The balance sheet does not present any substantial variation from that presented to you a year ago. I might, however, explain that on the debit side the relatively high withdrawal of £38,128 from the reserve for depreciation and renewals is largely due to the substitution of automatic working for manual at Singapore. Adequate provision for depreciation, based on the normal expectation of useful life of the different classes of plant and apparatus employed in the business is made year by year. But when, as occasionally happens, it is deemed advisable to replace plant before its useful life has expired—either with a view to giving improved service, to effecting economies in working, or for other reasons—special provision has to be made to meet the deficiency which would otherwise occur in the depreciation fund.

In the case of the manual equipment at Singapore, which, as I have explained upon a previous occasion, comes under this heading, we have been making provision in advance during the last few years to meet this deficiency, so that by 1930, when the change-over took place, the depreciation fund would be in a position to meet the special demand upon it. The cost of the manual equipment is now written off, and the balance of £40,556 represents the correct amount which should at present be in the fund to provide for the depreciation of all the company's plant and property, both in Singapore and Mauritius.

FAVOURABLE FINANCIAL POSITION.

On the credit side of the balance sheet, the deduction of £21,024 from the "cost of exchange equipment" is due to the same cause, namely, the withdrawal of the old manual equipment at Singapore. The addition of £13,387 to the land and buildings account represents, mainly, the final cost of the staff housing scheme there to which I made reference in my address to you last year. The value of your company's share holdings in the subsidiary and associated companies appears at the same figure as last year and, as usual, represents a very conservative estimate of the actual value of these holdings. The cash and liquid resources of the company have not varied substantially, save that a considerable proportion which figured last year under the heading of "fixed deposits," now appears under the heading "British and Indian Government securities." The company is thus in a very favourable position to cope, at short notice, with any development or expansion which it may be called upon to undertake.

Turning now to the profit and loss account, the principal item which attracts attention on the debit side is the increase of nearly £6,000 in income tax for the past year, due to the larger profits brought into account, and to the increase in the rate of tax from 4s. to 4s. 6d. in the £. Other items require no special mention, being all much the same as last year.

On the credit side the combined profits of our own two branches (Singapore and Mauritius) are up by £13,344, due mainly to substantial economies which have been effected during the year, and to the non-recurrence of special charges under the heading of depreciation and renewals. Dividends and interest from associated companies are down, however, by some £6,000, but this has already been explained in the report in your hands.

In conclusion, he dealt in detail with the year's working of their branches at Singapore and Mauritius, and their subsidiary and associated companies in Bombay, Bengal, Rangoon, Madras and Hongkong.

The report and accounts were unanimously adopted.

THE LONDON ASIATIC RUBBER AND PRODUCE COMPANY, LIMITED.

LEGISLATIVE RESTRICTIONS FOR RUBBER IMPROBABLE.

AMALGAMATION WITH SEPANG COMPANY APPROVED.

The twenty-third ordinary general meeting of the London Asiatic Rubber and Produce Company, Limited, was held, on the 8th instant, in the council room of the Rubber Growers' Association (Incorporated), 2, 3 and 4, Idol Lane, London, E.C., Mr H. J. Welch (the chairman) presiding.

Mr J. O. May, representing the secretaries (Messrs Harrisons and Crosfield, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: Ladies and Gentlemen,—For the first time in its history the company has not made a profit, the loss (including £5,475 written off for depreciation) amounting to £13,800, against a profit for 1929 of £69,884. It may be permissible to recall that since I joined the board, in 1915, the average dividends paid by this company up to last year equalled over 21 per cent. per annum.

The restricted crop produced showed a decrease of 370,000 lbs., and the cost per pound was the lowest ever attained by the company.

As further economies have been effected since the beginning of 1931, production cost per pound for this year upon the restricted crops now contemplated will be decidedly lower even than those for 1930, and will consequently create a fresh low record.

VOLUNTARY OR LEGISLATIVE RESTRICTION IMPROBABLE.

No estate can hope to obtain a profit by production of rubber at present prices. The objective must be principally to minimise the loss incurred.

Through a prolonged period of depression, such as the present, the financial resources of companies should be safeguarded at all costs.

The fact that about half the world's output of rubber is produced by Asiatic smallholders, of many different races and languages, scattered over a number of countries, makes it impossible for any satisfactory and equitable system of voluntary restriction to be organised.

Principally because no legislative restriction would be satisfactory to estate producers that did not limit the production of native producers, a satisfactory scheme of legislative restriction seems equally improbable. Owing to various reasons no scheme seems possible under which the actual tapping of the Dutch native can be restricted, even if the political difficulties of restricting his output could be overcome.

It is unfortunate that the idea of combined legislative restriction has been flirted with so long, as it has doubtless been the cause of prolonging the excessive supplies. The sooner now it is definitely abandoned the sooner will supplies begin to balance demand.

AMALGAMATION WITH THE SEPANG COMPANY.

Amongst the advantages of such amalgamations are those of local administration. Efficiency of management is generally increased and certain economies are made possible. The risks of tropical agriculture are more widely distributed.

The combined surplus liquid assets existing as at January 1st last, added to the calls upon the shares to be issued for the Sepang Estate, will amount to £144,500. This sum will provide the estimated capital expenditure of £54,000 required during the next six years to bring all the estates of both companies to maturity, and will leave a substantial balance of £90,000 available for working capital and cash reserves.

LOW NET COST PER ACRE.

You will also have noticed that, after providing for the further capital expenditure, the amalgamation will substantially reduce the net cost per planted acre of this company to £28, without placing any value on the reserve lands, etc., but also without, I must unfortunately add, making any allowance for any future debits to our profit and loss account.

The directors' report and statement of accounts were adopted after the chairman had replied to shareholders' questions; the retiring director and auditors were re-elected; and the resolution to increase the capital to enable the amalgamation to be carried through was approved.

A vote of thanks was passed to the estates staff and the Eastern agents, with whom the proposer and seconder associated the chairman and directors, for the services they had rendered to the company during a long period of years.

BRITISH MATCH CORPORATION, LIMITED.

HIGHLY SATISFACTORY RESULTS.

The fourth ordinary general meeting of the British Match Corporation, Limited, was held, on the 13th instant, at Winchester House, Old Broad Street, London, E.C., Sir George Paton (chairman and managing director of the company) presiding.

The Secretary (Mr H. E. Hobson, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—In these difficult and troublesome times it is gratifying to your directors, as I am sure it must be to you, that we have been able to place before you accounts which, if not quite up to last year, are highly satisfactory.

The net revenue amounts to £461,387 1s. 4d. and, adding the amount brought forward from last year, you have a total of £528,853 9s. 6d., against £545,139 2s. 2d.

Your directors recommend to write the sum of £40,000 off goodwill, rights, etc. The directors also recommend the payment of a dividend on the preference shares for the half-year to April 30, 1931, at the rate of 5½ per cent. per annum, less income tax, and a dividend of 4 per cent., free of income tax, on the ordinary shares. These two dividends absorb £259,125 2s. 6d., leaving £94,789 5s. 9d. to be carried forward to next account, against an amount of £67,466 8s. 2d. brought in.

Shares in subsidiary companies, taken at cost, are unchanged at £5,923,048 15s., and I can assure you they are not overvalued. They yield a gross return of over 10 per cent.—to be exact, 10.27 per cent.

The net revenue from shares in subsidiary companies at £480,313 15s. is down by £26,679 12s. This is more than accounted for by the depreciation in the Brazilian exchange.

SOURCES OF INCOME.

This corporation is only a holding company, and I think you would like me to tell you something of the businesses from which it draws its income. The most important of these, as you know, is Bryant and May, Limited, this corporation holding all the ordinary shares in that company. The annual meeting was held on April 29, 1931, when dividends the same as last year were declared. The net profit amounted to over £530,000, against £528,000 in the previous year; £100,000 was added to reserve account, bringing it up to £500,000. The investments consist of £549,699 in Government securities, yielding a return of over 5 per cent., and £1,377,793 in subsidiary and associated companies, which give a return of over 20 per cent. on the book value, and provide a large proportion of the profits of that company's business.

These results, I am sure you will agree, are eminently satisfactory, and I firmly believe, while largely due to the profit-sharing and co-partnership system introduced into that business over twelve years ago—the distribution amongst the employees this year was £47,341—it is also due to the conservative policy which has been consistently pursued for many years.

Sales of matches in the home trade have been maintained and are well over last year's totals, although competition from cheap imported matches has been very keen and in some districts troublesome. Goods of the highest quality only are produced at your factories. Good salesmanship and service are essential at all times, but particularly in the days, or shall we say the years, which we have been and are passing through. They bring their reward in the confidence and loyalty of buyers and friends alike.

The subsidiary companies of Bryant and May have all given a good account of themselves. I would also like to refer to our Scottish timber estates, situated at the head of the Holy Loch on the Clyde, where Bryant and May own close on 7,000 acres, which they are afforesting with timber particularly suitable for the match business. Up to the present 3,500,000 young trees have been planted on an area of 1,500 acres.

POSITION IN AUSTRALIA.

My colleague, Mr Bartholomew, has just returned from an extended trip to New Zealand and Australia, visiting Canada on his way to New Zealand. He reports most encouragingly regarding all our businesses in these places, but, with regard to Australia and New Zealand, the exchange question and increased taxation are putting up costs, and I fear we must face the fact that this will somewhat affect our returns from these particular places until the financial situation improves, as no doubt it will, provided the Australian Governments tackle the question of economy in a serious way.

A STRONG POSITION.

The position of the corporation and its subsidiaries is financially very strong, and, given better world conditions, there is nothing that I can see to prevent its future prosperity and growth.

The report and accounts were unanimously adopted.

CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED.

BUSINESS WELL MAINTAINED.

The meeting of the Calcutta Electric Supply Corporation, Limited, was held, on the 11th instant, in London, the Right Hon. Lord Meston of Agra and Dunottar, K.C.S.I. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that, despite political excitement, boycotts and severe trade depression, the business had more than held its own. They had a gratifying accession of new customers, both industrial and domestic, but the depression in the jute industry hit them badly, so that the increase in their gross revenue was only £27,000, and the effect on their load factor caused a rise of £16,000 in running costs. There was a serious enhancement of taxation in India, and the capital charges were increased owing to the new issue of 220,000 preference shares. In the result they had £295,000 to distribute, as compared with £306,000 last year. The system of distributing surplus profits between shareholders and consumers, which began two years ago, had not met with the popular success hoped for. The goal of the company's policy of modernising plant and distribution had been the cheapening of supply and the encouragement of increasing demand by lower rates. The board had accordingly determined, in place of a consumers' bonus this year, to reduce the domestic flat rate from 3 annas to 2½ annas (net) per unit, a concession worth over £50,000 a year to their consumers.

They had introduced an extremely moderate tariff for hotels, theatres and other large consumers taking current from the high-tension mains, and a novel and attractive rate for small power consumers. These measures would repay them by the extended use of electricity, especially as they were setting up a new and active sales organisation in Calcutta. There would be a period of transition, and to help them through it they proposed to set aside a special reserve of £30,000, leaving them with enough to maintain their carry-forward and repeat last year's dividend on the ordinary shares of 7 per cent., plus a 5d. bonus, in addition to the interim 5 per cent. distributed last November.

The resolution was carried unanimously.

CAWNPORE ELECTRIC SUPPLY CORPORATION, LIMITED.

SUCCESSFUL RESULTS DESPITE ADVERSE FACTORS.

The annual ordinary general meeting of the Cawnpore Electric Supply Corporation, Limited, was held, on the 11th instant, at Winchester House, Old Broad Street, London, E.C., Mr. John G. B. Stone (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, after referring to the effects of the recent riots in Cawnpore on their business, said: Dealing with the accounts, we have generated some 10 per cent. more energy and we have sold 12½ per cent. more. We sold 87 per cent. of the quantity generated, compared with 86 per cent. in 1929.

Public lighting has been extended by 161 lamps, and a new contract is now under discussion with the municipal board. The supply for power purposes has been given at an average rate of 1.78 As., compared with 1.81 As. in the previous year, and the special contracts have brought in 0.69 As., against 0.76 As. in the previous year.

The cost of generating and distributing the supply at £54,386 shows a reduction of £1,758 on the figure for 1929, and the revenue from the sale of current, etc., at £167,121 shows an increase of £1,312. As to the figures for traction, the slight excess of receipts over expenditure is £368 less than it was in 1929, traffic having been considerably interrupted during the year. Finally, we carry £81,419 to profit and loss account. The 1929 figure was £79,944. We have transferred to depreciation and renewals account £25,000, to the general reserve £8,000, to income tax account £4,500, and to the debenture sinking fund £8,341 2s. 6d., and we have paid during the year the preference dividend, amounting to £14,000, an interim dividend on the ordinary shares amounting to £6,000, and the directors' commission of £1,000, which is in respect of both these dividends. These transfers and payments are included in the profit and loss account, and the balance of profit and loss account, £20,819, is practically the same figure as for 1929.

The investments are set out in detail. Their market value shows an appreciation over cost of some £5,000. If we compare the total of investments and cash amounting to £183,600 with the corresponding total for 1929 there is a reduction of £15,828, which has gone into capital expenditure.

The report and accounts were unanimously adopted.

BRITISH BANK OF SOUTH AMERICA, LIMITED.

SATISFACTORY RESULTS.

The sixty-eighth ordinary general meeting of the British Bank of South America, Limited, was held, on the 14th instant, at the head office, 117, Old Broad Street, London.

Mr. Robert John Hose (chairman of the company) referred to the contributory effects of the continued world crisis on the unprecedented difficulties of Brazil and expressed the great satisfaction felt everywhere that the patriotism of her leading citizens had curtailed the revolutionary struggle. He then outlined the plans recently announced by the Provisional Government, under the able leadership of Dr. Getulio Vargas, for the solution of the formidable coffee problem and the balancing of the National Budget, and applauded their anxiety to increase and diversify exports.

Referring to the heavy fall in Brazilian bonds abroad, he attributed the unjustifiably low prices of many of them to forced selling, principally from New York, on investing markets disturbed and limited by world conditions. He believed the steps taken by the Government towards freeing the exchange market would be all to the country's advantage in the long run.

After referring to the favourable balance—£12,151,000—of exports over imports last year, the chairman said that, whilst the situation in Brazil was still undoubtedly difficult and recovery must necessarily be slow and, owing to world conditions, dependent to a greater extent than ever before on Brazil's own efforts, the Provisional Government was tackling its many problems with courage and determination, thus affording the promise of better times ahead and the development of the vast natural resources of Brazil, whose fortunes the bank had watched and shared for over sixty years.

The Prince of Wales, during his recent visit to South America with Prince George, had done much to enhance British prestige and hearten the British communities in that sub-continent, and he (the chairman) urged British manufacturers to adapt themselves still more to the special conditions of those intensely competitive markets.

With regard to the balance sheet of the bank, there was a general decline in the totals, which was mainly due to the lower rate of exchange at the end of the year. For the same reason and by means of economies the general charges had been reduced by some £12,976. The gross profits were lower by £22,000, at £292,100, and the net profits were £90,100, against £99,900. He thought it would be agreed that that was a favourable result, having regard to the quite exceptional trading difficulties experienced during the year. They were of opinion that the present circumstances called for a conservative dividend policy, and, with the distribution of a final dividend of 6s., the full dividend was 8 per cent. for the year, as compared with 10 per cent. formerly, but the carry-forward was increased by £10,000 to £118,760.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended May 9, 1931, amounted to £10,699,900 against ordinary expenditure of £7,490,300. After allocating £610,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £237,438, the week's operations, as shown below, reduced the National Debt by £2,837,000 to £7,617,001,000—

* Tax free. † Free of income tax. (a) Absorbed £24,300. (b) Rate per cent. per annum. Absorbed £12,501

The directors of the Liverpool and London and Globe Insurance Company, Ltd., have re-elected Mr. A. Allan Paton, C.B., as chairman, and Mr Arthur E. Pattinson, Mr A. Kentish Barnes, and Mr P. R. England as deputy chairmen of the company.

The directors of the Val de Travers Asphalte Paving Company, Ltd., have appointed Mr Charles W. Wood—for many years secretary and assistant manager to the company—to the post of general manager.

The British South Africa Company announces that Mr Arthur Edward Hadley, C.B.E., has been elected a director of the company.

Mr A. S. Bass, the treasurer of Gestetner, has been elected a director.

THE WALL PAPER MANUFACTURERS' LTD.—The directors have decided to pay an interim dividend of 5 per cent. on the ordinary shares of the company. With the results of six months' trading before them, they do not feel justified in maintaining the usual interim dividend of 5 per cent. on the deferred shares and have therefore reduced it to 4 per cent., believing this represents a true relation between the company's earnings and its share capital. It is not deemed to be owing to the effect of the world-wide depression on sales and production, but is possible to forecast final results at this stage, the board believes it right to state that, so far as it can be anticipated, it will not be possible to maintain the year's dividend on the deferred shares at its previous level. The warrants for the dividend on the ordinary shares will be paid to the holders on May 30, 1931, and for the dividend on the deferred shares on June 15, 1931.

DOMINION-SCOTTISH INVESTMENTS, LTD.—The directors have declared a dividend on the 5 per cent. cumulative redeemable preference stock (par value \$50.00) of the company at the rate of 5 per cent. per annum for the quarter ending April 30, 1931, payable on May 1, 1931, to shareholders of record at the close of business on April 20, 1931.

HARRIS (BUENOS AIRES) LTD.—The directors have considered the accounts for the half-year ended February 28, 1931, which show a heavy decrease in profits, but in view of the existing reserves and strong financial position, the directors have decided to declare the usual interim dividend on the cumulative preference shares at the rate of 8 per cent. per annum, less income tax at 4s. 6d. in the pound. Dividend warrants, payable June 17th, will be posted on June 16th to preference shareholders whose names are on the company's registers on May 15, 1931.

OIL OUTPUTS.

ANGLO-EQUADORIAN OILFIELDS, LTD.—The production for April is cabled as 16,824 tons.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of April are as follows:—Production of oil, 48,080 tons; deliveries, 44,190 tons.

THE ATTOCK OIL COMPANY, LTD.—Production for April, 10,796 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended May 6th:—Venezuela, 36,106 barrels; Trinidad, 28,430 barrels; total, 64,536 barrels. Production for April:—Venezuela, 155,325 barrels; Trinidad, 99,584 barrels; total, 254,909 barrels. Deliveries for April:—Venezuela, 160,145 barrels; Trinidad, 80,623 barrels; total, 240,768 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Gross production for April: Dacia, 6,055 tons; Perimeter X, 5,384 tons. The decrease in the latter is due to the sanding up of Well No. 2.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of April amounted to 99,794 barrels, or approximately 14,256 tons.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Company for April is cabled as 24,767 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended May 2, 1931, was 218,000 barrels.

SERVICE PETROLEUM.—The production from the company's oil wells at Gura-Oenitzi, Moreni and Ceptura for the week ended 12th instant, was 4,473 tons (31,311 barrels).

STEUA ROMANA (BRITISH), LTD.—The production of the Steua Romana Company, Bucharest, for the month of April was 73,670 tons.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during April was 20,579 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,543 barrels.

TOCULO OILFIELDS OF VENEZUELA LIMITED.—Oil produced during April, 1931, 2,396 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during April, 13,650 tons; oil purchased during April from other companies, 50,150 tons. On account of the large purchases of crude oil now being made, the company's own production is being restricted, and it is anticipated that restriction will continue over the next two or three months.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended April 18th was: Bolivar district, 73,501 m. tons; Maracaibo district, 17,299 m. tons; total, 90,800 m. tons. Production for the week ended April 25th was: Bolivar district, 72,709 m. tons; Maracaibo district, 17,042 m. tons; total, 89,751 m. tons. Production for the week ended May 9, 1931, was: Bolivar district, 76,115 m. tons; Maracaibo District, 16,672 m. tons; total, 92,787 m. tons.

Commercial Reports.

MARKET SUMMARY.

The general situation of the commodity markets is rather worse than a week ago. Prices have been irregular, but on balance the general level has been below that of last week. Some sections of the coal trade in Yorkshire and South Wales experience a good demand, but small coals continue to accumulate and industrial requirements show no signs of an early expansion. Exports during April, at 3.6 million tons, were 0.2 million tons below those of March, and they compare with 4.6 million tons a year ago. The low level of activity in the iron and steel industries is reflected by the production figures for April. The output of pig iron at 323,200 tons shows a decline of 33,900 tons on March, and the figure for steel at 397,400 tons shows a decrease of no less than 102,700 tons as compared with the previous month. The principal non-ferrous metals show a further decline in price—most pronounced in copper and tin. It is true that production has been greatly reduced in most cases and is now scarcely above the rate of current consumption, but the huge stocks, accumulated during the past year, prevent any substantial rise in quotations until a definite increase in consumption becomes noticeable. Among textile raw materials, cotton and wool declined further and there has been no increase in the sales of finished goods. Raw jute, hemp and silk have also been easier, but flax was maintained. High-class rayon fabrics are still in good demand in the United Kingdom, but little headway is being made in exports. Most foodstuffs, including wheat, have been cheaper, and the slight advance in raw sugar prices is due to the signing on May 9th of the International Sugar Convention known as the "Chadbourne Plan." Among miscellaneous commodities, vegetable oils and oilseeds have been dull, and hides failed to recover. Rubber has been slightly firmer following considerable American buying, and the decision of several companies to suspend tapping because of the unremunerative level of prices.

THE COAL TRADE.

SHEFFIELD.—After contract demands and arrears have been satisfied, there is little large steam coal available for shipment. It is probable, however, that the condition of the inland market will soon enable collieries to offer increased supplies for export. Best hards are firm at 17s. 6d. to 18s., f.o.b. Humber ports, and screened steam coal at 15s. 3d. to 15s. 9d. There is a seasonal decline of demand for house coal; some of the best qualities are more plentiful, and there is a surplus of secondary fuel. Best house coal is quoted at 22s. and 23s. at pits. The call for industrial fuel continues quiet, and trade in furnace coke has eased off since the demand for domestic heating declined.

CARDIFF.—The general position on the Cardiff coal market is unchanged. The majority of the large coals have been steadily absorbed, and for some of the Monmouthshire grades the prices realised for Cardiff shipment are from 3d. to 6d. per ton above the schedule minimum. The collieries are also well stemmed up to the Whitsun holidays. Beyond that period the outlook is very unsettled. Small coals continue to glut the market, and the colliery companies are experiencing increasing difficulties in the stocking of surpluses. The washed classes are fairly steady, but the cheaper qualities are receiving a diminishing support. The Egyptian State Railways are in the market for the balance of their recent requirements of 300,000 tons of large coal; but it is anticipated that, owing to the increase in the rates of freight to Alexandria, it will be impossible for contractors to renew the prices at which they were prepared to supply earlier in the year when the freight rate to Alexandria was only about 6s. 9d. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 19s. 9d.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 9d. to 18s. 3d.; best small steams, 13s. 6d. to 13s. 9d.; coking smalls, 14s. 9d. to 15s.; cargo smalls, 12s. to 12s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 27s. 6d. to 34s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. 6d. to 24s.

IRON AND STEEL.

MIDDLESBROUGH.—There is no lift in the depression that has overshadowed the market for Cleveland iron for so long, and consumers, who are expecting an early reduction in prices, continue a hand-to-mouth buying policy. Trade with Scotch consumers shows no expansion, although it is understood that increased concessions have recently been offered by Cleveland makers to secure more business. The response, however, has been altogether disappointing. No change was made in the official prices on Tuesday, which remain: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. per ton f.o.b. or f.o.t. The business reported was almost negligible and the outlook is very discouraging. The demand for hematite is slowly improving, increased quantities having been sold recently for early delivery, amongst which are some parcels for export, which is a satisfactory feature. Makers, however, have had to cut prices still further and have accepted 65s. for mixed numbers, which is now the general market quotation, although some works are holding for more. Inquiries are still circulating for important quantities for forward delivery, but business is slow to mature. Premiums are asked on the prompt price according to time of delivery required. In the finished trades very little new business is coming to hand and old orders are being rapidly worked off, which is causing uneasiness in regard to future rolling operations. Prices for home are unchanged, viz.: Plates, 48 15s.; angles, 48 7s. 6d.; joists, 48 15s.; subject to rebates. Other home prices are: Iron crown bars, 41 10s.; heavy steel rails, 48 10s.; 24-gauge galvanised corrugated sheets, 41 11; and 24-gauge black sheets, 48 10s. In the ore trade there is practically nothing doing. Spot cargoes of best rubio have been offered recently at 15s. 6d. c.i.f. without finding buyers. The freight Bilbao/Middlesbrough for prompt tonnage is about 4s. 3d. For forward delivery prices are higher, but consumers are off the market. Coke is in plentiful supply, and although 16s. is asked for good medium qualities delivered works, very prompt lots can be secured at a trifle less. There are still 21 furnaces in blast in the district, but this number will be increased by two going in at Ayresome Works towards the end of next week.

SHEFFIELD.—Taking local industry as a whole, conditions are no worse, and in several departments the downward movement of trade appears to have been checked and the bottom of the depression reached. Business, however, continues very bad and turnover so low that many firms are carrying on at a monetary loss. It is doubtful whether the trade in shipbuilding and railway material has ever been at such a low ebb as at the present time. Pig-iron makers are still experiencing severe competition from Indian foundry iron, and there is no sign of the home output being increased. Rather more tools and cutlery were exported last month than in March, and the home demand for cutlery and plate is somewhat brisker than it has been. Imports of cutlery remain at previous levels, although large quantities of very cheap safety blades have been delivered here lately. Trade in sterling silver ware is stagnant. The cheapness of raw silver has failed to stimulate buying on the part of the public.

GLASGOW.—The depression in the Glasgow and Lanarkshire steel trade shows no sign of lifting and works continue to run intermittently. The present state of affairs in the Clyde shipbuilding industry is largely responsible, as the shipyards normally take much the greater portion of the output of the West of Scotland steel

plants. Purchases of all materials are mainly for small lots for special requirements and it would seem that practically all buyers are well stocked with common sections. Work is more plentiful in the locomotive shops this week on account of a considerable amount of repair work which is presently being carried out. The pig-iron market is very quiet. Sheetmakers are booking very steadily for the home market and a fair tonnage of black for export, but the galvanised export trade is poor.

CARDIFF.—Depressed conditions continue to prevail in the tinplate and other branches of the South Wales iron and steel industry. Tinplate prices are weak, and it is reported that the continuance of the pooling arrangement is doubtful after the end of the present month. Quotations have ruled down to 14s. 9d. per basis box, and how severe the recent fall in price has been may be gathered from the fact that in mid-May, 1930, the current quotations ruled between 18s. 3d. and 18s. 6d. Extreme depression continues also in the galvanised sheet trade, where prices are unaltered at 411, compared with 412 per ton at the corresponding period last year. Tinplate bars are easier for the local make at from 44 15s. to 45 per ton, and for foreign bars it is between 43 15s. and 44 per ton.

OTHER METALS.

TIN.—It has been realised that at the present low level of consumption, the production quotas allotted under the restriction scheme are too high to bring about a considerable reduction in the large quantity of visible supplies which have a depressing influence on prices. The object of the scheme has thus been defeated. A meeting of the International Tin Producers, comprising representatives of the Dutch East Indies, Bolivia, British Malaya and Nigeria, has therefore been convened for Saturday, May 16th, at the Hague, with the object of examining the position. It is expected that the downward revision of quotas will be decided upon. Meanwhile the metal has failed to recover, and Wednesday's closing quotation for "standard cash," at 104 10s. to 104 15s. 6d. per ton, compares with 105 10s. to 105 12s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 28,616 tons, show an increase of 609 tons on the week.

COPPER.—Copper has suffered a further setback during the week. There has been no improvement in consumption, and although production has been severely curtailed, particularly in the United States, stocks of rough and refined copper in North and South America at the end of April showed an increase of more than 8,000 tons over the previous month. On May 9th, Copper Exporters, Inc., reduced their minimum price for "electrolytic" c.i.f. Continent from 9.80 cents per lb. to 9.775 cents per lb. owing to the lowering of freight rates, and on May 13th, the quotation was further reduced to 9.525 cents per lb. For domestic consumption the metal changed hands at only 9.00 per lb. Wednesday's quotation in London for "standard cash," at 438 18s. 9d. to 439, compares with 440 6s. 3d. to 440 8s. 9d. on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 11,858 tons, show an increase of 417 tons, while stocks of rough copper, at 1,272 tons, were 38 tons smaller. According to the Metal Exchange, the April approximate copper figures for North and South America are as follows:—

	April.	March.
Tons.	Tons.	Tons.
Refined stocks	328,571	316,071
Bliet, stocks	173,135	177,522
Foreign deliveries, refined	28,571	33,036
Domestic deliveries, refined	49,107	66,964
Refined production	90,179	91,071
Mine production	41,964	38,265

LEAD.—The metal has experienced a quiet demand and prices in New York and London again declined. On May 11th the New York spot price was reduced from 3.85 cents per lb. to 3.75 cents, and Wednesday's official closing quotation in London for "soft foreign," at 11 7s. 6d. to 11 13s. 9d., compares with 11 17s. 6d. to 12 2s. 6d. on the corresponding day last week.

SPELTER.—Considerable selling took place in spelter, and prices declined further. Wednesday's closing quotation for "good ordinary brands," at 10 5s. to 10 15s., compares with 10 13s. 9d. to 11 3s. 9d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—The demand for other non-ferrous metals has been quiet, and aluminium was again quoted at 48s per ton, while nickel changed hands at last week's price of 170 to 175 per ton. Foreign antimony sold at the recently reduced price of 424 to 424 10s. per ton and there was no change in the quotation of quicksilver at 22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—On balance, prices are two to three points lower than those of Wednesday of last week. Weather news continues to be unfavourable, but the market is responding more to the weakness in the stock markets than to crop reports. The U.S. textile figures for April are very discouraging, as they show sales to be only 138,000,000 yards, against 226,000,000 yards produced, compared with 295,000,000 yards sold and 272,000,000 yards produced in March. The U.S. consumption of cotton for April is estimated to be 515,000 bales, against 491,000 bales in March and 532,000 bales in April of last year. Fertiliser sales have not improved, and on May 1st were reported to be 28 per cent. less than last year. Spot sales for the week 7th to 13th (inclusive) are 33,000 bales, of which 13,050 are American, 1,550 Brazilian, 150 Argentine, 3,800 Peru, 3,200 Egyptian, 950 African, 460 East Indian, 9,440 Russian and 410 sundries. Imports for the same period are 27,519 bales, of which 18,299 are American,

983 Argentine, 498 Peru, 5,216 Egyptian, 1,334 African, 981 East Indian and 208 sundries. Quotations May 13th: American Middling, 5.32; Egyptian Sakel, 8.30; Uppers, 6.31; Brazil Fair, 5.37; Peru G.F. Smooth, 5.77; West African Middling, 5.37; and East African G.F., 6.37.

Manchester.—There have been no signs during the past week of increased activity in the market. Bearish sentiment in raw cotton circles is still pronounced, and the fear of lower values is undoubtedly putting a severe check upon enterprise. All sections of the trade are feeling the depreciation in values. Disappointing news has again been received from India and cloth sales have been few and far between. Dealers on the other side are complaining of poor clearances, and there is no disposition to purchase anything more than retail lots. Bids for China have been scarce. Very little has been done for Egypt and some cases are being mentioned of manufacturers being asked to delay deliveries against old contracts. Cloths for printing and dyeing have been in far request for South America. The home trade continues fairly busy. On the whole, encouraging clearances are being effected in the retail and wholesale establishments. American yarns have been slow of sale, with some irregularity in prices when tested. Only a restricted business has been done in Egyptian counts. Very few workable bids have been reported in export numbers.

Cotton Prices.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

seen at the opening. This, writes our Bradford correspondent, may be partly attributed to the inadequacy of Continental demand, but conditions in the industry both at home and abroad are not such as to contribute to an improvement of wool values, and during the sales withdrawals of merinos have been unfortunately large. Better prices are certainly needed to enable the owners to get out without loss, and the aggregate weight of merino wool available for consumption before another clip begins to come forward is not too much for the trade to face. The way fine wool has sold in Australia this week is in striking contrast with London and Bradford; 40,000 bales are being offered in Brisbane, but cable information indicates that prices realisable are fully 2d. more than a parity with the selling value of tops in Bradford, and only slightly below the Sydney sales a fortnight ago. Meanwhile, values for practically all descriptions in London have suffered a further relapse. Last week it was stated that merino could be bought on a clean scoured basis of 4d. less than at the opening, and it is now admitted that both merinos and crossbreds are 1d. per lb. cheaper. The position of merinos is stronger than that of crossbreds, for the consumption of the former is very large and likely to remain so. The Bradford market is still very dull, and it is impossible to sell anything except at less money. This week leading makers have been standing out for 24d. for average 64s, but have admitted quite frankly that they could not make that figure. At this juncture many spinners are not prepared to risk the future, even on a lower basis of price for tops. At the same time, yarns have been sold at figures which leave a loss on botany counts, even at to-day's cost in the wool. The demand for crossbred tops to-day is still worse than merinos, but failing the development of bigger requirements than are now in sight, still lower prices will have to be accepted by those who are determined to sell.

THE JUTE TRADE.—Dundee.—The jute trade has lapsed into idle conditions and prices of all productions are barely able to hold their own. Buyers of yarns and cloth have begun to look for lower prices, but spinners and manufacturers are determinedly resisting attempts to depress the market because of the uneconomical state of values compared with those of the raw material. The fibre is being maintained around recent levels, with sellers displaying considerable reserve, and this in spite of the fact that consumers of raw jute are taking extremely little interest meantime. Reports of the new crop of jute for next season are now more favourable and sowings will soon have been completed. Everything points to a much smaller crop than those of recent seasons. The unemployment figures in the jute trade in Dundee are increasing, and altogether there are over 22,000 persons engaged in that industry only who are receiving unemployment benefit, 13,500 being wholly unemployed. There are still no signs of improvement and, indeed, the position seems to be even worse now. Prices of raw jute are unchanged from last week, but the undertone of the market is very steady. Daisie assortment rules at from £16 10s., with threes at £16 5s. and fours at from £15, May-June. Tossa assortment continues at £17 15s., threes at from £17 6s., and fours at £16 to £16 10s., same shipment. White jute is very sparingly offered, and prices of good Lightnings and First Marks are more or less nominal at £17 10s. and £19 10s. respectively, May-June. Offers of new crop jute have been mentioned, but as the prices have been a bit above those of old crop, little notice has been taken of them. Jute yarns are very quiet and prices show a tendency to decline a little. Buyers are offering 1s. 10d. for common 8-lb. cops and 1s. 11d. for 8-lb. spools, but without success, though 1s. 10½d. and 1s. 11½d. would not likely be refused if actual business were to transpire. The quoted rates are 1s. 11d. for cops and 2s. for spools. Twist is quiet, and might be bought at 3½d. for 3-ply 8-lb., and sacking yarns are unsteady at 2½d. for 24-lb. weft and 3½d. for 8-lb. chains. Rove is dull at from £19 for 48-lb. and from £16 for 200-lb., while fine yarns are not so firm as they were. The cloth market is almost stagnant, with only small quantities being bought as a rule. Occasionally a large quantity is placed, but in that case buyers expect and receive concessions on the quoted rates of from 2½d. for 10½-oz. 40-in. hessians and 1½d. for 8-oz. The Calcutta goods market is quiet. Quotations are 18s. 9d. for 10-oz. 40-in. and 15s. 3d. for 8-oz., May-June; 18s. 10d. and 15s. 7d. respectively for July-September; and 19s. and 15s. 9d. for October-December.

THE GRAIN MARKETS.

WHEAT.—Climatic conditions during the last week have been beneficial to the British winter crop, which is somewhat backward, and farmers have been able to proceed with the sowing of spring cereals. The international wheat position has undergone little change since last week. Trading has been on a slightly smaller scale owing to reduced Continental imports, and the recent rise in prices has not been fully maintained. However, it is known that native supplies in France and Germany are quite insufficient for the remaining months of the current season, and it is expected that considerable quantities will have to be imported by both countries. It appears that a rebate of 10s. 9d. has been allowed to German millers for one month on all foreign wheat. The Crop Reporting Board of the Bureau of Statistics (Crop Estimates) of the United States Department of Agriculture has published its estimate of the condition of the winter wheat crop as on May 1st:—

Average Condition of United States Winter Wheat.

	April.	May.	June.	July.	Yield per Acre in Bushels.
1929	82.7	83.6	79.6	75.9	15.4
1930	77.4	76.7	71.7	73.8	15.7
1931	88.8	90.3	...	...	16.1 (May)

The area planted has been estimated at about 40,432,000 acres, or about 3.7 per cent. less than that of last year. The average

condition of 90.3 per cent. indicates a yield of 16.1 bushels per acre, or 652,902,000 bushels, as against 604,337,000 bushels last year. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 28s. 9d. per 496 lb., as compared with 29s. a week ago; No. 2, Northern Manitoba, Atlantic, ex ship, 28s., against 28s. 6d.; Rosafé, ex ship, 23s. 9d., against 24s. 3d.; Australian, ex ship, 26s. to 26s. 9d., against 26s. to 26s. 9d.; and Russian, on sample, landed, 24s. 6d., against 24s. 6d. last week.

WHEAT FLOUR.—The demand for flour has been steady, and last week's prices have been maintained. Quotations: Straight run, delivered country, 24s. 6d. per sack of 280 lb., as compared with 24s. 6d. last week; delivered London, 23s. 6d., against 23s. 6d. Manitoba patents, ex store, 22s. to 25s., against 22s. 6d. to 24s. 6d.; and Australian, ex store, 19s. to 20s., against 19s. to 19s. 6d. a week ago.

BARLEY.—There has been no change in quotations for barley. Brewing barley meets with a good demand, but barley for feeding purposes has been quiet. Quotations: "English malting," f.o.r., at 30s. to 35s. for 448 lb., remained unchanged. Californian sold at from 33s. to 43s., as compared with 33s. to 43s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—The scarcity of home supplies resulted in a better demand for foreign oats, with a consequent rise in prices. Quotations: "River Plate," landed, 13s. 3d. per 320 lbs., as compared with 12s. 9d. last week; "River Plate," ex ship, 12s. 3d., against 11s. 9d.; "Chilean Tawny," landed, 13s. 9d., against 14s.; and North Russian on sample, landed, 18s. 6d., against 18s. a week ago. English white remained unchanged at 19s. to 20s.

MAIZE.—Supplies of maize are large and considerable quantities continue to be shipped to Europe. Out of 803,000 quarters thus shipped last week, Argentina alone accounted for 661,000 quarters. Although feeding stuffs are in good demand, supplies are in excess of requirements, and there has been a slight decline in prices. Quotations: "Plate," landed, 21s. 3d. per 480 lbs., as compared with 21s. 9d. last week; Plate, ex ship, 17s. to 17s. 3d., as against 17s. 9d.; Plate, May-June, new, 16s. 6d., as against 16s. 6d. Yellow maize meal, ex wharf, was quoted at £5 15s., as against £6 10s. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to May 9	Owts. 101,987	Owts. 183,867	Owts. 132,984	Owts. 278,460
36 weeks to May 9	4,141,350	8,317,585	8,874,130	9,264,734
Average price of English wheat per cwt.	s. d. 5 7	s. d. 8 11	s. d. 9 11	s. d. 11 2

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
May 2, 1931.....	Owts. 95,326	Owts. 22,081	Owts. 38,327	s. d. 5 5	s. d. 7 1	s. d. 6 3
May 9, 1931.....	101,987	19,080	29,051	5 7	6 9	6 5
May 12, 1927.....	142,128	25,191	57,138	11 8	10 9	8 11
May 12, 1928.....	273,460	28,965	30,425	11 2	10 10	12 11
May 11, 1929.....	152,984	24,324	28,994	9 11	10 0	9 10
May 10, 1930.....	183,867	55,840	23,827	8 11	7 10	6 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	May 14, 1930.	Jan. 2, 1931.	Apr. 29, 1931.	May 6, 1931.	May 13, 1931.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	148½	105½	56½	59½	62½	62½
Chicago (No. 2 Winter) — Cents per 60 lb.	130½	102½	79½	81½	82½	82½

The visible supply of wheat in Canada, at 55,934,000 bushels, shows a decrease on the week of 5,345,000 bushels. Supplies a year ago stood at 69,542,000 bushels.

OTHER FOODS.

SUGAR.—On Saturday, May 9th, the international convention known as the "Chadbourne Plan" was signed in Paris. An International Sugar Council was established at the Hague with F. E. Powell as its chairman, and the votes allotted to the various countries are as follows: Cuba, 35; Java, 30; Europe, 25 (Czechoslovakia, 8; Germany, 6; Poland, 3; Hungary, 3; and Belgium, 2). The convention will remain in force until September 1, 1935. A discussion of the scheme will be found in *The Economist* of January 10th and 17th, and on another page of this issue. The signing of the convention resulted in a strengthening of the market in raw sugar, but in order to stimulate buying, "British refined" was reduced 3d. per cwt. In New York, Cuban centrifugals, 98 deg. spot, at 3.18 cents per lb., show a rise of 0.03 cents on the week. Raw futures in London have also been firmer. Wednesday's sales included "August delivery," at 6s. 3½d. to 6s. 4½d., against 6s. 2½d. to 6s. 3d. on the corresponding day last week; and December at 6s. 7d. to 6s. 8d., as against 6s. 6d. to 6s. 7d. a week

against 2s. 8d. to 3s. 4d. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,640 tons, as compared with 9,503 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.0 per cent. of the supplies, as against 84.3 per cent. a year ago; and imported mutton, mainly New Zealand, formed 86.6 per cent. of the total supply, as against 85.4 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally have a steeper feeling, but business continues on narrow lines. Linseed is steady after business done in Plate on passage to Hull and May-June shipment at £8 10s. and September at £8 15s., current value being slightly above these figures. The quantity on passage to Europe has been further reduced to 165,300 tons, which is 38,300 tons less than last week, and compares with 137,300 tons a year ago. Little is passing in Indian linseed, values of which are above buyers' ideas. Calcutta to London, May-June, is quoted nominally £10 7s. 6d. Cottonseed is lower, but demand is small, current value of black Egyptian, May and June loadings to Hull, being £5 12s. 6d. and Bombay £4 12s. 6d. (paid). The demand for linseed oil does not expand. Raw oil on spot, ex Hull, is quoted £16 10s., and June-August delivery, £16 5s. Cotton oil is quiet and lower, with crude Egyptian, ex Hull, at £19 10s., and common edible, £22 5s. The demand for oilcakes has fallen away, and with good supplies on hand, prices have again been marked down.

HIDE, LEATHER AND ALLIED TRADES.—Hides from home-slaughtered cattle were steady in price at the auctions held in Manchester this week, all ox and heifers selling at the previous week's figures. Warbled cows were 1d. per lb. cheaper on some weights, while an easier tendency was noticeable also in regard to calfskins. The market for sheepskins remains weak, with prices tending towards a lower basis. Although imported hides remain a poor sale on the whole, rather more interest is being taken in the position of affairs by tanners, and there is a feeling that some slight revival may take place in the near future. In the meantime, sales have been made to various quarters of South American wet-

salted hides, Argentine ox having changed hands on the basis of 5 1/4d., and seconds at 4 1/4d. Dry hides from this centre have ruled lower in price, sales of B.A. Americas having been made at 6 1/4d., and B.A. Inservibles at 3 1/4d. The market for Capes remains quiet, with drys quoted at 7d. and 6d. for first and seconds, and 5 1/4d. and 4 1/4d. for dry-salted, 20-30 lbs. Several sales of Australians have been made at recent quotations. Business in connection with sole leather has, if anything, been slightly less than that of the previous week, and, taking a general view of the position, the outlook does not seem promising. Consumers appear to be holding off in the hope of lower values, and this has resulted in an accumulation of the least wanted sorts. However, a fair turnover has been done in English and wet-salted bends in the light and medium weights, but for the heavier descriptions there has been very little call. Shoe-manufacturing requirements have also been of smaller dimensions, and while the inquiry for light weights is for the time being considered satisfactory, in view of the limited supplies available, there has been no increase in the consumption of the medium and heavy weights. Upper leathers sales are maintained at a fair level, particularly in regard to willow calf, and glacé kid in both black and brown.

RUBBER.—Considerable American buying has strengthened the market during the week. No striking advance in prices can be expected in the near future, but it is already evident that there will be a considerable reduction in output which may ultimately bring about an adjustment of supply to demand. Wednesday's official closing price for standard ribbed smoked sheet, at 2 1/2d. per lb. shows no change as compared with the corresponding day last week. Forward positions were firmer. Business has been done at 3 1/4d. for June, against 2 1/2d. to 3d. last week; at 3 1/4d. to 3 1/2d. for July-September, against 3 1/4d.; at 3 1/4d. to 3 1/2d. for October-December, against 3 1/4d. to 3 1/2d.; and at 3 1/4d. for January-March, 1932, against 3 1/4d. to 3 1/2d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,477 tons; delivered, 1,387 tons; stocks at the end of last week, at 139,528 tons, show an increase of 1,090 tons, as compared with the preceding week.

THE MONEY MARKET.

CONDITIONS have been fairly comfortable this week. The clearing banks have continued to charge 2 per cent. for money, but funds have been readily obtainable at 1 1/2 per cent. in other quarters, while late Wednesday afternoon money was offering down to 1 1/2 per cent. The activity in the Stock Exchange in British Government securities has been intensified by the general fall in money rates, and this is continuing to employ a fair amount of short

money. A further reduction of $\frac{1}{4}$ per cent. has been made in New York acceptance rates, and suggestions have been heard of the possibility of a reduction in the rediscount rate of the Banque de France, designed to facilitate conversion operations. In these circumstances, the idea of a further reduction in the London Bank rate is already being very widely mooted, but this suggestion appears somewhat premature.

Three-months' bills were quoted in the money market at $2\frac{1}{4}$ per cent. immediately after the Bank rate reduction, but during this week the rate has eased to $2\frac{1}{8}$ per cent. or even lower. It is difficult to see how market rate can remain for long at so low a level, as brokers are having to pay 2 per cent. on their loans from the clearing banks, and so have little or no margin in hand. It is possible that, with money so cheap and plentiful in all centres, they are able to obtain a fair proportion of their needs from outside sources at the lower rates quoted in the previous paragraph, but such a state of affairs would be contrary to their usual experience, and so cannot be expected to persist. Treasury bill issues are also heavy at the moment, as preparations are being made for the War Loan dividend due on June 1st, and this provides another reason why market discount rates should not fall any further.

This week's Bank return reveals few significant changes. The note circulation has contracted by £1,586,000, and the Bank has added £1,202,000 to its gold stocks, which now stand at £150,173,000 in the issue department alone. The reserve, consequently, has risen by £2,788,000, but this increase has been off-set by a reduction of £3,732,000 in Government securities. There has been a transfer of funds from bankers' to public deposits, due, possibly, to a very common reason, namely, discrepancies between the dates of Treasury bill payments and maturities. As a result of this, public deposits have risen by £4,642,000 and bankers' deposits have fallen by £5,565,000. The last-named now stand at £56,634,000, a figure low enough to suggest that under normal conditions of activity the market would not be over-supplied with funds.

	Apr. 30, 1931.	May 7, 1931.	May 14, 1931.	May 21, 1931.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{4}$	$\frac{3}{4}$	$2\frac{1}{4}$	$2\frac{1}{8}$	$\frac{3}{4}$ (May 14, '31)
Bankers' Deposit Rate...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (May 1, '30)
Discount (Call)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (May 1, '30)
Houses (Notice)	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2-2\frac{1}{8}$	...

It is possible that the market has let discount rates fall away on the ground that once the War Loan dividend is released, money will be very plentiful. If so, it is advisable to suggest that a longer view be taken. Money probably will be plentiful early in June, but, as already pointed out, the Bank return does not indicate that there is a superfluity of funds to-day. Again, in little more than a month's time, the market will be faced with the turn of the half-year, when resort to the Bank will be necessary. Even when the Bank has been repaid, the holiday season will be beginning, and with it the normal expansion in the note circulation and depletion of market resources. It seems likely, therefore, that if any sustained demand for funds arises, either from the money market or the Stock Exchange, conditions of greater stringency may develop.

It is also still necessary to have regard to the international position. In these days of depression there is always the risk of untoward events, leading to sudden movements of funds. At the moment, the position seems fairly settled, and this week's improvement in sterling suggests that, when the Bank rate decision was taken, the position was judged correctly. Unfortunately, there is no reason for supposing that our balance of payments *vis-a-vis* other countries is any more favourable than it was last year, when we were experiencing heavy and continuous gold losses. This means that the strength of sterling still rests largely upon London's power to attract and return foreign

short money. So far as New York is concerned, there is no ground for anxiety, for while there is no evidence that recent developments have brought fresh American money to London, no counter-movement has developed, and the decision of the New York banks to reduce their rates upon foreign time deposits should prevent any loss of money by London to New York.

On the other hand, the French position must still be watched. The premium upon forward francs is still equivalent to a margin in favour of Paris of 1 per cent. per annum, and, as before, this means that danger would arise if London discount rates fell below 2 per cent. Thus, not only is it against bill-brokers' interests to let market rate fall away any further, but it would also be inadvisable from the point of view of the stability of sterling. These arguments are also relevant in respect of any suggestions of another Bank rate reduction, unless, of course, the whole position in Paris is about to change. The market can be trusted to be aware of all these considerations, and for these reasons it looks as if the present level of discount rates will be maintained.

A further reduction of $\frac{1}{4}$ per cent. was announced on Tuesday in New York Reserve Bank's buying rate for bankers' acceptances, and the rate is now 1 per cent. for maturities up to 90 days. Dealers made a corresponding reduction in their rates, which now stand at $\frac{1}{4}$ per cent. for all bills up to 90 days' maturity. These reductions, following those announced in previous weeks, are understood to have as their object the checking of gold influx and the stimulation of the bond and commodity markets, and in view of the first object, it is significant that this week the New York banks have lowered their rate on foreign time deposits from 2 to $1\frac{1}{2}$ per cent., thereby bringing it into line with the domestic rate. The reductions have so far only affected Government and other first-class bonds, which have been very firm; but little fresh interest is taken in inferior bonds, while the commodity markets have so far failed to respond. The April foreign trade figures are disappointing. Exports were only \$217 millions, against \$237 millions in March, and imports \$187 millions, against \$211 millions in March. Several authorities are urging the need of downward industrial wage readjustments before business can revive, but this policy is meeting with resistance.

The Foreign Exchange market was moderately active, with sterling gaining ground against the principal currencies. New York rose from 4.86 $\frac{1}{2}$ to 4.86 $\frac{7}{8}$, after touching 4.86 $\frac{1}{8}$. Montreal lost $\frac{1}{4}$ at 4.86 $\frac{1}{2}$, while sterling improved against the franc by seven points to 124.36. Brussels, after touching 34.96 $\frac{1}{2}$, lost $\frac{1}{4}$ on balance at 34.95 $\frac{1}{2}$. Milan was weaker and lost three points at 92.92. Madrid was rather steadier, and remained unchanged on balance at 48.30 after touching 49.00. Amsterdam was steady, but the rate rose slightly at the close to 12.10 $\frac{1}{2}$. Berlin was a point worse at 20.42 $\frac{1}{2}$, but Switzerland improved from 25.23 $\frac{1}{2}$ to 25.22 $\frac{1}{2}$. Of the Scandinavian currencies Stockholm was $\frac{1}{4}$ worse at 18.14 $\frac{1}{2}$. Oslo lost $\frac{1}{4}$ at 18.16 $\frac{1}{2}$, and Copenhagen was unchanged at 18.16 $\frac{1}{2}$. The South American exchanges were variable, Rio gaining $\frac{1}{4}$ d. at 3 $\frac{1}{2}$ d., while Buenos Aires lost $\frac{1}{4}$ d. at 34 $\frac{1}{2}$ d., and Montevideo $\frac{1}{4}$ d. at 29 $\frac{1}{2}$ d. In the Far East the rupee was firm at 1s. 5 $\frac{1}{2}$ d., and the yen at 2s. 0 $\frac{1}{2}$ d. Batavia lost a point at 12.12. In the forward market dollars were firmer at $\frac{1}{2}$ cent and $\frac{1}{2}$ cent. premium, an improvement of $\frac{1}{2}$ cent in each case. Paris advanced from 11 and 30 centimes premium to 13 and 32 centimes premium for the two periods. Brussels was quoted at 3 and 6 $\frac{1}{2}$ centimes premium against 2 and 5 $\frac{1}{2}$ last week. Milan was unchanged. Madrid was more wanted at higher premiums of 3 and 17 centimos; Amsterdam was also better at $\frac{1}{2}$ cent and 1 $\frac{1}{4}$ cents premium. Berlin changed slightly from 1 and 2 $\frac{1}{2}$ pfennigs to 1 $\frac{1}{2}$ and 2 $\frac{1}{2}$ pfennigs discount. Switzerland was 1 $\frac{1}{2}$ and 4 centimes premium. The silver market was weak and dull, prices falling by $\frac{1}{4}$ d. for both cash and forward to 12 $\frac{1}{2}$ d. and 12 $\frac{3}{4}$ d. respectively. The China silver exchanges fell in sympathy, Hong Kong from 1s. to 11 $\frac{1}{2}$ d., and Shanghai from 1s. 3 $\frac{1}{2}$ d. to 1s. 2 $\frac{1}{2}$ d.

EUROPE'S TARIFF PROBLEM.

CONSIDERING the difficult circumstances, Mr Henderson may be accounted to have done the right thing at Geneva, and deserves congratulation upon the adoption of his proposal that the legal aspect of the projected Austro-German Customs union should be referred to the World Court for an opinion. For this step, taken by the League Council on his initiative, at least provides a breathing space, during which the present heated atmosphere of European politics may cool down. Such a respite was badly needed; for the animosities aroused by the Austro-German proposal had been exacerbated, on the eve of the Council meeting, by the defeat of M. Briand in the contest for the French Presidency, and the air was full of wild talk about a possible withdrawal from the League by Germany (Austria). The origin of such talk lay more in emotion than in logic; for it is difficult to suppose that, in view of the assistance rendered to her by the League, Austria would voluntarily resign membership, while it is also plain that Germany could not use her influence to draw Austria out of the League without thereby precipitating a peace crisis of the first order. Nevertheless, with peace running high and an *impasse* reached, the only way was to play for time, and Mr Henderson played it fully.

At the World Court will say, or whether its verdict resolve the *impasse*, is a very different question, for the problem with which it is faced is one of extreme complexity. To France, anything that can by the wildest flights of fancy be interpreted as an approach towards the Anschluss is abhorrent and illegal. On the other hand, Austria, on the grounds of sheer necessity, and Germany, as a matter of national pride, demand the right to act for themselves in the sphere of commercial policy. Moreover, the belief held by these two countries, that in the circumstances of the post-war situation it was natural and reasonable for them to draw together within the limits of the Peace Treaties, is one that has been shared by many outside observers, including the *Economist*. Inevitable and comparatively easy development in this direction comprised mutual facilities for migration, co-ordinated railway services, interchangeability of degrees and qualifications, common membership of cartels and closer inter-company relations. It was only when the question of tariff relations came to the front, as was inevitable sooner or later, that Germany and Austria were faced with a real dilemma. For both were committed to upholding the political and economic independence of Austria, and both were also obliged by the Peace Treaties, as well as by some of the commercial treaties, not to grant to each other any trade preferences which might involve a breach of the most-favoured-nation clause.

The formidable nature of this dilemma will be appreciated if we consider for a moment what are the essential differences between a Customs union and a preferential arrangement. A Customs union represents an agreement between two or more countries to trade with each other without any tariffs on their mutual trade and to establish a common tariff against the rest of the world. Such countries, in fact, transform themselves into a single economic unit. On the other hand, where two or more countries agree to reduce or even remove the duties on their mutual trade, but at the same time retain their own separate and varying tariffs against the rest of the world, it is not, in fact, a Customs union that results, but a preferential arrangement. An essential point is that where a Customs union exists there can only be one set of negotiations with third parties, whereas, in the case of a preferential arrangement, the nations participating in the arrangement will negotiate separately with all outside countries on the basis of their own separate tariffs. Clearly no country could demand free entry for its goods into the territory represented by a full Customs union, unless it was prepared to accept and adopt the tariff level in force for the union. Suppose that a full Customs union were formed between Germany and Austria—and that is without

doubt the final objective of the present proposals, to be achieved by several steps. In that case other countries would be obliged to negotiate their commercial treaties afresh with the new union, or, alternatively, to demand, in relation to the whole of the new union, the continuance of those treaties which are most favourable to themselves. For instance, if Britain regarded her treaty with Austria as more favourable than her treaty with Germany, she might properly demand that the Anglo-Austrian terms should apply to the whole of the new union. More than that could not be asked. On the other hand, if a preference arrangement only is made, the most-favoured-nation clause treaties give other countries the right to demand to share the concessions which the two countries are offering each other. Not only Great Britain but even countries whose tariff walls are high have frequently insisted on the right to come in on the ground floor when mutual tariff reductions between several of them have been contemplated under preferential arrangements. This insistence that reductions must apply all round, however high the opposing tariffs may be, has hitherto blocked any developments of this kind.

To return to the particular case now to be submitted to the World Court, the problem is further complicated by the fact that neither Germany nor Austria is a free agent. In the Treaty of Versailles Germany undertook both to give the Allied and Associated Powers most-favoured-nation treatment and to respect the independence of Austria, who also agreed to similar terms in 1919. Again in the protocol to the reconstruction scheme of 1922, Austria undertook to refrain from any negotiations or engagements which threatened to compromise her independence. So dilemma was reached. On the one hand, if the new Austro-German union was to avoid opening the door to the goods of all countries (through the operation of the most-favoured-nation clause) a complete Customs union was necessary. On the other hand, both countries are pledged to maintain independence. The new proposal seeks to solve the difficulty by the clumsy device of practically simultaneous legislation in the Parliaments of Berlin and Vienna on tariff matters, and though each country reserves the right to make separate treaties of commerce, "joint negotiations may be undertaken" subject to separate ratification by the two Parliaments.

It is evident from these considerations that a decision by the Court, whether of aye or no, will be difficult to reach, and will, whatever its nature, cause embarrassment. A decision in favour of Germany and Austria would have the following results:—It would be interpreted in France to mean that these countries can drive a coach-and-four through the provisions of the Peace Treaties, and would exacerbate Franco-German relations. It would mean that a union had been formed in Central Europe which it is practically impossible for any other country to join, and whose barriers, based on the recently-raised German tariff, would be difficult of penetration. It would mean that this limited union would be countered by rival unions bent on tariff war. If, on the other hand, the verdict goes against Germany and Austria, German public opinion will be gravely embittered, and the necessity will probably arise for fresh international action to save Austria from collapse.

Thus the World Court is faced with a most unenviable task. But reference to the Court was, as we have seen, the only method of evading immediate crisis and of providing Europe with one more opportunity for carrying out the recommendations of the World Economic Conference for freeing trade from the trammels which beset it. The breathing space must be used for hard thinking with regard to methods of approach to freer trade, other than that of the Customs union, which is not yet practical politics for any substantial number of countries. Interests are so conflicting that agreement as to a common tariff could not possibly be reached except on the basis of a low level of protection, and that can only be attained by stages. The scheme also premises a degree of surrender

of independent economic action, for which the countries are not yet ripe. France has propounded a series of alternative proposals, but in them lies little practical hope. Recent experience does not support the belief that such expedients as international allocation of markets, international cartels or even financial assistance can go to the root of the matter; nor is the problem solved by the offer of France to do more trade with Germany. What is wanted is not a bilateral deal between France and Germany, which would merely divert trade, but a general movement to lessen the impediments to international trade.

Where, then, is the road to salvation? The ideal, as emphasised by Mr Henderson for the hundredth time at Geneva this week, is a general agreement to lower tariff barriers. But experience in the last five years has shown this course overwhelmingly difficult of accomplishment. The supreme obstacle which has thwarted progress along the lines recommended by the World Economic Conference is the reluctance of nations to reduce their tariff all round without assurance that all countries, who will be thereby benefited, will reciprocate with fair treatment. For instance, some nations who are willing to join in a European movement for lower tariffs are definitely unwilling to reduce their duties on American imports so long as the United States maintains high barriers against their exports. Is there a way out? In our view there is. Hitherto the rigid enforcement of the most-favoured-nation clause, of which, admittedly, Britain has been one of the protagonists, has stood in the way. But in recent years a new conception of equity in international tariff relations has gained ground, and the rigid interpretation now in force no longer satisfies either justice or expediency. It is, of course, generally admitted that any return to chaotic tariff discrimination would be disastrous, and to prevent this it is necessary to establish and maintain the conception that, when a country reduces its duties on another country's goods, other nations should, on reasonable terms, have the opportunity of receiving similar benefits. It has, therefore, been suggested that countries should be free to make reductions in tariffs, the benefit of which would not necessarily be applicable to the whole world, but only to those countries whose tariffs conform to some standard of reasonableness. Various treaties have already been drafted with this object in view. If they come to fruition, they will provide inducements to other nations to conform to the tariff standard set up, and thereby the road to saner trade relations would at last be opened up. It is not feasible here to elaborate the possibilities that the initiation of a system of such agreements would open up for Europe. But it is our considered view that it is by such procedure, and by such procedure alone, that any early or substantial breach can be made in the tariff walls which are damming up the flow of international commerce.

POLICY AND ECONOMY.

PARLIAMENT, with a nonchalant shrug of the shoulders, has accepted Mr Snowden's makeshift Budget and has reserved all the fire of its criticism for the land tax proposals, the passage of which will not in any case affect the national revenue for two years. Mr Snowden has postponed the day of reckoning; but the taxpayer is living in *Paschal's* paradise if he forgets that it is a mere postponement, and that unless the Government undertakes major measures of retrenchment that day of reckoning will come next year as surely as sunset follows dawn. A few salient figures relating to the Budget prospects for 1932-33 suffice to support this assertion up to the hilt. Suppose, for the sake of argument, that expenditure for next year will stand at the present figure, which means that the Chancellor will successfully resist all influences working for new expenditure. Even then the Chancellor will be faced by a formidable deficit. It is certain that there will be a declining revenue from income tax and sur-tax levied upon declining profits and incomes. The Chancellor will also have to face the loss of £37 millions which he obtains

this year from raiding the Dollar Reserve Account (£23 millions), anticipating half of the second instalment of income tax (£10 millions), and taking the last remaining £4 millions from the De-rating Suspense Account. The upshot of the matter is that the Treasury may well be faced next year, if expenditure remains at its present level, with a prospective deficit of from £40 millions to £45 millions.

If such a situation arises, what will it mean? For the current year Mr Snowden budgets for tax revenue (if we include the whole of the receipts from the motor duties) of £721 millions, which, if the national income be computed at £3,750 millions, represents a ratio of tax to income of 19 per cent. This figure compares with 17.6 per cent. in 1930-31 and 15.4 per cent. in 1929-30. With trade depression in full force and the price level falling, the national income is declining, and, *ipso facto*, the tax burden increases in intensity, even without any additions to taxation. Without any new taxation at all, the tax burden bids fair to exceed 20 per cent. of the national income in the financial year 1932-33.

Such simple calculations as these should bring home to the country the vital necessity for Economy with a big and it is indeed becoming the fashion for the taxpayer the manner of a drowning man clutching at a straw, assume lightly that economy on a large scale is a simple matter which any Government can put into practice moment, if it cares to look the issue in the face. an assumption is as dangerous as it is erroneous; for results will not be obtained unless public opinion is the hard and unavoidable truth that retrenchment is substantial enough to give the taxpayer tangible relief inevitably involve important changes in policy, most which would be extremely distasteful to some sections of the community. Cheeseparing here and there will not take us far. If our estimate of a prospective deficit of £40 to £45 millions for next year be accepted as being within range of probability, then the extent of the reduction in public expenditure which is necessary, if sufficient tax relief is to be given to provide a psychological stimulus to industry and trade, is in the neighbourhood of £100 millions.

Can our Budget expenditure be cut by £100 millions? And if so, how? All who talk glibly about economy as a means to lightening taxation would do well to take a pencil and a piece of paper and attempt a solution for themselves. The sort of thing that they will find is this. Even if the whole of the 5 per cent. War Loan is converted to a 4 per cent. basis the maximum saving is £20 millions—and we still have £80 millions to find. The Defence Services are the next target. They are costing to-day £110 millions per annum. If the existing strength of the Army, Navy and Air Force is maintained, does anyone suppose that the Economy Committee could indicate savings of more than £5 millions through the elimination of waste and extravagance? If we are to get anywhere near our total savings of £100 millions, the Defence Forces must make a substantial contribution, which can only come through a deliberate reduction of strength of the forces. A cut of 20 per cent. in the Defence estimates would still leave the total at £88 millions—just £11 millions higher than the pre-war figure, when prices were not substantially different to those of to-day, and when the European nations were engaged in the maelstrom of armament competition. The fact must be faced that since the post-war figure the Defence Services includes £17 millions for pensions etc., a 20 per cent. cut in the aggregate cost (unlike pensions, etc., were reduced) would involve a cut of less than 24 per cent. in effective expenditure on military naval and air establishments and preparations. It would mean scrapping more warships, disbanding regiments and curtailing stocks of war materials. Can this be done with due regard to our national safety? Probably not, unless we can secure substantial reductions in the standard of defence expenditure by international agreement. But there lies the dilemma. We cannot have guns and men unless we pay for them, and if we are paying as much for them as in the past we cannot have economy and lighter taxes.

The New York Trust Company

Capital, Surplus and Undivided Profits \$48,000,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 BROADWAY, NEW YORK CITY

CABLE ADDRESS: NYTRUSTCO

There remains one flourishing and expanding tree to which the economist may lay his axe. It is, of course, the Civil Services, whose total is £318 millions. This total is made up as follows:—

	£ millions.
Pensions	99.2
Education	55.9
Health	22.3
Unemployment	44.9
Miscellaneous	99.5

The closer the study devoted to these various items, the more certain it becomes that unless Parliament is called upon to alter existing legislation, the Economy Committee cannot point to any very large savings. Let us suppose, however, that it can indicate ways in which the miscellaneous item may be reduced by 10 per cent., or £9 millions. This leaves us still with £49 millions to find, even after disarming to an extent which can only be achieved if the international situation undergoes a radical change for the better. Where are the remaining £49 millions to come from? The charge for education has risen by £10 millions in seven years, and clearly we cannot afford that the increase should continue. But it is difficult to see how more than £5 millions can be saved on this vote unless retrograde and unwise steps were taken. Unemployment charges—the favourite target of all—amount to £55 millions, including the general costs of the Ministry of Labour, and of this £30 millions are accounted for by "transitional" benefit, which at present falls entirely on the Exchequer. Unless trade recovers, or a drastic cut in unemployment benefit rates is made, it is hardly practicable to suppose that more than £10 millions could be saved under this heading. Now we have come to the end of our targets and are still short by no less than £34 millions of the desired goal. There is only one way in which that goal can be achieved, and that is by going back upon Parliament's contractual commitments to many beneficiaries, such as pensioners and employees of all kinds. There will be a real ground for reconsidering these contractual obligations without involving injustice if and when it can be shown that the rise in the value of the British £—as measured not, of course, by wholesale prices, but by the cost of living—has sensibly increased as compared with its value when the obligations were entered into. If the fall of prices could be arrested and the level restored to that of two or three years ago, the problem would not arise, for the tax revenue would expand and the burden of unemployment fall as the result of such a movement. But if we can neither restore the price level nor scale down contractual obligations in step with falling prices, we must abandon hope of any early easement of taxation. We do not, therefore, suggest that all the measures necessary to reduce expenditure by £100 millions, which we have indicated in this article, are within the immediate sphere of practical politics. But we have indicated them in order to reveal the size of the problem and in

the hope that the Economy Committee will not be afraid to propose savings on a really adequate scale, even though such savings involve not merely administrative tinkering, but definite departures from existing policy and statute. If such recommendations are contained in their report, it will at least open the eyes of the country to the magnitude of the changes needed if public retrenchment is to become an effective reality.

THE PLIGHT OF THE IRON AND STEEL TRADE.

THE statement of the Executive Council of the Iron and Steel Trades Confederation on the situation of the industry is a weighty and important document, and, in spite of occasional lapses into vague generalities and the impracticable nature of some of its proposals, the source from which it comes, as well as the line of its argument, entitles it to very serious consideration. The trade unions in the iron and steel trade are among the sanest in the country. Though the industry has been interrupted time and again by trade disputes in associated industries—coal, transport, the electrical trade and building—the iron and steel trade unions proper are proud of the fact that they have a long record of freedom from strikes or lock-outs. The sliding-scale system in the industry, which makes wages vary with prices and with output, has enabled the industry in part to adjust its conditions quickly to market changes, has directly associated the workers with the prosperity of their firm or their trade, and has oiled the wheels of wages negotiation. Conscious of the fact that they are, in the main, an export trade and must meet world conditions, the workers have been less obstructive than in many other industries to technical improvements. The men, also, are proud of their trade, and, in the report before us, go out of their way to rebut the charge that the industry is backward and behind the times. As regards technique and equipment, they endorse the opinion of the delegation, which they themselves sent to the Continent last year, that "the modernity and equipment of certain units of plant was equal to, and, in some cases, superior to the iron and steel plants which had been seen on the Continent." This is perhaps a rather half-hearted conclusion, for what we should like to hear is that the average condition of plant in this country is equal to, or better, than the average on the Continent. The statement, however, is evidence of the feeling almost of resentment which the unions harbour against criticisms of those who know little of the industry. If the spirit that obtains between employers and employed in the iron and steel trade had prevailed generally throughout the country, we should have avoided many of the difficulties which now beset us, and should have had much less leeway to make up in our competition for world trade. The report makes it clear that the iron and steel trades feel that they have little for which to thank the rest of the country. They have time

and again protested against their industry being held up by the quarrels of unions organised on a craft basis, of whose members only a few are incidentally employed in the iron and steel industry, and have even made efforts to bring everyone who works in the iron and steel works into the iron and steel trade unions. In the present report they drive home the complaint of the unsheltered against the sheltered trades, and, after contrasting the small increase in their own earnings with the much higher increase in the cost of living, in the increase of transport charges and of other commodities used by the trade, they observe that "for the past ten years it may be said that the industry, as regards the heavy sections in particular, has suffered exploitation by other trades and sections of the community." This, then, is not the report of a body of men who are either Bolsheviks or doctrinaire Socialists, but of a body of responsible trade unionists who are facing the stark realities of their situation.

What is the burden of their story? The figures show conclusively that, though British iron and steel prices have been kept down to a level substantially below the general price level, we have not been retaining our share of the world's production of iron and steel. In part this is due to the war, but in the main, so the thesis runs, it is due to the lack of national organisation in the industry. The Executive Council will not admit the common assumption that high wages in this country are the root of the trouble. They do not disguise the competitive effect of unorganised labour in such countries as Belgium, France and Poland, but they aptly point out that the test of labour conditions upon price is not the rate of wages, but the labour costs per unit of production under comparable conditions of efficiency; and they add significantly that "up to the present no comparative figures under that head have been produced." They might have added that, as was shown in an article which we printed a fortnight ago, the margin between Belgian and English wage rates to-day is no greater than it was before the war. In view, however, of the great recovery of the iron and steel industry of Germany, which has been made in recent years, their conclusion as regards that country is significant. "In any case," they say, "so far as Germany is concerned, we venture to assert that when the British iron and steel industry has been placed in an equal degree of efficient organisation and control, it need have no fear of Germany as a competitor in a fair field and no favour."

In this criticism of the organisation of the iron and steel industry, the unions are, indeed, on very strong ground. Effort after effort has been made from within the industry and from without, by Conservative and Labour Governments, by financiers and others to bring about reorganisation, but so far without avail. Certain firms, it is true, particularly in recent years, have amalgamated, but there is no nation-wide organisation of the industry either for buying and selling or for distributing orders among the works. The present memorandum points out that, even in the tinplate trade, where organisation for marketing and for negotiation with other countries is farther advanced than in other sections of the trade, "we have the spectacle of additional mills being erected while the trade was operating 20 per cent. below its productive capacity, and in other respects a minority of producers threatening the whole stability of the trade by a refusal to co-operate with their fellow producers for the common interest."

In view of these criticisms the trade unions are by no means at one with the employers in advocating the remedy of a protective tariff. They do, indeed, in certain circumstances, ask that the home market should be safeguarded; but their conclusion in this matter is very qualified, for they emphatically declare that to grant protection without doing anything else would be a very dangerous policy.

"If, therefore, the attitude of British iron and steel manufacturers is that all that is necessary to remove the difficulties of the industry is to impose protective tariffs, we cannot subscribe to that view. Such a short-cut method of solving a complicated problem has the appearance of a gambler's throw and one which would, in our judgment, make the industry the by-play of political factions and intrigue and provide a shelter for inefficiency and incompetence to the ultimate detriment of the more progressive elements."

This is in sharp contrast to the view put forward by many iron and steel employers, a typical example of which

is contained in the letter of Sir Peter Rylands, which will be found on a later page. Sir Peter Rylands makes a series of assertions with regard to the beneficial effects of protection which are contrary to all experience and to the trend of events in this country. But the most amazing of them all is that "all inefficient plants, unless engaged in specialised production, will be eliminated by competition." We have had the keenest possible competition for ten years, but neither by rationalisation nor by bankruptcy have we succeeded in eliminating the inefficient. Neither the experience of sheltered trades in this country nor any argument that Sir Peter Rylands has brought forward convinces us that, when the pressure of competition is relaxed and some degree of shelter given, the inefficient plants will tend to disappear. In this matter we are more disposed to accept the view of the trade unions indicated above than that of Sir Peter Rylands. Moreover, our readers will remember that, in the case of the Swedish iron and steel industry, protection was refused precisely on the ground that if it were granted there was no assurance that rationalisation would take place, seeing that the pressure of competition would be relaxed. The industry was, therefore, left unprotected, and, in fact, has put its house in order, with the result that it no longer needs protection.

The Executive Council, however, consider that, provided there were some national reorganisation of the trade, the central authority for the industry should have some power to assure the home market for the home industry, or, at all events, should ensure "fair competitive arrangements" with due regard to the interests both of the producers, including labour, and the consumers. Indeed, they do not ask for a tariff at all, but rather that the proposed Board should have the right to restrict or prohibit imports if competitive conditions required. They consider, however, that, in view of the authority which any central organisation of the industry should possess, it would obtain the results it requires rather by international agreement than in any other way. Indeed, the Council are careful to say that, on the general principles to be applied in the economic relation between countries, they support strongly those laid down by the World Economic Conference of 1927, and urge renewed efforts to secure the implementing of those principles by the various countries of the world "as being an international policy designed to promote the common welfare of the people and the peace of the world."

The conclusion of the whole matter is that there must be conscious planning and organisation of the industry. The unions are tired of waiting for private enterprise to do this, which conflicting interests appear to make impossible, and they therefore call upon Parliament to give the Government legislative authority to bring the industry under the control of a public-utility corporation and secure the mobilisation of the best organising ability, technical knowledge and experience for the effective organisation of the industry on the following lines:—

(a) The application of a national scheme of planning of the industry in all its main branches in well-defined regions of organisation with Managerial Boards responsible for the operation of the industry in their respective regions.

(b) A Central Board for the general supervision of the regional organisations, but allowing such local autonomy as will secure the fullest degree of initiative to produce the best results consistent with a sound national policy.

(c) Among other things, the Central Board would arrange for an adequate supply and distribution of ores and other raw materials, the co-ordination of research work, the distribution of orders and the marketing of the finished products.

(d) The Central Board would act for the industry as a whole in formulating agreements with other countries in regard to inter-trading relations, and would have authority to regulate, restrict or prohibit imports if the nature of the competition and other circumstances justified that course, and to fix prices of iron and steel in the home market, with due regard to the necessity of stimulating the activities of important using trades.

(e) Regional Joint Conciliation Boards to be set up to deal with Wages and Conditions of Labour that are local in character and a National Joint Conciliation Board to deal with those of a national character.

Now it is easy to criticise this scheme. It is only adumbrated in general terms, though in a matter of this kind details are all-important. It is also obvious that the iron and steel industry differs radically from a public-utility service of the ordinary kind, and that, in view of the great variety of products which it comprises, the fluctuations of

the market and the many decisions which those in charge must take on their own responsibility every hour of the day, a bureaucratically run industry would head straight for disaster. But if the statement is carefully read, it will be seen that this is not really what the unions have in mind. They speak of a public utility concern controlling the industry, and though, later on they speak of a Managerial Board running it and of the Central Board arranging for the sale of its products, it appears that they are thinking of building up from the existing organisation of the industry. Indeed, in a previous resolution, in which they had urged the necessity for a national scheme of organisation, they remark that "we hold no brief for any particular form of machinery." The whole tone of the report, in fact, is to suggest that since the efforts made from within the industry itself have failed, since Government persuasion has been of no avail, and since even the efforts of the Bank of England and of other financial authorities have been unsuccessful, the Government should step in and compel the trade to organise itself on a national basis. State intervention in so highly competitive a trade as this may well do an infinite amount of mischief; on the other hand, experience abroad has shown that it is not impossible for the Government to bring about the reorganisation of an industry. For those who hold Government intervention in any form to be the worst of all evils, the moral of this report is plain; and it is that, while there is yet time, the industry itself should reorganise so as to obtain the maximum economies in production by distributing orders, to act as a unit in the export trade, and to be able to bargain with other producing countries for its share in international trade.

THE DIRECTION OF OVERSEAS TRADE.

SINCE the March trade returns showed declines in our imports, exports and re-exports from £284 millions, £164 millions and £24 millions respectively in the first quarter of 1930 to £210 millions, £103 millions and £17 millions respectively in the first quarter of this year, it was hardly to be expected that our trade with any country would show an increase. However, an analysis of the first quarter's trade, published with the April trade returns, does in fact reveal a few small increases: a substantial growth in our imports from Russia, a smaller increase in those from Hungary, and a very small rise in our exports to Russia, Norway, Turkey-in-Asia and Colombia. The table below shows our trade with European countries:—

TRADE WITH EUROPEAN COUNTRIES.
January to March.
(000's omitted.)

	Imports from				British Exports to

* Including dependencies.

Apart from the increases already mentioned, there was a fairly general decline in both imports from and exports to all the countries in the table, but it is worthy of note that whereas total imports and exports showed declines of approximately 26 and 37 per cent. respectively as compared with the corresponding period of the preceding

CROWNS

and all Baltic currencies
bought and sold by

SKANDINAVISKA KREDITAKTIEBOLAGET

Phone Stockholm 0101

year, imports and exports from European countries and their dependencies declined by only 19 and 81 per cent. respectively. Trade with foreign countries outside Europe showed the most severe decline, as the following table shows:—

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE.
January to March.
(000's omitted.)

	Imports from				British Exports to			
	1913.	1929.	1930.	1931.	1913.	1929.	1930.	1931.

Other foreign countries (non-European)	1,570	4,123	4,228	3,811	1,505	2,824	2,593	1,420
Total	71,877	107,899	92,872	60,137	32,368	42,915	35,728	21,004

* Including dependencies.

Imports from the countries of this group were 35 per cent. lower and exports to them 41 per cent. lower than in the first quarter of 1930. The most conspicuous drops here are those of 40 per cent. in our imports from the United States and over 50 per cent. in our exports to that country. Trade with Egypt, Japan, Cuba, Peru, Chile and Brazil also fell off severely, in some instances by more than 50 per cent. In no case was there an increase in imports, but Turkey-in-Asia and Colombia took slightly more of our exports.

The next table shows our trade with the rest of the Empire:—

TRADE WITH BRITISH COUNTRIES.
January to March.
(000's omitted.)

	Imports from				British Exports to			
	1913.	1929.	1930.	1931.	1913.	1929.	1930.	1931.
Irish Free State	£ ...	£ 9,504	£ 9,742	£ 8,652	£ ...	£ 8,013	£ 8,569	£ 7,110
West Africa	1,222	4,350	2,945	1,899	1,446	3,220	3,025	1,641
South Africa	3,982	7,770	6,615	5,563	5,614	8,093	7,434	5,783
India and Ceylon	13,827	19,983	17,068	12,522	18,287	23,429	20,324	10,061
Strait Settlements	4,514	3,360	2,877	1,820	1,412	3,187	2,282	1,271
Australia	11,469	15,927	13,565	12,233	9,239	12,488	11,418	3,946
New Zealand	7,018	16,538	14,283	10,497	2,781	5,161	5,246	3,152
Canada	4,682	10,983	9,086	6,160	5,878	9,311	6,155	4,048
West Indies	375	1,181	983	974	420	1,026	1,105	1,080
Other possessions	2,550	8,560	6,241	4,944	3,300	7,754	7,702	6,353
Total	49,639	99,156	83,505	63,224	48,317	81,662	73,260	44,445

The decline here was greater than in our trade with Europe, but less than in that with other foreign countries, imports being down 24 per cent. and exports 39 per cent. Trade with the Irish Free State and the West Indies suffered least; imports from Australia showed a relatively small decline, but exports to that Dominion, as was only to be expected, were cut down by nearly two-thirds. Exports to India reached only one-half of the previous

year's level, and trade in both directions with Canada, South Africa and New Zealand was very much reduced. The remaining table shows re-exports to the principal countries over a number of years:—

RE-EXPORTS.
January to March.

* Including dependencies.

The decline here is marked in every instance, though re-exports to the Irish Free State have fallen off less than those to other countries. Re-exports to Australia only reached 41 per cent. of their very low level in the corresponding period of last year.

The extreme depression of international trade at present obscures any tendency there may be to changes in its channels. The only clear conclusion which appears to emerge from these figures is that trade with Europe appears to withstand the influences of the depression better than trade with more distant countries. Even this is probably to some extent a question of values, for the difference is more marked in the case of imports, and our imports from non-European countries consist to a far greater extent than those from Europe of food and raw materials which have fallen particularly heavily in price.

THE LAND-VALUE TAX.

(BY A LEGAL CORRESPONDENT.)

TEMPORARILY, at least, the dogs are tired of the unemployment bone: one of them has produced another where the meat is more easily got at, and politicians have, for the last fortnight, produced arguments, sound and fallacious by turns, as to why Mr Snowden's new land tax proposals should or should not become law.

