces in blast are able to produce sufficient to meet all demands. At the steel works also there is continued difficulty in finding employment for the plants in operation. Prices for galvanised sheets are somewhat lower this week, but business has not shown any expansion. Black sheet makers are also quiet this week and in this district there are fewer mills in operation. Tube makers are moderately well employed. It is announced this week that the Motherwell Bridge and Engineering Company, of Motherwell, have received a contract for the reconstruction of the Boyne viaduct at Drogheda from the Great Northern Railway of Ireland, involving many hundreds of tons of steel.

Our Cardiff correspondent writes:—In the South Wales iron and steel trade the demand for tinplates has been slightly stimulated by the abandonment of the minimum price scheme. Quotations this week have ruled down to 15s. 9d. per basis box, and to 16s. 16s. 3d. for odd sizes. There is also a better local demand for Welsh bars at the recently reduced price of £5 per ton. Foreign bars, however, are still offering at £4 per ton. Shipments last week were exceptionally heavy and more than twice as great as those in the previous week. Stocks have consequently been reduced and at 176,434 boxes they compare with 285,987 boxes at the corresponding period last year. Hopes are entertained that the few outside firms will join the "tinplate pool" as a result of the negotiations that are now in progress.

OTHER METALS.

Tin.—The standard market generally displayed quiet features, and with sellers more in evidence, prices exhibited slight irregularity and weakness, Eastern cables failing to give support. Standard

cash changed hands at £114 12s. 6d. to £114 and £114 2s. 6d.; three months, £115 15s. £114 15s. and £115 7s. 6d. In the East, sales were reported at £119 17s. 6d. to £120 2s. 6d. and £117 17s. 6d. c.i.f. terms, per ton.

COPPER market opened quieter, but values subsequently improved on sustained buying orders, and a good business resulted with sharp fluctuations at times. Standard cash sold at £47 2s. 6d. to £47 10s., but dealings were largely centred on forward positions, three months ranging from £46 15s. £47 17s. 6d. £46 15s. £47 13s. 9d. per ton.

LEAD.—Market slightly firmer but buyers slow to respond. Good soft foreign pig, November, sold £16 1s. 3d.; December, £16 to £15 17s. 6d.; February, £15 16s. 3d. to £15 18s. 9d.; March, £15 18s. 9d. per ton.

SPELTEN in fair support but prices gave way under liberal offerings. November sold £14 7s. 6d. to £14 6s.; December, £14 10s.; January, £14 18s. 9d. to £14 11s. 3d.; February, £15 2s. 6d. to £14 13s. 9d. and £14 16s. 3d.; March, £15 5s. to £15 3s. 9d. and £14 18s. 9d. per ton.

ALUMINIUM steady. Home trade, also export, £85 per ton.

ANTIMONY quiet but rates firmer on higher Eastern advices. English regulus, £38 to £45; Chinese ditto, spot £25 10s.; November-December, £23 15s.; Chinese crude, November-December, £14 10s. per ton c.i.f.

ANTIMONY OXIDE.—November-December, £25 5s. per ton c.i.f.

ANTIMONY ORE, 60 per cent., November-December, 3s.; ditto, 50 per cent., 2s. 6d. per unit c.i.f.

WOLFRAM quiet and easier. Chinese, November-December 16s. 6d. per unit c.i.f.

QUICKSILVER steady. Spot £21 15s. to £22 per bottle.

TIN PLATES dull. I.C. coke, prompt and forward, 16s. to 16s. 3d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, November 26th. Prices on the week are some 12 points down for the near positions and rather less for the distant. Fresh business seems entirely lacking, the only support coming from the Farm Board, but this has been offset by offerings from the south. Some selling during the week has been in evidence and the parity between New York and Liverpool has narrowed considerably. Spot sales for the week 20th to 26th (inclusive) are 23,000 bales, of which 11,870 are American, 1,400 Brazil, 650 Argentine, 4,500 Peru, 2,350 Egyptian, 950 African, 1,000 East Indian, and 280 sundries. Imports for the same period are 62,327 bales, of which 48,375 bales are American, 1,123 Argentine, 1,744 Peruvian, 10 Egyptian, 29 African, 474 East Indian, and 672 sundries. Quotations to-day: American Middling, 5-87; Egyptian Sakel 9-70, Uppers 6-62; Brazil Fair 5-84; Peru Smooth 6-39; West African Middling 5-89, and East African G.F. 6-84.

MANCHESTER, November 26th. Business in the market is still slow in expanding, and although during the past week inquiry has been fairly plentiful, the sales have been disappointing. The attitude of buyers is being somewhat affected by the sagging tendency of prices for the raw material. In the cloth section some advices from India have been rather more encouraging and a fair amount of business has been done for Karachi and Madras in light whites. There is very little improvement, however, in the demand for Bombay and Calcutta. China news has been rather featureless, and trade continues on a smaller scale than a little time ago. Not more than a sorting-up business has been done for most of the minor outlets East and West, and home trade buyers have acted with caution. Now and again manufacturers in Blackburn and Preston are able to restart a few idle looms, but less satisfactory reports are being received from Burnley. The yarn market has been generally slow and irregular. In American qualities most of the demand has run on the coarser counts. A few more transactions have been arranged in bundle yarns for India.

THE WOOL TRADE.

Our Bradford correspondent writes:—The majority of those interested in the likely course of values at the opening of the London sales were expecting to see at least a firm level for merinos. There is a large consumption on the Continent, and the position

THE BRITISH OVERSEAS BANK, LIMITED

ESTABLISHED 1919.

Report by the Board of Directors to the ELEVENTH ANNUAL GENERAL MEETING of SHAREHOLDERS to be held in the BANK PREMISES, 33 GRACECHURCH STREET (LOMBARD COURT), LONDON, E.C.3, on Tuesday, the NINTH day of DECEMBER, 1930, at 12 noon.

The Directors submit to the Shareholders the Balance Sheet of the Bank, as at 31st October, 1930, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all bad and doubtful debts, and Income Tax, for the year ended 31st October, 1930, amounts to £140,446 4 10

Balance available from last account £58,130 8 0

Leaving a total of £198,576 12 10

Interim Dividend paid on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the Half-year ended 30th April, 1930, and Income Tax thereon 30,000 0 0

Leaving a Balance of £168,576 12 10

which has been appropriated as follows:—

In payment of a Dividend on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the Half-year ended 31st October, 1930, £100 0 0

which, together with Income Tax thereon amounts to 30,000 0 0

as "A" or "B" Ordinary Shares £2,000,000 0 0

Subscribed and Paid in Full: £2,000,000 0 0

200,000 "A" Ordinary Shares of £5 each 1,000,000 0 0

AUDITORS' REPORT TO THE MEMBERS.

We have examined the above Balance Sheet and compared it with the Books of the Bank. We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange, and have verified the Securities. We have obtained all the information and explanations which we have required, and are of the opinion that the Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

London, E.C., 21st November, 1930.

firm, especially for fine fruit. Raisins sell readily. Evaporated fruits: Plums were accorded good support and large sizes firm on scarcity, but other descriptions move off slowly on about former terms.

CANNED GOODS.—Fruit: There was no material change in the general situation; attractive prices for Californian fail to stimulate demand. English, however, sells fairly well, with moderate support. Australian varieties. Fish: Sardines: There is rather more business passing in lower grades at the recent reduced prices, but fine quality firm and scarce. Salmon quiet of sale. Meat: Market generally quiet, but no material change occurred in quotations for beef and tongues. Condensed milk: Market steady, with a good demand for spot and near-at-hand parcels. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 33s. 6d. English ditto, 30s. 6d. Honey: Liberal supplies were available and moved off quietly. Jamaican white, 40s.-45s.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,437 tons, as compared with 9,358 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.3 per cent. of the supplies, as against 76.8 per cent. a year ago, and imported mutton, mainly New Zealand, formed 74.5 per cent. of the total supply, as against 69 per cent. last year. Prices on the whole remained steady, with beef slightly easier.

RUBBER.—Business was again conducted quietly, but prices ruled steady. Standard sheet, spot and December, sold 4 1/2 d.; January-March, 4 1/2 d. to 4 3/4 d.; April-June, 4 1/2 d. to 4 3/4 d.; July-September, 5d.; October-December, 5 1/2 d. to 5 3/4 d. London stocks increased 406 tons on the week: landings, 1,819; deliveries, 1,413; stocks, 76,448, against 51,012 last year. Liverpool stocks 489

higher; landings, 1,001; deliveries, 512; stocks, 40,492, against 17,479.

HEMP.—Nothing occurred to disturb the serenity of the market for Manila qualities. With buyers and sellers alike somewhat reserved, a featureless state of affairs prevails at the moment. K, grade November-January, held for £22 15s.; L.I. £22 5s. c.i.f. African sisal quiet unchanged. Receipts last week cabled 28,000 bales against 22,000 last year and 29,000 in 1928. Estimate for next week 22,000 and week after 24,000. Manila shipments last week to the United Kingdom 4,000, Continent 7,000, United States 7,000, Japan 4,000, and others 1,000; stock 111,000.

VEGETABLE OILS AND OLSEEDS.—Markets are irregular, though there is a slightly better tone in some sections. Linseed advanced in sympathy with wheat, but with buyers remaining indifferent, an easier feeling returned. The large unsold balance of the old Plate seed and continued encouraging reports as to the growing crop in Argentina, combined with the poor trade in oilcake and oil apparently are against a rise in values. Plate in near positions is steady, and a premium over the more distant, current value on spot at Hull being £11 2s. 6d., and afloat £11. More interest has been shown in cottonseed, and a fair business has been done in near positions. For Black Egyptian first half of December loading £6 1s. 3d. and £6 2s. 6d. has been accepted, but the market closes firmer. Linseed oil, after a firmer period, is again quiet, and lower current values on spot ex Hull being £24 15s., November £24 5s., and December £21 15s. Cotton oil is steady, crude Egyptian ex Hull being quoted £23, and common edible £25 10s. A fair in uir for copra was experienced, and with some reserve on the part of sellers, prices ruled slightly dearer. Straits S.D. December, to Rotterdam, quoted £16 8s. 9d., Dutch E.I. ditto, £16 8s. 9d. Palm kernels, December-January, to Hamburg, sellers £11 7s. 6d. c.i.f.

THE MONEY MARKET.

This week, the money market has been completely upset by the payment of the War Loan dividend, amounting in round figures to £50 millions. In previous years, circumstances have permitted either of adequate preparations being made in advance, or of the payment being offset by counter movements of funds. Thus a year ago the payment of the War Loan dividend was neutralised by the inflow of subscriptions to the new Conversion Loan. This year, on the other hand, so far as can be told from the

Bank return, the bulk of the money has been found partly by withdrawals (amounting to £11.0 millions) from Public Deposits, and partly from Government borrowings on Ways and Means account (amounting apparently to £24.4 millions) from the Bank. Both these operations have combined to bring about a temporary inflation of credit, as is shown by the expansion of £26.0 millions in Bankers' Deposits. Had not gold withdrawals and the beginning of the Christmas expansion in the note circulation together reduced the Reserve by £10.0 millions, the increase in Bankers' Deposits would have been greater still.

Thus money, which previously had been stringent, suddenly became so plentiful as to be almost unlendable, and on Tuesday it was actually stated that loans were made at $\frac{1}{2}$ per cent. Discount rates weakened in sympathy with the glut of funds. January bills, for which there was a keen demand from the clearing banks, changed hands at $2\frac{1}{2}$ per cent. Februarys were quoted at $2\frac{3}{4}$ per cent., while the three months rate, which now relates to March bills, was a weak $2\frac{1}{2}$ per cent. The clearing banks have lent a little money into the new year at $2\frac{1}{2}$ and $2\frac{3}{4}$ per cent. It is not easy to see why the banks are keen buyers of January bills. One somewhat ominous explanation is that they anticipate an early and drastic drive by the income-tax authorities, and wish to have funds in hand in order to meet it.

The prevailing impression is that money is likely to remain comfortable up to Christmas, though it must be remembered that the note circulation will steadily increase and deplete the Bank's resources as Christmas trade develops. At the same time the present glut of funds is not likely to persist, though as this week's issue of Treasury bills is only £5,000,000 in excess of maturities, it is not easy to see exactly how it will be absorbed.

	Nov. 13, 1930.	Nov. 20, 1930.	Nov. 27, 1930.	Dec. 4, 1930.	Previous Rate and Date Changed.

Meanwhile the drain of gold to France continues. Tuesday's Cape gold had practically all been bought forward on French account, and the record price of 85s. 2d. per oz. at which the quantity in the market was disposed of, only related to a very small amount, and so possessed little significance. Next week's Cape gold, amounting to £953,000, has also been bought forward by Paris, but the following week £200,000 in sovereigns are expected, and these will go into the Bank. It is understood that engagements have been made with London refiners up to the end of the year, so no early cessation of the French drain is in sight. This week's withdrawals on French account from the Bank amount to £2,071,371, which raises the total efflux for the past four weeks to £7,423,719. The Bank duly obtained this week £600,000 in sovereigns from South Africa, but as on Tuesday £400,000 in sovereigns were set aside, the Bank only gained £200,000 on balance. The £1,000,000 that is coming from Spain will go into a special account at the Bank, and so will not increase the Bank's gold holdings. Meanwhile the German exchange is very near the lower gold point, and sterling is also weak against the dollar. Thus the money market is faced with a glut of funds on the one hand and an adverse foreign exchange and gold outlook on the other hand—a combination of circumstances which makes it very difficult to see far ahead.

NEW YORK.

Although call money became firmer on Monday as the result of movements of funds to the interior, estimated at \$75,000,000, the general position remains one of ease, and this was emphasised by the reduction from 2 to $1\frac{1}{2}$ per cent. made at the end of last week in the interest allowed on Government deposits. The Christmas demand for

currency has already begun. According to a statement of the Comptroller of Currency, metropolitan banks are in a strong position, but country banks are passing through a difficult period. He is reported to be in favour of further bank mergers.

THE STOCK MARKETS.

The stock markets were again quiet, though there was a welcome absence of selling pressure. Gilt-edged receded slightly on a less favourable money position. The foreign bond market was disturbed by selling of Brazilian and Japanese issues, though European stocks were somewhat firmer. Home rails held their ground, and domestic industrials showed few measurable variations, the Stock Exchange being hopeful of a satisfactory outcome of the coal negotiations. Rubber and tea shares were idle, but oils were harder on the abatement of Continental liquidation. Business was quiet in the mining markets, copper shares failing to maintain a rise induced by the early strength of the metal.

THE COMMODITY MARKETS.

Fears of a stoppage, which has not been averted in Scotland, resulted in the dislocation of the coal trade in several districts, and sellers are not anxious to enter into forward contracts. The recent reduction in prices has stimulated the demand for pig iron, but the improvement in semi-manufactured materials has not been maintained, and activity in finished steel remains quiet. The declining tendency in raw cotton prices exercises a depressing influence on the market for manufactured goods. The Bradford market is quiet, but steady. Hides continued to fall in price, and the leather trade has been less active. Wheat is scarcely changed on the week, but the discrepancy between prices in Winnipeg and Chicago has become more marked.

THE FOREIGN EXCHANGES.

The Foreign Exchange market, though more active this week, was not really busy. Sterling lost ground against most currencies, though New York after moving against us was unchanged on balance at 4.85 $\frac{1}{8}$, and Montreal moved in our favour to 4.85 $\frac{7}{8}$. Paris gained four points at 123.56 after 123.50. Brussels was stronger at 34.80 $\frac{1}{2}$. Milan, after touching 92.83 and 92.62, settled down at 92.65. Madrid improved, on rumours of stabilisation measures, from 43.70 to 43.30, after touching 43.05. Berlin was considerably better at 20.36, and Switzerland also moved strongly against us to 25.06 $\frac{1}{2}$, after touching 25.07 $\frac{1}{2}$ and 25.06. The Scandinavian currencies moved in opposite directions, Stockholm losing $\frac{1}{2}$ at 18.19 $\frac{1}{2}$, Oslo gaining $\frac{1}{2}$ at 18.16, and Copenhagen being unchanged at 18.15 $\frac{1}{2}$. South American exchanges were again variable, but with a rather steadier tendency. Rio gained $\frac{1}{2}$ d. at 4 $\frac{1}{2}$ d., Buenos Aires lost $\frac{1}{2}$ d. at 38 $\frac{1}{2}$ d., and Montevideo $\frac{1}{2}$ d. at 38 $\frac{1}{2}$ d. In the Far East the rupee was steady at 1s. 5 $\frac{1}{2}$ d., the yen gained $\frac{1}{2}$ d. at 2s. 0 $\frac{1}{2}$ d., and Batavia improved by $\frac{1}{2}$ to 12.07. In the forward market dollars were quoted at par for both periods against a discount last week, but end of the year delivery is quoted specially at $\frac{1}{2}$ cent discount. Paris widened to 9 and 16 centimes discount, and Brussels went from par to one centime discount for one month's and from one centime to $2\frac{1}{2}$ centimes discount for three months' delivery. Madrid at par and 4 centimos premium for one and three months respectively was considerably weaker, as was Milan at 22 and 62 centesimi discount. Amsterdam was unchanged for one month and $\frac{1}{2}$ cent higher for three at one cent premium. Berlin was practically unchanged at 3 $\frac{1}{2}$ and 9 $\frac{1}{2}$ pfennigs discount. Silver fell by $\frac{1}{2}$ d. to 16 $\frac{1}{2}$ d. for spot and by $\frac{1}{2}$ d. to 16 $\frac{1}{2}$ d. for forward, on China sales to meet an increasingly unfavourable trade balance. The China silver exchanges weakened in sympathy, Hong Kong losing $\frac{1}{2}$ d. at 1s. 2 $\frac{1}{2}$ d. and Shanghai $\frac{1}{2}$ d. at 1s. 6 $\frac{1}{2}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Bouverie Street, London, E.C.4.

THE COAL MINES AND THE COUNTRY.

THE history of the negotiations in the coal-mining industry during the past fortnight makes lamentable reading for all who have the country's interests at heart. Notwithstanding the bitter lessons of 1926, lack of foresight, lack of good-will and lack of readiness to face facts have again combined to bring half the industry to the edge of disaster, and have resulted in an actual stoppage of work in most of the Scottish coalfields. Commenting on the situation as it existed a week ago, we had occasion to criticise the coalowners in South Wales for seeking to enforce a drastic reduction in wages, without offering the miners the alternative of a "spread over" of working hours. We still maintain that this uncompromising attitude on the part of the South Wales owners, following the Mining Association's boycott of the National Coal Mines Board, did much to embitter the atmosphere in which the delegate conference of the Miners' Federation met on Friday, November 28th; but however short-sighted and impolitic may have been the Welsh owners' proposals, the Federation cannot be acquitted of responsibility for embarking in their turn on a policy of crass blindness and folly.

For, when the delegates met, the National Coal Mines Board had issued, at a belated hour on the previous night, their interim findings on the South Wales dispute, and had recommended that negotiations should be at once renewed between the miners and their employers in that area with the object of enabling work to be carried on under a temporary "spread-over" of hours—without any reduction of wage rates. Having received the Board's recommendations, the South Wales coalowners made a satisfactory, if belated, new offer, and proposed that during the month of December there should be no variation in existing rates of payment for ordinary shifts, "bonus turns" or overtime, on condition that the hours of work for underground men should be the same as hitherto worked, i.e., 8 hours, but that the total hours should not exceed 90 in a fortnight. In the case of Scotland, where the owners had originally proposed only a very small downward revision of wages, provided a "spread-over" of hours were accepted, the National Board made the same recommendations as they had made for South Wales; the Scottish owners were inclined to concur in the Board's findings; and prospects for an agreed settlement in all the districts affected by the Act seemed greatly to have improved.

Notwithstanding, however, the recommendations of their representatives on the National Board and, apparently, the emphatic advice of the majority of their Executive, the miners' delegates decided last Friday by a large majority to exercise their right (under the proviso to Section 14 of the Coal Mines Act) to withhold approval from the working of a "spread-over" in any district. This contemptuous disregard of the findings of the court of appeal, which had been set up entirely at the instance of the miners themselves, was due, it appears, mainly to the votes of the districts not affected by the shorter working day which the Act brought into force. Thus the veto which Parliament incorporated—by way of delegation of its own powers—into the Act, as a means to provide an assurance that districts should have freedom of choice in the matter of elasticity of working hours, was used in fact to cripple that freedom.

The result was inevitably a confused and critical situation. In Scotland the miners, taking the national conference at its word and "standing pat" upon the letter of the law, refused the owners' final offer of an 88-hour fortnight with no reduction of wages, and came out on strike last Monday against the reduction of wages which the owners sought to enforce if a rigid 7 $\frac{1}{2}$ -hour day were to be introduced. In South Wales a stoppage was averted at the last minute by an agreement to continue working the mines for a fortnight on the terms recommended by the National Board, so that a "spread over," be it

noted, was instituted in technical violation of the Act. In other minor districts temporary arrangements were patched up on 7 $\frac{1}{2}$ -hour terms pending a general settlement.

Confronted with the consequences of their veto in the shape, firstly, of a stoppage of work in Scotland and, secondly an agreement by consent in South Wales to flout both the Federation and the Coal Mines Act—a policy which several other districts looked like following—the Miners' Delegate Conference met again on Thursday. Fortunately wiser counsels prevailed than on the previous Friday. First, a motion for a national strike in support of the miners "out" in Scotland was rejected, though the narrow majority of 21,000 in a vote of 439,000 revealed an uncomfortably large number in favour of such a tragic policy of despair as a national stoppage. The conference next proceeded to review the situation in the light of this vote, and accepted eventually, if half-heartedly, the logic of the position. Recognising, presumably, that the districts affected by the hours provisions of the Act are not in a position to continue payment of existing rates of wages and at the same time to support more costly production under a shorter shift, and that no isolated district strike could bring anything but needless loss and suffering to the miners concerned, the delegates agreed that the question of accepting the "spread over" system should be "referred back" to be "reconsidered" by the districts with a view to a further delegate conference being asked to endorse whatever decision "reconsideration" might produce.

As members of the Executive seem strongly to have urged the case for the "spread over," there appear once more to be good hopes that for the time being the troubles in this vexed industry will be composed. The matter, however, does not end here. Next July the Coal Mines Act of 1926, which gave permission for one hour to be added to the pre-existing statutory maximum 7-hours' day, expires, and a new crisis—involving on this occasion every district—will arise unless steps are taken in the meantime to plan means of settlement. We earnestly trust that such steps will be taken without delay; and it is important in this connection that the Government should make plain to the miners what their intentions are, and should not repeat their Micawber-like attitude of the past fortnight in waiting hopefully for some sort of agreement to "turn up."

By next summer the marketing schemes will have had a little time to bear fruit, but in view of the present financial results of the coal-mining industry and the general situation of world trade, it would be unduly optimistic to rely on the industry being able to revert to a rigid 7-hour day without such a reduction in miners' earnings as could not lightly be contemplated. Is the Government prepared to pass an Act providing for the continuance after next July of the statutory 7 $\frac{1}{2}$ -hour day? If not, then the only alternative would be to allow hours to be "spread-over" within the limits of an 84-hour fortnight. Such an arrangement would obviously not reduce the working time of miners in collieries which, like many to-day, for example, in Yorkshire, normally work only five days a week; and it is doubtless for that reason that recent opposition in the Federation to the "spread over" of a 7 $\frac{1}{2}$ -hour day was so vehement. But however desirable ideally it may be that no man should work a longer shift than 7 hours under ground, there is little doubt that, under existing trade conditions, provided the aggregate working hours per week are not excessive, the vast majority of the miners would prefer to have their earnings maintained, rather than to have their daily hours further reduced. The threat of yet another mining crisis in July would go far to kill all hopes of any trade recovery for Great Britain in 1931; and the country is entitled to hope that every effort will be made now to lay the foundations for settlements which will endure beyond next summer.

BURMA FOR THE BURMANS.

ON Monday last the Round Table Conference accepted in principle the recommendation made by the Statutory Commission, and endorsed apparently by H.M. Government ("the question," said Mr MacDonald, "is not open"), that Burma should be separated from India. A committee was set up to consider the nature of the conditions which would enable that separation to be effected "on suitable terms, and to recommend the best way for securing this end." The decision thus taken may be regarded as marking the end of an association which has lasted for only forty-four years, and whose continuance has for some time been recognised by all impartial observers to be illogical and anomalous.

It is apt to be forgotten that in 1886, when the last of Burma's kings surrendered to British forces and was sent to exile in Ratnagiri, the inclusion of Burma in the charge of the Governor-General of India was purely a matter of administrative convenience, and conformed to no historical precedent. Colonised originally by successive Indo-Chinese immigrations, and with a distinctively Mongol population little more akin to the peoples of India than to Europeans, Burma was never subject to any Indian dynasty. Indeed, from the beginning of Burma's recorded history, when King Anawrata took his seat on the throne at Pagan in 1044 A.D., until friction with the British in Chittagong led the Burmese in 1825 to the crazy adventure of attempting to invade Bengal, India appears hardly to have come within the purview of Burma's policies; and until the establishment by Europeans of shipping services between Calcutta, Madras and Rangoon, intercourse between Burma and the great sub-continent of India was negligible.

Thus the European traveller, faring Eastwards, who reaches Calcutta and finds that, unless he has a mind to tackle many leagues of practically impassable jungle on the land frontier, he must reach Burma by a sea voyage of over 700 miles to Rangoon, need not be surprised if he discovers at the end of his journey a civilisation very different from that which he left behind him in Bengal. Happy-go-lucky, serenely indifferent alike to Hindu metaphysics and the ethics of Mahomet or Samuel Smiles, the Burman—with his cheerful idleness, his weakness for gambling, coloured silks and the hasty knife-blow, his wholly un-Indian sense of humour, his emancipated, very business-like women-folk, and his infinitely peaceful, friendly, childish pagodas, where yellow-robed poongyis pad softly about in the service of remote Gautama Buddha—has developed and retained a distinctive national spirit, combining something of the *bravura* of Gascony with the indolence of Andalusia. And considering that the indigenous races form 91 per cent. of the population of 13 millions, and that literacy (in a language which has nothing in common with any Indian dialect) is relatively high, there is small cause for wonder that Burma, since the war, should have reacted strongly to the influence of the spreading idea of "nationhood."

In its Memorandum to the Statutory Commission the Government of Burma, while taking no positive line of its own in the "separation" issue, pointed out that "it becomes obvious that the nearer British India approaches the status of responsible government the less justification is there for retaining Burma as part of British India merely on grounds of administrative convenience. It might fairly be said, indeed, that Burma can be included in a self-governing India only by its own express consent." The Commissioners in their visit to Burma were clearly impressed with the strength of the popular demand: "Burma for the Burmans." And in their Report, after referring briefly to the motives inspiring that demand—racial sentiment, interests divergent from those of India in customs policy, the feeling that Burma was treated like Cinderella in the matter of central revenue for development—they reached the conclusion "that Burma should be separated from India immediately."

With that conclusion the Government of Burma expressed themselves* as being "entirely in agree-

ment"; and the Government of India, in their Dispatch† of September 20th to the Secretary of State intimated that in their opinion "practical considerations [military and financial] . . . do not in themselves constitute any insurmountable barrier. . . . We support in principle the proposal that Burma should now be separated." Under these circumstances, though the considerable size (800,000 approximately) of the Indian population resident in Burma would naturally make the delegates from British India and the States inclined to share the unwillingness of the Government of India‡ to "disclaim all concern in the framing of a new constitution for Burma," nevertheless the decision of the Round Table Conference on Monday was almost a foregone conclusion.

The principle settled, the details remain to be arranged. Here we can do no more than indicate the broad lines of the problems which have to be faced. So far as the framing of a new Constitution for Burma is concerned, the Government of Burma have urged† that "it is of great importance that it should be made clear beyond all possibility of doubt or question that the separation of Burma will not involve for Burma any departure from the statement contained in the preamble to the Government of India Act, 1919," i.e., that Burma will march *pari passu* with India towards responsible Government. If such a declaration be now made, as we assume it will, by H.M. Government, the task of constitution-making will clearly devolve on a body appointed for this purpose.

Separate from, but allied to the question of constitutional structure, there are three main problems—defence, finance and trade relations with India. As regards the first, the Statutory Commission pointed out that "but for the existence of a powerful army in India, Burma would require more troops for its own security" than are now stationed there, and increased military expenditure "would be prejudicial to the interests and contentment of both countries; but that there was no reason why both countries should not look to a common source for protection while remaining separate political entities. But Burma does not desire her defence to be under that of India and Lord Irwin's Dispatch after further examination of the problem reached the conclusion that while not expressing any opinion as to the garrison that may be required in a separated Burma, the sources from which it may be derived, or the nature and extent of such financial contributions, if any, as Burma might for one reason or another be asked to make towards the defence of India, "There is no military reason why each country should not possess its own separate defence organisation." The military problem should then be no obstacle to separation; but the details of the settlement and the charge which will in consequence be imposed on Burma are bound up in the larger question of the constitutional—and financial—responsibility for the defence of India.

This and other financial aspects of separation, indeed, raise many difficult issues. One of the most important is to determine what share of India's unproductive debt should properly be ascribed to Burma—a matter on which many Indians feel strongly, seeing that the debt includes the cost of the Burmese wars. But the whole basis of financial settlement is one either for a friendly bargain or for reference to an adjudicating body—taking not necessarily a strictly legal view, but one of general equity. If part, at all events, of the trade between the two countries becomes subject to import duties there will be a margin of additional revenue to ease the settlement.

But India and Burma are too closely bound by commercial interests to wish to put serious obstacles in the way of their mutual trade, and it would obviously be desirable that a Convention between India and Burma should form, by agreement, an integral part of the new régime. The economic connection between the two countries has become close. Not only is a considerable amount of Indian capital invested in Burma, but Burma depends on India for supplies of coal and gunnies, while India draws from Burma her requirements of petrol and teak, and is increasingly dependent on Burma's export surplus of rice. Except in so far as collection of customs revenue is essential for Budgets, the maximum freedom of trade would be to the advantage

of both countries; and we are glad to note U Ba Pe's emphasis on this point of view in his speech on Monday to the Round Table Conference. It is on wise economic policy that a Dominion of Burma would have to rely. Burma will need large sums in the future for railways, roads and agricultural development. If she is wise enough to maintain her credit at a high level from the outset, by inspiring confidence in the stability of her constitution and in her determination to deal fairly with all interests within her borders, that capital will be readily forthcoming from British investors, and can be used for productive purposes to mutual advantage without risk of impairing, by obtrusive Westernisation, Burma's own peculiarly unforgettable charm.

BETTER LATE THAN NEVER.

ARRESTING in its frankness was the speech with which Miss Margaret Bondfield introduced into the House of Commons on Monday a resolution to sanction an increase from £80 millions to £70 millions in the borrowing powers of the Unemployment Insurance Fund. Much of the sad story which she had to tell, particularly on the statistical side, was familiar. But she also presented new figures of a striking nature, and was courageous in her admission that, although fraudulent abuses were few and far between, abuses within the law were being perpetrated right and left, to the serious cost of the Fund and the Exchequer. The debate produced trenchant and searching criticisms, notably from Sir Henry Betterton and Sir John Simon. But the Minister of Labour was even more successful than her critics in revealing the desperate seriousness of the present position.

Of the many figures which Miss Bondfield gave we make a selection. Ordinary and transitional benefit are costing £107 millions per annum, or more than the annual cost of the Army and Navy. The debt of the Fund is now £56 millions, and it is increasing by £40 millions a year. The changes made by the 1930 Act have increased the number of claimants by 180,000, and the amount paid out in benefit by £13 millions. Of the women claimants, married women now form 50 per cent. We need quote no more to derive conclusive support for our repeated assertion that the Government should have made rapid inquiry and taken strong action long ago, first to draw a clear line between insurance and relief; secondly, to restore the insurance system to solvency and a sound actuarial basis; and, thirdly, to close up the "legal loopholes" through which public money is pouring away. The gravamen of the charge against the Government is threefold: first, they have by their legislation not merely raised the cost but widened the opportunities for abuse; secondly, by allowing relief to be progressively interwoven with insurance, they have destroyed the insurance principle and sunk the insurance

fund into irretrievable bankruptcy; thirdly, although in possession of accumulated evidence of the need for root and branch reform, they have been guilty of extremely costly and dilatory inaction, which is to continue while a Royal Commission examines the salient facts, though these, to judge from Miss Bondfield's most informative speech, are already well known by her and her Department.

But there it is. The Government have decided that there shall be a Royal Commission, and at long last a Royal Commission there will be. Experience, unfortunately, does not teach us to share Miss Bondfield's hope that it will be very expeditious and will have completed its survey by March next. So far, the names of the members have not been made public. The chairman has been announced, and in Judge Holman Gregory a sound choice has been made. But until the names of his colleagues are known, it is impossible to judge the chances of a quick, thorough inquiry and a bold report. If political partisans are appointed there will be a serious risk of several conflicting minority reports, and of a resultant situation in which Government action will be no more clear or easy than to-day. Meanwhile, throughout the period of the Commission's inquiry the taxpayers' millions will continue to melt away. For the moment the only satisfactory point is that the terms of reference are sufficiently wide to permit of investigation and recommendation covering the whole problem. Mr Snowden's answer to Parliamentary questions on Monday provides adequate assurance on that point, and this assurance is underlined by the complaint in the debate by a Labour member that the sole purpose of the Royal Commission is "to put people out of insurance."

To a certain point we agree. The most urgent task of the Commission is to show how the payment of public money to those who have no just claim to it may be stopped. It must examine evidence and give a view as to what proportion of the huge army of married women and seasonal workers now receiving benefit ever intend to enter the labour market again, and how it can be provided that benefit is restricted to those who really can claim to be genuinely unemployed and in search of work. Next the Commission must survey the difficult question of the exploitation, of which employers (perhaps even more than employed) are guilty, of the present state of the law regarding benefit claimable by short-time workers. Amazing instances of such exploitation were quoted by Miss Bondfield and by other speakers. In the interest of the genuine unemployed, just as much as of the taxpayer and the community at large, this must be stopped. There can be no disagreement about that among justice-lovers of all parties. These are the questions with which the quick interim reports of the Commission, which Miss Bondfield promises, should concern themselves.

But perhaps these first tasks are the least difficult. More intricate and more controversial are such problems

* Dispatch of 13 August, 1930, to the Government of India, Cmd. 3712.

† Cmd. 3700. § Dispatch cited, p. 86. ‡ Dispatch cited, p. 244.

as the restoration of the insurance system proper to a sound actuarial basis, the devising of alternative and separate measures for State assistance to those who cannot be brought, or kept, within an insurance scheme, the question whether the present flat-rate system of benefit should not be replaced by a sliding scale adapted to varying conditions in various districts and industries, and, finally, and most controversial of all, whether the substantial fall in the commodity price level, coupled with the straightened circumstances of the Exchequer, does not justly involve a scaling down of the general level of benefits.

In watching the work of the Royal Commission the public will do well to bear in mind one or two guiding principles. In these days, rightly or wrongly (rightly, as we think), the State has committed itself not merely to maintaining an insurance system for those who, for no fault of their own, fall out of employment, but also to the humane policy of keeping the wolf from the door of all necessitous citizens. On the other hand, tax burdens on industry have already approached, if they have not reached the limit of economic advisability. A general increase of taxation in the next Budget might, in the present temper and circumstances of industry, produce serious effects in the direction of restraining enterprise, and hampering the restoration of better trade and ampler employment. In this connection it should be remembered that one road to lighter taxation, and the chief road open to us, is the repayment of war debt. Under the régime in force at present the national Budget provides for the repayment of £55 millions of national debt out of current revenue. Owing to the trade depression and supplementary expenditure this figure will not this year be realised. Moreover, against such redemption as is effected must properly be placed the borrowing for the Insurance Fund, which, although it figures as a capital transaction, is generally recognised to be in reality an irrecoverable expenditure. So long as £40 millions per annum are to be "loaned" to the Insurance Fund, the country will in fact have been obliged to abandon its project of annual debt redemption. That is a very grave fact. Subject to the honouring of definite obligations and the satisfaction of claims recognised to be just and proper by the public conscience, the resources of the State must be carefully husbanded, if causes of fresh unemployment are to be avoided and impediments not to be placed in the path of economic recovery.

In view of the abundant data available and many times explored, we are not convinced that a Royal Commission was necessary or desirable. If the Government insist on a re-sifting of oft-sifted facts, it should have been appointed long ago. But since the delay has occurred and the clock cannot be put back, we can only say "Better late than never," and hope that the Commission in adopting that motto will realise that the emphasis is on the word *late*, and that promptitude and vigour is expected from it, in order that lost time may be made up.

GERMANY AND THE YOUNG PLAN.

(BY A CORRESPONDENT IN GERMANY.)

WHEN the long drawn-out negotiations for the "final" settlement of the reparation question came to an end at the second Hague Conference, even the pessimists hoped that for a few years at any rate Europe and the world would be able to get on with their business undisturbed by the vexed problem of international debts. To-day, some nine months afterwards, the evacuation of the Rhineland has gone off rather like a damp squib, international relations are more strained than ever, and the reparation question is persistently showing signs of coming to the fore.

It is impossible to blame the experts for this unfortunate state of affairs, and it is equally unfair to set it down to German bad faith. The Paris Conference of Experts had the misfortune of being probably the most untimely of major international conferences since the war. The atmo-

sphere of Paris was one of boom psychology; the American representatives at any rate were still imbued with the inevitability of trade expansion, and their influence was a paramount factor. The German position at the time was peculiarly unfortunate. Public expenditure on borrowed money had created artificial prosperity, and Dr. Schacht's arguments on the German "capacity to pay" were more or less completely nullified by the fact that serious attempts at public economy had never been made. The Dawes Committee had intended to provide a basis of practical experience upon which a definite estimate of German "capacity to pay" could be based. Owing to the obscuring of the situation by foreign investments in Germany it failed to do so, and the Young Committee was obliged to make another shot in the dark. Within a few months of their Report being signed a major international depression had developed.

At the time when the Committee met it was fairly obvious that the unsolved problems of capacity to pay and transfer might develop in either of two principal directions, mainly depending upon the flow of capital into Germany. If this flow continued, growing gradually less as time went on, the practical test of transfer would obviously be postponed. It was thus possible to hope that the change-over from a passive to an active balance of trade would be a smooth process involving comparatively little disturbance of the standard of living in Germany. The equilibrium of international trade would also not be seriously affected, and by that time, too, the natural expansion of world trade (a favourite theme of the Americans) might have made the sums involved relatively less important. This was the hope of the experts, and although responsible opinion in Germany was much more sceptical, the possibility was at least admitted. If, on the other hand, foreign investors were not willing to place more money in Germany, then the acid test of capacity to pay would have to be faced in the near future. This is what is happening. For some years to come Germany seems unlikely to be able to do more than fund her most pressing short-term debt. She may perhaps consider herself fortunate if there is not an outflow of capital on balance. If this is the case, the problem has to be faced here and now, and the next twelve months will be decisive.

The transfer question has been the subject of much discussion between eminent economists, but the most hardened advocates of the "automatic transfer" theory will scarcely deny that a change-over of several milliards of marks per annum in the balance of international payments, within a comparatively short period and in the teeth of a major international depression, is likely at any rate to produce severe friction. The most authoritative estimate of the German balance of payments, that produced by the Reichskreditgesellschaft, gave the non-recurring credit items (gold exports, imports of foreign capital, etc.) required to balance the account for 1929 as 2.77 milliards of marks. For 1930 and 1931 reparation payments will be lower by approximately 0.6 milliards annually, but interest payments will probably be somewhat higher. An approximate calculation would give a figure of 2.4 milliards as the measure of the increased surplus of exports over imports required to balance the account, excluding gold movements and upon the assumption that the balancing item of capital imports will no longer be available.

Considerable progress in this direction has been made during the current year. In 1929 Germany's foreign trade balance, including deliveries in kind, was practically in equilibrium. The first nine months of this year produced a surplus of one milliard, imports having dropped by two milliards and exports by one milliard, as compared with the previous year. The importance of this progress should not be exaggerated, however, since certain abnormally favourable factors have been at work. In the first place, stocks of raw material have probably been allowed to run down under the pressure of the business and credit situation. In the second place the fall in the price of raw materials, taken together with comparatively stable prices for finished goods, has undoubtedly improved the picture, but there is no guarantee that this state of affairs will continue. Even if, making allowances for these factors, we put what might be described as the

"genuine" surplus for the whole year as high as one milliard, there are nevertheless an additional 1.4 milliards or so to make up. The importance of this figure, which represents over 10 per cent. of German exports, is somewhat greater than appears at first sight. The bulk of German exports consist of finished goods made out of imported raw materials, which make up a considerable proportion of the value of finished products. The implications of this factor are vital to an understanding of the problem. Sir Andrew McFadyen, in his excellent and thorough study* of the reparation question, estimated that under present conditions an increase of exports would bring a simultaneous increase in imports of one-third of the value of the increased exports. In other words, in order to correct the deficit of 1.4 milliards mentioned above, a gross increase of some 2.1 milliards in exports would be necessary. This is indisputably correct (on the assumption that the estimate of one-third is justified) provided that the standard of living in the country is maintained. If this is reduced and there is as much diminution in production for the home market as there is increase in production for export, there will be no change in the value of the imports required.

The theory towards which this argument would seem to lead us is certainly being borne out by the pressure of the present situation on Germany's economic life. The exchange has so far not been seriously menaced. On the other hand, the Government is facing a heavy deficit, the plight of the local authorities is exceedingly serious, unemployment is well over three millions and likely to approach four at least during the winter, and there is a business depression of unprecedented severity. The Government is facing the situation with a bold programme of retrenchment and reduction not only of official salaries, but, furthermore, of salaries, wages and prices right through Germany's economic structure. Almost all business enterprise have reduced, or intend to reduce, salaries from top to bottom. A commencement has been made with wages, though this is a slower process. It is probably realised that the effect of these measures, even if to some extent accompanied by price reductions, must be to reduce the purchasing power and the standard of living in the country, although the Government, as is only natural, is a little obscure on this point. It is hoped, however, to reduce costs and export prices, and thus to find on the export markets compensation for the loss of purchasing power at home, which would automatically correct the balance of payments. In other words, as Mr Keynes has on occasion pointed out, the transfer problem is at last presenting itself as one of forcing down the standard of living in the paying country.

If this premise be admitted, it may readily be seen that the reparation problem at this point leaves the purely economic sphere and becomes largely political and psychological. That is perhaps the principal significance of the recent German elections. As long as the workers believed that reparation could be paid out of the rich man's pocket, they did not trouble about the question. Now that their own pockets are being touched, they naturally lend a ready ear to extremist agitators. The difficulty of reducing the standard of living, or even of merely reducing money wages, in a modern democratic State is obviously very much enhanced when agitators are able to point to "tribute" to the foreigner as one of the primary causes. The German Government, which certainly does not lack courage, has taken the only possible course in indicating that when the sacrifices which it is now asking of the people have been consummated, it will seriously consider making use of the protective provisions of the Young Plan. The formula, first set the house in order and then apply for a revision if necessary, was the only way of checking the progress of the extremists and getting the programme through. How far it will succeed has yet to be seen. If the sacrifices which the German population are going to make this winter prove sufficient to solve the problems involved, and a revival of business ensues, the Young Plan may be left untouched. If, on the other hand, further sacri-

An amalgamation of 20 banks, among
which is the OLDEST COMMERCIAL
BANK OF SWEDEN
established in 1830

fices prove to be necessary, nothing can prevent application for a revision at an early date.

If the above diagnosis of the situation is correct and the transfer question, hitherto looked upon as an economic problem, resolves itself into the political problem of how much the standard of living in Germany can be forced down without producing unbearable political pressure, it is obvious that the negotiations for revision will be of extreme difficulty. Sir Andrew McFadyen has pointed out that if it be correct to assume that there will be no transfer difficulty without an internal difficulty, the situation will be confused. In this case it will be hard to convince public opinion in the countries which receive reparation that other expenditure cannot be restricted and the unproductive expenditure on reparation payments allowed to continue. After many years of struggle to put reparation payments on an economic instead of on a political basis it looks as though the process may have to be reversed. The advisory committee which may be set up at Germany's request, and must be set up if she declares a moratorium, is to consist of economists. The successful working of the machinery may well depend upon whether the economists have the courage to act as statesmen.

THE POLITICS OF FOREIGN INVESTMENT.

IN a recent series of articles in the *Economist* we have given statistical estimates of our capital abroad and of the income which it yields. Into the implications of this international lending we have not entered at all. The opportunity to do so is afforded by the publication of a study* by Mr Herbert Feis of foreign lending by European countries in the half-century before the war. This admirable and well-documented work is chiefly devoted to a narrative of the way in which political interests determined the course of international capital movements during that uneasy period, and how those movements reacted upon political events. It contains both parallels and contrasts with post-war international borrowing.

The first part of the book is a record of the foreign investment of the three great lenders, Great Britain, France and Germany. Each of these countries had its own peculiarities in this field. The financial machinery was different. In France the private banks of Paris were frequently the initiators, though in the larger transactions the great industrial banks gradually supplanted them; the deposit banks, like the *Crédit Lyonnais*, served mainly to distribute the securities among thousands of savers all over the country. In Germany, the business of foreign lending was concentrated in the hands of the four great banks (the "D" banks), who often retained a direct interest in the enterprises whose borrowing they had furthered. In Great Britain, the raising of capital for Governments and enterprises overseas was divided among hundreds of merchant banks, private banks, issuing houses, specialist and often transient finance companies. London was the most enterprising, free and flexible capital market in the world.

* "Europe: The World's Banker, 1870-1914." By Herbert Feis. New Haven, Conn., Yale University Press (for the Council on Foreign Relations).

* See *Economist*, November 29, p. 998.

The amount and character of the resources available for capital export also differed. A long industrial start, and the abundant possession of coal and iron, had made Great Britain wealthier than any other country, and, in spite of her high standard of living, liberated vast sums for overseas lending. The rapid rise of new countries, the possession of a vast Colonial Empire, the enterprise and *Wanderlust* of her people, all attracted the savings of Britain beyond her shores. In France, on the other hand, saving was the fruit of parsimony rather than of prosperity. The fact that the hoards of thrifty rentiers were so extensively absorbed by risky foreign ventures is one of the peculiarities of this history. The explanation is to be found in political rather than economic forces. Germany, rapidly advancing in industry and commerce, had little capital to spare after her internal needs were satisfied, but she could not afford to stand aside from the race for markets and the diplomatic huckstering which characterised the period.

These forces were reflected in the direction of the investments. The following table summarises the geographical distribution, as here recorded, of the foreign investments of the three Powers at the outbreak of war:—

	Great Britain.	France.	Germany.
	%	%	%
United States	20	4*	16*
Latin America	20	13	16
Russia	3	25	8
Turkey and Balkans...	1	13	15
Europe	3	23	31
Far East	3	5	4
British Empire.....	47	17	10
Rest of World	3		
	100	100	100

* Including Canada.

The total sums involved were respectively about £3,750 millions, 45,000 million francs, and 23,500 million marks, to which must be added in each case private investments whose distribution was not ascertainable.

The contrasts presented by the above table are most significant. One quarter of France's exported capital was sunk in Russia. While Great Britain had lent only 1 per cent. to Turkey and the Balkan States, France and Germany had lent, respectively, 13 per cent. and 15 per cent. While nearly one-half of British overseas investment went to her imperial possessions, the French colonies received only some 9 per cent. of the overflow of capital from the mother country, and the German colonies even less. The contrast is one between a world Power, interfering in European affairs only to preserve a precarious balance of forces, or to defend interests in distant continents, and Continental Powers, constantly scheming to secure for themselves the hegemony of Europe.

The history which Mr Feis relates is largely the history of that European intrigue. Constantly the French and German Governments were using their official sanction and encouragements of loans as bribes to secure political allies, or their official disapproval of loans as an instrument of political displeasure. They had legal authority over the listing of securities in the public stock exchanges. The British Government had no such authority, and infrequently desired to intervene; but, even in London, the personal pressure which could be brought to bear determined on more than one occasion the fate of a prospective issue. Official opposition to the Bagdad railway plan, for instance, effectively prevented the participation of British finance in the project.

The latter half of the book, comprising a sequence of studies of investment by the three Powers in areas of special political interest—Russia, the Balkan States, Turkey, Persia, North Africa, China—is an enthralling though often a distasteful story of diplomatic intrigue, national ambition and profligate finance. To summarise its intricacies would pass the wit of man, so an example must serve instead. Russia was a persistent and heavy borrower. Up to 1886 German capital flowed in freely, with Bismarck's encouragement. Then public opinion began to be hostile to this drain on the national resources, and finally, in 1887, Bismarck instructed the Reichsbank to refuse to accept Russian bonds as collateral. He seems to have intended this action rather as a warning than as an

attack, but it drove Russia into the welcoming arms of France. The next outstanding events were political—the refusal of Germany to renew the “re-insurance” treaty in 1890, and the contraction, in the following year, of a vague understanding between Russia and France, followed by a military convention. This understanding was nearly upset by the refusal of the Paris House of Rothschild to participate in a projected Russian loan, on the ground of the persecution of Jews in Russia, but the French Government found other purchasers. During the whole period of the alliance the sale of Russian securities in France was aided by Government favour and preceded by diplomatic discussions. Political and financial partnership was one. And so the whole story runs, with political advantage always the first and financial security the second consideration.

Throughout the narrative two questions are constantly recurring to the minds of the reader and, obviously, of the author. The first is: Was this exchange of financial for political favours worth while? Mr Feis is inclined to answer “No.” “Debts are not the kind of bond which can unite the world”; the gratitude of debtors was ever fickle. And the second question is: Will the history of foreign investment since the war be the same sorry tale with the same catastrophic ending? Has Fate (for these events were closely linked to financial history) another Agadir, another Serajevo, another Tannenberg in store? Again the answer seems to be “No.” The great international flotations which the last ten years have seen—the Austrian Reconstructions Loans, the Dawes and the Young Loans, are new and hopeful features of world finance. Colonial re-partition seems a distant possibility. But if Europe has only to wait for the financial and political rehabilitation of Germany before embarking upon a new pursuit of the Balance of Power, aided by the resources of finance, or if the story which Mr Feis tells is only to be shifted to another and more exotic scene, then, indeed, it were better if international lending had never begun.

INTERNATIONAL CARTELS.

ONE of the most pronounced symptoms of the present world depression, a symptom to which must in some degree be attributed the prolongation of the depression, is the dislocation of price relations. Wholesale prices of most raw materials have declined catastrophically, while prices of many finished products and most retail prices have followed only sluggishly. Many reasons have been advanced in explanation of this: high labour costs, the growth in the proportion of the retail price which is needed to cover the costs of distribution, and the existence of various restrictive agreements of the kind which may conveniently, though somewhat loosely, be designated by the covering term “cartels.”

The growth of international cartel agreements during the post-war years has been rapid, but there has been little collected evidence to show their extent or to enable the scope and nature of their operations to be known. Economists who recognise the imperative need for rationalisation, and whose attention is focussed principally on the disastrous waste which arises from unco-ordinated production, contemplate the extension of the international cartel movement with favour, whereas those who are more preoccupied with considerations of price are inclined to see only the dangers. The World Economic Conference of 1927 came to the conclusion that international agreements were desirable, provided adequate safeguards against exploitation were maintained, and that the first necessity was for publicity. The Conference accordingly recommended steps which might be taken by the League of Nations to remedy the lack of precise information, and the Economic Committee of the League asked five experts to prepare a report, which has recently been published in the form of a collection of monographs* dealing respectively, with iron and steel, non-ferrous metals, potash, aniline dyes, bone glue, rayon, linoleum and incandescent electric lamps.

* “Review of the Economic Aspects of Several Industrial Agreements.” (Geneva). League of Nations. 2s. 6d.

The authors of the memorandum are M. Benni, M. Lammers, M. Marlio, M. Meyer and Sir Harry McGowan, some of whom have personal experience of the framing or direction of international agreements and all of whom have exceptional qualifications for an inquiry into this subject.

The agreements under consideration may be roughly grouped according to the principal influences which appear to have led to their formation. Many of them came into being because the market was thoroughly disorganised, often owing to changes brought about by the war, so that “over-production” and price cutting were destroying all profit on output. To this category appear to belong the three iron and steel agreements discussed in the memorandum: the International Steel Agreement, the Rationing Convention of 1926 between German, French and Luxemburg metallurgists, and the International Railmakers' Association. The first of these regulates output, the last controls exports, but the writer of the monograph holds that all three indirectly had a very favourable effect on the market.

The attempted agreements among producers of zinc, copper, tin and lead respectively, also appear to have been inspired by the chaotic conditions of these four markets as a result, largely, of the opening up during the war of new sources of production. The lead agreement has not yet been in operation long enough to enable a judgment to be formed as to its effectiveness; those in the tin and zinc industries have not so far been very successful in stabilising the market. Of Copper Exporters Incorporated, the best known of these cartels, there is a fuller account. The cartel, which regulates sales but not output, was formed in the winter of 1926-7, and shortly afterwards the price of electrolytic copper fell from 14.4 cents to 12.25 cents per lb., partly owing to the opposition of the London market; but by February, 1929, Copper Exporters had succeeded in raising the price, by stages, to 18 cents. This level was maintained till April, 1930, when the pressure of stocks became irresistible and there began the rapid series of reductions which attracted so much attention last spring. It is somewhat surprising that this memorandum offers no criticism of the maintenance of the 18 cent level during the period February, 1929, to April, 1930, but sums up the effects of the Association's policy in the following somewhat self-contradictory phrases: “Considering the special position of the copper market it may . . . be asserted that both producers and consumers have benefited, as a result of the cartel, by a period of fairly stable prices. On the other hand the market was completely disorganised by the enormous fluctuations which preceded and followed the period of stability.” The disorganisation was undoubtedly very much greater in consequence of the prolonged maintenance of the price in face of rapidly mounting stocks, and it seems a heavy price to pay for a few months of precarious stability at an artificially high level.

The agreement between Italian and Spanish producers of mercury, concluded in 1928, was the natural consequence of a European monopoly, shared by only two countries, of a uniform product in the hands of a very small number of producers. Its object was the abolition of undue competition between France and Spain; it operated by allocating a fixed percentage of sales to each country and by the maintenance of an official price; and the judgment expressed in the memorandum is that “both the industries producing the metal and those consuming it must certainly have benefited greatly by this change in the situation.”

The potash industry in Germany was one of the first to be cartelised and the present Franco-German agreement, which is a purely territorial cartel, is the natural culmination of this long-standing tendency towards organisation. It has benefited the industry by stabilising prices, and as the market for potash is very dependent upon the price being kept low, the cartel is not likely to exploit the consumer. The necessity for popularising the use of potassium fertilisers, which can only be effectively done by joint propaganda, has been a great stimulus to the development of scientific research.

Less equivocal in their economic results are those cartels whose formation was largely due to the need for technical

THE BRITISH LINEN BANK.

Every description of Banking Business transacted.

improvements or economies which could not be effected by competing producers. Perhaps the most interesting example of this is to be found in the monograph on the linoleum industry. The processes of linoleum manufacture are very complicated, and the bulk of the sales consist of very diverse patterned products. Since any alteration in description or pattern requires a prolonged stoppage of the machinery, linoleum manufacture is profitable only if each pattern is turned out in very large quantities. Further, the capital outlay required is very large, and success depends upon the employment of technical experts of very long practical experience. These conditions mean that competition and the existence of small firms involve immense waste and very high production costs, so that although the original Convention of 1911 had its origin in the usual price difficulties characteristic of a period of depression, the formation of the German trust in 1925, and the gradual adhesion to it of producers in six other countries, was both natural and desirable on technical grounds. In 1928 a Swiss holding company called the Continentale Linoleum Union was formed to amalgamate the leading German, Swiss and Swedish companies; it subsequently acquired interests in the Lithuanian and Norwegian industries; and Dutch and French concerns joined it in 1929.

The Continentale Linoleum Union now possesses eight factories in Germany and eight distributed over six other countries. Profits of all the members except the French firm Sarlino are pooled and equal dividends declared. The Trust has its own selling organisations in the countries where it has factories, and these work in conjunction with the native firms' own organisations. Elsewhere it sells through agencies. In view of the character of the product, orders are not allocated by quota but in accordance with the practical requirements of each case, and the non-German factories, which before entering the Trust were only working about 60 per cent. of capacity, are almost fully occupied.

Selling prices in foreign countries are fixed by friendly agreement with the English linoleum industry. The price policy of the Union has been, according to the monograph, to keep prices as low as possible and to alter them only at very long intervals. There were three reductions in 1927, but in 1929 and 1930 prices had to be raised owing to the very marked increase in the price of two important raw materials, cork and linseed oil. The price, however, is now only slightly higher than before the formation of the Trust, from which the conclusion is drawn that the economies of rationalisation have almost offset the great rise in the raw material prices. The consumer has benefited to this extent, and also from the economies effected in transport and tariff costs, while it is claimed that he has also gained in stability of price and quality.

Two of the most interesting international agreements, the Franco-German agreement on aniline dyes and the international agreement in the incandescent lamp industry, owe their existence very largely to the rapid development of scientific processes and the need for each unit in the industry to have access to all patents and processes. As far as the dyestuffs agreement, which was joined by Switzerland in 1929, is concerned, the expert responsible for the study draws the conclusion that it definitely aims at serving the customers' interest, and that outside competition is too strong for there to be any ques-

tion of raising prices. The electric lamp situation is more complicated; prices have been reduced, and there have been far-reaching measures of rationalisation, but "it is difficult to determine how far the consumer has benefited from these economies in production and sale."

The remaining memoranda lead their authors to conclusions no less favourable. In some instances, as, for example, the Linoleum Union, already discussed, and the International Association of Bone Glue Manufacturers, enough evidence is given to enable the reader to support from conviction the favourable conclusions of the authors, but some of these studies, which appear to have been prepared for publication in some haste, jump rather suddenly from the bare outline of the organisation of the cartel to an *ex-cathedra* pronouncement as to its economic effects. The experts, however, in their preface "reserve the right to make a more detailed study, in a special memorandum, of the economic aspect of the problem." We hope that they will exercise it, for it is highly desirable that the evidence on which these conclusions are based should be published as fully as possible, that they may carry the more thorough conviction.

Notes of the Week.

Governors-General and the Crown.—As we noted last week, one of the decisions of the Imperial Conference was that henceforth His Majesty should appoint Governors-General of the Dominions on the advice of his Ministers, not in London, but in the Dominion concerned. This decision has been acted upon rapidly, and it has been announced this week that the King, on the advice of Mr Scullin, the Prime Minister of Australia, has appointed Sir Isaac Isaacs to be Governor-General of the Commonwealth. Sir Isaac, the first Australian to be appointed to this high office, is a distinguished Judge and of his personal qualifications no doubts are entertained. Nevertheless, the appointment to the position of impartial representative of the Crown of one who has been closely identified with domestic politics, raises doubts as to the success of the experiment, for even if Sir Isaac were a super-Archangel his impartial performance of his task might on occasions be regarded by erstwhile political opponents with suspicion. His rôle will not be an easy one to play. As regards the ultimate results of the new system of appointment, we note in sections of the Australian Press some apprehension lest the office of Governor-General should tend to be regarded as a reward for political services. However, future Governors-General may be chosen from among any of the distinguished men, not only of Australia, but of the whole Empire, and we have confidence that future Premiers at Canberra will be guided in their selection by the success or failure of the present experiment. Meanwhile an even more important Imperial appointment is pending, namely that of the next Viceroy of India. Lord Irwin's term of office expires next spring, the announcement of the name of his successor is overdue, and the delay has given rise to certain rather disquieting rumours. It is obvious that the next Viceroy will face a load of responsibility which will call for the highest exercise of statesmanship, and upon a wise choice the smooth evolution of the next stage in Indian political evolution will in no small measure depend. We trust that the choice will be such that it will receive the same general welcome that has been accorded to the invitation to Sir Arthur Salter to advise the Government of India upon the immediate economic problems of the day.

Two By-Elections.—The by-elections at East Renfrew and Whitechapel, the results of which were declared last Saturday and Thursday respectively, have caused no change in party strengths at Westminster, the former seat being held by the Conservatives and the latter by Labour. Both results show a considerable swing of

votes against the Government, for at Renfrew the Conservative majority over Labour was increased by nearly 6,000 and at Whitechapel the Labour majority over the Liberal was reduced by over 8,000. Clearly both have sent messages of warning to the Government. The figures are, however, subject to qualification. At Renfrew the issue was confused by the intervention of a third candidate, who polled 4,818 votes, or rather more than the number by which the Labour vote was reduced. At Whitechapel, similarly, a Communist candidate entered the fray and took 2,106 votes. Here the Liberal vote rose by nearly 3,000, while the Labour vote fell by over 5,000, and the Conservative vote rose by a few hundreds. Free Trade arguments in a riverside constituency and the Liberal proposals regarding unemployment evidently made considerable impression, but too much general significance should not be read into these figures, for the election was fought in an area which, having a large Jewish population, was disturbed by the Government's Palestine policy. Indeed, all things being considered, the obvious swing against the Government is not much larger than might be expected against any Government which had been in power for eighteen months in a period of deepening trade depression. An incidental feature of these two by-elections, which distinguished them from other recent contests, was the absence of any candidate representing either the Rothermere or the Beaverbrook factions. Now we are to have another by-election, this time in East Bristol, whose Labour member, Mr W. J. Baker, has died this week. There perhaps we shall get some clearer evidence of the way in which the political tide is running.

The Moscow Treason Trial.—The trial of eight professors and experts, which has been in progress for some weeks at Moscow, is nothing out of the way in itself. Treason trials are the grand elixir of revolutionary régimes; and for years the Soviet Government, like competent theatrical producers, have managed to stage a series of such performances in almost uninterrupted succession. You cannot safely promise the millennium without paying out something on account in the form of public sensations; and the sensations must be blood-curdling if the popular valuation of the promised golden age is to be maintained at par. All this is common revolutionary form. But this particular trial at Moscow has been distinguished by the apparent eagerness of the accused to give themselves away. Their zest to confess has considerably outrun the prosecution's zeal to procure a conviction. With broad, impressionistic strokes of the brush, they have sketched a vast cartoon of an Anglo-French anti-Soviet plot, in which they claim to have played their humble rôles in a ballet graced by a galaxy of star performers: the Government of the French Republic; His Britannic Majesty's Government in the United Kingdom; Monsieur Briand; Monsieur Poincaré; "T. E. Laurence" (alias Air-Mechanic Shaw); Mr Winston Churchill; Mr Simon (uninitialed); "Sir Philip" (surname unknown, because English Lords do not sport surnames); and, last but not least, Pavel Pavlovich Ryabushinsky. Pavel Pavlovich is an authentic piece. He was a well-known Russian man of business under the old régime. He is just as historic as Monsieur Poincaré or as "H. M. G." And so Professor Ramzin's confession that he had plotted with him in Paris in 1927 was plausible enough till last Thursday, when one of Professor Ramzin's fellow-prisoners, Professor Feodotov, quietly pointed out that Pavel Pavlovich died in 1924. There is no doubt about it. The inscription on his tombstone at Batignolles, in France, has since been published in the Press. But the Public Prosecutor at Moscow is not to be defeated so easily as that, for Pavel Pavlovich has a brother, Vladimir. And what more simple than to transfer to Vladimir Pavlovich's name the damning evidence which has been booked, hitherto, to the account of brother Paul? (Just like these capitalists, to evade their obligations by shamming dead!) Meanwhile, the French Government has lodged a formal protest with the Soviet Government at being included in the caste. Monsieur Poincaré has made a personal *démenti*. And last Monday Mr Henderson announced in the House of Commons that the British

Ambassador at Moscow was being instructed to take exception to the offensive references, by the prosecution, to H.M. Government. What does it all mean? The farce may only too readily have a tragic ending, for public feeling throughout the U.S.S.R. is being worked up, and there are clamours for the infliction of the death penalty. How do the eight prisoners really stand? Are they performing their confessional works of supererogation under pressure of "the third degree," or in despair, or in collusion with the Soviet Government itself? The last of these three possible explanations is by no means inconceivable. It seems probable that "the Five Years' Plan" has lately begun to fall short, in execution, of the somewhat extravagant promises that have been made. And if this has now become apparent to those behind the scenes, the politicians and the experts may have decided that they have a common interest in finding a scapegoat. The inevitable scapegoat is the foreign capitalist world, putting one more spoke in Holy Russia's wheels. Has the treason trial been "produced" as the only possible means of reintroducing this old, old performing animal on to the Russian propaganda stage?

The New Austrian Cabinet.—Herr Vaugoin's Christian Socialist Cabinet, which failed to obtain a majority in the recent general election, resigned office on November 29th, but Dr. Ender, whom the President asked to form a new Cabinet, did not succeed until Wednesday. In consequence, the new National Assembly met on Tuesday, December 2nd, only to adjourn for two days—the adjournment being moved by a member of Dr. Schober's National Economic Bloc, and carried with Social-Democratic support, in spite of some Christian Socialist opposition. The position in the National Assembly is difficult. Dr. Ender, who is the Governor of the Province of Vorarlberg, is himself a Christian Socialist; and, like the other leaders of his party, he is in favour of co-operation with the (fascist) Heimwehr. The Heimwehr, however, are only eight strong in the new chamber; and their voting strength is not increased by the manoeuvre of marching in, two by two, with cock's-feathers in their hats. The last word remains with the less picturesque National Economic Bloc, who hold nineteen seats; and any new Government which does not include the Socialists cannot do without Dr. Schober's support. Dr. Schober appears to have agreed to join a new coalition government against the Socialists, but only on condition that the Heimwehr are excluded. And this condition has evidently been the rock on which Dr. Ender's attempt to form a Government nearly suffered shipwreck. In the list of names of the new Cabinet Dr. Schober figures as Vice-Chancellor and Minister of Foreign Affairs, and his co-operation seems in the end to have been secured by the appointment of a member of his own bloc to the post of Minister of the Interior. The rise of Dr. Schober indicates that the supporters of a moderate liberal constitutional régime in Austria know what they want, and feel themselves strong enough to insist upon having it.

Our Index Number.—After displaying a somewhat steadier tendency in the first half of November, wholesale prices developed fresh weakness in the last week of the month; and our index number for November 30th is 2.1 per cent. lower than that for October 31st and 19.7 per cent. below the corresponding figure a year ago. The previous month's rate of decline was 1.1 per cent., following falls of 3.8 per cent. in September and 1.9 per cent. in August.

AVERAGE, 1927 = 100.

End of	Nov., 1929.	Aug., 1930.	Sept., 1930.	Oct., 1930.	Nov., 1930.
Cereals and meat	90.6	82.5	79.5	76.8	73.2
Other foods	84.0	75.2	74.5	73.7	70.2
Textiles	83.6	61.7	56.9	55.8	55.1
Minerals	92.4	81.5	79.5	79.1	79.0
Miscellaneous	89.8	79.7	76.7	77.7	77.8
Complete Index	88.3	76.1	73.2	72.4	70.9

The groups in which the major downward movements occurred last month were the two foodstuffs sections.

Grain prices fell substantially, and "other" foods, notably butter, coffee, cocoa and sugar, were considerably cheaper. In the raw material groups fluctuations were irregular. Among textiles, cotton prices reacted after their firmness in October; but non-ferrous metals, taken together, were steadier, and rubber maintained the previous month's recovery.

If 1924 be taken as 100, the current figure of our index number works out at 61.3, as compared with 62.6 at the end of October and 76.3 a year ago. In the concluding table we show the index concerted to a percentage of the average for 1913:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168.5	215.8	214.7	149.3	122.6	166.2
" 1928	152.9	189.7	165.0	115.2	111.2	140.9
" 1929	143.0	173.5	144.7	119.6	105.0	132.8
End Nov., 1929	133.7	169.9	131.2	115.6	104.2	126.9
" Oct., 1930	113.3	149.0	87.6	98.9	90.2	104.0
" Nov., 1930	108.0	142.0	86.5	98.8	90.3	101.9

A forecast last January that before the beginning of 1931 the average level of commodity prices would have reverted to that of the last pre-war year would not have obtained wide acceptance; but it looks as though that position may be realised.

America Feels the Pinch.—It is clear from the message which President Hoover addressed to Congress on Tuesday, that American taxpayers will have to face a serious reversal of their recent happy experience of budget surpluses and tax reductions. Mr Hoover forecasts that a budget deficit of £36 millions will be shown at June 30th next in place of the anticipated surplus of £24.6 millions, and even this result will only be achieved by the application of large economies in many directions. The actual effect of the depression upon the Budget he valued at no less than £131 millions, revenues having declined by £86 millions, and expenditure on "Federal construction work" necessitated by the crisis reaching £45 millions. The prospective deficit is reduced to the figure of £36 millions by offsetting £37 millions of war debt payments, by a reduction of £20 millions in the demands of the Farm Board, and by governmental economies amounting to £13 millions. The passages in the message referring to the economic depression bore the optimistic tint which we have learned to expect from Mr Hoover. He expressed the view that the "fundamental security of the nation's economic life is unimpaired," and that "the major forces of depression now lie outside the United

States, and our recuperation has been retarded by the unwarranted degree of fear and apprehension created by these outside forces." The impression conveyed is of an America comparatively less affected by the depression than other countries, but it is scarcely borne out by certain figures given in the message. For instance, the volume of manufacturing production, he stated, was 80 per cent. of the 1928 level. Our own Board of Trade figures show for British manufacturing production indices of 109.4 for 1928, and 103.4 for the third quarter of 1930—a percentage drop of about $5\frac{1}{2}$ per cent., as compared with the American drop of 20 per cent. Moreover we note that on the day of Mr Hoover's statement, the Senate proceeded to discuss a Bill authorising the expenditure of £30 millions for unemployment relief. In view of this and other evidence, it is hardly possible to accept Mr Hoover's contention that the major forces of depression are not operating in the United States.

Tariffs at Geneva.—The second Conference for Concerted Economic Action has closed on a note of pessimistic optimism. So far as tariff questions are concerned it has just succeeded in keeping at least a semblance of concerted action going. The Commercial Convention of March, 1930, remains open for accessions, tariff negotiations are contemplated between various countries on a bilateral rather than multilateral scale, and conditions have been somewhat gingerly laid down about the preference proposals of the agricultural countries of Eastern Europe. Although the Convention is not yet in force—the time for the deposit of further ratifications is extended to January 25th—it has prevented the denunciation of commercial treaties, and has to some extent created a measure of tariff stability as a favourable atmosphere for negotiations. Whether or not it will eventually enter into force will be decided at a later session of the Conference, presumably on or after January 25th. Meanwhile, writes a League correspondent, the possibility of really executing the recommendations of the International Conference of 1927 depends almost wholly on the negotiations to be undertaken by Great Britain with countries ready to negotiate. The President of the Conference said bluntly that if the negotiations were not successful the whole undertaking would have failed completely with, in his opinion, disastrous results. The last partisans of free trade would adopt protectionism, and this would lead to a widespread tariff war. It was a matter of good sense and goodwill, and despite his fears, he said he still hoped it was "not necessary to despair." It behoves the British Government to pursue the matter with vigour and initiative. The British dyestuffs decision has improved the prospects of the entry into force of the Convention on Import and Export Prohibitions and Restrictions, and governments are asked to consider the new situation and communicate their observations in time for examination at the next session of the Conference. There is also a prospect of something being done by negotiations now in progress to find a way of drawing up a convention on the treatment of foreigners—a subject on which agreement was not reached at the conference held in Paris some time ago.

The British Industries Fair.—The Chelmsford Committee appointed by the Board of Trade to consider means of increasing the utility of the British Industries Fair has issued its report. The gist of its recommendations is that the Fair should be developed "so as to become a truly national manifestation of the quality and range of British products," that a site easily accessible from Central London should be acquired as a permanent site, and that the present Government grant should be raised from £25,000 to £100,000. If the Fair is to be continued, every effort should be made to make it representative, and if that is to be attempted it is difficult to resist the argument that an extra £75,000 is a small amount to ask for an attempt to sell British goods, in comparison with the £1,000,000 granted to the Marketing Board for stimulating the sale of Empire produce. Nevertheless every claim for the bounty of the Exchequer demands close scrutiny in these days, and before

the Government accedes, inquiry should be made, among other things, into the merits of the proposed acquisition of a special site in the London area. Might not such a building, to be used for the Fair only once a year, be a white elephant?

Greater London Traffic Problems.—The congestion of traffic on the main roads leading out of Central London presents a problem with which the London Traffic Commissioner, when he is appointed, will find it not easy to deal. In this connection, writes a correspondent, an interesting development has to be noted in the establishment of the London Coach Co-operation Committee. This was formed in September, 1930, by the independent operators of coaches running into London, owing to the rapid extension of the "Green Line" coach services controlled by the London General Omnibus Company. The "Green Line" was regarded by the independent operators as an effort on the part of the L.G.O.C. to "stake out a claim" in the London Traffic Area before Part IV of the Road Traffic Act, 1930, came into force. The Co-operation Committee is under the chairmanship of Mr Charles Dobbs, the managing director of the Skylark Motor Coach Company. Twenty-eight companies are associated with the Committee, but there is no question of any financial agreement, each company insisting on its independence. At present the organisation is somewhat a loose one, but it will doubtless be tightened up when the London Traffic Commissioner is appointed, and each company has, under the Act, to prove that its service is meeting an adequate demand. The Committee is securing legal representation so as to be able to meet the claims which the "Green Line" will put forward to the Traffic Commissioner. Between them, the companies comprising the London Coach Co-operation Committee own 415 coaches, as against the slightly smaller number of the "Green Line" service. About 200 of the 380 "Green Line" coaches have been specially constructed for the "Green Line" service by the L.G.O.C.'s associated company in the Underground Group—the Associated Equipment Company, at Walthamstow. The remainder have been taken over from the fleets operated by the East Surrey Traction Company and Autocar Services, both of whom, together with the National Omnibus and Transport Company, are agents and operators of those "Green Line" services within their respective areas.

The Australian Bank Reserve Bill.—The Select Committee of the Australian Senate, which has been considering the Central Reserve Bank Bill, has now issued its report. It will be recalled that the original Bill provided for the establishment of a new central bank to be virtually under public ownership and Government control. It also contained provisions for the bank's reserve of so complicated a character as to be, in the opinion of many authorities, unworkable. This, though in accordance with the tenets of the Labour Government and its supporters, was hardly to the liking of the Senate Committee, consisting mainly of opponents of the Government. The Committee, in its interim report, issued last June, expressed the view that the existing economic crisis made the time hardly opportune for making so drastic a change in the Dominion's banking system, and added that the forthcoming visit of Sir Otto Niemeyer and Professor Gregory provided an obvious opportunity for consulting acknowledged experts on the whole question. In other words, the Committee had a chance of playing for time, and took it. Since then, Sir Otto Niemeyer has been consulted, and has clearly criticised the draft Bill very severely. He also, apparently, agrees with the Senate that the present is a most inopportune time for making the change. Now the Senate have issued their report, in which they recommend categorically that the Government holding in the proposed bank should be limited to one-third of the shares, and that private interests—presumably private investors rather than other banks—should hold the remaining two-thirds. They also recommend that the Government should only appoint one-third

of the board, and these two provisions taken together clearly mean that the control of the bank should not be in Government hands. As this is in direct contradistinction to the views of the Labour party, it is obvious that either the bill will once more be shelved or else a constitutional crisis will arise between the Government and the Senate. On every ground it is to be hoped that it will be the former alternative that will materialise, and that the net results of the Senate's turning the bill inside out will be that the whole project will remain dormant until a more suitable moment arises for bringing it to fruition.

Irish Free State Banking.—Our Dublin correspondent writes:—Hitherto it has been difficult to follow the movements in Irish banking owing to the fact that the statistics published by the banks did not distinguish between their assets and liabilities in the Free State and elsewhere. This deficiency has now been partly repaired by the Currency Commission, which has published the following table showing the position of its nine shareholding banks at December 31, 1929:—

	In branches in Irish Free State.	In branches outside Irish Free State.
	£	£
Deposit and current accounts	124,145,775	40,559,851
Bills discounted and advances	56,999,959	34,168,471

These figures show that the ratio of bills discounted and advances to deposits is higher in the branches outside than in the branches in the Free State. This is what one would have expected in view of the predominance of agriculture in the Free State. If complete figures were published it would probably appear that the ratio of bank notes to deposits and of deposit accounts to total deposits are both higher in the Free State than elsewhere. The liquidity of the Irish banks is very great in view of the small ratio of their total deposits represented by current accounts. It is to be hoped that the Currency Commission will widen the scope of the statistics, as figures relating to the Free State alone are badly needed by all who seek to follow the progress of economic affairs in Ireland.

Bimetallism Again.—Lord Brabourne, in his address, last Wednesday, to the shareholders of the Consolidated Gold Fields of South Africa, Ltd., made a tentative proposal for remonetisation of silver. After referring to the predictions of an approaching gold shortage, he suggested that the chief nations of the world should agree to remonetise silver and fix its price at one-fortieth of that of gold—a proportion which corresponds very closely to 2s. an oz. He expressed the opinion that this price would be insufficient to induce any base-metal mill to increase its production of zinc, lead or copper merely for the sake of producing fresh silver; nor would it induce any purely silver mine to reopen. Thus he left it to be inferred that the adoption of his suggestion would not stimulate any additional production of silver, and he added that after the needs of industry and the arts had been satisfied, the amount of silver available annually for monetary purposes under his plan would not be greater than 300,000,000 oz., equivalent to £30,000,000 of gold. In making this suggestion, Lord Brabourne has entered a very wide field, and it goes without saying that any contribution to the general problem of the world's monetary gold merits the most careful consideration. Still, it is permissible to suggest that economic theory has progressed beyond the question of bimetallism, and that thought is now directed more towards means of improving the working of the gold standard rather than transforming it into a new bimetallic standard. The main difficulty in any case is the practical one of securing concerted international action. This would be even more serious in attempting to revert to the old conception of bimetallism than it need be in trying to frame jointly sound monetary policy based exclusively on gold as a monetary standard.

South Wales Coal Audit.—Our Cardiff correspondent writes:—There was a slight improvement in the financial trading results of the South Wales coal trade in the three months ended last August. The credit balance certified by the auditors was £150,848, or 3.57d. per ton, compared with £28,311, or 0.67d. per ton, in the previous quarter; while the economic wage certified was 11.59 per cent. above the 1915 standard rates, as against 8.66 per cent. in the previous three months. Under the expiring agreement, however, the owners are under an obligation to pay a minimum wage of 28 per cent. above the standard rates, and the deficiency arising from this obligation amounted to £690,595, thus increasing the aggregate deficiency carried forward under the present agreement to £16,279,378. Output, compared with the corresponding period last year, declined from 11.3 million tons to 10.1 millions, and the volume of the export trade from 6.3 million tons to 5.5 millions. The average pit-head price realised was 14s. 1.55d. per ton, which compares with 14s. 1.86d. in the three months ending last July, and with 13s. 8.72d. in the corresponding period last year. Wage costs, at 9s. 0.20d. per ton, were a shade higher than in the previous three months, and the increase in the profit was due entirely to a decrease in costs other than wages, which averaged 4s. 9.78d. per ton, as against 5s. 1.75d. in the July quarter.

More Looms Per Weaver System.—The Operative Weavers' Amalgamation, writes our Manchester correspondent, have definitely rejected the proposals of the employers regarding the wages and conditions to be applied to the "more looms per weaver" system, which the employers desire should begin on January 1st. The operatives, in a communication to the employers, laid stress on the absence of any provision for a fall-back wage, "and a minimum wage to provide for the contingency of under-employment." These were described as "lamentable features of your proposals." The operatives further stated that they were "opposed to any change in the number of ordinary looms run by a weaver on the drastic revolutionary wage proposals submitted by your organisations, and they refuse to give authority to the Central Committee to negotiate with your representatives upon them." The Central Committee of the Cotton Spinners' and Manufacturers' Association, representing the employers, discussed the situation on Friday, December 5th. Although no crisis can arise until the end of the year, the situation is undoubtedly serious and calls for tactful handling. There is no doubt that manufacturers, particularly in Blackburn and Burnley, have become impatient at the obstructionist methods of the operatives. At the outset the employers asked the operatives to discuss the proposed wages and conditions, but this request was turned down. The manufacturers then drafted a new wage list, and as long ago as October 15th this was approved by the District Associations of the employers' organisation. The new wage basis was sent to the operatives' representatives on October 28th. It was exactly a month later, on November 29th, when the Weavers' Amalgamation held a meeting in Manchester and decided to reject all the proposals. The employers are convinced of the practicability of the system, and contend that the operatives will receive bigger wages than at present.

The Butter Market.—A correspondent writes:—The Report of the Economic Section of the Empire Marketing Board on "The Demand for Empire Butter," which has recently been issued, is an important contribution to the analysis of this market for Empire produce. The object of the investigation was to provide the producer with a better knowledge of his market by placing before him a full and exact account of the nature and extent of the demand for his product. Apparently, the investigators found no evidence of foreign "dumping"; in fact, the word is not to be found in the whole report. But certain significant features are disclosed. Firstly, the main markets for each type of butter tend to be grouped round the ports of entry; Australian and New Zealand butter find their best markets in the southern districts of

England, while Danish butter is marketed mainly in the north and east. Secondly, as regards prices, and setting aside home farm and packeted butters, which are dearer than bulk butters, the order of retail prices from highest to lowest throughout the country is Danish, New Zealand, Irish and Australian; and what is significant is that the number of shops stocking each variety and the volume of imports of each variety occur in precisely the same order. Danish butter, with its established market, holds that market despite the fact that its price is higher than that of Empire butter. Thirdly, and following up the first point, multiple retail shops offer greater choice of butters than independent shops. The independent retailer clearly tends to draw his supplies from the local wholesaler, who, in turn, is likely to be found at the nearest port of entry. With multiple shops, on the other hand, supplies from a more distant port of entry have a chance of being retailed over a much wider area. The Economic Section of the Empire Marketing Board is to be congratulated on an important contribution to the study of markets. This is a type of inquiry which could, with advantage, be pursued in many other directions.

Public Health in 1929.—Sir George Newman's annual report on the state of the public health* consists partly of facts already published, as, for example, the record low birth-rate and the rise in the death and infant mortality rates in 1929, and the results of investigations into sickness and disablement experience under the Health Insurance Acts; but there is also much new matter. The section on maternity and child welfare again emphasises the importance of more determined measures for the reduction of puerperal mortality, which was 4.33 per 1,000 births registered in 1929, or appreciably worse than six years ago. In this respect Sir George Newman anticipates an improvement from the operation of the Local Government Act, 1929, which brings all public maternity accommodation under the control of the local authority. A special section is devoted to the development which may be expected from the co-ordination which the Act is designed to secure. Already progress is being made with the "break-up of the Poor Law" under the section which requires councils to aim at providing all assistance which can lawfully be so provided, otherwise than by way of Poor Relief. A number of local authorities are preparing to appropriate certain Poor Law institutions for the carrying out of these functions, and there is a timely reminder in the report that economy and efficiency may often be promoted by co-operation between local authorities for the development of their institutional work. A similar exhortation applies to the question of co-operation with voluntary agencies, and the report records that a gratifying amount of consultation to this end is already taking place. One aspect of the service in which Sir George Newman suggests that there is room for improvement in administration is the better differentiation and treatment of chronic cases and of those infirm persons who need constant care and yet are not properly regarded as sick, while at the same time he emphasises the fact that an improvement in the treatment of acute cases is also called for. The Act is also hailed as making possible a wiser and more effective organisation of the weapons of attack and defence against tuberculosis which have, even under the old régime, been welded with very substantial effect. Of the opportunities afforded to the medical officers of health under the Act, Sir George Newman writes with an enthusiasm which we hope to see justified by events. We confess, however, that we lay down Sir George's report, as in previous years, with the feeling that the country urgently needs an effectively organised General Staff in the war against disease.

Garden City Finance.—In a time of serious trade depression it is satisfactory, writes a correspondent, that First Garden City, Limited, should be able to keep up its maximum distribution of 5 per cent. on the ordinary shares, together with a payment of another fortieth on

* "Annual Report of the Chief Medical Officer of the Ministry of Health for the year 1929." H.M. Stationery Office. 3s. 6d. net.

account of arrears of dividends. One-eighth of these arrears has now been wiped out. Profits, at £12,918, are £2,610 lower than in 1929, and are just £70 below the amount required to cover the total distribution. Ground rents, the most stable source of income, show a satisfactory growth, owing to more cottage building by the Letchworth Urban Council, together with some larger houses built by private enterprise. For most of its profit the company relies on its three utility undertakings, but one of these shows a smaller profit than last year, the price of gas having been reduced, although coal costs more. Profits of the water undertaking are slightly larger, and the company has bought more land for a second pumping station. An increase of 49 per cent. in the sale of electricity units is less than the directors hoped; most of the increased demand has come from outside Letchworth; the profit was £19,021 on a capital expenditure of £335,000. Substantial additions to existing factories have been made during the year, and three out of five factories which became vacant have been purchased by other firms. The greater part of the company's land remains agricultural, as was intended from the beginning, but the revenue from its farms shows no improvement. A large county council school will be opened during the coming year, and the council proposes to build a senior school, to which a department for domestic science and technical work will be added. An approach road 150 feet wide, with a 30-foot carriage-way, is to be constructed to join the industrial area with the Great North Road; with its 60 feet of green-sward on each side of the metalled road, it may well be called a park-way. With the report a prospectus is sent out offering £100,000 of 6 per cent. registered debenture stock at 99; a similar amount was offered and subscribed last year at 97.

Bank of New South Wales.—Little surprise need be felt at the decision of the directors of the Bank of New South Wales to reduce the dividend from 10 to 9 per cent. as from the beginning of the fourth quarter of the Bank's financial year, ending September 30th last. The general situation of Australia must inevitably have affected the banking world, and have forced upon bank directors the need of exercising caution. A cabled summary of the Bank's latest balance sheet is in many respects reassuring, for despite the recent catastrophic fall in prices, deposits at £66,238,000, and discounts and advances at £60,400,000 both show small increases over the previous year. Still, the doubt arises lest the small increase in advances may not so much represent fresh and remunerative business as the gradual congelment of old loans, and the decision of the directors to make substantial appropriations to contingencies strengthens rather than dissipates these doubts. In short, the general impression of Australian banks has remained unaffected by recent adverse circumstances, there is no doubt that their earning power has suffered. This misfortune, however, is not likely to be one peculiar to Australian banks.

Prize Competition.—In accordance with Article 6 of the Rudolf Funke Foundation, the Institut für Weltwirtschaft und Seeverkehr at the University of Kiel, will award a prize for a thesis on the following subject: "The International Inter-Relationship of Economic Fluctuations." The thesis should trace the development of economic fluctuations, with typical examples from the beginning of the nineteenth century to the present day, with a view to ascertaining whether the economic fluctuations of various countries coincide, or not, in time, intensity and otherwise—and, if so, to what extent. In this connection, not only the various periods in the development of capitalism, but also the relations existing between different branches of economic life (e.g., manufactures, raw materials, agriculture) are to be taken into consideration. The winner will be awarded the Rudolf Funke Prize of Rm. 18,000 and the Rudolf Funke Gold Medal. The Institute reserves the right to purchase any thesis submitted for competition, even though it does not win the prize. Further particulars may be obtained from the Secretary of the Institute; the closing date is December 31, 1932.

The League of Nations Union announce that Sir Charles Addis, K.C.M.G., will speak on the International Aspects of Finance at the Kensington Town Hall on Wednesday, December 17, at 8.30 p.m. The chair will be taken by the Rt. Hon. the Lord Meston, K.C.S.I.

UNITED STATES.

Congress Prospects — Bank Amalgamations — Capital — Money — Industry — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 26.

FEAR of pressure to pass a wheat export bonus bill is offered as an explanation for the Farm Board's sudden and startling reversal of policy on wheat purchases. Recently it bought more than 10,000,000 bushels of wheat, in an effort to lift prices. The Board has explained that these purchases were designed to prevent demoralisation of the market and panicky conditions. The country remembers the futility of the Board's purchase of 60,000,000 bushels of wheat in the past year, which it still holds and which probably will be allowed to rot in the elevators, eating up about \$1,000,000 a month in storage charges. The Chicago market is being supported at a level well above world export markets, but it can scarcely be accepted that the Farm Board thinks the domestic market will take care of domestic production and no one believes the market has been permanently helped, while it is, of course, realised by most people that taxpayers will have to foot the bill for such piping. For the moment, nevertheless, the farmer sees an end to price declines and he and his representatives in Congress seem to be willing to let the matter rest there. It now looks as though no attempt will be made by the western agricultural bloc to press an export debenture bill, and perhaps after all the object of the wheat purchases was to stave off such proposals.

Such satisfaction as may be felt over that is nullified by the virtual certainty that the next Congress will be a prodigal one. President Hoover's message is expected to contain recommendations for increased appropriations for public works and other Federal expenditures. The Farm Board will probably get the remaining half of the \$50,000,000 originally set up in its revolving fund. The closeness of the party strength in the newly-elected Congress will have the moral effect of delaying action on highly controversial bits of legislation, and the next session will doubtless confine itself largely to appropriation bills.

The toll of bank casualties in the Southern and Central States has amounted to about 125, but the epidemic seems to have run its course, and some institutions which closed their doors have reopened. In a short time the affected districts will receive payment for the tobacco crop and that will ease the tension considerably. Rumours here of trouble at one or two large banks, which have persisted for nearly a year, have been set at rest by the amalgamation of four large institutions—the Manufacturers' Trust, the Bank of the United States, the Public Trust and the International Trust. A considerable writing down of capital will probably be necessary, but the merger will build from a firm foundation and it is assured of high-class management. The chief executive officer will be Mr J. Herbert Case, at present Chairman of the New York Federal Reserve Bank, and other prominent bankers, not heretofore identified with any of the constituent banks, will have places on the directorate. The new institution will be the fourth largest in the country, with resources of approximately \$1,000,000,000. It will deal effectively with what promised to grow into an unpleasant situation.

Further contraction in bank loans on securities is going hand in hand with purchase of bonds, but the banks are taking U.S. Government securities. Outside

the gilt-edged group the bond market has been rather flat. Interior institutions are not subscribing readily to new offerings and it is apparent that the translation of extreme ease in short-term credit into a comfortable long-term investment market will be a slow process.

New capital issues this week were limited by the holiday. Last week they were moderately large at over \$100,000,000, and most of them went well. Investment bankers look for a much better market shortly, and a better appetite among investors would, it is believed, quickly release a larger volume of new offerings. The prospect of a large increase in Government bond issues over the next several months has not hurt existing bond prices, which have mounted to new high levels.

Not only has hope disappeared of retention of the income tax cut made last year, but it is now reasonably certain that debt retirement will be limited strictly to the legal sinking fund, approximately \$400,000,000. There will be no surplus in the Treasury and, in fact, it may be necessary to apply the \$200,000,000 to be received from foreign governments during the present fiscal year toward extinction of a deficit. Maturities, therefore, will have to be met by new issues, which will drain off some investment capital which otherwise would be available for industrial uses.

Money rates continue at low levels. The expectation that they will remain low for at least six months more is increased by plans of the Clearing House for a reduction in interest rates allowed on bank deposits. Already two cuts in rates have been made, the reductions having lagged considerably behind the call and time money markets. Gold is again moving to Canada. Shipments north at this time of year are usual. Last year and two years ago the virtual embargo placed on gold exports by the Canadian Government prevented the normal righting of the balance in the late winter, with the result that Canadian exchange went to a discount. Recent heavy sales of wheat by the Canadian wheat pool while the Farm Board in the United States maintained domestic markets above the export price have strengthened Canadian exchange.

Concrete developments of the week reveal further declines in industrial activity, but some increase in retail trade, the holiday shopping having begun earlier than usual. The steel industry is now down to virtually 40 per cent. of capacity. Railroad traffic is showing a more than seasonal decline, being the lowest since 1921. Official figures on motor output for October give a total of 154,000 vehicles, and production for the year probably will be around 3,500,000. Conservative executives of the larger companies think that output next year will be at least as large as this year; some are raising their estimates by as much as 750,000 cars. Oil production is declining, but the price situation is highly unsettled. Gasoline at the refineries in the south-west has never been so low and there is a good deal of distress among producers unable to dispose of crude to the purchasing companies.

Commodity prices as shown by the Bureau of Labour Statistics index dropped nearly 2 per cent. in October. Details are shown below:—

Groups.	1926 = 100.			
	Oct., 1929.	Sept., 1930.	Oct., 1930.	Oct., 1930.
All commodities	96.3	84.2	82.6	82.6
Farm products	103.9	85.3	82.6	82.6
Foods	101.2	89.2	88.6	88.6
Hides and leather products	110.5	99.1	96.5	96.5
Textile products	92.7	75.5	73.8	73.8
Fuel and lighting materials	81.7	76.3	75.1	75.1
Metals and metal products	103.6	91.8	90.4	90.4
Building materials	97.8	86.4	85.8	85.8
Chemicals and drugs	94.2	86.6	86.0	86.0
House-furnishing goods	97.1	95.4	95.3	95.3
Miscellaneous	81.3	69.7	68.8	68.8
Raw materials	97.1	82.1	80.0	80.0
Semi-manufactured articles	97.9	76.5	75.5	75.5
Finished products	95.8	86.8	85.6	85.6

Notwithstanding this drop, the feeling toward commodity prices has improved with the conclusion of the copper curtailment agreement, the first effect of which was to lift copper prices to 12 cents a pound. Some reaction from that level has taken place, but it is believed that

moderate firmness may be shown for some time. The Department of Justice's attitude toward the scheme is still an uncertain quantity. Copper men hope that no point will be raised if prices are not allowed to advance too far.

FRANCE.

Public Expenditure — Oustric Commission — Iron and Steel Production — Cartels — Coal Agreement.

(FROM OUR CORRESPONDENT.)

PARIS, December 3.

THE Chamber has made good headway with the 5,000,000,000 francs colonial loan projects, the Bill for the renewal of the charter of the Banque de l'Indochine and the measure for the amelioration of the national economic plant, and is preparing to take up the Budget Bill for 1931-32. There is now an excellent prospect that before the new financial year begins on April 1st the national industries will be within sight of a distribution of 12,500,000,000 francs of capital intended, as far as the vast bulk of it is concerned, for the development of reproductive public works. The plan for the improvement of the national economic plant will place 7,275,000,000 francs at the disposal of industries of the most varied kinds. The bulk of the money (5,000,000,000 francs) is already in hand, and will be furnished from realised surplus taxation in the hands of the Treasury. The balance will be obtained from the local government authorities. The additional 5,000,000,000 francs to be raised by a series of colonial loans will be largely used for railway, road, port, agricultural and other forms of development. The important railway electrification work, the huge scheme for the utilisation of the Rhone to better advantage, and other great undertakings already in hand will still further improve the country's general industrial outlook. The country's leaders have settled down in earnest to plain, simple, non-spectacular every-day work on a national scale, and the nation is apparently responding unanimously to the call.

M. Tardieu, in his speech to the Retail Tradesmen's Federation, has just put forth a new definition of his meaning of the word prosperity. "Prosperity," he said, "does not mean getting rich quickly. Prosperity signifies labour, perseverance, conscience, order and courage." The assembled tradesmen applauded the definition, but without great enthusiasm. M. Tardieu's interpretation of the term Mr Hoover rendered famous a year or two ago, however, has been given large-type honours in endless French newspapers, and has already made its impression on the country.

The echoes of the Oustric group Bourse collapse are still making themselves heard, but the worst of the trouble—as also that connected with the difficulties of the equally important Devilder group—has been overcome. The Government had the luck of the lottery, by which the Special Commission of the Chamber—the committee of honour, as it is being called—was elected to inquire into the alleged relations of politicians with M. Oustric's operations. The Commission is now known to consist of 22 members of the governmental majority and 11 members of the Opposition, which gives the Ministry a much greater preponderance than it has in the Chamber itself. With M. Marin, the leader of the intransigent Nationalists, elected to the chairmanship of the inquiry committee, opinion generally is satisfied that "the truth" will be arrived at as far as could be expected. The Commission has already begun work in private, and has focussed its attention to begin with on the circumstances attending the authorisation given for the admission to the Bourse, some three years ago, of Snia Viscosa shares, an Italian artificial silk company which belonged to the Oustric group. To-day gossip is busy with the names of M. René Besnard, now a member of the Senate, but then French Ambassador at Rome, and M. Gaston Vidal, a former Under-Secretary, who are alleged to have been concerned in the Snia Viscosa affair. M. Besnard has to-day demanded to be immediately called before the Commission.

Iron and steel production figures for October, which are issued this week, reveal a substantial increase. The total output of pig iron was 880,000 tons, against 800,000 tons in September and 887,000 tons in October, 1929. The number of blast furnaces in operation was 139, as compared with 157 a year ago. Crude steel production totalled 796,000 tons, against 764,000 tons in September and 850,000 tons in October, 1929. How far these figures will actually be affected by the decision of the European International Steel Cartel to bring into operation a further cut of 15 per cent. (based on the October, 1929, production volume) as from October this year is as yet unknown. The managing committee of the Cartel is to meet in Paris next Friday, when one of the principal questions to be discussed will be how the "cut" which has been agreed upon shall apply. The question really turns on the application of the fines which are to be imposed on countries which exceed their quotas.

Everything tends to suggest that none of the countries concerned are likely to observe the actual production quota levels any more closely in the future than in the past; which is perhaps one of the weakest factors in the whole Cartel plan. Germany has so far been the worst offender in this respect. The French group insist that fines shall be applied solely to exported production, which is a concession from which the German producers have already profited. The French, however, have been conceded practically exclusive control of their own home market. Another important question to be considered on Friday is the future existence of the Cartel. At the last meeting it was decided to prolong the organisation until the end of the current year. The general opinion seems to be that the Cartel, on balance, has so far proved beneficial to its members, and that its renewal is practically assured, although on a slightly different but not less solid basis than at present. The recent dissolution of the French crude iron syndicate has automatically brought to an end the Franco-German convention for regulating French iron ore exports to Germany. It is expected, however, that negotiations will shortly begin for a new agreement as from January 1st.

Continental zinc producers have again been in conference here within the last few days, in an effort to revive the defunct Zinc Cartel. It was found impossible, nevertheless, to arrive at an agreement, in view of the recalcitrant attitude of the non-European producers, which was the cause of the recent break up of the old organisation.

The French coal industry, notwithstanding much grumbling at increased British, Belgian and Polish competition, continues to maintain high production levels, with prices substantially higher than in most other countries. The dividends so far reported are nearly all being maintained, and in many instances have been increased. There are no serious accumulated stocks, or threatening demands for either higher pay or shorter hours. The recent unimportant trouble in the Northern coal area, where there was a 24-hours' protest strike, owing to the failure of the employers to accede to a demand for annual holidays on full pay, has been settled by compromise. Delegates of both sides met at Douai last week, when terms were signed under which the underground workers will henceforward have the right, in principle, to six days' fully-paid holiday per annum, and surface workers to three days. In application, all workers who on January 1st have been uninterruptedly in the same employment for twelve months will be entitled to three days' fully-paid holiday per annum, this allowance being extended, in the case of underground workers, to four, five or six days, according to length of service. The length of the working day will henceforth be 7½ or 8½ hours, according to the varying demand for coal, subject to the proviso that the number of 8½-hour days shall not exceed 150 in any one year. Wages will remain at their present level for 7½-hour days and for pieceworkers, with an increase of 5 per cent. when the extra time is required. The terms of agreement are typical of the give-and-take atmosphere that has prevailed between French coalowners and their workers for some years past.

GERMANY.

Emergency Decree — Local Taxation — Prussian Budget — Impending Wage Disputes.

(FROM OUR CORRESPONDENT.)

BERLIN, December 2.

AFTER prolonged consideration, the Cabinet has decided to put into force its financial programme on the authority of the emergency clause, before the Reichstag assembles. This does not relieve the Government of the necessity of obtaining a parliamentary majority, for the emergency decree must be submitted for approval to the Reichstag and must be revoked if the Reichstag requires it. It has also proved legally impossible to incorporate in the decree ordinances which involve a change in the constitution and therefore require a two-thirds majority. The only advantage the Government gains from this recourse to emergency procedure is the avoidance of further parliamentary discussion of details. The choice they offer to the Reichstag is that of rejecting the decree *in toto* and so provoking financial chaos, or of allowing it to come into force in spite of the doubts undoubtedly felt by many of the groups which are necessary for a majority.

The Government, in evading the formal procedure of legislation, has by no means proceeded dictatorially. The Chancellor has prepared the way for the acceptance by the Reichstag of his decree by very complete negotiations first with the States and afterwards with the parties. In discussion with the Socialists in particular he has shown determination and patience, and he has made several concessions to them. The decree, indeed, has been so framed as to fulfil in some respects the wishes of every party on whose support the Cabinet is counting. For the Social Democrats the most important thing is the inclusion in the decree of a section revoking the emergency decree of July. The curtailment of health and unemployment insurance which that decree contained is now modified, and the poll tax, justifiably hated by the Socialists, which was introduced for the Communes, is more steeply graduated according to means, and so approximates more nearly to an income tax. Some of the desires of the farmers have been met by the decree, with the avowed object of making it impossible for the purely agrarian parties to vote with the Opposition for its repeal.

The decree also contains safeguards for the Budget, provision for the simplification and co-ordination of taxes, for the reduction of the taxes on land, industry and capital transfer, and for a recasting of public housing activity. New rules are laid down for the division of Reichsbank profits. The most important part of the financial plan of the Government, the reduction of official salaries, could not, for legal reasons, be completely incorporated in the decree, which simply contains an enabling clause for States and Communes which are released from any restrictions under federal laws in so far as they may desire to reduce salaries. An understanding has been reached with the States that such reduction really will take place.

In a number of Communes, including Berlin, State Commissioners have been set up by the Government to supervise the administration of finance. The Prussian Government came to this decision—and its example has been followed by the governments of other States—because the local governments were refusing to introduce the exceedingly unpopular taxes which the emergency decree of July placed at their disposal. As the burden of poor relief on the Communes, owing to prolonged unemployment, had grown enormously in spite of unemployment insurance, the Government felt that it could not wait until the good sense of the local representatives, under pressure of financial disaster, should conquer their fear of the wrath of their constituents. The State Commissioners have been given full powers to introduce the necessary taxes. They are not yet empowered to enforce economies except in Berlin, where the two Commissioners have been ordered by the Government

to put into force the economy proposals already prepared by the municipal authorities.

The Prussian Government has once more shown great firmness. The Prime Minister, who is not only the head but also the guiding spirit of the State Government, is certainly, as a Social Democrat, no supporter of poll taxes, but none the less he has called upon the Prussian Communes, and where their sense of responsibility is not sufficient is using all legal means to compel them, to introduce even these taxes if the communal budget can be balanced in no other way. Necessary, however, as this encroachment by the States on the rights of Communes is at this moment, it involves the danger of serious injury to the idea of self-government, for the Communes will perhaps in future prefer to have necessary but unpopular measures forced upon them by the States rather than take the responsibility themselves.

The recently published budget of Prussia shows reductions in expenditure amounting to Rm. 141 millions. Of this, 84 millions comes from the federal reduction in official salaries. According to the latest estimate, the Prussian budget will close at Rm. 2,250 millions, so that it amounts to rather less than half the sum (5,540 millions) which the Reich requires for its own purposes, not including reparation, in 1931. The high-water mark of public expenditure in Germany now seems really to have been passed. The closed accounts of the Prussian budget have been falling since 1928, but this is the first time the decline has been sufficiently marked to suggest no longer a mere temporary fluctuation, but a real turning point in the curve.

The nearer the end of the year approaches, the more wages agreements are denounced. Notice of termination of important salary agreements for Berlin officials has just been given, and the arbitration proceedings in the coal mining industry, which must be completed by January, are being watched with the greatest anxiety. The German system of arbitration in labour disputes suffered in 1928, through the judgment of the Federal Labour Court in the West German iron dispute, a complication which is now adding to the difficulties in the way of a peaceful settlement. Representatives of the employers of the unions appear before the Arbitration Commission as parties to the dispute, but the Commission, which consists of representatives of the two parties, sits under the presidency of a Government official. Until 1928 the chairman, if the employers and the union representatives on the Commission did not agree, would himself give the award. During the iron trade dispute the Federal Ministry of Labour decided, at the request of the employers, that an award could not be given by the chairman alone, but must be agreed to by a majority of the Commission. Thus the chairman must agree with either the employers or the trade union members. In a case like the present, therefore, where the union representatives reject any wage reduction, the chairman is forced to award a greater reduction than he really considers desirable in order to command the support of the employers' representatives. It has recently become known that this is what happened in the first award in the Berlin metal dispute, which led to the four weeks' strike. It is feared that this state of the law will hamper the arbitration activities of the Government in the severe conflicts which lie ahead.

NORWAY.

Election Results — Bank Rate — Loan Conversions — Tobacco Agreement — Norsk Hydro — Corn Monopoly — Bourse.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, November 22.

THE result of the general elections in Norway last month was a considerable advance for the bourgeois parties. The new Storting, which will meet on January 11th, will be composed of 45 Conservatives and Liberal Left (against 31 in the present Storting), 32 Radical Left (31), 26

Peasant Party (26), and 47 Labour Party (62). In spite of the remarkable increase of votes in favour of the Conservatives, it is not likely that they will have any chance of undertaking the task of forming a new Ministry, nor do they particularly wish to do so under present conditions. A continuance of Radical Government is, therefore, apparently the only possibility.

The reduction of the Norwegian bank rate, on November 7th, from $4\frac{1}{2}$ to 4 per cent. was hardly anticipated, at least, not at that juncture. The easy conditions that governed the money market earlier in the autumn were no longer quite so pronounced. During the last week of October, especially, a certain tightness was experienced, as was evidenced by the deposits of the big Oslo banks. It has, therefore, been openly suggested that one of the main objects in view was to facilitate the conversion of Government and municipal loans bearing a high rate of interest. On the face of it, this, if true, may seem somewhat hard on holders of such bonds, but in the long run the disadvantages would be neutralised to a great extent by the reduction of direct taxes as a result of reduced appropriations for interest on public loans. No doubt there were also other reasons for this step on the part of the Norges Bank, but, at any rate, the Municipality of Oslo have already taken advantage of the present low discount rate by arranging for the redemption of their $6\frac{1}{2}$ per cent. loan of 1920. A contract for a new loan of 35 million kroner at 5 per cent. has been closed with a group of savings banks, and this loan is now being floated at 98. This is, no doubt the first in a series of public loans to be converted in the course of the next few months.

The return of the Bank of Norway as at November 15th, the first after the bank rate reduction, seems to offer ample justification of this action. The item "Notes in circulation" has been reduced to 297,600,000 kroner, a lower figure than at any time since March last, while at the same time loans and discounts declined by about 3.3 million kroner and deposits by 5 million kroner.

With regard to industrial developments, the negotiations that have been carried on between the British American Tobacco Company and the Norwegian Tobacco Mills have attracted much interest. The products of the former concern have been boycotted for a long time by the Association of Norwegian Tobacco Mills, but an agreement has now been reached, according to which this boycott will be lifted on certain conditions specified in the agreement. The arrangement is being received with general satisfaction, and denotes the conclusion of a long and bitter struggle between foreign and domestic tobacco manufacturers.

The Norsk Hydro Company recently held their annual meeting, the accounts submitted showing a net surplus for the year 1929-30 of 7.4 million kroner, compared with 4.05 million kroner for the previous year. A dividend of 8 per cent. was declared on the ordinary as well as the preference shares. It appears from the report that the export of the company's principal product, nitrate of lime, rose from 120,675 tons for 1928-29 to 275,000 tons for 1929-30, a result obtained through the completion of the big extensions of their works on the Kjukan and Heröia, which were started in 1928.

The Report of the Corn Monopoly (Statens Kornforretning) for the first business year has just been published. On a total turnover of about 79 million kroner the surplus amounts to nearly 900,000 kroner, which amount has been transferred to the reserve fund. Imports amounted to about 870,000 tons of grain, including 174,000 tons of rye. Purchases of home-grown grain amounted to 25,000 tons, the price paid being 4 öre per kilogramme for wheat, rye and barley and 3 öre for oats.

Activities on the Bourse have been rather brisk during recent weeks, Government and municipal bonds being favourites. Industrials and shipping shares have been irregular, while whaling shares have been steady to firm. Several of the companies are receiving favourable catch reports from the Antarctic.

FINLAND.

Money Market — Foreign Trade — Prices — Election Results.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, November 17.

The slight stringency which became apparent in the money market at the end of October was largely due to seasonal causes. It is customary to pay for timber purchases from the State forests on the last day of October, and this caused some strain on the joint stock banks, which drew on their balances at the Bank of Finland. At the same time the Government's balances at the Bank of Finland rose sharply. The position of the banks is further affected by the fact that imports are comparatively heavy, as is usual towards the end of the year. This circumstance has been accentuated this year by the raising of various duties at very short notice. Importers hurried to increase their stocks while the lower tariff was still in force.

The actual changes in the balance sheets of the joint stock banks are, however, not very great. Credits increased during October by 119.2 million marks, compared with 12.7 millions last year. The total amount of credits, however, amounted to only 9,191.1 million marks, as against 9,800.7 millions a year ago, this being, of course, a result of the existing depression. Deposits fell off by 82.1 million marks, compared with 67.5 millions last year, but, in spite of the hard times, they amounted to 7,895.0 million marks in comparison to 7,486.6 millions a year before.

The position of the Bank of Finland reflects the same influences. Its total credits increased during October by 62.2 million marks to 761.6 millions, compared with 1,410.7 millions a year ago. While the reserve of foreign currency dropped slightly by 13.3 million marks, the note reserve also declined by 96.6 million marks to 785.1 millions. A year ago the note reserve was only 458.7 million marks and two years ago no more than 278.4 millions. The ordinary cover thus dropped in October from 81.1 per cent. of all liabilities payable on demand to 75.7 per cent., compared with 55.8 per cent. a year earlier.

Foreign trade during the autumn was below the level of last year. The volume of trade fell off to some extent, and, owing to the fall in prices, the value of both imports and exports fell considerably short of last year's figures. The value of imports in October amounted to 557 million marks, compared with 489 millions in September, and 654 millions in October, 1929. The value of exports at 553 million marks also exceeded the September figure, which amounted to 483 millions, but it was appreciably less than the corresponding figure for October, 1929, which was 731 million marks. The balance of trade thus resulted for October in a surplus of imports of 4 million marks, whereas in October, 1929, there was a surplus of exports amounting to 77 millions, and in October, 1928, a larger surplus of imports of 144 million marks. However, while the balance of trade for January-October, 1928, resulted in a surplus of imports amounting to 1,568 million marks, and, during the corresponding period last year to 511 millions, it is gratifying to see a surplus of exports this year of 289 million marks.

Prices continue to fall. The total wholesale index (1926 = 100) fell two points in October to 86, against 96 a year ago and 101 two years ago. The drop was greatest in the case of agricultural products, the index for which dropped to 75, while the index for local industrial articles stands at 94. The index for imported goods has fallen to 76, but for exported goods only to 83. The latter index has only fallen markedly during the autumn; in October, for instance, it fell 4 points.

The elections to the Diet were carried out in accordance with the regulations on October 1st and 2nd. Voting was livelier than at any former elections and the anti-Socialist parties succeeded in beating up considerable

reserves, with the result that they gained 134 seats in the new Diet, against 118 in the former, and thereby secured the desired two-thirds majority. The Communists lost all their 23 seats, and the Social Democrats obtained 66 seats. The Diet assembled on October 20th and accorded the Government a vote of confidence and passed the so-called "Communist laws," which brought about the dissolution last summer. As a dam has been erected against the activities of the Communists, it is expected that the excitement will calm down.

As the continued slump in trade this year has reduced the State revenue considerably, and has caused a deficit in the finances, the budget proposals were anticipated with interest. It is satisfactory to find that the Minister of Finance has succeeded in estimating a surplus of revenue amounting to 102 million marks. On the one hand, the extraordinary expenditure has been restricted, and, on the other hand, the revenue has been increased, among other things by raised duties on wheat, coffee, sugar, petrol, etc., as well as by a higher excise on tobacco.

SOUTH AFRICA.

Public Finance — Chambers of Commerce Congress — Low-Grade Ore Commission — Civil Service Salaries.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, November 10.

The high veld spring weather has not so far been such as to encourage any great hopes of substantial relief of the farmers' difficulties. The position of business throughout the country seems to be improving somewhat, but delayed rains are likely in some parts to cause severe aggravation of rural troubles. Union revenue for the six months ended September 30th shows receipts of £11,867,539 and expenditure of £16,336,595. The corresponding figures last year were £13,625,407 and £15,549,509. The latter half of the financial year brings in more than half the revenue for the year.

During October the Annual Congress of the South African Associated Chambers of Commerce met at Lourenço Marques. The president mentioned in his address that since 1920 no less than nineteen Acts of Parliament affecting trade and commerce had been placed on the South African Statute Book. While on the whole he commended the trend of this legislation, the speaker expressed the opinion that much of it was in advance of South Africa's present state of development. He suggested that Wage Act determinations reached in times of prosperity were a serious factor at the present time. The Executive Committee of the Association had prepared a detailed report on the cost of living in the Union. *Inter alia* this report states that wholesale and retail local prices of imported goods have not fallen so fast as prices in the countries of origin for the following reasons:—(1) Increased railway rates; (2) increases in Customs duties and additional taxation to replace duty formerly paid on articles now made locally; (3) increased ocean freights; (4) increased rents of business premises; (5) increased wage costs; (6) increased cost of advertising and printing.

In discussing the matter of Customs duties, the Congress denies a charge that members of the Chamber of Commerce are "red hot Free Traders." (In this connection it must be remembered that in spite of South Africa's dependence on primary industries, Free Traders are commonly regarded, not merely as people of unorthodox views, but as not much preferable to traitors.) The report contains statistics showing that in April, 1930, the wholesale market price of South African goods (including hides and skins, and all classes of agricultural goods) was 3.3 per cent. lower than the average of 1914. In other parts the report adds its quota to the fire of criticism which has for so long been directed at our railway system. (In parenthesis it may be remarked that travellers—South African and others—who return to this country report railway criticism all over the world, and seem to think well of the South African railways, apart from the goods rating system.)

The Low-Grade Ore Commission has so far taken the evidence of the Government Mining Engineer and of Mr P. M. Anderson, President of the Chamber of Mines. The Government Mining Engineer made a suggestion that has received a good deal of informal consideration for some time past. It is that European labour should be removed as far as possible from underground and that compensating employment should be offered on the surface to the men displaced. In his evidence, he suggested that the two sections of the proposal must be regarded as interdependent. To the critic it seems that the re-organisation of the labour force underground and the starting of new industries to absorb the men displaced are technical questions. The treatment of these two technical problems as interdependent, for the purpose of maintaining one section of the people in employment, is rather political than economic. It is considered by engineers that with suitable alterations in the Mining Regulations, the mines could work efficiently with an underground force of about half of the 11,000 Europeans now employed on underground work. The 5,000 or 6,000 Europeans retained would all be engaged in skilled duties of various grades, while the manual work, now done by natives, would also be supervised by natives in its immediate performance. At the existing scales of wages and compensation for accidents and phthisis, and assuming that the native gangs attained under native foremen their present efficiency, the economy would be considerable. The proposal is in some respects revolutionary, as it is still not officially recognised that natives can do skilled work, or admitted that there are fairly numerous cases in which they do it. To the true South African there is still some magic in the possession of a white skin and something sacred in a standard of life which the European enjoys only because his labourer works for perhaps one-sixth to one-eighth of the artisan's rate of pay. It is doubtful whether the scheme will be proceeded with, but if it should be, its ultimate effect on the economic structure of the Union would be fundamental. Its whole working on the mines would depend on the training of natives to responsibility and some elements of simple organisation. They would have to be paid a new scale of wages and probably the native wage level would rise generally, with a resultant rise in the native standard of civilisation. The resultant changes in South African life might lead to a new heaven or to ultimate perdition—as to which, prophecy can be guided only by personal view. What is certain is that for good or evil, nothing in South Africa would be quite the same.

Mr Anderson's evidence followed somewhat familiar lines in regard to the position of the mines as the key industry of the Union, and the views of their controllers in regard to tariffs, railway rates, native labour, etc. The suggestion which attracted most notice was in regard to a suggested "cut" of 5 per cent. in all salaries and wages.

The Union Government has already given a lead in the reduction of local allowances to its servants, the percentage to an employee in receipt of a basic salary of £306 (with an allowance on the Witwatersrand of £54) being £18, or 5 per cent. of the total emoluments. This corresponds fairly closely with the fall in the cost of living as recorded by the Department of Census and Statistics. Mr Anderson pointed out that the European standard of living in South Africa was reported by the Economic and Wage Commission in 1925 to be very high in relation to the producing capacity of the country. Real wages here (to European artisans) are as much as four times those ruling in some parts of Europe and comparable with those in North America. This is made possible by the existence of cheap unskilled labour, and the ultimate prosperity of the Union seems to be bound up in the attainment of a level more in harmony with the standard of production. Mr Anderson said that in South Africa we have a tendency to live beyond our means. For some reason this phase has been interpreted in most quarters in a personal sense instead of as a statement of general economic fact. The proceedings of the Commission are attracting a good deal of attention in official and other quarters.

HONG KONG.

Trade Improvement — Canton — Prevention of Smuggling — Budget.

(FROM OUR CORRESPONDENT.)

HONG KONG, November 1.

TRADE has taken a definite turn for the better during the past two months. During the early part of the year the general feeling was that there would be a recovery in exchange sooner or later and, not unnaturally, buying was on a hand-to-mouth basis. Stocks imported before the slump in the dollar were then available, but they have long since been exhausted; and now that there seems to be no hope of a return to a normal level of exchange dealers are placing orders much more freely. The fall of the dollar has been offset to a considerable extent by the drop in world commodity prices, and the actual landed cost of goods imported from gold countries is in many cases not very far above the cost of a year ago when the dollar was near the 2s. mark.

In the piece-goods market buying of fancy cottons for next spring is practically at an end. It is estimated that over 12,000 packages, valued at the very least £600,000, have been booked by Manchester. Clearances of woollen piece-goods for the winter season have been most encouraging and probably 75 per cent. of the goods which have arrived this autumn have already been taken up. There has been a fair quantity of supplementary orders placed with Bradford for quick shipment, and it is expected that there will be practically no carry-over. This augurs well for the next buying season, which usually opens towards the end of the year. Hong Kong trade statistics, the collection of which has recently been resumed after a lapse of four years, reveals the big strides made by Continental cloths; Germany now has a big share in the business which formerly went almost entirely to Bradford. The metal market has been much more active of late, but local prices are below replacement cost, and business has been somewhat difficult in consequence. There has been a great increase in demand for provisions and sundries, and the rapid development of motor transport in the interior is greatly benefiting the oil interests. Taken all round, the outlook is much brighter than it has been for the past few years, and despite currency depreciation, brigandage, illegal taxation and various other disabilities trade in the southern provinces is making steady headway.

There has been a welcome freedom from civil warfare in the south for over a year, but the political situation in Canton is still a little uncertain. General Chen Ming Shu, the virtual dictator of Canton, was recently summoned to Nanking, but so far has escaped the unpleasant experience of his predecessor, Marshal Li Chai Sum, who set off for Nanking in March, 1929, in somewhat similar circumstances and has remained a prisoner there ever since. Mr T. V. Soong, the able Minister for Finance in the Nanking administration, paid a very hurried visit to Canton last week. It is understood that the Nanking Government have been negotiating for a loan from the British American Tobacco Company to be secured on the proceeds of the wines and tobacco taxes. Apparently the Canton authorities were either not prepared to pledge their share of this revenue or had already earmarked it for other purposes. Whatever the reason, Mr Soong returned to Nanking after spending only two days in Canton and is reported to have gone empty away. There seems to be no doubt that Canton still retains a considerable measure of independence, although it remains loyal to Nanking.

Mr Maze, the Inspector-General of the Maritime Customs, is at present in Hong Kong in connection with the mooted agreement between Nanking and Hong Kong to combat the illicit trade which enters China from here, without passing through the Customs. The tariff which came into force early in 1929 was high enough to encourage smuggling. The subsequent fall in exchange has had the effect of increasing the tariff in respect of *ad valorem* duties as these are calculated on a gold basis,

and thus it has come about that a certain percentage of Chinese imports never go through the Customs. The Chinese are adepts at any form of evading official regulations, and as the Customs Service has not been expanded to cope with the greatly increased supervision required since the institution of the new tariff, and is hardly so efficient as it was when foreign control was more independent than it is at present, it is not altogether surprising that smuggling can be carried on with comparative ease. The Nanking Government is inclined to put on to Hong Kong all the blame for a very deplorable state of affairs and is demanding the right to station its own officials here. The Hong Kong Government is quite prepared to do all in its power to prevent illicit trade and will give the Nanking Government the facility of collecting duties here provided the officials in charge are under the direct control of Hong Kong.

The Colony's budget came before the Legislative Council last week and met with a great deal of criticism from the unofficial members. New taxation has become necessary owing to the drain on the Colony's revenue to meet the cost of the Civil Service which, being mainly on a sterling basis, has been greatly enhanced by the fall in exchange. More than 50 per cent. of the revenue is required for personal emoluments, which were increased on the recommendation of last year's Salaries Commission, and are costing the Colony about \$2 millions more than was calculated by the Commission, owing to the fall in the dollar to 1s. 3½d. Sir William Peel, who has been unfortunate in having to deal with an abnormal budget during the first year of his governorship, has promised some slight relief to the taxpayers by recommending to the Secretary of State a modification in the calculation of Civil Service salaries which will probably save the Colony about \$400,000. He is also hoping for further savings when he receives the report of the Retrenchment Committee, at present inquiring into the question of reducing the cost of administration. The million Chinese inhabitants of Hong Kong enjoy the blessing of efficient government which gives them law and order and safeguards their health conditions, but they are finding the cost somewhat burdensome and, not unnaturally, are inclined to object to further increases in taxation, more especially as 20 per cent. of such taxation is deducted for the Military Contribution which the Colony has to remit to the Imperial exchequer.

Letters to the Editor.

TRAFFIC ACT PERPLEXITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Parliament, true to past form, has worked some first-rate ambiguities and contradictions into the new Road Traffic Act, and as the Act is an addition to our criminal law we may look forward to seeing a number of respectable folk go to gaol on a point of draftsmanship. Are you an employer of labour? Then as you value your liberty study section 36, subsection 1 b (1) and b (2). In b (1) you will find that you are not bound under this Act to insure your liability for death of an employee arising out of and in the course of his employment. But move on to b (2) and you will discover that you must insure your liability for accidents to persons carried "by reason of or in pursuance of a contract of employment." These obscure words presumably are intended to cover the case of men taken to and from the works in motor vehicles, but on any normal interpretation they cannot be limited to that case.

What, for example, of a commercial traveller who is employed to cover a given area, and as part of his contract of employment is provided with a car? He is clearly being carried in that car by reason of a contract of employment and, even though he drives the car himself, his employers have an unmistakable take to keep the car in repair to see that it remains a road-worthy car. Failing in that responsibility, they are liable for his death or injury, and as he is carried in pursuance of a contract of employment they are guilty of a criminal act if they do not cover that liability by insurance. But it is a liability that most business car policies definitely exclude,

WAR LOAN CONVERSION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In an Investment Note in your issue of November 22nd you opine that the large amount of foreign holdings disallows a conversion scheme where the new stock to be issued is paid with tax deducted at source. Further, you suggest that Mr Goschen's success in his conversion was facilitated by his not having to contend with a large foreign holding. One of the memoranda to which you refer endeavoured to deal with this matter, making the following points:—

(a) That the British Government will never again (and need never) issue a loan where tax is not deducted at source; (b) That during the period of three months' notice any foreigner who wishes to retain a holding in British Government stock will have time to exchange into Funding Loan, from which he receives a full dividend. This feature was described as the great loophole through which the Government will be able to issue new stock when the dividend is deducted at source.

(c) That British credit is such, and that the troubles of the world to-day are such, as to make it highly probable that foreigners who hold War Loan will still wish to hold British Government stock; and if they are unable to obtain 5 per cent., they will accept 4 per cent.; and the transference of their War Loan holdings into Funding Loan will make a good market in this stock, and thereby will be reflected throughout all long-dated Government stocks. Moreover, it would appear that, the bigger the foreign holding, the stronger will be the market in Funding Loan, which should tend to give the Chancellor a better chance of fixing a good price for his new issue. On reflection, I think that the full development of this last point was not sufficiently emphasised.

All this relates, however, to the purely mechanical process of a conversion operation. The value of any new stock issued for conversion purposes will be bound to have a greater value per £100 of War Loan than £100. But the economic forces which will allow of a reduction in the percentage on War Loan really worth while are beyond the scope of this letter.—Yours faithfully,

THE AUTHOR OF ONE OF THE MEMORANDA.

The Bath Club, W.I.

November 25th.

THE DEVIL AND THE DEEP SEA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Permit me, as an old reader, to offer a few words of comment on your arresting article under this heading in last week's issue.

I think there cannot be two opinions about the gravity of the position in which the country finds itself to-day. If the situation is allowed to drift, the financial position of the country must get very much worsened, and consequently the remedying of it will be correspondingly more difficult. There is much truth in the old saying: "A stitch in time saves nine."

The country's financial position is the resultant of many causes, and consequently remedies will have to be sought in more than one direction. First and foremost, there must be a reduction of our present rate of national expenditure; secondly, something must be done with this terrible evil of unemployment, with its drain on national finance and its demoralisation of millions of our people. Is the nation so lacking in intelligence and patriotism that it cannot lift these two problems out of the rut of party politics?

You say, "Is there, then, no escape from the national dilemma? Under the existing system of politics, government, and administration there is none." Surely, such a view is defeatism in its worse form! There is no paper in the country that has a more intimate knowledge of the facts and figures of commerce and industry than the *Economist*. Your readers, therefore, not unnaturally expect that a publication with your traditions would be one of the first to step into the breach and give a lead in outlining, or helping to outline, measures of national safety which are as urgent as they are important. The Lord Chancellor, in conveying to the Lord Mayor Elect the official intimation that his election had been approved by the King, stated:

"I cannot conclude without referring to our greatest national difficulty, and that is unemployment. You, sir, in common with all Englishmen, join in the hope that during the next twelve months we may find some solution of this most pressing of problems."

Do you not think it possible that a meeting called by the Lord Mayor of representatives of all political parties, and of our national interests, banking, insurance, commerce, finance,

so all employers who send travellers round in cars should inspect their policies and see to it that the liability is covered even at the cost of additional premium.

On the other hand, are you an underwriter? Then ponder section 36, subsection 4, which says:—

"Notwithstanding anything in any enactment, a person issuing a policy of insurance under this section shall be liable to indemnify the person or classes of persons specified in the policy in respect of any liability which the policy purports to cover."

These words are cryptic enough, but they would seem to aim at the destruction *ad hoc* of *uberrima fides* and the duty of disclosure, the object of our legislators being to prevent an insurance company from voiding a policy on the ground of concealment and mis-statement—a revolutionary aim. And yet, if this is the meaning of the words, why say "notwithstanding any enactment"? For the doctrine of *uberrima fides* rests not on enactments but on judgments and case law. This is a serious obscurity on a very practical point. In the law of insurance *uberrima fides* is the holy of holies, the very ark of the tabernacle, and it is almost unbelievable that our Parliamentary draftsmen should word an Act in such a way as to leave it in doubt whether or not indemnities have been deprived of this time-honoured defence. But as the Act stands, it looks like a fifty-fifty chance that *uberrima fides* has gone.—Yours faithfully,

CORNHILL.

London, E.C.2.

December 3rd.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In one short letter, Mr G. W. Turner accuses me of "mixing up cause and effect," of "having taken a violent dislike to certain eminent persons," of "proceeding to erect a case for another primary cause"—is this obliquity moral or merely mental?—and of deliberately ignoring an important feature of my subject. On the strength of all this, he rebukes me for embarking "irresponsibly" on controversy in a field over which he seems to claim proprietary rights. Here is indeed a model contribution to the responsible and uncontroversial discussion of a scientific question!

But one thing he omits: to deal with the main purport of my letter, viz., that monetary action alone cannot remove the causes of our depression and so make other action superfluous. I have nowhere disputed the importance of the gold factor; but since cause, when not "mixed up" with effect, precedes and does not follow it, and since industry here was already severely depressed (while elsewhere it was phenomenally prosperous) before the gold shortage declared itself in the world slump, I conclude that gold cannot be the sole cause of our troubles. Does Mr Turner deny this conclusion? And, if so, on what grounds?

Asking what caused prices and wages to diverge, he says that it was not primarily the movement of wage-rates which sent prices down. I agree, the more heartily that there is no movement of wage-rates. He regards the divergence as only a manifestation of the disturbance caused by the trade cycle. On the contrary, I hold that beneath the cyclical disturbance there lies in our case a persistent trouble with two roots: the fact that prices are painfully, but in the long run inevitably, falling away from the inflated standards of war; and the refusal of wage rates to conform. Inevitably; for why should prices remain permanently at scarcity levels? Whatever we in these islands may do or leave undone, there are other peoples in the world markets who realise that the vast destruction of wealth in war, not yet made good by hard work and saving, affords no basis for the general relaxation of effort and extravagance of unproductive expenditure, public and private, by which we are vainly trying to make "a world fit for heroes to live in."

I welcome Mr Turner's admission that, if cyclical fluctuations should continue, the adjustment of wages to prices (of course, in either direction) "would be an obvious necessity." As my letter pointed out, such adjustment by carrying the price-fall down to the retail level and so applying the stimulus of cheapness to consumption, would tend automatically to check the fall and initiate a price-recovery. I hope a little further consideration may convince him that we may well leave it to the future to show whether that recovery, when at last it comes, will prove to be complete (as his cyclical theory requires) or only partial (as I hope and believe); and that we may agree that the adjustment of wages to prices, here and now, is (bar politics) the sound and sensible way of bringing about the improvement we all desire.—Yours faithfully,

Cookham.

C. HARRIS.

December 2nd.

political economy, &c., with a view to the formation of a National Council to examine dispassionately and disinterestedly all the causes of the unemployment crisis and report on ways and means to be adopted to restore the prosperity of the country, would meet with acceptance at the hands of the majority of the electors?

Unless serious action is taken, national bankruptcy is only a question of a comparatively short time. As I stated above, the *Economist* is well fitted to lead some such movement, and your participation in it would be welcomed by all your readers.—Yours faithfully,

J. T. SEGRUE.

9 Queen Victoria Street,
London, E.C.4.
December 3, 1930.

[What our correspondent calls "defeatism" is in reality only a recognition of the hard fact that the division between the political parties on matters of economic policy is so definite that a National or, in other words, Coalition Government is not practicable.—Ed., *Econ.*]

Books and Publications.

INTERNATIONAL LAW.

THE articles contained in the 1930 volume of the "Year Book of International Law" fall into two main groups, the first dealing with International Law in the strict sense, and the second with International Organisation or, as it is beginning to be called, International Constitutional Law.

In the first group is a long and very valuable article by Mr W. E. Beckett, one of the legal advisers in the British Foreign Office, upon "Decisions of the Permanent Court of International Justice on Points of Law and Procedure of General Application." Its basis is, what Mr Beckett demonstrates to be the fact, that although with rare exceptions "all the cases submitted to the Court have related to the construction of complicated and obscure treaty or contract provisions of apparently no great general interest, and not directly to any question of general international law," yet in practice the Court has found it necessary in deciding these cases to pronounce upon a large number of points of pure international law of general interest and importance. It is thus clear, as has always been asserted in reply to those who stress the scarcity and inadequacy of international law or to those who insist upon a code as an essential requirement for the success of the Court, that a court makes law and that the best way to develop law is to create a court. There is nothing new in this to the English lawyer, for he knows how the English judges in the Middle Ages made the common law out of the customs of the realm which they found around them. One is also led to hope, after the comparative failure of the Hague Conference for the Codification of International Law in March-April of this year, that after two or three decades of work by the Permanent Court this task of codification will be resumed with a much greater prospect of success.

The second article in this group is by Dr. Arnold McNair on "The Functions and Differing Legal Character of Treaties." His main point is a plea for emancipation from the conventional mode of regarding the treaty as a single instrument governed by a uniform set of rules as to its formation, validity, interpretation and discharge, whereas in fact it performs a variety of functions akin to the contract, the conveyance, the charter, and the legislation of private law, and therefore demands the development of a whole series of different rules to govern these widely differing aspects.

In the International Organisation group Sir John Fischer Williams subjects "The Optional Clause" in the Statute of the Permanent Court to a very searching analysis and endeavours to assess the legal effect of the recent British signature and ratification of the Clause and of the reservations attached to it.

He also draws attention to the need, resulting from the conclusion of the Covenant and the Peace Pact of Paris and the widespread adoption of the Optional Clause, of proceeding to a reconsideration of the whole conception of neutrality—a point which General Smuts emphasised in one of his speeches made in England last year.

The Permanent Court is also the occasion of Mr Fachiri's article on two separate protocols providing for "American Participation" and "Statute Revision," in which he traces the course of the negotiations of the last four years for America's entry into the Court and also examines the recent revision of the Court's Statute, the main object of which is to increase the number of judges and establish a permanent session with reasonable vacations in place of a single annual session. This change has been necessitated by the unexpectedly large amount of business which has been brought before the Court. America has not yet ratified the Protocol of Accession. The Revision Protocol having failed to secure adoption owing to the opposition of Cuba, its principal contents have been given effect by Resolutions of the Assembly.

What is known as the "General Act" of Geneva of 1928 is a treaty consisting of four parts entitled "Conciliation," "Judicial Settlement," "Arbitration" and "General Provisions." It has received very little attention so far in Great Britain, and there is some danger lest we may find ourselves parties to it before public opinion has become aware of its contents and its implications—which, however desirable they may be, would be unfortunate. Professor J. L. Brierly brings to bear upon the discussion a power of temperate and realistic analysis which may irritate the enthusiastic, but is an essential preliminary to wise action. The arbitration provisions of the "General Act" are based on the false assumption underlying all schemes for "all-in arbitration," as it is called, namely, that every international dispute is susceptible of solution by the legal method. That assumption is as untrue in international life as it is in our civic affairs. It entirely ignores disputes which are "on the plane of interests," economic or political, and it is mischievous in so far as it leads nations into thinking that the signature of a treaty affords a "short cut" in a task which demands every resource of patient statesmanship. Professor Brierly's remarks (on page 128) upon the sloppy use of the expression "gaps in the law" are most clarifying.

Professor Manning contributes a critical examination of the "Proposed Amendments to the Covenant of the League of Nations" which were debated in the Assembly this year. Dr. Lauterpacht, in his article on "The Absence of an International Legislature and the Compulsory Jurisdiction of International Tribunals," makes larger claims than Professor Brierly would assent to for the effectiveness of the judicial function and supports his plea in a very ably sustained argument. Mr D. B. Somervell, K.C., contributes a short and topical article on the International Position of the Indian States, whom he has recently been advising in a professional capacity.

The editorial notes, summaries of decisions, book reviews, and bibliography are as useful as ever. In short, the editors, Professor Pearce Higgins and Professor Brierly, deserve congratulations upon a volume which is well up to the usual standard.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Information on the Reparation Settlement. By J. W. Wheeler-Bennett and Hugh Latimer. With a Foreword by Sir Charles Addis. (London) George Allen and Unwin, Ltd., Museum Street. 10s. net.

An account of the Young Plan, with a valuable summary of the events which led up to it. The text of the relevant documents is reproduced in full. Such a clear and concise aid to the understanding of a difficult subject was badly needed.

The Indian Public Debt. By D. L. Dubey. With a Foreword by the Hon. Sir George Schuster. (London) Kegan Paul, Trench, Trubner and Company, Ltd., 38, Great Russell Street.

A thorough and lucid study of the borrowing policy of the Government of India.

The Key of Progress. Edited by A. R. Caton. With a Foreword by H.E. The Lady Irwin. (London) Oxford University Press, Warwick Square. 7s. 6d. net.

A useful survey of the legal, social and professional status of women in India.

An Economic History of Australia. By Edward Shann. (London) The Cambridge University Press, Fetter Lane. 18s. net.

An interesting book which provides the necessary background for the understanding of the present problems of Australia.

History of the Financial Administration of Ireland to 1817. By T. J. Kiernan. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 15s.

A valuable contribution to financial history.

Is Advertising To-day a Burden or—A Boon? (London) The New Advertisers' Press, Excel House, Whitcomb Street. 3s. net.

A most interesting collection of articles, including: "The Economics of Advertising," by G. D. H. Cole; "Group Advertising," one Remedy for Excessive Advertising Rates," by F. Macoun, and "Bleeding the Advertiser to Pay for Newspaper Insurance," by F. E. Coe.

Inflation und Stabilisierung in Frankreich, 1914-28. By Dr. Joseph Schmitz. 11 Rm.

A German history of the French franc during the period of inflation and stabilisation.

Silver and China. By A. W. Pinnick. (Shanghai) Kelly and Walsh, Limited.

An admirably condensed discussion of the Chinese currency problem.

Die Chinesische Geldverfassung. By Dr. Kowie Dschang. (Berlin) Wilhelm Christians Verlag, Unterwasserstr. 8. Rm. 4.

A study of the Chinese currency system.

The Annals of the American Academy of Political and Social Science, November, 1930. (London) P. S. King and Son, Ltd., 2, Great Smith Street.

This volume is devoted to articles on China. They cover a very wide range, and the publication as a whole is of very great interest.

Dr. Barnardo. By J. Wesley Bready. (London) George Allen and Unwin, Ltd., 40, Museum Street. 7s. 6d. net.

An enthusiastic biography of a great personality. Dr. Bready successfully shows how very much more widely the social influence of Dr. Barnardo's work extended than the immediate range of the movement that bears his name.

Business Life Insurance Trusts. By C. Alison Scully and Franklin W. Ganse. (London) D. Appleton and Co., 34, Bedford Street, Covent Garden. 10s. 6d. net.

A textbook for business men, underwriters and trust officers.

Principles of Banking, Currency and Foreign Exchange. By Robert H. King. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 5s. net.

A textbook for candidates for the final examination of the Institute of Chartered Accountants.

Manual of Company Law and Practice. By Leslie Maddock. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 10s. 6d. net.

A handbook on the promotion, management and winding-up of companies.

L'Organisation Syndicale et Corporative Italienne. (Rome) Imprimerie de la Chambre des Députés de Charles Colombo.

A well-documented account of the corporative system in Italy.

The Sales Tax in France. By Carl S. Shoup. (London) Oxford University Press, Warwick Square. 25s. net.

A very thorough study, intended partly for the purpose of throwing light upon the desirability or otherwise of introducing a sales tax into the United States.

Die öffentliche Verschuldung im Deutschen Reich. (Berlin) Verlag von Reimar Hobbing. Rm. 15.

An explanatory analysis, running to some 450 pages, of the national and local public debt of Germany at March 31, 1928, and December 31, 1929.

Boden- und Wohnverhältnisse in Kiel. By Dr. Jürgen Wissing. (Bonn and Leipzig) Kurt Schroder. Rm. 3.30.

Die Miethäuser in Köln. By Dr. Lothar Lenz. (Bonn and Leipzig) Kurt Schroder. Rm. 12.

Die Entartung des Familienhauses im Rheinland. By Dr. Fritz Reiff. (Bonn and Leipzig) Kurt Schroder. Rm. 4.

Three German housing studies of a most intensive character.

Le Marché Financier Belge depuis Cent Ans. By P. S. Chlepner. (Brussels) Librairie Falk Fils, 22, Rue des Paroissiens.

A short history of the Belgian money and stock markets.

La Belgique après le Centenaire. By Fernand Baudhuin. (Louvain) Editions de la Société d'Etudes Morales, Sociales et Juridiques. 18 francs.

An interesting stocktaking of the economic position in which Belgium finds herself after the events of the last few years.

Rapport sur le Commerce et l'Industrie de la Suisse en 1929. (Zurich) Vorort de l'Union Suisse du Commerce et de l'Industrie.

A useful book of reference containing a general section, a statistical section, and a series of special reports on different branches of finance, industry and commerce.

The Cotton Report. By W. S. Ascoli. (London) Williams and Norgate, Ltd., 38, Great Ormond Street. 1s.

A brief discussion by a merchant shipper of the report by the Cotton Sub-committee of the Committee of Civil Research.

King Cotton is Sick. By Claudius T. Murchison. (London) Oxford University Press, Warwick Square. 9s. net.

An examination of the causes of the prolonged depression of the United States cotton industry.

The Riddle of Unemployment. By William Wallace. (London) Nation and Athenæum, 38, Great James Street. 6d.

Reprint of a lecture delivered at the Liberal Summer School.

The Palestine White Paper of October, 1930. Memorandum by Leonard Stein. (London) Jewish Agency for Palestine, 77, Great Russell Street.

The Round Table, December 1930. (London) Macmillan and Co., Ltd., St. Martin's Street. 5s.

Includes, among other interesting contributions, articles on the Imperial Conference, the slump in the United States, India, England in the depression, and "Where is Europe Going?"

Daily Mail Year Book, 1931. Edited by David Williamson. (London) Associated Newspapers, Ltd., Carmelite House. 1s.

A handy reference book and review of 1930.

London University Guide, 1931-32. (Cambridge) University Correspondence College, Burlington House. 2s. 6d.

A book of reference on the external examinations of London University.

The Co-operative Movement and Free Trade. (London) The Cobden Club, 69, Victoria Street. 2d.

An article from the *Contemporary Review*.

The Stock Exchange.

THE ARBITRAGE CONTROVERSY.

A KEEN controversy has followed a recent decision of the Stock Exchange Committee against the return of half commission to outside companies and firms engaged in stock arbitrage. Arbitrage operations can be carried on only in securities which are internationally dealt in. Whenever the price of such a security, say, in New York, is higher than its equivalent price in London, it may be profitable to buy in London and sell in New York, provided the "margin" is sufficiently wide, even if this condition obtains only for a relatively short time. Arbitrage is a highly technical and specialised form of activity, to which approximately forty firms who are members of the London Stock Exchange normally devote either the greater part, or some part, of their energies.

During the war arbitrage business was at a standstill. In 1919, however, on the abandonment of the arrangement under which dealings in American dollar securities were in the hands of the Treasury, two firms took up arbitrage business, and subsequently a number of financial houses and branches of foreign banks followed their example. The Stock Exchange allows its members to return half their commission on orders introduced by banks and other agents, and this facility was used by the outside firms engaged in arbitrage—together with the normal facility of closing a given transaction during the same or the next succeeding Account without the charging of a second commission—although it was realised that, as regards many of the arbitrage transactions concerned, the outside houses were acting as principals and not as agents. When, however, the Stock Exchange Committee was recently asked to give a definite ruling on the principle thus involved, they decided that, as the return of half commission to principals was against the rules of the Stock Exchange, they could not officially acquiesce in the continuance of the concession, which had rested on an entirely tacit and unofficial basis. Certain members of the Stock Exchange, who had handled some of the outside firms' business, or were interested in other ways, asked the Committee to reverse its decision, but other members, representative of the "inside" arbitrage firms, asked that the ruling should be upheld.

As the Stock Exchange has not yet given an official reply to these representations the matter is, in a sense, *sub judice*. The views of the two sides to the controversy may, however, be briefly summarised. Those who favour the return of half commission to outside *arbitrageurs* declare that the latter have been largely responsible for creating an active market in London for a number of foreign securities. These outside institutions regard themselves as being somewhat at a disadvantage as compared with Stock Exchange firms engaged in arbitrage, since the latter are in a position to operate in the London market without payment of any commission. This difference, however, is partly counteracted by the facilities possessed by such concerns as banks for the foreign exchange operations necessitated by stock arbitrage. The financial resources of the Stock Exchange firms engaged in the business are declared to have been too limited in the past to allow of their handling the whole of the arbitrage operations which opportunity offered them. They carried as much business as they were able to finance, and only the "overflow" found its way to the stock arbitrage departments of the banks and outside houses.

The case of the outside firms is, further, that their operations were advantageous to the Stock Exchange as a whole, since they considerably increased the volume of the latter's business, and put commissions in the way of members which would otherwise have been non-existent. In the foreign exchange market, the participation of

banks in stock arbitrage contributed to the maintenance of an appreciable volume of activity after the stabilisation of many currencies had almost completely eliminated speculative operations. This factor was particularly in evidence in certain exchanges, such as the Canadian dollar, the Swedish krona, and the Swiss franc. Naturally, this had some bearing on the maintenance of London's position as the world's leading foreign exchange market. During the last two years, however, the total net profit earned through arbitrage by banks has been anything but princely. Arbitrage is a troublesome type of business, which ties up considerable funds and involves a certain amount of risk. Recently, total earnings are declared to have scarcely covered expenses by way of Stock Exchange commissions, though the latter have been charged at only half the full rate. Another argument advanced in support of the claim for the half commission, is that half commission in London is in any case considerably more than the full commission in most foreign Stock Exchanges.

If outside institutions decide to withdraw from arbitrage operations the consequences, it is argued, will be unfortunate from the point of view of all concerned—the more so as the rapid progress of internationalisation of finance and the increase in the number of securities available in several countries may offer future scope for a general expansion of stock arbitrage, from which London will be unable adequately to profit.

The answer made on behalf of "inside" arbitrage firms is that the Stock Exchange Committee does not propose to make a new rule, but to enforce an old one. It would create a far-reaching and probably embarrassing precedent if the Committee were to confer a privileged position on any outside operator whatever, who acted on his own behalf and not as an agent, merely because the business he brought to the Stock Exchange was of appreciable proportions. How, it is argued, could the Stock Exchange, after such a decision, refuse to split its commissions with all large buyers and sellers? To create a "privileged" outside class would involve the danger of setting up a highly ramified system of "exceptional rates," leading, in effect, to a general reduction in the average commissions charged over a wide area.

Stock Exchange firms doing arbitrage business, again, strongly deny the statement that their funds do not permit of their exploiting all the opportunities offered them. Indeed, at the present time, some of them are unable to employ all their resources in the business. The cost of arbitrage operations, they point out, is much less than their opponents have made out. Though a single firm may be responsible for dealings whose aggregate runs into many millions of pounds in a single year, the money is turned over, in normal circumstances, with extraordinary rapidity. Against the fact that they do not pay commissions on this business they put the extra charges involved by Stock Exchange membership—which involves, among other things, inability to advertise for outside business.

While recognising that some outside financial houses have played a prominent part in introducing foreign securities to London of recent years, the arbitrage firms of the Stock Exchange maintain that the amount of business brought thereby to the foreign exchange market has represented only a very minor part of the total dealings in many currencies. They declare that the natural desire of these outside firms to present as strong a case as possible for the continuance of exceptional facilities has caused them to exaggerate their rôle in the money market out of all true proportion. Alternatively, they point out that if the business is really of such considerable dimensions as have been suggested, much of it must come under what is known as the £2,500 clause, in the rules regarding Stock Exchange commissions, and thus be done at a lower commission in any case.

Finally, the inside arbitrage firms do not see how a valid claim can be made out for granting a *dual* privilege to outside houses. The latter have not only been obtaining half-commission facilities, but have also been allowed to buy a stock, say, in London at half commission and to sell it the same afternoon in Stockholm (this representing from their point of view a completed transaction), but also to carry out, anything up to a fortnight later, another transaction, say, with New York, involving the sale of the same stock in London, without paying any further commission.

The matter clearly raises numerous complicated issues, both of principle and expediency. The Stock Exchange Committee, it may be presumed, will weigh all the facts carefully before giving a decision which, in any case, cannot be entirely pleasing to one of the two parties concerned. Whether it was wise tacitly to allow the continuance for some years of a state of affairs under which certain outside firms enjoyed a *de facto* privileged position is open to question, though the Committee may reply that on the first occasion when it was officially approached in the matter it gave a clear-cut ruling. The ideal solution would, naturally, be a policy best calculated to increase the sum total of all business in the London market, irrespective of the interests of any one section. One of the most able critics of the world's Stock Exchange affairs, Mr J. Edward Meeker (the economist of the New York Stock Exchange), has just pointed out, in the new edition of his classic book on "The Work of the Stock Exchange," that arbitrage is a delicate financial operation which can be carried on when a highly organised security market is already available to those who undertake it. For the existence of such a market, those who use its facilities may be called on to pay a certain price—even if they regard some of its regulations as irksome from their own point of view.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.	
TICKET.	ACCOUNT.
December 16.	December 18.

Outwardly, the markets continued last week's story of restricted dealings, apathetic business, and purely fractional price changes without a definite trend. Actually, the week's tendencies were by no means without significance. Monetary developments were increasingly regarded as bearing an unfavourable construction from the point of view of gilt-edged stockholders, and of Mr Snowden. Conversely, while industrial shareholders could discover meagre consolation in current trade reports, there was insufficient stock in the market to depress prices. On the theory that liquidation had come definitely to an end in London (though not necessarily in certain overseas centres), and that the relative stability of equity shares in earlier weeks signalled the transition from the "slump" to the "stagnation" stage of the cycle, a few investors were inclined to examine the claims, on a long view, of shares in companies whose industrial operations might reasonably be regarded as having touched bottom. The continuance of such a tendency in the next few weeks would undoubtedly be a reassuring factor.

The Gilt-edged market was assisted by the disbursement of £50 millions of interest on Five per Cent. War Loan—which, however, failed to counteract the effect of the further gold drain to France and the unfavourable position of the pound *vis-à-vis* foreign currencies. Conversion Loans came on offer, and Funding Loan was realised. India stocks were neglected and Australians were dull, the revenue returns being regarded with a jaundiced eye. Among newly-issued domestic stocks, a feature was the sharp decline in Central Electricity Four-and-a-Half per Cents., which fell nearly to par.

The Foreign Bond market was disturbed and apprehensive. Brazilians were depressed by nervous selling and

by the unwillingness of dealers to load their books. Japanese bonds also showed sudden weakness, selling coming from the East. Europeans, however, were firmer on the whole, particularly the Young Loan.

The day-to-day changes in the coal-mining outlook were without effect on home rails, prices being, if anything, a little harder on the slightly decreased severity of the decreases shown in traffic revenue and the appearance of a few cautious buyers. Foreign railways, however, remained out of favour. Despite further reassuring messages regarding the crops, Argentines were depressed, current traffic figures affording no evidence of any improvement in immediate earnings' prospects. Brazilian rails were dull, but Antofagastas had a mild recovery on the cessation of the previous week's liquidation.

In the Industrial market, this week's carry-over, like its predecessors, revealed only a small open account. In the week's dealings, investment interest again centred on electrical shares. A number of supply company issues were harder, while among the manufacturing company shares, Johnson and Phillips were in demand. The Stock Exchange attitude towards the coal situation (analysed in a Note on page 1073) was one of confidence in a satisfactory settlement, and no serious losses were shown in the "heavy" share markets. The speeches at the Dennis meeting caused a slight recrudescence of interest in motor shares, Dennis, Leyland and Austin all improving. The Courtauld reductions in rayon prices (discussed on page 1074) were initially interpreted as a bear point, but more favourable second thoughts were reflected in firmer conditions throughout the artificial silk share market. The preliminary figures of Carreras (set out on page 1075) afforded little justification for the activity in the shares on the eve of their publication, and the effect of the reduction in profits was to induce moderate selling of tobacco shares as a whole. Brewery values, however, were generally maintained. The better tone of Continental markets was reflected in limited support of Unilevers. The announcement that the International Tea referendum would show a large majority against continuance of the merger negotiations was generally expected, and produced no change in the shares. Allen-Liversidge and British Oxygen suffered a setback on the circulation of an anonymous document against the carrying out of the proposed fusion. Bank shares were harder early in the week, but subsequently showed a more irregular tendency, and insurance shares lost the activity of recent weeks.

Though rubber was firmer, there was no change in the idle conditions of the share market. Transactions in tea shares were similarly negligible, the few price quotations recorded revealing an irregular trend. Oil shares had a satisfactory tendency, on the Deterding speech (discussed on page 1076), the abatement of Paris selling, and the favourable American production figures, though the extent of price movements gave an exaggerated idea of the volume of business.

(Continued on page 1072.)

INVESTMENT

by L. L. B. Angas.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- (i) The Business Cycle and its influence on the prices of all securities.
- (ii) How to detect the beginnings and endings of booms and slumps in single industries.
- (iii) Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- (iv) Rules for timing both buying and selling and for taking profits and losses.
- (v) Investment policy to be followed by Trustees at different stages of the Business Cycle.
- (vi) Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 1069.)

Business in the mining share market was again restricted, and no general trend was discernible. The Cape refused to support its favourites and Kaffirs were mainly idle, with Gold Fields and Rand Mines on the down grade. Anglo-American revealed early weakness and despite a partial recovery were lower on balance. Rumour was persistent on the subject of a possible Northern Rhodesian amalgamation, but share values were not responsive, changes being small and irregular. Rio Tinto improved on Tuesday's higher copper price but relapsed later with the metal. Tin shares were quiet and largely featureless, Ayer Hitam and Pahang recording small advances.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock markets were prepared to make the most of President Hoover's annual message to Congress. This turned out to be a somewhat colourless document. The President placed the indicated deficit in the current year's budget at \$180 millions, and advocated the elimination of the income tax reduction of last year—which was scarcely a bull point. He urged Congress to investigate the Anti-Trust Laws with a view to permitting co-operation among producers of basic raw materials in order to prevent over-production. He also suggested a further restriction in immigration and increased public works for unemployment relief. His views on power and utility development were carefully phrased to the point of obscurity, but gave the impression that he was opposed to

proposals for Federal regulation. The mild rally in share values which followed the message was based partly on the negative consideration that the President had said nothing about the banking "problem" (and, by inference, was prepared to ignore it unless his hand was forced by Congress), and partly to quite a different matter—the announcement by the U.S. Steel Corporation of an advance in selling prices. Trading, however, was restricted, transactions on Monday, for example, being the lowest for four years. Some support was given to copper shares on indications of a firmer price situation, though these were not fully borne out. After the middle of the week the markets turned heavy, though no considerable liquidation developed. The large decline in chain store and mail order sales in November induced sales of Montgomery, Ward, and Sears, Roebuck. Call money still ruled at 2 per cent., but the money market was firmer owing to heavy withdrawals for the interior.

INVESTMENT NOTES.

American Company Earnings.—It is now possible to estimate, on broad lines, the probable 1930 earnings of a number of the leading American industrial concerns. We have selected in the following table companies representative of the main industrial fields, and have shown how actual earnings for nine months and estimated earnings for the whole year compared with the figures for 1929:—

	Actual Earnings (9 months) per Share.		Actual Earnings, 12 months. Per share.		Estimated Earnings, 12 months. Per share.	
	1929.	1930.	1929.	1930.	1929.	1930.
Chemicals:						
Allied Chemical and Dye	2.89	2.22	12.60	10.00	12.60	10.00
Union Carbide and Carbon	1.66	1.47	3.94	3.00	3.94	3.00
Electrical Equipment:						
General Electric Company	7.33	4.25	2.24	2.00	2.24	2.00
Westinghouse Electric and Mfg.	2.45	2.49	10.15	5.50	10.15	5.50
Food Products:						
National Biscuit	1.85*	2.16*	3.28†	3.25	3.28†	3.25
National Dairy Products	5.56	0.56	4.04	4.10	4.04	4.10
Motors:						
Chrysler	4.96	2.68	5.49	3.00	5.49	3.00
General Motors	3.10*	3.01*	6.35	6.00	6.35	6.00
Retailing:						
Drug Incorporated	Decrease.	4.2	3.66	3.60	3.66	3.60
Woolworth	12.23	5.09	11.01	7.00	11.01	7.00
Steel:						
Bethlehem Steel	15.82	8.44	21.19	10.00	21.19	10.00
U.S. Steel	3.74	5.77†	8.75	8.75	5.77†	8.75
Tobacco:						
American Tobacco Co.	1.89*	2.34*	7.82	8.00	2.34*	8.00
Liggett and Myers	2.66	2.46	8.02	7.50	2.46	7.50
Miscellaneous:						
American Can Company	2.66	2.46	8.02	7.50	2.46	7.50
Otis Elevator	2.66	2.46	8.02	7.50	2.46	7.50

* Six months. † Adjusted.

It will be seen that the only companies which are estimated to have increased their earnings this year are the tobacco group, and, to a small extent, the National Dairy Products. The declines range from small percentages to nearly 50 per cent. The next table shows the highest and lowest market prices recorded this year, the current prices, the dividend rate and the dividend yields at current prices:—

	Estimated Dividend Rate for 1930.	Prices of 1930.			Dividend Yield.
		High.	Low.	Present.	
Allied Chemical and Dye	6.00†	34½	185½	304½	2.94
Union Carbide and Carbon	2.60	106½	54	62	4.19
General Electric Company	1.60	95½	44½	48½	3.30
Westinghouse Electric and Mfg.	5.00	201½	94½	99½	5.02
National Biscuit	3.30*	93	68½	78½	4.20
National Dairy Products	2.60†	62	38½	43½	6.01
Chrysler	2.50	43	14½	18	13.19
General Motors	3.30*	54½	31½	35½	8.51
Drug Incorporated	4.00	87½	63	61½	6.02
Woolworth	2.40	72½	61½	61½	3.89
Bethlehem Steel	6.00	110½	58½	62½	9.54
U.S. Steel	7.00	198½	138	145½	4.80
American Tobacco	5.00	127½	99½	109	4.59
Liggett and Myers	5.00*	114½	79	85	5.88
American Can Company	4.00	156½	107½	116½	3.43
Otis Elevator	2.50	80½	48½	58	4.31

* Including extras. † Payable when earned. ‡ Plus 5 per cent. in stock.
§ New stock. Old stock split, two for one, in July.

Readers will note with some surprise that even after the persistent liquidation from which the New York stock market has suffered, the yields obtainable on many first-grade stocks are still under 5 per cent. In some cases it will be found that the stocks are selling at a higher price value, in relation to earnings, than last year. Yields over 5 per cent. are confined to companies in industries which have been exceptionally depressed, such as automobiles, or to companies working on new capitalisations. The dividend yields obtainable in leading British industrial shares appear by contrast favourable. The following table selects some of the "leaders" on the London stock markets:—

	Current Price.	Div. Yield.
Imperial Chemical £1	19/6	8 7 6
General Electric £1	47/9	5 17 3
United Dairies £1	32/3	6 4 0
Shell Transport £1	3½	6 12 9 free of tax
Vickers 6/8	7/7½	6 19 11
Imperial Tobacco £1	4½	4 17 6 free of tax

It is not possible to estimate 1930 earnings of British companies in the absence of quarterly accounts, though some decline may be looked for in a number of instances. The higher dividend yields obtainable in British industrial shares are in part explained by the higher taxation which is imposed in this country than in America.

The Outlook for Coal Companies.—Not the least regrettable feature of the present disturbed labour situation in the coal industry is that it comes at a time when some coal-mining concerns appear to be entering upon a period of relative, if mild, prosperity. The following table shows that of thirteen companies whose reports have appeared since the beginning of September, eleven have increased their profits for the past year and seven have increased their dividend:—

Company.	1929.		1930.		Price of Ordinary Shares.	
	Net Profit.	Ord. Div.	Net Profit.	Ord. Div.	Nov. 3.	Dec. 3.
Blaenavon	£10,295	Nil	£18,155	Nil	3/9	3/9
Dormhill	13,787	2½	61,147	5	14/6½	14/6½
Denaby and Cadeby	546	Nil	108,586	5	...	...

* Tax free.

It is noticeable that of the six companies for which an official or unofficial quotation of ordinary shares is available, only one records a downward movement since the beginning of November, when the possible consequences of the application of Part III. of the Coal Mines Act first began to be appreciated. To suggest that this stability is due to a belief on the Stock Exchange that mining profits are certain to come unscathed through the storm would be to take an unduly narrow view. With miners' wages admittedly near subsistence level in many cases, it seems likely that shareholders will concentrate their hopes on the results of the wider measures of reorganisation in the industry to which the Act may give a certain impetus. It is already abundantly clear that only through amalgamation and widespread rationalisation on lines which in certain cases have already proved their value can the numerous small units of the coal industry hope for some measure of prosperity in the future.

The Position of Metduro.—The unhappy experience of many investors in recent months has prompted a suggestion that ordinary shareholders should organise an association, similar in character to the Council of Foreign Bondholders, which could ventilate their grievances and,

Established 1889.

if necessary, fight for their rights in the Courts. Such a body would doubtless find much to say regarding the unfortunate position of shareholders in Metduro, Ltd. This company, which was promoted by the Metropole Gramophone, made an issue of 450,000 7 per cent. preference shares of £1, and 450,000 ordinary shares of 1s., in March, 1929, for the purpose of exploiting commercially a liquid plastic substance known as Metduro, which, it was claimed, could be used in the electrical, furniture and gramophone trades. The Marquis of Winchester was the chairman of the company and Mr Leonard Blum managing director. The brokers were Williamson, Fawcett and Stirling. The directors stated in the prospectus that the constituents of Metduro were cheap and readily obtainable, that the process of manufacture and the plant required were very simple, and that the material could be produced at a competitive price. In April this year, however, the directors stated that the manufacture had proved to be a more difficult problem than they had been led to believe. They had therefore purchased the British rights of a process belonging to the Herold Aktiengesellschaft of Hamburg which was manufacturing a substance closely akin to Metduro. The company now has a new board of directors, who have just issued an interim report stating that the company's only tangible assets of any realisable value are the factory at Waltham Abbey, valued at £55,000 but unsaleable at present, and plant valued at £10,000, apart from unpaid instalments of 10s. on the £1 preference shares. It appears that the manufacture of Metduro has been definitely abandoned. The plant has been redesigned to produce in small quantities under the Herold process. In other words, the company is now exploiting a business for which it was not founded. The company at the moment has only a small sum in cash, and requires further money to pay for plant ordered from Germany for the first Herold unit, now in course of erection at Waltham Abbey. Under the agreement with the Herold Company the Metduro Company is under a contingent liability to pay £10,000 as soon as the plant is capable of producing 30 tons per month as guaranteed. The new directors therefore propose to call up 2s. 6d. per share on the preference capital to meet this liability and to provide working capital. The shareholders will no doubt be amazed at some of the disclosures which the new directors make in their report. The old directors purchased from Metropole Developments the freehold property at Waltham Abbey for £145,000; this property had been purchased by Metropole Developments for £65,488. They had also purchased from Metropole Developments the Herold process for £75,000: this process Metropole Developments had previously acquired for £17,365. The profits on these transactions were to a considerable extent invested by Metropole Developments in buying shares of the Metduro Company from Mr Blum. As Metropole Developments is a mere promotion company without assets, the directors add that it will be unable to meet any of the unpaid calls on the 38,123 Metduro shares registered in its name. The directors consider that it should be possible to dispose of the whole output of 30 tons per month from the new Herold plant at prices which should show a profit, and that it is in the interests of the shareholders to proceed to erect the plant and to bring it into production. Shareholders have been well-advised to demand further information and a general meeting has now been called for that purpose.

A Steel Agreement—James Dunlop and Colville.—Particulars have been published regarding a merger of David Colville and Sons, Ltd., and James Dunlop and Company, Ltd. The new company will have a capital of £4,500,000, to be allotted as fully-paid to the vendor companies, and will be known as Colvilles, Ltd. In exchange for the Dalzell Steel and Iron Works, the Clydebridge Steel Works, and the Glen-garnock Iron and Steel Works, Messrs David Colville (whose present capital is £5,000,000), will receive £4,050,000 in shares of the new company, including

1,371,400 £1 7 per cent. first cumulative preference shares, 860,000 £1 7½ per cent. second preference shares (cumulative up to 5 per cent. after January 1, 1936), and 1,818,600 £1 ordinary shares. Messrs. James Dunlop have a present capital of £550,000 in 300,000 £1 6 per cent. cumulative preference shares and 250,000 £1 ordinary shares, the latter being for the most part privately held. This company is to be allotted, in the new concern, 278,600 cumulative preference, 60,000 second preference, and 111,400 £1 ordinary shares, in exchange for the Clyde Iron Works, Calderbank Steel Works, the Clyde Coal-field, and other lands. The new company will take over £650,000 of floating stocks as working capital, of which £65,000 will be contributed by the Dunlop Company. The latter will continue to work the Cardowan Colliery, which has now reached the producing stage. At June 30th last, the Dunlop Company had preference dividend arrears of £107,350 outstanding. This matter is receiving the attention of the directors. Messrs. Lithgow, who have made advances to Dunlops totalling £335,000, have agreed to waive £25,000 due to them in interest in order to extinguish the debit of the company's profit and loss account. Provided the deal goes through and the preference shareholders agree to cancel dividend arrears to June 30th last, Messrs Lithgow are prepared to maintain their loans at least until January 1, 1933, free of interest.

Dorman, Long Results.—The report of Dorman, Long for the year ended September 30th last incorporates the figures for Bolckow, Vaughan, the merger of the two companies having become effective as from November 1, 1929. In the previous year, the profits of Dorman, Long alone were £391,400, and those of Bolckow, Vaughan £351,989, the latter figure, however, being exclusive of standing charges on idle plant, £47,317, and bank and loan interest, £46,252. Deducting these amounts, the combined profits, before debenture interest and depreciation, of the two companies in the last complete financial period before amalgamation were £649,820. The profit of the combined companies this year is £394,106, which fully covers the £305,659 required for debenture interest and the £63,603 provision for the redemption of the 5½ per cent. debenture stock. The company, however, has written nothing off for depreciation. This policy is the more open to criticism as the directors have chosen to pay a full year's dividend of £51,206 on the 6 per cent. cumulative preference shares. Some £105,495 is transferred from provision for liabilities to the Government, no longer required, and the carry-forward is increased from £97,820 to £174,954. The directors declare that results so far have borne out their anticipations of the advantages derivable from the union of interests. The year's trading conditions were, however, adverse, particularly in the last six months. The Sydney Bridge was closed in August last, and will be completed during 1931. This and other contracts have kept the company's bridge and constructional department well employed, and a number of important fresh contracts have been secured since the close of the financial year. The fruits of rationalised production must clearly require further time to mature. At present, the company is earning nothing (if depreciation be allowed for) on its £883,918 of 6 per cent. cumulative preference, its £2,052,746 of preferred ordinary and £8,311,482 of ordinary capital. For future dividends, holders of the two latter share groups must look to further economies and to a general revival in the steel trades.

Courtaulds and Rayon Prices.—In the last ten days Courtaulds have made a further reduction in their prices, an examination of which suggests an apparently definite line of policy. The reduction, in the first place (writes a correspondent) has a bearing on the question of competition in the trade. Since viscose silk competes with acetate, and acetate prices were recently reduced, it was natural that viscose prices should follow suit. Courtaulds have still to meet competition

from other viscose producers, though their yarns, it is claimed, are the standard by which all others are judged. An examination of their latest price cut shows that they have continued their policy of first of all introducing a super-quality yarn, then of gradually reducing the price of this yarn and making it the standard quality. This policy tends to produce general and steady improvement in the quality of rayon goods and acts as a form of defence of the company's position against competition both at home and abroad. There is no reason to believe that the latest manifestation of this policy will, in the long run, result in any marked diminution of turnover. It must, however, react detrimentally, for the time being, upon the prospects of acetate silk. Meanwhile, it is reported that Courtaulds are negotiating for a world-wide price and production pact, which would go far to bring prosperity back to the industry.

Peninsular and Oriental.—The accounts show profits for the year to September 30th last, before paying debenture interest, of £1,165,004—a decline of £75,598. The directors have reduced the dividend from 12 per cent. to 10 per cent., and the carry-forward is £5,813 lower at £115,052.

The balance sheet has been arranged in the customary manner and presents the usual intriguing problems of interpretation. Payments to date on vessels under construction are included with the existing fleet in one item of £14,962,399, which shows a decrease of £2,264,022. The company has again grouped its loans to subsidiaries with sundry investments, cash and debtors, which stand at £9,051,415, and show a falling off of £301,534. If the company were registered under the Companies Acts, and not established by Royal Charter, it would be required to separate these items, and show how the investments were valued. The financial position of the company is, of course, beyond criticism. Why, then, cannot the directors take their proprietors more completely into their confidence? Some £228,264 has been added to the profit-sharing scheme reserve, which is now £1,313,025. On September 30th last the insurance fund stood at £3,027,702. Of this, £27,702 was added to the profit and loss account, and £2,000,000 applied to writing down the book-value of the fleet. Three ships of the branch line to Australia have been sold, together with the "Morea" (built in 1907), for breaking up. The "Razmak" has been sold to the Union Steam of New Zealand to replace the "Tahiti." Two new 21,000-ton ships are under construction for the Australian run and four other vessels, aggregating 63,000 tons (including two of 14,500 tons) are also under construction. On all routes last year trade was difficult, but signs of improvement are discerned. The preferred capital is secured by net "book" assets of £419 15s. 1d. per £100 stock fully paid. At the present price of £205 the deferred stock yields £5, allowing for the present dividend.

Wall Paper Manufacturers.—The depression in general trade since May last has produced a continued fall in the sales of this company, reflected in a decline of £108,419 in net profit, which comes out at £585,200 for the year. Dividends, however, have been maintained.

	Years ended August 31st,

Buildings and machinery have risen by £241,307, but Government securities are £209,076 lower at £993,047, and cash has declined by £186,082 to £2,684. Liquid assets exceeded current liabilities by £1,087,113, a decline of £352,638. At the annual meeting the chairman declared that competition had been keen both at home and abroad, accompanied by price cutting, mainly by foreign firms. The company's investments, however, are spread over paint-manufacturing and other industries, as well as the wall paper manufacturing trade. The Wall-pamur Company continues to make good progress in the paint trade, and the Wall Paper Company's cretonne factory at Uxbridge is making satisfactory headway. The tangible assets of the subsidiary companies are stated to exceed the value at which the company's investments in these concerns appear in the balance sheet. At present prices the ordinary and deferred shares of Wall Paper Manufacturers yield £6 15s. per cent. and £9 8s. 11d. per cent. respectively.

Carreras.—The preliminary statement of this tobacco company, covering the year to October 31st last, reveals a decline in profit from £1,285,154 to £968,204. After deductions of £204,655 for income-tax, £5,242 for super-annuation fund, and £3,831 for expenses of the last share bonus issue, net profit stands at £755,076, and compares with £1,013,964 for the previous twelve months. The small preference dividend is again covered many times, but the ordinary dividend, which for six years has been at the rate of 50 per cent. free of tax, is this year paid less tax. As the 15 per cent. interim distribution was on a tax-free basis, the final dividends of 4s. 9d. per share on the ordinary and "A" ordinary shares, and 7½d.

* Tax free. † Less tax. ‡ Estimated.			

A decline in percentage earnings following two successive issues of bonus shares was foreshadowed last year in the chairman's speech, and should come as no surprise to shareholders. As regards the decline in profits, however, an explanation will doubtless be eagerly awaited. As yet there is nothing to suggest that Carreras has suffered disproportionately from the fierce "coupon" competition. The ordinary £1 shares now stand at 6, and yield about £8 15s. per cent. less tax, after deducting the final dividend of 4s. 9d. per share.

Massey's Burnley Brewery.—Despite the general upward trend of brewery company profits, this company, in common with several Northern breweries, reflects to a marked degree the effects of depression in the textile manufacturing districts. Net profit for the year to October 31st last amounted to £31,200, or little more than half last year's total of £61,419. Dividend on the preference and participating preference shares requires £28,500, and is barely covered. In the circumstances, the ordinary shareholders will no doubt be gratified to receive a dividend of 5 per cent.

	Year ended October 31,		
	1928.	1929.	1930.

* Seven per cent. participating preference shares received 8 per cent. dividend. Cover calculated on a dividend of 7 per cent.

No further addition is made to reserve fund, which stands in the balance sheet at £69,500. The accounts reveal a liquid position if stocks, valued at £92,000, are included in the category of available assets. Fixed capital stands at £1,533,937, after providing for depreciation to October 31, 1929—a considerable advance on last year's total of £1,323,380. Goodwill is shown at £15,000, and cash at £16. At their present price of 14s., the £1 ordinary shares show a yield of about £7 2s. per cent.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.," 8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....
Address.....

Royal Dutch Petroleum.—At the adjourned extraordinary general meeting of the Royal Dutch Petroleum Company, at The Hague this week, Sir Henri Deterding was at pains to reassure shareholders as to the cash position of the company. He declared that the directors not only had no thought of issuing debentures, but that part of the 4 per cent. priority capital not offered for conversion was redeemed on November 1st at 102½ per cent. in cash to an amount in excess of 8,000,000 Fl. An offer from one of the company's bankers to float 25,000,000 Fl. 4 per cent. Royal Dutch debentures had been refused for the same reason that induced the board to redeem the 4 per cent. priority capital, namely that the company had more than enough cash. The capitalisation of the Royal Dutch group, he added, compared satisfactorily in regard to earning power with that of any other oil company. Their companies had been able to meet the decline in revenue arising out of over-production and low selling prices by postponing extensions which were not now considered necessary. For the current year the savings under this head would be more than 30,000,000 Fl., and in 1931 about 50,000,000 Fl. Sir Henri expressed his absolute confidence in the future of oil and of the Royal Dutch-Shell companies based on the conservative financial policy which his group adopted in writing-off considerable sums each year in depreciation and re-investing them in the business. Whenever misadventure had overtaken the group, as for instance in Russia, they had immediately made a reserve of 100 per cent. With regard to the enormous stocks of oil products which the Royal Dutch-Shell group carried, Sir Henri added that these appeared in the balance sheet either at cost or at market value, whichever was lower. This, he thought, should give the shareholders confidence that when the revival in trade did come, the Royal Dutch-Shell group would experience the benefit immediately. Sir Henri did not commit himself to any statement as to the final dividend of Royal Dutch, except to deny that it would be small. This may suggest the possibility of a certain reduction to, say, 10 per cent., making 20 per cent. for the year. The effect of this "fighting" speech was to bring in buyers of Royal Dutch shares. The oil share market as a whole, however, had already recovered part of its previous losses on the realisation that the statistical situation in the oil industry (as we explained at length in the *Economist* last week) had been considerably improved up to the end of September by the restriction measures enforced in the American oil fields. A further reduction in the crude oil output of the United States is shown by this week's figures, the present level being lower than at any time since 1926.

De Beers Consolidated.—Contrary to general expectations, last year's profits show a small increase. Diamond sales were fully maintained, and a slight setback in sundry revenue was more than counterbalanced by reduction in outlay. Nevertheless, no payment is being made upon the deferred shares. Some holders of the latter may possibly be puzzled. The explanation is to be found in the financial position. Debtors, special investments and cash give a surplus of £1,404,650 over current liabilities. But of the £2,797,950 comprised under the former heading, £916,200, represents "open accounts and loans to affiliated companies," while £903,900 is embarked in "special investments." What proportion of these amounts is liquid must be regarded as a very open question. True, the company has £624,200 in "stocks and shares," but no information is available as to their composition. Our usual tabulated comparison is appended:—

	Year ended June		
	1928.	1929.	1930.
Diamond sales	3,311,780	3,255,790	3,262,670
Other income	588,370	554,000	535,810
Expenditure, depreciation, &c.	1,707,900	1,761,780	1,671,570
Net profit	2,192,250	2,047,010	2,126,910
To taxation	321,970	303,250	302,590
Dividend on deferred shares.....	817,890	817,890	...
Rate per share	15/-	15/-	...
To reserves	100,000	250,000	...
Carried forward	500,020	377,400	1,401,720

Some important changes have taken place in the balance sheet. The £1,635,500 South African debentures have

been redeemed out of the fund created for that purpose, and the amount has been written off the fixed assets. General reserves have been reduced to £2,224,500 by the transfer of £820,740 to the fund for "stabilisation of the diamond trade," which is thus raised to £3,394,600. This sum includes the De Beers participation in the Diamond Corporation, formed in February last with a capital of £2,500,000 for the purpose of nursing surplus stocks and shares. Presumably the object of the proposed increase of £750,000 in the deferred capital will be made clear at the meeting, which is to be held on the 15th. It is all to the good that arrangements have at length been made between the big producers and the Union Government for a general limitation of sales; nevertheless, the prospects for the early future must be regarded with a cautious eye. The current quotation of the £2 10s. deferred shares is about £6, and of the preferred under £10, as against £10 7s. 6d. and £12 15s. earlier in the year.

New Capital Issues in November.—In the following table we show the new capital raised in London by issue to the public and to shareholders in November, and in recent periods.

	(000's omitted.)			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
Monthly Average.	£	£	£	£
1924	7,051	6,023	4,370	17,444

July-Sept., 1929...Dr. 1,200	12,472	6,341	1,051	19,864
July-Sept., 1930... 1,800	15,224	2,775	4,586	24,585
October, 1929 ... Dr. 350	8,058	652	3,500	12,210
October, 1930 ... 850	11,839	12,000	1,480	25,319
November, 1929 ... 65,550	4,189	3,741	1,000	8,930
November, 1930 ... 1,050	6,479	6,158	2,893	15,530

The month witnessed a decline in the total of new issues. Of the aggregate of £16,580,000 issued, the United Kingdom accounted for £6,479,000, while net receipts from National Savings Certificates totalled £1,050,000, against £850,000 in October. The two most important offers were £5,000,000 inscribed stock by the Union of South Africa, and £6,000,000 4½ per cent. stock by the Central Electricity Board, together with a Central Argentine Railway issue of £3,000,000. A feature of the month has been the large number of issues "for information only," which have been privately placed and which are not included in the above table. In an "Investment Note" last week (see the *Economist*, November 29th, page 1018) we gave a summary of fifteen such issues, involving £5,513,470 of new capital.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mexican Railway, Ansell's Brewery, Consolidated Gold Fields of South Africa, Malaya General, Tate and Lyle, Foster Clark, and Strand Hotel. Discussing the steady decline in the price of silver, Lord Brabourne, presiding at the Consolidated Goldfields meeting, suggested that, in view of the fact that the supply of gold was apparently insufficient to meet the world's credit requirements, and of the probable decline in world gold production during the next few years, the chief nations of the world might well agree to remonetise silver and fix its price as one-fortieth of that of gold, or 2s. an ounce. At the annual meeting of Ansell's brewery, the chairman said that the promise the brewers had given to the Chancellor of the Exchequer to bear the extra duty of 3s. per standard barrel of beer themselves and not pass it on to the public or the retailers had been faithfully carried out.

AUSTRIA'S ECONOMIC AND FINANCIAL SITUATION

State Finances.

In the financial year 1929 the Government has balanced the State finances without being backed by loan proceeds. With the repayment of 50 million schillings of the Government Debt to the Austrian National Bank on December 31, 1928, the funds of the League of Nations Loan—with the exception of the amounts deposited for the service of the loan—have been exhausted.

From the closed accounts of the Austrian Budget for 1929 the following data may be gathered (according to the reform scheme of the League of Nations): in the field of current finances expenditure amounted to 1,032.82 million schillings (£30.00 million), and the revenue gave 1,199.75 million (£34.84 million), thus leaving a surplus of 166.93 million schillings (£4.84 million). The sum spent on investments was 147.20 million schillings (£4.27 million). If the expenditure on investments is deducted from the surplus of current finances the total surplus amounted to 19.73 million schillings (£0.57 million). Of the total expenditure on investments, 40.8 million schillings (£1.2 million) have been credited to the Federal Railways, 3.5 million (£0.1 million) to other railways, and 68.2 million (£1.9 million) to the Post and Telegraph Administration, altogether 112.5 million schillings (£3.2 million), which according to the Budget should have to be met out of loan proceeds, but actually had to be met by advances from current revenue. It is, however, to be noted that in 1929 total capital investments of the Federal Railways amounted altogether to 100.4 million schillings (£2.9 million); of this sum only 40.8 million (£1.2 million), as mentioned above, have been met out of Government funds on account of the delay of the Government Loan, while the balance of 59.6 million (£1.7 million) was met by short-term credit operations of the Federal Railways, which, however, in July, 1930, after the flotation of the Austrian Government International Loan, 1930, were all paid off.

According to the Budget for 1930 and its supplements, the following figures are indicated: expenditure, 1,133.2 million schillings (£32.91 million); revenue, 1,165.4 million (£33.84 million); thus leaving a surplus of 32.2 million. The amount required for investments is 189.9 million (£5.51 million), and, consequently, the net deficit is 157.5 million schillings. Of the above-mentioned sum for investments and of the net deficit respectively, 154.6 million (£4.5 million) will be credited to the Federal Railways and the Post and Telegraph Administration, which will be met out of the proceeds of the Austrian Government International Loan, 1930.

For about three years the Austrian Government has endeavoured to raise a loan in order to cover capital expenditure for investments. Since, however, Austria's financial freedom of action was limited by a series of international obligations imposed on her, the loan negotiations were very difficult. In this direction it should be noted that the Committee of the Guarantor States of the first loan decided in October, 1927, to give Austria authority to raise a loan for productive purposes to the maximum net amount of 725 million schillings (£21 million). The settlement of Austria's relief debts in 1928 and 1930 removed a further obstacle to the flotation, while the Hague Agreement of January 20, 1930, which cancelled the reparation creditors' claims, abolished the previously necessary consent of the reparation creditors to the loan transactions. On July 14th, the Loan Contract, by which a sum of about 390 million schillings (£11.3 million) came to Austria, was closed in London. This amount, representing the first tranche of the Austrian Government International Loan, will make it possible for the Government to continue its investment programme and in this way contribute to Austria's economic progress.

The Austrian National Bank.

In accommodating itself to the development of conditions on the international money markets, the Austrian National Bank continuously reduced its discount rate amounting to 8½ per cent. on September 28, 1929; during the year under review, and since September 10, 1930, there is a rate of 5 per cent. The position of the central bank in 1930 may be gathered from the appended table, which shows the figures in millions of schillings (£1 equalling 34.585 Austrian schillings):—

	Dec. 31, 1929.	June 30, 1930.	Oct. 7, 1930.
ASSETS:			
Cash Reserve*	406.3	434.9	431.3
Net Foreign Exchange not included in Cash Reserve† ...	334.2	421.0	478.0
Bills discounted	305.6	124.8	82.9
Government Debt	108.6	101.5	101.3
LIABILITIES:			
Combined amount of Notes issued and Current accounts	1,138.3	1,088.6	1,096.9

* Since September 7, 1930, the weekly bank reports show a gold reserve of 214.6 million schillings. The balance of the Cash Reserve consists exclusively of £ and \$ holdings.

† Only £ and \$ holdings.

The following table shows the percentage of cover:—

	Dec. 31, 1929.	June 30, 1930.	Oct. 7, 1930.
Proportion to notes issued, plus current account liabilities:—			
(a) Gold	14.56	15.48	19.55
(b) Cash Reserve	35.08	39.95	39.31
(c) Total Cash Reserve and Foreign Exchange	63.93	78.62	81.98

Foreign Trade.

In 1929, the volume of Austria's foreign trade was somewhat smaller than last year, amounting to 5,515.9 million schillings (£15.95 million), compared with 5,566.3 million (£16.09 million) and 5,289.8 million (£15.29 million) in 1928 and 1927 respectively. Taking the value of imports and exports in 1928 as 100, the figures of 1929 are: 99.8 (imports) and 98.0 (exports). While the decrease in the import figures is rather small, and besides—taking into consideration that the quantity of imports was 13 per cent. larger than in 1928—only caused by the general decrease of the international price level, the falling-off from the export figures in 1928—cannot be explained by the low level of international prices alone, but rather by the fact that Austria's foreign trade continues to be greatly impeded by the customs barriers erected between the individual States. In regard to both imports and exports, Germany and Czechoslovakia continue to figure foremost on the list of countries trading with Austria. It is worth mentioning that in 1929, 73.4 per cent. of Austria's imports came from the neighbouring and Succession States while 69.2 per cent. of the exports went to these States. The percentage of imports from the Succession States (Czechoslovakia, Hungary, Poland and Yugoslavia) alone amounted to 40.6, that of the exports to 34. In 1929, Austria had an active balance of trade with Yugoslavia, Italy, Russia and some other European States, while imports of all other countries to Austria were larger than Austria's exports to these States.*

Agriculture and Industry.

The general progress in agricultural production continued during last year although weather conditions were not very satisfactory. As a result of the excessive cold prevailing during the winter 1928-29 and a considerable shortage of rain, the output of 1929 did not reach the crop of 1928. The following list indicates the crop of the chief categories of agricultural production in 1928 (in millions of hundredweights): wheat 6.2, rye 9.5, barley 5.0, oats 8.8, potatoes 42.7, sugar beets 11.8. The striking upward movement of Austria's agriculture is best shown by the percentage indicating the increase in output of 1929 as compared with 1920: wheat 66.6, rye 70.0, barley 100.6, oats 75.5, potatoes 162.1, sugar beets 210.7. The value of the total crop in 1929 is officially estimated at 1,717 million schillings (£49.7 million) as compared with 2,000 million schillings in 1928. As to the 1930 crop, in consequence of the weather conditions the results will probably be less satisfactory than in 1929 regarding both quantity and quality.

In industry a continuation of endeavours is to be observed to render industrial operations more economical by means of technical innovations and measures of rationalisation, in which direction satisfactory results have been obtained in particular in mining, metallurgy, and the electricity and paper industries.

Utilisation of Water Power.

During the year 1929, the total effective output of all kinds of electric power plants in Austria was about 2,600 million kwh. Two-thirds of this was furnished by hydro-electric plants, while the remaining one-third was generated by steam-driven stations. According to the official statistics the available water power can be utilised to the extent of more than 20 milliard kwh. per annum. Up to the present Austria spent some 440 million schillings (£12.8 million) on the development of her water power; two-thirds of this amount were Austrian capital, while the balance was met out of foreign loans. The extraordinary success of the post-war exploitation of water power is, to a great extent, due to electricity legislation. Under the terms of the Electricity Facilities Act, 1928, hydro-electric plants may be exempt from corporation tax (income tax) for a period not exceeding twenty years; immunity from charges, etc., is provided for during the period of construction of the plants and the first three years after the plants being put into operation. The coal saving effects per annum of the hydro-electric development included may be estimated at 1.8 million tons. The export of electricity reached about 120 million kwh. during 1929, representing a value of some 10 million schillings (£280,000).

* In the first eight months of 1930 imports amounted to 1,821.1 million schillings against 2,073.4 million during the same period of last year, while exports amounted to 1,223.5 million, compared with 1,463.1 million in January-August, 1929.

COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED.

A STRONG FINANCIAL POSITION—MEXICO AND HER LIABILITIES.

MR. VINCENT YORKE'S VIEWS.

The one hundred and thirty-first ordinary general meeting of the Mexican Railway Company, Ltd., was held, on the 3rd instant, at Winchester House, Old Broad Street, London.

Mr Vincent W. Yorke, the chairman of the company, presided.

The Secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen, I do not think it will be necessary for me to detain you long to-day, as at our last meeting six months ago, when I had just returned from a visit to the property, I went very fully into the state of the country and the position of our affairs. I am afraid at the same time that I shall not have much of an encouraging nature to say to you to-day. The times which the world is going through, while bad for all classes of business, have been particularly so for foreign railways, and we could hardly expect our railway not to share in the troubles which are affecting them.

RECEIPTS AND EXPENSES.

Our gross receipts for the half-year under review were quite satisfactory, averaging as they did over \$36,000 per diem, and the tonnage carried was greater than for many half-years. Though comparisons with the corresponding half-year are, as usual, given in the report, I do not think that I need dwell on them under this or any other head, as we are comparing with a period when the country was in the throes of a serious revolution. Passenger traffic, which is being more and more affected by road competition, as new roads are constructed, shows only a small decrease of \$31,000, which would have been much greater if it had not been for a considerable volume of tourist traffic. Of this traffic, we have great hopes in the future, as I explained at our last meeting.

The increase in expenses amounting to \$440,000 is a regrettable feature in the accounts, but includes items in respect of the strike and the accident at Potrero amounting to \$130,000, which ought not to recur. The increase in the cost of fuel oil of about \$40,000 is a matter, of course, outside our control, as is the falling rate of exchange, which may be fairly estimated to have cost us £13,000 for goods purchased abroad during the half-year.

THE NET REVENUE.

The resulting net revenue of £84,000 is less than what I led you to expect at the last meeting, when I anticipated that it would reach £100,000. Both gross and net earnings fell off considerably for the last two months of the half-year. From this has to be deducted some £18,000 for loss on remittances and Mexican income tax, and the balance remaining is insufficient by some £8,000 to meet the debenture interest for the half-year.

On the other hand, I am glad to say that our financial position at July 1st was, and is now, comparatively strong, and we could have easily made another payment of 10 per cent. to the "A" certificate holders, as we have done for the last four half-years. We are sorry to have broken the continuity of these payments, but in view of our falling receipts during the current half-year, and the gloomy outlook for business generally all over the world, we have reluctantly come to the conclusion that it is wiser to conserve our resources and not to reduce these liabilities further for the present.

THE CURRENT HALF-YEAR.

As regards the current half-year our results can only be described as very unsatisfactory. Gross traffics for the first three months have decreased by \$100,000, and expenses have increased by \$170,000, and the ratio of operating expenses has reached the high figure of 95 per cent. The wave of business depression, which took longer to reach Mexico than most other parts of the world, is now affecting all the industries of the country, and here as elsewhere there are no definite signs of any recovery. At the same time, our expenses have been more adversely affected by the new conditions as to labour imposed upon us by the strike of December last than was at first anticipated, and I fear that it may be difficult to reduce them at all commensurately with the diminution in gross receipts.

CONDITIONS IN THE COUNTRY.

I do not think it is necessary for me to dilate upon the special causes which are depressing business in Mexico to-day. It is obvious that a country which depends for its living on the production

of oil, silver, copper and lead, must be suffering severely when the prices of most of these commodities have fallen to almost unprecedented levels. Agriculture is, of course, suffering for the same reason, and the cotton industry has reached a state of over-production which is causing alarm both to employers and employed. The question of exchange is also beginning to cause considerable anxiety in commercial circles. I understand that the matter is being vigorously taken in hand by the monetary authorities, and it is much to be hoped that this difficulty, from which Mexico has been singularly free for the last fourteen years, will not now be added to her many troubles.

On the other hand, it is a matter for real congratulation that, in contrast to almost every country of importance south of the Rio Grande, Mexico has preserved complete political tranquillity during the current year, and I hope that this may indicate that Mexican politics have passed into a new phase.

AN IMPORTANT AGREEMENT.

Since our last meeting an important agreement has been concluded between the Minister of Finance for Mexico and the International Committee of Bankers which still awaits ratification by the Mexican Congress. This agreement is clear evidence of a genuine desire on the part of the rulers of Mexico to recognise the liabilities for their public debt. When this matter has been finally arranged, it is reasonable to hope that they will turn their attention to their domestic liabilities, amongst which must be included the claims of our railway.

We still claim from the Mexican Government a sum of at least £1,500,000, which is being liquidated at present at the rate of only about £2,000 per week. Even a moderate acceleration in the rate of liquidation would make a wonderful difference to our financial position, and we will not miss any opportunity of pressing upon them both the justice of our claims, and the expediency in the interest of Mexican credit of their being equitably settled.

A RECENT CABLE.

I will now read to you the following cable just received from our general manager's office:—

"On the upper division of the line about one-third of cereal crops has been lost by early frost, but on lower division cereal, coffee and tobacco crops are good. Heavy loss of wheat in certain sections of the Republic has caused importations from Canada and United States. Some sugar mills on the Istmo Railway have closed down, which should increase movement on our line. As reported previously, Istmo banana plantations have been badly damaged. Textile mills near Orizaba have arranged for reduced working hours on account of heavy stocks on hand. Discount of silver unchanged at about 13 per cent., but large importers are limiting orders to cover immediate necessities only. Outlook for tourist travel good. Labour continues unreasonable. Train service normal. Are doing utmost to reduce mileage and obtain reduction in expenses, but this will be difficult."

I regret that there is but little encouragement in this cable, and it is specially disappointing to us to hear of the damage to the banana plantations, as the traffic seemed likely to become a valuable one to the railway.

THE GENERAL MANAGER.

I am glad to be able to draw your attention to the fact that we have Mr Holmes, our general manager, with us to-day. He has been spending four months' holiday at home, which he well deserves after three continuous years of strenuous work in Mexico. He returns to Mexico next week, I know, in improved health and, I hope, refreshed in spirit. We have impressed upon him the urgent need for all possible economy in these bad times, and are confident that he will do his utmost to carry out our wishes.

In his absence, our assistant manager, who is also our resident engineer, Mr Ingram, has been managing the business, and we have every reason for thinking that he has done so with both tact and energy. Mr Ingram is retiring from active service at the end of this year, after forty years in Mexico, twenty-two of which have been spent with our company; but I am glad to say that we shall be able to avail ourselves of his special knowledge and experience in his new capacity as consulting engineer in Mexico. He carries with him in his retirement the best wishes of the board, and, I hope, your good wishes too. I can honestly say that no one who has come within my own circle of activities has deserved better of his employers than has Mr Ingram.

The chairman concluded by moving the adoption of the report and accounts.

Mr John A. Gibbs seconded the motion and it was carried unanimously.

ANSSELLS BREWERY, LIMITED.**CHAIRMAN ON TRADE DIFFICULTIES.****BREWERS KEEP FAITH.**

The thirtieth ordinary general meeting of the shareholders of Ansell's Brewery, Limited, was held on Wednesday, November 26th, at the Queen's Hotel, Birmingham, Mr James A. Fairhurst (chairman), presiding.

The secretary (Mr Arthur Kimberley) read the notice convening the meeting, and the auditors' certificate was presented by Mr Howard Fisher, of Messrs Fisher, Randle and Fisher.

The Chairman, in moving the adoption of the report and statement of accounts, said:—

Ladies and gentlemen: Before commencing the business of the meeting I must apologise for the absence of Mr Thomas Ansell, my joint managing director. Your board, and, I am sure, the shareholders, regret this, especially as it is through illness. Mr Ansell is away from home recuperating, and, I am pleased to say, is much better in health.

Last year our secretary (Mr Winterton) was unable to be present at the general meeting through illness, and unfortunately, since that time his health has not improved, and he has resigned his position, Mr A. Kimberley, who has been assistant secretary for many years, having been appointed in his stead. For thirty-five years Mr Winterton had been a trusted and valued official of the company, always giving of his best, and I can assure you that your board fully appreciate the services he rendered, and with great regret accepted his resignation. It is really quite unnecessary for me to tell most of you how much companies owe to competent, trustworthy and assiduous officials.

THE BALANCE SHEET.

The directors' report and balance sheet have been printed and circulated amongst you, and I presume you wish to take them as read. We have been hoping now for a long time for improvement in trade; you remember, no doubt, the proverb: "Hope deferred maketh the heart sick, but when the desire cometh it is a tree of life." I do not imagine, with this balance sheet before them, that the hearts of the shareholders are sick, but all of us will rejoice when "the desire cometh." I do not think that there is any necessity to refer to more than two or three items on the balance sheet. First, you will notice that the paid-up ordinary share capital now stands at £800,000. The increase of £200,000 was caused by the capitalisation of that amount of reserve and the distribution of 40,000 fully-paid shares amongst the ordinary shareholders. That explains the reason why the reserve fund now stands at £280,000.

The other item to which I wish to draw your attention is the profit of £174,733. This, compared with the corresponding figure of last year, £189,329, shows a drop in our profits of between £14,000 and £15,000. This is regrettable, but it does not surprise me. We had to reckon during the period under review with months of exceptionally bad weather. Last year I told you that we were engaged in a business which deals with a very large public who are particularly affected by the two factors of bad trade and unemployment. Such factors were operating last year, and have continued to do so, as you all know, with increasing force right up to to-day. How long it will go on I do not know, but there is this redeeming feature—the situation is now so bad that men of all classes are co-operating to remedy it, irrespective of any political bias which they previously had when circumstances were different. So that I think that in this case out of a temporary evil a permanent good may arise.

BREWERS' PROMISE TO THE CHANCELLOR.

Another matter which has affected our profits has been the extra 3s. a standard barrel beer duty which was imposed this year, and which particularly affects your company, owing to the high strength of our beers. The promise the brewers gave to the Chancellor of the Exchequer to bear this duty themselves and not pass it on to the public or the retailers has been honourably kept, but your profits have to this extent suffered. I had my doubts at the time as to the wisdom of giving any such promise, and having regard to the increase of the income tax from 4s. to 4s. 6d. in the pound (of which we were unaware when the promise was given) I am now of the opinion that it was premature, and we ought not to have bound ourselves in such a manner.

During the course of the year the directors have elected to the board Sir Pierce Lacy, Bart., and Mr Alfred Inman Sherwin, and in accordance with the articles of association they both come up for re-election. In electing Sir Pierce Lacy and Mr Alfred Sherwin members of the board, your directors are confident that such action will meet with the hearty approval of the shareholders. Both these gentlemen are very well known to you and in the City of

Birmingham for their business ability, and I feel sure you have the fullest confidence in their capability of guarding your interests.

The brewery and properties of the company and all plant and machinery have, as usual, been fully kept up out of income, and the gravity and quality of our product have been maintained. I have every reason to hope, therefore, that as and when trade improves and employment increases your company will have at least their proportion of the benefits that will then arise.

MAKING ORDINARY SHARES MARKETABLE.

There is one other matter I should like to mention. The ordinary shares of this company have up to now been privately held, and with a view of making them marketable it is necessary to alter our articles of association so as to comply with Stock Exchange requirements. At the same time it is desirable to bring such articles up to date and in accordance with the Companies Act, 1929. You will therefore very shortly be receiving a notice calling a special meeting to consider new articles as well as the sub-division of the present ordinary shares of £5 into five shares of £1 each.

Before formally moving the resolution, I would like to take the opportunity of congratulating our staff and workpeople on the excellent services they have rendered during the past year, and on the splendid loyalty they always display. Your directors appreciate it, and I am sure you do.

I now beg to move the following resolution: "That the report and accounts be received and adopted and that the following final dividends be paid for the half-year ended September 30, 1930—viz.: At the rate of 5 per cent. per annum (less income tax) on the preference shares, and at the rate of 12½ per cent. per annum, together with a bonus of 2½ per cent., on the ordinary shares (both free of income tax)."

Mr A. E. Ansell (assistant managing director): I have very much pleasure in seconding the resolution.

The resolution was put to the meeting and carried unanimously. Mr W. Heath, J.P., moved: "That Sir Pierce Lacy, Bart., be re-elected a director of the company."

Mr Heath said that Sir Pierce was a man whose name carried great weight in the commercial and financial world, and his reputation was of a high standard. Having regard to the wonderful success of the company in the past, he could not help but think that the board would be strengthened by the inclusion of Sir Pierce. Captain Crossland seconded the resolution, which was carried unanimously, Sir Pierce suitably acknowledging.

Mr Frank Woolley moved: "That Mr A. I. Sherwin be re-elected a director of the company." Mr Woolley referred to the fact that Mr Sherwin was a partner of the late Mr Joseph Ansell, who was a brother of the founders of the business. Mr Joseph Ansell was a great asset to the company, with his wonderful personality and knowledge of the trade. He (Mr Woolley) knew Mr Sherwin's great successes, his few failures, and, incidentally, many of his frailties, but he was not going to talk about that. The company could be quite sure that it would be of great assistance to have Mr Sherwin at their board meetings.

Mr W. Scott, seconding the resolution, said as a member of the board he would like to welcome Mr Sherwin. He knew Mr Sherwin had some very excellent ideas and he was sure they would all profit by hearing of them. To use the chairman's illustration, he hoped they would hasten the coming of the "tree of life."

The resolution was carried unanimously.

Mr Sherwin, in thanking the shareholders, said that he would be proud to occupy the position to which they had elected him, and would do his best to justify the confidence they had placed in him.

On the proposition of Mr James Marson, seconded by Mr L. Litherland, Messrs Fisher, Randle and Fisher were re-elected auditors for the ensuing year.

Mr H. Fisher, on behalf of the firm, thanked the shareholders on their re-election as auditors.

Mr Alfred Aston, proposing a vote of thanks to the chairman, directors and staff, said he had proposed this resolution at annual meetings for many years and it was with great pleasure that he did it again. If he might divert from the subject a little he would like to congratulate the shareholders and other directors on the re-election of Sir Pierce Lacy and Mr Sherwin. He congratulated them on acquiring gentlemen of such business acumen and, as other speakers had said, he was sure the board would benefit by their services. He would also congratulate Mr Kimberley on his appointment as secretary. He (Mr Aston) well remembered Mr Kimberley coming as a boy to the offices in Park Road, and he had seen him working in harmony with Mr Winterton, whom they all regretted had had to retire from office. They trusted that Mr Winterton would be restored to health so that he might enjoy his retirement for many years.

Mr C. E. A. Flewitt seconded the resolution, which was carried unanimously and acknowledged by the chairman.

TATE AND LYLE, LIMITED.**OUTPUT GREATER THAN EVER.****HEAVY FALL IN PRICE OF SUGAR.****SIR ERNEST TATE ON THE OUTLOOK.**

The twenty-eighth annual ordinary general meeting of Tate and Lyle, Ltd., was held, on Thursday, December 4th, at the Cannon Street Hotel, London, E.C.

Sir Ernest W. Tate, Bt. (the president), said:—Ladies and gentlemen,—Before proceeding with the formal business of the meeting, I wish to refer to the loss which the company has sustained by the death of Lord Birkenhead. Although he had been a member of our board for only a comparatively short time, we directors thoroughly appreciated his great ability. It is needless for me to refer to his wonderful career, as that has already been done by some of the best-known men in the country. I will therefore ask you to stand for a few moments as a tribute to his memory.

The meeting having stood in silence for a few moments, The Chairman said: I will now call upon the secretary to read the notice convening the meeting and also the report of the auditors, as required by the Companies Act.

The secretary (Mr Chas. R. Hutchinson) having read the notice convening the meeting and the report of the auditors,

DISAPPOINTING RESULTS.

The Chairman said: With regard to the balance sheet which we are now here to consider, I must frankly say that it is very different to what I thought it would be when we met here this time last year, and I can assure you that it is just as disappointing to your board of directors as it will be to the general body of shareholders.

I have referred on more than one occasion to the possibility of this company having to face heavy losses upon the stocks of its chief raw material if the market value should drop, and in December, 1923, when the price of raw sugar was 24s. per cwt. I sought to justify our policy of setting aside large sums to reserve by stating that "some day we may show a very considerable loss on the large stock which we are compelled to hold in order to ensure that our refineries are kept working to the fullest extent possible."

I regret to say that the fear I then expressed has been justified, but to an extent never contemplated by anyone connected with the sugar trade, the price of raw sugar having declined during our financial year from 9s. 9d. per cwt. to 4s. 9d. per cwt.—that is to say, by over 50 per cent.

THE BALANCE SHEET.

Some important changes have taken place in the balance sheet as compared with September 30, 1929. Turning first to the assets side, practically all the first-class securities have been sold. As a consequence of this, and in connection with the holdings in subsidiary and other associated companies, the investment reserve, which at September 30, 1929, stood at approximately £306,838, appears at September 30, 1930, at £190,910. Your directors are satisfied that the value of the interests in subsidiary and associated companies is fully equal to the figure at which they have been brought into the balance sheet, less the investment reserve. As regards stocks, the figure is reduced from £2,619,111 in 1929 to £1,667,971 in 1930.

As regards debtors, the figure is reduced from approximately £1,510,513 in 1929 to approximately £933,149 in 1930. The smaller figures for 1930 are caused partly by a fall in the value of the commodities, and partly by the fact that we happened to hold smaller stocks and had smaller sales outstanding at the time of balance. They are not due to a lesser volume of trade as a whole—our trade having been greater, as I shall explain later.

Turning to the liabilities side, you will notice that £1,250,000 5½ per cent. mortgage debenture stock appears and the ordinary shares are increased by the addition of the small balance previously unissued. On the other hand, the bank loan of £3,210,000 of 1929 has disappeared.

SERIOUS MARKET POSITION.

The first six months of the year's working were satisfactory. There was a fall in the raw-sugar market, and, consequently, a loss on stock, but nothing abnormal, and it then appeared that the price of raw sugar would stabilise itself somewhere round about the cost of production, and we had every reason to expect that the next six months to the end of September would be equally satisfactory.

Unfortunately, a state of affairs developed during the summer months such as we have never had to meet before, and I am sure that there are many gentlemen in the room with a life experience of the trade who will agree with this remark. In April the price of

raw sugar was about 8s. per cwt., but during the summer it fell to the lowest point touched—namely, 4s. 9d., this being more than 1s. below any previously recorded price, and a little more than half the cost of production. At one period it almost appeared that the price might go to zero, and there would be a general collapse.

Fortunately, this did not actually take place, but I think you will understand that—carrying large stocks of raw sugar as we must do, owing to the magnitude of our weekly output—the position was serious.

ATTITUDE OF BUYERS.

In stable markets we can usually rely upon the consuming trade to cover their requirements for some time ahead, thus protecting us to some extent against a decline in value, but in a market with constantly sinking prices buyers show little desire to run any risk of market fluctuations, and by purchasing no more than their immediate requirements, throw the whole onus of the market risk back upon firms like ours, which, by the nature of their business, are bound to hold large stocks.

The existence of a single selling agency to control the sale of raw sugar in the chief producing country—Cuba—imported an additional element of difficulty in the purchasing of our supplies, and we were at times faced with a situation of being compelled to buy against our better judgment and in larger quantities than we would have preferred.

REASON FOR THE FALL.

You will naturally ask what is the reason for this fall in value. The people in the room who are in the sugar trade probably know as much as I do, but in my opinion, it has been caused primarily by the accumulation in producers' hands of a large surplus of sugar as a result of the disinclination of sugar users generally to hold stocks. This is a feature not confined to this commodity, and is one of the difficulties inherent in the present economic situation throughout the world.

I do not believe that the actual consumption of sugar everywhere shows much decrease, if it shows any at all, and if I am right in this assumption, then I think we shall be able to look forward with confidence to a large and regular trade during the coming year.

THE RESERVES.

We have in the past adopted a conservative policy with regard to reserves, and I am glad to say that—even in the difficult period we have passed through—we have not been compelled to touch these reserves except to a very small extent as follows:—

The dividend reserve, which was created in the year of the Coal Strike, has been reduced by £80,000, which I consider quite legitimate, as this reserve was created to meet an emergency such as has now arisen. The general reserve of £1,150,000 remains as before.

Since the beginning of October the raw sugar market has improved, and it is quite obvious that the price of raw sugar is now considerably below the cost of production, and this position of affairs cannot go on indefinitely. Naturally, it is our interest to obtain our supplies of raw material as cheaply as possible, but when an article is being produced at a loss there is always the danger of violent reactions which may seriously interfere with the normal course of business.

RECORD OUTPUT.

In spite of the fall in actual profits, I think it is my duty to make it clear that, in the opinion of your board, the results of the year's trading are anything but discouraging.

The facts are that our output has been greater than ever before: we have practically driven the foreigner from this country, and the margin of profit on day-to-day prices has been at least as good as last year. Had it not been for the unprecedented fall in the raw sugar market, the financial results would also have been greater.

In other words, our trade generally has been better than ever, and, since it is unlikely that the price of sugar can fall much lower, we may look forward to the future with continued confidence.

In conclusion, I should like to remark that our refineries have been maintained in a high state of efficiency, and the directors wish to express their appreciation of the loyal support that they have received from the staff and workpeople. (Applause.)

The President then moved the adoption of the report and accounts and the declaration of the dividends as recommended.

Sir Leonard Lyle (chairman of the company) seconded the resolution.

A SHAREHOLDER'S CONGRATULATIONS.

Sir Douglas Newton, K.B.E., M.P., said he would like to congratulate the board upon the very satisfactory results which they had achieved in an exceedingly difficult period, and also upon the manner in which they had conducted this great enterprise in a time of acute and world-wide industrial depression. (Hear, hear.)

The resolution was carried unanimously.

The retiring directors were re-elected, and the auditors were re-appointed.

The President having announced that the dividend warrants would be posted to the shareholders on Monday, the 15th instant, the proceedings terminated.

THE CONSOLIDATED GOLDFIELDS OF SOUTH AFRICA, LIMITED.

EFFECTS OF FALL IN METAL PRICES.

REVIEW OF COMPANY'S VARIED INTERESTS.

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Ltd., was held, on the 2nd instant, at River Plate House, Finsbury Circus, London, E.C., Lord Brabourne, chairman of the company, presiding.

Mr H. G. Sidgreaves (one of the joint secretaries), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, dealing first with the accounts of the operating company—New Consolidated Gold Fields—said that dividends received had increased from £311,559 to £385,000, but the total profit on sales of investments amounted to only £118,736, as against £656,636 in the year ended June, 1929, a year which comprised the exceptional profit made by the sale of the control of the American Potash and Chemical Corporation, and had not seen the inception of the disastrous period of progressive stagnation and depression in practically all markets which set in in the autumn of 1929, and of which the end was not yet in sight. The net profit balance, at £445,931, was £442,018 less; £300,000 was transferred from reserve to provide for depreciation, and a dividend of 7½ per cent. was declared, compared with 15 per cent. for the previous year.

The accounts of their own company—the holding company—showed a balance of £255,079, and the directors recommended a dividend of 7½ per cent., less tax.

Having referred to encouraging features in connection with the company's Rand gold-mining interests, and to the progress being made in Australia by the Lake View and Star, Ltd., and the Wiluna Gold Corporation, he said that their chief interest in platinum lay in the Waterval property, which, even at a much greater rate of production than the present, should have a life of over forty years, and must ultimately occupy an important place in the general picture, though at the present price of the metal it could make but small profits.

SOUTH AMERICAN GOLD AND PLATINUM COMPANY'S DIVIDEND POLICY.

Their other large interest was in the South American Gold and Platinum Company, and in this connection it was disappointing that, after fourteen years of prosperous conditions, the managers of a company which was still making a profit at the present price and had, as he was informed, a surplus of assets over liabilities of 2,017,000 dols., including 1,660,000 dols. in cash, continued to refuse to consider the payment of a dividend. "Gold Fields" held approximately a one-third interest in the company, but their voice was that of one crying in the wilderness.

SUGGESTED REMONETISATION OF SILVER.

A year ago it looked as if they might expect steady and increasing dividends from the Mexican Corporation, but the heavy fall in the price of copper, lead and zinc had greatly reduced profits. At June 30th the known oxide ore reserves contained over 7,500,000 ounces of silver, which at the present price was hardly worth mining. The fact that silver had fallen to its present level was, it could hardly be doubted, one of the chief contributory causes of the present world-wide depression in trade, for it was impossible to suppose that the fall in price had not gravely affected the purchasing powers of 700,000,000 Indians and Chinese. In view of the fact that authorities stated that the supply of gold was insufficient to meet the world's credit requirements, and of the probable decline in world gold production during the next few years, it was surely time that the chief nations of the world should agree to remonetise silver and fix its price, say, at one-fortieth of that of gold, or 2s. an ounce.

TIN INDUSTRY.

Referring to tin, the chairman, stating that their chief holding was in the Anglo-Oriental Mining Corporation, said there were signs that a recovery in price was at hand, and of that recovery, when it came, they were in a position to take full advantage. But for the formation and exertions of the Tin Producers' Association the industry would by this time have been in a complete state of chaos; but, now that the principle of ore conservation had been established with the co-operation of Dutch and Bolivian producers, there was little doubt that a return to healthy conditions could not be far off. That any British producers could hesitate to give their full co-operation to the association seemed inconceivable in view of the magnitude of the Empire's interest in the tin industry and the folly of digging up irreplaceable reserves for an insufficient profit.

After reviewing oil holdings, he said that they still had a very important interest in Celanese, both in the United States and in England, and had no reason whatever to question the desirability of their investment, which they looked upon as a permanent one of very great promise. He mentioned also the American Potash and Chemical Corporation, which, he said, continued its prosperous career; and, among new ventures, referred to gold-dredging interests in New Guinea, to the future of which they looked with complete confidence, and to the treatment of Estonian oil shales.

DEPRECIATION FULLY PROVIDED FOR.

Reverting to the general position, the chairman said that the £300,000 appropriated to depreciation reserve not only covered all depreciation of assets to June 30th last, but also more than made provision for all depreciation which had taken place since that date. Their present reserve of £606,000 was therefore intact, in addition to which they had the unrealised appreciation over book cost, to which reference was made in the report and for which they took no credit until it was realised.

In conclusion, he said that, so long as industry continued to suffer from a burden of taxation which was borne by no other country, and the present uncertainty as to the maintenance of safeguarding duties was allowed to continue, it was difficult not to take a pessimistic view of the immediate prospect. If the former was to be increased and the latter were to be removed, present depression and depreciation were as nothing compared with what might be seen in the near future.

Mr E. Birkenruth seconded the resolution which, after the Chairman had replied to a few questions, was carried.

FOSTER CLARK, LIMITED.

SATISFACTORY RESULTS.

The annual general meeting of Foster Clark, Ltd., was held on the 1st instant, at the registered office, Hart Street, Maidstone, Mr G. Foster Clark, J.P., the chairman, presiding.

The chairman, in moving the adoption of the report and accounts, said:—Ladies and gentlemen: The report, with your permission, we will take as read.

The profit for the year amounts to £149,627, and the amount brought forward is £63,098, making a total of £212,726. The directors recommend that a final dividend of 15 per cent. be paid on the ordinary shares, making a total of 30 per cent. for the year, and an allocation of £10,600 to taxation reserve and £24,499 to investment reserve, leaving a balance of £65,126 to be carried forward.

The profit is slightly in excess of the average profit for the last ten years, and in view of the present world-wide depression in trade, the directors consider that the result is satisfactory.

In addition a profit of £2,174 on sales of investments has been used to write down the book cost of the same.

The income from investments has been satisfactory.

The balance sheet is even stronger than it was last year. Provision for employees' pensions amounts to £50,460. Taxation reserve is increased to £34,700 and investment reserve to £60,000. The dividend equalisation and general reserves amount to £134,351.

The investments total £652,379, and of the £593,571 invested outside the business, £100,194 is in British Government securities. The balance is made up of Colonial and Foreign Government securities £41,547, banks, insurance companies, mortgages and debentures £179,647, and industrial companies preference and ordinary shares £272,180. The investments are widely distributed, and apart from Government securities, they number 311, and the average amount invested is £1,593.

The Australian company again had record sales for the past year, and although trade is depressed, the directors expect a reasonable profit to be made in the current year.

The report and accounts were unanimously adopted.

MALAYA GENERAL COMPANY, LIMITED.

THE RUBBER SITUATION.

The twenty-second ordinary general meeting of Malaya General Company, Ltd., was held, on the 3rd instant, at Winchester House, Old Broad Street, London, Mr George M. Weekley presiding.

The Chairman, in moving the adoption of the report and accounts, said that the results of the season's trading could hardly be called satisfactory to those who had invested their money in tropical agriculture and taken the attendant risks, which deserved a return of at least 10 per cent. But the present were trying times for industry in general, and probably more so for rubber than almost any other commodity. Rubber at the present moment was little more than half the price at which it stood at the time of the last meeting, and when one added to the estate cost of production, however low that might be, the items of freight, insurance, handling charges, storage, &c., it was very difficult for even the best managed and best kept estate to make both ends meet with "No. 1" rubber selling at anything like 4½d. per lb. The company's average selling price for the year, however, was 6.20d. per lb., which, with the income from their investments, enabled them to set aside £3,428 for depreciation and to carry into the balance sheet a net profit of £12,027.

In spite of the uncertain future and the fact that so many of their neighbours were failing to pay dividends, the directors felt it to be essential that, in bad times like the present, shareholders should have the benefit of dividends when they had been earned, and they therefore proposed to pay 5 per cent.

As market rates fell the board took all possible steps to reduce expenditure where such reduction would not jeopardise the future of the estate, and their monthly estate costs had gradually fallen to a point which enabled the manager to submit estimates for the current year on an estate basis of less than 12 cents per lb.

It was obviously unwise for growers to continue to produce more rubber than the world's requirements called for, and, after consultation with a great many other producing companies and their agents, the board had resolved to join them in an effort to keep unwanted supplies off the market. In fact, they had decided to reduce the output to about 70 per cent. of the potential yield. Fortunately, the company had ample funds; the reserve stood at nearly half the issued capital. Despite the present state of the market, the board felt they had seen the worst, although it would be unwise to prophesy as to when the desired recovery would come about.

The report was unanimously adopted.

STRAND HOTEL, LIMITED.

COST OF TELEPHONE SERVICE.

The twenty-third ordinary general meeting of the Strand Hotel, Ltd., was held on the 3rd instant, at the Trocadero Restaurant, London.