From the point of view of the logical mind, the most striking feature of the Budget proceedings on the matter is the contrast between the terms of the speech in which the Chancellor introduced his project, and the actual text of the Bill as subsequently revealed. From the tenor of Mr Snowden's speech one surmised that what he was proposing was a new increment duty—a duty which should fall on persons who had become the richer by reason of the land which they chanced to own appreciating in value as the result of economic and social advance. Such a tax might well have received even the grudging approval of the Opposition in the House of Commons, but, on turning to the actual text of the Bill, one finds not a single provision which proposes to put into operation any tax on increments as such: admittedly, the value of increments is indirectly introduced because the valuation which will be made will necessarily be the larger as the result of the increase of value in land during the last century or so—but it never appears as *causa causans* as the Chancellor would have us believe.

The proposed Bill is thus nothing more nor less than a tax on the value of land as calculated at the valuation date, subject to certain provisions as to exemption, etc. The Land Tax of 1909 is quoted on all hands as the forbear of these new provisions, but if the two measures are viewed side by side, the contrast is more apparent than

the similarity. The three main provisions of the 1909 Act were as follows:—

- (1) A reversion duty, being a tax levied on lessors at the expiry of a lease at the rate of 10 per cent. of "the values of the bounty accruing to the lessor by reason of the determination of the lease."
- (2) An increment duty, being a tax of 20 per cent. levied upon increases greater than 10 per cent. of the "land value" as defined by the Act.
- (3) An undeveloped land duty, being an annual tax of $\frac{1}{4}$ d. in the £ upon owners of land which had a higher value than £50 per acre for purposes other than agricultural.

As compared with this old Act, the new Land-Value Tax is much simpler in structure—mainly because it is more sweeping and *prima facie* at least involves less minute technical calculations. For a Bill which will affect hundreds of thousands of people, the charging sections are few and brief, and the greater part of the text is concerned with definitions and administrative detail. Clause 7 of the Finance Bill merely provides that "there shall, in respect of all land in Great Britain, be charged . . . for each . . . financial year, a tax . . . at the rate of one penny for each pound of the land value of every land unit." A land unit is defined as being a piece of land in "separate occupation" at the valuation date, and the land value of a unit is to be the price which a buyer would pay in the open market for the unit at the valuation date, on the assumption that:—

- (a) existing buildings and works (with certain exceptions) were not on the land
- (b) other land units were in their existing condition with such buildings, etc., as are found thereon.

Further, in the case of agricultural land, the "cultivation value" is also to be taken into account, viz., the higher value which would have been put on the land had it not been used for purely agricultural purposes. In general words, the Bill envisages a charge to tax on a unit of land as a vacant plot, unbuilt on, but ready for use for building or agricultural purposes, but where agricultural land is concerned, only the "cultivation" value, i.e., the value in excess of the agricultural value is to be charged.

The tax will be a general tax on land values, levied year by year on the full selling value at the rate of one penny in the pound from 1933-34 onwards. It is to be charged primarily on owners—where the owner is also the occupier, the tax will fall upon him, but where the land is held by various people having various interests therein (e.g., leases and sub-leases) the tax will be charged upon the lessee whose interest is a term exceeding fifty years as originally granted, or, if no term of such extent exists, upon the freeholder. A lessee who is charged has the right to deduct from his next payment of rent to his reversioner either the amount of tax which he has paid, or a sum equal to one-twelfth of the year's rent, whichever is the less.

The Bill provides, as taxing acts normally do, for certain exemptions. Firstly, a person whose aggregate liability does not exceed ten shillings for any one year is to be entitled to total relief for that year. It will be noticed that it is the taxpayer, not the land-unit, which is relieved, so that any one person may have several land-units all over the country and yet not be liable to tax, if the aggregate capital value of his land does not exceed £120. In addition to this general exemption, specific relief from all tax whatsoever is granted to eight types of land:—

- (1) Agricultural land, including allotments and market-gardens, having no higher value than that for agricultural purposes. (It will be noticed that other allotments are not exempt unless owned by local authorities, which means that the greater number of allotments in urban areas will have to bear tax.)
- (2) Land owned by a Government Department or Crown Lands.
- (3) Land owned by local authorities.
- (4) Land owned by the National Trust.

- (5) Land owned by statutory bodies providing public traffic and transport services, e.g., railways and water and gas undertakings. (Such a body cannot alienate its property for other purposes.)
- (6) Land used as a churchyard or burial ground.
- (7) Sites of buildings used for public worship.
- (8) Land used for charitable purposes as a hospital or almshouse.

Certain modifications of these exemptions are made if the land is the subject of a lease for a term of more than fifty years which has already commenced. Such then are the general provisions of the Bill. The charging sections appear to be simplicity itself, but it is by no means certain that in practice the utility of the Bill as a taxing measure will not founder on the rock of judicial interpretation, as did Mr Lloyd George's Act of 1909.

Mr Snowden preened himself on having not increased the standard rate of income tax; but when this Land Value Bill is regarded from the point of view of incidence of tax, it will be seen that what he has done in effect is to increase the standard rate of income tax on certain profits and gains which are already within the scope of the Income Tax Act of 1918—viz., profits falling under Schedules A and B. If it is assumed that the annual value of land of the capital value of £100 is £5—i.e., that land "returns" 5 per cent.—the Bill proposes a tax of 1s. 8d. in the £ in addition to the standard rate of income tax at 4s. 6d. in the £ on property already charged under Schedule A.

From the sociological point of view, two ways in which the duty will be harmful are evident on a first reading of the measure. As has already been pointed out, the greater number of allotments in urban areas will become chargeable, and, unfortunately, so also will sports grounds. The improved facilities for sport which have been provided by commercial and industrial interests for employees has been one of the phenomena of the post-war period. Employers will be more ready in future to sell land for building purposes than to give it to their employees for athletics.

There is, however, little doubt that during its passage through Committee the Bill as at present framed will be materially altered, and the efficacy of the measure cannot be accurately foreseen until, if at all, it finds its place on the Statute Book.

CURRENCY IN THE U.S.S.R.

READERS of the *Economist* may recollect that, following the publication last autumn of our Russian Supplement, a correspondent, who signed himself "Traveller," dealt critically, in a letter which appeared in our issue of November 8th, with the 1929-30 inflation of the currency in the U.S.S.R. Briefly, his thesis was that the Soviet Government was apparently being compelled to emit paper money in excess of the proportionate increase in the physical volume of production, for the reason that the central and local Soviets were not receiving in revenue enough to pay small producers for the commodities acquired from them and to pay State and co-operative employees their wages. The Budget, he suggested, was, in fact, showing a serious deficit (including, as it does, the whole of the State trade operations), and the Government, in its rôle of employer, was being forced to have recourse to the note-printing presses in order to meet its wage bill. The question at that time seemed to be whether the resulting rise in prices would strain to breaking point the enthusiasm for the Five Year Plan intensively "worked up" among the masses of Russian people.

On a later page there will be found an extremely interesting communication addressed to this journal by Dr. H. Nagler, of the People's Commissariat for Finance at Moscow, dealing with the various points which "Traveller" raised. With regard to the precise amount of currency expansion which took place between April and October, 1930, Dr. Nagler corrects, as he is entitled to do, the figures which "Traveller" gave. (At the time when "Traveller" wrote, the regular publication of currency statistics in the *Economic Survey* of the

State Bank of the U.S.S.R. had been suspended, so that exact data were not available.) But for the purpose of "Traveller's" general argument there is no great difference between an increase of 48 per cent. and one of 65 per cent. in the volume of currency in circulation during this six months. The question is whether Dr. Nagler's arguments with reference to the effects of that expansion can be accepted.

It is difficult to attach much importance to Dr. Nagler's comparison between the volume of currency and the turnover of goods in 1913 and 1931. Estimation of the goods turnover in 1913 is a matter of pure guesswork, and, even so, the uses of currency are so much more circumscribed in the U.S.S.R. to-day than in 1913 that no sort of conclusion can be drawn from any such comparison. In fact, the enigma remains: why did the Soviet Government, which had been increasing for four years the volume of currency in circulation at the average rate of 31 per cent. per annum, call a halt to that process in the winter of 1929-30, and then, after four months of continence, issue additional currency at such a rate as to increase within six months the total volume of currency in circulation by 48.2 per cent.? Dr. Nagler refers to the elimination of the bill-of-exchange system and its replacement by a system of bookkeeping; but a reform of this nature, if it has any effect at all on the legitimate demand for currency, should reduce that demand, not increase it. It is difficult to see how "overhead charges," or "the automatic financing of purchasers," or the increasing of the responsibility of contractors, could call for emissions of currency.

The volume of active currency necessary to maintain price stability and progressive economic equilibrium must be conditioned by the volume of goods turned over in the markets in which currency is employed for purchasing. The words italicised dispose, for the purposes of this argument, of the figures given by Dr. Nagler of the increases in production in coal, oil, iron, tractors, cement, and bricks. Some unknown proportion of the increased coal and oil has gone to domestic users, but the bulk of it has gone into capital employments. Of the entire output of the other commodities, only a fraction can have been sold "over the counter." Currency in Soviet Russia, as elsewhere—indeed, more than elsewhere—is normally expended mainly upon food, clothing, domestic fuel and light, house accommodation, and on such miscellaneous items as household gear, tobacco, soap, soda, newspapers, etc. Now it is nowhere claimed—Dr. Nagler himself does not claim it, and the *Economist* Russian Supplement did not show it—that there was a substantial increase in the all-over volume of "family budget" goods offered for sale in Russia during the year ending October 1, 1930, a year which had seen an increase of over 50 per cent. in the volume of currency in circulation. It is doubtful whether there was on balance any increase at all. What then was the reason for the expansion of the currency, and what was the effect of that expansion on the wage-earning currency receiver?

Dr. Nagler says the theory that the emissions of 1929-30 were the result of a deficit in the budget must be definitely rejected. On the contrary, it must be definitely accepted. The balance sheet quoted by Dr. Nagler would be convincing did it not leave out the fact that the Soviet Chancellor of the Exchequer achieved his surplus of 807 million roubles by the simple expedient of printing some 1,600 million roubles to pay his bills. In fact, the real Soviet deficit appears to have been in the region of 1,300 million roubles on a budget of some 12,500 million roubles. Not a catastrophic deficit, perhaps; but still a deficit.

What has happened begins to be plain. The Soviet Government is concentrating the energies of its people intensely upon the construction of capital goods—factories, railroads, power plants, equipment. These energies are, for the moment, yielding relatively few consumable goods. Wages have to be paid; and to pay them the Finance Minister has had to print more and more notes. These notes are in circulation, but for the moment there is little or no increase in the volume of the goods on which alone they can be spent. The prices of the State-controlled goods are kept stable; the quantity of goods that can be so bought is only a diminishing fraction

of the money in the pockets of buyers; consequently there is a mass of currency in the public possession which is valueless except in so far as something can be bought with it at fantastic prices in the way of private trade.

The currency emissions, according to Dr. Nagler's figures, have for the time being ceased. One might congratulate the Soviet Government on having succeeded again, as they did in the winter of 1929-30, in stemming for a time the torrent of currency emissions, were it not for what appear to be authoritative reports from Soviet Russia to the effect that wage payments are being increasingly made in the form of vouchers entitling the holder to receive goods to a certain quantity or value at co-operative or Soviet stores. Such vouchers are obviously as much an amplification of the currency in circulation as are rouble notes, silver, or copper. The suggestions freely made are that these and other phenomena betoken the coming demonetisation of the currency, and for the time being are masking the real inflation that is continuing apace. Before one can attach any significance to Dr. Nagler's 1931 currency figures, one must know precisely what the position is in these respects.

For the truth is that the Soviet economic system is designed to be, and is becoming, one in which a person receives, in return for unrecalcitrant service with the "Economic Forces," a title to so much food, clothing, fuel, house-room, and extras. Money has hitherto been an adjunct to the process of obtaining goods on the strength of the vouchers (ration cards, permits, etc.) issued. The flooding of the country with paper money, far beyond the volume of any goods that can be purchased with it, has served to make it clear to all that the permit is the real instrument of purchase. Declarations of official financial spokesmen have seemed of late to be increasingly tending towards a specific pronouncement to that effect. It is of the essence of Soviet doctrine as well as Soviet practice that the possession of money, apart from the possession of a permit, should entitle the holder to nothing but what he can pick up in dubious markets at fantastic prices. The devaluation of the rouble is in complete harmony with the general scheme. It is accordingly a little perplexing to discover why Dr. Nagler, on behalf of the Soviet Government, should be at such pains to deny that any such process is taking place. For external purchases the Soviet currency is valueless; for internal purchases, except within the limits of a permit, it has already probably gone beyond redemption. The Soviet Government may let the currency go; but it has not escaped the temptations and dangers of currency inflation by resort to the permit. It has still to face up to the task of keeping the issue of permits within the compass of the goods becoming available. Clearly also, the corollary of all this is that calculations of "real" wages of the normal type based upon retail prices—whether "controlled" or "free"—and wages measured in roubles with which so much play has been made are meaningless, and that the only test of the well-being of the Russian workers in town or country is the quantity of consumable goods of which they are able to obtain possession, whether by voucher or any other means.

Notes of the Week.

Mr Henderson's New Task.—Much satisfaction has been given by the news that Mr Arthur Henderson has been selected as Chairman of next year's World Disarmament Conference, and that the British Cabinet has sanctioned his acceptance of the post. The success of the Conference will depend in no small measure upon the personality and capability of the chairman, not merely in presiding over the meetings, but in the heavy work of thorough and efficient preparatory organisation. The list of possible candidates with the necessary qualifications for this onerous post could not have been large. It was in the first place essential that the chairman should be a representative of a Government which had shown genuine

desire to promote the cause of disarmament, of a country which had itself very substantially reduced its own military and naval forces, and whose individual position was not likely to be involved in the clash of conflicting Continental interests. It was essential also that the statesman selected should be a man of vigour, of substantial prestige in the Chancelleries of Europe and of the tactfulness necessary to ensure the smooth working of the Conference itself. The selection of Mr Henderson satisfies these desiderata. Britain has given tangible proof of her desire to disarm; her present Government has worked hard and long to promote the recent naval treaty; Britain stands outside the main stream of European armament controversy, and, finally, Mr Henderson, although his rise to fame has been extremely rapid, and he therefore is not possessed of the length of experience enjoyed by certain other European statesmen, has climbed by tact, perseverance and commonsense to a commanding position in the counsels of Europe. His selection, therefore, should command universal approval, and the world will wish him God-speed in his difficult task.

Liberals and the Government.—The importance of the meeting of the National Liberal Federation at Buxton last week lies in the confirmation which the proceedings have given of the impression created by the Liberal reception of Mr Snowden's Budget that, provided their policy keeps within moderate bounds, the Government are assured of the support not only of the majority of the Liberal Parliamentary Party, but of the majority of Liberals in the country. The proceedings of the Women's Conference and the general tone of the Federation's discussions revealed an overwhelming body of support for the attitude adopted towards the Government by Mr Lloyd George, and when a resolution was submitted emphasising the "unfettered independence" of the Liberal Party it met with amazingly little support, and was side-tracked by an amendment which, while asserting independence, approved Mr Lloyd George's attitude. Apparently the rank and file agree with the diagnosis of the political position given by Mr Lloyd George to the conference last Friday. It is certainly reasonable to suppose that if a dissolution were forced at the present juncture one of three things would happen. Either the Labour Party would be returned to power with a clear majority over the Opposition parties, in which case the country would expect a dose of Socialism, unpalatable to the Liberals, or the Conservatives would be returned with a clear majority, which would mean an immediate introduction of Protection, which, to the Liberals, is equally abhorrent, or, thirdly, and most likely of all in the view of many experienced politicians, a General Election would return a House of Commons of very much the same complexion as the present. That is to say, a House of Commons in which no single party had a clear majority and in which the Government of the day would have to depend upon the Liberal vote, swollen, perhaps, by the operation of the alternative vote system. If this view of the position be correct, it is difficult to see any national advantage, and easy to see many national disadvantages, from forcing an election, and a change of Government is in itself highly undesirable during the short period which will elapse before the resumption of the Round Table Conference and the assembly of the Disarmament Conference over which Mr Henderson has this week been chosen to preside. Nevertheless, it is essential for the Cabinet to realise that Liberal support is not unconditional and unlimited, and it would be disastrous were the Cabinet to presume upon the certainty of Liberal support under all circumstances and allow this complacency to lead them into the easy path of shirking the vital task of retrenchment in public expenditure and reform of the system of unemployment insurance.

The Egyptian Elections.—As was only to be expected, with a dictatorship holding elections under a new electoral law promulgated by itself, on the one hand, and the principal parties in opposition organising a boycott on the other, the first polling day in Cairo led to scenes

of disorder and bloodshed. A demonstration started by Saidi in the railway workshops led to the burning of trams and buses; troops were obliged to use arms, and there were several casualties, many of them fatal. In Alexandria polling was conducted more peacefully, and a very much larger proportion of the electorate voted, though, as the official figures, which place the average at all polls at 65 per cent. of the electorate, are naturally exaggerated, it is impossible at present to ascertain how far the boycott has been successful. Meanwhile the leaders of the Wafd, and the Liberal Party, Mustafa Pasha Nahas and Muhamed Pasha Mahmud, have sent a protest against the new constitution to the King. It is to be hoped that King Fuad will see his way to give it serious consideration, for it will be impossible for the British Government to continue indefinitely to support a regime under which the elections are not free. Moreover, in thus packing the elections, Sidki Pasha is probably defeating his own end, for his purpose is to secure a Parliament from which approval would be forthcoming if a treaty were eventually negotiated with the British Government, and it is highly unlikely that any British Government would be satisfied by the approval of a packed Parliament unsupported by the votes either of the Wafd or of the Liberal Party.

Restoration of Order in Spain.—The attitude of the Provisional Government to the recent outrages is not easy to assess. On the one hand it is reported that one Doña Maria Montero was fined 500 pesetas for merely being overheard in the street expressing disapproval of the burning of convents, but, on the other hand, the Provisional Government have taken very strong measures against the public authorities in those areas where burning and riots occurred. The Governors of Malaga and Cordova have been removed—disciplinary measures taken against the Madrid police, and, though ecclesiastical property is rapidly being converted to private ownership, an order has been issued for the restoration of looted property. At the end of last week it was rumoured that the Government had decided upon the expulsion of the Jesuits, but no such decree has so far been promulgated, and it seems possible that it may be avoided if the Pope will discountenance their participation in politics. Nevertheless, the transference of the attention of the Provisional Government from the more constructive work of conciliation to the task of repressing its own too hot-headed supporters has not helped to consolidate its position. Many conservatives who were not ill-disposed to the Republic are being alienated, and their goodwill is hardly likely to be won by the continued suppression of their organs of opinion, the *A.B.C.* and *El Debate* (the promise to revoke the order for the suppression of the latter was not fulfilled). The Socialists, on the other hand, have decided to work in co-operation with the Republicans at the forthcoming elections. One sign of sober constructive work is the announcement that the committee which is to study the draft constitution to be submitted to the Cortes by the Provisional Government is now sitting.

The International Wheat Conference.—Representatives of eleven countries, including Poland, normally a net importer of wheat, assembled at Canada House on Monday to discuss the wheat situation. Three proposals have so far been submitted: (1) restriction of acreage by precept as opposed to economic pressure; (2) valorisation schemes by sliding-scale export quotas allotted by an international authority to be set up in London by the conference; (3) propaganda to increase wheat consumption. The first proposal is put forward by the United States delegation, but the Russian delegates will have nothing to do with it, and it appears unlikely to be capable of adjustment to the general development policies of Argentina, Australia and Canada. Even in the United States propaganda to this end during the past eighteen months has had no perceptible effect, and the desire of the conference to avoid by this means the extermination of individual marginal producers which is likely otherwise to result from the present

level of prices seems to have little chance of fulfilment. Direct valorisation schemes are advocated by Australia and Poland, and the principle has the support of Western Canadian interests. Mr McKelvie, grain member of the Federal Farm Board, addressed the conference at length on this proposal, laying great stress on the failure of similar measures in the United States and on the ease with which the possible effect on prices of marketing methods can be exaggerated. The figures he quoted from the experience of the Farm Board can scarcely have commended that line of action to the conference. The proposal to attempt to bring about an increase in wheat consumption by direct propaganda was put forward at Rome by the delegate of the Liverpool Corn Trade Association. It is meeting with some support, but does not commend itself to the United States delegates. A method of increasing wheat consumption which would have nothing but advantages without any compensating drawbacks would be the increase of purchasing power in importing countries by the removal of trade restrictions. If the conference can make any recommendation on these lines it will indeed have justified itself. The attitude of Russia to any agreement limiting her freedom to export wheat is likely to be difficult, in view of her need for foreign credits, but the acreage and sowing figures to date suggest that the fears so widely held of a further increase in her exports are very ill-founded, especially as her harvest last year was favoured by most exceptional weather.

The Irak Oil Agreement.—The ratification by the Iraq Parliament this week of the agreement reached between the Government and the Irak Petroleum Company marks the end of delicate and intricate negotiations which have been going on intermittently for more than twelve months. The Irak Petroleum Company is an international concern, whose share capital of £4,400,000 is distributed as follows:—

	Per Cent.
Anglo-Persian Oil Company (through the D'Arcy Exploration Company)	23½
Royal Dutch-Shell group (through the Anglo-Saxon Petroleum Company)	23½
French group (through the Cie Française de Pétrole, in which the French Government is interested)	23½
American group (through the North-East Development Corporation in which the Standard Oil and large independent oil companies are interested)	23½
and Mr. C. S. Gulbenkian (through Participations and Investments, Ltd.)	5

The company was granted a concession for 75 years under the Convention of March, 1925, and was allowed three years (subsequently extended to November, 1930) in which to undertake a survey and select twenty-four plots of eight square miles each. Oil land outside the chosen areas was to be auctioned and the company was to receive the proceeds of the auctions while the Government took the royalties on the oil. Exploratory drilling was undertaken and oil was struck near Kirkuk in October, 1927. Further drilling proved the existence of an enormous oilfield, oil being found in large quantities in 11 wells. As the 1925 Convention did not provide for payments by the company prior to production, the Government was naturally anxious to push forward the production and export of oil in order to secure its royalty income. A further complication was the desire of the semi-official French group, for political reasons, to secure a supply of oil at the earliest possible moment and to conduct the pipeline through French mandated territory. The company, on the other hand, in view of the world glut of oil, was not disposed to advance its production plans or to incur the enormous financial outlay on the construction of a pipeline which would have to cover the 600 or 700 miles between the field and the Mediterranean coast. This was the situation which faced Sir John Cadman, who, as chairman of the company, had the difficult task of reconciling all the divergent interests. The agreement which has now been ratified stipulates, first, that the company should surrender its right to the proceeds of auction sales of oil-bearing plots within its former concessionary area, and should receive in return sole concessionary rights for that part of the Province of Mosul and Bagdad lying east of the Tigris; secondly, that

the company should construct a pipeline from Kirkuk to the Mediterranean coast with two terminals, one at Haifa in Palestine and one at Tripolis in the Lebanon, the line bifurcating at the town of Haditha, with the Haifa branch passing through Transjordan and the Tripolis branch passing through Palmyra, in French Syrian territory, the whole system to be completed by 1935; thirdly, that the company should agree to pay the Iraq Government £400,000 per annum, payments to start immediately; fourthly, that the Government should exempt the company from taxation on its operations in consideration of a yearly compounding payment on the tonnage of crude oil exported; and, fifthly, that the concession should last for a period of 70 years from 1925, at the end of which it should revert to the Government. Thus, the Iraq Government has gained its object of an immediate revenue, the company remains in unfettered possession of its entire oilfield and protected against competitive drilling, and the French group win their point about the bifurcation of the pipeline. As was perhaps inevitable, commercial interests have been sacrificed to the political. It is clear that the bifurcation of an already costly pipeline could not possibly be justified on commercial grounds. The total cost of the pipeline will be in the neighbourhood of £10-£12 millions. Further, the immediate payment of a royalty of £400,000 per annum to the Iraq Government makes it necessary for the company to push forward its production plans, which otherwise it would have been anxious to postpone for the duration of the world-glut of oil.

The First Report of the B.I.S.—The first annual report of the Bank for International Settlements, covering a period of 10½ months from the Bank's inception to March 31, 1931, gives a full and encouraging account of the manner in which that institution is developing. Net profits amount to 11,186,522 Swiss francs, 5 per cent. of this amount is allotted to the Legal Reserve Fund, in accordance with the statutes, and a dividend of 6 per cent. is recommended, to absorb 5,156,250 francs. The balance then available, amounting to 5,470,946 francs, is to be allocated in part to a special dividend reserve fund, in part to the general reserve fund, and in part to the German and creditor governments, as provided by the statutes. Reverting to the experience of the Bank, beginning with deposits of only 220 million Swiss francs, it has now expanded until it holds deposits of Frs. 1,900 millions, together with capital and other resources of Frs. 120 millions. Government deposits of a long-term character, made in accordance with the terms of the Hague Agreement, amount to Frs. 301 millions, and adding to this sum the Bank's capital of 103 millions, the Bank has Frs. 404 millions of long-term funds at its disposal. Its remaining resources consist partly of other deposits lodged with it in its capacity as trustee for reparations payments, partly of deposits made by central banks on behalf of their governments, and partly of deposits made by central banks on their own account. The last-named category of deposits now amounts to 43 per cent. of the Bank's total resources, and the report states that, thanks to the collaboration of the central banks in this way, the B.I.S. has become a reserve centre for the foreign exchange holdings of those agencies in the respective countries which are charged with the duty of maintaining exchange stability. The report has a good deal to say on this side of the Bank's activities. It hints at assistance given to central banks to regularise exchange rates and to develop bill markets. It refers to efforts made by the B.I.S. to promote the more even distribution of capital, both geographically and as between long-term and short-term channels. In this connection it recalls that the B.I.S. has appointed a committee to elaborate general principles governing middle-term credits, especially for the promotion of exports, and discloses that, as a result of the committee's labours, the B.I.S. has decided to employ 100 to 150 million francs of its funds in addition to investments previously made in operations of this type. Another passage of the report refers to the conference held in November, 1930, between the heads of the exchange departments of several important European banks of

issue. This conference prepared the way for the adoption of common conditions for the purchase of gold, and, as a result, gold to the value of over a billion Swiss francs held abroad has been reported to the Bank, thereby enabling it to act as a clearing intermediary for banks having movements of gold to effect between various markets, and so to avoid unnecessary physical shipments. The B.I.S. also holds in its own name, though for the account of various central banks, gold in New York, London and Paris, and the report notes that the concentration with the B.I.S. of a part of the foreign reserves of central banks has permitted the development of book transfer operations between central banks in the accounts of the B.I.S., thereby avoiding resort to the open market. The report also alludes to the useful results arising from the frequent personal contacts between governors and other representatives of central banks at the offices of the B.I.S., and to the use of deposits made on behalf of governments as a means of clearing inter-governmental debt and other payments with the elimination of exchange operations. The impression left by the report is that the B.I.S. has firmly established itself, and has become an essential part of the world's financial machinery. Progress must be slow and careful, and, among other possible dangers, the B.I.S. must avoid becoming an additional competitor for the world's monetary gold. Such dangers, however, are apparent to those responsible for the management of the Bank, and, while the day may still be far distant when the B.I.S. is in full-fledged operation as the world's central bank and clearing house, events already seem to be shaping in that direction. The following additional directors have been elected to the board:—Dr. Vissering, President of the Netherlands Bank, Mr. Ivan Rooth, President of the Sveriges Riksbank of Stockholm; and Dr. Bachmann, a President of the Swiss National Bank.

Employment and the Cost of Living in April.—Employment in the country as a whole during April showed some improvement as compared with the previous month. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at April 27 was 20.9, as compared with 21.5 per cent. at March 23 and 14.2 per cent. at April 28, 1930. It is estimated that the total number of insured persons in employment on April 27 was approximately 9,356,700. This was 89,500 more than at the end of March, but 553,300 less than a year ago. The number of persons registered as wholly unemployed on April 27 amounted to 1,848,170, as compared with 1,859,526 on March 23 and 1,158,109 at the end of April, 1930. Those temporarily without employment totalled 556,978 on April 27—47,111 less than a month ago, but 109,734 more than a year ago—while the number of unemployed among persons usually in casual employment amounted to 114,965, as compared with 116,503 at March 23 and 93,033 at the end of April, 1930. The Ministry's latest returns show that the total number of registered unemployed had risen to 2,532,511 on May 11 and included 1,853,927 wholly unemployed, 564,493 temporarily stopped and 114,091 usually in casual employment. With regard to the cost of living, the index number of the Ministry of Labour stood, on May 1, at 47 per cent. above the level of July, 1914, showing no change as compared with the figure for April 1, but a fall of 14.5 per cent. as compared with last year. For food alone the index registered 29 per cent. at May 1—the same figure as that recorded on April 1—against 40 per cent. last year. It may be recalled that our index number of wholesale prices at the end of April showed a decline of 19.9 per cent. on the corresponding figure a year ago.

Cotton Trade Reorganisation.—At the end of last week, writes our Manchester correspondent, the Joint Committee of Cotton Trade Organisations held a special meeting in Manchester to consider the replies of the constituent associations to the proposals put forward on April 9th. Some surprise has been expressed at the support recorded, as there was a unanimous decision in

favour of the resolutions. The statement made at the close of the meeting on April 9th was very comprehensive and covered practically all the problems which are facing the industry. In the first instance, it was recorded that in the opinion of the Joint Committee the time had arrived for a definite programme of action on the basis of the investigations which had been conducted by the Committee itself and by the Government Committee of Inquiry. The outstanding feature of the recommendations was that the Joint Committee expressed the belief that the first step towards any form of reorganisation was the adjustment of productive capacity to its present and prospective needs, so that all active units should as nearly as possible run full time. It was pointed out that a detailed basis of such an adjustment could not be formulated without accurate and complete information, and it was therefore recommended that an investigator or investigators should be appointed with statutory powers of inquiry, whose duty it should be to secure information for the use of the executive in preparing a scheme for maintaining a closer relation between capacity and demand. It is therefore important that all sections of the industry, by their decision at the end of last week, have agreed that productive capacity must be reduced, and action of this kind can only mean the scrapping of a portion of the machinery in Lancashire. It is recognised that many difficulties will be encountered in formulating a definite scheme to bring this about. Originally the Joint Committee suggested that the investigator or investigators should have statutory powers, but it has now been announced that with the goodwill of all sections it should be possible to obtain sufficient information on a voluntary basis. A questionnaire is being drawn up and will be submitted to the constituent organisations for their approval. It is hoped that all the necessary information will be available by the end of June, when a further meeting of the Joint Committee will be held. It is understood that the scheme will provide for the establishment of a fund with which to buy out the firms that consent to be eliminated.

Cotton Prices Low Record.—Our Manchester correspondent writes:—This week, the price of American cotton in Liverpool has broken its post-war low record. On Tuesday and Wednesday the spot quotation for middling qualities was 5.01d. per lb., and for a lower price it is necessary to go back to 1914, when the quotation in December of that year was 4.25d. per lb. The decline in values during the last few weeks has been due to the adverse conditions prevailing in the United States and the absence of any indication of increased world consumption. A critical period for the new crop is now approaching and operators are watching the weather reports from the belt very closely. On the whole, the climatic conditions for the plants are not very favourable, as heavy rains have recently taken place in many parts of the belt and crop progress has been hindered by low temperatures. It is recognised, however, that owing to the large stocks throughout the world, only a moderate yield in the coming season will be sufficient to meet the requirements of users. Although sentiment in many quarters is still bearish, values are certainly on an attractive level and much below the cost of production.

Re-Discount Operations in Argentina.—Our Buenos Aires correspondent writes:—Rediscount of commercial paper held by the Banco de la Nacion Argentina has already been effected with the Conversion Office, this latter institution issuing notes against bills deposited by the bank to a total amount of \$106,806,866 paper. The notes in circulation now are therefore increased by that amount and total \$1,268,316,754 paper; against which a gold backing is held of \$340,003,561 gold actually in Argentina and \$42,732,168 gold held in the Argentine legations abroad to the order of the Conversion Office, notes having been issued in Buenos Aires to the equivalent of the latter sum against cable advice that deposit has been made. The percentage of gold to the total amount

of paper in circulation is thus brought down from approximately 75 per cent. to 68.479 per cent. The backing is ample, and, provided that all the safeguards governing the commercial paper are adhered to unflinchingly, the issue of additional money at the present moment will help the local situation. Nevertheless, it is undeniably inflation, and, moreover, it undermines, be it by ever so little, the whole principle of Argentina's currency legislation. The system drafted in 1899, known as Law No. 3871, establishing an equivalence of 44 cents gold to the paper dollar—and it should be recalled that some \$293,000,000 paper were then taken over on purely fiduciary terms and are to this day without any more gold backing than the sum total of specie in the Conversion Office affords—was literally and morally based on the principle that the only emission of notes to be made henceforward in Argentina must have behind it \$1 gold for every \$2.27 paper. In 1899 the apparent danger, judging from past experience, lay in Government abuse of the printing press; commercial bills were certainly never in the mind of those who drafted and discussed the Conversion Law. They effectively tied the hands of would-be political financing, on the time-honoured lines of note issues backed by Government bonds, but they could not foresee the new trend in credit finance which, in a sense, warranted the emergency legislation of August and September, 1914. Then the Argentine Government granted the necessary authorisation to the Banco de la Nacion to take selected commercial bills—either from its own portfolio or from the bills of similar character rediscounted with it by other banks—and pledge them in the Conversion Office, provided that the specie backing of the total circulation in paper money never fell below 40 per cent. For seventeen years the power has lain in abeyance, and again and again it has been stated by the mouth of political and private leaders in the Argentine financial and commercial world that its application to current conditions was unthinkable. Recent general admissions of the unwieldy nature of Argentina's double currency, the obvious advantage of a Central Reserve Bank, and the equally evident need for a closer connection with the international exchange movement on lines that will enable this Republic to exercise the legitimate influence due to her importance both as a producer of foodstuffs and a rich market for manufactured goods, have, however, accustomed the public mind to the idea of change. What is most sincerely to be regretted is that the currency laws were not altered before the present step was taken. Now there is grave danger of the rediscount operations being used as a political arm which, skilfully handled, may even lead to the downfall of the actual Government, a result which would be most regrettable at the present juncture of Argentine affairs. *Abstr. omen.*

The Wiener Bank-Verein.—The report and accounts of this well-known Austrian institution show that so far it has weathered the prevailing depression successfully. There has been no serious contraction in the bank's resources, deposits being 446.3 million schillings on December 31, 1930, against 448.3 million schillings the year before, and net profits for 1930 at 2,944,000 schillings compare very favourably with those of 2,961,000 schillings for 1929. Nor has any significant change occurred in the distribution of the bank's assets. The report ascribes the small decline in gross profits to the shrinkage of earnings on securities and syndicate participations. The decline was almost entirely offset by economies in expenditure, including a reduction in the staff from 1,610 to 1,441. During 1930 the Austrian Bank rate was reduced from 7½ to 5 per cent., but the interest rates allowed on bank deposits were only lowered by approximately half as much. The remaining half represents "the sacrifice made by the banks in favour of the Austrian economy. The decline in money rates gave a certain impetus to the bond market, and this was of some benefit to the banks." Dealing with wider questions, the report alludes to the evil effects of high tariffs, and says that the news of the proposed Austro-German customs agreement was favourably received by the business community, particularly by farmers. Certain industries, the report holds, will need transitory tariff protection; but it holds that a successful

conclusion of the agreement will improve Austrian prospects. In general, the report is of a reassuring character, but it must be remembered that it relates only to 1930, and takes no account of subsequent developments.

Commercial Union Assurance.—A falling premium revenue and a lower level of underwriting profits reflect the conditions of general depression during 1930. The total premium income, excluding the life department, declined during the year by nearly £1,000,000 to £16,132,000. In the fire department, premiums were maintained on the home business, and practically the whole of the decline was suffered in the United States branch. In the accident department the falling off was relatively smaller, and here, again, the United States was mainly responsible. The comparative underwriting profits in the last two years are shown below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	306,823	4.0	195,374	2.9
Accident	155,336	1.8	— 5,570	— .7
Marine	200,000	29.2	200,000	28.6
Life:—				
Commercial Union	28,088		28,088	
Union Life Fund ...	5,000		5,000	
Hand in Hand Fund	80,000		50,000	
	775,247		472,892	
Less items debited to profit and loss acc't	256,783		216,922	
Total net trading surplus	518,464		255,970	

The chairman, in his speech at the annual meeting, attributed the falling off in profits almost wholly to conditions in the United States, where the decline in premiums was accompanied by a rising claims ratio and a heavier burden of expenses as compared with the reduced premium income. In regard to the accident account, the outstanding feature last year was the passing of the Road Traffic Act, which has imposed upon companies the principle of compulsory insurance. Time has yet to show whether or not this will redound to the benefit of the companies, since they no longer have the same freedom of selection of risks, and rates of premium have not been increased so that the new Act may have reasonable chance of success. The dividend has been maintained at 41 per cent., but, owing to reduced interest earnings, due to the smaller premium income, the gap between interest earnings and cost of dividend has widened from £150,000 to £181,000, with the result that the increase in surplus assets during the year's operations was only £75,000, a figure which compares unfavourably with the corresponding increases of former years. The balance sheet shows that £241,000 has been written off shares in subsidiary companies, compared with £400,000 in 1929, and the item "cost of businesses acquired" has, consequently, been reduced to £493,000 and is now within measurable distance of being wiped out. When this position is reached, the Commercial Union will possess shares in subsidiary companies standing at a book value of approximately £4,400,000, this sum being equivalent to a break-up value at dates of purchase, without any allowance whatever for the subsequent considerable increase in surplus assets of the companies concerned.

United British Insurance.—Two years ago this company was reorganised, and the control passed from the Motor Union to the Royal Exchange and the General Reinsurance Corporation of New York. Until that time the history of the company during its thirteen years of existence had been decidedly unfavourable. In particular, the Marine account, which at one time was the largest premium producer, was responsible for a loss of £110,000 in 1925 and £123,000 in 1927. Since that time the Marine account has been drastically reduced, and the company has virtually ceased transacting marine business. The loss of premium income has been replaced by a corresponding growth in the Motor and General department, as a result of the company's association with the

General Reinsurance Corporation of New York, but, so far, at any rate, the association has yielded nothing but losses. A general criticism which can be levelled against the company is the high rates of expense and of commission paid in all the underwriting accounts. In the Fire account, for instance, commission absorbs over 29 per cent., and expenses over 19 per cent. of the premiums and in the Motor and General account 27 per cent. and 17 per cent. respectively. So long as nearly 50 per cent. of the premiums continue to be absorbed in this way, the company can hardly expect to realise an underwriting profit. Details of the underwriting results in 1929 and 1930 are shown below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	— 21,959	— 17.7	— 10,797	— 9.0
Accident	743	22.7	265	8.7
Employers' Liability	514	4.7	219	2.3
Motor and General ...	— 16,050	— 5.5	— 19,170	— 5.7
Life	19,868		—	
	— 16,884		— 29,483	
Less items carried direct to Profit and Loss Account	95		3,480	
Total net trading loss...	16,979		32,963	
Add net interest earnings	29,736		32,966	
Total amount available	12,757		3	
Less preference dividend	22,400		21,700	

Total net decrease in surplus assets

No dividend on the ordinary shares has been paid since 1925.

Yorkshire Insurance.—As regards premium income the Yorkshire has shared the experience of other composite insurance companies transacting a world-wide business, total premiums (excluding the life department) having fallen from £2,968,000 to £2,918,000. The fire account yielded £1,027,000, the accident account £1,348,000, and the balance of £543,000 was in the marine account. Unlike many of its competitors however, underwriting profits show an increase in all departments, as will be seen from the following analysis:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	74,044	6.9	93,316	9.1
Accident and general	28,919	2.1	49,819	3.7
Marine	— 471	— .1	—	—
Life	9,610		9,610	
Profits from reversions	5,000		5,000	
	117,102		157,745	
Less items debited to profit loss account	108,366		122,529	
Total net trading surplus ...	8,736		35,216	

The dividend is at the same rate as for 1929, namely, 47½ per cent., and, owing to a falling off in interest earnings, calls for a slightly larger inroad on trading surplus than before. In the life department 1930 was the second year in the current quinquennium, and a small increase in new business was recorded, the comparative totals for 1929 and 1930 being £1,570,160 and £1,653,048 respectively. The interest earnings have been reduced by the rise in income tax, and the net rate in 1930 was £4 11s. 1d. per cent. The ratio of expenses and commission to premium income was low at 12.9 per cent.

Bankers' Trust Company.—Since the publication of our Banking Supplement with our issue of May 9th we have received the latest balance sheet of the Bankers' Trust Company of New York. We print this in a later column in order to complete the records of foreign banks with London offices, which were given in the Supplement.

Overseas Correspondence.

LEAGUE OF NATIONS.

Council Meeting — Proposed Customs Union — Disarmament.

(FROM OUR CORRESPONDENT.)

GENEVA, May 19.

THERE have been four full and important days of discussion in the League Council and in the Commission of Enquiry for the European Union on most of the elements—legal, historical, political and economic—of the Austro-German protocol. It has, to some extent, eased the situation, and has shown, by the variety of counter-proposals, that new life has been infused into the practical study of the general economic depression. The controversy remains acute, but it has been conducted with great moderation, with the single exception of the Yugoslav Foreign Minister's acrid intervention this morning. Accusing Germany of having caused the war by refusing any reference to the Hague or any conference, he delivered her a lesson on the danger of declining, for reasons of prestige, any discussion on matters concerning her interest. This was resented, though not with undue warmth, by Dr. Curtius. The point, however, is important. The Council has, after all, gone ahead with its request to the Court to give an advisory opinion upon whether the Austro-German protocol is compatible with the Treaty of St. Germain and with the Geneva Protocol of 1922. When that opinion is given (the Court will take up the matter in June or July), the League Council has to decide whether it will accept it. If the Court expresses the view that the Austro-German protocol is legally correct, France and the other States sharing her opinion reserve the possibility of raising the subject under the general terms of the Covenant. Such a discussion would be constitutionally legitimate, whatever might be its political wisdom, and the Germans have protested too much in their assertions that the Council might consider the legal but not the political or economic aspects of the plan. "Any circumstances whatever affecting international relations which . . . threatens to disturb . . . good understanding" are the words of the Covenant. M. Briand made the point plainly, and Dr. Curtius made no retort. But it would be far better, as Mr Henderson advocated in his emphatic speech this afternoon, that common agreement should be reached to meet the general European depression, no regional effort being by itself adequate. There was not much that was new in the Council debate on the legal side, except that Mr Henderson insisted on and obtained from the Austrian Vice-Chancellor, Dr. Schober, an assurance that no further steps would be taken for the establishment of the proposed regime until the Council had taken the necessary decision. One of the best points in an admirable exposé by Dr. Schober was the utterance of an apprehension lest a too-far-reaching interpretation of the Geneva Protocol regarding Austria's independence might deprive Austria of her freedom of action.

The more general debate in the European Commission, the various plans tabled and the gossip of the lobbies lend colour to the suggestion that France is trying to buy off Austria by offering counter attractions. This does not greatly matter if the opportunity is taken to press home the advantage now presented of some real action. Broadly, France's plan is to supplement measures already in contemplation to meet the agricultural problem by a preferential system for grain up to specified quotas fixed periodically (offering no opinion about equivalent concession on the part of grain-exporting countries), separate international industrial agreements which should make it ultimately easier to secure reduction of tariff barriers, continuation of the conversations now in progress on tariffs, special trade facilities for Austria, and consideration by the Financial Committee of the League of means of arranging Government loans in the general interest and on the widest basis. Italy advocates direct bilateral

agreements, and, with some other States, a revival of the Commercial Convention of March, 1930.

Two of the surprises were Italy's definite opposition—to last confessed—to the proposed Customs union, and Mr Litvinoff's moderate plea for some mutually advantageous *modus vivendi* between Russia and the capitalist States. Armaments, protectionism, debts and reparations, and the irregular distribution of gold were some of the causes of world depression outlined by Mr Litvinoff. An economic pact of non-aggression was essential (he said) for the peaceful co-operation of States in the economic sphere, irrespective of their political-economic systems. He circulated a draft in which he proposed an undertaking on the part of signatories not to adopt, in their relations with each other, any discrimination whatsoever, and to regard the adoption in any of their countries of a special attitude militating against the interests of one or any of the signatories as incompatible with the principles of this undertaking. He also suggested that States should agree by convention to remove differences of prices between the national and export markets and compulsory sale on the national market at prices not exceeding those demanded abroad.

Mr Henderson, in his speech this afternoon, said he hoped they would face the situation with a resolute determination to set aside every consideration of *amour propre* or prestige and concentrate on the real economic interests of the simple men and women they represented. Beyond all question, armaments were a contributory cause of the present situation, and for that reason he agreed with President Hoover that the success of the Disarmament Conference next year would do very much to bring the world crisis to an end.

But the causes of the present situation, as Mr Litvinoff had said, were many and various, and none of them could be dealt with by national action alone. There was no sectional solution, no action by any regional group could do very much to help, and even those like Dr. Curtius, who had proposed regional action, recognised that it could only have a limited effect, and, indeed, had only put it forward because they hoped it might lead to something wider. The present crisis brought home to them anew the absolute necessity for concerted economic action; public opinion in many countries had begun to understand the useless suffering that economic nationalism had caused; but nations in Europe to-day were striving by every means to keep out foreign goods, thereby impoverishing both their own and other nations. "This policy," he said, "is madness." It was a fight against the great economic forces of the age. In the view of the British Government, the magnitude of the high level of protective tariffs ranked first and foremost in the contributory causes of the world depression. They were barriers against prosperity. Behind these barriers there was subsidised, uneconomic and wasteful production, which competed with the natural harvests of more favoured countries for an ever-narrowing free market.

Meanwhile the principal creditor countries had insisted on the payment of the debts due to them and had refused to accept the goods which the debtor countries had to offer. They shut their eyes to the fact that international trade must take the form of barter; instead, the creditor countries had insisted on payments, not in goods, but in gold, and the consequent scramble for gold had contributed to the catastrophic fall in prices. This sequence was sapping the very foundations of our economic system. Everywhere the agricultural countries were being forced into bankruptcy because they were asked to pay in the gold they did not possess instead of in the goods which they had. The industrial countries in their turn found they could no longer sell their manufactures, and were therefore forced to maintain millions of people in a state of unemployment. The time had come to break the vicious circle; they must cease to make economic impossibilities into political necessities, or the last state of Europe would be hard to imagine.

"Before it is too late," he said, "we call once more for a change of policy, for a reduction of tariffs, for the abolition of restrictions on trade." There were, of course, strong vested interests to be faced, but each Government

must frame its policy by reference to the needs of its people as a whole and not the interests of sectional industries. The British Government would examine with the greatest sympathy the various proposals which had been submitted, and they would enter into negotiations with a determination to get results. It was plain that decisions could not be reached at this session on the plans put forward, and he proposed the creation of a sub-committee to recommend procedure for the preparation of definite practical proposals in the light of the various schemes submitted. He heartily endorsed the general principles of the French financial proposals; Europe was calling urgently for credit, but countries with surplus resources seemed more and more reluctant to lend.

UNITED STATES.

Money Market — Trade — International Chamber of Commerce — Corporation Profits — Railroads.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 10.

ANY doubts as to the Federal Reserve policy of forcing down interest rates throughout the country were removed this week. The New York bank again cut its bill buying rate, for the third time in a fortnight, which brought an open market rate of $1\frac{1}{2}$ per cent. The several reductions in bill rates had, of course, left the discount rate high and dry and weakened the control of the Federal Reserve Banks over the money market. Reduction in the discount rate from 2 to $1\frac{1}{2}$ per cent. was therefore logical, even though member banks had been steadily reducing their borrowings for more than a year, using the net imports of approximately \$360,000,000 in gold for that purpose.

The policy of sterilising gold imports and preventing them from exercising their normal influence on the credit system would probably have brought into existence just the same conditions had the old banking system of the country not been replaced by the Federal Reserve system. Thus the artificiality of cheap money at this time is more apparent than real. The widening of the credit base in the past year and a half amply justifies such expansion in credit as is likely to follow. However, the Federal Reserve authorities have doubtless wished to increase the velocity of credit rather than to add to the total amount outstanding. Money has been excessively cheap in New York and Boston, for short-term purposes, and fairly abundant for long-term employment; it has been scarce and rather dear for any purpose throughout the interior where cheap money is mostly needed.

It is hoped that an overflow of funds will take place in the New York money market, aided by a cut in bank deposit rates, which will increase the lending power at lower rates of interior banks. At the same time the bond market will be helped in all directions, and a considerable improvement has already taken place, which will probably be followed shortly by an increase in new capital issues. New financing for the past few weeks has been small and confined largely to municipal and State loans, apart from the heavy Federal Treasury borrowings. Another desideratum of the rate-cutting is the checking of the inflow of foreign money and of gold, though gold is still coming in from the Argentine. South American shipments, being due to political disturbances and slack trade, will scarcely be affected by cheaper money here.

Obviously there is some danger in this more determined cheap money policy. Some of the banks, already finding it difficult to make profits, are critical, but they will be compelled to meet the reduction with sharp cuts in their deposit charges. Savings banks in particular are paying too dearly for deposits, all of which encourages the piling up of money here. A few critics, while admitting the desirability of low rates now, are apprehensive lest, once an inflationary movement begins in the stock market, the Reserve authorities may hesitate too long before raising rates. That is borrowing trouble,

but it is hinted that the Chicago Reserve Bank, which followed New York with a reduction, did so with reluctance. Altogether seven of the twelve regional banks of the system have cut their rates, and the others will follow. The Federal Reserve Bank of New York will probably wait a while before making another cut in its bill rate. The supply of bills is falling rapidly and it is possible that acceptance rates may go below 1 per cent. Commercial paper, which did not have any seasonal expansion this year, may fall below 2 per cent. Call money is redundant at 1 per cent.

Federal Reserve policy, especially if it be followed immediately by a sustained rise in the bond market, may prove a much needed restorative of business confidence. Faith in the future was badly shaken by the poor character of the first quarter earning statements of industrial and railroad corporations, the failure of two Stock Exchange firms, the reorganisation of another, and ugly rumours concerning two or three large financial institutions. These rumours are believed to be entirely without foundation. Some faint stirrings of trade improvement are reported by corporation executives, but the statistics of basic industries are still mostly unsatisfactory. Pig-iron output in April was slightly higher, for the third successive month, but steel ingot production was somewhat lower. The steel industry is now operating at about 46 per cent. of capacity, compared with a mid-March peak of 56 per cent., and the rate may recede to 40 per cent. Prices are rather unstable. Motor output in April was up to expectations, at approximately 348,909 vehicles, a drop of 25 per cent. from a year ago, but a rise of 21 per cent. over March. Railroad traffic is not showing the usual seasonal gains, but is rising gradually.

Most of the speakers at the International Chamber of Commerce meetings held this week were careful to avoid prophecy of a business upturn, but the country is centring its hopes on the summer's harvests. Last year's drought was a heavy blow, and the financial burden which it imposed on the country was increased by the soldiers' bonus legislation. Given large crops this summer and autumn, regardless of prices, there will be solid ground for trade improvement. Commodity prices, after stiffening in March, had a setback last month. Dun's index shows a drop of 2 per cent.

General wage reductions are entering more insistently into any discussion of the trade position. Few are bold enough to advocate reductions as justified by current conditions, but in spite of the pious hopes expressed that wages may be maintained, there is a fairly general expectation that further cuts will have to come before industry can adjust itself to the new conditions. There will, of course, be trouble if the wage scales of the strongly unionised trades such as railroads and building are tampered with.

While proposals made before the International Chamber of Commerce for a reduction of international debts receive a good deal of sympathy here, it is unlikely that anything will be done about it. Many of those who feel that this country should cancel its war debts are not prepared to advocate such action at present, in view of our mounting Treasury deficit and the prospect of higher taxes. Such a move would be highly unpopular among the majority of citizens, and no political party would care to hoist that standard.

Criticism of tariffs and particularly of the American barriers, made at the meetings of the International Chamber, has met with approval among a wide section of Wall Street opinion; but, as in the case of international debts, the tariff is unlikely to be considered here in the near future as anything but a party measure. There is no evidence that the country as a whole is losing its illusions over high tariffs, although, of course, faith in the tariff as a business depression preventive has been somewhat shaken. Too much importance is possibly attached on your side to the possibility of practical results from the meetings of the Chamber.

First quarter corporation profits have run about 50 per cent. lower than in the same period last year, the heaviest

declines being shown in the petroleum industry. Most of the oil companies showed large deficits. Textile products companies suffered a drop of over 90 per cent. in earnings, and the iron and steel trade fell 85 per cent. Railroad net operating income for the quarter was approximately 40 per cent. lower than in the same three months of 1930, improvement in March helping to reduce the difference. The railroads earned at the annual rate of return of 2.07 per cent. on their property investment. As calculated by the National City Bank, the industrial profits for the first quarter were at the annual rate of return of only 5.3 per cent. on capital and surplus, compared with 10.7 per cent. a year ago.

Following conferences of railroad executives, it has been decided to make application to the Interstate Commerce Commission for an all-round increase in railroad rates, with exceptions for rates on commodities for which there is most active competition from motor transport. Recently the railroads have met this competition with voluntary reductions in fares. It is believed that these distressed times will not prove to be propitious for higher railroad tariffs, and possibly the railroad managers do not really expect them. Rather they wish to pave the way for the other way out of their dilemma—reduction in expenses, which can come only through lower wage scales. All other measures have been largely exhausted.

FRANCE.

Politics — Anglo-French Commercial Relations — Foreign Trade — Textile Strike.

(FROM OUR CORRESPONDENT.)

PARIS, May 20.

THE defeat of M. Briand's candidature for Presidential honours was a surprise only for those who ignored the fact that French presidential elections are generally fruitful in surprises, and for the still larger number of foreign observers who have persisted in under-estimating the enormous effect the results of the German elections of a few months ago had, and are still having, on French opinion of practically all shades.

It is impossible for any person who is in close contact with conditions here not to recognise that the Hitlerist success had the effect of a bombshell on all classes of Frenchmen. The sudden revelation of the Austro-German Customs union project which more recently followed had an almost equally alarming effect and, rightly or wrongly, appreciably increased the growing nervousness as to whether advantage was not being unfairly taken by Dr. Stresemann's successors of the Locarno policy hitherto followed by this country. All this helped to create an appreciable current of opinion that tended more and more to question the wisdom of M. Briand's foreign policy, some weeks before the Foreign Minister's candidature for the Elysée had become more than a possibility. M. Doumergue's significant speech at Nice undoubtedly focussed opinion even more closely on the problem, and equally undoubtedly the blatant insistence by M. Léon Blum, that M. Briand was "certain" to succeed to the Presidency as the nominee of the Left, fanned the growing dislike to the idea of a candidate put forward by such a sponsor.

Foreign opinion is apt to regard all suggestion of criticism of the Locarno policy as emanating merely from the irresponsible followers of M. Léon Daudet, than which there could be no greater error, as current events are proving. The *Action Française* movement has never been more discredited and less influential than at present. Its adherents have for many months been formally and actually under the Pope's ban of excommunication, and its doctrines are approximately as distasteful, in the eyes of the mass of the people, as those of the Communists. On the other hand, the hardening of opinion in the direction of a firmer French national policy has been strikingly indicated during the past two or three weeks by notable oral and newspaper pronouncements by M. Herriot, which appear to have completely modified the proba-

bilities of Socialists and Radical Socialists fighting side by side at the coming elections. M. Blum, in the *Populaire*, is openly accusing his former Radical friends of having helped to bring about M. Briand's defeat last Wednesday, and M. Herriot has flatly pronounced himself a supporter of French nationalism, in preference to the internationalism of M. Blum, which he frankly repudiates. A split in the Socialist Party itself, on similar grounds, also appears likely.

Misreading of the vote of confidence accorded before M. Briand's departure for Geneva apparently accounts for part of the misunderstanding abroad as to the Foreign Minister's present situation. The resolution, as its text shows, was one of confidence in the Government as a whole, and was certainly accepted by deputies as meaning that the mandate of whoever went to Geneva as the representative of France was definitely to oppose the Anschluss project. The developments that are likely to follow the formal resignation of the Ministry on M. Doumergue's accession to office in the middle of June remain obscure. There are indications, however, that the replacement of the present Cabinet by one still under the leadership of M. Laval, but in which M. Herriot and some of his friends may be included, is more than possible.

The statement, reported here as having been made in the House of Commons this week by Mr. Smith, Under-Secretary to the Board of Trade (in reply to a question by Mr. A. M. Samuel), indicating that no negotiations are in progress between the two Governments, in regard to suggested changes in the Anglo-French commercial tariff rates, has been received here with some bewilderment. In French official quarters it was elicited a few days ago that M. Elbel, Director of Commercial Accords at the Ministry for Commerce expects to be able to return to London within a month or six weeks, to resume the conversation begun during April with the Board of Trade officials there. At all events, the British request that the French Government should take into consideration the possibility of reducing certain of the import duties imposed on British goods entering this country has been taken under serious examination by the Ministry for Commerce, and there is every likelihood that M. Elbel will present certain counter proposals, when he again meets the representatives of the Board of Trade. The French Government has already replied to the British Note by asking for what amounts to a substantial reduction of some of the safeguarding and other duties affecting French exports to Great Britain. This was confirmed in the speech made yesterday by M. Rollin, Minister for Commerce, in the presence of Mr. Gillett, on his visit to the Foire de Paris. The Minister pointed out that it is true the French tariff affects 64 per cent. of British products, while the British tariff applies to only 26 per cent. of French products, but, on the other hand, owing to the fact that the British scale of duties is appreciably higher than the French rates, the duties imposed on French goods result in the British Treasury receiving £5,876,000 in revenue, while the French Government benefit from the duties on British goods entering France only to the extent of £2,174,000, or less than half the sum received by Great Britain.

The foreign trade returns for April show that the improvement registered during the previous three months, on which the Premier laid emphasis in a recent speech, has been only fugitive. Exports were 2,876,797,000 francs, or 199,000,000 francs less than in March, although still 119½ millions more than in February; and imports 3,901,650,000 francs, representing a drop of 28,000,000 francs. As compared with April, 1930, imports were 673,375,000 francs less and exports 1,012,500,000 francs smaller, only a minor fraction of which, so far as exports are concerned, is to be accounted for by the fall in prices. For the first four months of the year exports show a falling off of 4,291,500,000 francs (or 27½ per cent.) and 2,316,871 tons, as compared with the corresponding period of last year, while imports were 2,868,684,000 francs (or 15 per cent.) and 1,086,482 tons less.

The depressed state of the textile industry, which is the only one of the nine great French industries which has failed since the war to return to the level of its 1913 production (whereas industry as a whole stood at the end of March at 32 per cent. above 1913 output), resulted on Monday in the declaration of a strike against a small cut in wages in the Roubaix-Turcoing mills. It will be recalled that last year, when the national insurance scheme came into operation, the French textile workers refused to pay their half of the contributions towards their insurance, unless they received an equivalent advance in pay. Eventually, the employers' federation offered to add to the wages paid to all workers of over a year's standing in the same factory a bonus to be called a "fidelity premium," that would be equivalent to the payee's insurance contribution. The workers' unions refused to accept that, on the ground that such a designation of the bonus was a reflection on their dignity and an intolerable restriction of their liberty to work where they chose. The term was accordingly changed to "prime de présence," and under this guise accepted, the benefit to the workers being equivalent to about 4 per cent. of the wage. In view of the depressed state of the industry and the necessity for reducing production costs, the employers recently notified that in future insured workers must pay their own share of the insurance contribution, whereupon the textile unions—"C.G.T.," "Christian" and Communist alike—unanimously voted a general strike, to begin on Monday last, unless the employers cancelled their decision. So far about 120,000 out of the 160,000 workers in the Roubaix district have ceased work, and there seems to be a possibility of the movement extending to other trades.

GERMANY.

Money Rates and Reichsbank — Capital Market — Stock Exchange — Dividends — Unemployment in Coal and Building — Oldenburg Elections.

(FROM OUR CORRESPONDENT.)

BERLIN, May 20.

WE have for years been accustomed in Germany to regard changes in the Bank of England discount rate as of the greatest importance to our money market and to those of the rest of Europe. The latest reduction in the London rate, however, has not, at any rate so far, had the slightest effect in Berlin. The hopes of a reduction in the rate of interest in Germany, which were strong at the beginning of the year, now seem quite extinct.

This is due less to the technical position of the Reichsbank than to the stagnation of the gilt-edged market, but the situation of the Reichsbank is not all that could be desired. The fact that the note circulation on May 15 was backed by gold and foreign exchange to the extent of 65 per cent. against 68.5 per cent. at the corresponding date last year is not particularly significant; more important is the fact that the earning assets of the bank, discounts and advances against securities, stood at Rm. 1,596 millions, against Rm. 1,654 millions in the preceding year. The volume of production has, nevertheless, fallen very much in the interval, stocks have been cleared and a substantial decline in the demand for bank credits, and consequently in the amount of recourse to the central bank, might seem to have been inevitable. That this was not so is due principally to political uneasiness. There is less foreign capital in Germany now than last year, and banks and industries are making much more provision than they did then against sudden withdrawals of short-term foreign credit. As substantial sums are being placed abroad for this purpose, proportionally increased demands are being made upon the Reichsbank. For the same reason the market discount rate in Berlin is still 4½, and one-month money can only be got at 5-6 per cent. The fall in rates abroad is not even affecting the short-term market in Germany.

The state of the long-term capital market is best illustrated by the fate of the Reichspost bill issue. This was

a relatively short-term issue, of Rm. 150 million 6 per cent. bills, offered at 96 and redeemable on October 1, 1933. Its reception was thoroughly disappointing and, in spite of the efforts of all the larger banks, only about half was placed. (The success of the small share issue by the Berlin Light and Power Company, amounting to Rm. 30 millions, with a yield of 9 per cent., was due to particular causes.) The index of first-class German fixed-interest securities fell from about 95 to 94.2 last week, and the average yield is again 7.85 per cent., though there are many first-class loans which still yield 8½ per cent. In the circumstances the Reichsbank sees no possibility of reducing its discount rate below 5 per cent.; the margin between long- and short-term rates will first have to be reduced.

The disappointing course of interest rates is an important cause of the slump in the share market. Other causes are the uncertain state of foreign politics, the reaction on Berlin of market conditions in London and New York (large sales of German securities have recently been carried out on New York account), and the unsatisfactory profits earned by German industry. The latest dividend announcements have been very disappointing; scarcely had the market learned with satisfaction that the I.G. Farbenindustrie was maintaining its dividend and that the Mannesmann Röhrenwerke was only reducing its rate from 7 to 6 per cent. than the balance sheet of the largest pure coal-mining company in the Ruhr was published. The dividend on the ordinary shares, which had been 6 per cent. in the preceding year, was passed, and even the allowance for depreciation had to be reduced. Zellstoff-Fabrik Waldhof, the largest firm in the paper industry, which has large hidden reserves, is reducing its dividend from 12 to 6 per cent.; Polyphon, the leading gramophone company, from 20 to 12 per cent., and the Continentale Linoleum-Union, which has almost a European monopoly, from 15 to 5 per cent.

The outlook for other dividends is also unfavourable. It seems certain that the big department-store company, Karstadt, will have to pass its dividend after paying 12 per cent. last year, and the elektro-technical firm of Bregmann, and the Wicking Cement Works are expected to do the same, after distributing 9 and 10 per cent. respectively a year ago. The index of German ordinary shares rose from 85 to 103 in February and March, but the latest falls have swallowed up all this gain. At present prices many first-class shares are yielding 10 per cent., and no early improvement is anticipated.

While the general state of the labour market gives some ground for hope, the mining industry, like the building trades, is in a particularly critical state. The continual dismissals and extensions of short time are attributed to the decline in production: in the Ruhr, output in April averaged 290,000 tons per working day, against 364,000 in April, 1930, and an average of 407,000 in 1929. The output of raw steel in the first four months of 1931 was 2,212 million tons, against 3,966 million in the corresponding period of last year. In April this year 58 blast furnaces were in operation, against 90 in April, 1930. The number of residential building plans notified during the first four months of 1931 was 11,807, against 17,547 in the corresponding period of 1930. The corresponding figures for industrial and administrative buildings are 1,973 and 4,228 respectively.

At the Landtag elections in Oldenburg the National Socialists have increased the number of votes they secured at the 1930 Reichstag elections by one-third. Some of the centre parties have been almost eroded out of existence. The Social Democrats, hitherto the strongest party in the Oldenburg Landtag, have lost 15 per cent. of their votes, and about half of these have been transferred to the Communists. The Centre has held its own, which means that the National Socialists have gained practically no ground among the Catholics and the Peasants. The policy of this little State of barely 600,000 inhabitants would, of course, be of no great interest were it not that the State and communal elections in Germany have the significance of a political barometer, like by-elections in England and elsewhere. (There are no by-elections in Germany.) It is, however, very important to exercise

caution in generalising from the results. Oldenburg is predominantly agricultural, and all indications point to the fact that the National Socialists have recently been more successful in the rural districts than in the towns. Even in the smaller towns of Oldenburg they seem to have made less progress than in the villages.

The results of this election have, of course, no direct effect on the Reich, but they make the position of the Government more difficult by encouraging their opponents. Actually, though, the real matter for surprise to a dispassionate observer is the way in which the two great Parties, the Centre and the Social Democrats, have contrived, in spite of all difficulties, to hold their own against the Radicals both of the Right and of the Left. In spite of the losses of the Social Democrats, the body of enlightened opinion in Germany is still very strong—almost stronger than could reasonably have been expected in a country which has the heaviest unemployment in Europe, and which, in spite of all efforts and sacrifices, is perpetually faced with Budget deficits and with the consequent need for one further sacrifice after another.

BELGIUM.

Public Finance — Railways — Industry.

(FROM OUR CORRESPONDENT.)

LOUVAIN.

AS in all other countries, the economic crisis has seriously affected public finance, which was anyhow suffering from the ceaseless increases in estimates caused by the legislation of the last few years. The unemployment relief fund has begun to absorb a substantial subsidy, which, if no improvement appears in the labour market, will involve for 1931 more than 400 million francs, against only 40 millions for 1930, while the Belgian railways, which were to contribute 300 million francs to the Budget for 1931, will not be able to do so, on account of the decline in their receipts.

In view of this situation, the Government reduced the salaries and pensions of its officers on April 1st and caused the National Railways to adopt the same measure. The diminution has been fixed nominally at 6 per cent., but small salaries have been exempted, so that the yield of the reduction is less. A Bill providing for regulation of public officers' salaries has been promised, according to which salaries will vary with the cost-of-living index, so that there is likely soon to be a new reduction since the trend of the cost-of-living index remains downward. The reduction already enforced upon the salaries of Governmental agents *sensu stricto* makes possible an economy of about 150 million francs under this head.

The Government has also submitted to Parliament a Bill providing for new taxes, some of which are to be imposed immediately. Taxation revenue has to be increased by about 1 milliard, or about 12½ per cent. The import duty on motor oil, which amounts to 0.70 franc per litre, will be raised to 1 franc (say 6½d. per gallon). Tobacco taxes, which are at present very moderate (8 francs per kilo. is the average) and especially the import duty on cigarettes, will be substantially increased. The luxury tax of 6 per cent., *ad valorem*, on certain articles will be raised to 8 per cent. The excise duty on beer will also be augmented. The sales tax will again be fixed at 2 per cent. *ad valorem*, after having been cut to 1 per cent. at the beginning of 1930; but there will probably be numerous exemptions rendered necessary by the industrial depression. It is rumoured that death duties will be increased, at least for the larger inheritances. The tax on income proceeding from company directorships will be raised.

The incessant increase in the cost of pensions of all kinds paid by the Treasury has attracted the attention of the Government, and a committee of enquiry has been appointed. In the present Budget, 2,300 millions have been allowed for the payment of pensions, that is 30 per cent. of the estimated total tax revenue. Nearly half this amount has been appropriated to war pensions. There is

no doubt that there have been deplorable abuses in the obtaining of disability pensions. The number of disabled men entitled to a pension (90,000 against 530,000 in Great Britain) is surely out of proportion to the actual losses suffered by the Belgian army. It is also evident that old-age pensions are being drawn by persons who ought not to be eligible.

The present situation of the National Railways is also disquieting. The policy of its management has in general been good, and the substitution of the National Company for governmental management has certainly been responsible for progress, although the financial results have been mainly governed by the rates of freights and wages, both of which depend on the Government. The Government refused to revise the passenger and goods rates when they should have been raised. Salaries and wages have remained too high in view of the economic situation of to-day, for political reasons. In general, employees have earned 25 per cent. more than corresponding workmen in private industrial enterprises, in spite of the fact that the latter are exposed to the risk of unemployment and do not enjoy free tickets and holidays with pay.

The Belgian Railway Company's receipts, which are mainly influenced by the activity of the collieries and the metallurgical industries, have seriously declined, especially during the last three months. For the first two months of this year the receipts fell by 10 per cent. below the very conservative estimates made at the end of 1930. Expenses also have diminished, but not in the same degree, as wages comprise 58 per cent. of outlay. The usual placing of contracts for the renewal of the track has given rise to complaints, since the suppliers, having entered into cartels, have refused to lower prices. Quotations for rails, for example, have been kept too high by the I.R.M.A.

The business trend is still weak, but March was better than the first two months of this year. The situation of the collieries has become no worse. The wage reductions which the pitmen adopted have made it possible to reduce selling prices, and hence more successfully to resist foreign competition. Sales of Belgian coke have even been noticed in Sweden. The position of metallurgy has remained unchanged; in general it has maintained the reduced activity of October, 1930. The textile industry, which has so long been depressed, has shown some improvement. A rise in the price of wool has proved a stimulus to activity.

NORTHERN IRELAND.

Budget — Last Year's Results — Estimates — Unemployment Insurance.

(FROM OUR CORRESPONDENT.)

DUBLIN, May 14.

IN the absence of Mr H. M. Pollock, the Minister of Finance, who is recovering from a severe illness, the Northern Ireland budget was introduced by Mr Milne Barbour, the Financial Secretary to the Treasury. In 1930-31 total expenditure amounted to £12,229,000, of which supply services accounted for £8,592,000, reserved services for £1,800,000, and provisional contribution to Imperial services £507,000. This latter figure compares with an original estimate of £150,000, and the large excess over the estimate is due to the fact that in anticipation of an increase in the tax on tobacco, large quantities of tobacco were withdrawn from bond. Largely as a consequence of this development, reserved revenues exceeded the estimate by some £350,000. The final adjustment of the Northern Ireland contribution to Imperial services has, of course, to be settled by the Joint Exchequer Board; but meantime a sum of £507,000 has been retained by the Imperial Exchequer. The revenue in 1930-31 amounted to £12,233,000, leaving a surplus of £4,000. Transferred taxes yielded £1,024,000 and motor vehicles duties £528,000 (as compared with a budget estimate of £495,000). The yield of reserved services was £7,370,000, as compared with the budget estimate of £7,013,000. The tobacco duty exceeded the estimate by £324,000, while the duties on sugar and hydrocarbon oils also yielded

£21,000 and £13,000 respectively more than was estimated. The revenue from wines, beers and spirits, however, fell short of the estimate by £62,000. Income and super-tax produced 3,238,000 or some £43,000 more than the estimate. Total revenue from taxation thus yielded £8,922,000, while non-tax revenue yielded £3,311,000, including £884,000 from the Post Office, £860,000 from land purchase annuities and £517,000 by way of Imperial contribution to the Unemployment Insurance Fund.

In regard to the current year, determined efforts have been made by the Government to effect economies. A 15 per cent. cut has been made in the salaries of Cabinet ministers and of members of both Houses of Parliament. The salaries of teachers and of members of the Royal Ulster Constabulary have also been reduced by 7½ per cent. The estimates for supply services reflect the efforts of the Government in the direction of economy, and aggregate £8,589,000, as compared with total estimates (including supplementary estimates) of £9,220,000 in 1930-31. The estimated cost of reserved services amounts to £1,776,000 (as compared with estimates amounting to £1,811,000 in 1930-31), and Consolidated Fund services to £738,000 (as against estimates of £761,000 in 1930-31). Total estimated expenditure thus amounts to £11,103,000 in 1931-32, as against £11,792,000 in the previous year. On the basis of existing taxation, revenue from this source in the present year is estimated to yield £6,720,000. Customs and excise duties are expected to yield £3,550,000, as compared with an estimate of £3,808,000 for 1930-31 and actual receipts of £4,102,000. Income and super tax is expected to yield £3,160,000, as compared with an estimate of £3,195,000 in 1930-31 and actual receipts of £3,238,000. Receipts from non-tax revenue are placed at £1,861,000, while, in addition, £227,000 is expected from the British Exchequer by way of Unemployment Fund equalisation payment and £242,000 towards the cost of public works and buildings under Section 34 of the Government of Ireland Act. The total estimated revenue on the existing basis is thus £10,628,000, leaving a deficit of £475,000.

Changes in reserved taxation announced by Mr Snowden will bring in an additional £125,000 from Customs and Excise duties this year and an additional but non-recurring £100,000 from income tax. A sum of £205,000 is also available in the Rating Relief Suspense Account. These three items reduce the deficit to £45,000. In view of the fact that the revenue for the current year has probably been reduced by £250,000 by the premature withdrawal of tobacco from bond, and in the hope that a trade revival may also help to augment revenue next year, it has been decided not to impose any increased taxation. Accordingly a sum of £120,000 will be taken from the Road Fund as an emergency measure. This will enable the deficit to be met and will leave a sum of £75,000 available as a contribution to Imperial services.

In his Budget speech Mr Milne Barbour reviewed the position of what are probably the three main questions in connection with Northern Ireland finance at the present time. The year 1930-31 was the first in which the full effect of derating was felt. The total estimated cost for the year was £1,118,200, but from this must be deducted the cost of the previous grants in respect of the relief of rates on agricultural land, which in 1928 amounted to £257,000. The increased expenditure in respect of derating may thus be placed at £861,200. Since £410,000 was taken from the Rating Relief Suspense Account, only £451,200 of the additional cost of derating in 1930-31 was borne out of revenue for the year. In the current year, also, some £205,000 will be available from the Rating Relief Suspense Account, but as this will exhaust the account it will be necessary to meet the cost of derating in the future, either to effect economies or to provide extra revenue.

The continued heavy incidence of unemployment constitutes a further problem. Prior to the reinsurance agreement which was entered into between the Northern Ireland and the Imperial Governments in 1925 the Unemployment Insurance Fund in Northern Ireland had accumulated an excess debt of £3,424,434. This debt is, how-

ever, being dealt with and has already been reduced to £2,800,000. The interest on certain investments which have a market value of approximately £1,521,000, and which belong to the capital and reserve funds, is being accumulated towards the redemption of this debt. But since 1925 further debt has been incurred in connection with the Northern Ireland fund in the same way as in Great Britain, and under the parity arrangement with Great Britain the deficit of the fund is now about £1,750,000. In order to maintain the Northern Ireland fund on a parity basis with Great Britain, it has, however, been necessary, during the past five and a half years, to pay into the fund sums amounting to more than £5,000,000 over and above the normal state contribution towards unemployment insurance.

Certain items of the Northern Ireland non-tax revenue are of a terminable character. These are the Land Purchase Annuities and Church temporalities. In order to maintain a corresponding income to that derived from these sources, sinking funds have been established. The allocations from revenue in past years, and also the success of the Government in investing the monies in these sinking funds in long-dated securities at a more favourable rate than was anticipated, have resulted in a substantial surplus arising in these funds. Consequently the Government has decided to relieve the Exchequer by making no provision for the sinking fund in connection with the Land Purchase Annuities in the current year.

Letters to the Editor.

CURRENCY IN THE U.S.S.R.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Will you permit me to reply, even though it be somewhat late, to certain statements regarding the currency of the U.S.S.R., contained in a letter signed "Traveller" which appeared in your issue of November 8, 1930? It seems to me that a reply to the letter on the "Soviet Enigma" and "Inflation and its Dangers" has not lost interest even now, because the ideas expressed in the letter in question are still encountered in certain Western estimations of Soviet finance.

In the main, "Traveller" reasons thus:—The increase in the volume of money during the period 1925-28 is justified by the growth of the national economy of the country in those years. It was only in 1929-30, particularly in the latter half of that year, that such extensive emissions were made as to be a menace to the economic system of the country. These excessive emissions took place during a particularly slow growth of the volume of goods. In certain cases a decrease was even observed in the production of commodities of wide consumption, such as in cotton goods, the production of which decreased by 17 per cent. As a result, prices on the free market were doubled, difficulties commenced in regard to the exchange, and the illegal rate of exchange of foreign currency mounted. Owing to the doubling of prices on the free market real wages were considerably reduced. In conclusion, "Traveller" says:—"Will the Soviet regime collapse with the Soviet currency? The next six months will tell."

First of all, there are certain quite considerable inaccuracies in the figures relating to the currency in 1929-30 given by "Traveller." According to him, the volume of money on October 1, 1930, equalled 4,750 million roubles. Actually it was 4,263.9 million roubles. The increase in the volume of money for the period April to October he estimates at 65 per cent., instead of 48.2 per cent. which it actually was (on April 1, 1930, there were in circulation 2,876.1 million roubles).

Actually the movement of the volume of money for the last five years is as follows:—

	Total Volume of Money. Mn. Roubles.	Including Bank Notes. Mn. Roubles.
October 1, 1925	1,073.7	635.0
" 1, 1926	1,291.3	769.5
" 1, 1927	1,628.3	989.8
" 1, 1928	1,970.8	1,063.4
" 1, 1929	2,642.2	1,428.2
" 1, 1930	4,263.9	2,130.3
January 1, 1931	4,302.0	2,080.4
March 1, 1931	4,306.9	2,082.1

At the present time, by the way, the volume of money equals 4.3 milliard roubles and the goods turnover 60 milliard roubles (1929-30). The volume of money in Czarist Russia in 1913

equalled 2,100 million roubles, whilst the goods turnover equalled 11 milliard roubles. The nominal volume of money in the year 1930 exceeded the volume of 1913 by 100.4 per cent., and the goods turnover by 445.5 per cent. If we consider the difference in the purchasing power of the rouble, then the volume of money in Russia in 1913 would be equal to 4 milliard chervonetz roubles, covering, it is true, a greater territorial area than the present territory of the U.S.S.R. At any rate, it seems unquestionable that the goods turnover of the U.S.S.R. is based on a considerably smaller volume of money than that of pre-war Russia. The fact, however, remains that the emissions in 1929-30 were much more considerable than in the preceding years. The movement of the increase in volume of money in 1929-30 was as follows:—For the first quarter it was 130.8 million roubles; for the second quarter 103.1 million roubles; for the third quarter 578.5 million roubles; and for the fourth quarter 809 million roubles. Thus, the bulk of the emissions fall on the third and fourth quarters, more especially on the fourth.

What are the reasons for this increase? First of all, the theory that the emissions in 1929-30 were the result of a deficit in the budget must be definitely rejected. The State budget of the Soviet Union, commencing from 1924-25, has steadily shown a surplus of revenue over expenditure. The budget of 1929-30, as approved by the Government, covered 11.6 milliard roubles. It was actually realised as follows:—Revenue amounted to 12,623 million roubles, and expenditure to 12,316 million roubles. Thus, there was a surplus of 307 million roubles.

To elucidate the actual causes of the emissions made in 1929-30, we must bear in mind that the plans for that year provided for an increase in the output of planned industry of 32 per cent. and in the output of agriculture of 13.6 per cent. The amount of capital investment was to have been doubled. The reduction of production costs in industry was estimated at 12 per cent. and in building at 11 per cent. Moreover, provision was made for a considerable speeding up of the goods turnover of the consumers' co-operatives and for a diminution of left-over goods. It was these indices of the national economy that formed the basis of the financial plan, particularly of the credit and emission plans for the last economic year.

The realisation of this plan showed the actual increase in the production of planned industry in 1929-30 to have been 25 per cent. The insufficient rate of increase in the supply of raw materials at the commencement of 1929-30 prevented the expansion during that year of production in the light industries to the extent estimated by the plan. Production costs in industry were reduced only by 7 per cent.

What effect had this under-realisation of the plan on the financial plan? The absolute scope of the economic plan was so vast that even the comparatively slight under-realisation of it led to a considerable increase in the demands on the credit system.

Some influence must also be attributed to the not quite satisfactory methods of carrying out the credit reform (the liquidation of commercial credits and the transition to a planned system of financing) during the early months of its inception. One has to consider the great scope and exceptional difficulties of this fundamental reform, which eliminates from the Soviet economy the bill-of-exchange system existing since the Italian Renaissance. Naturally, reforms of this kind cannot be carried out without certain overhead charges. The practice of the automatic financing of purchasers has, to some extent, weakened control in the realisation of economic plans both in regard to the scope of production and to production costs. It is known that the Soviet Government has now introduced improvements in the methods of carrying out the credit reform. These improvements relate the financing of a given branch of industry to the realisation, both in regard to quantity and quality, of its plans, and, moreover, they increase the responsibility of the contractor for the quality of the goods he will have to supply. This does away with the possibility of making increased non-planned emissions, which inevitably happened during the period of change from the old system and the introduction of the new one for the financing of the Soviet economy. But, at that time, it would have been possible to avoid some of the unplanned emissions only at the expense of contraction of the industrial production, a proceeding which was not in the interests of the Soviet economy.

Such, in the main, are the causes of the upward movement in the volume of money. It is, however, clear to anyone that the figures relating to the movement of the money volume are, in themselves, insufficient to judge of the financial position of the country, particularly in regard to the existence of inflation and suchlike things. For this one must also consider the development of the national economy and explain the movement of such fundamental indices as gross production, goods-turnover, increased goods-traffic, movement of prices, etc.

The emissions in 1929-30, notwithstanding the under-realisation of the economic plan for that year, were made in

a situation marked by a great development of the economy of the country. The growth of industrial production as planned by the Supreme Economic Council equalled 25 per cent. for the single year. The national income of the country increased from 26.8 milliard roubles in 1929 to 35.9 milliard roubles in 1930 (at invariable prices), the goods traffic increased from 156 million tons to 244 million tons. The goods-turnover, of course, is an index not affected by change in prices. Below are given other salient indices:—

	Unit.	1928.	1929.	1930.	Estimates for 1931.
Sown area ...	Mil. hectares	113.0	118.0	127.8	143.0
Coal	Mil. tons	35.7	41.3	56.7	83.6
Oil	Mil. tons	12.4	14.4	18.9	27.0
Iron	Thous. tons	3,373	4,322	5,330	8,000
Tractors	Thous. pieces	1.5	4.5	16.4	56.0
Cement	Mil. barrels	12.5	15.3	21.7	35.0
Bricks	Mil. pieces	1,180	1,100	2,907	4,824

In regard to the production of commodities of wide consumption to which "Traveller" devotes special attention, it may be mentioned that the production of grain crops in 1928-29 amounted to 733.2 million centners, and in 1930 to 873.6 million centners; while the production of sugar rose from 1,285,700 tons to 1,736,700 tons, galoshes from 33.7 million pairs to 42.6 million pairs, boots from 34.6 to 68.0 million pairs respectively, and so on. Thus, the changes in the volume of money mentioned above coincided with a vast growth in the Soviet national economy.