Major M. Gluckstein (the chairman) said that work on the Strand Palace Hotel extension was now nearing completion. During the past year further bedrooms had been added, and their design and equipment afforded visitors the maximum of comfort and convenience. Every bedroom in the hotel now had its own telephone, though from the company's point of view the maintenance of this service had proved costly. There were in the Strand Palace Hotel nearly 1,000 extensions, and in the ordinary way of commercial usage one would expect, for such a large installation, some concession in the matter of rental. But such was not the case. The company paid the same annual rental for these extensions as 1,000 single subscribers would pay, and the Telephone Service insisted upon a permanent deposit of a sum equal to two-thirds of the quarterly account for call fees—in the company's case a substantial figure—on which deposit no interest was received, so that the more they used the telephone the more they were penalised. This reversal of the usual order of business methods was a distinct discouragement to the healthy development of the telephone habit. Altogether, their experience so far had compelled them seriously to consider the removal of the telephones from the bedrooms at the Strand Palace Hotel instead of introducing them at the Regent Palace Hotel, as had been intended.

The company's hotel site opposite the Marble Arch had now been cleared, and a new structure was being erected. The original intention was to erect an hotel with restaurant amenities, and J. Lyons and Company, Ltd., the owners of the next block eastwards, were to erect on their site a large Corner House. Further consideration had led to a combination of these two schemes, and the two companies had decided to pool their resources and form a separate company, providing the capital equally, and to run the two businesses together on the hotel site.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Nov. 29, 1930, amounted to £6,498,500, against ordinary expenditure of £9,410,700. After allocating £490,000 to the Sinking Fund, and having allowed for a reduction in Exchequer Balances of £73,800, the week's operations, as shown below, increased the National Debt by £3,476,000 to £7,681,079,000:—

(000's omitted.)

GOLD.

Messrs Samuel Montagu and Company write on December 3, 1930, as follows :—

The Bank of England gold reserve against notes amounted to £156,568,569 on the 26th ultimo (as compared with £157,913,216 on the previous Wednesday), and represents an increase of £10,608,485 since January 1st last. The shipment of bar gold from South Africa which arrived this week amounted to £1,037,000, but as this had mostly been sold forward to France, only £15,000 remained to be dealt with yesterday, and this was taken for India and the Home and Continental trade. The price fixed, 85s. 2d. per fine ounce, was the highest quotation recorded since the resumption of the gold standard in April, 1925. The French demand for gold continues and about £300,000 is withdrawn from the Bank of England daily for despatch to Paris after refining. Movements of gold at the Bank of England during the week show a net efflux of £1,922,065. Receipts totalled £600,306, of which £600,000 was in sovereigns from South Africa, and withdrawals consisted of £400,000 in sovereigns "set aside," £51,000 in sovereigns taken for export, and £2,071,371 in bar gold, the bulk of which was for France.

SILVER.

Following a sharp decline in the Shanghai exchange, the silver market was decidedly weaker during the week under review, and from $16\frac{3}{4}$ d. for cash and $16\frac{1}{2}$ d. for two months' delivery quoted on the 27th ultimo, prices fell to $16\frac{1}{4}$ d. and 16d. quoted yesterday for the respective deliveries; the latter were the lowest quotations fixed since August 9th last. China was a consistent seller and the market suffered from an absence of adequate support, there being small demand save to cover bear commitments. America has both bought and sold during the week, but was more inclined to give support at the low level. With steadier advices from China there was less pressure to sell to-day, prices reacting slightly to $16\frac{1}{4}$ d. for cash and $16\frac{1}{2}$ d. for two months' delivery. The difference between the cash and two months' quotations narrowed yesterday from $\frac{1}{4}$ d. to $\frac{1}{8}$ d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 24th ultimo to mid-day on the 1st instant :—

IMPORTS.	£	EXPORTS.	£
Mexico	60,404	British India	80,000
British India	70,800	Other countries	15,041
Australia	5,450		
Canada	15,876

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LTD.—The production for November is cabled as 16,323 tons.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The results for the month of November are as follows:—Production of oil, 36,850 tons; deliveries, 35,500 tons.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended November 26th: Venezuela, 34,881 barrels; Trinidad, 23,867 barrels. Total, 58,748 barrels.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Co. for November is cabled as 28,164 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended November 22, 1930, was 222,000 barrels.

THE VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended November 29, 1930, was: Bolivar district, 100,292 metric tons; Maracaibo district, 14,793 metric tons; total 115,085 metric tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Drier conditions over the United Kingdom during the past week enabled farmers to resume seeding operations, which are considerably in advance of this period last year. The market for native wheat displayed dull features, millers showing little interest owing to attractive offers of imported, and prices generally marked a sagging tendency. In the floating and forward cargo section, prices continue to fluctuate within narrow limits according to overseas cables, the steadier tone recently prevailing being due to crop damage by rust in Argentina, and a falling off in Russian shipments. These factors, however, have now been discounted, importers refusing to follow any advance, and with Plate supplies pressing, values are pursuing a downward course. Soviet cargoes are still arriving unsold, and stocks are steadily accumulating at the chief European ports, while reduced clearances from this source will be made good when the movement from Australia and Argentina is in full swing. According to some reports, the Russian shipping programme has by no means been completed, and exports are likely to be resumed in the Spring. Meanwhile, Plate shippers will no doubt seize the opportunity to ship freely during the winter months. A fair business transpired in Australian parcels on passage, this grade being considered most suitable for mixing with Russian. Heavy stocks in North America are being reduced slowly, and in view of the urgent need for export business, it would not be surprising to find Canada a more pressing seller in the near future. Following the easier tendency of wheat, home milled flour was reduced by 1s. per sack, which encouraged users to replenish supplies for a few weeks ahead. Imported makes, however, were difficult to sell, despite lower offers for shipment. The recent improved demand for feeding stuffs was maintained, and values of maize responded to a good demand both from United Kingdom and Continental buyers. Argentine sorts were chiefly favoured owing to lack of competition from South Africa and the Danube, and because of

smaller exports of European barley. A good chartering movement will ensure liberal Plate shipments during the current month, while stocks remain on a large scale. Barley and oats experienced a quiet sale at generally steady rates.

WHEAT.—Irregular and easier. No. 1 hard, Manitoba, ex-ship, 29s.-29s. 3d.; No. 1 Northern Manitoba, ex-ship, 28s. 3d.-29s.; No. 2 ditto, 27s. 3d.-28s. 3d.; No. 3, 27s.; No. 6, Manitoba, 23s. 6d.; Barusso, 61½ lbs., 25s.; Australian, 28s. 9d.-29s. 9d.; choice white, Karachi, 27s.; Russian on sample, ex-ship, 23s.-25s. 6d.; landed, 22s. 9d.-26s. per 496 lbs. English new, 6s. 3d.-6s. 11d. per 112 lbs.

FLOUR.—Quiet. London straight run, 26s. per sack for country deliveries, and 25s. London area. Of imported, Manitoba patents, 24s.-26s.; Buffalo ditto, 24s.-26s.; Australian, 22s. 6d.-23s., ex-store; per 280 lbs.

MAIZE.—Firm with fair inquiries. Plate landed, 20s. 9d., ex-ship to arrive, 19s. 3d.; December-January, 19s. 3d.; January-February, 19s. 6d.; No. 2, white flat, African, landed, 20s. 9d., per 480 lbs. Yellow maize meal, £6 5s. f.o.r. London. Yellow African ex-ship, £5 10s.; white, £5 2s. 6d. per ton.

BARLEY.—Steady. Californian old, landed, 30s.-35s.; new, ex-ship, 30s.-41s. as to sample; Chilian brewing landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, ex-ship, 15s. 3d.; landed, 16s. 6d.; Danubian, ex-ship, 15s. 3d.; landed, 16s. 6d.; Persian landed, 15s. 6d.; ex-ship, 14s. 6d. per 400 lbs. English new malting, 6s. 3d.-13s. 9d.; feed, 5s. 6d.-5s. 9d. per 112 lbs.

OATS.—Firm. Plate landed, 14s.; ex-ship, 13s.; Chilian tawny landed, 14s. 3d.; best whites, ex-ship, 19s.; landed, 20s.-20s. 6d.; mixed Canadian feed landed, 11s. 6d.; North Russian, ex-ship to arrive, 13s. 9d.-14s. 3d.; landed, 14s. 9d.-15s. 6d. as to sample, per 320 lbs. English new, 5s. 8d.-6s. 4d. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

WHEAT FUTURE.	Jan. 2, 1929.	Dec. 4, 1929.	Jan. 2, 1930.	Nov. 19, 1930.	Nov. 26, 1930.	Dec. 3, 1930.
Winnipeg (No. 1 Manitoba)	122	143	146	59	61	58
Chicago (No. 2 Winter)	116	129	130	73	75	76

The visible supply of wheat in Canada at 57,723,000 bushels shows a decrease on the week of 4,632,000 bushels. Supplies a year ago stood at 75,455,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent writes:—Owing to fears of a stoppage in the coal industry deliveries under contract have been hurried up and new inland orders placed. The present chaotic state of affairs is not, however, conducive to export business, and sellers are not anxious to contract very forward. There is fair activity in the house coal department, whereas industrial consumption of fuel tends to shrink. Stocks of small coal are very large, and the prices have been low for a long period. With more furnaces going out of commission the position of blast furnace coke gets worse, in spite of the considerable demand for domestic heating. Prices are being severely cut in the open market. The renewal of contracts under the sliding scale arrangement is now nearly due. A number of the contracts, however, will not be completed as deliveries were suspended or reduced when the iron trade slump developed. The sliding scale rate is several shillings per ton more than prices on the open market, which in some cases have fallen to 11s. per ton.

Our Glasgow correspondent writes:—Business in the export branch of the Scottish coal market is at a standstill, and the outlook is uncertain. In certain instances cargoes due for dispatch are being covered from stocks at dock sidings, but in others shippers find difficulty in obtaining supplies, which are in brisk demand at high prices for inland purposes. Additional quantities are being received by rail and sea from Northumberland.

Our Cardiff correspondent writes:—On the Cardiff coal market this week business has been dislocated by the wages and hours dispute. Contrary to the decision of last week's delegate conference but in compliance with the recommendation of the National Industrial Board and with the appeals of the President of the Board of Trade and the Secretary for Mines, the workmen have acquiesced in a temporary arrangement which secures for them their present wages conditional on the working of 11 full working days of eight hours each per fortnight up to the end of the present year. This arrangement gives a working period of 88 hours instead of the 90 hours sanctioned by the spreadover alternative under the Coal Mines Act. Negotiations have been resumed for a permanent agreement, but they have been suspended till next Monday, owing to the uncertainty in regard to the decision of the adjourned delegate conference of the M.F.G.B., which was to be held in London this week. It was one of the conditions of the temporary terms offered by the employers that in the event of a failure to agree within a fortnight, the matters in dispute should be referred to independent arbitration, but apparently this condition was struck out from the owners' terms in the form they were accepted by last Saturday's delegate conference of the South Wales Miners' Federation. The Miners' Federation is still adhering to its claim that failing a voluntary settlement the dispute shall be referred to the Industrial Board. The owners, however, are still strongly opposed to the mediation of any external body. The volume of trade this week has been considerably less than that in the first week of December last year, and prices for practically all classes of coal are at the minimum schedule figures. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to

18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 3d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 13s. 3d. to 13s. 6d.; best anthracite, large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 9s. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s. 6d.; pitwood, ex-ship, 28s. to 28s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Although the recent activity in the iron and steel markets has not been fully maintained, the tone of the market is steadier than for some time past. At the weekly meeting of the Exchange on December 2nd it was reported that more confidence was noticeable in trading and that in one or two departments buyers had shown a greater disposition to buy forward. This was particularly evident in the pig iron market, in which the recent reduction in prices appears to have stimulated business to some extent. Fewer sales of Continental iron have been reported during the past week, although it is understood that there are considerable deliveries to be made against old contracts. Some activity, however, is reported in the consuming trades which may be reflected in an increased demand for pig iron. In the steel department the demand for semi-finished material has become quieter after a spell of rather sharp buying. Whilst a certain amount of business was taken by the British works the greater part went to the Continent. A feature of this market was the withdrawal of many of the Continental works which apparently had booked as much tonnage as they cared to take in view of their curtailed production. In the finished steel department buying on export account remains lethargic, although there are signs that the overseas markets may soon become more active. The orders placed, however, have not been individually important.

Our Middlesbrough correspondent writes:—The market for Cleveland iron continues very quiet, and the uncertainty in the coal industry does not tend to improve matters, although it is not expected that there will be any serious stoppages. No change was made in the official figures at the makers' usual meeting on Tuesday, and on the market business was on a very exceedingly small scale, being made up of a few small lots for early delivery to home consumers. There was practically no demand for export. Prices were: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; No. 4 forge, 62s., f.o.b. or f.o.t. In hematite a fair number of orders of moderate size are reported this week for early delivery, both on home and export account, but there is no forward buying of any importance so far. The prospects in this direction are, however, considered favourable, as prices are not likely to go lower but rather in an upward direction, and the production is on a very low scale. Makers are accepting 71s. for mixed numbers for forward delivery, but are willing to book prompt lots at 70s. 6d. Shipments of pig iron for November were 10,643 tons behind October, and manufactured materials also showed a loss of 5,607 tons. The details are:—

	November, 1930.	October, 1930.
Pig iron	12,301	22,944
Manufactured iron	4,369	3,654
Manufactured steel	30,748	37,070
	47,418	63,668

There is very little buying of ores, and consumers are considerably in arrears with old contracts. Best rubio is offered for forward delivery at 17s. c.i.f., but prompt cargoes are obtainable at 16s. 6d., and even less than this has been accepted under special circumstances. The rate of freight Bilbao-Middlesbrough for early loading is round 5s. Imports of all kinds of ore into Middlesbrough last month totalled 86,056 tons against 91,485 tons in October. Coke is offering for this month's delivery at 17s. delivered works for ordinary furnace qualities, and a shade less has been accepted for odd prompt lots. The number of furnaces in blast in the district is 25.

Our Sheffield correspondent writes:—Demand for open-hearth steel in crude form has been a little brisker of late, but work in the mills still tends to decline, particularly in bars, strip and wire rods, and the general situation in Sheffield is no better. Buying is now being curtailed in view of the end of the year stocktaking, and little business will be transacted before January. Deliveries are being suspended for the same reason. A few contracts for foundry and forge pig iron have been fixed up at the new reduced rates. There are expectations of a partial revival in some at least of the export markets early in the new year. Seasonal trade in finished steel products has now tapered off, and only oddment orders are coming in for goods usually in demand at Christmastide. Steel prices have not been changed for several months, but there is some underselling of uncontrolled materials. Stocks of Sheffield goods in Australia are said to be exhausted and will have to be replenished to some extent shortly.

Our Glasgow correspondent writes:—One of the most pleasing items in this week's news in the West of Scotland is the fact that work has now been commenced on the new Cunarder, as it means that in a very short time regular employment will be found in the Clydebank district of Glasgow for several thousand men. In the steel trade as a whole conditions remain unchanged, the amount of new work placed being of very little account and negligible in comparison with plant capacity. While sheetmakers are still finding business quiet, there has been considerable tonnage for export booked during the present week with Glasgow works.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday a better tone characterised the tinplate market and prices were a shade steadier at from 16s. to 16s. 3d. per box, compared with 15s. 9d. to 16s. the previous week. At the close of a meeting of the tinplate manufacturers it was officially announced that the most important firms outside the pooling scheme had agreed to come in, and that there were reasonable expectations of making arrangements with the two or three firms who still remain outside. It was also stated that it had been agreed to investigate immediately the practicability of a scheme submitted to control sales. Galvanised sheet prices were slightly firmer at from £11 5s. to £11 12s. per ton. Both Welsh and foreign steel bars are unaltered at £5 and £4 per ton respectively. Shipments of tinplates fell off last week and stocks amount to over 265,000 boxes, compared with 176,000 the previous week and 199,000 at the corresponding week last year.

OTHER METALS.

TIN.—In the standard market, the opening tone was steady, but prices subsequently gave way on selling pressure, and offerings were moderately absorbed. Standard cash changed hands at £115 5s.-£112 17s. 6d., and three months £116 15s. to £114 2s. 6d. In the East, sales were reported at £118 12s. 6d. to £119 7s. 6d. and £118 2s. 6d. per ton c.i.f.

COPPER.—Market active and firmer following reports of a further advance in electrolytic, though slightly irregular at times, closing below the best. Dealings were largely centred on forward dates, with three months selling at £48 10s., £50 8s. 9d. and £48 16s. 3d. Limited sales of cash were made at £50 7s. 6d. per ton, closing £49 value.

LEAD in quiet support but generally steady. Good soft foreign pig, December, sold £15 17s. 6d., £15 15s. and £15 17s. 6d. March, £15 18s. 9d. to £16 per ton.

SPELTER opened steady, but later prices gave way on libera offerings. December, sold at £14 7s. 6d. to £14; January, £14 8s. 9d.-£14 10s. and £14 5s.; February, £14 13s. 9d. to £14 8s. 9d.; March, £14 16s. 3d. to £14 18s. 9d. and £14 11s. 3d. per ton.

ALUMINIUM steady. Home trade and export, £85 per ton.

ANTIMONY firmer, especially for near at hand parcels. English regulus, £38 to £45; Chinese regulus, spot, £25 10s.; afloat, buyers, £25; December-January, sellers, £23 10s.; Chinese crude, December-January, £14 5s. per ton c.i.f.

An Invitation

MAY we be the medium of helping you to do good this Christmas?

In spite of the comparative improvement in the conditions of the poor, thousands will fare scantily at the season of Joy and Plenty.

Last year, Christmas cheer was provided for over 100,000 of the most needy men, women and children through The Salvation Army. Will you lend a hand this year?

While enjoying the comfort of your own home, will you please spare a gift towards: XII

CHRISTMAS DINNERS for Poor Children, Homeless Men and Women, Needy Aged Folk.

CHRISTMAS PARCELS for Poor Families.

10/- to 20/- will provide a Christmas parcel for a family, but any gift will be welcomed and gratefully acknowledged by GENERAL EDWARD J. HIGGINS, Salvation Army, 101, Queen Victoria Street, London, E.C.4.

ANTIMONY ORE.—December-January, 60 per cent., 3s.; ditto 50 per cent., 2s. 6d. per unit c.i.f.

ANTIMONY OXIDE.—December-January, £25 5s. per ton c.i.f.

WOLFGRAM quiet and easier. Chinese, December-January, sellers 15s. 6d. per unit c.i.f.

QUICKSILVER steady. Spot £21 15s. to £22 per bottle.

TIN PLATES dull. I.C. coke, prompt and forward, 15s. 9d. to 16s. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: December 3rd.

The trade demand by itself has not been sufficient to absorb the offerings from the South, and prices have continued to sag. A new low level has been reached, and only the action of the co-operative societies in buying futures against sales of spots has prevented a still further recession in values. Spot sales for the week November 27th to December 3rd (inclusive) are 20,000 bales, of which 7,890 bales are American, 1,600 Brazilian, 500 Argentine, 6,250 Peruvian, 1,450 Egyptian, 1,200 African, 950 East Indian, and 160 sundries. Imports for the same period are 107,634 bales, of which 70,610 are American, 1,562 Argentine, 5,281 Peru, 16,763 Egyptian, 1,282 African, 10,395 East Indian and 1,741 sundries. Quotations to-day are: American Middling, 5.75; Egyptian Sakel, 8.75; Uppers, 6.40; Brazil Fair, 5.75; Peru Smooth, 6.30; West African Middling, 5.80; and East African G.F., 6.75.

MANCHESTER: December 3rd.

The easier tendency in raw cotton prices has been the main factor in dictating the attitude of buyers during the past week. In all quarters a policy of extreme caution has been followed out. The general trade prospects, however, are considered to be rather brighter, but at the same time no important change in the situation is expected until after the end of the year. News from the Far East has been disappointing. A report from India states that an attempt is being made to standardise the rupee at 1s. 4d., as against the present rate of 1s. 6d. China has also sent news to the effect that the Nationalist Government is to impose a 10 per cent. tariff on all imports from January 1st. Demand for piece goods has been restricted, buyers generally being content to mark time. There has been rather less demand for most of the markets, and it is only in isolated instances that even moderate transactions have been arranged. A large turnover is not expected until there are definite signs of a hardening movement in raw cotton rates. Yarns have been purchased from hand to mouth.

WILL YOU BE ONE?

DE BEERS CONSOLIDATED MINES, LIMITED.

REPORT OF DIRECTORS

For the Twelve Months ended the 30th June, 1930.

To be submitted to Shareholders at the Forty-Second Ordinary General Meeting to be held on Monday, 15th December, 1930.

TO THE SHAREHOLDERS—

GENTLEMEN,—Your Directors beg to submit their Forty-Second Annual Report, Balance Sheet at 30th June, 1930, Profit and Loss Account for the year ended 30th June, 1930, and Appropriation Account, 30th June, 1930.

The unappropriated balance at 30th June, 1929, was £650,029 12 8

Deduct—Final Deferred Dividend in respect to year ended 30th June, 1929 272,628 10 0

During the year the Diamond Account amounted to £377,401 2 8

Add to this the following:—

Interest and Dividends on Investments £503,168 0 10

Profits realised on sale of Investments 18,482 16 5

Income from other sources 14,160 6 9

535,811 4 0

£4,175,878 4 9

Deduct Expenditure as follows:—

Mining Expenditure £1,140,371 17 6

Farms and Landed Property Expenditure 59,537 11 7

Donations and Relief 13,579 18 11

Allowances to retired Employees, amounts paid during annual leave, and contributions to Provident Fund 104,500 18 4

Directors' Fees 21,708 6 11

Salaries—Head Office 30,901 10 1

General Charges—Kimberley and London 57,996 2 7

Interest on Debentures and on Capital of Leased Companies 133,191 2 9

Sinking Fund for repayment of Debentures 109,784 12 4

1,671,573 1 0

£2,504,306 3 9

Leaving a balance of £2,674,572 11 0

Which has been dealt with as follows:—

Union of South Africa Income Tax £302,588 11 0

Dividends:—

Preference Shareholders 800,000 0 0

1,102,588 11 0

Balance unappropriated £1,401,717 12 9

The Stock of Blue Ground and Lamps on the Floors at 30th June, 1930, was as follows:—

De Beers Mine 48,396

Wessels Mine 337,304

Bultfontein Mine 307,778

Dutoitspan Mine 914,348

Total 1,677,836

The usual dividend of 20s. per share was paid to Preference Shareholders during the year under review, and, as was foreshadowed in last year's report, a final dividend of 5s. per share in respect to the year ended 30th June, 1929, has been paid to Deferred Shareholders. No dividend has been paid to Deferred Shareholders in respect to the financial year covered by this report.

BALANCE SHEET, 30th JUNE, 1930.

Capital Authorised:—

800,000 Preference Shares at £2 10s. 0d. each 2,000,000 0 0

1,000,000 Deferred Shares at £2 10s. 0d. each 2,750,000 0 0

£4,750,000 0 0

Capital Issued:—

800,000 Preference Shares at £2 10s. 0d. each 2,000,000 0 0

1,000,000 Deferred Shares at £2 10s. 0d. each 2,726,285 0 0

4,726,285 0 0

Appropriation for Stabilment of the Diamond Trade, invested in the Diamond Corporation, Ltd., other Diamond Mining Companies and Kindred Interests:—

As at 30th June, 1929 2,573,841 16 0

Add amount transferred from Reserves:—

General Fund 820,744 10 8

3,394,586 6 8

Reserves (per contra):—

General Fund as at 30th June, 1929 £3,028,823 6 2

Add Adjustment of Blue Ground 16,435 19 3

5,045,259 5 5

Less Amount transferred to Appropriation for Stabilment of the Diamond Trade 820,744 10 8

2,224,514 14 9

Blue Ground Stocks, 30th June, 1930, at cost 257,301 18 2

Redemption Fund: South African Exploration Debentures 1,635,495 0 0

Less Transferred to Property (per Contra) 1,635,495 0 0

2,481,816 12 11

Current Liabilities:—

Loans and Open Accounts 621,389 19 9

Unclaimed Dividends and Sundries 64,792 4 2

Commissioner for Inland Revenue—Union of South Africa 302,588 11 0

Commissioners of Inland Revenue—Great Britain 3,688 15 9

Commissioner of Taxes—Southern Rhodesia 857 11 0

Preference Shareholders 400,000 0 0

1,393,317 1 8

Balance transferred from Appropriation Account 1,401,717 12 9

Contingent Liability: The Company has guaranteed the repayment of, and interest on, £984,100 of 5½% First Mortgage Debenture Stock, being the unredeemed portion at 30th June, 1930, of an issue of £1,250,000 made by the Cape Explosives Works, Limited, Somerset West, Cape Province. Imperial Chemical Industries, Limited, have indemnified De Beers Consolidated Mines, Limited, to the extent of half this contingent liability.

£13,397,722 14 0

AUDITORS' REPORT.

TO THE SHAREHOLDERS OF DE BEERS CONSOLIDATED MINES, LTD.

We have examined the above Balance Sheet with the books and records of the Company, including the Audited returns of the London Transfer Office, and have obtained all the

KIMBERLEY, 13th October, 1930.

On the 1st January, 1930, the De Beers 4½ per cent. South African Exploration Debentures fell due for redemption and have since that date been redeemed out of the investments representing the Debenture Redemption Fund which had been specially accumulated for the purpose. The reserve of £1,635,495 representing the amount appropriated out of past profits has now been deducted from the book value of claims, Other Mining Interests, Estates and Farms.

Throughout the period under review the diamond trade, in common with all other trades and industries, has felt the influence of the existing world-wide depression, and, with those of the previous year which had been adversely affected by over-production from other sources. The depressed condition of the trade was seriously aggravated by the crisis in the United States of America in October last, and any marked improvement can only be contingent upon a revival of general prosperity coupled with the judicious control of output and sales.

In February and March last, representatives of the four Conference Producers and the Diamond Syndicate attended a Conference convened by the Honourable the Minister of Mines and Industries at Cape Town with the object of concluding a new Inter-Producers' Agreement and Sales Agreements with the Syndicate in place of those expiring on the 31st December next. As the outcome of the Conference the Honourable the Minister of Finance was able to announce in the House of Assembly on the 26th March that the basis of agreement had been reached both for the allocation of the quotas to the big Producers and for the sale of Union and South West Africa diamonds, the volume of trade. Negotiations are now proceeding in connection with the conclusion of the agreements.

The Diamond Corporation, Limited, in which this Company and some of the other Conference Producers are interested together to the extent of 50 per cent., was registered on the 18th February last with a capital of £2,500,000. One of the principal objects of this flotation was to overcome the difficulty which had arisen through past over-production by taking over accumulated stocks of diamonds and spreading their trade to the Conference Producers.

During the year African Explosives and Industries, Limited, declared a dividend of 10 per cent., the amount paid to this Company in respect to its holding in that Company being £137,600.

Your Directors beg to report that in December last Sir Ernest Oppenheimer, M.P., one of the Directors of the Company, was appointed Chairman.

Your Directors very much regret to record the death, on the 13th March last, of their valued friend and colleague, Mr. L. Breitmeyer, who had been a Director of the Company for the past 18 years. Since the close of the year Sir Basil Blackett, K.C.B., K.C.S.I., has been appointed a Director of the Company to fill the vacancy.

In terms of Clause 89 (c) of the Company's Articles of Association, three Directors retire, namely:—

Mr. S. B. Joel,
Sir Ernest Oppenheimer, and
Sir Basil Blackett,

but, being eligible, they offer themselves for re-election.

A report by the General Manager on the Company's operations during the year will be submitted at the Meeting.

E. OPPENHEIMER, Chairman.

THE WOOL TRADE.

Our Bradford correspondent writes:—Unless the current series of London sales are interfered with by fog they will close on Friday, December 12th. This means that three auctions are being abandoned, this being largely due to the withdrawal of New Zealand wools. Evidently owners think it is advisable to hold for a better level of values, and no doubt those realisable to-day are very low indeed. The question many are asking, is whether any advance can be expected during the next six months. There is certainly a big weight of crossbreds in sight, but prices surely cannot go much lower. Importers and topmakers are realising what a further decline would mean, particularly to growers. There is absolutely no need whatever for any further depressing influences to be brought to bear upon any description of wool. In London the demand for slipe-lambs is very good, and as very little more of this description than is now already in London can be expected till next March, what has already arrived is being held for slightly better prices. The competition for greasy crossbreds has been very good, and blanket slipes are selling exceedingly well. Merinos are moving freely on about a parity with prices realisable at the first sale. The selection is good, particularly clips from Queensland and West Australia, whilst there are some good new clips from New South Wales. Scoured Queenslanders are selling with their wonted freedom, Eddington having touched 28d., and Maxwellton 24d. The Bradford market is quiet but steady. The trade has more or less recovered from the disturbing influences which have recently been at work. It is recognised that values for wool in Australian and other centres are moving fully on a parity with the cost of tops. This means that a constant struggle is going on in Bradford to make things fit. Some improvement in the quantity of spinning machinery employed is seen, but botany firms are the busiest, whilst some who were previously mostly engaged on crossbreds have had to turn over to merinos to meet their customers' requirements. Yarn prices are steady, and on the whole the position of spinners is strong enough to enable them to avoid undue cutting of prices.

HIDE, LEATHER AND ALLIED TRADES.

Further reductions of from ½d. to ¾d. per lb. were recorded for ox and heifer hides at the auctions held in Manchester on Tuesday, while with a less inquiry for calfskins prices for these were also slightly weaker. The market for sheepskins remains unsatis-

A. DRAKE, Secretary.
W. M. MILLER, Chief Accountant.

factory. Little business has transpired during the week in the foreign hide market, and although prices generally show small variation, wherever alterations have occurred they have been against the seller. In the South American market sales have been made of Argentine ox on the basis of 6½d., with light ox selling at 5½d., and Montevideo ox at 6½d. Only a limited amount of business has been passing in dry South Americans, with B.A. Americanos quoted at 7½d., and M.V. Americanos at 7½d. Fair sales have been made of Cape hides, drys selling at 7½d. and 6½d. for firsts and seconds, with dry salted 20/30 lbs. quoted at 6½d. and 5½d. Australian hides are neglected, and although no change in values so far has been recorded the tone is weaker. Producers and distributors of sole leather have found business rather less active for most descriptions, and the general opinion is that orders will gradually become smaller as the end of the year draws nearer. A moderate turnover is being done in box and willow calf, but here again business tends to fall away.

OVERSEAS PRODUCE.

SUGAR.—Quiet conditions governed the market, and at previous prices only a comparatively small business was arranged on actual trade account. Weakening factors in the situation just now are to be found in an increased European crop estimate by Mr F. O. Licht and a report that Germany, whose outturn is estimated at 2,425,000 tons, is desirous of exporting 800,000 tons. Terminal sections took a downward turn, as sellers were to the fore, though offers were fairly well absorbed. Of raw, March delivery sold 6s. 1½d.; May, 6s. 4½d. to 6s. 5½d. and 6s. 4½d.; August, 6s. 8d. to 6s. 7½d.; December, 6s. 11½d. to 6s. 10½d. Raw refining sugars still sparingly offered. Cuban receipts last week cable 57,561 tons, against 36,403 same time last year; exports, 130,721, against 51,432; stocks, 764,387, against 254,694. Stocks on plantations and in course of transit estimated at 923,000, against 330,000 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending November 29th amounted to 139,140 tons, against 162,688 last year.

COFFEE.—All the finer liquoring kinds meet with sustained support and realised firm rates, but otherwise market proved dull. Brazilian for shipment, very slow.

COCOA.—Only small spot sales occurred during the week on about former terms. Forward positions easier. Accra F/F. London contract, January-March, quoted 24s. 3d. f.o.b. G/F. January-March, to Continent, sold 26s. 3d. c.i.f. Terminal, March, sold 27s. 7½d. to 27s. 3d.; July, 28s. 6d. to 28s.

TEA.—Indian sales during the week totalled 53,290 packages. Monday's offerings went well at rates showing no essential change,

11 1/2d.; Lampung, October-December, sellers, 3 1/2d.; January-March, 6 1/2d.; Muntok, white, October-December, 10 1/2d.; January-March, 10 1/2d. London stocks of black, 523 tons, against 1,178 same time last year, increase of 73 tons on the week. Stock of white, 338, against 1,305 last year; increase on the week of 87 tons. Cloves dull. Zanzibar, spot, 1s. 2 1/2d.

FRUIT (Dried).—Currants: Market quiet and prices a shade easier. Pyrgos, 30s.-30s. 6d.; Amalias, 31s.-32s. Raisins maintained with fair inquiries. Valencias, quarter-boxes, 36s.-54s. Figs steady. Evaporated Fruits: Market firm for plums, especially large sizes, but peaches and apricots are difficult to sell and prices rather easier. Californian peaches, 1930 crop re-cleaned, 42s. 6d.-56s.

CANNED GOODS.—Fruit: English descriptions encountered a fair demand and there is some inquiry for Australian at about late rates. Californian fruits, however, move off slowly with fair supplies coming forward. Fish: Sardines in limited request and values easy for lower qualities, fine being scarce. Meat: Market dull but prices unaltered for beef and tongues. Condensed Milk: Market steady with a good demand for forward deliveries. Quotations: Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 33s. 6d.; machine-skimmed, ditto, 22s. 6d. English condensed milk, full cream, sweetened, 5-cwt. casks, 36s.; machine-skimmed, ditto, 22s. 9d. Honey: Trade remains quiet with adequate supplies on offer. Jamaica white, 40s.-45s.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 8,959 tons, as compared with 8,995 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.5 per cent. of the supplies, as against 78.3 per cent. a year ago, and imported mutton, mainly New Zealand, formed 73.4 per cent. of the total supply, as against 71.4 per cent. last year. The price of pork has been slightly lower, but beef and mutton remained steady.

BUTTER.—Generally steady and a moderate amount of business resulted. Standard sheet, spot and December, sold 4 1/2d.; January,

4 1/2d.; January-March, 4 1/2d.; April-June, 5d.; July-September, 5 1/2d.; October-December, 5 1/2d. To New York, estate sheet, January-February, sold 4 1/2d. c.i.f. As far as can be gauged at the moment, London and Liverpool stocks on Monday next will mark an increase. London stocks increased 222 tons on the week, landings 1,883, deliveries 1,661, stock 76,670, against 52,538 last year. Liverpool stocks decreased 559, landings 145, deliveries 704, stock 39,933, against 17,752. Malaya shipments last month 41,142 tons, against 46,239 last year.

HEMP.—Market active and firmer. K grade, December-February, sold £23 15s.; L.1, £23; M.1 and L.2, £22 10s. c.i.f. African sisal, No. 1, f.a.q., October-December, sellers, £22 c.i.f. Receipts last week cabled 22,000 bales, against 26,000 last year and 16,000 in 1928. Estimate for next week 24,000, week after 23,000. Manila shipments last week: 6,000 to the United Kingdom; 5,000 Continent; 6,000 U.S.A.; 2,000 Japan; 1,000 other countries; and 1,000 local consumption; making stocks 112,000 bales.

VEGETABLE OILS AND OILSEEDS.—There is a staidier feeling in the markets generally and more disposition to trade. Linseed is in fair request in near positions, which are at a good premium over in distant. Plate linseed, on passage and early December shipment, has been done at up to £11, while later December is a round £10 7s. 6d., and January to March, £9 17s. 6d. Favourable reports continue to come to hand regarding the new Argentine crop which is expected to yield an exportable surplus of over two million tons. A good trade has been done in cottonseed at advancing prices. Black Egyptian, on passage to Hull, is quoted £6 7s. 6d., and Linseed oil is erratic, and the lowest figure recorded for some years has been touched in the past few days, viz., £24 per ton naked ex Hull mill spot, and £23 month. Current value is somewhat better at £24 6s. spot. Cotton oil is firmer, crude Egyptian being held for £23 and common edible for £25 10s. prompt. The market in copra has been quiet. Straits S.D., December, to Rotterdam, quoted £16 8s. 9d.; Dutch East Indies, ditto, £16 8s. 9d.

THE MONEY MARKET.

MAINLY as a result of the fact that, so far, the Government has repaid only £4,675,000 of the money borrowed from the Bank in order to pay the War Loan dividend, money early this week was still in abundance, and even on Thursday the rate for new money was as a rule only 1 1/2 per cent. Loans into the New Year are at the rate of 2 1/2 per cent. to the end of the first week of January, and 2 3/4 per cent. to New Year's Day. The outflow of gold, however, to France and Germany has had a steadying effect upon the discount market, and this week the discount rate on

three months' bills was $2\frac{7}{8}$ per cent. January bills were $2\frac{1}{2}$ per cent., and Februaries practically $2\frac{7}{8}$ per cent., while four and six months' maturities commanded respectively $2\frac{1}{2}$ and $2\frac{5}{8}$ per cent. The clearing banks have now ceased buying bills. The November averages, reproduced below, show that since October they have made further substantial additions to their bill portfolios, and it is not surprising that they are now following their usual practice of refraining from immobilising additional funds in bills immediately before the end of the year.

	Nov. 20, 1930.	Nov. 27, 1930.	Dec. 4, 1930.	Dec. 11, 1930.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	$3\frac{1}{2}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount { Call	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
{ Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Houses {					
Market rate (3 months' bills)	$2\frac{7}{8}$	$2\frac{7}{8}$	$2\frac{1}{2}$	$2\frac{7}{8}$	...

While money is likely to remain easy until the end of the year, it must be remembered that the Christmas expansion in the note issue is making steady progress, a further increase of £5,255,000 in the circulation being shown in this week's Bank return. This, together with the week's gold losses, has reduced the Reserve by £8,437,000, and the Proportion to 43 per cent. Furthermore, several large movements of funds are imminent. On December 20th £6,000,000 of India bills are falling due, while on December 31st £5,000,000 of Australian bills and an equal quantity of Argentine bills reach maturity. It is possible that none of these bills will be renewed. On January 15th comes the final call of 90 per cent. on the recent Treasury Bond issue. The proceeds, amounting to £105,000,000, will mainly be used to pay off the £75,000,000 still outstanding of $4\frac{1}{2}$ per cent. War Loan and £11,000,000 of Treasury bonds maturing on February 1st. Thus the bulk of the money absorbed by the call will quickly be returned to the market, but while these operations are in progress there may be a certain shortage of funds.

To the continuance of the steady outflow of gold to France there was added this week the beginning of an efflux to Germany. So far as can be deduced from the Bank return, French withdrawals from the Bank for the week ending December 10th came to a round £2,000,000, which raises her total withdrawals from the Bank since November 6th to £9,400,000. Her purchases of Cape gold during this period amount to about £1,500,000, so that on the basis of these estimates she has taken a total of practically £11,000,000. Withdrawals on German account during the week ending December 10th amount to £1,100,000, to which must be added £600,000 taken on December 11th. It is not easy to account for the present strength of the Berlin exchange, but it has been suggested that German houses are calling in short loans from London, and that a large number of German bills, drawn against London credits, have lately been discounted in the London market. If this explanation is correct, it is not a bad thing that London discount rates should stiffen.

The November statements by the nine English clearing banks reveal a further increase in deposits, and a slight decrease in cash:—

	November, 1929.	August, 1930.	September, 1930.	October, 1930.	November, 1930.
Capital and reserves.....	130.8	131.8	132.1	132.1	132.1
Acceptances	215.2	212.7	217.8	216.4	216.3
Deposits (including notified profits, &c.).....	1,751.4	1,767.4	1,764.1	1,791.2	1,800.8
Total liabilities	2,097.4	2,020.9	2,014.0	2,039.7	2,049.2
Coin, notes, balance at bank, and cheques in course of collection	242.0	235.4	232.6	239.3	237.8
Money at call.....	139.7	133.7	132.9	141.9	135.1
Investments	259.5	276.5	281.3	283.3	291.0
Discounts	230.7	279.3	283.8	296.0	309.5
Loans and advances	973.0	934.3	925.4	922.3	918.7
Cash for accept., premises, &c.	252.5	161.7	158.0	156.9	157.1
Total assets	2,097.4	2,020.9	2,014.0	2,039.7	2,049.2

Earning assets have continued what has now become their customary trend. Advances have again contracted, and the banks have had to use more of their resources in the purchase of bills and investments. These movements are the inevitable consequence of the depressed state of trade and of the lack of demand for accommodation by industry.

NEW YORK.

Money remained easy up to Wednesday, with call rate steady at 2 per cent. Commercial paper was quoted at $2\frac{3}{4}$ per cent. for prime names, and 90-day bankers' acceptances at $2\frac{1}{2}$ per cent. Gold arrivals include a further \$2,750,000 from Buenos Aires, announced at the end of last week. The suspension of the Bank of the United States is discussed on a subsequent page.

THE STOCK MARKETS.

The stock markets were dull and somewhat dispirited. The gold drain and the failure of an important American banking institution arrested an incipient advance in gilt-edged stocks. Home railways were neglected, and, among foreign railways, Argentines suffered on a fresh pessimistic diagnosis of conditions by a well-known chairman. Industrials slowly receded, values as a whole re-attaining the low point previously touched last August. A number of rubber shares were marked higher, but tea shares continued to decline. The earliest Kaffir dividends were satisfactory, but most of the increases recorded had already been discounted. The published details of a proposed Rhodesian copper fusion created no enthusiasm.

THE COMMODITY MARKETS.

Although a national stoppage has been averted, uncertainty continues to prevail in the coal trade, and colliery owners and merchants are reluctant to enter into new contracts. Apart from the seasonal increase in the demand for coke and coal for heating purposes there are no signs of an improvement in the coal markets. Activity in the iron and steel industries continues on a low level, and although the demand for pig iron has slightly improved, production is still in excess of current requirements. The market in Manchester has been thoroughly disorganised by the further fall in raw cotton values. Trade in Bradford is quieter, but the position of raw wool is considered sound. Raw jute has shown more steadiness lately, and business in yarn has been more active. Hides are dull, and the demand for leather has decreased further. Wheat prices are scarcely changed on the week.

THE FOREIGN EXCHANGES.

The foreign exchange market was active in the earlier part of the week, but quietened down towards the close. Several currencies were irregular, the tendency in many cases being in favour of sterling. The peseta broke badly on Thursday on the news of the Valencia strike. New York went from $4.85\frac{1}{2}$ to $4.85\frac{1}{4}$, and Montreal also weakened to $4.86\frac{1}{4}$. Paris lost four points at 123.60 after 123.67. Brussels improved sharply from $34.80\frac{1}{2}$ to $34.76\frac{1}{2}$, after being $34.75\frac{1}{2}$. Milan was weaker at 92.75, and Madrid went from 43.30 to 44.90. Amsterdam moved in our favour to 12.06 $\frac{1}{2}$. Berlin was unchanged at 20.36. Switzerland recovered from 25.06 $\frac{1}{2}$ to 25.04 $\frac{1}{2}$. Stockholm weakened from 18.09 $\frac{1}{2}$ to 18.10 $\frac{1}{2}$. The South American currencies were all irregular and generally weaker, Rio losing $\frac{1}{8}$ d. at $4\frac{1}{2}$ d. after $4\frac{1}{2}$ d., Buenos Aires $\frac{1}{8}$ d. at $37\frac{1}{2}$ d., and Montevideo $\frac{1}{2}$ d. at $37\frac{1}{2}$ d. In the Far East the rupee was firm at 1s. $5\frac{1}{2}$ d. The yen gained fractionally at 2s. $0\frac{1}{2}$ d. Batavia was half a point better at 12.06 $\frac{1}{2}$. In the forward market, New York went from par for both periods to $\frac{1}{2}$ cent and $\frac{1}{4}$ cent premium. The quotation for end of the year delivery remained at $\frac{1}{2}$ cent discount. The discounts on forward Paris narrowed to 6 and 11 centimes, whilst Brussels was, at 3 and 5 centimes discount, rather wider than last week. Milan was weaker at 24 and 64 centimes discount. The peseta went from par and 4 centimos premium to a premium of one centimo for both periods. Amsterdam weakened a little at $\frac{1}{4}$ cent and $\frac{3}{4}$ cent premium. Berlin remained at $3\frac{1}{2}$ and $9\frac{1}{2}$ pfennigs discount. Silver prices fell sharply by $\frac{1}{8}$ d. for both cash and forward to 15 $\frac{1}{2}$ d. and 15 $\frac{3}{4}$ d. respectively. The China silver exchanges also weakened, Hong Kong losing $\frac{1}{2}$ d. at 1s. 2d. and Shanghai $\frac{1}{2}$ d. at 1s. 6d.

THE LONG SPOON.

SINCE we last reviewed the political terrain two events have taken place from which there was a tendency in advance to expect that some considerable modification of the situation would be forthcoming. The first was the definition of the attitude of the Liberal Party towards the Government given by Mr Lloyd George in an address to Liberal candidates last Friday, and the second the memorandum on economic and financial policy signed by Sir Oswald Mosley and sixteen of his fellow malcontents in the Parliamentary Labour Party. But in fact neither of these events has produced as profound an effect as was expected upon the immediate political outlook.

Mr Lloyd George opened his address by accepting the definition of the political situation recently put forward in the *Economist*, namely, that the country is between the Devil of an ineffective semi-Socialistic régime and the Deep Sea of a haphazard protectionism. Of the two, the Liberal leader prefers the former, and his choice is intelligible on the ground that while it is possible to sup fairly safely with the devil by means of a very long spoon, you are exceedingly likely to drown if you are plunged into an uncharted ocean. And the spoon which Mr Lloyd George proposes to use is apparently one which is not only exceedingly long but is also easy to withdraw from the porridge bowl, or even to employ, in the case of provocation, as a weapon of offence upon the head of the Prime Minister. For although Mr Lloyd George's policy is to keep the Government in office rather than to risk a Tory administration, he was at great pains to emphasise that there is no question of a pact or deal between the Liberal and Labour parties; that the Government is there on sufferance; and that, in his view, their misdeeds are grievous. Indeed, his speech comprised as much biting railery against the Government and its actions as might be expected in a speech of the leader of a party in unqualified opposition. Ministers were characterised picturesquely and variously as "pot-bound," as "toddlers" being wheeled out in a perambulator by bureaucrats, and even as "footlers"—quite a formidable addition even to a political vocabulary which has recently been enriched by "humbug," and other reported "terms of endearment."

Apparently the paramount influence in Mr Lloyd George's mind in deciding upon what we may describe as an attitude of malevolent tolerance towards the Government, has been its supposed willingness to introduce an Electoral Reform Bill including the provision of the alternative vote. We use the word "supposed" because, although an Electoral Reform Bill has been promised by the Prime Minister, there is as yet no official information as to whether it will really include provisions for a new electoral method. It must, however, be presumed that Mr Lloyd George has some previous knowledge of the contents of the Bill, and so the alternative vote enters the arena of practical politics. Mr Lloyd George and his Liberal followers accept it as a *pis aller*. They want proportional representation, but, hostility to this method in the Labour rank and file being unconquerable, they are prepared to accept the alternative vote as a small instalment towards an urgently needed reform.

With this qualified acceptance of the alternative vote we are inclined to sympathise. Under the system of the alternative vote, by which in a three-cornered election the candidate at the bottom of the poll is wiped out and his votes transferred—according to the second preference of his supporters—to the other two candidates, it will become rather less likely than at present that a House of Commons could be elected actually representing a minority of the nation. But we certainly cannot go as far as Mr Lloyd George in his claim that the alternative vote would make it certain that if we are to have Protection it will be only because Protection is voted for by a majority. The chief merit of proportional representation is that it produces, as nearly as human ingenuity can, a legislature in tune with the real opinion of

the country. It is possible for the alternative vote to work in a manner definitely less satisfactory. It is conceivable, to take an extreme case, that under that system a party might poll hundreds of thousands of votes without securing any representation in respect of them. Supposing, for the sake of argument, that the Liberal candidate was at the bottom of the poll in thirty constituencies and polled an average of 6,000 votes in each. Then 180,000 Liberal voters would be left without representatives of their first choice. The alternative vote, then, gives no certainty of the attainment even of approximate electoral justice, nor does it give a certainty that we shall be saved from the recurring possibility of that hopeless anomaly in any democracy, an unrepresentative parliament. Nevertheless, the ideal being unattainable in the present political atmosphere, the second best merits acceptance, however unenthusiastic, and events may prove Mr Lloyd George to be right in thinking that this system will work substantially in favour of the middle party of three. At all events, given the alternative vote, the elector will be saved from the dilemma of choosing whether to sacrifice his one and only vote on a forlorn hope or to give it to a candidate whose policy he does not whole-heartedly approve, simply in order to exclude the candidate whom he regards as least desirable of all.

The upshot of Mr Lloyd George's pronouncement is that the Government are rather more firmly set in the saddle and that their expectation of life has been increased; although it is difficult to believe that in the event of the House of Lords throwing out the legislation for the alternative vote (which must be accounted as a distinct possibility), the Liberal members of the House would really agree to keep the Government in power for this sole purpose in the two years or more that would be necessary to overcome an obstinate opposition from the Upper House. The Trades Disputes Bill, failure to reform the Unemployment Insurance system, or extravagant budgetary policy might obviously strain the unofficial *entente* to breaking-point. At the same time the much advertised memorandum by Sir Oswald Mosley and his colleagues has entirely failed to shake the Government's position. The list of signatories to the manifesto was by no means as imposing as had been expected, and the actual text itself is too curious a mixture of Tory protectionism, Labour ideals and crude Imperialism to make a wide appeal.

Sir Oswald's first proposal concerns the machinery of government, and here he suggests the establishment of a dictatorship of five, to whom, in the essential sphere of economic policy, Parliament's rights of control and criticism would be surrendered. In the sphere of domestic economics "the resources of the State would be mobilised to assist in the development of new industries and to secure the modernisation and re-equipment of industry." As regards overseas trade, he would establish import boards, bulk purchase agreements with the Dominions and protection for the home market, the latter to be conditional upon the maintenance of efficiency by the producers and non-exploitation of the consumer by higher prices. On finance and taxation the memorandum is vague. It is to be based on a "producer's policy," debt repayment is to be postponed, and relief in taxation given to skilled, technical and managerial workers. It is all rather a jumble, containing nothing very new in political or economic thought and little to strike the imagination either of the practical politician or of the man in the street, who, in particular, may be pardoned for smiling at the old, old proposition, of which Mr Bennett, of Canada, was the latest exponent, of protection coupled with a guarantee that prices will not be raised against the consumer.

Yet we cannot resist a feeling of sympathy for the underlying motive of the Mosley memorandum. "It is impossible to meet the economic crisis with a nineteenth century parliamentary machine." That is a point of

view which has found frequent expression in these columns and upon which, as our readers will remember, Mr Winston Churchill has based his demand for the creation of an industrial parliament. We agree, too, with Sir Oswald Mosley and his colleagues that the task which faces the nation is to "compress into a short period the readjustments we failed to carry out in the last decade." Let us frankly admit that the inelasticity and inadaptability which Sir Arthur Salter finds in our economic system are also unfortunately attributes of our administrative and executive machinery; and though Sir Oswald's remedy of a dictatorship is no more practical politics than the recent plea of the *Times* for a national Government, we should face the coming year with a better heart, could we hope that the Government—in return for the increased, if still precarious security, which Mr Lloyd George offers it—will address itself with a greater vigour to the present economic problems of the day.

CLEARER SKIES IN CHINA.

In every situation China may be trusted to take us by surprise. In 1928, the Kuomintang armies confuted all foreign prophecies by completing their triumphal progress from Canton to Peking and re-establishing the political unity of the Republic. Just when we were getting used to that, the whole edifice apparently fell to pieces again. The Kuomintang quarrelled with its partner the Kuominchün; General Chiang Kai-shek went to war with General Fêng Yü-hsiang; Fêng was aided and abetted by "the good boy" of China, the model tüchün Yen Hsi-shan; and so anarchy was let loose again. It looked like the familiar scene: Kuomintang on one side, Northern War-Lords on the other, and the Yangtse Valley for the cock-pit. Indeed, last year's fighting was only distinguished from the previous twenty years' fighting by being more sanguinary—the Chinese armies having been improved (from the technical point of view) by a long process of natural selection. A few months ago, all the observers—Chinese and foreign, on the spot or at a distance—were reminding one another that, in the rhythm of Chinese history, these bouts of aimless and devastating anarchy were apt to last for periods of anything from one hundred up to four hundred years. The gleam of light in 1928, we were all saying, must have been just some queer kind of optical illusion: in China, neither this generation nor the next was destined, after all, to see daylight. And then, when the words were on our lips, the skies cleared over China (just when they were darkening over almost every other part of the world) and the Chinese landscape changed as if by magic.

Ostensibly, the miracle was performed by a single *deus ex machina*, "the young marshal" Chang Hsüeh-liang, of Manchuria. After sitting discreetly, and not uncomfortably, on the fence for more than a year, this remarkable young man abruptly came down on Chiang Kai-shek's side; and, lo, Chiang's enemies were scattered in the twinkling of an eye. The model tüchün, Yen Hsi-shan, who had been unique among Chinese military governors in having held his province of Shansi continuously since the beginning of the Revolution, has at last been put out of business like all his confrères. As for the Christian General, Fêng Yü-hsiang, he has finally been defeated in his efforts to carve himself a corridor to the sea, and has thereby lost all hope of securing foreign supplies of munitions. Worse than that, he has been driven right out of the fertile plains of the east into the barren famine-stricken highlands of Shensi and Kansu—provinces which have never been able, out of their own resources, to maintain Fêng's army. Unkindest cut of all, poor Fêng has even been deprived of his victorious rival Chiang of the sole title to his soubriquet. For, a few weeks ago, General Chiang Kai-shek became a Christian too!

General Chiang Kai-shek's conversion, it may be said in passing, is a strange and unexpected culmination to the "anti-Christian" movement which has been one of the manifestations of the "anti-foreign" movement in

China during the last half-dozen years. The Christian Church in China seems to be as much astonished by this reversal of fortune as the Christian Church in the Roman Empire was when the persecutions of Diocletian and Galerius were followed by the conversion of Constantine. If Chiang Kai-shek were really to play the part of a Chinese Constantine, the consequences might be momentous. And there are considerations in China now, as there were in the Roman Empire then, which might prompt a far-sighted autocrat to contract an alliance with the alien faith. The modern Christianity which has appealed to Fêng and Chiang alike is the American type of Protestantism which presents itself, first and foremost, as a beneficent organising force—the force behind famine relief and behind the Y.M.C.A. To a Chinese mind, this American Christianity might well stand for that combination of honesty, efficiency and constructiveness which is precisely what China now most needs.

Presumably such considerations, coinciding with others of a personal character, have decided Chiang Kai-shek to take this step. But there is perhaps more in his conversion than that. Besides being an affirmation of personal faith and an indication of public policy, it has the appearance of being a gage of defiance thrown down at the feet of the stalwarts of the Kuomintang Party, to whom Christianity is obnoxious as a foreign institution.

This further explanation is suggested by the outcome of the recent plenary session of the Central Executive Committee of the Kuomintang. For in this session Chiang Kai-shek—reinforced by Chang Hsüeh-liang, who came to Nanking from Mukden for the purpose—has been able to secure the passage of two measures which must both be odious to Party members who believe in, and profit by, the Party Dictatorship. The first measure was the circulation to all Party members of a public reproof, in which they are taken to task for exploiting the Party as a source of personal livelihood, for conducting local Party headquarters as rival authorities to the local organs of Government, and for being guilty of improper conduct and improper language towards the people. The second measure, which was still more unpalatable, and which was carried in the teeth of violent opposition, was the decision to summon a people's convention for the purpose of framing a democratic constitution to replace the oligarchic dictatorship of the Kuomintang.

It was in vain that the scribes and pharisees of the Party cited the authority of their master, Sun Yat-sen himself, who had prescribed that the period of party-tutelage was to last for five years. The two marshals carried the day; and, when the people's convention meets, we may expect to see the Party Dictatorship formally superseded by some ostensibly democratic form of constitution in which plenary executive power will be vested in the hands of a first and second consul.

How will Chiang and Chang use their power if they really secure a free hand? In order to fight the last round with one another for the prize of sole survival? We need not be so pessimistic as to take that undoubted possibility for granted. After all, the territories of the Chinese Republic are surely broad enough to provide elbow-room for two dictators side by side, and there is no reason why our Chinese Octavian and Mark Antony should not co-ordinate their activities so far as to produce and apply a common policy in matters of common concern to China as a whole.

The two most urgent matters at this moment are the same as ever. They are the disbandment of the armies and the revival of economic prosperity through the removal of local impediments to trade. In fact, the problems of China and the problems of Europe are identical with one another to-day—and who knows whether the Chinese may not have stolen a march on us in approaching a solution? Already peace has brought a marked revival of trade in the vast area between Canton and the Yangtse. And in the world-wide depression of to-day, this is a favourable portent which deserves close attention. Supposing that a reconstruction of China on the grand scale by international co-operation were on the verge of becoming practical politics. Might not this conceivably provide the stimulus which is needed in order

"BLUE AND GOLD TOURS" to SOUTH AFRICA

The South African Railways, in association with the leading Shipping Lines on the African routes, have organised an attractive programme of sunshine tours to South Africa during the Winter.

Sailings from British and Continental ports will be made throughout December, 1930, and January, 1931. The steamer fares, on a liberal concessionary basis for the return voyage of 12,000 miles, are unique in travel values.

A comprehensive series of rail tours in South Africa has been arranged in conjunction with the steamship sailings, and the inclusive costs of the combined sea and land tours range, according to duration, class of accommodation, etc., from £70 to £205.

The full descriptive programme, "Blue and Gold Tours," will be sent, post free, on request. Apply:—The Director, Publicity and Travel Bureau, South Africa House, 73, Strand, London, W.C.2, and the leading Tourist and Travel Agencies.

to set the general economic and financial life of the world in healthy motion again? Perhaps this was in the mind of the American Academy of Political and Social Science when they devoted to China the entire issue of their *Annals* which appeared last month. This collection of well-chosen and well-written studies by forty different American, Chinese and English writers gives a timely survey of the possibilities in China to-day. Equally timely is the arrival, at this juncture, of the British Economic Mission to the Far East which left London on September 19 and which recently landed at Shanghai after spending a month in Japan.

High prices and short credits have been putting British goods in China at a serious disadvantage in competition with other foreign goods—Japanese and German goods in particular. On the other hand, the reputation of British goods in general for high quality is reported to stand in China as high as ever. Under such conditions, any increase of Chinese purchasing power which may follow from improved political conditions ought to benefit British trade peculiarly, if the opportunity is foreseen and is turned to full advantage.

ANALYSING THE WORLD SLUMP.

HOWEVER much the attention of thoughtful citizens in different countries may be attracted to the political problems of the day—and such a problem, for example, as that of the future constitution of India, involving as it does the great question of the relations between Asia and Western civilisation, takes on the complexion of a world issue—there is no doubt that the economic crisis arising from world-wide depression of trade dominates the outlook—political, industrial and social—of almost every country. Everywhere men continue to ask what are the causes of this depression? In what pre-existing conditions did its origins lie? What factor, or combination of factors, gave an impetus to its beginnings? For though special causes operative in particular countries may have varied locally the intensity of the slump, the almost world-wide range of its incidence suggests that forces of a universal character must have been at work.

Towards providing the answer to these questions, important contributions have come in the past few weeks from different sources, notably the New York Academy of Political Science, the International Chamber of Commerce, and two interesting articles contributed to the *Times* on Monday and Tuesday of this week by Sir Arthur Salter, Director of the Economic Section of the League of Nations. Sir Arthur was concerned primarily with the special difficulties under which Great Britain is labouring, and we comment in a Note of the Week on certain features of his diagnosis and prescription in their particular relation to British ills. Regarding the depression from a world point of view, he described the situation very truly as "an example of the paradox of general plenty causing general impoverishment. General overproduction, the economists say, is impossible—but on

one condition, that there is a satisfactory system to secure exchange, distribution and adjustment—and that condition is not now fulfilled."

Equal emphasis on this paradoxical element in the situation was laid by Mr. T. W. Lamont in his recent address to the New York Academy of Political Science, though he went on to tabulate other factors which characterised and influenced the course of the slump. Looking at the depression as a whole and not simply as it concerns America, he stated that the general consensus of opinion ascribed this world-wide phenomenon chiefly to the following causes:—

1. Production out-running consumption, not only in many basic commodities, such as cotton, wheat, copper, rubber, silk, sugar, oil, but also in many manufactured products.
2. Efforts made in many parts of the world to hold up commodity prices artificially, e.g., in the case of rubber, cotton, wheat, coffee, copper, etc. When prices for such commodities finally gave way, the severity of the business collapse was accentuated.
3. The fall in the price of silver, and thus in the purchasing power of a large part of the world's population as represented by India and China.
4. The shifting, on an almost unprecedented scale, of gold holdings among various countries. Thus from the beginning of 1929 to date the Bank of France and the Federal Reserve banks of America had increased their gold reserves in the aggregate amount of approximately \$1,120,000,000, a large part of this being drawn from the central bank reserves of other countries.
5. Current political unrest in many quarters of the globe, including notably India, China and South America.
6. The spirit of rampant speculation in certain countries of the globe, especially America. For some years many people lost interest in investing their money in good bonds returning a fair rate of interest. They had wanted quick speculative profits with the inevitable result that everybody knew.

This diagnosis of the fundamental causes of the world depression finds corroboration and amplification in the statement issued after a meeting in Paris last week by the International Chamber of Commerce. Having noted that since its June session no definite improvement could be detected, but that in some countries the depression had become more acute, while it had gradually spread to other countries where relative immunity had hitherto been enjoyed, the Chamber drew up the following list representing generally agreed causes of the depression:—

- (a) A general increase in productive capacity which has temporarily outstripped the rate of increase in population and in the capacity of consumption.
- (b) Following upon a long-period decline in world commodity prices, a farther sharp and excessive fall in prices, especially in raw materials and foodstuffs, not only too rapid but also too extensive to enable costs of production to be adapted and throwing retail prices out of equilibrium to wholesale prices. Immediate recovery from the prevailing price depression is delayed by the postponement of liquidation in stocks.
- (c) The widespread agricultural crisis.
- (d) The unprecedented extent of industrial unemployment.
- (e) The prolonged malaise caused by political unrest.
- (f) The closing, partial or complete, of some of the world's most important markets.
- (g) The slow readjustment of national to the international economic situations by reason of the varied bases chosen for monetary stabilisation.

(h) Barriers to enterprise and investment imposed in many places by an unusual spread between long- and short-term money rates.

(i) The heavy fall in the price of silver which has further reduced the purchasing power of one-third of the world's population.

(j) The forcing on the world markets of large quantities of grain, raw materials and semi-finished products by Soviet Russia at prices less than the normal cost of production.

(k) The levying in many countries of very heavy taxation to meet unprecedented national and international indebtedness.

(l) Excessive incursions of the State into the domain of private enterprise, which are clearly hindering, and in some cases actually preventing the necessary accumulation of private capital and the inducements to private enterprise and venture.

Into the details of the foregoing elaborate analysis of the world's present economic trouble we shall not attempt to enter on this occasion. Opinions will doubtless vary as to the relative weight to be attached to the influence of the several factors which enter into the problem, and in a number of the items listed by the International Chamber of Commerce, e.g. "the extent of industrial unemployment," a symptom rather than a cause of the depression appears to be indicated. Moreover, it is not to be supposed that the statements which we have quoted above are necessarily comprehensive; other important factors may occur to other observers.

For the moment, therefore, we will content ourselves with drawing attention to the fact that Sir Arthur Salter, Mr Lamont and the International Chamber are at one in pointing to "over-production" as the predominant feature, and that there is general agreement that this phenomenon was produced by failure on the part of the world to adjust itself adequately, or with sufficient rapidity, to certain changes in economic balance and structure imposed upon it by the course of events. Now, as Sir Arthur Salter has logically pointed out, the paradox of impoverishment through plenty is not and cannot be permanent. "It is not human desires that set the limit to consumption, but purchasing capacity or earnings. With a world system properly functioning these should in total approximate to the world's productive capacity." The first question then that arises is whether it was conditions arising primarily out of developments on the production side that placed temporarily too great a strain on the functioning of the world's system.

Mr Lamont proceeded to amplify his statement by giving some figures of the rate of increase in world production of certain basic products in recent years, figures which show in every case a much larger increase in 1929, over 1928, than in the preceding years:—

	Average Annual Rate of Increase in Production 1923-28.	Rate of Increase in Production 1929 over 1928.
Cotton	0.8	8.2
Sugar	5.8	6.2
Rubber	6.5	20.1
Copper	5.6	8.9
Crude petroleum	5.1	10.5
Pig iron	4.9	11.6

Following the evidence afforded by the League of Nations' indices* of world production, which showed that in 1928 the world's output of cereals and other food crops was 16 per cent. greater than in 1913, that of all food-stuffs 17 per cent. greater, and that of all raw materials 48 per cent. greater (increases considerably outrunning the expansion in world population), the figures of 1929 increase, quoted by Mr Lamont, suggest forcibly that the world could only have absorbed without economic indigestion the quantities which were being produced immediately before the slump if the process of the adjustment of distribution and exchange had been effected with remarkable rapidity and smoothness.

This, however, is not quite the whole of the story. Admitting the truth of Sir Arthur Salter's dictum that there can be no fixed limits to human needs "till the last Hottentot lives like a millionaire," the further question arises whether, given the aggregate purchasing capacity enjoyed by the world at present or likely to be enjoyed by it in the immediate future, the world could

* Memorandum on Production and Trade, 1923 to 1928-29. Geneva: League of Nations.

really be said in 1928-29 to stand economically in need of such increasing quantities of *primary products*. On this question some pertinent observations were made not long ago by Mr Arthur Loveday, of the League of Nations, in *The Index*.* His argument was that when primary necessities are met, the further rise in purchasing power and in the standard of living shows itself in a demand for personal services, sport, entertainment, etc., for more highly worked-up forms of raw material, for travel, literature, and not for goods which involve a proportionate increase in basic products. Material civilisation may involve for a long time to come a growing specialised demand, say, for copper for the electrical industry, rubber for tyres, or other materials of typically "twentieth-century" industries, but certainly not for food and clothing, nor for primary products as a whole. A great momentum, however, has in recent decades been given to the production of such products, not merely by opening up new areas for cotton growing, the development of new mineral resources, the bringing of new cattle-raising lands within range of the market, and so on, but by increasing the efficiency of production and by discovery of means of resisting inclement weather, pests and so forth.

Hence, we suggest, without minimising the importance of many other contributory factors—monetary influences, political unrest, tariffs and other forms of "economic nationalism"—it is arguable that for some years before 1929 forces (barely detected at the time) were at work producing a "hidden crisis," whose key feature was *real over-production for the time being* of primary foods and materials, demand for which was rendered abnormally inelastic by altered direction of purchasing. In short, to quote again Sir Arthur Salter's words, the depression of 1929-30 has been "a crisis superimposed on a crisis."

If it be correct thus to diagnose the fundamental cause of the world's present ills (aggravated though they be by other "complications"), then it will be appreciated that—even if all hindrances, political, fiscal and monetary, could be eliminated—convalescence is likely to be slow. For the real question is not merely the comparative powers of individual countries to readapt themselves to changed fashions of demand, or to readjust their internal mechanism of production, but the "correction" of "over-supply" extending over a wide range of agricultural and mineral commodities on whose value the purchasing power of half the world depends. Is the process of "correction" going to involve a protracted struggle—primary producers *versus* manufacturers—with the latter (and their employees) paying in loss of orders and unemployment for an attempt to maintain selling prices and wages at a level far too high for the primary producers. Or will sellers of finished articles succeed rapidly in re-establishing the volume of exchange of goods by equating their prices in terms of money with those of their "monetarily" impoverished customers—rich only in primary stocks? Given the universality of the present disequilibrium, time, we fear, will be required before an answer to these questions can be given; their immediate significance is that they suggest in themselves that no short-cut in the way of concerted inflationary expansion of aggregate currency could save the world as a whole from the painful task of re-establishing the economic balance which it has lost.

THE END OF THE DYESTUFFS ACT.

On November 19th Mr Graham announced, in answer to a question in the House, that it was proposed to allow the Dyestuffs (Import Regulation) Act to lapse on the appointed date—i.e. on January 15th next. The Government, he stated, had given "full and careful consideration" to a complex and much controverted question. The opinion of the framers of the Act, that ten years should prove a sufficient period to put the industry on its feet, had, in his judgment, been fully vindicated. "The comprehensive Report† of the Dyestuffs Industry

* *The Index*, January 1930. (Stockholm) Svenska Handelsbanken.

† Cmd. 3568, August, 1930.

Development Committee shows," said Mr. Graham, "that the industry has now reached a stage at which it is capable of meeting a very large proportion of the requirements of dyestuff users in the United Kingdom, and of carrying on an increasing export trade, and the manufacturers have indicated their ability to meet normal foreign competition in respect of prices. It appears then that the object of the Act has been attained."

The Government's decision was challenged by the Conservative Party, and on Thursday of last week, on the Committee stage of the Expiring Laws Continuance Bill, it was proposed to add the Dyestuffs Act to the schedule of that Bill. After a full-dress debate, in which the dialectic of Sir Philip Cunliffe-Lister was somewhat unexpectedly fortified by that of Sir John Simon, the decision to allow the Act to lapse was upheld by a majority of 30. In another month, therefore, yet another of our post-war essays in Protection will come to its appointed end.

The Dyestuffs Act has an interesting history. As was urged in last week's debate, it points no certain moral either for the protectionist or for the free trader. For across the simple issue that divides these hostile camps cut a number of conflicting claims. Military necessity—the promotion of research—the welfare of the fine chemicals industry generally—each of these aims, it has been urged, has been served by the protection of home dyestuffs; and the needs of the textile trade, clamorous for better and cheaper dyes, have to some extent, admittedly, been sacrificed to these ulterior ends. It is to be hoped—in spite of the Jeremiads that were raised last week in Parliament—that they have not been sacrificed in vain.

Before the war Britain was almost entirely dependent upon foreign producers for the dyestuffs that she used. In 1913 some 41.2 million lbs. were imported, of which 38.4 million lbs. (93 per cent.) came from Germany. The total value of these imports was £1.89 millions, and they comprised in all some 10,000 differently designated products. The whole of the supplies were of course cut off by the war. The necessity for stimulating their home production was thus urged forcibly upon public notice; the more so since (1) the laboratory in which the derivatives of coal-tar are distilled is the happy hunting ground of the research chemist; (2) the plant used in dye manufacture can be readily converted to the production of explosives. The British dye industry began life as a war-baby, and a carefully nurtured one; its foster parents applied research on the one hand and the urge of State necessity on the other.

The steps by which, as the war drew to a close, the industry was brought into existence were as follows:—In the first place, financial assistance was provided for various interested concerns. This took the form of grants for research and equipment and, later, of the actual investment of public moneys in the British Dyestuffs Corporation. Secondly, the amalgamation of the various

producing concerns was actively encouraged. And finally, on the advice of a Board of Trade Committee appointed in 1918, the importation of foreign dyestuffs, except under licence, was prohibited. Originally, this prohibition took the form of a mere Proclamation, but by the so-called Sankey judgment of 1919 the Proclamation was invalidated. *Ad hoc* legislation became necessary to protect the infant industry from the chilly blasts of competition. Such was the genesis of the Dyestuffs (Import Regulation) Act. "For national security," declared the Government, "it is essential that synthetic colour-making factories should be in existence, and be maintained in operation with their staffs of chemists and other experts in this country, and that their equipment should be equal in extent to that of any other possibly hostile nation." Against the assertion of this principle few voices were raised in opposition. The Dyestuffs Act had the blessing of the late Earl of Oxford, as Sir John Simon emphasised last week.

How has the Act worked in practice? We have been faced, during the controversies of the last three weeks, with a number of conflicting views. Users of dyestuffs, taking them as a whole, are heartily sick of the Act. In spite of the ten years' nursing which the British manufacturer has enjoyed, whole ranges of dyestuffs are still not produced in this country; these have had to be brought in under licence, and the delay and inconvenience involved have caused widespread complaint. Some makers of fabrics, it is notorious, have actually been sending their goods to be dyed abroad. Licences have only been granted on two grounds: (1) that the home-produced article is excessively dear, and (2) that it does not exist at all. The licence has been granted for the latter reason in practically every case.

It is urged, on the other hand, that the industry, though it has made substantial progress, is not yet quite ready to withstand competition from abroad. A few years more (the demand is a familiar one) and all will be well. In the quality and price of his wares, meanwhile, the home producer has nothing to fear from his competitors. It is at this point that the arguments for the continuance of the Act become a trifle incoherent. For if the infant of 1921 is now fully grown, what need has he of further protection? If he is not fully grown, how justify, after all these years, the continuance of his expensive tutelage? Reading between the lines of the Development Committee's Report (to which allusion has already been made) one draws the following conclusions: (1) A fairly flourishing industry has been built up. The table below shows that we imported, in 1913, 78 per cent. (by quantity) of the dyestuffs used; we imported, in 1928, 7 per cent. only. (2) But "the tendency has been . . . to concentrate on the materials for which there is a comparatively large demand; . . . where consumption is relatively small, the policy appears to have been to leave these to the foreign maker." Thus 36 per cent. of our demand for

the important (and expensive) vat colours is still being supplied under licence. (3) The drawbacks of protection, as well as its advantages, are thus beginning to assert themselves. The original objects of the Act have been largely, not wholly, fulfilled; to the extent to which it has failed, other, and less desirable objects, have supervened. The time has come to tear down the barrier, and to let in a little fresh air.

What then of the future, and of the hopes and fears expressed in last week's debate? That our national safety will be imperilled by the lapsing of the Act we do not for a moment believe. If the price of security is a bolstered industry, a direct subsidy would be better. So, too, with the complaints of organic chemists, that dyestuff manufacture is a *sine qua non* of scientific research. If this is true, it is scandalous. Better supplement, from State grants, the niggardly million and a half at present provided for our Universities than handicap our fabric manufacturers in the markets of the world.

Two other fears have been expressed. One is that the lapsing of the Act will be followed by excessive "dumping" (an immediate consequence in 1919-20 of the Sankey judgment); the other, that pressure will be brought upon the user of dyes to buy the whole range of foreign products as a condition of his securing those not yet manufactured at home. Two lines of defence, however, are here possible. One—if the worst comes to the worst—is a re-embodiment in legislation of the principle of the Act; the other is the entry of Britain—as represented, say, by Imperial Chemicals—into the Franco-German-Swiss Kartel. Such a possibility is by no means out of the question.

One final point may be noted. Many of the chemicals at present prohibited by the Act from coming in as dyestuffs have other (e.g. medicinal) uses. In so far as this is so, they have been admitted, but have paid duty under the "key industry" sections of the Finance Act, 1926. When the Dyestuffs Act lapses, the relevant sections of this latter Act will remain unaffected. Thousands of organic compounds will thus continue to be taxed if designed for one purpose, admitted free for another. Complications of this kind are everywhere recognised as among the minor evils of protection.

CENTRAL BANKS AND FORWARD EXCHANGES.

(BY A CORRESPONDENT.)

THE details of the foreign exchange clearing scheme of the Bank for International Settlements are expected with great interest in banking circles all over the world. Nothing has yet transpired as to the conclusions of the committee of foreign exchange experts of central banks, which met at Basle in November, and meanwhile, in the absence of any guidance, the scheme is subject to lively discussion in the foreign exchange markets. There is a wide divergence of opinions as to the limits up to which the central banks and the B.I.S. could, or should go. One extreme is represented by the attitude of those who view with suspicion every move of the International Bank, and would like to veto any new departures—even simple operations, such as tendering for Treasury bills—on the ground that they compete with vested banking interests. These critics are alarmed at the possibility of interference by the monetary authorities with the foreign exchange market. The other extreme is represented by those who attribute to the B.I.S. supernatural powers to solve all the monetary evils the world is suffering from. They hope that the foreign exchange clearing scheme will be able substantially to reduce exchange fluctuations, and may thus put a check to disturbing gold movements.

In reality, the proposed system seems unlikely to aim at anything as ambitious as is hoped by enthusiastic supporters, or feared by suspicious opponents of the B.I.S. It is most improbable that, with its limited resources, that institution should attempt to monopolise the market, or control the fluctuations of exchanges. Opinions may be divided whether such a course would be possible, and, if so, whether it would be desirable. Expert opinion is unanimous, however, that, at the

present stage of its development, the B.I.S. could not possibly embark upon such ambitious schemes with any chance of success. A sphere, however, in which the B.I.S. could operate successfully in spite of its limited resources is the market in forward exchanges. This market, which is largely a post-war development, is assuming an increasingly great importance in the international transfer of liquid capital. As it provides means for the elimination of exchange risks, it greatly facilitates the international distribution of funds. Any attempt on the part of the central banks and the B.I.S. to improve the facilities of the forward exchange market should therefore be welcomed; and as banking interests are well aware of the limitations of these facilities, they are not likely to resent this form of interference with the foreign exchange market.

As things are at present, the forward exchange market is far from adequate, and its shortcomings are often responsible for anomalies which are inconvenient to the practical business man. In theory, the forward exchange rate between two countries on the gold standard should always represent the difference between interest rates in two countries. In practice, discrepancies are caused by speculative influences and divergences between supply and demand. There are only a few exchanges in which there is an active forward market; in the great majority of exchanges, forward rates are a matter of negotiation, and hardly ever represent the equivalent of the difference between the rates of interests in the two markets concerned. Even in the exchanges which have an active forward market the forward rates very rarely correspond exactly to this difference.

Theoretically, the premium or discount for three months should be approximately three times the premium or discount for one month. There may be some discrepancies, owing to differences in the money markets between interest rates for one month and three months. But this, in itself, does not justify such discrepancies as appear sometimes, especially on days when there are wide movements in spot rates. In a market which is constantly borrowing abroad, local money rates and rates of forward exchange are constantly reacting upon each other. Between two lending markets, however, differences may develop which are not always offset instantaneously by arbitrage.

This is due in part to speculative influences. It results, however, to a much greater extent from the inadequate facilities of the forward exchange market. Although the rates usually quoted in tables of forward exchanges are those for one, two or three months, in practice a good deal of forward exchange business is transacted for odd dates. To give a true picture of the forward exchange market, it would be necessary to publish rates quoted for every working day within the next three months or more. This is obviously impossible, for in no market is forward business transacted on any particular day in any particular exchange for eighty or more consecutive working days. Thus, in practice, the chances for "marrying" exactly buying and selling orders for forward exchanges for most dates are negligible even in an active market. But for the fact that some dealers work so extensively not only in "outright forwards," but on margins against the spot exchange, it might be difficult to execute orders for odd dates. As it is, the rates for such orders are a matter of negotiation; if there happens to be strong buying or selling for any particular date the rate will deviate considerably from the theoretical level corresponding to the difference between money rates in the two centres.

The central banks and the B.I.S. would render a valuable service, therefore, if they could remedy this evil. Without suggesting that central banks should speculate in forward exchanges, or that the B.I.S. should provide a clearing house for these speculative transactions, it is possible to advocate that the monetary authorities should take an active hand in the development of an adequate forward exchange market by assisting in the elimination of the discrepancies due to local and temporary conditions of supply and demand. Even if, in doing so, they were to take a certain amount of risk—which in the case

of gold currencies is negligible—the benefit would be worth the sacrifice.

This is only one aspect of the problem. In other directions, too, there is a fair scope for central banks to operate in forward exchanges also. Several suggestions have been made lately as to the rôle central banks should play in this respect. Mr Keynes, in Vol. II of his "Treatise on Money," advocates, as part of his proposal of widening gold points, that central banks should buy and sell regularly the principal forward exchanges. It was recently suggested in the German Press that the Reichsbank should support the forward market in Reichsmarks whenever the spot rate is near gold export point and the forward rate is beyond gold export point on account of higher interest rates in Germany. Whether or not one agrees with either of these controversial suggestions, they certainly would appear more feasible if the task of the central bank were facilitated by the existence of an international exchange clearing system.

CANADA'S AGRARIAN CRISIS.

(BY OUR OTTAWA CORRESPONDENT.)

THE prairie provinces of Canada are confronted, as the result of the wholesale *débâcle* of grain prices, with the most serious economic crisis in their history. On October 15th the price of No. 1 Northern wheat (December) slumped to below 60 cents, the lowest recorded level in the annals of the Winnipeg Grain Exchange, and the atmosphere of pessimism which had enveloped the prairie country for the past twelve months became one of almost panic-stricken anxiety. The Premiers of the three prairie provinces at once held a conference in Winnipeg with the local bankers and representatives of the wheat pools and other grain trading interests, and then went to Toronto to hold further conferences with the banking executives at their head offices. On arriving in Toronto their spokesman, Premier Bracken of Manitoba, made the grim announcement that their mission was "to save the whole economic structure of the West."

The results of the conferences were reported to be satisfactory. At any rate, the banks agreed not to force any drastic liquidation of the wheat stocks on which they had advanced money and to support the Premiers in their demands for Federal assistance. The three Premiers then proceeded to Ottawa and submitted to Sir George Perley, the acting Prime Minister, and his colleagues a demand that the Federal Government should take measures to stabilise the price of wheat on a basis of 70 cents per bushel for No. 1 Northern. Eventually, after communication with the absent Premier had been opened by telephone and cable, and the Western Premiers had secured reinforcing support for their demands from the railway executives and leaders of the financial and business world in eastern Canada, the Government gave an undertaking that if the price of wheat recedes below a certain level, which is probably 60 cents per bushel for No. 1 Northern (December), it will stand behind the banks to support the financial commitments to the wheat pools and thereby avert a policy of drastic liquidation of wheat stocks which the banks would otherwise be compelled to force. It is understood that the advances of the banks on wheat stocks average about 58½ cents per bushel, so that the margin of security remaining is perilously narrow.

The problem which confronts the pools and the leaders of the private grain trade in Western Canada, is the marketing of about 300 million bushels of Canadian grain at adequate prices in what is obviously a buyers' market. In a bulletin published last week, the Dominion Bureau of Statistics placed the total volume of the Canadian wheat crop for 1930 at 396 million bushels. There was a carry-over of June 31st of 112 million bushels, and up to the end of October only some 85 million bushels had been exported. Accordingly, on October 31st, there still remained for disposal a total of 423 million bushels. Seed, domestic consumption and unmerchantable grain will probably account for 110 million bushels, leaving a

Hungarian Supplement

Next week's issue of the ECONOMIST will include a Special Supplement containing signed articles by a number of prominent Hungarian Ministers, bankers and public men, surveying the financial, industrial and agricultural situation of Hungary.

net exportable surplus as on October 31st of 313 million bushels. The Bureau's statement derived some comfort from the fact that up to the middle of November the export outflow has been on a somewhat larger scale than it was a year ago, and that the present low price of wheat makes it possible for China to purchase considerable quantities. Thus there are hopes of improved markets in the Orient for low-grade wheat; and it also happens that the wheat suitable for the Oriental market is chiefly to be found in the northern and central regions of Alberta and Western Saskatchewan, which are the areas nearest to Vancouver and Prince Rupert, the sea-board outlets to the Orient.

There is, however, very little hope that grain prices are due to experience any substantial rise for some months, and meanwhile Western Canada has a desperately hard winter before it. The Statistical and Research Department of the central selling agency of the wheat pools last week issued a carefully prepared statement in which were presented facts and figures showing the abnormal decline in the price of farm products and the accompanying loss of purchasing power for the farming community. It estimated that the value of the wheat crop of Saskatchewan, the most important grain growing province, had shrunk from 255 million dollars in 1925 to 90 million dollars for the current year, and that the earning power for each acre sown to wheat in the province had declined from \$22.40 to \$6.92 in the same period. It also pointed out that while the gross returns per acre from wheat grown on Saskatchewan farms had fallen by 58 per cent., the index of the retail prices of goods which the farmer has to purchase had decreased only 3.6 per cent. from the level of 1926, and that therefore the Western farmers had been reduced to a position of grave economic disadvantage. Those farmers are counted lucky who have enough money to buy the bare necessities of life, and in certain areas where the crop either failed or still stands in the fields unthreshed owing to inclement weather, many farming families are faced with a state of destitution which calls for immediate relief.

There is a widespread demand among the farmers for a general moratorium on their debts, and in many places they have banded themselves together with mutual pledges not to make any offers for land or stock at foreclosure sales. All the banks have very large sums of money tied up in unsold stocks of wheat. They thought they were playing safe when they agreed to make advances to the wheat pools sufficient for an initial payment to their members on the basis of 60 cents per bushel for No. 1 Northern, but their calculations proved wrong, and they have since been compelled to make the pools reduce this initial payment to 50 cents. Again, practically every country storekeeper has on his books a heavy volume of debts which at the moment are uncollectable, and wholesale houses who supply goods on credit cannot get their accounts paid. Mortgage companies and farm implement firms are also unable to get their money, and one well-known oil company is said to have millions of dollars due to it from farmers for gasoline bills.

At intervals in the past it has happened that when hard times have descended upon the West, there has been talk about a secessionist movement whose aim would be to create a separate British Dominion out of

the western provinces and emancipate them from the domination of the industrial and financial interests of Eastern Canada. So far this idea has not found expression in any organised movement, but it is simmering far and wide, and unless something is done to help the West it might become serious. It is contended that the West would be much better off separated from the East; that it could utilise the new Hudson Bay route and the Pacific coast ports as outlets for its exports and bring in imports by the same channels; that it would be free to pursue a free trade or low-tariff policy; and that it could thus reduce the costs of agricultural production to a level which would enable it to compete successfully in international markets.

Thus Mr Bennett finds himself in a peculiarly embarrassing position. All his adult life he has been identified with the fortunes of Western Canada, and during the recent election campaign he denounced the King Government vigorously for a culpable neglect of the interests of Western Canada which had brought the price of wheat down to the scandalously low level of 85 cents. He also promised that if the western farmers would support his policy of higher protectionism he would use the Canadian tariff as an instrument "to blast a way for their produce into the markets of the world." Yet, at the special emergency session held in September, he used his Parliamentary majority to put through a measure of upward tariff revision which threatens to increase both the cost of living and production for the western farmers, and he also secured authority for substantial expenditures of money for the relief of urban unemployment. Mr Bennett had doubtless hoped that the Imperial Conference would have yielded him some fruits which he could claim to be beneficial to the agricultural communities of the West, but now he returns empty-handed from the Conference, as far as the western farmer is concerned—to face as pretty a peck of troubles as has ever confronted a Canadian premier.

Notes of the Week.

The Royal Commission at Last.—On Tuesday the House of Commons passed a supplementary estimate of £10 millions for "transitional" benefit under the unemployment insurance scheme, and on the same day the Prime Minister announced the composition of the Royal Commission which is to investigate the system and make recommendations for its reform. The coincidence serves to underline the urgency of the task which faces this new body, which, promised in the King's Speech in October, now at last comes into a belated existence. The chairman, whose appointment we welcomed a week ago, is Judge Holman Gregory, and his colleagues are to be the following:—Councillor Astbury (of Sheffield), Professor Henry Clay (the well-known economist), Mr H. J. W. Hetherington (Vice-Chancellor of Liverpool University), Mr E. C. P. Lascelles (deputy umpire under the Unemployment Insurance Acts), Mrs C. B. Rackham (a former Inspector of Factories), and Mr H. M. Trouncer (President of the Institute of Actuaries). On the whole it is a workmanlike body, on which a very wide range of knowledge and experience is represented, and the inquiry will be saved from the embarrassment of political controversy by the exclusion both of trade union leaders and of political protagonists of any party colour. Two reflections, however, leap to the mind. It is unfair, in the first place, to expect that the Commission will find any way of saving the Government from measures of reform whose application is as likely to be unpalatable to large numbers of their supporters, as their general character was obvious before this inquiry began. In the second place, it is no aspersion upon the capacity of the members of the Commission to suggest that, because their number does not include names of leaders familiar to the general public, their report, however practical and comprehensive, may

not be accorded by mass opinion the respect which would have attached to that of a more popularly impressive Commission, whose findings even a reluctant Government could not have afforded to disregard.

The Round Table Conference.—From the not very informative "news" which has been permitted to emerge from St. James's Palace, it is difficult to form a just appreciation of the progress which is being made by the Round Table Conference. The vexed question of communal electorates appears to have proved less readily susceptible of settlement than earlier optimistic forecasts suggested, and the very size of the Conference is not conducive to the rapid despatch of business. The real danger seems to be lest the delegates, both from British India and the States, should tend, in the necessarily difficult process of translating principles into practical working forms, to revert almost instinctively towards the *partis pris* of pre-Conference policies and attitudes. If we judge rightly the present temper of the Conference, the British Indian delegates seem inclined to allow their first newly-found enthusiasm for the federal principle to be weakened by reluctance to have the status of a Lower House in a bicameral system changed greatly from that of the existing Legislative Assembly, namely, that of a popularly elected body dealing primarily, if not exclusively, with matters of "common concern" to British India alone. We should be glad to think that the difficulties which such a form of constitution, given a supreme and really federal second chamber, would involve, are being squarely faced and thrashed out. Moreover, it remains to be seen whether the Princes, during these knotty negotiations in formal constitution-building, may not in their turn lose part of their initial willingness to participate actively in federalism here and now. Meanwhile, if it be correct, as reported, that many of the delegates have booked their passages back to India for the middle of January, time presses. We trust, however, that at all costs means will be found to prevent the Conference from breaking up or, as is more likely, dwindling away, until agreement on the general principles of a constitution has been reached. If the lack of understanding revealed in Mr Churchill's mischievous speech on Thursday represented the considered view of the Conservative party, the prospects of such an agreement would be remote; but fortunately there is reason for thinking that the majority of the party has no wish to play the part of the bull in a china shop.

Dr. Brüning's Victory.—Last Saturday the Reichstag rejected, by 292 votes against 254, a motion, supported by the "Nazis," the Nationalists and the Communists, to repeal President Hindenburg's decree of December 1st, in which the President enacted the financial and economic reforms announced by the Ministry on September 30th. Though the margin of 38 votes is not large, the victory is signal. For one thing, the decree which is now confirmed is a repetition of the July decree which the last Reichstag promptly repealed at the time. It was on that very account that the last Reichstag was dissolved; so that the President and the Chancellor have brought a majority of the Reichstag round from opposition to support of their policy—and this in spite of the drastic terms of the decree, the successes of the extremist parties in the general election, and the unfortunate turn which the course of international affairs has just taken at this session of the Preparatory Commission for the Disarmament Conference. The decree which has thus been endorsed by the Reichstag is drastic indeed. It reduces the salaries of national, State and municipal employees by 6 per cent.; sets the limit of the budgets for the next two financial years at a figure £50,000,000 lower than that of the current financial year; places a veto upon any further assistance, out of the Budget, to the unemployment insurance fund; and makes further increases in the Customs tariff. What considerations have induced the Reichstag and the nation to support the Government in taking such stern measures? No doubt, in the back-

ground of the German mind, the ultimate consideration is a resolve not to relapse into the conditions of 1923, when Germany was fainting under the triple scourge of inflation, an unsolved reparations problem and a foreign military occupation. There is, however, a more positive incentive than that. There is the Government's steadfastly maintained principle that financial reform at home is "the essential condition for any successful foreign policy." And this aspect of the matter was brought out in the debate last Saturday, when Herr Curtius intervened in it. The main objectives in the field of foreign policy which the Government will seek to attain, when the time comes, are genuine disarmament, genuine protection of minorities, and some reconsideration of the Young Plan settlement in the light of the general financial and economic situation of the world. Meanwhile, last Saturday, Herr Curtius delivered a crushing retort to a motion (passed by the Foreign Affairs Committee of the Reichstag at the instance of the "Nazis") for withholding ratification from the recent German-Polish liquidation agreement. The authors of the motion would be surprised, he told them, to know what the representatives of the German minority in Poland would say about their handiwork. That was a shrewd blow. In Dr. Brüning and his colleagues we have a German Government which means to make itself respected equally at home and abroad.

France Without a Cabinet.—On Thursday, December 4th, Monsieur Tardieu's Government fell on a question of confidence in the Senate, which went against the Government by eight votes (147 to 139). A week later, at the moment when we are going to press, successive efforts to form a new Government still remain fruitless. In France, of course, the fall of a Government does not entail a general election. General elections occur at fixed intervals. Accordingly, this last week's *impasse* tells us nothing about the state of French public opinion. We shall receive no light on that until the general election of 1932. The present ministerial crisis reflects merely the balance of parties within the Senate and the Chamber as it has stood for the last two years and is destined to stand for two years more. The deadlock, which is not yet resolved, arises from the fact that the Socialist-Radical group are strong enough to veto the inclusion in the new Ministry of an element to which they object—the group led by Monsieur Louis Marin—but are not strong enough to form the nucleus of an alternative Coalition Government of their own. Meanwhile, anyone who attempts to form a Government without the Socialist-Radicals must form it on much the same lines as Monsieur Tardieu's Government, which was defeated last week; and Monsieur Tardieu is making it a condition of his own co-operation that Monsieur Marin should be taken into partnership as well. This is the dilemma from which it has so far been found impossible to escape. The first attempt was made by Monsieur Barthou, who aimed at what is called "Republican Concentration." His first rebuff was received from Monsieur Poincaré, who is steadfast in his determination to hold aloof. Monsieur Barthou did secure the support of Monsieur Briand; but this did not avail him in the end. By Monday morning, he had to inform the President of the Republic, Monsieur Doumergue, that he had failed; and the President handed over the task to Monsieur Pierre Laval. Monsieur Laval undertook it, only to find that the contradiction between Monsieur Tardieu's conditions and the Socialist-Radical conditions had set hard. By the evening of Wednesday, Monsieur Laval in turn found himself obliged to report that he had failed as Monsieur Barthou had failed before him. And there, for the moment, the crisis stands.

The Moscow Trial's Finale.—At midnight on December 7th, the Court of the U.S.S.R., which has been trying the eight professors and technicians, passed its sentence. Five of the prisoners were condemned to death, and the other three to terms of ten years' imprisonment each. From these sentences there was no appeal. Adroit as ever, the stage-managers of this strange judicial farce waited until the whole daily Press of the capitalist world

The MERCANTILE BANK of INDIA

LIMITED.

Branches and Agencies throughout the East.

INTEREST ALLOWED ON DAILY CREDIT BALANCES.

had indited and published the appropriate leading articles. Thereupon, the Presidium of the Red Parliament of the U.S.S.R. exercised its prerogative of mercy by commuting the five death-sentences to terms of ten years' imprisonment with confiscation of property, and reducing the three other sentences from ten years' imprisonment to eight. It is the old story of the Chinese mandarin who sentenced his prisoner to be "shortened at both ends," and then allowed him to present himself for execution in boots with extra-thick heels and a hat with an extra-high crown, with the happy consequence that the execution of the sentence was as bloodless as it was correct. In Russia, as in China, this kind of judicial play-acting really seems to work. The tragic emotions of pity and terror which the Government desires, for its own political purposes, to keep alive in the hearts of the masses are duly evoked—and evoked, it appears, so effectively that the immense paraphernalia of the setting and the lengthy rigmarole of the proceedings are well rewarded from the Government's point of view. All this is very alien to the Western mind. We can only conclude that the Five Years' Plan has not been working out quite according to the time-table (it would be a hasty assumption to suppose that it is breaking down), and that the eight prisoners were forced to go into collusion with the Government and take the rôle of scapegoats upon themselves. Were they subjected to police-methods of the third degree? Or were they simply told that, if they placed themselves at the service of the management in this official play, their ultimate fate would be less unpleasant than if they obstinately pleaded "not guilty"? Meanwhile, at Westminster, Mr Henderson has had to stand a fire of parliamentary questions regarding the allegations against the British Government, which came out in the evidence at the trial, and also regarding the use of Russian wireless for anti-British propaganda. This is a very old story. The Soviet Government's excuses do not sound very convincing; the attacks upon the British Government for letting these Russian breaches of international decorum pass do not sound very sincere. The truth is that the Soviet Government is incorrigible, but that few people in this country genuinely want Anglo-Russian relations to be broken off again.

The Savoy "Free Zones."—The question of the Savoy "Free Zones" has been brought, once again, to public notice by an order which was given last Saturday by the Permanent Court of International Justice at The Hague in a public sitting. The issue is a dispute between Switzerland and France, which might be one of the standing dangers to the peace of Europe if the scene of action happened to lie rather further east. As it is, the affair is merely piquant; for in this little drama France, who, since the peace settlement, has constituted herself the champion of the sacrosanctity of treaties, appears in the "Nazi" rôle of a revisionist who resorts to *force majeure*. Geneva is a city almost surrounded by foreign territory at close range; and for centuries the city has enjoyed free trade with the surrounding countryside by treaty with whatever State has happened to be the local sovereign of the day. In the Treaty of Versailles, France secured the insertion of an Article declaring that she was entitled to suppress the "Free Zones" by agreement with the Swiss Government. Such a clause was a strange ingredient in

a peace treaty terminating a war in which Switzerland had not been a belligerent, and in which the issue of the "Free Zones" had not been raised. The sequel has been curious. In 1923 France, after failing to obtain Swiss consent to the suppression of the "Free Zones," simply suppressed them unilaterally by moving her Customs cordon up to the political frontier. Switzerland then demanded arbitration; but, though the necessary *compromis* was concluded between the two Governments in 1924, it was not ratified by France until 1928, with the result that the Hague Court did not render a judgment till 1929. The Court then decided in favour of Switzerland by 9 votes to 3, but gave the parties a term within which to settle the dispute by agreement before the judgment should come into force. This term was extended by the Court for the second time last Saturday, and the President of the Court is empowered to extend the term again if he deems this expedient. When, however, the term does run out, the Court will deliver a judgment which will either embody the agreement of the parties (if such agreement has been reached) or will be confined to the decision of the point of law. It will be interesting to see whether, in this event, France will maintain her unilateral revision of the treaty—a revision which she has carried through by force—when judgment has been given in Switzerland's favour.

British Ills and Remedies.—By his detachment as an Englishman whose position as director of the Economic Section of the League has given him an almost unique insight into the financial, industrial and commercial conditions in European countries, Sir Arthur Salter is well fitted to play the part of Britain's candid friend. On his observations with regard to the world depression, published by the *Times* this week, we comment in a leading article. His analysis, however, of the peculiar disabilities of this country, quite apart from the world situation, will repay careful study. The essence of his diagnosis is that the British economic system suffers more than that of competing countries from rigidity. Having been first in the industrial field we have passed from the pioneer to the hereditary stage; much of our plant is old and inefficient; our banking system, directed from five great offices "has neither the liquidity and external relation to industry of the pre-war banks, nor has it the positive and directive interest of the German tradition"; internal debt, fixed charges and taxation, all increased enormously in weight by the fall of commodity prices, are more burdensome than elsewhere, and wages and labour rules of employment are dangerously inelastic. This statement of the case should receive fairly general assent, but the remedy is less easy to prescribe; and here Sir Arthur's prescription is likely to occasion controversy. In bald outline he suggests that the "Big Five" banks should make greater use of their power as creditors to force through industrial re-organisation schemes by agreement among themselves on common policy; that the strain of fixed charges might be eased by some discrimination in tax methods against debenture interest, etc., as opposed to dividends on equity shares; that taxation payable by companies might be assessed not on calculated profits but on dividends alone; that retail prices should be lowered (here Sir Arthur gives no clear indication of the means proposed); and that wage earners should recognise that "if prices go on falling there must come a point at which, whatever the reforms in other directions, nominal wages can only be maintained at the expense of a quite impossible extension of unemployment." Sir Arthur's thesis invites examination, and debate at much greater length than we can give it here. This much, however, may be said. He has drawn attention cogently not only to the pressing need for importing into Britain's economic structure the power and adaptability which it now lamentably lacks, but also to a problem of which much more is likely to be heard, namely, how in the long run we are to persuade active workers of every category to accept for their services a lower return in terms of money, while the *rentier* is automatically enriched by every reduction in prices to which the producer, in the widest sense, is asked to accommodate himself.

The Commons and Economy.—On Tuesday evening in the House of Commons a motion was introduced by Sir John Davidson calling for stern exercise of public economy. Before Sir John had proceeded far with his indictment of public extravagance, which with Budget shadows approaching is surely the liveliest of live national issues, the debate was interrupted for lack of a quorum. The necessary forty members were collected—but not among them the Chancellor of the Exchequer, who watched from the doorway but did not enter the Chamber—but after Mr Brendan Bracken and one or two other speakers had developed the theme of the urgent need for retrenchment and indicted the Chancellor for indifference, the House was actually "counted out" and rose for the day. True, it was only a private member's motion that was before the House and not a full-dress debate upon expenditure policy. Nevertheless, it is more than a little unfortunate that the Chancellor in particular and members of all parties in general have given the country an impression of callous indifference to one of the most vital problems of the day.

November Foreign Trade.—The November overseas trade figures have recorded a distinct reaction from the recovery shown by the returns of the previous month. If the published November results be added to the charts published in the *Economist* of November 15th, it is difficult to escape the conclusion that the general trend of the curves is still downwards. When, however, allowance is made for the fact that November was not only a day shorter than October, but also contained five Sundays, the setback is not so serious as at first sight appears, and in fact exports of British goods per working day were slightly higher in November than in October.

MONTH OF NOVEMBER. (000's omitted.)					
	1930.	Increase or Decrease as compared with			
		November 1929.		November, 1928.	
Imports	£ 79,412	£ -28,823	% -26.6	£ -27,410	% -25.6
British exports	44,057	-19,067	-32.0	-19,709	-30.9
Re-exports	6,818	-1,383	-20.0	-3,985	-58.5
Total exports	50,905	-20,456	-28.7	-23,694	-31.8
Excess of imports over total exports	28,506	-8,367	-22.7	-3,716	-11.5

ELEVEN MONTHS ENDED NOVEMBER 30TH. (000's omitted.)					
	1930.	Increase or Decrease as compared with			
		1929.		1928.	
Imports	£ 955,181	£ -160,104	% -14.3	£ -140,314	% -12.8
British exports	532,094	-139,031	-20.7	-130,939	-19.7
Re-exports	81,736	-20,068	-19.7	-29,537	-26.5
Total exports	613,831	-159,099	-20.6	-160,476	-20.7
Excess of imports over total exports	341,350	-1,005	-0.3	+20,162	+6.4

Raw material imports at £16.5 millions for November show a drop of £1.6 millions below October and one of £13.5 below November last year. Owing to the simultaneous decline in re-export trade, the reductions in re-export figures quoted above. Exports are in many respects disappointing. Those of coal were 4,066,000 tons, or the worst since August; those of machinery 36,000 tons, or the worst for the year with the exception of August (also 36,000 tons) and September (30,000 tons); those of iron and steel were 204,000 tons, or the worst for the year except for September (201,000 tons); those of woollen tissues were 5,245,000 square yards, or the worst for the year with the single exception of April (5,000,000 square yards) when the labour dispute was in progress; and those of cotton piece-goods were 130,000,000 square yards, which was easily the lowest figure of the year. Exports of motor cars were up to the year's average, and actually

showed an improvement over October. Details for the first eleven months of the year are given below:—

	Total for Eleven Months.		
	1928.	1929.	1930.
Coal	45,870,791	55,278,600	50,632,504
Pig iron and ferro-alloys	407,314	505,502	297,867
Railway material	576,202	449,034	379,425
Total iron and steel	3,902,570	4,047,428	2,988,381
Textile machinery	115,463	117,921	85,990
Total machinery	519,144	518,776	446,720
Cotton yarns	156,051,000	152,147,500	125,063,600
Cotton piece-goods	3,576,093,500	3,398,127,200	2,276,612,500
Wool tops	318,874	307,610	264,203
Woollen tissues	120,182,000	100,341,700	74,121,200
Worsted tissues	38,079,000	43,714,400	32,107,500
Linen piece-goods	60,973,000	66,506,000	57,248,400
Boots and shoes	1,012,195	929,650	854,132
Leather	379,973	338,848	228,974
Paper and cardboard	4,174,594	4,649,407	4,002,762
Locomotives	37,122	36,449	48,243
Motor cars and chassis	29,491	39,237	27,509

The figures for November, unfortunately, give no ground for thinking that the October returns were the prelude to a recovery. The best that can be said for them is that the deficit on 1929 is rather less than that of recent months.

An American Bank Suspension.—On Thursday afternoon it was announced that the Bank of United States had closed its doors and that the State Examiner was holding an investigation. Our New York correspondent cables as follows:—The Bank of United States was formed in 1913 in a Hebrew shirt-waist-manufacturing district on the East side of New York, and traded on its name, which was intended to give the impression of some connection with the Government. This, of course, was not the case. The management in the last few years made the most of trade expansion and stock market enthusiasm to push its expansion; and by amalgamations with numerous other small Jewish banks, and the purchase of new sites, it finally became an important institution with 59 branches. Most of its business, however, was done in connection with the clothing industry. It also formed a security subsidiary called the Bankers' Corporation, which dealt in stocks and bought and sold the bank's shares. The break in the stock market in the autumn of 1929 was a severe blow, and started rumours of trouble. Efforts were made to overcome the difficulties for several months, finally culminating in merger negotiations with three other banks. These failed, however, the stumbling blocks being the character of the business, which was not the same as that of the other large commercial banks, and which the latter's officers were reluctant to undertake. The Bank was not a member of the Clearing House Association, which, nevertheless, since the intervention of the New York State Banking Department has agreed to lend 50 per cent. at 5 per cent. on net deposits to any depositor. The bank had a capital of \$25,250,000, a surplus and undivided profits of \$17,156,000, and gross deposits of \$202,972,000 held by 400,000 depositors. The bank had 59 branches and 23,000 stockholders and 1,884 employees. It is the largest bank ever to fail here and the first since the market break.

A Banker on the Depression.—In an article on a previous page we examine the views of Mr Lamont, Sir Arthur Salter and others on the causes of the present economic depression. On Tuesday a British banker, Viscount Churchill, chairman of the British Overseas Bank, made a contribution to this discussion in an interesting speech to the shareholders of that institution. After a clear and cohesive review of the world situation and the influences at work to produce it, Viscount Churchill summed up as follows:—"These, then, have been the difficulties of the international monetary situation. The inequable distribution of gold, due to economic forces not being allowed free play, and aggravated by tariffs, reparations and other such forces distorting the natural courses of trade, has led to deflation, disharmony between prices, and ultimately to a general loss of confidence and

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 Fleet Street, London, E.C.4 Estd. 1836

the dislocation of the entire world's trade." We commend to our readers' attention the full report of Viscount Churchill's speech, which appears on pages 1133 and 1134 of this issue. There they will find not only the reasonings, drawn from the Bank's first-hand experience of world economic forces, which lead up to the conclusion just quoted, but other striking points as well. Of these three which are perhaps of the closest topical interest are Viscount Churchill's defence of banking practice, his insistence on the necessity to lower costs of production, and his condemnation of the results of recent attempts at artificial restriction of the output of various commodities.

More Looms Per Weaver.—Important developments, writes our Manchester correspondent, have taken place in connection with the dispute between the Lancashire cotton weaving employers and the Amalgamated Operative Weavers' Association with regard to the more looms per weaver system. The Cotton Spinners' and Manufacturers' Association has decided to give one month's notice to the trade union of their intention to bring the new piece price list rates of wages into operation as from January 5th next. The employers, in their letter to the Secretary of the Weavers' Amalgamation, point out that it has been proved to their satisfaction that the system would result in a reduction of costs, while the proposals provide for a considerably higher individual wage. The position was considered at a meeting of the Central Committee of the Weavers' Amalgamation on Tuesday last. It is understood that arrangements were made to ascertain the opinions of the branches, and the whole matter will come up for discussion at a meeting of the General Council to take place in Manchester on December 20th. The Weavers' Amalgamation has issued a manifesto in which it is stated: "The changes in the methods of weaving that the employers are proposing to operate throughout the whole of their mills have brought us face to face with what is one of the greatest problems in the history of the Amalgamation. We have no precise information where the system and the list will operate, as it makes each individual employer into a list-maker and a price-maker, and this will probably lead to chaotic and disastrous conditions in the trade. The General Council realises that this new system will of necessity impose increased physical and mental strain upon the members retained as weavers. We believe there should be provided within this system a full-back wage by which the standards of yarn can be safeguarded and a maximum wage below which the operatives should not be paid whilst remaining on the employers' premises a full working week." There is undoubtedly much difference of opinion as to the savings which can be effected by this system of working. Mr Thomas Ashurst, the Secretary of the Cotton Spinners' and Manufacturers' Association, has stated that putting weavers on eight looms will reduce the wage cost by at least 20 per cent. On the other hand, Mr Naesmith, the trade union Secretary, says that the cost of producing a plain grey cloth will not be reduced more than 2½ to 3 per cent. It is recognised that the leaders of the operatives have injured their cause by refusing to enter into negotiations with the employers. A large number of manufacturers are determined to establish this new system, and under some terms and conditions it will certainly come into operation. The position is complicated and a way out of the difficulty may not be easily found. It is understood that Sir Horace

Wilson, the Chief Industrial Adviser to the Government, is keeping in close touch with the situation. During the last fortnight Sir Horace has had discussions with the different sections of cloth manufacturers in Lancashire, and it is understood that the chief object has been to ascertain the view of manufacturers with regard to big-scale amalgamations. It is reported, however, that he has met with very little encouragement in this connection. The weaving branch of the Lancashire cotton industry is largely carried on by private firms and, although the trade has felt the recent depression very severely, numerous concerns are weathering the storm remarkably well, and there is a strong disposition against submerging their individuality.

Cotton Supplies and Prices.—On Monday last the United States Department of Agriculture published further statistics relating to the cotton crop for this season. The estimated yield was revised to 14,243,000 bales, against 14,438,000 bales a month earlier. The crop for last season was 14,828,000 bales. It was announced that up to the end of November 12,835,000 bales had been ginned, against 11,962,000 bales a fortnight earlier, and 12,853,000 bales at the same date last year. The yield per acre, at 150.8 lb., is disappointing and compares with 153.2 lb. a month ago and 155.0 lb. for last season. These figures were below the expectations of the market, but the slight advance in prices was soon lost. Leading authorities, writes our Manchester correspondent, are of opinion that the world consumption of American cotton this season will not be much more than 11,000,000 bales, and there is a probability of a carry-over next July of about 9,000,000 bales. A new low level of prices has been reached in the Liverpool market this week. On Tuesday January American futures were quoted at 5.37d., and for such a low level of values it is necessary to go back 15 years. The slump in prices for Egyptian cotton during the last week or two has also been important. On November 1st the quotation for Fully Good Fair Sakellaridis on the spot in Liverpool was 9.90d., but on Tuesday last the figure was 7.85d. There has been heavy selling in Alexandria and rumours of dissensions in the Government with regard to future policy have caused a very unsettled feeling to prevail. The raw cotton situation is causing much uneasiness in Lancashire trade circles, and is having a depressing effect. Buyers are afraid to operate, and it is recognised that the depreciation in values will be a serious matter for firms that take stock at the end of the year.

The Rayon Industry.—The almost world-wide setback to trade at the end of 1929 did not leave the rayon industry unaffected. The following table shows the production of rayon yarn in the United Kingdom and in various other countries, with an estimate of world production and consumption:—

RAYON PRODUCTION.						
Thousand lbs. (excluding waste).						
Period.	U.K.	Other European Countries (Belgium, France, Germany, Holland, Italy, Switzerland).	U.S.A.	Japan.	World.	
					Production.	Consumption.
					Total.	British proportion of Total.
1927, Quarterly average	9,699	32,085	18,762	2,001	66,717	14.5
1928, Do.	13,011	40,752	24,663	3,000	86,751	15.0
1929, Do.	13,275	47,064	30,534	4,500	100,791	13.2
1930, 1st quarter	12,283	50,166	29,841	4,511	102,923	11.9
1930, 2nd quarter	10,945	45,562	27,359	8,690	98,010	11.2
1930, 3rd quarter	12,242	45,586	27,240	8,270	98,697	12.4
						%
						68,751
						81,999
						99,624
						98,947
						94,450
						97,942

It will be seen that world consumption began to fall off early this year, reaching its lowest level in the second quarter. Although production was reduced in most countries, it continued in excess of demand until the third quarter. This resulted in the accumulation of considerable stocks of unsold yarn, with a depressing influence on

prices. During the past quarter, however, a slight seasonal increase in demand brought consumption more into line with the reduced level of production. France and Japan have been the only countries in which production continued to increase since January last; but the latter is experiencing increasing difficulties in disposing of its current output. The outstanding feature of the British rayon industry is the continuous decline in its proportion of the world's output since 1928. It fell from 15 per cent. in 1928 to 13.2 per cent. in 1929, and the average for January-September this year was under 12 per cent. The sharp contraction in the home market for rayon, which began at the end of last year, was promptly met by a curtailment in output, not drastic enough, however, to keep pace with the decline in demand. As will be seen from the table below, imports into this country have become almost negligible, while exports in volume under 20 per cent. of the total output, have declined by 17 per cent., as compared with the 1929 average:—

BRITISH RAYON.						
Thousand lbs. (including waste).						
Period.	Estimated Production of Rayon Yarn and Waste.	Quantity on which Excise Duty has been Paid.	Trade.		Estimated Consumption.	Stocks Increase (+) or Decrease (-).
			Imports.	Exports.		
1928, Quarterly average	13,560	13,146	651	2,883	10,917	+ 414
1929, Do.	14,226	14,130	417	2,433	12,114	+ 96
1930 1st quarter	12,810	11,409	101	2,294	9,216	+ 1,401
1930 2nd quarter	11,350	11,148	188	2,261	9,075	+ 202
1930 3rd quarter	12,730	13,005	201	2,020	11,186	- 275

Although there has been a seasonal increase in consumption during the past quarter, the immediate outlook for the rayon industry in this country and in the world as a whole is none too encouraging. In fact, world production and consumption for the current year will probably be on a lower level than in 1929. Moreover, writes a correspondent, it is to be feared that even yet the price position is unstable. Though further cuts would result in uneconomic working, they are certainly as likely as any increase. During the last week the Ministry of Labour have issued for the first time separate unemployment figures for the rayon yarn producing industry. From these it would appear that the percentage unemployed at October 27th was 27.7, or fractionally below the September figure, though much larger than that for July. During recent months there has been a great increase in efficiency of production—the number of workers per machine being reduced, but the effect upon employment cannot, in total, be very marked.

The Coal Mines.—As we recorded a week ago, last-minute efforts have succeeded in averting, for the moment, a national dispute in the coal-mining industry; and these efforts came to final fruition on Saturday, when the Scottish miners agreed to return to work for the time being on temporary "spread-over" terms, the gist of which is that wages remain the same as in November and the employers give an undertaking that not more than eleven days of eight hours shall be worked in any fortnight. Thus, in Scotland, as in South Wales and other districts, there is a truce, but it would be a grave error to mistake a truce for a settlement. A real settlement has still to be reached, and much work remains to be done, and much common sense and accommodation to be exercised on both sides, before terms are agreed which will carry the industry peacefully over coming months, and particularly the fateful date next July, when the Act of 1926 is due to expire, reducing legal hours from 7½ to 7 per day. To no small extent the success with which the industry will solve its internal problems will depend upon the work of the Coal Mines Reorganisation Commission appointed under Section 11 of the Act of 1930, the constitution of which was announced from 10, Downing Street on Tuesday. The Chairman is to be Sir Ernest Gowers, who was Permanent Under-Secretary for Mines from 1920 to 1927, who will have as his colleagues Mr Lawrence Holt, Mr Joseph

Jones, Sir Felix Pole, and Sir William Whyte. The purpose of the Commission is "to promote and assist by the preparation of schemes and otherwise the amalgamation of undertakings consisting of or comprising coal mines where such amalgamations appear to the Commission to be in the national interest." The Commission has power to prepare and submit a scheme to the Board of Trade. At the same time the Central Council administering the Central Coal Mines Scheme has appointed a panel of arbitrators to settle disputes between coalfields as to allocation of quotas. Between now and next July it may be possible to have a clearer idea how the machinery which the Act of 1930 set up is going to work.

Shipping Freight Index Number.—A further downward movement in whole-cargo chartering rates occurred in November, our index number recording a fall of 3 per cent., as compared with the previous month.

AVERAGE 1898-1913=100.

	Average, 1913.	Nov., 1929.	Sept., 1930.	Oct., 1930.	Nov., 1930.
European Waters	110.0	124.9	87.3	91.1	89.5
North America	113.1	96.9	91.2	85.6	85.0
South America	123.4	97.6	95.7	93.3	90.4
India	106.3	110.7	103.0	101.3	99.8
Far East and Pacific	117.4	91.6	89.2	85.2	81.0
Australia	127.9	94.4	117.5	113.9	107.7
Total	116.3	102.7	97.3	95.1	92.2

Outward coal freights were generally weak, and though homeward quotations from India were nominally firmer on the shortage of immediately available tonnage at Bombay, the one really encouraging feature in homeward business was the recovery late in the month of freights from the Plate, as a result of better inquiry for maize. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	81.0	- 0.4	South America—outwards	83.4	-11.2
Bay—outwards	106.4	- 3.7	South America—homewards	97.4	+ 5.3
Bay—homewards	96.8	...	India—outwards	109.5	+ 10.5
Mediterranean—outwards	80.6	- 3.2	India—homewards	90.2	+ 7.5
Mediterranean—homewards	91.3	- 2.1	Far East, &c.	81.0	- 4.2
North America	85.0	- 0.6	Australia	107.7	- 6.2

Expressed as a percentage of the average for 1913, the total figure of our index number for November works out at 79.3, as compared with 81.7 in October and 88.3 a year ago.

Sugar Restriction.—After a temporary breakdown, owing to the Java delegates' unwillingness to accept the Cuban proposal for a joint commission to ascertain what annual increase in Java's export quota would be justified by Eastern market conditions, a sugar agreement was suddenly reached last Monday. The Java producers have been conceded their demand for a cumulative addition of 100,000 tons yearly, during 1932-35, to their export quota, which is to be 2,300,000 tons in 1931. In return, Cuba will restrict her output during the next five years to 3,570,000 tons. It is hoped that this will be the foundation for an international agreement of wider scope, and both the Cuban American and the V.I.S.P. delegation have proceeded to Brussels, where the Sugar Conference is now in session. The European countries represented at the Conference are Germany, Poland, Czechoslovakia, Belgium, and Hungary, and three committees have already been appointed to discuss restriction in general, stocks and statistics respectively. Questions of prices and markets do not figure on the agenda of the Conference, but the projects to be considered include diminution of the area of cultivation in Europe, less intensive cutting of canes overseas, and the warehousing and marketing of existing stocks.

Germany's Foreign Debt.—Our Berlin correspondent writes:—The Federal Bureau of Statistics has undertaken for the first time an inquiry into German foreign debt. Although it was known that this debt was very great, the result of the inquiry caused surprise. Short-period foreign debt alone is estimated by the Bureau at Rm. 10.8 milliards, of which 8.6 milliards (as at the end of 1929) were attributable to the banks. In the third quarter of the current year it may be assumed that there was a substantial reduction of some 300 millions in the foreign indebtedness of the banks. The holdings of foreigners in Germany are estimated at 26.1 to 27.1 milliards. Apart from the short-term debt, this includes 8.5 milliards of long-term loans. To this must be added about 800 millions of German fixed-interest securities in foreign ownership, about four milliards of foreign branches and shares, and two milliards German land owned by foreigners. The development of foreign indebtedness in the last four years has been very significant. The short-term foreign debt of the German banks was as follows:—

SHORT-TERM FOREIGN BANK DEBT AT DECEMBER 31st.

(In Million Reichsmarks).				
1926.	1927.	1928.	1929.	
3,472	5,710	7,618	8,604	

During the same period the short-term foreign debt of public corporations has risen from 200 to 500 million. The growth of long-term foreign debt has followed a similar course, as is shown by the table below:—

FOREIGN LONG-TERM DEBT AT DECEMBER 31st.

(In million Reichsmarks.)

	982 2,224 3,672 4,923 6,242 6,471 8,292									

The first item in the table includes, at each of the last four dates, 189 millions bank indebtedness. Against the 26-27 milliards of foreign holdings in Germany must be set German foreign holdings of 8.8-10.8 milliards, of which 4.8-5.8 are short loans, three-quarters to one milliard fixed-interest securities and 3¼ to 4 milliards shares in foreign undertakings and miscellaneous invest-

ments. The foreign investments of German banks have been as follows during the last four years:—

	1926.	1927.	1928.	1929.
(Milliard Reichsmarks).				
Foreign assets of the German banks	2.7	2.7	3.8	4.5
Of which Reichsbank foreign exchange holdings	1.0	0.5	0.5	0.8

When foreign holdings and foreign debt are set off against each other the balance of indebtedness is reduced to 16.3-17.3 milliards, of which 6 millions are short and 10.3 to 11.3 long-term debt. The interest burden which this lays upon Germany's annual balance of payments amounts to about 1 to 1.2 milliards.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during November amounted to 884,753 ozs. of fine gold, as compared with 926,561 ozs. produced during October. In November, 1929, the output amounted to 861,593 ozs. of fine gold. The following table shows the monthly output since the beginning of 1924:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	796,768	823,692	796,270	839,782	843,857	876,452	882,801
February ...	760,617	753,925	753,924	779,339	816,133	815,284	818,188
March	795,671	825,479	834,340	860,511	877,380	866,529	889,370

Business Conditions—Railroad Difficulties—Presidential Message—Finance.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 3.

WHILE the surface has been ruffled by the convening of Congress and the forecast of Governmental expenditures and taxation contained in the Presidential Message, no real change in the business situation has taken place. Retail trade is holding up well because of the holiday buying, but production of raw materials, manufacture and distribution have declined further. In most instances the decreases have been more than seasonal. Steel production has fallen to beneath 40 per cent. of capacity, although some hope is pinned to the action of the leading companies in announcing an increase in prices of \$1 a ton for certain products for the first quarter of 1931. The stand is taken that more business is likely to be stirred up in that way than by further price-cutting. However, this action emphasises the fact that present prices are unprofitable and that demand is slow.

Oil production is declining, but stocks of crude are still mounting, although all oils are lower. There is no great sympathy with Sir Henri Deterding's proposal that prices be raised by the leading companies. For one thing, con-

certed action here would clearly be illegal; for another, the enormous stocks and moderate demand do not warrant a price rise. Copper prices are slightly firmer, but the higher quotation looks artificial. It will at least have the effect of improving the inventory position of companies at the year end. Commodity prices in general lost ground in November. Dun's index dropped 1.3 per cent., compared with a decline of 1.8 per cent. in the previous month.

The decline in railroad traffic continues. Weekly freight-car loadings during November were the lowest for any similar period since 1921, and the recession from the previous month was considerably more than seasonal. In spite of efforts to reduce operating expenses the railroads reported for October a drop of approximately 27 per cent. in net income as compared with 1929. In all probability, the showing will be even worse for November. Many of the weaker roads and several of the stronger ones are not earning their dividends, though reductions in dividends have not been numerous.

The darker outlook for railroad securities on account of the poor year's traffic has brought to the fore questions which were kept in the background during recent prosperous years. These are the steady whittling away of freight traffics by the Interstate Commerce Commission, the matter of consolidations, and, more especially, growing competition from motor passenger bus, motor truck, oil company pipe lines, airways and coastal shipping through the Panama Canal. In a recent report the Association of Railway Executives has called upon Congress for legislation designed to remedy some of these ills. It asks (1) for a respite from rate reductions, (2) withdrawal of Government-operated transportation, (3) a fairly comparable system of regulation for competing transportation service by water and on the highways. The report estimates an increase in railroad freight traffic from 1920 to 1929 of less than 1 per cent. annually, against a rise of 7 per cent. a year in the thirty-year period 1890-1920. Passenger traffic, after gaining steadily to 1920, has since then dropped 3 per cent. a year. Motor buses in operation have since 1920 increased 825 per cent. Panama Canal tonnage has risen 637 per cent. Inland waterway traffic has increased 93.5 per cent. Railroad competition, the report says, has also come from oil pipe lines, high-power electric lines and natural gas pipe lines, which cut into coal traffic. Meanwhile railroad executives announce that they will no longer submit meekly to adverse legislative efforts, and a spokesman for the Association declared that the railroads were now facing the most serious crisis since the passage of the Transportation Act in 1920.

A somewhat more cheerful view is taken by the Interstate Commerce Commission in its annual report, just submitted to Congress. The Commission notes that "financial difficulty confronts the railroads" as a result of competition from other forms of transportation, that "passenger revenue of 1929 was over 414 millions less than that of 1920." It admits that freight revenue was 498 millions greater, but states that the prospect is darkened by competition from water lines, pipe lines and trucks. "However," the Commission concludes, "the country still needs its railways and can support them. With the traffic of 1929, the railways were as a whole enjoying a comfortable degree of prosperity, even though they did not reach the full return upon their property which we think would be reasonable. Fortunately for their financial position, their capitalisation in recent years has not kept pace with their investment, and the relation of their net income, after interest charges and all taxes, to their capital stock was never better in their history than it was in 1929."

In his Message to Congress President Hoover insisted that railroad consolidations were desirable, and that additional legislation was needed in order to provide for them. Whether anything can be expected of Congress is rather doubtful, but sooner or later something will undoubtedly be done to provide better regulation of competing forms of transportation.

On the whole, President Hoover's Message was well liked by the financial community. He has proposed

elimination of the capital gains tax and asks Congress to consider revision of the Sherman anti-trust law, although he does not favour repeal. This law was passed forty years ago, since when conditions have greatly changed. President Hoover would have revision with the idea of making possible such agreements on production in the important industries as would conserve the country's natural resources. He is believed to have had in mind particularly the coal, petroleum and copper industries.

President Hoover asked Congress for a special appropriation of 100 to 150 millions to spend on public projects with the sole idea of relieving unemployment. This, with other appropriations passed or pending, would bring governmental expenditures for public works to 650 millions over the next twelve months. Still, the President admitted that "economic depression cannot be cured by legislative action or executive pronouncement." Wall Street regarded that as a sound economic gospel, but was less in accord with his assertion that "the major forces of depression now lie outside the United States" and that "we will overcome world influences."

The country was not particularly cheered by the President's estimate of a deficit of 180 millions for the fiscal year ending June 30th next and the recommendation of higher income taxes which would restore rates to the 1929 level. The really large deficit will, of course, be shown in the following fiscal year, unless stronger measures are taken to cut expenditure and unless new ways are found to produce revenue.

The Treasury will shortly announce a new certificate or note issue to meet maturities of 585 millions on December 15th. It will also have a bill maturity to meet. Tax collections are estimated at 475 millions for the fourth quarter. Recently the Treasury announced a cut of $\frac{1}{2}$ per cent. in the interest rate which it demands of banks holding Government deposits. The lower interest rate will insure subscription, as usual, on the basis of Government deposits, the operation being one whereby the subscribing bank merely credits the Treasury with a deposit balance of the amount of its subscription, which is drawn out as needed by the Treasury. It is also likely that the reduction in rate will enable the Treasury to borrow at a lower charge, and the coupon may be around 2 per cent. or under.

FRANCE.

Politics — Disarmament — Gold — Coal Production — Canal du Nord.

(FROM OUR CORRESPONDENT.)

PARIS, December 10.

THE fall of the Tardieu Cabinet last Thursday, by a narrow adverse majority in the Senate, was symptomatic of the incoherent situation brought about in the French political world by many months of sterile party warfare. There is no serious difference of opinion between the governmental majority and the Opposition on any of the vital questions concerning either foreign or domestic policy—so much so, in fact, that the Opposition has for months past lost no opportunity of taunting the Ministry with having actually put into operation as their own a programme of legislation that was originally drafted with the help of their present opponents. This charge is well-founded, and for the simple reason that the Tardieu Cabinet, since its advent, has consistently continued, in regard to both foreign and domestic affairs, the policy followed by its predecessors, under M. Poincaré and M. Briand successively, which policy was being either continued or further developed while MM. Herriot, Sarraut and other Socialistic Radicals were still actively co-operating as Ministers with the Government of the day, and the Radical Socialist Party formed an integral part of the majority in both Houses.

The whole present trouble is due to the fact that the Radical Socialist Party, as a whole, is still dominated by a majority among its rank and file in the constitu-

encies, who regard anti-clericalism as the vitally important plank in the party platform. It was this large section which passed the historic resolution at their Angers Conference, two years ago, which compelled MM. Herriot, Sarraut and two others of the Party to resign the important posts which they had held for over two years in the penultimate Poincaré Cabinet, as Ministers for Education, the Interior, Agriculture and the Colonies. The leaders of the recast Poincaré Ministry that followed, and of the two Tardieu Cabinets since, have always given proof of their conviction that no stable majority is likely to be constituted unless led by a "Government of Broad Republican Concentration," and have repeatedly manifested their anxiety that M. Herriot and his friends should resume co-operation with them. Until less than a month ago the return of the Radical leaders to the Cabinet seemed possible, and almost probable. Since their victory in the Senate, however, this hope has faded. The Radical objection to renew co-operation in a Cabinet including the Marin or Union Nationalist Party, has now extended to excluding M. Tardieu personally. The efforts, first of M. Barthou and then of M. Laval, to form a Ministry of the kind which everybody regards as necessary have so far, for this reason, been abortive, and down to a late hour to-night the country was still without a Cabinet.

M. Tardieu's argument is that, after all, the majority returned at the last elections, though small, still exists intact, and that the Radicals, although the largest individual Party in the Chamber, scored a defeat in the voting of two years ago, and can have no valid claim to dictate to the *de facto* majority in the popular House, whatever the situation in the Senate may be. To-night, dissolution of the Chamber and a general election is being suggested as the only satisfactory solution of the apparent deadlock. Meanwhile, the shadow of the revelations that are expected to result from the sittings of the Oustric Committee, in regard to the participation of politicians in financial operations, weighs heavily on all Parties.

A remarkable sidelight on the question of the French attitude towards disarmament has been afforded by a statement made in the Chamber by the War Minister, M. Maginot, a few hours before the Cabinet fell. The Minister, in reply to Socialist criticisms, stated that the national defence problem has now been complicated by the fact that, owing to the serious drop in the birth-rate during the four war years, the annual contingent of conscripts to be called on to join the colours each year, as from 1935, will be only 140,000, instead of the normal 250,000. It is hinted that, unless some satisfactory general decision be come to as to the reduction of military forces by the countries concerned, France may find it necessary to modify the present one-year's service system, in order to maintain her forces at what her leaders consider to be the requisite strength.

Attention is closely focussed here on the controversy concerning the continued flow of gold to France, and a good deal of bitterness is being expressed in regard to what M. René Théry terms the "keen campaign that has been carried on against France for some months past in certain foreign political and financial circles, accusing her of systematically attracting gold to herself and thus aggravating the general economic crisis." The French case is that this country is the prisoner of the gold standard, like those who have been or are suffering from the outward drain. All experts here agree that the continuance of gold movements to France is by no means a benefit, but quite the contrary, and that none of the various suggested remedies could in the nature of things be effective, while most of them must inevitably create still greater difficulties than those existing. The proposal that the French discount rate (which has stood at $2\frac{1}{2}$ per cent. for some time) should be reduced still further would be both difficult and dangerous, it is argued, and would risk producing inflation that would have serious consequences. The political situation and the general economic unsettlement, further, would prevent any attempt more or less officially to organise French investments abroad, while the suggestion that this country should foster movement of French capital to other countries finds no support. It is being pointed out that if

France has increased her stock of gold by some 9,712 million francs since 1929, America has acquired an additional 8,273 millions, while Great Britain, Germany, Italy, Belgium and Switzerland have also increased their holdings. M. Théry bases his hopes of a solution of the difficulty on the Financial Committee of the League of Nations.

Coal production figures for October indicate a total output during the month of 4,784,680 tons (with 750 more labour units engaged), against 4,603,396 tons in September (26 working days in each case), and monthly averages of 4,577,000 tons in 1929 and 4,369,000 tons in 1928. To these should be added 2,036,722 tons of coal and lignite from the Saar area, which entries are regarded as in fact, if not in principle, forming part of the national output of combustibles. The average daily output from the French pits, which was 177,054 tons in September, was in October 184,026 tons, against 184,120 tons in October, 1929. Imports of coal included 1,091,271 tons from Great Britain (against 1,030,283 tons in September), which was closely equivalent to the average monthly tonnage of ordinary coal alone that has been drawn from the Saar for over three years past. Imports from Germany were 414,882 tons (against 424,435 tons in September), this forming part of German reparation payments in kind. The total amount of coal (including lignite) placed at the disposal of consumers during the month was 6,500,000 tons, against 6,250,000 tons in September. None of the October figures concerning either coal or coke suggest any decline in industrial activity.

The rapidly growing imports of British and other foreign coal has just drawn a strong appeal from a deputy—speaking in the Chamber on behalf of the Marin Nationalist group—for the speedy taking in hand of the completion of the Canal du Nord, begun before the war, which would furnish direct means for the transport of combustibles from the northern coalfield to the metropolitan industrial area. The northern mines, it was stated, are now producing 33,000,000 tons a year, or two-thirds of the total national output. Of this, 12,000,000 tons are absorbed in the northern industrial area, 7,000,000 tons in the Paris area and in the Rouen and Havre districts, 5,000,000 tons in the east and 3,000,000 tons by the P.L.M., Orleans and State railways. The total consumption in the Rouen, Havre and Paris area, however, is 14,000,000 tons, so that apparently 7,000,000 tons are furnished there by British and other importers. In 1929, in fact, British importers increased their tonnage in France by 5,000,000 tons, Havre and Rouen alone absorbing 2,200,000 tons more than in 1928, while the French northern pits sent only an additional 100,000 tons into that region. If better transport facilities were provided, by the completion of the Canal du Nord, the northern mines would, according to the speaker, in a few years be producing 40,000,000 tons a year, and would be able in case of war to increase their output to 50,000,000 tons, and thus—if adequate transport facilities were available—render the country independent of foreign supplies. It is now hoped that completion of the canal may be taken in hand as part of the comprehensive plan, now before the Chamber, for the improvement of the national economic equipment.

GERMANY.

Electrical Companies' Amalgamation — Politics — Foreign Policy — Agricultural Protection.

(FROM OUR CORRESPONDENT.)

BERLIN, December 9.

ONE of the biggest industrial transactions of the year has just taken place, quite unexpectedly. The Rheinisch-Westfälisches Elektrizitätswerk has acquired the control of the Vereinigte Elektrizitätswerk Westfalen. The R.W.E., with an annual sale of current amounting to 8,000 million k.w.h., is the largest public utility undertaking on the Continent, but the other Westphalian company, with a yearly sale of 600 million k.w.h., catered

for an important section of the West German market and has hitherto always rejected the idea of a unification. It is now, however, obliged to give up its independence, chiefly because large extensions and acquisitions were financed last year by short credits, and it has not been possible to consolidate them in the present unfavourable condition of the international capital market.

In the summer of this year an international consortium, under the leadership of the D.D. Bank and of Harris Forbes, of New York, promised the Vereinigte Elektrizitätswerk Westfalen to take over Rm. 60 millions of preference shares and \$10 millions of loans, but the transaction could not be immediately completed, and to this difficulty others were recently added in the shape of unsuccessful stock exchange operations by certain of the directors on the company's account, which very seriously damaged the company's credit.

The R.W.E. is securing control on very favourable terms. It has agreed to the exchange of Westphalian shares for R.W.E. shares in the ratio of 6 to 4 in favour of the R.W.E. and to a dividend guarantee in the same proportion. The R.W.E. is now capitalised with Rm. 240 millions in shares and Rm. 280 millions of American loans; only Rm. 40 millions of new shares are necessary for the taking over of the whole Westphalian undertaking. The unification of the market should enable the R.W.E. to effect great economies.

The Brüning Cabinet has achieved a new victory in the Reichstag, where the motion of the National Socialists and German Nationalists for the revocation of the presidential decrees was rejected by a majority of 40. The Social Democrats supported the Government and very few of them abstained from voting. On the other hand, the Government has lost the support of a party which has hitherto been represented in the Cabinet. The Economic Party has gone over to the Opposition and has withdrawn from the Cabinet its representative, Dr Brecht, who was the Minister of Justice. The so-called "Christian Social People's Service" voted with the Government. Of the agrarian groups, the Government has only won over the German Peasant Party, which, in contrast to the much larger Land League, is republican in principle. The last elections have had the ominous result of making the Government dependent for the time being on the small groups of the Moderate Right to a degree which makes the conduct of government extraordinarily difficult. It was for precisely that reason that the Cabinet had recourse to the method of emergency decree; if it had had to discuss details with every separate group it would never have achieved anything.

The victory is undeniably a well-deserved reward for the Chancellor, who has carried through with skill and patience the whole difficult business of securing the necessary support from the fragmentary groups to the right of the German People's Party without losing the support of the Socialists, who were his strongest bulwark. The task was made more difficult, too, by the fact that the emergency decree cuts very deeply into the former rights of the States. The Bavarian People's Party, which is bound closely to the Chancellor's party by its Catholic viewpoint, and is in other respects a reliable auxiliary of the Government, wanted to oppose at the last moment because it saw in the decree, perhaps not wholly without justification, a "centralist" tendency. In the end, however, they contented themselves with a protest which they will perhaps carry before the courts, and voted, on general political grounds, with the Government.

The Brüning Cabinet will now have another battle to fight. It will have to defend its foreign policy. The German Nationalists and the National Socialists are demanding that Germany assert herself very definitely on both the disarmament and the reparation questions. They demand that the Polish-German liquidation agreement and the Polish-German trade treaty shall not be put into effect, and there are proposals that Germany should resign from the League of Nations. There is no doubt that the failure of the disarmament discussions, the oppressive burden of reparations, and the Polish excesses against the German minority have brought very large

sections of the population into a frame of mind in which they would feel it a relief if the German Government would bang its fist on the table at an international conference.

Everybody in Germany is fundamentally convinced that this sentiment is justified. It is very difficult to make any headway with rational arguments against the resentment of a people which was made to disarm in order to get disarmament started and then finds that nobody else has any intention of taking the further steps. When a peace treaty is openly admitted to be a dictate of the victor, it augurs ill for world peace. But when the fiat of the conqueror is disguised as a moral judgment or as a measure for the general betterment of mankind and subsequently stands revealed as nothing but the will of the stronger, that is far worse. Such an abuse constitutes the greatest danger to the idea of the community of nations and of international justice. That is the psychological condition of Germany at present and when the Government defend their foreign policy their most dangerous opponent will not be the propagandist nationalism of Hitler and Hugenberg but the spontaneous indignation of the people themselves at the injustice they have suffered.

The inevitability of such inward rebellion does not, it is true, alter the fact that it is at this moment a bitter necessity for Germany to pursue a moderate foreign policy. The Foreign Minister and the Chancellor must do their utmost to prevent the Reichstag from demanding any departure from the Stresemann policy which Herr Curtius himself has continued. In pursuing this course Herr Curtius will have difficulty with the right wing of his own party, the German People's Party.

A particularly important provision among the taxation clauses of the emergency decree is that according to which farmers having an income not exceeding 6,000 marks will be liable to land tax but not to the general income tax. The measures for the protection of agriculture include one which is entirely new in principle: a high duty has been imposed on bran. This is the first time that any kind of dairy fodder has been subject to duty. Hitherto only swine fodder had been taxed, on the ground that it competed with the surplus of native-grown potatoes and barley. This duty on bran will make competition with Denmark and Holland very difficult indeed for those butter producers who are not also corn-growers. Moreover, milk production is by far the most important branch of agriculture in Germany, and the Government only recently made great sacrifices in the Finnish trade treaty in the hope of protecting German butter producers. The bran duty was, however, very difficult to avoid if the corn protection measures were to be carried. The decree requires millers to handle a small quantity of rye so that there is an increased output of bran, and without the duty bran prices might have been so depressed that all advantage to the producers of grain would have been neutralised.

The Government has also undertaken a very considerable degree of interference with the consumer in favour of agriculture. Pure wheaten bread may in future only be produced for household use, not for restaurants and hotels, and the baking of larger loaves of wheaten bread without an admixture of rye is prohibited. The margarine industry may in future be compelled to use a prescribed quantity of German fat, and a corresponding obligation in respect of German wheat may be imposed on breweries by the Food Minister.

ITALY.

Budget Deficit — Public Servants' Salaries — Press Cost-of-Living Campaign — Wage Reductions — Unemployment — Traffic — Foreign Trade.

(FROM OUR CORRESPONDENT.)

TURIN, December 1.

THE Budget situation, which had been slowly deteriorating for some months, revealed disquieting symptoms at the end of October, since the effective expenditure rose

for the first four months of the present financial year to 7,081.6 million lire, against a revenue of 6,394.7 million lire. With the exception only of the net revenue of the railways, postal, telegraph and telephone services (+ 19.7), lotteries (+ 5.6) and wheat duty (+ 161.1), all other heads of public revenue showed signs of slackening: income tax declined by 136.1 million lire; stamp and registration duties by 276.4 million lire; excise by 86.6 million; customs by 42.4 million; salt and tobacco by 128.3 million.

The Government took immediate steps to face the situation. Salaries of public servants had been increased in the spring of 1929 by about 25 to 30 per cent., according to class, half of the increase being payable as from July 1, 1929, and half as from July 1, 1930. A royal decree of November 20, 1930, published in the Official Gazette for November 26th, reduced them again uniformly by 12 per cent. The exchequer will thus save 400 million lire for the present fiscal year and 700 million in a full year. The 12 per cent. decrease in wages and salaries was made compulsory also for all employees of provinces, municipalities, and other public bodies, employers' and employees' syndicates depending upon the State, provinces or municipalities, or maintained, wholly or partly, out of public revenue. Salaries of such employees, between 40,000 and 60,000 lire, will be reduced by 25 per cent. and those above 60,000 lire by 35 per cent.

This reduction of the salaries of public employees was the signal for a Press campaign for a thorough-going reduction in the cost of living. Campaigns of such remarkable vehemence are, perhaps, a peculiar feature of Italy. The main subjects of the inflammatory exhortations were bread, meat and other necessities of life. Willingly or not, retailers were invited by their associations to reduce prices by 10 or more per cent. The corporative system was called in aid. For instance, house-owners had been on July 1st restored to complete freedom in fixation of rents. The transition from a regulatory system to complete freedom of bargaining was easy and did not give rise to friction. To-day, however, house-owners are asked by their association to contribute to the general reduction in the cost of living by a reduction of rents. The reduction is not legally enforceable; but the house-owner is reminded that he is liable to exclusion from membership of the association as an unworthy citizen. To be so labelled is not a pleasing prospect. The general cry in the Press is: "Back to four times the pre-war prices." The co-efficient four is the result of the 3.67 multiplier adopted for the stabilisation of the lira, with a small addition to take account of the depreciation of gold. In a few cases, producers have endeavoured to prove that their case is exceptional. For instance, sellers of electricity assert that the price of electric light has only tripled since 1914 and that the big increase in the price paid by the consumer is mainly due to the increase in state and municipal taxation of electricity for illumination. Taxation in general, increased from seven to eight times the pre-war level, is, indeed, the most difficult item of cost to diminish. In his speech in the House of Deputies on November 27th, the Finance Minister, Signor Mosconi, offered no hope of reduction in taxation in the near future. The reduction in public employees' salaries was prompted by the urgent need for avoiding a deficit and maintaining the state credit. He disclaimed vehemently any Government intention of also reducing the interest paid on Consols and other State Loans.

One after another the great corporations and public bodies are following the lead given by the Government. The Chamber of Deputies has reduced the members' salaries by 12 per cent., notwithstanding the fact that they were just four times the pre-war rate. Their example will undoubtedly be followed by the Senate and the Academy of Italy. The Bankers' and Banking Employees' Confederations have agreed to reduce the salaries of the employees by 12 per cent. and the fees and other perquisites of directors by 25 per cent. Fees of joint-stock companies' directors are to be reduced also by 25 per cent. Industrial wages will be reduced by 8 per cent., except where they are below 12 lire per day in

cities of over 200,000 inhabitants and 8 lire in other cities. Wages of men working only three days per week are not to be reduced. Monthly salaries of industrial employees between 300 and 1,000 lire will be reduced by 8 per cent.; over 1,000 lire by 10 per cent., always provided that a minimum salary of 300 lire is paid.

Time will show whether these reductions will be sufficient to reabsorb the unemployed, whose number rose from 322,291 at the end of June to 446,496 at the end of October. In 1929 the corresponding rise was from 193,825 to 297,382. Taking the number of men employed in a certain number of factories in September, 1926, as 100, the corresponding number was 94.2 in January, 1929, 97.0 in July, 1929, 93.6 in January, 1930, 87.9 in July, 1930, and 87 in September, 1930. At the latter date, cotton (75.2), linen and hemp (73), motor cars (73.9), railway materials (76.3) were well below the average; while artificial silk (111.8), jute (100.7) and electric machinery (105.5) employed more men than in September, 1926.

After a discussion lasting twenty-seven days, the federations of sugar-beet growers and sugar makers reached on November 27th an agreement in virtue of which 413,000 acres of land will be devoted to beet-growing and work will be assured to raise all the sugar necessary for internal consumption. To that end a royal decree of the same day increased the duty on foreign sugar from 360 to 450 gold lire per ton until October 31, 1931. This will exclude foreign and especially Czechoslovakian sugar from Italy; but sugar makers have pledged themselves not to increase its price in the meantime.

The figures of goods carried on the railways, a sensitive index of the economic situation, show widespread reductions. Goods loaded on railway cars in the first nine months of the year for trade account amounted to 40.1 million tons in 1930, as against 45.1 in 1929; goods loaded in the ports to 9.4, as against 10.8; goods entered by land from foreign countries 4.5, as against 5.1; goods exported by land to 2.0, as against 2.3. A decrease of the tariffs for carriage of goods on State railways is contemplated, and a committee has been appointed to work out the details in the briefest possible time.

The value of imports in the first ten months of the year decreased from 18,008.9 million lire in 1929 to 14,417.1 in 1930, or 20 per cent.; exports from 12,468.9 to 10,110.1 million lire, or about 19 per cent. As the weight of the goods imported decreased in the first nine months only from 20.7 million tons to 18.9, or 8.6 per cent., and of goods exported from 3.5 to 3.3 million tons, or 8.5 per cent., it appears that the main cause of the foreign trade contraction is the fall in prices.

AUSTRIA.

Election — Economic Conditions — Distribution of Taxes — Tariff — Hydraulic Power Contract.

(FROM OUR CORRESPONDENT.)

VIENNA, November 27.

THE result of the Austrian general election is in favour of those who recognise that Austria's chief concern is not the domestic political situation but the growing economic crisis. The whole of the Right Wing of the Christian Socialist Party, and especially the members who are leaders of the Home Defence League (Heimwehr), thought at one time of doing away with Parliament, but they finally saw that they would not have the support of their following for this step. During the critical weeks the Austrian Social Democratic Party displayed very striking reserve, and their success in the election is partly attributable to the fact that, possibly for tactical reasons, they declared the combating of economic privation to be more important than the political fight.

During the last few weeks the economic situation has become still worse. The number of unemployed in receipt

of benefit has gone up to 210,000, which means an increase of nearly 70,000 over the corresponding figure for last year. It is estimated that this figure will increase at the rate of 2,000 per day up till the end of the year, and a reform of unemployment insurance cannot further be postponed. Already there has been a rise of 20 per cent. in the contributions for this purpose, and even this has failed to make ends meet. In addition, the advances made by the Government are going up by leaps and bounds, and these sums will not be easily repaid.

Apart from the decline in purchasing power at home, the recession in Austrian trade is having other unfavourable effects. Austrian exports for the first ten months of this year are 156 million schillings less in value than those of the corresponding period of last year, while imports have sunk by 382 million schillings, or more than 15 per cent. In volume, exports have decreased by nearly 480,000 tons, while imports have decreased by 1.6 million tons. In view of the increasing difficulty in exporting, the iron industry and the locomotive and wagon works have cut down output. By May of next year the locomotive works will have completed all the orders they have in hand, and even now they can only keep things going by working short time. In several plants only four days a week are being worked.

In fear of a further reduction of staff, the employees of the big electricity works "Elin" carried on a very animated agitation against the transfer of the share majority of the company to the German Siemens-Schuckert concern. The Credit-Anstalt and the Bankverein, also the Eisenbahn Verkehrs Anstalt, were prepared to sell their holdings, but only at a price considerably higher than the stock exchange quotation. In spite of all assurances to the contrary, the employees were still afraid that output would be cut down, and they succeeded in inducing the Government to oppose the sale of the enterprise to the foreign syndicate. The shares, which had risen rapidly to nearly 44 schillings, went back to 30 schillings when the sale negotiations were broken off, owing to the lively speculation which had occurred in connection with them.

The municipality of Vienna has started relief measures by creating a guarantee fund amounting to five million schillings, which is to constitute, after negotiations with insurance companies, assurance for exporters against losses due to failures of clients and to catastrophes. The total of invoices insured at any time must not exceed ten times the amount of the fund. With this export credit insurance it will therefore be possible to cover invoices amounting to 50 million schillings. As, in general, the risks are of three to six months, the average turnover can be estimated at 150 million schillings per year.

In consequence of bad trade throughout the world, the credits which the banks and industrial concerns have taken on short terms from abroad have also dwindled through repayments, and this is reflected in the fact that the gold and foreign exchange holdings of the National Bank, which figured at 432.2 million schillings on October 1st, have since diminished by 12.1 million schillings. From time to time the demand for foreign means of payment stiffens foreign currency quotations, especially the rate of the dollar, which has gone up temporarily to 711.50. Conditions in domestic politics during October had an unfavourable influence upon bank deposits, so that at the leading Vienna banks and savings banks a decline of 21 million schillings was registered. Many withdrawals ensued in consequence of the rumours then in circulation, but in the meantime the public has become reassured and deposits are again on the increase. This is the more noticeable as the public cannot be induced to take any interest at all in the stock and share market. The big increase in life assurance is also a symptom of the crisis. In many cases the policies are destined to become collateral for borrowed money; on the other hand, they serve as savings. New issues are at a complete standstill, and under these circumstances the Vienna banks will undoubtedly consider

distributing lower dividends than last year. At several of the banks, including the Bankverein, further measures of retrenchment have been taken and staffs have been reduced.

The negotiations which will shortly take place, when the new Government has been formed and the newly-elected Cabinet meets, will be of great importance. One of the questions to be settled is the distribution of taxes among the various provinces. The Federal State and most of the provinces take the view that the share of Vienna is too large and should be diminished by 41 million schillings. Vienna regards such reduction of its revenue as excessive, especially as the municipality is continuing its housing activity, which is financed out of public means. Next year municipal housing is to be carried on to a value of about 90 million schillings. The great body of the public is opposed to this building as far as its financing is concerned. It is the general desire that the municipality should show consideration for the present generation, which is bearing an almost overwhelming burden of economic difficulties and heavy taxes, and not finance housing out of revenue from taxes but by means of a loan for the purpose. Moreover, it is feared that it will gradually become impossible to let dear flats in Vienna, and that the normal increase of rent and the general impoverishment will compel tenants of big flats to live more modestly. Shops are now to let in good parts of the city, for the first time for many years.

Price reduction is making very slow progress in Austria. Shoes and clothing and all articles of luxury are becoming cheaper, but foodstuff prices are more resistant. Farmers, however, have been obliged to make a reduction in the price of milk, a reluctant concession, as milk was the only profitable part of the business of many farms. The resolutions of the East European States in relation to the creation of a central sales organisation for agricultural produce have attracted great attention in Austria. The question of a grain monopoly has again been raised, and the proposal of the former President of the Republic, Dr. Hainisch, that Austria should purchase agricultural products only in those countries which constitute a valuable market for Austrian industrial products, is once more under discussion.

The new parliament will begin as soon as possible a comprehensive revision of customs tariffs. It will certainly not be possible to concede all the increases asked for by industrial and agricultural interests. The commercial treaty with Germany is still awaiting ratification, and it is seldom that a treaty has met with such unanimous reprobation in Austrian economic circles. It does, indeed, offer Austria very few advantages. An agreement must also be arrived at with Yugoslavia, as a preliminary condition of the conclusion of a treaty with that country. It is also possible that a revision of the commercial treaty with France will be undertaken. However, it is highly desirable that Austrian industrial circles should get rid of the idea that customs duties should be increased on industrial products which are not yet manufactured in Austria. For instance, the passing to France of a contract for a rather large quantity of water pipes has given rise to plans for an increase of duty on such pipes, because one concern here, in which, incidentally, German capital participates, is contemplating manufacturing them in Austria at some future date.

After lengthy negotiations, the contract for the extension of hydraulic power in West Tyrol has been given to a group supported by the banking houses Credit-Anstalt and Escompte-Gesellschaft, and a start will probably be made in the course of next year. In consequence, another project, which was planned with the participation of the Wiener Bankverein, the Rheinisch-Westfälische Elektrizitätswerke and certain Swiss concerns, has been shelved, but it is assumed that this group will finally participate in one way or another in the extension.

ARGENTINA.

Crop Prospects — Wool Market — Exchange Rates — Currency Reform.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, November 8.

At the moment of writing the general situation in Argentina is one of anxiety owing to the reported widespread existence of the yellow rust technically known as *puccinia glumarum*. This particular pest has been officially reported as present throughout almost all the wheat-growing regions, though as yet no estimate of the damage done is obtainable. Indeed, there is still a hope that actual loss will be small. Since, however, in certain weather conditions, a week is sufficient to destroy the grain throughout a wide area, pessimistic reports abound. Warm, damp unsettled weather is fatal to the wheat if it is then attacked by this particular scourge; and that, unfortunately, is the weather which prevails at present. Furthermore, by an inexplicable oversight, the pedigree wheats that have been bred and sown of recent years were specially prepared to resist the ravages of "black" rust only, *glumarum* being previously unknown in this country.

Within the next month, and possibly sooner, authoritative information as to the position may be expected. Meanwhile an open mind as regards crop reports is advisable, remembering always that it is to the interest of exporters to minimise as much as possible the net yield of what looked like being an all too abundant harvest, given the cereal position throughout the world generally. The estimated area sown to wheat has been officially declared at 8,636,200 hectares, which is some 350,000 hectares above last year's figures. Meanwhile grain prices are extraordinarily low, wheat being \$7.30 paper per hundred kilos., maize \$3.95 and linseed \$13.20. The linseed crop, which is already being harvested, may be described as exceptionally large and reasonably safe, the area sown being close upon 3,000,000 hectares, and the probable yield round about 2,000,000 tons. If anything like these figures is realised the superabundance of the seed will undoubtedly cause a sharp decline in prices to a figure which will barely repay cost of production.

Conditions in the wool market are also most unsatisfactory. The season begins on October 1st, and prices are even lower than they were in October, 1921. Fine wool from the Pampa is quoted at \$4 paper per ten kilos., while fine wool from Corrientes, which is the best wool that Argentina produces, stands at anything between \$8 and \$10. Moreover, even at these prices buyers show small interest, declaring that they are still awaiting orders from their principals and can for the moment do little trading.

The general financial situation is marked by easy money, a superabundance of deposits in the banks, and complete lack of local enterprise. This condition has favoured the Government in its financial readjustments. Advantage will be taken between now and the end of the year, of the balance of the offer made by the local banks. Some \$45,000,000 paper will be thus taken off the market in six months Treasury bills discounted at 5½ per cent. per annum net. Exchange is barely 39d., and during the past month has been below that figure. The Government, by availing itself of its legal right to ship gold in settlement of external debt services, if and when ruling rates make purchases of remittances in the open market unprofitable, has given very real assistance to remitters by keeping the rate stable and, to a certain extent, thereby checking speculation. It is not thought necessary to take steps at the moment to raise the quotation of the Argentine peso to anywhere near its par value, and if 42d. is reached by the end of the year, it is said that the official world will be satisfied. Offers of export bills, if substantial, should easily carry the rate to that figure, and, as the Government has given ample indication of its intention to interpret the clause in the 1923 Budget which authorises gold export in a liberal and commonsense manner, if all goes well even higher quotations are probable. Meanwhile, though the offers of external loans are still numerous their consideration is deliberately delayed, in the very

reasonable belief that rates for long-term accommodation are likely to decline in the New Year, while available funds for carrying our harvest operations can easily be had locally, or alternatively—with exchange rates as they are, and the great grain interests of Argentina practically in the hands of two firms whose international credit is such that they are able to raise money when and where they please—they can be obtained abroad at a minimum cost.

All this encourages the Government to attend first to the reform of the currency. An important long-term loan will undoubtedly coincide with the announcement that a new single currency system is projected. The business of the country is likely to be facilitated, at home and abroad, by the legal and irrevocable establishment of the Argentine peso pure and simple, without any explanatory device of gold or paper significance. This peso would be based on a gold standard having ample reserves, and valued, at present gold prices, round about the current value of the present Argentine dollar reckoned in terms of the international gold parity at the time the change is made. The change will certainly not be immediate, but that it will be one of the most important adjuncts to the issue of a new long-term loan is as certain as anything can be in the present state of world finance. Nor does it necessarily follow, when one speaks of the terms of international gold parity, that the new Argentine peso thus imaginatively outlined will perforce be one of 47½d. A peso at 42d. or 44d. par would, for all internal purposes, be just as satisfactory. If it be objected that this is tantamount to currency depreciation, one may well reply that such objection is more theoretical than real. Present interests would suffer little loss, as the principal liabilities contracted in the past will be in terms of foreign money, and repayable in foreign money at lender's demand or option.

AUSTRALIA.

Public Finance — Decline in Imports — Government and Commonwealth Bank.

(FROM OUR CORRESPONDENT.)

MELBOURNE, November 7.

THE fresh financial proposals of the Commonwealth Government have produced an unfavourable impression, as although they include further additions to taxation, they do not provide for fully balancing the 1930-31 Budget and show only a slight actual reduction in expenditure, apart from the sinking fund. The latter is to be reduced by £1,950,000 as part of a total reduction of £3,180,000 in expenditure. New taxation is estimated at £4,820,000 in a full year, or £3,700,000 for 1930-31, principally from Customs and Excise, £3,100,000 (full year), and additional income-tax on property incomes £1,500,000 (full year). The tariff alterations are partly protective, but the revenue portions include an increase in primage from 2½ to 4 per cent., a duty of 4d. per lb. on tea, and a duty of 1d. per gallon on kerosene. The latter tax and the taxes on lubricating oil and fencing wire will be especially burdensome on the country districts, and objection is being raised to them by the Country Party. The Acting Treasurer's speech included a statement of short-term debts of the Commonwealth and States, showing totals of £37,897,000 in London, and £7,134,000 net in Australia. As London payments are now being provided for by remittances from Australia with the help of the banks, he stated that the short-term indebtedness in London would remain practically stationary until a funding loan is issued.

Imports are now falling off considerably, and the total for the three months ended September 30th shows a decrease of £17½ millions, or 46 per cent., as compared with the first three months of the 1929-30 financial year. Between this and the general contraction of business there has been some reduction in demand for banking accommodation for trading purposes. The decline in imports is reflected in the Customs revenue, which for the four months ended October 31st, shows a decrease of £4½ millions. In view of the moderate aggregate value of

Australian exports expected during 1930-31, and the amount required for interest and other payments abroad, it is evident that Australian capacity to import will be severely limited for a considerable time to come. This is the result of the withdrawal of the stimulus of constant external borrowing.

The question of the relations between the Commonwealth Government and the Commonwealth Bank is approaching a critical stage, as in pursuing a sound line of policy the directors of the Commonwealth Bank are not carrying out the inflationary objects hoped for in some quarters. Should the question lead to a double dissolution, there is an expectation that the manufacturing interests which are understood to have assisted in the Labour victory in New South Wales would be likely to repeat the process in the Commonwealth, and thus give Labour full command over the Commonwealth Bank. Meanwhile proposals are on foot that the Commonwealth Bank should be called upon to create credit in favour of the Government to provide for repayment of the loans about to mature locally so far as they cannot be converted, and the moderate members of the Government find it difficult to resist the pressure of the extreme section.

Letters to the Editor.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May a third party presume to offer a contribution on the above subject, as a supplement to the remarks of both Sir Charles Harris, whose letter was published in your issue of November 22, and Mr. Turner, whose reply appeared in the issue of the following week?

These letters express the views of two rival camps in the field of practical economics, but, strange as it may appear at first sight, their views are not necessarily irreconcilable. If common ground can be discovered, some useful result may not be beyond hope.

The essential difference of view between the two camps may be summarised as follows:—

Sir Charles Harris argues that the pegging of money-wages is one of the causes of unemployment; and one is led to infer that in his opinion "a general system of constant real wages," "increasing when productivity increased, but not otherwise," would be desirable.

Mr Turner, who apparently objects to any scheme involving a reduction of wages unless it is applied equally to "other factors," argues that the divergence of wages and prices which has occurred in recent years is not a primary cause of our present industrial troubles; and he states in support of that assertion: "Obviously it was not primarily the movement of wage rates which set prices in the downward direction."

Thus speak the two rival camps; they look at the problem from different ends. But the two views are not irreconcilable, because each statement is only a half-truth. On the one hand, Sir Charles Harris's thesis that wages should be continually adjusted to secure that their real value bears a constant ratio to the country's productivity appears to pay too little regard to the fact that the country's "productivity," which must be regarded as comprising not only volume of production but also facility of exchange of goods, is often very far from the maximum possible (as, for instance, at present). Sir Charles Harris has given no proof that present real wages are too high for the country's maximum potential productivity (i.e., on a basis of 100 per cent. employment); and if real wages are not shown to be too high for that state of affairs, it is not easy to justify reductions in money-wages as a remedy for present ills, seeing that that places the burden of sacrifice where it can least be borne.

On the other hand, to Mr Turner one might say that the main reason why prices of raw materials did set in the downward direction was because the world demand slackened; and the world-demand for raw materials slackened for the same reason that the demand for labour slackened, namely, that enterprise was checked because it was seen to be no longer profitable. (It does not matter where this movement started; we know that when once it starts, the effect is cumulative.) While Mr. Turner would be right in suggesting that it was not a general movement of wage rates which rendered enterprise no longer profitable, it might still be true that the results of wage-movements in the past are at the bottom of the trouble;

for, whatever may have been the intrinsic merit of present wage rates when they were introduced, no economic justification can be found for their existing relation to one another; and this is true of other countries as well as our own. Is it not possibly this "uneconomic" maladjustment which has been slowly for many years tending to produce the effects, in most countries alike, which we can now no longer ignore?

The influence on general trade of diverse wage-levels within the country is a subject on which the public would welcome further information from the experts. It is clear that wide divergences of wage-levels will have some adverse effects. The pamphlet recently issued by the Engineering and Allied Employers' National Federation has given fresh emphasis to this fact. Is it, or is it not, true that if the prices of the "products" of our "intermediary" sheltered industries (such as transport, power and so-on) were lowered to conform adequately to reductions from the high money-wages in those industries, our trade in exportable goods could be re-established?

The immediate answer to which the ordinary thinking man inclines is: "Yes."

If that answer is correct, then possibly Sir Charles Harris is right in so far as he says that some money-wages are too high, and wrong in implying that none are too low. And if that answer is correct, it follows that any system of wage regulation should start by bringing wages in different industries nearer to a common basic level. If this step is, as suggested above, demanded by the "economics" of the situation, we must take the step, and face the incidental consequences; possibly introducing other adjustments where these may be necessary. One of the awkward incidental consequences is that those whose money-wages might have to be reduced would suffer a reduction in real earnings during the period which, under present conditions, elapses before a new price equilibrium is established. This is a problem of hastening as far as possible the price adjustments. Although this is an incidental and not a fundamental problem, it is, as Mr Turner implies, serious. One simply cannot ask those whose earnings are the lowest of all to be alone in bearing the burden of sacrifice. One need not, however, despair of a satisfactory solution to that problem, especially if it can be recognised and dealt with as the temporary and incidental factor which it is. It is a separate problem, and a discussion of it must be for another occasion.

Briefly, then, as regards wages. Is not the wage problem essentially a two-fold problem comprising:—

(1) The determination of an appropriate general basic level for wages as a whole, and

(2) The determination of an appropriate relationship between the basic levels of wages in different industries?

Given an "economic" adjustment of the relationship between wages in different industries under (2), the determination of the "general level" in a country like Britain must in the final resort depend upon how far our costs enable us to maintain an adequate trade in exports.

To regard the wage problem in this way and to deal with it thus, as it were in two separate compartments, offers, I suggest, a sound basis for a system of regulation of industry which should enable us to secure a constant approach to maximum employment and maximum "productivity."

Yours faithfully,
53 Anson Road, N.W. 2.
December 8th.

E. M. D.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Whatever the demerits of my recent short letter, it has, with your permission, at least provided Sir Charles Harris with opportunity for an interesting elaboration of his argument in favour of the adjustment of wages to prices.

He now distinguishes two stages of our present trouble, viz., the depression which existed here before the world slump set in (i.e., before about September, 1929, if we take the date selected by the London and Cambridge Economic Service), and the further depression which has added to our difficulties since that date. As regards the first, he gives two roots—a long trend price fall from inflated standards of the war, and the failure of wages to conform. As regards the second, I gather he accepts monetary causes, on a world-wide scale, as predominant.

I suggest, first of all, that the depression we were suffering from before September, 1929, is not adequately explained by the two "roots" he mentions. I do not see how he can ignore, for example, the numerous disturbances resulting from the war, such as the breakdown of markets, reparations and external debts. Neither can he dismiss as negligible the effects of post-war monetary policy, including the reactions from the return to the Gold Standard; nor the regrettable dislocations which followed the attempts made to adjust wages to prices a few years ago.

Looking at these causes in the past, and at the monetary causes which seem to have been established as conspicuously responsible for the present world slump, I am not satisfied that the adjustment of wages is either the only or the first consideration. In any case, why select wages for sole treatment when other costs are also out of step with prices and in one way or other just as much "pegged" as wages?

I do not say there is a sole cause or a sole cure. But I do suggest that so long as we employ money (whatever its form) with a purchasing power liable to frequent and arbitrary variation, an attempt to adjust wages to prices would not remove our difficulties. Such an adjustment, together with the similar adjustments required to deal with other costs would, to put it mildly, produce enormous "economic friction." And when it had been accomplished, the instability of prices would remain to upset everything again.

I think I am not alone in the opinion that we have painfully followed the effects of price disturbances long enough; and that it is time steps were taken both nationally and internationally to try the other course of aiming at some form of monetary stability. That is why the measures directed to dealing in the first place with the monetary factor seem to me to be preferable to Sir Charles Harris's revival of the hoary idea of "having another cut at wages."—Yours faithfully,
Ealing.
G. W. TURNER.

Books and Publications.

INTERNATIONAL LAW AND AFFAIRS.

THOUGH Dr. Baty has taken international law as his subject, his book* is to a considerable extent devoted to the discussion of public affairs. On many matters the author trenchantly gives his own opinion. The result is a very live piece of work, and one which cannot lightly be passed over, for Dr. Baty's views are based not only on an extensive acquaintance with legal and other libraries, but on considerable practical experience of affairs of state. Looking at the world from Japan he has the advantage of detachment. After pointing out that international law exists without any policeman or legislature and without being formulated in a code, resting merely upon the universal conviction of what is right, Dr. Baty continues, "It is a necessary corollary that its rules must of necessity be simple, certain and objective, while nevertheless elastic. These four requirements are the Canons of International Law." This explains the title of his book, in which he is concerned "to ascertain and to reinforce certain guiding principles, the recognition of which appears to be necessary if the Law of Nations is not to degenerate into a morass of conflicting opinions, or of ukases dictated from Geneva."

While the rules ought to be (1) simple, to be understood; (2) certain, because to question an established rule may be to destroy it; (3) objective, so that they may be capable of easy application by the ascertainment of plain facts, and (4) elastic, it becomes very clear, as subject after subject is passed in review, that these conditions have by no means been fully established as yet. Questions of territory and extra-territoriality, of independence and interdependence, of recognition of States and Governments, of nationality, of treaties, and many war questions (including the relations of belligerents and neutrals at sea) are discussed.

It is impossible in a short notice to deal adequately with 500 pages of compressed writing, but, by way of example, reference may be made to what is said of "the movement to introduce a privileged position for the subjects of powerful States in the territory of weak ones, by holding the latter responsible, by hook or crook, if they come to harm." This movement, Dr. Baty considers, "is really one to standardise the world in the interests of trade. . . . Merchants must be sure of protection for their agents, their goods and their contracts. Concessionaires must be sure of safety for their engineers, their mines and their lines, and the rest of their property." This creation of a privileged class, Dr. Baty

* "The Canons of International Law." By T. Baty. John Murray. 21s. net.

describes as a very menacing phenomenon. "It is easy," he remarks, "to say that the resources of the world are here for the benefit of all, and that they ought not to be appropriated by any single state. Such an appropriation is by far a lesser evil than the intrusion of foreign force."

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Borrowing and Business in Australia. By Gordon Wood. (London) Oxford University Press, Warwick Square. 12s. 6d. net.

The content of this timely publication, which is very fully documented and constitutes a most thorough and scholarly study of the subject, is best summed up by the sub-title, "A study of the correlation between imports of capital and changes in national prosperity."

An Economic History of Modern Britain. By J. H. Clapham. Second Edition. (London) Cambridge University Press, Fetter Lane. 25s. net.

This second edition of Professor Clapham's work in the period 1820-1850 has not been re-written, but account has been taken of such criticisms and corrections called forth by the first edition as appeared to the author to be valid.

An Early Experiment in Industrial Organisation. By Erich Roll. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 15s. net.

A history, from original records, of the pioneer firm of Boulton and Watt.

How we Live. By J. A. R. Marriott. (London) Oxford University Press, Warwick Square. 2s. 6d. net.

An introductory volume for the student and the general reader. It differs satisfactorily from most of its kind in crediting the lay reader with a normal degree of intellectual development.

Cheap Bread. By Ronw Moelwyn-Hughes. (London) Ernest Benn, Ltd., Bouverie House, Fleet Street. 2s. 6d. net.

A brief account, with some statistical tables of imports, of the mechanism by which the British consumer gets his bread supply.

Les Principes de la Méthode Statistique. By Lucien March. (Paris) Librairie Félix Alcan, 108, Boulevard Saint Germain. 125 francs.

In this very substantial volume the author has sought to present the elements of statistics in such a way that the mathematics of the subject shall be within the capacity of the non-mathematical student.

Methods of Correlation Analysis. By Mordecai Ezekiel. (New York) John Wiley and Sons, Ltd., 11, Henrietta Street, Covent Garden. 22s. 6d. net.

A useful text-book for students of statistics who have surmounted the elementary stages.

Deutschlands Handelsverträge und sein Anteil am Welt-handel. By Dr. Franz G. Haushalter. (Leipzig) C. L. Hirschfeld Verlag. Rm. 8.

A useful analysis of Germany's foreign trade relations.

L'Eveil des Nationalités et le Mouvement Libéral (1815-1848). By Georges Weill. (Paris) Librairie Félix Alcan, 108, Boulevard Saint-Germain. 60 francs.

A study of the rise of nationalities in Europe and America during the first half of the nineteenth century.

La Política Económica Española ante el Memorandum Briand. By R. Perpiñá Grau. (Madrid) Editorial El Financiero, Ibiza 13.

An essay, in Spanish, on the economic policy of Spain.

Strumenti Teorici di Corporativismo. By Carlo Pagni. Reprint of an article on industrial parliaments, in which the views of Signor Favet are discussed.

Les Problèmes Actuels du Crédit. (Paris) Librairie Félix Alcan, 108, Boulevard Saint Germain. 15 francs.

A series of lectures by French economists on present-day credit problems. M. Jacques Rueff contributes a lecture on international credit problems.

Problems We Bankers Must Meet. By R. S. Hecht. (New York) Published by Economic Policy Commission, American Bankers Association.

Reprint of an address to the American Bankers' Association.

The Documents of Commerce. By F. A. Willman. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

Deals with bills of exchange, cheques, shipping forms, contracts, marine insurance and Customs forms, &c.

The Work of the Stock Exchange. By J. Edward Meeker. Revised Edition. (New York) The Ronald Press Company. \$5.00.

An interesting and very full descriptive account of the New York Stock Exchange.

International Yearbook of Agricultural Statistics, 1929-30. (Rome) Bestetti and Tumminelli S.A., 32, Via Michelangelo Caetani.

This reference book is completely indispensable to any statistical office. In it are tabulated the area, population and numbers of live-stock of all countries; the area, production and yield of the principal crops in each country; the imports, exports and prices of the principal agricultural products, freight rates and fertilizer and forestry statistics. Most of the tables cover the years 1926-29.

Whitaker's Almanac, 1931. (London) J. Whitaker and Sons, Ltd., 12, Warwick Lane. 6s. net.

One of the best, if not the best, annual books of reference on general subjects. It is the first place in which to look for information, not obviously covered by some highly specialised year-book.

The South American Handbook. Eighth Edition. (London) Trade and Travel Publications, Ltd., 14, Leadenhall Street. 2s. 6d.

A book of reference for the business man and tourist on the products, industry, trade, transport, currency, banking and government of the countries of Latin America. A new air section has been added this year.

Rubber-Producing Companies, 1930. Compiled by the Mincing Lane Tea and Rubber Share Brokers' Association, Ltd. (London) The Financial Times, 72, Coleman Street. 7s. 6d.

Contains very full financial particulars of each company, with a list of directors and secretaries.

The Canadian Securities Manual. October, 1930. (London) Andrew Holt and Company, 148, Leadenhall Street.

A pocket reference booklet containing the usual financial particulars of each security.

The Thirty-sixth Semi-Annual Table of Bonds and Debentures in Japan. (Tokyo) The Industrial Bank of Japan, Ltd.

The Banker, December, 1930. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Includes an article by E. L. Franklin on "The London Foreign Exchange Market."

The Bankers' Magazine, December, 1930. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

The leading article this month is on "The Financial and Industrial Outlook."

Decisions of Courts and Opinions Affecting Labor, 1927-1928. (Washington, D.C.) Superintendent of Documents. 85 cents.

Union Scales of Wages and Hours of Labour, May 15, 1929. (Washington, D.C.) Superintendent of Documents. 50 cents.

A most detailed collection of tables showing the union rates current in the various districts of the United States in May, 1929, for each grade of work.

The Manchester School, Vol. I, No. 2, 1930-31. (Manchester) The University.

Includes an article by Professor Daniels on "Recent Criticisms of the Theory of Wages."

Kyoto University Economic Review, July, 1930. (Tokyo) Maruzen Company, Ltd.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

"KAFFIR" SHARES.

MORE than usual interest attaches to the half-yearly dividends about to be declared by the Rand gold-mining companies. A bout of anticipatory activity is usually evident in the market at this period of the year, but up to a very recent date the customary animation has been lacking this year. The reasons can be readily discerned. "Kaffir" shares have been unfavourably affected by the dullness of stock markets generally. Paris, which always exercises an important influence on Rand shares, has been under a cloud. In Johannesburg, there have been minor difficulties on the Stock Exchange. Now, however, that the November settlement in Paris is safely over, and Johannesburg's troubles, it may be hoped, have been overcome, the way has been at least partially cleared for efforts to induce a revival of activity in Kaffir shares.

Working costs on the Witwatersrand have lately tended to benefit from falling commodity prices and the corresponding rise in the value of gold. Such conditions make not only for reduced costs of production but also for a plentiful native labour supply, owing to migration from agriculture and other depressed industries. Thus "record" tonnages may be mined and treated with a greater spreading of overhead charges, so that, other things being equal, profits may be increased and mine development programmes expedited. If a future world "shortage" of gold should arise, the Rand would naturally benefit from any efforts made to stimulate gold production. A Government Commission has been examining the position of the Rand low-grade mines. Should its recommendations urge the Union Government to take action calculated to lower working costs and lengthen the lives of the mines, its report might be a stimulus not only to the low-grade producers but to the industry as a whole. On the other hand, there are certain doubtful factors in the situation—such as the possibility of a diminished labour force and the doubts entertained in some quarters as to whether the Government will, in fact, go as far in the direction of helping the industry as the more optimistic prophets believe.

Excluding dormant and moribund concerns, there are thirty-three Rand mining companies at present in existence; thirty are actual producers and three are in the development stage. Twenty-one of the former declared

dividends last June; twenty-three are expected to do so this month. Four of the remaining seven will probably re-enter the dividend list sooner or later, but no further distribution is generally expected from the three others until their liquidation. The above rough classification provides the investor with a working basis for further study, and in the table below he will find some of the more relevant details to aid him in measuring the relative merits, as speculative investments, of the twenty-three companies expected to declare dividends this month.

A striking feature of the table is the wide range in yields, from just over 2 per cent. in the case of Durban Deep to 32 per cent. for Modderfontein B. This shows, incidentally, how dangerous it is to generalise, even within the restricted category of Rand dividend-payers. The reason is to be found partly in differing expectations of life, partly in prevailing views as to the trend of future profits and dividends. When a mine has only a short prospective life, the investor must needs allocate from dividends comparatively large annual sums for capital redemption, while dividends themselves tend rapidly to dwindle during the last few years of such a mine's operation. Low yields usually prevail where expectations exceed past realisations, and "medium" yields where prospects, profits, prior charges and dividends are on a more stable basis. The yields shown are gross flat yields. Kaffir dividends are subject to the full rate of British income tax less the appropriate rate (at present 2s.) of Dominion tax relief. For this reason—and owing to the fact that no allowance has been made for accrued dividend since the last payment in August—the actual yields afforded are higher than the figures given in the table, which are based on the last two dividends and ignore possible changes in the coming declarations.

As a guide to immediate prospects, the working profits for the first nine months of the current year have been compared with figures representing some three-fourths of the totals for 1929, except in the case of companies closing their year on June 30th, whose figures for the first three months of the current financial year are compared with amounts equal to one-fourth of the 1928-29 total. In applying this criterion to possible dividends such factors as capital expenditure, debenture interest

and redemption, miners' phthisis levies, etc., must be taken into consideration, and each mine must be regarded on its own merits. It should also be remembered that the newer mines work under lease from the Government, paying to it a proportion of profits on a sliding scale.

It will be seen that outstanding increases in working profits are shown by Witwatersrand Gold, Sub Nigel, Nourse, Robinson Deep, Simmer and Jack, New State Areas, Durban Deep, and some other mines. Where estimated lives and other conditions indicate a maintenance of such an improvement, the yields will be found to be on a low level, and the investor, pursuing his investigation, will next look for data on which to base a long view in these cases. He will study such factors as future calls on capital expenditure, the redemption of debentures or the liquidation of other indebtedness, which will tend to release larger proportions of gross profits for future dividends. He will gather useful information from the trend of ore reserve tonnages and values, and will compare current with past development results.

Ore reserve tonnages offer no guide whatsoever to the life of a mine: at least, not until all development and reclamation has ceased. Decided trends in ore reserve tonnages and values, however, read intelligently in conjunction with results of development, afford much useful information. In calculating the development figures in the table, values, in pennyweights, have been taken across the width (in inches) over which the ore will be stoped or extracted. The result, expressed in inch-dwts. is the all-important factor as regards the quality of the ore. In regard to the quantity met in relation to the total footage advanced on the reef, the percentage of payability is the index of relative success in development. In the appended table we have indicated the increase or decrease in ore reserve tonnages and values at the end of the last financial year, as compared with those twelve months earlier. These changes, read in conjunction with the trend in development results, show how each mine is "opening out," since reserves at the close of any year reflect the run of development during that year. In other words, to foresee what change is likely to take place in ore reserves at the end of this year, the course of development during 1930 must be compared with that during 1929.

On certain mines, increasing ore reserves, and an improved tendency as regards development (which, in its turn, may suggest further future increases), may lead to the installation of new plant, the expectation of higher monthly crushings, and possibly to lower costs per ton crushed and to increased profits. Such conditions apply, for instance, to Sub Nigel, while in the case of Robinson Deep, similar hopes have been created by the acquisition of Village Deep. On the other hand, decreasing ore reserves and poorer development results spell eventual lowering of grade in order to keep mills fed to capacity, leading inevitably to lower yields, smaller profits, and decreasing dividends. Again, when a mine is reaching exhaustion and no ground remains to be developed, it often happens that working costs are relieved by the extent of development charges, and profits are deceptively higher. Such a condition may apply to a varying extent to Modderfontein Deep, Van Ryn Gold, New Kleinfontein, and certain other mines.

The main conclusion suggested by this review is that gross flat yields are no criterion of the relative merits of respective Kaffir shares. The investor must perforce look further, to avoid serious misconception and, possibly, financial loss. Kaffir shares fall into the category of speculative investments. The industry "produces" a stable commodity under, on the whole, improving conditions in the matter of costs and efficiency. The investor, however, must constantly bear in mind that a mine is a wasting asset, and Rand mines, long lived as most of them have proved, are no exception to this rule. He must, therefore, prepare to redeem his capital by annual re-investment of a portion of his dividends. He must also be ever on the alert, and must examine monthly, quarterly and yearly results with the utmost care. If he is prepared to observe these conditions, a close study of the table given on the previous page, interpreted on the lines laid down in this article, may assist him in making a judicious selection of Kaffir shares.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS

TICKET.
December 16.

ACCOUNT.
December 18.

The week's Stock Exchange events were not altogether reassuring. The gilt-edged market did not like the increased gold efflux, and after some little firmness values became easier on Thursday. New York was unquiet, and the Continent turned a seller before the week was over. News from home industry gave little scope for optimism, the continued increase in the unemployment figures, at a time when Christmas trade normally absorbs large numbers of seasonal workers, being the subject of adverse comment. Before the end of the week, industrial share values had receded to the low level reached last August. In the mining markets prevailing discontent vented itself in criticism of the terms of a big Rhodesian fusion. The general feeling was summed up in a remark that the "House" would be better pleased to lose its reputation as a prophet of coming industrial events than to have its present judgments confirmed.

Gilt-edged stocks showed to advantage in the first half of the week, on a recovery in sterling and on easier money market conditions. Conversion issues were in fair demand, and War Loan at one time reached 103. The accentuation of the gold drain, however, as the week progressed, put a brake on the market, reactions occurring in prices throughout the list. The reception of the Kenya Loan, however, was not discouraging, the high price frightening off the stags, while the scrip was firm after dealings had started in the market. Other new issues were steady, with improvements in some cases. India loans were harder on the prospect of the removal of the Hindu-Moslem *impasse* from the Round Table Conference. Further selling took place of Australians.

The foreign bond market was quiet. Some slight support was forthcoming for German issues, but Brazilians were unable to hold an improvement, and China Customs Loans remained on the dull side.

Home Rail prices tended to ease, though there was little actual selling. The wage negotiations developed according to plan, and the week's traffic figures showed no general change in the situation. An unusually small decrease in the receipts of the London, Midland and Scottish was due mainly to comparison with a poor week of 1929. Argentine rails suffered from a further pessimistic pronouncement by an authority whose conservatism had previously been made plain. The "heavy" stocks tended to slump in mid-week, after a fresh fall in the Argentine dollar, though the exercise by the Cordoba Central directors of their power to postpone payment of the Second Debenture interest caused no surprise. Antofagastas were weak, after a moderate gain, but Havanas rose slightly on the sugar restriction agreement. Canadian Pacifics were easy all the week.

The industrial markets suffered from domestic *ennui* and a partial renewal of foreign liquidation. Transatlantic issues were marked down appreciably before and after the failure of the Bank of the United States. This tendency affected Columbia and H.M.V. The firmness of electrical issues was checked by profit-taking, mainly from the provinces, whence came further selling of Turner and Newall. Motor shares receded, mainly on liquidation by tired bulls. Developments in Lancashire in regard to the more-looms-to-a-weaver question were looked on as a bear point for textile shares as a whole, and Courtaulds shared in the general tendency. The brewery group held its ground better than most, on the satisfactory nature of recent profits statements. Anglo-Argentine Tramway preference issues became largely a nominal market on the postponement of the final dividend payments. Tobaccos turned easier following the revival of higher taxation rumours. Unilever were weak, partly on the unsatisfactory United Africa report (discussed on page 1127), and towards the end of the week, on selling from Amsterdam. A few scattered sales of P. and O. deferred stock occurred after the chairman's somewhat colourless speech. Insurance shares remained

dull, with prices lower where changed, and only a small business was done in banking shares.

Though business in rubber shares was again restricted, the firmness of the commodity caused a tentative effort to mark up a number of prices at the beginning of the week. Tea shares, however, continued to decline, Consolidated Tea being again on offer, while Assam Frontiers were weak on the passing of the interim dividend. Oils were firmer at the beginning of the week, but on Wednesday and Thursday Amsterdam came in as a seller, Royal Dutch (and, to a less extent, "Shell") being considerably affected. The results of this tendency entirely offset the favourable effect of a further decline in the American production figures.

The mining share markets again suffered from a marked absence of business, particularly in the second half of the week. Paris and Johannesburg evinced some interest in their favourites at the outset, but Continental advices subsequently became less assuring. The outlook for Kaffir shares is discussed in a leading article on an earlier page. The week's dividend announcements were generally satisfactory, but the increases recorded by a number of companies had been foreseen and discounted. The market did not give an enthusiastic welcome to the terms of the Rhodesian merger (which are dealt with on page 1130). Congo Border, Bwana, and N'Changa were all lower on the proposals, particularly the first-named. A feature was the strength of Ashanti Goldfields on a promising cable, though profit-taking cancelled part of the gain. Tin shares were again quiet, the metal being weak. Burma Corporation was dull on the reduced interim dividend and the record low level of silver, and Tintos were lower over the week.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Dealings at the beginning of the week resembled those of earlier periods. The outstanding feature was the weakness of railroad shares, heavy selling being recorded of Van Sweringen issues, while New York Central, Atchison and other leading shares fell to new low price levels. Second-grade railroad bonds were also sold owing to the fact that a number will lose their position as "eligible" investments this year, earnings having fallen below the minimum prescribed by State laws. Utility, copper and chemical shares also declined, but at a more moderate pace. Despite some support, a number of stocks broke November's low levels, the list including Bethlehem Steel, Westinghouse Electric and Eastman Kodak. Although the steel industry was estimated to be working at only 88 per cent. of capacity, as compared with 89 per cent. last week, the Steel Corporation's unfilled tonnage

statement for November showed an increase of 158,000 tons. On Wednesday, in the last hour, the market became very unsettled on rumours of a crisis in the affairs of a large banking institution, and on Thursday it was announced that the Bank of the United States had suspended payment. Runs at the branches of the bank on Wednesday exhausted its ready cash and the bank had no more securities eligible for discount at the Federal Reserve Bank, so a closing down was decided upon. The stock market took the news calmly, and sold off moderately. There is a general feeling that an abscess has been cleaned, and it will now be easier to restore confidence. No other bank of consequence is in trouble, and two which have been conducting merger negotiations with the Bank of United States joined the Clearing House on Thursday morning. However, the public is somewhat nervous, and some withdrawals of deposits from other banks in the Jewish sections is likely. The danger of real trouble, however, is remote. The bank had no financial connections whatever outside New York.

INVESTMENT

by L. L. B. Angas

(Author of "The Coming Collapse in Rubber," 1926.)

A book which shows how to detect the beginnings and endings of slumps and booms in single industries, and how to exploit the fluctuations which take place in shares on the Stock Exchange.

Rules are laid down for the timing of both buying and selling, and directions are given for taking profits and losses.

A valuable feature of the book is the list of faults which must be avoided.

The Economist: "To the Stockbroker, and even more to the individual investor, this book will be a *guide maxim*, the mastering of whose principles will repay in hard cash many hours of study."

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."

Publishers: Macmillan & Co., St. Martin's Street, LONDON, W.C.1. 187 pages. Numerous Charts. PRICE 20/-

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

* 2-hour session.

PARIS.

The end-of-October settlement was effected in the face of heavy differences, and the liquidation which followed brought about a considerable fall in prices. After a mild recovery, the announcement that the Banque Oustric could not meet its obligations brought about a fresh collapse in values. In spite of the measures taken by the Chambre Syndicale de la Coulisse to arrest the decline and rally confidence (such as to invite its members to refuse short selling orders and to re-establish provisionally the right to call for delivery before the settlement) the fall was accentuated during the first fortnight of November. Several houses, unable to meet the large differences which the *débâcle* of the Oustric group had occasioned, resigned from the Syndicat. The list of defaulters appears now to be closed, thanks to the financial assistance rendered by those intermediaries who were not too deeply involved. The settlement of the 15th was effected fairly comfortably with money at ½ per cent. The Chambre Syndicale announced that it would guarantee the bargains in which houses belonging to the Syndicat were concerned, and as a result the tendency improved somewhat at the beginning of the second fortnight. In the *marché en Banque*, money rates have been fixed at 4½ per cent. against 4¼ per cent. at the end of October—

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

an increase which reflects current tendencies. The energetic cleansing of the market has produced a better impression, and the two major questions—Oustric and Devilder—are now considered to be settled.

BERLIN.

In November and the first week of December the Berlin security market underwent unusually large fluctuations. There were, indeed, some favourable influences in the first half of November, as for example the firmness with which the Government proceeded with the rapid execution of their financial programme. The steady increase in unemployment, the idleness of much industrial plant, combined with the heavy declines on foreign stock exchanges, were factors determining the tendency in Berlin. Between November 20th and 26th there was an unusually heavy fall. Foreign holders of German securities offered large blocks of shares, the declines in New York and Paris made matters worse, and the bear attacks were the more successful as the approaching session of the Reichstag was awaited in Germany with much uneasiness. In a few days Reichsbank shares lost 20 points, R.W.E. 22, A.E.G. 29, and Siemens 35, while Salzdettfurth even lost 70. The reaction followed very soon, and when it became clear, at the end of November, that the Government were prepared to bring their financial programme into effect in any circumstances, hasty covering purchases were made and quotations recovered in a few days, though only a part of the decline was made good. On December 1st the emergency decree was issued, and on December 6th the Brüning Government secured a majority for it. The Berlin Bourse responded to these developments with a favourable tendency, but the turnover remained small and there was no real eagerness to buy. It is particularly noticeable that German loans are continuing their downward tendency, in spite of the fact that there has not been a single internal issue in the last few months.

INVESTMENT NOTES.

Stock Exchange Membership.—The Stock Exchange Committee have passed alterations and additions to the "House" rules, the effect of which is likely to be far-reaching. As long ago as May, 1928, writes a Stock Exchange correspondent, a movement for dividing membership into two groups came to a head. Petitions were then presented to the Committee with the intention of strictly limiting the number of nominations to membership. It was claimed that this object could be achieved without imposing hardship upon Stock Exchange clerks who desired to become members through the operation of the rule which annually admits a limited number without the necessity of acquiring a nomination. The scheme was adumbrated by Mr C. F. Hipwell, and is commonly known by his name. The policy of the Stock Exchange for many decades has been to encourage membership on the part of men who have served an apprenticeship in the "House," and have always been regarded as particularly desirable, from the point of view of experience, as prospective members. Four years' service entitles a clerk to apply for membership under a greatly reduced scale of entrance fee and subscriptions, as compared with the outside candidate. Under the old system, such an entrant, after he had been a member for four years, was entitled to receive a nomination of the same value, and ranking in all respects *pari passu* with the nominations already in existence. The effect, naturally, was to bring into being a waiting-list of clerks who desired to become members without the payment of the cost of a nomination. The list, to-day, includes some hundreds of names. The Stock Exchange managers have admitted varying numbers from year to year; sometimes as few as five, sometimes as many as twenty. Thus, nominations have been "watered" annually. Under the new scheme, which has now been passed by the Stock Exchange Committee (subject to confirmation next Monday week), two sets of membership are inaugurated. The waiting list is divided into two sections, one of which will correspond with the rules as they stand at present, while candidates in the section called "B" will not have any right of nomination unless it be acquired by payment. In brief, the effect will be to restrict the number of nominations actually in force, and to enhance the value of Stock Exchange membership, though clerks seeking membership without the right to nominate their successors will be able to obtain it as freely as heretofore. A further advantage is that a nomination will become an asset in the estate of a defaulter, and will be dealt with by the Stock Exchange Committee in such a manner as will benefit the creditors. As things stand at present, if a Stock Exchange member is "hammered," his nomination is lost, and it has been felt for many years that this constitutes a grave hardship upon creditors who cannot obtain any value for what is obviously an asset of worth. The passing of the rules has had no immediate effect on the prices either of Stock Exchange shares or of nominations. The value of the latter remains about £400, which may be considered a poor indication of the value that should be placed upon membership of the London Stock Exchange. It is true that within the past two or three years the price of nominations has been up, at one time, to nearly £2,000, but even the latter sum is a bagatelle compared with the price of seats in the New York Stock Exchange.

Anomalies of the Companies' Act.—In a lecture before the Incorporated Secretaries' Association at Sheffield on Monday last, Mr Herbert W. Jordan described some of the anomalies inherent in the latest codification of British company law. As a registration agent, Mr Jordan speaks with unrivalled authority, for he has been present at the birth of hundreds of thousands of British companies. His criticism on this occasion, however, was almost entirely confined to matters of detail. He showed, for example, that whilst the receipt of applications for a declared "minimum subscription" was an indispensable condition precedent to allotment of shares only on the occasion of a company's first issue, every subsequent prospectus was

required to state a "minimum subscription," which had no binding force. Mr Jordan also pointed out that though proxies are included in the computation of votes for or against an extraordinary or special resolution, they have no statutory right to demand a poll unless the articles specially provide for such a power. There are, indeed, many obscure points in the legal position of proxies, as has been exemplified in the recent case of Cousins and Another v. International Brick Company, Limited, and Another. In this case Mr. Justice Luxmoore decided that a shareholder who has given a proxy which has not been validly revoked can, nevertheless, attend and vote personally at the meeting for which the proxy was given. This case may possibly go to appeal, but the general principle that the agency of a proxy may be determined by a shareholder who elects to attend and vote personally would appear to be sound. Another important matter which Mr Jordan touched upon but did not develop at length was the unsatisfactory definition of a subsidiary company. Under Section 127 of the new Act a company is a subsidiary when another company holds more than 50 per cent. of its share capital or of its voting power, or has power to appoint the majority of its directors. One criticism of this definition is that, in practice, a company may be effectively controlled, to all intents and purposes, by another company whose nominal rights fall short of those specified; while, as Mr Jordan amusingly pointed out, a company may theoretically be a subsidiary to three distinct companies, under the terms of the Act. In view of the growth of holding company finance, and the probability that further measures of rationalisation of British industries will involve the creation of yet more holding companies, the matter is clearly one upon which the law should be laid down with the utmost precision. Mr Jordan finally drew attention to the loose draughtsmanship of Section 128 of the Act, relating to the disclosure of remuneration paid to directors. As this Section contains a proviso exempting amounts paid to managing directors from disclosure, and the expression "managing director" is nowhere defined, it has been possible for many companies to drive a coach and four through the Act's provisions. In some cases companies with large directorates have expressly appointed nearly the whole of their board managing directors. On the whole, while many critics declare that the new Act does not go nearly far enough in imposing more stringent requirements on companies, particularly in the matter of disclosure of material facts, its general draughtsmanship has so far proved not unsatisfactory. Some of the anomalies pointed out by Mr Jordan and other commentators, however, are of sufficient importance from the investor's point of view to suggest the advisability of a short amending Act in the near future.

The United Africa Company.—The first report has been issued of the United Africa Company, which was formed in April, 1929, as an amalgamation of the African and Eastern Trade Corporation and the Niger Company, both

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL,
RAILWAY, PUBLIC UTILITY,
INVESTMENT TRUST AND
INDUSTRIAL FINANCING

companies trading with the natives of West Africa. Subsequently, the company acquired the West African interests of the Margarine Union. The African and Eastern and the Niger Company each received 6,500,000 shares of £1 in the United Africa, while a further 2,731,600 shares of £1 are to be issued in respect of the Margarine Union and other acquisitions, bringing the total issued capital up to £15,731,600. Treating the subsidiary companies as branches, the United Africa now reports a profit of £386,407 for the year to April 30, 1930, from which the following deductions are made: depreciation, £276,275; directors' fees, £3,000; income tax, £38,616; employees' provident fund, £25,360; and preliminary expenses, £19,013, leaving a balance of £24,143, or 0.15 per cent. on the issued capital. Even so, no depreciation has been provided in respect of land and buildings other than those belonging to manufacturing subsidiary companies, as it is the intention of the directors to have a revaluation made of the fixed assets of the company. Clearly, such a revaluation is urgently required as the consolidated balance sheet shows a break-up value of about par for the £1 ordinary shares, which are only able to earn 0.15 per cent. The significant feature of the consolidated balance sheet is the disclosure of the enormous quantities of stocks carried, merchandise being valued at £6,531,946 and stocks of produce at £3,597,306, a total of £10,129,252. These stocks are valued at cost or market prices, whichever are the lower, and the writing-down of merchandise and produce to market values may account for the meagre profits shown in the profit and loss account. Disregarding stocks, it will be found that "quick" assets (debtors, payments in advance, cash and bills receivable) amount to £3,967,529, as against trade liabilities of £9,464,563. The company does not appear to be very liquid, and the carrying of such large stocks prompts the suggestion that the company's trade has been gravely affected by the slump. The African and Eastern is placed in a somewhat thankless position. It holds 6,500,000 shares of the United Africa, on which it is receiving no dividend. Its income is entirely derived from the rents of its properties

(Africa House, Kingsway, and Hampden House, which were not transferred to United Africa, bring in about £17,000 a year) and from interest on its investments. The results for the past three years compare as follows:—

	Year to September 30, 1928.	Seven months to April 30, 1929.	Year to April 30, 1930.
Profit	Dr. 96,953	74,600	14,803
Brought in	266,453	44,717	37,330
Available	169,500	119,317	52,133
Prof. divs.	†124,783	*81,987	14,250
Forward	44,717	37,330	37,883

* Including one half-year's dividend to December 31, 1928, on "B" preference. † "B" preference dividend paid to June 30, 1928, only.

The company has paid the dividend on its "A" preference shares for the year to April 30, 1930, but the "B" preference shares dividends are in arrears since December 31, 1928. Until the trading position of United Africa improves, the shareholders of the African and Eastern must possess their souls in patience. The ordinary shares of African and Eastern have fallen to 3s. 9d., after being as high as 16s. 6d. this year. The "A" preference shares are quoted at 16s. 6d. and the "B" shares at 7s., as compared with high levels of 19s. 9d. and 18s. 4½d., respectively, earlier this year.

Aerated Bread Company.—A marked improvement is shown by the accounts for the year ended September 27th last. After £66,737 was allotted for depreciation, as compared with £51,541, a year ago, the net profit rose by £82,086 to £104,328. After payment of preference dividend, a distribution of 5 per cent. was made on the ordinary capital, on which 6.29 per cent. was earned. This distribution may be criticised on the score of liberality, in view of the falling off in the company's holding of cash, and the difficulties through which its affairs have recently passed:—

	Fifty-two Weeks ended		
	Sept. 29, 1928.	Sept. 28, 1929.	Sept. 27, 1930.

* Not stated.
† £124,659 general reserve absorbed in providing for losses or depreciation of investments in subsidiary companies and other assets and in making provision for expenses of investigation.

On the figures shown in the balance sheet, the financial position has been considerably improved. A mortgage of £83,000 has been redeemed, and the bank overdraft reduced by £54,178 to £49,698. The growth of £38,549 in creditors was offset by an increase of £41,375 in debts, of which £39,812 was represented by the rise in sums due by subsidiaries, now £93,786. Cash fell by £20,646 to £5,979, and property and fixtures, equipment, etc., were reduced by £25,866 and £17,656 respectively to £1,055,025 and £483,786. In their report, the directors state that the turnover was a record for the company. Drastic reorganisation has been, and still is being carried out. The J.P. Restaurants redeemed £100,000 6 per cent. debentures, the interest on which had been guaranteed by the A.B.C. since 1928. The directors go on to say that the assets of the company are free from any prior charge, but the combined balance sheet does not appear quite to bear out this statement. This balance sheet is shown after "eliminating goodwill and all intangible assets, and after making provision for all dividends paid

or declared for the period covered by the accounts." Assets are shown totalling £1,080,771, the largest being property £823,304, plant, etc., £158,921, stock £41,428, sinking fund premiums £15,551 (surrender value £9,551), debtors £32,630, and cash £8,836. Of the liabilities of £692,627, £300,000 represents debentures (presumably those of Abford Estates, Limited, which has this sum outstanding), mortgages, loans and overdraft £277,125, and creditors £115,502. Of the surplus of assets of £388,144, the Aerated Bread share is £362,782. During the year new premises have been acquired and attention given to redecoration and repairs to the various depots, the latter being paid for out of revenue. At the present price of 19s. 4½d. per £1 share, the yield on the ordinary shares is £5 8s. 10d. per cent., allowing for the 5 per cent. dividend.

Richard Thomas.—In a circular issued last October the directors of this steel and tinplate manufacturing company informed shareholders that, in view of the higher level of earnings and the reduction in floating indebtedness, they proposed to postpone the formulation of a scheme of capital reorganisation in order to have further experience of the working of the company under the new arrangements. The accounts for the financial year ended September 30th last certainly reveal a gratifying improvement. Gross profit totals £391,573, against £231,128 in 1929. Net profit, at £203,991, compares with £27,566 for the previous twelve months. The payment of preference dividends, however, even on a reduced scale, has not yet been resumed.

	Year to September 30.	1928.	1929.	1930.
Gross profit	242,728	231,128	391,573	
Directors' fees	...	5,928	6,709	
Depreciation, &c.	67,182	67,336	62,925	
Debenture interest, &c.	132,441	130,298	117,947	
Net profit	43,105	27,566	203,991	
Brought forward	189,747	232,852	260,418	
To re-valuation reserve	...	...	250,000	
Carried forward	232,852	260,418	214,409	

The sum of £250,000 has been transferred from profit and loss account to a special "reserve for revaluation of capital assets," while a further amount of £150,000 has been taken from general reserve and likewise credited to the new fund, which now totals £400,000. The carry forward is decreased from £250,000 to £214,409. A note in the balance sheet states that the values shown are "subject to adjustment in respect of depreciation of properties and investments, the total amount of which cannot at present be fully ascertained." Though the position of the company is still far from liquid, an improvement has been effected since 1929, the "amount due to bankers" and "amounts due by the company" both revealing considerable reductions. It remains to be seen whether the directors' previous forecast of a net annual profit of £250,000, after providing £120,000 for depreciation, will be realised during the present year.

Samuel Allsopp.—The accounts of these Burton brewers for the year to September 30th last reveal a marked increase in turnover and profits. Trading profit stands at £234,156, an increase of £23,548, while net revenue has advanced from £128,240 to £145,323.

	Year to September 30th.	1929.	1930.
Net profit	128,240	145,323

Paid %	8	8½	
To Reserve	25,642	25,000	
Carried forward	31,850	59,769	

The report recalls that during the year negotiations were concluded for the purchase of a controlling interest in the Lichfield Brewery Co. and half the ordinary shares in Archibald Arrol and Sons, the acquisitions being financed by a temporary loan which has since been repaid out of the proceeds of an issue to ordinary shareholders of 466,408 shares at a premium. The effect of these amalgamations does not appear in the current balance sheet, but the board is of the opinion that "substantial benefit will henceforward accrue." Shareholders will notice that the balance sheet fails to reveal a high degree of liquidity, and that goodwill still stands in the books at £700,000. At their present price of 23s., the £1 ordinary shares give a yield of £7 14s. 6d. per cent., allowing for the dividend of 8½ per cent.

An Undesirable Offer.—It is doubtful whether the machinery of the Industrial and Provident Societies' Act was intended to cover such propositions as the Co-operation Rubber Corporation, Ltd., which has been formed, according to its prospectus, mainly to speculate in raw rubber. Any form of speculation, as such, is unsuitable to the small investor, but of all possible forms, that of gambling in one of the most unstable of all commodities, whose past price movements have repeatedly taken even well-informed market authorities by surprise, is the least desirable. The Corporation has a capital of unlimited amount in 2s. shares, for which the outside public may subscribe at par plus 1d. entrance fee, with a minimum limit of 100 shares and a maximum of 2,000. The directors are Mr William Alfred Lack, a director of two rubber companies, and Mr Walter Cecil Norfolk, described as an East India merchant. The prospectus bristles with debatable points. The document which has reached us originally bore the printed words: "This is not an invitation to subscribe for shares, but is issued for information only." This has been ruled through in red ink. The erasure is not attested in any way, but as an application form is enclosed, it must be presumed that the document is, in fact, an invitation to subscribe. The shares will, naturally, have no Stock Exchange quotation, and no market, though the corporation is prepared to act as a clearing house for members who wish to buy and sell, and proposes to allocate an unnamed sum from each year's revenue as a fund for the repurchase of shares "at the discretion of the directors." Any funds which are not required for the purchase and sale of rubber are to be used for an "investment trust business," though the document is entirely silent as to the proportion this sideline is likely to bear to the rubber business or the nature of the securities into which the money will be put. In a letter to the Press, one of the directors has stated that the money not employed in the rubber business will, in fact, be invested in gilt-edged securities. This is not the normal meaning of the term "investment trust business," and should have been made clear in the official document. The matter forwarded to us includes a folder giving information (of a somewhat optimistic tenor) on the subject of native rubber output, plantation costs, etc., and leading to the conclusion that "an immediate forward purchase of raw rubber with the object of holding it, if necessary for twelve months, should yield a profit of approximately 100 per cent." There are many conservative persons in

HEAD OFFICES: LIVERPOOL AND LONDON.

the rubber market who believe that, sooner or later, the commodity will rise above its present low level, but few would support a bald statement that within twelve months it is likely to rise to over 9d. a pound. The resources of the small investor are entirely inappropriate media for speculations on such a possibility.

Turkish Loans.—The recent failure of the Turkish Government to meet its obligations has caused much speculation as to bondholders' prospects. Last spring the two Co-Presidents of the Loan Council visited Turkey and were presented with a request from the Turkish Government that till October 25th the Loan Council should make a loan to Turkey of two-thirds of her interest obligations, while Turkey would pay one-third to them. This arrangement was never confirmed by the Loan Council, which pointed out that not only had the Co-Presidents no power to make it, but had never given their consent as claimed by Turkey. Till October 25th, Turkey regularly paid the one-third. French legal opinion has, however, been consulted, and has declared that such part payment is no discharge of the debt. Turkey's latest budget incidentally allots £T54 millions to the Army and £T7 millions to the Navy and Air Force out of a total estimated expenditure of £T222 millions, while Public Works and Public Debt receive £T33 millions each. It is recognised that at present taxation in Turkey has reached a maximum point; the 1930 crop, further, has been bad. As a result of the legal advice the Council has received, it is not prepared to distribute any of the money received from the Turkish Government lest it should be regarded, under International Law, as having agreed to the discharge of the Turkish Government's obligation by the payment of 6s. 8d. in the £1. Since October 25th, Turkey has not fully maintained the payment of the one-third of her obligations. Nevertheless, it is stated that America has decided to loan Turkey certain sums to found a Central Reserve Bank. So long as Turkey finds herself in a position to obtain new money on these lines a settlement of the Debt dispute is likely to be delayed.

The Rhodesian Amalgamation.—For some time past negotiations have been in progress for a fusion of, or at least, a working arrangement between the Congo-Border-N'Changa group and the Bwana M'Kubwa. The delay in the announcement of the scheme is attributed to the opposition of a minority interest on the Congo side; and even now two out of the twelve directors of the Congo Border Company are not in agreement with the proposals. These are, in brief, that the Rhodesian Congo Border Conversion should absorb the N'Changa, giving one share in respect of every four, and should acquire for 550,000 shares "the mining and prospecting undertaking and certain assets" of the Bwana M'Kubwa Company. For this purpose the capital of the Congo Border Company is to be largely increased, and to provide the additional funds needed for treatment, plant, etc., an issue of £4,500,000 7 per cent. debentures is to be made under guarantee of the Rhodesian Anglo-American and Messrs J. C. im Thurn and Sons. That the Congo and N'Changa concerns would be amalgamated sooner or later was a foregone conclusion. The properties adjoin, and the ore bodies trend from the one into the other. As regards the Bwana, importance attaches chiefly to the N'Kana property, which is situated some 40 miles from the Congo area. It is claimed that the fusion will (1) effect a marked saving in capital outlay and overhead charges; (2) will facilitate financing; and (3) will place the combined undertaking in "a dominating position" amongst the copper producers of the world. In view of the distances separating the two groups of properties, it is not quite clear how No. 1 claim can be justified. From the Bwana Company's point of view, however, the financial provisions would appear to be not unattractive; they may also have been the chief ground of opposition of the Congo minority interest. The information lacking on various points, more especially as affecting Bwana, will doubtless be supplied at the meetings. Meanwhile the announcement of the scheme has had the effect of depressing the quotations of the various shares to lower levels than for many months past.

British Controlled Oilfields.—Last September a scheme for the reorganisation of the capital of the British Controlled Oilfields was passed by the shareholders. This scheme involved the writing-down of the preference shares by 40 per cent. and of the ordinary shares by 60 per cent. On account of this reorganisation the directors have considered it desirable to alter the date of the accounting period from July 31st to December 31st, so that the general meeting which takes place in Montreal shortly will be adjourned until April 30, 1931, when the report and accounts covering the period of seventeen months ending December 31st, 1930, will be presented. In the meantime the directors have issued an interim report, stating that the total production of the company from all sources for the year ended July 31, 1930, was 2,714,985 barrels, as compared with 2,601,374 barrels in the preceding year, while the gross profits amounted to £395,864, as compared with £440,171. The following table, comparing the results for the past few years, shows that the company has made steady, if slow, progress:—

	1928. Barrels.	Year ended July 31. 1929. Barrels.	1930. Barrels.
Crude oil production ...	2,352,576	2,601,374	2,714,985
Gross profit	£ 405,280	£ 440,171	£ 395,864
Net profit after depreciation	169,472	241,115	149,864

The net profit figure for last year, after allowing for depreciation of £246,000, has been calculated on the same basis as in the previous year. It is satisfactory to learn, from the directors' report, that the reduction in profits for the past year is mainly attributable to higher freight rates, for there has been a severe fall in tanker freight rates since July 31st. The issued capital of the company now consists of \$27,500,000 in \$17,500,000 7 per cent. participating preferred shares of \$5 and \$10,000,000 common shares of \$5. Approximately £194,000 is required for the dividend on the preferred shares. It will be seen that the company earned only 77 per cent. of its preference dividends last year. As regards the prospects for the current year, the shareholders must wait for the chairman's statement at the general meeting in April next year. The common shares, which have been as high as 4s. 10½d. this year, are now quoted at 1s. 6d., and the preferred shares have fallen from 8s. to 3s. 9d.

Rand Low-Grade Mines.—The evidence submitted to the Low-Grade Ore Commission, sitting at Johannesburg, has been of a varied and voluminous character. We are in receipt of a statement prepared by Mr H. M. Thomas, M.E., B.Sc., who has had a long experience in management on the Witwatersrand Goldfield. An accompanying diagram emphasises many of the writer's conclusions. It shows clearly the "zone of enrichment" which extends from the New Modder to the Springs, and after a break of several miles reappears at the Sub Nigel. Although at the last-named property the zone is much narrower, and the gold contents much higher than further north, the Modder and Sub Nigel zones are considered to be identical. On the south-west side of the Zambesi there is a narrow belt of low-grade ore; on the north-east side a fairly wide belt of medium-grade material. Each of these belts narrows to disappearance at the break above referred to. Mines situated within the rich zone are the New Modder, Modder Deep, Government Areas, New State Areas and Springs; those partly in the rich and partly in the poor zone, the Van Ryn Deep, Brakpan and West Springs; those partly in the rich and partly in the medium zone, the Modder B, Geduld, East Geduld and Daggafontein. The two last-named, and the Witpoort, are at present only in the development stage. The principal object of the writer has been "to place the Far East Rand in its true perspective as regards the future of the gold-mining industry." Circumstantial evidence is declared to be against the optimistic view that the district will continue to produce vigorous New Modders and Government Areas. On the results shown by development and drilling, Mr Thomas

places the possible additional payable claims at 7,900, containing ore above 8.5 dwts., 5,000 claims containing ore above 6 dwts., and "a certain number" of lower grade. These totals include the ground owned by the three developing mines—the East Geduld, Daggafontein and Witpoort; hence the prospective addition does not amount to a great deal. But while hopes are buoyed up by visions of future discoveries in the Far East Rand, "millions of tons of low-grade ore in the producing mines from Boksburg to Randfontein are in peril of being permanently lost through the caving of the partly worked-out areas and the cessation of operations. Millions of tons have already been lost through these causes, and the extraction of the remaining tonnage before it is too late is a matter of foremost importance." Here we have the point of a paper the bulk of which, at first sight, appeared rather wide of the mark. The writer's contention is that it is really better to render possible the exploitation of ore known to exist than to spend large amounts in searching for ore which may not be there. As regards the Low Grade Commission, cabled advices from South Africa state that this body is unlikely to continue its sittings during the coming session of the Union Parliament. It is expected that technical sub-committees will be appointed to go into the various questions and draw up reports to be considered by the Conference at resumed sittings next recess.

Tin Dredging Results.—In view of the conditions which have prevailed during the period covered, the showing made by the reports of the Malayan Dredging group to June 30th is better than might have been expected. Those conditions were, of course, the low price of the metal and the restriction of output in one shape or another. The company named treated a somewhat increased quantity of ground, but the average yield was distinctly lower than before, and the net profit came out at £107,100 in place of £153,050. The final dividend of 10 per cent. makes 47½ per cent., as against 60 per cent. On the present occasion only a trifling sum is written off property account, but £110,770 goes forward, or £11,870 more than was brought in. Investments have risen by £119,100 to £293,900. Of the area of 2,177 acres, 889 acres have been worked out. A new and powerful dredge is replacing two old machines closed down. Thanks to the operation of all four dredges the subsidiary, Southern Malayan, put through a largely increased yardage, with only a small falling off in average yield. As a result the output totalled 2,018 tons, against 1,270 tons, and the profit came out at £96,700 in place of £79,060. A final dividend of 2½ per cent. is declared, raising the total to 30 per cent., or 7¼ per cent. more than for 1928-29. Of the 2,020 acres held, 188 acres have been dredged out. With the Southern Perak, results were adversely affected by the reduced value of the ground treated, although a considerably larger yardage was put through. The profit amounted to £28,600, as against £46,600. No final dividend is recommended, the total for the year thus being 18½ per cent. in place of 25 per cent. Of the company's area of 1,888 acres, 415 acres have been dredged out. Each of these undertakings is in a position to benefit quickly from any improvement in the tin market.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Overseas Bank, Peninsular and Oriental Steam Navigation, State of Bahia South-Western Railway, Nelson Financial Trust, British Burmah Petroleum, Steaua Romana (British), Roan Antelope Copper Mines and Luipaards Vlei. At the annual meeting of the Peninsular and Oriental, Lord Inchcape said that, although the number of ships in commission during some part of the past year slightly exceeded the number for the previous twelve months, they had, as a result of the trade depression, run three-quarters of a million less than in 1929; the cargo carried had dropped in the same period by a million tons; the number of passengers had fallen by 50,000, and the number of animals by 50,000. Presiding at the meeting

of the Roan Antelope Copper Mines, Mr A. Chester Beatty informed shareholders that during the year a Central Native Labour Association was formed to serve the rapidly growing needs of the Rhodesian copper mines, and that, within a very few months of its formation, the labour shortage had practically disappeared. At the Luipaards Vlei meeting, the chairman said that the success of the new system was illustrated by the fact that during the period September-November of this year they had been able to send to the mill nearly 93,000 tons of ore, compared with 68,600 tons during the corresponding three months of last year.

CAPITAL ISSUES.

The week's flotations reveal that professional investors are becoming more discriminating as the supply of investment issues increases. *The British Aluminium Company's* issue of 5½ per cent. debenture stock at 98½, offering a flat yield of £5 1s. 6d. per cent., was not much more than fully covered by subscriptions. For an industrial bond covered only three times on earnings and two and a half times on assets the terms were not considered cheap. *The Kenya Government* 4½ per cent. loan at 98½ was regarded as dear, and was not even fully subscribed, underwriters receiving 23 per cent. *The Cunard House* issue of 4½ per cent. first mortgage debenture stock at 90, to return a flat yield of 5 per cent., was better received, the loan being secured on real property in the City and unconditionally guaranteed as to interest and sinking fund by the Cunard Company, whose earnings, we regret to observe, were not published in the prospectus. This issue was ten times over-subscribed. On the other hand, *The Metropolitan Housing Corporation's* offer

of 5½ per cent. first mortgage debenture stock at 95½ was apparently just subscribed. These results point to a more discriminating mood on the part of the London capital market. An issue of £750,000 Corporation of Smethwick 4½ per cent. stock, 1955-65, at 98½ was issued on Thursday, the stock being a Trustee issue, giving a flat yield, somewhat on the low side, of £4 11s. 4½d. per cent. The result of the issue was not available when we went to press.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to December 6, 1930, £239,722,055.
Total, including conversion recorded, January 1 to December 6, 1930, £421,114,686.