In view of a partial under-realisation of the plans for 1929-30 the purpose of an emission to a certain extent beyond the limit set for that year was to supply industry in full with the necessary working capital. It also created conditions for a still greater increase in industrial production in the special quarter (for the three months alone industrial production increased by 25 per cent.) and in 1931.

To prove his theory about the so-called "Enigma" (i.e., inflation in the U.S.S.R.), "Traveller" instances the movement of the rate of exchange (illegal) and prices on the so-called "free" market. But the illegal currency market in the U.S.S.R. plays only a very insignificant part. The movement of the rate of exchange on this market has no economic importance whatever and does not reflect any changes in the national economy. Certainly in 1929-30 there was some rise, and in different parts a considerable one, in the so-called "free" prices, and there were certain temporary difficulties regarding the silver money. But after all, what was the importance of these facts? I trust that "Traveller" will find it hardly possible to deny that the overwhelming volume (90 per cent.) of industrial and agricultural products are sold and reach the hands of consumers at steady, stable and very low prices. In like manner all agricultural raw materials and the realisation of industrial products in the rural areas are also carried out at stable prices. Under inflation this would not happen.

The budget and the single financial plan for the special quarter of October-December, 1930, was drawn up and carried out without recourse to emissions. This alone emphasises the fact that there is no foundation for the assertion of inflation. The policy of a financial plan without emissions is being followed in 1931 also. The financial plan of the present year, covering in round figures 32 milliard roubles, is balanced without recourse to emissions and with a reserve of 2 milliard roubles (1.5 milliard roubles general reserve and 0.5 milliard roubles reserve for the estimates of the Supreme Economic Council).

The further strengthening of the rouble is one of the most important problems of the economic and financial policy of the Soviet Union. The resolution adopted at the last Session of the Central Executive Committee of the Union of Soviet Socialist Republics on the report of the People's Commissar for Finance, Grinko, concerning the financial plan and the budget of 1930, emphasised that the activities of the economic and financial organs must be so arranged that the following problems should be placed in the foreground:—(a) a complete realisation of the tasks, in quantity and quality, of the national economic plan in 1931; (b) a maximum mobilisation of the resources of the country necessary for carrying out the approved rates of socialist construction; (c) the introduction of the strictest financial discipline and regime of economy in all the branches of the national economy, social and cultural development and administration.

The prospects for the currency are very favourable. As a matter of fact, the national economic plan for 1931 approved by the Session of the Central Executive Committee of the U.S.S.R., has provided for an increase of production in State industry of 45 per cent.; for group "A" (production goods) provision is made for an increase of 58 per cent. in the output, and for group "B" (consumption goods) of 29 per cent.; the increase in retail trade is estimated at 30 per cent., and in

the consumers' co-operatives alone, serving the consumer direct, the increase is estimated at 25 per cent. This considerable development of the economy is based on a financial plan without recourse to emissions, balanced with a reserve of 2 milliard roubles.

The success of the special quarter and the efforts applied to the realisation of the national economic and financial plan of the present year have created a complete confidence that the question of the further strengthening of the chervonetz will be successfully solved.—Yours, etc.,

H. NAGLER.

People's Commissariat for Finance, Moscow.
April, 1931.

TARIFFS AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your comments upon the manifesto recently issued by Sir William Morris you refer—and not for the first time—to the Free Trader's belief that a tariff must put up prices and encourage inefficiency.

Those who believe in the wisdom of import duties confidently assert the contrary, and claim that while it may be contended that the available evidence is not conclusive, they are of opinion that this belief is confirmed by all experience in these matters, and at the worst that the argument on both sides is merely assertion lacking absolute proof.

Protectionists assert that if an industry can be conducted efficiently in this country, and the volume of production of the commodity increased in unlimited quantities, the following consequences must follow:—

1. Costs must fall.
2. Competition will stimulate the highest attainable degree of efficiency in production.
3. All inefficient plants, unless engaged in specialised production, will be eliminated by competition.
4. Prices must fall to a level not exceeding a reasonable profit under the most efficient conditions of manufacture.
5. Exports must tend to rise.

Protectionists claim that these results directly followed the adoption of a protective tariff in the United States of America and in Germany, and these results, which indubitably were achieved, were not "post hoc" but definitely "propter hoc."

Protectionists also claim that the only protected industry of importance in Great Britain presenting the conditions I have predicated, and of which we have experience, is that of motor cars, and no one can deny that the results which Protectionists say must follow the adoption of a Tariff under the stipulated conditions were actually experienced in the case of that industry.

It is possible that in small and unimportant industries these results might not be achieved, but it would be comparatively easy to provide some suitable safeguard as recommended by the "Balfour" Committee for dealing with any cases where import duties were used as a cloak for inefficiency.

In such cases, however, as the great steel industry, which can do so much to make or mar the prosperity of the country, Protectionists affirm with absolute confidence that these consequences would ensue. These views are almost universally held by the men responsible for the conduct of the British iron and steel industry. They know from their practical experience what would be the effect on their own companies; the amount of capital which they would immediately expend, and the enormous improvement in efficiency which would be achieved provided their home market was secured with the assistance of a tariff upon imported iron and steel.—Yours faithfully,
W. PETER RYLANDS.
Warrington.

[We deal with some aspects of Sir Peter Rylands' letter in a leading article on the iron and steel industry. We will only add two comments here. The first is to traverse the idea that the iron and steel development of Germany and America and of other countries was mainly due to Protection. In certain cases undoubtedly Protection has enabled certain branches of the industry to be established in the first place, the classic case being that of tinplates in the United States. But Sir Peter Rylands has omitted to mention the fact that, in spite of her colossal iron and steel production, the highly protected United States of America has never been a very heavy exporter of iron and steel and is not the most serious menace to this country except in certain lines. The threat has come in recent years from the countries with low iron and steel protection, namely, Belgium and France. The second point is that the case of motors, far from proving Sir Peter Rylands' case, strengthens our own view. Under the shelter

of a tariff and our horse-power tax the process of rationalisation has gone on intolerably slowly, and we have continued to produce an enormous multiplicity of types which have prevented the advantage of mass production. Motors have become a great product of world trade, but whereas in former days we were accustomed to get from 20 to 50 per cent. of world trade in manufactured goods, we have acquired since the war, according to the Balfour Committee, less than 10 per cent. of the world's increased motor export trade. Even in the unprotected electrical equipment industry, we have secured nearly 30 per cent. of the trade of the world in the last decade. By comparison the results of the protected motor industry are most disappointing.—Ed., Econ.]

Books and Publications.

MINERALS AND INTERNATIONAL POLITICS.*

A DESCRIPTION of the new elements which are said to have entered the "mineral picture," of the future geography of mineral resources, of the mineral position of the nations, and the nature of the specific political measures which have been adopted by them, together with a discussion of the question of conservation of minerals, the bearing of minerals on war, and the "mineral future and politics" seems an extensive theme for adequate treatment in a book of 213 pages. The plan of the book is well devised and the subject-matter, which is of engrossing interest, is expressed in a clear and attractive style. It is, therefore, the more regrettable that the argument should be marred by inaccuracies and half-truths, and weakened by the omission of fundamental matter. For these reasons the general reader must be warned against accepting the main conclusions, as these, though presented with an appearance of authority, are not always warranted by fact.

One cannot agree, for instance, that the concentration of mineral production will, for a lengthy period, be restricted to a few regions, and, consequentially, that the principal mineral trade routes must be few in number; and, again consequentially, that "the key to the problem is to be found mainly in the convergence of mineral trade routes of the North Atlantic Ocean" (page 13). Or that "the centre of gravity for minerals will remain as before with the North Atlantic countries" (page 171). For these assertions are largely in the nature of assumptions unsupported by evidence.

The author mentions the fact that over 90 per cent. of the world's steel-making capacity is confined to the United States of America, England, the Ruhr and North-Eastern France and adjacent territories. "In no other region now known," he states, "would it be possible to duplicate these large units with equal efficiency." Why not? Large steel and other works are now being established in the Urals by the Soviet Government, and, as long ago as November, 1928, Dr. Krummer, the well-known German authority, reported: "In a short time, the steel works and rolling mills of Seversk, the rolling mill and wire works of Revda, and the copper works of Degtiarka will bear an absolutely modern face, so that they can be compared without doubt with the most modern equipment in Europe or America."

Far from being static, the centre of gravity in regard to minerals is a changing centre. The centre of gravity of tin is now Malaya, Bolivia and Dutch East Indies. Once it was Cornwall. True it is that at present 85 per cent. of the world's oil-refining capacity is concentrated in the United States (page 9) and equally true that that country produces 55 per cent. of the world's copper (page 10) and so on. But the known supplies of liquid oil are nearing exhaustion in the United States, and, before a great many years have elapsed, the main sources of oil will be coal and oil shales, automobiles will probably be driven by vegetable alcohol, and the centre of gravity in respect of copper will, within a short time, have shifted from the United States to Northern Rhodesia.

The author's belief that the tendency is towards world monopoly by single companies or co-operating groups of

* "World Minerals and World Politics." By C. K. Leith. McGraw-Hill Publishing Company, Ltd. 10s.

companies, owing largely to the concentration of minerals of economic value in a few centres so that they are easily brought under one control, is not sound logically, for it pre-supposes a static condition in regard to technological methods. On the point of the advantages accruing from control by large combines, the author labours (page 16) a partial truth. Concentration of commercial control is not in all cases advantageous, and one doubts the existence of a "steady trend towards common ownership and centralised directing of the industry" in view of the number of separate and distinct productive units at the present time as compared with, say, 60 years ago. One doubts, too, very much whether "problems as to who shall ultimately own the world's minerals" do, in point of fact, "loom large before a rather startled world" (page 18).

In regard to the part the Governments of Great Britain and the British Empire play in mineral politics, the author is much at sea. It is hardly accurate to say that in the United Kingdom "The Government has now assumed control over the coal-mining industry" because of the provisions of the 1930 Act, of that "in most of the Empire, excepting Malay, under direct control of the British Government, there are restrictions against alien exploration and acquirement of minerals. Nor is it true, if one excepts oil, that "the Government exercises some degree of indirect control also through companies such as the British South Africa Company." The assertion that "the British Government owns the majority of shares in the Anglo-Persian Company" is incorrect—the interest is less than one-third. It will be news to many, too, to learn that the same Government has taken an active interest in the Nickel Industry of Canada and "in the manganese industry of the Gold Coast of Africa, and in the effort to secure high-grade iron ores abroad to supplement the low-grade domestic supplies."

The activities of Great Britain, which are largely a figment of the author's imagination, loom large in this work, the bibliography of which, with two minor exceptions, is American. Thus, "British Capital plays a large part in the mineral industries of the entire Empire and Great Britain makes no secret of its desire to unify the group and round it out by supplying deficiencies." And this in face of the fact that the British capital invested in the Canadian mineral industry is vastly less than that of the United States of America, and the fact that the copper-mining industry of Rhodesia is largely in American hands—to quote only two instances.

The author states as a fact that it is "especially true of the British Government that it is giving political aid to the exploitation of minerals outside its own spheres of influence." A declaration of this sort, to be of any value, should be supported by actual instances, but none are forthcoming.

With regard to gold, it is stated that "the peak of world production was passed in 1915," but there can surely be little doubt that a greater peak will be reached in the future. The great pre-Cambrian shield of Canada has been only very partially prospected, the Porcupine Gold-field was only discovered in 1913. The author fails to take into account the probable new discoveries of gold, the recovery of gold as a by-product in the treatment of other ores, and the possibilities, with the improvement of scientific methods, of the extraction of gold from substances at present valueless for that purpose.

In his survey of the mineral situation, the author omits from consideration the important bearing of the factors of population and of transport. Thus, the minerals of America have reached their present intensive development largely because they are situated among an industrially-minded population. The bearing on the problem of water transport is very great, as it is so much cheaper than land transport. For instance, British anthracite is sold in Montreal in successful competition with that from the United States of America.

The inference that Germany, in the first six months of 1914, accumulated stocks of manganese, brass, nickel, tin, aluminium, graphite and asbestos for war purposes is not proved by the chart shown on page 143. There is nothing to show that the comparative annual increase in imports was not occasioned by feverish purchasers on the

outbreak of war, or even later. The author should have given monthly, instead of annual statistics in support of his belief, a belief commonly held, but insufficiently supported by the data presented.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

The Firm of Cadbury, 1831-1891. By Iolo A. Williams. (London) Constable and Company, 10-12, Orange Street. 10s. 6d. net.

A well-written biography of one of the most interesting industrial firms this country has produced.

The Agricultural Situation in 1929-30. (Rome) Bestetti and Tumminelli S.A., Via Michelangelo Caetani, 32.

The publication of this annual commentary on their Statistical Year Book is a very welcome departure by the International Institute of Agriculture. There are chapters on the agricultural produce markets, and on action taken by Governments and by voluntary organisations in the interests of farm relief, and there is a short section on agricultural conditions in each country.

An Economic History of South Africa. By D. M. Goodfellow. (London) George Routledge, 68-74, Carter Lane. 10s. 6d. net.

A most readable book, which supplies a very definite want. It is much less of a textbook than the title suggests.

An Outline of the Economic History of England. By D. W. Roberts. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 4s.

An introductory book for students and the general reader.

International Competition in the Trade of India. By George B. Roorbach. (Worcester, Mass.) Carnegie Endowment, 44, Portland Street. 5 cents.

An account of India's imports, with a useful analysis of the changes in their sources.

Journal of the Royal Statistical Society. Part II., 1931. (London) Royal Statistical Society, 9, Adelphi Terrace. 7s. 6d. net.

Includes an article by the Editor of the *Statist* on wholesale prices in 1930.

The Political Quarterly, April-June, 1931. (London) Macmillan and Company, Ltd. St. Martin's Street. 14s.

Includes an article by Mr E. F. Wise on "An Alternative to Tariffs," and a reply by Professor Robbins.

The Journal of Political Economy, April, 1931. (Chicago) University of Chicago Press. \$1.25.

Includes articles on "The Economics of Exhaustible Resources" and "Some Aspects of Stock Market Speculation."

Proceedings of the Second International Conference with a View to Concerted Economic Action. (Geneva) League of Nations. 10s.

The full report of the proceedings at Geneva, November 17-28, 1930.

The Stock Exchange.

FIXED INTEREST STOCKS AND TRADE DEPRESSION—II.

IN last week's *Economist* we showed that, in theory, trade depression should cause a rise in fixed-interest stocks, as a class, since it is usually accompanied by a fall in money rates and a transfer of investment resources from equities to prior-charge securities. We found, however, that gilt-edged stocks alone had risen during recent months, investors having tended to sell many foreign bonds on account of their "political risks," and many company debentures and preference on account of their "industrial risks." An analysis of the reports of a large number of British concerns, published this year, showed that while profits in 1930 had fallen off by something between 10½ and 12½ per cent., as compared with those of 1929, they were sufficient, in the aggregate, to cover current debenture requirements nearly nine times and preference dividends nearly four times. A more detailed examination of the figures, however, revealed that while profits in the public-utility industries, brewing, retail trade and "finance" were relatively stable, they had fallen by 50 to 75 per cent. or even more in the case of shipping, the textile trades and "primary" industries like rubber. These results suggested that, in certain industries, the effects of depression had been sufficiently severe to threaten the earnings position of some companies.

As an example of the considerations affecting the position of fixed-interest securities at the present time, we instanced the factor of "gearing"—i.e., the proportion between fixed and variable dividend-bearing capital. The following table was given, showing the "gearing" of eleven large British concerns whose stocks are widely held:—

Name of Company.	Total Debenture Capital.	Total Preference and Preferred Capital.	Total Ordinary and Deferred Capital.	Amount of Fixed Interest Capital per £1 of Ord. Capital.
	(£'000)	(£'000)	(£'000)	£
Unilever	2,596	11,419	0-23	
Courtaulds	8,000	24,000	0-33	
Imperial Chemical	22,214	54,458	0-41	
Bleachers' Association	2,250	3,819	1-24	
Cunard	4,420	2,500	1-24	
Guest, Keen and Nettlefolds	1,775	6,535	1-29	
Dunlop	6,306	4,400	1-36	
Fine Cotton Spinners	2,750	3,940	1-52	
Great Western Railway	38,152	67,082	2-19	
London Midland and Scottish Railway	114,381	205,577	3-37	
Cables and Wireless	...	443,435	8,543	5-09

The "gearing," it will be seen, varies enormously the rule being that, if other things are equal, the higher the ratio between fixed-interest capital and ordinary capital, the more vulnerable the former to the effects of fluctuations in earning power. The above figures, however, give only an approximate idea of the real position, since the "gearing" of holding companies like Unilever, a large part of whose annual receipts is obtained from ordinary shares in subsidiaries, is obviously higher than its own figures, by themselves, suggest.

The impressions given by the last table may be supplemented by reference to the figures in the next column, which indicate, for the same eleven companies, the net profits earned in each of the last two years, and the percentage of each year's earnings required to meet the requirements of each class of capital on a cumulative basis. In other words, the figures show where each body of stockholders "got on and got off the earnings 'bus'" each year, and how far that vehicle travelled. This method, which is being increasingly used by investment statisticians on both sides of the Atlantic, is one of the most satisfactory ways of indicating the real "cover" for fixed-interest securities.

It will be seen that, despite last year's severe reduction in profits, preference shareholders are still amply covered in the case of such companies as Unilever and Courtaulds.

Company.	Date of Balance Sheet.	Net profit earned before Deb. Int.	Cumulative Percentage of Total Earnings taken by each Class of Stock, &c.					Rate of Divi- dend on Ord. Shar.

* After deduction of £30,000 debenture redemption.

† Free of income tax.

‡ Period April 8, 1929, to December 31, 1929.

(a) Debenture interest, and preference and preferred dividends, paid out of reserves.

As regards Dunlop and the London, Midland and Scottish Railway, the margin has become slender, while in other cases, like the Fine Cotton Spinners and Cunard, preference requirements for the last financial year have been met only by drawing on the earnings of other years. The table also suggests that, in the case of companies engaged in trades which—as shown last week—have been particularly susceptible to depression, a "cover" which appeared satisfactory, or even generous, a year ago has tended to disappear with somewhat disconcerting rapidity. This tendency is exemplified by the figures for such companies as Guest Keen, Fine Cotton Spinners, Cunard, and Dunlop.

The reaction of the share market to these and other considerations is shown in the table on the next page, which sets out the present prices and yields of some of the most important debenture and preference stocks of the eleven companies.

If the yields are read in conjunction with the "cover" figures shown in the preceding table, it will be seen that, broadly, present prices tend to be governed less by relative rates of interest than by "dividend risks." Industrial debentures whose income position is regarded as relatively secure yield from 5 to 6 per cent. at present prices, and "good" preference shares yield up to about 7½ per cent. The more "doubtful" stocks, on the other hand, have an indicated yield of 10 per cent., or even more.

The conclusions suggested by this review may be briefly summarised. The severest trade depression for the last ten years has made sufficient inroads upon the earning power of British industry to compel fixed-interest stockholders to take cognisance of its existence, and to use discrimination as regards its potential effects on earning power. While debenture and preference requirements, over the whole field of company finance, still appear to be covered by profits with a reassuring margin, variations in

Company.	Shares or Stock (Description and Par Value).	Total Amount Quoted.	Present Price.	Present Yield (allowing for Accrued Interest).

earning power between industry and industry, and company and company, have been sufficiently wide to bring some preference shares, at least, within the danger zone. So long as the duration of the present depression is uncertain, it cannot be assumed that the company accounts so far published afford a complete indication of its effects on industrial profits. Investors may be well advised, therefore, to distinguish between industries and individual companies which have already shown marked susceptibility to the effects of depression and those whose earnings record has been more stable. Further, investors should remember that, as regards individual securities, figures of "earnings cover" must be related to those of "gearing." In a period of reduced profits, a "low-gear" share, other things being equal, is safer than a "high-gear" share. In the latter case an imposing amount of "cover" for fixed-interest requirements in one year may be reduced to dangerously low proportions by a moderate profits recession in the next.

Provided a given company is intrinsically sound, the converse will, of course, apply when trade takes its eventual turn for the better and the curve of industrial profits begins to rise once more. Under such conditions "high-gear" shares, in industries showing more than average liability to upward and downward earning fluctuations, will offer obvious scope for capital appreciation.

TIN RESTRICTION.

THE representatives of the Dutch East Indies, British Malaya, Bolivia and Nigeria, comprising the International Tin Committee, who met at the Hague last Saturday, reached decisions of great importance to the tin-producing industry. It was generally assumed that this inter-Governmental committee would recommend a more severe restriction of output, seeing that the delay which had occurred in bringing restriction into force—the starting-point having been postponed from January 1st to March 1st—had caused a much larger increase in the world's visible supplies than would otherwise have been the case. It was not, however, expected that the restriction screw would be turned so tightly as it was at the Hague meeting. The unanimous decision arrived at by the International Committee was that the production of the restricting countries should be further reduced by 20,000 tons per annum, "to assure the object laid down in Paragraph 1 of the scheme." This object, we may recall, is to "secure a fair and reasonable equilibrium between production and consumption with a view to preventing repeated and severe oscillations of prices." As there has been some misunderstanding of the actual percentage restriction which a further cut of 20,000 tons implies, we have prepared a table showing the actual world production for 1929 as agreed by the International

Tin Committee, the quotas which were allowed to the restricting countries under the agreement which came into force on March 1st, and the new quotas which are allowed under the Hague agreement of May 16th and which will take effect as from June 1st:—

	World		Percent- age Reduction		Percent- age Reduction	
	Produc- tion, Tons.	March 1st, Quotas, Tons.	from 1929, Tons.	June 1st Quotas, Tons.	from 1929, Tons.	from 1929, Tons.
Malaya	69,366	53,925	22·27	45,355	34·61	
Bolivia	46,338	34,260	26·07	28,818	37·81	
Dutch East Indies	35,730	29,910	16·29	25,159	29·59	
Nigeria	10,412	7,750	25·57	6,512	37·46	
Total	161,846	125,845	22·24	105,844	34·60	
Non-Participating countries	24,672	19,155	22·36	19,156	22·36	
Total World Output	186,518	145,000	22·25	125,000	32·98	

It will be observed that the restriction now proposed on the 1929 world production amounts to 61,518 tons, or approximately 33 per cent. Actually the restricting countries are curtailing their output by 34·6 per cent. as compared with 1929. With regard to the non-participating countries, it is estimated that the 1929 production of 24,672 tons will be reduced to 19,156 tons, partly because a number of mines—in Cornwall, Australia and elsewhere—have been shut down, and partly because other mines, although not yet included in the restriction agreement, are disposed to conform to some measure of restriction. The present scale of restriction would seem drastic enough not only to balance supply with demand, but to allow some inroads into the accumulated stocks. Consumption in the first four months of this year showed a very severe drop. The actual consumption statistics are not available, but it is possible to arrive at a fairly accurate estimate by assuming the market "delivery" figures as approximately 78 per cent. of actual consumption, an estimate which past statistics have proved to be reliable. On this basis the following estimates of consumption are arrived at:—

WORLD TIN CONSUMPTION.

(Based on "deliveries," being 78 per cent. of total.)

1929	180,000 tons
1930	163,000 "
1931	150,000 " (estimated on the first 4 months).

This estimate of consumption of 150,000 tons for the calendar year, 1931, compares with an estimated production for the year ending March 1, 1932, or 125,000 tons. It will, therefore, be appreciated that the extra restriction now imposed by the International Committee—a 16 per cent. turn of the March 1st screw—should dispose of any doubt about bringing supply into balance with demand. The statement issued by the International Tin Committee of the exports of tin (in terms of metal content) from the restricting countries shows that Bolivia, Dutch East Indies and Nigeria are already somewhat short of the quantities allotted as from March 1st. The figures are as follows:—

	March 1st. Monthly Quotas.	Exports, 1931.	
		March.	April.
Bolivia	2,855	2,861	2,813
Malaya	4,494	4,548	4,620
Dutch E. Indies	2,493	2,280	2,417
Nigeria	646	610	551
	10,488	10,299	10,401

It is reported from Malaya that certain producers are ill-disposed to accept the new quotas on the ground that they favour the Dutch at the expense of the British. It is true that an extra allowance of 1,778 tons was originally given to the Dutch East Indies, but that was compensated for by a reduced allowance of 1,483 tons for Bolivia and 295 tons less for Nigeria. The Malayan quota, it appears, was exactly the same percentage of the world's total under the March 1st restriction scheme as it was in 1929, namely 37·19 per cent., and has only fallen to 36·28 per cent. of the world's total on account of the rise in the non-restricting "quota."

Two further decisions of great importance were taken at the meeting of the International Tin Committee last Saturday. First it was decided to publish "agreed" international statistics. The apparent contradictions of the statistics published by the different Governments and the various trade authorities have long militated against any attempt to rationalise the producing industry or stabilise prices. Three computations, for example, are published of "visible supply," each compiled on primary information, but differing in the view taken of the moment when tin becomes "visible." There has been no organised effort to collate the various statistics of supply or to follow up the details of consumption, especially as regards deliveries direct from smelters to consumers. An international collation of statistics, provided it is published promptly enough, should be a great stabilising force in the industry. The second decision at the Hague was to appoint a sub-committee to consider the imposition of a nominal export tax of approximately 3s. per ton to provide for the maintenance of an International Tin Research Association. The present Research Association, which was set up when the Tin Producers' Association was formed, has suffered from inadequate financial and moral support. For the purpose of encouraging consumption, an International Research Association devoted to the application of tin in commercial alloys is all-important. The complexity of non-ferrous alloys demands constant research work, which the British Non-Ferrous Metals Research Association does not neglect; but there is every ground for believing that a greater variety of commercial uses would be found for tin if an individual research body were devoting special attention to the application of the white metal in commercial alloys.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.	
TICKET.	ACCOUNT.
June 9.	June 11.

DEALINGS in most markets were again limited, and during the earlier part of the week the bears reigned supreme. Apart from the gilt-edged market, where the reduction in Bank rate and the satisfactory tone of sterling combined to induce optimism, prices made new low levels until Wednesday, when the decline was arrested. A fair amount of bear closing initiated a general recovery. It was doubted, however, whether the latter was more than the inevitable reaction of an oversold market. The movement, significantly, had no counterpart in New York.

In the gilt-edged section quotations continued under the influence of sterling and the prospect of an early Conversion Loan, 5 per Cent. War Loan being sold in order that holders might exchange for long-dated securities. Elsewhere, marked strength was exhibited, new high levels being touched by several issues, including 4 per Cent. Funding Loan. Little business was recorded in Indian stocks, but prices were marked down on news of this week's £10 millions loan. Australians showed little alteration, but New South Wales issues again suffered from liquidation. New Zealanders likewise came on offer. Home corporations were firm in sympathy with gilt-edged.

The foreign market was again depressed. Argentine and Chilean Government bonds receded, while losses of a point or so were experienced in several Brazilian stocks on Wednesday as a result of liquidation from America. Peru Corporation revealed marked initial weakness. Among Europeans, German and Austrian loans reflected Continental dissatisfaction with the proposed Customs Union, the "Young" bonds being particularly out of favour. Chinese issues were fairly steady, but Japanese shared in the general indisposition.

Though this week's railway traffic figures failed to reveal the hoped-for improvement, the tone of the Home Rail Market was unusually steady, and movements were more favourable to holders than for some time past. Great Western proved an exception to the rule, the ordinary shares creating a new low record. Foreign rails made a

poor start, but the tone improved as the week advanced, with a mild recovery both in Argentines and Brazils.

The trend of quotations in the industrial market dipped sharply at the opening of the new account, and the moderate mid-week improvement left dealers looking to America for sufficiently encouraging news to justify the better tone which was apparent in most sections. J. and P. Coats (whose preliminary figures are discussed in a Note on page 1114), and Courtaulds again came in for forced liquidation from the North, though the wave spent itself by Wednesday. Brewery and tobacco leaders, electrical equipment, and catering and provision shares all suffered from selling at first, and recovered together when the bears covered. Engineering shares were comparatively steady, with Babcocks and South Durhams as bright spots. Cables and Wireless improved fractionally after a dull commencement, while sharp advances were recorded in Imperial Chemical and Turner and Newall. Insurance shares displayed unusual weakness, but subsequently improved.

The tone of oil shares varied almost as much as that of industrials, the cessation of forced liquidation later giving a firmer appearance to Royal Dutch, Shells and the Eagle issues, which enjoyed good support from Paris and America. Rubber shares were fairly steady, United Sua Betong recording a further advance. Tea shares were again in the doldrums, and little business was transacted, though Jhanzies and Jokais registered improvements. The Finlay group weakened on the reports, discussed on page 1115.

The mining share market experienced a not unsatisfactory week, after participating in the general weakness in the earlier sessions. Central Mining were dull on the report, but improved later, while support was enlisted for Randfontein and others in the Kafir list. "Chartered" exhibited strength, while Rhokanas rallied in the Northern section. De Beers were active, but no fresh interest could be evoked in Tin shares. Ashanti Goldfields enjoyed a further period of popularity, while inquiries were made for Taquah and Abosso.

NEW YORK.

The week opened with heavy liquidation, particularly of railroad shares, which continued to be the chief danger signal in the market. Chain store issues were also subjected to bear attacks, and both United States Steel and American Can broke below 100 for the first time. Some of the selling was undoubtedly of a forced character, the speculative position, so far as the general public was concerned, having been greatly reduced. Although moderate recoveries developed intermittently, the trend continued downwards, with particularly sharp breaks among high-priced stocks. Little credence, however, was given to reports of heavy selling from England. Movements in the main trade indicators remained adverse, car loadings fall-

ing off slightly in the first week of May, while operations in the steel industry declined last week from 47 to 45 per cent. of capacity. The railroad executives are developing plans for a concerted movement to secure rate increases, estimated at \$400 millions gross for the whole country. It is understood that individual members of the Inter-State Commerce Commission question the advisability of such a policy in a period of depression, but are prepared to give due consideration to concrete proposals.

* 2-hour session.

AMSTERDAM.

Contrary to expectation, new low records have again been registered on the Amsterdam stock market, not only for petroleum and rubber companies, but also for sugar and shipping shares. Among the causes of the decline can be mentioned the further drop in the price of rubber to below the cost of production, and the disappointment caused by the fact that the operation of the Chadbourne scheme has so far failed to bring about a rise in the price of sugar, while there has been no increase worth mentioning in the turnover of the V.I.S.P. The discouraging rumours as to the dividend to be distributed by Philips Works also tended to depress the market, and, last but not least, the drop in the quotations for Royal Dutch gave rise to general uneasiness. The pessimistic dividend expectations turned out to be justified. Artificial silks and Unilever failed to escape the influence of the general depression. Sumatra tobacco shares, on the other hand, managed to resist the effects

of the weak sentiment, and the good results of the last tobacco sales at Amsterdam helped to establish a firm tendency. The Dutch cigar industry, in particular, bought some large parcels at satisfactory prices. The favourable weather reports from the Dutch East Indies also tended to stimulate this section. The Deli company realised 5.42 guilders per (metric) pound for 1,000 bales, as against a valuation of 1.89 guilders. At the close rubber shares succeeded in recovering a little of the ground lost in the preceding week. Sugar shares were decidedly lower and registered new low levels all along the line. Shipping shares were dull, despite the improved tendency of the freight market. There was practically no trading in this section. The latest Bank rate reductions in New York, London and Amsterdam exerted hardly any influence on the stock exchange. In the bond market, on the other hand, the further drop in discount rates did not pass unnoticed, and the tendency continued firm. The marketing of the 4 per cent. State loan of 277.6 million guilders for conversion of the 1918 5 per cent. loan, was a great success. A big 4 per cent. East Indies loan, reported to be for 100 million guilders, is expected to be announced shortly.

INVESTMENT NOTES.

Conversion Prospects.—The gilt-edged market on the Stock Exchange has every appearance of preparation for a conversion offer to 5 per Cent. War Loan holders. Under the stimulus of the reduction in the Bank rate and the fall in discount rates, long-dated stocks are steadily rising, while sellers of War Loan are much in evidence. The following table shows the rise in the long-dated stocks and the fall in 5 per cent. War Loan, as compared with the prices ruling before the Budget and before the reduction in Bank rate to 2½ per cent., together with the price to which the long-dated stocks must rise to return a yield of 4½ per cent.—a possible "jumping-off" figure:—

	Highest Price, 1930.	Pre-Budget Price, Middle.	Price at May 12.	Price at May 21.	Price to Yield 4½%
Consols 2½%	59½	57½	59½	60½	61½
Consols 4%	94½	90½	93½	95½	98½
Funding 4% (1960-90) ..	96½	93½	95½	96½	98½
Conversion 3½%	83½	80½	82½	83½	86½
Local Loans 3%	69½	66½	68½	69½	73½
5% War Loan (1929-47) ..	105½	104½	102½	102½	...

ex. div.

Opinion is sharply divided on the prospects of an early conversion operation. On the one hand, the unsatisfactory state of the national finances is emphasised—in

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 1111.)

particular, the failure of the Government to reduce the national expenditure or to deal adequately with the "dole" problem. On the other hand, it is pointed out that the lack of confidence in other trustee securities—Australian, New Zealand, Indian and Home Railway—is artificially enlarging the demand for British Government stocks. What form the Conversion scheme is likely to take is being widely canvassed. On the whole, opinion inclines to the view that the offer to 5 per cent. War Loan holders will be in two or three classes of issue—a short-dated and a medium or long-dated stock—to meet the differing needs of the banks and finance houses on the one hand, and the permanent investor on the other, apart from an issue abroad, not subject to tax, to meet the case of the foreign holder. There are several considerations which the Treasury would do well to bear in mind. First, it is unwise to commit the country to pay 4 per cent. on a large block of debt for a long period. In twenty years' time or less British Government credit may be on a 3 1/2 per cent. or a 3 per cent. basis. Further, it is desirable that the mass of £2,095 millions of 5 per cent. War Loan should be split up into smaller and more manageable blocks. If an understanding were arrived at between the Treasury and the banks regarding the remission, in whole or in part, of the tax payable on capital profits through the redemption of 5 per cent. War Loan at par, the task of conversion would be facilitated. With the goodwill of the City there is no doubt that the conversion of 5 per cent. War Loan, in a period of abnormally cheap money, with Bank rate at a level which has not been seen since 1909, is an operation which should not be affected by the political complexion of any Government which may happen to be in power.

Marks and Spencer's Progress.—Marks and Spencer, familiarly known in pre-war days as the "Penny Bazaar Company," and later as the "English Woolworth," has had a remarkable earnings' record since its registration under its present auspices as a public company in 1926. In the last four years (to March 31st) the net profits, before income tax, have been:—1928, £167,243; 1929, £235,116; 1930, £335,175; 1931, £476,073. Though the chairman, Mr Simon Marks, is too good a business man to be unaware that a good company meeting has a high general advertising value, his speech on Tuesday gave shareholders an insight into the methods on which the company's expansion has been based. Its selling prices extend from 3d. to 5s.—a range sufficiently elastic to bring in not only the lower-priced "domestic materials," but a considerable selection of textiles, for example, which fall outside the scope of stores with a lower price limit. The company buys direct from the manufacturers (90 per cent. of its goods are British made) in large lines to its own specification. Presumably, the economies of large-scale production, on which the chairman and vice-chairman laid such stress in their speeches, are shared between the manufacturers and Marks and Spencer, and the latter, selling to the public on a strictly cash basis, can both avoid bad debts and obtain large discounts by making prompt cash payments to its own suppliers. Its

stock-in-trade is relatively small. At March 31st last it was valued at only £417,783—a figure only £81,620 more than that for furniture and fixtures, and less than 15 per cent. of the valuation of the company's freehold and leasehold properties. As the company has about 140 shops actually doing business (to be increased by this year's building programme to 118 large stores and 32 smaller units), the average amount of stock at each branch is no more than £3,000. Turnover, clearly, is exceptionally rapid, and the decline in prices, from the worst effects of which the company is thus protected, tends to bring an increasing variety of articles within the five-shilling range. Last June the company issued £1,000,000 6 per cent. debenture stock and £1,000,000 7 per cent. preference shares. Only part of this new capital has so far been employed, but the £550,883 of cash still available will shortly be absorbed by the building programme now in hand, and a further capital issue is envisaged for next year. The company's ordinary shares, at 4 1/2, yield £3 14s. per cent. This is one of the lowest in the whole gamut of shares in the Stock Exchange lists, but investors are doubtless influenced by the facts that the company last year earned 55 per cent., against the 30 per cent. paid on the ordinary and "A" ordinary, that the equity in the results of further developments in valuable, and that shareholders have received regular capital bonuses of 10 per cent. in "A" ordinary shares every year from 1929 onwards.

Newspaper Profits.—Although Sir George Sutton, the managing director of Associated Newspapers, Limited (which owns the "Rothermere group" of national journals), would appear to have been aware of the probability that advertisers as well as shareholders would read his speech at the annual meeting, on May 15th, the accounts gave a certain scope for pride of achievement. A decline of 15 per cent. in net profits was a not unsatisfactory result, having regard to the year's difficulties. The 40 per cent. deferred dividend, which has been paid regularly since 1924, was earned, with something to spare:—

	Years ended March 31st.

* Special publicity reserve. † Reserve against investments.

Sir George disclosed that the company's properties, machinery and plant, shown in the balance sheet at £1,590,000, had been valued by a well-known professional firm at £2,030,000. He did not discuss the valuation of the company's shareholdings in subsidiaries (which appear in the balance sheet at an unchanged figure of £1,569,725,) but described as a purely precautionary measure the writing down by £200,000, out of last year's profits, the portfolio of other investments now valued at £1,068,499. These include considerable holdings of British Government, American and Canadian securities, and it would seem that any depreciation which may have occurred must be related to the latter rather than the British holdings. As the crucial factor in "national" newspaper earnings, to-day, is advertising revenue, shareholders were reassured to learn that the fall in receipts from this source last year was no more than 10 per cent., due entirely to a decline in the volume of advertising matter, the number of advertisers using the group's newspapers being fully maintained. Despite the cessation of the provincial evening newspaper "war" between the "Rothermere" and "Berry" groups, the accounts of the latter, as set out in the annual report of Allied News-

papers, Limited, make a less favourable showing for 1930 than for 1929:—

	(Calendar Years).

* After transferring £150,000 to income tax reserve.

After transferring £150,000 to income tax reserve and paying debenture interest, the net profits show a reduction of 19 per cent. The company paid an interim of 2 1/2 per cent. last November, but, although the year's profits would have covered a final distribution of this magnitude, the directors, "having regard to the continued depression in trade," have decided to retain available profits in the business. No dividend from Allied Northern Newspapers was included in the year's accounts, though the latter company's receipts were more than sufficient to meet its expenses and debenture interest. Finally, the report of Inveresk Paper Company, Limited (of the quondam "Harrison group"), issued this week, suggests that the new management continues to find contemporary conditions unfavourable to the preparation of a reorganisation scheme, and has been lightening the company's load of indebtedness by realising some of its assets. Its shares in Koholyt A.G. have been sold for £1,000,000, and its holding in Horton Kirby Paper Mills for £30,339, against book values of £1,510,313 and £28,998 respectively. Since the close of the financial year the holding in Annandale and Son has been disposed of for £68,865. Further treatment of the £5,226,821 book item of investments in and loans to subsidiaries must await the eventual reorganisation scheme. Last year's income totalled £71,372 (against £337,953 in 1929), which was reduced to £118 by expenses, taxation and interest.

J. and P. Coats.—In a preliminary profit statement, issued last week, the directors report that operations during the year 1930 resulted in a net profit of £1,809,851, compared with a total for 1929 of £3,179,575. Dividends on the ordinary shares aggregating 15 per cent. have been paid in four quarterly instalments, but the usual bonus of 2 1/2 per cent. is not forthcoming. The directors, however, have declared the customary interim dividend of 3 1/2 per cent. for the quarter ended March 31, 1931.

	Year to December 31,

* Six months to December 31st.

† Year to December 31st.

The ordinary shares were a heavy market for some weeks before the announcement, a considerable decline in profits having been foreseen as a result of depressed textile conditions at home and abroad, and the necessity of writing down inventories to reduced levels. The decision to pay an unchanged interim dividend, however, was regarded as a reassuring directorial "gesture." From a high level of 67s. 6d. in 1930, the £1 ordinary shares have fallen to 45s., and yield about £6 16s. per cent., allowing for the interim dividend.

Lancashire Electric Light and Power.—In view of conditions in Lancashire, this company's results for the twelve months ended March 31st last are not unsatisfactory. Practically all its assets are represented by investments in the Lancashire Electric Power Co. and the Ormskirk Electric Supply Co. During 1930 the Lancashire Electric Power Co. generated 253,459,310 units, a decline of only 7,083,814 units, while the horse power connected was 7,250 h.p. greater at 141,670 h.p. The trading profit dropped by £11,481 to £245,653. The holding company's gross profit was £5,711 down at £216,945 and its net profit £3,422 lower at £169,687:—

	(Year ended March 31).		
	1929.	1930.	1931.
Net profit.....	150,885	173,109	169,687
Preference dividend.....	90,686	85,811	84,936
No. of times covered.....	1.66	2.02	1.99
Ordinary dividend:—			
Amount.....	60,000	86,800	80,600
Earned %.....	7.52%	7.04%	6.83%
Paid %.....	7 1/2%	7%	6 1/2%
Increase in carry-forward.....	199	498	4,151

As was foreshadowed in the *Economist* leading article on the provincial electric supply companies last year, the dividend has been cut from 7 per cent. to 6 1/2 per cent. At 21s. 3d. the shares yield £6 10s. 4d. per cent.

SUMMER SHELL

The seasonal blending of Shell gives you a petrol more perfectly suited to Summer temperatures than is possible with any fuel blended on a compromise for all-the-year-round use.

NOW ON SALE AT EVERY SHELL PUMP

Rubber Production and Costs.—Though the price of rubber has recovered to 3½d., the industry remains by no means satisfied as to the general outlook. Part of this week's rise was due to a report that a scheme for output restriction had been submitted by Dutch interests to their Colonial Office, but opinion on this side was adequately expressed by Mr John G. Hay, the chairman of the Rubber Growers' Association, at last week's general meeting. Mr Hay declared that restriction could be successful only if it were sufficiently widely based to establish "a virtual monopoly of supplies"—a Utopian proviso in view of the large proportion of the industry in native hands. The failure of successive price reductions to produce a significant decline in the output of rubber, which has caused disappointment to so many investors, is adequately explained in the current issue of *The Rubber and Tea Quarterly*.* This journal declares that the majority of estates find the idea of dismissing staffs, which have taken many years to train, so repellent that they are unwilling to consider its adoption until the depletion of their liquid resources has rendered it imperative. Some producers, including a number of the weakest, have sold forward with a minimum price clause sufficiently high to enable them to make ends meet. While the scope for reductions in production costs has proved, so far, greater than was expected, the drastic measures taken in some cases are tending to exhaust bark reserves, and thus represent a virtual "living on capital" of a particularly undesirable kind. The speech of Sir Francis Voules at this week's meeting of the Gordon (Malaya) Rubber Estates, dotted the i's and crossed the t's of this argument. This company last year earned a small profit after depreciation, its estates being exceptionally low-cost producers. In reply to the suggestion that they should be placed on a "care and maintenance" basis, the chairman pointed out that, even if the company produced not a single pound of rubber, certain fixed charges could not be avoided. These included quit rent, weeding, maintenance of hospital, salaries, wages, maintenance of buildings, coolie lines and machinery, and the upkeep of the estate. Over the whole of the company's properties these costs would total £7,600 per annum, whereas, with rubber at 3d. a pound, the total loss from working the estate would not exceed £5,000. Actually, costs of production and marketing (exclusive of overhead and upkeep charges), were 2.30d. a pound, so that, at the then current market price of 3½d., the company was realising an amount towards the reduction of its overheads. An average price of 3.84d., the chairman declared, would cover the whole of the company's charges, and enable it to work without loss. Many of the less favourably situated estates certainly could not come within these figures, but it is clear that, while market prices remain at or over 3d., many estates will consider production a lesser evil than suspension—so long as their cash resources hold out.

I.G. Farbenindustrie.—Our Berlin correspondent writes:—"The results of Germany's largest chemical undertaking do not appear to have been affected to any immoderate extent by the world crisis. In contrast to Kuhlmann, the chief French chemical firm, which has had to reduce its dividend from 16 to 8 per cent., and the English chemical trust, which has cut the dividend on its ordinary shares by 2 per cent., I.G. Farbenindustrie is maintaining its 12 per cent. dividend. Gross profits were, indeed, reduced from Rm. 256½ to 217½, or more than 15 per cent., but as the burden of taxation was less and the depreciation of plant, which had been especially high in the preceding year, was Rm. 13 millions less, net profit amounted to Rm. 89.2 millions, against Rm. 104.6 millions the year before. If dividends had again had to be paid on Rm. 800 million ordinary shares, this net profit would certainly not have permitted the distribution of a 12 per cent. dividend, but as the company bought in a large quantity of its own shares during the year, there remained only Rm. 713.7 entitled to dividend. The use of its own resources for this purpose has only very slightly diminished the liquid assets of the company, as the depression has

brought about a reduction in stocks and in outstanding debts. The American offspring of the I.G., the American I.G. Chemical Corporation, shows particularly satisfactory results, with a net profit, after payment of interest, amounting to \$2.32 millions, against \$2.09 millions in the preceding year. The parent company receives no dividend on its holding in the American company, whose net profit is used to build up a surplus fund, thus augmenting the reserves of the concern as a whole. The I.G. report shows that the colour trade is fairly satisfactory, and business in medicines may even be described as very good, in spite of the diminished purchasing power of some importing countries. Nitrates alone show a serious decline, and both turnover and profits will again be substantially lower in the current year, but statistics are unfortunately not given. Owing to the slump in petroleum prices, the production of oil from coal has proved unprofitable, and the new hydrogenation plant is being used for refining crude oil. The company derived a substantial income last year from the sale of hydrogenation licences to foreign companies.

"Finlay" Tea Companies.—The report of James Finlay and Company, which is involved, both directly and indirectly, in the fortunes of the tea industry, shows a decline in profits last year. Income from fixed security investments rose by £4,304 to £113,112, but receipts from ordinary shares held by the company were £134,590 lower at £130,556, and a 1929 trading profit of £83,172 has been replaced by a trading loss of £4,662. Net profit was £196,194 lower at £233,806, and the dividend has been reduced from 25 per cent. to 15 per cent. The following table shows the comparative results of four tea companies closely associated with James Finlay:—

Company.	Year (Nov. 30)	Net Profit.	Pref. Div.	Ordinary.		Inc. or Dec. in Carry Forw'd.
				Earned.	Paid.	
Amalgamated Tea Estates	1928	£ 179,947	£ 21,000	16.61	17½	— 8,475
	1929	94,661	21,000	7.69	7½	+ 1,909
	1930	69,924	21,000	5.11	5	+ 1,089
Anglo-American Direct Tea Trading Co.	1928	126,065	16,542	17.26	17½	— 1,476
	1929	66,265	16,542	7.84	10	— 13,711
	1930	95,072	16,542	11.86	10	+ 12,293
Consolidated Tea and Lands	1928	332,683	78,000	21.22	22½	— 15,317
	1929	133,244	78,000	4.80	5	— 4,756
	1930	47,634	78,000	...	2½	— 60,366
Kanan Devan Hill Produce Co.	1928	304,053	33,000	36.14	35	+ 8,553
	1929	178,677	33,000	19.42	20	— 4,323
	1930	150,221	33,000	15.62	17½	— 14,029

None of these companies has made any allocation to its reserves in the last three years. The accounts of James Finlay show that during the year "goods consigned and on hand" declined by £162,468 to £433,353. The preference capital of £500,000 is secured by tangible assets of £9 Os. 4d. per £1 share fully paid. At their present price of 2½ per share the £1 ordinary shares yield about £7 1s. per cent. after allowing for final dividend.

More Oil Reports.—The preliminary figures of the Burmah Oil Company show a decline in earnings last year of 21.9 per cent. as compared with those of 1930. The net trading profit, after allowing £580,914 (as against £528,456) for depreciation, and providing for income tax and all charges, amounted to £2,736,013, as compared with £3,502,856 in 1930. The same allocations of £20,000 to insurance reserve, £500,000 to general reserve, and £100,000 to field expenditure equalisation reserve were made as in 1930, and there is an additional allocation of £350,000 to taxation reserve, leaving £612,517 to be carried forward, as compared with £399,775 in the previous year. The shares have fallen since the announcement of these results to 2½, which allows a yield of 11.2 per cent. on the present reduced rate of distribution of 22½ per cent. The Venezuelan Oil Concessions is able to report an increase of 16.13 per cent. in net profits, in spite of a 9.13 per cent. decline in production and a lower level of sales prices. This remarkable result was achieved by the reductions in operating expenditure, drilling expenses

falling from £2,240,129 to £1,889,708. The following table shows the results for the past three years:—

	1928.	1929.	1930.
Production (tons).....	5,084,580	6,469,206	5,878,186
Net profit	£1,206,430	£1,085,666	£1,260,757
Dividend { Amount	£1,114,877	£1,079,759	£1,259,541
{ Rate	11½%	20%	17½%
Carry forward	£190,005	£195,912	£178,097*

* Less £19,031 new issue expenses written off.

As we pointed out in our last issue, the dividend of 17½ per cent. is payable on an increased capital.

Central Mining.—In one respect, writes our mining correspondent, the report for 1930 makes a better showing than might have been anticipated. The profit falls only £79,000 short of the total for the preceding period. Unfortunately, the Central Mining, in its search for "fresh fields and pastures new," embarked heavily in a company formed to construct a railway in Spain. The Government of that country has signally failed in its undertaking to pay for sections of the line as completed, and the reimbursement made in January last, a year overdue, "took the form of Government bonds to which conditions were arbitrarily attached suspending their negotiation until after the end of the present year." As a result the company in question—the Anglo-Spanish Construction—will be unable to carry out the debenture redemption due on September 30th. It is mainly in this connection that the directors of the Central Mining have considered it necessary to transfer from the reserve fund £1,140,000 to a depreciation reserve. One would imagine that this provision should be found adequate. Then £310,000 further is transferred from reserve towards meeting the depreciation in the company's other interests. By these two transactions the reserve is reduced to £450,000. It is intimated that, apart from the shares and debentures in the Anglo-Spanish Construction Company, the market value of all quoted shares and investments at the date of the balance sheet considerably exceeded the book valuation. Our usual table is appended:—

	1928.	1929.	1930.
Shares, investments, &c.	8,250,370	7,810,730	6,652,980
Debtors, less reserves	236,990	1,502,290	1,637,150
Creditors and dividend	7,021,810	6,039,860	5,354,000

Written off	...	...	763,550
Brought forward	71,350	71,730	71,890
Carried forward†	71,730	71,890	27,270

* Taken from reserve. † After deduction of directors' percentage.

For each of the seven years ended in 1929 the company paid 12½ per cent., tax free. No interim distribution was made on account of the past year, nor can there be any final, the whole of the earnings being swallowed up by depreciation. The position of the company's South African interests generally remains satisfactory, but the oil undertakings have suffered from over-production. The latter remark would also apply to the Bolivian tin-silver properties, in which an interest was acquired in 1929. General conditions have adversely affected the earnings of Messrs. Bernard Scholle (the issuing house), but a 5 per cent. dividend has been paid by the Amalgamated Metal Corporation—a fusion of the British Metal Corporation and Messrs. Henry Gardner and Company. From their best this year of about 12, the £8 shares of the Central Mining and Investment Corporation have lately fallen to 7. This quotation is calculated to be more than covered by the value of the quoted investments.

Anglo-American Corporation.—It may be recalled that in the autumn of 1929 the capital of this undertaking was divided into equal portions of 6 per cent. preferred stock

and 10s. ordinary shares. In respect of 1929, 22½ per cent. was paid upon the latter. The announcement made in March last that no distribution upon the ordinary capital would be practicable for 1930 will have prepared the shareholders for a distinct setback in the profits. The accounts now issued show a surplus of £340,400, against £721,000 previously. Interest on the preferred stock required £120,000, and towards meeting the depreciation on holdings £1,065,000 is transferred from various reserves. The directors have not thought it necessary to write down all the scrip to market prices as at December 31st, holding the view that the low level then current was abnormal. Meantime, improvement has occurred in several of the company's Rand gold interests, but its diamond and Rhodesian holdings have suffered further heavy depreciation, and it is difficult to see ground for early substantial recovery. Some striking changes are indicated in the balance sheet. Shares and interests have fallen from £7,313,850 to £6,233,340, debtors from £3,232,150 to £769,800, loans from £2,212,560 to £1,568,680, Government and municipal securities from £1,281,900 to £271,300, and cash from £1,144,270 to £71,890. On the other hand, deposits by affiliated companies and others have shrunk from £6,052,580 to £2,167,700, and sundry creditors from £2,273,350 to £1,235,780. The liquid assets fall £802,800 short of the liabilities. Anglo-American preferred stock is now quoted around 78 and the ordinary shares at 11s.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following:—Incorporated Accountants and Auditors, Weiner Bank-Verein, Gresham Life Assurance Society, London Assurance, Royal Insurance, Imperial Continental Gas Association, Glentafte Tea Estates, Howard and Bullough, Associated Newspapers, Marks and Spencer, Shanghai Electric Construction, Forestal Land Timber and Railways, and Wiggins Teape and Company. At the annual meeting of the Society of Incorporated Accountants Mr Henry Morgan criticised the principle of "rationalisation," as recently applied, on the ground, among other things, that the amalgamation of larger numbers of companies and large combines had operated harshly as regards many members of the accountancy profession. We should point out that, though it is possible to sympathise with the smaller accountants who may be displaced by amalgamations, the benefits of rationalisation to the national economy in other directions are very great, and accountants, like other sections of the community, should be able to display sufficient elasticity to fit themselves as a body into the new conditions. Presiding at the annual meeting of Imperial Continental Gas, Sir Henry Birchenough said that, despite many attempts to stabilise prices, the inexorable law of the survival of the fittest was now asserting itself in the coking industry, and the fall in the price of metallurgical coke had already caused many coke-ovens to close down.

"The general economic depression resting on the world will pass, and, in fact, the extreme fall in commodity prices and the gradual abandonment of schemes to artificially counteract over-production are in themselves signs of a gradual return to more normal conditions. Meanwhile, the very existence of our difficulties should be an opportunity for constructive leadership. I still think that the far-reaching experience of this country in banking and finance will be an important factor in mobilising the credit resources of the world and making them available for a general revival of international trade." (Hear, hear.)

[Other Stock Exchange information, including the latest dividend announcements, summary of balance sheets, reports and notices, profit and loss figures, and oil outputs, will be found on page 1135 under the heading "Company News."]

The marine department had transferred to profit and loss account a profit of £46,464 for the year. Premium income amounted to

THE OUTLOOK.

As to the outlook for this year, the Chairman said he found it difficult to say more than that, so far as the year had gone, there were indications of a further shrinkage of premiums, while the company's position as regards losses was somewhat more favourable than at the corresponding date last year. Never had they experienced such a world-wide depression, affecting not only the younger producing countries, but also, and just as acutely, the older and more settled communities. Reference to precedents could scarcely help, for the circumstances were really unprecedented.

The Chairman continued:—"The complex but nevertheless smoothly working structure of international commerce was dealt a terrific blow by the war—a fact which, I believe, we are only now beginning to realise in its true perspective, and the difficulties against which practically all the countries of the world are at present struggling are its direct and inevitable aftermath.

"Formerly commerce leaped over political frontiers to the advantage of all. Since the war political and economic frontiers have multiplied in number, and commerce has the greatest difficulty in surmounting them. The attempts of nations to live by themselves and for themselves and to place restrictions on everything not produced within their own boundaries intensifies the difficulties.

"The idea that the war was the threshold to an era of unprecedented prosperity and that self-determination and legislation would necessarily produce prosperous nations with a higher standard of living has proved fallacious. While I believe that the recovery for which we all look is inevitable, I do not think it will come until the hard school of experience has once more demonstrated that, to proceed on wrong principles, is to move towards disaster—a remark which is equally true of an individual or a nation. We in this country, in common with the rest of the world, are faced with the problem of readjusting our industrial and commercial structure to conditions which, during the past few years, have suffered a fundamental change through the fall in commodity prices, and the restriction of consuming markets, the recovery from which must necessarily be slow. It is my earnest hope that the realisation of the necessity for this readjustment will not be delayed, as only by such measures can we be restored to our former prosperity. It is assuredly impossible for any country to prosper where a policy of shorten the day and lengthen the pay is adopted. These conditions must inevitably affect our business, but I can only say that our organisation, both as regards the officials, the staff and the agents, not only in this country and the United States and Canada, but in Australia and elsewhere throughout the world, is well fitted to protect our interests through the troublous times that may still lie ahead, and to take full advantage of the opportunities which may be afforded when trade revival materialises." (Applause.)

The report and accounts were adopted.

The retiring directors, Mr A. Kentish Barnes, Mr Frederic A. Bates, Sir Edmund F. Rushby, Mr P. R. England, Mr Geo. B. Heyworth and Mr Arthur E. Pattinson, were re-elected.

EXTRAORDINARY GENERAL MEETING.

At the extraordinary general meeting held immediately after the annual general meeting a resolution, proposed by Mr A. Allan Paton, C.B., and seconded by Mr A. Kentish Barnes, was passed adopting the company's new articles of association.

Established 1889.

HOWARD AND BULLOUGH, LIMITED.

THIRTY-SEVENTH ANNUAL MEETING.

The thirty-seventh annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held, on the 14th instant, at 12 o'clock noon, at Globe Works, Accrington.

The chairman of the company, Sir George Bullough, Bart., presided.

The report of the directors and auditors and balance sheet were taken as read.

In moving the adoption of the reports and accounts, the Chairman said:—

Since I last had the pleasure of addressing you, we have experienced even worse conditions in the world's cotton trade than those which prevailed during the year 1929-30. The effect of these conditions is reflected throughout the whole of the textile machinery making trade.

During the year under review many cotton mills have been compelled to go into liquidation, with the result that much fairly new machinery has been thrown out of commission, and in many cases this machinery has changed hands at practically scrap prices. The general situation has been further rendered more serious owing to increasing tariffs and importation restrictions which are being introduced by several countries.

The disturbed conditions in India have also seriously reacted upon us, but with wiser counsels prevailing, and a settlement of the difficult problems in a satisfactory manner, bringing a return to more normal trading conditions, we hope to secure a good share of new business.

Owing to such a combination of exceptional circumstances, competition for the small amount of new machinery offering has been keener than ever, and the level of prices obtainable, coupled with the necessary curtailment of production, has inevitably placed us in a worse position than we have ever experienced.

THE OUTLOOK.

The outlook, under prevailing conditions, does not seem favourable, unless some restoration of earning capabilities becomes apparent in the cotton trade generally. Many of our customers have deferred the purchase of new machinery under that hope, and although new machinery embodying many improved features would be an advantage, they are compelled to continue to work their old machinery until more propitious times.

Once again the hope I expressed last year in regard to the Russian business has been deferred, but we are keeping continuously in close touch, with a view to securing business when the time arrives.

It will be within your recollection that in my last year's remarks, I alluded to negotiations which were then in progress on the question of amalgamation or regulation of selling prices. Those negotiations, however, did not materialise, but quite recently further serious conversations have been taking place, and at this moment negotiations are in progress with a view to finding some means of conserving our industry. I am not in a position at this meeting to give you details of the proposals which are before us, but you may rest assured that should any scheme result from these deliberations which your directors consider to be advantageous to you, they will not hesitate to place it before you for your consideration. I am hopeful that some definite conclusions will be arrived at on this matter in the near future. My colleagues and myself will look with favour upon any scheme which they consider would be of benefit to our shareholders.

You will notice from the balance sheet that the money owing to us is considerably less than last year; you will also perceive that in consequence our investments are increased.

DIVIDEND POLICY.

The directors do not consider it advisable to pay any dividend this year on the ordinary shares, as they deem it more prudent to reserve the firm's resources in order to be able to cope with any new lines of business that we may be able to undertake. Whilst the demand for textile machinery is so meagre, your directors are continually seeking to develop other classes of work for which our equipment and reorganisation are suitable. It must be remembered, of course, that our works are laid out for dealing with large orders on mass production lines.

I wish to take this opportunity of referring to the retirement of one of our colleagues, who has felt it incumbent upon him, for reasons of health, not to seek re-election to your board of directors. I refer, of course, to Mr C. A. Peltzer, whose services have been of very great value to the firm for over forty years, and who also for many years occupied the position of vice-chairman. I am sure we all hope that he will live many years to enjoy his well-earned leisure.

During the past year we have been working in the most economical manner, and expenditure has been considerably reduced, consistent with the maintenance of organisation and efficient

working. At the same time, we have constantly in view improvements in our various machines, and many valuable and important advancements have been achieved.

As indicated in the report of the directors, it is not proposed to fill the vacancy on the board for the present, owing to the continued depression. A further economy will thus be effected in directors' fees, etc. I beg to move that the reports and accounts as presented in the balance sheet be allowed and passed.

Mr S. D. Fielding, Accrington, seconded, and the resolution was carried unanimously.

Mr J. H. Dickinson, New Longton, proposed the re-election of Sir George Bullough, Bart., as director of the company, which was seconded by Mr J. S. Wilkinson, Clayton-le-Moors, and unanimously approved.

The meeting terminated with votes of thanks to the chairman, co-directors and staff.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

CONTINUED PROSPERITY.

ATTRACTIVE COMPREHENSIVE POLICY.

The eighty-second ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on Tuesday, May 19, at the chief offices of the society, 188-190, Fleet Street, London, E.C.

Sir Reginald MacLeod (of MacLeod), K.C.B. (the chairman), presided.

The General Manager (Mr Alex. Lawson) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—The report and accounts are before you, and I assume that, as usual, you will be pleased to take them as read. (Agreed.)

In submitting to you our eighty-second annual report I am happy to be in the position of congratulating you once again on the continued prosperity of the society. The year under review has, however, been one of anxiety to your directors. There has been a severe—I may even say catastrophic—trade depression in evidence in all parts of the world, and in India we have had to face difficulties similar to those experienced in other branches of commerce. Inevitably the society's new business in that country has, for the time, suffered materially, but death claims remain on the same moderate level as heretofore.

Notwithstanding these adverse circumstances, the new sums assured during the year amounted to £2,329,460, with a new premium income of £113,939, figures which are only fractionally below those of the previous year. The number of policies issued was 5,297, while 337 proposals were declined.

We received during the year the sum of £15,969 as purchase money for annuities, including annual premiums under contingent and deferred contracts, representing an ultimate annual payment by the society of £1,714. On the other hand, owing to the death of sixty-four annuitants, the society has been relieved from payments to the extent of £3,026 per annum.

The total premiums received amounted to £909,288, inclusive of single premiums of £2,861, being an increase of £22,618. Interest, less tax, amounted to £394,435, as against £375,487 in 1929. The income of the society from all sources amounted to £1,314,301, showing a highly satisfactory increase of £42,105. The death claims, together with bonus additions, absorbed a sum of £211,205, as against £247,500 in the previous year, the society experiencing the very satisfactory rate of mortality of 67 per cent. of the amount expected according to the table used in the valuation. This low rate is, I think I may claim, ample evidence, if such is needed, of the extreme care exercised by your directors and the management and their medical advisers in the selection of the risks which have been and are being placed on the books. The claims under matured endowments were £281,445.

The total assets of the society increased during the twelve months by £242,425, and now amount to £8,394,759. In the year 1930 the society paid to policyholders who elected to take their bonuses in cash a sum exceeding £110,000 in respect of the quinquennial distribution declared at the last annual general meeting. There would thus have been a further augmentation of the society's funds by this amount but for this cash distribution.

I am pleased to be able to say that the rate of interest earned upon the funds was £5 0s. 11d. per cent., after deduction of income tax, which shows a satisfactory increase of 1s. 2d. per cent. over the rate obtained in the previous year.

This matter of investment is, I need scarcely say, one that is continuously engaging the attention of your board, and, while every advantage is taken of market opportunity to enhance the rate of interest earned on the large funds of the society, the guiding principle of our investment policy is "Safety First."

The expense ratio was 24.62 per cent. upon the premiums, being very slightly in excess of the rate for the previous year. Every effort is made to control the expenses within the narrowest possible limits, but as the society's operations extend to many foreign countries, where the cost of production and administration exceeds that of companies transacting home business only, it follows that the expense ratio must show a corresponding cost; on the other hand, the rates of premium charged in those countries make due allowance for the special expenses to which they are subject. The Chancellor of the Exchequer has again failed—as did his predecessors—to meet the demand so vehemently urged, that life policies specifically taken out to meet claims on death for estate and succession duties should not be included in the deceased person's estate. So long as the amount provided to meet death duties is added to the net assets and the rate of duty increased with the total of such assets, every discouragement is given to a specific provision during life to meet the share demanded by the State at death. The change desired would be as much in the interests of the Exchequer, as securing ready and immediate payment of duties, as of the persons from whom such duties are exigible. There is one point which has been mentioned elsewhere on more than one occasion recently, but which I particularly desire to emphasise, as I consider that it cannot be too often or too forcibly brought home to the investing public—namely, the fact that a life insurance policy is not subject to the ordinary influences which may tend to depreciate the value of Stock Exchange investments.

In these times of falling commodity prices, trade depression and political unrest life insurance is, therefore, the safest and most protective form of investment. In this connection I should like to refer specially to our own comprehensive family policy. There has recently been an increased demand for a policy covering the ordinary assurance benefits, but in addition providing a larger income in case of death than could be obtained by the mere investment of the policy moneys in ordinary market securities. Our society was, I think, the first to make a feature of this form of policy, and its introduction has met with great success in many countries in which we operate. The policy is in the nature of an endowment assurance, the full sum being payable in case of survival to the end of the term selected. Should, however, the assured die during the term, the capital will be retained by the society and interest paid thereon at the rate of 10 per cent. per annum until the expiration of the original term, when the full sum assured becomes payable. In addition to the larger yield thereby obtained, the widow or other beneficiary avoids entirely the risk of loss which is incidental to the investment of money. I wish, in conclusion, to place on emphatic record our appreciation of the work of the officers and staff of the society at the head office and at our home and foreign branches. Special efforts have been made to draw together the staffs of this society and of the Gresham Fire and Accident Society so that the welfare and progress of both should be the common interest of all serving under the Gresham flag. (Cheers.) I beg to move:—"That the directors' and auditors' reports be approved and adopted."

Mr Courtenay C. S. Fooks (the deputy-chairman) seconded the resolution, which was carried unanimously.

A NEW DIRECTOR.

The Chairman, in moving that Mr Alexander Lawson be appointed a director of the society, said:—"I am very happy in that it falls to me to move the election of Mr Alexander Lawson to a seat on the board. He entered the service of the society as an officer in 1891, having already had many years' training in assurance work. Since 1913 he has held the arduous post of principal officer, and it is during this period of his control that the society has steadily forged ahead to its existing assured and prosperous position. Since 1928 he has acted also as a general manager of our subsidiary company, the Gresham Fire and Accident Insurance Society, and was elected to the board of that society last year. I move this resolution not only in recognition of the excellent work Mr Lawson has performed in the past, but also in the conviction that, occupying a seat on the board of both societies, he will be in a position to render still more service in the future. (Cheers.)"

Mr Courtenay C. S. Fooks, in seconding the resolution, said that the present was a unique occasion in the history of the society, when the directors commended to the shareholders' favourable notice the election of one of the officers to a seat upon the board. Mr Lawson had been with them since 1891. He had never spared himself for one moment in his efforts to forward the interests of their great, world-wide institution. He had travelled in its interests in every country in which they had done business, and the success of their foreign business was mainly due to his prolonged visits at great personal trouble and anxiety. The prosperity of the foreign branches was due to the energy and foresight which he had brought to bear upon them.

The resolution was carried unanimously with acclamation, and Mr Lawson briefly responded.

WIENER BANK-VEREIN.

REVIEW OF THE PAST YEAR BY MR HUGO MARCUS.

The sixty-first ordinary general meeting of the Wiener Bank-Verein was held in Vienna on May 7th, Mr Hugo Marcus, the chairman of the company, presiding.

The abridged report submitted to the shareholders proceeds as follows:—

THE PAST YEAR.

A world-wide economic crisis of unprecedented severity characterised the year 1930. Ever since its creation the Republic of Austria suffered acutely from the consequences of the prohibitive international tariff policy that was inaugurated after the war. It is but natural that Austria was therefore the first country to suggest at international conferences the practical proposal of mitigating by means of regional agreements the effects of the high Customs barriers that prove so harmful to the international exchange of goods. In an endeavour to improve this country's economic activity, the Government ultimately framed a preliminary Austro-German agreement aiming at a Customs Union between the two German-speaking countries. The news of the negotiations initiated by the Vienna and Berlin Cabinets was generally favourably received by the Austrian economic community and, in particular, by the farmers; certain industries will need a transitory tariff protection. Considering the many difficulties which have still to be surmounted, it is to be hoped that a successful conclusion of the contemplated agreement will improve the prospects of the Austrian economy.

In harmony with the international money markets, loan rates were lowered in Austria at an accelerated pace, this finding expression in the gradual reduction of the official Bank rate from 7½ per cent. to 5 per cent. Whereas that measure had its full effect on the cost of credits granted by bankers, the interest rate allowed on deposits was lowered only by approximately one-half of that reduction. This implies a sacrifice made by the banks in favour of the Austrian economy.

The cheapening money rates, as well as the lack of opportunities for profitable investments in productive operations, gave a certain impetus to the bond market; the banks derived some benefit from that circumstance, and the outlook in that direction is likewise fairly encouraging. We would recall in that connection the successful issue of the Austrian portion of the 1930 International Federal Investment Loan, the conclusion of which did, however, not relieve the depression under which the Austrian commerce and industries are labouring owing to the unfavourable economic conditions. After having for a long time shown a surprising stability, the fiscal revenue has begun to recede, so that the contemplated de-rating could not materialise. Single indirect taxes had even to be increased in order to raise the funds required for the emergency relief for the sorely stricken agriculture; this led to a further growth of the exceedingly heavy taxation burden. A development of the production was therefore further handicapped, all the more since no lightening of the taxation burden may be looked for in the near future.

Loans of a number of public corporations were launched also during the current year, *inter alia*, the 7 per cent. Housing Loan of 150 million schillings, in the successful issue of which our institution had a prominent share.

THE BANK'S ACTIVITIES.

The aggregate sum of the balance sheet remains only slightly below the figures of the 1929 accounts, notwithstanding the fact that the financial requirements of the economy were substantially reduced owing to the restricted production of goods and the receding trade, in conjunction with the general falling off of prices. The amounts deposited with our institution have further increased, and we register a similar tendency this year. Debtors show a moderate decrease, while our participations in syndicates and our holdings of securities have slightly risen.

The small decline of gross profits is almost entirely ascribable to the shrinking of the profits earned on securities and syndicate participations; the other earnings remained practically unchanged. As it was possible to reduce the expenditure, the net profit reached the same amount as in 1929; the relation between the charges and earnings from the current banking business was concurrently somewhat improved, while the discrepancy between taxes totalling 3.17 million schillings and a net profit of 2.73 million schillings—exclusive of the amount brought forward from 1929—still subsists. Owing to the extraordinary increase of charges since the war, banking business in Austria has to contend with serious difficulties. We propose to continue our unerring policy of trying to improve the

relation between the charges and the earning possibilities. The bank's staff now numbers 1,441, as against 1,610 one year ago. Owing to the opening of a new sub-branch in the city of Vienna the number of branch offices has advanced from 50 to 51; we now have 35 sub-branches in Vienna and its suburbs, 10 branches in Austria, three branches and three sub-branches abroad.

We participated in 1930 in the following transactions:—Jointly with the other Vienna banks we underwrote the 50 million schillings portion of the Austrian issue of the 1930 International Federal Loan; similarly, we participated in the successful issue of the 1929 7 per cent. loan of the Province of Tyrol. We took part in the capital increases of the Oesterreichische Automobilfabriks A.G., vormal "Austro-Fiat," the Eisenbahn-Verkehrsmittel A.G., Berlin, the Kabelfabrik Aktiengesellschaft, Cracow, the Crédit Foncier Franco-Bulgare, Paris, and the Société Industrielle d'Exploitation de Moyens de Transports, Paris. Jointly with the Böhmische Union-Bank, we participated in the creation of the Union-Portlandzement Fabrik, Stupava, while our Hungarian branch co-operated with the Pester Ungarische Commercial Bank and others in the creation of the Ungarische Ammoniakfabriks A.G. that was carried out by the Salegó-Tarjánér Steinkohlen Bergbau A.G. We moreover joined in the underwriter syndicates for the 4½ per cent. and 4 per cent. loans of the Swiss Federation, and for Treasury bonds of the City of Frankfurt. After enumerating participations in other syndicates, the Chairman mentioned that the bank's permanent participations in affiliated banks had undergone no changes. He thereupon proceeded to survey the numerous companies in which the Wiener Bank-Verein holds a controlling interest; while a number of these are, owing to the economic depression, slightly reducing their dividends, some even deciding to pass the dividend, single companies are able to maintain the dividend, and a few even to slightly increase it, while remaining true to their traditional conservative policy. The Wiener Bank-Verein, which is already interested in the existing large water-power plants of Austria, is devoting its careful attention to the further development of that great national asset. Amongst the hydro-electric schemes in which the bank is concerned the Danube water-power Ybbs-Persenbeug project has made great progress, and it is to be hoped, in the interest of the Austrian economy, that this scheme, which would also benefit the shipping on the Danube, will materialise in the near future. The bank is likewise interested in the development of the water power of the Styrian section of the Enns, and in that of the water power of Western Tyrol. The execution of those schemes should substantially improve the economic situation of Austria.

RESULTS OF THE YEAR.

The results of the year are as follows:—

Assets.		Schillings
Cash	...	18,170,526.51
Bills	...	83,926,202.03
Debtors:		
Balances with banks	...	47,630,553.29

Depreciation on real estate	121,000.—
Net profit	2,943,559.33
Total	25,027,221.73

Distribution of Profits.

The total earnings amount to	S. 25,027,221.73
after deducting charges totalling	S. 22,083,662.40

the balance is S. 2,943,559.33

The Chairman proposed, on behalf of the board of directors, to apply S. 2,750,000.—

of the net profit to the payment of a 5 per cent. dividend (i.e., S. 1.00 for one share of S. 20.00 par value), and to carry over to 1931 S. 193,559.33

No addition is made to the ordinary reserve fund, but the Chairman recalled that the bank's visible reserves exceed 50 per cent. of the share capital.

The reports and accounts were adopted. The Chairman paid a warm tribute to the memory of the hon. chairman, Herr Carl Stoegermayer, and the members of the board of directors, Herr Kuno Mauthner-Markhof, Herr Alfred Liebieg, and Herr Dr. ing. h.c. Otto Heinsheimer, the loss of which the board has to deplore. Their valuable advice and great experience, as well as their indefatigable zeal in carrying out their responsible duties, will be sorely missed. The co-optation as a member of the board of directors of Herr Richard Fanta, Vienna, who has, for many years, been closely connected with our foreign affiliations, was sanctioned, and the directors retiring by rotation, to wit, Signor Carl Arnstein, Mr W. M. L. Fiske, and Herr Oskar Wassermann, were re-elected.

A vote of thanks to the chairman concluded the meeting.

THE LONDON ASSURANCE.

QUINQUENNIAL VALUATION RESULTS—INCREASED BONUSES.

The annual general Court of the London Assurance was held, on the 20th instant, at 1, King William Street, London.

Mr Colin Frederick Campbell (the Governor), in moving the adoption of the report and accounts, said: The life account is of special interest because another quinquennial period has been completed. The progress made last year was most satisfactory. The premium income, apart from single premiums, showed an increase of £40,682, and the fund increased by almost half a million sterling. The claims were unusually small, and the expenses were much the same as in 1929; actually there was an increase of a little over £2,000, due to expansion of business. The rate of interest earned was £5 8s. 2d. per cent., compared with £5 9s. 3d. in the previous year. During the year we issued a leaflet drawing special attention to a scheme whereby a whole of life policy is issued with an option to convert at the end of five years into an endowment assurance. This has met with some success, and we continue to secure an increasing amount of new business under our other schemes, monthly premiums, children's option policies, etc., which have been brought out in recent years.

THE QUINQUENNIAL—GOOD PROGRESS.

Coming to the past quinquennium, consistently good progress has been made throughout the period. The life assurance fund has increased by nearly 50 per cent., and now amounts to £6,401,293. New assurances were completed for a total of nearly £9,000,000 after deducting reassurances, and over 12,000 new policies were issued.

When I addressed you five years ago, after the declaration of a very satisfactory bonus, I told you that, if matters should progress in a normal way during the next five years, there was a reasonable expectation that the results then declared might be maintained. I am glad to say that on the present occasion we are able to show even better results. The participating policy holders in the old series receive a bonus equivalent to a cash distribution of 55 per cent. of the whole term premiums paid during the quinquennium, and the policy holders in the 1911 series receive a compound reversionary bonus at the rate of £2 5s. per cent. per annum, as against £2 in 1926, the bonus of 55 per cent. to the policy holders in the old series comparing with 45 per cent. 5 years ago. These results have been arrived at after assuming a rate of interest of 2½ per cent., against 3 per cent. previously. Intermediate bonuses will be payable at the full rates on all policies which become claims during the current quinquennium 1931-1935, however recently they may have been effected, this being a further small concession in favour of policy-holders.

The lower rate of interest assumed has resulted in substantially strengthening the reserves, the actual amount of the increase being £282,000, and £112,960 has been carried forward to the next valuation.

The share of the profit taken by the shareholders will be £20,000 a year during the next five years, instead of £12,500 a year during the past quinquennium.

FIRE DEPARTMENT.

The fire account, which we took on as the backbone of our business, has been a disappointment to us during the past year. We have always had a large American business, which in days gone by has produced substantial profits. The result last year was extremely bad, because, while our premium income declined by about £150,000, the loss ratio rose by about 10 per cent., so that we experienced an actual loss of £27,000. This is the more disappointing because we secured an increase in our home department income, the result being quite satisfactory. We also more than maintained our premium income in the general foreign field, and with satisfactory results. The fire fund at the end of the year amounted to £1,250,000, being 98.1 per cent. of the premium income against 94.1 per cent. a year ago. Notwithstanding a smaller fire profit than we usually expect, I am confident that our organisation is such that it will quickly respond to any general revival in trade conditions.

MARINE ACCOUNT.

The marine account is always an interesting one to us, because, as is well known, we write a big account, and therefore its success or failure plays an important part in our affairs. The progress to which I have been able to refer in each of the two preceding years continues, and it really looks as if this department is once again definitely on a profit-earning basis. We may perhaps have to face disappointments in the future, and we still have a long way to go before it can be said that premiums on all classes of risk are adequate, but at the moment it looks as if the long period of losses has been arrested. A great deal is due to the collaboration that has taken place between those interested in marine business, but still more is due to the personal efforts of our underwriter.

The premium income at £946,548 is greater by £32,000 than in 1929, and the marine insurance fund of £985,415 represents 94.6 per cent. of the premium income, which compares with a ratio of 91.8 per cent. at the end of 1929. It is our desire to work up the marine fund to a figure at least equal to the premium income, and to do this from the profits on the account, but this year we have taken £35,983 from the account to the profit and loss account, which is £10,000 less than the interest credited to the account. After this transfer the fund represents 94.6 per cent. of the premium income, or 3 per cent. more than a year ago.

The accident account suffered from conditions in the United States similar to those of the fire department, and the re-insurance contracts to which I alluded last year have also affected the account this year. The results in the home field were favourable, but not so elsewhere.

GUILDHALL ACQUISITION.

With regard to the balance sheet, we continue to maintain the conservative policy which has always been adopted in the investment of our funds, and I am glad to say that the valuation made at the close of last year disclosed a large appreciation over the book value. The recent acquisition of the share capital of the Guildhall Insurance Company does not affect the figures in the statement before you for the reason that the transaction was not completed till January 1st this year. We have every confidence that the acquisition of the Guildhall by the London will prove to be of substantial benefit both to them and to us. The Guildhall is one of the most successful, possibly the most successful, of the post-war companies.

Both the British Law Insurance Company and the Vulcan Boiler Company did extremely well last year, and the results shown by the London Associated Reinsurance Corporation, all the ordinary shares of which are held by us, were also very good. We increased the share capital of the Manhattan Fire and Marine Insurance Company during last year to 1,000,000 dollars, but this did not involve any transfer of money from London to New York, as we held surplus funds in America sufficient for our purpose. This American company, which was only started seven years ago, is becoming firmly established, but no dividends have so far been declared, the surpluses having been utilised to strengthen the reserves.

DIVIDENDS AND CARRY-FORWARD.

The profit and loss account shows that, after providing for dividends at the same rate as in 1929, the balance carried forward is slightly increased at £240,098. The net interest earnings are considerably in excess of the cost of the dividend.

The Bill which was approved by the General Court held on November 26th last has now received the Royal Assent. I want to draw your attention to one of its most important provisions. This is that the present liability on our shares has now been definitely fixed at 25s. per share. That is to say, our ordinary shares, which are £2 10s. each, have a liability of not more than 25s. I am aware that this has been assumed generally to be the case, but there has been a doubt lurking in the minds of some which has now been removed for ever.

The report was unanimously adopted.

WIGGINS, TEAPE, AND COMPANY (1919), LIMITED.

BENEFITS ACCRUING FROM RATIONALISATION POLICY.

The twelfth annual general meeting of Wiggins, Teape and Company (1919), Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London, E.C.

Colonel W. R. Portal (the chairman), in the course of his speech, said: Ladies and Gentlemen, on the occasion of the last annual meeting, in dealing with the prospects for 1930, the chairman stated that the results for the year to date were satisfactory, and this condition of affairs operated for the first half of the year. During the second portion of the year, however, and in particular during the last two months, trade became most difficult, especially in the export markets.

OUTPUT AND SALES IN 1930.

Despite the unsatisfactory trade conditions in this country, your company maintained in the home market during the year 1930 the high level of sales reached in 1929. In the export markets, however, owing to the reduced purchasing power of most of the countries throughout the world, our sales show a considerable falling off compared with those for the year 1929. The output of paper from the mills of your company and those of the subsidiary companies was for the year 1930 practically the same as for the year 1929.

PROTECTION.

I think it will be plain to all that before long some form of protection must be given to the industries in this country. I submit, however, that protection in any form should not, and must not, be given merely to bolster up inefficient units in any particular industry. At the same time, if raw materials are allowed free of duty into this country, there should be no justification for the raising of prices against the consumer, as the extra output which should accrue to the various industries should enable them to keep their prices at the present level, unless they are already, through over-production and competition, both at home and abroad, producing at a loss.

PROSPECTS FOR 1931.

I am happy to be able to tell you that the economies which should accrue from the large amalgamation which has taken place have now commenced to operate, and the results are apparent since the beginning of this year. It will be another twelve months, however, before the full benefit of these economies will be felt, but you must realise that we have a big task in hand, and no time is being lost in taking full advantage of these benefits. We have been able to centralise our organisation and this is giving very good results, and a system of central buying has now been started which should help your company very materially.

The report and accounts were unanimously adopted, and the dividend of 10 per cent. as proposed was approved.

The retiring directors were re-elected, and the auditors having been reappointed, a vote of thanks to the chairman and directors concluded the proceedings.

FORESTAL LAND, TIMBER AND RAILWAYS COMPANY, LIMITED.

DIVIDEND MAINTAINED.

The twenty-fifth ordinary general meeting of the Forestal Land, Timber and Railways Company, Limited, was held, on the 21st instant, at River Plate House, London.

Baron Emile B. d'Erlanger (the chairman) said that taking into consideration the world-wide depression in trade, from which the leather trade and its associated trades had not escaped, and taking into consideration the fact that the Forestal Company had only worked at 50 per cent. of its output capacity and that the prices for quebracho extract had been lower than for 1929, they had every reason to congratulate themselves upon the results of the year, which enabled them to recommend the same dividend as in the previous year. The profit for the year was £362,142, or £58,898 larger than that of the previous year.

As to the subsidiaries, it was anticipated that the accounts of the Natal Tanning Extract Company for the period to 30th June next would show an initial profit. The results of the Calder and Mersey Extract Company had not been unsatisfactory, and the St. Helen Holdings, Limited, showed, as usual, a substantial profit. The three subsidiary companies in the Argentine had all shown satisfactory profits. The liquid assets of the Forestal Company exceeded the quick liabilities by approximately £2,000,000, of which close on £1,000,000 was in British Government securities and cash. A stronger financial position could hardly be wished for, and it was a sheet-anchor in the world tempest which assailed their industry, like all others, at the present juncture. It was proposed to pay a final dividend of 4 per cent.

While twenty-five years' experience in the tanning extract market and the proud record of the Forestal Company and the excellent organisation and management of its subsidiaries allowed the board to look with unshaken confidence upon the future, he was not without misgivings as to the immediate prospects. He did not think one could pick out any raw material or semi-manufactured article where the total capacity of production did not exceed the highest record of world consumption, and quebracho extract was no exception; but the company was in a strong position and shareholders might rest assured that they would weather the storm.

The report and accounts were unanimously adopted.

SHANGHAI ELECTRIC CONSTRUCTION COMPANY, LIMITED.

THE FALL IN THE VALUE OF SILVER.

The twenty-fifth annual general meeting of the Shanghai Electric Construction Company, Limited, was held on the 21st instant, at Basilston House, Moorgate, London.

Mr J. S. Haskell (the chairman) said that the accounts related to a year which had been by no means free from difficulty. In the month of April they had had a strike which had meant a total loss of revenue for a short period. Much more serious than that temporary disturbance was the severe and continued fall in the value of silver, and there was at present no indication of any material improvement under that head.

The unfavourable course of exchange had caused a rise in local prices, which meant a higher cost of living, and had reduced the purchasing power of local currency as regarded imports. The result, so far as the company was concerned, was that special allowances had had to be made to their foreign and native staffs and that the cost of the supplies essential to operation had materially increased. Those conditions had been progressive. It had therefore been necessary to revise the scale of fares once more. The revised fares were still very low as compared with the generality of similar undertakings.

The Singapore Traction Company, in spite of the depression in Singapore, had been able to show substantially increased earnings, and the share of profits which became payable to the Shanghai Electric Company as managers had been increased to £16,000, which was £2,000 higher than in the preceding year, and brought their total participation in profits to date up to the satisfactory figure of £50,000. The accounts were sufficiently clear to speak for themselves, and he thought shareholders would agree they showed a satisfactory financial position. The general reserve was more than represented by the value of British Government securities, and the accumulated provision for renewals stood at the substantial figure of £132,000. That provision was not a surplus but represented an appropriation of profits in recognition of the fact that the track and all other parts of the undertaking were undergoing wear and tear, and would sooner or later require renewal. The profits for the year sufficed to pay a dividend of 12 per cent. free of tax, of which 5 per cent. had already been distributed by way of interim dividend, and to carry forward £16,995 to next year.

The report and accounts were unanimously adopted.

IMPERIAL CONTINENTAL GAS ASSOCIATION.

SUCCESSFUL YEAR—RECORD GROSS PROFITS.

BURDEN OF TAXATION.

The 183rd ordinary general meeting of the proprietors of the Imperial Continental Gas Association was held, on the 20th instant, at Winchester House, Old Broad Street, London. Sir Henry Birchenough, Bt., K.C.M.G., deputy-chairman of the company, who presided, expressed the regret of the chairman, Col. H. Le Roy-Lewis, C.B., C.M.G., D.S.O., at his inability to be present owing to indisposition, read the address which Col. Le Roy-Lewis had prepared.

COL. H. LE ROY-LEWIS'S STATEMENT.

The address of Col. Le Roy-Lewis contained, inter alia, the following observations: Dividends, rents and sundry revenue, which shows an increase of £100,000, is made up as follows: Dividends on foreign shareholdings £399,000, as against £334,000 last year; dividends on home investments, £125,000, as against £102,000 last year; interest £70,000, as against £35,000; rents £80,000, as against £121,000; and sundry revenue £18,000.

The profit for the year amounts to £552,000, as against £468,000 for last year. These, however, are net profits, and to arrive at a true picture the figures for the two years should be increased by the amount of British income tax which we have to bear. In this way we arrive at a total of £580,000 for the previous year and £696,000 for this year, a gross increase of £116,000. (Applause.) Our previous record profit was in 1911, when £557,000 was earned. As, however, the rate of income tax was then only 1s. 2d. in the £, the corresponding gross profit was £600,000. We have thus this year passed our record gross profit by £96,000, although, owing to the increase in the rate of income tax, our net profit is still short of our 1911 net profit. In making comparisons, therefore, account must not only be taken of the loss, since 1911, of the gas supply of Berlin, Hanover, and other cities, but also of the increased burden of taxation, both English and foreign.

Loans to associated companies have increased by £672,000, and represent mainly our loans to the Utility Loan Company.

Cash at bankers' and in hand at the very low figure of £15,000, practically all of which is at stations, will indicate the impoverished state of our treasury. Actually in London on March 31st we had an overdraft of £68,000. This is an economical course in view of the present easy money rates, the alternatives being to realise part of our home investments or to make a further capital issue.

Investments show an increase in book value of £846,000; this is due to further investments in associated companies to the extent of £350,000. Home investments show an increase of £500,000, but this only represents a real addition of £304,000 of new money, as owing to favourable dealings in Government securities during the year a capital profit of £196,000 was realised and carried to our reserves, the proceeds being reinvested.

General and specific reserves now amount to over £5,000,000, the increase being mainly due to premiums on the issues of capital stock during the year, profits on the realisation of investments, and the addition to general reserve authorised at the last general meeting.

No additional appropriation to general reserve is recommended. Many of you will be surprised to learn that taxation of practically 8s. in the £ is imposed on all dividends from Belgian sources, and only slightly less on those from our French interests. Furthermore, we cannot claim any relief upon English taxation in respect of sums set aside out of profits as reserves. On the other hand, our subsidiary companies can claim relief from taxation in their own countries in this respect. It is, therefore, unwise to press the subsidiary companies for dividends in excess of the sums required to yield a reasonable rate of dividend, thus giving the subsidiary companies ample scope to build up substantial reserves and avoid unnecessary taxation. During their last accounting year the companies in which the association is chiefly interested, taking only the proportion of the association's participation to the whole capitals, put to reserve £175,000.

We now recommend the payment of a final dividend of 12½ per cent., less tax., £271,250, and a proportionate staff participating bonus of £4,335, the balance of £437,368 to be carried forward. This latter sum is approximately 20 per cent. on our capital, so that the present rate of dividend is practically assured for next year.

Our total profits may be said to have been the profit and loss balance of £552,000, plus income tax amounting to £144,000, plus other companies' reserves of £175,000, making a total of £871,000 and our gross dividend absorbs £560,000, so that approximately two-thirds of our gross earnings are coming to you as dividend.

COSTS AND PRICES

The successful industrialist must give perpetual thought to the means by which his costs and the prices of his goods can be reduced, so that people are able to purchase more of what he has to offer for

sale. To take a simple example: If the price of motor-cars is reduced by half, twice as many motor-cars may be bought. I go further: The relationship between reduction in prices and the quantity of goods bought is not merely a straight line function, but something further. If the price of an article is reduced by half, experience goes to show that the quantity of goods bought at the lower prices will not merely be twice as many, but often three or four times as many. I do not wish to appear to attribute too great a responsibility for the present industrial depression to the producer, for a great part of the trouble is due, not to the failure of the producer to reduce costs, but to the failure of the distributor to pass on to the consumer the reduction in costs. The retailer has, of course, extra charges to bear in the form of higher taxation and increased transport and handling costs, but I question whether the wide margin between wholesale and retail prices has complete justification. In the gas and electrical industries we are, for the most part, our own producers, our own transporters, and our own retailers, but, like others, we have to bear our proportionate share of taxation. I cannot speak for outside companies, but within our own organisation we are paying approximately the same gold price for our coal as before the war. Wages in terms of gold have considerably increased, but despite this our gas and electricity prices are below the gold pre-war level. This is in part due to improved technique, but apart from this I think that the gas and electricity supply industries, by the moderation of their prices, afford a clear demonstration that the middleman is playing far too large a part in the organisation of industry to-day.

SURVIVAL OF THE FITTEST.

It is idle to think that our competitive position in the world's markets can be secured by tinkering with plant the obsolescence of which is known; this is merely throwing good money after bad. Only the most economical producer with the most modern plant can survive; others must inevitably be driven out of business. Price-fixing agreements may ward off the evil day, but the law of the survival of the fittest will ultimately assert itself. Despite many attempts to stabilise prices, this inexorable law is now asserting itself in the coking industry; the fall in the price of metallurgical coke has already caused many coke-ovens to close down, and some of these will never be restarted. These are naturally the producers of high costs. In this way supply will adjust itself to demand over a space of time; in so far as the adjustment takes place at a lower price-level, demand will, in turn, be stimulated, and so will advance part of the way to meet the effects of the so-called over-production.

OBSCULENT PLANT.

I have said that courage is necessary for the application of this remedy: old works which were thought to have some value have to be demolished, and the values at which such works stand in the balance sheet have been written off. It is not pleasant, but is it not much better to utilise reserves for such a purpose than to eat up those reserves by seeking to keep in operation plants which are no longer economic units? The only real value which an industrial plant possesses is a capitalisation based on its cost of production. Where a plant has a high cost of production it has nothing more than a scrap value, and it is idle to keep such plants in the balance sheet at a figure which presupposes that such works have a value in excess of what could be realised by breaking them up.

We are putting out of action five works which, in our opinion, are no longer economic producers. We have created reserves against those plants, and, when the moment arrives, you must be prepared to see those reserves utilised for the purpose for which they were created, of writing out of our balance sheet obsolescent plant.

Our balance sheet may not look quite so good in consequence, but the true criterion of the value of your undertaking is its earning capacity, and the elimination of part of our reserves should lead to no diminution of our profits; in fact, having regard to the modernisation of our plant which necessitates it, I look forward, when our present programme is in full fruition, to increasing profits.

He moved the adoption of the report and accounts.

Mr Harold Godfrey Palmer seconded the resolution, which was unanimously adopted.

Other formal business having been transacted, the Chairman (Sir Henry Birchenough) proposed a cordial vote of thanks to the general manager and to the whole of the staff in London and on the Continent for their services during the past year. He referred to their loyalty and their eagerness to serve the company now, as always in the past.

Lord Remnant second the resolution, and added the shareholders' gratitude to the chairman and the directors, with the expression of an earnest hope that Colonel Le Roy-Lewis would soon be restored to health and allowed to return to his labours in the City. As for the report itself, the document, he said, was a bright spot amid deep depression in the City.

The resolution was passed with acclamation.

ASSOCIATED NEWSPAPERS, LIMITED.

STRONG FINANCIAL POSITION.

SIR GEORGE SUTTON ON THE YEAR'S TRADING.

The twenty-sixth annual ordinary general meeting of the Associated Newspapers, Limited (proprietors of *The Daily Mail*, the *London Evening News*, and the *Sunday Dispatch*), was held, on the 15th instant, in the Memorial Hall, Farringdon Street, London.

Sir George A. Sutton, Bart. (managing director), presided.

The Secretary (Mr J. P. Hobbs, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the annual report and balance sheet, said:—

Ladies and Gentlemen.—You have all had an opportunity of becoming familiar with the facts and figures contained in the accounts and reports which have been circulated, and I propose, therefore, with your approval, as usual, to take them as read.

Of the effect of the world's trade depression on the profits of the most flourishing and prosperous companies in Great Britain you are well aware. And a company such as ours, whose source of income is largely derived from advertisements, cannot but be affected also. For a considerable part of the year under review many large advertisers, in view of the continued depression, thought it advisable to curtail to some extent their advertising appropriations. The number of public issues of capital has been negligible, but many companies have availed themselves of our papers in order to obtain the greatest possible publicity for the proceedings at their annual meetings, as they find this is a cheap and effective method of bringing the work of their undertakings before the whole nation.

Having regard to the depression which has unfortunately led to the publication of so many disastrous company reports during the last year—many of them relating to the greatest and soundest concerns in the country—the directors consider the results we are able to place before you to-day are eminently satisfactory.

With your permission I shall run through the various items in the balance sheet which call for comment.

BUILDINGS AND PLANT.

With reference to the value of buildings and plant appearing in the balance sheet at the sum of £1,590,993 16s. you will be interested to know that Messrs Fuller, Horsey, Sons and Cassell, the well-known valuers and surveyors, who very recently surveyed our buildings and plant, reported that they were satisfied that if they were required to make a valuation in detail of the above assets, on the basis of what they are worth as a going concern, the amount of their certificate would be about but not less than *two million and thirty thousand pounds*. Messrs Fuller, Horsey, Sons and Cassell add that the plant and machinery of the printing and publishing offices (London and Manchester) "can without exaggeration be said to represent the highest standard of efficiency in newspaper production, attainable only by a board of directors having both foresight and experience with the necessary financial resources."

The very extensive additions and extensions at Manchester are practically completed, the whole of which have been paid for out of the resources of the company.

Stocks of paper and other materials are down by £246,305 8s. 11d. There is little alteration in the amount of the investments. These, other than investments in subsidiaries, include considerable holdings in British Government securities, also American and Canadian securities. The world's trade depression causes sudden fluctuations in market values, and, to provide for a possible loss on the realisation of investments, your directors have deemed it advisable to make a reserve of £200,000 on the appropriation account this year.

ANGLO-NEWFOUNDLAND DEVELOPMENT COMPANY, LIMITED.

You would perhaps like me to say a few words in regard to our large investment in the Anglo-Newfoundland Development Company. Your directors are very well satisfied with the last reports received covering this company's operations. Much money has been spent out of surplus funds during the past year in improvements to the mill plant and machinery, resulting in a substantial reduction in the cost of manufacture. In this respect the mill is now in a position to compete with any newsprint mill in the world, and I might again point out that the Anglo-Newfoundland Company is the owner of immense pulpwood forests held on long leases which ensure for the company virtually a perpetual supply of its raw material and form an asset of very great value. In addition, there is the Buchans Mine.

NORTHCLIFFE NEWSPAPERS.

As you are aware, your company is largely interested in Northcliffe Newspapers, Limited. Despite the difficult trading conditions of

the past year, the revenues of Northcliffe Newspapers continued to expand, and your directors feel that, as a result of enterprising and careful management, the value of your investment in this group of newspapers is steadily appreciating.

Readers and advertisers in the Newcastle and Bristol areas continue to show increasing evidence that the *Evening Worlds* have established themselves as part of the daily life of those centres. It is highly significant that, although advertising throughout the country declined substantially, both of these papers recorded very encouraging increases in advertisement revenues during the four months to April last, as compared with the corresponding period last year.

Northcliffe Newspapers have just enlarged their sphere of influence in the Midlands by the purchase of the *Leicester Mail*. This newspaper circulates in a prosperous industrial area which has not felt the effect of the trade depression to anything like the same extent as many other districts. The paper already has a very efficient plant, and the improvements which have been effected under the new management have already brought about a very satisfactory increase in the circulation.

Debtors are slightly increased. Our cash resources amounting to £642,074 are ample for the needs of the business.

The only item that calls for comment on the liabilities side of the balance sheet is the item for creditors and reserves for contingencies, which shows a decrease of £250,387. This is due entirely to a reduction in the amounts outstanding for ordinary trade creditors owing to the completion of our present programme for extensions at Northcliffe House, Manchester, and the considerable reduction in stocks of paper and materials. Reserves for contingencies include the £200,000 set aside last year for special publicity and remain practically the same as a year ago.

IDEAL HOME EXHIBITION.

The *Daily Mail* Ideal Home Exhibition held at Olympia, W., achieved a phenomenal success.

In a time of admitted depression, the exhibition smashed even its own remarkable records set up in a much more propitious period.

The total number of visitors who paid for admission during the 23 days on which the exhibition was open was 666,890, this figure being 49,852 above the previous record of 617,038.

Exhibitors in all sections were enthusiastic about the volume of business done, and in many cases stated that sales far exceeded their anticipations.

The exhibition, which has for long been an event of national significance, has now assumed international importance, and claims the interest of the Press throughout the world.

ADVERTISING REVENUE.

The high position of our papers in the esteem of the advertising world remains unchallenged. In common with other industries, the advertising revenue has been affected, but I am glad to say that, although we have lost a little in volume of advertising, we still have as many advertisers using our papers as ever.

This fall in revenue represents only about 10 per cent., and bearing in mind the twelve months of depression through which we have passed, I think you will agree that our papers have weathered the storm in a highly satisfactory manner.

Last year may, I think, be regarded as a test of the value of our advertising columns to the business community, because, although there has been a wholesale cutting down in many other directions by most advertisers, our papers have only suffered to the small extent that I have just indicated.

A large proportion of every important national advertising appropriation is spent in our newspapers, and advertisers are everywhere recognising the benefits of concentrating in them in association with our allied companies, which publish the *Daily Mirror*, the *Sunday Pictorial*, and the Northcliffe Newspapers.

Taking the combined sales of the *Daily Mail* and the *Daily Mirror* we have a figure of nearly three millions daily, while the sales of the *Evening News*, apart from sporting editions, are over two hundred thousand copies in excess of any evening newspaper published in London. The net sales of the combined Northcliffe evening newspapers throughout the provinces are in excess of 550,000 daily. On Sunday again the group supplies the two best advertising media, in the *Sunday Dispatch* and the *Sunday Pictorial*.

In these times of limited appropriations, advertisers would do well to study the potentialities of this group of newspapers exclusively, instead of dissipating their effort in a large field of doubtful media.

PULLING POWER OF "THE DAILY MAIL."

The *Daily Mail* stands supreme in its own field as the best advertising medium in the country, and it is worthy of note that during the past year the *Daily Mail* has carried no less than 86,636 inches more of trade display advertising than its next nearest competitor.

The return from advertising in the *Daily Mail*, even during the period under review, has time and again proved its superiority for increasing and developing business throughout the whole country.

I would like to quote one or two examples. On one occasion during the year the *Daily Mail* produced 90,000 replies for a 7½d. sample from one advertisement for Messrs. Crosse and Blackwell.

Messrs. Harrods, Limited, who reserved two full front pages of the *Daily Mail* to announce their January sale, in six days did £470,000 worth of business. The first day's total of £172,185 showed an increase of £24,000 over the corresponding day of the previous year, proving that the *Daily Mail* is unequalled for reaching middle-class homes and that section of the public who have money to spend or invest.

The *Evening News* still holds the premier place among evening newspapers, not only in its having the largest net sale of any evening newspaper in this country, but also in the amount of advertising that it carries. During the year the *Evening News* carried 222,955 single column inches of trade display advertising, which was 82,778 inches in excess of its next nearest competitor.

The *Evening News* has suffered less from the present trade depression than any of our other newspapers. This is no doubt due to the fact that, in addition to its established reputation as an unrivalled advertising medium in the evening paper field, the unemployment problem in and around London is not nearly so acute as in other parts of the country.

The *Evening News* is acknowledged to be the best evening medium in London for all types of advertising appealing to the middle and "upper-middle" classes.

No less gratifying has been the way in which the *Sunday Dispatch* has maintained its leadership in its own sphere of high-class Sunday journalism. This great national Sunday newspaper, serving a public of the middle and upper-class types, is essentially one which the whole family can read.

It is particularly popular with national and mail-order advertisers, who find in it an excellent Sunday medium for reaching in a national way the homes of the people on this one day of leisure and intensive reading.

The *Over-seas Daily Mail*, with its world-wide appeal to Britons abroad, gains increased prestige as an organ of British trade. It again shows an increase in advertisement revenue.

The *Daily Mail* Atlantic Editions, printed and published each day at sea in the ships of the Cunard Fleet, continue to receive wide support as a means of getting into touch with the wealthy ocean voyager.

I am pleased also to be able to report that during the past year, when many old-established businesses have found themselves in difficulties, the advertising agencies with whom the bulk of our business is conducted have met their commitments promptly.

Before closing I should like to add that very few readers of morning and evening newspapers are aware how much the newspaper industry affects the employment question. Take our own company as an example. We directly employ 4,500 persons, who receive in wages and salaries about one and a half million pounds per annum, and there are also numerous casual workers engaged. The rate of pay of our skilled and unskilled workers is, I believe, the highest in any industry.

NEW BUILDINGS AND PLANT.

During the past few years we have expended on new buildings and plant a sum of over £1,500,000, a very large proportion of which represents wages. Our enormous purchases of materials also entail the employment of many skilled and unskilled workers. In addition to this we contribute immense sums to railway and other transport companies, telegraph and postal departments, News agencies, and other new gatherers, authors and artists.

I have been associated with the *Daily Mail* since its foundation by the late Lord Northcliffe and Lord Rothermere, and I can safely state that (omitting the period of the war) I never remember such a time of acute trade depression in all industries.

Viewing the trade situation as it directly affects your company, it is difficult to indulge in prophecy. There are, however, certain signs that business is gradually taking a turn for the better. The

public is beginning to buy more freely. Firms who are standing fast to a policy of vigorous and forceful advertising are getting greater rewards for their enterprise.

And we all rejoice that the Prince of Wales has come forward, after his visit to South America, to encourage the nation to regain its old prosperity.

His views are sound and clear, his courage high, and his belief in the genius of the people of these islands is unshakeable.

He breathes confidence at a time of depression. And he has discovered, and is not afraid to tell us, that we, as a nation, are too modest. He is to-day the chief apostle of advertising. "Advertise, advertise, advertise your goods" is the lesson he has learned, and has set himself to teach the manufacturers and traders of these islands. Some have already learned the lesson and, consequently, are in a happier position to-day than those to whom the Prince appeals to tell the world, and sell their goods.

Clearly the Prince believes that if we set to work with a will the tide will turn. We do not know when that will be, but when it does this company, by reason of its strong financial position, keen and unrivalled personnel, liquid resources, and its magnificently equipped buildings, is ready to cope with any development or any competition that may arise.

STRONG FINANCIAL POSITION.

This business, as you know, is not burdened with debentures or prior charges. As I have mentioned before, the amount required to pay our preference and ordinary dividends is only £67,000 per annum, and on last year's figures this sum is covered some fifteen times, which I think you will agree is a very happy position to be in.

The resolution for the adoption of the report and accounts was carried unanimously.

The retiring directors were re-elected and the auditors (Messrs. Lever, Honeyman and Company) were reappointed.

The proceedings closed with a cordial vote of thanks to the chairman, directors and staff.

GLENATFEE TEA ESTATES, LIMITED.

TEA MARKET PROSPECTS.

MR. H. B. YUILLE'S SPEECH.

The sixth annual ordinary general meeting of the Glentafee Tea Estates, Limited, was held at 20 Eastcheap, London, E.C., on Thursday, May 21, 1931.

Mr H. B. Yuille (the chairman) said: During 1930 a restriction scheme was in force in all producing countries and this company subscribed to the scheme. We were, therefore, unable to produce to our full capacity. Owing to various causes the results were not so successful as was anticipated. We harvested a crop of 419,057 lbs., which sold at a net average price of 15-21d. per lb., which compares with a crop of 415,392 lbs., sold at 15-48d. the previous year. The net profit carried to the balance sheet was £566 10s. 9d., to which must be added the sum of £4,102 19s. 7d. carried forward from last year. We propose to deduct £100 as further provision for income tax, which leaves a balance of £4,569 10s. 4d. to be carried forward. The net average price of all Ceylon tea sold in London during the year 1930 was 4d. per lb. lower than in the previous year. As this company's average is only 4d. per lb. lower, it is evident that the quality of the outturn was fully maintained.

The working of the Rickarton Estate was handicapped to some extent in the early months owing to the dislocation caused by the fire, which destroyed the factory in 1929. The new factory is an up-to-date building in every way and has been placed on a more advantageous site. The cost of building is high nowadays, and we were obliged to spend £4,319 more than was recovered from the underwriters, but this amount includes alterations to the ropeways. For this sum, however, we have been able to replace an old, and in many ways unsatisfactory, building with a modern one planned as regards design and withering accommodation on the latest ideas, and we find the new factory is turning out an excellent class of tea which is selling at very satisfactory prices on the London market.

The Glentafee Division also maintained for most of the year an excellent standard of quality.

POSITION OF TEA MARKET.

The present state of the tea market is causing producers some anxiety. The London market has been over-supplied mainly with the commoner qualities owing to the financial troubles in Australia and also because considerably less tea was consumed locally in India, because of the boycott of British goods.

It has been very difficult, and at times impossible, to obtain exchange with Australia, and I understand a good deal of tea

recently shipped there was paid for by exports of other commodities from Australian ports.

Prices have fallen so low in Colombo that much of the tea usually sold there has been shipped to London and this market is now overstocked. A heavy decline in the prices for common and medium grades has taken place, these qualities in some cases selling below the cost of production. Fine teas, on the other hand, are selling well, and it is evident that those who can make good teas will do best by making every endeavour to maintain a high standard, even at the expense of quantity. We ourselves have given instructions to this effect, and I am glad to say that the present season's teas, which have been sold, have done credit to the managers and realised prices which compare favourably with other sales from the same districts. Economies in cost of production are being studied and given effect to, and we hope that a definite saving will be shown by the end of the year without any deterioration in quality. Capital expenditure, too, will be considerably less, and we feel that the time is now coming when the results of the expenditure and hard work that has been put into our properties will be apparent.

I will now put the first resolution, viz., that the report and accounts, as presented, are adopted, and ask Mr Cooke to second the resolution and give you an account of the state of your properties which he visited last month.

MR. W. H. COOKE ON HIS VISIT.

Mr W. H. Cooke said: Whilst in Ceylon at the end of last year, I was able to visit the company's estates, and spent some days making a close inspection of them. With regard to the Glentaffe and Shannon properties, I found that the improvement in their condition, which I was able to report on my last visit in 1928, has been fully maintained.

On Glentaffe crop was restricted, as in 1929 the yield was in excess of the minimum yield of 400 lbs. an acre—below which the restriction scheme did not operate. Had this not been the case, I am confident this estate would have maintained its former yield, and probably have exceeded it, even if allowance is made for more selective plucking. I found all works being well carried out. The estate is now fully equipped with the necessary labour accommodation, which is all up to Government standard. The staff bungalows are permanent and in excellent order. The factory was extended in 1929 and fully equipped with the necessary machinery to allow of the manufacture of Shannon leaf in one factory. With increasing crops from the latter estate, it may be necessary, later on, to provide additional withering space in the old portion of the factory, to give the best results, but for the time being the present factory should amply suffice to turn out satisfactory teas. With regard to Shannon, I find I wrote as follows in my report on the estate, dated November 17th last: "I am immensely pleased with the way this estate has responded to cultivation, combined with careful plucking and pruning." This is evidenced by the steady improvement in crops secured since the company acquired the estate, which are as follows: 1927, 78,956 lbs.; 1928, 108,483 lbs.; 1929, 113,229 lbs.; 1930, 119,612 lbs. The estimate for the current year is 130,000 lbs., and, judging from the crop secured to date, this appears likely to be obtained. Taking into consideration that these crops have been harvested with the lightest possible plucking and resting of all immature tea, I consider them very satisfactory. I found the tea looking in good heart and all works well carried out. Good progress has been made in bringing the accommodation for the labour up to Government requirements, and little more needs to be done. The ropeways erected for transport of leaf and manure are proving of much benefit and help to reduce transport costs.

Although I found the tea looking in good heart on Rickarton, crops have suffered, due to the disorganisation of pruning caused by so much labour having had to be employed on transport of factory materials for the building of the new factory, which was completed in 1930, and which also caused other works to get in arrears. This increased the cost of production.

I am satisfied normal working has now been resumed, and I have every confidence that this estate will make steady progress. The new factory is a first-class building and up to date in every way, capable of manufacturing teas under the best conditions.

Recent prices have been very satisfactory, and, given careful plucking in the field, I see no reason why these should not be maintained, as long as the present market demand for good teas remains steady.

Good progress has been made in cootch grass eradication, and although there is a comparatively large area of ravines to be cleared up and planted in tea, this can be taken in hand gradually.

My visit to the estates enabled me to go thoroughly into all matters with the managers on the spot, and I am pleased to say that, as a result, it has been possible to effect a good many economies which will undoubtedly assist in reducing the cost of production.

I am perfectly confident as to the future, and, given no unforeseen difficulties ahead and a steady market for good quality teas, I consider the future prospects of the company are favourable. I have pleasure in seconding the resolution.

The report and accounts were unanimously adopted.

MARKS AND SPENCER, LIMITED.

ANOTHER SUBSTANTIAL INCREASE IN PROFITS.

DIVIDEND INCREASED TO 30 PER CENT. AND USUAL SHARE BONUS.

PRESENT YEAR SHOWS STILL LARGER INCREASE IN TURNOVER.

PROGRESSIVE PROGRAMME OF DEVELOPMENT.

The fifth ordinary general meeting of Marks and Spencer, Limited, was held, on the 19th instant, at Winchester House, E.C., Mr Simon Marks (chairman and managing director) presiding.

The Secretary (Mr E. Berry, F.I.S.A., F.C.W.A.) having read the notice convening the meeting and the auditor's report,

The Chairman, in moving the adoption of the report and accounts, said:—It gives me very great pleasure to put before you a report which shows substantial progress in the development of our business. The net profit for the past year amounts to £476,073, which is an increase of £140,898 on the previous year.

This satisfactory result has been attained during a period of very trying conditions, which have involved this country in a large increase in unemployment, and which have reduced the purchasing power of the community to a much lower level. Our increased profit is due to the expansion policy we are steadily pursuing, and to the fact that we have achieved a very much greater volume of business, brought about not only by a reduction in our margin of profit, but also by the vast improvement in our merchandise.

It is worthy of note that our older stores continue to transact a larger volume of business year by year. Our principle of selling superior value merchandise is procuring for us the goodwill of the buying public, the only foundation on which a progressive business can be built.

It should be observed that only part of the capital brought in by the public issue of last year has so far been employed, and that this part has been productive only from the various dates of the opening of our new stores.

Our building programme, you will be interested to learn, is the largest this company has ever undertaken.

ALLOCATION OF PROFITS.

The net profit of £476,073, after deducting £54,071 for income tax, leaves a balance of £422,002, which, together with £51,111 brought forward from the previous year, makes a total of £473,114 available for distribution.

The directors recommend the following appropriations:—

Properties contingency reserve, £17,500, against £10,000.

General reserve account, £120,000, against £100,000.

Payment of a final dividend on the ordinary and "A" ordinary shares at the rate of 20 per cent. per annum, making 30 per cent. for the year ended March 31, 1931, £145,200.

By carrying forward to next year's accounts £53,105, against £51,111 brought in.

ISSUE ON BONUS TERMS.

The directors further recommend that a distribution be made by way of bonus to the holders of the existing ordinary and "A" ordinary shares of the company, in the proportion of one "A" ordinary share for every ten existing ordinary and "A" ordinary shares held.

BALANCE SHEET.

On reference to the balance sheet, you will notice that the authorised capital has been increased by a further £1,000,000. This is in respect of the 1,000,000 7 per cent. cumulative preference shares which you authorised last year. The issued capital has been increased by this amount, together with a further £66,000 represented by the bonus issue of 132,000 "A" ordinary shares of 10s. each, fully paid, allotted to the ordinary and "A" ordinary shareholders last year.

Loan capital, amounting to £1,000,000, is in respect of the issue of the 6 per cent. first mortgage debenture stock which you authorised last year, and the £10,000 is for interest accrued since the date of the last interest payment.

RESERVES.

Your directors have decided to write off the whole of the new issue expenses, amounting to £105,809, by setting off the £70,000 received by way of premiums on the issue, plus an allocation from

the general reserve account of the sum of £35,809. After writing off the balance of the new issue expenses, our general reserve account will amount to £329,457.

EXPENDITURE ON PROPERTIES.

On referring to the assets side of the balance sheet, the expenditure on freehold properties acquired during the past year, together with additions and alterations, amounted to £228,637. The expenditure on leasehold and leased premises during the same period was £258,612. The increase in furniture and fixtures is £68,820, and is in respect of furnishing new stores.

STOCK-IN-TRADE.

The stock-in-trade stands at £417,783, showing an increase of £71,502 on the previous year, and has been valued on our usual conservative basis.

MERCHANDISING POLICY.

It is true to say that the chain-store system is effecting substantial changes in the whole process of producing and marketing goods, and that it is perhaps the most effective attempt to grapple with the problem of the cost, not only of production, but of distribution, by eliminating all factors which tend to increase those costs.

The cardinal point to be borne in mind to-day by every business man is that the purchasing power of the community has decreased very materially, and is likely to decrease still further. If business, therefore, is to be maintained successfully, it is essential to provide the consuming public with cheaper and better merchandise values to fit their restricted purse.

Our efforts, therefore, are concentrated primarily in adjusting our merchandise values by continuously investigating, together with our manufacturers (with whom we co-operate most closely), methods by which savings in production may be achieved.

Our organisation offers unrivalled opportunities and facilities to the up-to-date manufacturer of doing a large direct business under favourable conditions. Provided he has the right goods which appeal to the public, we help him to solve his most difficult problem—that of distribution, which is our primary function.

Our selling prices range from 3d. to 5s., and, within these price limits, we have developed a large range and variety of useful and attractive merchandise in all departments. Although we aim at cheapness in price, we insist on quality and on our goods being well finished.

It is not sufficiently realised that about 90 per cent. of the goods which we buy are made in this country—British made. It is our desire to increase that percentage still further. We seek every opportunity of having goods, usually made abroad, manufactured in this country by British labour.

CONSTRUCTION PROGRAMME.

In view of the finance at our disposal, we are pushing forward more rapidly with a large building programme. Our organisation and personnel have been sufficiently developed to take care of this rapid progress. Experience has shown that every unit added or extended makes our position stronger. We have had every encouragement in the past by the knowledge that our expansion has so quickly met with such gratifying results, and we are satisfied that we are proceeding in the right direction.

During the past financial year we have dealt with 29 stores, which not only include new stores, but also extensions of existing units. Our building programme so far for this year will deal with about 32 stores, including extensions. When these are completed we shall have in operation 118 super stores and 32 smaller units. In the course of the year other new stores or extensions will be added as opportunity arises.

I repeat what I said last year, that although we have made good progress, we realise that we are still only on the threshold of our possibilities. We are convinced that there is ample scope in this country for a considerable development for this company for many years to come.

I should like now to refer to the success of our public issue of £1,000,000 6 per cent. debenture stock and £1,000,000 7 per cent. preference shares of last June. The success of the issue, which was

JOBSON'S INVESTMENT DIGEST.

London Agent: A. J. JOBSON, 8, Bouverie Street, E.C. 4.

very gratifying, was due in no small measure to the policy we adopted of giving favourable terms to the public. This policy we shall pursue on future occasions, and we are confident that when we go to the public again, which we may have to do next year, we shall meet with an equally favourable response.

You will be pleased to know that since the beginning of the current financial year our volume of business shows a large increase over the corresponding period of last year. Without being unduly optimistic, I am hopeful that this increase should be maintained.

REMOVAL OF REGISTERED OFFICE TO BAKER STREET.

We have found it necessary to acquire considerably larger premises for our head office staff, in view of the development of our business. Our registered office will be shortly transferred to 72-82, Baker Street.

In conclusion, it gives me great pleasure once again to pay tribute to the enthusiasm and whole-hearted co-operation of the officers and staff.

Mr I. M. Sieff, B.Com. (vice-chairman and assistant managing director), seconded the resolution, which was carried unanimously.

The retiring director, Mr Norman Laski, was re-elected; Messrs Deloitte, Plender, Griffiths and Co., and Messrs Edwin Guthrie and Co. were reappointed auditors; and a resolution was passed authorising the capitalisation of £72,600 of the general reserve account to enable the distribution of bonus shares to the ordinary and "A" ordinary shareholders in the proportion of one "A" ordinary share for every ten ordinary and "A" ordinary shares held.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS AND STAFF.

Sir George May, K.B.E., in proposing a hearty vote of thanks to the chairman, directors and staff, congratulated them on the remarkable progress which had been made during the last four or five years, and referred to the great possibilities for the expansion of the business in the future.

Lord Ratendone seconded the vote, which was accorded with acclamation, and the chairman having made a brief acknowledgment, the proceedings terminated.

INCORPORATED ACCOUNTANTS.

SATISFACTORY FINANCIAL POSITION.

MR HENRY MORGAN ON RATIONALISATION.

In the course of his presidential speech at the forty-sixth annual general meeting held, on the 19th instant, at Incorporated Accountants' Hall, London, Mr Henry Morgan, F.S.A.A., said that the Society's accounts disclosed a satisfactory financial position. The surplus for 1930 was £1,675, which was £500 greater than for 1929.

A feature of the last twelve months, he said, has been the progress in the application to certain leading industries of the principle of rationalisation. Generally members of the accountancy profession regard it with misgivings on the grounds that it is unlikely to bring permanent advantage to our sorely depressed industries. Rationalisation eliminates individuality, destroys initiative, and stifles competition. Dissension and jealousy are frequently engendered amongst staffs and officials of the various rationalised concerns, and labour difficulties are increased by the closing down of factories and works and the consequent displacement of labour. The distrust of investors has been clearly evidenced by the result of a recent issue to the public in connection with one of the important rationalisation schemes, when the underwriters were left with no less than 96 per cent. of the issue.

The amalgamation of large numbers of companies and large combines has operated harshly as regards many members of the accountancy profession. The auditors of the constituent companies, who have generally contributed towards the creation or building up of the businesses, almost invariably receive a polite intimation that the board of the combine has decided that all the companies shall be audited by the same firm of accountants and requesting their resignation. As a result much audit and accountancy work previously distributed amongst a number of practising accountants is swept into the net of a few large firms. The situation is of serious import, not only to practising accountants generally, but especially to the large number of young men who are qualifying year by year. During the last three years, despite an examination system which rejects 50 per cent. of the candidates, the average number annually admitted to membership of the Institute and Society has been over 850, but the increase in practising members is relatively small. It is evident that the major part of the members qualified in more recent years is not entering into practice. This is rather striking when we consider the rapid increase in the scope and extent of the work of professional accountants. The opportunities for the young accountant to commence public practice are curtailed by the fact that so large a part of audit and accountancy work is concentrated in the hands of a few firms. Whilst we recognise the services that have been rendered by the founders and principals of some of these large firms in raising the British accountancy profession to its pre-eminent position, our code of professional ethics should involve the discontinuance of any action which operates harshly or unfairly upon fellow members. This applies especially to rationalisation or amalgamation schemes, whereby a number of companies are brought under one control. I can well understand the feelings of hardship and even some bitterness created in the mind of an accountant who has carried out his duties faithfully and efficiently for a long period of years when he loses what may be an audit of material consequence to a firm whose practice is of a magnitude beyond the comprehension of the average practitioner, and to whom the addition of a few audits must be relatively a matter of small importance. Cases such as these have been numerous within the last few years, and it is perhaps not surprising that one is frequently asked the question as to whether they are consistent with the etiquette that should be observed between members of a great profession, especially as it must be frequently within the power of the leading accountancy firms to set their faces against the displacement of auditors or accountants under circumstances such as I have indicated.

Referring to the intense world depression and collapse in prices, the president said that possibly the chief handicap under which our manufacturers suffer is the relatively high rates of wages. After the war, when we experienced an artificial state of prosperity and when the purchasing power of money was much less than it is at present, the standard of living amongst all classes of the community was appreciably raised. Leaders of labour exhibit an unwillingness to recognise that the standard of living must have some relation to the state of prosperity or otherwise of commerce and industry, and that rates of wages must be regulated according to those ruling in the countries with which we compete. Claims are being advanced for a reduction in working hours as a means of relieving unemployment, but this can only intensify the difficulty unless it is accompanied by a corresponding reduction in wages.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended May 16, 1931, amounted to £8,675,000 against ordinary expenditure of £9,123,800. After allocating £485,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £96,794, the week's operations, as shown below, increased the National Debt by £837,000 to £7,617,838,000:—

BULLION.

The following statistics of imports and exports of gold for week ended May 21, 1931, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	To—	From—	To—
Netherlands	25,000	Germany	23,100
France	126	France	14,556
Belgium	50,000	Switzerland	25,300
British S. Africa	1,115,709	Austria	19,480
Straits Settlements	47,990	British India	26,331
Hong Kong	2,553	Other Countries	987
New Zealand	39,133		
Total declared value of imports	1,281,501	Total declared value of exports	109,814

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931. ARRIVALS.		1931. WITHDRAWALS.	
May 15	May 15	May 15	May 15
Sovs. from abroad	50,000	Sovs. for export	4,000
Bars bought	5,240	Sovs. set aside	20,833
18 Sovs. from abroad	18,700	Sovs. for export	11,000
19 Sovs. from abroad	200,000	Sovs. for export	2,900
20 Bars bought	15,726	Sovs. for export	Nil
21 Bars bought	247		
Sovs. received	443,334		
Total	1,647,847	Total	37,833

Net arrivals, £1,610,014.

Messrs Samuel Montagu and Company write on May 20, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £148,976,873 on the 15th instant (as compared with £147,506,074 on the previous Wednesday), and represents an increase of £1,351,251 since December 31, 1930. In the open market yesterday £917,000 of bar gold from South Africa and £50,000 from the Straits Settlements was available. The price was fixed at 84s. 9½d. per fine ounce, at which about £45,000 was taken for India and the Home and Continental trade. The Bank of England secured about £895,000 at the statutory buying price. Movements of gold at the Bank of England during the week have resulted in a net influx of £1,190,441. Receipts totalled £1,230,023, of which £275,000 was in sovereigns (£200,000 South Africa, £50,000 Brazil, and £25,000 Netherlands), and £955,023 in bar gold. Withdrawals amounted to £39,582, of which £20,833 was in sovereigns "set aside" and £17,000 in sovereigns taken for export.

SILVER.

A weak tendency developed during the past week, and quotations have shown a substantial decline. Up to the 18th instant the fall had been gradual, prices sagging daily by small fractions until 12½d. for cash and 12½d. for two months' delivery were quoted, but yesterday rates fell more sharply, being fixed ½d. lower at 12½d. and 12½d. for the respective deliveries. To-day, sellers showing hesitation, there was a slight reaction to 12½d. and 12½d.

A weaker feeling seems to have pervaded the Eastern markets, and both the Indian Bazaars and China have been disposed to sell, in addition to which there have been offerings on Continental account with America also inclined to sell on most afternoons. The market, therefore, has found little support except for small covering purchases by bears, who, however, have in many cases preferred to extend their commitments. The undertone seems less promising at the moment, but the outlook is very uncertain, as it is difficult to attribute the cause of the rather sudden weakness. The following were the United Kingdom imports and exports of silver registered from mid-day on the 11th instant to mid-day on the 18th instant:—

IMPORTS.		EXPORTS.	
£	£	£	£
France	35,534	British India	90,235
U.S.A.	26,345	Other countries	12,368
Mexico	46,810		
Canada	12,345		
Other countries	17,065		
Total	£138,099	Total	£102,603

Gold coin and bullion in India	714	720	720
Securities (Indian Government)	...	...	...
Securities (British Government)	...	...	...

The stocks in Shanghai on the 16th instant consisted of about 84,000,000 ounces in sycee, 155,000,000 dollars and 3,720 silver bars, as compared with about 84,000,000 ounces in sycee, 154,000,000 dollars and 2,440 silver bars on the 9th instant.

We feel sure that all who are associated with the silver market will learn with interest of the retirement on the 1st of this month of Mr John F. Harman from the chairmanship of Messrs. Handy and Harman, of New York. We understand that Mr Harman, who is now eighty-seven years of age, has been actively engaged in the affairs of his firm for 64 years, and will still continue to act as a director.

NOTICES.

At the fifty-third annual general meeting of the Institute of Bankers, held at 5 Bishopsgate, E.C., on Wednesday, May 20th, Brigadier-General Arthur Maxwell, C.B., C.M.G., D.S.O., one of the managing partners of Messrs Glyn, Mills and Company, was elected president of the Institute for the coming year. The annual report for the year ended April 30, 1931, and accounts to December 31, 1930, were submitted and adopted. The result of the Prize Essay Competition on the subject, "The Financial Aspect of the Rationalisation of British Industries," was announced as follows: 1st prize, £30, Mr P. J. Fleming, Lloyds Bank, Ltd., Southampton; 2nd prize, £20, Mr A. D. Cozens, Lloyds Bank, Ltd., High Street, Canterbury.

The Standard Bank of South Africa, Ltd., announce that an agency has been opened in the University of Cape Town. An agency of the bank has also been established at Citrusdal, near Clanwilliam, in the Cape Province.

Company News.

REPORTS AND NOTICES.

GOVERNMENT, &c.

AUSTRIAN INTERNAL LOAN—Applications aggregating 228,000,000 schillings were received for the 7 per cent. Austrian Housing Loan, issued at 95 per cent. and redeemable at par within 40 years. As the issue only amounts to 150,000,000 schillings, the loan has been oversubscribed to the extent of 50 per cent. Nominally, it is an obligation of the Credit Institut für Oeffentliche Unternehmungen und Arbeiten, in which the Austrian Treasury holds the majority of shares, but in fact the Austrian Republic is liable for interest and redemption charges. The sum required for the promotion of house-building is about 240 to 250 million schillings, and the subscriptions received for the loan are not far short of this amount. However, 150,000,000 schillings only will be allocated to subscribers, but it is believed that later in the year the Government will authorise the issue of a second tranche of 90 to 100 million schillings to be offered for subscription abroad.

ESTONIA (REPUBLIC OF) (BANKING AND CURRENCY REFORM) 7 PER CENT. LOAN, 1927.—The service of this loan, together with the service of a small loan of £130,000 raised in 1926 under the Trade Facilities Act, has a first charge upon revenues derived from the excise duties on tobacco, beer, matches, &c. The yield on these assigned excise duties in 1928 was £271,776; 1929, £267,817; 1930, £253,344. Approximate cost of yearly service of 1927 loan, £114,000.

MISCELLANEOUS.

AKTIEBOLAGET SVENSKA KULLAGERFABRIKEN (SWEDISH BALL BEARING COMPANY).—The Board of Directors of the "S.K.F." has to-day published the results of the company's business for 1930 showing a net profit of Kr. 16,622,884.10, after deducting depreciation on buildings and machinery amounting to Kr. 3,723,275.19 and provision for taxes amounting to Kr. 2,800,000. The board at the same time announces its intention of proposing that of the above net profit Kr. 13,000,000 be distributed to the stockholders (amounting to 10 per cent. for the year), and that the remainder, Kr. 3,622,884.10, be transferred to undistributed profits, which will thereafter amount to Kr. 14,767,622.10.

THE BENGAL IRON COMPANY LIMITED.—The directors have issued a circular dated May 19, 1931, to holders of the 7 per cent. first debentures of the company as follows: The directors have had under consideration the serious position of trade, and also the political situation in India, and they have decided to ask the debenture holders to consent to two years' suspension of the sinking fund, the amount of which for 1931 would be £28,800, and for 1932 £30,800. They do this as a precautionary measure to conserve the resources of the company while passing through the difficult times now existing, for though the company has ample liquid resources both in cash and stocks for the purpose of its business, it is impossible to foresee how long the present depressed condition of trade will continue. Of the £1,000,000 of authorised and issued debentures £132,550 have already been redeemed out of profits. The directors trust that debenture holders will consider it in the best interests of the company that their proposal be accepted.

THE HOME AND COLONIAL STORES LIMITED.—The Directors of the Home and Colonial Stores, Ltd., announce that any shareholders in Lipton, Ltd., desiring to avail themselves of the offer to exchange their shares for shares in the Home and Colonial Stores, Ltd., must lodge the relative certificates and duly executed transfers at the offices of Lipton, Ltd., 179-189 City Road, London, E.C.1, on or before May 30, 1931, on which date the offer will be finally withdrawn. Notice will, in due course, be given by the Home and Colonial Stores, Ltd., of its intention to acquire, under the provisions of Section 155 of the Companies Act, any shares of Lipton, Ltd., which have not then been tendered for exchange.

THE MILLON AND ASKAM HEMATITE IRON COMPANY LIMITED.—The gross profit for 1930 amounted to £76,139. After deducting £9,303 for debenture stock interest and redemption fund, £5,000 reserve for income tax, £30,000 reserve for depreciation and directors' fees, a net profit of £26,030 is carried to the balance sheet. The preference dividend for the year ended September 30, 1930, absorbs £24,500, and the balance carried forward is £55,658, compared with £54,127 brought in from previous accounting period. Blast-furnace improvement account (£20,000) and general reserve (£130,000) remain unaltered. Depreciation reserve is increased by £30,000 at £67,500. The estimated loss of £50,014 on investment in and advances to the Camerton Coal and Firebrick Company, Ltd., is written off capital reserve, reducing that item to £403,972. Contingent liability (£15,000) (subsequently reduced) shows a reduction of £25,000. Works, plant and machinery have been maintained in an efficient condition out of revenue.

NATIONAL OMNIBUS AND TRANSPORT COMPANY LIMITED.—The net profit for 1930 amounted to £37,045, to which is added £38,099 brought forward, making £75,144 available. Preference dividend absorbed £24,081. The ordinary dividend of 8 per cent. per annum, less tax, absorbed £12,400. The carry forward is £38,663. The realisation account has increased by £143,640. It is proposed to amalgamate the general reserve of £15,000 with the realisation account, making total general reserve £258,640. Meeting at Fur Trade Sale Rooms of Hudson's Bay Company, Garlick Hill, E.C., May 27, 1931, at 2 p.m.

† Free of income tax.

* For half-year.

Mr John Herbert Fyfe and Mr Daniel Mackinnon Hamilton have been admitted as partners in the firm of Gray, Dawes and Company.

Sir Alfred Boit, Baronet, has joined the board of the Rhodesia Railways Limited.

Mr H. Leslie Boyce, M.P., has been elected a member of the Joint East African board.

The offices of the Secretary of the British Thread Mills, Ltd., are now at Eagle House, Friar Lane, Leicester.

The Broken Hill Proprietary Company, Ltd., announce that Sir W. Peter Rylands and Mr William Royse Lysaght have been elected members of the London board.

Sir Alexander Robertson Murray, C.B.E., a director of Lloyds Bank Ltd., has been elected to a seat on the board of the Bank of London and South America, Ltd.

On and after May 26th, the address of the Anglo-Czechoslovak and Prague Credit Bank will be at 48 Bishopsgate, E.C.2. Telephone No.: Avenue 2866 2870.

Consequent upon the death of Senor Don Fernando Guerrero, Sir Herbert Gibson, K.B.E., has been appointed chairman of the local committee of the Buenos Ayres Great Southern Railway Company, Ltd., in Argentina.

It is announced that Mr R. B. S. Castle, the manager of the Liverpool branch of the Royal Exchange Assurance, retired on pension on March 31st, after 37 years' service. To succeed Mr Castle the directors have appointed Mr A. W. O. Stubbs.

At a meeting held on April 16th, Mr J. W. Beaumont Pease, chairman of Lloyds Bank, Ltd., was elected chairman of the Committee of London Clearing Bankers and Sir Harry Goschen, Bart., K.B.E., chairman of National Provincial Bank, Ltd., was elected deputy-chairman for the ensuing year.

In view of the impending retirement of Mr Ernest C. Thomas, F.I.A., from the position of general manager and secretary of the Southern Life Association, the directors of the Association have appointed to succeed him in that position Mr John Miller Macfarlane, O.B.E., F.F.A., at present agency manager of the Scottish Amicable Life Assurance Society, Glasgow.

OIL OUTPUTS.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended May 9, 1931, was 215,000 barrels.

SERVICE PETROLEUM COMPANY, LTD.—Cable received from Roumanian manager states that the production from the company's oil wells at Gura-Ocnitzei, Moreni and Ceptura for the week ended 10th instant was 4,083 tons (28,581 barrels).

Commercial Reports.

MARKET SUMMARY.

Most commodity markets have experienced a further decline in prices. The general situation of the coal trade remains depressed, and the total output of saleable coal in Great Britain during April at 18.6 million tons shows a decline of 0.8 million tons as compared with the previous month. The iron and steel industries have been

OVER ONE HUNDRED YEARS OF SERVICE.

SCOTTISH UNION & NATIONAL INSURANCE COMPANY.

ASSETS EXCEED - £15,600,000

FIRE. LIFE. ACCIDENT. MARINE.

Edinburgh: 35, St. Andrew Square.

characterised by a slight reaction, and production in the tinplate industry has fallen to about 50 per cent. of capacity. Among non-ferrous metals, there has been a slight improvement in tin, following the decision of the Tin Producers' Committee to reduce the original quotas by 15.9 per cent. in order to adjust output to the low level of current consumption. Copper has weakened further, but lead and spelter have been steady. The outstanding feature in the textile raw material markets has been the sharp decline in cotton. The downward tendency in wool values has continued, but flax and jute remained unchanged. There has been no increase in the sales of finished cotton or wool goods, and the position in the rayon trade is also less satisfactory. Most foodstuffs, including wheat, have been cheaper. Among miscellaneous commodities, rubber has continued to advance, but vegetable oils and oilseeds have again declined.

THE COAL TRADE.

SHEFFIELD.—Prompt trade for best steams for import just about balances the supplies available, of which there is no excess. Apart from washed trebles, there is abundance of other classes of fuel. Best steams are firm at 17s. 6d. and 18s. f.o.b. There is a moderate inquiry for industrial fuel, but little new business has been forthcoming since prices were advanced. The house coal department is seasonably quiet, although prices are being maintained. Best ordinary quality is quoted at 22s. and 23s. at pits. The furnace coke branch is still extremely depressed, with prices weak at 11s. 6d. to 12s. at ovens.

GLASGOW.—Despite further curtailment of output, supplies remain ample for all requirements, and the general trend of values is weak. Collieries, however, are not disposed to entertain inquiries for business ahead at quotations now current—the labour outlook being still uncertain—and orders negotiated are mostly for small parcels for early delivery. An interesting development of the past few days has been the reaching of a new anthracite seam by the Manor-Powis Company at their colliery near Causewayhead, Stirling. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 9d.; splint best, 16s. 3d.—16s. 6d.; splint second, 14s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 14s.; trebles, 11s. 6d.; doubles, 10s. 3d.—10s. 6d.; singles, 9s.; pearls, 9s.; dross, 10s. FIFE.—Screened navigation, 16s. 6d.—17s. 6d.; first-class steam, 12s.; third-class steam, 10s. 6d.; trebles, 11s. 6d.—12s. 6d.; doubles, 10s.—10s. 6d.; singles, 9s.; pearls, 8s. 9d. LOTHIAN.—Prime steam, 11s. 3d.; secondary steam, 10s. 9d.; trebles, 12s.; doubles, 11s.; singles, 8s. 9d.; pearls, 8s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s.; trebles, 11s. 6d.; doubles, 11s.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s. 6d.

CARDIFF.—The state of business on the Cardiff coal market continues unsatisfactory. Shipments have been fairly well maintained on the basis of the recently reduced volume of about 400,000 tons per week, but new inquiries are scarce and a great deal of irregular working is feared after the Whitsun holidays. Stocks of smalls continue to accumulate at the pit heads, and the larger combines have been compelled to seek dumping grounds elsewhere. No actual figures are available giving the quantities of these stocks, but they are described as unprecedentedly large. Prices for practically all grades are ruling at the scheduled minimum figures, but it is anticipated that there will be a further substantial reduction in the authorised output quota for the third quarter of the year. The uncertainty concerning the hours of labour in the coal mines after July 8th next is a deterring influence, and a strong resolution on this subject has been addressed to the Government by the Council of the Cardiff Chamber of Commerce. The following are the current prices:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dross, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 9d. to 18s.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s.; coking smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 30s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 27s. 6d. to 31s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. 6d. to 23s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron continues inactive, and it is difficult to see any sign of early improvement. Trade is almost entirely confined to the requirements of local consumers, and they are only buying from hand to mouth. So far as can be ascertained, no extra business has been secured from Scotch consumers as a result of the recent offers of increased concessions made by local makers through their Scotch selling agency, and deliveries to that area show no expansion. Export orders coming to hand are only for small quantities for distant destinations, there being no chance of success on the near Continent at present.

prices. Notwithstanding the extremely unsatisfactory state of business, official prices were left unchanged at Tuesday's weekly market, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. Work at most local foundries will be suspended for the first two days of next week, but the interruption of deliveries of pig iron will only be slight. The position of hematite is somewhat better than that of Cleveland. More orders are coming to hand, but they are mostly for early delivery, buyers lacking confidence to buy far ahead. Now that prices have reached a lower level, it is expected that trade will gradually expand, especially as stocks at works on the Tees are being reduced. For early delivery mixed numbers are obtainable at 65s. per ton, but 6d. to 1s. more is asked for periods ahead. Shipments of all kinds of pig iron to 19th inst. total 6,142 tons, against 6,959 tons to same date in April. In the finished trades new orders come to hand very slowly which is causing grave concern in regard to future operations. Prices are generally unchanged. The ore market shows no change. There is no business passing to fix prices, but best Bilbao rubio for early delivery is nominally 15s. 6d. c.i.f., and the freight Bilbao/Middlesbrough for prompt loading is about 4s. 3d. Coke is still in abundant supply for early delivery, but there is very little demand. Producers quote 16s. delivered furnaces for good medium qualities, but would accept a trifle less for spot lots. The number of furnaces in operation in the district will be increased to 23 by the end of the week by the addition of two on hematite at Ayresome Iron Works, Middlesbrough, which were lighted up on Tuesday, and expect to be producing iron in a few days.

SHEFFIELD.—Business in iron and steel has been curtailed this week owing to preparations for the Whitsun holiday. Most of the large works intend to stop operations for a full week. Signs of improvement in the situation as a whole are still lacking, and the heavier departments report that work is still undergoing contraction. Orders continue to be on the oddment level. A number of enquiries are about, but few of them materialise. Railway companies are curtailing their requirements to the extremest limits consistent with safety. There was a reduction last week of 10s. per ton on basic steel billets, and 2s. 6d. per ton on foundry and forge iron. As was predicted, these concessions have failed to stimulate buying. Substantial orders continue to be received for rustless steel material, including some from abroad. Makers of special steels report a bad slump in foreign business. The market for ferro-alloys for steelmaking is almost stagnant as regards new business. The market for steel scrap has again receded, causing a further drop in values. Some of the hand tool branches are doing rather better than of late, but there is no life in cutlery and plate.

GLASGOW.—Business is still very quiet in the West of Scotland. Within the past few days several small orders for steel structures have been placed with local firms, amounting in all to a quite fair tonnage. Steelmakers and makers of semis are finding very little business, as also bar iron manufacturers. There are rather more enquiries on the market for large diameter tubes. Further orders have been placed during the week for thin black sheets for export, but the export trade in galvanized sheets shows no expansion. Home trade in both is quite satisfactory.

CARDIFF.—Business in the tinplate trade continues very inactive, and output are approximately equal to only 50 per cent. of capacity. The organization for the regulation of production and prices is in a state of disruption, and present intentions are to discontinue the pooling scheme as from the middle of next month. Quotations on the Swansea Metal Exchange on Tuesday further receded to 14s. 6d. to 15s. per basis box, compared with 14s. 9d. to 15s. the previous week, and 18s. 4½d. to 18s. 6d. in the corresponding week last year. Galvanized sheets are unchanged at £11 per ton, South Wales tinplate bars at £4 15s. 0d. to £5 per ton, and foreign bars at £3 15s. per ton. Shipments last week were larger than have recently been usual, totalling 105,424 boxes, compared with 83,894 boxes in the corresponding week last year.

OTHER METALS.

TIN.—The production quotas, introduced last March, have proved to be too high at the current rate of consumption, and when prices fell early this month to the lowest level for twenty-nine years, the International Tin Committee decided to hold a meeting, which took place at the Hague last Saturday. It was then decided to reduce the quotas by 15.9 per cent. or 20,000 tons per annum. The new quotas are expected to come into operation on June 1st. The announcement has only slightly strengthened the market as considerable time will have to elapse before the effects of the new scheme will be felt. Wednesday's official closing quotation for "standard cash," at £105 to £105 2s. 6d. per ton, compares with £104 10s. to £104 15s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 29,123 tons, show an increase of 507 tons on the week.

COPPER.—In the absence of any encouraging feature, copper declined further during the week. In order to bring the export price more in line with domestic quotations, which remain at 9.00 cents per lb., Copper Exporters, Inc., reduced their minimum price for "electrolytic" c.i.f. Continent, from 9.775 cents per lb. to 9.525 cents per lb. on May 16th, and to 9.275 cents per lb. on May 18th. Wednesday's quotation in London for "standard cash," at £38 13s. 9d. to £38 16s. 3d., compares with £38 18s. 9d. to £39 on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 13,090 tons, show an increase of 1,232 tons, while stocks of rough copper, at 1,347 tons, were 75 tons larger.

LEAD.—The market in lead has been quiet, and New York spot prices remained unchanged at 3.75 cents per lb. London prices

show a slight improvement on last week, and Wednesday's official closing quotation for "soft foreign," at £11 11s. 3d. to £11 16s. 3d., compares with £11 17s. 6d. to £11 13s. 9d. on the corresponding day last week.

SPELTER.—Spelter has been quiet, but there was no further decline in prices. Wednesday's official closing quotation in London for "good ordinary brands," at £10 7s. 6d. to £10 15s., compares with £10 5s. to £10 16s. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Antimony has declined from £24 to £24 10s. per ton for "foreign," but aluminium was again quoted at £85 per ton, while nickel sold at last week's price of £170 to £175 per ton. Quicksilver remained unchanged at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—**Liverpool.**—The markets have shown weakness in sympathy with the fall in the securities markets and more favourable weather news from the cotton belt. Spot sales for the week 14th to 20th (inclusive) are 45,000 bales, of which 15,150 are American, 1,500 Brazilian, 350 Argentine, 3,000 Peruvian, 3,750 Egyptian, 1,000 African, 1,050 East Indian, 18,950 Russian, and 250 sundries. Imports for the same period are 32,897 bales, of which 19,620 bales are American, 1,425 Brazil, 491 Argentine, 310 Peru, 6,269 Egyptian, 3,031 East Indian and 1,751 sundries. Quotations, May 20th: American Middling, 5.00; Egyptian F. G. F. Sakel, 8.05; F. G. F. Uppers, 6.03; Brazil Fair, 5.06; Peru G. F. Smooth, 5.46; West African Middling, 5.06; and East African G. F., 6.06.

Manchester.—The further decline in raw material rates has thoroughly disorganised trade throughout the market and owing to the fear of still lower values buyers have been decidedly cautious. There are some signs, however, of more activity if prices can be stabilised at round the present level. Some advices from India are slightly better. A few more cables have been received making offers for bleaching and printing styles, chiefly for Bombay and Karachi. It is reported, however, that picketing in the up-country districts is very pronounced. Trade improvement for China has been checked by the fall in silver, but some merchants have been asked to cable prices abroad on a freer scale and scattered transactions have occurred in bleached shirtings and fancies. Very little has been done for Egypt and the Near East. Finishing cloths continue to attract a fair amount of attention for South America and the West Coast of Africa. From day to day useful orders have been booked in home trade fabrics. Reports from most weaving districts are worse and there are indications of more machinery stopping. Very irregular conditions have prevailed in the yarn market. Only restricted purchases have taken place in American and Egyptian counts for home use and export.

THE WOOL TRADE.—**Bradford.**—The closing days of the last London sales did not leave any very marked impression upon values. Certainly there was no recovery in crossbreds, and the best that can be said about merinos is that some broadening of competition imparted a healthier tone. Second-hand wools had previously been withdrawn rather freely during the first two weeks, and some owners who put up their wools a second time did not lose anything by the experiment. Values for all descriptions of the raw material are quite reasonable, writes our correspondent, the real trouble being lack of consumption. Judging from the quantity of wool held over in London at the end of the series, there will be plenty to supply all requirements when the July series commences—that is including the further supplies which will have become available by that date. The total quantity sold was approximately 115,000 bales, the home trade taking 53,000 bales, the Continent 61,500 bales, and the United States 1,000 bales. Including about 58,000 bales not offered, the weight carried forward is 72,000 bales. Neither the home trade nor the Continent has operated as heavily this time as at the second series, but given anything like satisfactory developments and the subsidence of present disturbance on the Continent, both sections should be ready to take substantial weights at the end of another six weeks. The wool transferred from Australia to this country last March will probably be as difficult as anything to shift at a profit. The Bradford market is quiet. Very little new business is being done in either merino or crossbred tops, but prices are just about steady. Spinners are still making low bids in the hope of finding a weak seller, but for standard makes of good warp 64's 24½d. is wanted. Reports of Russian operations in crossbred wool have been circulated in Bradford. It would be incorrect to say that there has been no buying at all on Russian account, but the absence of any improvement in crossbred tops is alone plain proof that there have been no big sales.

THE GRAIN MARKETS.

WHEAT.—Climatic conditions have recently been unfavourable to field work in this country, and the winter wheat crop is still backward. Supplies of home-grown wheat are scarce, and higher prices, have, therefore, been realised last week. The outstanding event in the international situation is the International Wheat Conference, which opened on Monday in London on the invitation of the Canadian Government. The purpose of the Conference, at which eleven exporting countries are represented, is the discussion of "the abnormal situation which has arisen and is forcing those engaged in the agricultural industry to sell their wheat below the cost of production." Mr G. H. Ferguson, High Commissioner for Canada, in opening the Conference in his capacity as President, stated that the problem may be dealt with under two headings: (1) The disposition of present accumulated stocks in various countries; (2) improved methods for handling and distributing the wheat surplus of the future. At a plenary meeting on Tuesday, Mr S. McKelvie, a member of the Federal Farm Board, said that they saw no possibility of a satisfactory solution of the world wheat problem which did not include, as the most important single element, curtailment of production in exporting countries, individually and as a whole, until a better adjustment between supply and disposition could be effected, and restraint upon fresh expansion of production thereafter. Meanwhile, reports of the favourable condition of the United States winter wheat crop, coupled with a temporary decline in Continental imports, caused a slight setback in prices. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 28s. per 496 lb., as compared with 28s. 9d. a week ago; No. 2, Northern Manitoba, Atlantic, ex ship, 27s., against 28s.; Rosafé, ex ship, 23s. 6d., against 23s. 9d.; Australian, ex ship, 26s. to 26s. 9d., against 26s. to 26s. 9d.; and Russian, on sample, ex ship, 22s. 6d. to 24s.

WHEAT FLOUR.—The demand for home-milled flour has been steady and prices remain unchanged, but imported flour remains neglected. Quotations: Straight run, delivered country, 24s. 6d. per sack of 280 lb., as compared with 24s. 6d. last week; delivered London, 23s. 6d., against 23s. 6d. Manitoba patents, ex store, 21s. 9d. to 25s., against 22s. to 25s.; and Australian, ex store, 19s. 3d. to 20s., against 19s. to 20s. a week ago.

BARLEY.—Requirements of barley for feeding purposes have been quiet, and prices have been slightly lower, but other varieties remained steady. Quotations: "English malting," f.o.r., at 30s. to 35s. per 48 lb., remained unchanged. Californian sold at from 33s. to 3s., as compared with 33s. to 43s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—Owing to their limited supply, native oats advanced further; this led to a slight expansion in the demand for foreign oats. Quotations: "River Plate," landed, 13s. 3d. per 320 lbs., as compared with 13s. 3d. last week; "River Plate," ex ship, 12s. 3d., against 12s. 3d.; "Chilean Tawny," landed, 13s. 9d., against 13s. 9d.; and North Russian on sample, landed, 18s. 6d., against 18s. 6d. a week ago. English white remained unchanged at 19s. to 20s.

MAIZE.—The demand for maize has been quiet, but there was little change in quotations. Quotations: "Plate," landed, 21s. 3d. per 480 lbs., as compared with 21s. 3d. last week; Plate, ex ship, 17s. to 17s. 3d., as against 17s. to 17s. 3d.; Plate, May-June, new, 16s. 6d., as against 16s. 6d. Yellow maize meal, ex wharf, was quoted at £5 15s., as against £5 15s. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to May 16	Owts. 122,997	Owts. 130,531	Owts. 88,053	Owts. 251,856
37 weeks to May 16	4,264,347	8,448,116	8,962,183	9,516,590
Average price of English wheat per cwt.	s. d. 5 8	s. d. 8 9	s. d. 10 0	s. d. 11 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
May 9, 1931.....	Owts. 101,987	Owts. 19,080	Owts. 29,051	s. d. 5 7	s. d. 6 9	s. d. 6 5
May 16, 1931.....	122,997	12,260	25,505	5 8	6 9	6 8
May 14, 1927.....	162,543	27,134	59,907	12 0	11 2	9 4
May 19, 1928.....	251,856	25,855	25,228	11 3	11 0	12 11
May 18, 1929.....	88,053	17,386	18,407	10 0	10 4	9 9
May 17, 1930.....	130,531	46,234	20,428	8 9	7 9	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	May 21, 1930.	Jan. 2, 1931.	May 6, 1931.	May 13, 1931.	May 20, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	144½	107½	56½	62½	62½	60½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	103½	79½	82½	82½	82½

The visible supply of wheat in Canada, at 51,955,000 bushels, shows a decrease on the week of 3,979,000 bushels. Supplies a year ago stood at 66,306,000 bushels.

OTHER FOODS.

SUGAR.—Although the level of prices is still exceedingly low, the signing of the International Sugar Convention has imparted confidence in the sugar position. In New York, Cuban centrifugals, 96 deg., spot, advanced a further 0.02 cent to 3.20 cents per lb. There was no change in the quotations for British refined sugar, but new futures in London have been slightly easier. Wednesday's sales included "August delivery," at 6s. 2½d. to 6s. 3½d., as against 6s. 3½d. to 6s. 4½d. on the corresponding day last week; December, at 6s. 6½d. to 6s. 6½d., as against 6s. 7d. to 6s. 8d.; and March, 1932, at 6s. 9d., as against 6s. 10d. to 6s. 10½d. a week ago. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931. Tons.	1930. Tons.	1931. Tons.	1930. Tons.	1931. Tons.	1930. Tons.
London	244	502	1,283	1,221	28,793	37,125
Liverpool	14,342	15,440	12,553	13,525	79,922	96,257
Total	14,586	15,942	13,836	14,746	108,715	133,382
Last week	22,744	14,909	14,325	17,178	107,965	132,186

COFFEE.—The prices realised at this week's auctions were generally lower than last week, and only finest qualities were in good demand. Last week's movements of coffee in London were as follows: Brazilian, landed, 133 bags; delivered for home consumption, 316 bags; exported, nil; stocks, 2,839 bags, against 5,948 bags last year. Central American, landed, 5,881 packages; delivered for home consumption, 4,053; exported, 2,508; stocks, 127,763 packages, against 114,909 a year ago. Other kinds, landed, 4,601 packages; delivered for home consumption, 3,407; exported, 3,996; stocks, 104,568 packages, against 133,450 a year ago.

COCOA.—After a considerable decline during the last few weeks, the downward movement in prices seems to have been arrested and Wednesday's quotation for Accra, fair fermented, May-June, remained unchanged at 18s. 9d. per cwt., f.o.b., London contract. Last week's movements of cocoa in London were as follows: Landed, 6,344 bags; delivered for home consumption, 3,088 bags; exported, 180; stocks, 224,502 bags, against 195,151 last year.

TEA.—The quantities catalogued for this week's auctions comprised 48,710 packages of Indian, 30,887 packages of Ceylon, and 11,568 packages of Java and Sumatra tea. The recent improvement in tea prices has been maintained, and there was a good demand for common and fine teas, but medium qualities were neglected. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mining Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
May 15, 1930....	1 2-81	1 6-47	1 7-95	0 11-13	1 0-30	0 11-24	1 4-01						1 4-01
April 30, 1931....	0 11-12	1 3-24	1 6-53	0 6-76	0 7-16	0 5-81	1 0-93						1 0-93
May 7, 1931....	0 10-62	1 2-87	1 5-41	0 7-06	0 8-14	0 5-92	1 0-84						1 0-84
May 14, 1931....	0 10-26	1 4-61	1 4-63	0 6-99	0 7-49	0 5-95	0 11-88						0 11-88

RICE.—A further improvement has become noticeable in the market for rice. Wednesday's quotation for Burma No. 2, cleaned, May-June, in singles to the Continent, and to the United Kingdom, at 7s. 4½d. per cwt., shows a rise of 3d. on the week. Movements in London during the past week were as follows: Landed, 34 tons; delivered, 29 tons; stocks, 572 tons, as against 2,589 last year.

POTATOES.—Supplies at the Borough Market were again rather heavy, with the result that no recovery took place in prices, and "Best King Edward" again sold at £9 to £9 10s. per ton.

SPICES.—There has been no further decline in pepper prices, but the market remained quiet. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows no change as compared with that of last week.

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low. Bonuses high, and policies, as before the largest British Mutual Life Office, world-wide. Assets £83,000,000. Annual Income £11,800,000. Full particulars on application.

MEAT.—A considerable advance in beef and pork prices was the feature at the Smithfield Market during the week. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. to 4s. 8d. per 8 lbs., against 3s. 10d. to 4s. 2d. on the corresponding day last week, while New Zealand frozen mutton again realised 2s. 10d. to 3s. 6d. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,918 tons, as compared with 9,234 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.6 per cent. of the supplies, as against 82.8 per cent. a year ago; and imported mutton, mainly New Zealand, formed 85.9 per cent. of the total supply, as against 83.5 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally have an easy tone and values show some reaction in the absence of effective demand. Linseed is quiet and neglected, crushers both here and on the Continent being out of the market despite lower prices in sympathy with Argentina. Plate for May and June shipments declined to £8 5s., but later improved to £8 10s., distant positions being at a small progressive premium. For September shipment to Hull £8 10s. was conceded early in the week. Calcutta to London, May-June, is nominally £10 5s. Large arrivals have reduced the quantity of linseed afloat to Europe to 129,000 tons, or 36,300 tons less than last week and comparing with 121,100 tons a year ago. Linseed oil is in poor trade demand and with Continental oil offering at competitive figures prices have declined sharply. Raw oil on spot at Hull has fallen to £15 10s., and May to August delivery to £15. Cotton oil is quiet and neglected. Crude Egyptian ex Hull mill offers at £18, crude Bombay £17 10s., and common edible at £20 10s. Oilcakes and meals are in only moderate demand at unchanged prices.

HIDE, LEATHER AND ALLIED TRADES.—Cattle hides showed a steeper tendency at the auctions held in Manchester this week, all ox and heifers selling at the previous week's figures. Cows were again a weaker market, reductions of 1/4d. per lb. being recorded

on all weights. Bulls were unchanged in value, as was also the case with calfskins. The market for sheepskins remains weak in face of a poor demand. Although business in regard to imported hides is chiefly confined to small sales, there is a brighter tone in some quarters and rather more strength in quotations. In the South American market the continual buying on account of United States tanners has kept prices at a fairly steady level, Argentine ox now being quoted at 5 1/2d., with light ox selling at a fraction over 4 1/2d., and Uruguay ox at 5 1/2d. Very little business has transpired in regard to dry River Plates, but small sales have been made of B. A. Americanos at 6s., and Inservibles at 3 1/2d. The position of the market for Cape hides shows practically no improvement. Australian hides are a quiet market. Turnover in regard to sole leather has not been at all satisfactory, and, generally speaking, sales have been for lesser quantities than during the past fortnight or so. Dry hide bends for manufacturing purposes have been inquired for and a fair amount of business, all things considered, has been done in the lighter weights. In the upper leather section a fair business has been done in most classes, the chief call being in connection with glacé kid and willow calf.

RUBBER.—The appointment by the Dutch Colonial Secretary of a committee to consider means of improving the situation of rubber growers in the Dutch East Indies, which has given rise to the hope that the Dutch Government may eventually consider the control of output, caused a sharp rise in prices at the end of last week. Wednesday's official closing price for standard ribbed smoked sheet, at 3 1/2d. per lb., shows an advance of 1/4d. as compared with the corresponding day last week. Forward positions were also firmer. Business has been done at 3 1/2d. to 3 3/4d. for June, against 3 1/4d. last week; at 3 1/2d. for July-September, against 3 1/4d. to 3 1/2d.; at 3 1/2d. to 3 3/4d. for October-December, against 3 1/4d. to 3 1/2d.; and at 3 1/2d. to 3 3/4d. for January-March, 1932, against 3 1/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,875 tons; delivered, 2,196 tons; stocks at the end of last week, at 140,207 tons, show an increase of 679 tons, as compared with the preceding week.

THE MONEY MARKET.

DULL conditions have prevailed since the holidays, and business has been very limited. On Wednesday, old money was quoted at 1 1/4 per cent., while 2 per cent. had to be paid for new money, but the following day 2 per cent. was quoted all round. Immediately before Whitsun there was a tendency for discount rates to fall below 2 per cent. Last Friday's Treasury bills were, in fact, allotted at an average rate of £1 19s. 11.95d. per cent.

and this rate was recorded in the absence of keen competition, as applications for the £35,000,000 of bills offered only amounted to £42,350,000. Since then rates have been inclined to harden. On Wednesday three months' bills were quoted at $2\frac{1}{2}$ per cent., while the following day 2 per cent. was a common figure.

The hardening tendency of discount rates was generally ascribed to adverse foreign exchange movements, for the New York, Paris, Amsterdam and Swiss rates have all moved this week against sterling. The movements were in no case large enough to cause any real anxiety, and it is noticeable that this week the premium upon three months' forward francs has narrowed from 32 to 23 centimes. The new rate is equivalent to a cost of covering French short-money investments in London amounting to only $\frac{3}{4}$ per cent. per annum, against one per cent. the previous week, and so a 2 per cent. market rate in London has for the moment ceased to be quite as essential as it was. In fact, market rate could now probably fall to $1\frac{1}{2}$ per cent. without any serious danger of French withdrawals arising.

On the other hand, so long as the clearing banks continue to charge 2 per cent. for their loans, it is difficult to see how market rate can remain as low even as its present level of 2 per cent. It is true that in these days, especially when money is unusually abundant, bill-brokers must be able to obtain a fair quantity of their funds from outside sources. Against this, competition from the gilt-edged market must be reckoned with, and in any case the money market is normally accustomed to rely upon the clearing banks for the bulk of its funds. Taking every factor into account, there is reason to believe that at present bill-brokers are having to work upon an adverse margin between the average cost of their loans from all sources and the average earnings on their bills. The return on their holdings of short-term Government securities helps to redress the balance, and in any case bill-brokers cannot grumble, after their previous post-war experience, if they have to pass through a lean period. Still, this does not suggest that a 2 per cent. market rate possesses any great permanence.

	Mar 7, 1931.	Mar 14, 1931.	Mar 21, 1931.	Mar 28, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	2½%	2½%	2½%	3 (May 14, '31)
Banks' Deposit Rate..	1	1	1	1	1½ (May 1, '30)
Discount (Call)	1	1	1	1	1½ (May 1, '30)
Houses' Notice ...	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months bills)	2½	2½	2-2½	2	...

The foreign situation must also be taken into account, for the recent weakness of the mark, the Credit-Anstalt difficulties, and the hints of a possible reparations moratorium all show that there is a general atmosphere of unsettlement on the Continent. The Credit-Anstalt position is dealt with fully on a subsequent page, where it is pointed out that London houses are unlikely to do anything to add to the difficulties of the situation. Still, as the French banking difficulties of last autumn showed, any untoward development is likely to cause unexpected movements of funds, and to make money tighter all round. This makes it extraordinarily difficult to forecast the outlook for the discount market, and possibly bill-brokers would be well advised not to try and take at present too long or definite a view.

Suggestions of a 2 per cent. Bank rate are still to be heard, and no doubt the fact that it would facilitate conversion operations is being given due weight. Again, the decline in the premium on forward francs is removing one powerful objection to a further reduction. The considerations, however, advanced in the previous paragraph, apply with still greater force to the question of a lower Bank rate than they do to the course of market discount rates. So here again all that can be said at present is that the situation must be watched with the utmost circumspection, and that if the reduction does come, it will come

without the slightest warning. In one sense, it is to be hoped that it will come, for its advent might mean that the difficulties on the Continent are on the way to their solution.

This week's Bank return mainly reflects the Whitsun withdrawals of currency and the continuation of preparations for the War Loan dividend. The note circulation has expanded by £3,319,000, and allowing for the week's gold acquisitions of £872,000, the reserve is lower by £2,447,000. Public deposits are higher by £2,483,000, but against this Government securities have expanded by £2,926,000. An increase in discounts and advances almost exactly offsets a contraction in other securities, the movement being just under a million in each case. Bankers' deposits have fallen by £1,873,000 to £54,761,000. Under normal conditions this last figure is low enough to cause some stringency, and so the easy conditions now prevailing are evidence of the lack of demand for funds and of the inactivity of the money market.