National Savings Certificates.

Net sales, week ended December 6, 1930, £300,000.
Total receipts, April 1, 1930, to December 6, 1930, £5,000,000.

Kenya Government 4½ per cent. Inscribed Stock, 1961-71.—Issue of £3,400,000 4½ per cent. inscribed stock, 1961-71, at £98½ per cent., of which £900,000 has already been placed in the terms of the prospectus. Trustees are authorised to invest in this stock. The principal will be repaid at par on January 1, 1971, but the Government of Kenya will have the option of redemption at par on or after January 1, 1961, on six months' notice. Half-yearly contributions to a sinking fund at the rate of 1 per cent. per annum will be commenced on or before July 1, 1934. The issue allows a flat yield of £4 11s. 5d. per cent.

Smethwick Corporation.—Issue of £750,000 4½ per cent. redeemable stock, 1955-65, at £98½ per cent. Trustees are authorised to invest in this stock. The stock will be redeemed at par on September 30, 1965, unless previously cancelled by purchase or agreement, but the Corporation will have the option of redeeming the stock in whole or part at par at any time on or after September 30, 1955, on three months' notice. The proceeds of the present issue will be applied for the purposes of housing, gas undertaking, and for redeeming existing loans. A rate of one penny in the pound produces £1.410.

British Aluminium Company.—Issue of £2,500,000 5 per cent. first mortgage debenture stock at £98½ per cent. The stock will be redeemable by means of a cumulative sinking fund of 1 per cent. per annum, commencing in 1936. Any stock not previously redeemed will be repayable at par on January 1, 1973, but power is reserved to redeem outstanding stock from January 1, 1936, up to and including January 1, 1951, at 103 per cent. and thereafter at par, on three months' notice. The present outstanding prior lien debentures and debenture stock are to be redeemed on June 30, 1931, at 105 per cent. and December 31, 1930, at 110 per cent. respectively. The company was incorporated in 1910 for the purpose

of establishing hydro-electric undertakings and producing aluminium and its alloys. Net profit for the year to December 31, 1929, totalled £420,017, covering interest on the present issue 3.4 times.

Cunard House, Limited.—Issue of £750,000 4½ per cent. first mortgage debenture stock at £90 per cent. The company reserves the right, on six months' notice, to redeem at par plus accrued interest on July 1, 1940, or at any time thereafter. Stock not previously redeemed will be repaid at par on January 1, 1934. Redemption will be affected by a cumulative sinking fund of ½ per cent. per annum operating half-yearly by drawings at par or by purchases up to par. The company was incorporated in December, 1930, with the object of acquiring a freehold site in the City for the purpose of erecting a building to be known as "Cunard House." The interest and sinking fund payments are guaranteed unconditionally by the Cunard Steamship Company.

Metropolitan Housing Corporation.—Issue of £1,000,000 5½ per cent. first mortgage debenture stock at 95½. The stock is to be redeemed by the operation of a cumulative sinking fund of 1 per cent. per annum, commencing in 1931, to be applied annually by purchase in the market below par or by drawings at par. Any stock not previously redeemed will be repaid at par on December 31, 1965, but power is reserved to repay the whole of the outstanding stock at any time after December 31, 1940, at 105 per cent. on three months' notice. The company was formed in March, 1929, to carry on business as owners of property in the Metropolitan area. Net profit for the six months to September 30, 1930, was £66,388, covering half-year's interest on sinking fund of the present issue more than twice.

Sun Electrical Company.—Issue of 60,000 7½ per cent. preference shares of £1 each at par. The company was formed in 1899 as a wholesale electrical distributing firm. Profits for the year ended April 30, 1930, amounted to £23,174, covering dividend on the preference shares, including the present issue, nearly three times.

Rugby Gas Company.—Issue by tender of £10,000 6 per cent. redeemable preference stock. Minimum price of issue par, to be redeemed at par on July 1, 1950. Net revenue after debenture interest for the year to December 31st last totalled £8,481, covering dividend on the preference stock, including the present issue, 2.8 times.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction. **Railway and General Investment Trust.** Particulars of £500,000 5 per cent. redeemable debenture stock, series "A," 1975-85, issued at £96 per cent. **Brough Nicholson and Hall (1930).** Particulars of an issue of £150,000 6 per cent. first mortgage redeemable debenture stock at £95 per cent. repayable 1957. The company was incorporated in November to acquire the old-established silk and thread manufacturing business of Brough, Nicholson and Hall. **Metropolitan Housing Corporation.** Issued capital £1,000,000, in 350,000 7 per cent. cumulative preference shares of £1 each and 650,000 ordinary shares of £1 each.

[Other Stock Exchange information, including the latest dividend announcements, profit and loss figures, weekly traffic returns, summary of balance sheets, reports and notices, and mining output statistics will be found on page 1144 under the heading "Company News."]

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended December 3rd: Venezuela, 34,612 barrels; Trinidad, 21,283 barrels; total, 55,895 barrels. Production for November: Venezuela, 149,853 barrels; Trinidad, 88,077 barrels; total, 237,930 barrels. Deliveries for November: Venezuela, 144,551 barrels; Trinidad, 83,408 barrels; total, 227,959 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of November amounted to 107,721 barrels, or approximately 15,389 tons.

MEXICAN EAGLE OIL.—Reduction week ended November 29, 1930, was 218,000 barrels.

STEAVA ROMANA (BRITISH) LIMITED.—Production of the Steava Romana Company, Bucharest, for the month of November was 51,310 tons.

TOCUYO OILFIELDS OF VENEZUELA, LTD.—Oil produced during November, 1930, 2,459 tons.

COMPANY MEETINGS, &c.

THE BRITISH OVERSEAS BANK, LIMITED.

SATISFACTORY RESULTS IN AN ABNORMAL PERIOD.

CHANGES IN WORLD MONETARY CONDITIONS.

CAUSES OF THE DEPRESSION.

VISCOUNT CHURCHILL'S INTERESTING REVIEW.

The eleventh annual general meeting of the British Overseas Bank, Ltd., was held on Tuesday, December 9, 1930, at the bank's premises, 33 Gracechurch Street, London, E.C.,

The Right Hon. Viscount Churchill, G.C.V.O. (the chairman) presiding.

The deputy manager and secretary (Mr A. E. Thorne) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, the report and accounts have been circulated and I presume that, as usual, you will wish me to take them as read. (Agreed.) Now, gentlemen, in moving their adoption, I should like, first of all, to tell you how very sorry I am—and I am sure you will all join me in that—that our manager, Mr Dean, is not present here to-day. He was taken ill some weeks ago and has had a very severe operation for appendicitis. I am glad to say, however, that he is going on very well, and we are looking forward to having him back with us in due course. I know how sorry he is at being unable to be present with us to-day.

PERIOD OF ACUTE WORLD DEPRESSION.

Since our meeting last year the changes that have come over the complexion of world conditions have been great and widespread. The collapse of the New York stock market, in November of last year, was the herald of a period of acute world depression. How acute, in comparison with previous slumps, it is too soon to judge, as it would be unduly optimistic to say we are in sight of its end. Rather than prophesy, therefore, I propose to review, in general terms, the situation as it is, and to indicate the principal circumstances which have led up to it.

This collapse in Wall Street which heralded the period is regarded by many people, particularly on the other side of the Atlantic, as an important, if not the main, cause of the depression, and the influences that had been at work since the war are apt to be overlooked. What actually happened is that the preceding Wall Street boom made possible a fictitious continuance of prosperity in America at a time when trade activity had passed its peak and was definitely on the down grade.

RENEWED FALL IN PRICES.

One of the most important features of 1929 was the renewed fall in world prices. This followed a period of two or three years of comparative stability, in which we were beginning to hope that the disturbances of the first few post-war years had at last given way to settled conditions. The inflation and unbalanced budgets of the years immediately following the war had been succeeded by a phase of general reconstruction. Most of the principal countries had returned to the gold standard and had set their finances in better order; and though this process involved a certain tendency to deflation, and consequently falling prices, that was part of the cost of restoring the world's financial health.

Once that was over, we hoped for better things. However, in 1929 the fall of prices began again. In England, for instance, this fall began in March or April, while America, under the influence of the Stock Exchange boom, did not follow suit till the autumn. Practically the only country unaffected was France, where special circumstances have deferred the movement almost till the present day.

SUPPLY AND CONSUMPTION.

A fall in prices means that there has been something wrong in the adjustment of supply to demand. It is true that in some special instances production has been greatly in excess of what can be regarded as a reasonable level of consumption; this is particularly so in cases where some scheme has been set up for maintaining prices without any adequate control of production, such as, for instance, the Brazilian Coffee Defence Scheme, the Stevenson Rubber Restriction Scheme in the Malay States, or the American Copper Exporters' Association. This is a form of support to trade

that has been tried out in many countries, either by their Governments or by associations of producers, and it is difficult to think of a single instance where it has worked out satisfactorily in the long run.

Equally, consumption has been restricted by special circumstances affecting individual countries, such as Soviet Russia or China. But these particular instances do not give the whole explanation. Even before the depression came, industry was working considerably below its capacity and unemployment on a large scale was a problem in many countries. This showed a general failure to adjust supply to demand which was due in the main to certain underlying influences. I refer to the gold question and also to war debts, reparations, tariffs, taxation, and the whole of the political uncertainties and difficulties that have hampered and restricted trade ever since the War.

Under our existing monetary and credit system, the function of gold is to form the ultimate basis for credit supplies, and the ultimate means of settlement of International indebtedness. An excessive expansion of credit, for instance, in one individual country, should produce the automatic corrective of an outflow of gold and consequent restriction of credit supplies. Equally, an abnormal inflow of gold should lead to credit expansion which would in due course neutralise the tendency for further influx. Unfortunately, however, this has not been the case since the War, with the result that gold supplies are extremely badly distributed.

THE GOLD STANDARD.

This is one of the most potent factors in the post-War situation. The return to the gold standard, in itself, has been of benefit to world trade, in removing the risk of exchange fluctuations and transfer difficulties, but a gold standard subject to these abnormal impediments is not an unmixed blessing. To show the extent to which the distribution is at fault, I may mention that two countries, the U.S.A. and France, are estimated to hold about £350,000,000 or £400,000,000 of gold in excess of the actual requirements, or more than double the total amount at present held by the Bank of England: while at the same time many of the principal countries, notably Great Britain, Germany and Italy, have inadequate supplies. Moreover, there are no signs of improvement in the position as yet. The recent attempts of the U.S.A. to release part of their surplus, by a policy of cheap credit, only culminated in the disastrous stock market boom and slump of last year, while France has yet to show any signs of willingness to co-operate with the rest of the world in dealing with this problem.

The creation of the Bank for International Settlements was believed in some quarters to be a contribution towards the solution of the gold question, but the value of this contribution remains to be seen.

WAR DEBTS AND TARIFFS.

This maldistribution has been considerably aggravated by other factors, the chief of which are war debts and tariffs.

Germany is the first case in point. As the payer of reparation annuities, she has been forced to develop her export trade at any cost, with results that are strongly felt in Great Britain and other manufacturing countries. However, you cannot suddenly force a country's foreign trade to yield a heavy credit balance, and in consequence Germany has been particularly dependent on foreign capital to carry her through this period, and has been obliged to maintain high interest rates.

POSITION IN AMERICA.

In America the position is the reverse. A creditor nation since the War, the amount of her claims on foreign countries is increased by large receipts on account of war debts and reparations. This surplus can only be liquidated by increased imports of merchandise, by foreign lending, or by importing gold. Neither of the first two ways, which we can regard as the normal method of dealing with such a position, has come into operation effectively. The aspiration

has been frequently heard in America, since the war, that New York should usurp the place of London as the monetary centre of the world. The fundamental difference was, however, overlooked: that, while Great Britain of necessity received from her foreign debtors foodstuffs and raw materials in liquidation of her loans and payments of interest, the United States has put every difficulty in the way of her debtors paying their principal and interest in merchandise, by the imposition of prohibitive tariff barriers. In consequence, she has always had a tendency to import gold, to the detriment of credit conditions throughout the world.

The American tariffs are not, of course, the only ones which influence the world situation. High and indiscriminate tariff barriers have sprung up throughout the world, and their effects in impeding trade and reducing purchasing power are already sufficiently clear. Of the past year, one can only say that it has shown no improvement over its predecessors, and one wonders where the movement will stop.

INTERNATIONAL MONETARY DIFFICULTIES.

These then have been the difficulties of the international monetary situation. The inequable distribution of gold, due to economic forces not being allowed free play, and aggravated by tariffs, reparations and other such factors distorting the natural courses of trade, has led to deflation, disharmony between prices, and ultimately to a general loss of confidence and the dislocation of the entire world's trade.

Another factor which has weighed heavily on world trade is high taxation. Its effects in reducing the savings available for fresh productive investment are clear throughout the world. Political leaders of all parties seem to have lost sight of the fact that new expenditure, whether on social schemes or new development projects, must keep pace with the growth of economic strength, and the burdens on industry and trade have been multiplied to an impossible degree. One may, however, note, in the midst of this general reckless tendency to increase national expenditure, that the German Government has taken courageous and far-reaching steps to reduce expenditure, while the French budget also shows a halt after the steady increases of recent years.

POLITICAL SITUATION.

To turn to the political situation: generally speaking, the whole temper of politics in Europe has become more unsettled, largely, no doubt, through the economic crisis, which has brought to a head many long-standing enmities and grievances. There has been a tendency towards extremes, both of reaction and revolution, at the expense of the moderate elements, and in many countries there has been a complete failure of democratic principles.

International relations have been clouded by a number of developments, among which, in particular, the recent tension between France and Italy may be specially mentioned as a matter for anxiety. The success of the National Socialist Party in the German Elections has also had considerable influence on European sentiment.

POSITION AT HOME.

Finally—the situation in this country. I have already dealt with the factors influencing the world generally, and these, of course, have had a predominating effect on our own position, as on that of other countries. In fact, we have felt their effects particularly strongly since we are more dependent on foreign trade than any other country of the world, and are, consequently, particularly subject to world conditions generally. The financial and political disturbances in Asia, South America and Australia, some of our principal markets, have also added to the difficulties of our export trade. Moreover, even before the depression began, we had our own special difficulties to contend with. Many of our most important industries—wool, cotton, coal, iron and steel and shipbuilding—were in an unsatisfactory state, and unemployment has been a grave national problem since the war. In addition, we have had wage problems of the greatest difficulty. Our sheltered trades have been in a position to maintain wage levels at a time when prices and cost of living were falling, and this has naturally increased the difficulties of wage adjustments in the unsheltered trades, which depend on competition with other countries for their prosperity.

REDUCED PRODUCTION COSTS ESSENTIAL.

This is a problem that has become all the more acute with the recent fall of prices, and it is difficult to resist the conclusion that unless production costs can be drastically reduced there is little prospect of our unemployment problem being effectively dealt with. A world-trade revival should undoubtedly bring some alleviation, but the fact remains that, if we are to maintain our position as an exporter of manufactures, our production costs must be brought

into relation with those of our competitors. On the other side of the industrial picture, rationalisation and reorganisation have made some progress, to the benefit of our competitive power, but these methods will not furnish a complete solution of our problems, particularly as their immediate effect is undoubtedly towards increasing unemployment.

The renewed demand for a revision of our tariff policy is a not unexpected consequence of the depression. It is unfortunate that the practical importance of this question should have been so little appreciated by politicians and economists until it was forced upon their attention by dire necessity.

Speaking generally of our position, I do not think that enterprise is lacking, but high taxation and the absence of confidence in the present political situation is diverting new industries from this country to other more favoured ones, and is a tremendous handicap.

LONDON'S POSITION MAINTAINED.

One satisfactory feature, however, of the past year is the manner in which London has maintained and, in fact, strengthened its position as the lending centre of the world. The threat of predominance by New York, which has constantly been in people's minds since the war, seems to have definitely weakened. This is a matter for satisfaction, both in itself and in its effects on British trade, although the close connection between our trade and our financial activities is sometimes overlooked by industrialists.

During the year one has heard from time to time criticism of the banks for their failure to give adequate financial assistance to trade and industry. While in some directions there may be a certain amount of truth in these comments, it would probably be more interesting to ascertain the extent to which basic industries have been injured by injudicious banking support. A restrictive policy is never popular, and it is, therefore, necessary to be on one's guard lest uninformed clamour influences lending and turns a situation of difficulty into one of danger and disaster. Self-interest is usually sufficient inducement to guarantee the adoption of popular methods, but there are times when the self-denial imposed by a conservative policy is essential in the general interest.

BALANCE SHEET ITEMS.

I do not think it is necessary for me to refer to the figures in our balance sheet in much detail as the fluctuations are of a character which one might anticipate. Current, deposit and other accounts, show a diminution of about £600,000, whilst acceptances show a somewhat larger shrinkage. This smaller total is entirely due to the fall in the prices of commodities, only four articles out of all those for which we furnish credits showing an increased turnover during the twelve months. In this connection, it is, however, interesting to find that the number of credits issued increased by a percentage almost similar to that of the shrinkage shown in the totals. Had prices, therefore, remained at approximately the same level as they were a year ago, the increase of the total shown would probably have been substantial.

PROFIT AND ALLOCATIONS.

You will see that we have declared a profit of £140,000 as against £150,000 a year ago. The one unsatisfactory item in our profit and loss account has been the low rate of interest current during the year. While naturally this item affects everyone, our profits are peculiarly sensitive to this influence owing to our large capital in relation to our deposits. Interest on our capital directly affects our profits, and prevents the difference between the borrowing and lending rates being of the same importance to us as it is to those institutions whose deposits are higher in relation to their capital.

After paying our usual dividends and placing £5,000 in reduction of premises account, we carry forward to next year £73,576 12s. 10d., in place of £58,130 8s. This figure is, of course, arrived at after full provision has been made for all bad and doubtful debts, but we felt that in such times as we are passing through it was sounder policy to increase this figure instead of allocating any sum to our reserve fund or other accounts.

THE RESOLUTION.

Gentlemen, I think I have brought to your notice all the most important points, but I shall be pleased to hear any remarks you may wish to make or any questions you may like to ask. I now beg to move: "That the report and accounts for the year ended 31st October, 1930, as audited and certified by your auditors, now before the meeting, be approved and adopted: that the dividends recommended of 3 per cent. (final) on the 'A' ordinary shares and 6 per cent. for the year on the 'B' ordinary shares be approved, such dividends to be paid to shareholders on the register of members at the closing of the books on November 25th, 1930."

I ask Mr Hird to second that.

MR NORMAN L. HIRD'S SPEECH.

Mr Norman L. Hird (advisory director): Lord Churchill and gentlemen, I have much pleasure in seconding the adoption of the report and accounts, and, in doing so, I think it is only right that I should, on behalf of both classes of shareholders, congratulate the board, the management and the staff on the result that they have put before us. (Hear, hear.) The balance sheet speaks for itself; it is a very strong balance sheet and I need say nothing about it.

With regard to the profits, as Lord Churchill pointed out, there is a fall this year, but we are all quite satisfied that, although the present year may not be a very good one, the future has got a lot in store for the British Overseas Bank. Those of us who are closely connected with banking at home know what a difficult and anxious year it has been, and that anxiety is by no means lessened when you are dealing actively with countries all over the world. I think that in these circumstances we have to congratulate ourselves on the fact that the results are so good because we have got to remember that the British Overseas Bank has operated in what one might call an abnormal period.

GOVERNMENT INTERFERENCE.

It has not had the opportunities which the older banks have had or the good times which they have enjoyed and which we believe, in spite of the depression to-day, will come in the future. (Hear, hear.) Lord Churchill has spoken in a very comprehensive fashion about world economic conditions and there is really very little left for me to say. There are many causes of the present depression and it is difficult to know in what order to put them, but certainly I think we can say that the position is very much worse than it would have been otherwise, owing to Government interference in many ways and, not least of all, Government interference with the course of economic laws. That is not confined to one country; unfortunately it has been rather common all over the world.

Here at home, undoubtedly, apart from the very great problem to which Lord Churchill referred—that of the sheltered and unsheltered trades—some of our troubles are due to the excessive spending of elected bodies. I do not think it is realised always that a manufacturer does not like in the slightest degree having to reduce wages or to alter adversely the conditions of labour; he does those things because he is forced to do so and because he has got to face facts. In the same way, we feel that governing bodies, whether local or Parliamentary, should face the facts and not do what they would like to do but what they ought to do. I have very much pleasure in seconding the adoption of the report and accounts. (Applause.)

The Chairman: Gentlemen, I shall be very happy to hear any remarks which you may wish to make or any questions which you have in your minds. (A pause.) Well, then, gentlemen, I beg to put the resolution. Those in favour will kindly hold up their hands; to the contrary? Carried unanimously. I now ask Mr Hindley kindly to move the next resolution.

RE-ELECTION OF DIRECTORS.

Mr R. T. Hindley (advisory director): Lord Churchill and gentlemen, I have the honour to move the following resolution: "That the directors retiring by rotation, Sir James Caird, Bt., and Mr Dudley Ward, C.B.E., be re-elected." It is a great pleasure to do this. I know the careful attention that those gentlemen give to the work of this bank. Their ability and their experience are always at our service and I think that you and I, as shareholders of this bank, are deeply indebted to them—the directors and executive of the bank—for representing us as they do and for taking on their shoulders the burden and responsibility of guiding a company such as this in these days.

Sometimes I think that we do not quite realise what the burden and responsibility upon directors and executive bodies in industry really mean. They have to guide industry in conditions which are not within their own control. Lord Churchill has very graphically sketched out for us in his speech some of the difficulties.

The Chairman: Those in favour will kindly hold up their hands; to the contrary? Carried unanimously.

Sir James Caird: Gentlemen, I thank you.

Mr Dudley Ward: Thank you.

The Chairman: I now ask one of the shareholders to move the next resolution with regard to the auditors.

REAPPOINTMENT OF AUDITORS.

Mr C. J. Brand, J.P.: Lord Churchill and gentlemen, I beg to move: "That the retiring auditors, Messrs George A. Touche and Company and Messrs McClelland, Ker and Company, be reappointed as auditors of the company for the current year at the same remuneration, namely, a collective fee of seven hundred

and fifty pounds." Will another shareholder kindly second that?

Mr A. J. Thorogood: I shall be very pleased to second that motion, and I may add, from the point of view of the shareholders, that I do not think the audit could be in better hands. (Hear, hear.)

The Chairman: Those in favour kindly hold up their hands; to the contrary? Carried unanimously. That, gentlemen, concludes our business, and I thank you very much for coming here to-day.

VOTE OF THANKS TO THE CHAIRMAN, DIRECTORS AND STAFF.

Mr Frederic Hewson: Gentlemen, I do not think that we can leave this meeting without expressing our thanks to our chairman. We all know his great ability as chairman in other directions as well as this. There is no need for me to say anything in his praise in that direction. He does not need it, but I am sure you will all heartily agree in passing a hearty vote of thanks to him. (Applause.)

Mr Brand: I should like to second that, and to include in it the other directors, the management and the staff, who have had a very anxious time, I am quite certain, during the past year in carrying on our bank successfully, as they have done. (Applause.)

CHAIRMAN'S REPLY.

The Chairman: Well, gentlemen, I am extremely obliged to you for the very kind motion that you have just passed. As I have told you each year, I am pleased to say that we are a very happy family here, including the management and all the staff, who, I am quite sure, will agree with that statement. Where such unity and mutual trust exist I am quite certain that they always tend to the successful operation of any business, however difficult and however trying. Our board are the most loyal body of gentlemen that I have ever had the honour of presiding over—casting no aspersions on other boards. (Laughter.) They are always most kind to me, helping me in every possible way, and our old friend on my right, Mr Gairdner, is a sure rock on which I lean. Therefore I should like to ask him to say a word or two to endorse what I have said. (Applause.)

MR ARTHUR C. D. GAIRDNER'S ACKNOWLEDGMENT.

Mr Arthur C. D. Gairdner (deputy-chairman and managing director): Lord Churchill and gentlemen, the very kind words which Lord Churchill has used and the cordial way in which you have received them have never been more welcome than they are this year. I think that on most occasions when we have met—in fact, I do not feel I should be exaggerating if I said on every occasion—we have found that some country, with which we were in intimate banking relations, was in a state of upheaval and their finances were chaotic. On the present occasion we are confronted with a world-wide convulsion that is bringing about ruthless revelations of mistakes and inefficiency, and giving theory and sentiment a very rough time because of the primitive forces at work. For that reason, on behalf of my colleagues and myself, I thank you most heartily for the cordial support which we always find in you and which, as I have said, has never been more welcome than at the present moment. I thank you. (Applause.)

The proceedings then terminated

STATE OF BAHIA SOUTH-WESTERN RAILWAY COMPANY, LIMITED.

The twenty-first annual general meeting of the State of Bahia South-Western Railway Company, Ltd., was held, on the 9th instant at 8 Arthur Street, London.

Sir F. M. Crisp (the chairman), in moving the adoption of the report and accounts, said the directors regretted that the figures for the year were disappointing, showing substantial decreases in both gross earnings and net receipts; receipts from all classes of traffic being below those of last year. The cocoa crop was a slightly smaller one, the tonnage carried by the company being about 900 tons less. Earnings for the first seven months of the current year showed a decrease of £5,331, as compared with the corresponding period of last year; this was accounted for by the continued severe depression in trade, which had been accentuated by the exceptional conditions which have obtained during the past few months. The months of May, June and July, 1930, constituted one of the wettest periods on record, and unfortunately during the month of May serious floods occurred, causing considerable damage to the line and interruption of traffic.

This was followed by the unsettled political conditions in Brazil during the month of October, during which time all banks were closed and business generally was at a complete standstill.

It was expected that the formal inauguration of the extension to Itapira would take place before the end of the year.

The report and accounts were agreed to.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

CAUSES OF SHIPPING DEPRESSIONS.

BENEFITS OF CONSERVATIVE POLICY.

LORD INCHEAPE ON TRADE AND TAXATION.

The ninetieth ordinary general meeting of Peninsular and Oriental Steam Navigation Company was held, on the 10th instant, at the offices, 122 Leadenhall Street, London. The Rt. Hon. the Earl of Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (the chairman of the company), presided.

A DIFFICULT YEAR.

The report and accounts having been taken as read, his lordship said that during a lengthy experience he had never known trade so bad. Disurbances in India, the condition in Australia, and the civil war in China, added to the severe fall in the sterling value of the dollar and tael, had seriously affected shipping.

The financial situation in Australia was causing the company and its allies grave inconvenience. They had a very large sum of money lying there which they could not get home except at a very heavy discount. Meantime the money was lodged with the banks at a fair rate of interest.

The latest figures available showed that on October 1st there were laid up 368 British ships with a total of 885,418 tons. The prospects ahead of shipping were far from bright and despite all efforts to economise there continued to be the greatest difficulty in making voyage results show anything except heavy losses.

THE DIVIDEND.

Thanks to their conservative policy extending over many years the board were able to recommend the payment of a final dividend of five per cent., making a total for the year of ten per cent. free of tax. He felt sure the stockholders would, in the altogether abnormal circumstances, support the board in recommending a reduction of two per cent. in the year's dividend.

INSURANCE AND DEPRECIATION.

The amount at the credit of their insurance fund at the end of September, 1929, was £3,000,000. This year it was £3,027,702 10s. 11d., and from this amount they had taken £27,702 10s. 11d. into profit and loss account. They had now decided to insure all their ships outside against total loss and to reduce their insurance fund to £1,000,000, applying £2,000,000 to the depreciation of the fleet.

MAIL SERVICES.

The mail services had been carried out with punctuality, the total tonnage landed and embarked at Marseilles and London being no less than 73,500 tons.

SUEZ CANAL DUES.

Continuing, his lordship said he was glad to report that the Suez Canal Company, in view of the depression in shipping, had made a reduction of twenty-five centimes gold in the canal dues, the rate as from December 1st last having been fixed at 6 Francs 65 centimes gold per ton. Since 1920 the dues had been gradually reduced by 1 Franc 85 centimes and on ships in ballast by 2 Francs 67½ centimes per ton. The canal transit has been much shortened. The removal of many of the awkward turnings has improved the navigation. The "Mantua," homeward bound, had made the canal passage two days ago in only ten hours.

THE YEAR'S TRAFFIC.

The P. & O. and its allies during the year under review had transported 2,041,943 passengers without the loss of a single life. He said this with all trepidation, but the board's first object was to see that the vessels were kept in perfect order so far as was humanly possible, regardless of expense. In this they had the loyal co-operation of their marine and superintending engineers, their dock and purser superintendents, and their captains, officers, engineers and agents everywhere, than whom it would be impossible to have a more loyal or efficient body of men. Although the number of ships in commission during some period of the past year slightly exceeded the number for the previous twelve months they had, as a result of the terrible trade depression, run three-quarters of a million less than in 1929, the cargo carried had dropped

in the same period by a million tons, the number of passengers had fallen by 50,000; the number of animals by 50,000. The average daily crew employed on board the ships had been slightly reduced, with a corresponding diminution in the cost of wages and victualling.

RUNNING OF THE FLEETS.

A year ago it had been his privilege to say that of the 322 ships owned by the P. & O. Company and its associates not one had been lost. In August last, however, the "Tahiti," of the Union Steam Ship Company of New Zealand, employed between New Zealand and San Francisco, after an accident to her propeller shaft, went down, and although she had 252 souls on board, all told, there was no loss of life, thanks to the skill and resource of Captain Toten, his officers and engineers, to the unflagging devotion of the crew, and to the discipline and good humour of the passengers; and thanks, above all, to Marchese Marconi's wireless, which brought to the "Tahiti" a ship to which everyone on board was safely transferred. After the public inquiry in New Zealand the Court pronounced the following verdict:—

"The loss of the 'Tahiti' was due to a peril of the sea which no reasonable human care or foresight could have avoided. The ship was staunch and well found. The cause of the loss was breakage of tail shaft, probably by a diagonal or scarf fracture, resulting in over-riding of end, this causing puncture of hull and injury to the base of the water-tight bulkhead. The Court awards the highest praise to all concerned, with special reference to the resource and cool accurate judgment of Master and courage and endurance of Engineers."

Of the steamers owned by the P. & O. Company and its associates, this was the only loss.

NEW TONNAGE.

They, the stockholders, might wonder why in the present condition of trade and shipping the board were building six steamers. The reason was that besides the "Razmak" they had during the last year sold five ships to be broken up. They had to look ahead. Some of their vessels were advancing in years, like himself, their chairman, and it was the policy of the board to bring forward new and up-to-date tonnage. The new ships would all have greater speed than the older vessels; oil fuel would give them greater cleanliness and expedition in bunkering; and more economic fuel consumption; and they would have less vibration. The passenger steamers were being arranged for the greater comfort of passengers, including the punkah-louvre arrangement to keep in the alleyways, the public rooms and the cabins, fresh air and equal temperature. Things change and would go on changing, but they were using their best judgment to anticipate the future. He, the speaker, went to India in May, 1874, in a P. & O. steamer from Suez, having crossed Egypt by land. She was 3,000 tons gross register, had close bulwarks, all her cabins were below, oil lamps, no electric light, no fans. He was in a first-class cabin with eight, and they had two wash basins. There was no music room, no writing room or lounge, no smoking room. A number of the cabins were off the dining saloon, the cabins shared one oil lamp with the saloon, and the carpenter came round at 10 o'clock and turned the lights out. A candle for a cabin was only provided on the doctor's order. A ship raced along at ten knots, and going down the Red Sea in the month of May was no joke.

THE ADEN-BOMBAY FERRY SERVICE.

The board had been able to dispense with the ferry service between Aden and Bombay, utilising the China or Australian steamers, with their improved speed, for the fortnightly service both ways, thus avoiding the transfer of mails and passengers at Aden, which was expensive and not very popular. This freed the "Razmak," the price of which would come into next year's accounts. He had felt some responsibility in suggesting to their friends, the Union Company of New Zealand, that they should purchase the "Razmak," and ten days after she was delivered in Auckland he had telegraphed to the Company:—

"Hope pleased 'Razmak'."

and was relieved to get their reply:—

"Very pleased 'Razmak' valuable attractive addition to our fleet."

CARE OF PASSENGERS' BAGGAGE.

Last year he had mentioned that, when he was in India a few years ago, he saw a remark in a newspaper there that passengers landing from P. & O. ships were constantly losing their baggage. A record kept for 1928-9 showed that 9,523 passengers from Europe had been landed from P. & O. steamers in Bombay and that of their 95,230 packages of baggage not one had been missing. Last year 9,400 passengers were landed, and of 94,000 packages of baggage only one has not been traced. This package was insured and the owner recovered its value.

They were greatly indebted to the Bombay Port Trust for their most efficient and expeditious arrangements at Ballard Pier for the landing and shipment of mails, passengers and baggage, and also to the Indian railway companies for facilities in connection with the landing and shipment of mails and passengers at Bombay, to say nothing of the excellent arrangements made by the Post Office there.

THE BURDEN OF TAXATION.

Turning to public affairs, Lord Inchcape said that while taxation was inevitable and all had to bear their share of the cost of the defence and administration of the country, the present expenditure was pressing very hardly on industry. Income tax and super tax and the death duties on the savings a man might leave behind him absorbed in many cases 50 per cent. of his estate.

This raid on the fruits of industry and thrift, this expropriation of capital which should remain as a source of reproductive trade and national wealth, was in itself a sufficient cause of regret. A worse aspect was that a large part of this reckless plunder, instead of being applied to intensive reduction of the national debt, was dispensed with too lavish a hand in the payment of doles. The insurance scheme on which it was proposed to base this expenditure had become bankrupt. There were now two-and-a-quarter millions unemployed people in this country, costing the taxpayers well over two million sterling a week. He was recently told of a case in which an unemployed man was offered a job at twenty-eight shillings a week. He declined it, saying, "Why should I take work for twenty-eight shillings when I am getting thirty for doing nothing?" Relief which approached too nearly to the wages line was, he said, morally and financially, a sin against the people.

THE MYTHIC CAPITALIST.

One heard it said, "Down with the capitalists," but who was to take their place? Were all industries to be killed? Was private enterprise to go? Were all the banks, factories, railways, steel works, coal mines, shipbuilding yards, shipping, shops and stores to be expropriated and run by Government officials? The whole thing was moonshine.

Meantime production costs remained at a level which increased the difficulties of our export trade. Overhead charges could not be escaped and were in many instances an accumulating burden.

One heard talk about thirty-six or forty hours' work a week being enough for anyone. Barring a holiday now and again, he, the speaker, had never been idle, even when on holiday, for the last sixty years. In common with many of his friends, he had worked on an average sixty hours a week and was none the worse for it to-day.

If he might venture to say so, the future of this country was, to a great extent, in the hands of the leaders of the trades unions. If they, the union leaders, did not realise the economic position of the country in the arena of international competition, the nation would come to grief, and they and all their members would share in the disaster.

THE BRITISH CHARACTER.

He believed that the adoption of a more wholesome policy would instantly prove that the heart of the people was sound. He did not believe for a moment that we should ever fall into the abyss of Communism or exchange our civilisation for such a condition as that which exists in Russia to-day.

The Chairman concluded by moving the adoption of the report and accounts.

The Hon. Alexander Shaw (one of the managing directors) seconded the resolution and it was carried unanimously.

The dividend recommendation was unanimously approved.

The Right Hon. the Earl of Cromer, P.C., G.C.I.E., G.C.V.O., and the Right Hon. Sir Robert S. Horne, P.C., G.B.E., M.P., were elected directors.

Mr G. A. T. Darby and Colonel Sir Robert Williams, Bart., were re-elected auditors, and the proceedings terminated with a cordial vote of thanks to the chairman, directors and staff for their continued successful management of the company's business.

NELSON FINANCIAL TRUST, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The forty-seventh ordinary general meeting of the Nelson Financial Trust, Ltd., was held, on the 8th instant, at the Cannon Street Hotel, London.

Mr Harold Nelson (chairman and managing director) said that the balance sheet was the first disappointing one it had been his lot to submit to the stockholders. They had earned £70,161, as against £127,157 in 1929, and the net result showed a profit of £32,485. The £70,161 was equal to 5 per cent. net, or gross £6 8s. 6d., on the balance-sheet values of the company's assets, but they feared there was a possibility that their revenue from investments would be affected during the current year by the trade depression. The accounts disclosed that they had been up against very difficult conditions. There had been an ebbing tide of prosperity for the last two years, very much accelerated in the last six months, and that had left its mark on practically every industry.

WORLD CONSUMPTION AND PRODUCTION.

World conditions were of such a nature that no man, or group of men, or attempted rationalisation of industries, had been powerful enough to have any effect on the downward course of prices. The simple statement of fact was that world consumption at the present time was not equal to world production, and that applied to practically all commodities which were the basis of international trade. The most serious aspect of the position from their point of view was the inevitable depreciation which had affected all classes of investments. Their status was that of a finance company, and as such they were restricted from distributing revenue during the period that their book value of investments in the aggregate was in excess of the market value based on Stock Exchange quotations. The directors were of opinion, however, that a scheme could be drawn up which would enable the company to resume payment of dividends. Should it be the desire of the stockholders, the company could become a trust company, and, if that were done, dividends could be resumed, but, naturally, on a much lower basis. The board would consider how an equitable arrangement could be made with regard to ordinary and deferred stockholders.

The report and accounts were unanimously adopted.

STEAUA ROMANA (BRITISH), LIMITED.

QUESTION OF RESTRICTION.

The annual general meeting of Steaua Romana (British), Ltd., was held, on the 10th instant, at Winchester House, London.

Sir Albert G. Stern said that the main feature as regarded Roumania's production during the year was the exploitation of the lower horizon of the Meotie formation of the Moreni field, in which most of the Roumanian companies held concessions. Production from wells drilled into this sand had so surpassed expectations that in May the Steaua Romana took the lead in discussions for formulating a restriction scheme, with the object of ensuring that Roumania should produce only such quantity of oil as could be absorbed by her natural markets. In July a scheme of production quotas, in the preparation of which the Steaua Romana was not consulted, was presented by two of the leading companies to the other Roumanian producers, including the Steaua Romana.

This scheme contained certain obvious defects, but the Steaua Romana decided to accept the proposals in the hope of later additions and amendments being carried out. Unfortunately, even sooner than was expected, the situation arising under this scheme, accentuated by the fall in world prices, became rapidly untenable for the Steaua Romana, whose status and even existence were seriously menaced by the low production quota accorded under these regulations, and they saw no alternative but to give notice of termination as from December 1st. It was still hoped to formulate a new scheme which would operate in a more equitable manner and thus secure greater stability.

The production of the Steaua Romana Company for the year was 904,828 metric tons, as compared with 737,624 metric tons in the previous year, an increase of nearly 23 per cent. But for the five months ended November 30th last the production was only 308,068 metric tons, as compared with 388,752 metric tons, a decrease of 21 per cent., this reduction being, however, solely due to the restriction agreement.

The trading profits for the year had again been increased from £48,822 to £72,567, equal to about 49 per cent. increase. They proposed paying a dividend on the ordinary shares at the rate of 4 per cent. per annum, less tax, placing to general reserve £25,000, and to an income-tax equalisation account £16,222, and carrying forward a balance of £26,786.

The report was unanimously adopted.

ROAN ANTELOPE COPPER MINES, LIMITED.

EXCELLENT PROGRESS IN ALL DEPARTMENTS.

MR. A. CHESTER BEATTY'S REVIEW.

The third ordinary general meeting of Roan Antelope Copper Mines, Ltd., was held, on the 8th instant, at River Plate House, London.

Mr A. Chester Beatty, the chairman, stated that in view of the information given to shareholders at the extraordinary general meeting held in June last, and in the general manager's annual and quarterly reports issued since, it would only be necessary for him to make a brief statement bringing this information up to date. After commenting on the accounts, the chairman stated that the cash position was very satisfactory, there being approximately £1,200,000 in hand to-day.

The Chairman, continuing, said: Gentlemen, the drilling programme carried out during the year has continued to show very satisfactory results; the completion of Borehole No. R.E.12 at the end of September finished this work, and the contract with the Longyear Exploration Company has been terminated. As a result of the drilling campaign, the company's engineers in Northern Rhodesia estimated the ore reserves on October 1, 1930, at 108 million short tons, averaging 3.44 per cent. copper, of which 95 per cent. is in the form of sulphide.

The drilling concluded to date does not exhaust the possibilities of the property, for there still remain over 4,000 acres of undrilled ground under which the Roan series of ore-bearing rocks are known to exist. However, in view of the very long life assured by the present ore reserves, it is considered unnecessary to continue drilling operations for the time being.

BEATTY SHAFT COMPLETED.

The Beatty shaft, through which the entire initial mine production will be raised to the surface, has been completed at a depth of 1,000 ft., and the work in connection with the erection of the permanent headgear, winding engines and so forth is well advanced. It is estimated that 75,000 ft., or about 15 miles, of drives, raises and crosscuts are required to prepare the mine for its initial production of two million tons of ore per year. Of this estimated amount, 60,030 ft. have already been completed. During the months of September, October and November the average monthly rate of advance was just over 6,000 ft. This very satisfactory rate of progress ensures that the mine will be ready for production on the scale planned as soon as required by the plant.

I am also pleased to report excellent progress in construction. All workshops are completed and in operation. In the power plant the first 7,000 kw. turbo-generator started operating in August, and the second started in November. The coal plant, which will furnish pulverised fuel for both the power plant and smelter, is also in operation. The erection of the coarse crushing plant, the fine crushing plant, and the concentrator, is well advanced, and construction work on the smelter is well under way.

In order to give shareholders an idea of the progress of the plant construction, we have issued reproductions of six photographs with the directors' report. At the meeting in June last, it was stated that production was expected to commence in the autumn of 1931. Since that statement was made, such excellent progress has been made in all departments that there is every probability that operations will commence at an earlier date.

NO MORE LABOUR SHORTAGE.

During the year a Central Native Labour Association was formed to serve the rapidly-growing needs of the Northern Rhodesian copper mines. Within a very few months after the formation of this association, labour shortage practically disappeared. In view of the valuable work which has been done in regard to the efficient utilisation of native labour, we do not foresee any difficulty in obtaining sufficient native workers for all the needs of the copper industry in Northern Rhodesia.

COPPER POSITION.

With reference to the copper position, I can scarcely do better than repeat what I said at the meeting of Rhodesian Selection Trust, Ltd., on October 2nd last:—

"It is certain that over a period of years we may look forward with the greatest confidence to the normal increase in copper consumption. Over 60 per cent. of the world's copper is used in the electrical industry, and the whole world to-day is increasing its consumption of electrical energy very rapidly. In the United States, where there has been a huge expansion in the quantity of electricity consumed during the last 20 years, we find that the copper consumed per capita has increased as follows:—

"In 1912, with a population of 95 millions, there was a consumption of 8.66 pounds per person, while in 1928, with a population of 119 millions, the consumption per person was 16.49 lbs.

"In Great Britain in 1912, with a population of 45 millions, the consumption was 6.98 lbs. per person, and in 1928, with a population of 46 millions, it was 7.89 lbs. per person.

"This condition holds similarly for France and Germany, where there has been a slight increase in this particular period. However, the electrical industry is expanding rapidly in these countries to-day, and with this expansion must come an increase in the consumption of copper.

ANNUAL CONSUMPTION INCREASE.

"For the past fifty years there has been an increase of 6 per cent. per annum in the world's copper consumption. If we use this figure, we find that by 1940 the world should be consuming three million tons of copper per annum, which would mean that there is only enough copper ore proved in the world to-day to take care of the world's requirements for about twenty years. There may be times in the next ten years when too much copper will be produced, but the average consumption during that period should be sufficient to give a fair average price, and I am sure that we can look forward with great confidence to the future of Northern Rhodesia, and that there is no cause for alarm because of the present low prices."

In concluding my remarks, I should like briefly to summarise the present position of the company. We are now within measurable distance of completion of the first construction and development stage of this great mine, and I feel that the foundation for a long and prosperous life has been truly laid. The highest technical skill available has been brought to bear on every important phase of the work, from the proving of the ore by drill holes to the working out of the mining method and the designing and arrangement of the concentrating plant and smelter. In this connection, I especially wish to express our indebtedness to the American Metal Company, who have put at our disposal from the start their highly skilled and experienced staff, and also their works at Chrome, New Jersey, where a large amount of invaluable research and experimental work has been carried out.

I am confident that when the mine is in full production, our original estimate of cost of producing copper will prove to be a conservative one, and our actual costs will compare very favourably with those of any of the large low-cost producers of the world.

EXPANSION FORECAST.

Looking farther ahead, when an expansion in our operations becomes warranted—and I think this will be at no very distant date, because I believe there will be a great demand for copper in the future—there should be an even further lowering of costs.

It must be difficult for shareholders to realise the vastness of this undertaking, and I would ask you to visualise the enormous work and enterprise involved in the opening of this mine. I want particularly to stress the magnificent work which has been accomplished by the general manager, Mr D. D. Irwin, and all those concerned in the construction and underground work. The loyalty and energy which have been displayed call for our highest praise, and I am sure that shareholders will desire me to convey to the staff our warmest appreciation of their fine work. (Applause.)

In conclusion, I should like to draw your attention to certain facts. Eighteen months ago there was the greatest spirit of optimism abroad, copper was selling at the very high price of 18 cents, that is about £83 per ton, and all news was good news.

Now we are in the midst of a world depression and pessimism is rampant, and all news is bad news. Just as the previous point of view was a wrong one, so also is the present one. There is no doubt about the recovery coming, although it may be slow.

CAUSE FOR CONFIDENCE.

As shareholders in this company we must not forget that for many reasons, of which the following are the chief, we have every cause for confidence in the present position and prospects of our enterprise:—

- (1) We are in a strong cash position.
- (2) We have one of the great copper mines of the world.
- (3) We have enormous ore reserves easily and cheaply worked that present no metallurgical difficulties.
- (4) We shall produce copper at a cost which even at the present low prices prevailing should show good profits.
- (5) We have one of the finest and most up-to-date plants in the world, and,

Lastly, our property is situated in a British Colony in a healthy country with an ample supply of good labour. From all the facts we have before us, I think you will agree that without undue optimism we have very sure grounds for looking forward to a prosperous future for our enterprise. (Applause.)

The report and accounts were unanimously adopted, the retiring directors and auditors were re-elected, and the meeting closed with a vote of thanks to the chairman, directors and staff.

LUIPAARDS VLEI ESTATE AND GOLD MINING COMPANY, LIMITED.

FORTHCOMING ISSUE.

The ordinary general meeting of the Luipaards Vlei Estate and Gold Mining Company, Ltd., was held, on the 9th instant, at Winchester House, Old Broad Street, London.

Mr E. Turk (chairman of the company), who presided, said: The accounts show a profit of £37,033, making the total credit on profit and loss account £83,533. Our profits have been used for the enlargement of our treatment plant and the reorganisation of our underground operations. We have therefore transferred the sum of £75,000 to a general reserve account, and carry forward the sum of £8,533.

At the last general meeting I said that the beginning of 1930 would be a landmark in the history of the company. This prediction has been fulfilled, and I may say at once that, provided nothing untoward happens, we can to-day anticipate with confidence that the work that has been done within the last twelve months will bear fruit in 1931 in increasing outputs and profits. The success of the new system is illustrated by the fact that during the period September-October-November of this year we have been able to send to the mill nearly 93,000 tons of ore, compared with 68,600 tons during the corresponding three months of last year. Working costs have been brought down in two years by more than 2s. per ton, and we hope that a further reduction will be possible when we crush regularly still larger quantities of ore.

At the last two meetings we have explained that our programme of expansion was being financed from two sources, viz., first, from profits reinvested in the property, and, secondly, from advances obtained from our friends, the H.E. Proprietary (New), Ltd., group. It is obvious that neither of these two methods of financing can or should continue indefinitely. It is these considerations that have actuated the board in creating £150,000 7 per cent. notes, of which £100,000 will be offered to shareholders for subscription after the turn of the year. The proceeds will be sufficient to liquidate our indebtedness and to provide the money for the completion of our present capital programme. It will leave us with £50,000 notes in hand for future issue should this be required. In this way profits will become free for distribution. The notes will be convertible into shares for three years on the basis of 4s. per share, and, if our expectations regarding the future of the property are realised, the conversion rights should prove of value to holders.

The report was adopted.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.

Presiding at the meeting of the British Burmah Petroleum Company, Ltd., held on the 9th instant, at the Cannon Street Hotel, Cannon Street, London, the Hon. Lionel Holland (chairman), in moving the adoption of the report and accounts, said that when they met last December he felt justified in predicting that the results of the then current year's trading—the results they were now reviewing—would not be less satisfactory than those that were on that occasion under consideration. This forecast would have been amply fulfilled had it not been for two more recent developments that he did not foresee. Thanks to the effects of economies and process improvements and adaptations at their refinery—and in spite of lower average prices for kerosene and benzene, and a still further restricted throughput—their net revenue from the completed sales of products exceeded the sales revenue for the previous year. It was assisted during the earlier months of the financial year by a rise in the selling price of wax, which helped to offset the low price of other products, and a diminished throughput at the refinery. But this advantage failed them before the close of the financial year. The price of wax had fallen in harmony with the depressed values that prevail in all departments of the industry. This recent marked fall in prices had materially affected their revenue and profit and loss accounts, involving the stocks of refined products at the refinery, or in transit, or in the course of being marketed, being written down to their reduced current values. A gratifying and the outstanding feature of the year's work was the maintenance of their sales revenue in spite of the reduced deliveries of crude oil to the refinery and its restricted throughput. This result was largely due to the continuous economies effected at the refinery, especially in the cost of fuel.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended Dec. 6, 1930, amounted to £10,203,100, against ordinary expenditure of £56,485,000. After allocating £632,500 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £361,100, the week's operations, as shown below, increased the National Debt by £46,553,000 to £7,734,584,000:—

GOLD.

Messrs Samuel Montagu and Company write on December 10, 1930, as follows:—

The Bank of England gold reserve against notes amounted to £154,648,810 on the 3rd instant (as compared with £156,568,569 on the previous Wednesday), and represents an increase of £8,688,726 since January 1st last. Bar gold from South Africa to the value of £953,000 arrived this week, but none of this was available in the open market yesterday as it had previously been sold forward to France. The feature of the week has been the resumption of demand for gold on German account and there have been some withdrawals from the Bank of England for Germany. It is interesting to note that during the last two months it is estimated that about £12,000,000 of gold has been exported from Germany to France. Hence it can be readily understood that, with the sterling exchange moving in favour of Germany, that country should take the opportunity to replenish its stocks by withdrawing gold from London. As the Reichsbank is willing to accept standard gold as delivered by the Bank of England, refining has not been necessary. The French demand for gold continues and movements at the Bank of England during the week show a net efflux of £3,054,214. Receipts totalled £81,179 and withdrawals consisted of £36,000 in sovereigns and £3,099,393 in bargold. Of the latter, about £1,150,000 was for Germany and about £1,850,000 for France after refining.

SILVER.

The market has continued to be influenced by the weakness in Shanghai which developed further during the past week. China offered to sell freely, but offerings met with very little resistance, and as a consequence the market has been easily depressed, prices showing a considerable decline from those ruling last week. The confidence in the market established during the recent steadiness has been shaken during the past two weeks; consequently there has been no disposition to buy, bear covering being practically the only source of support. America has been more disposed to sell in spite of the weaker tendency, and offerings from that quarter have been made freely on most afternoons.

The price fixed to-day for cash delivery was 15½d., equalling the lowest recorded price for that delivery quoted on June 24th last.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 1st instant to mid-day on the 8th instant:—

IMPORTS.		EXPORTS.	
	£		£

JOSEPH NATHAN & CO., LIMITED.—We are officially informed that the company's accounts for the year ended September 30, 1930, will show a net profit, subject to audit, of £28,937 as compared with £55,377 last year. The report and accounts will be issued in March, when the annual general meeting will be held. The usual dividend on the 8 per cent. preferred ordinary shares will be recommended, and confirmed, will be paid (less income tax) immediately after the general meeting. Warrants for the half-yearly dividend on the 7 per cent. preference shares will be posted on December 31.

ANGLO-ARGENTINE RAILWAYS CO., LIMITED.—The directors regret to announce that on account both of the increased loss in exchange and the serious drop in Buenos Aires, they are unable to recommend payment of the final dividend on five-and-a-half per cent. cumulative first preference shares and the six per cent. cumulative second preference shares for the year ending December 31, 1930. Drastic economies are being exercised at home and abroad in the endeavour to meet the adverse circumstances under which the company is at present operating. The board have reduced their numbers and have also reduced their remuneration by two-thirds.

HARLAND AND WOLFF, LIMITED.—Having regard to the acute depression through which the shipping industry is passing, the Director, G. Harland and Wolff, Limited, have decided not to pay the dividend on the First Cumulative Preference Shares due on January 1, 1931.

REPORTS AND NOTICES.

Sir Henry P. Burt, K.C.I.E., C.B.E., has been elected chairman of the Bengal Doorga Railway Company, Ltd., in place of the late Mr Robert Miller.

MISCELLANEOUS.

CRITALL MANUFACTURING COMPANY.—The directors' report states that the profit for the year ended August 31st last amounted to £250,203, as against £240,651 for the previous year. With the balance brought in there is £256,580 available for appropriation. After deducting interest on loans, debenture stock and notes, dividends on preference capital, and the interim dividend on the ordinary shares, amounting to £154,208, there is a balance of £85,795 which, with the balance of share premium account transferred, £28,624, makes a total of £112,419. The directors recommend the following appropriations: Transfer to general reserve £20,000, raising that fund to £270,000; to depreciation reserve £25,000, raising the fund to £150,000; provision for dividend at the rate of 7 per cent. per annum on 500,000 preference shares for the three months to August 31st last, £8,750; and payment of a dividend at the rate of 7½ per cent. for the year on £1,000,000 ordinary share capital £75,000, less interim dividend in March £25,000, absorbing altogether £103,750, leaving a balance of £8,669 to be carried forward as against £6,376 brought in.

FREMLINS, LIMITED.—The report and accounts for the year ended September 30, 1930, shows a trading profit of £113,151 (last year £102,987). Adding interest receivable and transfer fees, £4,073, and deducting directors' fees, interest payable and special reserves, £21,611, there remains £95,613, from which is provided £26,250 for preference share dividend, £15,052 written off goodwill, £10,483 for income tax, and £14,000 for interim ordinary share dividend of 4 per cent., leaving £29,827, from which it is proposed to pay a final ordinary share dividend of 6 per cent., making 10 per cent. for the year. (The total dividend last year was 7½ per cent. actual, which represented approximately 10 per cent. per annum for the period.) Adding the amount brought forward, the amount carried forward is £26,449 (last year, £17,621). In addition to the above £15,052, a further £10,000 has been written off goodwill by transfer from reserve account. Cash has risen from £46,574 to £85,415. The report states that no dividends have been received on the shareholdings in Isherwood, Foster and Stacey, Ltd., the undistributed earnings having been carried forward by that company. Meeting: Maidstone, December 17, 1930, at 12 noon.

HUDSON'S BAY COMPANY.—The difficult conditions of trading for the current year, as foreshadowed by the Governor at the annual general meeting, on June 27, 1930, have proved to be even more severe than was anticipated. Not only has there been a continuous and serious fall in the price of furs, thereby involving the company in very heavy losses, but the prevailing depression in Canada has adversely affected the company's other activities, including the land department receipts. Unfortunately, there appears to be no immediate prospect of improvement, and the present year's working will, undoubtedly, result in a heavy loss. In these circumstances, the governor and committee much regret that they do not feel justified in declaring interim dividends on the preference and ordinary shares. The governor and committee take this opportunity of stating that the report of the special committee who are inquiring into the company's affairs has not yet been received, but they understand the report will be submitted about the end of the year.

sales. In this connection, the reported withdrawal of direct representation by the Canadian pool in Europe will be welcomed by traders on this side, and implies that the marketing policy will revert to usual channels for the future. The seasonal decline in Russian shipments was accentuated last week, although the quantity is still fairly substantial, and the large number of cargoes arriving unsold are causing rapid accumulation of stocks at various British ports. New Southern Hemisphere crops now figure prominently in the international situation and pressing offers from Argentina at steadily declining prices indicate keen competition for European custom, and a desire on the part of growers to ship supplies freely when a basis of trading has been established. United States wheat is still held above world's parity, consequently export business is reduced to a minimum, and in view of the heavy statistical position, it would appear that stocks ultimately may have to be liquidated at heavy financial losses. Feeding stuffs also presented quieter features, and Plate maize tends easier owing to a falling off in demand following recent liberal purchases, time being necessary to allow for market absorption.

WHEAT.—Easier. No. 1 hard Manitoba, ex ship, 28s. 9d.; No. 1 Northern Manitoba, ex ship, 27s. 9d.-28s. 6d.; No. 2 ditto, 26s. 9d.-27s. 9d.; No. 6 Manitoba, 23s. 6d.; Barusso, 61½ lbs., 24s. 6d.; Rosafe, 63½ lbs., 26s.; Australian, 29s.; choice white Karachi, 27s.; Russian, on sample, ex ship, 23s.-25s. 6d.; landed, 22s. 9d.-24s. 9d. per 496 lbs. English, new, 6s. 3d.-6s. 8d. per 112 lbs.

FLOUR.—Quiet. London straight run, 26s. per sack for country deliveries, and 25s. London area. Of imported, Manitoba patents, 24s.-25s. 6d.; Buffalo ditto, 24s.-26s.; Australian, 22s.-22s. 6d. ex store per 280 lbs.

MAIZE.—Easier, following lower c.i.f. offers. Plate, landed, 20s. 6d.; ex ship to arrive, 18s. 6d.; December-January, 18s. 6d.; January-February, 18s. 6d.; No. 2 white flat African, landed, 20s. 6d. per 480 lbs. Yellow maize meal, £6 10s. f.o.r. London.

BARLEY.—Quiet. Californian old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample; Chilian brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, ex ship, 15s. 3d.; landed, 16s. 6d. Danubian, ex ship, 15s. 3d.; landed, 16s. 6d. Persian, landed, 15s. 6d.; ex ship, 14s. 6d. per 400 lbs. English new malting, 6s. 3d.-13s. 9d.; feed, 4s. 6d.-5s. 9d. per 112 lbs.

OATS.—Dull. Plate, landed, 13s. 9d.; ex ship, 12s. 9d.; Chilian, tawny, landed, 14s. 3d.; best whites, ex ship, 19s.; landed, 20s.-20s. 6d.; mixed Canadian feed, landed, 11s. 6d.; North Russian, landed, 14s. 9d.-15s. 6d., as to sample; South Russian, ex ship to arrive, 14s. 3d. per 320 lbs. English, new, 5s. 8d.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

THE COAL TRADE.

Our Sheffield correspondent writes:—There is no improvement in the South Yorkshire coal market except an increased call for house coal. Owners in this locality desire a restoration of the subsidy plan to help the export trade. There is little forward buying. The industrial demand tends to shrink. The position of blast-furnace coke has receded and lots can be bought on the open market at 11s. at ovens, or less. Consumption of this fuel has again declined. Arrangements for renewal of contracts under the sliding-scale arrangement are now in hand. The present basic price is 13s. 6d. and it is proposed to reduce it by 1s. 6d. per ton.

Our Cardiff correspondent writes:—The approach of the Christmas holidays has improved colliery stems, and for this reason the pits are working a little more regularly. Otherwise, the position on the Cardiff coal market is unchanged. Considerable uncertainty still exists concerning the wages and hours dispute in the coalfield, and both colliery owners and merchants are reluctant to enter into new contracts. At a meeting of the Joint Conciliation Board on Monday the owners offered to extend the period of the temporary terms, based on the spreadover, till the end of January, but the miners have demanded a three months' truce with a continuance of existing wage conditions, and negotiations for a permanent agreement have been deferred pending the decision of a delegate conference to be held next Saturday on the owner's offer. Prices are nominally unchanged. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best small steams, 13s. to 13s. 6d.; coking smalls, 14s. to 15s.; cargo smalls, 12s. to 12s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; French nuts, 43s. to 46s.; machine-made cobbles, 40s. to 45s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 9s. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s.; pitwood, ex ship, 28s. to 28s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The better conditions noticed of late in the iron and steel trades have been maintained. The volume of business has increased and there is more activity at the works than for some time; but this may be due in part to the desire to get orders completed before the Christmas holidays. Buyers are also showing more interest in forward business, as the impression prevails in most branches of the trade that prices have touched their lowest. The demand for pig iron has improved to some extent, but although the output has been considerably curtailed, production in most districts is in excess of the demand, with the result that stocks are increasing. Nevertheless, a more cheerful tone prevails in this department, and it would seem that consumption is slowly increasing. In the semi-finished steel department the pressure of foreign competition is severely felt in spite of the recent advance in the prices of Continental material. The greater part of the business transacted by British works appears to be for comparatively small orders for near delivery. On the other hand, it is understood that heavy imports of Continental semi-finished steel must be expected for some time against recent purchases. Irregular conditions still obtain in the finished steel section of the market. The home demand has improved of late, but competition from Continental sources is keen, particularly in the overseas markets.

Our Middlesbrough correspondent writes:—Business in Cleveland iron continues on a very small scale and there are hardly any signs of an early improvement. Local consumers are practically covered up to the end of the year, and only in odd cases is it found necessary to purchase further small lots to complete requirements. In view of the concessions that are being made to Scotch consumers and because of the continued competition of Continental iron, local users seem determined to hold out for a readjustment in prices. Whether local makers will be able to withstand this pressure seems doubtful, but at their Tuesday's weekly meeting they made no change and there was practically nothing doing on the market afterwards, prices remaining: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. The hematite trade shows signs of expansion. Orders for early delivery continue to absorb the current production on the Tees and stocks are being slowly but steadily reduced. There are some rather important inquiries on the market for forward delivery and some business is expected to result. Lower prices are not likely to rule; in fact, a little buying might easily cause an advance, as costs of raw materials are considered to have reached a minimum. Mixed numbers are at present unchanged at 71s. for delivery a few months ahead, with prompt lots available at 70s. 6d. Shipments of pig iron are making a better start this month. The clearances to 9th instant total 5,309 tons, against 3,236 tons to November 9th. In the manufactured trades new business matures slowly, but further orders are expected to be placed very shortly. Prices for home, under the rebate scheme, are unchanged, viz.: Steel plates, £8 15s.; steel joists, £8 10s.; steel angles, etc., £8 7s. 6d. Among other quotations are heavy steel rails, £8 10s.; crown iron bars, £10 15s.; 24-gauge galvanised corrugated sheets, £11 5s.; and 24-gauge black sheets, £8 12s. 6d., also for home use. The iron ore market remains very quiet, only an odd cargo or two being disposed of now and again. Best Bilbao rubio is obtainable for prompt at 16s. 6d. c.i.f., and the current freight to Middlesbrough is about 5s. For forward delivery 17s. is the minimum figure quoted. Coke is still offering for this month's delivery at 17s. delivered furnaces, but more is asked for delivery over the first quarter. The number of furnaces in blast in the district is unchanged at 25.

Our Sheffield correspondent writes:—Apart from pressure to complete orders for finished work before the stoppage, business and activity generally have declined in consequence of holiday preparations. Several large works propose to close for a fortnight at Christmas. The position is no better, there still being a dearth of inquiries and bulk orders. Small orders are numerous and demand for alloy steels is a little more active than it has been. The depression is most pronounced in the heavy and crude steel branches. Of the 119 open-hearth furnaces in Sheffield and Lincolnshire, only 33 are

operating. Several are always down for repairs, so that the average works out at nearly 35 per cent. of capacity. With such low output, works cannot be operated remuneratively. The pig-iron position is unchanged, but not worse. The tool sections report moderate home business, but quietude in the export markets. The seasonal trade in cutlery and plated goods has now ended except for small late orders.

Our Glasgow correspondent writes:—During the present week operations at the various steel plants in the Glasgow and Lanarkshire areas have been continued at the low rate of production which unfortunately has prevailed for some time. Although little new business is being done, there is a general feeling that prices are now at their lowest, and buyers are showing more interest. Makers of semis are still faced with very keen competition from the Continent. In both the black and the galvanised sheet trade the slight improvement noticeable a week ago is being maintained. Things remain quiet in the tube trade, and the extreme depression in the bar-iron industry still exists. A further order for locomotives has been placed with the North British Locomotive Company, Ltd., Springburn, for the Central African Railway. Structural engineers in the Glasgow district continue to be comfortably employed.

Our Cardiff correspondent writes:—In the iron and steel trades of South Wales conditions continue very depressed. The slight improvement last week in the tinplate market has not been maintained, and this week the prices have receded to 15s. 9d.-16s. 3d. per basis box compared with 16s. to 16s. 3d. last week, and 18s. 9d. to 19s. in the corresponding week last year. The trade is considering the proposal to establish a system of sales control, but there has been a revival this week of opinion favourable to the re-establishment of minimum prices. Galvanised sheets continue steady at from £11 5s. to £11 12s. 6d. per ton, and native and foreign sheet bars are unaltered at £5 and £4 per ton respectively. Tinplate shipments last week were slightly larger than in the previous week, and stocks have been reduced to 188,804 boxes.

OTHER METALS.

TIN.—The standard market presented dull features, and prices gave way under selling pressure and lack of support, while influenced by lower Eastern cables. Shipments from the Straits during November totalled 8,549 tons compared with 7,342 tons in the preceding month. Total supply for November 11,388 tons against 9,656 tons, total deliveries 10,147 against 10,365, visible supplies 40,513 against 39,272, and carry-over 4,971 against 5,596 tons. Dealings were recorded in standard cash at £112 5s. to £109; three months, £113 10s. to £110. Sales in the East were reported at £117 5s. to £115 5s.

COPPER in fair demand, but offerings proved excessive and a weak market resulted. Business was chiefly confined to forward dates, embracing three months at £47 10s. to £46, with cash at £46 2s. 6d.

LEAD moderately active, but with sellers to the fore, values exhibited irregularity and weakness. Good soft foreign pig, December, sold £15 12s. 6d. to £15 7s. 6d.; January, £15 10s.; February, £15 13s. 9d. to £15 7s. 6d.; March, £15 13s. 9d. to £15 10s.; April, £15 10s. ton.

SPELLER quiet but fairly steady, as sellers refrained from pressing. December sold £13 15s.; January, £13 18s. 9d. to £14 and £13 18s. 9d.; February, £14 to £14 2s. 6d. and £14 1s. 3d.; March, £14 5s. to £14 6s. 3d. and £14 5s. per ton.

ALUMINIUM maintained. Home trade, also export, £85 per ton.

ANTIMONY quiet and easier. English regulus, £38 to £45; Chinese ditto, spot £25 10s.; December-January, £22 15s. paid; Chinese crude, December-January, £14 5s. ton c.i.f.

ANTIMONY OXIDE, December-January, £24 5s. per ton c.i.f.

ANTIMONY ORE, 60 per cent. December-January, 3s.; 50 per cent. ditto, 2s. 6d. per unit c.i.f.

WOLFRAM easier. Chinese, December-January, sold 14s. 6d. per unit c.i.f.

QUICKSILVER maintained. Spot, £21 15s. to £22 per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 15s. 9d. to 16s. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, December 10th.

Values show a further decline on the week, and new low levels were reached yesterday. Business has again been slow—supply being in excess of demand, and few, if any, are inclined to anticipate requirements very far ahead. The Agricultural Bureau figures, published on Monday last, estimated the crop at 14,243,000 bales against its estimate of 14,438,000 bales on November 8th. Ginnings to December 1st were given as 12,835,000 bales against 12,858,000 to the same date last year and 12,562,000 in 1928. The yield per acre shows a reduction, being 150.8 against 154.2 in November, whilst the acreage harvested is given as 45,218,000 acres against 45,815,000 acres planted. The markets continue uncertain with sentiment against prices. The world's visible supply of American cotton on December 5th is stated to be 7,801,000 bales against 5,785,000 bales to the corresponding date in 1929 and 5,678,000 bales to the corresponding date in 1928. The world's spinners' takings since August 1st are 4,030,000 bales against 6,177,000 bales

to the same date last year and 6,392,000 bales to the same date in 1928. Spot sales for the week 4th to 10th (inclusive) are 17,000 bales, of which 7,270 bales are American, 500 Brazilian, 700 Argentine, 5,000 Peruvian, 1,050 Egyptian, 1,000 African, 1,000 East Indian, and 480 sundries. Imports for the same period are 84,364 bales, of which 64,149 are American, 686 Argentine, 4,061 Peru, 2,592 African, 6,371 East Indian, and 6,505 sundries. Quotations to-day are: American Middling, 5-53; Egyptian Sakel, 8-60; Uppers, 6-32; Brazil Fair, 5-73; Peru Smooth, 6-03; West African Middling, 5-63; and East African G.F., 6-63.

MANCHESTER, December 10th.

Trade throughout the market has been thoroughly disorganised by the further downward movement in raw material rates, and owing to the weakness of prices buyers have been afraid to operate. In many quarters there has been a renewal of pessimism with regard to future events, and owing to the small business done there is a tendency for spinners and manufacturers to lose ground. A falling off has been reported in cloth inquiry for India. Fewer sales have taken place for Karachi and Madras, and it is still practically impossible for anything to be done for Bombay and Calcutta. The decline in the price of silver has had a vital effect upon business for China, and operations have been practically at a standstill. Exporters to most of the minor outlets East and West have adopted a waiting policy, and very little has been done in home trade fabrics. Some uneasiness exists as to stocktakings at the end of the month in view of the further depreciation in values. Prices in American and Egyptian yarns have favoured buyers, and only a limited trade has been put through.

CONQUISTADORES!

It is a far cry since the adventurous days of the Spanish Conquistadores and their pioneer expeditions to the ancient American civilisations.

To-day, a great and growing volume of overseas trade is transacted annually by the Republics of the New World, and unrivalled facilities for every description of modern banking business are afforded by

THE WOOL TRADE.

Our Bradford correspondent writes:—Though no marked change has come about in Colonial and foreign wool this week, the situation is sound and encouraging. Demand continues steadily in all selling centres, and though undue "bearing" influences have been seen in South Africa, buyers generally have no small measure of confidence in the raw material, particularly anything of merino quality. It is believed that merino wool has now touched a point below which it is not likely to go for some considerable time. There is also very encouraging consumption of this class of raw material both at home and abroad. Wool has passed out of hand very well in London this week, everything fully maintaining the opening level of prices, except, perhaps, inferior style offerings. There appears to be quite as much of these as the trade can absorb at present, particularly in shabby clothing lots. Fog has interfered with selling this week, but the programme was revised to enable portions of the quantity of the abandoned sale to be included each day this week, and it is intended to hold a sale on Saturday. This means that selling brokers are determined to offer as much wool as the trade seems prepared to take, even if this means selling reasonably. This is a sound policy. Trade in Bradford has become quieter, and here and there it is possible to find topmakers who are willing to see merinos and fine crossbreds at fractionally less money. Financial considerations are no doubt largely responsible, but nobody at the moment is prepared to indulge in any extensive speculation in either buying or selling.

THE JUTE TRADE.

DUNDEE: December 10th.

Speculative operations in raw jute in Calcutta are the reason for a fluctuating tendency of prices, and, though occasionally an easier tone prevails, no real weakness is displayed. Despite the very large crop forecasted, the imports of the fibre into Calcutta are less than usual up to this period of the season, but against this the exports from Calcutta to other consuming countries are only about 50 per cent. of normal, while the Calcutta mills have purchased more to date than they had done last season, no doubt being attracted by the very low rates ruling. Daisie assortment rose last week to £15 10s., but there are sellers again willing to accept £15. Buyers, however, are not inclined to purchase at this limit, after having paid the higher price when the market displayed great firmness. First Marks are seldom quoted, unless in the grade or lower qualities, which rule from £17 12s. 6d., with good Lightnings quoted at £17 15s. for Red H down to £17 5s. for Triangle Jajodia and Asahi Lightnings, December-January shipment. A good business has been concluded in jute yarns, hessian and sacking qualities especially coming in for attention. The very firm rate for common 8-lb. cops is 2s. and for 8-lb. spools 2s. 1d., with many spinners refusing less than 2s. 1d. and 2s. 2d. respectively. These yarns have been bought against orders for sacking cloth, while the fact that production has been so considerably curtailed has caused manufacturers some concern over their supplies. Twist is quiet at from 3½d. to 4d. for 3-ply 8-lb., and fine yarns are also of small interest meantime. Rove is dull, and some spins of 48-lb. can be bought at the reduced rate of £23 10s., and 200-lb. is steady at £17. Carpet yarns are slow. Little business can be recorded in jute cloth, and the bulk of the orders placed are still for only small quantities. Manufacturers, however, are adhering to their prices and not less than 2½d. for 10½-oz. 40-in., and 2d. for 8-oz. can be done. Calcutta goods still fluctuate and recently prices touched lowest points this year, when 8-oz. was sold at 13s. 6d. and 10-oz. at 17s. for November-December shipment. Values are again about 9d. dearer than these limits.

HIDE, LEATHER AND ALLIED TRADES.

Several weights in ox and heifer hides changed hands at still lower figures at the auctions held in Manchester on Tuesday, although prices were inclined to be a shade more steady than those of the previous week. Cows, for instance, were unchanged, while the alterations in connection with calfskins showed only a slightly downward tendency. Although some fair sales of dry hides have taken place, business in connection with imported raw material generally is still restricted to immediate wants, with the result that although changes in values have been slight the tendency of prices still remains in favour of buyers. Frigorific hides have been a steady market, and sales of Argentine ox have been made at the equivalent of 6½d., with light ox selling at 5½d. Business in connection with dry South American hides has been poor; a few sales have been made of B. A. Americanos at 7d. Dry Capes have changed hands at 7½d. and 6½d. for first and seconds, while sales of dry-salted have been made at 6½d. and 5½d. for 20/30 lbs. The market for Australian hides is lower, with only a small amount of business being done at the reduced figures. Sales of sole leather during the past week have been of a restricted character all round, and the general opinion is that inquiry from now until the end of the year will show a gradual falling off. The repairing section has been in the market for supplies of English and wet-salted bends, but the business has not been for quantities equal to those which have been taken up during the last two or three weeks. Dry hide bends for shoe manufacturing requirements have changed hands in small parcels, presumably just sufficient to cover orders for footwear due for delivery at an early date. The position of prices, all

things considered, remains satisfactory. Business in connection with upper leather has been rather less this week, although box and willow calf still accounts for a fair turnover. Business in connection with footwear production shows no signs of expansion, and although some firms appear to be fairly well placed for orders, there are others who are compelled to rely upon the daily post to keep the wheels revolving.

OVERSEAS PRODUCE.

SUGAR.—The firm tone apparent of late in this market became more pronounced to-day. Prices received a further lift in all directions, and the chief feature is the reserved attitude of sellers, in face of very favourable progress of the plan to bring production more into line with consumption. Messrs Willett estimate stocks on plantations and in course of transit to Cuban ports at 871,000 tons against 297,000 same time last year. The Java Trust disposed of 45,000 tons white and brown at 8 and 7 guilders respectively, ex go-down, and further bids at these figures were not entertained. Offers of first-hand raw refining kinds almost entirely absent. Terminal sections dearer, and business proceeded on active lines regarding raw. March delivery sold 6s. 5d. to 6s. 6½d.; May, 6s. 7½d. to 6s. 8½d.; August, 6s. 10½d. to 6s. 11½d.; December, 7s. 2½d. to 6s. 3½d. Messrs Tate and Lyle's goods advanced 3d.; home-grown granulated from 1½d. to 3d. Continental beet, 88 per cent., quoted 5s. 6d. f.o.b. terms. Cuban receipts last week cabled 47,315 tons against 32,619 same time last year; exports, 75,045 against 44,668, and stocks 738,439 against 241,983. Stocks of raw sugar in the three chief ports of the United Kingdom

for week ending December 6th totalled 163,723 tons against 174,610 last year.

COFFEE.—Fair quantities submitted to auction experienced a generally unsettled market. All really fine liquoring qualities fared well, but otherwise most parcels were quite off the line compared with valuations. Brazilian grades for shipment remain dull, and trend of prices weak.

COCOA.—No change to note in the spot market. Here and there, perhaps, a trifle less money was accepted in order to clear. Forward positions steady but quiet. Accra F/F, January-March, London contract, quoted 25s. f.o.b.; and G/F to Continent, 27s. c.i.f. Terminal, December, sold 29s.; March, 27s. 10½d.; September, 29s. 3d.

TEA.—Indian auctions amounted to 51,867 packages during the week. Coloury fannings and fine teas sold steadily, but apart from these, irregularity prevailed with prices frequently ½d. to ¾d. down. Ceylon sales of 19,121 packages. Good to fine qualities sold steadily, and there was no essential change to note, though low broken favours the buyer. Java sales irregular.

RICE.—No new feature to note. Trade partakes of retail proportions, but sellers asked steady rates.

BEANS AND PEAS.—Market in beans dull for most descriptions, and quotations nominally steady. Peas quiet, though sellers adhered to previous asking prices.

POTATOES.—The market in potatoes has been quiet at unaltered prices.

SPICE.—Pepper met with fair attention, chiefly in forward positions and prices ruled firm. Lampung spot, quoted 6½d., Muntok,

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

11d. to 11 1/2d. as to quality. Lampong, October-December, quoted 6 1/2d.; January-March, 6 1/2d.; Muntok, white, October-December, 10 1/2d.; January-March, sold at 10 1/2d. Cloves quiet on former terms. London stocks of black 37 tons down on the week, at 486 tons, against 1,290 same time last year; white, 50 tons lower, at 288, against 1,311.

FRUIT (Dried).—Currants. Market steady, with sustained inquiries. Pyrgos, 30s. 3d.-30s. 6d. Sultanias firm, while in short supply. Greek, 56s.-75s. Raisins maintained. Valencia quarter-boxes, 36s.-45s. Evaporated Fruits.—Californian plums meet a steady sale, the quality of new crop arrivals being better than anticipated. Apricots and peaches sell slowly, but pears experienced a better movement. Almonds firm.

CANNED GOODS.—Fruit: There is no material change in this section, demand for Californian varieties being slow to expand, both spot and forward. English moved off steadily, and a moderate business transpired in Australian descriptions. Fish: Sardines in quiet request at about late rates, fine quality being scarce. Lobsters slow of sale, but crab ruled steady both spot and forward. Meat: Market steady, but demand restricted for both beef and tongues. Condensed Milk: Market generally steady. Honey: Liberal supplies moved off quietly on about former terms. Jamaica white, 40s.-45s.; Cuban, 36s.; Californian, 40s.-48s.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 10,010 tons, as compared with 9,234 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.9 per cent. of the supplies, as against 78.78 per cent. a year ago, and imported mutton, mainly New Zealand, formed 75.1 per cent. of the total supply, as against 73.5 per cent. last year. Meat prices are scarcely changed on the week.

RUBBER.—A quiet tone pervaded the market, and prices ruled fractionally easier. Standard sheet spot and December sold 4 1/2d.-4 3/4d.; January, 4 1/2d.; January-March, 4 1/2d. to 4 3/4d.; April-June, 4 1/2d. to 5d.; July-September, 5 1/2d. to 5 3/4d.; October-December,

5 1/2d. London stocks increased 207 tons on the week; landing, 1,494; deliveries, 1,287; stocks, 76,877, against 53,431 last year. Liverpool stocks 416 higher; landings, 1,199; deliveries, 783; stocks, 40,349, against 17,920.

HEMP.—Manila qualities reservedly held and with fair inquiries, a firm market resulted, but closing quieter. J.2, December-February sellers, £23 10s.; K, £23; L.2, £22 2s. 6d.; L.1, £22 10s.; M.1, £22 5s.; M.2, £21 5s. African sisal dull, and near positions weaker. No. 1 f.a.q., October-December sellers, £20 15s. c.i.f. Receipts last week, cabled 23,000 bales, against 22,000 last year, and 29,000 in 1928. Estimate for next week, 22,000, and week after 24,000. Manila shipments, last week: 5,000 to the U.K.; 7,000, Continent; 12,000, U.S.A.; 5,000, Japan; and 1,000 other countries, making stocks 104,000 bales.

VEGETABLE OILS AND OILSEEDS.—Markets on the whole are about steady, but not very active. Linseed on spot and near positions is in good demand and has developed some firmness, and is at a substantial premium over forward delivery, which is steady but neglected. Old crop Plate on spot and "near" has advanced to £12, with December shipment around £10 17s. 6d. New crop offers freely, and is quoted £10 2s. 6d., January-March. The quantity on passage to Europe is 126,000 tons, against 39,500 tons a year ago, while the estimated balance available for shipment to the end of the month is 114,000 tons, against 97,000 tons. The new demand, and business in black Egyptian has been done to Hull around £6 5s. for afloat and December-January shipment. Linseed oil has further declined in value, raw oil ex Hull mill being quoted on spot, £23 10s., and December delivery £22 10s., with later positions at a good discount. Cotton oil is easier, crude Egyptian, ex Hull, offering at £22 10s., and common edible at £25 10s. The demand for all descriptions of oil cakes is improving, and prices are steady. The market in copra continued dull, and prices moved further against the sellers. F.M.S. Straits, January, to Rotterdam, sellers, £16 5s.; Dutch E.I., ditto, also £16 5s.

THE MONEY MARKET.

MONEY was inclined to be less plentiful on Wednesday afternoon and Thursday, and at times the rate for new money rose to 2 per cent. The clearing banks have lent a certain amount into the New Year at rates of 2 1/2 and 2 3/4 per cent. The chief development of the past week, however, has been the stiffening of discount rates. On Wednesday the market rate on three months' bank bills was given as 2 1/2 per cent., this being the highest rate

recorded since the end of July. Treasury bill rates are also higher. The rate of issue on December 12th was $2\frac{3}{4}$ per cent., as against rates in the neighbourhood of $2\frac{1}{8}$ and $2\frac{1}{16}$ per cent. during preceding weeks, and the rate for December 19th was confidently expected to be practically $2\frac{1}{2}$ per cent.

The main reason for the rise in discount rates is that the imminence of the turn of the year is making banks and bill brokers very chary of buying fresh bills. At present, the chief need of the money market is liquidity, and so the demand for bills has fallen below normal. On the other hand, the supply of bills is steadily growing, for even though trade remains at a low ebb, each week Treasury bill issues are in excess of maturities. Thus, last week £45,000,000 bills were issued, against maturities of £38,000,000; this week the corresponding figures are £45,000,000, against £40,000,000; and next week £45,000,000, against only £35,000,000. Thus, in these three weeks alone there will be a net addition of £22,000,000 to the outstanding volume of Treasury bills.

	Nov. 27, 1930.	Dec. 4, 1930.	Dec. 11, 1930.	Dec. 18, 1930.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$ (May 1, '30)
Banks' Deposit Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (May 1, '30)
Discount { Call	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (May 1, '30)
Houses { Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{3}{4}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	...

In many ways it would not be a bad thing were the market discount rate to establish itself at $2\frac{1}{2}$ per cent. Such a rate is $\frac{1}{2}$ per cent. below Bank rate, a margin which until this year was regarded as normal. It leaves bill brokers with a more reasonable margin of profit over the rate of 2 per cent. now paid by them to the clearing banks for their weekly loans. Such a market discount rate, too, can be justified on broader grounds. Too low rates attract to London bills in excessive quantities, and their purchase in London depresses the exchanges against sterling. A slight rise in market discount rates is the natural corrective to such a development, and it is far better that the cure should be effected in that way rather than by a rise in Bank rate, with all its widespread and undesirable consequences.

France has continued to take gold at her normal rate, and there is no sign of her demands coming to an end. The Bank, however, has once more been partially able to off-set the French claims by gold acquisitions from elsewhere, including another £1,000,000 from Brazil. The flow of gold to Germany has now been arrested. The result is that, on the week, the Bank return shows a net gold loss of £1,132,549, but, owing to a further increase of £7,667,361 in the note circulation, the reserve has fallen by £8,799,910. The public's withdrawals of currency from their banks for use in Christmas shopping also explains the reduction of £7,817,445 in Bankers' deposits, which now stand at £64,294,938. From the market's point of view this last figure is large enough for comfort, but not too large.

NEW YORK.

The fourth quarter's income-tax payments, which fell due on Monday, created a temporary stringency in the money market, and call rate was advanced from 2 to $2\frac{1}{4}$ per cent. By the middle of the week conditions had once more become easy, and call rate relapsed to 2 per cent. The banks are reported to have been selling bonds heavily, and this partially explains the new record low levels of bond prices established this week. The House of Representatives Committee on Banking has decided to start immediately an inquiry into the year's 1,100 bank suspensions, and evidence will be taken not only on internal questions, but also with regard to the international relations of the New York Reserve Bank. Gold imports for November are given as \$40,159,000, and exports at \$5,008,000, or a net import of \$35,151,000. Net gold imports for the first eleven months of the year amounted to \$247,344,000.

THE STOCK MARKETS.

The stock markets were affected by American liquidations, and the price of many ordinary shares reached the lowest level for eight years. Gilt-edged stocks receded on the further loss of gold—actual and prospective—from the Bank, but Australian stocks showed a moderate recovery following the full subscription of the £28,000,000 conversion loan. Home rails were neglected and friendless. Industrials started a three weeks' "ho, ho, ho" account in depressing fashion, but became steadier before the end of the week. Dealings in tea and rubber shares remained on a small scale. The prices of leading oil shares were marked down, partly on "nerves." The mining markets were quiet, base metal shares being dull on the renewed fall in commodity prices. Rhodesian copper shares derived no appreciable benefit from the ratification of the Congo-N'Changa-Bwana fusion terms.

THE COMMODITY MARKETS.

The export and household sections of the coal trade have been more active, but the demand for industrial fuel shows no signs of an early expansion. The recent improvement in pig iron has not been maintained, and the demand for semi-finished and finished materials has slackened off. The market in Manchester which has been disorganised by the rapid decline in raw cotton values, shows no signs of an improvement, and trade with India and China has fallen off further. The last series of London wool sales met with a steady demand at the lower level of prices, and business in Bradford has been well maintained. Hides continued to fall in value, and the turnover in leather has been on a small scale. Wheat prices show a slight drop on the week.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was dull, with sterling inclined to be weak, whilst several currencies fluctuated a good deal within narrow limits. New York went from 4.85 $\frac{1}{2}$ to 4.85 $\frac{1}{4}$, but Montreal was weaker at 4.86 $\frac{1}{4}$. Paris remained at last week's level of 123.60. Brussels, after improving a little early in the week, was unchanged on balance at 34.76 $\frac{1}{2}$. Milan lost a point at 92.76 after some hesitation. Madrid ran up to 48.90 on the news of the attempted revolution, but recovered later to 45.00. Amsterdam fluctuated a good deal, and was appreciably weaker at 12.06 $\frac{1}{2}$. Berlin remained unchanged on balance at 20.36, but at one time touched 20.37 $\frac{1}{2}$. Switzerland recovered fairly sharply from 25.04 $\frac{1}{2}$ to 25.02 $\frac{1}{2}$. Of the Scandinavian Exchanges, Stockholm gained a point at 18.09 $\frac{1}{2}$, Oslo was better by $\frac{1}{4}$ at 18.15 $\frac{1}{2}$, whilst Copenhagen lost $\frac{3}{4}$ at 18.16. The South American exchanges were again erratic. Rio lost $\frac{1}{4}$ d. at 433 $\frac{1}{2}$ d., Buenos Aires $\frac{1}{4}$ d. at 37 $\frac{1}{2}$ d., and Montevideo $\frac{1}{4}$ d. at 36 $\frac{1}{2}$ d. In the Far East, the rupee was firmer at 1s. 5 $\frac{1}{2}$ d., and the yen was unchanged at 2s. 0 $\frac{1}{2}$ d. Batavia gained $\frac{1}{4}$ at 12.06. In the forward market, dollars remained at $\frac{1}{2}$ cent and $\frac{1}{4}$ cent premium for the two periods; Paris was a point better at 5 and 10 centimes discount; and Brussels rather weaker at 4 and 7 centimes, also discount. Milan gained a point for one month's delivery at 24 centimos discount, but at 70 centimos discount was decidedly weaker for three months' deliveries. Madrid improved to one and 2 centesimi premium. Amsterdam was practically unchanged at $\frac{1}{4}$ and $\frac{1}{2}$ cent premium, as was Berlin at discounts of 3 $\frac{1}{2}$ and 8 $\frac{1}{4}$ pfennigs for the two periods. Silver touched new low levels during the week, and though it recovered slightly at the close, the net fall during the week was $\frac{3}{4}$ d. for cash and $\frac{1}{2}$ d. for forward. 14 $\frac{1}{2}$ d. was the price quoted Thursday for both deliveries. The China silver currencies weakened in sympathy, Hong Kong losing $\frac{1}{4}$ d. at 1s. 1 $\frac{1}{2}$ d., and Shanghai the same amount at 1s. 5 $\frac{1}{2}$ d.

What Christmas Present more useful?

What more acceptable New Year's Gift?

CHRISTMAS AS USUAL.

MARK TAPLEY would be in his element just now. He would assuage gloat upon the unrivalled opportunity for displaying the proper Yuletide spirit of festivity amid surroundings of universal depression and anxiety. There must be many this Christmastide who find it difficult to emulate his spirit. But for our part we feel that it is exactly in such circumstances as those of to-day, with troubles and difficulties besetting the public life of the nation and the private lives of so many, that it is more than ever helpful to step for a few hours outside the orbit of our daily work and give way to the spirit of geniality and enjoyment which is customarily in the ascendant at this Yuletide season. It is a poor heart that never rejoices, and it is as true of a nation as it is of an individual that, when the power of enjoyment has passed, its passing is a sign of lowered stamina and the beginning of a decline. Let us then take as our slogan "Christmas as usual," and live up to it as well as our various circumstances permit.

In saying this we are quite prepared to find that we have surprised many of our readers. We can understand and sympathise with the difficulty which many people must be finding in deciding the problem whether it is really right in these days of national crisis to expend both funds and energies on the object of seasonal celebration. So constantly do grim economic facts and conclusions obtrude themselves on our attention that many must feel it hard to reconcile the spirit of the week of good cheer with the teachings of the dismal science. Nor is the dilemma resolved by such conflicting advice as is contained, on the one hand, in the manifesto issued this week by Sir Robert Horne and other prominent Conservatives pleading for stern all-round economy, and, on the other hand, in the provocative letter which appears in our correspondence columns to-day—arguing that free spending and not economy is the only road to economic salvation. Let us for a moment, but only for a moment, confound the confusion further by saying that up to a point we agree with both points of view. How, asks our correspondent, could it benefit the world at large if everyone were to stop spending beyond what was necessary for the bare necessities of life? To that question we would add another—and the really important one that people are pondering this week: Does the existence of the great depression make personal economy more desirable, more of a duty than in ordinary times? Frankly, our view is that it does not.

Let us explain. Supposing everyone who has a margin of spending power above what is required for the purchase of life's necessities were to decide that all avoidable expenditure must be cut down; suppose that Mr X decided to buy no new clothes, and make his old ones last twice as long; that Lord Y postponed the repainting of his mansion; or Mrs Z reluctantly refrained from buying the usual Christmas toys for her children. What would be the result? It would in the main be two-fold. In tailoring and its supplying trades, in the decorating trade and among the toy-makers and toy-vendors a definite increase in unemployment would take place. On the other hand, an addition would be made to the pool of accumulated national savings. What we have to decide is whether it is on balance to the advantage of the nation that these twin results should be achieved. The decision would certainly be in the favour of stern economy, were there any convincing evidence of an immediate real shortage of saved capital available for the financing of industry and production. But there is no such convincing evidence to-day. It is probable that later on, when industrial activity springs again to life, a deficiency of current savings may be revealed; and it is desirable that, to be on the safe side, the accumulation of private capital should perhaps be slightly increased now, certainly not diminished. Indeed, it is almost certain that in the years to come much larger accumulations of capital must be made—either by public

or private saving—than in the recent past. But the overwhelming factor of unemployment weighs very heavily in the scale against all arguments that can be brought for a deliberate general curtailment to-day of ordinary budgets of personal expenditure.

Let us not be misunderstood or regarded as advocates of wild extravagance. At all times and in all circumstances there are some forms of expenditure which are definitely deleterious. Our argument is confined to the thesis that the depressed circumstances of the present make stern personal retrenchment, not more, but less nationally advantageous than when times are normal. Hence our slogan "Christmas as usual" for those who can observe it as usual, not with increased lavishness, but with the normal generosity in response to calls of charity, the normal purchasing and giving of gifts, and the normal enjoyment of good cheer—provided always that expenditure is confined within the limits of current income and does not involve a rash mortgaging of future resources. Neither the world economic crisis nor the disabilities of Britain will be remedied by making Tommy go without his Teddy Bear.

There is more confusion of thought, perhaps, about this question of private expenditure and retrenchment than about any other subject in the realm of economics. The real question of vital moment to the country's life to-day is not whether a family, let us say, with £5 a week is justified in going to the cinema or purchasing a gramophone, but whether the members of that family contribute £5 worth to the productivity of the nation. If they do not, then either their productivity must be raised or else the £5 of purchasing power which they receive must be reduced in its proper relation. Similarly, the important question is not whether a railway director with £10,000 a year should or should not buy a new Rolls Royce, but whether, in actual fact, he earns his £10,000 a year. If he does not, he must either work harder and with greater efficiency or else submit to an appropriate reduction in his salary.

The proper avenue of approach to the problem is from the picture of a common pool of national resources. The main question is not how the individual spends what he takes out of that pool, but whether he puts in as much as he takes out. And this is just where we part company with our correspondent, Mr Archibald Phillips. He implies that over-production must, with the progress of science, become chronic unless we all proceed to work less and retain existing rewards for our labour. The short answer to this attractively specious fallacy was, as it happens, given by Sir Arthur Salter in a recent article in the *Times*: "The paradox of impoverishment through plenty is not and cannot be permanent. . . . The notion that in the nature of things there is a fixed limit to human needs is a mere delusion and will be until the last Hottentot lives like a millionaire." Provided that there is no hitch in the working of the process of exchanging goods and services one with another, it is idle to fear, for many years to come, any danger of permanent unemployment through "saturation" of markets. The real danger is that of impoverishment by spending not absolutely "too much" but "too much" relatively to the amount of real wealth we are creating.

The question of the need for public economy is in an entirely different category. Here the crux of the matter is plain. Reproductive expenditure by the State in a time of depression can be justified by strong arguments; and we do not suggest that mere redistribution of individual spending power by means of taxation *ipso facto* impedes production. The real trouble is (1) that heavy taxation in bad times not only has a depressing psychological effect but depletes damagingly the resources of corporate institutions, and (2) that much State expenditure is apt to pass to recipients who do not put back into the national pool the value of what they receive. This is

true of extravagant or redundant Departmental staffs. It is equally true—however frankly we admit that society is bound to keep the wolf from the door of the economically defenceless—of those drawing “doles.” And in the latter case there is the additional factor that abuse of the principle of benefit may ultimately prove a real deterrent to work and the production of wealth. On these cogent grounds there can be no question of the rightness of the widespread demand for public retrenchment, to which Sir Robert Horne and Sir Walter Runciman have added their advocacy this week.

To revert to private economy, we are by no means unqualified supporters of the cry, “Spend, spend, spend until the depression is over,” nor, indeed, do we yield to any in our laudation of the virtue of balanced thrift at many times and in many circumstances. But in the peculiar conditions of the present moment we can find it well within our conscience, for psychological as well as economic reasons, to join in singing the old ballad: “Let us be merry and make good cheer, for Christmas comes but once a year.” To spend too little may be almost as bad economically as to spend too much, if purchases are forgone, not because the money to finance them has not been earned, but because the potential purchaser is “afraid to buy.” The lesson to be pondered this Yuletide, we suggest, is the vital necessity not of our spending less but of “earning”—nationally, and in the real sense—more.

REPUBLICANISM IN SPAIN.

FROM Friday of last week, when the revolt at Jaca occurred, until Wednesday evening, Spain was virtually cut off from the rest of the world. The frontiers were closed, news suppressed by a drastic military censorship, the use of the international and inter-city telephone lines forbidden, and martial law proclaimed throughout Spain. It is still too early to appreciate fully the significance of the events which have taken place, but though martial law and a strict censorship remain in force, the fact that foreign correspondents in Madrid and Barcelona were permitted to send messages to their papers on Wednesday night, and the general tenour of those messages themselves, suggest that for the time being the insurrectionary movement has been repressed.

The rising itself appears to have been badly mismanaged. The plan of the Republicans, it seems, was that zero-hour should be Thursday, December 18th, and that on that day a general strike in support of the proclamation of a republic by civilian elements should be supported by mutinies in the disaffected sections of the Army. As matters turned out, the plan went seriously wrong, either through lack of effective liaison between its civil and military leaders, or, as is by no means unlikely, because of the multiplicity of republican factions of different shades in the Spanish anti-monarchical movement. The premature explosion which gave General Berenguer sufficient warning to take counter measures occurred at Jaca, a small town at the foot of the Pyrenees. The idea had been that the garrisons of Jaca and Huesca should combine in revolt, seize the railway and advance through Lerida on Barcelona. On the eve of last Friday, however, a party of young civilians apparently belonging to the bourgeoisie and not to the working class, arrived at Jaca from Saragossa in taxicabs in the small hours of the morning. At their instigation, part of the garrison mutinied and arrested the military governor and other officers of high rank. On the other hand, the Civil Guard (which has a professional feud with the Army), the Carbineers and the Mayor of the town all refused to join the movement; and at Ayerbe—a station on the railway between Jaca and Huesca—a detachment of the Civil Guard, warned by postal officials of the doings at Jaca, pulled up the track, and thus seriously interfered with the advance on Huesca.

Meantime, though the troops at Huesca at first refused to obey orders from Madrid to march against the insurgents at Jaca, loyal forces were rushed to Huesca,

whose garrison, realising probably that the Jaca *émeute* had been premature, and impressed by the concentration of troops at the Government's disposal, returned to their allegiance. On the morning of Saturday the 13th, the mutineers from Jaca were met some ten miles distant from Huesca by a superior force which rebuffed their attempts to fraternise and opened fire with artillery. The mutineers were dispersed and many were taken prisoners; and two of the captured officers were tried by court martial and shot out of hand.

Next, there came other disconnected outbreaks on the part of some elements in the Air Force. At Barcelona a number of republican flying officers appear to have made an abortive attempt to seize the aerodrome at dead of night, but were easily frustrated. At Madrid, however, a party of civilians led by General Llano and Major Franco seized the Cuatro Vientos aerodrome, arrested three officers who resisted them, and proclaimed a republic by sending out wireless messages and scattering leaflets over Madrid from aeroplanes on which the Spanish national colours had been daubed out in red paint. The aerodrome was quickly invested by a column of troops from the Madrid garrison (which remained loyal to the Government) and was shelled. Thereupon, the military leaders of this *coup de main* made their escape by aeroplane to Portugal and the rest of the rebels capitulated. The majority of the troops in the aerodrome seem to have played a passive part from first to last.

Meantime, though the military movement was limited to these sporadic missfires, the civilian side of the republican plan was belatedly put into operation on a much wider scale, though for the most part on non-violent lines and without, so far, seriously threatening the position of the Government. Strikes were declared in most of the principal cities, excluding Madrid, and in many villages and towns throughout Spain republican proclamations are reported to have been made and republican flags hoisted. In some places, as we go to press, the strikes appear to have come to an end; in others they continue. But though here and there there have been outbreaks of disorder—telegraph lines wrecked, railway tracks pulled up, and occasional affrays with the Civil Guard—a fair estimate of the situation seems to be that, at the moment, General Berenguer has the situation “well in hand.”

The outlook, however, is by no means clear. As regards the Army, events have proved that, so far, the Government can count on finding, at short notice, a loyal majority of troops who are ready to take extreme measures with any rebellious minority of their comrades. The Army is, of course, a political force in Spain. Successive regimes which it occupies in France or in Great Britain. More-over the Army has a grievance; for the Marques de Estella, during his dictatorship, restored the principle of promotion by merit in lieu of promotion by seniority; and this is an old quarrel between the Army and the Government. The Army have always striven for the seniority principle, on the specious ground that “merit,” in Spain, means not merit but favouritism. However, the artillery, who were supposed to be the most discontented arm, have recently been conciliated by an increase in their pay, and it does not look at present as though the Army were disaffected *en masse*. The only indication that the Army as a whole may not, after all, be so loyal as appears on the surface, is given by the Government's action in summoning the Foreign Legion, post haste, from Morocco to Spain. This step, which looks like a false move made in a moment of panic, is reported to be arousing resentment in the Spanish units of the Army, and it might conceivably provoke the very disaffection against which it is intended to be a safeguard.

What of the civil population? So far as Barcelona—the obvious danger-point—is concerned, the comparative tranquillity of that city looks as though Catalan nationalism does not regard the immediate situation as a favourable opportunity for seeking to realise its aspirations. Elsewhere, strikes have been on a sufficient scale to indicate that the republican movement has behind it considerable mass support. For it is clear that so far as the Spanish working class is concerned, the demonstra-

tions have been primarily political and not inspired by class motives on Communist lines. The influences at work have been rather those of Paris of '48 and '71 than of Moscow of 1917. In fact, we shall probably see this Spanish upheaval of December, 1930, in the truest light if we regard it as a belated example of the classical European type of revolution which, in other parts of Western Europe, is already *démodé*; a social phenomenon of the nineteenth rather than the twentieth century. We shall not be far wrong if we look for the force behind the upheaval in a straightforward fight between republicanism and monarchy—an old-fashioned issue which does not bother Englishmen or Frenchmen or Americans nowadays and which has been settled decisively, since the war, in Germany and Austria and Turkey, but which is still a live issue in certain countries; for instance, in Egypt and in Hungary.

If this diagnosis is correct, we may perhaps venture to predict that, though the present upheaval in Spain may be surmounted, the country is far from being at the end of its troubles. A very large part of the Spanish nation—far larger than the fraction which took up arms last week—does hold the present King responsible for the late Marques de Estella's *régime*. He is held responsible and he has not been forgiven; and if and when a Spanish parliament, properly elected, meets, there may be a doubt whether the King will be able to retain his throne. The ultimate choice before him may be to save his dynasty by a timely abdication or to bring in the republic by kicking against the pricks too long. This threat to the crown explains why the present Prime Minister, General Berenguer, has allowed nearly a year to pass since the demise of the Marques de Estella's directorate without holding a general election. In fact, Spain is being governed dictatorially still. She is being governed like this in the supposed interests of the King; and the longer Spain remains in this political limbo the greater the resentment against the King and the stronger the demand for a republic will be.

If General Berenguer could convince the Spanish people that the elections, due to take place next March, would not be rigged and that the Government and the monarchy were sincerely intent on “the reconstitution of Spanish politics,” the process of evolving a new constitutional *régime* without abandoning the monarchical principle in Spain would seem more capable of realisation. Otherwise, the life of the existing Government seems to depend precariously on the inability, so far, of a rising tide of discontent to produce unity of purpose and concentration of effort on the part of the various factions in the republican movement.

FRANCE AND GOLD.

The magnitude which the steady efflux of gold from London to Paris has attained since the movement was resumed on September 22nd, and the controversy which has arisen on both sides of the Channel as to the essential causes of the efflux and possible means of arresting it, lend particular interest to the following analysis of the present situation by a distinguished French economist.

THE continued influx of gold from London to Paris may fairly be said to be a matter of as much concern to the market which is receiving the metal as to that which is losing it. London may be displeased at seeing the Bank of England's reserve decline, although on December 10th the “reserve ratio” of gold stocks to deposits and notes, at over 32 per cent., was still considerably above the level of 25 per cent. to which it fell not long ago; but Paris is equally disturbed by the possibility that the movement may involve the danger of a rise in the French level of prices.

Fears on the latter score may well seem somewhat exaggerated. Calculated on the basis of francs of pre-war purchasing power, the present volume of notes in circulation in France is little higher than the corresponding figure in 1912 (15 milliards against 12 milliards). Moreover, even if the existing circulation is responsible for the rise in prices—a thesis which is by no means proved despite the continued increase in the retail index number—it is thereby contributing towards moderating the effects of the crisis which is every day becoming more clearly visible in French industry and commerce. This in itself is a substantial point to the good. Indeed, the maintenance of the existing level of prices, or even a slight increase in it, would be the most efficacious means of influencing the trade balance in the direction of larger imports, and so changing the course of the present unwelcome flux of gold.

It would be a mistake to suppose that in this matter considerations of self-interest are uppermost in French minds. Paris derives no sort of satisfaction from seeing the London market in difficulties. Such an idea is far from the truth, and could only be entertained by those who are ignorant of the intimate connections which link the two markets. It is, in fact, the very intimacy of the connection between London and Paris which is giving rise to the present difficulties, while equally the closeness of the ties affords ground for hoping that the difficulties may be transient.

In the first place, it should be borne in mind that London has never displayed the capacity shown by Berlin or Paris to retain gold. During the period of enormous Transvaal production between 1895 and 1910 the stock of gold coin and bullion in the Bank of England not only did not increase; it actually fell. During the

same period the Bank of France augmented its stock of gold by 1,200 million francs; the Reichsbank's gold holdings rose by 200 million marks; and the stocks held by other European central banks doubled or trebled. Thus, whether the explanation is to be found in the economic structure of the various countries, or in the mechanism of their money markets, or more particularly perhaps in the organisation of their foreign lending, the fact must be recognised that some special characteristic renders the task of building up gold reserves in London relatively more difficult. It is not a question of a recent development but of a long-standing phenomenon.

It is true that current movements of gold have been on an unusually large scale. This, however, is the result of the combination of a variety of circumstances superimposed one on the other, but all exercising an influence in the same direction. It is because of this coincidence of so many factors that one may hope that the present disturbance is transitory and will disappear with the disappearance of the circumstances which have occasioned it. For the essential cause of the gold influx has been beyond dispute the stock market and banking crisis which burst upon Paris two months ago. The crisis was not serious of itself, but nevertheless it produced among depositors and customers of the banks—particularly after the suspension of the Banque Adam—feelings of anxiety out of all proportion to the original cause. In fact, this incident illustrates the extent to which nervousness still prevails among a public in whose minds the memory of the monetary and financial troubles of 1926 is still fresh. Moreover, lack of confidence was intensified by apprehension—equally exaggerated, it may be, but none the less widespread—aroused by the results of the German elections and by various bellicose utterances whose martial ring echoed loudly enough through Europe. Thus it happened that withdrawals of deposits assumed such dimensions that the commercial banks in France had to use all the means at their disposal to increase their cash balances. A reflection of these movements is to be found in the unusual increase of 3.5 milliards between the month of August and now in the private deposits of the Bank of France. The growth of deposits* in the central bank is the normal but significant counterpart of withdrawals of deposits from the other banks. Moreover, the note circulation, which a year ago fell by one milliard after the settlement at the end of November, this year remained almost stationary between November 28th and December 5th, despite a reduction of 1.5 milliards in the Bank of France's holding of bills. This holding, notwithstanding the stagnation of business, stood at the end of November at a figure of 400 millions higher than at the corresponding date in 1929—a further proof of the remarkable strength of the demand for bank cash.

It is well known, however, that recourse to the Bank of France is not the only means available to the commercial banks of increasing their liquidity. The custom, almost universal before the war, of placing a considerable part of their liquid assets on short-term investment in London and Berlin, but particularly in London, was resumed on a large scale by the banks immediately following the stabilisation of the franc. This habitual policy is itself a result of the remarkable facilities for short-term investment offered by the London market, and it has contributed greatly to supporting sterling exchange in Paris. On the other hand, the other side of the picture for the borrowing market is the ease with which funds so placed can be withdrawn. And, as has been the case in all previous crises, balances in London have served during the past two months as a "first line of reserve" on which the French banks could call to increase their cash balances. This is a phenomenon which has recurred with perfect regularity ever since the beginning of the nineteenth century, and of which every crisis has afforded evidence. On this occasion the magnitude of the movement of funds was the greater in that open-market discount rate in London has not been higher than the outside discount rate in Paris,

and has been lower than the rediscount rate of the Bank of France. Hence it was more advantageous for the French banks to repatriate their balances from abroad than to rediscount bills with the central institution.