Money remains cheap and plentiful in New York, and while the inside call rate remains at $1\frac{1}{4}$ per cent., money has at times been freely offered "outside" at 1 per cent. Brokers' loans, according to last week's return, have fallen to a new low record of \$1,631,000,000. New York banks have reduced their rates for foreign and commercial demand deposits to as low as $\frac{1}{4}$ per cent., while the rates paid on time deposits of these classes have been lowered from 2 to $1\frac{1}{4}$ per cent. Banks throughout the country are now reducing their deposit rates. The San Francisco Reserve Bank has lowered its rediscount rate from 3 to $2\frac{1}{4}$ per cent.

The Foreign Exchange market was fairly active in spite of the intervention of Whitsuntide, and fluctuations were numerous and in some cases wide. The dollar fell away at one time to below 4.86½, but closed at 4.86½, a loss by sterling of $\frac{1}{4}$ on the week. Montreal improved fractionally to 4.86½. The franc improved by nine points to 124.27, after touching 124.24. Brussels was better at 34.92, but the lira lost two points at 92.94. The peseta was again very erratic and touched new low levels at 52.50, against 48.30 last week. Amsterdam moved against us from 12.10½ to 12.09½. Berlin was weak throughout, and fell away from 24.42½ to 20.47½. Swiss francs improved sharply from 25.22½ to 25.16½. Of the Scandinavian exchanges, Stockholm was better by $\frac{1}{4}$ at 18.14½. Oslo lost $\frac{1}{4}$ at 18.16½ and Copenhagen gained $\frac{1}{4}$ at 18.16½. The South American currencies were again erratic and weak, Rio losing $\frac{1}{4}$ d. on balance at 3½½d., Buenos Aires declining from 34½d. to 33½d., and Montevideo from 29½d. to 27½d. In the Far East the rupee was weaker and lost $\frac{1}{4}$ d. at 1s. 5½½d. The yen was unchanged at 2s. 0½½d. Batavia improved from 12.12 to 12.10½. In the forward market, dollars were unchanged at $\frac{1}{2}$ cent and $\frac{3}{4}$ cent premium. Paris was more on offer at reduced premium quotations of 10 and 23 centimes, as was Brussels at $\frac{1}{2}$ cent and 3 cents premium for one and three months respectively. The discount on forward Milan widened by a point for each quotation to 7 and 23 centesimi. Madrid was weaker at 2 and 15 centimos premium. Amsterdam was firmer at $\frac{1}{4}$ cent and $1\frac{1}{4}$ cents premium. Berlin was better at $2\frac{1}{2}$ pfennig and $1\frac{1}{2}$ pfennigs discount, against $1\frac{1}{4}$ and $2\frac{1}{4}$ pfennigs discount last week. Switzerland fell away fractionally to $1\frac{1}{4}$ centimes and $3\frac{1}{4}$ centimes premium. As a result of Chinese and Indian selling, silver fell by $\frac{1}{4}$ d. for both cash and forward to 12½d. and 12½d. respectively. The China silver exchanges weakened in sympathy, Hong Kong losing $\frac{1}{4}$ d. at 11½d. and Shanghai $\frac{1}{4}$ d. at 1s. 2½d.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity. Included in our Supplement this month is a table showing stocks, output and prices of leading commodities.

THE WAGES PROBLEM.

WAGE negotiations are pending in a number of important British industries, among them engineering, shipbuilding and docks, and it is clear that this summer will bring to the forefront the main question, which a long-continued depression in trade was bound to raise, whether a widespread reduction in wage-levels has or has not become essential. Apart from the exceptional case of the coal mines and trades such as the iron and steel trade, where wages are based on a sliding scale, and the recent moderate scaling down of wages on the railways, the average level of nominal wages in organised branches of British industry has shown no appreciable change during the past seven years; but as the cost of living has steadily declined during these years, real wages have risen to an appreciable extent. The question is whether that level, which is the highest for those in employment that has ever been experienced in this country, can be maintained in the face of the last eighteen months' catastrophic decline in the prices of primary commodities and the consequent contraction in the purchasing power of many of the customers on whom our export trades rely.

The question, of course, is not by any means confined to this country. Important wage reductions have already been made in Germany, while in the United States the concerted attempt to prevent any wage reductions that was initiated by Mr Hoover after the stock market crash of 1929 has apparently broken down. Very many wage reductions have in fact been made with the consent of the local unions, and many more are under discussion. But the American Federation of Labour has now declared its intention of definitely resisting further cuts. The President of the Federation has just issued a statement pointing out that, though the prices of many commodities have fallen heavily, the reduction in retail prices and the cost of living generally is probably not more than 6 or 7 per cent., and that therefore large wage reductions can only be carried out at the expense of the worker's standard of living. But in the United States, even more than in this country, the industrial sections of the population are close up against the agricultural sections whose purchasing power has been very drastically diminished, and with six millions unemployed and a considerable number partly employed it is not surprising that, though there has been no general cutting of wage rates, the pay rolls of industrial concerns show a very rapid and substantial fall.

In this country, so far as the trade union leaders have declared themselves, they have adopted the same point of view as the American Federation. At the People's Congress, for example, held at Manchester a week or two ago, and attended by delegates from trade union, Labour and co-operative organisations, Mr Ernest Bevin, the dockers' leader, committed himself to a definite defence of the inelastic rigidity of British wages as an effective weapon whereby "the system" could be forced to adapt itself to the requirements of trade unionists. Unless trade unionists made the most stubborn resistance to the employers' proposals, he saw no logical end to the process of wage reductions other than a lowering of the workers' standard of living to what he described as the "coolie level"; and he made much of the argument that every time wages fell the commodity value of indebtedness to bondholders went up. Thus, he said, "resistance to wage reductions stands for a bigger philosophy than for the maintenance of a penny or two of present rates."

If this point of view, which after all is a natural reaction of wage-earners to any suggestion of wage reduction, is to be taken literally, it would imply that no wage reductions will be made in this country without serious conflict. We may, however, venture to doubt whether this is what, in fact, will happen, for it is natural to suppose that to some extent this declaration is a manœuvre for position, and that few, if any, of the forthcoming wage negotiations will be carried out on general principles. On the contrary, what is likely to happen is that the discussion in each industry will be based upon the capacity of that trade to pay present wages, and that the bargainers on the trade

union side will pay attention, as they have always done in this country, to the turnover of trade, to profits and the ability of the industry to employ at current rates. The trades in which demands for wage cuts are being made are naturally those in which competition is keenest, and the wage-earners, no less than the employers, are naturally anxious to avoid a drastic curtailment of employment. When the time comes to make a deal, the leaders will be able to justify part, at all events, of any concessions they may have to make by the fall in the cost of living to which we have already referred. Throughout industry generally, but particularly in the competitive trades, it is clear that the variations of employment would be considerably less if there were greater flexibility of wages and a more ready means of adjusting them to the state of trade. It is very much to be hoped that in the forthcoming negotiations, wherever conditions are appropriate, some system should be designed analogous to that obtaining in the iron and steel industry. In that trade the flexible system of wages adopted has maintained industrial peace and done something to enable employers to meet acute periods of competition. Unfortunately, the still unorganised character of dock labour makes it impossible to contemplate the adoption of such a system in that branch of the transport industry.

Unfortunately, any changes that may take place in these competitive trades will throw into greater relief the other great problem of British wages, namely, the discrepancy between "sheltered" and "unsheltered" trades, and this growing discrepancy will inevitably raise the question whether it is necessary to face a general scaling down of wages. We are certainly not among those who consider that the wage level of Great Britain is unduly high or one that it is quite impossible for her to maintain in normal circumstances. Indeed, the level of real wages is the test of a country's economic prosperity. An analysis of the facts shows that between 1924 and 1929, in spite of the difficulties attendant upon the return to the gold standard, and the prolonged mining dispute of 1926, the volume of employment in Great Britain kept pace with the increase in the adult population; while the productivity of the country increased a little faster, and, as we have already indicated, real wages slowly rose. During that period the continuing abnormal unemployment was mainly concentrated in a few export industries, and it is not too much to hope that, but for the intervention of the world depression, we should gradually have absorbed into other industries the surplus workers in the contracting trades. The slump of last year has produced a setback to this steady progress.

It is not, of course, practical to assume that the wage system of the country as a whole can swing backwards and forwards with the state of trade. The question to be decided is whether the present situation is such as to call for a general revision of the wage level. The answer to this question depends upon what view is taken of the economic situation. Briefly, three views are possible. The first is that owing to the economic decadence of Britain (of which, however, the progress of recent years affords no evidence), the threat of Russia to the whole of Western civilisation, the lessened opportunities for a great trading nation like Great Britain in a world of highly nationalist economic units, we must be prepared for a continuous decline in our trade, involving a steady fall in the British standard of living, or a great emigration of our population. The second view, to which Dr. Sprague recently gave some currency, is that there is no hope of reconciling the divergence between agricultural and manufacturing prices except by lowering the latter to the level attained by raw produce. Such adjustment would necessarily affect the earnings of the industrial population all over the world. The process would be long and must affect all commodities, but when it had been carried out production and exchange would go on as before. If either of these two views is correct, we must make preparations to bring about as smoothly and as harmoniously as possible a general fall in the level of wages. But if we do this,

we must take heed to Mr Bevin's demand that sacrifice must not be confined to the wage-earner, which is indeed unanswerable. Income reduction cannot be demanded for one section of the population only; the corollary to general wage reductions is a cut in all salaries and earnings of all kinds, including the return to the *rentier*, for it is inconceivable that any such general movement would be accepted if the holders of fixed-interest securities are to be immune from the general scaling down. This is, in fact, precisely the position which Australia is facing to-day. If prices all over the world are to be adjusted in the way that Dr. Sprague suggests, the only method by which we in this country could escape from the consequences entailed would be by cutting our monetary system adrift from gold—a step which would sacrifice our international commercial interests and prejudice the great volume of employment which depends upon them. Happily, however, there is a third possibility. It is that, under the influence of cheap money, with the elimination of the political difficulties that beset the international scene, and with the removal of arbitrary and foolish obstacles to trade, we may once more see a re-emergence of buying power, a resumption of the normal flow of capital, and a recovery of prices which will help the sorely distressed agricultural countries of the world. If this happens, we have no need to fear a prolonged or permanent reduction of the standard of living, and we may expect to see the price level re-established on a basis that may render unnecessary a nation-wide revision of salaries and wages.

We may not know for some little while which of these three will prove to be the correct view. In the meanwhile there are three points which should be borne in mind, and three steps to be taken. The first is that in the competitive trades every endeavour should be made to introduce automatic methods of wage adjustment according to the ability of the industry to pay—adjustments which, of course, must work upwards when trade is good as well as working downwards when trade is bad. Secondly, that the disparities between sheltered and unsheltered trades should, in notorious cases, be adjusted so as to remove an element of inequity from the wage system; and, thirdly, that the cost-of-living index should be overhauled and put on a basis which commands the confidence of the workers, in order that, if it is clear that the cost of living has fallen by a definite amount, wage adjustments should be readily and automatically accepted.

THE PHYSICIANS OF EUROPE.

THE League has once more amply justified its existence. The Austro-German customs union question was duly referred to the World Court, and thus removed for the moment from the arena of immediate controversy. But the delegates assembled at Geneva went further and made an attempt to deal constructively with the economic difficulties of the day. A convention providing for the creation of an International Agricultural Mortgage Company was signed by sixteen States, with other adhesions, including, possibly, that of Great Britain, in prospect. For the rest the European Committee did the only thing it well could do in the limited time at its disposal—selected a number of questions ripe for immediate examination and referred them to committees which will meet more or less simultaneously in the month of June. These various activities are enumerated by our Geneva correspondent in a later column. On their respective merits and on that of others that might be mentioned, much could be said—and there will be other opportunities of saying it. What is in some respects more important at this particular moment is the spirit in which the discussions at Geneva were conducted, the motives that prompted the suggestions made in different quarters, and the net effect on the political situation of Europe. These questions are the more relevant in that, though the meetings of the European Committee were devoted almost wholly to economic matters, the members of the committee were, with one or two unimportant exceptions, not Ministers of Commerce but Foreign Ministers. The points of view of the individuals holding those respective positions in a particular Cabinet do not always coincide, and before the sequels to the Geneva talks of ten days

ago work themselves out, the Boards of Trade and Ministries of Commerce will have their observations to offer on the general directives their colleagues of the Foreign Offices have given.

What lay behind those directives is clear enough. There weighed upon the European Committee, which M. Briand had brought into being, and over which he presided with a personal authority undiminished by his defeat in the presidential election, an oppressive sense of the economic distresses of Europe, and their convictions on that point were brought to a very definite head by the Austro-German customs negotiations. The question of the actual legality of the proposed customs union was sent safely off to the Court at the earliest possible moment, but it will come back from the Court some day, and it was necessary to be ready with some larger scheme of European economic reconstruction in which the Austro-German plan might be discreetly merged if the Court should pronounce it legal, or which might be accepted by Germany and Austria as a not inadequate alleviation of their sufferings in the event of the opposite verdict being returned. Austria, in particular, had justified her negotiations with Germany by the plea that her situation was so desperate that any possible relief from whatever quarter must be clutched at. That being so, Austria must be offered, as the French in their plan did offer her, something apparently tangible to feed her hopes. The customs union plan might or might not prove workable in practice and might or might not yield the results predicted of it, but it has at any rate produced in Vienna the impression that something radical, with considerable possibilities, is being attempted, and the consequent psychological reactions are not altogether negligible. France, in particular, was satisfied that some alternative must be provided that would make a direct appeal to Austria. Hence her proposals for a general preference for Austrian products, an advance which Austria would have appreciated more if it had come from the Little Entente, with which her trade relations are, or should be, extensive, rather than from France, with whom they are inconsiderable.

But even interpreted crudely as a mere attempt to outbid Germany as furnisher of relief to Austria, France's initiative is legitimate enough. Austria must have help of some sort from outside, and it was well for the European Committee to turn its mind in that direction. If that had no other effect, it enabled Dr. Schober to return to Vienna satisfied that his country's necessities were not being overlooked and that salvation did not hang on the customs union plan alone. It would appear that Dr. Schober did, in fact, return home reasonably satisfied. M. Briand, in his closing speech, declared that he, too, went home content, in the conviction that the body he had brought to birth was grappling as it should with the problems it was created to attack. Mr Henderson has put on record equally his belief that the discussions served their purpose in laying the foundations of new forms of international co-operation. M. Litvinoff, who was a good deal less out of his element in the Geneva framework than ever before, agreed that while the Soviet system and the capitalist system must continue to pursue their undying struggle, there was room for beneficial collaboration between them in the field of international trade.

To Dr. Curtius Geneva may have been less congenial. There could be no question of not accepting the reference of the customs union to the Court, but that course had to be justified to the Nationalists of various shades, who would have hailed its rejection with delight. The German Foreign Minister, moreover, has every reason to recognise what the failure of the European Committee, or some other agency, to effect an improvement in the affairs of Europe will mean to his country. Detached observers view with grave apprehension developments which the coming winter may bring in Germany, for, though no one believes Hitlerism capable of anything constructive, it may quite well put to its credit the far simpler achievement of pulling down. And the legates of a Hitler failure would be the Communists.

In spite of that, the general trend of the Geneva discussions gives ground for some encouragement. The

atmosphere was good. The opposition between the French and German points of view over the customs union was sensibly less sharp when the Foreign Ministers met face to face than when the interchanges had taken the form of public speeches and newspaper polemics. Talks between M. Briand and Signor Grandi resulted in a definite *détente* so far as the two Ministers themselves were concerned, though that does not mean necessarily that they can carry their publics with them along the road they would like to travel. M. Litvinoff conformed in all respects to the Geneva tradition, and his speeches opened up new hopes of the co-operation of Russia in various economic understandings essential to the welfare of Europe. And what may be most important of all if words have their sequel in action, the condemnation of Europe's tariff madness, voiced with outstanding emphasis by Mr Henderson, was endorsed openly or tacitly by all the Foreign Ministers on the European Committee—and they numbered over twenty. Italy made the specific proposal that the negotiations contemplated under the abortive Commercial Convention of last March should be resumed. That involves, incidentally, acceptance of the principle of the tariff truce, and more specifically the prosecution of further negotiations leading to progressive reductions of tariffs. The motives behind the proposal are to some extent matter for conjecture. The simplest explanation is no doubt that Italy is sincerely convinced of the necessity for general tariff reductions. Contributory motives may have been a desire to approach the standpoint of Great Britain on this question, and also the temptation to present a rather embarrassing challenge to France, which had discreetly postponed ratifying the Commercial Convention till after it had lapsed from an insufficiency of ratifications. If the British, French, German and Italian ratifications all hold good still, a reopening of the conversations might put a new complexion on the outlook for some definite understanding in regard to tariffs.

The optimism of M. Briand's closing speech to the European Committee may have gone a little far, but there can be no doubt that the committee fully justified its existence at its recent meeting. It is one of the recognised merits of the League of Nations Council that it brings into personal contact the principal Foreign Ministers of Europe at least three times a year. But there are a number of men outside that narrow circle—Benesh of Czechoslovakia, for example, and Hymans of Belgium, and Beelaerts van Blokland of Holland—whose countries are not at present members of the Council, but whose absence from any European discussions of importance would be a serious loss. In assembling them at Geneva as often as the Council meets the European Committee is serving a useful purpose, and so far from the Council and Committee clashing they are working in with one another in perfect harmony. The position at the present moment is that the Committee has taken a general survey of the ground and set machinery in motion which is timed to produce results in five weeks' time. Whether in that short space anything of practical value can be achieved is obviously open to question. On the other hand, the case is urgent, and what cannot be done quickly may be not worth doing at all.

SOME FEATURES OF THE AMERICAN SITUATION.

THE American boom of 1929, with its tremendous pull upon the liquid money resources of the world, followed by the disastrous slump in November of that year, stood out so clearly as the immediate heralds of the world depression that all eyes are naturally fixed upon the United States to seek for the first omens of recovery. It would be a mistake to regard the economic prosperity of the rest of the world as merely governed by conditions in the United States. Nevertheless, the United States is so important a factor as a consumer of raw produce, as well as producer, as financier and international trader, that the situation across the Atlantic is perhaps rightly to be considered as the greatest single

factor in the world position. We know of no one who is ready to make a really confident forecast as to the future trend in that country, and it is certainly not attempted by the official authors of the annual report* on the economic conditions in the United States, recently published by the Department of Overseas Trade. Their survey, however, of a very abnormal year contains a number of sidelights, comments and criticisms which may well help to a better understanding of the position.

Some of the features to which they refer are reassuring. For example, having called attention to the enormous expansion of credit during the period of prosperity, they proceed to discuss the part played by instalment buying—a system which some have regarded as at the root of the trouble. There can be no doubt that this system in certain industries gave tremendous momentum to the activity of the years of prosperity, and that the large amount of instalment debt outstanding when depression set in acted as an added check to the sale of all such goods.

"The interesting fact here to be recorded, however, is that liquidation of such indebtedness during the past year or eighteen months has proceeded, on the whole, in a very orderly manner without any alarming number of personal bankruptcies, while the reduction in the volume of new instalment sales has been no greater than the reduction in general business activity."

Moreover, it is significant that although the large number of concerns floated to finance this system were consolidated and to-day number probably no more than 1,200, there have been no failures recorded among these financial houses. According to a special inquiry of the *Magazine of Wall Street* no more than 10 per cent. of the instalment debt financed in 1929 was outstanding at the end of 1930. At the peak of the boom the system probably accounted for \$600 millions in a year, or about 10 per cent. of the total retail sales of the country. The system undoubtedly represents debt inflation, but the greater part of the extended bank credit went not into commercial loans but, particularly in the latter years of the boom, into loans against securities and real estate. A rough estimate of the holdings of the latter shows a rise from \$11 millions in 1920 to \$27 millions in 1929, while *Moody's* estimate of the total volume of securities outstanding shows an increase from \$62 millions in 1920 to \$100 millions in 1929.

The authors proceed to discuss the rôle of mass production. They lay the greatest possible stress upon the pooling of experience, which they think tended very considerably to raise the average level of industrial proficiency throughout the country. Whatever the cause, the results were undoubtedly very striking, but it is suggested that in many cases the movement has been carried beyond what was rational and has produced units of unwieldy size. "The point of maximum production-economy seems to have been exceeded, notably in such industries as flour milling, baking, petroleum refining and probably several others. . . ." In the opinion of the authors, some of these consolidations have been made for reasons by no means connected with efficiency.

"The aim in some instances has been rather to facilitate the raising of fresh capital or to provide personal profits for the promoters and their friends. Without inside information it is usually impossible to disentangle the motives behind consolidations. Sometimes they seem to result from the efforts of corporation lawyers to create work for themselves, and, again, from the lust of an industrial leader for greater power; but, in this country at least, the concentration movement swells and subsides with the rising and falling of the stock markets. With some concerns merger is the only alternative to bankruptcy, and this is undoubtedly the light in which some of the combinations should be regarded."

Another aspect of this matter is the great problem of disposing of the vast output of these huge units. The problem of marketing is growing acute. In past times the American market was a very rapidly developing one, but at the present moment, in the authors' opinion, the degree of elasticity now existing in American domestic demand is much smaller than formerly.

In these circumstances it might have been assumed that the effect of the depression would be to turn the output

* "Economic Conditions in the United States of America, March, 1931." Report by Sir J. Joyce Broderick and Arthur J. Pack. (London) H.M. Stationery Office, 3s.

of these great producing organisations into the overseas market, and in 1929 it seemed that this situation was imminent. Severe price cutting was resorted to in some instances, and it is well known that other countries considered the necessity of taking steps to meet this menace from America. The danger, however, did not materialise, and, as the authors observe, "no systematic dumping ever came to the writers' notice." Indeed, foreign orders dropped off in spite of the most energetic attempts to enlarge them. It would, however, be unwise to under-rate the trend of American production towards the export market. This is illustrated not only by the growth over a period of years of the total volume of American exports, but by the rising proportion of manufactured goods. Although much of the exceptional activity of American traders in 1915 and 1916 in South America proved ephemeral, and many firms perished in the collapse following 1920, the United States never entirely lost the foothold she secured during those years. In that part of the world and in the Far East, more than in Europe, the United States has been consolidating her position. The world has required, moreover, just those products which the United States has developed most rapidly. Countries which are desiring to industrialise their own equipment naturally tend to call for the most modern type of goods, and to obtain them in the country where modern machinery has been most successfully applied.

It is also important to recognise the rôle played by America in foreign lending. Although American loans may not be specifically associated with orders placed in the United States,

"the experience of Britain in the past and that of the United States in the last ten years show that, in the absence of very special circumstances, orders for machinery, equipment, construction material and the like tend strongly to go to the country providing the development funds, while the loan negotiations stimulate general enterprise in the lending country and widen contacts between its producers of other classes of goods and the consumers in the borrowing country."

It has sometimes been said that Americans were not developers; but if this was true fifteen years ago, it is not true to-day.

"It is estimated that at present there are about 2,000 independent or branch American industrial undertakings in operation outside the United States, including mining companies, sugar centrals, motor car assembly plants, packing houses, textile mills, shoe factories, etc."

The total of issues of foreign long-term bonds has, of course, fallen very heavily, from one and a-half billion dollars in 1927 to six hundred millions in 1929. There was, however, a fair recovery in 1930. It is, however, doubtful whether the total for the current year will exceed, even if it equals, that of 1930. If, therefore, the export of capital to countries in a state of depression is the key to the situation, it is doubtful whether a great stimulus will come from the United States until the American investor's confidence is restored by signs of returning prosperity in the borrowing countries.

It is encouraging to find the report referring to a growing recognition among the business community of the interdependence of nations and a reluctance to resort to embargoes or other extreme forms of international trade restriction. This attitude was notably displayed in the closing days of the present Congress in the face of insistent demand for added protection from some of the depressed industries. At the same time, the authors do not hold out much hope of any appreciable move towards a lower tariff, although they consider that there is a possibility that the elastic provisions of the tariff as now laid down may lead to some modification. The Tariff Commission can act more rapidly than heretofore; particulars submitted to it may be treated as confidential, and foreigners have the same right to initiate proceedings before the Commission as American interests. The authors appeal to British manufacturers to take the President at his word and to bring their difficulties and troubles to the Commission. We confess, however, to some scepticism, so long as the fundamental principle which guides the Commission is to put on a duty which will balance the difference between costs of production in the United States and in the principal competing country; in other words, to do away with the whole benefit of international trade.

As regards the immediate outlook, the report sees some signs of activity. When they wrote, the steel industry was growing, building contracts for residential construction had been increasing for two months, more raw material was being used by the cotton trade, the weekly sales of cloth had expanded, freight-car loads were better, and commodity prices had shown an inclination to benefit. Stocks in the hands of manufacturers and dealers had been dwindling, and employment showed a tendency to increase in the automobile and some other industries. Some of these signs have not been maintained during April and the present month, but the Federal Reserve Board index of American industrial production for April is slightly better than that recorded for March.

THE RUSSIAN WHEAT POSITION.

(BY A CORRESPONDENT.)

DURING the current cereal season Russia has, as is generally known, exported much larger quantities of wheat and of other grains than in any previous post-war season, though the quantities have not been as great as before the war. The large 1930 crops which have provided these export surpluses followed upon the mass drive towards the "Socialisation of Agriculture" inaugurated under the Five Year Plan, and there is a widespread tendency to regard the heavy shipments of this season as an instalment on account of much heavier things to come, as the Soviet plans for collectivisation and mechanisation progress. This expectation—it would be reasonable to say this fear—weighs very heavily upon the wheat market, and is not without effect upon other commodity markets, and, in turn, on the security markets. As stated by Lubimoff at the Canada House Conference last week:—"The total area under wheat in 1931 will be not less than 104 million acres," this comparing with 82 million acres in 1930 and 75 million acres in 1929. "The wheat crop anticipated is 1,307 million bushels," against 1,084 million bushels in 1930 and 703 million bushels in 1929. As cabled to America, and as circulated in the grain trade here, Lubimoff's statement, and similar statements by other Soviet authorities, have been taken as indicating that Russia might have for export next autumn three or four times as much wheat as in the current season, heavy though this latter quantity has undoubtedly been.

Lubimoff was in no sort of doubt as to the reason for the sudden appearance of a surplus last autumn, and for its expected tremendous growth next autumn and onwards:—"The new principles of State and collective farming, combined with the advantages of the system of planned economy and the utilisation of modern machinery make it possible for the U.S.S.R. to enter the world market with a high-quality grain and with lower costs of production than in a number of other countries. . . . We consider that the present agricultural crisis is directly due to the contradictions of the capitalist system. . . . The U.S.S.R. does not experience any crisis, and continues to develop its industry and agriculture in conformity with the Five Year Plan." It must not be thought that Lubimoff was simply manœuvring for position in an attempt to secure Russia an unreasonably high wheat export quota if the conference had been able to agree to a quota system; he was expressing the official Soviet view.

Despite the widespread acceptance which this view has secured, it rests upon very flimsy evidence. There is a considerable volume of testimony that the surplus which Russia secured last autumn was attributable only in a small degree to "Planwirtschaft," being almost entirely due to abnormally favourable growing weather, such as any country experiences in an exceptional year. In 1928 Canada and Argentina reaped about twice as big a wheat crop as the same acreage yielded in 1929; in 1915 the U.S.A. secured a crop of 1,026 million bushels, while in 1925 approximately the same acreage yielded 677 million bushels. In America, the banner crop of 1915 is regarded as "the 'break' which contributed (with the entrance of the United States) to the decisive issue of the war." If the Russian wheat crop of 1930 can be regarded as a similar "break," it contributed to depressing wheat prices

to about the lowest levels for many generations. Russia will require distinctly luck weather to equal last year's crop this year, while any increase, particularly so huge an increase as Lubimoff so confidently forecasts, seems quite out of the question, unless a summer growing season of freakishly and unprecedentedly favourable weather can be postulated.

Geographically, Roumania is closest to the main grain districts of Russia, and is not dissimilar in soil and climate. A comparison of Roumanian and Russian wheat crops is distinctly illuminating:—

WHEAT CROPS IN ROUMANIA AND IN RUSSIA, 1924-1930.

Year.	Roumanian Wheat Crop, Million Bushels.	Compared with Previous Year.	Russian Wheat Crop, Million Bushels.	Compared with Previous Year.
1924	70	(Crop failure)	472	(Crop failure)
1925	105	Increase	782	Increase
1926	111	Increase	914	Increase
1927	97	Decrease	776	Decrease
1928	115½	Increase	795	Increase
1929	100	Decrease	703	Decrease
1930	131	Increase and record.	1,084	Increase and record.

Both countries had crop failures in 1924; in every year since, if one has shown crop increase, so has the other, and *vice versa*. Roumania has no Five Year Plan, no collective farms, no mechanisation schemes or motor tractor stations; but Roumania had an increased and record crop in 1930, just as Russia had.

It is possible, roughly, to allocate the causes of the bumper Russian 1930 crop as between good luck in weather and good management in "Planwirtschaft." Molotov, in a speech to the Sixth Soviet Congress in March last, asserted that the yield on collective farms was 1.1 bushels per acre higher than on peasant farms for winter rye and 1.5 bushels per acre higher for winter wheat. It is intrinsically reasonable to suppose that collectivisation does tend to increase yields. Considering the appallingly primitive methods of strip farming employed by Russian peasants, complete scepticism as to collectivisation would hardly be justified. One may, however, fairly suppose that the increased yield on the collective farms was not greater than Molotov stated, and that the increase in spring wheat was less than in winter wheat—otherwise Molotov would have quoted the spring wheat, seeing that the entire speech was intended as propaganda for collectivisation. Two-fifths of the 1930 wheat acreage was on collective farms and Soviet estates, so that, taking Molotov's figure at its face value, and assuming that it applies also to spring wheat, it would appear that the effect of collectivisation in 1930 was to increase the over-all wheat yield by 0.6 bushels per acre. But the yield of wheat in 1930 was 3.9 bushels per acre bigger than in 1929. So that the proportionate influence of planning in making the yield increase in 1930 may have been little more than one-seventh as great as the influence of favourable weather.

As regards the present cereal year, the grain plan falls naturally into two parts—a plan for autumn-sown (winter) grain, and for spring crops, the latter being the more important. The winter-grain plan called for an increase of 9,600,000 acres: early reports were that an increase of 7,000,000 acres had been achieved, this being later reduced to an estimated increase of 5,000,000 acres, while last month revised estimates showed an increase of less than 3,000,000 acres, or about 3 per cent. increase instead of the 10 per cent. planned. Winterkill over the winter of 1929-30 was, however, abnormally light, only about 2 million acres, as compared with 20,000,000 acres killed in 1928. No estimate has so far appeared as to the extent of winterkill during the winter just passed, nor is there any clear indication as to what would be considered a normal amount. In the United States, which is analogous in some respects, an average winterkill is about 12 per cent. of the planted acreage. The total acreage of winter grain planted in Russia last autumn was roundly 100,000,000 acres, rather less than one-third of this being winter wheat, and the balance mostly rye. In certain districts south of Samara 12 to 15 per cent. of the sowings have been reported winter-killed. It is clear that, if acreage

Branches and Agencies throughout the East.

INTEREST ALLOWED ON DAILY CREDIT BALANCES.

loss from winter and spring frosts has averaged anything over 5 per cent., there must be less autumn-sown acreage for harvest than last year. There would, even so, be some switch from rye to wheat, but this would not necessarily increase the exportable surplus of wheat, because the size of Russian wheat exports tends to be conditioned by the size of the total grain crop rather than by the wheat crop alone.

For spring-sown crops as a whole the plan calls for 247 million acres, as compared with 217 million acres last year; but so far the campaign appears to be going badly. As of May 15th a total of 114,100,000 acres is reported sown, as compared with 125,700,000 acres by the same date last year, which was itself considered late in spring sowing—not a good showing for a plan which calls for an increase of 30,000,000 acres. Weather has been against the plan, spring in the Ukraine being reported the latest in many years; but there may be factors more important even than weather working against it, as the following table illustrates:—

ACCOMPLISHMENT OF SPRING SOWING PLAN, MAY 15, 1931 AND 1930.

Type of Farm.	Sown by May 15, 1931. Acres.	Per cent. of Plan.	Sown by May 15, 1930. Acres.
Collective farms	78,000,000	64	64,600,000*
Soviet estates	11,500,000	65	2,400,000*
Peasant farms	24,600,000	23	58,700,000*
All farms	114,100,000	46	125,700,000

* For May 15, 1930, the total of 125,700,000 acres is as officially reported: the allocation between the various types of farming is based on the assumption that the percentage components were the same on May 15th as on May 10th, the latter having been reported but apparently not the former; the assumption can hardly cause any appreciable error.

Thus the "Socialised Sector" has fulfilled, roughly, two-thirds of its allotted acreage plan, which is a fair showing for the date, though hardly a good one. But the uncollectivised peasants have apparently drilled less than a quarter of the area officially expected from them, and only about two-fifths of the acreage which they had in by this date last year. It seems impossible for the uncollectivised peasants to fill their plan, or even approximate thereto. It may be that Soviet methods of "collecting" peasant grain, and of giving the "Socialised Sector" priority with all the means of production, leave the peasants with neither the incentive nor the ability to sow a full acreage. The collectives tend to be awarded the more fertile land, including presumably that in which spring is earliest, so that some relative loss in peasant sowing is to be expected, though hardly so much as is reported. *Izvestia* of May 16th complains of the backwardness of seeding in northern and north-eastern regions, due to "the return of cold weather. In some places a temperature of -12 was registered," i.e., 22 degrees of frost Fahrenheit, which does not help either sowing or even germination.

Spring wheat acreage sown by May 15th amounted to 54.7 per cent. of the plan, and equalled 66 per cent. of last year's total. Considering that in a normal year wheat seeding is reckoned to be finished by May 23rd even in the latest district (Eastern Siberia), this can scarcely be considered satisfactory. Whatever the final acreage may prove to be, it is already clear that the percentage sown abnormally late will be high, this naturally increasing the

hazard of summer drought: actually, by April 25th only 9,200,000 acres of spring wheat had been sown, as against 26,700,000 acres by the same date last year. Throughout the world's arid and sub-arid districts it is extremely rare for late-sown crops to yield as highly as those sown in good time. Yield forecasts would require weather forecasts for the next three months, which are not available to us, nor, so far as we know, to M. Lubimoff. Crop outturns depend on weather, and weather defies forecasting for more than the briefest period ahead. But it is not difficult to envisage summer weather conditions in Russia which might make the lateness of this spring unusually important.

THE CO-OPERATIVE CONGRESS.

(BY A CORRESPONDENT.)

This year's annual Congress of the Co-operative Union has been held at Bournemouth in a peaceful atmosphere reflective of the Whitsun weather and the calm complacency into which the movement has fallen since the alliance with political forces has diverted its active forces from the trading to the Parliamentary outlook. In his valedictory address, Mr T. Liddle, O.B.E., of Hartlepool (the retiring president) deplored the way in which the retail societies depended on private sources for a proportion of their supplies, and stressed the point that they should be more mindful of their co-operative principles in securing their progress in the commercial life of the country. This idea was developed by the incoming president (Mr W. J. Salmon, J.P., of Colchester), who challenged the view that the average purchase of £35 worth of goods per member per year was sufficient for the co-operative purpose. And, examining that £35 average individual trade per annum, the president suggested that they should limit the amount of supplies drawn from outside the movement. More trade ought to be done with their own co-operative factories with a view to developing a co-operative and buying policy.

The estimate of the present position of the retail distributive societies is that there are now 6,455,852 members of 1,344 distributive societies with funds of £162,227,000, of which £114,045,000 is in share capital. The stocks in trade are £19,000,000 and the debts are a rapidly growing item owing to the increase of mutuality clubs and hire purchase schemes. The sales in 1930 are calculated at £219,136,000, upon which the profit was £26,557,280. This gives an increase of 1 per cent. in sales and of 1.62 per cent. in surplus. But as the latter includes £4,875,434 interest on share capital—an increase of 7.74 per cent.—it is evident that the profits have been even better than the estimated 1.62 per cent. This may have been in the mind of the acting secretary of the Parliamentary Committee of the Co-operative Congress when he reminded the delegates that the Consumers' Councils' Bill (which will be in the charge of Mr A. V. Alexander, M.P., who was secretary of the Parliamentary Committee until he entered the Cabinet) will apply to co-operative societies as well as other trades. This was a significant warning in view of the steady rise in the dividends on purchases that have been a feature of the last few years. The growth of the share capital of the retail societies continues to be a distinctive feature of co-operative progress. Of the eight and a half millions of new share and loan capital received by the societies in 1930, only two and a half millions were used in land and buildings for trade, half a million in increased stocks, while five and a half millions had to be loaned to municipalities and other enterprises outside the trading operations of the distributive societies. Of the £114,045,000 share capital no less than £65,290,000 is re-invested. This has made it necessary for many of the retail societies to reduce their interest rates owing to the increasing difficulty of finding remunerative investments. There are now 125,021 employees in the distributive services and 58,600 in the productive and transport departments of these retail societies. Their wage bill was over £24,000,000.

The Congress has been mainly concerned with internal organisation. Last year, at the Congress at York, a committee of inquiry was set up, which has adopted proposals for the institution of a national authority to voice the views of all sections of the movement as a whole. The delegates have remitted this for consideration by the various bodies and districts, so that a final decision may be reached at the Congress to be held at Glasgow in 1932. The relations between co-operative societies and the trade unions became strained during the general strike of 1926, since when negotiations have been proceeding with the General Council of the Trade Union Congress—with, however, no decisive settlement. The T.U.C. General Council has just intimated that these negotiations may be regarded as closed; but the Co-operative Congress has resolved that the Co-operative Union shall make a new effort to secure an understanding on equitable lines.

The only hitch in co-operative amity that threatened to stir the placid atmosphere of this year's Congress arose in connection with a political matter—the attitude of the movement towards the Government's Agricultural Marketing Bill. Here the Agricultural Committee of the co-operators and the Co-operative Party came into conflict with the result that both their reports were withdrawn and they are to meet conjointly to find an agreed policy. As consumers the co-operative societies are at variance with the views of the producers, and efforts to find a policy that will be acceptable to the farmers and equitable to all sections are to be made before the Agricultural Marketing Bill goes much further. In fact, the attitude of the industrial co-operators may threaten the passage of the Bill into an Act. How far the co-operators have developed politically was shown by Mr A. Barnes, M.P., the chairman of the Co-operative Party, who showed that, for the first time, the membership affiliated to the Party was a majority of the movement, comprising 423 societies, with a membership of 3,281,971. Hence the confidence with which he submitted a report showing that in the discussions in Parliament on tariff problems the co-operative group always emphasised the objection to Protection and particularly to tampering with the free import of foodstuffs. He then proceeded to declare for the public and co-operative ownership and development of specified national key services and the establishment of National Boards for electricity, gas, oil and transport of every kind; the setting up of Home Trade Councils to secure the home market and a public inquiry into the economic utility of the sugar beet industry with a view to its reorganisation on a new basis with the two co-operative wholesale societies responsible for the manufacturing processes. This vast programme—reminiscent of the old-time Socialist formula of the “means of production, distribution and exchange,” was accepted practically without discussion and endorsed without a single figure or calculation being offered. The once familiar resolutions as to the Co-operative Commonwealth have been remodelled in terms of National Boards—without any indication of plans or costs.

Throughout the Congress there has been a deep interest in disarmament and peace between the nations. It was emphasised by the President in his opening address with a message from Viscount Cecil, who thanked the Co-operative movement for its sustained support of the League of Nations Union. Echoes of the same idea were loud in the speeches of the delegates from European countries, and in the final session on Wednesday a resolution on the limitation of armaments was carried enthusiastically to the effect that “Realising that the whole future of international co-operation largely depends upon the results of the first general conference for the reduction and limitation of armaments, this Congress earnestly requests His Majesty's Government to use all its influence to secure such real and substantial reduction at that conference as would be represented by an all-round cut of one quarter in the total amounts provided for military expenditure in the budgets of all countries other than those that have accepted restrictions on their armaments through the Peace Treaties.” On that note the Congress concluded.

SOUTH AFRICA'S REAL PROBLEM.

(BY A CORRESPONDENT.)

THERE is an opinion in South Africa, long held implicitly and now gaining an explicit credence, that all problems in that country are really one problem—in the sense that developments in the racial situation will sooner or later be found to exercise a governing influence over the ultimate solution of all other South African problems. Before the discovery of the mines sixty years ago, the population was predominantly pastoral in its pursuits, somewhat primitive in its outlook and with a preference for a loosely constructed patriarchal system of government. This was particularly true of the Republics of the Transvaal and Orange Free State, and partly true of many districts of the Cape Province. (The Europeans of Natal were then, as now, perhaps a little inclined to thank their Creator that they were not as other South Africans.) Into this loosely-knit, easy-going, financially poor collection of States, the mines—first diamond and then gold—drew a mixed collection of competent and pushful professional and business men, and a substantial industrial population. Within comparatively few years the position and preponderating outlook of the country experienced fundamental changes. To-day we know first that the gold mines are by no means exhausted and, secondly, that there are extensive supplies of other minerals. The harassing problems of agriculture are not insoluble, and manufacturing industries of importance are planned as a superstructure to the primary resources. South African patriots visualise a prosperous nation of world-wide importance—the term “United States of South Africa” has been heard. Of what human material is this nation to be made?

A solution of sorts is materialising by the ordinary processes of economic nature, hampered by official policy and by public opinion. Both official and popular forces are fighting elementary economic and social forces. The latter are bound to prevail ultimately, but the procedure is in the last degree clumsy and inefficient. It is not unjust to say that the majority of Europeans regard themselves as the people of South Africa and keep their own immediate interests in view without thought for others or any appreciation of the prospects of the situation. Natalians who grumble about the Indian village trader do not always reflect on the one-time importance of Indian indentured labour to the sugar plantations of that province. Housewives, artisans and others complain eternally of the stupidity of native workers, without reflecting either on their own casually given orders or on the obstacles to the general development of native intelligence. The fact that the native, working hard for comparatively low wages, must in the process maintain his own economic balance by learning from his masters is widely deplored. The view that the national income could be increased more readily by encouraging and educating natives than by any other means, is discounted. In any case, it is not generally appreciated that any increase in the national income, however caused and by whomsoever created, would be found at no distant date to benefit the whole country and everyone in it. The South African view, on the other hand, supports the wage-fund and work-fund theories—holding that any native employed on work which could be done by a European is displacing a European from that particular job. It is black heresy to suggest that the majority of Europeans receive real incomes in excess of their share of the income of the country and in excess of their value by international standards, because the non-European receives so much less. (Artisans on the Rand receive 2s. to 2s. 6d. per hour and upwards, whilst the native labourers receive about 3s. to 3s. 6d. per day, including the value of food and quarters.)

The only possible means by which South Africa could secure its future as a European nation would be by very heavy immigration in the next few years. To that policy there are two objections—one which will probably pass and one of a more fundamental nature. At present the tradition and opinions of ordinary Dutch South Africans are strongly opposed to any substantial influx of immigrants, because of the obvious fact that their own views and policy would be swamped by others less static.

One is reminded of President Kruger's reply to a suggestion that the Uitlanders should receive the vote on less onerous terms; pointing to the Vierkleur flying above him, he told his interlocutor “If I agree, that flag can be hauled down.” The other difficulty is that any country with a less civilised proletariat governed by an aristocracy of superior race, there is no satisfactory place for the lower order of European. The hewer of wood and drawer of water is the native. To him, his position is natural, and from that position he may in individual cases rise to others. The European who loses his place—or the European child who has never had a place—can make no career, as he can in a purely European country, in fields easier to his talents and temperament. It is no uncommon thing for the “poor white” South African who has lost all pride of race, all typical skill, personal ambition—even the habits of bare cleanliness and decency—to cling fiercely to his refusal to do “Kaffirs' work.”

The result is the “poor white problem.” “Poor whites” constitute perhaps an eighth of the European population. A large proportion of this fraction has already sunk below the level of the better class of industrialised native—some of them below the levels of native tribal decency. The problem has gone beyond the difficulty of finding them work. They have lost the habit of work, and in most cases are too ill-fed to work. Protagonists of “white South Africa” are fond of comparing the results of easily measured labouring work done by natives in South Africa with the results of similar work done elsewhere by European unskilled labourers in their own countries. It is not unnaturally found that the superior races give better results. But in South Africa there can be no doubt that the native is economically superior, at the relative wage levels, to the class of European against whom he finds himself in competition. In many cases, moreover, the native is intrinsically superior apart from the wage difference. This has resulted in the obscuring, in most country districts, of the economic boundary which still separates white and black in organised trades in urban areas. In some places it is by no means unknown for Europeans of the lower classes to work for non-European employers. In the social aspect, as distinct from the economic, neither public opinion nor laws against miscegenation prevent the arising of coloured offspring from parents drawn from the worst of both races.

This argument is not in any way concerned with the question whether the programme which contemplates South Africa as a country of Europeans served by natives is ethically sound. For the moment it is sought to show merely that it does not achieve its object. It does not provide, and it cannot provide, for the helpless type of European. It leaves the “poor white” problem untouched in essentials and badly and temporarily patched in details. Moreover, its confessed procedure prevents the white man from sinking merely by the very doubtful method of preventing the black from rising. This arrangement is adding a “poor black” problem to the existing “poor white” problem. The tendency of European administration is to remove the historic checks on the numerical increase of the native races: tribal wars are prevented, famine and pestilence are mitigated; but the black man's economic efficiency may develop only haltingly and in face of opposition.

The present and future interests of the South African nation could best be served by a policy not conceived so entirely in the supposed interests of the European population. We must not overlook the dictum of Marcus Aurelius as to the identity of interest of the beehive and the bee. Special circumstances of race-superiority have placed the direction of affairs in the hands of two-ninths of the population. The other seven-ninths cannot, however, be prevented from learning both good and evil from their masters. In so far as their opportunities of learning good, or experiencing economic development are restricted, so much the greater proportion of evil in what they learn. In the last resort, every sectional—even individual—component of the population stands or falls by its own economic merits. Even more important is the fact that the whole stands or falls by the merits of the whole. The respective capacities of European and native are, in representative cases, sufficiently differentiated to

enable the majority of Europeans to live free from fear. Where this is not so, a false policy based on race-fear is not merely ethically indefensible, but tactically useless. It restricts the development of the country, it fills the native with legitimate grievances, and it is failing even in its immediate object. South Africa's future lies in a policy promising scope to every citizen regardless of colour. Thousands of the "poor whites" are of good, or not definitely bad, stock; severe competition and some disciplinary training to meet it—the latter quite within the scope of a workable policy—would rescue a large number of them. Ill-designed and artificial support which they virtually vote to themselves (e.g., the "white labour" policy of the railways) is already leading to the precise end which it is sought to avoid.

Notes of the Week.

A Free-Trade Campaign.—While the Palace of Westminster remains closed until next Tuesday, the Whitsuntide recess has not been marked by idleness in the rival political camps, and of the holiday events the most interesting is the launching at the Caxton Hall by Mr Lloyd George of a nation-wide campaign in support of the maintenance of the Free Trade system. For the initiation of this campaign we have primarily to thank Mr Baldwin, whose series of speeches in the provinces, designed to outline Conservative policy, have become little more than a rather stale and wearisome reiteration of Protectionist fallacies. His latest address, delivered at Welbeck Abbey on Whit Monday, provides the Free Trade campaigners with an easy target, for Mr Baldwin harped upon the amazing theme that Britain's pre-war industrial supremacy was "built up on Protection." A more misleading quarter-truth it is impossible to imagine, and when a party leader lends his authority to such travesties of fact it is time that the whole truth should be widely propagated. A significant passage in Mr Baldwin's speech contained a reference to the fact that unemployment is worse in some great Protectionist countries than in Free Trade Britain. There is not the slightest doubt that this fact has caused a profound impression among industrialists, who, before that phenomenon appeared, were attracted by the idea that Protection might after all be a remedy appropriate to this country; nor will they be impressed by Mr Baldwin's very thin explanation that excessive unemployment set in here before it began to afflict America. All who have followed the recent proceedings at Geneva will realise that the tariff history of Europe has reached a crucial point. The one thing needed to make a perpetuation of tariff war a certainty would be for Britain to enter the lists of Protectionist combat, and it is regrettable that it is left to the numerically weakest of the three political parties to drive home that truth throughout the length and breadth of the country. But we trust it will succeed in awakening British common sense to realise that to add one more to the tariff walls of Europe is scarcely the most hopeful way of easing the flow of international trade.

M. Briand Sees it Through.—One cheerful item in a gloomy week's news is the announcement that M. Briand is to remain in charge of French foreign policy. The position of European politics is by no means so stable that it could afford to lose the unrivalled experience and adroit statesmanship of the man who, with the late lamented Dr. Stresemann, must be accorded a large share of the credit for the constructive work for peace which has been carried on in Europe during the last ten years. The news is doubly welcome, for the instalment of M. Doumer as President of the Republic appeared to herald a distinct movement to the Right in French policy, and for that reason, as well as in view of the *impasse* over the Austro-German customs union proposal, it was a most untimely moment for the removal of the master hand from the wheel of foreign policy. It appears that M. Briand's decision to stay has been arrived at somewhat reluctantly on the urgent advice of his friends. A fortnight ago

M. Briand made a profound mistake when he allowed his friends to persuade him to be a candidate for the Presidency, but in this case we do not think that he will regret his acceptance of their advice, and it is certain that his decision will be heard with relief throughout Europe.

Indian Negotiations.—The news from India is mixed. On the one hand active preparations for the re-assembly of the Round Table Conference in London are being pushed on energetically by the Viceroy and progress is reported with important preparatory committee work, as well as with the promised Indianisation of the Army. On the other hand, there seems to have been a definite and unfortunate setback to recent hopes of a Hindu-Moslem concordat. It was hoped that the embitterment caused among the Moslems by Mr Gandhi's address to the All-Moslem Conference at Delhi early in April had died down; but unfortunately the outlook has again been darkened by a further speech by Mr Gandhi, in which he asked for a "unanimous" definition by Mussulmans of the minimum safeguards which they thought necessary in conjunction with the grant of "responsibility at the centre." The effect of this phraseology, which implies that the All-India Moslem Conference is not representative of Moslem opinion, has been to put back the Hindu-Moslem deadlock to very much the position in which it was left after the London Conference; for the Working Committee of the All-India Moslem Conference, meeting this week at Lahore, passed a resolution calling upon Moslem members of the Round Table Conference "to refuse to agree to the introduction of responsibility at the centre unless and until the minimum demands embodied in our resolutions last Easter have been conceded." Meanwhile communications have been passing between the Viceroy and the Indian Round Table delegates on the question of the date for the London re-assembly. A date as early as July was suggested in messages from Simla at the beginning of the week, but it now appears that a postponement of a month or two will be necessary to suit the convenience of a number of delegates. The riddle of Mr Gandhi's intentions to be present or to abstain from participation has not yet been solved.

The Burma Rising.—As in China, so in parts of Burma, fighting is a seasonal occupation, and it was hoped last week that the arrival of the monsoon would temporarily check the rebellion which has been breaking out from time to time in different parts of the country. It is now, however, becoming evident that the rebel forces have so far no intention of abating their activities, and the official communiqué of May 22nd stated that a complete brigade of the Indian Army was being held in readiness for despatch to Burma. It is now reported that this brigade has been despatched. The need for this step arises not from any access of strength to the rebels but from the extremely scattered nature of their risings, which require the stationing of troops over a very large area. So far there has been little evidence of any organised nationalism behind the rebellion, though the frequent displays of anti-Indian feeling show that the primary motive of economic distress is reinforced to some extent by nationalist sentiment. The principal cause of the unrest, however, is probably the impoverishment which has resulted from the slump in the price of rice. It remains to be seen what degree of relief will be afforded by the decision of the Government, announced this week, to reduce from 10 to 6½ per cent. the rate of interest on loans to cultivators and to obtain from the provincial loan funds a further 20 lakhs to supplement the 11 lakhs of such loans which have already been issued.

New Australian Proposals.—The discussions at the Australian Premiers' Conference held this week were of a sounder and more constructive character than the proposals for currency inflation contained in measures recently presented to the Canberra Parliament and rejected by the Senate. In brief, the Conference is at last getting to grips with the problem of economy, and is also realising that the Australian economic situation must be

made to fit the present level of commodity prices, instead of trying to scale up prices to the level of two years ago. According to cabled reports, the Conference has adopted plans for a general cut of 20 per cent. in expenditure, and has also discussed proposals for increasing certain taxes, all designed to reduce the total Government deficits to manageable limits by the end of the coming financial year. The most striking of these proposals is that of the issue of new Government stock, bearing interest at 4 per cent., to be offered in exchange for all outstanding securities, subject to certain reservations as regards tax-free securities and interminable stock. While this conversion offer is nominally to be a free one, in that holders of existing Government stocks can accept or reject it, an element of compulsion is introduced by the proposal to impose a surtax of 25 per cent. upon the income derived from all unconverted Commonwealth and State securities. The rate of conversion is to be determined "by actuarial valuation on the basis of money being worth 4 per cent.," and it is calculated that the whole of this proposal is equivalent to a cut of 22½ per cent. on the average rate of interest now paid on Government stocks, or, in more definite terms, to a saving of £6,500,000 a year in the cost of the interest on Government loans. Certain exemptions, of course, are necessary, prominent among them being the case of foreign traders' balances, normally employed by them in their business, but at the moment lodged in Australian short-term stocks. The scheme before the Conference also envisages the progressive reduction of private interest rates, to be assisted by special taxation upon preference dividends designed to secure equality of sacrifice between different classes of investors. The banks, too, are lending their support to the scheme, for the Commonwealth and State Savings Banks have already announced a 1 per cent. reduction in their interest rates, conditional upon the complementation of the scheme, and the banks generally have let it be known that they will be prepared to extend credits for the relief of unemployment when once the scheme has gone through. The ultimate objective before the Conference was the restoration of confidence in Australia's finances, to the point that will permit of the funding upon reasonable terms of Australia's short-term external indebtedness. For the moment it is sufficient to say upon this point that Australia's present methods possess a far greater chance of success than those essayed earlier in the year. Resort to almost compulsory conversion is naturally unpalatable to Australia's creditors. But it is a more honest and, if fairly carried out, a more equitable method of composition than inflation.

The Wheat Conference.—The Canada House Conference concluded its labours on Saturday, having been unable to agree upon any of the more important suggested courses for improving the wheat market. The grain trade had throughout been sceptical, but those people who based hopes upon this Conference—and there were many such—were apparently disappointed; September wheat at Chicago sold at 62c. on the day before the conference commenced, and at 58c. on the day after it concluded. At the Rome Conference in March it was reported that no scheme for export quotas or similar international surplus control could be there devised because importing countries were represented; in London, apparently, there were too many exporting countries, with too many conflicting aims and views, for any such agreement; even within certain of the individual delegations, there was no unanimity as to the desirability or practicability of various suggested procedures. It is unofficially understood that the important United States delegation announced that it had no power to subscribe to any such scheme without special legislation; and it is suggested that before passing such legislation Congress might reasonably require that the "farm relief" which it has already legislated should commence to justify itself. It is incidentally doubtful whether any such legislation would be constitutional in the United States. In the absence of any agreement on export quotas, the main decision of the Conference was to set up a committee, consisting of one representative from each participating State, which shall in turn set up a "Clearing

House of information to serve the wheat exporting countries . . . thereby assisting the orderly distribution of wheat in world markets." This has been widely regarded as face-saving, and it is indeed difficult to indicate any field wherein such a clearing house might usefully work. The compilation of official data by the International Institute of Agriculture at Rome, and of unofficial data by the regular grain trade resources of information, is demonstrably comprehensive and thorough; the Canadian Royal Grain Commission found as a fact, "The Liverpool Wheat Futures Market . . . has the fullest possible information respecting world crop conditions, world needs and world supplies." On this matter also, as in many other matters, the experience of the United States Federal Farm Board is not cheering; it is mandatory on the Farm Board "to keep advised from any available sources and make reports as to crop prices, experiences, prospects, supply, and demand, at home and abroad." The Board has frequently stressed the great efforts it has made to comply with this instruction, having gone so far as to appoint Agricultural Attachés in foreign countries specifically for this purpose; but, immediately before sailing to Europe as chief American delegate at this Conference, Mr S. R. McKelvie, who is Grain Member of the Federal Farm Board, observed, "I might add that with all of the figures before me, I would have lost my shirt if I had speculated in the grain market any time during the past year." The Canadian Pool's experience in this matter is, if anything, even worse. Indeed, the gospel of "Salvation by Statistics" is not anywhere in North America preached to-day with quite the fervour of two years ago.

The Credit-Anstalt.—Recent developments unfortunately suggest that the task of overcoming the difficulties under which this institution are labouring are proving more formidable than at one time seemed likely. On May 27th an announcement was authorised to the effect that, in agreement with the Governor of the Bank of England and at the suggestion of the Credit-Anstalt itself, an informal and temporary committee had been established in London. The Committee consists of Mr Lionel de Rothschild, who will act as chairman, and of Mr Charles E. Whigham, Sir Robert Kindersley, and H. E. Peter Bark. It will concern itself particularly with the policy to be adopted in the near future, and inquiries from interested persons are invited, to be addressed to Mr H. E. Davies, New Court, St. Swithin's Lane, E.C.4. Previous reports show that the work of providing the Credit-Anstalt with fresh capital on the lines described in the *Economist* of May 16th was making good progress, and the fact that the direct assistance of the Bank for International Settlements was found not to be necessary also put a more hopeful aspect on the situation. On the other hand, it must not be overlooked that the Credit-Anstalt now concentrates in itself the bulk of Austrian banking business and that the Austrian system is one in which a large proportion of a bank's assets are locked up in the industrial undertakings of the country. In bad times these become completely frozen and liable to heavy loss. The dominant rôle which the bank plays to-day in Austria's economic life makes it peculiarly important in this time of acute difficulty for that country that the task of turning this difficult corner should be successfully accomplished. Although many important foreign creditors are deliberately refraining from adding to the difficulties by withdrawing their balances, calls upon the bank have been continuously made during this week. On Thursday a Government measure was introduced giving some form of State guarantee to the bank, but at the moment of going to press it was not clear to which of the bank's liabilities this applies. At the moment the vital need is to give those concerned in the work adequate breathing space, and no doubt this is the main reason for the appointment of the Committee. The Credit-Anstalt has extensive commitments and connections in all important foreign financial centres, and a chief task of the Committee is obviously to act as a medium for supplying interested parties with such information as they are entitled to and for giving them all reasonable reassurance from time to time that by exercis-

ing patience they will be safeguarding and not jeopardising their legitimate interests. The appointment of so strong a Committee after consultation with the highest quarters should go a long way towards establishing such an atmosphere.

Money and the Depression.—In a lecture entitled "The Monetary Character of the Present Crisis," delivered before the Institute of Bankers on Wednesday last, Professor Gustav Cassel returned to the charge that central banking policy was largely responsible for the existing crisis. The chief blame was laid by him upon the United States Federal Reserve system, both for their policy of restricting credit in 1928-29 with the avowed object of checking speculation upon Wall Street and for their delay in making credit more plentiful immediately after the Wall Street collapse. Their former policy of restriction inevitably affected both production and commodity prices, while on the latter point Professor Cassel declared that had the system concentrated in the first six months of the crisis the whole amount of the action it took up to January, 1931, it would have arrested the fall in commodity prices. Professor Cassel also quoted statistics of gold production and absorption of a kind already made familiar by Sir Henry Strakosch, and after alluding to the reports of the League of Nations' Gold Delegation, came to his constructive proposals. One was that central banks should be freed from all legal provisions regulating the size of their gold reserves on the ground that Governments and parliaments were not competent to determine such matters. Another was that the central banks should "come together and make an end of the depression simply by declaring that they intend, from this moment on, to supply the world so abundantly with means of payment that no further fall in prices will be possible." This raises, of course, a very wide question. As Professor Cassel realises, the depression is in part the legacy of the war and its aftermath, and in his lecture he gave a very vivid summary of the "appalling" mistakes and "violations of fundamental economic principles" committed by the present generation. Again, to recall a recent address by Sir Henry Strakosch, it is no use pouring oil copiously upon the bearings when once they have seized up, and this is one reason why trade fails to revive, even though there is already to-day a superabundance of money and credit. For this reason it is difficult to accept Professor Cassel's view that for the central banks to pump fresh credit into the bearings of the world's economic system would by itself be sufficient, though doubtless the knowledge that a trade recovery would not be held up by an insufficiency of credit would go some way to promote confidence in the future, the truth is that there are many causes of the depression, all leading back to a lack of confidence and equilibrium. Professor Cassel has put his finger upon one important cause, but the others must not be forgotten or neglected.

The Steel Masters' Point of View.—As was to be expected, the National Federation of Iron and Steel Manufacturers has lost no time in commenting upon the important statement by the iron and steel trade unions which we discussed last week. The employers are gratified to find that on a great many points the trade unions see eye to eye with them. Indeed, they dot the i's and cross the t's of the statement of the difficulties in which the trade has been placed during and since the war, emphasising in particular the fact of their heavy capital charges in contrast with their competitors, who either liquidated their capital debt by inflation or received compensation which enabled them to rebuild their industries on the most modern basis. Naturally, however, the employers join issue with the principal conclusion of the memorandum, repudiating the suggestion that "State control in any form could possibly assist the industry in the solution of its present difficulties," and claiming that nationalisation in any shape or form would lead to complete collapse or render it only possible to continue by subsidies from the taxpayer. To the complaint that the industry is far behind its competitors in organisation, the

Federation declares that "regional organisation based on amalgamation of similar interests which was initiated by the industry itself has already made substantial progress in every district," and it goes on to make the interesting observation that under private enterprise it contemplates that the units of organisation "will ultimately attain regional dimensions, with a co-ordinating body to formulate and direct national policy in, for example, such matters as development, marketing and international negotiations." Here is rather an unusual and promising forecast by an industry of the course of its future evolution. For the benefit of those who think that the industry has been very slow in moving towards its goal, the Federation adds the familiar argument that the industry can only be expected to reorganise and re-equip itself under the protection of a tariff. The Federation are prepared to agree, in the event of being granted protection, that consumers' interests should be safeguarded by a board, judicial in character, to which consumers could appeal in the event of a tariff affecting their interests adversely, and they hope to secure with its help "a basis for international co-operation by the industry itself in securing the stabilisation of world prices and marketing conditions by international agreement." In other words, the Federation now attribute to the lack of protection their failure to come to any agreement with European interests on the many occasions when the matter has been discussed during the last ten years. The final words of the statement reveal very clearly the state of mind of many business people, for the Federation conclude by demanding a tariff "as a means of negotiation for obtaining entry to markets now barred by tariffs as the only effective means of securing a greater measure of freedom in world trade which all sections of the community desire." Clearly the international side of their business is a matter which cannot possibly be ignored by an industry which can only hope to regain full production on the basis of a large export trade, and many of those in this position have got tired of waiting in vain for other countries to lower their barriers. In such cases, though those responsible for policy must be nervous of the effect of protection in raising costs at home, the use of a tariff as a bargaining weapon makes a strong appeal. But whether the best way to clear away other tariffs is to put up one ourselves is another story.

The Cotton Industry Since the War.—Our Manchester correspondent writes: The Cotton Trade Statistical Bureau has this week issued a comprehensive review of the world cotton industry since the war. The director, Mr H. G. Hughes, says that a review of this kind must be, to a large extent, a record of unsolved perplexities, irrelevant disturbances and frequent misfortunes. "Lancashire has lost most because she had most to lose. In no country has the cotton industry been exempt, particularly during the last two or three years, from the evils of over-expansion and excessive competition. On the other hand, it may be useful to set Lancashire's experience in perspective against those of other producers, not with the object of deriving a thin consolation from other people's troubles, but solely in order to see what guiding influences can be traced in the events of the last few years." The first section of the review is a survey of the general tendencies in the relations of supply and demand since the war. This is followed by an account of recent developments in the chief cotton manufacturing countries. Lastly, there is an analysis of the position in the principal markets for yarn and cloth. Mr Hughes contends that five main facts stand out:—(1) Since the war the cotton industries of the world generally have not grown so rapidly as other manufacturing industries, though their growth has kept pace with the increase of population; (2) world exports of cotton goods have not increased at the same rate as the increase in the total production; (3) other exporting countries have been able to increase their foreign trade at Lancashire's expense; (4) changes in the kind of goods consumed have been largely to the advantage of our competitors, whose industries were less dependent than Lancashire upon the great pre-war staples; (5) the world's cotton industry has for the last two or three years been in a position of instability, in which

profits have declined and full-time working has become increasingly difficult. In bringing the review to an end Mr Hughes strikes an optimistic note by saying:—"It is not unreasonable to suppose that, under the right conditions, Lancashire can look for a substantially larger volume of trade than was enjoyed in the past."

British Production.—The physical volume of production in the United Kingdom in the first quarter of 1931, as estimated by the Board of Trade, was 3.6 per cent. lower than in the first quarter of 1930, and 14.1 per cent. below that of the corresponding quarter a year ago. The following table shows the figures for the respective groups in each of the last two years, in the March and December quarters of 1930, and in the first quarter of 1931:—

INDEX OF PRODUCTION (1924 = 100).

Group.	Year 1929.	Year 1930.	Mar. Quarter 1930.	Dec. Quarter 1930.	Mar. Quarter 1931.
1. Mines and quarries	96.8	91.3	102.0	91.4	85.3
2. Iron and steel and manufactures thereof	114.0	88.8	113.8	65.8	67.7
3. Non-ferrous metals	120.5	119.1	105.7	118.3	95.5
4. Engineering and shipbuilding	121.0	116.6	125.5	105.9	104.3
5. Textiles	98.5	79.5	92.4	75.7	72.6
6. Chemical and allied trades	115.8	102.2	106.3	94.6	101.4
7. Paper and printing	†	†	†	†	†
8. Leather and boots and shoes	98.5	101.4	108.5	95.0	101.3
9. Food, drink and tobacco	106.0	104.9	96.9	109.4	101.2
10. Gas and electricity	135.8	139.7†	†	†	†
Total of manufactur- ing industries (2-10)*	115.5	106.3	113.2	100.9	98.0
Total of all groups (1-10)*	111.8	103.3	111.0	99.0	95.4

* Including also various industries not specified above.

† Adequate information in respect of the paper and printing trades has not up to the present been available. The particulars received have been included in the general index.

‡ Provisional figures of the quantity of gas made have been used for the calculation of the group index for 1930, but no information is available as to the quantities made in each quarter. The available data for electricity have been included in the general index.

It will be seen that the progressive decline in production which began early in 1930 has not yet been arrested. A comparison of the past quarter with the October-December period of 1930 shows a decrease in each group, with the exception of iron and steel, chemicals, and leather, boots and shoes. The recession in activity has been most pronounced in the mining, non-ferrous metals and food groups, which declined by 6.7 per cent., 19.3 per cent. and 7.5 per cent. respectively. Despite the severity of the depression in shipbuilding, the index for the engineering group shows only a small decline, which is ascribed to the relative stability in general and electrical engineering. A further sharp decline has taken place in the production of iron and steel in April, and, in the absence of any signs of a definite upward movement in the other industries, it appears unlikely that the index for the current quarter will show much improvement.

Our Trade with Egypt.—The criticism of British trading methods, recently expressed by the Prince of Wales, finds striking confirmation in the report* of the Trade Mission to Egypt which, under the chairmanship of Sir Arthur Balfour, was appointed to inquire into the present position of trade between that country and Great Britain and to recommend action which would lead to the increase and development of such trade. According to figures contained in the Mission's report, although Britain's share of Egypt's trade is still more than double that enjoyed by any other country, our share in Egyptian imports has fallen from 30.5 per cent. of the total value in 1913 to 20.3 per cent. in 1930, while we now take 34.4 per cent. of her exports as compared with a pre-war figure of 43.1 per cent. Cotton piece-goods, cotton yarn,

agricultural machinery, boots and shoes, motor cars and bicycles are among the articles in which the United Kingdom's share of Egypt's import trade has declined since 1913, while imports of coal from Great Britain show a fall in value of £E.439,000, although our share of the import trade in this commodity has increased since pre-war days. The Mission is of opinion, however, that if coal and cotton piece-goods are excluded, "the sum total of the remaining trade of the United Kingdom with Egypt is healthy, both absolutely and in relation to other nations." The reduction in the coal import figures is accounted for chiefly by the use of oil as fuel for ships, but the position with regard to cotton piece-goods is more serious. The report states that our prices are too high in comparison with those of other countries, and that we have lost ground to the textile industries of Italy, Czechoslovakia and Japan. This criticism applies to many other industries, and Sir Arthur and his colleagues are of opinion that a complete overhaul of our costs of production is more than overdue. They estimate that in 1924 the annual income per head of the "fellah" was about £E.15.5, of which probably not more than £E.6 represented actual cash, the rest being received in kind. For instance, most of the maize produced is eaten by the growers, while some is bartered for goods and services. By 1930 the annual income had probably fallen to £E.11.6 per head, and it is, therefore, not surprising that the "fellah" buys the cheapest goods, and not necessarily the best. In this respect British goods are often too substantial and not attractive in pattern to the Egyptian native. The latter likes bright colours and somewhat "flashy" designs, and the Mission urges the wisdom of studying the tastes and wants of our customers and adapting our goods accordingly. It is recommended that goods should be advertised by pictures, samples and by word of mouth, and that catalogues, price lists, etc., should be printed in English, French and Arabic, and, finally, that the exhibition of films showing British progress and enterprise might greatly assist in bringing our goods to the notice of the "fellah" who visits the cinema, although in many cases he does not read. In brief, the authors of the report urge our manufacturers to make a closer study of the market through personal investigation, to adapt their goods to its needs, and, above all, to aim at a reduction in production costs through the co-operation "of the State, financiers, employers, trade unions, and the workers."

Wealth and Income of the U.S.A.—In its March Bulletin the National Industrial Conference Board published its estimate of the national wealth and income of the United States for 1929. The estimate of the national wealth is based on, and designed to fill the gap between, the decennial valuations of the physical assets of the country made by the Bureau of the Census. The last official census was taken in 1922, and in its subsequent estimates the Board has assumed a rate of progress similar to that between 1912 and 1922. In working out the average annual increment to the national wealth between the two census years, the Board has eliminated variations in the price level by the application of the Department of Labour's wholesale price index. The results thus obtained are set out in the following table:—

ESTIMATES OF NATIONAL WEALTH, 1912-29.
(Thousand million dollars.)

Year.	Census Estimates.	Estimates of National Industrial Conference Board, Inc.			
		Aggregate Wealth of States.		Total Wealth (a).	
		In Actual Dollars.	In Actual Dollars.	In 1913 Dollars.	In Actual Dollars.
1912.....	183.6	183.0	184.8	186.3	186.3
1913.....	...	189.1	189.1	192.6	192.6
1920.....	...	485.8	218.7	488.7	488.7
1922.....	320.8	314.7	227.2	320.8	320.8
1924.....	...	331.2	235.6	337.9	337.9
1926.....	...	349.7	244.1	356.5	356.5
1927.....	...	339.4	248.3	346.4	346.4
1928.....	...	353.5	252.6	360.1	360.1
1929.....	...	355.0	256.8	361.8	361.8

* "Report of the United Kingdom Trade Mission to Egypt, February-March, 1931." (London) H.M. Stationery Office. 1s. 6d.

(a) Including value of ships belonging to United States Navy, value of privately owned waterworks, and value of gold and silver coin and bullion, not distributed by States.

The estimates of the national income are a continuation of those made by Dr. Willford I. King for 1909-18, and are based on the gross value of the national product. In this case variations in the purchasing power of the dollar have been eliminated by applying the index of the price of consumption goods, compiled by the National Bureau of Economic Research. This index was considered a more appropriate measure than the cost-of-living index of the Bureau of Labour statistics, which takes into account only the expenditure of wage-earners. The proportion of all taxes (Government, State and local) to the total income, which has been worked out by the Board, has been added to the next table:—

ESTIMATED NATIONAL INCOME, 1912-29 (a).

Year.	Total Income. Thousand Million Dollars.		Income per head, Dollars.		Proportion of Taxes to Income. Per cent.
	Actual Dollars.	1913 Dollars.	Actual Dollars.	1913 Dollars.	
1912.....	33.0	33.6	347	354	...
1913.....	34.4	34.4	356	356	6.4
1920.....	74.3	37.5	697	352	10.9
1922.....	60.0	37.9	546	345	10.3
1924.....	70.0	43.7	619	386	10.2
1926.....	79.5	47.7	681	410	10.9
1927.....	78.1	48.2	661	408	11.6
1928.....	81.0	50.6	676	422	11.5
1929 (preliminary)	84.0	52.5	692	432	11.6

(a) Includes business savings.

Eliminating changes in purchasing power, the national wealth shows an increase of 39 per cent. as compared with 1912; while the total income and the income per head advanced by 56 per cent. and 22 per cent. respectively. An interesting feature is the relatively low proportion of all taxation to the total income.

Economic Conditions in Mexico.—The Department of Overseas Trade have issued a report under this title, compiled by the Acting Consul-General at Mexico City and dated January last. The general tenor of the report is that while three years ago Mexico successfully established stable political conditions, the substantial gain to her commerce that should have accrued from this settlement of her internal affairs was largely neutralised by the 1930-31 trade depression. Mexico was hit particularly hard by the fall in silver and other metals and in petrol, and also by the fact that only poor crops were obtained both in 1929 and 1930. Thus at the moment her purchasing power, in common with that of other primary producers, is limited, and this reacts both upon her power to deal with her external debt, a revision of which is now under discussion, and upon her capacity to buy foreign goods. On this last point, the report is not too encouraging when it comes to speak of opportunities in Mexico for the development of British trade. It suggests in somewhat qualified terms that there is scope for British machinery and steel, but states that British tools are not sufficiently well known to command a ready sale, and holds out few hopes to the British motor industry or to British electrical engineers. Imports of textiles have now to face the effects of a recent 40 per cent. increase in the tariff, but inasmuch as there are still various products that are not made in Mexico and which, therefore, have to be imported, the Consul-General still feels that there is room for energetic salesmen in Mexico. In general, there are countless British articles still practically unknown in Mexico, and the United States enjoys a natural advantage in being a near neighbour to the Republic. On that point, however, the report pertinently calls attention to the high railway rates on goods coming from the United States, and say that the establishment of a rapid and frequent British steamship service to Vera Cruz would be of great benefit. This section of the report concludes by mentioning such familiar points as the appointment of suitable agents, the need of visits by principals, the necessity of maintaining adequate stocks, and terms of credit and payment. All these are important, but the general impression left by the report is that so long as Mexican purchasing power is restricted as it is at present it will not be easy for British traders to establish themselves in this market.

German Insurance Results.—The largest German insurance group, the Allianz-Konzern, shows very favourable results for 1930, writes our Berlin correspondent. The premium income of Allianz und Stuttgarter Verein Versicherungs A.G. has risen from Rm. 188 to Rm. 196 millions, and the expenses have been reduced by a substantial diminution in fire losses. Net profit was Rm. 5.7 millions against 4.3 millions in the preceding year, and a 12 per cent. dividend is again being paid on the ordinary shares. The sum of 1.2 million, against 0.6 million last year, is being used to pay up the amount uncalled on the ordinary shares. The premium income of the concern as a whole has risen to Rm. 356 millions, and now constitutes 13 per cent. of the aggregate premium income of all German companies in the property insurance business. The big daughter company, the Allianz und Stuttgarter Lebensversicherungsbank A.G., achieved a life insurance business of Rm. 3,183 millions in 1930 against Rm. 2,805 millions in the preceding year, which brings its share of German life insurance business to 17 per cent. It is now the largest life insurance company on the Continent, and has Rm. 500 millions invested in mortgages, securities, land, etc. The large profits of this company are mainly derived from the yield of its capital; its mortgages and securities yielded 8.5 per cent. in 1930. The company is once more distributing a 16 per cent. dividend, and its very satisfactory growth shows how baseless are the rumours of unsoundness in the German insurance business. The failures of recent years, notably that of the Frankfurter Versicherungsgesellschaft and also those of smaller transport, credit and motor insurance companies, were due to mistakes of management in these undertakings, but cannot be used as a ground for inferences as to the state of other German insurance companies.

German Bank Amalgamation.—Two of the largest German private banks, writes our Berlin correspondent, will shortly enter into an agreement which practically amounts to an amalgamation of their interests. They are the firm of S. Bleichröder, which was founded 128 years ago, and before the war played at times a leading part in the international money markets, and the much younger but recently very active firm of Arnhold Brothers. To the very substantial property which the latter firm has acquired through successful transactions during the last decade are now to be joined the tradition and the high prestige of Bleichröder, which has been represented on the advisory councils of most of the big German concerns for decades, but has hitherto held aloof for personal reasons from the substantial business opportunities which this position, together with the firm's foreign connections, would have made possible. The amalgamation will greatly strengthen private banking in Germany, giving rise, as it will, to a large and active private bank of the same rank as Mendelssohn and Warburg, hitherto the largest firms in existence.

Unemployment Relief in Czechoslovakia.—A correspondent writes:—There are at present about 300,000 unemployed persons in Czechoslovakia. This figure was only surpassed in the winter 1922-23, when there were 320,000 unemployed. The first step in the direction of unemployment provision was taken on December 10, 1918, by a law which granted to the unemployed and the returned soldiers direct State maintenance. The law of August 12, 1921, brought in a new regulation of the State provision for the unemployed, in which direct maintenance was continued. The main provisions of this law were the following: Persons, other than seasonal workers, covered by health insurance had the right to be supported during a period of unemployment not exceeding six months, or, in exceptional cases, one year. This period was increased in 1922 to eighteen months. The benefit amounted to about one shilling daily. The Act required, in addition, the provision of public work in times of slackness. As early as 1921 the National Assembly of Czechoslovakia decided to introduce the Gent system, by which the State contributes only to trade-union unemployment benefit. An Act to this effect came into operation on April 1, 1925, and is still in force, though a proposal is now being discussed for replacing the Gent system by compulsory

unemployment insurance. The State contribution was limited to 1s. 6d. a day. A considerable improvement was brought about by the law of June 5, 1930. Under this law the unemployed could claim State support for a period of 26 weeks, or six months in one year. Further, the State contribution was, in consideration of the circumstances, increased to four times the contribution paid by the organisation to which the unemployed belonged. The Act provided against the possibility of the number of the unemployed reaching an extraordinarily high figure. If the Minister declared unemployment in the whole State or in certain parts or in certain branches of industry to be extraordinary, members of a trade union were to have the right to claim unemployment benefit during a period of 13 weeks, even if a former claim had been rejected or exhausted. The contribution paid by the State amounts to 2½d., that of the trade union to ½d. These provisions regarding extraordinary unemployment proved to be of practical value, and, since January 1, 1931, unemployment in the following branches of industry has been declared extraordinary: textiles, glass, metal, leather, mining, wood and printing. The same Act provides also for the productive employment of persons out of work. The Minister is entitled to use a part of the unemployment fund for the carrying out of work undertaken in times of distress by the State, a borough or a municipality for the public welfare. The State is planning vast undertakings of its own and contributions to other public works on the strength of its powers under this Act.

Education in 1930.—The Report of the Board of Education for 1930 contains ample evidence of the fact that reorganisation, on the lines laid down in the Hadow Report, has been progressing steadily. The number of existing departments in public elementary schools affected by reorganisation schemes in the twelve months ended March, 1930, amounted to 1,202, as compared with 1,103 in 1929, and 742 in the previous year, while the majority of the new schools opened during the year were also organised according to the Hadow principles. The movement has also extended to voluntary schools, and has been greatly facilitated by friendly co-operation between the managers of these schools and the local educational authorities. The number of elementary schools in existence totalled 20,803 on March 31, 1930, as compared with 20,747 on the corresponding date in the previous year, while the number of children on the registers of public elementary schools maintained by local authorities amounted to 5,527,113, as compared with 5,512,283 on March 31, 1929. Considerable progress was made during the year in reducing the average size of classes, and the number with over 50 pupils dropped during the year from 10,883 to 10,017. Building activities during the year accounted for capital expenditure to the extent of £5,509,505, as compared with £4,298,909 in 1929, while the Board reports good progress in providing playing-field accommodation for both new and existing schools. Secondary schools eligible for grants from the Board numbered 1,354 at the end of March, 1930, and the pupils in these schools totalled 394,105 (207,462 boys and 186,643 girls) as compared with 386,993 on March 31, 1929. On October 1st last the number of pupils in grant-aided secondary schools over 16 years of age showed an increase of 4,500 over the figure for the corresponding date in 1929, and the Board have reason to attribute this increase in some degree to the difficulties experienced in obtaining employment under present conditions. Of the 66,741 pupils who left grant-aided secondary schools in 1929-30, 2,477 boys and 1,352 girls, 63.4 per cent. of whom were ex-public elementary school pupils, are known to have proceeded direct to universities.

Royal Insurance Company, Limited.—Owing to a considerable reduction in single premium business the premium income in the life department fell from £1,891,000 to £1,795,000, but the net new business transacted in 1930 was rather larger in amount, at £3,823,842, compared with £3,699,593, and the fund, which was also increased, now stands at almost £20½ millions. The last quinquennial valuation took place on December 31, 1929, and a

reversionary bonus for the five years then ended was declared at the rate of 42s. per cent., while the interim bonus for the current quinquennium was raised to 45s. per cent. The detailed working of the various departmental accounts is set out in the table below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	562,541	8.1	446,692	6.8
Personal accident.....	4,800	2.2	7,253	3.2
Employers' liability.....	58,844	15.8	32,236	8.5
General	292,817	5.8	172,593	3.4
Marine	104,489	8.8	46,465	3.9
Life	40,000		40,000	
	1,063,491		745,239	

Less items debited to profit and loss account.....	504,991	316,438
--	---------	---------

Total net trading surplus 558,500

428,801

The total premiums, excluding life, have fallen from £13,755,000 to £13,202,000, most of the decline having occurred in the United States fire business. In the general and miscellaneous account, which produces over £5 million premiums per annum, there was actually a small increase. No doubt a portion of this was due to the passing of the Road Traffic Act, which has brought a certain amount of business to the Royal under the compulsory insurance provisions, though the general experience is that the proportion of motorists uninsured was exceedingly small, most of the extra business being in the form of small motor-cycle insurances. The marine account showed the largest proportion of decline in premiums, from £1,184,000 to £967,000. The decline in profits was heaviest also in this department, though the incidence of claims in the 1930 account suggests that some improvement may be expected when this account is closed at the end of the current year. The dividend has been raised from 62½ per cent. to 65 per cent., and 95 per cent. of the cost of this is met from interest earnings.

Sun Insurance.—In the 220th year of its existence the Sun finds itself by all the usual tests in an extremely strong position. In addition to the departmental reserves there is a general reserve of £1 million and a profit and loss account balance of nearly the same amount; while the total funds, apart from the capital, amount to 136 per cent. of the premium income. A year ago £120,000 was applied towards paying up 10s. per share of the uncalled liability, and at the same time each £10 share was split into ten £1 shares, on each of which 5s. is paid up. The 1930 dividend of 53½ per cent. is, therefore, not exactly comparable with that of 1929, but the cost is approximately the same and is entirely met out of interest earnings. It is pleasing to observe that the Sun has managed to report an increased total premium income in 1930 as compared with 1929, the respective totals being £4,473,000 and £4,291,000. Although the fire department showed a drop, there was again an expansion in the burglary and general department, and a large increase in the marine premium income. This latter department is a post-war development, and the premiums now amount to just under £600,000. The profits have been carefully conserved, with the result that the fund now comfortably exceeds one year's premium income. The detailed results of each department are set out below:

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	224,633	8.7	150,685	6.1
Personal accident.....	9,569	19.4	5,831	10.9
Employers' liability.....	5,504	3.7	18,637	12.6
Burglary and general	75,656	6.8	62,794	5.2
Marine	20,000	4.9	...	...

Less items debited to profit and loss account	335,362	237,947
---	---------	---------

	121,789	123,586
--	---------	---------

	213,573	114,361
--	---------	---------

The 5s. shares stand at 70s. and yield 3.2 per cent. gross on dividend and 4.5 per cent. gross on earnings.

Guardian Assurance.—Following upon a disappointing fire report for 1929, the 1930 accounts show a substantial improvement in this department, an improvement which, however, has been off-set in some degree by a falling off in profits from the accident and miscellaneous account. Both accounts show a drop in premium income, the combined total, including marine, now being £2,061,000, rather more than one-half of which is derived from the fire department. The underwriting results are set out below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	23,677	2.1	87,235	8.1
Accident.....	46,819	5.8	26,137	3.3
Marine	650	.5	4,518	2.3
Life	36,000		36,000	
	107,146		153,890	
Less items debited to profit and loss account .	167,920		81,713	
	- 60,774		72,177	

In arriving at a net trading loss for 1929 it is only fair to mention that £70,000 of the total of the items debited to profit and loss account, being part of the cost of liquidating an old standing claim for Excess Profits duty, was met out of reserves created from past years' profits. Rather curiously, in view of the declining premium income, the net interest income shows a moderate increase, and, as the dividend has been maintained at the same rate as in 1929, namely 100 per cent., the gap in interest earnings has been reduced from £15,000 to £6,000. The life department shows a steady increase, and new business was transacted in 1930 for net sums assured of £1,323,404, compared with £1,332,770 in the preceding year. At the last quinquennial valuation, which took place on December 31, 1929, the usual distribution of surplus was made, and it was resolved that the shareholders' proportion of surplus in future should be reduced from 20 per cent. to 10 per cent.

LEAGUE OF NATIONS.

Mr Henderson's Prestige — Polish Minorities — The Economic Crisis — Disarmament Conference Plans.

(FROM OUR CORRESPONDENT.)

GENEVA, May 26.

It is early to say what may be the ultimate effect of the May session of the League of Nations Council which ended on Saturday, but there can be no doubt of its importance as a stage in several matters of first-class political and economic concern. It has been a personal triumph for Mr Henderson, whose authority increases at every session, and there is real satisfaction over his appointment as President of the Disarmament Conference next year. This, apparently, is felt also in the United States, whose Secretary of State, Mr Stimson, has sent him a most cordial telegram of congratulation. Apart from this general observation on the part played by Mr Henderson in most of the major problems considered, his intervention on the question of German minorities in Upper Silesia was immediately hailed by the Germans in Geneva as having saved the German Government; if that is so, it was worth a Council meeting. But in itself it was characteristic. The report which the Polish Government had been asked by the last Council to furnish on the steps taken to deal with the abuses of which the German Government had rightly complained, only reached the members of the Council while they were in Geneva; it is a production of sixty pages, and does not include the one essential fact which would have satisfied the Council, namely, the complete severance of the official relationship between the authorities and the notorious Polish Insurgents Union. Regret was indicated in the Japanese representative's

report, which, however, noted considerable improvement in the relations between the authorities and the minority, and suggested that the Council's examination should be closed, implying also an expectation of further steps by Poland. But Dr. Curtius asked for an adjournment, as he had had little time to consider the Polish statement; this was quite reasonably supported by Mr Henderson (temporarily presiding), who pointed out the extremely busy time which Dr. Curtius had had as President of the Council, with its heavily charged agenda, in addition to the meetings of the European Commission. The French, Polish and Yugoslav representatives pressed for the immediate adoption of the report, and the Polish representative virtually threatened the Council by declaring that his Government could not be responsible for any circumstances which might ensue from the adjournment. It was to this that Mr Henderson vigorously retorted in the name of the Council that Poland could not so divest herself, and he thus gave much-needed comfort and satisfaction to Dr. Curtius. The matter was, in fact, adjourned, as no one challenged Mr Henderson's somewhat doubtful ruling in that sense.

The Council Committee on the Ukrainian petitions, sitting under the Presidency of Mr Henderson, followed the unusual course of issuing a *communiqué* explaining, in guarded but intelligible terms, that it was postponing its examination till a later session in the hope that the Polish Government would be able to reach agreement with the minority. It is generally assumed that the Committee received some assurances from the Polish Government, which is given this further opportunity of action. The Council had before it the report on the work of the European Commission, and approved its proposals. It appointed an organising committee for the creation of the International Agricultural Mortgage Credit Company, and decided that the convention setting up the company should be immediately open for signature; sixteen States attending the European Commission immediately signed. The conclusions of the Commission provide for a series of committee meetings throughout the summer, and it must be confessed that, while there are one or two elements of great potential value, they have, on the whole, the appearance of a hasty attempt to counter the Austro-German proposals. There will probably be an interval until September or possibly October before the legal opinion of the Court will be available for the Council's consideration, and this time must be occupied in showing whether the general approach to the problem of Europe's economic relations is really genuine and whether it is more feasible than the particular approach as advocated by the Germans and Austrians. However, the discussions in the Council and the Commission have undoubtedly produced a *détente* for the time being.

The plans of the Commission, as approved by the Council, are that a Co-ordination Committee, upon which all members of the Commission will be represented and whose sphere of action is to be conceived on the widest possible lines, will meet on July 6th to co-ordinate and, where necessary, amplify the conclusions of the various other sub-committees which it was also decided to appoint. This Co-ordination Committee will report to the full Commission and communicate the report before the Assembly meets to the members of the League not represented on it. The following steps were also taken:—

A sub-committee on agricultural problems, "with due reference to the results of the Rome and London Wheat Conferences," is to meet on June 10th. The British, Swedish, Danish, Norwegian, and Dutch Governments all made reservations on the suggestion for the establishment of a preferential regime for the benefit of agricultural countries of Eastern Europe.

It is recommended that the Council should, if it thinks fit, take steps for the application of the principles of the Commercial Convention of March, 1930; it is at the same time recommended that henceforward States should conform as far as possible to these principles.

States are invited to continue to endeavour to bring to a successful conclusion as rapidly as possible the negotiations entered into by agreement between various Governments and the British Government on the latter's initiative.

A committee of "highly qualified experts," working in contact with their Governments, is to meet on June 24th to examine "in complete freedom and in a spirit of liberal understanding," means calculated to bring about closer and more profitable co-operation with a view to improving the organisation of production and trade.

A small committee of five Government representatives is to consider, in consultation with a delegation of the Financial Committee of the League, practical measures for the issue of State loans of an international character.

A committee of twelve members is to study unemployment problems.

A number of other less vital problems are set down for consideration by one or other of the committees, e.g., trade in and transit of livestock, transport and transit of electric power, customs exemption for liquid fuel, customs nomenclature and treatment of foreigners.

One proposal was that there should be a committee to consider measures by which the difficulties of Austria might be remedied, but the Austrian representative observed that his Government proposed, if necessary, itself to submit suggestions on this matter to the appropriate committee. The draft pact of economic non-aggression submitted by Mr Litvinoff and supported by the Turks is referred to the Co-ordination Committee.

The Council finally selected Geneva as the seat of the Disarmament Conference next year. The German Government was not successful in its suggestion that the information to be asked of Governments on the position of their armaments should be provided in a model table containing facts on material in service or in stock and trained reserves. States which have obstinately opposed the inclusion in the Draft Disarmament Convention of limitation of material or trained reserves were not likely to agree that preparatory information should include these points. The Council, in fact, could do little else but accept the British proposal that the information should be provided by filling in the tables attached to the Draft Convention; the French and Japanese representatives found even these a little exacting, but at any rate it was agreed to with a certain amount of reservation, and with the proviso, on the other side, that the Conference would be free, if it liked, to ask for more information. Dr. Curtius abstained. Governments are also to be asked to fill in the standard budget contained in the report of the experts on budgetary limitation of armaments, and the Secretariat is to publish a special edition of the *Armaments Year Book* just before the Conference.

The Council decided to ask Governments to give their Assembly delegates the necessary powers to take a decision on the draft Convention for improving the means of preventing war, upon which a special committee has reached agreement on the points undecided at the last Assembly.

Among a variety of other subjects dealt with by the Council, one of the most important was the authorisation given to the League technical organisations to collaborate permanently with the Government of China in its reconstruction work. One of the things asked of the Council by the Chinese Government is to send an expert who will be in a position to give an opinion on its scheme of reconstruction, and on the particular methods by which the League could help in its execution.

The formal accession of Great Britain, Australia, India, New Zealand and France to the General Act for the Peaceful Settlement of International Disputes were made during the Council, and the Italian Government announced that it would accede shortly.

UNITED STATES.

Money Market — Public Finance — Industry — Wages.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 15.

THE latest moves of the Federal Reserve authorities to cut interest rates and force funds from New York back to the interior have produced only a moderate effect. Last week's reduction in the New York Federal Reserve Bank's discount rate has been followed by cuts in other districts and by one more reduction in the New York official bill-buying rate. Current stagnation in the bill market probably foreshadows still another reduction, which would force the rate on short-term bills below 1 per cent. Call money was posted at 1 per cent. renewal on the Stock Exchange for two days, but heavy withdrawals at that figure restored the old $1\frac{1}{2}$ per cent rate. However, time loans are being made at $1\frac{1}{2}$ per cent. for six months.

Chipping of bank interest rates charged to customers on loans at interior cities is beginning, and that is one of the objects of Federal Reserve policy. So far the bond market has improved only in the gilt-edged sections, and no increase in new capital offerings has appeared. The new issue market is given over almost entirely to Treasury and municipal financing, and some fancy prices are being received. An issue of New York City bonds, for instance, was sold this week to public investors on a 2.86 per cent. yield basis, the lowest in history for the municipality. The Treasury's last bill issue was awarded at about 1 per cent. Investment money is fairly plentiful and goes eagerly into high-grade investments, but is wary as ever of the lesser grades.

Rather to the surprise of Wall Street, the Clearing House Committee has failed to vote a cut in deposit rates. This is not to be interpreted as disagreement with the Federal Reserve Bank's policy of making money more plentiful in other centres, but a number of the Clearing House banks feared there might be too rapid a withdrawal of deposits by their country correspondents. Reduction probably will come. Individual banks are reducing rates on time deposits, and a committee of bankers representing the institutions holding the bulk of foreign deposits have decided to cut deposit rates on foreign time money from the old rate of 2 per cent. to $1\frac{1}{2}$ per cent. The demand rate was left unchanged at 1 per cent. Meanwhile the Federal Reserve Bank has announced a reduction in its buying rate on bills for foreign correspondents to $\frac{3}{4}$ per cent., which is calculated to make this market less attractive.

Bankers note no appreciable outflow of funds to foreign countries, and do not expect much for a while at least. This week's statement of the Federal Reserve system reveals the ineffectiveness of the latest bill cut in forcing credit into the market. Bill maturities far exceeded new purchases, and the system's portfolio of bills dropped \$40,000,000. Government security holdings were unchanged and the member banks cut discounts slightly.

Money circulation rose \$46,000,000 in April, responding to seasonal needs. Gold imports were over \$20,000,000, mostly from Argentina, and the cheap money campaign seems scarcely able to check the movement from there. Reports of a Spanish credit are believed to be unfounded on fact.

With declining prices in the share market and continued reduction of bank loans on securities throughout the country, the brokers' loan total is falling. This week's reduction of \$28,800,000 puts the figure at a new record low level of \$1,671,000,000. The portion now allotted to corporations and out-of-town banks is dwindling rapidly, since the spell of 1 per cent. money, after deducting the $\frac{1}{2}$ per cent. charge made by local banks for placing these loans, left little inducement for others to make loans. The drop this week for corporate and out-of-town bank loans was \$95,000,000, and corporate money lent is now down to \$152,000,000, or less than the Treasury holdings of the United States Steel Corporation, for example.

After a lull in loans under the new soldiers' bonus law, which in effect amounts to gifts from the Treasury, borrowing has increased rapidly. Loans under the old law totalled \$344,480,000, and additions under the new law, which increased the amount available to 50 per cent. of the maturity value, are \$711,132,000. The continuance of the trade depression makes it likely that borrowing will reach the maximum limit, which allows of nearly \$500 million dollars more being advanced.

The Treasury is now making a tender of non-interest-bearing bills every week, in amounts ranging from \$50,000,000 to \$100,000,000, and this form of borrowing has largely supplanted the old method of a note or certificate issue only on a quarterly tax date. A maturity will fall in each week for several weeks ahead, in addition to the new money which the soldiers' bonus payments and other expenditures are requiring.

Maturities of Treasury certificates on the next tax date, June 15th, total \$588,000,000, and it is possible that the Treasury may choose that date to float a long-term issue to consolidate much of the short-term indebtedness. It is

also possible that the long-term issue when it comes will carry privilege of conversion for Fourth Liberty and other Liberty loans. For the first time since before the war the Treasury's credit has been raised to a 3 per cent. basis. The certificate maturity for June will doubtless be replaced by another, and the financial community is talking of a 12-15-year 3 per cent. long-term issue, although so low a coupon might be somewhat difficult; but by the offer of special privileges as in 1927 a billion or two of Liberties might be converted into a 3 per cent. bond.

Trade news is still rather unfavourable on the surface, but some slight improvement is taking place in a few industries. Cotton consumption rose about 5 per cent. in April, and department store sales throughout the country, as reported by the Federal Reserve Board, increased about 9 per cent. last month. Motor production continues to gain moderately in the lower-price field, and building permits and contracts were larger in April, though the increase was less than seasonal. Steel output is around 46 per cent. of capacity, and probably will not go below 40 per cent. this summer. Railroad traffic is creeping ahead slightly, but is far below that of recent years for this season.

Industries which have shown some further recession include copper. Buying on the part of the public utilities and the electrical manufacturing concerns fell in April, and, although copper output declined, a moderate addition to stocks took place, after a few months of decline. Oil is still producing far more than consumption demands require, although recently a reduction has occurred in the new East Texas region, and somewhat more stable prices are the result.

Wage cutting throughout the country continues, but with very little publicity, and, in many instances, with such devices as work days without pay, designed to conceal the real reductions. The major industries, which work on a more or less fixed scale, such as the railroads and the steel and building trades, have not cut wages; but undoubtedly they feel that it will be necessary to do so, whatever may be said for publication. Railroad executives are fearful of efforts to bring down wages at this time, because the strikes which would most certainly follow would be too costly for the weaker roads to bear, and numerous receiverships probably would result. Dividend reductions are being made daily, offsetting to a considerable extent the influence of cheap money on investment markets.

FRANCE.

M. Briand — Radical and Socialist Policy — Revenue — Livestock.

(FROM OUR CORRESPONDENT.)

PARIS, May 27.

THE Briand problem, with all its far-reaching complications, received definite solution this morning, when the veteran Foreign Minister, in response to a request from M. Laval, in the name of the entire Cabinet, consented to continue in charge of French foreign policy. The *Temps*, which has not been too sparing in its criticism of M. Briand lately, remarks in an article of the "all's well that ends well" type, that "Ministerial solidarity has survived the consequences of the miscalculations of the Presidential election," which it suggests was due to M. Briand's ill-luck in having certain encumbering and compromising friends. "He has left the Socialists to their defeatist philosophy, and the Radicals—become rather more prudent latterly, if not wiser—to their rather too electoral conception of peace." The Ministerial team will therefore meet the Chamber to-morrow as a still united body, and in the middle of June will probably, according to all present indications, collectively resign on the accession of the new President and equally collectively resume office.

The alarm, nevertheless, has been a serious one. In present circumstances M. Briand could as little afford to

abandon the Ministry as the Cabinet could risk severing connection with him. The Government's left wing supporters are still too doubtful a quantity to permit the risk that would attend the dropping of a pilot of the calibre of M. Briand, and the Foreign Minister's own situation, were he dependent on the support of the Socialists and a probably divided Radical Party, would be largely divested of real authority. His firm stand at Geneva proved that he has recovered his old form, and he has on this occasion, as French opinion has been quick to realise, the active support of his British colleague.

The latest split between the Radicals and the Socialists, which apparently nearly came to a head with the defeat, alleged to be the result of Radical votes, of M. Briand's candidacy for the Presidency, now appears to be becoming more visible daily. M. Herriot has this week again declared himself definitely opposed to any kind of Austro-German Customs Union. M. Blum, on the other hand, is just as strongly in favour of the Austro-German project, and equally firm in his demand that France shall disarm, at any price, whatever other nations may do. In a strongly worded article in a Lyons newspaper M. Herriot insists that the project is not an economic but a purely political move, and that in putting it forward Germany has shown that, now the Rhineland has been evacuated, she has returned to her old policy of intimidation, on exactly the same lines as the historic *coup d'Agadir*. An economic alliance, M. Herriot argues, can only be necessary between nations whose respective industries are complementary, which in this instance is not the case. The launching of the project when the European Union was actually under discussion was a direct challenge to M. Briand's proposals, which latter he (M. Herriot) was prepared to support to the utmost.

Meanwhile, the Socialist Party, at their national congress at Tours, is mildly rent with intestinal sham-fighting. M. Paul Boncour, who, with a few other dissidents, refuses to accept either M. Blum's unilateral disarmament doctrine or his surrender to the Anschluss demand—and who, incidentally, is regarded by many old parliamentary hands as a more than possible successor of M. Briand—has abstained from attending the Tours gathering, and the assembly has so far carefully avoided taking serious official notice of their comrade's attitude. In view of the danger, owing to the proximity of the General Elections, of any direct vote on the Party's future policy in regard to national defence, the congress was electrified on Monday by a sudden interruption by a back bench delegate who grimly demanded: "Why do our German comrades vote credits for new cruisers and for the Reichswehr when we do not vote even the Budget?" The question, which embodies the whole Herriot and Paul Boncour gospel, fell like a bombshell on the party caucus. Everybody realised that any clearly-stated resolution, defining in plain language the party's attitude towards national defence, must in present circumstances inevitably prove disastrous to French International Socialists at the coming elections, no matter which alternative it favoured. It was promptly decided to adjourn consideration of the question till the closing hours of the congress to-day, by which time it was estimated it would be found possible to draft the usual meaningless resolution on the subject that will commit nobody, satisfy nobody and annoy nobody. Of all the members of the party, M. Renaudel is perhaps the most embarrassed. As *rapporteur* for the Air Ministry budget—a post which he willingly accepted—it was his duty to recommend large credits for air defence, which party discipline condemned him to refuse to support by his vote. His appointment as *rapporteur* was one of those slim little moves which French politicians delight in.

The revenue returns for April indicate only approximately the extent to which the country is suffering from the economic slump. The total yield from all "normal and permanent" general Budget sources for the month was 3,303,430,000 francs, as compared with 3,493,800,000 francs in April last year and 3,962,131,000 francs in 1929. It must not be overlooked, however, that during the past two years some £40,000,000 of taxation reductions have come into operation, which would be equivalent to something like 275,000,000 francs per month of lost revenue.

On the other hand, although no fresh taxation in the ordinary sense of the word has been imposed, there have been innumerable modifications upward, in connection with the incidence of many of the existing imposts, which have appreciably contributed to cancel out losses due to "remissions." Income-tax payers, for instance, last year found their assessment notes unexpectedly higher, while in a large number of cases rateable values have been mysteriously swollen. All this has the effect of rendering anything like exact comparisons impossible. Customs duties last month yielded 479,000,000 francs, against 253½ millions in April, 1930, or almost double, owing to the numerous increases by decree latterly in various scheduled rates. Imports in April, nevertheless, were 15 per cent. less in value and 5 per cent. lower in tonnage. The yield from the turnover taxes, on the other hand, was 17½ per cent. lower than in April, 1930, which was only partially due to the general, although small, drop in commodity prices during the year and the suppression of this tax so far as chemical manures are concerned. The tax on Bourse operations, which was reduced by one-half under the 1930-31 Budget, produced only 9,414,000 francs, against 27,500,000 francs in April, 1930. The yield for the month was 30,500,000 francs, or about 1 per cent. in excess of Budget estimates, against a surplus of 1½ per cent. in March and of 2½ per cent. in February. The January and December yields were respectively 136,000,000 francs and 38,500,000 francs below expectation.

Returns of the country's flocks and herds during 1929, which are now available, set forth the following totals, as compared with the pre-war figures:—

	1913	1929
Cattle	14,787,710	15,631,140
Sheep	16,131,390	10,451,760
Pigs	7,035,850	6,101,810
Horses	3,333,080	2,985,650

It will be noted that the stock of cattle, which in 1915 had sunk to 12,520,000 head, has since not only recovered to pre-war level but appreciably surpassed it. The stock of pigs, which was diminished to 4,910,000 by the end of 1915, representing a loss of about 30 per cent., has been the slowest to recover. The figures representing sheep are perhaps misleading, as they do not indicate that, although sheep-breeding has largely declined in France itself during the war, it was already seriously neglected for many years previously. Over half a century ago, when French sheep-breeding was at its zenith, the national flocks totalled over 30,000,000 head, but have been decreasing ever since, owing to ever-growing competition by Australian and other wool. The drop of nearly 6,000,000 head since 1913 has been almost exactly compensated for by the remarkable development of sheep-breeding in Algeria, whose flocks now amount to over the amount of the decline in metropolitan France.

GERMANY.

Geneva — The Austro-German Customs Proposal — Politics — B.I.S. Report — Rayon Cartel — Petrol Selling Agreement.

(FROM OUR CORRESPONDENT.)

BERLIN, May 27.

A LARGE section of the German people has been bitterly disappointed by the developments at Geneva. That the legality of the customs union agreement should be decided upon by the Hague International Court would have been comprehensible, but that the Council of the League should make the question the subject of a political debate is in German eyes a particularly poignant instance of the special treatment which Germany receives at the hands of international law. The attitude of the rest of the world to this question seems to Germany to be something like this: "If Germany's proposal is contrary to the Treaties, it must be abandoned, but if it is permitted by the

Treaties, we must first discuss whether it suits us to let Germany carry it out, and if we reach a negative conclusion, Germany shall not be allowed to exercise her right."

That is, of course, a misapprehension, but it is not surprising that public opinion in Germany cannot follow unaided the subtleties of League politics. This is not the only matter in which the edicts of international law and of Geneva custom are not quite an open book to the man in the street, but no other great people is so dependent in vital matters on the decisions of international committees as are the Germans. The English, the French, the Italians leave the details of League negotiations to their experts, but the German people cannot take things so calmly when it is a question of refusing to the population of the two German-speaking countries the elementary right of mutual help by economic means in an economic emergency, and of refusing it merely because these two countries were on the losing side in a war. It is as natural as it is regrettable that to the eyes of suspicion things seem even worse than they are. The only bright spot in the situation, otherwise so unfavourable, as far as Germany is concerned, to the cause of international co-operation, is the fact that, thanks to Mr Henderson's attitude, the Polish report on Upper Silesia was not accepted *in toto* but has been reserved for searching examination.

Disappointment at the turn of events in Geneva has given rise to an attack, in which some of his closest colleagues have played a leading part, on the position of Dr. Curtius. His resignation was demanded, and an attempt made to get the Chancellor to bring pressure to bear on him. In addition to the discontent with foreign policy, there was also a purely domestic political motive: the new emergency decree which will have to be issued early in June will be very unpopular, and naturally no party, not even the Social Democrats, to whose party Herr Curtius belongs, likes the idea of being responsible for it. These domestic considerations, however, only found expression because they coincided with the depression caused by the international political situation. The attack was a failure as the Chancellor was not to be moved, and as a large section of the German People's Party was afraid to jeopardise the existence of the Brüning Cabinet.

In its relations with the Left, also, the Chancellor's authority is the strongest asset of the Government. The Social Democrats will shortly hold their Party meeting, on the agenda of which are many resolutions calling for a change in policy and sharper opposition to the Brüning Government. Herr Löbe, the President of the Reichstag, recently criticised, with much greater moderation but very decidedly, the results of the complaisance which the Social Democratic Party has so far shown towards the Brüning Cabinet. Apart from the fear of the curtailment of the social services, which is certain to be introduced by the next emergency decree, the tendency towards opposition among the Social Democrats is primarily due to the question of bread prices. The price is still rising, and the Government has so far done little to bring about the stabilisation on the basis of the average for the last six months which was promised by the law. There are many signs that this may afford the Chancellor a means of meeting the wishes of the Social Democrats.

The first report of the Bank for International Settlements was received with great interest in Germany, where it has intensified the critical attitude towards the Bank which has existed for some time. It was already evident from the monthly reports that the Bank is doing nothing to restore equilibrium between long- and short-term credit; the medium of long-term investments of the Bank are very small indeed and are only to be very slightly increased in the near future. The annual report provides, however, the first information that has been made available as to the geographical distribution of the Bank's loans, and it appears that 21 per cent. have been placed in Germany. That amounts to about 400 million Swiss francs, almost exactly the sum which Germany keeps permanently in Basle as reparation balance and foreign exchange reserve. The B.I.S., therefore, so it is reasoned in Germany, is doing nothing to equalise interest rates between debtor and creditor countries, and nothing to facilitate the payment of reparations, though that is supposed to be its

function. It simply lends to Germany the sums it receives from her.

There are signs that the restoration of normal conditions in the rayon industry, which has suffered from the depression to an exceptional extent, may not be long delayed. As the productive capacity of the German factories greatly exceeds consumption, and imports, aided by the low duties, are very high, rayon prices in Germany during the last two years have fallen by 40 or 50 per cent. After prolonged and unsuccessful efforts the chief producers have at last reached an agreement with the principal importers. If they are successful in securing the adhesion of some of the smaller factories, a cartel will be evolved which will take over the function of selling in place of the importers and manufacturers. The cartel will take up the goods on the basis of fixed quotas; the Aku group, which is in close touch with Courtaulds, would have a quota of 50 per cent., I.G. Farbenindustrie 15 per cent., and the Italian importers (Snia Viscosa, etc.) 17½ per cent. The Belgian and French quotas are not yet fixed, and England does not export to Germany.

An agreement for joint action in the German market has also been reached by the big petrol companies. The competition between Russia and Roumania has brought about a very severe fall in prices, though increases in taxation have prevented the consumers from feeling its effects. After six months of unrestrained competition (before that there was a selling agreement), Standard Oil, Shell, and the Anglo-Persian group have now reached an agreement, and the Russian and Roumanian companies have so far fallen in with it as to adopt the same price increases. Upon the conclusion of the agreement prices were raised throughout Germany by 15 per cent. The American importers would like an agreement establishing quotas for all sellers.

HOLLAND.

Dutch East Indies — Coal Industry — Money — Revenue — Capital Issues — Foreign Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, May 15.

PROSPERITY in Holland is closely related to the economic situation prevailing in the Dutch East Indies, and the situation there is very critical just now in consequence of the phenomenal drop in the prices of plantation products. Rubber, sugar, coffee, tea, etc., as well as petroleum and tin, are among the principal products of the Dutch East Indies, and the proceeds of those products are far below the level of previous years. The income for the Netherlands from those sources is accordingly very disappointing. Many of the sugar enterprises, and the majority of the rubber companies, are operating at a loss, as the prices of the products are in many cases below their cost of production.

The Government of the Dutch East Indies has endeavoured to improve the situation by helping towards the achievement of tin restriction, and playing an active part in the matter of sugar restriction. The Chadbourne scheme which was signed at Brussels has come into operation, and, by means of the issue of export permits, the Government of the Dutch East Indies will be able to enforce the restriction of export, and so render nugatory the opposition of the minority.

So far the operation of the Chadbourne scheme has failed to bring about a rise in prices, and the sales of the V.I.S.P. are not progressing very briskly. Most of the sugar companies are, in fact, still burdened with stocks accumulated from the old crop. Although the working results of the Dutch East Indies sugar companies for 1930 have been disappointing, many of them have nevertheless distributed a dividend on their shares by drawing on reserve funds. Apparently those companies do not take a very gloomy view of the future, but consider the situation to be of a transient nature. Generally speaking, the weather has been beneficial for the new crop, and a larger

yield of sugar is to be expected, which will mean an automatic reduction in the cost of production.

The annual reports of the rubber enterprises also disclose a decidedly gloomy state of affairs, and, in view of this, it is remarkable that the Government of the Dutch East Indies has not been active in procuring some measure of relief on behalf of the rubber interests, but the Government has not made the slightest attempt to ameliorate the lot of this industry. Apparently they do not want to exert restraint on the native rubber planters, while the big rubber companies in Holland are also opposed to restriction. This critical situation in our colonies made the appointment of the new Governor-General a question of vital importance, and the appointment of Jonkheer de Jonge, hitherto director of the Bataafsche Petroleum Mij (Royal Dutch-Shell concern) has been greeted with satisfaction.

Most Dutch undertakings are suffering from the steep drop in prices, but in hardly any branch can a crisis be said to exist. The largest coal producers in the Netherlands, the State coal mines in Limburg, even record very satisfactory results for 1930. The production of coal in the Netherlands in 1930 totalled 12,211,000 tons (previous year 11,581,000), of which 6,959,387 tons (previous year 6,811,964) were produced by the State coal mines. Thanks to advance sales, results were satisfactory in spite of the unfavourable situation of the coal market. The average sale price was 9.96 guilders (preceding year 9.88) per ton, and the cost of production was 9.64 guilders (preceding year 9.57). The average cost for wages rose from 5.50 to 5.61 guilders per ton. The gross profits were 12,163,940 guilders (last year 11,188,069), depreciation 9,961,931 (9,038,069), reserves 52,009 guilders (last year nil), and the dividend on the 43,000,000 guilders of shares, all of which are in the hands of the State, was 2,150,000 guilders (unchanged). At the end of the year the number of persons in the employ of the State coal mines was 21,619.

The trade depression is already reflected in the revenue. Receipts from income tax for the first quarter of 1931 were 22,587,366 guilders (last year 23,602,665), and from property tax 3,753,588 guilders (last year 3,942,918). Traffic in the port of Rotterdam showed a further decline in the first quarter of the year, the number of vessels being 3,288 (against 3,711 same period last year), with a tonnage of 5,489,504 net (6,155,524).

The money market continues to be very amply supplied, and the Stock Exchange remains very weak. The reduction in the New York discount rate exerted hardly any influence here. The April end-of-month requirements were fulfilled very comfortably, the Amsterdam money market has reverted once more to its customary state of relaxation and the Netherlands Bank has reduced its discount rate from 2½ per cent. to 2 per cent.

Not only money rates, but long-term interest is still falling, as is apparent from the daily quotations of a number of selected funds. That the absorbing capacity of our capital market is not very big is equally apparent from the results of the issues marketed, for not even conversion loans could boast of any great success. The following table shows the issues during the first four months of recent years:—

	(Thousand guilders.)			
	1928.	1929.	1930.	1931.
January.....	34,737	68,209	51,037	10,444
February.....	55,116	101,588	55,485	14,200
March.....	92,688	25,820	74,664	32,473
April.....	38,734	16,762	55,700	22,769
Totals.....	221,275	212,379	236,886	79,886

As will be seen, the new issues market has not yet been able to recover from the effects of the trade depression. During the past month there was, however, some change in the character of the issues, industrial requirements having accounted for a relatively larger percentage this time. These issues were, however, almost entirely for consolidation purposes and not for extension of business. Issues of bonds continue to predominate, and

accounted for 21.7 million guilders in April (31.4 preceding month), against about 1 million guilders for share issues (1 million preceding month). The issues for April included only 4.8 million guilders for account of Dutch borrowers, the remaining 17.9 millions being for foreign account.

Imports in March weighed 2,259,000 tons, with a value of 166.7 million guilders, as compared with 2,641,000 tons, value 226 millions, in March, 1930. Exports in March, 1931, weighed 1,440,000 tons, with a value of 116.4 millions, against 1,341,000 tons and value 155.9 millions in March, 1930. The figures for the first quarter of the year 1931 are:—Imports, 495 million guilders (against 647 millions last year) and exports 343 millions (last year 452 millions).

BULGARIA.

Politics — Budget — Economic Situation.

(FROM OUR CORRESPONDENT.)

SOFIA, May 14.

BULGARIA's economic and financial troubles, skilfully and widely used as efficient propaganda weapons by the parties of the opposition, have gradually rendered the position of M. Liapcheff's Government almost hopeless, especially on the eve of parliamentary elections. Home policy, foreign relations, conduct of the country's financial affairs, administrative methods—almost every branch of the Government's activity has become the object of widespread and rapidly growing criticism, which, although in many cases unfair and not entirely justified, has created a painful atmosphere, necessitating important and radical changes in the composition of parliament and administration.

Soon after the close of the session, M. Liapcheff tendered the Cabinet's resignation. Building up a new amalgamation of elements of the opposition with part of M. Liapcheff's party proved a task much more difficult than was generally anticipated. Repeated efforts have been made to bring about a coalition between M. Malinoff's Democrats, both wings of Liberals and part of the Sgovor (M. Liapcheff's party formed after the *coup d'état* of June 9, 1923), but although there are no divergences on material points between the doctrines and aims of the parties concerned, there appear to be considerable difficulties mainly with respect to the distribution of ministerial posts in proportion to each party's aspirations. An agreement has, however, been reached with the former Radoslavist Liberals in virtue of which the Ministers of Commerce and Agriculture respectively have resigned in order to make way for the two Liberal leaders, M. Statoff and M. Smiloff.

Shortly before retiring, the Chamber voted the Budget for 1931-32, which could hardly be called a successful piece of work. After much argument about the urgent necessity of wide retrenchments in order to make the Budget correspond to the real possibilities of the country's present situation, the final estimates have been voted (in million leva):—

RECEIPTS.			EXPENDITURE.		
1930-31.	1931-32.		1930-31.	1931-32.	
Direct taxation.....	942	834	Central Government.....	2,290-5	2,150-4
Indirect taxation.....	2,761	2,450	Public Debt.....	144-5	152-4
Other taxes.....	759	745	Foreign Affairs.....		
Fines and confiscations.....	59	85	Home Office and		
Railways and Ports			Public Health.....	442-3	437-3
(net profit).....	126	125	Education.....	898-8	874-3
Posts, telegraphs and			Finance.....	132-8	132-8
telephones.....	306	303	Justice.....	207-0	239-0
Domains, &c.....	530	530	War.....	1,087-0	1,109-6
Municipal contribu-			Trade, Industry and		
tions towards main-			Labour.....	135-4	111-3
tenance of educa-			Agriculture.....	200-6	322-0
tional staff.....	485	412	Public Works, Roads,		
Industry revenues.....	806	606	and Communica-		
Revenue from closed			tions.....	393-6	371-4
exercises.....	225	240	Posts, telegraphs,		
			telephones and air	319-0	315-7
			Other expenditure.....	58-8	53-7
	7,000	6,400		6,445-4	6,399-7

According to expert opinion, estimates of receipts are too generous, especially as expenditure in the last two

financial years and the present economic position do not appear to warrant much optimism in this direction:—

	Estimates.	Actual Receipts.
1929-1930.....	6,740	6,210
1930-1931.....	7,000	5,300*
April-December, 1930....	4,890	3,983

* Provisional total.

On the other hand, it is only fair to state that a substantial reduction of expenditure will be very difficult to obtain without a wide and thorough reconstruction of several State services with a view to the reduction of redundant staff. Salaries have been reduced in almost every State service, but the remedy does not appear to consist in curtailing the salaries of a great number of underpaid officials. Competent students of this question give the total of State employees as 82,250, and their salaries as roughly 35 per cent. of the total expenditure of the State. As no serious diminution of expenditure is to be expected on such important items of public debt, roads and communications, public health and home services, labour, agriculture, commerce, etc., where, on the contrary, the provisions are notoriously insufficient, the only real economy is to be pursued in the direction of reforming administrative methods so as to reduce the number of employees. Even if earnestly carried out, such a policy will take many years and will meet with strong opposition. The number of educated people in Bulgaria is steadily increasing, and many of them cannot find employment outside the services of the State, as their training is hardly appropriate to the needs of an agricultural country of small estates and limited resources.

The total amount of protested bills in 1930 rose to leva 3,000 millions, as against 2,130 millions in 1929 and 1,432 millions in 1928. According to the statistical data of the National Bank, there were 224 failures, as against 107 in 1929 and 395 moratoria, as against 104 in 1929. These are record figures, and though a slight improvement has since set in, the situation remains unsatisfactory, especially on account of the heavy reduction in the purchasing power of peasant consumers. Prices of imported goods and of products of the protected local industries remain abnormally high in proportion to those of agricultural produce and raw materials of local origin. This circumstance is causing a strong dissatisfaction in peasant circles and is undoubtedly aggravating the economic position.

CANADA.

Crop Conditions — Grain Marketing — Business — C.P.R. Wage Cuts — Newsprint Situation — Inter-provincial Reciprocity — Lithgow Mission.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 5.

FARMERS in Eastern Canada are well ahead of last year's schedule with their cultivation. On the prairies seeding has been delayed by lack of moisture and soil drifting, but in Manitoba, where 90 per cent. of the wheat has been sown, seeding is slightly in advance of last year; further west many farmers have been holding back in the hope that rains may come and give a decent seed bed. All reports agree that the wheat crop has rarely been planted under less favourable conditions, and Mr Gardiner, the Leader of the Progressive Party, who has recently visited his farm in Alberta, has declared in a Press interview that all the portents indicated the prospect of a short crop. Grain prices have shown a slight improvement, and a better foreign demand is anticipated, particularly from Germany, as the result of the decision of the German Government to permit more imports of wheat. Since navigation opened on the St. Lawrence, the export movement of wheat has been reasonably brisk, and over 3 million bushels have been loaded since April, making a total export of 5,319,260 since the year began, as compared with 3,933,578 in the parallel period of 1930.

The problem of the satisfactory marketing of the 1931 crop is exercising the minds of the agrarian leaders in the

West. A decision of the Supreme Court of Saskatchewan that the Grain Marketing Act recently passed by the provincial legislature is *ultra vires* has obliterated for the time being any hopes of a compulsory pool, and a demand has now arisen for the revival of the Canada Wheat Board, which marketed Canada's grain during the later war years. It has the support of the three provincial governments of the prairies, but the Bennett Ministry will probably delay making any pronouncement of policy until it has digested the report of the Stamp Commission on "futures" trading which has just come into its hands. Its decision may also depend upon the weather in May, for if dry weather persists the crop will be short and prices will probably rise to a level at which the pools could handle the situation for themselves; but if rains come and ensure an average crop, the establishment of a Wheat Board may be forced upon the Bennett Ministry.

In business conditions there is little change, but in some quarters it was claimed that there was evidence of an upturn during April. It was, however, comparatively slight, and little hope is entertained of any serious recovery until the autumn. The latest business review published by the Dominion Bureau of Statistics gives the following weighted indices of the physical volume of business in Canada for March, based on the six-year period from 1919 to 1924, and corrected when necessary for seasonal variations, with the comparative data for February, 1931, and March, 1930, added:—

	March, 1930.	February, 1931.	March, 1931.
Forestry	187.9	153.7	156.7
Mining	176.6	130.6	147.4
Construction	163.0	262.1	229.1
Manufacturing	161.1	128.7	141.8
Employment in trade ...	135.4	134.0	138.0
Imports	159.5	119.2	130.5
Exports	140.7	102.4	105.7
Car loadings	118.9	101.2	97.2
Shares traded	447.1	279.0	239.0
Bank debits	149.0	146.1	134.5

These figures indicate that, while there have been distinct gains in some departments of business, there have been recessions in others. However, car loadings have since shown a considerable improvement, and the Bureau's figure for the week ending April 25th, placed at 50,368 cars, though it is 6,390 cars below the figure for the corresponding week of 1930, shows a gain of 1,642 cars over the previous week. The figures for motor-car production in March, given at 12,993 cars, also show an increase over the total for February, which, however, was a shorter month. On the other hand, the unemployment index for April 1 was disappointing at 99.7 (1926 = 100), as compared with 100.2 on March 1st, and with 107.8, 110.4, 102.3 on April 1, 1930, 1929, and 1928 respectively. A seasonal decline at the beginning of April is not unusual, owing to the cessation of work in the logging camps; but the disturbing feature of the employment record is that for the first time for several years the curve has been steadily downward since the year began.

One adverse development has been the decision of the executive of the Canadian Pacific Railway Company to embark upon what is tantamount to a wage-cutting policy. They are not actually cutting the rate of wages, but they have reduced the wages of their supervising officials by 10 per cent. and have induced the rest of their staff to agree to lay off three days per month without pay until conditions improve. This means that the whole pay roll of the Canadian Pacific Railway will be reduced by 10 per cent., and the lead which has thus been given is certain to be followed not only by the Canadian National Railways, but by a number of important corporations. The inevitable consequence will be a curtailment by 10 per cent. of the purchasing power of the large proportion of the working classes, and this loss is bound to be reflected in decreased business for merchants. Consequently the business outlook for the summer is not regarded as auspicious, and many firms will be hard pressed to make any profits.

There is still considerable hardship in communities in the northern hinterland, which are dependent for their

livelihood upon the pulp and paper industry, and the situation has not been improved by the latest cut of \$5 per ton in the price of newsprint. Efforts to secure consolidations in the industry which might make possible economies are still being persevered with, but so far no definite results have been achieved. Undoubtedly the problem of the very serious embarrassments of the Canada Power and Paper Corporation and its subsidiaries is causing considerable worry not merely to the directors and shareholders of the corporation, but also to more than one important Canadian bank and to the Government. The protective committee appointed by the security holders is still engaged in working out a scheme of financial reconstruction, but many thorny difficulties have to be surmounted. Meanwhile there are forecasts that the Abitibi Pulp and Paper Company and the St. Lawrence Paper Company will shortly reach an agreement for the creation of a common selling organisation, and some other newsprint companies might be induced to join it.

A curious sectional quarrel has developed lately between the Maritime Provinces and Ontario. The coal operators of the Maritime Provinces, ever since the Bennett Government came into power, have, with the help of their political friends at Ottawa, been agitating for a sharp increase in the duties on bituminous coal, which would enable them to capture the Ontario market. The Bennett Government did make some concessions to their demands by fixing an arbitrary valuation upon bituminous coal for import duty purposes, but the manufacturers of Ontario, who want to import their bituminous coal from the United States, lobbied successfully at Ottawa against any tariff increase which would force them to buy their coal in the Maritime Provinces, and even objected to the increase which enabled the "Maritimers" to secure the market east of Montreal. So there has developed a movement in Nova Scotia to punish Ontario for what is described as its fiscal selfishness. Local business people are being urged by propaganda in the Press to transfer to Quebec orders which they formerly placed in Ontario, a province which buys two million dollars' worth of Maritime coal per annum. The movement is gaining considerable support in Nova Scotia, and bodies have passed resolutions in favour of what is called "interprovincial reciprocity." The efforts of the Maritime coal owners to secure higher tariff protection against American coal are viewed with disfavour by their brethren in British Columbia, who are interested in retaining a free export market in the United States, to which they exported last year 121,000 tons. They fear that higher duties on the part of Canada might provoke from the United States a retaliation which would cost them their American market.

The industrial mission organised by the Federation of British Industries and headed by its President, Sir James Lithgow, has spent its time in Montreal and Toronto, where it held conferences with local leaders of industry, bankers and others. It is understood that during the discussions the members of the mission received considerable encouragement for their schemes for the rationalisation of industry in the Empire, and they have certainly acquired a good deal of valuable information. They are due to reach Ottawa to-day, and will hold conferences with members of the Bennett Ministry and departmental officials. Subsequently, before sailing, they will revisit Toronto and Montreal.

Letters to the Editor.

THE WORLD DEPRESSION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I ask the indulgence of your readers if after so many years—more than ten—I venture to occupy their precious time again. As the after-war problems are almost common for all the world, I beg leave to discuss some of them, induced to do so by Mr Snowden's third Budget. The Chancellor of the

Exchequer had to deal with a Budget of over £800 millions, i.e., more than four times the second Budget of Mr Lloyd George for 1911-12 (£185,090,000), while the index numbers for the wholesale prices of commodities are under the pre-war levels. The debt charge for 1931-32 absorbs 45 per cent. of the total revenue. It is destined mostly for the payment of interest, leaving a very trifling sum for amortisation. The total reduction of the public debt during the last eight years is limited to 3½ per cent. In reviewing Mr Snowden's statement I am reminded of another Chancellor's address as far back as twelve years ago. In framing his Budget for 1919-20 Mr Chamberlain outlined the future shape of a peace Budget in the following way:—

Army, Navy and Air	£110,000,000
Debt Charges	400,000,000
Civil Services	190,000,000
Revenue Offices	53,000,000
Other Services	13,000,000
	£766,000,000

These items are not far from the present estimates. Mr Chamberlain spoke a few months after the Armistice. The interesting debates in the *Economist* about the best methods of restoring the disturbed conditions really began as long ago as the latter part of 1917. As the principal problems confronting Europe were of the same importance for all the countries I also joined the discussions in four letters published in the *Economist* (January-April, 1918, May-August, 1919). Will you be kind enough to let me repeat the following passages? "... The continuance of the war policy in peace times will lead to extravagances and misconceptions. ... The war has been fought and won through conscription by the masses. They are quite justly now expecting their reward. In order, therefore, to successfully cope with the amazing multiple labour problems and dissipate the dark clouds in the horizon, it is imperative to settle the financial questions. The financial sickness arising out of the great war is of a twofold character, namely, debt and currency. Internal debt to be reduced by a capital levy. External debt and currency are questions which cannot be settled the one without the other. These questions, moreover, cannot be regulated by one country single-handed. It is essential both for the creditor as also for the debtor countries to come to a common agreement in order to lay the foundation-stones of the new working plan of Europe. ... The war has been won by the establishment of the high military command. ... It would be expedient in order to secure the peace of the world to create a high financial command. ..."

Writing on the currency question in the December, 1920, issue of the Athens Chamber of Commerce Monthly Bulletin I expressed the following views:—"... In view of the necessity of co-operation of the banks of issue, I propose to place these institutions under a common financial council, just like the Federal Reserve Board in Washington. ... The United States to lend to Europe the gold which has been acquired during the war (some 7 billion gold francs). ... The European banks should, moreover, have the privilege of obtaining nearly one-half of the gold which is to be coined. ... The proportion of the gold, as also the volume of the fiduciary circulation, to depend upon the decisions of the financial council." Such recollections came to my mind on reading Mr Snowden's *exposé*.

Undoubtedly the present world depression is the consequence of a wrong after-war start. The leading financiers were then too sanguine about the situation. Had we proceeded to a joint regulation of the common financial problems, we surely could have obtained the annulment of our war obligations towards the United States of America. In the winter of 1919-20 leading Americans were convinced of the insolvency of Europe. But we lost that opportunity. The effects of a capital levy—which by now would have belonged to history—were considered by responsible men as a deterrent on the savings without which industry must wither, and it was decided to follow the policy of over-taxation. This was a good policy during the war against inflation, but a very bad one during the first period of peace owing to deflation, by which the economic forces became impotent. In order to cope with the present conditions and dissipate the very thick clouds encircling the horizon we must gain a clear conception of the situation. The present depression is not an accidental one. Only by joint efforts we can overcome it.—I am, Sir, yours faithfully,

Athens, May 14, 1931.

M. S. EULAMPIO.

EQUALITY.*

FEW causes are so fortunate in their advocates as those adopted by the author of this book. Mr Tawney is so evidently convinced by what he has to say, and says it so delightfully, that it is almost impossible not to agree with him. Nowhere has his gift for presenting what is still rank heresy to thousands as plain common sense been displayed to greater advantage than in these pages. Nowhere has he called a spade a spade with more disconcerting frankness. As thus: "A public school ... is not a school that is easily accessible to the public, but a school that the great majority of the public are precluded from entering." Or thus: "Rightly interpreted, equality meant" (to the nineteenth-century radicals) "not the absence of violent contrasts of income and condition, but equal opportunities of becoming unequal."

Fortunately, there are often solid grounds for not disagreeing with Mr Tawney. No doubt he underestimates the difficulties of an equalitarian world. No doubt he has something of the social reformer's lighthearted zeal for spending publicly money that is still for the most part privately produced. When all is said, however, this book states a powerful case in simple and powerful terms. Manifestly it is impossible to measure one human being against another, finding Tom to be worth two and a half Harrys, and Harry worth three and a half Dicks. Hence, the only possible course is to assume that we all matter equally. It is this simple fact which underlies the whole of Mr Tawney's social philosophy.

Social institutions, however, are, and always have been, framed on a different plan. Formerly it was legal inequality, then political inequality, then in these days economic inequality that poisoned the foundations of social life. In a rapid historical sketch Mr Tawney shows how each type of inequality has been overthrown only to give place to a new embodiment of the same unequal principles. Always we have distinctions of one sort or another dividing society into classes which, though their limits may not be clearly defined, are part of the very substance of English life and ways of thought. Mr Tawney's statistics of income and education, as well as his more personal researches into the life history of bishops and deans, show how formidable are the barriers that stand even to-day between class and class.

For what he calls the strategy of equality Mr Tawney relies chiefly on the redistribution of income through the provision of communal services out of the taxes. He makes no suggestion of an equal division of money incomes, and is well aware how disappointing would be the results were such a policy seriously attempted. In an interesting chapter describing the growth of these services in the past twenty or thirty years he condenses with characteristic skill into small compass the main facts about the growth and cost of public provision for the health and education of the people. Rapid though the rise of this type of communism has been, Mr Tawney has no difficulty in showing that it is far from having created even equality of external conditions, and quotes effective figures to illustrate how actual health and length of life are bought with money just as much as are the comforts and conveniences of civilisation. The rich, in fact, live when the poor would die.

In his concluding chapters Mr Tawney hints at the implications of his policy for industry. Society must learn to regard industry as a social function rather than as an exercise in oppression and greed. To which end "the bad old tradition of autocratic government, already disappearing from all reputable firms," must be "finally discarded"; and with it must go "the affectation that questions of business policy and organisation do not concern, or are beyond the competence of, representatives of the workmen." Possibly Mr Tawney is not always rigidly practical; but he is very seductive.

* "Equality." By R. H. Tawney. Allen and Unwin. 7s. 6d.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Wall Street and Lombard Street. By Francis W. Hirst. (London) Macmillan and Company, Ltd., St. Martin's Street. 8s. 6d. net.

An important analysis, by a former editor of the *Economist*, of the 1927-29 boom and its sequel. In the final chapter, Mr. Hirst discusses the causes and remedies of the present state of affairs.

Forecasting Business Cycles. By Warren M. Persons. (London) Chapman and Hall, 11, Henrietta Street, Covent Garden. 22s. 6d. net.

A well-stocked collection of data on business in the United States since 1875, with chapters on their analysis.

Proceedings of the International Conference of Agricultural Economists. (Menasha) George Banta Publishing Company. 14s.

Contains a very large number of papers covering a very wide range of subjects, including the causes of agricultural depression, farm wages, taxation in relation to agriculture, co-operative marketing, wheat price movements, agricultural credit, farm costings, recent developments in various countries, and all manner of allied subjects.

The Statesman's Year Book, 1931. Edited by M. Epstein. (London) Macmillan and Company, Ltd., St. Martin's Street. 20s. net.

A very useful book of reference. For each country there are sections on its constitution and government, area and population, religion and education, finance, defence, production and industry, commerce, communications, money, weights and measures.

Le problème monétaire d'après-guerre, et sa Solution en Pologne, en Autriche et en Tchécoslovaquie. By Michel A. Heilperin. With a Preface by William E. Rappard. (Paris) Librairie du Recueil Sirey, 22, Rue Soufflot.

A well-documented study of the post-war monetary experiences of Poland, Austria and Czechoslovakia.

Carl Fürstenberg. Die Lebensgeschichte eines deutschen Bankiers, 1870-1914. By Hans Fürstenberg. (Berlin) Verlag Ullstein, Kochstrasse, 22-26. Rm. 10.50.

The biography of a German banker.

Joseph Priestley. By Anne Holt. With an introduction by Francis W. Hirst. (London) Oxford University Press, Warwick Square. 8s. 6d. net.

An interesting biography.

Dangerous Drugs. By Arthur Woods. (London) Oxford University Press, Warwick Square. 9s. net.

An impressive account of the dangerous drugs traffic, and the efforts which are being made to combat it.

Latin-American Relations with the League of Nations. By Warren H. Kelchner. (Boston) World Peace Foundation.

A Ph. D. thesis which constitutes a useful record.

International Labour Review, May, 1931. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes articles on the lignite industry, on wages and hours in coal mines in 1929, and on "An Experiment in the Management of Indian Labour."

Il Commercio del Grano. Part II. Il Mercato Italiano. By Ugo Caprara. (Milan) Industrie Grafiche Italiane Stucchi.

A description of grain cultivation and grain marketing in Italy.

The Success of the Five Year Plan. By V. M. Molotov. (London) Modern Books, Ltd., 16, King Street. 1s. 6d.

A report of two speeches delivered last March before the Sixth All-Union Soviet Congress.

The Fuel Problem of Canada. By Martin Nordegg. (London) Macmillan and Company, Ltd., St. Martin's Street. 6s. 6d. net.

A plea for reorganisation of the Canadian coal industry, having as its object the maximum possible degree of self-sufficiency in respect of fuel.

Union-Management Co-operation on the Railroads. By Louis Aubrey Wood. (London) Oxford University Press, Warwick Square. 18s.

An account of conditions on those United States railroads on which the trade unions co-operate in the management.

Budgetary Control in Manufacturing Industry. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. \$3.00.

A survey of costing systems in the United States.

The United States Shipping Board. By Darrell Hevenor Smith and Paul V. Betters. (Washington) Institute for Governmental Research, Brookings Institution, 26, Jackson Place. \$2.50.

One of a series of monographs on the various services of the United States Government, which give the history of the service, its functions, its organisation, the laws governing it, and its finance. There is a good bibliography.

Hard Times—The Way In and the Way Out. By Richard T. Ely. (London) Macmillan and Company, Ltd., St. Martin's Street. 7s. 6d.

An informal essay on trade depression in which the author bases his main hope for the future upon research.

Der Deutsche Osten—Rettung oder Verzicht. By Otto Chr. Fischer. (Berlin) Junker und Dünhaupt Verlag. Rm. 3.80.

A plea for assistance, both economic and cultural, for the Eastern provinces of Germany.

The Bankers' Magazine, May, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes, *inter alia*, articles on "Austria and the Zollverein" and "Some Causes of Industrial Depression, with some Suggested Remedies."

Indian Affairs, April, 1931. (London) Windsor House, Victoria Street. 3s. 6d. net.

Includes an article by the Editor on "The Indian States and the Federal Constitution."

The Tables Turned. By James Bonar. (London) Macmillan and Company, St. Martin's Street. 7s. 6d. net.

A series of imaginary conversations with Adam Smith, Malthus, Ricardo, and John Stuart Mill.

Los Salarios y le Empresa de los Ferrocarriles Nacionales de Mexico. By J. S. Herzog. Published by the Office for Economic Studies, Tercer Piso, Palacio Nacional.

A very detailed collection of Mexican railway statistics.

Liquidator's Index and Summary of the Companies Act and Winding Up Rules, 1929. By John H. Senior and H. M. Pratt. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 15s. net.

A conveniently arranged tabular book of reference whose appearance just now has a sinister timeliness.

The Society of Incorporated Accountants and Auditors. List of Members. (London) Society of Incorporated Accountants and Auditors, Incorporated Accountants' Hall, Victoria Embankment.

Provincial Brokers' Stock Exchange Year Book, 1931. (Hull) Provincial Brokers' Stock Exchange, Parliament Chambers.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

NARROW MARKETS.

THE downward trend of prices on the London Stock Exchange, which started in February, 1929—ante-dating the slump in British industry by at least twelve months—has now outrun the two years at which some of the more pessimistic trade forecasters initially assessed its maximum duration. In the last major economic depression security values broke in April, 1920, on the rise of Bank rate to 7 per cent., only six months or so before the downward turn in industry, and touched bottom before the end of 1921—i.e., within a period of twenty months. Thereafter the prices of ordinary stocks, according to *The Bankers' Magazine* Index, appreciated by over 20 per cent. in the first ten months of 1922, remained relatively stagnant for two years, and began, towards the end of 1924, a steady rise which culminated in the boom of 1927-28. On the present occasion, having fallen by about 30 per cent. between February, 1929, and August, 1930, they declined, on the average, by little more than a quarter of 1 per cent. per week until the middle of last month. Then, in defiance of precedent, they took a new downward plunge, with a "gradient," according to the *Financial News* daily index, of about 4 per cent. per week, which was not checked till May 20, when prices, on the average, were little more than half those reached at the top of the boom.

This fresh decline, which attained its greatest momentum in the middle of May, was both disappointing and unexpected. To some extent prices in London have been influenced by heavy selling in Wall Street, following the publication of depressing first-quarter earnings' statements by the larger American industrial corporations and the abandonment of hopes of the much-advertised spring recovery in trade. Certain forced selling, again, from Scotland and the North of England has been attributed to the special difficulties of at least one financial group.

The slump of April-May, 1931, however, unlike that of 1929-30, has not, on the whole, been accompanied by really heavy and widespread liquidation. The break in quotations has been chiefly due to the fact that brokers, executing quite moderate selling orders for clients, have encountered an unwilling market, not merely for "difficult" stocks whose earnings' position was open to serious question, but for trustee issues like the senior preference stocks of the group railways. Jobbers, unwilling to add to their commitments, have marked down prices for reasons connected with the state of their own books rather than with the intrinsic merit of the securities concerned, or have quoted, for securities normally negotiable with the utmost facility, wide margins more commonly associated with shares in which dealings are nominal.

From all points of view, this state of affairs is regrettable. Prices in a narrow market are "artificial" in the sense that their disproportionately low levels are based on dealings in comparatively small and unrepresentative amounts of stock. They do not merely act as a damper upon any incipient recovery, but tend to create a vicious circle by lowering the margin on collateral loans and inducing sales, frequently of the best stocks, in order to restore the cover to the minimum dimensions required by the lender.

The extent to which current prices appear to have over-discounted the realities of a difficult economic situation can be shown by a few outstanding examples. Indicated dividend yields of $7\frac{1}{2}$ per cent. on Australian Fives (1945-75), of 10 per cent. on New South Wales Fives (1935-55), of $12\frac{1}{2}$ per cent. on San Paulo Coffee $7\frac{1}{2}$ per cent., and of $28\frac{1}{2}$ per cent. on Singer ordinary and $26\frac{1}{2}$ per cent. on Bleachers ordinary may all, possibly, be regarded as fairly reflecting prevailing uncertainty as to the income position. A brief examination of the Stock Exchange lists, however, will show that numerous industrial debentures and preference shares offer, at present prices, yields one would normally look for only from the most specula-

tive securities in their class. A few examples may be given:—

Company.	Share or Stock.		No. of times Interest or Dividend covered last two years.		Date of last Balance Sheet.	Price, May 27 1931.	Yield Allowing for accrued interest.

* Without allowing for redemption at par on February 1, 1934.

The effects of present conditions are far-reaching. Investors may decide for themselves, for example, how far the cessation of activity in the new capital market (where issues between April 13th and May 16th—i.e., in the period of most rapidly falling Stock Exchange prices—totalled only £7,151,000, against £48,407,000 and £33,825,000 in the same weeks of 1929 and 1930) is due respectively to trade stagnation, the disastrous failure of recent issues like Lancashire Cotton Corporation and Rio Tinto debentures, and the tendency of company boards to regard as prohibitive the cost of new fixed-interest stocks giving a yield anything like that on existing securities.

If the present situation be examined in the light of previous experience, two conclusions are suggested. First, the markets are feeling the effect of the absence of the much-maligned speculator, who in normal times, by his willingness to back the opposite view to that of the majority, is a vital element in the making of an active market. Secondly, the period of "dead centre" at which markets appear to have arrived is essentially a temporary phenomenon, though so long as it endures its effects may be extremely damaging. If the latter assumption is justified, a case can be made out for special measures, by all parties whose interests are affected, to tide over the present phase, in confident anticipation of improvement later on.

Public and private investors, who purchased stocks before the depression mainly in order to obtain a reasonably secured income, and are not at the moment financially embarrassed, may be urged by their responsible financial advisers to refrain from a human but mistaken tendency to "cut their capital losses" by selling sound shares at present prices—particularly prior securities or seasoned ordinary shares whose dividend position is not, so far as can be foreseen, in serious danger. The banks and other financial institutions who have considerable loans outstanding on the security of stocks and shares, may consider whether, with due regard to the maintenance of reasonable liquidity in their own position, they may gain in the long run by placing a somewhat generous interpretation on their rules as regards cover, in cases where the majority of the securities deposited with them are intrinsically sound, though temporarily depressed in value. In any case, "cover" ratios are somewhat academic under present conditions, as the banks would quickly discover if they foreclosed and endeavoured to realise borrowers' securities on a large scale.

No estimate can be made of the amount of bank loans, on collateral, at present outstanding. Though it is probably less than a few months ago, its total must needs be substantial. To take merely a small part of the whole field, the balance sheets of those investment trusts which have

shown bank loans as a separate item in reports published since the beginning of this year, reveal the following position:—

	Total Number of Com- panies.	Book Value of Investments. £	Total Loans. £
Trusts registered before the war	14	34,683,036	718,733
Trusts registered since the war ...	14	14,563,139	1,531,820

Judging from this small sample, the newer trusts appear to have resorted to bank loans on a more extensive scale than the pre-war companies. Certain selling of shares alleged to have come recently from Scotland has been unofficially associated, in some parts of the market, with the position of a trust group *vis-à-vis* its bankers.

Present conditions, again, can scarcely be regarded with equanimity by the Stock Exchange itself. Undoubtedly they have given a certain plausibility to the contention that while some market jobbers are men of substance, who perform a valuable economic function by carrying stocks over difficult periods, many others lack the necessary resources, and are a source of weakness rather than strength. Such men can neither find stock in a boom nor hold it in a depression. If, however, the later stages of a prolonged decline find the stronger and weaker dealers alike with so much stock on their books that they are driven to protect themselves against further additions by quoting prices which are intended to be prohibitive, the machinery of the Stock Exchange may be regarded as coming perilously near ceasing to function.

It is generally agreed that, under modern conditions, a larger proportion of the floating supply of stock in the market is financed by loans from outside than in pre-war days. If the market's resources are pledged up to the hilt, its ability to perform its normal functions in a complex national financial system may depend less on the willingness of its own members than on the attitude of outside financial institutions. From the market's point of view, it would be helpful if the latter, having made themselves indispensable to the Stock Exchange by their readiness to grant not altogether unprofitable accommodation in good times, were prepared, if necessary, to nurse the market—within reason—in bad times.

If, finally, the causes of Stock Exchange and trade fluctuations are in part psychological, all institutions whose attitude is a factor in public sentiment may consider whether a special effort to enhance general confidence is not called for at the present juncture. Irrational "prosperity talk," obviously, may do more harm than good, but a reasoned insistence by the Government, the Press and recognised leaders of industry and labour, on the mischievous results of undue pessimism and panicky action during a period of temporary trial, and on constructive measures calculated to expedite the return of prosperity, would be particularly helpful. So far as more strictly financial factors are concerned, those institutions whose word carries weight in the City of London may be counted upon to use their influence along the most helpful lines during a decisive phase of the current trade cycle.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. June 9.	ACCOUNT. June 11.
--------------------	----------------------

MEMBERS who extended their Whitsun holidays missed very little. The tone of most markets showed no improvement. Gilt-edged suffered a setback and the foreign market was greatly depressed. New York was again a seller on balance, and unfavourable news was received from Central Europe. The "hammer" was twice heard on Monday, though neither failure was serious in character.

In the absence of any further sizeable gold influx, together with the less favourable appearance of sterling, the gilt-edged market deteriorated, initial dullness being

followed by a moderate amount of liquidation. Newfoundland loans were an unsatisfactory feature, following the announcement that the Government had failed to obtain tenders for a projected New York bond issue. Indian stocks were adversely affected by the tepid reception of last week's new issue and the prolongation of the rebellion in Burma. Australians remained heavy, with Tasmania 6½'s and New South Wales Fives of 1945-65 in the forefront of the declines. Home Corporations drooped in sympathy with gilt-edged.

The foreign market gave neither sign nor promise of recovery, and sellers again predominated. Brazilian stocks reflected the prevailing uncertainty as to the prospects of financial rehabilitation. Chilean loans were little better. Argentines declined, and San Paulo coffee bonds were liquidated. Renewed anxiety with regard to the Central European outlook brought about sweeping reductions in the Young loan, while Austrians relapsed after a short-lived recovery. Unexplained liquidation of Roumanian 4 per cent. Consols took the price from 36 to 33. Polish issues were weak. In the Far East, Chinese loans suffered from the latest news regarding the political situation.

Home rails took on a better appearance than of late, and all-round improvements were recorded among the prior charges, while even the junior stocks showed signs of convalescence. Argentine rails in the foreign section were unable to dissociate themselves from the renewed weakness of the peso, and heavy reductions ensued. Antofagasta and Leopoldinas were fairly firm.

Business in the industrial market was again very restricted, but the bears were less in evidence than during recent weeks. Transatlantic issues suffered heavily from the weakness of Wall Street. Cables and Wireless receded on the disappointing official traffic, and Swedish Match and Kreuger and Toll declined, with reviving fears as to the security of the latter company's large portfolio of Government bonds. Textiles found support on the news that the Egyptian Government is facing up to the gravity of the cotton situation. Pinchin Johnson, General Electric, and Turner and Newall suffered a precautionary marking down. Amalgamated Metal Corporation were a firm spot on a moderately satisfactory report, and J. Lyons, in the catering list, continued their upward trend. Imperial Chemical took on a steadier aspect following initial weakness. Insurance shares responded to modest investment orders.

Oil share transactions were on a very small scale, with Paris a seller of the Eagle issues and Amsterdam of Royal Dutch. Shells were easier, but Lobitos advanced smartly on the announcement of a 10 per cent. dividend. Few changes occurred among rubber shares, though Allied's yielded a small gain. Idle conditions prevailed in the tea share market, with a pronounced fall in Kukicherras among the "heavies."

In the mining share market dealings were of small proportions, but the tone was somewhat improved. Kaffirs responded to recent optimistic speeches, "Johnn's," Rand Mines and Springs Mines being among the favourites. Rhodesian shares were unable to throw off their lethargy, "Chartered" receding further; while the Northern issues trended downwards in most instances. The latest turn of the restriction screw made little impression on tin shares, and prices were mostly unaltered, while the effect of the new decline in copper was also negligible. Ashanti Goldfields, however, continued to enjoy marked popularity.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets suffered from successive waves of selling, which were only momentarily stayed by the action of the New York Stock Exchange Committee in requesting members to furnish particulars of stocks borrowed and lent. Such a step had not previously been considered necessary since the slump of the autumn of 1929. Heavy selling occurred of railroad shares on the refusal of the Interstate Commerce Commission to take the initiative in proceedings for a rate advance as suggested by the railroad executives, though the latter will probably proceed with their efforts despite this check. United States Steel touched a new low record, and utilities again came on offer. Copper shares were one of the few exceptions to the general trend, a larger volume of sales of the metal being reported. Last week's operations in the steel industry were estimated at 43 per cent. of capacity, against 44 per cent. in the previous week and 80 per cent. in the corresponding week of 1930. Fifty railroads reported a drop of 35 per cent. in net operating income for April as compared with last year. The bond market was weak, partly owing to the continuance of relatively large new issues, and partly to political fears as regards South America and Central Europe. High quarters continued to express qualified optimism as to the outlook, but the market itself was disappointed by the absence of any recovery in commodity prices, and a growing tendency was noticeable to assume at least the temporary failure of the policy of attempting to stimulate activity by low money rates. Possibly, the markets may be ripe for a technical upward reaction in the near future, but the date of more permanent recovery is as difficult to estimate as ever.

CANADA.

There is nothing but gloom and trouble to report concerning the stock market situation in Canada. Recently, a spell of steady sagging culminated in a serious break, which took most stocks to the lowest levels since 1927. The bisection of the C.P.R. dividend, announced on May 16th, although it had been freely discounted, came as a bad shock to the market, and a considerable volume of selling followed, while a parallel weakness developed in Consolidated Smelters, which ranks as a C.P.R. subsidiary. The depression of a pivotal stock like C.P.R. generated a felling of pessimism, which was accentuated by poor reports about the condition of the new wheat crop in the West. Other adverse factors were the reduction of its dividend from \$1.00 to 50 cents by the Gooderham-Walker Corporation, which depressed all the distillery stocks; a disappointing report by International Nickel, which showed earnings of only 8 cents for the first quarter of 1930; and further weakening in the Brazilian milreis. When confidence in the market had been seriously undermined, it only required the sharp recession in New York which occurred on Monday, May 18th, to bring stocks tumbling down all along the line. Nor is there any hope of immediate improvement, for corporation earnings for the first quarter of the year are almost uniformly bad, and business will not be helped either by the impending increase in the sales tax or the wage-cutting process which is now going on. Negotiations for the reorganisation of the newsprint industry seem unable to make headway, and the doleful view which the Street takes of the industry's future is indicated by the fact that the common stocks of three important newsprint companies are at present selling below a dollar. Undoubtedly many stocks are to-day on the bargain counter, but investors are still very loath to buy, and the success of the Dominion Government's conversion loan indicates that there is now a widespread preference for the greater security of bonds. In the mining market the seasoned gold stocks seem almost proof against depression, but shares in other kinds of mines are still a drug on the market. The Bureau of Statistics Investors Index, covering twenty-five common stocks, stood on May 14th at 94.9, as compared with 96.5 on April 30th; but the latest slump came after this figure had been compiled.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—*Shares with a New York quotation, or with definite American interest, are distinguished by italics.*

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

The Case for a S.E. Guarantee Fund.—It seemed particularly inappropriate, writes a "House" correspondent, that the Stock Exchange should return from its Whitsun holiday to hear a couple of failures announced. Both were brokers doing a comparatively small business, though one had been a member for forty-two years. That failures have not been far more numerous may be ascribed mainly to the fact that the open speculative position is now of negligible proportions compared with pre-war days. Nevertheless, even a single failure is a bad advertisement for the Stock Exchange. Clients are prompt to ask whether they would not do their business more safely through the agency of the banks than by going direct to the Stock Exchange, though to what extent the banks would accept responsibility in the event of the failure of a broker with whom they dealt on behalf of a customer, it is impossible to say. Some bank managers, at any rate in the provinces, have no hesitation in claiming absolute protection from customers against loss. For this reason the question of establishing a Stock Exchange guarantee fund has frequently been discussed. It has been suggested that, for some years, members of the "House" might contribute a special payment, in addition to their annual subscriptions, towards such a fund. Jobbers as well as brokers would probably be ready to contribute, on the ground that the average volume of business in the "House" might be expected to expand as public confidence increased. Indirectly, the existence of such a fund might affect the scale of commission charged to clients. The latter frequently complain, not without reason, that the minimum scale is high. The broker replies that, as he is required to return to intermediate parties half his gross commission, on a substantial proportion of the business he undertakes, his net remuneration is very different from that suggested by the official scale. If clients were to deal more directly with their brokers the latter might be willing to accept a lower rate of commission. In some of the Northern Stock Exchanges the rules permit of no division of commission with non-members. It is recognised in the South, however, that banks play a useful part in the collection of Stock Exchange business, and are entitled to a certain remuneration for this service. Some years ago they declined, most emphatically, to entertain proposals for altering the present system. The intimate connection between the banks and the Stock Exchange makes it a matter for regret that there should be any wide divergence of view. Obviously, however, the closely-related problems of a guarantee fund and the reduction of Stock Exchange charges are matters of considerable public interest.

Mr "Solly" Joel.—South African mining magnates are fairly plentiful in the City, but the passing of Solomon Barnato ("Solly") Joel will leave a gap not easily filled. Of humble origin, the late Mr Joel was called, with his

brother, Woolf Joel, to a prosperous business possessing infinite possibilities, by his uncle, Barney Barnato. Barnato Brothers made their fortunes in the Kimberley diamond boom and the gold rush on the Rand. After Barney Barnato had been drowned in the Atlantic and Woolf Joel had been assassinated in his office, "Solly" Joel settled down to business with great determination. He rapidly expanded his gold-mining interests and grouped them into the Johannesburg Consolidated Investment Company ("Johnnies"), which became eventually the premier mining house in South Africa. He bid successfully for the Government areas in the Far Eastern Rand, and he acquired, in 1916, the whole of the late Sir Joseph Robinson's interest in Randfontein Estates, in addition to the Langlaagte mine. Apart from the gold mines, "Solly" Joel became the leading force in the diamond industry, and organised through the Diamond Syndicate the monopolistic control of the world market in South African diamonds. He was a director of De Beers and New Jagersfontein, in which Barnato Brothers held vast interests, and became a director also of the Premier (Transvaal) Diamond and Companhia de Diamantes du Angola. Latterly he had ceded his control of the Diamond Syndicate to Sir Ernest Oppenheimer—possibly with wisdom—and followed (somewhat reluctantly, it appeared) in the rush to Rhodesian copper mines. Apart from gold and diamonds, "Solly" Joel's interests extended to South African breweries, theatres and hotels in London, and racing establishments in several countries. His spectacular deals included the purchase of the Speyer interests in the London "Underground" for several millions and his £5,000,000 deal with Horrockses, Crewdson and Company. In these spectacular and intricate financial excursions he had few rivals. His more solid work lives on in "Johnnies."

More Fixed Trusts Points.—Numerous points of interest have been elicited by a somewhat voluminous correspondence, arising out of our recent articles on fixed trusts. A firm of London stockbrokers has forwarded us a copy of a prospectus, sent by an American house, advertising the United States Electric Light and Power Shares, Inc., Trust Certificates, Series B. This is a fixed trust of a type which limits its portfolio to shares in light and power companies, and would appear to have the disadvantages of fixity without the advantages of the spread of investment risks over many industries. London brokers were offered, in this case, a commission of as much as 3 per cent. for selling the certificates. We have received a letter from a firm handling the London business of a large American fixed trust, declaring that, while the results of any hypothetical fixed trust formed in Great Britain before the war (on the lines of the example given in our article of March 21, 1931), would bear witness to the dangers of a fixed portfolio over long periods, the probabilities in this respect, in America, differ from those in Great Britain, both in degree and in kind. These correspondents contend that America, to-day, has the advantage of stronger companies and a more assured economic outlook than Great Britain in 1912. Whatever the truth or otherwise of this contention, the argument still holds good that, over long periods, profound economic changes may take place, in the face of which the inelasticity of fixed trust holdings is a serious defect. An American opponent of the fixed trust, Mr J. R. Edwards, of Cincinnati, makes the point (to which we have previously referred) that the legal position as regards trusteeship is altogether different from that generally supposed. This correspondent contends that all trusts are composed of three parts—the corpus or trust fund, the trustee who manages the trust, and the beneficiaries, who are the equitable owners of the trust and its proceeds. He declares that, since the promoters of the trust are responsible for all its conditions, and since they accept a profit for their services as managers, they cannot legally transfer all the responsibilities of trusteeship to a bank, which is responsible only for custodianship. The bank, in fact, is the agent of the promoter-trustee, is responsible to the latter as well as to the beneficiaries, and is paid for its services as a custodian,

and not as a manager. If the bank resigned, the promoter could appoint a new custodian. Whenever discretion of any kind is called for, the bank must act in accordance with the instructions of the promoters, within the terms of the Trust Deed. If a trustee makes a hidden profit, he violates his trusteeship. If the promoters are, in law, the trustees it would appear that the beneficiaries—i.e., the holders of fixed trust shares—are entitled to a full annual statement of all profits made by the promoting group. In no case within our knowledge, however, is the publication of such a statement provided for. Finally, a London reader sends us certain figures inspired by our calculation of the results of a policy of investing in the ordinary shares of various British investment trusts, before the war, and holding them on "fixed trust" lines, i.e., selling all rights except cash bonuses. This correspondent finds that an investment of £100 in each of 10 investment trusts in 1903 (the selection being made with a view to including as many different management houses as possible) would have given a capital value in 1930 of £3,740 (against an original investment of £1,000), and a steadily rising dividend from 5.69 per cent. in 1903 to 20.6 per cent. in 1930. As we go to press, we learn that the New York Stock Exchange has ruled that, while it cannot express any opinion regarding the soundness of the principles underlying the formation of trusts either of the fixed or restricted management type, it is prepared to allow its members to enter into relations with such trusts. Before adjudicating on any specific application, however, it will require to be satisfied on a large number of points, and will not permit any reference to hypothetical results obtainable by a process of "jobbing backwards." Our informant declares, however, that the Stock Exchange has no immediate intention of inviting applications for listing on the part of fixed trusts.

Jeremiah Rotherham's Directors.—Directors' fees are a peculiarly sensitive point with shareholders, and many an astute board, by throwing part of its remuneration to the wolves, has saved itself from a worse fate. The question whether directors can most appropriately be remunerated by fixed fees or a percentage of profits is of long standing. The majority of companies adopt the former method, which is not inappropriate, seeing that most "general" directors are not expected to give full-time attention to their companies' affairs, and the payment they receive is thus in the nature of a retaining fee. The method, however, may place a board of directors in an invidious position if a steady decline in profits converts total fees from a small to a comparatively large proportion of available earnings. This has occurred in the case of Jeremiah Rotherham and Company, Limited, an old-established concern of East London wholesale drapers, which has five directors entitled under the articles to an aggregate annual remuneration of £12,000—though, in fact, the board has drawn only £10,000 in recent years. The company's profits, unfortunately, have shown a steep downward trend in the last few years. Earnings (before debenture interest and directors' fees) have fallen from £152,457 in 1922-23 to £78,751 in 1929-30, and £41,925 in 1930-31. Thus directors' fees, which eight years ago absorbed less than 8 1/2 per cent. of profits, last year absorbed 24 per cent. The board has now produced a scheme under which its "fixed" remuneration will be limited to £5,000 per annum, further fees being governed directly by net profits. It is understood that, at the meeting called for next Monday, certain shareholders will oppose the resolution on the ground that, if profits return to the average for the five years before the present depression, the board will actually be able to claim a greater total payment than under the present system. Whatever adjustments may be made in detail, however, the plan has much to commend it in principle. Every case of this kind must be judged on its own merits. In the present instance shareholders would seem to have much to gain from a change which, without reducing fees to such a low level as to render the directors liable to lose interest in the business, offers the most effective of all incentives to a

special effort to reverse the downward tendency of profits, which clearly antedated the onset of general trade depression.

The Affairs of Barrow Haematite.—In the *Economist* of July 5, 1930, particulars were given of a scheme of arrangement put forward by the directors of this Northern steel company, by which the debenture stock holders were to take over the control of the company, and the greater part of the "equity" in the future. The scheme, which involved the drastic writing down of the second preference and ordinary capital, and the cancellation of all arrears of dividend on the first and second preference shares, was sanctioned by the Court only on condition that the company should issue, before May 31, 1931, £150,000 of 6 per cent. Prior Lien Notes for cash. A circular issued by the board states that, owing to the continued depression in the iron and steel industry, and the lack of confidence felt in financial circles in regard to trading conditions generally, the company has not yet found it practicable to raise the new money, though it has succeeded in holding its own and meeting all current trading expenses. In the circumstances, the directors propose to submit to the debenture holders, interest certificate holders, and the different classes of shareholders, a short modifying scheme of arrangement, whereby the date for raising the new money is extended to December 31st next. The directors refer to the possibility that, by the end of the year, a further extension may be required, but stress the importance of the results expected from the rationalisation of the iron and steel and coal industries generally.

Textile Machinery Fusion.—The announcement that six of Lancashire's most important textile machinery manufacturers have decided on a scheme of amalgamation marks a step towards rationalisation taken not before its time. The companies involved are shown in the table below, together with their share and debenture capital and reserves. Incidentally, the trading losses of five out of the six companies aggregated over £190,000 during their last financial year.

Name of Company.	Issued Share Capital.	Debenture Capital.	Reserves, &c.	Latest Year.	
				Net Profit.	Ord. Div.
Aaa Lees and Co.	360,000	24,000	Nil	...	...
Brooks and Dookey	572,500	230,722	266,900	Dr. 28,743	Nil
Dobson and Bullock	400,403	230,000	664,600	Dr. 51,176	Nil
Howard and Bullough	1,500,000	Nil	Nil	Dr. 53,343	Nil
John Hetherington	799,571	Nil	704,500	25,281	Nil
Platt Bros.	3,710,160	1,030,600	704,500	25,281	Nil

Though full details of the scheme are not yet available, it is understood that the fusion will involve a reduction in capital to £4,000,000, of which £2,500,000 will be in the form of 6 per cent. preference shares and £1,500,000 in £1 ordinary shares. Each company will form a subsidiary to take over buildings, plant and machinery and goodwill, receiving in exchange ordinary shares in the new company, while in return for stock and equivalents for cash, preference shares will be allotted. The shares of the subsidiary companies will be transferred to a holding company. While the prosperity of the textile machinery

LIVERPOOL and LONDON.

industry naturally depends largely on the state of trade in the cotton industry, it is admitted that there is ample scope for internal economies. The recent growth of competition from the Continent, added to the general depression in Lancashire, has led to a catastrophic struggle for markets and a price war which has contributed nothing to the welfare of the industry. Though the six companies are those mainly concerned with the production of machinery for the ginning, preparation, spinning and doubling of cotton, the business of this new merger company will embrace a wide field of activity. From many points of view, however, the fact that the scheme has been rejected by such an important firm as Tweedales and Smalley is a matter of regret.