It is possible, too, that these repatriations have been slightly accelerated by the uncertainty felt in the Paris market as to the franc's really effective gold point in London. Since deliveries by the Bank of England have been limited to standard bars, which have to be refined before acceptance by the Bank of France, the market no longer knows exactly how far the cost of importing gold is going to be increased through the loss of interest consequent on delays in having the metal refined. Nor is it aware at what point the Bank of France may decide at any moment to intervene and buy foreign exchange so as to prevent further depreciation of sterling. To put an end to this state of uncertainty would, however, be as easy as it would be desirable. For example, if it be admitted that the instability of the gold point is an important factor in inducing a sense of insecurity, the Bank of France could decide to purchase bars, irrespective of their degree of fineness, at the price of fine gold less the cost of refining, and to carry out the necessary refining itself. It is hard to believe that a small matter of difficulty which could so easily be smoothed out by common accord can long play an appreciable part in the monetary relations between France and England. Nevertheless, this question of standard gold and the gold point has contributed in the course of the past few weeks to precipitating the withdrawals of foreign balances to which the Paris banking crisis gave rise.

That crisis itself, be it noted, was a complication superimposed on a steady tendency towards repatriation of capital due to the decline which has proceeded without interruption for more than a year in the Paris Bourse, where a large bull position had long been kept open in defiance of all the omens. Capital has had to be repatriated to meet settlement differences; while still further repatriations of French capital have been caused by the slump in the stock markets abroad, with the result that sellers of sterling in Paris have predominated.

In so far as the present influx of gold arises from this coincidence of exceptional circumstances—a coincidence which can be summed up in the one word "crisis"—there is no doubt that it will cease with the end of the crisis itself. Moreover, the severity of that crisis should be lessened by the arrivals of gold into France, since these will do something to dispel the exaggerated nervousness which has been the motive for the withdrawals of deposits from the banks. As soon as the tide of sentiment changes, a small differential between discount rates in London and Paris—be it an increase in the London rate or a reduction in that of Paris—will be sufficient to change the course of the gold tide as well. There are substantial reasons, one knows, why London should hesitate to raise its discount rate at present. Equally serious considerations make it difficult for Paris to have a rate lower than 2½ per cent., and indeed this rate is so low that it is questionable whether a further reduction would be of any advantage. Nevertheless it remains true that a difference between rates of discount is the only really effective method of attracting back to any particular market balances which have been removed elsewhere. The remedy for the present situation—as soon, that is to say, as the temporary spasm of "nerves" on the part of French depositors has been allayed—is there for the authorities in the two markets to apply when they wish. Its application, sooner or later, will be a matter of necessity.

On the other hand, there is a permanent factor in the situation of the two countries to which attention may usefully be directed and which presents a problem less easy to solve—the diametrically different courses pursued by the balance of payments in France and Great Britain since the stabilisation of their respective currencies. In the case of Great Britain, the official returns indicate that the balance of "current items," visible and invisible, is much less "favourable" than before the war, since exports continue to be much below their pre-war level.

* Calculated in terms of gold francs the present figure of private deposits in the Bank of France, 9 milliards, is treble the average figure of 1912.

Against this, London has resumed with its old activity its traditional rôle of international lender of capital both on short and long term. In Paris, however, market developments have run on exactly opposite lines. The foreign trade balance has become as "favourable," if not more so, than before the war, thanks partly to the great increase in tourist traffic. But the export of long-term capital, which before 1914 was a distinctive feature of the Paris market, has by no means regained its pre-war level, for the reason either that the domestic market, following the stabilisation of the franc, has made heavy calls upon national savings, or, it may be, because many of the Governments which used to figure as borrowers in the Paris market have to-day vanished from the scene and have not yet been replaced by new clients. As matters stand, the political and economic status of many potential new borrowers is insufficiently known in Paris, or, if known, makes insufficient appeal for issues on their behalf to be practicable.

If the present situation were to be prolonged, it would clearly result in two equally undesirable consequences. On the one hand, the gold reserves of the Bank of England, even under normal conditions, would not grow fast enough for London to be able to face substantial withdrawals of funds in times of crisis abroad without disquietude. On the other hand, the glut of liquid assets in the Paris market could not find any outlet except in short-term investment in foreign markets, whose currency would thereby be rendered more vulnerable on the least hint of alarm.

It would appear, then, that the fundamental cause of current events lies in more or less permanent disequilibrium in the balance of payments of France and Great Britain. To restore equilibrium purely monetary expedients are inadequate. What is necessary is to devise in each case sound lines of economic policy. For Great Britain, if a French observer may be permitted to express a friendly view, the appropriate remedy would be a policy having for its chief objective a reduction in industrial costs of production; for France, what is wanted is a rational policy of augmented lending abroad. In this latter connection, however, it should be borne in mind that though foreign borrowing in the Paris market will be encouraged by the low discount rate in France, the full potentialities cannot be realised unless the prospect of world peace seems sufficiently assured to make the investor in France feel disposed to risk once more placing his money abroad. In the present position of Europe politics and economics are more closely linked together than ever before. Their inter-connection might well be brought to the notice of all those who see in the central banks the authors of each and every crisis with which the world is troubled, and who attribute to the same quarters the magical power of putting an end to each and every crisis at will. There could be no more dangerous illusion than this; for if we are to have economic stability and material well-being, the first essential task is to establish and consolidate peace.

BRITAIN'S BREAD.

MUCH has been heard in recent months of the import board as a means of protecting British agriculture, or rather that very small proportion of British agriculture which is devoted to the production of wheat. In its origin, however, the idea of an import board was a device for protecting, not the producer, but the consumer of wheat, and in that capacity its adoption was urged in a pamphlet* which appeared some months ago, and which deserves serious examination, less on its merits than because it is typical of a line of criticism which relies very largely upon a misrepresentation of the facts of the grain trade.

Mr Hurst's thesis is that the British consumer no longer enjoys either the stability or the low level of bread prices

* "The Bread of Britain." By A. H. Hurst. Oxford University Press. 2s. 6d.

offers every facility for
Banking Business

with

SWEDEN

which obtained before the war, owing to the fact that combinations among overseas wheat growers on the one hand and British millers on the other hand have reduced the grain merchant to a mere economic survival, without effective influence on the trade. Thus there no longer exists the reserve supply of grain which the merchants used to hold in the natural course of business, and which acted as a buffer against sudden rises in price, while the elimination of the regular hedging operations has made prices liable to more violent fluctuations and thereby raised the ultimate cost to the consumer by the amount necessary to cover insurance against the increased risks carried by the millers. Further, the immense growth of speculation has so increased the turnover on the wheat markets of the world that British imports, once a very weighty factor in the market, have become a very small proportion indeed.

Since, in Mr Hurst's view, no private interests can take over the functions of the grain merchant—and in this he seems to have unduly minimised the hedging habitually carried on by millers in the normal course of business—he advocates the intervention of the British Government to set up a board which should be responsible for the discharge of those functions. He goes into very little detail as to the proposed activities of such a board, and one of the first questions which suggests itself to the reader is how, if the evils of which Mr Hurst complains are largely attributable to the fact that the immense speculative developments of the international market have dwarfed the British share to an almost insignificant proportion, a mere change in the method of making British purchases is going to help the situation? The more nearly Mr Hurst is right in visualising the wheat market as dominated by giant combines and at the mercy of political manoeuvres, the less likely does it seem that the British consumer can protect himself merely by making his purchases through a government agency.

Whether Mr Hurst's picture does fairly represent the facts is, however, another question. A more recent writer has challenged the alarmist figures which have been bandied about, purporting to show the proportion of the wheat supply of the principal exporting countries which is controlled by pools, and the extent of combination in the British milling trade; and some of these challenged figures correspond to those put forward by Mr Hurst. Mr Moelwyn-Hughes states, for example, that the three milling combines control only 38 per cent. (not 62 per cent., as suggested by Mr Hurst) of the flour output in this country, that there is keen competition between them, and that the limit of concentration has probably been reached. He dismisses the idea that pools or large firms exercise any effective control of wheat exports from Australia and the Argentine, and illustrates with a brief recapitulation of the activities of the Canadian Wheat Pools and the Federal Farm Board his contention that "they have in no wise prevented the grain trade from exercising its normal and efficient function, nor endangered Great Britain's supply of wheat."

Pools, in short, are dismissed as almost innocuous, unless there were to arise either a degree of international combination among exporting countries which is scarcely conceivable in present conditions or else a world shortage.

† "Cheap Bread." By R. Moelwyn-Hughes. Ernest Benn. 2s. 6d.

How unlikely a shortage of wheat is may be judged from the following table:—

WORLD WHEAT PRODUCTION.
(In million cwt.)

Average.	
1890-99	1,328.5
1900-09	1,626.5
1910-19	1,536.5
1920-29	2,065.5

With many European importing countries aiming at a greater degree of independence of foreign supplies, it seems hardly likely that world demand can outrun supply within measurable distance of time, though whether Mr Moelwyn-Hughes is right in assuming that because the pools cannot hope to succeed in their object they do not cause any considerable disturbance to the grain trade is perhaps debatable.

In flat contradiction to the allegation that the grain merchant has been to all intents and purposes eliminated, Mr Moelwyn-Hughes asserts that he still handles two-thirds of the wheat imported into this country. That he handles it efficiently, *prima facie* evidence is to be found in the fact that whereas the average price of wheat imported in the years 1909-13 was 8s. 5d. per cwt., in 1922-30 it fluctuated between 10s. and 14s. If allowance be made, by means of a wholesale price index number, for changes in the purchasing power of money, the cost of wheat was actually reduced, in 1922-30, from a pre-war average of 11s. 1d. to a range between 8s. 1d. in 1923-24 and 10s. 7d. in 1925-26, while the mean for 1929-30 was 9s. 6d. Mr Moelwyn-Hughes takes an optimistic view of the extent to which cheapness of wheat is reflected in the price of bread, but that the British consumer has little cause for complaint as compared with consumers in other countries is shown by the following table taken from his book:—

BREAD PRICES PER 4 LB. LOAF.

	1914.	August, 1930.
	s. d.	s. d.
London	0 5½	0 8
Liverpool	0 5	0 7
Hamburg	0 10½	1 4
Paris	0 7½	0 9
Antwerp	0 6½	0 6
Stockholm	1 2	1 6
Rome	0 8	1 2
United States (average)	...	1 5½
Canada (average)	...	1 3
Australia (average)	...	1 11

Only in Belgium is it possible to obtain bread as cheaply as in this country, and there, Mr Moelwyn-Hughes argues, the quality is so poor that it partly invalidates comparison.

One may disagree with Mr Moelwyn-Hughes on certain points, but it is difficult to deny that he has made out a very strong defence of his position that, as far as the interests of the British consumer of bread are concerned, there is no need for any supersession of the present machinery of the grain trade. When he turns to the discussion of the specific proposal that the activities of the grain merchant should be carried on by an import board, he has an even more devastating battery of arguments. Not least of these is the contention that control of the grain trade would inevitably lead to control of milling, baking and trade in all kinds of stock and poultry feed. The economies which would be effected are, in Mr Moelwyn-Hughes's opinion, negligible, while speculation would not be checked but would merely, owing to the publicity of every move made by a Government purchasing board, be more unfavourable to the British consumer than before. The certainty of political pressure on the board opens out a dreary vista of "slogans, and election pledges, and still further doses." The experience of Continental countries which have tried similar schemes is anything but encouraging. Perhaps one of the most deterrent arguments is that which points to the high degree of international ill-will which would inevitably attend the negotiation of big wheat contracts by a body representing the British Government. If Canada "took it personally" when British merchants,

following the ordinary principles which guide every good housewife, bought Argentine wheat last year because it was the best bargain, how would feeling run if the British Government did the same? In Mr Moelwyn-Hughes's words: "The harmless bargaining of merchants is to be lifted to the plane of international relations and conducted at the temperature of national feelings." In short, proponents of the import board plan have yet to convince us that such a mechanism is required to meet any obvious need, or that, if established, it would work well.

THE DRAFT DISARMAMENT CONVENTION.

(BY OUR LEAGUE CORRESPONDENT.)

THE Preparatory Disarmament Commission having finished its work and concluded a draft convention, it now remains for the Council of the League to fix the date of the Conference. It is doubtful whether it will take a decision at the next session in January, and the chances are that it will be more likely to proceed first to a general consultation of the Governments. There is clearly much to be done by way of conversations before the Council will be in a position to name a date, and it will be surprising if the important preliminaries are completed in time for a conference before 1932.

The Commission seems to have been moderately well satisfied with what it has achieved, and there are certainly features of its convention which are not negligible. At the same time nothing is of greater disservice than to exaggerate the achievement, and Mr. Gibson's warning in this direction was wise. Even on some of the points of greater importance, decisions were by majority, and there are numerous reservations. How far they will remain obstacles it is early yet to say, but in view of all the circumstances it seems fairly clear that the Commission could not have gone further with any hope of bringing with it those states on whom rests the biggest responsibility to act. The draft convention is inadequate and disappointing, but it is something—if only the Conference itself fills in even moderately reasonable figures. That will be an extraordinarily difficult undertaking, and everything will depend on political relations, but the Governments at the Conference will scarcely be able to enact the farce which is sometimes prophesied.

That is one of the valuable features of at least having guiding principles down on paper. If the majority decisions are finally accepted, and an honest attempt made to take action on them, the armaments situation can be improved and the road opened to further progress later. It will not satisfy Germany, but it is useless to expect that at this stage there could be a levelling of European armaments, as Count Bernstorff claims; and Germany has some obligation to dispel any suspicion that pressure to do all at once may be prompted rather by a desire to arm herself than to persuade others gradually to reduce armaments. That suspicion is not widespread, but it exists, and the strong feeling of all Germans on the fundamental question should not be allowed to be exploited by the Nationalists. Action has certainly been delayed long enough, but it is idle not to recognise the realities. There will be no such quick revolution in political thought as to make a levelling of armaments possible next year or the year after. Count Bernstorff declares that the draft convention enables countries to increase their armaments. We shall see. That would be a sorry business, and a very dangerous situation would arise if Governments were to attempt such a deception of Germany and of a vast number of people all the world over. But why emphasise that possibility, if possibility it is? There are some states who have declared their existing armaments to be insufficient, particularly in relation to naval and air armaments, but the estimate of that insufficiency will to a large degree depend on what others do. Nevertheless, no one could pretend that the situation is not critical, and what is necessary between now and the Conference is a great deal of thinking and of energetic action by Governments who want results and Governments who are under strong moral obligations—at least—to contribute to results.

What are the main provisions of the draft convention? The average daily effectives in land, sea and air forces and formations organised on a military basis are to be limited. Trained reserves are excluded, and there is to be no limitation of annual contingents; but there is to be a limitation of the period of service in conscript armies. The annual expenditure on the upkeep, purchase and manufacture of war material for land armaments is to be limited; to this the Americans make a reservation, as they (with the Germans and some other states) prefer direct limitation. For naval armaments, in addition to direct limitation, there is to be a limitation of expenditure as well, but the Americans, French and Japanese made reservations, and the British and Italians explained that their acceptance depended on the attitude finally adopted by other maritime powers. An attempt to get budgetary limitation on air material failed, despite a determined effort by Lord Cecil, who said that without it, the air arm, potentially the most destructive, would be the most free for competitive international development.

With regard to naval armaments, provision is made for limitation by global tonnage, and each state is to show in which way it intends to distribute the global tonnage between the different categories. There is to be direct limitation of the number and size of capital ships, aircraft carriers and submarines, and of armaments. There are provisions for transfers from one category to another, on condition that before a ship is laid down for construction due notice should be given. Account must be taken of the special circumstances of each Power and of the classes of ships involved in the transfer. Powers whose total tonnage does not exceed 100,000 tons (this figure is given as an indication of the size of smaller navies) will have full freedom of transfer as regards surface ships, and as regards other Powers the amount of transfer is to be variable in inverse ratio to the amount of their total tonnage. The Italian delegation made a general reservation to the effect that they could not finally agree to any specific method before all the Powers had agreed on the proportions and the levels of maximum tonnage.

Air armaments are to be limited as follows: the number and total horse power of aeroplanes capable of use in war, in commission and in immediate reserve, is to be limited, and also the number and horse power and volume of dirigibles. States are to refrain from embodying military features in civil aviation, and they agree to encourage economic agreements between civil aviation undertakings in the different countries. The Germans made a reservation on the ground that reduction and limitation do not apply to the aggregate of war material, including material in reserve, thus leaving the countries free to increase their stocks of aircraft not yet put together. There are several other provisions aimed at preventing civil aviation from being used for the development of air armaments.

The total annual expenditure on land, sea and air forces, and organisations on a military basis, is to be limited, and a Committee of Budgetary Experts is to report on the conditions in which it shall be carried out. Conditions are laid down for exchange of information, and while this is a matter of publicity and not of limitation, it provides for the publication of a great deal of essential material. There is to be publicity also for civil aeroplanes and dirigibles and for the amounts expended by Governments and local authorities.

In addition, one of the most valuable features of the convention is the establishment of a Permanent Disarmament Commission, whose members are to be appointed by Governments, but are not to be representatives of Governments. There is a complete system for the lodging of complaints with regard to the application of the convention, for wide liberty in obtaining further information, and for publication of the Commission's reports on any complaints, and the contracting parties undertake promptly to advise as to the conclusion of the report. This is significant. The Commission is to receive all information supplied to the Secretary-General, is to meet at least once a year, and is to make a report on the information submitted, and on any other information that

may reach it from responsible sources of the situation with regard to the fulfilment of the convention. It may also meet in extraordinary session on the application of any contracting party.

In the final chapter one point of note is an article which states that if any dispute arises between the contracting parties which cannot be settled directly or by some other method of friendly settlement, the parties will, at the request of any one of them, submit the dispute to a decision of the permanent court, or to an arbitral tribunal chosen by them. In some respects the reservations, not all of which have been indicated, might go a long way to nullify some of the provisions, but on the assumption that there will be a reasonable attitude in the discussions which must ensue before the Conference meets, and that the states at the Conference are not altogether devoid of statesmanship, it is fair to say that the armaments situation can be greatly improved even within the framework of the draft convention.

HUNGARY.

THE world crisis in agriculture has naturally had far-reaching results in a predominantly agrarian country like Hungary. Nevertheless, the general picture of economic conditions given in a special Supplement,* which we publish this week, is not by any means discouraging under all the circumstances. Post-war Hungary, with a population of eight and a half millions, has recovered from the more immediate consequences of the war, the dislocations caused by the Treaty settlement, and several years of inflation, while the plan of financial stabilisation, carried through under the auspices of the League of Nations, compares very favourably in its results with many other experiments in European reconstruction. Moreover, the settlement of Eastern Reparations, arrived at earlier this year at The Hague and at Paris, has finally removed one of the most uncertain features which so long retarded economic progress in this part of the world.

The chief credit for the stability which Hungary has achieved must be assigned to Count Bethlen, whose ten years of office as Chief Minister is easily a record in these days of rapidly changing administrations in Europe. Freedom from political change and uncertainty is itself a great asset, and considering the storms through which he has steered the ship—navigating successfully the years of inflation, the periods of acute tension with neighbouring countries, the long negotiations over the Optants question (now happily settled), and many other troubles—Count Bethlen's administration must be counted one of the influences which has contributed in an important degree to the pacification of Europe. Such a record tends to become a tradition, but, as is the case with other régimes, its testing time must come again in periods of economic depression. Credit must also be assigned to the work of the Financial Section of the League of Nations under Sir Arthur Salter's energetic direction and to the wise and tactful behaviour of Mr Jeremiah Smith during the years in which he represented the League in Hungary.

At the present moment the low level of cereal prices dominates the Hungarian situation. It has made itself felt in a fall in Government revenue; it has had the most marked effect on the returns of foreign trade; and it has intensified the problem of agricultural credits. Stabilisation was effected in 1924. During the succeeding five years public revenue expanded steadily; receipts exceeded ordinary expenditure; and this enabled the Government to proceed with its investment policy and thus help forward the general economic recovery of the country. In the financial year 1929-30, however, ordinary revenue fell short of ordinary expenditure and the Budget was balanced with the help of extraordinary resources which

* This is the fourth Supplement of the *Economist* devoted to Danubian Europe. Czechoslovakia was described in our issue of December 8, 1928; Bulgaria on May 4, 1929; and Roumania on July 20, 1929.

happened to be available during the year in question. The investment programme could not be continued under such circumstances and, at the moment, every effort is being made to curtail expenditure. It is fortunate that the debt charges are relatively small, amounting in all to about one-tenth of total expenditure. No attempt has been made, in Hungary, to valorise the holdings of pre-war and wartime Government loans in the possession of Hungarian nationals.

The foreign trade position has undergone a marked transformation during the past eighteen months. After the currency was stabilised, the way was open for the influx of funds from abroad; foreign borrowings assumed considerable proportions in 1927 and 1928; and this enabled Hungary to increase her imports considerably. The change in world conditions last year, however, brought this movement to an end, and Hungarian imports fell off in consequence. On the other hand, in spite of the heavy fall in the value of cereal exports, total exports remained fairly constant, thanks more specially to a very marked increase in the export of livestock. As a result of these changes, Hungary has a favourable balance of trade this year for the first time since the war. This bears witness to a remarkable power of economic adaptation, though, so far as the export of cattle is concerned, it may have been achieved in part at the expense of the capital equipment of the country. The reduction in the available supply of foreign capital and short-term foreign credits, which set in last year, led to a fall in the gold and foreign exchange holdings of the National Bank which had been built up in the years of greater prosperity immediately preceding. The Bank's commitments, however, were also reduced, and the statutory ratio of assets to liabilities has remained at over 50 per cent. The situation now appears to be stabilised on the new basis.

The agricultural crisis, however, has certainly led to a reduction in the standard of living of the rural population. Taxation remains relatively high, though prices are very low. Any improvement in agricultural production is limited by the possibility of obtaining credits. Such short-term facilities as are available for the agricultural community are very expensive, and the whole organisation is in many ways unsatisfactory. Long-term credits, on the other hand, are practically unobtainable. It is hard to see how this situation is to be remedied without recourse being had to fresh borrowing abroad. If and when this proves possible, however, it is important that the funds made available should be used to increase the productive efficiency of the country, and for no other purpose. There is ground for thinking that some, at least, of the expenditure incurred in the years when foreign funds were easy to obtain was on too ambitious a scale for the present needs of the country and care must be taken to profit from the lessons of the past, in this respect.

These considerations have a very direct bearing on tariff policy. In the years immediately before the war, every effort was being made to encourage the industrial development of the old kingdom by active Government intervention. This policy remained as part of the inheritance of post-war Hungary. Leading bankers and industrialists—and the two are very closely associated in Central Europe—were greatly influenced by the ideal of economic self-sufficiency, which had its adherents in all the surrounding States as well. A high protective system restricted the import of industrial goods into Hungary and made the export of Hungarian agricultural products to the more industrialised neighbour States, such as Austria and Czechoslovakia, much more difficult. Industrial development proceeded to some extent in Hungary, but Czech and Austrian agriculturists became steadily more influential in the political sphere, and at last succeeded in introducing protective duties on foodstuffs in their respective countries. This was at once felt by Hungarian exporters of foodstuffs, who are coming to feel more and more that their interests have been sacrificed to those of the industrialists. Yet Hungary is, and must long remain a predominantly agricultural State.

The ideal of self-sufficiency, as the World Economic Conference pointed out, is one which very few States in the world can hope to attain. The greater States of Europe are gradually being forced by circumstances to recognise this, and if large and populous States must accept as inevitable the interdependence of nations, it is clearly absurd for smaller nations, such as those of Central and South-Eastern Europe, to aim at economic self-sufficiency unless they are prepared to acquiesce in a low and unprogressive standard of living. Hungary claims, and with some justice, to have made serious efforts to moderate the excessive tariffs of Central Europe by means of commercial conventions with her neighbours. But the process has not gone very far, and bad times do not make the problem any easier; for though they bring home very forcibly the need for the greater industries in each country to find markets, and produce phenomena like that of the Agrarian States of Europe seeking to co-operate for their mutual benefit as exporters, at the same time they stiffen the demand of importing industries for more protection. The need, however, for a wiser policy is pressing. It is certain that the introduction of high tariff barriers, with a view to multiplying industrial undertakings in the various countries of the Danube basin—and this at a time when capital resources had been sadly depleted and new capital was hard to obtain—is one of the causes of the reduction in the standard of living of the agricultural community. In a time of crisis like the present this particular problem stands out in greater relief than ever.

Hungary, in common with the rest of the world, is now passing through a period of some difficulty. The fact, however, that the Government was recently able to place Treasury Bills to the amount of £3,150,000 in London, New York, Amsterdam and other European centres, is a sign that Hungarian credit stands high on the international money market. This is confirmed by the 7½ per cent. League of Nations Reconstruction Loan, which was issued in 1924 at 88 and now stands at 102. The most immediate need is that Government expenditure, which has risen steadily each year since stabilisation was achieved, should be systematically curtailed. In this connection certain observations were made by Mr Jeremiah Smith two years ago. "Hungary," he said, "is now in a satisfactory condition, and it ought to remain so, provided that the Government pursues a sound and conservative policy in the light of its permanent expenditure, which cannot be reduced in times of difficulty; and secondly, that the country does not borrow too much money abroad." This advice is still worthy of the most serious consideration.

Notes of the Week.

Facing the Issues at the Indian Conference.—There has been much activity in the Committees of the Round Table Conference during the past week, and a number of reports have been drawn up. The large volume of work to be got through—even if all goes smoothly—is illustrated by the fact that the Conference is still busy appointing new sub-committees. Those which are only just getting to work include those reporting on the Franchise, on the North-West Frontier, and on Minorities. As regards the first of these, the Conference has received a memorandum from an influential committee making proposals for ensuring the adequate representation of women in the new legislative bodies, and the two women delegates to the Conference have now been added both to the Franchise and to the Minorities Committees. The latter is one of the focal parts of the Conference, and its appointment was, in fact, postponed until this week in order to give the utmost opportunity to reach an agreement outside the Conference—the last effort in this direction being an attempt by the Prime Minister himself to mediate. His week-end party at Chequers, however, failed to resolve the deadlock, the Moslem representatives, stiffened by pressure from their constituents in India, refusing to

make any concession from their minimum demands, the chief of which are separate electorates, representation in Bengal and the Punjab in proportion to population, "weightage" in the provinces in which they are in a minority, a full provincial constitution for the North-West Province, and the separation of Sind. The first and second of these are the crucial points. In other matters there has been considerable progress. The Federal Structure Sub-Committee has put forward a provisional list of "federal subjects," and has recommended a two-chamber legislature, which will deal not only with these matters, but also with topics that cannot at present be either entirely federalised or entirely provincialised. This will create an anomalous position in regard to which further explanations are needed; but the committee hold that it is preferable, as a temporary expedient, to any possible alternative—such, for example, as setting up another central legislative for British India. So far we must accept this as a negative conclusion rather than a positive contribution to constitution building. The committee has not dealt with subjects such as Defence and External Affairs, which depend upon the relations to be established between the Crown and British India. The Provincial Sub-Committee has reported very much along the lines of the Simon Commission's recommendations—unitary cabinets, abolition of the official bloc, enlargement of legislatures elected for five years, etc. It has, however, rejected (with two dissentients) the proposal that the Governor should be free to appoint a service member; it illustrates forcibly the special characteristics of the Indian problem by a proposal which at once differentiates the new Constitution from Western practice by the proposal that minorities should be included in the Cabinet; it leaves the question of the police to the Services Committee, but reserves very important powers to the Governor—not merely to refer matters back to the Legislature, etc., but to safeguard minorities, to ensure the safety and tranquillity of the province, and to carry on in the event of a breakdown. About a third of the members of the committee drawn from the British Indian delegation dissent from the reservation of these powers. This must be classed with such problems as the minorities question, the relation of the Crown to India in regard to reserved subjects, and, above all, the responsibility of the Central Executive to the Indian Federal Legislature, as among the major problems yet to be resolved. There is a growing feeling that they cannot be settled separately, and that until the attitude of the British representatives is made known, with some indication of how far the Government is prepared to go on the last of these key questions, the others cannot be resolved. The time is fast approaching when the Government must show its hand.

Monsieur Steeg's Cabinet.—For the moment, France has a Government again—formed last Saturday by Monsieur Steeg. There is no certainty that the new Prime Minister will have a very long tenure of office. Yet Monsieur Steeg's achievement in forming a Cabinet at all deserves respectful notice, however short an incident in French history it may prove to be. The personnel of the new French Ministry is distinguished enough. It contains no less than five Senators and six quondam Premiers. Monsieur Steeg himself is a Senator who has been both Governor-General of Algeria and Resident-General in Morocco; and it is natural that he should take, as he has done, the portfolio for the Colonies in addition to the Presidency of the Council. He has persuaded Monsieur Briand to remain at the Ministry of Foreign Affairs, Monsieur Chéron at the Ministry of Justice, and Monsieur Germain-Martin at the Ministry of Finance. With Monsieur Leygues as Minister of the Interior; Monsieur Barthou, War; Monsieur Sarraut, Marine; Monsieur Loucheur, Commerce, and Monsieur Painlevé, Air—the new Government can display an imposing catalogue of talents on paper. But Monsieur Steeg will stand or fall by the number of votes on which he can count in the Chamber and the Senate. From this point of view, it is to be noted that, while eleven out of his eighteen Cabinet Ministers are members of his

own Socialist-Radical Party, four are members of Monsieur Tardieu's Party of the Republican Left, while as many as six in all have been Monsieur Tardieu's supporters under the late régime. On paper this, again, looks like a valuable political asset. The crucial point, however, is that these gentlemen bring Monsieur Steeg their personal support only. They have joined his Government in opposition to the policy of the group or groups to which they belong; and it is conceivable that their action, so far from securing support for Monsieur Steeg in the Chamber, may actually stimulate opposition. In any case, the Conservative groups, to the right of the Republican Left, who supported Monsieur Tardieu, will be definitely hostile to Monsieur Steeg. In these circumstances, can his Government stand unless it receives Socialist support? And is it likely that this support will be given? It is one of the cardinal principles of the French Socialist Party's policy not to co-operate with any bourgeois groups, and the party discipline is strict. Moreover, even if the Socialist vote were thrown into the scales in Monsieur Steeg's favour, would he not be saving his political life in one way only to lose it in another? For part of the support which has enabled him to form his Ministry has been given to him on the understanding that he does not rely on support from the Socialist side. Our comments resolve themselves into a string of questions, many of which may have received their answers before they appear in print. One thing, however, can be said for certain, here and now. If our British parliamentary practice happened to prevail in France, there would have been a dissolution and a general election now, if not a year ago. Indeed, we see no other possible issue out of the impasse. If the present Chamber, as at present constituted, is really to drag out its existence until 1932, France seems doomed to go without a stable Government for another two years. That would be a misfortune not only for France herself but for Europe.

The East Africa Debate.—Native policy in East Africa was again the subject of a debate in the House of Commons on the Tuesday of last week. The ostensible points at issue were trivial. Lord Winterton alleged that the phraseology employed by the Government in the recent White Paper was offensive; Mr Ormsby-Gore, in a more statesmanlike speech, suggested that all this pother had arisen because another White Paper, published simultaneously, had been erroneously supposed to apply to Northern Rhodesia, whereas, in fact, it does not. The Government speakers easily disposed of Lord Winterton's points. They reminded him that the two phrases to which he took chief exception had made their entry into the vocabulary of Downing Street in a State Paper published under a Conservative Administration. ("His Majesty's Government think it necessary definitely to record their opinion that the interests of the African races must be paramount, and that if, and when, these interests and the interests of immigrant races should conflict, the former should prevail."—White Paper of 1923.) Nor did they find it difficult to show that the phraseology of the memorandum which was submitted in the name of the white settlers in Northern Rhodesia, and was published in the White Paper itself, were offensive in a very different manner and degree from anything ever published by the Government in Whitehall, under any Administration. But the chief interest of the debate lay in the occasional glimpses which it gave of certain underlying considerations. Shall the white settlers seek support in resisting the native policy of His Majesty's Government at Westminster by throwing themselves into the arms of His Majesty's Government at Pretoria? (Lord Winterton suggested that they might petition the League of Nations as well!) And, on the other side, shall white capital in Tropical Africa be allowed, in the name of "responsible government," to have absolute political rights over black labour? These are issues in which the whole future of British East and Central Africa is involved. The usual battlefield is Kenya Colony; but, at the moment, the scene of action has shifted to Northern Rhodesia—a terri-

tory which passed from a chartered company *régime* to a Crown Colony *régime* half-a-dozen years ago, and which is now undergoing a rapid industrial development owing to its richness in minerals. Those settlers and their supporters here who play with the idea of "secession" have certainly drawn attention to a remarkable historical parallel. The overrunning of East and Central Africa by a sprinkling of white settlers in this country does curiously resemble the occupation of the cotton belt in the Mississippi Basin by other white settlers a century ago. But does not the last chapter in that American story give Lord Winterton cause to think furiously? If one embarks on those deep waters of comparative history, one should keep an open eye for the reefs ahead.

The Dyestuffs Dilemma.—On November 19th the Government's decision to allow the Dyestuffs (Import Regulation) Act to lapse on January 15th was announced. On December 4th the House of Commons confirmed this policy by a majority of 30, after resisting a Conservative motion to prolong the Act for five years. But on Tuesday of this week the House of Lords, by way of reminding the country once more of their active functioning as a revising Chamber, added the Act to the list of measures covered by the Expiring Laws Continuance Bill—an omnibus Bill prolonging for one year the term of a conglomeration of Acts of Parliament. On Wednesday the Commons, by the narrow majority of six, rejected the Lords' decision, and on Thursday the Lords, in their turn reaffirmed it. The Government therefore was faced by a dilemma. They could not drop the Expiring Laws Continuance Bill, for, if they did, the Rents Restriction Act and other important legislation would lapse forthwith. Moreover, in view of the narrowness of their majority on Wednesday, when a number of Labour members abstained from voting and the Liberals divided themselves almost equally between the two lobbies, the Government were not in a very strong position to challenge the Lords' decision that a further year should be allowed for investigation into the dyestuffs question. The Commons, having received the usual "message" from the Upper House, Mr Graham, with as good grace as might be, announced that the Government would not insist on their disagreement with the Lords. So, for a year, the Dyestuffs Act is reprieved.

The Death Penalty.—The Select Committee on Capital Punishment appointed a year ago has reported, but it may be doubted whether their report* will either cause any profound effect on public opinion or lead to legislation. Actual recommendations fall into two parts: "conditional" and "definite." The first presupposes the maintenance of the death penalty, and in that case recommends that the insanity rules be revised, that no distinction should be made between the sexes, that no citizen under the age of twenty-one should be condemned to death, and that there should be a larger exercise of the Royal prerogative of mercy. The "definite" recommendations are as follows: (1) The abolition of the death penalty for an experimental period of five years; (2) meanwhile, pending the passing of necessary legislation, the Royal prerogative of mercy should be exercised in every case; and (3) that the substituted penalty should be that which now applies in cases where the death penalty is commuted. On the way to reaching these conclusions the Committee survey all the familiar arguments and produce a wealth of quotation (even Robert Burns, Shakespeare and Victor Hugo figure), and review the experience of other countries where capital punishment has been abolished. But, as Omar would say, we "came out by that same door wherein we went." No new or conclusive answer is provided to the agelong questions of the moral right of the State to take life and of the deterrent effect of the fear of death. We will content ourselves with three comments. First the report carries

the less weight because some of the members withdrew from the Committee at an early stage in its deliberations. Secondly, if any change is to be made, we agree that initially, abolition should be for an experimental period. Finally, it is probably better that any decision on this matter of the death penalty should await a thorough review and reconsideration of the British penal code as a whole.

British Salesmanship.—At a dinner of the Sales Managers' Association at the Guildhall on Tuesday, the Prince of Wales, who is shortly leaving for Buenos Aires, where he will open the British Empire Trade Exhibition, delivered an outspoken address on salesmanship. The main theme of his speech was a frank appeal to exporters to engage overseas representatives of a higher calibre, to offer better remuneration in order to secure a better class of man, and to ensure that these better representatives were more scientifically trained for their job. "The employers," said the Prince, "engaged in the struggle for world trade must recognise the need for employing a more adequate and a more appropriately educated staff if British trade is to live and grow, not wither and die. And they must make it clear beyond a doubt that for such staff they are prepared to pay an attractive price and give them in their work abroad adequate financial backing, so that they may have a standing as well as an efficiency worthy of their country. They must, moreover, courageously and steadfastly back them up by policy based on the needs of to-day rather than on the traditions of former years, and wholly different times." This cogent plea for greater efficiency and adaptability comes with force from one of the most observant and extensive of British travellers.

Hours in the Coal Mines.—The difficulty over the "spread-over" of miners' hours has not yet been finally resolved. On Wednesday the Executive of the Miners' Federation met, as arranged, to consider the replies of the districts and to decide whether its approval, in virtue of its powers under the Act, should be given to the "spread-over" principle. The result of the district voting was not disclosed, but it appears that Northumberland, Durham and Yorkshire have not abated their opposition to any modification in the rigid 7½-hour day, and the Executive of the miners' national body were glad to accede to the request of Lancashire that a final decision should be deferred until the National Wages Board has heard that district's case in the light of the colliery owners' latest wage proposals on "spread-over" terms. If, as a result of the National Board's finding, the Lancashire miners accept "spread" hours, there may be a sufficient majority in favour of the principle to warrant the Executive lifting its veto. Otherwise an awkward *impasse*, very discouraging in its bearing on the wider problems next July, will have been reached.

Iron and Steel Production in November.—Low as were the figures of production of iron and steel reported for October, there was a further fall in November. The number of furnaces in operation declined by 4 during the month to 92, and production of pig iron fell from 415,000 tons to 384,100 tons, while imports of pig iron amounted to 25,000 tons. Last year's production of pig iron averaged 631,600 tons, and imports 9,700 tons per month. Steel production also registered a substantial decline from 512,500 tons in October to 433,700 tons in November, and now amounts to little more than 50 per cent. of the output prevailing a year ago. Unfortunately, writes a correspondent, there is as yet no indication when the curve of production will turn upwards. Even the low prices at which Continental material has been offered have not stimulated demand. This is illustrated by the import figures which, in November, amounted to only 209,800 tons, though these comparatively low imports were slightly in excess of the exports, which amounted to only 203,900 tons. This is the second month this year in which imports have exceeded exports, although the margin

is not so great as in September when imports were 223,800 tons compared with exports at 200,300 tons. While the production of steel has fallen by 47 per cent., imports of steel and steel products have fallen by only 22 per cent., so that whereas last year imported material represented 22.6 per cent. of the total steel demand, imports in November represented 30 per cent. The price index for iron and steel products fell from 111.0 in October (1913 = 100) to 109.9 in November. The percentage unemployed in the pig iron industry on October 27th was 34.6 per cent., compared with 12.0 at the end of January, and in steel melting, rolling, etc. 41.4 per cent. compared with 23.7 per cent. in January.

Employment and the Cost of Living in November.—Unemployment continued to increase during November. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at November 24th had risen to 19.1, as compared with 18.7 per cent. at October 27th and 10.9 per cent. a year ago. It is estimated that at November 24th there were approximately 9,501,200 insured persons in employment in Great Britain. This was 32,000 less than a month before and 718,200 less than at the corresponding date last year. The actual number of those registered as wholly unemployed at the end of November was 1,659,867, and compares with 1,551,095 a month ago and 947,817 a year ago. Those temporarily stopped numbered 521,305, which showed a decline of 60,309 as compared with October but an increase of 260,430 over the corresponding date last year. The registers showed that at November 24th 105,288 of those usually in casual employment were without work, against 105,784 on October 27th and 133,810 at the end of November, 1929. At the end of the first week of December the number of registered unemployed had increased to 2,306,962, which included 1,694,046 wholly unemployed, 509,086 temporarily stopped and 103,830 normally in casual employment. With regard to the cost of living, the index number of the Ministry of Labour stood on December 1st at 55 per cent. above the level of July, 1914, as compared with 57 per cent. at November 1st and 67 per cent. a year ago. For food alone the corresponding percentages were 41, 44 and 59 respectively.

End of Sugar Conference.—All the European countries which were represented at the Sugar Conference, except Germany, have agreed to the plan proposed to them by the Javan and Cuban delegations. The exports of the European countries are to be reduced from 1,445,000 to 1,229,000 tons and the quotas which formed the basis of discussion during most of the session were:—Czechoslovakia 590,000 tons, Poland 319,000 tons, Hungary 85,000 tons, Belgium 35,000 tons and Germany 200,000 tons. Germany stood out for 350,000 tons with an extra 100,000 tons in the first year and, failing to obtain it, her delegates left the Conference. When an agreement was on the point of signature between the remaining European delegates, the Polish and Hungarian representatives suddenly demanded an addition of 1,000 and 5,000 tons respectively to their quotas. The Polish demand and half that of Hungary were ultimately satisfied at the expense of Belgium, whose quota is reduced to 31,500 tons, and on that basis a protocol has been signed. The quota of 200,000 tons has been reserved for Germany, but whether Mr Chadbourne, the head of the Cuban-American delegation, will be able in private negotiation to persuade the German producers to accept it seems extremely doubtful.

The Oustric Affair.—Our Paris correspondent writes:—The scandals arising from the Oustric group's Bourse operations are daily growing in volume. The special committee presided over by M. Louis Marin is apparently doing its work very thoroughly, as shown by its handling

of the Raoul Péret matter. M. René Besnard, former Ambassador to Italy, and since then another of M. Oustric's many legal advisers, is now undergoing examination as to the circumstances attending the admission to quotation here of Snia Viscosa shares, the Italian artificial silk issue. Inquiries are being made into the question of how the text of a confidential (and unfavourable) report sent to the Quai d'Orsay by the French commercial attaché in Rome, concerning the Snia Viscosa company, became known to emissaries of the parties interested in the admission of the shares to quotation here. Last night the commission probed into the question of several mysterious accounts at the Banque Oustric, under the headings of initials only, and began to identify the holders. Another account which is exciting attention is one alleged to stand in the name of an official of the Bank of France, which carried out a discount operation for £1,000,000 for the Oustric Bank, in connection with Oustric Group issues. In view of the whole atmosphere in the political and banking world at present, the commission last week decided to make public the official shorthand notes of the proceedings, voluminous verbatim extracts from which are now being published by the newspapers. This is regarded as likely to render impossible any interment, under political pressure, of the work of the commission.

The Australian Loan Success.—The announcement that the Australian internal loan of £28,000,000 has been fully subscribed and that there have been no less than 100,000 individual subscriptions is among the best news that has come from the Dominion for a long time. It is true that the success of the loan will not directly ease either the exchange position or the state of the national accounts, for the whole of the money is required to redeem maturing debt. Yet on the narrowest grounds it is easy to envisage the difficulties that would have arisen had the loan proved a failure or even a partial success; and on wider grounds the success of the loan is a notable testimony to the faith of the Australian investor in his own country. The result will undoubtedly enhance Australia's credit in the eyes of the world. Last but not least, the loan's success is a well-merited tribute to those Australian Ministers—and in particular to Mr. Lyons, the Acting Treasurer—who valiantly stood up against the impossible demands of the Labour caucus a short two months ago. National credit may be an intangible asset, but it is a very real asset, and there is no doubt that the success of the loan will be of immense assistance to the saner Australian elements in their task of reconstituting the Dominion's finances, both internal and external, upon a sound and durable basis. Many of Australia's broader problems remain, and her recovery depends ultimately upon the revival of the world demand for commodities such as wheat and wool, in which her fortunes are intimately bound up. Still, the success of the loan means that she has taken one more of the preliminary steps necessary before she can be in a position to participate fully in the trade revival, whenever it comes.

South American Banking.—This year Mr Beaumont Pease, in his address to the shareholders of the Bank of London and South America, had an unusually interesting, if somewhat difficult, period to cover. He responded by giving his audience an extremely comprehensive and frank review of the situation in the countries served by the bank. Beginning with Argentina, he stated that the disappointments of the year as a whole had been partially redeemed by the fairer promise of its final months. According to a recent cable, harvesting operations were being conducted under favourable conditions, and the rust damage to the wheat crop was proving to be not very considerable. Unfortunately, grain prices were some 40 to 43 per cent. below the level of last year. Mr Pease paid a tribute to the new Argentine Government, and alluded to the help given to it by the banks, both native and

foreign. He described the inconveniences caused by the closing of the Conversion Office a year ago, and testified to the faith he had in the efforts now being made by the statesmen and economists in Argentina to stabilise the currency once more. Their task would be made all the easier by the ample gold reserves, amounting to 76½ per cent. of the note circulation. Turning to Brazil, there too he had to tell a tale of a change of government, and of a heavy fall in the price of the country's staple product, in this case coffee. As regards the coffee outlook, he could not speak with any great certainty, but he called attention to the issue of the 1930 7 per cent. Coffee Realisation Loan, and also to the progress being made in establishing other industries, such as fruit-growing. The financial situation is still a little obscure, as he observed that the moratorium has just been extended for a further 60 days. Obviously, the Brazilian position is not yet so clear-cut as that of Argentina. During the remainder of his speech, Mr Pease touched upon such matters as the consolidation of the Chilean nitrate industry, the over-production of base metals, the flourishing state of the Uruguayan cattle industry, and proposed oil legislation in Colombia. On balance, his clear and interesting survey of the South American Continent during a critical year of its history reflects a tempered optimism which seems well founded.

Barclays Bank (D.C.O.).—When due allowance is made for the world-wide character of this institution's business and for the way in which stagnant trade tends to shift the earning assets of banks out of advances into discounts and investments, it is apparent from a comparison of the accounts of Barclays Bank (Dominion, Colonial and Overseas) during the past three years that it has displayed remarkable powers of resistance to the trade depression. The relevant details are given below:—

	Sept. 30, 1928.	Sept. 30, 1929.	Sept. 30, 1930.
Deposits	59,675,657	61,043,263	62,690,265
Notes	942,550	968,017	918,520
Acceptances	4,687,223	4,561,855	3,974,620
Cash	10,771,837	11,649,107	11,844,753
Bills discounted	17,415,119	12,564,919	14,081,480
Investments	9,249,647	9,200,778	12,970,040
Advances	23,305,538	28,690,100	25,090,490
Net profit for preceding year..	494,823	516,594	465,070

In interpreting the trend of both discounts and advances, it must be remembered that there is a seasonal inter-play between these two items, which may occur either before or after the date of the balance sheet, according to the progress made by crops. Thus it is unwise to generalise too dogmatically from changes from one year to the next in either of these items. Still, it is permissible to deduce that Barclays Bank (D.C.O.) is continuing its progress even under the present adverse conditions. Deposits have once more risen by about £1½ millions, and as investments have only risen by about £3½ millions and discounts by £1½ millions, there is no evidence of any pronounced shifting of the bank's earning assets into these items. Moreover, advances, though £3½ millions lower than last year, are still above their 1928 level, though here the caveat mentioned above must be borne in mind. The least favourable features of this year's accounts are the contraction in acceptances and the reduction in net profits. The former is the most direct evidence that the balance sheet contains of the influence of the trade depression. The decline in net earnings need occasion little surprise, particularly in view of the low rates obtainable this year upon bills. Moreover, the figure of net profits is very little less than that of two years ago, and the directors have shown their confident view of the bank's position by reducing the allocation to reserve by £50,000, whereas the interim dividend upon the "A" and "B" shares has been raised from 4 to 4½ per cent.

Overseas Correspondence.

FRANCE.

New Cabinet — Fraud Charges — Capital Issues — Production — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, December 17.

UNDAUNTED by the successive failures of M. Barthou and M. Laval to form a Cabinet that should represent the whole of the Centre parties and command a stable majority, M. Théodore Steeg accepted the mission to form a new Ministry. M. Steeg is one of the leaders of the Radical Socialist Party, a former Governor of Algeria and Resident-General in Morocco, a Protestant (like M. Doumergue) and one of the most skilful politicians in the country. He was faced with the capital difficulty that rendered the two previous efforts abortive—the flat refusal of the Radicals to accept any Cabinet in which M. Tardieu himself, or any representative of the Marin Nationalist Party, was included. M. Steeg got over the difficulty by inducing his Party not to accompany their acceptance of his request for their co-operation with any declaration of "exclusivity" against M. Tardieu or anybody else. On his own side he refrained from requesting the co-operation of M. Tardieu or of any member of the Marin group. At 3 a.m. on Saturday M. Steeg was able to announce that his Cabinet was complete, and it was on Sunday formally recognised by Presidential decree.

For all practical purposes the new Ministry marks a revival of the Cartel des Gauches, against which the country returned a majority at the elections of 1928. Seven of the 18 Ministerial portfolios and four of the Under-Secretaryships are held by Radical Socialists. M. Briand, by common consent (except that of the Marin Party, perhaps) remains at the Quai d'Orsay, and M. Chéron at the Ministry of Justice, as in the Tardieu Cabinet. M. Germain-Martin, hitherto Minister for the Budget, has become Minister of Finance, and is replaced by M. Palmade, one of the Radical financial experts (and a former *Rapporteur*), as Budget Minister. The only other recruits from parties supporting M. Tardieu are MM. Georges Leygues, Grinda and Thoumyre (the two latter specialists in national insurance matters), and two under-secretaries belonging to the Republicains de Gauche group. M. Leygues, a former Premier and several times Minister for the Navy, was dropped from that post when M. Tardieu re-formed his Ministry last February. His appointment to the Ministry for the Interior, whose tenure by M. Tardieu has been the main cause of Radical ire against M. Tardieu, is typical of M. Steeg's skill as a Cabinet-maker. Two of the new under-secretaries, belonging to "Tardieu groups," who were offered posts in the early hours of Saturday morning and accepted on being told that their groups had agreed to support the new Ministry, have since resigned on the ground that this was untrue.

The new Ministry is to appear before the Chamber to-morrow, but what its reception will be it is still impossible to forecast. Practically the whole of the old Tardieu majority groups have already pledged themselves to withhold their support, but whether they will vote against the new Cabinet, or, as a matter of tactics, merely abstain, will not be decided till to-morrow. In any case, if the Steeg Cabinet escapes an overthrow on its first appearance, similar to that which befell the Chautemps combination last February, it must necessarily be dependent on the Socialists for a majority; and it is not clear how it can command Socialist support unless it is prepared to go very much further towards the Left, both as regards foreign policy and expenditure, than its predecessors were prepared to do. The situation of M. Palmade, the new Budget Minister, will be especially difficult. Less than a month ago he was fighting for the

expenditure on economic development to be fixed at 35,000 millions, against the 17,500 millions asked by M. Tardieu. The fate of the Budget is again in the balance, and its adoption before the new financial year is once more felt to be doubtful. The unfortunate serious illness of M. Poincaré, whom all sections of opinion regard as the sole leader capable of eventually forming a really broad Centrist Ministry and thus overcoming the present deadlock, has gravely complicated the whole political outlook.

Under the heading "For the Protection of Thrift," the Ministry of Justice yesterday issued an official communiqué stating that "at the present moment" 181 bankers or financiers are under inculpation in Paris (*anglicé*: undergoing judicial examination on charges of fraud), and that 35 of these are detained in custody. The vast majority of these men may be described as "small fry" bankers, in the general French sense of the term; which is to say that they are not bankers at all, in the English acceptance of the word, but persons whose chief business is connected with stock exchange operations. The majority of the charges relate to fraudulent pledging of securities, belonging to their customers, as cover for advances for speculative Bourse operations. Many of the rest concern fraudulent share-pushing operations.

The index figure for November, representing quotations of 300 French issues of variable yield (1913 = 100) is returned as 378, or a drop of 48 points (roughly, just over 11 per cent.) since the end of September, immediately before the Oustric and Devilder troubles became acute. Bedrock was apparently touched at the end of November, for the figure returned for the first week in December shows a recovery of two points, to 380. All factors suggest that the market has to a great extent, if not entirely, recovered from the recent trouble, and that it has undergone a distinctly beneficial purge of its worst ills. The mid-monthly settlement in the official market on Monday revealed perfectly sound general conditions, the only adverse factors being the still unsettled domestic political situation and the unsatisfactory situation in Wall Street and other foreign centres, which has again resulted in upsetting conditions here, through causing a substantial volume of selling in Paris on foreign account.

New bond issues in November were 953,000,000 francs, as against 3,142,000,000 francs in October (this swollen total being due largely to the 2,200,000,000 francs Crédit Foncier conversion issue), 1,118 millions in September, 1,835 millions in June, and monthly averages of 567,000,000 francs in 1929 and 298,000,000 francs in 1928 (all these totals being exclusive of railway bond issues, the November total of which is not yet announced). The average yield offered by new bond issues in November was 4.80 per cent. (the same as in October, 1929), against 4.35 per cent. in October (which was the lowest touched for some years), and of 5.36 per cent. in 1929 and 6.03 per cent. in 1928. The average yield at present prices from issues of variable return in November was 3.95 per cent. (against 3.69 per cent. in October, 3.31 per cent. in June, and a mean of 2.70 per cent. in 1929 and 2.72 per cent. in 1928). The average return from these descriptions in November for the first time surpassed issues of fixed yield, which averaged 3.90 per cent. (against 3.87 per cent. in October, and means of 4.89 per cent. in 1929 and 5.33 per cent. in 1928). Money for carrying-over purposes was again abundant for last Monday's settlement at ½ per cent., at which level it has stood for several recent fortnightly liquidations.

Industrial production continues at a remarkably high level. The general index figure representing the output of the nine principal industries in October is 136 (1913 = 100), or a point lower than in September, three points lower than the mean for 1929, and nine points higher than the mean in 1928. The figure for textiles shows a rise of three points on the month, to 83; and that for the rubber industry of 28 points, following one of nine in August. Engineering is returned at 152, against a mean of 157 in 1929; metallurgy remains unchanged at

120 (against 129 throughout 1929, and 127 in 1928), and building at 134, against a mean of 122 in 1929 and 97 in 1928.

The index figure for wholesale prices at the end of November is 504 (July, 1914 = 100), against 519 in September, 544 for the opening months of the year, a mean of 623 in 1929 and of 634 in 1928. The index of wholesale prices of French products is 565 for October, and that for prices of imported goods 395 (against 635 and 602 respectively in 1929). The Paris retail prices figure for October is 647, or a rise of ten points on the month.

GERMANY.

Government Success — Foreign Policy — Price Reduction Difficulties — Waldenburg Failures.

(FROM OUR CORRESPONDENT.)

BERLIN, December 16.

THE parliamentary success of the Brüning Cabinet, which began with the rejection of all motions demanding a rescission of the new emergency decree, has been completed by the fact that the attacks by the Right on the foreign policy of the Cabinet have come to nothing. The Reichstag decided to forgo the debate on foreign policy, which, in the opinion of the Cabinet, would have served no useful purpose, and adjourned until the beginning of February without discussing the motions on this subject, including the vote of no-confidence in Dr. Curtius, which had been proposed.

The Government will, of course, have to give an account of its proceedings after the League of Nations Assembly in January, and it will certainly be eager to do so without waiting to be urged, but not until then will it be possible to see whether all hopes of disarmament are finally doomed, and whether there is any means of modifying the Polish reign of terror over minorities and especially over the German minority. That is the point upon which the decision of the Reichstag in respect of foreign policy will principally depend.

The reduction of iron prices has for some time been a subject of dispute in Germany. In November, Dr. Ernst Poensgen, the leader of the German steel industry, announced a "radical step" of price reduction, but since then the iron industry has been manifestly less inclined to undertake a generous measure of reduction. Peter Klöckner has just defended the thesis, at a general meeting at his works, that not even a very sharp cut in prices would lead to a substantial improvement in the market, and intimated that no very considerable cut would be forthcoming. Whereas after Dr. Poensgen's speech a fall of 15-18 marks per ton was fairly generally counted upon, it is now assumed that if prices are lowered at all it will only be by 5 marks per ton at most.

At the same time, the iron industry is laying great stress on the necessity that the coalmining wages award, which is expected at the end of the month, shall substantially reduce labour costs. The November reduction in Ruhr coal prices did not bring any relief to the large concerns which raise their own coal, but it is hardly possible for the Government now to reduce wages in the coal industry, through the arbitration award, if the industry insists on maintaining at its present level the price of iron, in which it is particularly important that a diminution in the cost of coal should be reflected. The price of iron, as one of the most important basic materials of industry, plays an exceptionally important part in the reduction of the general price level. Still more important is the psychological aspect of the question: if the closely organised iron industry opposes the reduction movement resistance in other industries to the moral pressure of the Government and public opinion will be strengthened. As the Government has very little means of bringing actual pressure to bear, and this principally on moral suasion, the

failure of this weapon in a particularly conspicuous case might easily seal the fate of the price reduction campaign. The linking together of the reduction of prices and wages began in the iron industry when the arbitration award of Bad Oeynhausen reduced the wages of the most highly-paid workpeople, and the industry reduced prices to an extent which even exceeded the saving in wages. If the reverse happens now and the industry responds feebly or not at all to a further modification in costs it will lose the favourable public opinion which its previous magnanimity gained for it. The unfavourable conclusions which the Committee of Inquiry have reached as to the profitability of the iron industry scarcely afford a foundation for its attitude in this matter, for the more unsatisfactory the net profits, the more urgent becomes a better utilisation of plant, and this can only be achieved by lowering prices.

The Institut für Konjunkturforschung has attempted, in its latest quarterly report, an estimate of capital expenditure in the years 1924-28. It estimates new investments, not counting the replacement of obsolete or worn-out plant, at a total of Rm. 27 milliards. Of this, 3.7 milliards were for industry proper, 2.6 milliards for electricity, gas and water supply, 4.3 milliards for transport, 2.4 milliards for agriculture, 5.4 milliards for housing, and 5.7 milliards for public administration. This 27 milliards is a relatively small sum when it is considered that the total income from German economy in this four years has been fully 250-300 milliards, and, further, that a substantial part of the plant was built with the aid of foreign credits. Though the estimate may contain serious sources of error, it, at any rate, affords no evidence that German economy has, on the whole, developed its productive capacity to a greater extent than was economically justified.

The Waldenburg Nitrogen Company in Lower Silesia and, in conjunction with it, the Waldenburg Mining Company, have asked their creditors for a moratorium. Both companies belong to the Pless concern, and both are involved in debts to the amount of some 20 million marks. The announcement has attracted great attention in Germany, as the Princes of Pless were, before the war, among Germany's richest magnates, and, in addition to the ownership of immense agricultural estates, played a leading part in the industry of Silesia. The Pless property was among the victims of the partition of Upper Silesia. Large properties round Kattowitz were separated and placed under the separate administration of a son of the Prince, who became a Polish citizen. That did not, however, save the Pless family from persecution by the Polish authorities, as the young prince was openly active in the defence of the German minority in Polish Upper Silesia, and retained the German employees in his works in positions of responsibility. Excessive taxation and other difficulties subjected the Pless property to very heavy financial losses, the consequences of which were felt with fatal effect when the economic crisis in Germany hit the possessions of the Pless family in Lower Silesia as well.

It is said, however, that as far as the nitrogen works are concerned it was not the unfavourable state of the market but technical and financial mistakes in construction which were responsible for the losses, for the works have only just been completed and therefore have not yet entered the market. Of the 20 million debt, about half is bank debt and the other half is due to the contractors who built the works.

The Waldenburg Mining Company presents, if possible, a still more difficult problem, for the Waldenburg coalfield is working under such hopeless conditions that the Government, in spite of heavy subsidies, is considering closing several mines for social-political reasons. Negotiations with the creditors are to be conducted with the aid of the Reichskreditgesellschaft, and the creditors are to be induced to make some reduction in their claims. This is the first big industrial failure which the present crisis has brought about.

SWEDEN.

Stock Exchange Optimism — Unemployment — Industrial Output — Foreign Trade — Balance of Payments.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, December 6.

SINCE the end of October the opinion has been gaining strength here that the international depression has touched, or is about to touch bottom, and this hope has determined the recent tone of the Stock Exchange, which is usually first to herald such movements. But even if this is true of international conditions, there are no signs that the depression has touched bottom in Sweden. The most recent figures of unemployment show that the number of persons making application for each hundred vacancies has risen from an average of 146 in September to 175 in October. Only part of this increase is seasonal, and not since 1926 has the October figure been so high. Whereas the number of unemployed applying to the Unemployment Commission for assistance a year ago was about 5,000, it was 8,600 this year and 6,300 a month earlier. Finally, the Social Board's figure for employment in the country sank in the third quarter to 2.94 from 3.22 in the second quarter and 3.51 in the third quarter of last year. Such a low figure for the third quarter has not occurred since 1922.

It may be that these figures represent past conditions, but all the signs point to a deterioration of the position since. Restriction of output is of daily occurrence; the S.K.F. and the Grangesberg Company curtailed output at the turn of the month, and there has been a cutting down in the sulphate and sawmill industries which will show serious effects next year. Behind these measures there lies a reduced consumption in some of the most important markets, the end of which is not yet in sight.

That Sweden has, however, felt the effects of the depression comparatively lightly appears most clearly in the volume of production of the leading industries. Until May it was surprisingly great. In June came a serious setback and since then activity has been remarkably unequal, with a falling tendency in the main. The latest available statistics are for October, when *Svensk Finanstidningen's* index number fell from 127 to 126 (1923-24=100), whereas last year it rose from 131 to 134 as a normal seasonal improvement. But clearly as this figure indicates a progressive depression, it is yet very moderate. In the period June-October the figure stood at 125, against 131 a year ago. For the first ten months the figure of last year was maintained, thanks to good employment during January-May. The average for January-October was 136, compared with 135 for the same period last year. The unusually large stock of orders with which Sweden entered the depression is clearly reflected in these figures. Now that this stock has run down, the volume of production has only been maintained because Swedish industry is little concerned with luxury trade and because it has been able to reduce its prices. The effect will be seen in the profit and loss accounts, but industry has succeeded in preserving its markets.

In foreign trade the situation is similar. From 86 per cent. of last year's exports in July the figure fell to 77 per cent. in September and October. In the latter month pulp shipments were down 23 per cent. and paper 16 per cent., while for timber the decline was 36 per cent. and for iron ore 35 per cent. In the quality industries ball bearings fell 19 per cent., motors 16 per cent., separators 22 per cent. and telephones 35 per cent. The electrical industry is in a class by itself. Exports increased by 18 per cent. in September and 30 per cent. in October.

There was an excess of imports of Kr. 15 millions, while the normal for October of recent years has been an export surplus of Kr. 8.9 millions. Whereas the period from June to October last year showed an active balance of Kr. 107 millions, this year in the same period,

the best shipping months, there was a passive balance of Kr. 7 millions. It is remarkable that as yet these developments have affected the balance of payment very little. Even during October Sweden's net claims abroad were increased, though only slightly. They amounted to Kr. 580 millions, that is to say they exceeded by about Kr. 20 millions the corresponding figure in 1929. Since the beginning of the year, the reduction has been only Kr. 4 million. The principal explanation is to be found in the fact that exports of capital have considerably declined. Thus in the third quarter there was an import surplus of Kr. 8 millions as compared with an equal export surplus a year ago. In October there was a net export of Kr. 5 millions due to a repatriation of German capital.

An interesting change has taken place in the placing of these bank claims. The share of the Riksbank has increased from Kr. 232 millions to Kr. 398 millions at the end of October, and that of the commercial banks has declined Kr. 327 millions to Kr. 181 millions. There we have in a nutshell the state of the money market, which is still characterised by abundant money in the commercial banks and consequent independence of the Riksbank. Rediscounting is still on an abnormally low level. The Swedish krona has, in consequence of realisations, as a rule been firm. This was accentuated at the end of November when the Riksbank for the fourth time this year was compelled to buy pounds at 18.09 and to take up all offers in order not to risk an import of gold.

DENMARK.

Bacon and Butter — Wholesale Prices — Exports.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, December 8.

ATTENTION is focussed just now upon the agricultural problem. The decline in the prices of butter and bacon has been very marked and opinion is rather pessimistic as to the probable consequences. Last week the butter quotation was unchanged at Kr. 210 per 100 kilos., and it is reported from the English market that consumption has lately increased as a consequence of the low prices (the price in the corresponding week of 1929 was Kr. 300 per 100 kilos.). It is therefore possible that a certain balance is about to be reached in the English market, in spite of considerable imports of colonial butter. But for bacon the position is more uncertain. In the course of a year the Copenhagen quotation has declined from Kr. 152 to Kr. 90, and it fell from Kr. 100 to Kr. 90 last week. In its last report, however, the Agricultural Council states that demand will probably be stimulated when the reduction is fully reflected in retail prices in the United Kingdom. Meanwhile there are already signs of increased consumption on the home market.

The *Berlingske Tidende* announces that wholesale prices are still falling, but it is pointed out that the decline has been less pronounced in November than in the last few months. The total index figure (1913 = 100) is only one point lower, 122 against 123 for October. The decline has particularly affected vegetable foods, which dropped from 89 to 86, cattle food, which declined from 160 to 154. The remaining groups have only declined slightly or not at all, and animal food produce even shows a rise from 120 to 121. As a consequence of the rise in animal foods the entire group of export prices has risen one point to 118, while import prices have declined from 118 to 117 and prices of goods for the home market from 129 to 126.

Compared with the index for the autumn of 1929, the total index has dropped from 150 to 122, or nearly 20 per cent. Within the separate groups the decline has been very uneven. It has been most pronounced for cattle food, which is about 35 per cent. lower, while vegetable food produce has declined 27 per cent. and animal food produce 24 per cent. Generally speaking, raw materials and semi-manufactured articles have declined most, the

entire group being about 23 per cent. lower than last autumn, while articles of consumption have declined about 16 per cent. Within the two groups foodstuffs have declined far more than other goods. For export goods the decline has been 24 per cent., while import goods have dropped 20 per cent. and home market goods 18 per cent.

In the course of the year the most noteworthy increase in the volume of exports has been for bacon. Butter exports have amounted to 155,000,000 kilos., or 7 per cent. more than last year. The export of eggs exceeds last year's quantity by 10 per cent., but the increase in bacon exports is as much as 22 per cent., to 274,000,000 kilos.

ROUMANIA.

Budget — Failure of Petroleum Convention — Agricultural Situation.

(FROM OUR CORRESPONDENT.)

BUCHAREST, December 11.

THE Budget proposals for the year 1931 have been laid before Parliament by the Minister of Finance. The Treasury returns, published monthly during the current year, had made it abundantly clear that the estimates of the last budget would not be realised. It seems, indeed, hardly likely, to judge by the figures so far available, that revenue for the present year will exceed 32,000 million lei. In view of the fact that the nation is undoubtedly becoming gradually poorer, and that consumption is decreasing owing to the severe economic crisis which shows no signs of abating yet, it appears highly improbable that even the much reduced revenue of this year will be obtained in the course of 1931. Economy has already been exercised, and the expenses have necessarily been kept much below last year's estimates, but it has become obvious that the need for further efforts in this direction is imperative. In addition, the new law of public accountancy, which was introduced with the stabilisation, and which came into effect at the beginning of this year, makes it necessary to confine the budget to the twelve months of the year and not to take into account certain receipts and expenditure of the following six months as had been done heretofore. All these considerations make the budget proposals an exceedingly interesting document.

The total revenue for 1931 is estimated at 32,472 million lei, against an expenditure of 35,889 millions. The deficit of 3,417 millions is to be covered by a reduction of from 10 per cent. to 22 per cent. in the salaries of the civil servants. The revenue and expenditure statement is somewhat obscured by an item of about 3,000 millions for payments remaining unsettled from the year 1930, this amount being covered by a similar sum called "remainders from the year 1930." Although the Minister of Finance, in his budget speech, endeavours to explain that this amount is of no importance, it seems that it represents a disguised deficit which is carried over to the next year. It is, indeed, looked upon as important enough to give rise to a rumour of the impending resignation of Monsieur Auboin, who, first as assistant to Monsieur Rist, and then as his successor, is supervising the Roumanian State finances on behalf of the foreign group which assisted Roumania in the stabilisation of its currency.

It is hardly possible to regard the various items of the revenue estimates otherwise than as over-optimistic in the light of the conditions prevailing at present in this country. Thus, direct taxation is made responsible for 9,310 millions, which is practically the amount which may be expected in the current year; no account has been taken of the decrease under this heading which the depression may entail. The same may be said of the customs receipts which figure in the budget at 4,775 million lei. Taxes on articles of consumption are estimated at 2,882 millions. Up to the end of October of this year, 1,800 millions were received from this source. It is not likely that more than 500 millions will be obtained in the remaining two months. The estimate for 1931, therefore, shows an increase of about 500 millions. The figures speak for

themselves. The tax on business turnover and the stamp taxes are estimated at 2,000 millions and 4,150 millions respectively, corresponding to the expected receipts for this year. It is, however, improbable that these figures will be realised in the next twelve months. The Minister of Finance has, in fact, based his estimates on the revenue received this year, whereas it would have been advisable, on account of the general economic depression, to make careful provision for the possibility of a reduced yield of taxation. Courage seems to have been lacking to effect the drastic economies which the finances of the country required.

A very interesting announcement was made by the Minister of Finance in his budget speech to the effect that the group of banks which launched the stabilisation loan had made an offer of a second issue of this loan. It will be remembered that this stabilisation loan was issued by the Roumanian Monopoly Institute and guaranteed by the State. The Monopoly Institute is doing good business, and is easily able to cover interest and redemption of the existing issue and also contribute to the State a considerable surplus. (The revenue from the Monopoly Institute and the public commercial regies is estimated in the budget proposals for 1931 at 5,578 millions.) If a second issue of the loan is made this surplus will of necessity be reduced, and the State finances will suffer accordingly.

Consternation was caused by the news that the Steua Romana Company had decided to withdraw from the convention for the conservation of crude oil which was concluded in July last. This convention had fixed the maximum total production for Roumania at 1,350 wagons per day, which amount was apportioned amongst the producers in accordance with their relative capacity. The Steua Romana considered that the share allotted to it was too small considering the importance of the company as one of the leading companies in the country and its capacity as shown by its monthly output. Continuous negotiations have been going on during the whole month of November, unhappily without result. At the last meeting of the producers other resignations were presented and there were a number of unsavoury accusations that certain companies had produced more than their quota. The consequence is that the accord has come to an end and free competition among the petroleum producers is recommencing. The failure to come to an agreement can only be deplored by those who have the interest of the petroleum industry of Roumania really at heart, and it is possible that the effect will not be confined within the limits of this country. Hopes of an ultimate accord being reached are, however, not abandoned as the interest of self-preservation is expected to force producers eventually to come to an agreement. It is reported even that the large petroleum trusts have taken an immediate interest in the matter and will meet representatives of the Roumanian industry in Paris for the purpose of devising a scheme for the restriction of the production in this country. Other negotiations are to take place also in Paris for the organisation of the petroleum export to France.

Prices of cereals have shown a slight improvement lately. It is, however, not expected that they will reach a level which would leave a satisfactory profit to the producer. As has been pointed out before in these columns, the fall in the world price of cereals which occurred last summer threatens to undermine the whole economic structure of Roumania. Various plans have been suggested for the relief of the farmers, who are hopelessly in debt, but so far nothing useful has been done. The only proposal which has been definitely made is that of the Acceptance Bank of Paris, which has offered to accept bills drawn by Roumanian banks secured against cereals and forwarded through the intermediary of the National Bank. These bills could be discounted in Paris at the current rate, which would allow the Roumanian banks to make advances at 9 per cent. for the purpose of financing the export. The proposal touches merely the fringe of the problem in so far as it assists only part of the export.

Much wider and more permanent facilities are needed to relieve the situation, and the negotiations which have been going on for such a long time to obtain foreign assistance have, so far, had no tangible result. For the moment

a tendency to a slow decrease in prices of certain articles of consumption is noticeable. If this is maintained and becomes more general so as to produce a decided effect on the cost of living, if credit is organised so as to provide cheap facilities for the producers, a gradual improvement of agricultural conditions may be achieved. But it is hardly to be hoped that the ultimate result will be obtained without serious sacrifice, and as is general in economic readjustments, only the fittest will survive.

CANADA.

**Business Conditions — Woollen Industry's Prosperity —
Tariff — Bank Clearings — Railway Statistics —
Wheat Pools — Federal Revenues.**

(FROM OUR CORRESPONDENT.)

OTTAWA, December 2.

In his annual address to the shareholders of the Bank of Montreal, delivered on December 1st, Sir Charles Gordon, the President, offered the opinion that forces were at work for the improvement of business conditions whose present depression he attributed solely to the decline in the purchasing power of the rural community as the result of the extreme lowness of the price of their staple products. But he also said that he could not foretell whether the upward pull to revived prosperity would be long or short, and informed opinion in Canada does not look for any substantial improvement in the business situation until midsummer or perhaps the autumn of next year.

The Bureau of Statistics, in a survey recently published, estimates that the physical volume of Canadian business had at the end of last August suffered a decline of more than 25 per cent. from the peak point it had reached in October, 1929. For that month it gave the index figure (1919-24 = 100) as 196.9, and it placed the index for August at 144.8. Since August there has been a further setback, and the contraction from the peak is now probably almost one-third. The agricultural depression in the West, which has approached the dimensions of a widespread calamity, is the most serious factor in the slump, but is by no means the only one. The newsprint industry is still beset with difficulties, the weakness of the lumber market is forcing the lumber operators to curtail their winter cut to the lowest level for many years, and mining production shows a serious decline. The fishing season on the Atlantic coast has not yielded satisfactory results, and the fruit farmers are complaining about the poorness of prices. There has also been a general curtailment of industrial activity except in the textile mills, which are reported to be enjoying better times than they have experienced for years.

At the annual meeting of the Canadian Woollen and Knit Goods Association, held in Toronto on November 28th, various speakers emphasised the improved outlook for every section of the woollen industry as the result of the increased tariff duties. Mr D. C. Dick, the President, stated that British capital was now being attracted to the Canadian woollen industry, and there is said to be some apprehension in woollen circles lest a number of British woollen firms establish plants in Canada—one Yorkshire firm has already acquired a factory in Perth County, Ontario—and try to secure a share of the local protectionist preserves.

While the new textile duties are very gratifying to the manufacturers, they are not exactly popular with the public at large, which finds that the price of clothing has already been raised for many lines. It is also being argued that in the end it will not do the textile manufacturers of Eastern Canada much good to have the inflow of British textile imports curtailed if the purchasing power of the Western farmer remains at half its former volume as the result of Canada's inability to market her wheat at profitable prices. Meanwhile the protectionist forces are in the ascendant, and it is freely rumoured in Ottawa that the more extensive revision of the tariff which Mr Bennett forecast for the regular parliamentary session will be

largely in an upward direction. Any further moves towards higher protectionism will certainly arouse violent opposition in the West, which is already in a mood of angry exasperation. At a convention of the United Farmers of Manitoba Mr Hoey, who is Minister of Education in the Manitoba Government, elicited enthusiastic applause for a suggestion that the West should unite in demanding that Churchill, the tidewater port of the Hudson Bay Railway, should be made a free port through which the West could carry on its trade with the outside world without the interfering barrier of the protectionist tariff now imposed in the interests of Eastern Canada. If the tariff is pushed upward next session, more will be heard of this demand; Eastern Canada would, of course, refuse to listen to it, and the West could only carry it to success by a movement for outright secession.

There has been virtually no change in the general business situation during the past fortnight except that the advent of really cold weather has stimulated the sale of winter goods. The carloading figure for the week ending November 22nd, at 60,608 cars, shows a gain of 2,472 cars over the figure for the previous week, but is 3,970 cars below the figure for the corresponding week in 1929. Bank clearings continue to fall, and for the month of November they reveal a very heavy decline compared with the figures for the corresponding period of 1929. The following are the comparative figures for three of the leading Canadian cities:—

	1929.	1930.
	\$	\$
Montreal	824,660,681	532,743,207
Winnipeg	335,179,707	220,936,508
Vancouver	102,195,408	76,236,866

Equally unsatisfactory are the earnings of the railway companies. For the month of October the net earnings of the Canadian Pacific Railway, despite the drastic cut of \$2,283,635 in operating expenses as compared with October, 1929, were \$6,554,092, as compared with \$7,309,836 in October, 1929—a drop of three-quarters of a million dollars. For the ten-month period ending October 30th, the net earnings of the company were \$29,165,526, a decline of over six million dollars from the total of \$35,441,626 earned in the parallel period of 1929. The figures of the Canadian National are relatively much more unsatisfactory, for the net revenue for the system for October was only \$3,858,786, as compared with \$5,990,382 for October, 1929. Papers like the *Montreal Star* have been directing considerable criticism against the management of the Canadian National Railway and arguing that its finances are in an unwholesome condition, and that a curb should be placed upon the heavy capital expenditures to which it is committed.

The grain marketing situation has shown very little improvement during the past week, and with a continued weakness in export demand prices have been sagging on the Winnipeg Grain Exchange. The Bureau of Statistics placed the volume of Canadian wheat in store in the Dominion and the United States on November 21st at 199,585,855 bushels, which was a gain of 8 million bushels as compared with the figure for November 14th, but was 22 million bushels less than the total stocks held in storage the corresponding date of 1929. Mr John MacFarland, of Calgary, has been formally appointed manager of the Central Selling Agency of the Wheat Pools, and his appointment is interpreted as an indication that the fortunes of the pools are now in the hands of the banks and various interested governments. A report published by the pool, covering the last crop year up to August 31st, reveals the fact that on its operations over a twelve-month period an actual loss of nearly 12 million dollars has been incurred on wheat already sold. It also shows that on August 31st there was still a small carry-over from the crop of 1928 and a larger carry-over from the crop of 1929. For most of this wheat an initial payment of \$1 was made, and it is estimated that the pools have incurred a further loss of at least 8 million dollars on this old wheat, which means that their total loss is not less than 20 million dollars.

The Federal revenues continue to show an ominous shrinkage. For the first seven months of the present fiscal

year they are placed at \$239,888,820, as compared with \$287,366,016 for the parallel period of the previous fiscal year. The worst shrinkage is in customs duties, which have fallen from 114 to 84 millions, and the excise taxes have declined from 34 to 21 millions. Indeed, the only gain is in the income tax, whose returns have risen from 63½ to 66 millions. Meanwhile, in the seven-month period the expenditure, at \$210,857,276, shows an increase of 12 million dollars over the parallel figure for the previous year, and it is plain that a very substantial deficit is inevitable at the end of the present fiscal year. The total net debt on October 31st was placed at \$2,137,134,993, as compared with \$2,148,732,414 on October 31, 1929.

INDIA.

**Falling Prices — Government Policy — Foreign Trade —
Exchange.**

(FROM OUR CORRESPONDENT.)

BOMBAY, November 28.

THE fall in prices has affected India seriously, as, indeed, it has all countries exporting agricultural products. The wholesale index number for Bombay in September, 1930, was 119, as compared with 124 in August, 1930 (1914 = 100). The September level was actually 26 points below the yearly average of 1929, and the prices of raw cotton, raw jute, wheat, rice, and certain oilseeds are lower than the pre-war level. Cotton manufactures have fallen as compared with last year's prices, but still remain above the index number of general prices. Recently, with the improvement in the political horizon, the cotton mills in Bombay city and island have been finding business better than hitherto. The mills of Ahmedabad continue to find a good market for their goods, and since 1929 about a dozen new mills have been constructed or are in course of erection. The new tariffs have been very effective, especially in grey goods from Japan, and it is only in bleached goods that one hears complaints in some quarters regarding Japanese competition. The fall in prices, however, is bound to have its repercussions on general purchasing power, especially on the part of the cultivator. The mills of Bombay find their prices at a lower level than they have been for fifteen years, and imports of piece-goods in the first six months of the current financial year are 40 per cent. below the imports in the corresponding period of last year.

The Government have been asked to help in regard to raw cotton and raw jute. The Indian Cotton Committee put forward a scheme that the Government of India should fix a reasonable basic figure, and that they should be ready with a scheme to help the grower if the price falls below that level. Even if a reasonable basic figure could be fixed, the major problem, the formulation of a satisfactory scheme for giving assistance to the cultivator, would still remain. The Committee considered and rejected a scheme by which Government should purchase and take off the market, for whatever period might be necessary, a considerable quantity of cotton, and the Government of India entirely endorsed the Committee's judgment. The lesson of the United States, Egypt, and Brazil in this direction is well known. The Committee, however, suggested that Government assistance should be given in financing the cotton crop. The Government came to the conclusion that, apart from the difficulty of ensuring that the benefits derived by middlemen should be passed on to the cultivator, and apart from difficulties of providing large storage facilities up-country, if the scheme were to be effective in holding up stocks of cotton there was the fundamental objection to the fixation of a minimum price, viz., that it might prove to be out of relation with world prices. The Government believe that the danger of encouraging cultivators and merchants to engage in speculative operations is just as great as that of engaging in speculative operations themselves, and that the risk of financing the accumulation of stocks by cultivators and merchants, who would not be in a position to face heavy losses, is very nearly as great as the risk of direct purchase. The decision, all things considered, is wise.

The seaborne trade returns for the first six months of the present financial year (April to September) are now available, and reflect the world-wide trade depression. Exports of Indian merchandise were Rs. 123 crores, against Rs. 157 crores for the corresponding period of last year, a fall of 22 per cent. Imports of merchandise were Rs. 87 crores, as against Rs. 120 crores in the same period of 1929, a fall of 28 per cent. The imports of foreign goods have fallen considerably, except raw cotton, timber, dyes and oils. The imports of cotton piece-goods from Lancashire have in the six months fallen by 39 per cent. in quantity and 46 per cent. in value as compared with 29 per cent. and 48 per cent. in the case of imports from Japan. There has been an increase since the new tariffs came into operation of 140 per cent. in quantity and 79 per cent. in value in white bleached goods from Japan. The total visible balance of trade, merchandise and treasure, is Rs. 1,993 lakhs for the six months ended September in favour of India, as against Rs. 2,755 lakhs in the corresponding period of 1929 and Rs. 2,593 lakhs in that of 1928.

Money has been cheap, but with the onset of the busy season the Imperial Bank of India rate was raised to 6 per cent. on November 20th. There has been some weakness in exchange during the last few weeks. On November 21st the cross rate for telegraphic transfers was 1s. 5½d., as against 1s. 5¼d. on the same date last year. The Government has last week taken steps to strengthen the exchange by contracting the currency by five crores as well as by raising the Imperial bank rate from 5 to 6 per cent. The weakness in exchange is really due to a feeling of uncertainty regarding the Round Table Conference and what the Conference will bring about. Lack of confidence leads to uncertainty, and those in favour of the 1s. 4d. ratio begin to think, despite all that the Finance Member, Sir George Schuster, has said, that a reversion from 1s. 6d. to 1s. 4d. may be practical politics. It is certain, however, from what one sees and hears in Simla that 1s. 6d. must and will remain.

What India wants more than anything else is a strong Central Bank to carry out the functions of controlling both currency and credit. The silver market has recently been steady, but following easy China advices it has recently declined. The stock of silver has been increased by deliveries from the Bombay Mint. The gold market has been strong, following quieter advices of sterling. There has been a very considerable increase in the imports of gold and silver during the first six months of the present financial year. Gold has been imported to the extent of Rs. 1,152 lakhs, or 56 per cent. more than in the corresponding period of last year. Silver imports have been 58 million standard ounces, valued at Rs. 726 lakhs, an increase of 38 per cent. in quantity and 20 per cent. in value. A striking feature of the bullion imports into India is that the share of Bombay in the first half of the current financial year is Rs. 13 crores out of an all-India total of Rs. 19 crores.

Letters to the Editor.

FALLACIES IN "ECONOMY."

TO THE EDITOR OF THE ECONOMIST.

SIR,—Is it not possible that this world-wide preaching of economy may be entirely wrong, and only result in driving us back to the hut days? While I am quite prepared to admit that the policy of economising while everybody else is living what we call extravagantly must result in the accumulation of wealth by the individual, I fail to see how it would benefit the world at large if everyone were to stop spending beyond what was necessary for the bare necessities of life. Why should it be considered an extravagance if by mass production gramophones, wireless sets, etc., become accessible to all, instead of only to those more fortunate people who are blessed with more money than their neighbours? When we look back to the periods which we call "boom years," we find that everyone not only spent money, but benefited by the

luxuries which abounded, sharing the products of each other's labour—whether this were devoted to the production of food or gramophones. Surely at such times the world is a happier place to live in.

With the introduction of science the world is able to produce greater results in a shorter time; consequently, if we continue working the same number of hours we must expect these periods of over-production to occur.

In my opinion the reduction of wages is not going to help matters, but will only intensify unemployment by further diminishing the circulation of money, and will encourage Bolshevik tendencies.

The solution surely lies in this: that as science enables us to produce more, we must work less, or extend our activities more and more beyond the bare necessities of life; otherwise we must expect to have unemployment and the dole always with us.

The isolation of nations by tariff walls and the advocacy by all nations of rigid economy are, to my mind, both fallacies; and I think that these are subjects which should be seriously considered by the League of Nations before it is too late.—Yours truly,

The White House, The Drive,
Rickmansworth, Herts.
December 12, 1930.

ARCHIBALD PHILLIPS.

[We refer to this letter in the first leading article in this issue.—Ed., Econ.]

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Sir Charles Harris regards prices as "painfully but inevitably falling away from the inflated standard of the war," and asks why they should "remain permanently at scarcity levels."

The answer is that to finance the war (for which lenders of money were ultimately responsible) loans were raised at high rates of interest and at an average price-level of about double that of 1913. By returning to gold at pre-war parity, in order to satisfy the financial pride of the City, we set the example to the world of forcing down the level of prices, thereby doubling the weight of our debt—all the gold accumulated by the United States should depreciate and Europe remain unsafe for their financiers.

The proper remedy is not to attempt to force our sheltered prices down to the present unnatural world level, but to restore our unsheltered prices to the level reached immediately before the resumption of bullion payments, when our costs and prices were roughly in adjustment. This can be effected by raising the bank price for gold.

In 1921 Professor Cassel and others warned the world against the policy of deflation, and in 1922 the Genoa experts on currency deprecated the "simultaneous and competitive efforts of a number of countries to secure metallic reserves." The monetary authorities have paid no attention to this advice, and the fall in prices which has already lasted six years—and which will continue indefinitely unless we take energetic steps to check it—is the result of their ineptitude.—Yours, etc.,

Liscard, Shortlands.
December 13th.

GEOFFREY BIDDULPH.

THE ALTERNATIVE VOTE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You speak of the alternative vote as a "second best," and say that as such it merits acceptance "however unenthusiastic."

But is it a "second best"? I believe on the contrary that it would be worse than the present system.

The alternative vote is only another name for the Second Ballot—a system which has failed wherever it has been tried. And it has failed not for any curable defect, but because it is based on the unsound principle that large bodies of voters are not to be allowed representation by the man of their choice, but are to say which of two opponents they dislike most. The vote of the minority on the alternative vote system is a vote *against* and not a vote *for*. This is a violation of the whole principle of representation—the principle that a man is sent to Parliament by those who agree generally with his views—and is incurable.

If the Conservatives know their business, they will follow the lead once given them by men like Lord Balfour, Lord Milner and Lord Birkenhead, and will learn from the experience of Conservatives in the European countries, and will meet the alternative vote with a proposal for proportional representation.

If Liberalism, having no present prospect of office, is not to stand for justice, what is it to stand for? If the answer is the cynical answer, that it is to stand for its own party interests, then it is pertinent to observe that the alternative vote, so far from helping Liberalism, will promote its destruction. For Liberal M.P.s will be returned—some by the help of Conservatives, some by a purely Liberal vote, and some by the help of Labour. The party will be a chameleon—or rather a sort of pantomimic animal—with a Tory head, a Liberal middle and a Labour tail. It will be more than ever divided against itself, and will fail to stand accordingly.—Yours, etc.,

Oxford.
December 15th.
JOHN FISCHER WILLIAMS.

Books and Publications.

INSTALMENT BUYING.

DETAILED and practical information on the finance of the hire-purchase system has not hitherto been easily obtainable. The publication is, therefore, very welcome of a clearly and competently written book* which deals with all the important aspects of the subject, the legal bearing of the contract of hire-purchase, the systematic record of transactions in the trader's book, the calculation of profits, the hiring company's balance sheet, valuations of hire-purchase instalments payable, methods of financing such transactions, and also the treatment of profit for income-tax purposes.

Incidentally, an easily applied and useful rule is given for approximating to the effective rate of interest charged. An interesting table sets out the terms of hire-purchase agreements and the effective rate of interest in 14 cases compiled from representative advertisements. The variation in the effective rates of interest charged is very instructive.

In discussing the calculation of profit, the author dismisses, perhaps too curtly, the conservative plan of ascertaining profit and auditing it in the accounts only when the transaction is completed. His reasons would, by many directors of public companies, be considered good, as enabling profits to be declared at an earlier date, and as assisting them in a forward dividend policy. The case for prudence appears rather incidentally later in the book in the discussions of bad debts. Reference is made to the accounts of a company engaged in financing this class of trade. Profits had been declared out of which dividends had been paid over a period of five consecutive years, exceeding in total 50 per cent. of the relative capital. Nemesis came in the sixth year, when the conditions of business changed so vitally that the directors did not feel justified in regarding any portion of the receipts from this source as distributable revenue, and further stated that it would be two or three years before the value of the debts for outstanding instalments could be reasonably valued. It is, perhaps, permissible to contrast the financial position of our railway companies with that of our banks and insurance institutions, as probably indicating that strength, stability and power to meet adverse circumstances are oftener attained by long-continued caution than by regard for early and regular dividends.

The author is to be congratulated on producing an excellent textbook upon this class of accounts, one worthy of attention by all persons interested, if only indirectly, in this growing department of business.

A series of lectures on the foreign policy of the United States from the point of view of Canada, Europe, Latin America and the Far East respectively.

Survey of American Foreign Relations, 1930. By Charles P. Howland. (London) Oxford University Press, Warwick Square. 24s. net.

In accordance with the usual policy of this series, particular attention is given to the provision of a general background for the study of the relations of the United States with one particular part of the world. This year the particular study is devoted to China.

The Industrial Efficiency of India. By Rajane Kanta Das. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 8s. 6d.

An interesting study which owes its origin to the author's conviction that the primary cause of the poverty of the Indian people is their inability to make the best use of India's productive resources.

The Essentials of Federal Finance. By Gyan Chand. (London) Oxford University Press, Warwick Square. 11s. 6d. net.

A most painstaking piece of work, packed with information, and generously furnished with statistical tables. Unfortunately it was prepared for the press in April, so that the author was not able to include the Simon Report in the mass of material which went to the preparation of his work. We would suggest to the publishers that in future editions more attention be paid to paragraphing and general layout; at present the appearance of the pages is a serious deterrent to the study which this very competent book deserves.

The Economic Journal. December, 1930. (London) Macmillan and Co., Ltd., St. Martin's Street. 6s. net.

Includes Professor Gregory's address on "Rationalisation and Technological Unemployment," an article by Sir Josiah Stamp, on "Inheritance: a Sample Inquiry," and articles on American retail trade, American manufacturing efficiency, and the Australian problem.

Statistical Abstract of the United States, 1930. (London) Office of the Commercial Attaché, Bush House. \$1.00.

The most indispensable work of reference on the United States. It contains a remarkably full collection of official statistics of all kinds.

The Manufacturing Industries of the British Empire Overseas. Part I, Canada. (London) Erlangers, Ltd., 4, Moorgate.

A statistical analysis, illustrated by elaborate diagrams, of the manufacturing industries of Canada, including the relevant import and export figures. The statistics include the number of factories, the number of employees and the value of the output of each branch of manufacture.

1st Arbeitslosigkeit unvermeidlich. By L. Albert Hahn. (Berlin) Magazin der Wirtschaft., Kurfürstenstrasse. 131.

A German discussion of the unemployment problem.

Die Schäden der deutschen Milchwirtschaft. By Prof. Dr. Karl Brandt. (Berlin) Magazin der Wirtschaft, Kurfürstenstrasse, 131.

A booklet on the possibility of rationalising the German milk industry.

La Guerre d'agression comme problème de Droit International. By Prof. Uden.

L'Espagne, l'Homme et le Peuple. By Prof. Vossler.

Démocratie française et Démocratie allemande. By Prof. Vermeil. (Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint-Germain. 4 fr.

Reprint of three lectures.

ENGINEERING COMPANY SHARES.

THE instinct of the British investor, in the last few years, has been to choose for special attention the shares of companies in certain specialised branches of the engineering industry—such as electrical equipment or motor-vehicle manufacturing—but to give general engineering shares, on the whole, a wide berth. In some cases, the finance of the industry has been inextricably bound up with that of the "heavier" trades, but, broadly speaking, it may be said that post-war depression has been less intense in engineering than in iron and steel, and that, before the onset of the present "cyclical" setback to trade, the process of recovery had been more rapid. A few years ago, the industry had an unemployment percentage much higher than that for all British industry, but at the end of last year its figure had actually fallen below the average.

The British Engineers' Association has recently published an informative summary of the financial results of a large number of engineering and allied concerns in their last three financial years. These are given below:—

SUMMARY OF THE FINANCIAL RESULTS OF SIXTY-TWO REPRESENTATIVE ENGINEERING AND ALLIED FIRMS FOR FINANCIAL YEARS 1927, 1928 and 1929.

	Financial Years.*		
	1927.	1928.	1929.
	(In £000's.)		
Total amount of:—			
Ordinary capital	91,097	92,878	92,136
Preference capital	48,058	48,240	46,059
Total paid-up capital	139,155	141,118	138,195
Debentures outstanding	55,338	55,038	43,510
Earned profits	5,673	5,882	7,211
Ordinary dividend	3,796	3,930	4,289
Preference dividend	2,056	2,243	2,360
Total amount distributed in dividends	5,852	6,173	6,641
Appropriation to reserve	512	989	1,051
Carried forward	1,788	768	1,875
Ratio of:—	%	%	%
Debentures outstanding, to paid-up capital	39.8	39.0	31.5
Earned profits, to paid-up capital	4.1	4.2	5.2
Amount distributed in dividends, to paid-up capital	4.2	4.4	4.8
Amount distributed in dividends, to earned profits	103.2	105.0	92.1
Amount placed to reserve, to paid-up capital	0.4	0.7	0.8
Amount carried forward, to paid-up capital	1.3	0.5	1.3

* The financial year of a company ending at any date after December 31st, and before or on March 31st following, is taken as for the previous calendar year, i.e., a report for the year ended March 31, 1929, is taken as for 1928.

Though the sixty-two companies include a number of concerns with large iron and steel as well as engineering interests, the figures are reasonably representative. They show clearly that the year 1929 (which preceded the current depression) was a progressive one, during which the sixty-two engineering companies reduced their debenture charges, increased their earnings on the average by 22½ per cent., and, for the first time for some years, paid out in dividends less than they earned. Even so, the average distribution on all capital—preference and ordinary taken together—was by no means princely, the sixty-two companies paying out 4.8 per cent., against 5.2 per cent. earned.

These average figures, however, cover wide differences between individual companies. The engineering trade is distinguished, technically, by the large number of specialised industrial groups coming within its scope, and,

financially, by the existence, side by side, of numerous large and small concerns. In this industry size is not, at the present time, synonymous in every case with financial strength. The North British Locomotive Company, which is the largest locomotive-building concern in Europe, has earned less than 1 per cent. on its ordinary capital during the last few years. The Agricultural and General Engineers, a post-war combine of some seventeen concerns, found it necessary to reduce its paid-up capital from £3,753,852 to £2,511,036 in 1924, and has not subsequently paid any dividend either on its preference or ordinary shares. The large textile machinery concern of Howard and Bullough has shown a decline in its ordinary share earnings in the last five years from 10.3 per cent. to nil. One of the biggest of all British engineering concerns, Sir W. G. Armstrong Whitworth (which also has large steel and armament interests), has necessitated one of the most difficult reconstructions of modern times, and Vickers, another giant concern with widespread interests (whose recent results were discussed in the *Economist* of November 22nd last, page 963), was in a position to resume payments on its ordinary shares only after heavy writing-down in 1925.

Some idea of the contrasted experience of different engineering concerns may be obtained from a study of the annexed table. All the concerns shown are of moderately large size. Babcock and Wilcox are water-tube steam boiler manufacturers; Mather and Platt, textile, electrical and hydraulic engineers; the North British Locomotive Company do a large international business; while Ruston and Hornsby specialise on agricultural machinery:—

Company, and Date of Balance Sheet.	Babcock and Wilcox. (Dec. 31.)	Mather and Platt. (Dec. 31.)	North British Locomotive. (Dec. 31.)	Ruston and Hornsby. (Mar. 31.)

* Free of tax.

Babcock and Wilcox have important American connections. The company has for years past been one of the most prosperous concerns in the whole of the engineering trades, but, as will be seen, its profits have recently shown an appreciable downward tendency. Mather and Platt, unlike most textile engineering concerns, has succeeded in maintaining its earnings in recent years, but prevailing conditions of acute competition at home and abroad do not promise any early increase in profits. The North British Locomotive Company has been recently unable to earn anything on its ordinary capital, the meagre 2½ per cent. dividends of late years having been paid entirely out of past profits. In the case of Ruston and Hornsby, ordinary earnings have been at scarcely less depressed levels.

It is, however, characteristic of contemporary conditions in the engineering industry that the smaller concerns are

able not merely to make a living, but occasionally to show results comparing very favourably with those of their larger competitors. Such companies frequently enjoy a limited and specialised, but highly remunerative market, and have avoided the reefs of over-capitalisation on which many larger companies broke their backs in the post-war boom. The recent results of four such concerns are shown below:—

Company, and Date of Balance Sheet.	W. and T. Avery. (Mar. 31.)	Greenwood and Batley. (Mar. 31.)	Petterson. (Mar. 31.)	Tweedales and Smalley. (April 30.)

* Together with capital bonus of 50 per cent. † 1925. ‡ Neglecting preferential dividend arrears. § Present price.

All these concerns are old-established businesses. W. and T. Avery are weighing-machine manufacturers, established in 1891. Greenwood and Batley are makers of machine tools, oil mill machinery and steam turbines, and took over an established business in 1888. Petterson also took over a going concern in 1910, and to-day specialise in the production of semi-Diesel oil engines and aircraft. Tweedales and Smalley took over, in 1920, a textile machinery manufacturing business carried on under a similar title. The last-named, which does a considerable export trade, is clearly feeling the depression common to all textile engineers. Greenwood and Batley is an example of an unspectacular type of company, whose earnings vary little in good times and bad. The remaining two concerns, however, have both adopted a "forward" policy in recent years. Their capital requirements have been financed mainly from inside their respective businesses, and both are still distributing each year considerably less than their full earnings.

The engineering industry has, naturally, been unfavourably affected by this year's world depression. It disposes of approximately 70 per cent. of its annual output in the home market and 30 per cent. in the export market. For the first eleven months of 1930, exports of machinery show a falling off of 14 per cent. in tonnage and 12½ per cent. in value as compared with the corresponding period of last year, the branches most seriously affected being the makers of machine tools, "prime movers," marine engines, grain-milling machinery, and, within the last few weeks, of agricultural machinery. Exports of locomotives and wagons, on the other hand, have been greater this year than last and shipments of boilers, boiler-house plant and cranes have similarly shown a slight expansion.

Shareholders must be prepared, therefore, for a reduction of earnings this year in numerous cases. Broadly speaking, while only a minority of concerns in which the investor is interested are likely to require elaborate financial reconstruction in the next few years, earnings in the industry as a whole afford only a moderate return on the capital employed, and in many branches there is considerable scope for future "rationalisation." Investors, in the meantime, may be well advised to confine their attention to those companies which have proved their ability to earn stable profits in the last few years, and in particular to those specialised concerns which have combined progressively increasing earnings with a conservative dividend policy.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
January 6. January 8.

The beginning of the three-weeks' account bore out the view that the technical position of London had for some time been sounder than that of certain foreign centres. Liquidation from New York, following the failure of the Bank of United States, was reflected in the widest downward movement of British prices for four months. Quotations, consequently, reached the lowest level since the 1929-30 slump began, industrial shares as a whole being no higher, in fact, than in the autumn of 1922. The foreign bond market, in its turn, was affected by a default on a Rio State loan. Gilt-edged securities remained under the unfavourable influence of the continuing gold-drain, of which no early interruption was foreseen. The effect of the better tone of New York in mid-week, however, was evident here on Thursday, though the initial recovery in prices was not fully held. The immediate outlook for share prices, therefore—apart from customary holiday influences, which this year will be somewhat intensified—hinges largely on the question whether America has exhausted her store of unpleasant surprises and eliminated all sources of weakness in her present situation.

Gilt-edged stocks attracted noticeably less interest than in previous weeks, and a moderate amount of selling was sufficient to depress prices, though firmer conditions ruled on Thursday. Funding Loan came on offer (partly from American quarters), and Conversion issues were dull, though War Loan ruled steady. Australian stocks showed a slight recovery following the complete subscription of the £28,000,000 Conversion Loan, though the market was somewhat at a loss to explain the rapid increase in applications during the last few days. Home corporation loans were quiet. Last week's Smethwick issue was left as to 71½ per cent. with underwriters, dealings opening at 1 discount.

The Foreign Bond market was afflicted not only by American liquidation, but by the announcement that the coupon on Rio State Sevens of 1927 would not be paid. On this news (which is discussed in a Note on page 1180), the stock became a nominal market, and significant declines were marked in numerous Brazilian issues. Other South American loans were weaker. Among Europeans, there was further selling, from external sources, of the Young Loan. Chinese issues were quiet, though the Shanghai-Nanking Loan was firm on the announcement of the payment of the December coupon, the Chinese Ministry of Railways having advanced £66,700 for the purpose.

Little or no interest was taken in Home Railways, prices easing slightly on an almost infinitesimal business. The week's traffic figures showed approximately "average" decreases, except on the North-Eastern, where the decline below last year was smaller than those of recent weeks. Argentine railways again lost ground heavily. A further break occurred in the exchange value of the peso, and news was received that the harvest in some areas was being retarded by rain. The Central Argentine, however, reported the first comparative increase in traffic receipts for fourteen months, San Paulo broke sharply on Wednesday, and Leopoldinas were lower. Canadian Pacifics were sold in fairly large quantities, the splitting of the stock, designed to increase its market appeal, resulting in this instance in a more extensive marking down, *pro rata*, than might have been expected on the old basis.

A three weeks' "holiday" account, in the Industrial markets, started with the added disadvantage of weak conditions in New York. All international issues were marked down, but showed a measurable recovery on Thursday, on better Transatlantic reports. The worst sufferers among domestic stocks were Turner and Newall, and Pinchin Johnson, which were both affected by weakness in the provinces, together with Imperial Chemical, though the latter enjoyed a modest recovery on the House of Lords' proposal to extend the Dyestuffs Act. Manchester was a

(Continued from page 1175.)

seller of textiles, particularly of J. and P. Coats. Little interest was taken in iron and steel shares, and motor shares sagged further. Among electrical manufacturing concerns, Associated Electric and General Electric were both within the zone of American liquidation. A duller tendency prevailed among electric supply shares. Despite the excellent results of British American Tobacco (set out on page 1181), a recovery in tobacco shares was not fully maintained, and breweries tended to recede. Unilever was again subject to selling from Amsterdam. Bank shares were irregular, and a fair amount of selling caused recession in insurance share prices.

The easier tendency of rubber—the commodity—following the receipt of depressing American consumption figures for November, produced a few declines in rubber shares, though little selling was encountered. Some slight amount of stock was on offer in the tea share market, but the declining tendency of prices was partially checked in mid-week, the Finlay group, in particular, being firmer. The oil market was nervous of American developments, and prices were marked down on a narrow range of dealings. The Continent, however, refrained from selling on any large scale. A better tone obtained on Thursday, but the prices of leading stocks had, in the meantime, suffered a fairly extensive decline.

Mining shares were dull on the renewed fall in metal prices and the unfavourable tone of the "House" generally. Kaffirs were a quiet market, Paris and Johannesburg filling the rôle of uninterested spectators. "Johnnies" were marked down on the passing of the interim dividend. Sub Nigel showed a slight improvement. Rhodesians were flat, Congo Borders declining further, despite the majority obtained for the fusion scheme at Wednesday's meeting (which is dealt with in a Note on page 1182). Tin shares receded on a fresh slump in the metal (discussed on page 1182), while Rio Tinto and Burma Corporation were adversely affected by a decline in the price of copper and silver respectively.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The closing of the Bank of United States produced considerable liquidation, partly of a forced character. Idle talk of a repetition of 1907, however, was quickly falsified, the rediscounting facilities freely asked for and given by the Federal Reserve Bank—non-existent in 1907—being of invaluable service. On the early days of this week markets usually opened with a steadier tendency, but developed weakness in the last hour or two. On Wednesday, however, this sequence was reversed, a wave of short-covering and bargain-buying, attracted by low prices on the reaction, giving the market a more reassuring appearance by the end of the day. Some issues, in which the short interest was especially large, showed advances ranging from 2 points in Warner Brothers, 2½ in General Electric and 2½ in Anaconda, to 6½ in Baltimore and Ohio and 10½ in J. I. Case. The rise reflected a belief, in some quarters, that the bulk of the forced liquidation overhanging the market had been completed and that several weak situations in the financial district had been taken care of. Call money, which had previously been raised to 2½ per cent., fell back to 2 per cent. Meanwhile, trade indicators show no signs of an early revival. Steel operations have fallen to 37 per cent. of capacity, and building permits last month were down by 12 per cent. as compared with October. General Motors' sales in November were 41,575 units, against 57,757 in October and 68,893 in November last year. Car loadings, however, are making a slightly better showing. The November figures for rubber and copper, however, were worse than had been anticipated. Much interest has been taken in the position of the Transamerica Corporation.

* 2-hour session.

AMSTERDAM.

The Amsterdam Stock Exchange has been extremely dull during the last few weeks. Quotations were well maintained at first, one of the reasons for this being Sir Henry Deterding's encouraging remarks at the last meeting of the Royal Dutch, under the influence of which the shares registered an advance of 20 per cent. in the course of a single week. The sugar restriction negotiations, which have yielded satisfactory results at Amsterdam, gave rise to a firm tendency for sugar shares. The VISP, it is stated, have not been accepting any more bids on their last asking prices. The improved tendency disappeared entirely a few days ago, however, under the influence of the bank difficulties in America, and the weak tendency on foreign stock markets generally. Leading shares suffered severe losses here, particularly Margarine Unies, which dropped 10 per cent. and more at a time. Other prominent shares, such as Philips Lamp Works and Royal Dutch were also subjected to severe selling pressure, and prices gave way in consequence. Royal Dutch lost practically all the ground they had gained at first. The turnover in tobaccos, rubbers and shipping shares was again very limited indeed, with prices practically unchanged. A better tendency was maintained for tea shares, on account of advancing prices of the commodity. A continuation of the present restriction of the tea crop has been decided upon by the association of Dutch East Indies tea planters. Consent to this measure has yet to be given by the interests involved, but is not likely to be withheld. The increase in the German import duties on tobacco failed to find much reflection in the prices of tobacco shares, although these increased duties mean a severe setback to the interests of the tobacco plantations in the Dutch East Indies and the tobacco trade in Holland. The increase proposed in the first place was from 80 marks to 250 marks. This was modified by the Reichsrat to 200 marks, and finally the Reichstag passed an increase in the duty to 180 marks.

INVESTMENT NOTES.

American Markets.—All things considered, the American share markets have withstood the shock of the largest bank failure in New York's history in moderately reassuring fashion. There were "runs" on certain banks last week-end, at some of their branches operating in those parts of New York City where foreign elements predominate in the population. Resort was had to the rediscounting facilities of the Federal Reserve Bank, loans were called in from the interior, call money was raised from 2 to 2½ per cent., and the resulting liquidation of a forced character reduced Stock Exchange prices generally to the lowest points of the year. The index number of fifty industrial common stocks, compiled by the Standard Statistics Company (1926 = 100), declined from 131 on December 3rd to 123 on Wednesday of last week, on the eve of the Bank of United States failure. The index on succeeding days was as follows: Friday, December 12th, 121; Saturday, 117½; Monday, 117; Tuesday, 113; Wednesday, 118. The situation undoubtedly induced a certain amount of professional short selling. On Tuesday, as many as twenty-six issues were lent at premiums at the close of the market, the process being

comparable to the payment of "backwardation" in the London market. Special market efforts were, however, made to limit the immediate effect of selling, the directors of the Transamerica Corporation, for instance, announcing that a \$20 millions pool had been formed to support the company's stock, any further decline of which might have led to an impairment of confidence in some of the concerns controlled by the corporation, including the Bank of America, of California. By mid-week there were definite indications that the stream of selling was slackening, and before the close on Wednesday a measurable recovery had been initiated in many of the leading stocks. Prices generally, however, have touched their lowest points since the beginning of the great bear market in the autumn of last year, as is shown by the following table, based on figures supplied by the Standard Statistics Company:—

(1926 AVERAGE = 100.)

	Highest, 1929.	Lowest, 1929.	Apr. 10, 1930.	June 25, 1930.	July 23, 1930.	Oct. 22, 1930.	Dec. 10, 1930.	Dec. 17, 1930.
Group indices:								
335 Industrials	218.9	134.5	174.1	130.6	144.2	109.9	103.6	98.2
33 Rails	173.5	127.8	144.3	117.2	126.6	106.4	93.8	89.1
34 Utilities	330.4	177.6	267.4	202.8	220.8	175.1	157.7	153.7
Total, 402 stocks	228.1	140.3	184.2	139.8	153.5	119.6	110.5	105.5

Prices generally are now back, to all intents and purposes, at the levels of 1926, after having risen, during the boom of 1928 and 1929, to 228 per cent. of that level. The bear market of 1930 has been interrupted only by a somewhat extensive recovery which terminated early in April, and a more short-lived upward movement in June and July. Whether the situation can be "straightened out" without further losses to security holders will be revealed during the next few weeks.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Rio State Default.—Somewhat undue significance may have been attached, in London, to the postponement of this week's interest payment on the 7 per cent. Rio de Janeiro sterling loan of 1927. It is pointed out, in private quarters, that since the recent revolution the governments of the various States of Brazil have changed hands, and the new Treasurer of the State of Rio de Janeiro has only had a short time in which to make himself acquainted with the affairs of his State. The City of Rio de Janeiro, the capital of Brazil, is not, however, the capital of the State of Rio de Janeiro, which is at Nictheroy, a suburb of the Federal city. The State, which is the country surrounding the city, is one of the poorest in the Republic. The recent revolution, accompanied by the fortnight's "holiday," held up arrangements for the payment of the interest on the Rio State 7 per cent. loan. The Treasurer of the State found that arrangements had not been made, and so has had little time in which to complete the transaction. He has, however, promised payment at the end of the month, and we understand that it is more than probable that this promise will be fulfilled. Meanwhile, the prices of Brazilian stocks have shown a further decline this week:—

	Dec. 12.	Dec. 15.	Dec. 17.	Fall since Dec. 12.

The pre-revolution Federal Government authorised the temporary issue of, backed by gold, 300,000 contos (£1,500,000) in currency notes to be made by the Caixa de Estabilisação, the stabilisation office which was formed in 1927. When the new Government took office it found that 100,000 contos had been issued, and ordered the issue of the remainder to be stopped. The issue, which was for six years, has, however, since been authorised by the present administration. It has been decreed that these notes will not be convertible into gold until six years have elapsed, and the Caixa has been closed, all its gold and business being taken over by the Bank of Brazil. When the bills are reconverted, in six years' time, the operation will be effected by sight drafts drawn on London by the Bank of Brazil. The Government may only use gold to pay external debts, hence the receipt by the Bank of England of sovereigns on Wednesday last from Brazil. This shipment has been placed to the credit of the Delegation of the National Treasury of Brazil. On November 19th last 300,000 contos were issued in 7 per cent. Treasury Bills, one-half redeemable in one year, and one-half redeemable in two years. Bond-holders will note with satisfaction that the primary consideration of the Government is to maintain Brazil's credit abroad.

Hungarian Bonds.—The investor in Hungarian bonds will be interested in the Supplement which we publish this week on Hungary and its economic development. It is well known that Hungary has enjoyed relatively good credit among Central European countries. The issue of the Hungarian Government 7½ per cent. loan in 1924 in London, New York and other centres, through the auspices of the League of Nations Financial Commission—the second of the League of Nations' reconstruction loans—did much to restore Hungary's credit in the London capital market. This loan was issued at 88 in July, 1924, in London—on an 8½ per cent. yield basis—

and was amply secured by a first charge on Customs, the sugar tax, and the tobacco and salt monopolies, the financial arrangements coming under the supervision of a League of Nations Commissioner. Several provincial Hungarian loans have subsequently been floated in London on a considerably lower yield basis than that of the League of Nations loan. For example, Counties of Hungary 7½ per cent. twenty years' sterling bonds were issued at 98 in July, 1926, and the 6 per cent. sterling bonds (Series "B") of the same issue at 92 in July, 1927, the flat yields being 7.65 per cent. and 6.52 per cent. respectively. The New York market, however, demanded better terms. The Hungarian Consolidated Municipal 7½ per cent. dollar bonds, for example, were issued in New York in July, 1925, at 89, to yield 8.43 per cent. and the 7 per cent. dollar bonds in July, 1926, at 98½, to yield 7.48 per cent. A joint issue was that of the Hungarian Land Mortgage Institute 7½ per cent. sterling bonds, which were placed both in London and New York, the bonds being issued in respect of loans made by the Mortgage Bank secured by mortgages on agricultural land or freehold urban property up to 50 per cent. of their appraised value. The prices at which these loans are now quoted in London and New York are shown in the following table:—

	Re-dem.	London.				New York.			
		High. Price, 1930.	Present Price.	Flat Yield.	Red. Yield.	High. Price, 1930.	Present Price.	Flat Yield.	Red. Yield.
Hungarian 7½% Loan (1924)	1944	103½	102½	7.35	7.25	104½	99½	7.51	7.53
Counties of Hungary 7½% (1st series, 1926)	1946	103½	98	7.65	7.75	...	...	...	...
Counties of Hungary 6% (2nd series, 1927)	1946	90½	87	6.90	7.5	...	...	...	...
Hungarian Land Mortgage 7½% (1926)	1961	99½	94	8.00	8.05	100	86*	8.72	8.82
Hungarian Cons. Municipal Loan 7½%	1944	...	...	...	...	98½	84*	8.93	9.70

* And interest.

It will be seen that there is a considerable disparity in the credit which Hungary enjoys in the London and New York market, but the higher yields obtainable on the dollar loans are partly attributable to the recent heavy liquidations of foreign bonds as a whole in New York. It is also understood that "placing" of certain Hungarian issues in New York was less firm and substantial than that of most London issues. British holders of Hungarian bonds may be interested in the recent movements of the leading Hungarian securities on the Budapest Stock Exchange:—

LEADING BUDAPEST STOCK EXCHANGE SECURITIES.				
Stocks.	Quotation at the end of			
	1928.	1929.	1930.*	(In pengő).
National Bank of Hungary	224.9	227.3	217	
Hungarian General Credit Bank	83.7	75.3	64.5	
Commercial Bank of Pest	118.0	107.0	101

* Dec. 15.

It will be seen that Hungarian security values, in general, have declined this year, though to a moderate extent, by comparison with the recession in prices on other Stock Exchanges, such as New York and London. On the whole, it will be seen that Hungary has maintained the relatively good credit which she secured in the London market as a result of her financial reconstruction under League of Nations' supervision.

British American Tobacco.—The accounts of this prosperous company (which operates in the overseas markets) show few signs of prevailing world depression. Net profits for the year to September 30th last amounted to £6,501,560, compared with £6,357,772 in 1929 and £6,563,500 in the previous year. Following the issue of 6,000,000 £1 6 per cent. preference shares in October, 1929, preference dividends now require an additional £330,000, representing eleven months' dividend on the new shares. The increase of capital has not yet been fully reflected in profits, ordinary earnings having consequently declined slightly. The dividend is maintained at 25 per cent., tax free.

	Year to September 30th,		
	1928.	1929.	1930.
Net profit	£ 6,563,560	£ 6,357,772	£ 6,501,560
Brought forward	2,318,486	1,608,218	1,748,764
Preference dividend	225,000	225,000	555,000
No. of times covered ...	29.1	28.2	11.7
Ordinary capital:			
Earned £	6,338,560	6,132,772	5,946,560
Paid £	5,882,558	5,892,217	5,895,180
Earned %	26.9	26.0	25.2
Paid %	25	25	25
Other allocations	1,166,270	100,000	...
Carried forward	1,608,218	1,748,772	1,800,144

Whether the increase in net profits can be attributed to partial utilisation of the new block of Preference capital for an expansion of production and turnover, or whether, as is believed in some quarters, it is due rather to internal economies and reduced prices for raw leaf, is not clear, the report observing the taciturn traditions of its predecessors. Accompanying the report is a notice convening an extraordinary meeting at which it is proposed to recommend the conversion of all classes of the company's shares into stock, transferable in multiples of £1, in order to obviate the inconvenience and expense entailed by the provision that each share must bear a distinctive number. The ordinary £1 shares rose on the dividend declaration from 4½ to 5½, at which price they give a yield of about £5 per cent., allowing for a final dividend of 1s. 8d. per share.

Hudson's Bay Company.—The market was prepared for an adverse report from the Hudson's Bay Company, but scarcely for the serious statement which has just been issued by the directors. According to the directors' circular, not only has there been a continuous and serious fall in the price of furs, involving the company in very heavy losses, but the prevailing depression in Canada has adversely affected the company's other activities, including the land department. Unfortunately there appears to be no immediate prospect of improvement, and the present year's working (up to May 31st) will undoubtedly result in a heavy loss. In these circumstances the directors do not feel justified in declaring the interim dividends on the preference and ordinary shares. It has been common knowledge that the company has been feeling severely the depression in Canada. The chairman warned the shareholders at the annual meeting on June 27th that the company must prepare for a difficult period. The land sales for the six months to July 31st have shown a considerable fall as compared with the corresponding period of the previous year, the figures being as follows:—

	6 months to July, 1929.	6 months to July, 1930.
Farm lands	£ 291,500	£ 76,200
Town lots	227,300	124,700
	518,800	200,900

Apart from the land department, the company's departmental stores must have suffered a considerable decline in revenue as a result of the depression among the farming community. In addition, the fur trade has had to meet a further heavy fall in prices. In June last the chairman stated that the average price of furs was then 45 per cent. below the level of September, 1929, and further declines of

20 per cent. or more have subsequently been recorded in the prices of certain varieties at the autumn sales. Past experience has shown that the trade of the Hudson's Bay Company has always proved vulnerable in periods of trade depression in Canada. For example, the earnings on its ordinary share capital dropped from £420,454 in 1921-22 to £181,519 in 1922-23. While a substantial recovery was shown in 1926 and maintained up to 1929, when the earnings on the ordinary shares amounted to £665,512, or 33.2 per cent., another severe decline in profits to £161,766 occurred in the year ending May, 1930, when trade was adversely affected by the drought in Canada and the fall in fur prices. As shareholders had already expressed dissatisfaction with the company's results last year, the directors allowed a committee of shareholders to examine the company's position in detail. The report of this special committee will be submitted about the end of this year. Hudson's Bay £1 ordinary shares have now fallen from a high level of 4½ this year to 25s., and the £5 preference shares from 5½ to £3.

Dorman, Long Meeting.—At the annual general meeting of this prominent iron and steel company, which took place on Tuesday last, Sir Hugh Bell gave an informative survey of the past and present activities of the company, which recently presented its first accounts since the fusion with Bolckow, Vaughan and Company. Sir Hugh wisely devoted a portion of his address to an elucidation of the new balance sheet, in the course of which he pointed out that, whereas in last year's balance sheet "subsidiary companies at cost" stood at only £113,000, compared with the present amount of £1,288,389, the increase was due to the fact that among the subsidiary companies in which Bolckow, Vaughan had a controlling interest was the important constructional business of Redpath, Brown and Company. After tracing the progress of rationalisation on the North-East Coast, in so far as it affected the interests of the two merger companies, Sir Hugh said that it would be surprising if, during the next few years, the industry were not centred more and more in one control. Whereas a century ago Great Britain had taken the lead as an iron-producing country, and for some time had easily held first place, so that in 1857 she made more than half the pig iron of the world, by 1887 her percentage had fallen to 33 per cent., and by 1913 to 13 per cent. Throughout this period of changing ratios, the North-East Coast had maintained its position as the chief centre of the iron trade in Great Britain, thanks to certain natural advantages, and had continued to produce about one-third of the total. What was true of the North-East Coast was true of their joint undertaking also, and in general the results of the merger were satisfactory. While the outlook for the future was of necessity obscure, and depended on certain incalculable

Increasing Interest in South American Markets

Estd. 1862
THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France, Belgium, Portugal and U.S.A. with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request and a Monthly Review of Market information is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

Affiliated to Lloyds Bank Limited

factors which were outside their control, of the present it was true to say that rationalisation had given them a much larger output to market, and while in some very important articles their position had sensibly improved, in none was there any serious falling off.

Chosen Corporation Affairs.—Shareholders in the Chosen Corporation have been informed, by a circular signed by three of their directors (Messrs C. Bourke-Borrowes, M. Casenave and L. Rondon), that "acute differences" have arisen between the members of the board. The circular declares that Mr M. C. Harman became chairman and managing director in December, 1927, Mr B. Fairfax Conigrave, who had been associated with Mr Harman on other companies, having been co-opted to the board a few months previously. Before May, 1929, certain of the Chosen Corporation's funds were, under arrangement with Mr Harman, lent to the Rock Investment Company and other companies in the "Harman group" on the security of shares in that group. In May, 1929, the latter securities were returned to the borrowing companies and the loans were transferred to a fixed deposit account with a banking company, of which Mr Harman was chairman and Mr Conigrave a director. The "independent" directors of the Chosen Corporation now allege that difficulty has been experienced in obtaining from this banking company the normal amounts necessary for the corporation's running expenses. In June, 1930, Mr Harman is declared to have agreed to the appointment of a controlling committee of the principle creditors of the bank, but it is alleged that the committee has not been able to exercise real control over operations. The directors now declare that the bank is, in fact, unable to meet its liabilities, and also allege that Mr Harman has extended a loan of some of the Chosen Corporation's funds to a certain firm in contravention of a resolution passed by the board, and that he has given notice of his intention to propose the names of two new directors at the forthcoming meeting. To these charges Mr Harman has replied in general terms, declaring that the matters dealt with in the circular, whose issue he considers "unfortunate," will be dealt with at the meeting. Mr Bourke-Borrowes has issued a second circular dealing with a personal point raised by Mr Harman. The result of the voting at the meeting, fixed for Friday, December 19th, was not available as we went to press.

Combined Pulp and Paper.—The affairs of the Combined Pulp and Paper Mills, Limited (which were last dealt with in the *Economist* of November 29, 1930, page 1020), came up once more at the company's ordinary general meeting, held on Tuesday last. The chairman, Mr Henry D. Drysdale, declared that the long-threatened foreclosure on the company's German investments had now taken place, and that, as a result of certain "complicated arrangements," a company introduced by Mr Bruno Philipp (a former director) was claiming £125,000, plus costs and expenses, from the Combined Pulp Company. Though Mr Drysdale declared that the latter company was prepared to submit itself to the judgment of the English courts in this matter, he made it quite clear that the company's properties were gone and its assets had almost entirely disappeared. Liquidation, it would appear, can scarcely be avoided, but in view of the fact that legal proceedings have been instituted against all the original directors and the late auditors of the company, the concern is to be kept alive until outstanding legal actions have been decided. This is a sorry position for a company whose £1 ordinary shares were run up to 78s. 9d. and its 1s. deferred shares to 16s. 3d. in 1928.

Further Decline in Tin.—The new decline in tin to a level but little above £100 per ton has followed one of the severest breaks even seen in this metal, which a year ago stood in the neighbourhood of £180. For

months past, writes a trade correspondent, production has been much in excess of demand—an evil which the two months' "holiday" combated, but did not cure. The rate of increase in visible supplies slowed down, it is true, and warehouse stocks in this country have been drawn upon. The statistical position, however, remains unsatisfactory, and the prospect of further deterioration has compelled the latest reaction, after a recovery from £107 had appeared to indicate that price as the turning point in the fortunes of the metal. Stocks normally held in Batavia by the Government of the Dutch East Indies are to be drawn upon, and instead of this reserve being subject to bids from London, a parcel of 3,000 tons is to be shipped to Amsterdam on consignment—a development which has further revealed the unreliability of "visible supply" figures as a barometer of the real situation. The announcement has acted as a damper on the Metal Exchange, but one must seek elsewhere for the real factors for the present low price level. First and foremost is a recent outspoken pronouncement on schemes of artificial output restriction, which has shown that such schemes are not palatable to certain producers, who do not intend to support them. This knocks away the prop upon which bull interests in the tin market have been leaning, but must make for a healthier situation in the long run. Consumption has not so far responded to the spur of an exceptionally low price. America's call for tin is much below normal, and although buying is seen on every fresh fall, continuity is lacking. It would now appear that tin may fall below £100, and that a sensational recovery is unlikely. The early months of 1931 may, however, see the beginning of a gradual improvement.

The Rhodesian Fusion.—At Wednesday's meeting of the Rhodesian Congo Border the reasons for opposition to the proposals for amalgamation with the Bwana M'Kubwa were given almost as much prominence as those in favour of the scheme. The former, briefly, were that the Congo N'Changa properties contained the largest and richest copper ore-body known in Northern Rhodesia; that no additional funds were at present required; that an independent report on the N'Kana mine was lacking, and that the proposed method of finance was undesirable. On the other side it was emphasised that the fusion would ensure collaboration, avoid competition in production, save capital outlay, strengthen the position of the undertaking generally, and—above all—facilitate financing. The Bwana is already burdened with a heavy share and debenture capital, and the independent raising of several millions more, which will be necessary to bring the N'Kana mine to the production stage would be difficult, if not impossible. Under the scheme the powerful financial backing will be secured of Messrs. Rothschild and Messrs Morgan. Recognising the strength of the supporters of the scheme, Sir Henry Strakosch—who, with Mr McConnell (the latter representing American interests) was the leader of the opposition—announced that he would loyally support the verdict of the meeting; and Mr McConnell expressed his acquiescence. On a poll being taken, the resolutions were carried by 607,700 votes to 257,100. At the meeting of the Bwana Company there was only one dissident. It was made clear that the Congo Border Company acquires all the assets of the Bwana Company, apart from debts and cash in hand.

Wiluna.—Our mining correspondent writes:—The rather belated report now issued—the accounts are made up to March 31st—is the last before the commencement of production. By this time next year crushing should have been under way six months or more. During the period covered no development was carried out with the express purpose of increasing the ore reserves; nevertheless the work performed permitted the inclusion in the estimate of a considerable further tonnage, chiefly of "probable" ore. The total of the latter is now placed at 358,000 tons, averaging 38s. 6d. per ton, and the "positive" at 10,217,400 tons, worth 39s. 1d. Work-

ing costs, when operations are at full capacity, are estimated not to exceed 19s. per ton; while allowing for contingencies the milling value is placed at 35s., with an extraction of 83 per cent. These figures give a profit of 10s. per ton. The initial basis of production is to be 40,000 tons monthly. Extension of the scale of operations and modifications in the treatment plant have entailed an outlay far exceeding that originally budgeted for. An issue of £300,000 seven-year notes was made under guarantee of the Commonwealth Government, and an offer is now to be made of a like amount of 10 per cent. seven-year bonds. The first issue is repayable by half-yearly instalments of £25,000, commencing June, 1932; the second is redeemable at 20 per cent. premium on December 31, 1937, subject to conversion into shares at par until December 31, 1935. It will be seen that the terms in respect of the second note issue are exceedingly generous. The explanation is that they were arranged prior to the latest developments in connection with the gold bonus. Moreover, the shareholders will be entitled not only to subscribe for the new bonds but to participate in the underwriting on the basis of a commission of 5 per cent. It is also obvious that, especially in the earlier years of production, the company will have to meet heavy prior charges. As a partial counter-balance may be placed the benefits of the projected bonus of £1 per oz., although exactly how this will work out cannot yet be gauged with any degree of accuracy.

Camp Bird Group.—The annual reports have been issued, and the meetings held of the Santa Gertrudis, the Mexican Corporation and the Camp Bird. The first-named company, of course, holds about a quarter of a million shares in the second, while the third is largely interested in both. Thanks to the receipt of an increased income from miscellaneous sources, the Santa Gertrudis earned £18,200 more than in 1928-29. The effects of what the manager describes as the "disastrous fall in silver" were offset by the ability of the company to treat higher-grade ore and by reduction in costs. Accordingly, no difficulty was experienced in maintaining the dividend at 3s. per share per annum; while an interim distribution of 1s. 6d. is payable early in January. Once again £50,000 is placed to reserve, raising that fund to £250,000; income tax reserve gets £20,000 in place of £5,000. The ore reserves represent about eighteen months' supply for the mill. There are indications that the veins for some time past opened up in the Don Carlos property do not further extend in depth, but an interesting discovery has been made by diamond drilling on the north-eastern boundary. The Mexican Corporation, which owns a 50 per cent. interest in the Fresnillo company, and in the Tezintlan mixed-metal property, last year entered the dividend list with an interim payment of 1s. per share. Since then, owing to the fall in metal prices, the earnings of the Fresnillo have fallen off very seriously, while operations at the Tezintlan have resulted in loss. At the meeting, Mr F. W. Baker (the Chairman) stated that between June 30, 1929, and December 1, 1930, lead had depreciated 30 per cent., zinc 44 per cent., copper 35 per cent., and silver 32 per cent. He saw little prospect of any amelioration during the current financial year, and could hold out no hope of dividend payments for at least twelve months. It may be mentioned that since December 1st zinc has been cheaper than for over half a century, while silver has set up a low record. The company's position has been improved by the extinction of the £380,000 notes, the outstanding balance of £10,000 being repayable shortly. The Camp Bird earned £134,700, as against £99,570. The preference interest and other charges absorbed £117,000, and £100,000 was placed to reserve against depreciation, leaving £73,300 to go forward as compared with £150,000 brought in. At the meeting, the Chairman gave a frank warning that last year's results were not likely to be equalled in 1930-31. When metal prices recover, the company's predominant interest in the Lake George mine, New South Wales, will assume importance.

Trepca.—This company's meeting was awaited with interest in the hope that some light would be thrown upon the financial results of production. It will be recalled that the treatment plant started in the middle of August, and the output for November showed considerable expansion upon that for October, which in turn was better than for September. The accounts, which are made up to September 30th, show receipts from concentrates £25,400, with operating expenditure £21,300. Obviously these results afford no criterion of what may be expected under normal conditions. In one quarter the suggestion has been put forward that the company is now earning £20,000 per month. This appears ultra-optimistic; such a surplus would represent two-fifths the gross value of the products. At the meeting the chairman was rather indefinite on the point. He stated that the grade of ore at present being mined was above the average of the reserves, and this would largely compensate for low metal prices. The results, however, "not only showed a very good profit, but showed that satisfactory profits could be earned when mining to a grade equivalent to the average of the reserves."

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of London and South America, Ionian Bank, National Bank of Scotland, Agar Cross and Company, Crittall Manufacturing, Panama Corporation, Chinese Engineering and Mining, Richard Thomas and Company, Rhodesian Congo Border Concessions, Bwana M'Kubwa Copper Mining, Wiluna Gold Corporation, Camp Bird, Santa Gertrudis, Messina (Transvaal) Development, Showells Brewery, Ind Coope, and Hall's Oxford Brewery. Presiding at the annual meeting of Agar Cross and Company, the chairman declared that the Argentine had suffered heavily from widespread harvest failure and a severe and prolonged drought, which brought disaster to the farming and pastoral industries. Discussing the proposed Rhodesian copper merger, Sir Edmund Davis told shareholders at the annual meeting of Bwana M'Kubwa that, so far as copper mining was concerned, there could be no doubt that there would be ample room in the world's market for the Northern Rhodesian supplies, provided the position were handled with care, and by amalgamating the three companies they were satisfied that they were going a long way towards protecting the position. At the annual meeting of the Ionian Bank, the chairman pointed out that for thirty years Greece had rigidly honoured her obligations, while the Government had provided a very large sinking fund—over 12 per cent. of the total budget of the country—for redemption of debt. The Rhodesian Congo Border meeting is discussed in an Investment Note on page 1182.

CAPITAL ISSUES.

The new capital market has been comparatively quiet this week. Only three issues made their appearance, high-grade borrowers being involved in each case. The *Liverpool Loan* is mainly a conversion operation, arrangements having been made for any unconverted stock to be taken up privately. No cash applications for the new issue are, therefore, invited. The *City of Auckland* debentures are not a trustee issue, and give, in fact, a yield which is somewhat higher than that on recent trustee offers—namely, £5 1s. per cent. flat and £5 2s. allowing for redemption in 1951. The issue, however, is a sound stock, and a direct obligation of the City of Auckland, secured by a special rate of 1½d. in the pound on all rateable property. The London and Home Counties Joint Electricity Authority is issuing £1,000,000 in 4½ per cent. stock, 1955-1975, at a price of 95½ per cent.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to December 13, 1930, £248,377,305.
Total, including conversion recorded, January 1 to December 13, 1930, £430,304,936.

National Savings Certificates.
Net sales, week ended December 13, 1930, £250,000.

Liverpool Corporation 4½ per cent. Stock, 1951-71.—Offer of £4,000,000 stock in exchange for holdings of Liverpool Corporation 6 per cent. stock, 1930-50, due for repayment on April 16, 1931, the exchange to be at the rate of £100 of the 4½ per cent. stock for each £100 stock surrendered. Arrangements have been made whereby any part of the £4,000,000 4½ per cent. stock for which applications are not received, will be taken up for cash at £100 per cent. Liverpool Corporation 6 per cent. stock not converted under this offer will be repaid at par on April 16, 1931. If not previously redeemed, the 4½ per cent. stock will be repaid at par on April 16, 1971, but the Corporation reserve the right, on three months' notice, to redeem the stock at par at any time on or after April 16, 1951. The rateable value of the city is £6,437,637, and a rate of one penny will produce £24,200.

City of Auckland 5 per cent. 1951 Loan.—Issue of £198,600 in debentures to bearer of £100 each, at 95½ per cent., to be applied to repay a similar amount of Auckland City Consolidated 4 per cent. loan, 1909, of £310,200, due on January 1, 1931, the whole of which will be redeemed. The issue is a direct obligation of the City, and is also secured by a special rate of 1½d. in the £, which at present would produce approximately £18,500 per annum. The principal will be repaid in London at par on January 1, 1951.

London and Home Counties Joint Electricity Authority.—Issue of £1,000,000 4½ per cent. Stock, 1955-75, at 95½ per cent. The proceeds of the issue will be applied towards the purchase, on terms approved and sanctioned by the Electricity Commissioners, of electricity undertakings of Callenders, Twickenham and Teddington Electric, Leatherhead and District Electric and Edmundson's Electricity, including generating stations, main transmission lines, distribution systems and other properties of the said undertakings.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction. **Vereeniging Estates.** Particulars of an issue of £650,000 6 per cent. mortgage debentures. The company was registered in August, 1897, and owns about 130,000 acres of land in the Transvaal and Orange Free State. **Francois Cementation Company.** Issued capital £310,000 in 250,000 8 per cent. £1 cumulative preference shares and 1,200,000 ordinary shares of 1s. each. Particulars of an issue of £120,000 8 per cent. debenture stock.

AFRICAN AND EASTERN TRADE CORPORATION, LTD.—The African and Eastern Trade Corporation, Ltd., officially announce that payment will be made, on January 1, 1931, of the half-yearly dividend to December 31, 1930, on the 6 per cent. cumulative "A" preference shares, less income tax at 4s. 6d. in the £.

COMPANY MEETINGS, &c.

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

RESULTS OF A DIFFICULT YEAR.

MR BEAUMONT PEASE'S REVIEW OF CONDITIONS IN LATIN-AMERICA.

The sixty-eighth ordinary meeting of the Bank of London and South America, Ltd., was held, on the 16th instant, at the head office of the bank, 6, 7 and 8 Tokenhouse Yard, London.

Mr J. W. Beaumont Pease (the chairman) said in the course of his speech: Your directors have decided, in view of the general depression which exists all over the world and which has not failed to react upon business in South America, that a conservative and precautionary policy is eminently desirable. In view also of the inevitable dislocation arising out of the political disturbances on that continent, this decision of your directors will commend itself to you. While our faith in the ultimate prospects of South America remains undiminished, we are convinced that you will support us in the attitude we are adopting.

After making full provision for all bad and doubtful debts and after charging all normal bad debts to profit and loss account, the gross profits stand at £1,754,000, which is £61,000 less than last year. The charges for head office and branches stand at £16,000 less than last year, with the result that the net profit this year is shown at £390,472, as against £435,144 last year. It is proposed to pay a final dividend of 5 per cent., making a total distribution of 9 per cent., as against 11 per cent. for the previous year.

CONDITIONS IN ARGENTINA.

Were it not for the fairer promise of its final months an account of the past year in Argentina would be far from cheerful hearing. The harvests, which largely form the basis of her wealth, were meagre, and the correspondingly small return from them was further diminished by the world-wide fall in the value of cereals. With the Conversion Office closed, the already difficult commercial situation was augmented by falling exchange rates caused by the result of the growing adverse trade balance, which became heavier than usual. The ill effects of this to the country are clear; firstly, the service of all foreign debts costs the country 20 per cent. more; secondly, the necessary goods imported into the country also cost 20 per cent. more, and sends up the cost of living, and, as the lower exchange also reduces the profits of the foreign utility companies, such as railways, banks, and mortgage companies, &c., depressing their share values, so it affects the country's credit and makes future loans, &c., harder to negotiate even at a lower issue price.

It is, therefore, comforting to know that the prevailing uneasiness in this respect is fully appreciated by those in power, who recognise that a monetary régime providing for greater elasticity and making for a permanently stable "peso" at 11·45 to the pound, is greatly desirable for the good of the country, and its uninterrupted progress. So many are the factors linked with exchange in a producing country that the means to the desired end will doubtless require profound study and mature consideration, but I feel that we can rely upon the distinguished statesmen and economists of Argentina to bring this vital question to a successful issue at no distant date, and in their efforts to do so I am sure they have many friends in the London financial circles ready to come forward with any help and advice that it may be in their power to give them. In any scheme which may be engaging their attention they have a good basis to work upon, as the gold in the Conversion Office amounting to £84,479,000 guarantees the notes in circulation to the extent of 78½ per cent.

To the monetary inconveniences of the nation was added political trouble, resulting in the almost bloodless revolution of September 6th, a sharp and unmistakable protest against the old régime. The new régime, formed of well-known and experienced men imbued with a sense of their responsibilities, and with the avowed intention of working for the good of the Republic, has been welcomed, not with mere wordy sympathy, but with practical assistance, and by full recognition of all foreign Powers, and a feeling of relief has been engendered and confidence restored. The banks, both Argentine and foreign, established in Buenos Aires, have placed at the disposal of the new Government the assistance necessary for the temporary needs of the situation, and the renewal of a fairly large foreign loan was arranged, on more favourable terms than the original.

FAVOURABLE CROP PROSPECTS.

Bearing in mind that any forecast of a harvest is unfortunately liable to eleventh-hour betrayal by weather or pest, we can record that sowing was realised under ideal conditions, and aided by opportune rains the immediate prospect for all crops is favourable. Weather conditions over the whole republic have been of a satis-

factory character; pasturage throughout the country is remarkably good, and well able to carry the 88,000,000 odd head of stock which the cattle census of last July reveals as the country's total of cattle, sheep, horses, and pigs. The estimated area sown to cereals is some 4 per cent. greater than in 1929.

There is no hiding the fact that Argentina is passing through a period of commercial depression, a condition of affairs which is universal. However, there is no cause for undue pessimism, as with peace and economy the country should, when the tide turns, quickly recover in view of its manifold resources.

BRAZIL.

Probably the most important happening in Brazil during the last year has been the recent revolution, which, although it occurred since the closing of the bank's year, has been casting its shadow over the country since the Presidential election of March last, which resulted in the naming of Dr. Julio Prestes as President-elect to take office on November 15th last.

Dissatisfaction with the fairness of this election culminated on October 3rd with a simultaneous rising in the States of Rio Grande do Sul, Paraná, Santa Catharina, Minas Geraes, and the north, and the fighting which took place in many parts of the great republic terminated with the success of the revolutionary party in Rio de Janeiro on October 24th. The Provisional Government then set up has nominated Dr. Getulio Vargas, the defeated candidate in the Presidential election of March, to hold that post. This gentleman has chosen for his ministers well-known men of standing, ability and confidence. Much is hoped from this Government, whose programme is both sound and economical, and most of the foreign governments have already recognised it.

The commercial and financial situation has been very black throughout the past year, and failures have again been very heavy, and most factories have been either working on short time or have been closed altogether.

The failure of the Coffee Defence Scheme, which had kept up prices at an artificial level for some years, resulting in October, 1929, in a fall of about 50 per cent. in the market value of coffee, required prompt action on the part of the authorities, and a new loan was issued in London, New York and on the Continent by the Government of the State of Sao Paulo, called the Coffee Realisation Loan of 1930, 7 per cent., redeemable in ten years, in accordance with which the very large stocks which had accumulated during the bounteous harvests of recent years were to be marketed under schedule. The terms and conditions governing this issue have been faithfully adhered to, but the coffee position cannot be considered as settled, for much must depend on the future crops. Owing, however, to the fall in prices and the efforts of the Government to raise the standard of quality, many of the old trees are being destroyed and other products are taking their place. This must ultimately prove beneficial to the country.

The Provisional Government have decreed an issue of Treasury Bonds up to 300,000 contos, interest not to exceed 7 per cent. per annum, tax free, and redeemable half in one year and balance in two years from date of issue. Further details are not yet to hand.

The Budget for 1929 resulted in a surplus of over £4,000,000, and, although a less satisfactory return must be expected this year, prospects for the future would appear more encouraging in view of the policy of retrenchment and economy which forms a prominent part of the new Government's programme.

Our recent information is that the Caixa has now been abolished, and the balance of gold, having been transferred to the Bank of Brazil, is now in course of shipment to the Brazilian Treasury delegates in London. When exchange of gold notes, still in circulation, is again allowed, this is to be effected by a sight draft of the Bank of Brazil on London bankers.

CHILE.

Chile, which is a country dependent on her exports for her upkeep, was naturally adversely affected by the world conditions ruling, but was more fortunate than some of her neighbours, inasmuch as no internal dissensions disturbed her wellbeing.

difficulties would not seem to arise from any diminution in her own products or industry, but are directly attributable to the decreased purchasing power of the rest of the world, and, with the one exception of meat, the low prices of her chief products in the world's markets. Uruguayan exchange rates have had a tendency of late years to follow the trend of those of her neighbour, Argentina, even when economic factors hardly seem to justify the movement, and the reduced purchasing power of the Uruguayan peso, the value of which had fallen *pari passu* with that of the sister Republic, has had a limiting effect on imports, which in turn has reduced the national revenue through a shrinkage in Customs dues. After six successive years of surplus of income over expenditure, a shortage is anticipated in the national accounts corresponding to the fiscal year ending June 30th next. The Government is coping with the unexpected situation, and has adopted a necessary policy of economy, new expenditure which had been proposed in the Budget has been postponed until times may be more propitious, and expenses generally are being curtailed when not absolutely justified.

COLOMBIA AND PARAGUAY.

The commercial depression in Colombia, which was referred to last year, continued throughout the year under review. The decline in coffee prices was severely felt, and an unduly prolonged summer adversely affected the agricultural situation, which, until the recent rains brought a change for the better, had become grave. All classes have felt the pinch of the resultant trade restriction, especially the working class, among whom there has been much unemployment. Various relief works have been undertaken, but the rigid economies which are being effected throughout all branches of the national administration make it difficult for the Government to palliate labour's emergency more than slightly.

The year 1930 has been a fortunate one for Paraguay: the world-wide depression, and especially the conditions ruling in the sister Republic and principal customer, Argentina, precluded any great forward strides, but the menace of war with Bolivia which had overshadowed her during the previous year, had vanished, and she is now able to turn her whole attention to her home affairs. Much of the capital transferred abroad when international trouble was imminent has returned, and the finances of the country, which are ably and economically administered, are satisfactory.

The report and accounts were unanimously adopted.

THE NATIONAL BANK OF SCOTLAND, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

The 105th annual general meeting of the proprietors of the National Bank of Scotland, Ltd., was held in the bank's head office, Edinburgh, on the 18th instant, the Most Honourable the Marquess of Zetland, P.C., G.C.S.I., G.C.I.E., the Governor of the Bank, presiding.

The Lord Marquess, in moving the adoption of the report and accounts, having dealt with industrial and financial conditions, said:—The profits show a slight decrease compared with the previous twelve months. After deduction of dividend, at the same rate as formerly, namely 16 per cent., absorbing less tax £136,400, and the application of £50,000 to contingent fund, £35,000 to heritable property account, £50,000 to the bank officers' pension scheme, and £5,000 to the staff widows' fund, the carry-forward is slightly increased at the figure of £74,293. The deposits stand at the substantial figure of £32,266,000, exhibiting a small increase over those of a year ago. The progress made in establishing the small deposit account system has been very gratifying, and further progress is looked for in this direction. The note circulation shows a small decrease, accounted for by the general diminution in trading and industrial requirements. The acceptances by the bank, which stand at higher figures than a year ago, vary from time to time; on the other hand, there is shown a reduction in endorsements, guarantees and other obligations. Turning to the assets side of the balance sheet, the liquid position, as you will observe, is well maintained; while, in addition, further strength is represented by a substantial holding of Treasury Bills, which are included under bills discounted. British Government securities exhibit an increase of, roughly, £800,000. The bank has taken an interest in the Bankers' Industrial Development Company, Ltd., formed recently under the auspices of the Bank of England with a view to furthering the cause of rationalisation in industry. Loans and advances show a contraction of about £500,000, indicative of the reduced requirements of business. The heritable property account is well written down, and is further strengthened by the allocation of £35,000 from this year's profits. In brief, I would say that the bank is in a strong position, not only to continue its support to trade and industry, but to meet the needs of the business community when the hoped-for recovery in trade comes about.

The resolution was carried unanimously.

IONIAN BANK, LIMITED.

HIGH STANDING OF GREEK CREDIT.

The ninety-first annual ordinary general meeting of the Ionian Bank, Ltd., was held on the 16th instant, at the offices of the company, 25-31 Moorgate, London, Sir John Stavridi, chairman of the company, presiding.

The secretary (Mr R. H. Fry) having read the notice convening the meeting and the report of the auditors,

The Chairman said: At our last meeting I referred to the year as having been one of the most abnormal periods since the termination of the war. Unfortunately, the world has had to face during 1929-30 even worse conditions than previously. The world-wide slump in the price of commodities has dealt a heavy blow to agriculture, trade, industry and finance, and not a single country can claim to have escaped the consequences. In Greece, the bulk of the exports consists of tobacco, currants, dried figs, olive oil and wine. Fortunately, the fall in value of tobacco and currants has not been by any means as heavy as that of the staple products of the world, but Greece has suffered severely through the serious fall in value of olive oil and the closing of the French market against her wines.

FAVOURABLE FACTORS.

The balance of trade is still strongly against Greece, but the one bright spot during the past year is that the reduction of imports is substantially greater than the reduction of exports. Moreover, we must bear in mind the remittances of emigrants, which had been materially reduced for some years, but which during the past year have exceeded the sum of £7,000,000, and so helped to redress the balance of accounts. Another point of importance is that during the last few years a large increase has taken place in the area devoted to the growing of wheat. When it is remembered that Greece imports annually over half a million tons of wheat, this increase of production must in time materially assist the balance of trade.

As I have on numerous occasions pointed out to you, Greece has for over 30 years rigidly honoured her obligations. Moreover, the Government has provided for each new loan issued a very large sinking fund for redemption of debt—over 12 per cent. of the total Budget of the country. No other State to my knowledge has dealt with amortisation of national debt at this rate. No wonder, then, that the credit of Greece, as shown by the prices of her securities on the foreign Stock Exchange, should stand so high. The country's finances are on a satisfactory basis, the last three Budgets having shown actual surpluses, thanks to the steps taken three years ago by the League of Nations for the financial regeneration of Greece by the establishment of the Bank of Greece and the issue of the Tripartite Loan.

The political problems facing Egypt still occupy the field in that centre, and until these are out of the way there is little likelihood of a recovery in the prosperity of the country. Our results there have not maintained the improvement shown last year. In Cyprus the conditions in regard to agriculture and trade have been similar to those in Greece, but the cost of living is very low there, and justice is up to the required standard. I am glad to be able to say that after four years' working in the island we have earned the full confidence of the public.

When we met on December 23rd last I informed you that your directors were not content to wait on events, and had taken steps to reduce expenditure to the lowest margin commensurate with efficiency and safety, and I think that you will agree from an examination of the figures that they have kept their promise. Unfortunately, however, the results of our efforts towards economy have been nullified by the high deposit rates which have been current in Greece throughout the year, caused by the fierce competition for deposits by the banks.

BANK'S POSITION.

The investments of the bank now stand on the books at prices below the current value without taking into consideration the investment reserve of £50,000. As regards the balance sheet, you will observe that all those accounts which represent what I might term the strength of the bank are either unchanged or show improvement. The result of the year's trading is a net profit of £39,530, as against £48,048 last year, and although the ample carry-forward would have permitted the maintenance of the dividend at the rate of 7 per cent. for the full year, your directors feel that it is in the interests of the shareholders that, at any rate until such time as the present conditions—which, unfortunately, are world-wide—continue, the resources of the bank should be preserved, and they therefore recommend that the final dividend to be paid this year should be at the rate of 3 per cent., making a total of 6 per cent. for the full year.

The report and accounts were unanimously adopted.

AGAR, CROSS AND COMPANY, LIMITED.

CONDITIONS IN THE ARGENTINE.

EFFECTS OF CROP FAILURE ON COMPANY'S BUSINESS.

INCREASE OF CAPITAL APPROVED.

The twenty-fourth ordinary general meeting of Agar, Cross and Company, Ltd., was held, on the 15th instant, at the Hotel Victoria, Northumberland Avenue, London, W.C.

Mr Thos. F. Agar (the chairman) presided.

The Secretary (Mr Frank H. Gibson) read the notice calling the meeting and the auditors' report to the shareholders.

The Chairman said: Ladies and gentlemen,—As usual I will, with your permission, take the directors' report and the company's accounts for the year to June 30th last as read. These have been in your hands for the unusually long period this year of three weeks, this having been necessitated by the fact that one of the resolutions to be proposed at to-day's meeting deals with the adoption of new articles of association, which resolution requires three weeks' notice to make it legal.

CONDITIONS IN ARGENTINA.

In presenting to you the accounts and directors' report for last year, the directors regret that they so markedly reflect the results of last season's harvest failure and the heavy depreciation in the rate of exchange brought about through that cause and the closure of the Caja de Conversion in December, 1929. Apart, however, from the actual loss consequent on the depreciation in the rate of exchange, your directors feel that, in the circumstances, the results are not in fact entirely unsatisfactory. (Hear, hear.)

During the year ending June 30th last, world-wide trading conditions were, and still continue to be, abnormal, and all commodity prices have fallen to extraordinary low levels, and the Argentine Republic has been no exception to the conditions ruling elsewhere. In addition, the Argentine was peculiarly hard hit by widespread harvest failure and a severe and prolonged drought which brought disaster to the farming and pastoral industries, and its prosperity, which is almost entirely dependent on the export of its crops and meat, thus suffered very badly.

EFFECTS ON COMPANY'S BUSINESS.

Our business consists largely in filling the wants of the farmer and the breeder and fattener of livestock, and when, from climatic deficiencies, these interests are severely hit we feel the effect almost immediately. Thus, due to the loss of the wheat and linseed harvests last year, our sales of harvesting machinery were extremely low in comparison with normal years, and, after the harvest, for ploughing and seeding the demand for all classes of implements was very meagre, as all possible buyers, having been so severely hit, had to economise in every way and only purchase when absolutely unavoidable.

There is another way in which a harvest failure adversely affects our results—namely, this: in order efficiently to cover the very wide territory we have to cover, we have to start our sales force to work about August 1st for the purpose of selling machinery for the harvests expected in the following November, December, and January. If that harvest is a failure, we do not get the sales and we have incurred those heavy expenses. The past year—that is, the year ending June 30, 1930—was particularly disappointing for us, as where drought had spared the crops hail, rust, or other causes came along and completed the disaster. The result was therefore, that we had incurred considerable expense for which we eventually got no benefit.

With regard to the current year in the Argentine, ploughing and sowing were carried out under favourable conditions, though a spell of exceptionally mild weather and abundant rainfalls at one time tended to bring on the growing crops too quickly. Since then the weather conditions have been favourable, and in the ordinary course of events nothing should now prevent good yields of both linseed and wheat.

LOW WHEAT PRICES.

The depressing factor of the situation is the exceptionally low prices to which cereals have fallen, and especially wheat. Recent quotations have been the lowest touched for very many years, and this notwithstanding the comparatively small total of last year's local production. Good harvests obtained elsewhere have contributed amongst other factors to world depression experienced in prices of wheat, and what is causing some preoccupation locally in the Argentine is as to whether this state of affairs is likely to continue when the new crop is harvested or if a change for the better will materialise.

Generally, with regard to wheat prices, the situation should not be regarded with too much optimism, but on the other hand there seems no reason to be pessimistic.

We understand that a representative committee in the Argentine has been formed to watch the situation, and if possible intervene, when necessary, to protect Argentine interests. It is also interesting to note that we understand the Banco de la Nacion has authorised its branches to give special credits to farmers for financing the harvesting expenses.

CATTLE INDUSTRY.

Pasture camps, due to suitable conditions ruling in the autumn and early winter, are generally in excellent condition with, possibly, the exception of the Pampa, which, however, we hear is improving. In consequence, the condition of the cattle industry is very good, the market for the same having proved one of the bright features in the prevailing economic depression, and prices on the whole have been satisfactory to the producers. Owing to the excellent condition of pastures many breeders have held back their cattle and others have been active purchasers of cattle for winter fattening, with the result that frigorificos at times had some difficulty in filling their requirements.

The much-needed live stock census was taken on July 1st last. The resultant figures were:—

Cattle.—31,973,802, against 25,866,763 in the year 1914.

Sheep.—43,083,909, against 43,225,452 in the year 1914.

Pigs.—3,763,693, against 2,900,585 in the year 1914.

Horses.—9,839,463, against 8,323,815 in the year 1914.

WOOL AND COTTON.

The quality of the country's wool this year has been generally poor and prices obtained extremely low compared with those ruling in previous seasons. Stocks, we understand, are low. With regard to the quality of the next crop, it is felt that it will be of better quality than last season's, owing to the ample rains which have fallen and the existence of good pasturages.

As a result of increased area sown with cotton for season 1929-30, assisted by favourable climatic conditions, a correspondingly larger production has been obtained. The total area sown was 134,480 hectares, compared with 103,710 in 1928-29. An estimate of the total crop of raw cotton gives this as 150,000 tons, which has produced approximately 40,000 tons of fibre, and, after allowing for local consumption, some 33,000 tons will be available for export. All these figures show a very considerable increase on the previous season. While the prices obtained by producers were not very remunerative, owing to continued fluctuations, on the other hand they have been compensated by abundant crops, which, due to good rainfalls and lack of frosts, prolonged the cotton harvest by nearly two months, thus giving growers an exuberant production and splendid yields, in addition to which the quality of the cotton has been satisfactory.

WINE AND SUGAR.

In this industry, on the other hand, the situation continues unsatisfactory. Notwithstanding the reduced production this year—approximately 1,500,000 hectolitres less than last year—stocks are heavy and prices low. The depression in commerce generally throughout the country has seriously affected the demand, but it is expected that a good grain harvest will lead to a replenishing of wine stocks by camp stores, &c., which are at present very low, and a tendency to better prices being paid for the product.

Notwithstanding the somewhat unfavourable outlook early in the season with regard to this year's sugar crop, the results obtained have been satisfactory, due to late rains and the absence of severe frosts.

It is estimated that this season's production of sugar will be some 25,000 tons less than the previous season, which amounted to 345,000 tons. Local stocks at the beginning of the current year were approximately 340,000 tons, and, as the domestic consumption will probably not exceed 360,000 tons, with the new production stocks will be considerably in excess of requirements. The exports of sugar during the first eight months of this year were very limited—namely, 750 tons, compared with 6,557 tons during the same period last year.

EXPORTS AND IMPORTS.

The following statistics relative to the country's exports during the first 10 months of the current year are of interest.

The value of exports during that period shows a decrease of approximately \$312,000,000 gold, or, say, 37.1 per cent., compared with the same period last year, the respective totals being \$528,315,174 gold for 1930, as against \$840,185,959 gold for 1929. This decrease in value is due to smaller tonnage of shipments, as, whilst this year the exports reached, say, 9,053,312 tons, last year 14,799,675 tons were exported, which represents a decrease of 5,746,363 tons, or, say, 38.8 per cent.

With regard to imports, on the other hand, we have found it impossible to get accurate or reliable information regarding these for the same period—that is, the ten months past—and, unless one has reliable information of both exports and imports, one can hardly form reliable judgment of the effect on the country's position.

An analysis of the most important export figures for the first 10½ months of 1930—namely, those corresponding to cereals and linseed—shows a very unfavourable balance compared with the same period in 1929, as: Wheat fell from 6,301,788 to 2,075,254 tons; linseed fell from 1,577,267 to 1,095,623 tons; oats rose from 391,617 to 407,548 tons; maize fell from 4,544,494 to 3,987,091 tons.

The tons referred to are 1,000 kilos.

Meat exports during the first ten months of this year totalled 529,572 tons, as compared with 591,867 tons in 1929, the respective values for the two periods being \$109,092,357 gold and \$114,801,945 gold, the prices obtained this year being more favourable. The shipments of the principal cereals and linseed as at this date thus show a considerable decrease compared with the same period of 1929.

The gold in the Caja de Conversion at October 27, 1930, amounted to \$443,259,757.62. The gold reserve is approximately 77 per cent. of the paper money in circulation, which amounts to \$1,300,426,770.34.

THE RAILWAYS.

The railway companies generally show a considerable falling off in receipts owing to the great decrease in cargo transported as a result of small cereal harvest and bad weather, which latter has seriously affected the harvesting and transporting of maize to ports. This reduction in receipts will doubtless have its effect on immediate new constructions of importance, but a number of the companies, and particularly the private ones, have maintained a considerable activity in the prosecution of new works and some new lines have recently been opened to traffic.

LABOUR SITUATION.

During the year under review the labour situation has been anything but satisfactory and strikes have occurred affecting the interests not only of private concerns but also those of public services. The ports of the capital, Rosario and Santa Fé, have for a long period been in a state of unrest, thereby seriously prejudicing commerce. Conflicts between rival labour groups, whereby importers and exporters were subjected to boycott by certain syndicates on account of employing personnel affiliated to others or free labour, have conduced to increased expenditure and great inconvenience to commerce in general.

Lastly, there were the political disturbances which took place in the Argentine in September last. Our advices show that the country, and business interests in especial, are more than satisfied with the new provisional Government, which is composed of leading citizens pledged to run the government of the country on economical lines, and the latest advices which we have are that they have been energetically looking into the position of the national finances with a view to putting them on a sound basis. They have pledged themselves to hold a general election as soon as possible and it is fully expected that the change of Government will make for great improvement commercially.

There is one other matter to which I would make special reference—namely, this: The staff in the Argentine during this past year have come through a very trying time indeed and your directors feel that, while the staff all over has so well and so willingly assisted in the conduct of the business, a special vote of thanks ought to be accorded to those members in the Argentine who had to bear the special strain of the extremely worrying times through which they came last year and during the political disturbance of this year.

MR H. S. F. ALEXANDER'S STATEMENTS.

Mr Henry S. F. Alexander then dealt with the balance sheet and accounts, comparing the figures with those of the previous year and giving an explanation with regard to any items which showed notable changes. In particular, he referred to the stock of merchandise on hand at date of balance. He explained that, as the shareholders should be aware, the business of the company was

largely a seasonal one, and that it was necessary for them to have in the Argentine, ready for sale at the appropriate season, the necessary quantity of machines. These machines were bought by the company in the United States or Great Britain and had to be ordered months before they were required in order that there would be sufficient time to permit the makers to manufacture them and the company to ship them, erect them in the Argentine, and distribute them to the necessary centres ready for sale. This meant that the company had to anticipate their requirements by months at a time, and, should the harvest in any year happen to fail, the result, of necessity, was that the company were left with stocks purchased in one year and not sold, which they had to carry over and sell in the succeeding harvest season. The date at which the company balanced their accounts—namely, June 30th—was midway between the time when the orders had to be placed and shipped and the date on which they would probably be sold, and, as the harvest in 1929 had been a very bad one, the stock at June 30, 1930, which represented goods not sold during the previous harvest, was of necessity large. The stock, however, was undoubtedly thoroughly good and saleable and very conservatively valued.

FINANCIAL POSITION.

Mr Alexander also commented on the sundry debtors and the company's position with regard to exchange, and, in particular, showed that the raising of additional fixed capital at this time meant a saving to the company of a very large sum of money—namely, some £70,000 sterling—which, to a large extent, could be treated as an off-set against the £100,000 which the directors had transferred to depreciation of reserve account at June 30th last.

He explained that before arriving at the profits the company made very ample provision for depreciation, not only on buildings but especially on their plant, machinery, motor-vehicles, &c., and also very careful and full provision against bad debts.

The Chairman then moved: "That the directors' report and audited statement of accounts for the financial year ended June 30, 1930, as presented to this meeting, be received and adopted and that a dividend of 11 per cent. per annum, free of income tax, under deduction of the interim dividend paid June 1, 1930, be paid this date on the ordinary share capital of the company to the shareholders on the register as at December 1, 1930."

Mr William A. Agar seconded the resolution, and, after questions had been answered, it was put to the meeting and carried unanimously.

On the motion of the Chairman, seconded by Mr Stuart C. Sheppard, the retiring director, Mr Henry S. F. Alexander, was unanimously re-elected.

The auditors, Messrs Rattray Brothers, France and Doran, were re-appointed on the proposition of Mr H. M. Brodie, seconded by Mr L. Marston.

NEW ARTICLES OF ASSOCIATION.

Mr Alexander then proposed as a special resolution under the Companies Act, 1929, "that the regulations contained in the printed document submitted to this meeting, and for the purpose of identification subscribed by the Chairman thereof, be and the same are hereby approved, and that such regulations be and they are hereby adopted as the articles of the company in substitution for and to the exclusion of all existing articles thereof."

He explained that the directors had felt it was desirable that the company's articles of association should be brought up to date and made to conform with the requirements of the new Companies Act, 1929, and modern practice, and that the principal changes proposed had been pointed out in the special circular which had been issued to the shareholders along with the notice calling the meeting.

Sir William Coats Cross, Bt., seconded the resolution, and, on being put to the meeting by the chairman, it was unanimously carried.

INCREASE OF CAPITAL.

Mr Alexander proposed the following as an ordinary resolution, namely, "That the capital of the company be and it is hereby increased to £1,550,000 by the creation of 50,000 ordinary shares of £1 each." In presenting this resolution he gave the following explanation: The printed balance sheet shows that the unissued shares amount to 175,000, and, as the directors propose to issue £225,000 in new ordinary shares, it was necessary to increase the capital by £50,000 in order to make up this amount.

Mr Thomas F. Agar, junior, seconded the proposal, and, on being put to the meeting by the chairman, it was unanimously carried.

On the motion of Mr W. T. Henderson, a cordial vote of thanks to the chairman was carried with acclamation and the proceedings then terminated.

CAMP BIRD, LIMITED.

YEAR'S PROFITS INCREASED.

LAKE GEORGE MINE DEVELOPMENTS.

The twenty-ninth ordinary general meeting of Camp Bird, Limited, was held on the 12th instant, at River Plate House, Finsbury Circus, London.

Mr F. W. Baker (chairman of the company) presided.

The secretary (Mr E. E. Leaman) having read the notice convening the meeting and the report of the auditors,

The Chairman, in dealing with the accounts, said:—The company's income has increased during the past year from £113,411 to £146,790, representing an increase approximately of £33,380. The net profit for the year consequently shows a total of £134,719, as against £99,571 for the year ended June 30, 1929. The charges against net profits were, however, greater during the past year than they were in the previous year. The charges relate almost exclusively to the reorganisation of the company's capital which occurred in 1926. After making the appropriations from the current year's profits there remains a balance of £23,293 carried to the balance sheet, as against £27,111, which was the corresponding figure last year.

METAL PRICES AND EARNINGS.

I regret again that we cannot indicate a dividend on the ordinary shares for the year under review. This position would have been entirely possible had not the fall in metal prices affected our earnings. As I explained to the shareholders of the Mexican Corporation this morning, had silver prices remained at the level as at June, 1929, with zinc, lead, and copper at the same rates, the company would have been in the position to maintain steady and increasing dividends. Santa Gertrudis would also have been in a position to distribute more, and this would have reflected additional earnings to our company of something like £65,000, arising from an increased dividend in Santa Gertrudis and an additional dividend on our Mexican Corporation holding. These additional earnings would have increased the net amount of the year's profit from £23,000 up to £88,000, out of which a satisfactory dividend payment could have been made.

The result of the decrease in earnings from Fresnillo and Teziutlan, affecting earnings of the Mexican Corporation, which holds a 50 per cent. interest in both of those mines, compelled that company to suspend dividend payments.

The salient features with regard to Santa Gertrudis are, notwithstanding the heavy fall in the price of silver, that the gross profit for the period under review is £328,000 odd, or £18,000 in excess of the previous year.

MEXICAN CORPORATION.

Turning to the Mexican Corporation, this company retains a substantial interest in Mexican Corporation. I have pointed out to you how the earnings of this company have been affected by the fall in the price of silver, lead, zinc, and copper. Had this fall in metals not taken place the Fresnillo Company could have paid from 30 to 40 cents per quarter, and the Mexican Corporation, through its holding, instead of paying only a dividend of 1s., could have paid about 3s. or more. The Teziutlan Mine could also have contributed quite substantially to the earnings of the Mexican Corporation.

I now come to one of the most important interests which we hold—namely, the Lake George Mine; and Mr Agnew, who is known to you as a man of the highest standing in the mining world, has kindly consented to give you his views on this interesting and important property, and in asking him to second the resolution for the adoption of the directors' report I will ask him also to deal with the Lake George position.

The Durango Timber Company, Limited, is another of our most important assets, and in this case I am glad to be able to tell you that the result of the last year's operations have been very satisfactory and show a substantial improvement in production, sales, and profit. Costs have been reduced and markets extended. The total of timber cut during 12 months to June 30th last is 56½ million board feet, and the sales for the same period amounted to nearly 66 million board feet, existing stocks having been drawn on to complete deliveries. The gross operating profit of the local companies controlled by Durango Timber Company amounted to \$659,900, as against \$372,000 for the previous year. The reserves of timber still uncut on the basis of a 50 million board feet annual cut should give this company a life of over 30 years.

CREOLE PETROLEUM CORPORATION.

The Creole Petroleum Corporation, in which we have quite a substantial holding, is a subsidiary of, and is controlled and managed by, the Standard Oil Company of New Jersey. It has an enormous holding of oil lands in Venezuela and is developing in Eastern Venezuela a new oilfield of considerable potential value, which has

now reached not only the production stage but the marketing stage through its own pipelines and loading facilities.

The average production of the Creole Company in Western Venezuela during the first nine months of this year has been 15,500 barrels daily, and during the same period additional wells have been completed in Eastern Venezuela, where the present daily production is approximately 8,000 barrels. We are advised that the production for 1931 should show a considerable increase over that for the year ended December 31 last, when this corporation made a net profit of \$2,434,000, as against \$611,000 for 1928.

It has been necessary for the Creole Company to finance its subsidiaries during last year to the extent approximately of \$3,600,000 for the purposes of carrying on operations of an exploratory nature, and further to determine the value of their properties. For this purpose the Creole Company is about to make a new issue of 1,000,000 shares of no par value at the price of \$4.25 per share. The Standard Oil Company of New Jersey has agreed to take such number of shares of the proposed new stock as it, as a stockholder, may be entitled to receive, and, further, has agreed to purchase at the subscription price the new shares which may not be subscribed for by the stockholders entitled to them.

VENEZUELAN CONSOLIDATED OILFIELDS.

Our holding in the Venezuelan Consolidated Oilfields has been exchanged into shares of the Siparia Trinidad Oilfields. This company is a subsidiary of the Trinidad Leasehold Company, is amply provided with working capital and is being operated under that management, and has important oil interests in the island of Trinidad. I look for quite a successful outcome of its operations.

I wish I could feel optimistic as to the current year's operations. Under normal conditions we should have been doing very well, but do not be disappointed if this year's results fall short of the earnings disclosed by the accounts under review.

The chairman concluded by moving the adoption of the report and accounts.

MR J. A. AGNEW'S STATEMENT.

Mr J. A. Agnew seconded the motion, and, in dealing with the Lake George Metal Corporation, Ltd., said that the Lake George mine was discovered in 1860 and was closed down in 1899 with large sulphide ore bodies left virtually intact. It was not reopened until the present operations commenced in March, 1925. The mine was situated at Captains Flat, New South Wales, 22 miles from Canberra and 183 miles from Sydney. The railway between Sydney and Canberra passed within 21 miles of the mine.

The main lode channel was 5,000 ft. long, and in this there were three main ore shoots. In the Elliotts section, the most northern, the shoot had been proved for a length of about 1,000 ft., the width ranging from 10 ft. to 30 ft., and the tonnage developed to date approximated 1,000,000. In the central section the ore shoot had been proved for a length of about 650 ft., the width varying from 5 ft. to 15 ft., and the ore so far exposed amounted to about 200,000 tons. In Keatings section the ore shoot had been proved over a length of 900 ft., the width of the lode varying from 5 ft. to 30 ft., and so far there had been proved to exist in this section 800,000 tons.

There were thus shown as developed about 2,000,000 tons, the average value of which was: Lead, 7.5 per cent.; zinc, 12.9 per cent.; copper, 0.75 per cent.; silver, 2.2 oz.; gold, 1.28 dwt. A further 880,000 tons of probable ore was indicated by diamond drilling.

It was estimated that with a plant operating on the scale of 500 tons of ore treated daily the working costs, including development, could be taken at 23s. per ton, while on a basis of treating 1,000 tons daily these costs could safely be taken at 21s. per ton.

RECOVERY OF THE METAL.

In order to indicate exactly the lines on which a metallurgical plant should be built and to determine whatever problem there might exist in recovering the metal from the ore, a pilot plant having a capacity of 30 tons daily was erected and had been in operation for the last twelve months. The work in this plant had determined definitely that a highly satisfactory recovery of both lead and zinc can be made from Lake George ore.

It was felt by the board of the Lake George Company that, viewed entirely from the outlook for metal prices, the present was the proper time to be pushing on with the construction of treatment works. The company would thus be in a position to take the fullest advantage of a rise in prices, which it was felt must occur.

To sum up, the Lake George property had every appearance of turning out to be a most valuable asset to the Camp Bird Company. The chairman having replied to questions, the report and accounts were adopted.

SANTA GERTRUDIS COMPANY, LIMITED.

INCREASED GROSS PROFITS.

MR F. W. BAKER ON RECENT DEVELOPMENTS.

The twenty-second ordinary general meeting of the Santa Gertrudis Company, Ltd., was held, on the 12th instant, at River Plate House, London.

Mr F. W. Baker (the chairman) said, in the course of his speech: The assets side of the balance sheet shows under the heading of "Investments at cost," "Loan partly secured," "War Loan and Conversion Loan at cost," and "Cash at bankers," a total of £636,000. In addition, our associated companies in Mexico have a cash balance of over £150,000, making a total of more than £780,000. After making due allowance for depreciation in investments and other items there remains a very substantial sum at our disposal.

These large reserves had been created over past years to meet a position which your directors have realised would have to be faced—namely, the possible exhaustion of our existing mines; and your directors, after consultation with some of the larger shareholders, have before them a policy of meeting any diminution in the Santa Gertrudis earnings by the investment of such an amount as may be necessary of these reserves in the acquisition of some other mining property that will enable us to continue and live as a dividend-earning organisation. It is for this purpose that we acquired an interest in the Lake George Mine, and instructions have been given to Mr Rose to endeavour to secure for us, through his large mining connections, an opportunity of carrying out the policy which I have just referred to, and, having regard to our very fine technical organisation in Mexico, I have little fear that if any recommendations are made to us on the lines indicated we shall be running no risk by acting upon them.

YEAR'S PROFITS.

The gross profits of the company amounted during the year under review to £328,783, which was, approximately, £18,230 in excess of the previous year's profit. This was mainly accounted for by an increased income having been received from miscellaneous investments.

The dividends declared by the Cia. Beneficiadora de Pachuca, S.A., amounted to £300,000, which is exactly the same figure as the dividends declared by that company in the previous year.

Owing to the depreciation in the price of silver and other metals it is unlikely that the profits for the present year will equal those in the accounts before you. You will see by the appropriation from the net profits that £50,000 has been transferred to reserve, a sum of £20,000 has been reserved for income tax, two dividends of 1s. 6d. per share each have been declared, absorbing a further £233,010, and after adding the balance brought forward from the previous year there remains a credit balance to profit and loss of £39,063 to be carried forward.

SATISFACTORY LEVEL OF REVENUE.

In spite of the unprecedentedly low price of silver during the period under review, the company's revenue remains at a satisfactory level. The average price quoted for silver on the New York market during the past year was 46c. U.S. currency per fine ounce, as against 56c. for the previous year. Since the end of the company's financial year silver has dropped to lower levels, but earnings have been, and it is estimated will continue to be, maintained at a substantial rate.

I may here add a word of comfort in these depressed times—that in consequence of the higher values now being secured as a result of the development work recently carried out and still continuing at the newly discovered Mariposa vein, as well as the developments in the western end of the Dos Carlos vein, which show so substantial an increase in values, the decrease in silver prices can be offset to some extent by the treatment of the higher grade ore which the mine is now disclosing. I do not mean in making these remarks to suggest that we are, for the purpose of maintaining a substantial earning, intending to pick the eyes of the mine. The general effect of the development of these higher values is to increase considerably the general average grade of the ore available for milling, and, as I have just stated, there is some crumb of comfort in this reflection.

Continuing the intensive exploratory programme inaugurated in 1928, a total of 43,354 ft. of development was accomplished during the year, of which 36,315 ft. were driven in the Dos Carlos territory. As a guide to this work, 10,770 ft. of diamond drilling was done. The total cost of this very large exploratory programme has been charged up as a part of our working costs before arriving at the sum shown as realised profits.

ORE RESERVES.

The ore reserves are only 78,000 tons less than the previous year's estimates, notwithstanding the fact that we have extracted and milled during the year 506,000 tons of ore. The new development during the past years and the possibilities of the properties point to the fact that we should have every reasonable expectation of continuing to operate for a much longer period than indicated by the amount of the ore reserves as at June 30th last, and I certainly feel that we may look for very satisfactory results being secured by development which will be approximately as good from the point of view of tonnage as the results secured in the past year.

The disastrous fall in the price of silver has constituted the outstanding adverse factor of the company's business during the past year. The market price of this metal at June 30, 1930, showed a depreciation of 37 per cent., as compared with the price at the same date a year previous. However, owing to the higher assay value of the present reserves, a valuation as at the two dates mentioned shows a depreciation of only 18 per cent. in the gross value of the ore reserves as at June 30 last. Furthermore, the fall in gross value is, to a considerable extent, being offset by a substantial reduction in working costs effected by the local management.

A POSSIBLY IMPORTANT DEVELOPMENT.

Advices from Mexico recently received point to the possibility of a development which may have an important bearing on the future of the mine. One of our close neighbours is an American company known as Real Del Monte. They have been working a vein of good widths and values up to within 300 ft. of the Western Dos Carlos borderline. There probably may be some connection between our No. 2 vein in the Dos Carlos and the vein now being operated by the Real Del Monte Company. If this should prove to be the case, and development work indicates commercial values, we should have available for development in this portion of the property over a kilometre of unexplored territory.

I have not made a reference to this matter to raise any buoyant hopes, but our past history in the development of the Dos Carlos has been so full of agreeable surprises that it is within the range of possibility that the opening up of this ground may be fruitful of further pleasant surprises.

MEXICAN CORPORATION INTEREST.

The Mexican Corporation's interests have suffered very severely from the fall in metal prices, not only silver, but also lead and zinc, and to a smaller extent copper.

The Fresnillo Mine has shown excellent developments in the sulphide section during the year, new veins have been discovered, and three new levels are being opened up on existing veins. The sulphide ore reserves have been considerably increased, and an active programme of development is still being carried on with excellent results.

As regards the oxide ore body of the Fresnillo Mine, the reserves here have been diminished during the year, and very little new development has been done to make up for the loss. The reason for this is that the oxide ore is relatively unimportant under present conditions, and the existing low prices of silver make the treatment of this class of ore unprofitable. However, both the mill and the mine at Fresnillo are in excellent condition to take advantage of any increase in metal prices.

Altogether, the Mexican Corporation's interests, while being in first-class condition as regards developments, organisation, and costs, have fallen on evil times purely on account of the very low prices of silver and base metals, so much so, that it appears unlikely that the Mexican Corporation will be in a position to make any distribution to its shareholders during the next twelve months.

THE LAKE GEORGE MINE.

I will now refer to the Lake George Mine. Work for the period under review was largely confined to preparing the property for production. A limited amount of underground development and diamond drilling was done with satisfactory results.

While everything is in readiness for the equipment of the property, the board has decided, in view of the very low price of base metals, not to proceed with it for the present, and to shut down the mine with the exception of a small amount of development still to be done in the central section. Prior to the shut-down the estimate of ore reserves was: 2,000,000 tons, averaging 1.28 dwt. gold, 2.2 oz. silver, 7.5 per cent. lead, 12.9 per cent. zinc, and 0.75 per cent. copper.

The consulting engineer reports that on the evidence obtained from diamond drilling, coupled with the persistence of the ore bodies and the geological evidence, it is justifiable to add a further 880,000 tons to the above figure. He further states that the tonnage possibilities are exceptionally good.

The report and accounts were unanimously adopted.

BWANA M'KUBWA COPPER MINING COMPANY, LIMITED.

AMALGAMATION SCHEME APPROVED.

An extraordinary general meeting of the Bwana M'Kubwa Copper Mining Company, Ltd., was held, on the 17th instant, at the Cannon Street Hotel, London, to consider a resolution approving an agreement with the Rhodesian Congo Border Concession, Ltd.

Sir Edmund Davis (chairman and managing director) said in the course of his speech: This meeting has been called to consider our recommendation to enter into an agreement with the Rhodesian Congo Border Concession, Ltd., in terms of the draft which is being submitted. The policy of bringing under one control our properties, those of the Rhodesian Congo Border Concession, Ltd., and those of the N'Changa Copper Mines, Ltd., has been under consideration for some time past, and after lengthy negotiations your directors have unanimously come to the conclusion that we should recommend your acceptance of the scheme we are submitting to-day.

If the suggested amalgamation is approved of by the shareholders of the companies I think we may take it for granted that there will be dealt with in the N'Kana plant between 5,000 and 7,000 tons of N'Kana ore per day and about 2,000 tons of richer ore from the Rhodesian Congo Border Concession and/or the N'Changa properties. The production from this tonnage should be sufficient in the early days of the amalgamated venture to give very satisfactory profits with a normal copper market.

PRODUCTION AND CONSUMPTION.

You are all conversant with the difficult times which have prevailed for more than a year in the marketing of copper and all other base metals, and so that there should be no further trouble at a later date it is necessary that we should take all possible steps when bringing the Northern Rhodesian copper mines into production to prevent over-production.

So far as copper production is concerned, there can be no doubt that there should be ample room in the world's market for the Northern Rhodesian supplies, provided the position is handled with care, and by amalgamating the three companies we are satisfied that we are going a long way towards protecting the position. As the other Northern Rhodesian copper mines are under the control of the Selection Trust group, there will in future be only two groups to be considered in the production, and between them there should be no difficulty in arriving at an arrangement for all practical purposes, so that production should not outrun consumption.

"A DOMINATING POSITION."

Of course, it would have been better to have amalgamated the whole of the known Northern Rhodesian copper undertakings, but at the moment it is impossible even to give consideration to the idea. This being so, we must do all we can to place the combined three properties into a dominating position, and make it one of the most important copper mining propositions within the Empire, and one of the greatest copper producers in the world. In such a position the company would carry weight in any negotiations which might eventually have to be entered into on the subject of production.

Under the scheme we are submitting, after the issue of 550,000 shares in the Rhodesian Congo Border Concession to us, and any shares which may be issued in exchange for the N'Changa Copper Company shares, the Rhodesian Congo Border Concession, Ltd., will create £6,000,000 of 7 per cent. debentures, of which £4,500,000 will be issued. These will be redeemable at any time before 1940 at a premium of 20 per cent., or at any time thereafter at par, or by purchase in the market. They will carry certain conversion rights, which are set out in the circular. The issue will be underwritten by the Rhodesian Anglo American, Ltd., and Messrs. J. C. Im Thurn and Sons, Ltd., at a commission of 3 per cent.

When this issue is made we shall be entitled, as the holders of 550,000 Rhodesian Congo Border Concession shares, to apply for about £1,735,000 debentures; the exact amount cannot be settled until the number of N'Changa shares exchanged has been ascertained. We will then arrange for the shareholders in this company to be given an opportunity to subscribe on the same terms as the issue will be made to all, that is, of course, less the underwriting commission, in proportion to their respective holdings in the Bwana Company. From discussion we have had with some of our largest shareholders we are already satisfied that a very large proportion of the issue will be so taken up, which is further evidence, if it were at all required, of the approval of the scheme we are submitting.

I think you will take it for granted that we, on this Board, as well as the holders of millions of our shares, are sufficiently satisfied that the development results which have taken place on these properties warrant our recommending the amalgamation scheme.

The resolution was agreed to.

WILUNA GOLD CORPORATION, LIMITED.

MAGNITUDE OF THE ENTERPRISE.

REGULARITY OF VALUES DISCLOSED.

EFFECTS OF THE AUSTRALIAN GOLD BONUS.

The ordinary general meeting of the Wiluna Gold Corporation, Ltd., was held, on the 15th instant, at River Plate House, London.

Mr Frederic H. Hamilton, the chairman of the company, who presided, in the course of his remarks, said: It is impossible not to be struck with the magnitude of this enterprise, and the regularity of the values which we have encountered. It is estimated that above the 820-foot horizon reached by the main shaft, and over the relatively limited longitudinal area of the property so far developed in the Southern Leases, some seven years' supply of ore should be available on the basis of treating approximately half a million tons annually.

You will observe that the working profit is estimated at 10s. per ton. The consulting engineer, Mr Vail, indicates that he hopes this will be exceeded. This, of course, is on a gold basis irrespective of any exchange premiums or bonus benefits. Both he and the general manager, Mr Prior, expect to start production some time during March next, and, naturally, for the first few months normal production and profits cannot be looked for, but by the early summer the normal production should be reached. We should then be treating 40,000 tons per month, producing a working profit of £240,000 a year.

As you know, the Wiluna property extends for some two miles along the strike of the lodes, and work at the southern end has been limited to approximately 1,500 feet, or about one-sixth of the whole. The evidence that large tonnages of average grade ore should be eventually obtained from the Northern Leases is very strong.

THE FINANCING SCHEME.

The scheme for raising the necessary capital, which we are submitting to you, involves the creation of £350,000 in notes, and a like number of ordinary shares in order to provide for conversion into ordinary shares at par at any time before December 31, 1935, if they have not previously been redeemed. The whole issue has been underwritten by the Consolidated Gold Fields and the Transvaal Agency.

Another factor of immense importance to this and all other Australian gold-mining companies is the bonus of £1 per ounce on all gold produced in excess of the output of 1930, which has just been sanctioned by the Commonwealth Legislature. It would be a great mistake to imagine that a bonus on gold is a mere extension of the old protection policy. It is rather a corrective, and, in the circumstances in which Australia finds itself to-day, an economical and statesmanlike measure. It must be remembered that the gold-mining industry was the foundation of Western and, indeed, of Australian, prosperity, but for over twenty years it had languished owing largely to artificially induced conditions.

ADDITIONAL ORE IN THE PAY LIMIT.

According to the Commonwealth Year Book, the industry employed at the beginning of the century over 70,000 men. To-day, when unemployment is widespread, it employs under 7,000. There is more than one promising new field which remains undeveloped, and in the older fields there are many millions of tons already opened up, which were below the pay limit, but which the bonus now granted should render productive. The cost to the Government will be relatively small. It will be roughly proportioned to the extent to which it gives fresh employment and creates fresh wealth in the form in which the world just now most needs it.

In our own case not only will it bring large fresh quantities of ore within the pay limit, but one result will in all probability be to encourage us to proceed with the development of our Northern areas much sooner than would otherwise have been possible.

Upon the basis of our estimated tonnage and yield this bonus would work out in the case of the Wiluna at approximately an additional 2s. 6d. per ton. If, subsequently, the output of Australia reached 800,000 ounces, the bonus payable would be £400,000, equivalent to 10s. per ounce, and upon the same basis the additional profit to Wiluna would be increased to 3s. 9d. per ton.

Obviously, the effects upon the position of this company should be far reaching, and I venture to think that the results upon Australian prosperity generally, within the long run, will be hardly less important and beneficial.

In conclusion, the chairman moved the adoption of the report and accounts.

Mr John A. Agnew seconded the motion, which was unanimously adopted, and a resolution to increase the capital of the corporation from £1,000,000 to £1,350,000 by the creation of 350,000 new shares of £1 each, ranking in all respects equally with the existing shares, was unanimously approved.

RHODESIAN CONGO BORDER CONCESSION LIMITED.

KEEPING CONTROL IN BRITISH' HANDS.
RICHNESS OF THE FIELD.
MONEY SECURED FOR DEVELOPMENT.
AMALGAMATION APPROVED.

The eighth annual general meeting of the Rhodesian Congo Border Concession, Ltd., was held, on the 17th instant, at Winchester House, London, E.C., Mr Francis L. Gibbs (chairman of the company) presiding.

The report and accounts were unanimously adopted; the retiring directors were re-elected, and the auditors were reappointed.

Sir Auckland C. Geddes then moved the special resolutions in connection with the draft agreement with the Bwana M'Kubwa Copper Mining Company, Ltd., and in the course of his speech said:—

Let me begin by recalling those days about two years ago when a strenuous effort was necessary to prevent the N'Changa mine and the very rich deposits since discovered in our ground just outside the N'Changa Concession from passing into the control of an American corporation. Speaking at the meeting of the Rio Tinto Company on April 14th of this year, I defined my position at that earlier time in these words:—

"I am not prepared to take up an anti-American attitude in this matter, but I am prepared to take what action is possible to prevent dominance by any one national interest in an industry which must serve a world need"; and then a little later in that speech I said: "And now I believe no one nation can dominate the Rhodesian field, but that its development is in the hands of companies representing, through their shareholding, practically all the world, American as well as European. This, I am satisfied, is the best arrangement possible." So much for April 14, 1930.

I had hardly finished speaking when the price of copper broke. As time went on the effects of this collapse began to accumulate and I became anxious about the future control of this company. There was a great deal of exaggerated talk about copper being in superabundant supply and about the certainty of low prices for the metal for many years, and quite a number of people quite naturally took up the attitude, "Well, we have a good profit on our R.C.B.C. holdings. Let us realise it," and quite a number did, and many of their shares passed into American hands, although many also passed into ours, for we have been steadily increasing our holding and propose still further to increase it, provided this consolidation goes through.

FINANCIAL DISCUSSIONS.

A little later, in May-June of this year, to be precise, I raised in the technical committee the question of our coming financial needs, because I foresaw some difficulty in finding the money required to finance Rhodesian copper developments, as a whole, in sufficient volume in London to maintain British interest in the proportion which was established at the time when we prevented the control of N'Changa and a large slice of our most valuable territory from passing into non-British hands. Indeed, London has already failed to maintain its proportion, for the two large American holdings, and several smaller ones which are opposed to the proposals before us to-day, were built up to their present proportions after the struggle of two years ago. I have reason to believe—in fact, I know—that other and quite different American interests hoped, perhaps would still hope if these resolutions could be defeated, to obtain large blocks of shares in this company. I believe I am betraying no confidence when I tell you that when I was in New York I heard the view expressed that some of the British holdings were too weak to support their share of the further finance required, that they would have to diminish their proportionate holding and that American interests would buy.

Please do not misunderstand me. I am far from taking up any anti-American attitude; on the contrary, I am in favour of American participation in these great enterprises, as I am of French and Dutch and German and any other national participation, but I do not think anyone, least of all the wiser and more far-sighted American, wants to see the whole Northern Rhodesian copper-field in the hands of the American copper companies. And so I ask you to remember that at the back of all the proposals which I bring before you to-day is a very real problem, namely, that of financing the development of the Northern Rhodesian copper-field—a vast undertaking.

WORLD COPPER POSITION.

As the world economic position worsened, my belief in the wisdom of achieving the largest possible consolidation of the Northern Rhodesian copper mines strengthened, and I set out in some private notes, written to clarify my own thought, ten reasons which I subsequently used at a meeting of your board as the basis of my recommendations in favour of the course proposed to you to-day:—

1. That copper is in danger of under-consumption, which will be called over-production for a time to be measured in years.
2. That the best way of meeting such a situation in relation to the copper world as it exists to-day is for the coming production of Rhodesia to be in as few and as strong hands as possible.
3. That the best chance of securing a proper share of the world's supply of copper for the Rhodesian mines is for them to be equipped to meet something more than their probable share of the supply and for that equipment to be under the control of organisations self-contained and assured of adequate financial resources.
4. That large units would be advantageous in dealing with the Northern Rhodesian Government as well as conceivably with the British Government.
5. That the Chartered Company wields great power in Rhodesia, and that it will be immeasurably advantageous to be in a position of partner with, rather than tenant of, the Chartered Company. This would in effect be the position under the consolidation before us to-day as a result of the Chartered Company's very large shareholding in the Rhodesian Anglo-American, Ltd., the largest single holder of R.C.B.C. shares.

BENEFITS OF CONSOLIDATION.

6. That consolidation would make it possible, if such a course were considered advisable or were forced on the company by world conditions, to secure any given reasonable profit per existing share of R.C.B.C. and Bwana M'Kubwa in combination with a smaller capital outlay than would be required to secure the same profit for the existing shares of R.C.B.C. and Bwana M'Kubwa if the companies remain separate. As the two companies must draw fresh capital from the same general sources this has advantages for both. Further, this may legitimately be regarded as a saving of capital expenditure from the shareholder's view-point as well as from the point of view of copper production, though to a much greater extent in the case of the former than in that of the latter, the ratio being in this respect of the order of 3:1.

7. Consolidation would save expenses throughout the life of the mines.

8. Consolidation will not damage any of the company's powers to produce cheaply or diminish their ore reserves, and it will have little, if any, detrimental effect in the case of R.C.B.C. upon the actual proportion of the equity in R.C.B.C. adhering to any one existing share.

9. The present organisation of the R.C.B.C. Company is clumsy and cumbersome. Under consolidation it should be not only possible but relatively easy to secure simplification and much greater efficiency of management.

10. The Consolidated Company will secure the powerful financial backing of Messrs. Rothschilds and Messrs. Morgans as leaders. This alone appears to me to have great value in connection with the need of financing new mines in the present position of world markets. I return to this at length later.

These were and are my views expressed briefly for my own mental clarification, but I should like to read to you Sir Ernest Oppenheimer's views on the same subject. He wrote these for my information in August of this year.

"I have been considering the possible future of the Bwana, R.C.B.C. and N'Changa Companies, and I have very definitely formed the opinion that it would be of the greatest benefit to those companies, and hardly less so to the Northern Rhodesian copper industry as a whole and the country itself, if an operating company"—(this suggestion has not been proceeded with for reasons which seem to be conclusive)—"could be formed which could acquire the undertakings of the three companies mentioned."

AVERTING COMPETITION.

Among the many reasons which have led me to this opinion, the following appeal to me particularly:—

1. The establishment of such a company would ensure collaboration and avoid competition with regard to production.
2. The formation of one large company would greatly strengthen the position *vis-à-vis* legislation and the Government authorities generally.
3. For purposes of finance. This is certainly as important as either of the previous reasons.

N'CHANGA POSITION.

This completes what I have to say on the general policy of consolidation. There remain certain special considerations in so far as the property of the N'Changa Copper Mines, Ltd., is concerned. It seems to us, who came in later, a pity that the N'Changa Company was ever formed as a separate entity. No doubt it seemed wise at the time, but subsequent discoveries have shown that the concession area just missed a very rich ore-body—in fact it is just in the wrong place.

In my view, consolidation will pay the shareholders of R.C.B.C. both in ultimate share values and in earlier dividends, provided that the terms of the purchase and of the exchange of shares are fair.

We take over the disposable properties of the Bwana M'Kubwa Company as a going concern as at September 1st; all debts accrued due at that date being paid by Bwana. We do not take over the company or any of its debts or debentures or any liability it may have for income tax.

We have had the N'Kana mine under continuing observation. So far as I personally am concerned, the most important fact is that it has been seen and visited not only by the managing director of the Rio Tinto Company, but by that company's technical director and also by its chief geologist.

A WELL-DISCUSSED PROPOSITION.

Remember we have lived with this thought of consolidation, tested it, examined it, studied it for fourteen months, and that outside a very small and limited circle of those whose interest is exclusively or overwhelmingly in this company, not a word was said to anyone until August of this year; since then we have been negotiating, discussing, arguing, with the result that ten of your directors are in favour of consolidation on these terms, and two are not. There is associated with the latter in this opposition at least one large shareholder, Mr Congden, whose name is well known in the American copper world, and who feels, I understand, as they do, but even more strongly. There are some smaller American shareholders who have also expressed opposition to the scheme. This one can only deplore, but I should be failing in my duty did I not tell you that seven out of the eight groups which hastily came together two years ago to save the eyes and heart of your property, as well as the N'Changa Mine from passing into non-British hands, are in favour of this amalgamation, and one, and only one, is against it. The seven are:

The British South Africa Company.
The Rio Tinto Company.
Messrs. Rothschild.
The Rhodesian Anglo-American.
The Anglo-Metal Company.
Selection Trust.
Minerals Separation, Ltd.

The one opposing is the Union Corporation, whose representative on the board is Sir Henry Strakosch. Apart from him, I know of only one other British shareholder opposed to this scheme either on the general question of consolidation, or on the terms to be offered to the Bwana M'Kubwa Copper Mines, Ltd.

With regard to the second resolution—the offer to be made to the N'Changa shareholders—I know of no opposition having been expressed or urged anywhere. The terms seem to be quite reasonable to us, and anyhow the N'Changa shareholders can take them or leave them as they will, provided you approve of the offer being made.

With the third resolution we return to the main question: Is it wise to absorb the Bwana M'Kubwa assets from our point of view, as shareholders in R.C.B.C.? Let us see what would happen if we did not.

First, we should have either to float a company to do the mining, or get the terms of our grant from the Chartered Company changed, or, alternatively, we might sell our rich ore to N'Changa for shares in that company. That, indeed, was the first idea we explored, but in fact it is hopeless. There is no salvation that way. Let us suppose that we had got our concession altered, and that we now

had to proceed to finance this company to bring our property to production.

For ourselves, by ourselves, we should need not less than £5,000,000, and it would be, say, five years before any adequate revenue could be expected. In such a case debentures would be out of the question. The money would have to be raised by the issue of a large number of new shares, with the inevitable result that existing shareholders would have to find their proportion of the new money or suffer for all time a diminution of their share of the equity.

ATTITUDE OF DIRECTORS.

As you know, your board was divided in the proportion of ten to two on the questions before us. Let me state the point of view of the minority in their own words. I have here a statement drafted by them which I shall read to you.

"Sir Henry Strakosch and Mr McConnell were against the amalgamation. They understand, however, that in spite of the objections they have raised, shareholders holding a majority of the total issued capital of your company are prepared to vote in favour of the resolution, and in these circumstances Sir Henry Strakosch and Mr McConnell feel that no useful purpose would be served by placing before you, in full, their case against the scheme. They think it only proper, however, that I should inform you in general terms of the principal reasons for their dissent. They are against the scheme because they are of the opinion:—

"(1) That the ore-body already disclosed by boring on your property is by far the richest and widest in Northern Rhodesia, and that its ultimate value is likely to be far greater than that assumed in arriving at the basis of amalgamation.

"(2) That your company has sufficient funds in hand to continue its programme of development and exploration for at least a year, and that it has no need, for its own account, to raise further funds in this time of acute financial depression, while by acquiring the Bwana assets your company will take upon itself an immediate and onerous financial commitment.

"(3) That those opposed to the amalgamation handed to your board certain technical reports, including one from an eminent firm of consulting engineers, who were responsible for bringing three of the largest copper mines in the world into production, which reports were to the effect that either amalgamation is undesirable or the terms inequitable to this company.

"(4) That the proposed method of finance is not a desirable one, involving, as it does, burdening your company with a debenture issue at a time when the shares of the company stand at a very high premium and when the company has not yet reached a profit-earning stage."

That is the end of Sir Henry Strakosch's and Mr McConnell's statement. Clearly, their view is different from mine, but I do not wish you to think that your board is going to be torn by internecine strife. It was a real pleasure to me earlier in this meeting to propose the re-election of our American colleague, Mr McConnell to the board, and if Sir Henry Strakosch had been a candidate at this time I certainly should have asked him to allow me to propose or at least to second his election.

A QUESTION OF POLICY.

I am altogether in favour of big non-British interests participating in these great enterprises, and we welcome the representation of the big American interest for which Mr McConnell speaks, even though on this occasion he, like Sir Henry Strakosch, does not see eye to eye with the rest of the board.

And now let me say this: My mind has never been obsessed by this question of ratio, which I have necessarily dealt with at length to-day. Provided that no glaring injustice be done to any of the three companies concerned, I am indifferent as to a difference of 5 or even 10 per cent. In my view, the question is one of policy.

What we are doing to-day is to create a company with funds secure, big enough, strong enough to bring to full production a great part of the unbelievably rich copper field of Northern Rhodesia, to enable us to build up a great refining industry in this country, and to secure for the Empire a worthy share of the copper industries of the world.

SIR HENRY STRAKOSCH'S REMARKS.

Sir Henry Strakosch, addressing the meeting, said: Mr Chairman, ladies and gentlemen,—Sir Auckland Geddes has informed you, in general terms, of the principal reasons why Mr McConnell and I are opposed to the scheme of amalgamation which is before you. Nothing I can add would serve any useful purpose or alter the course which the proceedings of this meeting are likely to take, for I have been assured that the majority of the shareholders of your company are in favour of the scheme, and will cast their votes accordingly. If they do—and I have no reason to doubt that they

will—there is nothing to stand in the way of the scheme being consummated.

I have been asked by a number of people what, in the circumstances, my further course of action will be. It is only right that I should make my position clear. Whatever I may think or feel regarding the propriety of carrying through a transaction of this magnitude in the face of the considered opinion of a substantial minority, I am quite clear in my own mind what is the right thing for me to do when this meeting has given its decision in favour of the scheme. It is to accept the verdict of this meeting ungrudgingly, and to co-operate loyally with my colleagues with a view to making the greatest possible success of the scheme.

This is the line of conduct I propose to pursue, and I should like to add, if I may, that my views of the exceptional merits of our property encourage me to think that a very prosperous future lies in front of it. I am supported in this view by a careful investigation of the available data by a firm of mining engineers of the very highest standing in copper mining. The success they have achieved in developing, equipping, and bringing to the producing stage three of the greatest copper mines of the world—involving problems not dissimilar to those with which we shall have to deal—lends exceptional weight to their opinion. Without it I should not have ventured to express a view which might lay me open to the charge of excessive optimism. The ore body which has been disclosed in our company's property west of N'Changa is unique. Its extent, its width, and its copper contents, as so far indicated, are such as to justify the belief that the exploitation of this ore body alone will ultimately make your company one of the biggest and cheapest copper producers in the world.

The resolutions were carried.

MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED.

ENCOURAGING DEVELOPMENT AND LOW COSTS.

The annual general meeting of the Messina (Transvaal) Development Company, Ltd., was held, on the 17th instant, at the Cannon Street Hotel, London.

Lt.-Col. John P. Grenfell (the chairman) said that the working profit amounted to £148,920, as compared with £150,549 in 1929. It was proposed to pay a final dividend of 5 per cent., making 20 per cent. for the year, to place £50,000 to reserve fund and £35,584 to taxation reserve, bringing the total reserves up to £285,584, and to carry forward £45,742.

While they were satisfied with the financial position, they were glad to say that further development of the Messina and Harper mines had been productive of good and important results. Increased outputs had been obtained during the five months of the current year.

He informed the shareholders a year ago that costs were above normal, because they had taken advantage of high prices of copper to increase development. This policy of expansion had been continued, and as a result there was an increase to 1,155,132 tons in the ore reserves. The necessary corollary of costs of production being above the normal had also followed, and it gave them the opportunity, when the heavy fall in the price of copper took place in April, of making somewhat drastic curtailment of development, without affecting, either now or in the future, the productive capacity of the mines, and in consequence to-day their costs were low. Some few years ago he stated that their costs were in the neighbourhood of £42 per ton all in, which included as much development as was necessary to cover their ore-production tonnage. The same facts applied to-day, although they were working a grade of ore which was 4 per cent. copper lower than they did at that time. Indeed, they were doing better, and actually for November their total costs were £37 per ton electrolytic copper.

Mr W. T. Anderson, C.B.E., M.Inst.M.M., said that the Harper Mine during the year had shown great improvement in depth, and was establishing itself as a valuable high-grade proposition. The knowledge that there were large reserves of ore within reasonable distance of attack from the old levels placed the Messina Mine in a very satisfactory and solid position.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

CRITTALL MANUFACTURING COMPANY, LIMITED.

CONTINUED PROGRESS.

Presiding at the ordinary general meeting of the Crittall Manufacturing Company, Ltd., held on the 17th instant, at River Plate House, London, Sir Valentine Crittall, J.P. (chairman and managing director), in moving the adoption of the report and accounts, said that before dealing with the business of the meeting he wished to refer to the retirement of Mr F. H. Crittall, his father, from the position of chairman of the company. Having now reached the age of seventy, he felt that he was entitled to some relaxation from his lifetime labours on behalf of the metal window industry. All the same, the company would continue to enjoy the full benefit of his experience and guidance, and they would be pleased to know that at the present time he was on a world tour of inspection of their overseas interests.

THE YEAR'S WORK.

Dealing with the year's work, he stated they would note with satisfaction that the profits amounted to £250,203 for the past year, an amount which he felt sure they would regard as highly satisfactory. Their company was originally established for the purpose of converting users of wooden windows to that of metal, and early in its history they realised that it was necessary to create manufacturing units and distributing organisations with a view to putting their specialties on the market by an economic and profitable basis. Since 1924, therefore, they had been engaged in carrying out this object. He ventured to say that in their factories at Braintree, Witham, Maldon, and Silver End, they possessed manufacturing units which compared favourably with any plants either in this or any other country. In building up an organisation, it was impossible to obtain during the period of construction the results which they ultimately aimed at. They had now reached the stage when he could definitely say their present plants were complete, and the organisation was functioning in a manner which accorded with their highest expectations.

From the point of view of the present-day value of their assets, he assured them that as a result of the additional improvements which had been effected the balance-sheet figures representing them were arrived at on a conservative basis, and when trading conditions again became normal the results they looked to obtain from them would satisfactorily establish that fact. Although they had introduced every conceivable labour-saving device and were using three times the amount of mechanical power per employee they had now more than double the men employed as compared with 1924. This was an achievement which he thought they might be justly proud of. In their overseas business they had during the past year experienced considerable difficulties, but they were satisfied the acquisition of manufacturing plants in the United States and Germany justified their expectations and would enable them to take full advantage when the long-hoped-for recovery in world trade came about.

THE SILVER END FACTORY.

In regard to Silver End, he pointed out that in 1925 more than one-third of their employees were cycling daily distances which constituted serious inroad on their working efficiency. They had exhausted local supplies of labour and available housing accommodation, and further progress demanded more labour. The necessary ground was therefore acquired to make good this deficiency. In addition to the houses and complementary buildings, there was established there the factory which made the most expensive parts for their windows. Every week half a million small parts, mostly brass work, were produced outright in this, one of their most complete factories; in fact, it was from the efficiency of their Silver End factory that much of their success was achieved. The whole of their transport system was centralised there, and the importance of Silver End to their organisation could be gauged from the fact that by far the larger part of their output was moved by road. The volume of stock they carried represented real liquid assets which were turned over several times during each year and was annually subjected to rigid valuation.

They had paid particular attention to their sales organisation, and they were proud of the fact that through its development they had over a long period of years built up an enterprise which stood for service in every sense of the word. Through it they were able to maintain personal contact with their customers throughout the world.

Every year saw a definite move in their productive efficiency, and despite adverse conditions their sales and sales prospects warranted them in looking forward to the future with the utmost confidence.

The report and accounts were unanimously adopted, and the proceedings closed with a vote of thanks to the chairman, directors and staff.

RICHARD THOMAS AND COMPANY, LIMITED.

CONDITIONS IN THE TIN PLATE INDUSTRY.

The eighty-first ordinary general meeting of Richard Thomas and Company, Ltd., was held on the 18th instant, at the Cannon Street Hotel, London, E.C., Mr Henry Bond (the chairman) presiding.

The Chairman said that the results of the past year showed a gross profit of £391,000, and a net profit, after providing for interest on debentures and loans, and providing £57,000 for depreciation, of £204,000. A steady demand for tinplates was maintained up to the end of August. Although the world-wide depression had affected demand in almost every other branch of the iron and steel industry all over the world, tinplates held their own for longer than they could have reasonably expected. At the same time South Wales and every other country producing tinplates worked during the latter period of the year substantially below their full capacity, and it was due to domestic and international arrangements that prices were kept on a profitable level, while at the same time they were able to maintain their share of the world business.

If the trading results of the year could be maintained, they should rapidly reduce their floating indebtedness. Until the floating indebtedness could be reduced by a substantial sum or a substantial portion of it could be funded by an issue of debentures, it was not sound even if it were practical to distribute any substantial part of the profits among the shareholders. At the last meeting he held out the hope that they might pay some dividend this year. That hope was justified by the profits which had been made, but conditions which he could not have foreseen and their inability to raise fresh money compelled them to use all the profits in reducing their floating indebtedness.

CURRENT YEAR'S PROSPECTS.

In regard to the prospects of the current year, they could not expect him, having regard to trade conditions all over the world, to speak with any confidence. Since August last there had been a substantial falling off in the demand for tinplates, and the trade in South Wales to-day was only working to about 50 per cent. of its capacity as compared with an average of over 75 per cent. during the twelve months ending September 30th last.

The falling off in the demand for tinplates and sheets had restricted the demand for steel. That restriction had been further accentuated by the increased imports of steel from the Continent which had been sold into this country of recent months regardless of cost.

At their Redbourn Works in Lincolnshire they had been producing 3,000 tons of steel per week, one-half of which had been sent to their own works in South Wales in the Newport district and one-half had been disposed of to sheet makers in different parts of the country.

He emphatically denied statements which had been made by prominent men in the House of Commons and outside, that the Welsh tinplate industry owed anything to imported steel. During the last two years the industry had consumed nearly 1,000,000 tons of steel per annum. Possibly 150,000 to 200,000 tons of that steel had been imported with some benefit to those tinplate makers who had purchased it, but that import had never increased the demand for tinplates by a single ton. On the other hand, it had had a demoralising influence on the selling price of their product, and conditions in the tinplate industry would not be so difficult to-day if those imports were not coming into the country at such low prices.

DOMINION PREFERENCE.

Referring to Dominion preference, he said that we were importing canned goods to the value of £20,000,000 per annum, mostly canned fruits, fish and vegetables; much, if not all of this, could be produced within the Empire. A policy which would admit canned goods into this country produced within the Empire on special terms if packed in Welsh tinplates would be of permanent benefit to the Empire and to the Welsh tinplate industry. He was alive to the fact that India and some of the Dominions had established their own iron and steel industry, but an agreement with them by our own manufacturers under which they worked together so that those young industries in the Dominions should have their share of the business which they could economically do and we take the rest should be possible.

Of the total output of tinplates in South Wales last year, 27½ per cent. was consumed at home, 21 per cent. was exported to the British Empire, and 51½ per cent. to other countries. There should be no reason why the exports to the British Empire should not be increased. Some years ago, at the instigation of Welsh tinplate manufacturers, an active campaign was started to establish increased canning in this country; that campaign continued to show important results, and they could look for a substantial increase in the home demand for tinplates in the next few years.

The report and accounts were unanimously adopted.

PANAMA CORPORATION LIMITED.

PHENOMENAL VALUES.

The fourth ordinary annual general meeting of Panama Corporation Ltd., was held, on the 17th instant, at River Plate House, London.

Mr Duncan Elliott Alves, J.P., the chairman of the Corporation, presided, and in the course of his remarks said: "The Corporation's operations in Panama have been repeatedly referred to in different organs of the American press and the local press of Panama; it is voiced that the gravest suspicions have been engendered in certain quarters in the United States in connection with the company's operations in relation to the Panama Canal."

After thorough investigations locally by a special mission sent from Washington it was officially announced that they were satisfied as to the *bona fides* of this British enterprise and its operations in Panama.

It is well that it should be appreciated that, so far, no incident has occurred in connection with our operations in Panama to which the slightest objection could be taken with regard to our relationship with the Panamanian Administration. Our relationship with that Government is most harmonious. The Government of Panama have only in view one objective, and that is the opening up and development of the resources of their country, looking ultimately to the prosperity and many advantages that will accrue to the nation; in this connection they have done everything in their power to assist and support us in our strenuous endeavours to that end.

MR HUGH F. MARRIOTT'S SPEECH.

Mr Hugh F. Marriott: I have extreme confidence that your properties in Panama contain within their boundaries the next coming goldfield of the world.

The upper levels were about 29 shillings to the ton. Later examination of the lower levels has disclosed that the gold-bearing portion of the lode was lying in mineralised country on one side or the other of the tunnels.

In one place on the 4th level from 1,850 feet onwards the later development exposed ore over a distance of 130 feet, 36 inches wide, assaying from a few shillings up to 588 shillings a ton.

At 1,882 feet a sampling result over a further 22 inches of lode matter, in the wall, assayed no less than £636 to the ton.

This section of the lode was then risen on and a bulk sample 8 feet above gave a result of 76 shillings to the ton.

A winze below this point gave over 32 feet, 63 shillings a ton over 53 inches. Further samples taken at 50 feet gave 46 shillings over 72 inches.

The whole of these results show, without the inclusion of the very rich sample, ore of double the value of that disclosed in the upper levels, and of considerably greater width for mining purposes.

Near the vertical shaft, 1,667 feet north a total distance of 415 feet assayed 52 shillings a ton over 31 inches. This included ore of 97 shillings a ton over 40 inches for 115 feet.

In the northern workings on the fifth level a crosscut 300 feet north of the shaft exposed ore of 44 shillings a ton over 60 inches. At 607 feet from the shaft richer ore was encountered of the value of £22 a ton. Driving was continued in this rich ore and has opened up to date no less than 71 feet of distance averaging £17 to the ton over a width of 29 inches. One sample which first gave a return of £60 a ton on being checked assayed gave £160 a ton.

The estimated profit at Remance of 13 shillings a ton as a separate concern can easily be increased, when the mine is a component part of the workings of the whole Panama Corporation, to a profit of £7 a ton.

In the Sabalo river, we have already proved as you know several million cubic yards of alluvial valued at 18 cents. or 9d. a cubic yard.

The third property getting ready for early production of gold is at El Mineral on the north side of Veraguas.

The larger proportion of the gold consists of nuggets with a small proportion of fine gold. Rich concentrations of gold will be found as extraction operations proceed.

Results are up to £10 and £20 per cubic yard, and the output as a whole may be counted on to give up to 6 shillings a cubic yard. Another property that is ready for the first unit of equipment is Mina Blanca Mine in the Hatillos district.

I anticipate that the profit from these four properties, when operating on their full equipment, will be between £350,000 and £400,000 annually.

On the Chiriqui Line, west of Mina Blanca and Remance, we have found over 40 miles at least a dozen exposures of similar outcrops.

The report and accounts were unanimously adopted.

A full report of this meeting may be had on application to the Secretary, 14 Waterloo Place, London, England.

THE CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

MINING PROFITS MAINTAINED. EFFECT OF ADVERSE EXCHANGE.

The eighteenth annual ordinary general meeting of the Chinese Engineering and Mining Company, Ltd., was held on December 18, 1930, at Winchester House, Old Broad Street, London, E.C.

Mr W. F. Turner (chairman of the company) presided.

The Secretary (Mr Alfred W. Berry) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The outstanding feature of the report and accounts for the year ended on June 30, 1930, is that whilst the business and profits of the Kailan Mining Administration have been satisfactorily maintained compared with the preceding year, and our share in dollars is almost exactly the same, the heavy fall in exchange has seriously reduced its value in sterling. Consequently the net profit of the year is £263,953 against £361,297 in the preceding year, before providing for income tax, which necessitates a reduction in the dividend. We recommend the payment of a balance dividend of 4 per cent., making 9 per cent. for the year free of tax, on the increased share capital of £1,960,000.

The gross profit of the Kailan Mining Administration for the year amounted to \$9,548,715. After providing for interest on the 6 per cent. Kailan bonds, £48,240, redemption of bonds for the year, £24,000, reserve for depreciation, \$1,432,307, the proportion of profit to which the Chihli Provincial Government is entitled, \$259,571, and other items, there remains a net profit of \$5,655,044.

PROFIT AND LOSS ACCOUNT.

The proportion of this profit brought to credit of our profit and loss account, together with interest in China, is £267,563, the conversion being at the rate of 1s. 4½d. per dollar, compared with 1s. 10½d. in the preceding year. Interest amounted to £33,514, and minor items bring up the total credit of the account to £307,381. Administration and expenses of all kinds in Europe amount to £20,816, which is about the same as before. The directors' percentage of £1,477, under article 83 of the articles of association, is about one-fifth of the figure for 1928-29. You will see at the foot of page 8 of the profit and loss account a note relating to directors' remuneration, which is required to be stated by clause 128 of the Companies Act, 1929. The larger item therein mentioned was explained in the directors' report submitted at the last general meeting; it does not relate to the past year. There is a debit of £21,134 on exchange account, after transferring £9,787 from reserve account. This represents the loss in exchange on the portion of the profits of 1928-29 remitted in the following year, and on the portion of the profits of 1929-30 remitted since June 30th last.

The net profit for the year as I have already said, is £263,953, compared with £361,297 for the preceding year. The balance brought forward from the previous year's account was £26,438, making a total credit of £290,391. On the other side we have income tax £109,103, an enormous proportion, over forty per cent. of our profit for the year, and an increase of £25,687 over the preceding year. The explanation is that the liability is based on the larger profits of the preceding two years. The balance to be carried to the balance sheet is £181,288. The interim dividend of five per cent., free of tax, paid on May 30th last, amounted to £98,000, which leaves available the sum of £83,288.

The further dividend of four per cent., free of tax, to be declared to-day, takes £78,400, leaving a balance of £4,888 to be carried forward.

STRONG FINANCIAL POSITION.

The balance sheet shows a strong financial position, and but for the fall in exchange would have been stronger still. The liabilities amounted to £66,263, consisting mainly of dividends and interest outstanding as usual at the date of our balance sheet. Reserve for income tax is £24,444, and for the half-year's interest on debentures to June 30, 1930, £23,760. The 6 per cent. first mortgage debentures stood at £792,000 after providing for the annual reduction by drawing of £24,000. The reserve account, after carrying through the scheme which was adopted a year ago for creating a bonus issue of capital and providing the expenses connected with it, stands at £92,235. On the other side there are cash £867,700, bills receivable

£21,196 and debtors £5,623, together £694,519. There is, therefore, a surplus of cash assets over liabilities of over £580,000.

The property account, described as "Property, rights and undertaking acquired under agreement dated 28th June, 1912, including the Kaiping collieries and mining rights, buildings, plant and equipment; land, harbour works and other property at the port of Chinwangtao; depots at various ports in China and other assets, at cost," is unchanged at £1,836,163. The note appended to this item is made in order to comply as closely as possible with section 124 of the Companies Act, 1929, as was explained in detail last year.

The next three items in the balance sheet consist of our accounts with the Kailan Mining Administration. The first is working capital account, £352,519, which shows a slight increase. The loan account, £50,143, is unchanged. The item, current accounts £26,339, explains itself. The shares and debentures in the Chinese Dredger Company, Ltd., £25,158, replace the amount which appeared as advances to that company last year.