William Beardmore.—Unfavourable conditions have greatly accentuated the difficulties of this company in putting its rationalisation plans into practice. Last year it suffered a trading loss of £41,198. Debenture interest required £72,956, while losses incurred on departments closed down or disposed of amounted to £161,960. Some £28,000 was transferred to the profit and loss account, from taxation reserve, no longer required. The results of the past three years are shown:—

	Year ended December 31.		
	1928.	1929.	1930.
Net profit	Dr. 69,105	18,142	Dr. 278,115
Reconstruction provision	216,540	...	...
Taxation reserve	...	...	Dr. 28,000
Inc. or dec. in carry-forward....	-285,645	+18,142	-250,115

During the year the shipyard at Dalmar was closed and the fixed assets and loose plant and machinery sold. The closing of the yard and other unremunerative departments, however, enabled the directors to rid the company of sources of substantial losses. Improvements, involving capital expenditure, have been effected in the remaining departments, but their effect will not be appreciable until a recovery occurs in industry. The directors do not consider that sufficient amounts were written off fixed assets in 1929, but believe that there is little practical point in any further writing down under present conditions. No depreciation, therefore, has been written off buildings, fixed plant and machinery. The locomotive department has been closed, but it has not yet been decided whether this should be a permanent or a temporary step. Owing to the R 101 disaster there has been a cessation of orders for airship engines, but it is hoped to produce a horizontally opposed Diesel engine for use in aeroplanes.

Associated Automatic Machine Corporation.—The disentanglement of the affairs of this unfortunate company from the Hatry web proceeds slowly but surely, according to the latest report. On March 31st last claims amounting to £174,614 were outstanding against the company in respect of irregular transactions purporting to relate to the share capital of the company, but since that date one of the claims, amounting to £70,052, has been withdrawn without any payment having been made by the company. Differences between the company and three of its late directors have been settled out of court on terms which included cash payments from each of the parties concerned, who, however, deny liability. In the meantime, the British Automatic Company, in which Associated Automatic has a 98 per cent. interest, recorded a profit for the year ended September 30th last of £56,464, after charging debenture interest and other expenses. After provision for depreciation and obsolescence of machines, and contingencies, a balance of £2,462 remained to be carried forward. Once again, no dividends were received from subsidiary companies. The balance sheet gives little more information than last year. Some £931,868 of total assets of £1,432,075 is represented by losses on realisation and revaluation of assets in the suspense account. To that account has been transferred an amount of £5,312, representing shares in the Photomaton Parent Corporation, together with £1,972, due by a subsidiary company. A further item of £960 has been included under

the heading "Legal Actions Suspense Account." Shareholders will look to the meeting for further information as to the possibilities of the company's reaching a satisfactory earnings basis.

British Electric Traction.—Though this holding company has large interests in the North and Midlands, where the prevailing depression is most severe, the preliminary profit figures show that earnings, after deduction of all expenses, have risen to £271,005 for the year to March 31st last, compared with £253,081 for the preceding year. The holders of the cumulative participating preference stock are entitled to a participating dividend of 2 per cent., making 8 per cent. in all, while the deferred ordinary stockholders again receive a dividend of 5 per cent. and a capital bonus in deferred shares of 10 per cent. Earnings on the deferred capital have risen from 54 per cent. to nearly 60 per cent. A balance of £80,217, compared with £65,547, is added to undivided profits account. The 8 per cent. preferred ordinary stock, at 122½, yields about £6 15s. per cent., after deduction of final dividend.

International Telephone and Telegraph.—The International Telephone and Telegraph Corporation closed the first decade of its history under conditions of exceptional world difficulty. As early as January, 1930, extensive readjustments were put in hand to meet prevailing conditions. In the upshot, the communications subsidiaries, engaged in telegraph and cable services, suffered severely from reduced earnings, but the receipts of the telephone operating companies were only slightly less than those of 1929, and the manufacturing companies showed increased sales and profits. Consolidated operating revenues and gross profits on sales aggregated \$93,076,000, as compared with \$89,291,000 in 1929, the increase being due in part to properties acquired during the year. Consolidated net income was \$19,221,000, against \$20,910,000, and net income available for dividends, after deducting interest on debenture bonds, \$13,750,000, against \$17,732,000—a creditable showing. Dividends were distributed quarterly, to a total of \$2 per share. During the year the company carried out two major financial operations, \$50 millions of Twenty-Five-Year 5 per cent. Gold Debenture Bonds being issued in February to liquidate floating indebtedness, and 733,967 no par shares issued in March at \$50. The company's policy, in the face of depression, has been, clearly, to concentrate on conserving and improving its plant and consolidating its recent acquisitions, without undertaking new commitments on a large scale. In many directions activity was maintained to a surprising extent. The seven Transatlantic cables operated by Commercial Cables carried a "wordage" only 2.8 per cent. less than in 1929 and 15.5 per cent. greater than in 1928, Stock Exchange depression being reflected in a tendency to transfer messages from the faster to the cheaper services, rather than in a decline in their volume. The year was noteworthy, in the sphere of radio telephony, for the establishment of a large number of new international circuits connecting existing telephone systems. The experience of the corporation's manufacturing companies, happily, was not on all fours with that of American industry, its largest subsidiary, International Standard Electric Corporation, actually showing an increase of 17 per cent. in its gross sales. Despite the magnitude and complexity of its international ramifications, the corporation regularly publishes detailed consolidated income accounts and balance sheets, being apparently unaware of the difficulties which so many British holding companies appear to find insuperable in connection with such a policy. The shares touched 77½ last year, and now stand at 24½.

Dutch Art Silk.—The Hollandsche Kunstzjde Industrie (Dutch Art Silk Industry) reports gross profits for 1930 of fl. 2,673,000, compared with fl. 4,419,000 in 1929. Net profits amount to fl. 1,400,000 (against fl. 3,066,000 in

the previous year) and have been appropriated in their entirety for writing off depreciation:—

	1927.	1928.	1929.	1930.
		(Thousand guilders).		
Capital	8,295	9,899	15,000	15,000
Reserves	900	1,000	2,125	2,125
Gross profit	3,194	4,192	4,419	2,673
Depreciation	1,113	1,927	1,257	1,400
To reserve	350	200	1,775	...
Net profits	2,231	3,060	3,066	1,400
Dividend	8%	8%	...	...

The annual report states that the company has been able to maintain its stocks at a moderate level, but efforts to arrive at an agreement between producers, in order to improve general conditions in the rayon industry, have had no positive result. The A.K.U. holds a large interest in the company.

Royal Dutch Petroleum.—The report of the management of the Royal Dutch Petroleum Company for the year 1930 contains, as usual, a number of highly contentious political arguments (ranging this time from Russia to bi-metallism) in addition to highly instructive comments on the world oil situation. Pessimism, it declares, is out of place in regard to the petroleum industry. "Over-production" is not so alarming for oil as for the coal industry. If the output of oil were doubled fuel oil would become so cheap that coal would be almost entirely ousted. Too little attention, we are told, has been given to the "earnestness" of the oil restriction movement. Not only was the daily average production of crude oil in America brought down from a level of 2,572,000 barrels a day in January, 1930, to 2,161,000 barrels a day by December, but a policy of restriction of output was put into effect in other countries—in Venezuela in November, 1930, and in Roumania from July to October, 1930. In the latter country the restriction agreement was terminated on the notice of the Steaua Romana, much to the dissatisfaction of the Royal Dutch directors, who have some hard words to say about it. Only Russia held aloof from the policy of restriction, its output for the year ended September, 1930, amounting to 17,209,000 metric tons, against 14,167,600 metric tons in the previous twelve months. The total world production of crude oil in 1930 was curtailed to 199,777,400 metric tons—about 11,000,000 tons less than in 1929. The directors of the Royal Dutch attribute the fall in oil prices, which is still continuing, to under-consumption rather than to over-production. They advance two causes for the slowing down in demand. The first is the elimination of Russia from the world's markets, and the second, the slump in silver. The Royal Dutch directors find many reasons to account for the slowing-down of economic development, such as the civil war in China, troubles in India, the payment of war debts and war indemnities, tariffs, and so on, but they stress the importance of the 40 per cent. depreciation in silver last year in its reaction on the purchasing power of 800 million people in China and India, and argue that the bi-metallic standard will have to be reinstated in order to bring "the value of silver up to where it belongs." The following figures are given of the crude oil production of the Royal Dutch group in 1929-30:—

	(Metric tons).	
	1929	1930
Dutch East Indies	4,746,426	4,806,640
Sarawak	760,166	701,518
Egypt	271,520	281,997
Roumania	852,372	1,034,042
Mexico { Corona	363,361	284,749
{ Aguila	1,689,564	1,553,258
{ Caribbean	2,330,341	3,072,084
Venezuela { V.O.C.	6,469,206	5,878,186
{ Colon	...	705,261
Trinidad	102,800	128,240
U.S. { Shell Petrol Corporation	3,602,835	2,873,908
{ Shell Oil Company	3,980,717	2,650,164
Argentina	15,079	9,980
	25,184,387	23,980,027

The trading results of the Royal Dutch, which holds approximately 60 per cent. of the share capital of the

subsidiaries against the Shell's 40 per cent., are shown in the following table for the past three years:—

	1928.	1929.	1930.
	Fl.	Fl.	Fl.
Dividends on shares	96,925,754	113,956,468	82,817,023
Interest and differences in exchange	6,490,866	12,611,453	9,242,162
Dividends lost by limitations, etc.	337,636	275,898	10,364
Total income	103,754,256	126,843,819	92,069,549
Net income (less administration expenses and interest)	103,367,780	126,471,391	90,836,415
Priority and pref. divs.	1,342,500	1,342,500	822,612
Rate of ord. dividend.....	24%	24%	17%
Amount of ord. dividend.....	98,904,720	120,869,760	85,616,080
Commissaries bonus	2,881,964	3,588,958	2,181,854
Carried forward.....	1,015,025	2,219,313	4,613,145

The net income of the company showed a decline of about 28 per cent. The directors are maintaining a conservative financial policy, the carry-forward being increased by Fl. 2,393,832. The cut in the final dividend from 14 per cent. to 7 per cent. disappointed the market in Amsterdam, if not in London, and the shares have subsequently fallen to 17½, as compared with a high level in 1929 of 38½. At 17½ the shares return a dividend yield of £8 2s. per cent.

Rubber Outlook.—After reaching the lowest price ever recorded, rubber has recently shown a slight improvement. Very few dividends, however, have been declared in respect of 1930. The largest companies have, in some cases, been among the worst sufferers. Grand Central and Jugra Land and Carey, for instance, have had a worse year than many smaller companies, though both have a paid-up capital exceeding £1,000,000. The following table shows the results of nine large companies for the past two years. The aggregate capital represented is £5,887,143:—

Company.	Net Profit to December 31.		Earned Per Cent.		Dividend Per Cent.		Market Price per £1 Share.

† Share denomination 2/-.

Despite the difficulties of the industry at the moment, the chairman of the Rubber Plantations Investment Trust took a cautiously optimistic view at the annual meeting. He declared that producers are realising that "all-out" production will not minimise their cash loss. On some properties "caretakers" are being introduced. At present, world stocks are heavy, totalling about 600,000 tons, and are increasing; but the general adoption of a conservative policy will, he believes, assist in reducing this very present bugbear of the industry, and in enabling growers to reserve their cash resources. Meanwhile production costs have fallen in remarkable fashion. In 1922, when rubber stood at 7d. per lb., many plantations had an "all-in" cost of 10d. per lb. In 1928 the "all-in" cost was 8d. per lb., and to-day certain companies are even able to produce at 5d. per lb., or less. Low prices have taught the industry the technique of economy, which has been assisted by the introduction of scientific methods. Expansion of acreage has been practically stopped, while even the native grower is beginning to see the inadvisability of "all-out" production. Other slight but tangible indications of better times are not entirely absent. In January last world stocks were increased by 15,000 tons; in April by 5,000 tons. During the quarter

ended April 30th last, deliveries to manufacturers in the United Kingdom were 1,500 tons more than in the corresponding period of 1930. The lasting economies introduced during the past twelve months may enable rubber to be sold profitably at a lower price than that ruling before the crisis—a factor calculated to stimulate demand after the passing of the present depression. In short, while some of the weaker companies may succumb, those which survive may legitimately look forward to better years in the near future, when prosperity may be based on more scientific foundations than in the past.

Lonely Reef.—From the standpoint of treatment operations, writes our mining correspondent, 1930 presented no very striking contrast with the preceding year. The effect of increase in tonnage milled, with a substantial decrease in the cost ratio, was rather more than offset by decline in the grade of the ore, the net profit coming out £2,000 down at £96,800. This would not in itself have entailed a cut in the dividend, but "to strengthen the position in regard to the acquisition of new interests" £15,000 was added to reserve, raising that fund to £25,000. After the payment of distributions totalling 20 per cent., as against 25 per cent., the enhanced sum of £20,060 remained to go forward. Development at depth continued to be attended with practically negative results, but the outlook has been changed by the savings effected—with more to follow—in working costs. This will permit the profitable treatment of a very large tonnage hitherto passed by as unpayable. The quantity is estimated at between 500,000 and 750,000 tons, representing eight or nine years' work—of course, on a reduced scale of earnings. Actually as from the beginning of the current year the monthly profit has been cut down to about £6,000, although an interim dividend of 10 per cent., has again been declared and is included in the current price of the shares. At about 15s. 6d. the latter do not appear overvalued.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hambros Bank, India General Navigation and Railway, Licences and General Insurance, Fine Cotton Spinners' and Doublers' Association, Nitrate Producers' Steamship, Rubber Plantations Investment Trust, Central Mining and Investment, Crown Mines, and Wm. Beardmore. At the annual meeting of Central Mining the chairman informed shareholders that the Witwatersrand gold mining industry had had a successful year, the Transvaal production of a value of £45,520,000 being the largest annual output ever recorded, while of this amount the Witwatersrand alone accounted for £43,500,000. Presiding at the annual meeting of Fine Cotton Spinners, Mr H. W. Lee said that loss occasioned by short-time running had been due, not only to the world crisis, but to the rush into their branch of the trade of spinners who, until recently, used mainly American cotton. In 1914 there were 14 million spindles engaged on Egyptian types of cotton, and, although few new spindles had been installed since then in the Egyptian branch, the turnover of spindles from the American section of the trade had brought the number up to about 18 million spindles.

INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION.

SUMMARY OF ANNUAL REPORT, MAY 25, 1931.

TO THE STOCKHOLDERS:

The year 1930, the period covered by this report, marked an end of the first decade in the life and history of your Corporation. It was a period of financial and economic crisis which, originating before the beginning of the year and extending after its close, spread throughout the world.

It will be recalled that in the latter half of 1929 the first indications of a severe decline were felt. A second phase of the decline began in the following summer and continued with increasing severity throughout the rest of the year. In January, 1930, the executives of your Corporation initiated a thoroughgoing programme of readjustment to meet these conditions, not overlooking, however, the importance of conserving existing plant and maintaining positions already taken. This programme of readjustment to the new conditions was carried on throughout the year 1930, and was intensified during the first quarter of the present year.

The general regional and local executives of all our Companies were charged with the responsibility of making such revisions as would effectively meet the altered economic conditions with which they were confronted. Put to the test of facing the changed conditions, the employees, from the humblest to the highest, met the situation squarely and responded wholeheartedly. The fullest acknowledgment is given to each member of our large International family for the fine spirit displayed and the splendid example of service shown.

In general, it may be said, reviewing the results of the past year, that while the record communications companies, engaged in telegraph and cable services, suffered severely from reduced earnings, the earnings of the telephone operating companies were only slightly less than those of the previous year, and the manufacturing companies showed increased sales and profits.

As has been stated in previous annual reports, newly acquired companies, as a rule, do not immediately show their true earning power, and, as a result, do not contribute their full share of earnings until after they have gone through a period of reconstruction and development. While this period of reconstruction has been passed by the more important of our Associated Companies, the full benefit in increased earning power has been retarded in common with practically all classes of business activity during the past year.

THE INTERNATIONAL SYSTEM.

The International System now offers a highly co-ordinated and expanding record communications service. All branches of the service are so interconnected that telegraphic dispatches filed with any office of the System will be transmitted immediately by radio, cable or land line, or any combination of the three, to any point in the United States, to other countries of the world or to ships at sea. The flexibility of the services is a guarantee of efficient performance under all conditions.

In addition to maintaining direct cable service between North, Central and South America, All America Cables obtained authorisation to erect in certain parts of Central and South America radio stations to supplement cable facilities. Authorisation was obtained from the Government of Colombia to erect a radio station at Medellin, Colombia, for the handling of international telegraph and telephone business. This station is expected to be in operation by August 1, 1931. Radio telegraph service between Lima, Peru, and the Mackay Radio and Telegraph Company's station at Sayville, Long Island, has been successfully operated throughout the year.

Commercial Cables continued to render fast and accurate service over its seven cables across the Atlantic. There was a large increase in the number of words handled in the cheaper services, but the fast service showed a decrease in volume. The overall number of words transmitted, however, was 15.5 per cent. greater

than in 1928 and only 2.8 per cent. less than in 1929, when the Company handled the largest volume of business in its history.

The revenues of the Postal Telegraph System decreased during the year. The reduction, however, was less, proportionately, than the decrease in the total telegraph business of the country, since, as a consequence of the improvement and extension of its plant and increased efficiency in its services, Postal Telegraph succeeded in obtaining a greater proportion of the telegraph business of the United States than during the previous year.

Contracts were made with various of the Standard Oil Companies under which Postal Telegraph service is made available on the highways at these Companies' major filling stations throughout the country. Late in 1930 arrangements were completed for the delivery by Postal Telegraph offices of tickets for New York theatres. Furthermore, arrangements were made to extend the service providing for the telephoning of telegrams to Postal Telegraph offices, the charges appearing on the Telephone Companies' bills to the customers, which service at present is available throughout most of the territory of the United States.

Mackay Radio and Telegraph Company completed in August, 1930, a new station at Rockland, Maine. This station is located in the most advantageous position to serve ships of the North Atlantic lanes, and is the fourth radio station of the International System to be opened on the Atlantic coast, the others being located at Sayville, Long Island, New York City, and West Palm Beach, Florida.

The first step in the extension of the services of Mackay Radio to Europe was taken in March, 1931, through the completion of an agreement with Radio Austria. By virtue of this agreement a direct radio telegraph circuit has been established between New York and Vienna. This circuit was inaugurated on April 22, 1931, by an exchange of messages between the President of the United States and the President of Austria.

To consolidate its position in South America, and further to round out its communications service between that Continent and Europe, your Corporation acquired a controlling interest in Sociedad Anonima Radio Argentina. This company operates a radio telegraph service between Buenos Aires and Madrid, and accepts messages to and from South America, Europe and certain parts of North Africa. The Argentine Government recently granted to Sociedad Anonima Radio Argentina authority to extend its services to the U.S.A.

RADIO TELEPHONY.

Greater progress was made during 1930 than during the previous three years combined in bringing a large number of the peoples of the world into close communication with each other. This was due to the establishment of many new international radio telephone circuits connecting existing telephone systems.

Your Corporation, through the radio stations of its Associated Companies in Buenos Aires (Argentina), Santiago (Chile), and Madrid (Spain) provided radio telephone links connecting the South American countries with Spain and most of the other important countries of Europe. The Buenos Aires station affords direct radio telephone communication between the subscribers of our Associated South American Companies and more than thirty million telephones throughout the world, or about 90 per cent. of the world's total telephones.

Additional radio stations are now under construction in Brazil and Colombia. These stations will be placed in operation during 1931.

On May 7, 1930, radio telephone service between Great Britain and Argentina, Chile and Uruguay was officially inaugurated. This circuit, between South America and Great Britain via Madrid, typifies the high degree of co-ordination which has been effected between wire and radio systems in providing long international telephone connections. This circuit employs a combination of the land

telephone lines of the British General Post Office, of the Department of Posts, Telegraphs and Telephones of France, and of our Associated Telephone Company in Spain, with the radio circuit provided by the latter in co-operation with our Associated Radio Company in Argentina. Transmission beyond Buenos Aires follows the sub-fluvial cable of the United River Plate Telephone Company, Limited, to Uruguay, and the Transandean telephone cable to Chile.

The radio service between Europe and South America was further extended during 1930 and the current year by the provision of direct radio telephone circuits between Buenos Aires and several of the principal European capitals—namely, Paris, Berlin and London.

A further logical development in the expansion of telephony by means of radio was the installation of radio telephone apparatus on ships. Early in 1930, commercial radio telephone service was made available to the public on the Transatlantic liners *Majestic* and *Olympic* of the White Star Line. Facilities offered by this service enabled any passenger on either of these ships to telephone to any telephone subscriber in the United States or Great Britain at practically any time during the Transatlantic crossing. In the course of subsequent voyages, the ship to shore service was extended to the telephones in Canada, Mexico, and Cuba on the one hand, and practically all of the European countries on the other. Further extension of the service has now been made to include the telephone subscribers in Australia, Argentina, Chile and Uruguay. The equipment installed on these ships for this service is provided and operated by your Corporation's Associated Company, International Marine Radio Company, Limited.

The technical success obtained by ship to shore services in the North Atlantic was followed by the installation of similar radio equipment on the *Belgenland* of the Red Star Line, which was proceeding upon an around-the-world cruise. The latest and most highly developed equipment was installed, and, as a result, the ship was in almost constant touch with the whole of the civilised world throughout her voyage. It was possible for the first time in history for the passengers on a ship engaged in a cruise around the world to converse with their friends located in the chief countries of the globe.

TELEPHONE OPERATING COMPANIES.

In 1930 three new telephone companies were acquired, the Compania Peruana de Telefonos, Limitada (Peruvian Telephone Company); the Shanghai Telephone Company; and the Societatea Anonima Romana de Telefoane (Rumanian Telephone Company).

The Peruvian Telephone Company, a controlling interest in which was acquired January 3, 1930, operates a telephone system in Lima and other important cities in Peru, and its acquisition adds over 10,000 stations to the number served by our Associated Telephone Operating Companies.

The Shanghai Telephone Company operates in both the International and French Settlements, the Company having acquired as of August 1, 1930, with the approval of the Councils of both Settlements, the properties of the Shanghai Mutual Telephone Company, Limited. On December 31, 1930, this Company had in operation 35,432 telephones which connect with the Chinese Government exchange operating in the native section of Shanghai and also connect with the lines of the Government Telephone Administration which gives long-distance service to points in the Yangtze Valley as far as Nanking. Rotary automatic equipment, similar to that installed by the Corporation in many European capitals and other large cities of the world, is used.

The Rumanian Government, on July 3, 1930, granted to your Corporation the exclusive right to operate and develop the telephone system of that country. The contract covers the entire telephone and electrical communication field other than the telegraph, and provides for the establishment and operation of complete local, long distance and international telephone service, including auxiliary services by wire, cable or radio. The contract follows the general lines of that granted in 1924 to your Corporation's Associated Company in Spain. The actual transfer of the properties, previously owned by the State, to the new Company was made in January, 1931, and, accordingly, the consolidated statements included in this report do not reflect the investment or operating results of this property. At present there are over 80,000 miles of telephone lines connecting more than 50,000 telephones. Of this total, approximately 25 per cent. are in Bucharest, the capital.

The foregoing acquisitions bring the total number of countries in which Associated Companies of the International Telephone and Telegraph Corporation operate telephone systems to eleven, i.e., Spain and Rumania in Europe; Argentina, Brazil, Chile, Peru and

Uruguay, in South America; Mexico, in North America; Cuba and Porto Rico in the West Indies; and Shanghai, in China.

Progress was continued in the programme of development of the telephone properties, and in spite of the unfavourable economic conditions during the year there was a net station gain of 106,123, or 18.24 per cent., resulting in a total of 688,052 stations in service at December 31, 1930.

The Associated Telephone Operating Companies have adhered to the policy of training nationals of the countries in which they are established to assume the duties of operating their properties. The continued progress of the Associated Telephone Operating Companies is a tribute to the energy, zeal, and adaptability of these employees.

MANUFACTURING COMPANIES.

As has been recited earlier in this report, the manufacturing companies in the face of adverse economic conditions have concluded a year of increased earnings. The gross sales of the International Standard Electric Corporation in 1930 amounted to \$60,948,000, as compared with \$51,954,000 for the year 1929, an increase of 17 per cent. Orders on hand at the end of 1930 amounted to \$28,600,000. Gross sales of other manufacturing units amounted to \$19,375,000, and orders on hand at December 31, 1930, to \$7,642,000. The total sales of all manufacturing units were \$80,323,000 and total orders on hand at December 31, 1931, were \$36,242,000.

These manufacturing results are especially gratifying when it is borne in mind that many Government Administrations, which serve as an outlet for a large part of our manufactured products, had adopted a policy of retrenchment and in some instances had deferred the purchase of equipment for the extension of their systems until such time as normal economic conditions return. It is interesting to note that of the total sales effected during the year 1930, approximately 20 per cent. were to our Associated Telephone, Telegraph, Cable and Radio Companies, and the remaining 80 per cent. to other companies and Government Administrations.

Manufacturing units associated or affiliated with your Corporation are situated in ten of the principal cities of Europe, as well as in Buenos Aires, Shanghai, Sydney and Tokyo. In addition, there are sales and distributing organisations located throughout the world. Major item of manufacture are automatic central office equipment, manual central office equipment, subscribers' station apparatus, private branch exchanges, aerial and underground cable, carrier and repeater equipment, loading coils, radio point to point and broadcasting stations, telegraph printers as well as practically all accessories utilised in the telephone, telegraph and radio field. During 1930 the manufacturing activities of your Corporation were expanded through the formation of Standard Elektricitäts Gesellschaft, A.G., in co-operation with Allgemeine Elektricitäts Gesellschaft, A.G., and Felten & Guillaume, Carlsberg, A.G. This new company owns a controlling interest in several important German manufacturing companies. Your Corporation also acquired controlling interests in Österreichische Telephonfabrik, A.G., of Vienna, and in C. Lorenz, A.G. of Berlin, both of which specialise in the manufacture of telephone, telegraph and radio apparatus, and in Aktieselskabet Skandinaviske Kabel og Gummifabriker of Oslo, a company engaged in the manufacture of cables and wire.

Important orders executed by Creed and Company, Limited, included the supply and installation of telegraph printers for the British Post Office, Amsterdam Police, Italian Post Office, Italian State Railways, Italian Foreign Office, Vatican City, Reuters News Service in Shanghai, and a new ticker service for market quotations in Switzerland.

In September, 1930, Creed and Company acquired the rights of the Teletype Corporation relating to start-stop telegraph printing equipment for all countries of the world, except the United States, Canada and Newfoundland.

Very satisfactory progress has been made with the installation of the rotary type of automatic telephone equipment, which is an original development of the International Standard Electric Corporation. As of December 31, 1930, there were some 781,360 lines of Standard rotary automatic equipment in actual operation as compared with approximately 186,515 lines as of December 30, 1925, the year in which the International Standard Electric Corporation was acquired by your Corporation. Important contracts for further installations are held by several of our Associated Manufacturing Companies. There are now 83 cities in which Standard rotary automatic equipment is installed.

The Vatican City State, the newest of States, is essentially international, and it seemed fitting that the International Telephone

and Telegraph Corporation should be the medium through which a modern telephone system was installed in that State. On November 19, 1930, His Holiness, Pope Pius XI., most graciously lent his presence at the ceremony of inauguration and released the lever which set in action the rotary automatic telephone service. The Central Office is established in the building, until recently occupied by the Governor of the City of Rome, in the Villa Belvedere, which was commissioned by Pope Innocent VIII. (1484), and which is now the centre of the Vatican sculpture gallery.

LABORATORIES.

The practical results obtained from the research and development work of our Laboratories have been noteworthy. The commercial application of those developments by our Associated Manufacturing and Operating Companies will result in important economies and assure the continued recognition of the position of these companies in their respective fields. The following paragraphs outline some of the more important developments.

In March, 1931, the International Telephone and Telegraph Laboratories of Hendon, England, in co-operation with the Laboratories of Le Matériel Téléphonique of France, gave a successful international demonstration of new ultra short wave radio telephone transmission between Dover, England, and Calais, France. The wave length used was 18 centimetres, or approximately 7 inches, with transmitting and receiving aërials less than one inch long and power of $\frac{1}{2}$ watt.

This development, called "The Micro-ray," opens to possible commercial uses a new medium for the transmission of spoken and written messages, and points to a practical method for the transmission of television signals.

A system of facsimile telegraphy has been designed which transmits typewritten and printed messages as well as line drawings in such form that an exact duplicate is reproduced at the receiving terminals. The speed of transmission is at the rate of 90,000 printed words per hour, and a continuous flow of messages may be automatically passed through the machines without requiring the service of expert operators.

During the year, long distance automatic dialling was demonstrated before the Comité Consultatif International (International Communications Committee) at Dusseldorf, and also at the Brussels Conference, from an automatic telephone in Brussels, the Conference delegates dialled telephone subscribers in the London area. Considerable interest has been manifested in the equipment by several telephone administrations.

Ever since the introduction of the dial or automatic telephone, efforts have been made to design central office equipment of lower cost than the equipment now employed. Our Laboratories have succeeded in perfecting an automatic system known as the "By-path" for use in step-by-step automatic areas, which offers increased flexibility and lower cost of production.

The development of equipment for one of the largest broadcast transmitting stations in the world, rated at 120,000 watts, was completed during the year. It is now being installed in Prague, Czechoslovakia.

During the year the Laboratories completed a number of developments, through the use of which the operating telegraph and cable companies will be enabled to render improved service and to effect important operating economies.

Of great importance was the completion of the development of equipment for the improved operation of submarine cables. The installation of this equipment has increased by more than 30 per cent. the westward speed of the fastest Transatlantic cable of the Commercial Cable Company.

The Laboratories have also developed and improved ship radio telegraph transmitting and receiving equipment, and a number of these equipments have been manufactured and installed by the Mackay Radio and Telegraph Company and are giving highly satisfactory service.

FINANCIAL.

In the year 1930, two major financial operations were effected by your Corporation. On February 1, 1930, \$50,000,000 principal amount of twenty-five year 5 per cent. Gold Debenture Bonds due February 1, 1955, were issued and the proceeds utilised to liquidate indebtedness incurred in financing the Associated Companies during 1929 and the opening months of 1930. In providing

further for the financial requirements of your Corporation 733,967 shares of additional capital stock without par value were issued and sold at \$50 per share in the relation of one share for each eight registered in the respective names of the stockholders at the close of business March 21, 1930.

During 1930 the number of stockholders increased from 53,594 on December 31, 1929, to 77,804 at the end of 1930, or an increase of 24,210. On May 14, 1931, there were 81,617 stockholders.

Consolidated operating revenues and gross profit on sales during 1930 totalled \$93,075,550.50, as compared with \$89,291,335.64 in the previous year, an increase of \$3,784,214.86, which increase was due in part to the inclusion of revenues and gross profits of properties acquired during the year. Consolidated net income for 1930, before deducting interest on debenture bonds, amounted to \$19,221,271.25, as compared with \$20,909,672.39 for 1929, a reduction of \$1,688,401.14. Interest on debenture bonds amounted to \$5,471,138.39, as compared with \$3,177,513.50, resulting in net income available for dividends of \$13,750,132.86 in 1930, as compared with \$17,732,158.89 in 1929, a reduction of \$3,982,026.03.

Dividends were distributed quarterly at the rate of \$2 per year on each share of stock outstanding.

Further information of a financial nature will be found in the appended consolidated balance sheets of your Corporation and its Associated Companies as of December 31, 1930, and statement of consolidated income and surplus accounts for the year ended that date.

Approved by the Board of Directors,

HERNAND BEHN, President.

SOSTHENES BEHN, Chairman.

INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION AND ASSOCIATED COMPANIES.

COMPANY MEETINGS, &c.

THE FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION, LIMITED.

ANNUAL MEETING OF SHAREHOLDERS IN MANCHESTER.

A CALAMITOUS YEAR, BUT NO CAUSE FOR DESPAIR.

TRADE DEPRESSION WORLD WIDE.

GROUND FOR GRATITUDE RATHER THAN CENSURE ON THE MANAGERS.

The thirty-fourth ordinary general meeting of the shareholders of the Fine Cotton Spinners' and Doublers' Association, Limited, was held in the Memorial Hall, Albert Square, Manchester, on Friday, the 22nd instant,

1. To receive the report of the directors and statement of accounts for the year ended March 31, 1931.
2. To declare dividends.
3. To elect directors in place of those retiring.
4. To elect auditors, and to fix their remuneration.
5. To transact such other business as may be legally transacted at a general meeting of the company.

Mr Herbert W. Lee (chairman of the association) presided. The other directors in attendance were as follows:—Col. R. W. D. Phillips Brocklehurst and Mr John Graham Peel (vice-chairmen); Mr William Howarth (managing director); Mr Vernon Bellhouse and Mr Alan Murray Gordon Debenham (the above constitute the executive board).

Mr John Wallace Adam, Mr Percy Ashworth, Mr George Alfred Barnes, Mr Robert Leslie Bellhouse, Mr Robert W. Bennett, Mr Arthur Lyons Carroll, Mr Archibald E. Dixon, Mr Esmond Miles Dixon, Mr Francis Iredale Dixon, Mr John I. Higson, Mr F. Watkin Hiller, Mr Ernest Mather, Mr E. Lomas Oliver, Mr Edwin Oliver, Mr Ian Maurice Lomas Oliver, Mr Wm. Alfred Perry, Mr Alfred Edwin Rahr, Mr John A. Wanklyn, Mr Philip Bruce Whitehead, and Mr Herbert Stowell (director and secretary).

There was a large attendance.

The Secretary read the notice convening the meeting. Then, at the call of the chairman, the auditors' certificate was read.

The Secretary also read letters of apology for absence from Mr. Percy Musgrave and Mr John B. Walker, two of the directors.

THE CHAIRMAN'S SPEECH.

DIFFICULTIES OF THE PAST YEAR.

WORLD DEPRESSION AND THE TEXTILE TRADE.

The Chairman, in moving the adoption of the report and accounts, said:—The report and balance sheet have been in your hands for the past week, and I presume you will follow your usual practice and take them as read.

It is with the utmost regret, a regret that is shared by all our directors, that we have such a calamitous result to put before you. This is the thirty-fourth meeting of our shareholders. Our returns have varied during that period, but we have never so far had to present you with a balance sheet with figures such as the one you have before you to-day.

Our worst year during the long existence of the company was that ending March, 1921, the year of the great slump, and it may be of interest to you to know, although it will not be much consolation that the actual trading of that year showed a greater loss than the present one. The position, however, in that case was improved by the great amount of excess profits duty which it was possible to bring back to the credit of the profit and loss account, and this minimised the loss to a great extent. It has been my practice during the now long period which I have been chairman of the association to give you at these meetings particulars of the various conditions of the trading of the year that have had a good or ill effect on the figures presented to you.

"TEXTILE TRADE ESPECIALLY HARD HIT."

I think that, with the unfortunate results you have before you, you will expect me on this occasion to somewhat amplify my report. In the time at my disposal it would be impossible to give you a full report of all the factors that have contributed to the result. You must remember, for one thing, that we are not an isolated example of bad trade, either as a company, or even taking trade in general as a nation. The whole world is going through the most widespread

trading crisis of modern times, and we could not have hoped to be exempt from it. The textile trade above all in every country has been especially hard hit. Whether you look East or West the aspect is the same, short-time running, great depreciation in values, and heavy losses in every direction.

Lancashire has had, in addition, extra handicaps in the boycott of its goods in India, and the disastrous fall of silver in China, markets which, you might think, did not affect this company, but which, especially in the case of China, both directly and indirectly, have a considerable effect on our trade.

TWO MAIN CAUSES OF HEAVY LOSSES.

Now, our failure to make both ends meet may be put down, roughly, under two heads, each of them brought about by a considerable variety of reasons. These are short-time running and a great loss from depreciation in the value of the heavy stocks in cotton and yarn we are compelled to hold. Both these reasons are immensely serious, the first is the one which gives me the greatest concern because the remedy for it is yet to be found. The second has, in the past year, been in the larger way responsible for the heavy losses we have sustained.

We have an advantage, in the ordinary course of affairs, in being an association that is, to a certain limited extent, a vertical one. We not only spin yarn but we cord it, and we also lay ourselves out to do many subsidiary processes that enable us to deliver our products ready to go straight into the loom, the hosiery machine, or any other machine that it may be required for. It is an advantage and one which we have been developing, and one which will help us in the future, but it has one great disadvantage, that is, the loss we must sustain in a time of falling prices. We have to carry always a heavy stock and that stock is in a material which, unlike American cotton, we cannot hedge, or can only do so to a very limited extent.

EFFECT OF COLLAPSE OF WORLD MARKETS.

This time last year the rate of prices that then obtained looked fairly safe; we were not perhaps shrewd enough to envisage the world collapse of all markets. We did not anticipate the world crisis that brought all raw products to values far below the cost of production and sent some of them down to even below pre-war levels. Cotton was no exception to this, and, unfortunately, the cotton we use was more seriously affected than any other.

ENORMOUS DROP IN COTTON PRICES.

The reduction in American was bad enough, but the reduction in many of the brands of cotton we use came to the astounding figure of 40 per cent. to 45 per cent. In yarn the drop was even more serious, reckoned per lb., caused not only by the fall in raw materials, not only through competition abroad, but through senseless and unnecessary competition among the spinners of this country, and it would not be an outside estimate to put the average fall in the price of yarn down at a figure of 6d. per lb. A part of this followed naturally the fall in the price of cotton, but part of it was unnecessary if the trade had made the slightest endeavour to work with any reference to the cost of production. When we consider that the fall of every penny per lb. on the minimum weight of stock we are compelled to carry to enable us to conduct our business is equivalent to well over £100,000, you will realise how easily and quickly under the circumstances of last year the difference between the profit we hoped to make and the loss we show can be accumulated. We may undoubtedly put down, not all, but the greater part of the actual loss of this year to this depreciation in value. It is a grievous showing, but such part as is the result of depreciation in value is limited.

We might have a further fall, but prices are now so low that any further heavy decline is most unlikely. It does not, personally, weigh on my mind, therefore, nearly as much as the remainder of

the loss occasioned by short-time running, which has been caused, not alone by the world crisis in trade, but also largely by the rush into our branch of the trade by spinners using up to recently entirely or at any rate mainly American cotton. In 1914 there were 14,000,000 spindles engaged on Egyptian types of cotton, and, although few new spindles have been installed since then in the Egyptian branch, the turnover of spindles from the American section of the trade has brought the number up to about 18,000,000 spindles.

This turnover and the competition from these extra spindles has been facilitated by the fact that the demand that has existed has required a much larger proportion of low qualities than has usually been the case, making it easier for mills not specially adapted for the spinning of Egyptian cotton, as ours are, to enter into this competition for such orders as may be offered with a better chance of success than would have been the case if the super qualities of yarns had been more generally in demand. I propose to say a few more words on this subject directly, but I should like, first, to just run through the figures of the balance sheet with you.

BALANCE-SHEET ITEMS—ASSETS.

I had perhaps best take them in the order you are used to, and turn, first, to the asset side of the balance sheet.

You will notice that our associated properties show additions of £91,938. This may appear to you a big amount in such a year as the present, and it may surprise you to hear that nearly half of it—£45,000—has been expended in the purchase of a new mill. We had at our concern of Shaw, Jardine and Company 76,000 spindles installed in a mill that was not of the most approved size for a spinning mill, and would not take modern machinery. We have, therefore, been allowing the machinery in this mill to run out its natural life, and it has now arrived at a period when it is advisable to scrap it. To rebuild and refill the mill would have cost over 40s. per spindle, and, under present conditions, we should never have contemplated such an expenditure, but we were offered the Ena Mill, at Atherton, one of the largest Lancashire mills, very little run, and very up to date, at 8s. per spindle, and we decided to scrap the Shaw, Jardine old machinery and turn this mill over to them instead. We had the greater inducement to do this because the firm of Shaw, Jardine and Company has always been a very successful one, and the old building, while unfit for spinning machinery, is well built and is exactly what we require for a rearrangement of the doubling machinery at that concern, and I think you will agree that the circumstances of the case justified this expenditure. The remainder of the sum paid for additions is almost entirely for finishing machinery, putting us into a position to deliver a greater weight of yarn in a form ready for immediate use by our customers. It is a great convenience to some of our manufacturers, and undoubtedly should give us a preference when they are placing orders.

DEPRECIATION.

I want to call your attention specially to the depreciation account; we have taken £180,000, the same as last year. This amount has naturally added to the loss we show. I notice that in many of the latest balance sheets of cotton mills, no provision, or very little provision, has been made for depreciation. It may be that, with the short time we have been working this year, together with the fact that we have now £495,218 standing to the credit of our depreciation account, we should have been justified in at any rate reducing in a year like this the amount we put on one side for this purpose, but your directors are so convinced that the future in the industry will be held, and can only be held, by those mills that not only keep their plant of every description equal to new, but are also ready and able to adopt without delay every new invention or improvement that comes forward, that they decided to adhere this year at any rate to the full amount. This sum is only on account of the associated mills, the subsidiary concerns have their full depreciation taken through their own balance sheets in addition at the same rate as for former years.

Out of the depreciation fund we have this year spent £99,288 on renewals, against the £180,000 placed to it, although we have not grudging any expenditure during that time for the objects I have indicated, and, in addition, we have expended the sum of £75,016 in repairs, which has been written off against profits in the usual way. This brings all our associated properties to £6,141,508, a net increase of only £11,228 over last year.

INVESTMENTS IN SUBSIDIARY COMPANIES.

The amount invested in our subsidiary companies comes under three heads. Investments in shares and debentures, £3,121,665, show a decrease of £6,930. debentures to that amount having been paid off. Advances to and amounts due from subsidiary companies, £1,237,438, always a varying amount, is this year £107,309 less than last year.

STOCK-IN-TRADE.

Stock-in-trade exhibits a reduction of £884,419. Part of this occurs through the weight of cotton in stock having been considerably reduced, but the larger part is represented by the fall in value during the year. Had our present stock been valued at the prices ruling at March 31st last year it would have stood at very nearly £600,000 more than it appears in the balance sheet to-day. I do not wish to give you the impression that we have lost that amount by the depreciation in values, that would not be correct, but the figure is of interest in indicating the great difference in the level of prices as between March 31, 1930, and March 31, 1931. I can assure you that these stocks have been taken with the utmost care, and that the value has in every case been written down to the level that obtained on the date of the stocktaking.

Trade and other debtors, at £745,170, show a reduction of £272,570, an amount easily accounted for by the miserable turnover and the reduction in values we have had during the year.

LIABILITIES.

Turning to the other side of the balance sheet, you will find no change until you come to the account of reserves, which are reduced by £400,000, the amount we recommend you to transfer to profit and loss account, to allow the payment of debenture interest and preference and preferred ordinary dividends, which I shall refer to again. The insurance account has now £202,621 standing to its credit, an increase of £6,366, the difference between the premiums credited to it and the claims paid.

The welfare fund stands at £2,097, and is sufficient for any work in sight. We are continuing in all necessary essentials the welfare work we have established, and we are convinced that it is not only of the greatest value to our workpeople, but it is also of financial consequence to the association in maintaining the best standard of worker and discipline in our mills.

RESULTS OF SUBSIDIARY COMPANIES.

Now, ladies and gentlemen, we must return to the profit and loss account, and into this should enter not only the profits or losses from our associated concerns, but also the results of our subsidiary companies. The returns of these subsidiary companies have been nearly as disappointing as those of the associated mills. Our mills in France, which have done so well during the past few years, have suffered from the reduction in values just as we have here, and for the last six months have felt a reduction in demand. In spite of that our French group of mills have paid us a dividend, although a much smaller one than last year. Our British mills in France, the Société Cotonnière d'Hellemmes, Limited, have, however, had to pass their dividend, largely in consequence of the depreciation in the value of stock. I am glad to tell you, however, that further sums have been received for reparation on account of this group of mills, and we hope to have a final settlement from the courts during the coming year. Part of the sum so far received has been paid over to the Inland Revenue, part has gone to reduce the capital value at which the mills stand in our books, which now rests at a figure we can regard with satisfaction, and part has been used in adjusting the taxation reserve, which, to some extent, has enabled us to minimise the loss we have sustained this year.

Many of you may have noticed reports of strikes, which are now occurring in France, in the Roubaix district, and you may have thought those strikes might have extended to our mills at Lille, which is close to that district; but I am glad to be able to tell you that the strikes have not extended to our mills. The mills are all running, and the managers assure me there is no likelihood of the strike in any way affecting us.

PLANTATIONS IN THE MISSISSIPPI DELTA.

We have had no good fortune this year with our investment in the plantations in the Mississippi Delta. You have all heard of the great drought in Arkansas and the neighbourhood of that State. We are on its borders, and, although the depth of our soil saved us from an entire failure, still the absence of rain from May to September reduced our crop from its normal 12,500 bales to 7,600 bales. Our reports of the planting and the condition of the starting of the year's operations are good. Considerable economies in working have been put into operation, reductions have taken place in salaries, and heavy reduction in wages have been made. Given a reasonable price for the crop and an average crop, we have no fear of the result in the future.

THE COLLIERY.

The colliery, in which I know you take an interest, is one of our subsidiary companies that has paid a dividend. This is not up to the average of those we have received in past years, but, when we

contrast the position of our colliery with the general run of the coal trade, I think we have every reason to be satisfied with the result, but I feel we may still count on a reasonable dividend in the future on the capital invested in this concern. Its success is, I think, due to the determination to keep everything connected with it up to date, and, above all, to the ability and the hard work of our managing director, Mr Ward. Some of our other investments in companies connected with but not actually spinning cotton have made small returns, but these have all been affected by the world crisis in trade.

Our big subsidiary companies in this country spinning and doubling cotton have all done badly. They have not been able to run any longer hours or to obtain any better prices than the associated mills, and have suffered like them from the depreciation in values. Their returns are not of a satisfactory nature either to them or to ourselves. I need not labour the recital of our disappointments, the result shows all too clearly in the profit and loss account you have before you.

If you turn now to that account you will notice that we bring in a carry-forward of £183,134, and we have a net loss of £226,944. We have, of course, to meet our debenture interest, which amounts to £110,000, and the charge of £8,759 for directors' fees. I ought, perhaps, to say a word about this figure. The last balance sheet was the first in which this item appeared. It was then shown as £16,950, but in that amount salaries were included which ought to have been charged elsewhere. That and a cut in the directors' fees at the end of last year account for the difference. The figure this year is taken in accordance with the provisions of the Companies Act of 1929.

BOARD'S DIVIDEND POLICY.

The directors have had the very difficult decision to take as to the course they would recommend you to follow to meet the deficiency in the account. They had decided at the interim stocktaking to pay the dividends on the preference and the preferred ordinary shares. The results for the first half-year were not as bad as they have been for the second, and at that time an improvement in the trade seemed imminent. They had now to decide whether or not to recommend you to pay the second half-year's dividend on those shares. As you know, we have considerable reserves, put away in past years. These amounted to £590,075, reserves from profits; £150,000, reserves from profits earmarked for equalisation of dividends; and £417,884, premiums on the issue of shares; a total of £1,157,959.

I must admit to you that the directors had the greatest repugnance in reducing these reserves by the large amount required to adjust the profit and loss account, but, after long consideration, they came to the conclusion that this was the best course to take, and they propose to you to transfer the £150,000 from the special reserve for equalisation of dividends, and a further sum of £250,000 from the reserve set apart out of profits. They also recommend you to pay the second half-year's dividend on the preference and preferred ordinary shares. These dividends are cumulative, and we can find the amount required without straining our financial resources, and it seemed to us, therefore, better for the association and better for the ordinary shareholders that these dividends should be paid. If you agree with this we stand in the position that our reserves are reduced to £757,959, our cumulative shares are paid up to date, and there is a little carry-forward left of £40,431 16s. 8d.

I need hardly say what a cause of regret it is to the board, for the first time in thirty-three years' working, to be unable to recommend any dividend on the ordinary shares, but I am sure you will all agree that, under the circumstances, we had no other course open to us.

FUTURE PROSPECTS.

Well, ladies and gentlemen, you are no doubt saying to yourselves, "What of the future, and how do our prospects stand for getting back to the prosperity we have enjoyed for the past thirty-two years?" That is a most difficult question, so many factors enter into it, over many of which we have no control. I should not like you to leave here feeling too depressed. I should like to remind you that, after all, we have not been facing ordinary bad trade, we have been and are in the midst of a world crisis in trade, and that of almost every description of trade. We cannot hope for a free-running business as long as values remain at their present level. The producers of primary products are our main customers, they cannot keep our spindles and looms running as long as they are having to sell the results of their labour below cost. Until we have a decided and considerable rise in values I cannot think we shall see much improvement in demand. Here is a problem we are powerless to influence. It is international. Many of us think the failure of the gold money standard of the world to keep pace with the productivity of the world has much to answer for, and we look in vain for the publication of the Macmillan report, which has been so often

promised, on this aspect of affairs. Then we have the problem of the redundant spindles in the trade. Sound trading can only be attained when all spindles running are working 100 per cent. Had it not been for the intervention of the Government and of the banks I think it probable that we should to-day have been in that position; as it is, we are not even approaching it. Several schemes are being discussed, and it may be that some solution of the difficulty may, in the end, emerge. During the year several of the larger units, of which we were one, on our side of the trade, made an attempt to join together, to try and hold prices to, at any rate, cost levels. It promised well for a short time, but it quickly broke down. I don't propose to attempt to apportion the blame. Indeed, I am doubtful if any such arrangement can succeed unless we can evolve some scheme having a considerable measure of financial unity. These are only a few points of the problems we have in front of us. I do not propose to speak to you at length on the necessity for the observance of national economy by the Government and the municipal and county authorities, the doing away with the excessive rates of wages in sheltered trades, which affect the cost of living, and the necessity for the entire reconsideration of the method of carrying on the social insurances. I have spoken from the Chamber of Commerce quite recently on all these points and won't repeat myself here.

TWO ESSENTIALS VITAL TO SUCCESS.

It is well, however, to remind you that, in addition to these, there are two conditions that are vital to success. One is the abolition of the trade union policies and restrictions which hamper us so much in our endeavour to cheapen production, and another is that the wages we have to pay should be properly related to the cost of living and the possibilities of trade. It is absolutely necessary, if we are to regain prosperity, that the policies and temper of the trades' unions should undergo a complete and drastic change, and that they should work with us in adopting every improvement and every modification in working that will enable us to produce our products at the cheapest possible rates, and it is equally necessary that old methods of price lists, many of which are long overdue for amendment, should be redrawn in the light of present conditions. Even in the matter of wages, it would be far better for a workman to be drawing less per pound if that would lead to full employment, rather than to be carrying on with a high rate of pay which curtailed the possibility of sales and kept him on part-time work. It is easy to understand and to sympathise with the reluctance of the workpeople to give way on these points, but I am sure it would be to their best interests to discuss the whole matter with the employers with the determination to make any alterations which will enable present trade to be retained and a part at least of lost trade regained. With all these difficulties in front of us you will easily understand that I can only ask you to have patience; you cannot expect a quick recovery. But, after all, the world depression must some time pass away, and it does not seem possible, as I said before, that we can have any great further loss from depreciation in stock, two important factors. We are actively engaged in not only looking after our old markets, but also in endeavouring to find new uses and to produce new materials which will absorb fine yarns and enable us to get our spindles fully running. Although one dare not prophesy, yet it may well be that the present position, black as it is, may mark the extent of the depression, and that brighter times may be in store. We can only work and hope.

TRIBUTE TO STAFF.

Before I sit down it is my pleasure and my duty to tell you that, in my opinion and from my observation as chairman, in spite of the impression the bad results of the year may have given you, you have been well served by your staff. Everyone has done his best, from the managers downwards, in endeavouring to save loss and to get spindles going in the midst of hopelessly impossible conditions, and they are still continuing the fight. It is interesting to note that the whole of the staff have joined with the directors in accepting a cut in their salaries with the utmost goodwill. In several cases, also, our workpeople have helped us, and I think that, if events ever give them a free hand and they have no outside pressure to resist, we could count on them for very different help to that which they are now able to render. (Applause.)

The Chairman then formally moved the resolution, as follows:—"That the directors' report and accounts, as presented to this meeting, and upon which a report by the auditors has been read, be and the same are hereby received and adopted."

He called upon Col. Phillips Brocklehurst to second the resolution. The resolution was seconded by Col. Brocklehurst, and it was adopted unanimously.

A FEW CRITICISMS.

Questions, or criticisms, at these meetings are very rare. On this occasion, however, when for the first time in its full history of

LOST.—Within the past twelve months, all over the country, much money invested in stocks and shares; owners desirous re-creating estates.

FOUND.—A gilt-edged security liable to appreciate, not depreciate; carries rights to income tax rebates; buyable in a rising market; creates an immediate estate. Apply LIFE DEPT., THE LIVERPOOL AND LONDON AND GLOBE Insurance Company, Ltd., 1, Dale Street, Liverpool.

**RE-CREATE YOUR ESTATE
THROUGH THE

AND GLOBE INSURANCE Co., Ltd.**

thirty-four years the association has failed to pay a dividend on its ordinary shares, a few Scotsmen had thought it fitting to send a few questions to the chairman by letter as to certain policies purposed by the directorate. Two gentlemen present in the room also asked for a little further enlightenment.

The Chairman replied to the queries addressed to him as chairman of the association, pointing out how much at fault some of the critics were in their inferences.

Concluding his remarks, he said, with deep feeling, that to reproach for one year's failure a board of directors who had carried a company on for thirty-three years and given their shareholders an average dividend of 10 per cent. through all those years would be the height of folly; and, he would like to add, the height of ingratitude. Loud and general cheering followed this expression of opinion.

Other resolutions were then submitted and adopted, as under:—

DECLARATION OF DIVIDENDS.

Moved by the chairman and seconded by Mr John G. Peel:—“That the following dividends be now declared out of the profits of the undertaking, viz.:—A dividend for the half-year ended 31st March, 1931, at the rate of 5 per cent. per annum on the £3,000,000 preference shares, numbered 1 to 3,000,000 inclusive. A dividend for the half-year ended 31st March, 1931, at the rate of 5 per cent. per annum on the £940,000 preferred ordinary shares, numbered 1 to 940,000 inclusive.”

RE-ELECTION OF RETIRING DIRECTORS.

Moved by Mr William Howarth and seconded by Mr Vernon Bellhouse:—“That Messrs H. W. Lee, J. W. Adam, F. I. Dixon, E. Mather, P. Musgrave, A. E. Rahr and J. A. Wanklyn, be and they are hereby re-elected directors of the association.”

ELECTION OF AUDITORS.

Moved by Mr G. St. Clair Robertson and seconded by Mr A. Richardson:—“That Messrs Edwin Guthrie and Company, chartered accountants, of 71, King Street, Manchester, be and they are hereby appointed auditors of the association until the next ordinary general meeting of the association, and that they be paid the sum of £1,500 as remuneration for their services, inclusive of out-of-pocket, travelling and hotel expenses.”

VOTE OF THANKS TO THE CHAIRMAN, DIRECTORS AND STAFF.

Moved by Sir William H. Himbury and seconded by Mr Wilfred Sykes:—“That the thanks of this meeting are due and are hereby tendered to Mr H. W. Lee for the ability and courtesy with which he has presided over this meeting, and to the directors and staff for their work in the past year.”

The Chairman responded in a very brief speech to this cordial recognition of the work of the directors, of his own work, and of the service rendered by the staff.

The meeting then separated. Of course, every shareholder regretted that there was no dividend this half-year, but there could be no question that everyone's spirits were lightened by what the chairman had to say of the general world-wide depression in trade, and of the constant and ardent endeavours of the directors and their managers to repair the weak places and to find new markets for their products.

THE RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.

MR. H. J. WELCH ON POSITION OF RUBBER INDUSTRY.

At the annual general meeting of the Rubber Plantations Investment Trust, held on the 22nd instant, in London, Mr H. J. Welch, the chairman, in the course of his remarks, said:—The accounts before you, when compared with 1929, show a fall in net profits from £252,550 to £157,894, caused by a decrease of over £50,000 in income from investments and of about £43,000 in profits from our tea estates. The market quotations for Rubber Plantation shares fell steadily throughout the year, and are now only nominal, and have little reference to real values. After making the allocations proposed in the report, the balance of the profit and loss account amounts to £100,626, which the directors recommend should be carried forward, together with the £50,000 standing to the credit of dividends equalisation reserve.

As regards the immediate prospects of this company, whilst I look upon the depreciation of market value of our investments as of a temporary nature, which any revival in the world's markets will speedily adjust, it should be remembered that the income from such investments this year must be considerably less than last. We estimate this year to produce our teas at about 1½d. per lb. cheaper, but the profit from them will depend upon the course of the market for teas, which is at present depressed.

At the end of April this year the stock in London warehouses was 212 million lbs., in comparison with 234½ millions at the end of April last year. For the first four months of this year the average price obtained for all tea sold in public sale on garden account has only been 1s. 0½d., whereas for the corresponding periods in 1930 and 1929 the average was 1s. 3½d. and 1s. 6½d. respectively.

RUBBER POSITION AND PROSPECTS.

Rubber, in common with most other raw commodities, experienced a period of acute depression during 1930. No one can doubt this decline was abnormal, and closely associated with the world-wide economic depression. The current price is now below the total cost of production of the cheapest producer of estate rubber. In recent weeks the factors of the problem have changed, and consequently we may expect the policy of “all-out” producers and others to change also. Most of them no longer can expect at present prices to sustain a smaller cash loss by full tapping than by producing a restricted crop, or, in some cases, by placing estates on a “caretaker” basis, the cost of which has recently been much reduced. The surplus stocks are heavier than ever, and are still increasing. These facts should lead all estate producers to review their policy, and, if advisable, reduce or further reduce their outputs, in order to minimise their inevitable losses at present prices.

It is estimated that on estates, afloat and in ports, and in hands of dealers and manufacturers, stocks equal about 600,000 tons, being ten and a-half months' supplies at the present average rate, and about nine months at the 1929 average rate of absorption. Probably the minimum amount of world stocks required for the efficient working of the industry equals six months' supply. Against the above figures must be placed the fact that the U.S.A. tyre stocks are below normal, and invisible stocks in the form of tyres in the hands of users are certainly reduced.

The idea of a satisfactory and equitable scheme of voluntary organised restriction of outputs was abandoned last year. In such an industry as ours, however, restriction can only be a temporary palliative, and the failure to find a satisfactory and acceptable scheme must not be considered all loss. I would remind you that, when in 1922 the British scheme was put in force, the average “all-in” cost on full production of good companies probably exceeded 10d. per lb. To-day the “all-in” cost of average good companies has been reduced to about 5d. per lb., and of some well below that figure. Another advantage gained from the depression is that practically all extensions have been stopped. The native producer also is learning a lesson it is hoped he will not forget. A further consideration is that under legalised restriction the industry would lose the control of its own affairs.

But although the immediate outlook is serious and even critical for many producers, the further outlook is, I think, more hopeful. The persistent trend of the increase in absorption for the last twenty years has only been stopped temporarily. In my view, when business recovers absorption will continue to increase with renewed vigour, as it has done on each previous occasion when the trend has been interrupted.

I believe that the rubber plantation companies which weather the storm will again enter upon an era of prosperity, in which, by reason of our present adversity, estate production will be upon a sounder economic foundation than for many years past.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED.

EFFECTS OF WORLD ECONOMIC DEPRESSION.

STRONG FINANCIAL POSITION.

SATISFACTORY GOLD MINING RESULTS—OIL INTERESTS.

RAILWAY ENTERPRISE IN SPAIN—ATTITUDE OF GOVERNMENT.

SIR R. SOTHERN HOLLAND'S REVIEW.

The twenty-sixth ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held, on the 27th instant, at No. 1, London Wall Buildings, London, Sir R. Sothern Holland, Bt. (chairman of the corporation), presiding.

The Secretary (Mr R. A. Macqueen) having read the notice convening the meeting, and also the auditors' report,

The Chairman addressed the meeting as follows:—Gentlemen,—I presume it is your wish that the report and accounts be taken as read.

Before we enter upon the business of our meeting this morning I desire, on behalf of my colleagues and myself, and I am sure on behalf of you all, to refer to the death of Mr S. B. Joel. He had been well known to many of us over a long period, and all must be conscious of a sense of loss—the loss of a real personality. We think of Mr Joel particularly in relation to his prominent connection with mining affairs from the very early days of Kimberley and Johannesburg, and the prominent part he took in the development of the gold and diamond mines, where he always showed great courage, foresight and knowledge. On behalf, I know, of all present I beg to extend an expression of sincere sympathy to Mrs Joel, the members of the family, to Mr J. B. Joel, and also to those associated in business with the late Mr Joel, whose death we all so deeply regret.

FACTORS AFFECTING RESULTS.

The results obtained from the operations of the corporation during the past year do not—for reasons which will be apparent to shareholders who have studied the report and accounts—warrant the payment of a dividend. The corporation could not, however, expect to escape some of the consequences of an economic depression more widespread and more profound than any in the experience of this generation.

Under the circumstances of the time, the working profit earned must be considered satisfactory; it amounted to 14.2 per cent. on the par value of the issued capital, compared with 16.6 per cent. for the previous year, an achievement which compares favourably with that of most other companies similarly situated. At the same time, a strong financial position has been maintained, as is, indeed, essential if the corporation is to take advantage of the first signs of economic improvement. Unhappily, in the middle of this unparalleled depression a further decline in the exchange value of the currency, and the loss, doubtless only temporary, of political stability that inevitably attends a revolution, compelled us to make immediate provision for a possible depreciation of our important interests in Spain.

When, in November last, the question of the payment of an interim dividend was, as is customary at that period of the year, under consideration, the board thought, in view of the then unpromising outlook, it was advisable that the matter of making any distribution should be deferred until the audited accounts covering the full period to the end of the financial year were available. That conclusion was announced to shareholders at the time, and subsequent events in the industrial and financial world in their bearing upon certain of our activities and investments prove it to have been a wise and prudent decision.

PROVISION FOR DEPRECIATION OF INVESTMENTS.

It is not possible—as I have said—to recommend a dividend on the present occasion. The board regret that fact, but the policy they have followed both in this respect and in connection with the provision that has been made for actual and possible depreciation of investment values will, I trust, commend itself as a full and frank appreciation and acceptance of the realities of the situation, as, indeed, it has commended itself to the best financial opinion in the comments made on the accounts since they were published. Shareholders may, and indeed will, feel disappointed—as the directors do—over the setback the corporation has experienced.

In the 15 years since the capital was fixed at the present figure

dividends have, except for the period under review, been paid without interruption at an average rate of 10 per cent. per annum free of tax. That is, I suggest, a good and creditable record, and should, taken in conjunction with the information given in the reports and accounts and, I trust, in my address to you to-day, be reassuring to shareholders as indicating that we have so far weathered economic troubles of a severity unparalleled in modern times, that we are in a position to meet such foreseeable difficulties as may still be ahead for industrial and financial institutions, and that we are in a good position to reap the advantage of any improvement in the general situation.

Before dealing in detail with the more important of our many interests, I should make some further reference to the profit and loss account and the financial position which I touched on a moment or two ago.

SOUND AND LIQUID FINANCIAL POSITION.

The balance of the profit and loss account for 1930, that is, the working profit of £483,926, shows that our profit-earning capacity was fairly well maintained, especially when we take into consideration the fact that market conditions throughout the period were most unfavourable for remunerative operations.

The balance sheet reveals the maintenance of a financial position which is sound and liquid. As you will have anticipated, the total figures of the balance sheet reflect the lower valuation of holdings. The essential figures in relation to our liquid assets, when compared with those of the previous year, can be most clearly realised in the following comparisons:—

Gilt-edged investments are decreased by ...	£782,000	0	0
Money loaned—on call, at short notice, etc., decreased by ...	£903,000	0	0
Cash on deposit and current accounts increased by ...	£872,000	0	0
Sundry debtors increased by ...	£135,000	0	0
Sundry creditors decreased by ...	£686,000	0	0

“Shareholdings and interests” as a whole remain in magnitude approximately the same, with the exception of our oil interests, where there has been a modest increase. The valuation of these holdings has, however, decreased considerably, with the exception of our South African gold-mining interests, which have more than maintained their value.

VALUE OF HOLDINGS.

If we exclude the Anglo-Spanish Railway investment, our holdings at December 31st last, based on market values where quotations exist, and the directors' valuation where holdings are not quoted, show a total value at that date considerably in excess of the value at which they stand in our books.

Returning to the profit and loss account, the net profit carried to appropriation account was, as I have mentioned, £483,926, which, together with the balance brought forward from the previous year of £71,890, necessitated a transfer from the reserve account of £310,000 to provide for the depreciation written off “shares and investments” of £763,549, to make the necessary reserve for income tax of £75,000 and to carry forward a balance to the current year of £27,267.

Depreciation in values has been general throughout the world, and the interests of the corporation are diverse and widespread, but a large proportion of the writing down of values that has been necessary is applicable to our substantial holdings in Trinidad Leaseholds and Tucuyo Oilfields of Venezuela. The heavy fall in the prices of oil is common knowledge to you all; I shall refer later to the position and prospects of these oil interests, but I am justified in expressing the opinion that although we may still have need to exercise considerable patience, this commodity may be expected, in due course, to command a better price with immediately beneficial effects upon the value of these important holdings. (Hear, hear.)

SPECIAL DEPRECIATION RESERVE ACCOUNT.

Before leaving the subject of the accounts, I would ask you again to turn to the balance sheet in order to observe the manner in which we have dealt with the reserve fund. You will see there the necessary transfer to appropriation account of £310,000, which I have just mentioned; in addition, we have considered it wise to make another transfer of £1,140,000 to a special depreciation reserve account. In the main, this special depreciation reserve account is created for the purpose of making provision as far as we can foresee towards meeting possible losses in connection with our Spanish railway interests, that is, to provide against the contingency of a substantial permanent depreciation in Spanish currency when stabilisation takes place.

In my belief, however, it is undoubtedly a fact (and one which represents the view of leading authorities whom we have on various occasions consulted in connection with the subject of the Spanish exchange) that the economic position of Spain compares favourably with most countries in Europe and that the exchange problem—so detrimental to foreign interests operating in Spain and to Spanish interests themselves—is, if the right measures are adopted, capable of satisfactory solution. The economic factors are, however, overshadowed and dominated by the vicissitudes of the political situation; the restoration of a normal measure of political stability and public confidence should enable the stabilisation of Spanish currency at a figure greatly superior to that which now prevails with corresponding advantages to Spain and to all those in economic relationship with that country.

When addressing you a year ago, I said the situation in Spain, and in particular its currency problem, was a matter of great anxiety to your board; during the intervening period that anxiety has been intensified by the sequence of subsequent events.

ACTION OF LATE SPANISH GOVERNMENT.

The treatment our interests received at the hands of the late Spanish Government during the time that has elapsed since the last annual meeting has been damaging and unjust. I am interpreting the result of their attitude and actions in moderate terms when I say that the major portion of the heavy provision from our reserves to meet possible contingencies in regard to depreciation in the Spanish currency would not have been necessary if the late Spanish Government had fulfilled its explicit promises and definite undertakings.

Of the amount due in February, 1930, for work completed in accordance with the contract, a balance of 70,000,000 pesetas remained unpaid, and clear undertakings were given by the Spanish Government that that sum would be paid within two months. Of this amount, however, nothing at all was received for twelve months, notwithstanding frequent applications and repeated personal visits to Madrid. The only payment on account eventually made was one of 50,000,000 pesetas in Spanish Government bonds plus interest at 5 per cent., which we received at the end of January of this year—approximately one year after the latest due date. Even so, the payment took the form of a deposit lodged by the Government with the Bank of Spain and endorsed subject to a condition that it cannot be moved or dealt with until the beginning of next year. This stipulation by the late Government was imposed arbitrarily and without any consultation with the interests concerned. The balance of 20,000,000 pesetas still remains unpaid.

DELAY IN PAYMENTS.

A final payment of 30,000,000 pesetas which fell due in February of this year in respect of the most recently completed section of the railway has also not yet been paid. As regards the amount of 70,000,000 pesetas which should have been received approximately fifteen months ago, we have a clear claim against the Spanish Government on account of the loss on exchange that has been experienced in consequence of the delay—as the rate of exchange at the time the money was due, and if paid would have been converted into sterling, was approximately 36 pesetas to the £. The railway which has, as you know, been built by the Santander-Mediterraneo Company, but financed by us through the Anglo-Spanish Construction Company, has been completed in what I feel sure is record time in Spain, and with an efficiency and of a quality that compare favourably with any railway in Spain.

In a word, we have done our job well and more than kept our contract; on the other hand, the late Spanish Government was not only unhelpful throughout the whole period, but failed definitely to keep specific undertakings given. There has, of course, been no suggestion of any dispute as to the amount owing, but there has been this inexcusable and costly delay in the making of payments. We have again in the last week or two paid a visit to Madrid for the purpose of getting into touch with the Ministers of the present Government, to whom we were able to put in the

plainest terms the injustice from which we have suffered. We are hopeful that action on their part in the future will be in accordance with what we have a right to expect from the Spanish Government.

FINANCING OF SANTANDER-MEDITERRANEO COMPANY.

The Santander-Mediterraneo Company in building the railway has been financed through the Anglo-Spanish Company by us not only as regards our large proportion of the share capital and debenture issue, but also by the open loan account, which it was necessary to place at the disposal of the undertaking in order to complete the work if the whole enterprise and assets were not to be placed in jeopardy. The open loan account, which at one time exceeded £2,500,000, was at December 31st last, £1,506,000, as appears in the balance sheet before you. The loan was granted on the understanding that it was to be repaid as the amounts were received from the Spanish Government, and would thus have been repaid had the Spanish Government fulfilled its obligations. When the open loan account was first initiated it was impossible to contemplate that the Government of Spain, which had hitherto always fulfilled its undertakings, would fail to do so in the manner I have described.

POSITION OF ANGLO-SPANISH CONSTRUCTION COMPANY.

At the present time the position of the Anglo-Spanish Construction Company is as follows:—

It has cash in Madrid of a little more than 4,000,000 pesetas; and there are deposited in the Bank of Spain, in the name of the Anglo-Spanish Company, Spanish Government bonds quoted at the date of deposit at approximately 52,500,000 pesetas; and there is still owing by the Spanish Government to the Santander-Mediterraneo Company approximately 52,000,000 pesetas, plus interest due at 5 per cent. per annum to date of payment. The Anglo-Spanish Company owns approximately 99 per cent. of the capital of the Santander-Mediterraneo Company, which, in effect, possesses, and has the right to exploit, the railway for a period of fifty years, against which exploitation it has lodged with the Spanish Government bonds to the value of approximately 12,000,000 pesetas as a guarantee; the equity of the Santander-Mediterraneo should, therefore, have considerable potential value.

In the aggregate, the assets of the Anglo-Spanish Company are very substantial, and if, as we hope, there is ahead of Spain an era of sound and stable Government, accompanies, as it would be, by the stabilisation of the peseta on a basis justified by the assured economic position of Spain, such a change in the situation might mean that the provision made in our reserve account would not eventually be required. It is, however, impossible under present conditions to formulate any confident view as to the probable course of events in the immediate future.

In our numerous conversations with Spanish Ministers we have not failed to realise the fact that our interests as potential sellers of approximately 105,000,000 pesetas necessarily constitute a factor of importance that must be considered when the time arrives to make arrangements for the stabilisation of the peseta. We have made it plain that we should be agreeable to any suitable arrangement by which sterling is made available for us on a satisfactory basis.

The Anglo-Spanish Company has recently circularised its debenture holders giving them all available information and intimating that a meeting will shortly be called to consider the necessity, under existing conditions, for deferring for a period the redemption of debentures due on September 30th next.

LATEST INFORMATION ON CONSTRUCTION.

Having dealt with the financial affairs of the Anglo-Spanish Company, I must bring your information up to date in regard to construction. When I addressed you last year, 321 kilometres of line were in exploitation. Since then the remaining section linking up Trespadernes with Cádiz has been completed and brought into operation, giving a total distance of some 366 kilometres. The Santander-Mediterraneo Company has thus carried out the terms of the Decrees governing its concession. The Spanish Government has not yet given any indication of the route which the line will follow north of Cádiz to establish direct communication with Santander.

According to legal opinion, there is no obligation on the Santander-Mediterraneo Company to undertake further construction, but that company has signified its willingness to consider negotiations for the construction of the route finally selected by the Government. As you are aware, the exploitation of the line is in the hands of the Santander-Mediterraneo Railway Company, and, bearing in mind that exploitation is in the initial stages and that no through traffic is possible owing to the fact that the railroad stops at Cádiz, the marked improvement now being shown in the traffic revenue is very encouraging. Receipts, however, still fall considerably short of the amount required to balance balance working costs.

INTERESTS IN SOUTH AFRICA.

I turn now to a happier section of our industrial field—South Africa. It has hitherto been the practice at the annual meeting to survey in considerable detail the activities of the gold mining industry and also the operations of the individual companies in which we are interested as shareholders and those for which we, in conjunction with the Rand Mines, Limited, are responsible for administering. On this occasion, however, I shall deal much more briefly and, for the most part, in general terms with these matters. I do so because all essential information is given in the illuminating and comprehensive report of the consulting engineer which is already in your possession, and also because the position of practically all our South African interests is eminently satisfactory.

The Witwatersrand gold mining industry had a successful year, and Transvaal production of a value of £45,520,000 was the largest annual output ever recorded; of this the Witwatersrand alone accounted for £43,500,000. The magnitude and the stability of the gold mining industry have been the mainstay of South Africa for a generation or more, and this fact has been conspicuously manifested and more generally recognised during the prevailing economic depression, from the effects of which in industry and agriculture the Union, like the rest of the world, is suffering severely.

NATIVE LABOUR.

The availability of a full supply of native labour was an all-important factor in making possible the increased scale of production; that supply has been obtained mainly because of the restricted activities of other industries and of agriculture, and shortages are, therefore, liable to recur in the future under normal conditions unless the Government agrees to provide facilities to be utilised if and when required to enlarge the present restricted field for recruitment. This important question is one of the subjects of inquiry by the Low-Grade Ore Commission—the latest of a long series of investigations carried out by the present and previous Governments.

The mines of the Witwatersrand under the Central Mining-Rand Mines administration were reduced in number owing to the sale, of which you are aware, of the Village Deep. The remaining mines in 1930 milled 12,988,900 tons of ore, producing 4,116,685 fine ounces of gold, equal to about 40 per cent. of the total gold production of the industry; the working revenue amounted to £17,561,315, the total working profits were £4,425,410, and the dividends declared came to £3,518,798. The working profits earned and the dividends declared were, respectively, £115,789 and £43,487 higher than the corresponding figures for the previous year.

REDUCTION IN WORKING COSTS.

In 1929 the working costs of the mines of the group showed a reduction compared with 1928 of 6.3d. per ton milled, or a total over the mines concerned of £340,000. In 1930 there was a further saving compared with 1929 of 6.9d. per ton milled, representing some £370,000. This must be regarded as a highly creditable achievement. There is another equally satisfactory performance. The development footage accomplished by the mines of the group in 1930 was a record notwithstanding the disappearance from the list in the last year or two of the Village Deep, the Ferreira Deep, and the Wolhuter. (Hear, hear.) This record footage totalled 524,733 ft., equal to almost 100 miles, which affords a striking indication of the tremendous amount of what I may term advance underground work done by the gold mines under our administration during the period under review.

It will interest shareholders to know that in the service of the Witwatersrand gold mines of our group—not taking into account those in the service of other South African mining and industrial concerns with which we are closely identified—there are over 9,000 European and over 81,000 non-European employees. For the reasons already given I do not propose to deal in detail with the affairs of the individual companies that comprise our large, varied and most valuable interests in South Africa. In respect of them all, with one exception, the comment may be made that the position is satisfactory.

RAND MINES, LIMITED.

In the long list of our South African interests—interests that have been fully maintained—the most important is that which we have in Rand Mines, Limited. You will, I am sure, have been impressed by the remarkably favourable showing made by the accounts of that corporation for the past year. The dividend, it is true, was slightly reduced (from 100 per cent. to 90 per cent.) in order to strengthen the financial position; but the profit at £601,710 was £36,140 more than that for the year before. Full provision for all depreciation in respect of share and other investments was made and written off against the largest investment reserve account created for such purposes, but the actual appreciation in the market

value of other investments, which appreciation was not taken into account, exceeded the total depreciation allowances for the corresponding period. These results are highly satisfactory and amply justify the maintenance of our large interest in the Rand Mines as well as our individual interests in South African mining and other industrial enterprises. (Hear, hear.)

The operations of the individual mining companies are, as I have already pointed out, fully reviewed by the consulting engineer in his report. One might enlarge upon the splendid position and progress of Crown Mines, the continued wonderful profit-earning capacity of New Modderfontein—though those profits, as was forecast by the chairman at the last annual meeting of that company, are now on a lower scale, and recent development results show a decline—the successful rehabilitation of Durban Rodepoort Deep, the prospective return to the dividend-paying list of the East Rand Proprietary Mines—(hear, hear)—the facts relating to these and other mines might be amplified.

CITY DEEP POSITION.

But it seems sufficient to repeat that they all make, to speak in modest language, a satisfactory showing both individually and collectively, with the exception of City Deep, in which we are largely interested as shareholders, and, in conjunction with Rand Mines, as loan-holders. This important gold mine has latterly been in a precarious position, and has only been enabled to continue its existence by the loan facilities that have been provided. Even here, however, uncertain as the outlook may be, it is encouraging to note that, at the annual meeting in Johannesburg last week it was officially stated that a scheme of reorganisation being introduced by the board afforded a real prospect of the mine regaining a profit-earning position.

We have valuable interests in South Africa other than our interest in gold mining companies, and all the more important of these, including coal and certain industrial concerns, have continued operations on a satisfactory profit and dividend-paying basis. As you are aware, the corporation is not involved in diamond mining or, except to a negligible extent, in copper mining; the exceptional extent to which those important and valuable industries—the prosperity of which would mean so much to British South Africa—have been affected by the prevailing depression is greatly to be regretted. (Hear, hear.) But they, like other industries organised on a sound basis, must benefit immediately from any general improvement in the economic situation.

OIL INTERESTS.

I have now to deal with our extensive oil interests. For the year ended June 30, 1930, the results of Trinidad Leaseholds, Limited, were less favourable on account of the serious fall in the price of oil products. The company refined a considerably larger tonnage of oil—namely, 962,566 tons, as against 927,430 tons—but profits declined appreciably, and the dividend was reduced to 7½ per cent. A year ago I mentioned that the world over-production of crude oil was entirely responsible for the low prices of products, and that the question of supply in relation to demand, which was engaging the serious attention of the big oil interests, had met with some measure of success, as was evidenced by the substantial reduction at the end of the year of the daily production of crude oil in the United States. I think I am correct in saying that such success as was achieved saved the industry from major disaster.

Unfortunately, towards the middle of the year the progressive deterioration of the general economic situation aggravated the difficulties facing oil producers and distributors; prices continued to fall and competition for available business became more intense. To meet the changed conditions the Trinidad Leaseholds Company restricted its oilfield production and operations, and, concurrently, has been able to effect considerable economies. It has also embarked on the distribution of petrol in the United Kingdom. This petrol, under the brand of "Regent," is a first-class product, and, being of fine quality and of Empire origin, has met with a gratifying reception and demand.

TOCUCO OILFIELDS.

The results of drilling undertaken by the Tocuco Oilfields have fallen short of expectations. Since the commencement of operations up to the beginning of February this year twenty-one producing wells have been brought in and the total quantity of oil won amounted to 33,561 tons. The geological conditions so far encountered have been found to be highly complex and the sands lenticular, irregular and watered. Drilling hitherto has only been done on a small part of the extensive area belonging to the company, and the latest geological work seems to indicate the possibility that more favourable conditions may be found to exist in a direction south-east of the present producing field. In addition to the shallow drilling a deep test well is at present being sunk, and the results of this test are awaited with much interest.

The North Venezuelan Petroleum Company continued active geological exploration throughout the year. The results of detailed work indicate several promising areas. An important agreement was concluded during the year under review with the Standard Oil Company of Venezuela, by which that company undertook to test one of these areas, and, in the event of satisfactory results, to exploit it. According to this arrangement, the North Venezuelan Petroleum Company will receive, in addition to a small royalty, a proportion of the oil won after the costs of production have been recouped. The gratifying news was received in a recent cable that the first test well drilled by the Standard Oil Company struck oil of very high quality at a shallow depth. Results appear to be encouraging, as an initial test of eight hours through a $\frac{1}{2}$ -in. aperture indicated an average rate of flow of 726 barrels per day. The geological work leading up to the location of this well was performed by the geologists of the North Venezuelan Petroleum Company, and I take this opportunity of congratulating them on what they have done.

GOOD RECORD OF TRINIDAD LEASEHOLDS.

Before leaving the subject of oil I should like to say that the directors see no reason to regret the investments made by the company in this field. The industry, even if temporarily depressed, caters for a demand the steady increase of which has been one of the most remarkable features of industrial history in recent years. The record of Trinidad Leaseholds is a good one. The company has made large profits and distributed good dividends and has maintained its property and equipment in a condition of first-rate completeness and efficiency. It is affected solely by the slump in the price of its product. (Hear, hear.) Our other oil interests are for the most part in the prospecting and development stage, and the news I have just given you of the new strike in Venezuela is a further indication of their potentialities.

The firm of Bernhard, Scholle and Company, Limited, did not have a successful year, and, as stated in the report, considerable depreciation had to be written off the value of the securities held and there was no dividend distribution. When it became necessary to deal with the direct and also with the indirect consequences of the heavy fall in security values, the unusual Articles of Association proved an obstacle to our exerting the measure of control that the extent of our interests warranted. To obtain direct control and so ensure the adoption of such measures as we considered it necessary to apply, we acquired (as was officially announced in the Press at the time) the holding of one of the directors who subsequently retired from the firm.

It would not serve any useful purpose, under existing conditions, to detail the action taken in one direction or another, and the justification in each instance for what we have done. I shall only say that all that has been done in this matter has been governed entirely by what we have conceived to be in conformity with the plain interests of Central Mining as shareholders, and this is the sole consideration that will continue to govern our policy in the future.

Other interests of the corporation do not call for any special comment from me to-day, though I should perhaps mention, since the investment in question is a substantial one, that London Wall Estate, Limited, of which we hold the control, continues to give a very satisfactory return—a return which should show progressive improvement as debenture redemption proceeds.