KAILAN MINING ADMINISTRATION.

The next paragraph of the report deals with the business of the Kailan Mining Administration for the past year and the prospects of the year now current. We drew your attention at the last meeting to the fact that serious military troubles existed at that time. These continued during a great part of the year. It is therefore satisfactory to find that, despite all difficulties and fluctuations during the year, the sales reached four and three-quarter million tons, an increase of 342,000 tons over the preceding year, while the net working profit of the administration was only slightly below that of the preceding year. The military troubles appear to have died out, and the political situation looks more stable than it has done for a long time past. The sales for the five months July to November inclusive show an increase of 380,000 tons over the same period of the preceding year. At present all indications seem to be favourable for active business in Kaiping coal. Unfortunately, the rate of exchange has fallen further during the current year. We cannot attempt to forecast the course of exchange for the remainder of the year, but the present rate is extremely low and we may derive some encouragement from the fact that rates during the past five months have shown a certain steadiness, fluctuations having been within comparatively narrow limits. You will see therefore that our concern as to the results of the year lies in the question of exchange rather than in the earnings of the business of the Kailan Mining Administration.

MECHANICAL HANDLING PLANT.

The mechanical handling plant at Shanghai to which I referred a year ago is just coming into operation. The electrification of the first section of the railway at the port of Chinwangtao is proceeding, and the second section is about to be undertaken, while electrification of transport is proceeding as rapidly as possible at two of the principal mines. A new agreement has been entered into between the Kailan Mining Administration and the Peiping-Liaoning Railway extending existing arrangements as regards rolling stock and providing for the supply by the administration of six new locomotives to help to cope with the coal traffic. The development of the mines continues to be kept well ahead and the reserves are sufficient for all contingencies. Given a continuation of the present peaceful conditions and adequate means of transport, there is ample room for the expansion of the Kailan Mining Administration's business.

I move, "That the directors' report and accounts to 30th June, 1930, be and they are hereby received and adopted, and that a final dividend be declared of 4 per cent., free of income tax, making 9 per cent. for the year, free of income tax, payable on 19th December, 1930."

The Rt. Hon. Lord Southborough, G.C.B., seconded the resolution, and, after the chairman had replied to questions, it was put to the meeting and adopted.

The retiring directors, Mr Félicien Cattier, Colonel H. A. Micklem, C.B., C.M.G., D.S.O., and Major W. S. Nathan, C.M.G., were re-elected, and the auditors, Messrs Annan, Dexter and Company, were re-appointed.

The proceedings then terminated.

SHOWELLS BREWERY COMPANY, LIMITED.

BOARD'S SOUND POLICY.

The forty-fourth annual meeting of the shareholders of Showells Brewery Company, Ltd., was held on the 17th instant, at Winchester House, Old Broad Street, London. Mr. James Davenport, chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said:—When we met exactly a year ago I used these words: Financially, industrially, and politically the country has gone, and is going, through a testing time. We, as a company, are proceeding quietly and methodically with the improvement of our properties as and when opportunity offers, and as the financial conditions justify. But these are not times for spectacular policies, and our first consideration has been and will remain the maintenance of a strong financial position, so that if storms do come, we may meet them with equanimity.

The policy I then outlined has been followed persistently and without deviation, and the results are before you to-day. My remarks are going to be very brief, for the accounts speak for themselves. Our liabilities are a mere bagatelle—the amount of £143,114 for sundry creditors, including provision for taxation and contingencies, looks rather imposing, but, as I have told you on previous occasions, and I repeat to-day, the greater part of this item consists of internal reserves. Our liquid position is as strong as ever, with cash at the bank of over £34,000, Government securities standing in the balance sheet at approximately £102,000, and worth to-day considerably more, and other investments £36,000 (including over £48,000 of the company's own debentures), and worth in the aggregate a great deal more than the balance sheet figure.

The volume of our business has been well maintained, due firstly to the continued uniform excellence of our beers which our friends, Samuel Allsopp and Sons, Ltd., have maintained at the high standard to which the consumer has now become accustomed, and secondly to the efficient and loyal service we have had from Mr. Holland, our general manager, and the contented and faithful officials he has gathered round him. We tender our sincere thanks to them.

Conditions are still unsettled and disturbing. But our policy is well defined, and with the strong financial position we have and shall keep, we can look forward with hope to brighter times.

The resolution was carried unanimously.

HALL'S OXFORD BREWERY, LIMITED.

SIR RHYS WILLIAMS ON TRADE CONDITIONS.

The thirty-fourth ordinary annual meeting of the shareholders of Hall's Oxford Brewery, Limited, was held on the 17th instant, at Winchester House, Old Broad Street, London.

Lieut.-Colonel Sir Rhys Williams, Bart., K.C., D.S.O., chairman, presided, and there were present Messrs. J. J. Calder, James Davenport, and E. C. Quilter, directors.

Mr C. Robinson, secretary, read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said: This is the thirty-fourth annual meeting of the company.

During the year which ended on September 30th last the trade, in spite of adverse conditions, has been maintained, and the profits are slightly in excess of the previous year.

The company has continued its policy of generous expenditure on repairs and improvements of its hotels and public houses, and on the provision of further plant in the bottling department to meet the very satisfactory increase in the demand for our bottled ales and stout.

The directors propose to declare the same dividend as last year, namely, 22 per cent. free of tax, and to carry forward the sum of £59,316 3s. 1d.

I would like to take this opportunity of thanking the members of our staff for their good work and loyalty to the company. They deserve full praise.

I beg to move that the directors' report and statement of accounts for the year ended September 30, 1930, submitted to this meeting be seconded and adopted, and that a dividend on the ordinary shares of 12 per cent. free of tax (making with the interim dividend of 10 per cent. already paid, 22 per cent. for the year free of tax) be and it is hereby declared.

Mr. James Davenport seconded the adoption of the report and accounts, which was carried.

Mr J. J. Calder said he had much pleasure in proposing the re-election of Lieut.-Colonel Sir Rhys Williams, Bart., K.C., D.S.O., as a director of the company.

Mr Eustace C. Quilter seconded, and it was adopted. Mrs. Mackenzie moved that Messrs. Harrison, West, Ledsam and Company be reappointed auditors for the ensuing year.

Mr Bailey seconded the resolution, which was carried.

The meeting closed with a vote of thanks to Sir Rhys Williams for presiding.

IND, COOPE AND COMPANY, LIMITED.

INCREASED TRADING PROFIT.

The eighteenth ordinary general meeting of Ind, Coope and Company, Ltd., was held, on the 15th instant, at the Great Eastern Hotel, Liverpool Street, London.

Mr Louis E. Walker (the chairman) said that the past year, so far as this company was concerned, had been a quiet one, inasmuch as nothing of outstanding importance had occurred. Since the closing of the accounts under review, however, the board had entered into a provisional contract to acquire a controlling interest in the old-established firm of Messrs Budden and Biggs, of Strood, Kent. It was hoped that the licensed houses at present controlled by that firm would later on form suitable markets for the sale of the company's Romford product.

From a trade point of view the year had been an exceptionally quiet one, due, partly, to the deplorable state of trade, more particularly in the Midlands and the North. While he instanced the Midlands and North as being especially affected, he was sorry to say that the depression was now showing itself in the more Southern districts, which up to six months ago did not appear to have been materially affected. A secondary cause of quiet sales was the very wet summer experienced last year. Shareholders might wonder, having regard to the two factors just mentioned, why the company was able to show such satisfactory results. The answer was that they were deriving great advantage from the various businesses which had been acquired during recent years, the results of which had come up to their best expectations. Had trade generally in the country been anything like normal, their sales would have been considerably higher. He was glad to be able to say that the beers brewed at Burton, Romford, and at their small brewery in Liverpool had all been of excellent quality, and that the company had been able to maintain its connection throughout the country. The demand for beers in bottle continued to increase.

The trading profit for the year showed an improvement of £46,600, while the interest on trade and other investments showed a decrease of approximately £12,500. If the recommendations of the board were approved, the reserve for public-house improvements and the general reserve would be increased by £50,000 each, bringing those reserves up to £150,000 and £750,000 respectively.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended December 13, 1930, amounted to £8,540,000, against ordinary expenditure of £14,344,800. After allocating £490,000 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £118,200, the week's operations, as shown below, increased the National Debt by £6,413,000 to £7,740,997,000:—

REPORTS AND NOTICES.

BANKS.

ULSTER BANK, LIMITED.—The Report for the year ended November 29, 1930, discloses a net profit of £215,472, to which is added £62,650 brought in, making £278,122 available. Two half-yearly dividends absorbed £128,000. The sum of £50,000 has been put to reserve and £40,000 to contingent fund, while £60,122 is carried forward.

GOVERNMENT STOCK, &c.

CHILE TREASURY BILLS.—£2,000,000 Chile Treasury bills, maturing November, 1931, have been placed in London by N. M. Rothschild and Sons under discount at 5½ per cent. per annum and brokerage. £1,000,000 of the bills is being discounted as on the 27th instant, and the remaining £1,000,000 as on January 17, 1931.

INSURANCE.

ROYAL EXCHANGE ASSURANCE.—The Royal Exchange Assurance announces the following appointments, as from January 1, 1931: Rt. Hon. Lord Forteviot and Mr J. A. Tombazis as local directors attached to its Dundee branch, 51-53 Meadows. Mr J. A. Tombazis, F.C.I., after 40 years' service, has expressed a desire to retire on pension as from December 31, 1930, and the directors have accepted his resignation with regret. He joined the service of the Corporation in 1891 as an inspector and has been manager of the Dundee branch since its inception at the end of that year. Following his resignation, the directors have appointed Mr Tombazis to a seat on the Dundee local board. Consequent upon the retirement of Mr J. A. Tombazis, the Royal Exchange Assurance announces the appointment of Mr J. S. Inglis, at present manager of the Edinburgh branch, to be also manager of the Dundee branch. Mr J. A. McLaren, at present inspector at Dundee, has been promoted to the position of assistant manager.

MISCELLANEOUS.

THE BRITISH NORTH BORNEO (CHARTERED) COMPANY.—The following is financial results—North Borneo and London—for the first nine months of the current year (compared with the corresponding period of 1929), subject to deductions in respect of interest on debentures, certificates of indebtedness, depreciation, &c.:

	1929.	1930.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Wintry conditions have prevailed over the United Kingdom during the past week, the wet state of the ground being unfavourable for field work. Winter sowings, however, are showing up well in Southern localities, a wide area being under cultivation. Revised official estimates of cereal crops in England and Wales this season are much below the average for wheat and barley, due to wet harvesting weather. Growers are still reluctant to offer native wheat at current prices, consequently supplies at the principal statute markets were in small compass. On the import market prices continue to fluctuate within narrow limits, and little change in the general position is expected until new Southern Hemisphere crops are in circulation. Reports of unfavourable harvesting weather in Argentine and Australia have lately imparted a steady appearance to the market, but latest advices indicate improved climatic conditions, and with renewed pressure from Plate shippers, prices are sagging again. Russia still dominates the immediate situation, and large quantities in store and arriving provide millers with plentiful and cheap supplies of grist. Black Sea chartering operations have been resumed for January loading, but it is understood that comparatively few vessels are required to cover contracts of grain previously made. Any substantial movement, however, would result in another slump in face of excessive supplies already available. Canada is pressing offers at declining rates, recent bids being freely accepted. Business in this growth is steadily assuming larger proportions now that values are coming down more on a parity with competing kinds. The change of policy by the Canadian Pool in marketing future supplies through usual trade channels tends to inspire confidence of millers on this side, and will no doubt prove beneficial to Dominion growers. Pressure to sell feeding stuffs resulted in a downward trend of prices, maize in particular reacting sharply, especially for spot and near positions. Consumption, however, is fairly well maintained, and there is a fair business passing at the decline.

WHEAT.—Irregular. No. 1 hard Manitoba, ex ship 27s. 6d.-28s.; No. 1 Northern Manitoba, ex ship 27s.-27s. 9d.; No. 2 ditto, 26s.-27s.; No. 3, 25s. 6d.; Barusso, 61½ lbs., 23s. 6d.; Rosaf, 63½ lbs., 24s. 6d.; Australian, 28s. 6d.; choice white Karachi, 26s. 6d.; Russian, on sample ex ship, 23s.-25s. 6d.; landed, 22s. 9d.-24s. 9d. per 496 lbs. English new, 5s. 7d.-6s. 2d. per 112 lbs.

FLOUR.—Dull. London straight run, 26s. per sack for country deliveries, and 25s. London areas. Of imported, Manitoba patents, 24s.-25s. 6d.; Buffalo ditto, 23s. 6d.-25s. 6d.; Australian, 21s. 9d.-22s. 3d. ex store per 280 lbs.

MAIZE.—Declined sharply. Plate, landed 18s. 6d.; ex ship to arrive, 17s. 3d.; December-January, 17s. 3d.; January-February, 17s. 3d.; February-March, 17s. 6d.; No. 2 white flat African, landed 18s. 6d. per 480 lbs. Yellow maize meal, £6 5s. f.o.r. London.

BARLEY.—Dull and weaker. Californian old, landed 30s.-35s.; new, ex ship 30s.-41s. as to sample; Chilean brewing, landed 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, ex ship 14s. 6d.; landed 15s. 9d.; Danubian, ex ship 14s. 6d.; landed 15s. 9d.; Persian, landed 14s. 9d. per 400 lbs. English new malting, 6s. 3d.-12s.; feed, 4s. 6d.-5s. 9d. per 112 lbs.

OATS.—Quiet and easier. Plate, landed 13s. 3d.; ex ship 11s. 6d.; Chilean tawny, landed 13s. 9d.; best whites, ex ship 13s. 6d.; landed 20s.-20s. 6d.; mixed Canadian feed, landed 11s. 3d.; North Russian, landed 15s.; South Russian, ex ship to arrive 14s. per 320 lbs. English new, 5s.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Dec. 13	Cwts. 105,929	Cwts. 273,751	Cwts. 261,543	Cwts. 278,225
15 weeks to Dec. 13	2,047,452	4,156,789	4,436,829	3,816,449
Average price of English wheat per cwt.	s. d. 6 2	s. d. 9 6	s. d. 9 7	s. d. 9 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1930.

AMERICAN WHEAT MARKETS.

The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Dec. 18, 1929.	Jan. 2, 1930.	Dec. 3, 1930.	Dec. 10, 1930.	Dec. 17, 1930.
Winnipeg (No. 1 Manitoba), —Cents per 60 lb.	122	136½	148½	58½	58½	54
Chicago (No. 2 Winter), —Cents per 60 lb.	116½	121½	130½	76	77½	76½

The visible supply of wheat in Canada at 59,418,000 bushels shows an increase on the week of 3,701,000 bushels. Supplies a year ago stood at 74,158,000 bushels.

THE COAL TRADE.

Our Sheffield correspondent reports a revival of activity recently in both the export and household departments. Owing to the approach of the holidays there have been more numerous specifications for shipment delivery under contract. Best Yorkshire steams are still quoted at 16s. and 16s. 6d. f.o.b., these prices being fairly firm. New contracts are scarce. Householders have been getting in extra supplies for Christmas. The position of blast-furnace coke is still weakening and occasional sales are reported below 11s. at ovens. For shipment 15s. and 15s. 6d. f.o.b. at Humber ports is being quoted.

Our Workington correspondent writes:—The coal trade has been brisk since the Scottish competition disappeared temporarily. Orders are coming in freely in the Irish market and the cross-Channel shipments have during the past fortnight been heavy, the total from Workington alone being 20,070 tons. House coal is in strong demand, but industrial fuel is poor. Prices are firm. Best round is 21s. 6d.; washed doubles, 20s.; washed singles, 19s., all f.o.b.; smalls, 16s. 6d.; best house coal, 30s.; and house nuts, 28s. 4d. at station; gas coal, 28s.; West Coast coke is in only moderate local demand at from 17s. 9d. to 18s. 3d. per ton.

Our Glasgow correspondent writes:—The coal market is only now getting back to normal following the unsettlement caused by the stoppage at the mines. Supplies of coal are, however, still not plentiful, and the collieries continue to quote relatively high prices for whatever coal they have available. There is little or no new business being booked so far as the shipping trade is concerned, and in the case of the London market the shipments being made are largely against old contracts. To-day's prices are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s.; splint best, 16s. 6d.; splint second, 15s. 6d.; navigation, 17s.; navigation second, 15s.; Hartley, 16s.; steam, 13s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 13s. 3d. to 13s. 6d.; singles, 12s. 6d.; pearls, 12s. 3d. to 12s. 6d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d. to 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 14s. 6d. to 16s. 6d.; doubles, 13s.; singles, 12s. 6d.; pearls, 12s. LOTHIAN.—Prime steam, 12s. 6d.; secondary steam, 12s.; trebles, 13s. 6d. to 14s. 6d.; doubles, 12s. 6d.; singles, 12s. to 12s. 6d.; pearls, 12s. Ayrshire.—Unscreened navigation, 16s.; jewel, 18s.; steam, 13s.; trebles, 14s.; doubles, 13s.; singles, 12s. 6d.; pearls, 12s.; dross, 11s.

Our Cardiff correspondent writes:—Conditions on the Cardiff coal market have been more favourable this week than at any period since the beginning of the year. The approach of the holidays and the uncertainty of the issue of the wage negotiations have accelerated shipments, and so heavy has been the demand that there is an actual shortage of prompt supplies of some of the steam coals. There has been no movement in prices, but minimum figures have been obtainable without any difficulty. One or two important contracts, including that of the Egyptian State Railways, are also under negotiation. There has been a further interruption in the

discussion of the terms of a permanent wages agreement. There was a failure to agree at a joint meeting on Monday, and the miners have again referred the dispute to the National Industrial Board, although on Monday they were informed by the owners that under no circumstances would they appear before the Board, but were prepared to leave any unsettled questions to independent arbitration. The collieries have not yet been all informed of their quotas for the March quarter of the present year, but it is anticipated that the authorised production will be about 1½ million tons less than in the first three months of the current year. In some cases the restriction will be between 14 per cent. and 15 per cent., though the average will be less. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 19s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s. 3d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; best smallsteams, 13s. to 13s. 6d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 14s. to 15s.; best anthracite large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 9s. to 9s. 3d.; foundry coke, 29s. to 35s.; patent fuel, 20s. to 21s.; pitwood, ex ship, 27s. 3d. to 27s. 6d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The seasonal falling off in business which usually sets in at the end of the year has commenced rather earlier than usual. This may be ascribed largely to the reluctance of stockholders and other buyers to carry over the end of the year a larger stock than they can help, and this tendency is likely to be more pronounced in a period of bad trade. The tone at the weekly meeting of the Exchange on Tuesday, however, was by no means depressed, and it was suggested that the falling off in buying at the present moment should lead to an increased demand in the New Year, when stock replenishment orders will have to be placed. The recent improvement in the demand for pig iron has not been maintained, and stocks appear to be accumulating in most of the producing districts. The demand for semi-finished steel has been quiet, but a few fair-sized orders are reported to have been placed. Many of the Continental works have withdrawn from the market for the time being, and as a consequence British producers have taken some orders which in the ordinary way would have gone to the Continent. It is in the finished steel department that the seasonal falling off in trade is most noticeable, and both British and Continental works have been affected. The export markets also remain lethargic. Recently there was some active buying from the Far East, but most of the business was placed on the Continent, although a small share came to the British works.

Our Middlesbrough correspondent writes:—There is nothing new in regard to the market for Cleveland iron, which remains extremely quiet. Consumers have recently bought a few small parcels to complete their requirements up to the time of closing down for the holidays at the middle of next week, but they still decline to discuss forward business at the present level of prices. At Tuesday's weekly market no change was made in the official quotations, which remain: No. 1, 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s., f.o.b. or f.o.t., and there was almost an entire absence of business. Makers are evidently of the opinion that to reduce prices now would have no appreciable effect, and that it is better policy to wait until the holidays are over before making any move. Consumers urge that substantial concessions must be made or they will be compelled to use increased quantities of Continental iron, which is freely offering at much cheaper prices than Cleveland, and Midland brands are also obtainable on better terms. The demand for hematite is a little quieter owing to the approaching stoppages of consumption, but the position has not weakened and a resumption of buying is looked for early in the New Year. Makers adhere to 71s. for ordinary mixed numbers for delivery a few months ahead, at which figure they have been able to do business, but for prompt lots they are still willing to accept 70s. 6d., and it might be possible to secure supplies at a trifle less. Shipments of pig iron have eased off, the total quantity

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low. Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £78,000,000. Annual Income £11,500,000. Full particulars on application.

MUTUAL PROVIDENT SOCIETY Established 1849.
73-76 King William St., London, E.C.4.
D. E. WALKER, Manager for the United Kingdom.

red to the 16th instant being 6,136 tons, compared with 7,127 to November 16th. In the finished departments very few orders are coming to hand, and there will be a somewhat stoppage of operations at most works for the holidays. It is hoped that by the beginning of January there will be an accession of fresh business that will ensure more regular working in the different plants. Prices are generally unchanged. The ore is practically idle. Best Bilbao rubio is now nominally for prompt and 16s. 6d. to 17s. for delivery over the first few days of next year. The freight Bilbao/Middlesbrough for 7 tonnage is about 5s. There is only a poor demand for coke, and this is offered for early delivery at 17s. delivered works, and this has been shaded for odd lots for very prompt delivery. The number of furnaces in operation in the district is unaltered at 25.

Our Sheffield correspondent writes:—The large steelworks in heavy section have all stopped deliveries of raw materials, most of them have arranged to close this (Friday) evening, the holiday, which in some cases will extend over three weeks. Prospects for the New Year are obscure, as there is little work on order books and few inquiries. Continental soft steel billets being offered in this country at 20s. per ton below British, but owing to the poor state of trade, the quantities being offered are not relatively large. The decline of exports to Australia is not so pronounced. Overseas trade continues to be weak in the situation. So far as Sheffield products are concerned there is scarcely a healthy foreign or Colonial market. Prices of steel material have undergone no change for a long period. The pig iron continues steady, and has lost no further ground. There is a moderate home demand for tool and alloy steels and tools, especially from builders of commercial motor vehicles, who are busy.

Our Workington correspondent writes:—Trade has fallen to a low ebb at the end of the year in the North-West Coast of the pig iron trade. Only six furnaces now remain in draught at Workington and Ulverston. Two of these are on alternate days and one is on manganese alloys. In spite of the restriction on the heavy steel industries are in brisk demand. Competition from the East Coast makers of hematite is not so pronounced. Overseas trade continues to be weak in the situation. So far as Sheffield products are concerned there is scarcely a healthy foreign or Colonial market. Prices of steel material have undergone no change for a long period. The pig iron continues steady, and has lost no further ground. There is a moderate home demand for tool and alloy steels and tools, especially from builders of commercial motor vehicles, who are busy.

"THE INVESTORS' CHRONICLE"
20 BISHOPSGATE, LONDON, E.C.2.

£4 6s. 6d. at Sheffield; and £4 8s. 6d. at Birmingham. There is only a small call for special descriptions of iron which stand at from 2s. 6d. to 5s. per ton above the aforementioned figures; malleable iron is a quiet trade at £6 2s. 6d. per ton delivered at Birmingham, and ferro-manganese is dull at £12 per ton export. The steel trade is in so poor a condition that two furnaces have had to be damped down at Barrow, and there is no activity in the steel works there, while at Workington there is nothing more than spasmodic activity. The mills at Workington are on rails, sleeper plates and billets for home users, but it is improbable that they will work again until the beginning of the year. Native ore at 16s. 6d. to 18s. 6d. per ton is in diminished local request, and there are very few deliveries to East Coast or Scottish users.

Our Glasgow correspondent writes:—Until more work is actually in progress in the Clyde shipyards there is little prospect of any marked improvement in the position at the steel works in the West of Scotland. However, the announcement of the contracts just made by the Admiralty with Messrs the Fairfield Shipbuilding Company, Ltd., Govan, and with Messrs Beardmore and Company, Ltd., of Dalmuir, should relieve unemployment considerably in these districts once operations are commenced. There is some business being done in lighter sections for the requirements of structural engineers, who are comparatively well employed. Tube makers are not experiencing any increased demand, and there are very few inquiries for either bar iron or re-rolled steel bars. Bookings for black sheets during the past week have been very considerable, but prices remain low.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday inquiries for tinplates showed some improvement and a fair amount of new business was done. Prices, however, were a shade easier at from 15s. 9d. to 16s. per basis box. Galvanised sheets were unaltered at £11 5s. per ton and local steel bars at £5 per ton. The tinplate trade has been strengthened by the adhesion of the Melingriffith Company, and it is expected that the other few firms who are still outside will be persuaded to join.

OTHER METALS.

TIN.—The standard market continues to show a good deal of irregularity, and after a firm opening, prices gave way on realisations and declining Eastern cables, offerings being moderately absorbed. At the close prices showed some recovery. Standard cash changed hands at £107 5s. to £104 10s. and £105 17s. 6d., and three months £109 to £105 15s. and £107 5s. In the East, sales were reported at £112 2s. 6d. to £109 15s. and £111 per ton c.i.f. terms.

COPPER.—Business was on a fair scale, but the general tone remained weak and prices declined on liberal offerings. The close was active and firm. Standard cash changed hands at £45 7s. 6d. to £44 5s. and £45 2s. 6d., and three months £45 5s. to £43 10s. and finally £45 per ton.

LEAD market fairly active at times, but continued selling pressure imparted irregularity. Good soft foreign pig, December, sold £15 2s. 6d. to £14 12s. 6d.; January, £14 15s. to £14 10s. 3d.; March, £15 2s. 6d. to £14 12s. 6d. and £14 17s. 6d. per ton.

SPELTER quiet, and market unsettled owing to weakness of other metals. December sold £13 10s. to £13 7s. 6d.; January, £13 13s. 9d.; February, £13 18s. 9d. to £13 10s. and £13 16s.; March, £14 1s. 3d. to £13 15s. and £14; April, £14 to £13 17s. 6d. per ton.

ALUMINIUM maintained. Home trade, also export, £85 per ton.

ANTIMONY firmer. English regulus, £38 to £45; Chinese ditto, spot £25 10s.; December-January, £23. Chinese crude, December-January, £14 10s. per ton c.i.f.

ANTIMONY OXIDE.—December-January, £24 10s. per ton c.i.f.

ANTIMONY ORE.—December-January, 60 per cent., 3s.; ditto, 50 per cent., 2s. 6d. per unit c.i.f.

WOLFRAM firm. Chinese, December-January, sold 14s. 6d. to 14s. 9d., closing 14s. 6d. sellers per unit c.i.f.

QUICKSILVER steady. Spot £21 15s. to £22 per bottle.

TIN PLATES remain quiet. I.C. coke, prompt and forward, 15s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL: December 17th. The downward movement in prices has continued and quotations show a decline of about 35 points on the week. Monday witnessed a new low post-war record when January were traded in at 4.93d. Some short covering has, however, brought about some reaction, and to-night quotations are some 16 points over the lowest. There has been no aggressive selling, but offerings continue to be in excess of demand. The monthly figures of the Textile Association of America are most disappointing, being as follows: Sales, 88.6 per cent. of production, compared with 146.7 per cent. in October and 160 per cent. during September. The U.S. Department of Commerce Census Bureau issued on Monday its figures of consumption of cotton in the U.S.A. for November as 415,000 bales, against 444,000 in October and 544,000 bales in November last year. The daily rate, however, shows a slight increase, being 18,800 per working day for November, against 18,000 for October and 16,800 in September and 23,600 in November last year. Spot sales for the week, 11th to 17th (inclusive), are 19,000 bales, of which 10,790 are

American, 450 Brazil, 500 Argentine, 4,000 Peru, 1,820 Egyptian, 950 African, 300 East Indian, and 190 sundries. Imports for the same period are 55,000 bales, of which 18,527 are American, 7,261 Brazil, 2,319 Peru, 24,544 Egyptian, 978 African, 757 East Indian, and 614 sundries. Quotations to-day are: American Middling, 5.23; Egyptian Sakel, 7.75; Uppers, 5.92; Brazil Fair, 5.39; Peru G.F. Smooth, 5.69; West African Middling, 5.29; and East African G.F., 6.29.

MANCHESTER: December 17th.

Trade in the market has again been considerably disturbed by the further decline in raw cotton rates, and buyers have not been in the mood to place orders on a freer scale. There is a disposition in all quarters to adopt a waiting policy until conditions are more settled. It is feared that no distinct change in the situation can take place until after the turn of the year. Far Eastern trade in piece-goods has been blocked by the further drop in the price of silver, and with exchange at the present level it has been practically impossible to arrange contracts of any kind. Demand for India remains quieter and less satisfactory news is being received with regard to the political situation, especially in Calcutta. Shippers to Egypt and the Near East have looked on and only scattered sales have occurred for South America and the West Coast of Africa in printing and finishing styles. Only restricted operations have occurred in home trade fabrics. Prices in American and Egyptian yarns have continued to ease with cotton, and rates have been very irregular when tested. There has been an inclination on the part of buyers to be exceedingly cautious in operating.

THE WOOL TRADE.

Our Bradford correspondent writes:—The last series of London sales for this year terminated last Saturday, and altogether a very creditable time has been seen, notwithstanding that a distinct decline in both merinos and crossbreds has to be recorded compared with the close of the previous series. Merinos were absorbed very keenly, and Germany's support of crossbreds was most creditable. Generally speaking, merinos declined about 10 per cent., except the finest quality clothing, which was at par. Greasy crossbreds declined 10 to 12 1/2 per cent., and shipes a good 5 per cent. South African wools moved mostly in line with Australian merinos. Prices generally harmonised with those current in overseas markets. More wool has been catalogued in London this year, this being no doubt due to the low prices prevailing overseas. Considering the big supplies which confront the trade, it is creditable to see what a big weight has been distributed, and we are looking forward to a better market during 1931. The following shows the distribution of the wool sold at each sale in London this year, and the total takings of each section during previous years:—

	Home Trade.	Continent.	America.	Total.
	Bales.	Bales.	Bales.	Bales.
1930.				
First series.....	51,000	42,000	1,000	94,000
Second series...	58,000	63,000	3,000	124,000

1924.....	370,000	301,500	9,000	680,500
1923.....	577,000	488,000	36,500	1,101,500

There is no change in consuming centres. Consumption is well maintained, but new business is now largely suspended until the New Year. In the meantime, tops are barely firm, and every quality can be bought most reasonably.

HIDE, LEATHER AND ALLIED TRADES.

Market hides were again weaker at the auctions held at Manchester on Tuesday, when most weights in ox and heifer were 1/4d. per lb. cheaper than the previous week. Imported hides are still a difficult sale with most tanners, the limited amount of interest being mainly

London: 5, Walbrook. E.C.4. and 4, St. James's Street. S.W.1

centred on wet-salted South Americans, and sales have been made which have given to these goods a rather firmer tone. For instance, 6 1/4d. has this week been paid for Argentine ox, while light ox have changed hands at 5 1/4d. The position of dry River Plates is not very satisfactory; business for the most part is of a retail character, and although B.A. Americans have changed hands at from 6 1/4d. to 7d., sales are not sufficiently large to give a true indication of the market. Small exchanges have been made of African hides, the latest prices realised for Capes being 6 1/4d. and 5 1/4d. for first and second dry-salted, 20/30 lbs., and 7 1/4d. and 6 1/4d. for the same selection of dries. Australian hides are weak, with only a limited business being done. Producers and distributors of sole leather have this week felt the effects of the approaching holiday which, together with the fact that most of those engaged in the consuming industries are thinking about stocktaking, has resulted in a considerably reduced turnover. The position, however, is no worse than was to be expected, and, generally speaking, hopes for the New Year are not too black. Shoe manufacturers for the most part are engaged on clearing up the work in hand.

OVERSEAS PRODUCE.

SUGAR.—There was no new feature to comment upon. Prices were advanced 3d. per cwt. for both British refined and home-grown granulated, with business proceeding on quiet lines. Raw refining kinds still sparingly offered, with quotations from first-hands more or less nominal. Terminal sections, apart from slight irregularity at times, ruled steady and quite a fair amount of business arranged. Of raw, February delivery sold 5s. 11 1/4d.; March, 6s. 0 1/4d. to 6s. 2 1/4d.; May, 6s. 3 1/4d. to 6s. 5d. and 6s. 4 1/4d.; August, 6s. 6 1/4d., 6s. 8d. and 6s. 7 1/4d.; December, 6s. 10 1/4d. to 6s. 11 1/4d. Cuban receipts last week cabled 37,703 tons, against 28,377 last year; exports, 49,439, against 54,539; and stocks, 724,246, against 215,331. Messrs. Willett estimate stock on plantations and in transit at 829,000 tons, against 269,231 same time last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending December 13th totalled 175,830 tons, compared with 172,758 last year.

COFFEE.—Chief feature during the week proved strength of demand for all good to fine qualities in the cup. Full rates were realised; in fact, valuations were exceeded in many cases. Medium and common remain generally quiet, with slight irregularity.

COCOA.—Only small sales on the spot, but rates remained steady. Good to fine bold red Ceylon sold 72s. to 75s. Forward positions steadier though quiet. Accra G.F., January-March, to Continent, sold 28s. 3d. c.i.f. Terminal, March, sold 29s. 6d.; September, 30s.

TEA.—Indian auctions during the week totalled 49,728 packages, which received good support at steady prices except for some plain medium teas. Leaf teas, unless of attractive quality, met a quiet market, as export demand fails to revive. Ceylon sales of 23,371 packages experienced a good demand and in the main quite a firm market resulted. Some light liquoring teas disclosed irregularity, not to say slight weakness.

RICE.—Business moves very slowly, but sellers required previous rates for most descriptions.

BEANS AND PEAS.—Market in beans still very slow and quotations somewhat nominal. Peas quiet of sale on about former terms. Japanese, afloat, Liverpool, sold 13s. 9d.; ditto, London, 13s. 6d., and December-January at 13s. 6d. c.i.f.

POTATOES.—Supplies of potatoes have been large, but the market continued quiet and prices are practically unaltered.

SPICE.—Pepper, after showing weakness regarding forward positions, assumed a steadier tone. Lampong, October-December, quoted 5 1/4d.; January-March, 5 1/4d.; Muntok, October-December, quoted 9 1/4d., and sales in January-March, 9 1/4d. to 9 1/4d. Cloves quiet. Zanzibar and Madagascar, spot, London, 1s. 1 1/4d. London stocks of black reduced 20 tons on the week, but white increased 25.

FRUIT (Dried).—Currants: Market steady but generally quiet. Pyrgos, 30s. 3d. to 30s. 6d. Sultanias firm and in demand. Greek, 52s. to 75s. Raisins steady. Valencia, quarter boxes, 36s. to 45s. Dates in good demand for Siam. Figs maintained. Evaporated Fruits: Californian plums were in fair demand and large sizes are dearer. Apricots, pears and peaches move off quietly on about former terms. Almonds firm.

CANNED GOODS.—Fruit: Trade remains quiet for Californian descriptions, but English and Australian sell with fair freedom at steady rates. Spot demand for Singapore pines marked no improvement, but shipment offers were reservedly made at full rates. Fish: Sardines in limited request but prices steady, especially for fine quality. Salmon slow of sale. Lobsters dull and rates easy. Meat: Trade restricted for beef and tongues, general position being unaltered. Condensed Milk: Market remained steady. Honey: Trade generally quiet with ample supplies on offer. Jamaican white, 40s. to 45s.

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,822 tons, as compared with 9,920 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.4 per cent. of the supplies, as against 78.1 per cent. a year ago, and imported mutton, mainly New Zealand, formed 69.2 per cent. of the total supply, as against 70.3 per cent. last year. Beef prices have been firmer, while quotations for mutton showed an easier tendency.

RUBBER.—Business was on a moderate scale, and tone of market proved irregular. Sheet spot sold 4½d. to 4¾d.; January, 4½d. to 4¾d.; January-March, 4½d. to 4¾d.; and 4¾d.; April-June, 4½d. to 4¾d.; July, 4½d. to 4¾d.; July-September, 4½d. to 4¾d.; October-December, 4½d. to 4¾d. To New York, estate sheet, December-January sold 4½d.; January-February, 4½d.; February-March, 4½d. c.i.f. Estimated Straits shipments to all parts for first half of present month, 23,500 tons. London stocks on the week increased 616 tons, landings 1,971, deliveries 1,355, stocks 77,493, against 53,180 same time last year. Liverpool stocks 68 down, landings 780, deliveries 848, and stocks 40,281, against 18,263 last year.

HEMP.—A quiet market resulted regarding Manila parcels and trend of values favoured the buyer. J.2, January-March, quoted £23; K, sellers £22; L.1, £21 15s.; L.2 and M.1, £21 15s.; M.2, £21; H at £22 5s.; and G, £23 10s. Sales K grade, January-March, £22 c.i.f. African sisal, No. 1, f.a.q., December-February, sellers £20 10s. c.i.f. Receipts last week amounted to 19,000 bales, against 29,000 last year and 24,000 in 1928. Estimate for next week 24,000, and week after 23,000. Manila shipments last week, to the United Kingdom 6,000 bales, Continent 4,000, America 5,000, Japan 4,000, other countries 2,000, local consumption 1,000, making stocks 102,000 bales.

VEGETABLE OILS AND OILSEEDS.—Markets have again taken an easier turn. Lower Argentine options and the pressure of the new crop have caused weakness in linseed, Plate on spot at Hull having declined to £10 17s. 6d. For December clearance £10 has been paid, and a small trade has been done in January-February and February-March, at £9 2s. 6d. to £9 5s. Indian linseed is in some demand, and Calcutta to London December shipment is reported at £12 17s. 6d. and new crop April-May at £10 7s. 6d. The new Argentine crop is now on the move in substantial volume, and the unsold balance of the old crop is being gradually reduced. The quantity of linseed on passage to Europe is now 126,000 tons, against 38,100 tons a year ago. Cottonseed has had a sharp set-back, black Egyptian, December landing, having been done at £5 16s. 3d., and January-February at £5 15s. Substantial arrivals of linseed in this country in the past few days have relieved the stringency of supplies of oil, and prices have receded. Current value of raw oil on spot ex Hull mill is now £21 5s. per ton, December delivery £20 7s. 6d., and January-April, £20 5s. Cotton oil is neglected, lower crude Egyptian ex Hull quoting £21 10s., and common edible £25. Demand for oilcakes is not so good as recently, and prices ex mill are unchanged. With no appreciable improvement in the demand for copra, prices disclosed further weakness, though sellers were not unduly pressing. Straits S.D. December to Rotterdam sellers, £15 17s. 6d.; January, also February, £15 15s.; Dutch E.I., January, £15 15s.

THE MONEY MARKET.

DURING last week discount rates gradually hardened, until the culminating point was reached on Friday, when the week's issue of Treasury bills was allotted at a fraction above 2½ per cent. This was the highest rate recorded since April 17th last. When the allotments came out, the market found that it had missed the bulk of the week's issue, which, presumably, had gone to a special quarter. Consequently, brokers had to fill their needs by subsequent purchases, and the demand for bills that thus sprung up drove the three months' market rate down to practically 2½ per cent. by Tuesday afternoon. Meanwhile, money has remained easy at rates running from 1½ to 1½ per cent.

NATIONAL PROVIDENT INSTITUTION

DISTRIBUTION OF PROFITS
DECEMBER 31st, 1930.

INTERIM BONUSES INCREASED.

48 Gracechurch Street, London, E.C.3.

While it is still uncertain how stringent money will be on December 31st, there is an impression abroad that the market may not escape so easily as on some previous occasions. In addition to the usual balance-sheet operations by the banks, there may be a heavy foreign exchange settlement to provide for, while it is now understood that the £5,000,000 of Australian bills maturing on December 31st will be renewed. The renewal of the Argentine bills, also amounting to £5,000,000, has already been arranged. As regards the Treasury bill position, issues this week exceeded maturities by £5,000,000, but next week maturities are in exactly the same excess of issues. The turn of the year, however, falls exactly in the middle of next week, and much depends upon which days next week the old bills mature and the new bills fall due for payment. In any case, it is clear that this year, December 31st will coincide with some large movements of funds, and, while the position will be partially eased by borrowings into next month, which have already been effected, it would not be surprising if money turned out to be more scarce than usual.

The Christmas holidays have prevented the inclusion of this week's Bank return in the current issue of the *Economist*, and so it is as yet impossible to tell the full size of the pre-Christmas expansion in the note circulation. During the three weeks ended December 17th, the expansion amounted to £21.0 millions, as against £17.1 millions for the same four weeks of 1929. This year's increase in the amount of money required for Christmas trade is somewhat surprising, in view of the trade depression and the decline in commodity prices, which embraces to a limited extent retail business as well as the wholesale trades. As regards gold movements, the Bank's stocks have now fallen to almost exactly £150,000,000. In this connection, references have been made in the Press to the fact that this represents the Cunliffe Committee's famous minimum "limit," and suggestions mentioned that the Bank may now be considering it necessary to "take action." As has been many times pointed out in the *Economist*, the Bank authorities long ago ceased to attach any special significance to this particular figure, and there appears to be no reason why there should be any talk of a higher Bank rate.

We express this opinion despite the fact that gold is still going to France at what has now become the "normal" rate, and by all accounts will continue to do so at least until the end of January. Already the Cape gold due on December 30th and January 6th, and amounting in all to £1,407,000, has been bought forward for France, and all the Bank of England will get from the Cape during that fortnight is £250,000 in sovereigns on January 6th. This week, the Bank got £200,000 in sovereigns, which formed part of Tuesday's Cape gold, and if France is going to take gold indefinitely at the rate of £300,000 a day, or nearly £8,000,000 a month, it is obvious that a further appreciable reduction in the Bank's gold stocks must be anticipated. Even so, in view of the special circumstances explaining these movements, it appears that no immediate action on the part of the Bank is either necessary or would have any corrective effect.

NEW YORK.

Money has eased again after the passing phase of stringency in the middle of the month. At end of last week, "outside" call money was available at 1½ per cent., while early this week the official rate was 2 per cent. Shipments of gold from Canada to New York are continuing, the forthcoming movement of \$3,000,000 being announced late last week. Further bank suspen-

sions were announced on Monday, including the Bankers' Trust Company of Philadelphia, with deposits last June of \$35,000,000. These created a bad impression upon Wall Street, but none of the banks involved this time is of any great size or importance.

THE STOCK MARKETS.

Business in the stock market was of attenuated dimensions in a short "holiday" week. Among gilt-edged securities, long-dated stocks, with the exception of Funding Loan, generally held their ground and foreign bonds were firmer. International securities were lower on a fresh downward turn in New York prices. Domestic industrials, however, showed slight change on a small amount of business. The rubber and tea share markets were idle. Oils were lower on a resumption of Continental selling. The good impression produced by the last batch of Rand dividends failed to maintain "Kaffir" share values in the absence of support from the Cape and Paris. A somewhat spectacular recovery in the price of tin was not held, and produced no renewal of public interest in tin shares.

THE COMMODITY MARKETS.

The coal trade is busy working off orders which have to be completed before the end of the year, but there is little forward contracting. Trade in the iron and steel industries is restricted by the holidays and stocktaking, and new orders are scarce. The raw cotton market is still unsettled, and business in Manchester goods has been quiet. The wool trade has been characterised by an expanding demand for the raw material, coupled with a sharp decline in prices throughout the year. The jute trade is quiet. Although imports of building timber have been on a small scale lately, the market is depressed because of a decline in activity in the building trade. Hides and leathers continue weak. Wheat has declined further, and prices in the United States, which are supported by the Federal Farm Board, are now more than 50 per cent. above the world level.

THE FOREIGN EXCHANGES.

The foreign exchange market showed no great activity, and fluctuations were mostly within narrow limits. The New York rate was ¼ lower at 4.85½, but Paris was unchanged at 123.60. Brussels gained ¼ at 34.76½, and Milan was a point better at 92.75. Madrid again betrayed hesitation, and was weak at 45.60. Amsterdam moved against us at 12.05½, but Berlin weakened sharply to 20.37½. Switzerland moved strongly against us from 25.02½ to 25.000. Of the Scandinavian exchanges, Stockholm lost ½ at 18.10½, and Copenhagen ¼ at 18.16½. Oslo was unchanged at 18.15½. The South American currencies were all weak, Rio losing ½d. at 4½d., and Buenos Aires ¼d. at 36½d. Montevideo was unchanged on balance at 36½d. In the Far East, the rupee and yen were unchanged at 1s. 5½d. and 2s. 0½d. respectively. Batavia lost ½ at 12.06½. In the forward market dollars were in rather better demand at 3½ cent and 3½ cent premium. The discount on forward Paris widened by one centime to 6 centimes for one month, but was lower by the same margin for three months at 9 centimes. Brussels was less offered at 3½ and 5½ centimes discount, and Milan was rather better at discounts of 17 and 57 centesimi. Madrid improved to 3 and 9 centimos premium. Amsterdam went from ¼ and ½ cent premium to par for one month and ⅓ cent premium for three months. Berlin was quoted at rather lower discounts of 2½ and 8 pfennigs. Silver improved a little after opening at the lowest price on record, and closed at 14½d. for spot and 14½d. for forward, a gain of ½d. in each instance. Of the China exchanges, Hong Kong improved in sympathy by ½d. to 1s. 1½d., but Shanghai remained unmoved at 1s. 5½d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

THE OTHER SIDE OF CHRISTMAS.

WE are at least nearing the close of one of the longest and weariest years through which this generation has been called upon to struggle since the war. Yet last week we urged our readers to celebrate Christmas with as much of their customary cheer and liberality as they could honestly afford. We urged this as sound economic policy, but economic arguments provide by no means the only, nor even the most important motive for refusing to allow the celebration of Christmas to be dimmed. For as Christmas is in its origins a religious anniversary, so the festivities which accompany it are symbolic; and the carols, which, as a form of folksong, express those aspects of the Christmas tradition that have made the widest and most lasting popular appeal, leave no doubt that the aspiration which this season has made peculiarly its own is one of "peace and goodwill to all mankind."

Peace and goodwill. The generations to which the events of 1914-18 are still a vivid and ghastly memory have been struggling hard to secure by political means some certainty of peace, and to that end much has also been done to promote that social intercourse between the individuals of different nations from which alone a reliable foundation of goodwill can be constructed. Politically and socially progress, though it has been lamentably slow, has at least been perceptible, and the activities of the League of Nations give evidence that the peace which we are ensuing is no longer the negative conception of absence of war, but a spirit of international co-operation which, though still so young as to require careful nursing if it is to survive, yet holds great promise for the future.

In our Christmas stocktaking, then, we may, if our standards are not too exacting, record some progress in the political and social departments. But when we come to examine the state of affairs on the economic side of that curious giant business called the world, it is far otherwise. Now, more than ever before, the economic activity of every national group is intricately bound up with that of most of the others, yet never have the nations been so busy diligently trying to cut the economic threads which bind them together.

This paradoxical situation has been made, by an American professor, the theme of a most timely book.* In a penetrating analysis of the development of industry during the last few decades, Professor Patterson shows that the leading industrial countries have been steadily expanding their productive capacity in the staple industries to an extent which has made it increasingly urgent to secure access to very large markets in order to keep down unit costs of production. This has brought them more and more keenly into competition with each other in external markets as well as at home, while the progressive industrialisation of newer countries, as for example the development of the cotton industry in Japan and India, has at the same time diminished the desire of certain markets for their goods. The situation is intensified by the great volume of foreign investment which has taken place in the past, the interest on which has sooner or later to be paid in goods.

Concurrently with this development of large-scale industries, dependent for their existence upon immense markets which are growing more difficult for each individual country to secure, there has been a steady increase in the economic inter-dependence of all countries. Professor Patterson illustrates this by separate analyses of the situation of Great Britain, France, Germany, the United States, Italy and Japan. Not only are the first four of these very dependent upon the rest of the world for food and raw materials (though the United States is not yet so dependent as the others, her dependence is steadily increasing and in 1929, 57.3 per cent. of her imports consisted of food and raw materials), but the rest of the world is also greatly dependent on them. The dependence of Japan and Italy, on the other hand, owing to the poverty of their national resources, is more one-sided, a

circumstance which leads Professor Patterson to hope that their influence may ultimately be on the side of peace.

Yet in spite of this close interweaving of the economic interests of different parts of the world, the world is resolved into separate groups which are, by all manner of "protective" devices, struggling to close their doors more tightly against each other. Part of this, we agree, is attributable to the very understandable desire for economic "stability" as the counter-part of political "security." It is not unnatural that groups should feel that if they close the home market they have something secure and definite upon which they can rely. Moreover, the growth of great corporations within a group tends still further to consolidate the life of that group in opposition to that of its neighbours.

This steady intensification of economic nationalism is a menace both to prosperity and to peace. The menace, indeed, is so great that those who recognise it are very naturally tempted, in their desire to lose no time in checking it, to attempt too much at once and so to defeat their purpose. Here Professor Patterson shows his wisdom. He contends that this paradoxical situation arises because "people behave like human beings." Everybody has a standard of life which he is determined at all costs to maintain, and if possible improve; of the almost ineradicable tendency of human beings to organise themselves into groups, the national group is one of the most persistent manifestations; and any programme for improving world economic conditions must allow for human nature. While Professor Patterson recognises that the only perfect solution is the organisation of a world community, his immediate suggestions therefore carry the more weight, because they do not require, as a condition precedent to their adoption, the conversion of the entire business world to the level of idealism at present only attained by a few individuals.

A minor step, which, if individual countries would bring themselves to it, would do something to ease the pressure, would be a more rapid transference of capital and labour out of those industries in which world capacity is redundant. It is, however, the proposed measures of international co-operation with which we are for the moment concerned, and here Professor Patterson follows the lines laid down in 1927 by the World Economic Conference, whose recommendations have so far made such lamentably small progress towards realisation. Commercial treaties, international cartels, financial consortiums for co-operation in foreign lending, the activities of the International Chamber of Commerce, and, finally, the work of the League of Nations, are the avenues through which we may hope to see the world gradually approach a more unified economic organisation. At the same time, an enormous international strain is imposed by the fact that payment of reparations and of war debts has to be made in imports which the creditor countries receive as reluctantly as the debtor countries part with them, so that here again is an imperative need for constructive co-operation.

It is, however, less in the remedies, with which the patient is theoretically familiar, though he rarely tries them, than in the convincing diagnosis of the disease and the telling presentation of the urgency of the need for treatment that the importance of this book lies. The danger is that in a time of acute economic stress, nations, like individuals, may be even less willing than usual to make efforts in any other cause than that of checking the emaciation of their own resources. Professor Patterson has made a useful contribution to the timely thesis that "peace and goodwill," translated into terms of international trade, are a 100 per cent. paying proposition. If the end be good, let us not be too exacting in the matter of motive. Let us hope, rather, that the very leanness of this Christmas will lead many of us, if only for the sake of our pockets, to place high on the list of our New Year resolutions the resolve to show a little more readiness to co-operate economically with our neighbours in other countries.

* "The World's Economic Dilemma." By Ernest Minor Patterson. McGraw-Hill Publishing Company, 6-8, Bouverie Street, E.C. 4.; 17s. 6d.

THE CRUX FOR THE CONFERENCE.

DURING the last ten days the atmosphere of the Round Table Conference has been one of pessimism and disappointment at the lack of progress that is being made; and many delegates, who had made arrangements to return to India comparatively early in January, have openly spoken of the possibilities of breakdown and failure. Those who have experience of international discussion at Geneva and elsewhere are not surprised or unduly alarmed at this phase, for it is the almost universal experience that when complicated negotiations pass from a statement of principles and generalities to "brass tacks," and when hard-headed discussion in committee is substituted for the oratory-fanned enthusiasm of open meetings, confidence tends to flag and determination to waver in the face of practical difficulties.

But though we are not despondent, we have no wish to minimise the difficulties with which the Conference is faced. The various committees have reached interesting and important decisions covering a wide variety of topics in regard to which the Statutory Commission's Report and the Government of India's comments thereon have amply prepared the ground. But no one can read the drafts prepared by these committees without recognising that they have one and all stopped short when brought up against one or other of the few key problems in the situation. At the time of writing, no settlement has been reached between the Hindus and the Moslems, and there are misgivings among some of the British Indian delegates that this division may be used by Great Britain as an excuse for letting things drift. But an inconclusive Conference would mean a steady worsening of the position in India, and it would be a profound mistake to imagine that we should be justified, either in the eyes of India or in the eyes of the world, in taking a negative attitude because of communal difficulties. There has never been the slightest hope that a Conference of this size could achieve any results without leadership and carefully thought out plans; and that leadership the British Government must supply. The members of the British delegation, many of whom were new to the Indian problem, have now had time not merely to understand something of the psychology and of the points of view of the many sections which compose the Indian nation, but also to inform themselves of the state of opinion in India to-day—opinion which, as Lord Reading noted in the early days of the Conference, is moving with very great rapidity.

What is now required, if the Conference is to fulfil its early promise, is that the British delegation should use the short Christmas recess to come to an agreement among its different sections and place the Prime Minister in a position to make a statement at the reassembling of the Conference as to the attitude of Great Britain. In our opinion that statement would command the confidence of the country if it took something like the following form:—

In view of the desire of all the parties concerned, including the Indian States, to form a federation of All-India, Great Britain is prepared to grant responsibility to the central organ of such a federation—provided that the preliminary conditions outlined in Sir George Schuster's section of the Viceroy's Report are fulfilled before financial responsibility is transferred; that agreement is reached regarding the scope and character of the powers which must be reserved for the Viceroy; that adequate arrangements are made in connection with those matters on which it is generally agreed by Indians that this country must require "safeguards"; and that the Hindus and Moslems reach some settlement of their differences or agree to accept the decision of the British Parliament thereon.

It is not certain that a statement even of this kind would lead to an immediate solution of the communal problem, but it would test the good faith of both sides. (If one of the functions of Britain in India in the future

is to be that of holding the scales, we should make it clear that we do so only at India's request.) Nor would such a statement make it possible to draw up a constitution in a few weeks—a new constitution of India will take many months, possibly years, to build—but it would make it possible to enable the delegates to return home with an agreed statement of principles which would be worked out by other conferences, and by various appropriate expert bodies. Indeed, it might well be advantageous that the provisions of the new constitution should come into effect piecemeal so as not to delay, for example, the changes in provincial governments until the whole final structure is complete.

We have said that we believe that such a statement would now command the assent of the majority of the country. Some will no doubt protest that seeing that a mere fraction of the country is literate, we must not give responsibility to a mixed oligarchy of landlords and black-coated "intellectuals." But from Magna Charta to the Reform Bill the political freedom of Great Britain was won by the few in a country where a mere fraction could read and write. Others may maintain that it is our duty to raise the status of Indian women in India and purge India of the evils involved in her rigid caste system before she can be entrusted with self-government. Those changes must be made by India and by India alone; they cannot be imposed by a handful of alien administrators. Finally, some may argue that British trading interests will be imperilled. Here, truly, safeguards must be required, but as in China, so in India, experience has proved that goodwill is a far better paying proposition than a privileged political position associated with hatred.

India, in her relations with Britain, is at the cross-roads, and in the affairs of nations as in those of individuals "there comes a moment to decide." A decision may involve risks. But as Sir Austen Chamberlain once said in a famous speech (recalled last week by the *Nation*), in which he regretted his vote against the South African Settlement: "If we could have seen further into the future, if I could have voted in that division with the knowledge I have to-day, I should have known that that great act of faith was not, as I thought it, the destruction of our policy, but its completion and fulfilment. . . . In the affairs of men there comes a moment when courage is safer than prudence, when some great act of faith, touching the hearts and stirring the emotions of men, achieves the miracle that no arts of statesmanship can compass." Sir Austen Chamberlain would do one more service to his country if he would persuade his party that what they should have done in 1906 in regard to South Africa, and failed time and again in the last forty years to do for Ireland, they should do to-day for India.

THE TRADE DISPUTES BILL.

THE text of the Trade Disputes and Trade Unions [Amendment] Bill—to give it its full title—was made public on the day on which Parliament rose. Its second reading is to be taken on January 22nd, so that a month is available for the study of the legislation proposed. And this is all to the good. For the issues are complex and must be viewed against their political and economic background. From the political standpoint, the Government is pledged to amend the Act of 1927. The official Opposition, which placed that Act on the Statute Book, is equally concerned to keep it there. Much will depend, therefore, upon the attitude of the Liberal Party. The House of Lords, too, may well feel impelled to take a hand. If the Bill survives its second reading—and much here will turn upon the temper of its presentation—considerable modification of its text is likely, as well as desirable, before the Royal Assent is attained.

The economic background is no more propitious. With prices rapidly falling and unemployment unprecedented, the level of money-wages, for many workers, can hardly remain where it is. But wage reductions, however inevitable, will be strenuously resisted, and serious disputes

are by no means unlikely in some of our major industries. Under these circumstances, the amendment of the Trade Disputes Act, 1927, becomes more than an academic issue. We propose, therefore, to examine briefly the chief changes which the new Bill enacts.

(1) The illegality of certain strikes and lock-outs.

The problem of preventing, by legislation, a repetition of the General Strike of 1926 is very nearly insoluble. Section 1 of the Act of 1927, which seeks to accomplish that object, is not wholly satisfactory. In effect, it declares to be illegal such strikes and lock-outs as—

(1) have any object "other than or in addition to the furtherance of a trade dispute within the trade or industry" in which those concerned are engaged; and

(2) are "designed or calculated to coerce the Government either directly or by inflicting hardship upon the community."

Now this proscription (apart from difficulties of definition) is perhaps somewhat too wide. The section could be so construed as to penalise almost any "sympathetic" strike whatsoever. And nearly all strikes "inflict hardship upon the community." So that a sympathetic strike in one industry, of which the aim is to influence public opinion in regard to the affairs of another, though possibly very closely associated, industry, may be held to be illegal in the Courts. The unions, in short, under the Act of 1927, are in a distinctly worse position than in 1906, when the first Trade Disputes Act was passed.

Is this desirable? In attempting to answer the question we must not confuse two issues. Nobody wants to see a repetition of the events of 1926, and to restore within limits the "right to strike" in matters which do not immediately affect the wages and conditions of the striker does not involve approval of the attempt in that year to compel the Government of the nation to a particular course of action by attacking vital services. But is there a method of proscribing general strikes, where acts unlawful in themselves are not involved, while permitting sympathetic strikes within a narrow range of industries or occupations economically connected with one another? In other words, where are we to draw the line?

The new Bill does not, indeed, go so far as to repeal the section. Not even a Labour Government is anxious to be stigmatised as having "made legal the general strike." It is proposed, however, to substitute a section so vague as to be practically meaningless. Under this section, a strike or lock-out is illegal

"of which the primary object is an object other than that of furthering purposes connected with the employment or non-employment, or with the terms of the employment, or with the conditions of labour, of any person (whether or not employed in the trade or industry in which the strike or lock-out takes place)."

The course of events in 1926 would, pretty clearly, have been unaffected had these words been on the Statute Book. It is hard to conceive of any strike of which the purposes could not be so formulated as to render those promoting it immune.

How, then, are general strikes to be obviated? We are back again at our starting point, after nearly five years of controversy. In our view, Section 1 of the 1927 Act does not face realities. The clause that is now proposed to replace it is its *reductio ad absurdum*. The right line of approach is quite different. In the first place, the State should revise its attitude towards the unions. Their constructive possibilities should be turned to account, as they could be if the wastefulness of strikes were more generally realised. In the meantime, essential public services—services wherein a stoppage of work can paralyze the community—should be scheduled for special treatment. The best plan would be to insist, in such services, upon long-term contracts of employment (with security of tenure as its corollary) and to make the breaking of contracts a criminal offence, as it long has been in the gas and water industries.* It is along these

* Under the provisions of Section 4 of the Conspiracy and Protection of Property Act, 1875. These provisions were extended to the electrical supply industry by the Electricity [Supply] Act of 1919.

lines, in our view, that the problem must eventually be tackled.

(2) The prevention of intimidation.

The difficulties of "peaceful picketing" have exercised the ingenuity of Parliament for over a hundred years. The Act of 1927, in endeavouring to define certain recognised abuses so as to bring them within the scope of the law—or rather, to deprive them of the protection afforded by the Trade Disputes Act 1906—went a little farther than is reasonable. "Intimidation" was defined in such sweeping terms as to render liable to a criminal construction almost any "picketing" activity whatever. The present Bill, while leaving unaffected the sub-section which penalises intimidation, has narrowed the scope of the definition:—

"In this section the expression 'to intimidate' means to cause to any person a reasonable apprehension of personal injury to him or to any member of his family or to any of his dependants or of violence or damage to his or their property."

This errs on the other side. It is too narrow. Doubtless numerous modifications of this formula will be suggested when the Bill is in Committee.

(3) The Political Levy.

The arguments for "contracting-out" (which it is now proposed to restore), as opposed to "contracting-in," are very nicely balanced. Before the Osborne case, in 1910, it was never suggested that a trade union has not the same rights as any other corporate body in regard to the disposal of its funds. Thereafter the "political fund," with the right of "contracting-out," was established by the Trade Union Act, 1913. The alternative of "contracting-in" (i.e. of a system of voluntary contributions) was put forward in 1927 as safeguarding more effectively the rights of minorities. We do not regard the matter as of first-rate importance, always provided that there are adequate safeguards against improper pressure or intimidation.

(4) The status of Civil Servants.

(5) Rights of local authorities.

The 1927 Act lays down (i) that Civil Servants shall not be members of trade unions, save in so far as these are confined to the Civil Service, and (ii) that local authorities shall neither compel their employees to belong to trade unions, nor debar them from membership of them. Both these provisions it is now proposed to repeal. To us, they seem, *prima facie*, to be based upon sound principles of policy; and it is difficult to see what case can be made out for reversing the decisions of 1927. Here, again, a different avenue of approach is needed. Surely, public service ranks as an "essential service," and should be treated in the same way which we have suggested for other essential services.

The upshot of the matter, in our view, is this. It is possible to make out a sound case for modifying some of the main provisions of the 1927 Act, and no Labour Government could resist the united demand of the trade unions that modification should be attempted. On the other hand, the Government will be making a profound mistake if they attempt to travel beyond public opinion or if they give the slightest grounds for the suspicion that their aim is to facilitate industrial strife.

THE YEAR'S NEW CAPITAL.

THE record of London's new capital market in 1930 reflects very clearly certain economic characteristics of the year, namely: bad trade, Stock Exchange inactivity, lack of public confidence, and cheap money. The net result of these influences is that there has been, as compared with 1929, a big decline in offerings of speculative shares, and, indeed, of "equities" of any class, and that this drop has not been fully counterbalanced by the increase in fixed-interest bond issues caused by the lowering of money rates. Our total of new money raised by public offer in the London market is, therefore, lower than last

year. The totals for 1913 and the past four years, domestic and overseas, are as follows:—

	NEW ISSUES IN LONDON.				
	1913.	1927.	1928.	1929.	1930.
	(£ million.)				
Total	196.5	355.2	369.1	285.2	267.8
Domestic	36.0	206.9	263.6	198.0	170.6
Colonial	76.1	99.8	63.2	61.0	61.5
Foreign	84.4	48.5	42.3	26.2	35.6

More than the whole of the decline is accounted for by the domestic class, for Colonial borrowings remained steady, while the foreign figure recovered slightly after last year's sharp fall. Moreover, the whole of the drop in the domestic figure is due to a lessened demand for non-Governmental purposes, as will be seen from the next table, in which the destination figures are further analysed:—

	DESTINATION OF NEW CAPITAL.					
	Whole Years.					
	1913.	1926.	1927.	1928.	1929.	1930.
	£	£	£	£	£	£
United Kingdom—						
Government	Nil	4,666,800	66,083,800	83,861,000	65,400,000	65,640,000
Other	35,951,200	124,508,900	140,799,800	179,722,100	132,626,500	105,006,100
British Possessions—						
Government	26,278,700	31,866,000	55,697,200	40,223,000	26,366,100	49,081,300
Other	49,858,500	21,308,300	44,115,200	22,895,400	34,610,900	12,366,900
Foreign countries—						
Government	76,137,200	53,174,300	99,812,400	63,158,400	60,977,000	61,448,200
Other	26,158,200	23,818,000	11,822,500	15,938,900	3,650,000	21,330,000
Grand total ...	196,537,000	230,782,600	355,166,000	369,058,100	285,239,400	267,800,700

The amount of capital raised for employment at home, apart from Government issues, fell from £179.7 millions in 1928 to £136.6 millions in 1929 and £105 millions in 1930. Similarly, issues for non-Governmental purposes in the Empire and in foreign countries fell away sharply; but both foreign and Empire Governments took greater advantage of the better terms available in the market. The British Government total of £65,640,000, very nearly the same as for 1929, is made up as follows: New money from 4½ per cent. Conversion Loan issued in February, £37,060,000, and from 4 per cent. Treasury Bonds issued in October, £19,000,000. The Ulster Loan, issued in July, amounted to £1,980,000. The balance of £7,600,000 represents net sales of National Savings Certificates. The next table classifies borrowers in seven main categories, and brings out even more clearly the paucity of issues of shares:—

	CLASSES OF BORROWERS.

Foreign and Colonial Government issues, and all corporation issues between them took nearly £78 millions more than in 1929, while the most striking figure in the table is the last—£58.8 millions for a miscellaneous category, chiefly home industry, which is substantially less than a half of the 1929 figure, which, in turn, was lower than that for 1928.

The next table, which analyses under 29 different categories the purposes for which new issues were floated in 1929 and 1930, brings out still more clearly the paucity of new financing carried on in a large number of industrial, commercial and speculative classifications:—

Description.	Whole Year, 1929.	Year, 1930.		
		Three Quarters to Sept. 30.	Fourth Quarter.	Total, Whole Year, 1930.
British Government loans.....	£ 65,400,000	£ 43,790,000	£ 21,850,000	£ 65,640,000

Docks, harbours, and shipping	7,107,400	367,500	Nil	367,500
Banks and insurance	544,500	Nil	Nil	Nil
Manufacturing and miscellaneous	6,273,100	3,023,600	Nil	3,023,600
	56,981,800	15,574,600	5,787,100	21,361,700
	285,239,400	192,589,200	75,211,500	267,800,700

The main tendency of which we have spoken is illustrated not merely by the very big drop in the last item in the above table, but by no less striking declines under such headings as "trusts" and "patents." In 1928 "trusts" absorbed £42.5 millions, "patents" £8.6 millions, and "hotels, theatres and entertainments" £14.7 millions. In 1930 less than £7 millions was claimed by these three purposes—as clear an indication as could be wanted of the stagnation of enterprise. The increase in the figure for "oil" is due to a Shell issue of 5 million £1 shares at 25s. last February.

The following table shows some of the most important issues during the year:—

Date of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, Dec. 22, 1930.
1930.				
January ...	Central Elec. Bd. 5% Stk., 1950-70	7,000,000	97½	103
January ...	Central Argentine Railway 5% Deb. Stk., 1967-87	3,000,000	89½	85
February ...	4½% Conversion Loan, 1940-44	192,800,000	95	101½

WORLD-WIDE LETTERS OF CREDIT AND DRAFTS ISSUED.

The cheapness of money and the general strength of good class fixed-interest securities on the Stock Exchange are responsible for the fact that most of these new loans stand at a substantial premium over issue price. There are, however, one or two notable exceptions, the German Reparations Loan and the San Paulo issue having fallen sharply under the stress of peculiar adverse circumstances.

It should be appreciated that the new capital issues included in our quarterly surveys take no account of Stock Exchange "introductions," an aspect of the capital market which was discussed fully in the *Economist* of July 27, 1929 (page 175). In the following table we show the total amounts involved in these "introductions" during the past eight quarters. "Cash values" are calculated on the assumption that the whole of the nominal value of the stock "introduced" is taken up at the price at which dealings on the Stock Exchange open:—

TOTAL CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION.

	United Kingdom.	Colonies.	Abroad.	Total.
Year 1929—				
1st Quarter	15,191,600	393,700	3,094,400	18,679,700
2nd Quarter	9,465,500	1,284,400	2,166,400	12,916,300
3rd Quarter	3,574,700	217,100	5,778,300	9,570,100
4th Quarter	733,400	304,400	1,437,500	2,475,300
Total Year 1929	28,965,200	2,199,600	12,476,600	43,641,400
Year 1930—				
1st Quarter	3,982,300	1,477,000	8,399,900	13,859,200
2nd Quarter	839,600	Nil	2,685,100	3,524,700
3rd Quarter	67,200	100,000	601,500	768,700
4th Quarter	3,402,900	1,667,600	721,200	5,791,700
Total Year 1930	8,292,000	3,244,600	12,407,700	23,944,300

† Nominal amount of capital introduced, £31,519,934.

‡ Nominal amount of capital introduced, £22,158,480.

There has been a considerable diminution of the number of issues for public information only during 1930 as compared with the rush during 1929, but they have become more numerous in the past three months.

TRADERS AND ACCEPTANCE CREDITS.

(BY A CORRESPONDENT.)

THE Committee of Inquiry on Banking and Industry addressed some time ago a questionnaire to the London banks engaged in acceptance business, with the object of ascertaining the proportion in which acceptance credit facilities are used for the financing of British foreign trade, and the foreign trade of other countries. This move was presumably the result of recent criticisms directed against the banks on the ground that they favour foreign exporters at the expense of British exporters, in providing them with cheap acceptance credit facilities. In consequence of the decline of interest rates, the discrepancy between the market rate for prime bills and the rate charged on loans and advances has widened considerably; while the former was for some time this autumn under 2½ per cent., the latter is in most cases fixed at one per cent. or half of one per cent. above Bank rate, with a minimum of 5 per cent., or 4½ per cent. In normal conditions the commission charged by banks largely offsets the difference between bill rates and loan rates; but at present, thanks to the widening of the discrepancy and to the low rate of commission charged by some banks, there is a distinct advantage in financing exports with the aid of acceptance credits.

Although no statistical data are available as to the extent to which foreign exports are financed by London acceptance credits—and it is highly doubtful whether the questionnaire of the Committee on Banking and Industry will produce any reliable figures—it is generally known that the predominant part of bankers' acceptances in the London market is, in fact, financing the trade of foreign countries. Some experts put the ratio at 75 to 80 per cent. in favour of acceptances on foreign account. But it would be unfair to use this fact as a basis of criticism against our banking system. After all, if London wants to

remain an international banking centre, she has to finance the trade of foreign countries.

Some quarters are inclined to hold the view that our banks provide foreign exporters with facilities which are withheld from British exporters. This is, however, by no means the case. British business houses of good standing can also avail themselves of acceptance credit facilities for financing their foreign trade operations, on terms similar to those granted to their foreign rivals. They do not, however, avail themselves of these facilities to the extent that German firms, with the co-operation of German banks, do. And the reason for this is the prejudice that exists in this country against the use of bills. First-class British business firms do not like to have bills bearing their name brought in circulation, and prefer to pay the higher rate of interest charged on bank loans, as, in doing so, even the comparatively limited publicity of their credit transactions involved in operations in the bill market can be avoided. The use of acceptance credits for financing British exports would expand considerably if the interested parties themselves could overcome their prejudice.

The difference, however, between the cost of acceptance credits and bank loans is often rather exaggerated. Although the rate of commission charged on acceptance credits arranged under the guarantee of a first-class foreign bank is between ½ and 1 per cent. per annum, in addition to this, there is the commission charged by the foreign bank to its customer, which is between 1 and 2 per cent. in countries such as Germany or Italy, so that, on the basis of a bill rate of 2½ per cent., the total cost of the credit is at least 4½ per cent., but in most cases rather higher. As big British firms can often obtain from their banks a modification of the rule of the minimum rate on loans of 5 or 4½ per cent., the cost of their credit operations is approximately the same as those of foreign firms. In cases when the minimum of 5 per cent. is applied, the difference in favour of foreign firms varies between ½ and ¾ per cent. per annum. For export operations which are liquidated in three months, the difference is a negligible percentage which certainly does not play a decisive part in international competition.

In fact, it is not through the use of London acceptance credit facilities, but through their abuse that foreign business firms may secure certain advantages over their British rivals. There is no doubt about it that acceptance credits arranged under the guarantee of foreign banks are used to a great extent for drawing finance bills under the disguise of commercial bills. This practice enables German exporters to grant their customers credits for one or two years, and in many cases this is certainly a considerable factor in deciding whether a foreign order should be placed in this country or in Germany. It is thus a legitimate grievance of British firms that, while banks are reluctant to grant them credits for two years so as to enable them to offer terms similar to those of German exporters, the latter are in a position to obtain long credits in London at reduced rates.

The banks are not in a position to prevent this practice, as it is in most cases difficult to ascertain whether or not a bill represents a genuine export transaction. They consider it, moreover, their duty to take the word of a leading foreign bank that the acceptance credits granted are used for bona fide export bills only. Most of them are reluctant to be too strict about the matter, as otherwise they may lose their customers, but some banks have adopted measures to discourage bills which are obviously

not genuine; and at least one bank has adopted the policy of charging double commission on bills unaccompanied by documents. As, however, the volume of acceptance business has declined considerably owing to the fall of prices and the trade depression, most banks feel they cannot afford to divert business to their rivals by scrutinising too closely the origin and nature of bills. After all, as these bills bear the guarantee of a leading foreign bank, there is no doubt as to their security.

Fortunately, though the endeavours recently made to raise commissions on acceptance credits, and thus eliminate the real or imaginary grievances of British business interests, have failed, there is reason to believe that the situation is tending in other ways to change in favour of British firms. Owing to the decline in the volume of acceptance business and to the competition of joint stock banks and foreign banks, acceptance houses are far from being occupied up to the limit of their capacity. Some of them have been inclined to yield to the temptation of undertaking second-class business, but recent unfavourable experience has discouraged them from that course. The alternative is to take a greater interest in directly financing British trade. Thus, while joint stock banks have expanded their activity in foreign business since the war, their competition is driving acceptance houses towards playing a greater part in the financing of domestic commerce, including the interesting experiment of hire-purchase operations.

Notes of the Week.

"Qui s'excuse."—Parliament has dispersed for its Christmas holidays, with the Trade Disputes Bill giving every promise of "wigs on the green" when the House reassembles, for all that the Labour Party has endorsed Mr MacDonald's plan of proffering Cerberus the Alternative Vote as a not "too shame-making," if not "too speechlessly seducing" sop. Meanwhile, presumably lest it be thought that while our parliamentarians have gone home to cook their turkeys, inaction has cooked the Cabinet goose, the Government have issued yet another apologia* for their policy in connection with unemployment. This time the usual statement of "emergency works"—schemes have been approved under various programmes estimated to involve, over an unspecified period, £136 millions—is accompanied by a lengthy *exposé* of "long-range policy, designed to increase the efficiency of British industry, and to promote the prosperous development of British economic life." If we are to believe the Government, nothing is in any case greatly amiss. There is a world slump in which all countries are sufferers. Before the present depression, Britain had been handicapped by "special difficulties in world markets," by political troubles abroad, by substitution of oil for coal as fuel, by restoring the pound to parity with the dollar, by tariff barriers, and by heavy fixed charges on her industries. But comparison internationally of indices of production suggests that British industry has been hit less hard by the slump than that of our competitors; the Government have promoted the rationalisation of the coal industry and have begun consultations for the same purpose with the leaders of the cotton and iron and steel industries; Treasury bill policy a year ago helped to lower market discount rate; missions to study markets have been sent north, east and south; export credits have been continued, insurance facilities provided for the Cunard Line, and the process of stimulating agriculture begun. Meanwhile, slums are being attacked, education expanded, and training provided for the unemployed.

"To-day the view is steadily gaining ground that Great Britain, despite her special difficulties, is weathering the world depression better upon the whole than many of her principal rivals, and is likely to emerge from it in a stronger relative position than before."

* Cmd. 3746. H.M. Stationery Office, 4d.

In our Trade Supplement this week we emphasise the danger of drawing too confident conclusions from national indices of production; and with the numerous fallacies on which this ostrich-like complacency of the Government rests in relation to the pre-slump trend of British trade Mr Arthur Loveday has dealt recently* in these columns. The claim which the Government make that "the well-being of the population has been maintained" may be granted, though the price has been unparalleled unproductive expenditure; but to suggest that they have earned applause for what they have done to secure industrial reorganisation, or that progress in that direction entitles the nation to be reassured as to the future, is to "protest too much." Command papers were not devised for use as electioneering pamphlets.

"Peace on Earth"—A Stocktaking.—The message broadcast to the United States last Sunday by Mr Arthur Henderson came on the heels of the decision taken on the 17th by the Foreign Relations Committee of the Senate at Washington to postpone until December, 1931, its consideration of the protocols of the Permanent Court of International Justice. This decision appears to have been determined not by any consideration of "the Root agreement" on its merits but by the quite irrelevant exigencies of parliamentary time and party manoeuvres. Whatever the cause, the decision itself is regrettable from the international standpoint; for it seems certain that American public opinion is strongly in favour of adherence to the International Court on the terms which Mr Root negotiated; a majority in the Senate was probable; and there is no doubt that, if the United States had taken this step forward at this moment, the cause of peace would have received an impetus at a time when it badly needs one. It lay in President Hoover's power to provide the parliamentary time and opportunity by convening a special session of the Senate in March; but it is now evident that he does not intend to take this initiative. The truth is that the growing interest of the American people in international affairs cannot be expected to produce immediate results in practical politics. When it comes to the point, America feels too remote and too secure to bestir herself, while on the Continent of Europe there are powers whose sense of insecurity is so acute that they exert themselves to keep the international situation immobile. Hence the tension of which Mr Henderson spoke in the opening passages of his address. The British Secretary of State went on to remind his American listeners of the social progress which has been achieved this year: the negotiation of the Three-Power Naval Treaty, the settlement of the Reparations Question, the complete evacuation of the Rhineland, the new and striking turn for the better in China. But his tone inevitably became less confident when he passed to the work of the Preparatory Commission for the Disarmament Conference. And his opening observations on the critical nature of the present moment have been echoed and reinforced by Lord Cecil in a message that has been issued by the League of Nations Union. Referring to the Disarmament Conference, to which the work of the Preparatory Commission, now concluded, is to lead up, Lord Cecil warns us that, unless this Conference results in a treaty which will stop competitive limitation, and bring about the substantial reductions that are clearly intended by Article 8 of the Covenant and are anticipated by the defeated Powers in view of the promises made to them by the Allied Powers at Versailles, "the whole edifice of international peace will be shaken to its foundations." Lord Cecil appeals to public opinion to throw its weight into making the World Disarmament Conference a success. Let us hope that this appeal may find a response on both sides of the Atlantic.

* Economist, October 25, 1930.

The New Viceroy.—Many rumours, some of them mischievous and most of them ill-informed, have been dispelled by the announcement of Lord Willingdon's appointment as Viceroy and Governor-General of India, in succession to Lord Irwin. The Government's choice will be regarded as a wise and safe one both in this country and in India. A Liberal by political tradition, with a number of years' experience of the Parliamentary machine, Lord Willingdon carried with him in 1913 to the Governorship of Bombay high qualities of tact, sympathy and breadth of view combined with decisive resolution; and his period of office as Governor of Madras from 1919 to 1924 increased both his prestige and his popularity. There has been a tendency in some quarters to criticise the appointment as "unimaginative," on the ground that the new constitutional era in prospect for India might well have been signalled by choosing as Viceroy a younger man with no associations with either "pre-Reforms" or "dyarchic" India. We can find little point in these arguments, and we fail to see why, in the Empire's greatest and most responsible post, calling for a fine sense of history as well as sound judgment of men, lack of personal experience should be deemed a qualification. If, despite his sixty-four years, the new Viceroy is physically able to carry the burden of another term in India, at a time which will inevitably be one of great strain, he is well qualified to continue the work which Lord Irwin, who has deserved well of India and the whole Empire, is laying down.

M. Steeg in Office.—M. Steeg has not only succeeded in forming a Cabinet. He has encountered the Chamber and weathered his first parliamentary storm. When he met the Chamber on Thursday, December 18th, he was challenged on a question of confidence and held his own by a majority of seven (291 votes to 284). The fate of his Government depended on whether the Socialists would give him their support and on whether he would accept it from them. Before the sitting, no less than five minor members of his Cabinet had resigned—apparently because it was already becoming clear that, without the Socialist vote, the Government could not survive, and that M. Steeg did not intend to fall if the Socialists were ready to uphold him. But these resignations probably strengthened the Government, since the five portfolio-holders concerned belonged to parties of the Right which were not in sympathy with M. Steeg, and which would assuredly have put constant pressure upon their representatives in his Cabinet had these remained there. No doubt he made a good exchange in losing these five colleagues in the Cabinet and gaining the Socialist vote in the Chamber. After the stormy meeting on Thursday, the Chamber and the Senate settled down on Friday to a business sitting, in which the accumulated arrears of domestic legislation were disposed of. But some members had occasion to regret this good behaviour when, at the end of the sitting, decrees were read in both Houses declaring the parliamentary session closed. This step was entirely constitutional; and M. Steeg was no doubt prudent to avoid challenging a second vote of confidence immediately after he had secured his first by so narrow a majority. The situation remains unstable, because the policies of the Socialists and of the bourgeois groups in the Chamber are felt, on both sides, to be divided by a great gulf, so that it is scarcely thinkable that M. Steeg can rely upon perpetual Socialist support. Presumably he will use the respite which he has given himself till Parliament reassembles next month in bargaining, once again, with the parties immediately to the right of him in the hope of reconstructing his Government on some basis of "Republican conciliation," which, without the Socialist vote, will give him a working majority. The scene which his opponents made in the Chamber when the closure of the session was announced on Friday suggests that his prospect of placing his Government on this stronger foundation within the next few weeks may be reasonably good.

The Agricultural Marketing Bill.—The provisions of the Agricultural Marketing Bill are, in the main, innocuous enough. For the most part the Bill is merely permissive. It enables producers in a given area, which may be the whole or any part of Great Britain, to regulate, on their own initiative, the marketing of any kind of agricultural produce specified in the schedule to the Bill, in so far as it is produced within that area. Any scheme for such regulation must provide for the registration of any producer who makes application for the purpose and for the constitution of an administrative board representative of registered producers. The scheme must be submitted to the Minister of Agriculture, who, if he is satisfied that its promoters are substantially representative of the producers of the commodity affected within the specified area, may, after giving due notice of the scheme and considering any representations made in respect of it, make such modifications in the scheme, provided they do not have the effect of extending its area of application, as he thinks proper. Failing a resolution to the contrary by either House of Parliament, the scheme may be put into force by order of the Minister. The scheme must provide for the prevention, under penalty of a fine, of sales of the regulated commodity by producers who are neither registered nor exempt from registration. It must also provide for a fund to be collected from members and administered by the board to insure the equitable operation of the scheme and to assist producers with loans and guarantees. A consumers' committee is to be appointed by the Minister under each scheme, and a committee of investigation to examine reports by the consumers' committee or other complaints. The Minister, in consultation with the Board of Trade, may, if the committee of investigation report that any part of a scheme is contrary to the public interest, revoke or modify the scheme, or take other necessary steps to have the matter rectified. The Bill provides for the establishment of a fund of £650,000, out of which loans may be made to the boards. Thus, though the spirit of the Bill is permissive, it contains a certain compulsory element, but until this very experimental measure has been tried, it is impossible to say how large the element of compulsion is likely to loom. Meanwhile, though it is satisfactory to see anything, of however tentative a character, being done to promote co-operation in agricultural marketing, it is questionable whether this Bill, hedged about with so many committees, and so largely dependent on farmers' initiative, will afford much immediate or substantial relief for this most depressed branch of industry.

The Social Services.—An annual White Paper* which merits attention despite its usually belated appearance is that which gives a synopsis of expenditure (other than out of loans for capital purposes) incurred under various Acts of Parliament on account of what we term "social services." Expenditure includes all sums spent either out of local rates, Parliamentary votes and grants, or out of other receipts—e.g., unemployment and health contributions—accountable for by the State. Comparable figures for England, Wales and Scotland in 1921, 1924, and 1928-29 are shown below:—

"SOCIAL SERVICES" EXPENDITURE.

	(In Millions.)			
	1921.	1924.	1928.	1929.
	£	£	£	£
Unemployment insurance	10.8	48.0	42.8	53.8
Health insurance	29.9	30.9	37.6	39.9
War pensions	100.9	69.6	56.9	54.0
Other pensions	20.8	24.0	45.6†	58.7†
Education	88.8	86.6	94.4	97.0
Working-class housing	4.7	16.6	26.7	31.6
Poor relief	34.3	41.9	45.5	43.9
Miscellaneous‡	16.5	14.5	16.5	16.9
Total	306.7	332.1	366.0	395.8
Total, less War pensions	205.8	262.5	309.1	341.8

* No. 17 of 1930. H.M. Stationery Office, 4d.

† Includes widows', orphans' and old age contributory pensions under the Act of 1926.

‡ Including expenditure on hospitals, maternity and lunacy.

The enormous increase in these forms of expenditure since the War is measurable by comparison with the aggregate, £63.2 millions, expended in 1911. Between 1924 and 1929 the bulk of the increase reflects an expansion in "other" receipts (contributory pensions, + £23 millions; rents, + £10 millions; unemployment insurance contributions, + £6 millions), and the revenue derived for these purposes from rates and from the Exchequer compares as follows:—

	1924.	1929.
	£ Mn.	£ Mn.
Local Rates	78.8	90.9
Parliamentary votes and grants ...	175.3	176.8

Considering that in these five years the cost of War Pensions automatically declined by £15.6 millions per annum, these increases are substantial; and when it is borne in mind that a heavy fall in prices greatly increases the burden of rates and taxes, it must be recognised that the task of financing this "social services" expenditure is palpably becoming a serious problem—rendered increasingly acute by the enormous growth of payments on account of unemployment since 1929.

The Waterlow Case.—On Monday, after a 21 days' hearing of a case unique in banking history, Mr Justice Wright delivered judgment in favour of the Bank of Portugal against the famous printing firm of Waterlow & Sons, Ltd., and awarded damages of £531,851 with costs, as against the bank's claim of £1,100,281. The main facts were not in dispute. Messrs. Waterlow were the official bank note printers for the Bank of Portugal, for whom they had carried out previous orders. In December, 1924, a Dutchman, by name Marang, called at Waterlow's office presenting credentials (afterwards proved to be forged) and purporting to be empowered by the bank to place a secret order for the printing of a large quantity of £5 Vasco da Gama notes for use in Angola. Of these Marang obtained delivery of 580,000, and himself set up a bank in Portugal for the purpose of uttering them. Suspicions were aroused, the facts discovered, and the Marang bank closed down by the Portuguese authorities. The Bank of Portugal caused the Marang bank to be wound up, called in the whole of the existing Vasco da Gama note issue, and replaced the Marang notes with notes of their own to the value of over £1,000,000. Their case against Waterlows rested on two claims:—Firstly, that Waterlows had been negligent, and, secondly, that they (the Bank of Portugal) had suffered loss to the extent of the notes which they had issued in substitution. On the point of negligence, it is impossible to quarrel with the dictum of the Judge that "nothing should satisfy the printer of bank notes except the closest and most stringent scrutiny, and that he should demand quite exceptional proofs that what he was doing was done with the authority of the bank." Equally unanswerable is the Judge's conclusion that Waterlow's investigations did not reach that high standard of thoroughness; and, however deeply one may sympathise with an old-established firm of the highest repute and integrity for becoming the victims of a clever and unprecedented fraud, the evidence entirely supports the imputation of negligence. When the question of damage is approached, we reach far more debatable ground. It was argued for the bank that the damage suffered by it was equivalent to the whole issue made by it in replacement of the Marang notes. For the defendants it was claimed first that the bank was in no way obliged to make such substitution, and, secondly, that since the notes are not convertible into gold, the actual loss of the bank was limited to the trivial figure representing the cost of paper and printing. Mr Justice Wright preferred to accept the bank's contention, and his award represents the face value of the substituted notes less the amount recovered by the bank from its foreclosure on the bank set up by Marang. Substantially, we agree with the judgment on this point also. So long as the notes were in circulation, the actual damage to the bank was not great. The Portuguese public, it is true, suffered as the result of higher prices caused by inflation, but the bank only lost the profits of a note circulation which it had not issued, though it suffered in common with everyone else from exchange and general deprecia-

tion. But when it called in the issue and gave good notes in exchange, it certainly lost, for it would not hold the spurious notes as cover and (except to the extent that the liquidation of the Marang bank provided resources) had to provide cover—in accordance with the banking law—out of its own resources. The Judge dealt very conclusively with the arguments that the bank was not obliged to redeem the Marang notes, and was not entitled to do so at Messrs. Waterlow's expense. The case and its competent conduct afford a striking example of the possibility of achieving international justice in national courts.

Miss Orpen of Hackney.—There is a pleasant antiquarian flavour about a Bill entitled [21 Geo. 5] Sunday Observance Act (1780) Amendment; but the supporters of this private members' measure may readily be acquitted of the charge of framing a mere "museum piece" of legislation. Indeed, their commendable intention is to save us from being turned by 21 Geo. III. cap XLIX, and the painstaking researches of Miss Millie Orpen, into a laughing-stock for the delectation of the whole of Europe's humorous press. Whether the Bill which Mr Boyce and his backers have presented, and which enacts that no proceedings under the Act of 1780 may be commenced, or, if commenced, heard, without the consent of the Attorney-General, is the best way out of the difficulty, need not trouble us. The essential point is that Miss Orpen, by "informing" against the cinema proprietors licensed by the L.C.C. to give performances on Sunday, and thereby, so far as we can judge, legally necessitating the award of pains and penalties on an astronomical scale (reminiscent of the initial reparations figures) against not only the cinema but the newspapers which have accepted their Sunday advertisements, has forcibly brought the legislature up against the whole absurd, anachronistic corpus of law which surrounds "Sunday observance" in this country. We shall not, we hope, be accused of anti-Sabbatarianism if we suggest that no citizen, be he church-goer or not, is likely to be turned into a moral trespasser if he is accorded the opportunity legally to enjoy, on the one complete holiday in the week, a concert, theatre, cinema, tennis tournament, or whatever entertainment—not entailing oppressive hours of work for those employed in providing it—he desires to patronise. "Unto God the things that are God's." The churches of to-day, we imagine, are wise enough to know that Cæsar will not increase the offering to their cause by inhibiting the freedom of his subjects with laws which make no appeal to the social conscience of our times.

The Coupon Gift Scheme "War."—The hostilities which have arisen as a result of the unnatural prominence obtained by coupon gift schemes, writes a correspondent, reveal some fundamental aspects of the problem of distribution. "Gifts" are no novelty in the salesman's pack; it was the sudden inclusion in such schemes of popular branded articles that raised the present storm. In a period of depression the opportunity to participate in a gift scheme was irresistible to the manufacturer at his wits' end to maintain production, and he fell an easy prey to the cigarette producer, ever on the watch for a better-class "gift." But to many the consequent huge orders and the chance to have their products distributed amongst a virgin market have proved a trap. The retailers, finding that articles on the sale of which they depended for a substantial portion of their turnover, were being offered to the public in exchange for coupons obtained on the purchase of cigarettes and in some cases for cash, took collective action and condemned all coupon gift schemes and those participating in them. Some even started retaliations, one firm of stationers offering 6s. worth of cigarettes to each purchaser of a well-known fountain-pen, and announcing that after selling out they would not re-stock the line. A firm of jewellers offered 20 cigarettes (with choice of brand) for every 5s. worth of goods purchased, and the story is told of a man who bought a £100 engagement ring and claimed 8,000 cigarettes. The cigarette manufacturers retaliated by offering

ever more alluring gifts (manufacturers of the most high-class products falling to the bait of immediate and vast orders) and by lowering the number of coupons required to obtain each respective gift. Coupons attained a cash value; a well-known cinema accepted them as payment for seats; but perhaps the height was reached with the offer of a fifteen-guinea wireless set of well-known mark for "60 coupons down" and 15 further monthly instalments. To all intents there might be no end to such moves and counter-moves; meanwhile the public was smoking itself sick and revelling in the spectacle of many of their daily wants and fondest dreams being suddenly dangled before their eyes "free." However, with the turning of the retailer's fury from the comparatively guiltless cigarette manufacturer upon those who supplied the "gifts," things took an ugly turn. One after the other, realising the temporary nature of the gift scheme boom and their permanent and ultimate dependence on the retailer, manufacturers have hauled down their flag, and, in some cases, taken considerable newspaper space to propitiate the dealer and restore distribution to the more normal channels. A gramophone company, at present selling 500 gramophones a week through such schemes, has announced that it will not renew the contract. The retailers have secured a great victory, and it remains for them to dictate the peace; the wise ones will not be vindictive but will appreciate the view of one manufacturer, that participation in a gift scheme will have brought the product considerable popularity with the public and that it will be a better selling line now than ever before. As for the public, its eyes have been opened to the substantial margins reserved by both manufacturer and retailer for occasions of this kind.

Manufactured Imports Analysed.—In the long trench war of attrition between Free Traders and Protectionists much inconclusive fighting has taken place on the "no-man's land" provided by the Board of Trade's classification in the Trade Returns of manufactured imports. For 1929 the total imports of articles "wholly or mainly manufactured" were listed as £334 millions, and, while the Free Trader has habitually claimed that a large proportion of these so-called manufactured imports are really raw materials, the Protectionist has used the figure as proof of a great stream of foreign manufactures into this country, which, if tariffs were imposed, might be produced by our own workers. Hitherto, both sides have been fighting inconclusively, because neither possessed a full battery of real information. We welcome, therefore, the full and detailed analysis of the category "articles wholly or mainly manufactured," which has been made on behalf of the North Western Free Trade Union by a Lancashire statistician, Mr W. H. Slater. Starting from the above-mentioned figure of £334 millions, Mr Slater finds that £105 millions represent raw materials on which little labour has been expended, e.g., pig iron and petrol; that £46 millions refer to partly manufactured articles, e.g., flax yarn, copper sheets; that £44 millions are for goods subjected to import duties already. This reduces the total that can be described as untaxed real "manufactured imports" to £139 millions, and of this £53 millions are miscellaneous and unclassifiable under any main heading, and include a considerable proportion of goods on which further labour must be expended after import. There remain only £86 millions, which, according to Mr Slater's analysis, are indisputably finished manufactures coming into this country free of duty, and since of these we re-exported £24 millions, Mr Slater arrives at a figure of £62 millions as the true one for free imports of finished goods in 1929. Whatever holes may be picked by critics in some details of this analysis, it serves a very useful purpose in revealing in a clear and arresting manner the fact that the volume of foreign manufactures entering British ports free of duty is very much smaller than is popularly supposed, and on the other side of the picture is the equally important calculation that of the £574 millions British exports classed as "wholly or mainly manufactured" articles, not less than £423 millions qualify for description of "finished" goods.

New Cotton Spinning Machine.—Our Manchester correspondent writes: It is announced that two Preston men have patented a new cotton spinning machine, which, if generally adopted, will revolutionise that section of the cotton industry. This inclined mule spindle ring frame allows a more gentle treatment of the thread, resulting in practice in higher spindle speeds and lower twist for given counts. Both these mean greater production and lower costs, and the latter more desirable yarn. Higher counts will be spun from the same cotton. Up to the present fine yarns have always had to be spun on mule frames. In recent years new methods have been developed for the spinning of coarse and medium counts, but they have always had the limitation of being applicable to full twist yarns only. It is claimed that the new invention will succeed in producing not only coarse weft, but also the soft fine counts as well, and that it will produce yarn which is equal to, if not better than, that produced on the mule from the same sort of cotton. One of the first advantages of the proved success of this new inclined ring frame will be the production of a better yarn at a lower cost. For the spinner it is contended that there will be other advantages, such as a higher output per spindle, a lessening of the space required per spindle, a reduction of the wages cost on each pound of yarn and a saving per pound of yarn from the introduction of the high draft process for weft spinning purposes. It is also urged that so far as manufacturers are concerned, the waste loss will be reduced to a minimum, cops will have more length and, in consequence, will need less attention from the weaver, while cloth production will be less faulty, thus reducing the amount of warehouse supervision necessary. The invention has passed severe tests, involving a long period of production on a commercial scale, and the results suggest that it is an advance on the mule economically and is equal to it in other respects. Skill is virtually eliminated, and female labour only will be required. The patentees of the invention are Textile Underclearers, Ltd., of Preston, a company with a nominal capital of £7,000. A number of textile machinists have been licensed to manufacture the machine.

British Film Progress.—The advent of the "talkie" early in 1929 caused at first a marked setback in the competitive power of the British film producer in the domestic market. In 1928, with the assistance of the "quotas" imposed on exhibitors by the Cinematograph Films Act of 1927, the British proportion of the films registered with the Board of Trade, as required by that Act, for exhibition in this country, had risen to 13.5 per cent. The following table, giving the average weekly length, in feet, of films registered, shows subsequent developments:—

Period.	Silent.		Synchronised.		All Films.	
	Total feet.	British proportion of total per cent.	Total feet.	British proportion of total per cent.	Total feet.	British proportion of total per cent.
Weekly average:						
1928 (a).....	112,532	13.5	...	...	112,532	13.5
1929	72,065	15	61,482	7	133,547	11.5
1930 (b).....	50,146	16	97,664	15	147,810	15.4

(a) January 17th to December 25th.

(b) January to October.

It was only towards the end of last year that British producers began to adjust themselves to the new "talkie" fashion, and they found themselves unable to produce more than 7 per cent. of the total length of synchronised films registered during 1929. During the first ten months of 1930, however, British studios have been increasingly successful, and registrations of British synchronised films amounted to 15 per cent. of the total. This proportion is not one with which we should remain satisfied, but it represents a welcome advance; and there is no doubt that talking films offer British producers a great opportunity, if they use it rightly, of overhauling much of America's lead in the cinema industry. Changes in technique and in public taste, however, take place very rapidly in this industry; and it is to be hoped that the new colour processes and the introduction of the wide film will not find our producers unprepared.

American Investment Abroad.—Some interesting figures on the growth of American investments in other countries have lately been published by the Department of Commerce, writes our New York correspondent. The Department arrives at a total of \$7,477,735,000 (as at the end of 1929), covering 4,062 separate investments by American business men and corporations in American-controlled manufacturing and selling organisations, in the securities of foreign-controlled concerns, in purchasing agencies, oil lands, refining and distribution facilities, mining and smelting works, public utilities, plantations and miscellaneous properties. The figures do not include investments of private individuals in the stock of foreign corporations, bank holdings of foreign deposits, acceptances, loans and the like. The largest investment is in Canada, where approximately \$2,000,000,000 is involved. South America comes next with \$1,500,000,000, and Europe is third with \$1,350,000,000. The stake in Africa is the smallest, at \$102,000,000, but that has increased considerably since the beginning of the year. In Europe, Great Britain stands first as an outlet for American investment: Germany is second, and France third. In the last-named country, manufacturing investments account for the bulk of the money. In Italy, more than half the direct investment is in public utilities.

Overseas Correspondence.

UNITED STATES.

Banking Difficulties — Industrial Production — Money Market — Public Finance.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 13.

LONG-STANDING rumours of financial difficulties among brokerage houses, investment firms and banks reached a climax this week with the failure of the Bank of United States, involving deposits of about \$200 millions, held by 400,000 depositors. Aside from the temporary embarrassment caused to the depositors, the failure was important only in that it lent colour to rumours of weakness elsewhere and depressed confidence. Operations of the bank were largely local and confined to the garment trades. Prompt action by the Federal Reserve Bank and the Clearing House Association banks isolated the trouble and staved off what might have been serious withdrawals of deposits from other institutions. One or two other banks which have recently figured in merger negotiations with the Bank of United States felt the effects of public nervousness, but they were amply assisted, and the trouble seems to be blowing over without great injury, though one or two more minor failures may take place.

Banking troubles here and in other parts of the country, particularly in the South and Middle West, are, of course, symptomatic of the disease caused by the inflation of recent years, but they also are the result of "over-banking." It would be easy to exaggerate the significance of these involvements from the standpoint of the general credit position. Fundamentally the country's banking system is sound, and while the volume of loans which may be regarded as "frozen" in securities is large, it is not alarmingly so; and loans of a commercial character have been well liquidated. Observers here make no attempt to deny that liquidation must proceed further before a solid foundation can be laid for recovery. It is now reluctantly admitted that the depression has gone beyond expectations, and there is increasing appreciation among business men and others of the world-wide nature of the trade slump.

So far as the basic industries are concerned, some further recession has taken place. Steel mill operations have fallen to about 38 per cent. of capacity. Steel ingot output in November was the lowest since 1924. Unfilled orders of the United States Steel Corporation

rose 157,000 tons during the past month, and at the moment the trade reports a rising trend in new business booked for the first quarter of next year. This is partly due to the firm stand which the mills have taken on prices, and the extent to which these orders will be translated into actual business remains to be seen. The operating rate will quite likely fall further before the end of the year, but hope is strong of a gradual improvement beginning early in 1931.

Revised figures of motor production for November place the total at 124,000 vehicles for this country and Canada, a reduction of 22,000 from the preliminary estimate of the National Automobile Chamber of Commerce. The latest estimate is the lowest for any month since 1921. Railroad traffic continues to disappoint with decreases in weekly freight loadings which are proving to be more than seasonal. Loadings for the last week of November, including the Thanksgiving Day holiday, were the lowest for any week, except year-ends, since before the war. Coal mining is rather stagnant, and the building industry, after failing to enjoy much recovery last summer, is now undergoing a seasonal decline.

Copper mining is showing the first effects of the production restriction agreement. Although there was a further increase of nearly 5,000 tons in stocks of refined metal in November (the thirteenth consecutive monthly increase), stocks of blister copper, in process of refinement, dropped to the lowest point in several years, foreshadowing a considerable decline in refined metal. Copper production dropped to a daily average of 3,755 tons, compared with 3,814 tons in October and 4,846 tons in November of last year. Actual shipments of metal were somewhat less in November than in October, and the result is that the producers' price has fallen from the nominal quotation of 12 cents to 11 cents a pound, while custom smelters are selling copper at 10½ cents. It is generally expected that a further decline in price will take place, and in respect to price the trade has been disappointed. Whether the curtailment agreement itself can be maintained depends on how much buying comes to the market in the next few months.

Along with assurance of a good average cotton crop, as shown by the ginning returns, consumption of the staple has fallen. Consumption during November was 414,887 bales, against 444,494 in October and 541,153 in November of last year. Exports also declined nearly 100,000 bales last month.

Mobilisation of currency in the banks against contingencies which might arise from the bank failures is supplementing the usual accumulation of funds here and in other Reserve Bank centres in preparation for the fourth quarterly income tax payments and Treasury operations falling on December 15th, and involving, with corporation dividends, approximately \$2,000,000,000. The extra credit has come mainly from fresh purchases of bills and government securities by the Federal Reserve Banks, with only a mild increase in member bank borrowing. Call money has responded with a rise to 2½ per cent. on the Stock Exchange, the first change from the 2 per cent. rate since September 29th, when the rate rose from 1½ to 2 per cent. However, call money has been virtually unobtainable a good deal of the time at as low as 1 per cent.

The firmer tone in short-term rates is regarded as temporary. Time funds, even for the short maturities, have shown no corresponding stiffening, and next week call rate should recede. The Treasury has allotted \$428,322,000 on its December 15th certificate issues, to provide for maturities of \$450,000,000. Bank subscriptions will be made largely through deposit credits, but the remainder will require disbursements which the Treasury will secure from temporary borrowing at the Federal Reserve Bank. This overdraft, probably amounting to \$150,000,000, will promote the usual ease in call money pending collection of income-tax cheques.

Although the new certificate issues bore the lowest rates at which the Treasury has ever borrowed, 1½ per cent. for the six months' issue and 1¾ per cent. for the twelve months' maturity, over-subscription was enormous,

being more than six times the shorter issue. This was due in part to the recent cut in the rate of interest which the Treasury requires banks to pay on its deposits, but also reflected the confidence of the banks in a long continued period of easy money.

Non-interest bearing Treasury bills will mature next week in the sum of \$102,000,000, and in view of the current appropriating of Congress for Farm Board purposes, food doles and unemployment relief, an early refunding issue is assured. Other operations next week include collection of approximately \$122,000,000 on foreign debt payments, income tax collection of about \$470,000,000, Government interest disbursements of \$90,000,000 and corporation dividend payments of about twice the latter amount.

Absorbed with discussion of appropriations recommended by the Administration for unemployment relief, Congress has had little time to consider any other legislation. Having announced its definite policy of supporting the wheat, corn and cotton markets, the Farm Board probably will receive \$250,000,000 more, the remainder of the original half billion promised, and this will keep in the background any move to amend the Farm Relief Act to include an export bounty on wheat.

Congress is inclined to raise President Hoover's estimate of the amount desirable for labour relief and food doles, and, having started the appropriation landslide, the Administration is now warning Congress that the country cannot stand any more waste. It is highly unlikely that the President will veto any important appropriation bill, and the prospect of a considerable Treasury deficit for the next fiscal year is daily becoming more certain.

Responding to despatches from your side, some sections of the Press here are publishing reports of a huge Federal Reserve Bank or private banking credit to be shortly announced for the Bank of England, but these reports are given short shrift in well-informed quarters. However, there is no question that Federal Reserve policy is entirely sympathetic with foreign central bank ideas on gold reserves and the necessity for building up a stronger long-term investment market and thereby helping to stabilise commodity prices, the fresh fall in which is creating some anxiety here.

FRANCE.

Politics — Close of Session — Revenue — Foreign Trade — Retail Prices.

(FROM OUR CORRESPONDENT.)

PARIS, December 22.

THE new Ministry made its first appearance before the Chamber last Thursday under the depressing influence of the resignation, immediately before the sitting, of the newly-appointed Minister for Pensions, M. Thoumyre; the Under-Secretary for the Interior, M. René Coty (both members of the Republicains de Gauche group, to which also belongs M. Georges Leygues, a former member of the Tardieu Cabinet and now Minister for the Interior); and another under-secretary. This brought the number of withdrawals to five since the formation of the new combination five days earlier. The reason given by all five was the same—that their respective groups refused to desert M. Tardieu, in spite of the inclusion of some of their members in the new Government. The customary Ministerial Declaration was colourless, as was to be expected, and the debate that followed its reading was of a purely party character. In the result, the new Government "just scraped home" with a majority of seven votes. The division list shows that—leaving out of the question the Radical Left Party, which has been hopelessly split for many months past—the old Tardieu majority of the Chamber remains intact, and is likely to continue so. The Steeg Cabinet, in other words, owed its majority solely to the support of the 106 Socialist votes, without which, even if it is given the benefit of the 80

abstentions by representatives of various parties, it would have been defeated by a majority of over 70. It has been publicly admitted by the Socialist leader, M. Léon Blum, that his party is in no way pledged to support the Steeg Cabinet, but that its primary object is to keep M. Tardieu out—an ambition which is undoubtedly shared by the Socialistic Radicals. In these circumstances, as the new Ministry announces that for all practical purposes it has taken over M. Tardieu's own programme, it is evident that a fresh Ministerial crisis may occur at any moment after the Chamber gets down to work again, when the holidays are over.

On Friday, the day following the new Government's first appearance before Parliament, M. Steeg suddenly presented both Houses with a decree bringing the session to a close until January 13th for the Christmas and New Year holidays. This step was received with a good deal of surprise, as it had been expected that advantage would be taken of the few days remaining before the usual date of adjournment to deal with several items of urgent business. The Government's action has left only ten weeks, at the most, for the Budget—already again behindhand—to be put through both Chambers, and nervousness is being expressed in many quarters that the long-drawn-out party quarrel may again result in *douzièmes provisoires*, owing to more Budget delay. The new pensions law should have been voted before December 31st, and it is possible that hundreds of thousands of disabled ex-soldiers will not be able to receive their increased allowances until well into the New Year.

The Bills authorising some £48,000,000 of loans for the colonies, which have already passed the Chamber, and which the new Under-Secretary for the Colonies undertook in writing should be approved by the Senate before the holidays, have been similarly hung up. The same may be said of the £140,000,000 five-year measure for the improvement of the national economic plant, which was taken in hand by the Chamber a few weeks ago and which is being anxiously looked forward to as a weapon to allay possible industrial depression in the near future, but which is not even mentioned in the new Ministry's Declaration of Policy. Judging by the general trend of the Budget discussions by the Finance Commission of the Chamber, and by the arguments advanced by Opposition speakers in the debates on the Bill for economic development, it is more than possible that both measures may now have to be substantially recast, particularly if the Socialists think fit to exercise pressure on the new Ministry in regard to them.