DIRECTORATE.

During the year Sir Evelyn Wallers paid frequent visits to Spain. Mr Phillips visited Venezuela and Trinidad. Mr Rogers spent a considerable period in the United States, and, in the current year, has recently returned from the Argentine and Bolivia. Mr John Martin, whom I am glad to welcome here to-day, continues to direct with distinction your extensive and varied interests in South Africa. (Hear, hear.) Colonel Pollen and Mr Fennell are the two directors retiring by rotation, and I shall presently have pleasure in proposing their re-election. I will also ask you to approve the re-election of the Comte Pierre de Villoutreys, who was recently appointed a director of the corporation, and who retires in accordance with the Articles of Association.

As you know, we have a large number of shareholders in France, and it has always been the object and desire of the corporation that those interests should have adequate and acceptable representation. We have been deprived of the services of one of our French colleagues for a considerable period owing to ill-health, and the Board have for some time past been devoting attention to the question of future arrangements. As you know, we have for many years had the benefit of the valuable co-operation of one of the French directors of M. de Verneuil, who occupies a position of great distinction and influence in Paris, and this is a co-operation which will be more strongly linked by the services on the Board,

which we are very glad to have obtained, of Comte Pierre de Villoutreys.

FRENCH REPRESENTATION.

In connection with the matter of French representation your directors have also had under consideration the possibility of devising some extension of the general organisation in a manner calculated to appeal and be satisfactory to the general body of French shareholders. It is not possible for me to announce to-day details of the arrangements we shall ultimately make in fulfilment of this policy, but without finally committing myself I may indicate that, as supplementary to adequate representation of French shareholders on the board of the corporation, we are carefully considering the feasibility of appointing a Paris committee.

Most of our companies which are registered and have their head offices in South Africa have, with complete success, followed the policy of having regular London committees, constituted by and responsible to the boards of the respective companies they represent. The success achieved by this method and the satisfaction it has afforded to oversea shareholders in the case of our South African companies predisposes us to believe—though the matter is still being considered—that a similar arrangement, if feasible, would be warmly welcomed by all our shareholders in France and provide—while such a committee would not exercise administrative functions—the means by which close contact and co-operation could at all times be maintained. In connection with these arrangements, you may be sure that the representation to be arranged will itself be really representative and influential.

In the early part of this year Mr Heim intimated his desire to retire from the board. He has devoted many years of service to the corporation, and I would like to take this opportunity of conveying to him the appreciation and thanks of the board. (Hear, hear.) I wish also to express to the staff in London and oversea warm appreciation of their services during an exceptionally trying year.

CRITICISMS OF BOARD IN FRANCE.

Before concluding I should briefly deal with a question that has been asked in advance by a shareholder, and also with criticisms of the policy and actions of the board that have recently been printed and circulated in France. To take the question first:

One shareholder wishes to know how the loan to the City Deep has been dealt with in the accounts; he is concerned about the prospects of repayment and also that the hope expressed two years ago that the mine would be put on a profit-making basis has not been realised. My reply to that inquiry is this: The loan to the City Deep is a joint loan by the Central Mining and the Rand Mines in the proportions of 40 per cent. and 60 per cent. respectively, and our proportion of it appears in the balance sheet among the items included under the heading of advances to associated companies. Although miners' phthisis outstanding liability is in certain circumstances, according to South African legislation, preferent to the claim of any other creditor, we should, at the least, be able to look forward to the repayment of our share of the current loan.

The annual meeting of City Deep took place at Johannesburg last week, and, as I mentioned in an earlier portion of my speech, the official view then announced was that there were sound prospects of the mine regaining a profit-earning position during the current year. The prediction of two years ago, to which the shareholder refers, was based upon certain assumptions in regard to the possibility of increased production, reduction of working costs, improvement of labour efficiency, and so on. All these assumptions were fully realised, but they were outweighed by a factor beyond control: the unforeseeable decline from an already low value of the grade of ore available for milling.

COMPLAINT OF COMMITTEE.

The published criticism of the corporation is contained in a circular recently issued in France by three people constituted as a committee, whose main complaint in appealing for the support of shareholders is that the Central Mining board, in consequence of an alleged change of policy in 1923, embarked upon a class of investment and enterprise outside South Africa, particularly the Spanish Railway, that has turned out unsatisfactorily. The assertion is most misleading. The actual founders of the corporation, with an organisation similar to our own, carried through with immense success many transportation (tramway) undertakings abroad, particularly in Europe and South America, any one of which would have been the very reverse of a success if the conditions we have recently met with in Spain, even in the matter of exchange depreciation alone, had been encountered.

After all, losses on the most conservative investments due to the reduction of the exchange value of the currencies of other countries have not been an uncommon experience since the war. Our principal oil interests, another subject of attack, date from 1913. The large interests we have in Trinidad and Venezuela were regarded by everyone as satisfactory and attractive both in themselves and as helping to broaden the basis of our investments and activities as a corporation. There was never a word of criticism in respect of them by or on behalf of any Central Mining shareholder until the influences of an unparalleled world depression upon the prices of oil immediately affected, and seriously affected, market valuations. (Hear, hear.) In the same circular information is given purporting to show the scale of our holdings of certain shares. I need only say that in important particulars the details given are inaccurate. Finally, there is an allegation that French shareholders are not adequately represented on the board. With that matter I have already dealt.

SUPPORT FOR THE BOARD.

In concluding my reference to this published criticism, which has by advertisements in the French Press and in other directions been carried to unexpected lengths, I should like to say that one of the effects of the campaign has been to produce overwhelming support for the board from the shareholders of the corporation both in England and from the most influential and responsible quarters in France. (Hear, hear.)

I have now completed my survey of the affairs of the corporation for the year 1930, and, where feasible, for the current year to date. As I remarked at the outset, the whole period under review has, for industrial and financial institutions, been characterised by conditions of unexampled difficulty and complexity. Many values hitherto thought to be normal have undergone a revolutionary transformation. We, as I have shown, have in consequence, and like so many other concerns, been severely affected in various directions and have, in addition, had to struggle with a situation in Spain that had become beyond any immediate business control. (Hear, hear.)

STRENGTH OF THE CORPORATION.

The depreciation for which we have had to provide in a single year has, however, revealed the strength of the corporation and the wisdom of the past policy of building up the reserve fund with the object of providing against the very contingencies that have now materialised. They materialised to a degree beyond anything that would normally have been thought possible. It must, therefore, be a source of satisfaction to shareholders that our financial position and profit-earning capacity should have been so well maintained. (Hear, hear.) The directors are bound to take a long view of the needs and interests of the corporation, and I trust it will not be long before a change in the world economic situation makes it safe for us to resume the distribution of a satisfactory proportion of our profits in the form of dividends.

I now beg to move: "That the report and accounts for the year ended December 31, 1930, as printed and circulated among the shareholders, be and they hereby are received, approved and adopted," and I shall ask Mr. John Martin to second the resolution.

MR J. MARTIN'S SPEECH.

Mr J. Martin: Mr Chairman and gentlemen, I have much pleasure in seconding the resolution. It is very seldom that I am present at a company meeting in London, as my main sphere of activity and responsibility is in South Africa, and I should like to recall that notable work has been done there by several members of the present board, including Sir Evelyn Wallers, Mr Rogers, Mr Phillips, and, at an earlier stage, Mr Fennell. The contributed to the building up of a splendid tradition and organisation in connection with the administration of our affairs in that country. As the chairman has told you, in common with the rest of the world, South Africa has not escaped some of the devastating consequences of the present unexampled depression. But, on a general survey, it is my opinion that there is no country which, under the greatest stress, has maintained a higher level than South Africa of security and stability. (Hear, hear.) The gold mining industry has been, and will continue for many years, the mainstay and foundation of the whole economic fabric of South Africa. It is appropriate, however, to recall that in the history even of the gold mines there have been periods of serious depression and crisis which caused the public confidence in their position and prospects to shrink and waver.

You have on many occasions heard well-justified criticism of Government action calculated to increase costs and retard the expansion of the gold-mining industry. It is, therefore, particularly satisfactory on the present occasion to be able to draw your

attention to a pronouncement recently made by the Hon. N. C. Havenga, Minister of Finance in the Union Government, who, when replying about a month ago to criticism of his Budget proposals, made the following statement:—

"I might have gained a great deal of popularity by taxing the gold mines, but the Government came to the conclusion that it was not in the best interests of the country to impose a further tax on the mining industry, which is already more heavily taxed than any other branch of industry. . . . The Government could do nothing calculated to prevent the investment of new capital in the industry or to cause a loss of faith in the industry."

PRESTIGE OF THE CORPORATION.

You will all appreciate, without emphasis from me, the wisdom, from a national standpoint, of such an attitude, though you may, no doubt, wish it was one that found more general recognition and application. In concluding, I wish fully to associate myself with what the chairman has so appropriately said about the present and potential value of our gold mining and other important interests in South Africa. There is another asset of great value—equally great in bad times as in good times—which does not appear in the account before you, one which exists and exerts its influence wherever the corporation is represented. I refer to the prestige of the corporation and the managerial, technical and general staffs which so ably and so loyally serve us in various parts of the world. (Hear, hear.) Our record, experience and organisation should enable us to take prompt and effective action whenever there is any general improvement in the economic situation. Whether that general improvement comes soon or late, I feel confident that our important interests in South Africa will continue to make a satisfactory showing.

The Chairman, having dealt with questions, the motion for the adoption of the report and accounts was put to the meeting and adopted.

The retiring directors were re-elected and the auditors were re-appointed.

A vote of thanks to the chairman and directors concluded the proceedings.

LICENSES AND GENERAL INSURANCE COMPANY, LIMITED.

IMPROVED RESULTS.

The forty-first annual general meeting of the Licenses and General Insurance Company, Limited, was held, on the 27th instant, at the offices of the company, Moorgate, London, Mr A. W. Ruggles-Brise, J.P., D.L. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that, so far as the "Licenses" were concerned, they would have been quite content under general conditions to see the premium income remain on last year's level. It was therefore a source of some gratification that they had actually increased the premium income by £8,560. In itself this was but a very small sum, but there was for them a source of greater approval when he told them that in that final figure they had reduced their reinsurance commitments, and so had actually more than replaced such decrease by an increase over all in the goodwill business of the company.

So far as the general revenue account was concerned, the variation in premiums was again slight, the claim payments were practically on last year's level. The total variation in the fund at the end of the year was an amount increased by less than £3,000, and the profit of £15,034 followed a similar course to the previous year.

Their interest earnings had risen to £21,270, and at such figure provided a satisfactory margin over the net amount required for the maintenance of the 20 per cent. dividend. Their underwriting reserves remained materially on the same high percentage ratio which it had always been their endeavour to maintain. They were steadily and quietly improving their position and enhancing their reputation. They viewed the future with some confidence and felt very satisfied that when the clouds of depression departed they would see ever-widening opportunities for the company's service.

So far as 1931 had gone, the reports were favourable. Direct income had slightly increased, and, if those early promises were maintained during the remainder of the year, they could count on a moderate advance in 1931. Claims were, on the whole, easier, especially in the fire department. Management expenses also showed a satisfactory decrease, comparing the first four months of 1931 with those of the previous year. The marine department registered a further improvement, with income stationary; claims had fallen by more than 2,000 during the period.

The report was adopted.

CROWN MINES, LIMITED.

(Incorporated in the Union of South Africa.)

VERY SATISFACTORY YEAR.

The thirty-fourth ordinary general meeting of shareholders was held in Johannesburg, on April 24, 1931.

The Chairman (Dr. Samuel Evans), in the course of his speech, said:—As you will have gathered from the reports and accounts, 1930 was in several respects a very satisfactory year for the Crown Mines. In a number of directions previous records were broken and generally our future prospects were substantially improved. The footage developed, the tonnage of ore mined and milled and the total yield were considerably higher than in any previous year. We were better supplied with native labour throughout the greater part of 1930 than in any previous year; and fortunately the layout and the organisation of the mine are such as to enable the fullest advantage being taken of the labour available. The importance of an adequate supply of natives for underground work can hardly be exaggerated. A shortage occasions decreased tonnage and increased costs per ton milled, and the resulting decrease in profit is much greater than the proportionate reduction in the labour supply.

There has been no change in the company's mining property since our meeting last year. I referred then at some length to the purchase of the freehold and the mynpacht of the farm Diepkloof. We had at the beginning of this year approximately 2,646 intact Main Reef Leader claims and 2,886 intact South Reef claims, as compared with 1,979 intact claims on both reefs at the time of the amalgamation twenty-two years ago. We have every reason to anticipate that we shall be able to work the whole of our mining ground with the exception of a small portion south of No. 15 Shaft and a small area in Diepkloof, provided there is no serious fall in the grade, that the dip of the reef does not steepen appreciably, that the native labour supply is reasonably adequate and that no further burdens are imposed on this industry by the Union and Provincial Governments. Unfortunately, I fear that we shall have to continue to leave untouched a considerable body of low-grade ore, the mining of which has been rendered unprofitable by the high working costs that have prevailed in recent years. It is true that the vertical depth of the stopes which are being worked is increasing from year to year. Last year the ore for the mills was hauled from an average vertical depth of 3,600 feet, as compared with 1,300 feet in 1909. In this connection, however, it is important to bear in mind that the length of the area over which our mining operations are being carried on has been steadily extending and will continue to extend for some years. The length on the strike of the reef of the ground stoped in 1909 was under 1½ miles, as compared with close on 2½ miles last year and with nearly five miles when mining operations are extended to our western boundary. The additions made to the length of our mining ground by the acquisition of Mooifontein and of the Diepkloof mynpacht will gradually moderate the speed of our downward stoping. In a few years' time our underground electric system will be working over the whole length of the property, a distance, as I have stated, of close on five miles from east to west. A distinctly encouraging feature is the fact that our development operations show that, whilst there has been a considerable reduction in the reef width since the early years of the company, the inch-dwt. value has been well maintained for the past ten years. The grade of the ore developed last year was actually higher than the average of the past fifteen years.

You will observe from the consulting engineer's report on last year's operations that, with the exception of a small area, the Main Reef Leader development gave gratifying results throughout and that in the deepest section of the mine 570,000 tons at 8.5 dwts. per ton over an estimated stoping width of 46 inches have been developed. The values exposed in other portions of the mine were generally good, and particularly in the Main Reef Leader at the west end of the mine. South Reef development continues to provide a considerable tonnage of payable ore of low value in the areas west of No. 15 Shaft.

A VALUABLE LESSON.

I am sure you will agree with me that what has been accomplished at the Crown Mines provides a valuable lesson which should be taken to heart by those who are responsible for the taxation and regulation of the industries in the Union of South Africa. It is generally recognised that the increase in the working costs since Union has rendered unprofitable the mining of a large quantity of low-grade ore and has thereby substantially curtailed the life of the gold-mining industry; but few realise that it is more than likely that the non-exploitation of deep-level areas which may contain comparatively high-grade ore involves an even greater loss

to South Africa. It is, I consider, justifiable to assume that in all probability there are in the undeveloped portions of the Rand several extensive deep-level areas carrying highly payable ore bodies at no greater depth than the payable ore exposed in the Crown Mines in recent years. Now why is it that so little is being done at present to open up and work those areas? I believe that the answer is this: They can only be located and worked by the expenditure of capital running into several millions. That is the governing factor in the case of deep-level mining on the Rand. The shaft sinking and equipment necessary to open up our deep-level ground has involved a capital expenditure of over three million pounds. It is true that this capital has been provided largely out of working profits, but it is as certain as anything can be that our deep-level development programme would not have been inaugurated had the present conditions as regards taxation and the interference of the Government with industries prevailed 20 years ago. When the Crown Mines came into existence, and for a few years afterwards, a distinctly optimistic feeling prevailed as to the future of mining and other industries in South Africa. In fact, at the time of the National Convention in 1908-9, we were assured that the Union of the four colonies under one administration would lead to economies in the cost of government and a reduction in taxation which would inevitably mean that the then working costs of the mines would be lowered. As a result, in the years prior to and immediately after the passing of the Act of Union, a great deal of fresh capital was invested in the mines of the Rand. When the Central Mining and Investment Corporation, Limited, guaranteed our debenture issue of £1,000,000, it was not for a moment contemplated that the Union Government would adopt the anti-capitalistic measures which have characterised its policy in the past 16 or 17 years. In 1908-9 those of us who were responsible for the amalgamation never anticipated that the Government interference with the mining industry would be extended in every possible direction, that the direct and indirect taxation of the mines would be enormously increased and that they would be called upon to pay a levy on account of miners' phthisis unprecedented in its prodigality. I do not for a moment suggest that there should be no provision for compensation in the case of industrial diseases. What I submit is that the miners' phthisis compensation is on a highly lavish scale and that the necessary funds should have been provided partly by the companies and partly by the European miners out of their wages. Act No. 40 of 1919, which transferred the whole of the miners' phthisis burden on to the scheduled mines, was an injudicious and harmful measure, as under it the European miners ceased to have any interest in preventing abuses and extravagances in the distribution of the compensation. Even if the European miners paid the whole of the miners' phthisis levy, their day's pay would still be higher than the average day's pay of the European gold miners in Australia. The Economic Commission which reported at the beginning of 1914 showed that wages of European miners on the Rand were then 69 per cent. higher than in Australia. The increases in wages made on the gold mines of Australia during the war and afterwards have been considerably less than on the Rand.

INCREASED REVENUE.

Our revenue last year amounted to £4,016,756, as compared with £3,687,453 in 1929 and £3,668,195 in 1928.

You will see from the report that we had an unappropriated balance at the end of last year of £440,644. This compares with an average of £340,000 at the end of the previous three years. We are carrying forward a larger amount than usual on account of the somewhat heavier capital expenditure which we estimate will be incurred this year for winding engines and other equipment for Nos. 16, 16A, 17 and 17A Shafts, underground pumping plant, reduction works, compounds and married quarters. For 1930 and 1931 together, however, our capital expenditure will average about £210,000, as compared with £240,000, the average of the three years ended December, 1929.

PROSPECTS FOR CURRENT YEAR.

Last month, March, records were made in tonnage crushed and gold produced, the figures being 266,000 tons and 84,036 ounces respectively. If the supply of labour remains good there is every prospect that the output for the current year will exceed that of 1930.

There has been a substantial increase in the commodity value of gold in the past 18 months. In several countries, notably those

where the gold standard was restored by devaluation, the purchasing power of gold, measured in both commodities and services, is almost as great as it was before the war.

For some years a number of writers on currency and finance have been disposed to blame gold for many of our present-day troubles. They contend that the world was faced with a gold famine and that the fall in prices from the high level of 1920 and the present world-wide depression were due mainly to two causes: the shortage of monetary gold and the mal-distribution amongst gold standard countries of the existing supply of monetary gold; and they insisted that an infallible remedy for this state of affairs would be the creation of an international organisation to control the distribution and the commodity value of gold and limit its use as money to international transactions. And it has been suggested that the Union Government should take the initiative in this movement, notwithstanding the fact that the real object of the movement is to prevent gold recovering its pre-war value and, if possible, further depreciate it. The views I have quoted are not quite so popular to-day as they were some time ago. A rapidly increasing number of authorities are recognising that the history, particularly the recent history, of money justifies the conclusion that the present depression is not due to the shortage or the mal-distribution of monetary gold, and that attempts to control its value, to regulate its distribution and limit its use as money will simply make matters worse instead of better.

As to the movement for the international control of the value of gold, it is clear now that it cannot possibly succeed. The establishment of a workable international understanding is out of the question, as the interests of the different nations of the world are not identical. As you are aware, I am a firm believer in the self-regulating gold standard of pre-war days. I entirely agree with the late General Walker "that the best money for mankind in the present and through any future for which the economist or statesman feels called to provide is a money the supply of which is determined by the cost of its production."

With regard to dividend prospects, the Chairman stated, in reply to a question, that personally he was inclined to be optimistic, but was not prepared to make any prophecy, as there were so many factors to be taken into account, the principal being the supply of native labour.

The motion was put to the meeting and carried unanimously.

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY, LIMITED.

ADVERSE CONDITIONS AFFECT EARNINGS.

The annual meeting of the India General Navigation and Railway Company, Limited, was held on the 27th instant, at Winchester House, London.

Mr S. G. L. Eustace (the Chairman) said that the financial position as disclosed in the accounts might be summarised by the paragraph in the directors' report, "The general trade depression, mentioned in the last report, still continues, and has again seriously affected the company's earnings."

In this respect they were in the same position as most other carrying companies in the world, but in India added to the general depression they had political unrest interfering with trade and the prosperity of the country. Another adverse circumstance they had to contend with was that the Port Commissioners in Calcutta had found it necessary to increase their river due charges on practically all imports and exports by 12½ per cent., but it was hoped, with a revival of trade, this might only be a temporary measure.

The net profit, after the necessary provision for taxation, amounted to £43,466, against £123,207 for the previous year. Actually the total number of maunds of cargo carried did not show a very great falling off, but the passenger traffic was greatly affected by the depressed economic conditions of the country.

In referring to the additions to the fleet, he said that their commitments on capital account had for the moment ceased entirely, but during the past year their expenditure, in order to complete the programme, amounted to £95,000 odd.

After dealing with the profit and loss account and stating that it was proposed to pay a final dividend of 2 per cent. on the ordinary shares, making 4 per cent. for the year, he said that up to the present moment earnings again showed a decrease compared with the previous year, but every endeavour was being made to reduce working expenses commensurate with present trade conditions, and, in addition, a number of vessels had been laid up, but held in readiness to be again placed in commission so as to meet, at once, any improvement that might take place in the demand from shippers. The fleet, however, had been maintained in its usual first-class order, and they had had no complaints from either shippers or passengers in regard to the upkeep of the accommodation provided.

The report was unanimously adopted.

HAMBROS BANK, LIMITED.

CONTINUED EXPANSION OF THE BUSINESS.

The nineteenth annual general meeting of Hambros Bank, Limited, was held, on the 28th instant, at 41 Bishopsgate, London.

Sir Eric Hambro, K.B.E. (the chairman), said: In addressing you in previous years I have ventured to make certain observations on the ruling economic conditions. I think you will agree with me that a wise man in the present circumstances says very little and gets on with his business.

I should like, however, before turning to the balance sheet, to say that I think we can count ourselves fortunate in this, that the northern countries with whom we deal most largely are weathering the storm extremely well; and in Finland the timber exporters have tackled the problem of reducing their costs in a masterly fashion, and are in a good position to meet all eventualities.

Another country with which we are closely connected is Greece, and which I recently visited, and here again conditions are slowly improving under a wise Government, and the faith which we have always had in that country's future is, I am sure, fully justified, and she is—and will continue to be—a good customer of this country.

Coming now to the balance sheet, which is before you—the figures of which speak for themselves—I should like to say that our policy has always been to help our customers in the normal development of their commercial business. During the last year their requirements have naturally been affected by the restricted trade turnover and the fall in commodity prices, hence our figures show this year a very large measure of liquidity, and this has, in turn, slightly reduced our profits. Our acceptances, although they have fluctuated both ways during the year, were, at March 31st, at an almost identical figure with last year. This would seem to be exceptional in view of the general trend of trade, but, on the other hand, we have again been able to increase the number of our clients, which shows that our business continues to expand.

Before concluding, I should like to say a word about the staff and to thank them for the way they have carried on the work of the bank during the last year. We can count ourselves lucky on having so loyal a staff. Their devotion to duty has been beyond all praise.

The chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr H. C. Hambro and carried unanimously.

WILLIAM BEARDMORE AND COMPANY, LIMITED.

PROGRESS WITH DIESEL ENGINES.

The annual general meeting of William Beardmore and Company, Limited, was held, on the 22nd instant, at Winchester House, Old Broad Street, London.

Mr H. A. Reincke, the chairman and managing director, who presided, said that in the profit and loss account there were two items on which shareholders would expect information, namely, the trading loss on continuing departments and the losses on departments closed down or disposed of during the year. The latter losses were accounted for almost entirely by the shipyard and the locomotive department at Delmuir. The shipyard had been sold to the National Shipbuilders' Society, Limited.

The steelworks were the very foundation on which the company was built. The forge at Parkhead was working; as to the Moss-end works, which had been closed since 1928, whilst they continued to remain closed they must be a factor in any scheme of rationalisation in the Scottish steel industry. At Parkhead there had been during the year under review a trading loss of, roughly, £29,000, which could not be avoided in the present state of trade depression. The dearth of orders still deferred the day when the benefit of the improvements effected would be reaped. Notwithstanding the fact that trade conditions generally were worse than at the time of the meeting last year, the forge and the foundry, which were the principal departments at Parkhead, had done better than last year.

In the Diesel engine department a great deal of work had been done in developing and improving the designs of the different classes of engine. Satisfactory reports continued to come to hand from various parts of the world where engines supplied by the company were running. A further advance had been made by the development of a horizontally opposed Diesel engine for use in aeroplanes. The mobile Diesel generating set supplied to H.M. Post Office had been followed by repeat orders for two similar sets, and he would be very disappointed if next year he was not able to report progress in that department. During 1929 sixteen sets of exhaust steam turbines and gears of the Bauer Wach system were installed in various vessels, and during the year under review nineteen sets had been installed in vessels of a total indicated horse power of 110,000.

The report and accounts were unanimously adopted.

NITRATE PRODUCERS' STEAMSHIP COMPANY, LIMITED.

DIFFICULTIES OF CARGO SHIPOWNERS.

The annual general meeting of the Nitrate Producers' Steamship Company, Limited, was held, on the 28th instant, at 20 Billiter Buildings, London.

Sir John Latta, Bt. (the chairman), said that from his remarks at their last meeting, shareholders would not have been surprised at the reduction in profits. Relative to obtaining conditions, the surplus was more than might have been expected. Failing a marked improvement in freights, the results for the current year must be on a further reduced scale.

After referring to the relative advantages of steamers as compared with Diesels, the chairman said that it was impossible to exaggerate how lamentable the position of the private cargo shipowner had become. He was not only suffering from a periodical sequence of the flows and ebbs of trade, but was also being submerged by an accumulation of adverse circumstances, greatly accelerated by foreign countries maintaining merchant fleets under heavy subsidies. It had always been his conviction that, if dividends were rigidly limited, and the whole of the surplus earnings in good times and bad put to reserve and judiciously administered, there were few more attractive commercial investments than that of a well-managed steamship company. The abnormal uneconomic conditions now obtaining, however, put that conservative opinion in danger. That was not without its anxiety for shippers and manufacturers, as they were vitally dependent upon the cheap freightage arising from the keen competition which had always obtained between tramp shipowners.

When the present death struggle of the shipowners of the world for bare existence had passed and normal conditions returned, it would be of paramount importance to the Empire that the volume and quality of our tonnage should not have declined. The central geographical position and equable climatic conditions which these islands enjoyed at the maritime gateway of the highly industrialised and thickly-populated Continental countries, who lived largely on and for foreign trade, gave this country unrivalled international advantages. Thus favoured, and with our world pre-eminence in high all-round trading traditions, coupled with the great history which our artisans had created for excellence of workmanship, our future wellbeing remained with ourselves.

They were not, however, living up to their opportunities, or true to the great heritage left them by their industrious forefathers. It was the antithesis of common sense that the thrifty and enterprising—nicknamed "broadbacks"—should indiscriminately be forced to support extravagant social experiments, as well as maintain thousands of able-bodied men and women in idleness.

Why should the "broadback" argument not apply to the favoured workers in sheltered employment? Their prosperity was to a large extent gained at the expense of the distressed artisans in the unprotected shipbuilding, engineering and kindred trades. The persistent refusal of those sheltered workers to recognise inexorable economic laws so increased home manufacturing costs as to make successful competition with foreigners impossible. In consequence, thousands upon thousands of their less fortunate confreres were mercilessly thrown on the dole. It was nothing short of a disguised labour civil war. Until those anomalies were effectively tackled and trade ceased to be the sport of politicians for vote-catching purposes, they must go from bad to worse.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended May 23, 1931, amounted to £10,068,400 against ordinary expenditure of £6,385,500. After allocating £1,202,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £144,954, the week's operations, as shown below, reduced the National Debt by £2,556,000 to £7,615,502,000:—

(000's omitted.)			
Treasury Bills	£ 4,064	Public Department Advances	£ 6,000
National Savings Certificates	+ 300	4% War Loan	- 100
	+ 4,364		- 6,700

A complete analysis of the National Debt at March 31, 1931, was printed in the *Economist* of April 4th.

BULLION.

The following statistics of imports and exports of gold for week ended May 21, 1931, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Netherlands	3,359	Germany	15,770
Argentina	443,354	France	5,509
British W. Africa	46,363	Switzerland	2,000
British S. Africa	240,649	Spain	3,272
		Austria	6,820
Total declared value of imports	733,725	Total declared value of exports	31,171

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931. ARRIVALS.		1931. WITHDRAWALS.	
May 22 Bars bought	£ 23,669	May 22 Sovs. for export	£ 3,000
23	Nil	23 Sovs. for export	4,000
26	Nil	26 Bars sold	7,002
27 Bars bought	236,588	27 Sovs. for export	6,000
28 Sovs. released	100,000	28	Nil
Total	360,237	Total	20,002
Net arrivals, £340,235.			

Messrs Samuel Montagu and Company write on May 27, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £150,173,380 on the 20th instant (as compared with £148,976,873 on the previous Wednesday), and represents an increase of £2,547,758 since December 31, 1930. The shipment of bar gold which arrived from South Africa this week was only about £241,000, which, together with £45,000 from West Africa, was available in the open market to-day. There was only a small demand, trade requirements being about £40,000, and the price was fixed at 84s. 9½d. per fine ounce. The Bank of England secured £236,000 at the statutory buying price. Movements of gold at the Bank of England during the week have resulted in a net influx of £683,816. Receipts totalled £703,818, of which £443,334 was in sovereigns from Argentina and £260,484 in bar gold. Withdrawals consisted of £13,000 in sovereigns taken for export and £7,002 in bar gold.

SILVER.

Prices have fluctuated during the past week, but the tone continued weak. Some support has been given by China, although sales were also made by this quarter following a fall in the Shanghai exchange, but the pressure has been mainly from Indian Bazaar selling to cover bull commitments. The quotation had fallen to 12½d. for both cash and two months' delivery by the 23rd instant, a level which attracted buying from both China and Indian Bazaar bears, causing a slight reaction. America has again been disposed to sell for near delivery, but showed less inclination at the lower rates. Prices were quoted level on the 22nd and 23rd instant, but ½d. premium on cash delivery was re-established yesterday. The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th instant to mid-day on the 23rd instant:—

IMPORTS.		EXPORTS.	
U.S.A.	£ 121,228	British India	£ 47,879
British West Africa	10,474	Other countries	23,024
Other countries	13,663		
	£145,365		£70,903

AMALGAMATED PRESS.—The net profit for the year ended February 28, 1931, amounted to £716,507, a reduction of £19,252 compared with 1929-30. The preference dividend absorbs £315,000 and the ordinary distribution, which, with the final payment of 8 per cent. now recommended, is maintained at 15 per cent., absorbs £180,000. A transfer of £200,000 (against £220,000) is to be made to general reserve, increasing it to £600,000, and £10,000 is again to be placed to pensions and allowances fund, leaving £146,167 to be carried forward (against £134,660).

FABRIQUE DE SOIE ARTIFICIELLE DE TOMASZOW, S.A., WARSAW.—After making provisions for depreciation on plant, buildings and machinery, bad and doubtful debts, income tax, &c., there is a profit left for 1930 of Zl. 3,498,851, compared with Zl. 4,801,219 last year. After deducting directors' fees and bonus for the staff, a dividend of 7½ per cent. is being paid. According to the report, the management have been successful in reducing the cost of production, and by keeping the plant constantly up to date are continuing their efforts to obtain still better results.

LONDON THEATRE DEAL.—Sir Harold Wernher is about to acquire the control of Associated Theatre Properties (London), Ltd., now held by the American Shubert Brothers. He will henceforth be in control of six leading West-End playhouses, viz., His Majesty's, Gaiety, Apollo, Shaftesbury, Adelphi and the Cambridge. Associated Theatre Properties (London), Ltd., was registered in 1925, and has an authorised and issued capital of £500,000 in £1 shares—£300,000 in 7½ per cent. cumulative preference and £200,000 in ordinary shares. It has also £139,150 of 6½ per cent. first mortgage debenture stock outstanding of £250,000 authorised and issued.

THE UNITED MOLASSES COMPANY, LIMITED.—The United Molasses Company, Limited, announce that they have decided to liquidate the British Molasses Company, Limited and the Pure Cane Molasses Company, Limited, two of their subsidiary companies. This is purely an internal arrangement to effect economies of working, and has no other significance. The trading of these two subsidiary companies will in future be carried on by the United Molasses Company, Limited, who are taking over and fulfilling all outstanding contracts.

Commercial Reports.

MARKET SUMMARY.

The seasonal decline in the world's industrial activity which has recently become noticeable, particularly in the United States, has had an adverse effect on the principal commodity markets. The British coal trade experiences increasing difficulties in foreign markets and the home demand for industrial fuel fails to expand. In addition to this there has been a sharp decrease in house-coal requirements. Activity in the iron and steel industry has declined further, and the decision to discontinue the output restriction scheme in the tinplate industry of South Wales after June 12th has caused a fall in prices. Non-ferrous metals have again been weak. Tin dropped to £102 2s. 6d. despite the new quota scheme, and copper prices in New York are the lowest for fifty years. Raw cotton, too, has fallen to a very low level, which is partly due to favourable weather reports from the United States and to the low level of consumption. Wool prices, though lower than at the beginning of the year, have been fairly well maintained. The expectation of a lower crop has kept up raw jute prices, although business in yarn and cloth fails to expand. Among cereals, wheat has declined, following favourable crop reports in North America. The Conference of representatives of the leading wheat-exporting countries, whose aim was to establish the regulation of the distribution of existing stocks and of the next crop failed in its immediate object. Maize has experienced a sharp decline when it became known that Argentina desires to market its huge crop rapidly. Among miscellaneous commodities, vegetable oils and oilseeds declined further in price, and rubber has not maintained its recent improvement.

THE COAL TRADE.

SHEFFIELD.—More fuel is available for export, but new business is scarce. South Yorkshire is experiencing keener competition from other home centres, as well as Poland and Germany. The available output of best steams is, however, being taken up on prompt account, and prices continue firm at 17s. 6d. and 18s. f.o.b. Humber ports. Industrial demand is still poor, and tends to ease off. Deliveries are chiefly on account of existing contracts. House coal is in plentiful supply, with a reduced demand. Best ordinary coal is quoted at 22s. to 22s. 6d. at pits. The market for furnace coals is in a depressed state. Good brands of blast furnace coke command from 11s. to 12s. at ovens.

WORKINGTON.—The coal trade has slumped, and it is evident that the collieries will have to work shorter time for the rest of the summer. The Irish market is flat, cross-Channel merchants being content to buy small lots for immediate shipment. House coal is dull, but industrial fuel is in normal request. Prices are steady. Best round is 22s. 6d.; washed doubles, 21s.; washed singles, 19s.; all f.o.b. Smalls, 16s. 6d. per ton. Best house coal, 31s. 8d.; and house nuts, 30s. at station. Gas coal, 28s. per ton. West Coast coke is in fair request at from 17s. 9d. to 18s. 3d. per ton.

GLASGOW.—The Scottish coal trade continues in a depressed condition. In addition to the seasonal contraction in the home market, the shipping trade generally runs on poor lines. Stocks are heavy in all districts, with large coals more plentiful than nuts, and buyers with firm business to place can usually secure concessions on the market rates, which are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 14s. 6d.; splint best, 16s. 3d.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 14s.; trebles, 11s. 11s. 6d.; doubles, 10s. 3d. 10s. 6d.; singles, 9s.; pearls, 9s.; dross, 10s. FIFE.—Screened navigation, 16s. 6d. 17s. 6d.; first-class steam, 11s. 9d. 12s.; third-class steam, 10s. 3d. 10s. 6d.; trebles, 11s. 6d. 12s. 6d.; doubles, 10s. 10s. 6d.; singles, 9s.; pearls, 8s. 9d. LOTHIAN.—Prime steam, 11s. 11s. 3d.; secondary steam, 10s. 6d.; trebles, 12s.; doubles, 11s.; singles, 8s. 9d.; pearls, 8s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s.; trebles, 11s. 6d.; doubles, 11s.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s. 6d.

CARDIFF.—All the collieries in the South Wales coalfield were idle on Monday, Tuesday and Wednesday of this week, and the output is estimated not to exceed 45 per cent. of the recent weekly average production. The docks resumed work on Tuesday and shipments have been fairly normal, but business on the Cardiff coal market was not actively resumed till Thursday. Prices are nominally stationary at the minimum schedule figures. It is anticipated that the decision of the Egyptian State Railways on the tenders for the supply of 300,000 tons will be reached next Monday, and negotiations are also in progress for the supply of 120,000 tons of sized coals to the Buenos Ayres Electricity Works. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 9d. to 18s.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 14s.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; foundry coke, 27s. 6d. to 34s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. to 23s. 3d.

IRON AND STEEL.

MIDDLESBROUGH.—The usual Tuesday's market was not held this week on account of the holidays. There is nothing fresh to report in regard to the position of Cleveland, and prospects of

increased trade are very slight. Official prices are unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. Local consumers continue to restrict their purchases to cover requirements from week to week, and this policy is likely to continue. Business with Scotch consumers does not increase and export trade is reduced to a minimum. The production of Cleveland iron for the open market is not large, but the present demand can scarcely absorb all that is available, and stocks are said to be increasing to some extent. Home consumers are buying moderate quantities of hematite iron for early delivery and a few lots have also been sold for export for prompt shipment. Forward business, however, develops slowly, although a move in this direction is looked for at any time. Makers are offering mixed numbers for early delivery at 65s., and in one or two cases have accepted a little less where delivery could be taken promptly. For forward, premiums of sixpence to one shilling are quoted, according to period. Shipments of all kinds of pig iron to 26th inst. total 9,301 tons, against 9,077 tons for the corresponding period of last month. In the finished trades operations are now generally resumed after the holidays, but there has not been any important accumulation of new business and fresh orders would be very welcome. There is still a fair amount of work in hand for rails and structural materials. Prices are unchanged except that galvanised sheets are lower and 24-gauge corrugated are now quoted at £10 5s. to £10 10s., and 24-gauge black sheets 5s. lower at £8 5s. The reductions, however, have brought in very little more business so far. The ore trade is idle, with best Bilbao rubio quoted nominally 15s. 6d. for early delivery. The current freight Bilbao-Middlesbrough for prompt boats is about 4s. 3d. Coke is freely offered and medium blast furnace qualities are now obtainable at 15s. 6d. to 15s. 9d. delivered works. The number of furnaces in blast in the district is increased to 23 by the blowing in of two on hematite at Ayresome ironworks.

SHEFFIELD.—At the majority of the heavy steel works production has been suspended this week, and the aggregate stoppage is rather longer than is usual at Whitsuntide. In the open-hearth section work continues scarce, and inquiries few and unimportant. Prices of all kinds of billets have been reduced lately to the extent of 10s. per ton, and basic scrap has dropped to 40s., or 22s. below the figure of a year ago. These concessions have failed to stimulate business. Some kinds of foreign part-manufactured steel are being offered here at pre-war prices. Imports of steel, however, continue to shrink, owing to our poor export demand for finished materials. The overseas situation does not improve, and the shipyards and railway companies at home are taking very meagre quantities of material and tools. All the cutlery and plate houses are working part time, and report the volume of business as the smallest for many years. Some classes of tools are selling fairly well at home, but exports are heavily down.

WORKINGTON.—The month closes with little indication of any improvement in trade. The make of the eight furnaces in blast between Workington and Ulverston is in excess of requirements, but hopes are entertained that the policy of stocking instead of damping down will be justified, and that local consumption will increase towards the end of the half-year. At present only one of the steelworks plant is in engagement, so that the overplus for the outside market is rather larger than at any time since the beginning of the year. The Continental and Midland demand is, however, steady. Some sales have been made to the Dominions, and Scottish and South Wales needs are not altogether inconsiderable. For the first time for five years the normal difference between East Coast and West Coast hematite prices exist. Bessemer mixed numbers are quoted at £3 13s. 6d. per ton at Glasgow; £4 2s. 6d. at Manchester; £4 4s. 6d. at Sheffield; and £4 6s. 6d. at Birmingham. Special qualities of iron are in fair request at from 2s. 6d. to 5s. per ton above these figures. Malleable iron is a quiet trade at £5 17s. 6d. per ton delivered at Birmingham, and there is little demand for ferro-manganese at £11 5s. per ton home. There is not much new business moving in the steel market, but the orders on the books represent a tonnage that will keep the rolling mills in operation until the middle of July. Railway material is being rolled at Workington for South America and South Africa and also for home users. Native ore at from 16s. 6d. to 18s. 6d. per ton is in steady request by Cumberland and North Lancashire smelters, but there is very little metal going to Scotland or the East Coast.

GLASGOW.—The larger number of inquiries on the market at the moment would seem to indicate that business is opening up in several overseas markets, but the amount of tonnage placed is not so encouraging and works are operating under the same uncomfortable conditions, which must continue until there is a resumption of forward buying. Meantime buyers are placing orders only for their immediate requirements in practically every branch of the industry. In the sheet trade the freeing of prices announced towards the end of last week has not had the effect of stimulating demand to the extent that might have been expected and bookings during the present week are somewhat disappointing. To-day's prices in Glasgow are £10 10s. f.o.b. for 24-gauge galvanised for export and £7 10s. per ton for black ½-in. The demand for bar iron and re-rolled steel bars is very poor and business remains quiet in the tube trade.

CARDIFF.—The discontinuance as from June 13th next of the output regulation scheme in the tinplate industry is now officially confirmed and it is also authoritatively stated that nine works have withdrawn membership of the South Wales Tinplate Corporation, which, for the past six years, has been marketing over 50 per cent. of the total output. Prices are weak, and it is feared that the dissolution of the regulation schemes will lead to increased internal competition. Prices of tinplate bars and galvanised sheets are unchanged.

OTHER METALS.

TIN.—Despite the new quota scheme, the price of tin declined further, and at £102 2s. 6d. per ton "standard cash" established a new low record. This fall has been attributed to a further increase of stocks and to large liquidations. Although the Government of the Malay States issued a reassuring statement as regards the new quotas, the metal failed to recover substantially on Wednesday. Wednesday's official closing quotation for "standard cash," at £102 10s. to £102 12s. 6d. per ton, compares with £105 to £105 2s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 29,812 tons, show an increase of 689 tons on the week.

COPPER.—The seasonal decline in American consumption has further weakened copper prices. Although "domestic spot" in New York remained unchanged at 8.75 cents per lb., "electrolytic," Copper Exporters, Inc., reduced their minimum price for "electrolytic," c.i.f. Continent, from 9.275 cents per lb. to 9.025 cents per lb. on Wednesday. This resulted in easier prices in this country, and Wednesday's quotation in London for "standard cash," at £37 3s. 9d. to £37 6s. 3d., compared with £38 13s. 9d. to £38 16s. 3d. on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 13,054 tons, show a decrease of 36 tons, while stocks of rough copper, at 1,296 tons, were 51 tons smaller.

LEAD.—Considerable quantities of lead were offered during the week in London, and as demand was only moderate, prices showed a slight decline. New York spot prices remained again unchanged at 3.75 cents per lb. Wednesday's official closing quotation for "soft foreign," at £11 6s. 3d. to £11 12s. 6d., compares with £11 11s. 3d. to £11 16s. 3d. on the corresponding day last week.

SPELTER.—The market in spelter has been quiet, and prices failed to recover. The New York spot price for "East St. Louis" at 3.30 cents per lb., shows a decline of 0.05 cents on the week. Wednesday's official closing quotation in London for "good ordinary brands," at £10 8s. 9d. to £10 13s. 9d., compares with £10 7s. 6d. to £10 15s. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Antimony declined further from £24.22 10s. to £23 10s. £24 per ton for "foreign," but aluminium was again quoted at £85 per ton, while nickel sold at last week's price of £170 to £175 per ton. Quicksilver remained unchanged at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—The market has declined during the week about 25 points, owing to continued weakness in the American Stock Markets and favourable weather news. The rapid decline over the holidays caused further long liquidation from the East and the continent, but to-day some slight short covering has been seen. Trade news continues very depressing. Spot sales for the week 21st to 27th (inclusive) are 20,000 bales, of which 8,600 bales are American, 500 Brazil, 200 Argentine, 2,000 Peru, 2,850 Egyptian, 2,550 African, 1,100 East Indian, 2,030 Russian, and 170 sundries. Imports for the same period are 36,501 bales, of which 5,151 are American, 1,244 Argentine, 2,882 Peru, 5,969 Egyptian, 713 African, 20,152 East Indian, and 390 sundries. Quotations, May 27th: American Middling 4-83; Egyptian, G.F.E. Sakel, 8-03; Uppers, 5-95; Brazil Fair, 4-88; Peru G.F. Smooth, 5-28; West African Middling, 4-88, and G.F. East African, 5-88.

Manchester.—This has been the big holiday week of the year in Manchester, and to a considerable extent business has been suspended. A feature of interest has been the further decline in raw cotton rates to a fresh low level. This development has made buyers of yarn and cloth more cautious than ever in placing orders. In all directions traders are feeling very adversely the depreciation in the value of stocks. Cable and mail advices from India remain poor, and only a few transactions have been arranged in piece goods. Operations for China have been confined to retail lines in fancies. The minor outlets East and West have given very little support. Less demand has been about in home trade goods. Prices in American and Egyptian yarns have been easier and demand has been very restricted.

THE WOOL TRADE.—Bradford.—This has been a quiet week in the wool trade, writes our correspondent, but, on the whole, the situation is fairly sound. Encouraging firmness has been maintained in raw material values in Australia. Cable information received from Brisbane, where 80,000 bales of wool were offered, showed that the clean cost was above a parity with Bradford, and there are no very large stocks of fine wool to absorb before the next clip begins to come forward. Both Australian and South African merino wool has passed out of hand in creditable fashion, and with patience forthcoming supplies should be absorbed somewhere around the current level. It is understood that the next Australian clip is expected to be a good one, weather conditions favouring

the growth of heavier fleeces. The scarcity of new business is at the moment a disappointing feature, and it really looks as if the trade as a whole is in for a further period of comparative inactivity. The character of the next clip will no doubt have a great deal to do with the prices realisable when it begins to come on to the market. One important asset will be the maintenance of quality in merinos, for, so far as can be seen at present, fine wool is likely to maintain its popularity for many manufacturing purposes. The market value of crossbred wool cannot advance unless larger ultimate requirements develop. There is no change to report in the Bradford market for tops. Some firms are receiving a little inquiry, but, on the whole, trade is slack, and anyone determined to sell to-day can only do so at a reasonable figure. This applies to all merino and crossbred qualities. Lack of demand for yarn is also being experienced, and some mills are standing the whole of this week.

THE JUTE TRADE.—Dundee.—Hopes are again revived that the Calcutta mills will take some steps to mitigate the depression surrounding the jute industry. A meeting of the committee of the Indian Jute Mills' Association is to be held to-day to consider the question of further curtailment of output, understood to be by stopping for one week each month, or to stabilise prices of goods by fixing minimum selling rates. From the manner in which stocks of both hessians and heavy goods are remaining high, it would appear that some action is due, and it is hoped that the mills will find a way out. Trade has been even worse during the past few weeks, and, so far as Dundee is concerned, this has been the quietest month on record. Prices are all more or less nominal in the absence of interest on the part of buyers. Raw jute is keeping up in price. The new jute crop reports are not so satisfactory, too much rain having fallen in most districts and more sunshine required for the young plants. Private estimates of the extent of the next crop indicate an outturn of between seven and eight million bales, judging by the area sown, but a great deal depends upon the weather conditions between now and the time for cutting. Sellers are receiving so little encouragement from spinners that they are not troubling to make offers now, and values continue about unchanged. Daisee assortment is offered here at £16 10s. and Tossa assortment at from £17 to £17 10s., with Mahabir Tossa-4 mentioned at £16, May-June. Heart Ram tops are unchanged at £16 7s. 6d. for May-June, and £16 10s. for June-July. Spot jute is freely offered, but spinners are bidding too low prices and business is practically nil. Jute yarns are very slow, yet spinners are not any more anxious to sell unless they obtain their quoted rates. Their losses are already too severe to admit of further reductions, and nothing less than 1s. 10½d. is possible for common 8-lb. cops and 1s. 11½d. for 8-lb. spools. Buyers continue to offer ½d. less in each case. Twist is quoted at from 3½d. for 3-ply 8-lb., and sacking yarns are steady enough at from 2½d. for 24-lb. web and from 3½d. for 8-lb. chains. Any small lots of rove changing hands are paid for at the unchanged rates of £19 for 48-lb. and £16 for 200-lb. Fine yarns are quiet but steady, and carpet qualities are dull. Only trifling lots of hessian cloth are being purchased, and for these manufacturers are receiving unchanged prices of from 2½d. for 10½-oz. 40-in. and from 1½d. for 8-oz., but if any buyer came forward with an order of any consequence he would have little difficulty in obtaining a concession. Linoleum hessians and heavy goods are very quiet. The Calcutta goods market has advanced about 6d. for both hessians and heavy goods as the result of the fresh attempts to help matters in Calcutta.

THE GRAIN MARKETS.

WHEAT.—The international conference of eleven wheat-exporting countries, which account for about 95 per cent. of the total exports, held its last meeting on Saturday, May 23rd, at Canada House, under the chairmanship of Mr Howard Ferguson, High Commissioner for Canada. It was the aim of the conference to discuss and adopt means of disposing of the large surpluses held by exporting countries and of regulating the distribution of the 1931-32 crop in order to secure a reasonable price for growers. None of the schemes put forward by the various delegates has found general acceptance, but if the conference has failed in its immediate object, it has nevertheless succeeded in establishing a contact between the exporting countries and in impressing upon the representatives the dependence of each country on the world wheat situation. In an official communiqué, it was stated that the fall in wheat prices was due especially to the world economic depression, to over-production, to the absence of adequate information about the movements of wheat, the requirements of certain countries and the quantity likely to be placed on the market, and to the uncertain state of the wheat market. The conference therefore decided to establish a committee consisting of one representative from each State participating in the conference for the purpose of establishing a clearing house of information on the wheat position in each country and to explore all possible avenues for the greater utilisation of the cereal. Meanwhile, the wheat markets have experienced a set-back during the week and prices are again lower. This decline has been the result of heavy shipments, the increase in the floating supply and favourable crop reports from North America, coupled with the failure of Continental countries to increase their imports to any considerable extent. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 27s. per 496 lb., as compared with 28s. a week ago; No. 2, Northern Manitoba, Atlantic, ex ship, 26s., against 27s.; Rosafe, ex ship, 22s. 9d., against 23s. 6d.; Australian, ex ship, 25s. 9d. to 26s. 3d., against 26s. to 26s. 9d.; and Russian, on sample, ex ship, 22s. 6d. to 23s., against 22s. 6d. to 24s. a week ago.

WHEAT FLOUR.—Flour has been a quiet market, and prices were slightly easier. There has been an increase in shipments from North America during the past week which amounted to 254,000 sacks, as compared with 211,000 sacks a week ago. Quotations:

Straight run, delivered country, 23s. 6d. per sack of 280 lb., as compared with 24s. 6d. last week; delivered London, 22s. 6d., against 23s. 6d. Manitoba patents, ex store, 21s. 9d. to 25s., against 21s. 9d. to 25s.; and Australian, ex store, 18s. 9d. to 19s. 6d., against 19s. 3d. to 20s. a week ago.

BARLEY.—Buying of barley has been on a small scale and prices remained unchanged. The visible supply in the United States at the end of last week amounted to 6,494,000 bushels, against 6,590,000 at the end of the previous week. Quotations: "English malting," f.o.r., at 30s. to 35s. per 448 lb., remained unchanged. Californian sold at from 33s. to 43s., as compared with 33s. to 43s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—Home-grown oats have again been in limited supply and prices have been maintained. Foreign oats, which again experienced a good demand, have been slightly cheaper. Quotations: "River Plate," landed, 13s. per 320 lbs., as compared with 13s. 3d. last week; "River Plate," ex ship, 11s. 9d. to 12s., against 12s. 3d.; "Chilean Tawny," landed, 13s. 9d., against 13s. 9d.; and North Russian, on sample, landed, 18s., against 18s. 6d.; English white, 22s., against 19s. to 20s. a week ago.

MAIZE.—In view of the large crop in Argentina which that country desires to market rapidly, a sharp fall in prices has been experienced during the past week. Quotations: "Plate," landed, 16s. 9d. per 480 lbs., as compared with 21s. 3d. last week; Plate, ex ship, 15s. 6d., as against 17s. to 17s. 3d.; Plate, May-June, new, 15s. 9d., as against 16s. 6d. Yellow maize meal, ex wharf, was quoted at £5 10s., as against £5 15s. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat	Cwts. 71,209	Cwts. 138,801	Cwts. 141,532	Cwts. 174,515
1 week to May 23	4,335,556	8,585,917	9,103,715	9,691,105
38 weeks to May 23	4,335,556	8,585,917	9,103,715	9,691,105
Average price of English wheat per cwt.	s. d. 5 10	s. d. 8 7	s. d. 9 10	s. d. 11 2

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
May 16, 1931.....	Cwts. 122,997	Cwts. 12,260	Cwts. 25,595	s. d. 5 8	s. d. 6 9	s. d. 6 8
May 23, 1931.....	71,209	11,221	19,733	5 10	7 5	6 8
May 21, 1927.....	170,754	27,011	66,210	12 4	11 4	9 9

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	May 28, 1930.	Jan. 2, 1931.	May 13, 1931.	May 20, 1931.	May 27, 1931.
Winnipeg (No. 1 Manitoba)	148½	111	56½	62½	60½	58½
Chicago (No. 2 Winter)	130½	107½	79½	82½	82½	82½
Centra per 60 lb.	130½	107½	79½	82½	82½	82½

The visible supply of wheat in Canada, at 50,221,000 bushels, shows a decrease on the week of 1,734,000 bushels. Supplies a year ago stood at 62,528,000 bushels.

OTHER FOODS.

SUGAR.—The raw sugar markets experienced a sharp decline in prices during the past week. This is ascribed mainly to the unsettled state of the market in the United States. Wednesday's quotation in New York, for Cuban centrifugals, 96 deg., spot, at 3.11 cents per lb., shows a decline of 0.09 cents on the week. On Tuesday "British refined" was again reduced by 3d. per cwt., and raw futures in London have also been easier. Wednesday's sales included "August delivery," at 5s. 11½d. to 6s. 0½d., as against 6s. 2½d. to 6s. 3½d. on the corresponding day last week; December at 6s. 3½d. to 6s. 3½d., as against 6s. 6½d. to 6s. 6½d.; and March, 1932, at 6s. 5½d., as against 6s. 9d. a week ago. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons. Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	3,004	2,049	1,534	1,458	30,263	37,716
Liverpool ...	7,445	15,390	12,683	14,079	74,684	97,568
Total tons ...	10,449	17,439	14,217	15,537	104,947	135,284
Last week ...	14,586	15,942	13,836	14,746	108,715	133,382

COFFEE.—At the last auctions before the Whitsun holidays prices showed some improvement. Last week's movements of coffee in London were as follows: Brazilian, landed, 8 bags; delivered for home consumption, 61 bags; exported, nil; stocks, 2,786 bags, against 5,752 bags last year. Central American, landed, 10,823 packages; delivered for home consumption, 5,350; exported, 2,722; stocks, 130,514 packages, against 118,845 a year

ago. Other kinds, landed, 3,151 packages; delivered for home consumption, 2,914; exported, 2,446; stocks, 102,359 packages against 132,745 a year ago.

COCOA.—The recovery experienced in prices last week has not been maintained, and Wednesday's quotation for Accra, fair fermented, May-June, at 18s. per cwt., f.o.b., London contract, shows a decline of 9d. on the week. Last week's movements of cocoa in London were as follows: Landed, 6,129 bags; delivered for home consumption, 2,650 bags; exported, 256; stocks, 227,725 bags, against 202,173 last year.

TEA.—There have been no auctions during the week. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasa-land.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
May 22, 1930....	1 2-51	1 5-45	1 7-53	0 11-07	0 11-99	0 10-35	1 3-63						
April 30, 1931....	0 11-12	1 3-24	1 6-55	0 6-76	0 7-15	0 5-81	1 0-93

May 14, 1931....	0 10-26	1 4-61	1 4-63	0 6-99	0 7-49	0 5-95	0 11-88						
May 21, 1931....	0 10-27	1 1-86	1 3-96	0 7-08	0 7-72	0 6-83	1 0-00						

RICE.—The market in rice has experienced a decline in prices during the week. Wednesday's quotation for Burma No. 2, cleaned, June-July, in singles to the Continent, and to the United Kingdom, at 7s. per cwt., shows a decline of 4½d. on the week. Movements in London during the past week were as follows: Landed, 40 tons; delivered, 32 tons; stocks, 580 tons, as against 2,730 last year.

POTATOES.—Supplies at the Borough Market have been ample to meet requirements. Prices remained unchanged, and "Best King Edward" again sold at £9 to £9 10s. per ton.

SPICES.—The spot pepper market showed some improvement at the end of last week. Wednesday's quotation for "Black Singapore," at 6d. per lb., shows a rise of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 7 tons; delivered, 60 tons; stocks, 542 tons, against 1,115 tons last year. White, landed, 11 tons; delivered, 47 tons; stocks, 644 tons, against 644 tons a year ago.

MEAT.—Prices at the Smithfield Market have been irregular during the week. On Wednesday, Argentine beef (chilled hind-quarters) was sold at 3s. 6d. to 4s. 4d. per 8 lbs., against 4s. to 4s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 2d. to 3s. 8d., as against 2s. 10d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,075 tons, as compared with 8,420 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.3 per cent. of the supplies, as against 82.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 82.5 per cent. of the total supply, as against 86.9 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets are very quiet and depressed, with prices still on the down grade for want of buying support. Linseed is again lower in sympathy with Argentina, but there is little or no demand from crushers either here or on the Continent, who seem to have all their immediate requirements well covered. Large quantities have arrived in Europe during the past two or three weeks. The quantity on passage having now dropped to 107,000 tons, as against 111,200 tons a year ago. Plate on spot afloat, May and June shipment to Hull, is quoted around £8, and shipment to October £8 2s. 6d., while the value of Calcutta to London is nominally £10. Cottonseed is quiet and easy. Egyptian (black) offering in all positions at £5 2s. 6d., without attracting purchasers. Linseed oil is in better trade demand at the extremely low levels now touched, the lowest for many years. Raw oil for delivery to August ex Hull mill has dropped to £14, and September-December to £14 10s. Cotton oil is rather steadier at the latest decline. Crude Egyptian ex Hull quoting £17 15s., and common edible £20. Olecakes and meals are in moderate request, and prices show but little variation.

HIDE, LEATHER AND ALLIED TRADES.—Owing to the Whitsun holiday no auctions of market hides and skins will be held this week, supplies at all centres having been sold for the fortnight at the last sales. At the present moment the market is in a fairly satisfactory position, and it is likely that prices will rule steady. Business in the imported hide market has been difficult, and with buying confined to small quantities, prices are again inclined to be easy. South American wet salted hides are offered at lower figures, sales of Argentine ox having been made on the basis of 8½d., while light ox have sold at 4½d., and Uruguays at 5½d. Dry South American hides are weaker in the face of small trading, B.A. Americanos having changed hands at 5½d., Sierra Cordobas at 6½d., and B.A. Inservibles at 3½d. Demand for African hides also is confined to narrow limits. A few sales have been made of dry salted Capes at 5½d. and 4½d. for first and seconds, 20/30 lbs. Enquiry has also been made for dry Capes, but the prices quoted by sellers are above the limits of buyers. This latter remark also applies to most classes of Australian hides, with the result that trade with tanners in this country is confined to a few odd parcels. Business in sole leather has not been very interesting since the holidays, and the general feeling is that nothing of consequence will transpire until shoe factories are back into their stride. Trade in upper leathers has been smaller, owing to the holiday, but some business has been done in staple lines, such as willow calf and black and brown glacé kid.

THE TIMBER TRADE.—The market for European woods, writes our correspondent, has been weak during the past month, both in the spot and forward departments. This weakness is largely due to the fear that large quantities may be forced on to this market this year, and that foreign shippers desire to sell to the United Kingdom market quickly, and, seemingly, almost regardless of cost. On the surface, however, conditions appear most favourable to the spot market. United Kingdom imports are much smaller this year, 459,766 loads (of 50 cubic feet), against 714,652 loads for the corresponding period last year. London's receipts and dock stocks generally are lighter, and deliveries into consumption from dock stocks larger than a year ago. It is questionable, however, whether the demand is so good at other prominent United Kingdom ports. The Russian supplies are not coming forward on nearly such a large scale as a year ago, and with the exception of Polish wood via Danzig all the European countries have sent diminishing supplies this year as the result of poor hand-to-mouth buying. There is an impression amongst some operators that the Soviet will not be shipping more than 500,000 standards of wood to the United Kingdom this year, against the proposed 600,000 standards. To the end of last month the Soviet were some 23,000 standards behind last year's export to the United Kingdom, but the opening season does not start until late May-early June, and that deficiency may soon be caught up and perhaps surpassed. The c.i.f. values of Russian wood were considered as very low three or four months ago, but that is not the case to-day, for those of the timber of other countries have fallen appreciably, and British importers are still wondering whether they have touched bottom. Their fear of buying too far ahead, however, is in danger of leaving the United Kingdom market under-supplied, with the result that spot prices may move upward rather than downward. The building trade to the end of April was disappointing, unemployment that month totalling 19.5 per cent., or 5.6 per cent. more than a year ago. Better May weather should reduce those figures and add to the timber demand. In the hard and fancy woods market business has been very dull during the past month, and imports generally have been light. Mahogany and other sawn woods are well down

in imports, including the American varieties, but of the latter more than sufficient is coming forward to meet the declining call, and values are consequently suffering. A noticeable feature in the hardwood imports is the decline in the supply of Indian teak, due largely to the poor conditions of the shipbuilding trade and other industries in which that outstanding timber is brought into requisition. A year ago many operators were of the opinion that the depression in the demand for hardwoods was due to the great growth in the usage of plywood. Since then, however, the call for this made-up material has depreciated considerably, imports this year amounting to only 84.5 million square feet, as against 143.4 millions a year ago, and 107.3 millions January-April, 1929.

RUBBER.—Nothing is known as yet about the contents of the report submitted to the Dutch Colonial Secretary by the committee he appointed recently. In this connection, the speech of Mr J. G. Hay, chairman of the Rubber Growers' Association, is interesting. He stated that unless and until they receive authoritative and unqualified assurances (1) that the Dutch Government is prepared to consider legislation for the regulation of output, and (2) that the Dutch Government is willing and able effectively to control native production, they could have no confident belief that the negotiations of the liaison committee could reach a successful conclusion. In view of the present uncertainty, buyers showed less interest during the past week, and prices were slightly easier. Wednesday's official closing price for standard ribbed smoked sheet, at 3d. per lb., shows a decline of 1/4d. as compared with the corresponding day last week. In forward positions, business has been done at 3d. to 3 1/4d. for June, against 3 1/4d. to 3 1/2d. last week; at 3 1/4d. for July-September, against 3 1/4d.; at 3 1/4d. to 3 1/2d. for October-December, against 3 1/4d. to 3 1/2d.; and at 3 1/4d. to 3 1/2d. for January-March, 1932, against 3 1/4d. to 3 1/2d. a week ago. For the first time for many weeks, stocks in London and Liverpool show a slight decrease. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,590 tons; delivered, 2,216 tons; stocks at the end of last week, at 139,581 tons, show a decrease of 626 tons, as compared with the preceding week.

INCREASED ANNUITY RATES

The following are examples of the Rates of Annuity that will be allowed in respect of each £100 of Purchase Money:

Age Attained	Males.		Females.	
	£	s. d.	£	s. d.
60	9	8 2	8	4 8
65	10	18 9	9	8 10
70	13	1 11	11	4 2
75	16	5 6	13	17 4

The rates quoted are for Annuities payable by half-yearly instalments, the first payment being made six months after the date of purchase, and the final payment at the half-yearly due date preceding the death of the Annuitant.

EQUITY & LAW

LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W.C.2.

Established 1844

Funds £9,300,000

What of the individual investor

who during the past year has seen the value of his Securities crumble to the extent of 20 per cent. or more?

There is only one sure and certain method

by which the depreciation in the capital value of Investments can be covered and that is by Life Insurance. To restore the value of your Estate at an expenditure of a few pounds per cent. is surely purchasing peace of mind at a cheap rate.

Under the Distinctive System of this Institution you can obtain at early and middle ages a Whole Life Assurance of about £1,300 with right to bonuses for the same premium as is charged elsewhere for £1,000.

Particulars and rates on application

passed through to the Bank of England for payment. The Bank return gives evidence of the effects of this operation. Public deposits have fallen from £17.4 to £6.5 millions, and Government securities have risen from £276.9 to £282.7 millions. Thus the Treasury has drawn heavily upon the funds it had been accumulating for this purpose during preceding weeks, and has also in all probability borrowed a small amount on Ways and Means from the Bank.

As a result of this disbursement, Bankers' deposits have risen from £54.8 to £72.2 millions, representing a transition from the market's standpoint from relative stringency to ease; and, in fact, the clearing bank which usually calls on Tuesday did not do so this week. It should be recognised, however, that on this occasion money has been less plentiful than is often the case immediately after a War Loan dividend payment, and that the surplus funds are already beginning to disappear. One reason for this is that, as March 1st fell on a Sunday, there were no Treasury bill maturities on June 1st, and so, on the latter day, the market was deprived of one of its usual sources of funds. Furthermore, Treasury bill issues are at present above the normal in size, this week's offering alone amounting to £45,000,000. So, taking everything into account, there has not been this June the usual extreme glut of funds.

Discount rates, too, have hardened since a fortnight ago. It will be recalled that the Treasury bills issued on May 22nd went at a rate of £1 19s. 11.95d. per cent., and that the following week three months' bills were quoted down to 2 per cent. Such rates were too low, both from the standpoint of the bill broker who still has to pay 2 per cent on money borrowed from the clearing banks, and from more general considerations such as the state of the exchanges and the comparative level of money rates in foreign centres. By the end of last week the market had begun to appreciate these facts, and the issue of May 29th went at £2 1s. 9.45d. per cent. This week, three months' bills have been dealt in at 2½ and possibly 2¾ per cent., with 2½ per cent. quoted by running brokers for "hot" Treasuries. With £45,000,000 of Treasury bills on offer on Friday, some brokers were inclined to look for a rate of 2½ per cent., but inasmuch as heavy maturities at the end of this week will supply the market with funds, the issue may go at a slightly lower rate.

	May 14, 1931.	May 21, 1931.	May 28, 1931.	June 4, 1931.	Previous Rate and Date Changed.
Bank Rate	2½	2½	2½	2½	3 (May 14, '31)
Banks' Deposit Rate..	1	1	1	1	1½ (May 1, '30)
Discount / Call	1	1	1	1	1½ (May 1, '30)
Houses' Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2-2½	2	2½-2¾	...

On the other hand, the market has recently received good allotments of Treasury bills, and so its power to absorb fresh supplies may be limited. It is noticeable that very few buyers of bills have been in evidence this week, and that even the clearing banks have limited their purchases to a few July and August bills. According to one account the banks are now buying short-dated bonds. Other factors that suggest higher discount rates in London are the recent temporary lapse of the Paris exchange to Frs. 124.08, and the general feeling of uneasiness inspired by the Continental situation in general, and, in particular, by the difficulties of the Credit Anstalt. This week's exchange and gold movements have already indicated the ways in which these developments can affect London.

Prominent among these are the further depreciation of the Reichsmark to Mks. 20.49½, and the appreciation of Swiss francs to Frs. 25.08. There is no doubt that these movements are connected, and that lack of confidence in Germany is causing the transfer of further funds to Switzerland. The rise in the value of Swiss francs had an immediate consequence in London, for on Tuesday Switzerland was in a position to bid for the Cape gold, and

of the £1,016,000 on offer, actually bought £387,000 at a price of 84s. 10½d. per ounce. The balance was held over till the following day, when Swiss competition was again in evidence, and the Bank of England was only able to secure gold after bidding 84s. 10½d., or practically 1½d. more than its statutory buying price, which is all it has had to pay since the middle of April.

Taking all these factors into account, it is just as well that discount rates should be settling down at rather over 2 per cent. Such rates leave brokers a small margin, and they also have regard to the needs of the international situation and to the level of money rates abroad. It is true that the New York exchange has been momentarily above parity. This week's fall in sterling against the franc, however, is a definite warning, and while the ground so lost has since been recovered, the market would be well advised to regard it as such.

New York has been overshadowed by the headlong fall in stock prices during the early part of the week, and by the widespread feelings of pessimism. Some indication of the intensity of the depression is given by the fact that according to the most recent figures, loans to members of the New York Stock Exchange have fallen since the 1929 peak from \$6,549 millions to \$1,431 millions, member bank security loans from \$9,179 to \$6,918 millions, and member bank other loans from \$9,871 to \$7,885 millions. To meet the recent fall in prices, several of the leading banks have this week reduced their margin requirements in respect of collateral loans to brokers from 25 to 20 per cent. Call money remains at 1½ per cent., and prime commercial paper is quoted at 2-2½ per cent.

The Foreign Exchange market continued active during the past week. Sterling on New York maintained its recent strength, touching 4.86½ on June 2nd and closing at 4.86½. Montreal was 4.87, as against 4.86½ a week ago. French francs appreciated at one time to 124.08, but closed near last week's level at 124.22. Demands for sterling in Brussels took the rate to 34.93½, as against 34.92 last week, while Milan was also offered and closed at 92.98. The peseta fluctuated wildly, and dealings were frequently impossible within reasonable margins of the rates nominally quoted. The worst level touched was 62½ on June 1st, but subsequently more settled conditions prevailed, and the rate closed at 51½, showing an improvement on the week of 1½ pesetas. Amsterdam was 12.09½. Reichsmarks were steadily offered from Continental sources and closed at 20.49½, a further depreciation of 1½ pfennigs. A strong and steady demand for Swiss francs, principally from Germany, caused the Swiss rate to fall to 25.08, against 25.16½ last week. Stockholm depreciated to 18.15½. In the South American exchanges Rio was 3½d., showing an improvement of ½d. against a week ago. Montevideo was also better at 28½d. and Buenos Aires at 33½d. was ¾d. better than last week. In the Far East rupees were weaker at 1s. 5½d., as also were yen at 2s. 0½d. In the forward market, dollars were generally in strong demand, and after being quoted at ¾ cent for one and 1½ cent premium for three months, closed at ¾ cent and 1½ cent premium respectively. Paris forwards fluctuated but closed around last week's levels. Forward Brussels was in better demand with the rise in the spot rate, being 2 cents and 4 cents premium for the two periods. Forward Milan was offered at discounts of 10 and 27 centesimi. Movements in forward Spain were as violent as those of the spot exchange, changing from premiums to discounts of 25 centavos and 80 centavos for one and three months, after being as high as 35 centavos and 1.00 peseta respectively. Amsterdam forwards were ¼ cent for one month and 1½ cents premium for three. Dealings in forward Berlin were small in volume and difficult of negotiation. The final rates were par for one month and ¼ discount for three. Forward Switzerland moved to discounts of ½ centime for both one and three months. After early weakness resulting from Chinese selling, silver recovered to within ¾d. of last week's levels at 12½d. for spot and 12½d. for forward delivery. Hong Kong was 11½d. and Shanghai 1s. 2½d.

THE STATE AND THE UNEMPLOYED.

WHATEVER results may emerge from the Interim Report of the Unemployment Insurance Commission all will agree that it has made an honest attempt to carry out its mandate. We sympathise with the view of both the Majority and Minority of the signatories that it is unsatisfactory to attempt to deal with the problem piecemeal and to make proposals which attempt to lighten the burden upon the country without radical overhaul of the whole system of relief of unemployment. The Commission has not had time to consider many important matters of administration, nor does it deal with many suggestions which must be considered before the final plan is drawn up. There is, for example, the question of varying the rates, both of contributions and of benefits, in different trades and localities, and the problem of dealing with those who have long been out of work, either by training or transfer. The argument, indeed, of "incompleteness" is used by the two dissentients from the Majority Report as a reason for leaving matters as they are until the final scheme is prepared.

Briefly, the scheme of the Majority, which is fully summarised in another column, makes a series of proposals—on the assumption that unemployment will continue at a level of about 2½ millions—under which the total expenditure on benefits would be cut from the present figure of £119 millions to £95 millions. Half of this cut is to be secured by reducing the rate of benefit from 17s. to 15s. in the case of a man, from 15s. to 13s. in the case of a woman, and from 9s. to 8s. for an adult dependant, the rate for children being alone unchanged. As to the other half, £5 millions is to be saved by setting an upper limit to the amount of benefit which can be drawn by part-time workers—the limit varying with their earnings during the days that they are at work—and by regulations which will prevent the drawing of benefit by married women unless it is clear that they are likely to be re-employed in an insured occupation. A further £3 millions is to be saved by imposing a means test for transitional benefit, not in all cases, but in case of single adults living with relatives, of married women, and of pensioners, etc., while £3½ millions are to be saved by the provision that the 30 contributions which qualify a man or woman to become an insured person must have been paid during the preceding six years. This elimination from the scheme of persons who have practically not worked for several years is the only one of the economies which will involve recourse to the Poor Law, and inasmuch as there will be a strict means test in all these cases it may be presumed that the additional charge on the Poor Law will be less than the amount saved under the Insurance scheme.

On the other side of the account it is proposed that contributions should be raised to 9d. (taking as a representative case an adult male) from each of the three contributing parties, namely, the State, the employers and the workers, which means an addition of 2d. a week from the worker, 1d. a week from the employer and 1½d. a week from the State. These contributions are estimated to yield £9 millions of additional revenue, which, with the £24 millions of reduced expenditure, will make it possible to reduce the £40 millions a year which are now being borrowed to a deficit of £7 millions. This is not solvency, but it is a serious attempt to attain it.

These recommendations will at once become the most important political issue in domestic politics. The Budgetary situation, the tightness of which we have repeatedly emphasised, and the precarious economic outlook in all countries, which threatens to prolong the present crisis, mean that the Government is bound to give the Majority Report most earnest consideration. At a time when sweeping wage reductions are being made in the erstwhile prosperous United States, when large cuts are imposing themselves on Australia and on many countries of

Europe, notably Germany and Austria, the Government in this country cannot lightly brush aside the comparatively modest changes that are here proposed to stop the threatened deterioration of our public finances.

It is idle to deny, however, that the Report, which embodies the first of the sacrifices to which Mr Snowden referred a few months ago, presents great political difficulties; for every single suggestion is certain to encounter from one quarter or another the keenest opposition. Employers, for example, will claim, not without reason, that an increase in their insurance payments will be a severe handicap at the moment when they are having the greatest possible difficulty in meeting competition. Clearly, however, it would not be practicable to ask the workers to increase their weekly payments without any corresponding increase from the employers; and without some increased contribution from these two sources we should merely be increasing the already excessive burden on the taxpayer. Again, the proposal to reduce the payment to part-time workers who are earning good wages for two or three days of the week will no doubt be resisted by the interested parties, but this and the proposal to restrict the payments to married women who are unlikely to resume employment in an insured occupation will probably secure fairly general support. As regards the means test for certain classes of those receiving transitional benefit, here we sincerely hope the Government will have the courage to adopt the recommendation, for it will not only save expenditure which the country can very ill afford, but it also serves to emphasise the distinction which the Commission quite properly makes between unemployment insurance and the subsequent relief of unemployment out of State funds. In this connection the Report quite truly observes that the restoring of the insurance character of the scheme is not only important for financial reasons, but also because a true insurance scheme makes it possible to pay out benefits without an excessive amount of red tape and private investigations. As soon, however, as payments to the unemployed become fully chargeable to the State, the latter must take measures to protect itself against what may easily become a fatal drain upon its resources. It is, we think, highly probable that in their final Report the Commissioners will find it necessary to make the distinction still sharper between those who are drawing benefit to which they have themselves contributed and other unemployed by requiring from the latter some form of work or training.

The immediate political crux of the matter is, however, quite clearly the proposal to lower the standard scale of benefits. It is true that, as the Report emphasises, the rates, after the proposed reductions, which mean that a man and wife and two children will under the new scheme get 27s. a week instead of 30s., compare favourably with the rate prevailing in recent years when account is taken of the fall in the cost of living. Thus, in 1924 such a family actually received 27s., but, as the cost of living was considerably higher, it was only the equivalent to 22s. 8d. at to-day's prices. The Commission's proposal, therefore, means that the family of an insured person will be better off at the reduced rates proposed than in recent years prior to 1930. Nevertheless, the reduction of benefit may well prove a bitter pill for the Government's supporters to swallow, and the use of the cost-of-living index in connection with scales of benefit has been challenged on the ground that an unduly large part of the income of beneficiaries is swallowed up in rent, which has not fallen.

This, and other similar points, need careful scrutiny, for it is certainly not desirable that the all too large section of the working population now unemployed should be reduced to a condition of under-feeding or driven hopelessly into debt. On the other hand, clearly the country cannot offer in this crisis to give a rising standard to those who are not working. Regarded as part of a general plan under which, to use Mr Snowden's phrase, sacrifices have

to be made all round, the majority Report strikes us at first reading as an admirably balanced piece of work which will stand all fair criticism. On its merits it deserves to be treated as many of our leading politicians indicated last autumn that they intended to treat it, and should be accepted as it stands. We should like to think that Mr MacDonald will rise to the occasion, take his courage in both hands and make an unequivocal declaration in this sense. If, unhappily, he feels himself not strong enough to do so, then his course should be to appeal to the House to treat the questions arising out of this vital Report as a non-party matter, and endeavour, in consultation with the leaders of the two Opposition parties, to ascertain what degree of support, both in Parliament and the constituencies, can be guaranteed him in implementing the Majority's recommendations. The worst thing of all that could happen would be if any of the three parties endeavoured to make political capital out of the report, or effectively prevented the carrying out of sound and urgent reform by manœuvring for position with an eye to the polling booths.

CONVERSATIONS AT CHEQUERS.

DURING the coming week-end the British Prime Minister's country house in the Chilterns seems likely to be the centre of European interest, for events have conspired to invest the visit to Chequers of Dr. Brüning and Herr Curtius with "news value" considerably greater than could have been anticipated when the meeting was arranged. Mr MacDonald's invitation that Germany's two leading statesmen should visit England for a friendly and informal talk was issued, before Easter, at a time when no obviously insistent topic—with the exception, it may be said, of the perpetual question of disarmament—presented itself as the natural object of speculation and forecast on the part of the European Press. In fact, the motive for the invitation was undoubtedly the desire that hospitality which had been enjoyed by the representatives of the other leading European nations should be extended with an equal warmth to the heads of the German Government. Since Easter, however, not only has the path of disarmament been once more obstructed by the hitch in the naval negotiations and the renewed strain in relations between Italy and France, but there has arisen a burning controversy over the Austro-German Customs union, and the idea of an *Anschluss*, while the continuance of economic depression and falling commodity prices, and the disclosure of the banking difficulties of Austria have brought into the picture once again the possibility of Germany applying for a postponement of transfer of the conditional annuities under the Young Plan, or even for a revision of the Plan itself.

A cursory study of the Continental Press during the past week serves to show how great is the importance attached, both in Germany and in France, to the Chequers meeting, and there is little doubt of the great potentialities for good or evil of these conversations. We do not propose to join in the intriguing but unprofitable game of endeavouring to prophesy in any detail what Dr. Brüning and Mr MacDonald will have to say to each other. It is obvious, however, that two statesmen in their position to-day cannot spend a week-end together without discussing in some form or other the three topics of disarmament, the *Anschluss* and the future of reparations in the light of Germany's and the world's present economic position. So far as disarmament is concerned, every good European will sincerely hope that Mr MacDonald will succeed in satisfying Germany, through Dr. Brüning, that in this matter we are actuated by feelings of cordial amity to the nations of Europe without distinction, that our objective is the eminently desirable one of securing substantial alleviation from the present terrible burden of expenditure on fighting forces, and that we are prepared to support with all our power the principle of budgetary limitation of armaments at a level substantially below present expenditure.

Equally, we hope that in the matter of the *Zollverein* the British Prime Minister may be able to satisfy his

German *confrères* that, if our policy has not been one of wholehearted support for the projected Customs union, this must not be taken as evidence of any lack of friendliness to Germany or to any desire to hem Germany in for ever with immutable treaty prohibitions. Actually the *Anschluss* is for Germany a matter of pride rather than of business; it would do extremely little to help Germany's economic situation; and persistence in the project might well damage, rather than assist, the trade and industry both of Germany and of Europe as a whole by exacerbating an already tense international situation. In this issue we suggest that a wise course for the statesmen at Chequers would be to explore the possibility, first, of Germany acceding to the definite request that we have put forward for a reduction of tariffs on English goods, and, secondly, of Britain and Germany working together to secure a really worth-while reduction of tariffs in Central Europe as a sound and valuable alternative to the *Anschluss*.

It is, however, the question of the future of reparations that seems likely to be indirectly the outstanding subject of moment in this week-end's conversations. Indirectly, we say, because we think that, in all probability, Dr. Brüning and Herr Curtius will not make any proposition even informally in this respect, but will be content at this juncture to represent to Mr MacDonald the cold facts of the German position and leave it to the British Government to draw its own conclusions. Doubtless, they will say, and rightly, that Germany has made an immense effort to carry out the Young Plan, the burden of whose execution has been considerably increased by the change during the past two years in the general level of prices, and is now aggravated by the world-wide depression, which has hit German industry hard. The establishment by Germany of a substantial export surplus has shown that the strain to which the Young Plan is being subjected falls not so much on the mechanism for transfer as on that for the collection within Germany of the means of payment. The Brüning Government has imposed on the nation a programme of rigid economy with stringent taxation and drastic reductions of social services, official salaries and wages. So far it has succeeded, with Social Democratic support, in carrying out this inevitably unpopular policy in the face of Nationalist opposition. But, faced with a heavy budgetary deficit, it is now being forced to apply further emergency legislation, whose details our Berlin correspondent foreshadows on a later page, and whose effect seems likely to be still further to drive German opinion to the extreme Right and the extreme Left. It would be premature, perhaps, to conclude that the stability of the Brüning Government is as yet in jeopardy, for the Socialists, up to a point, are likely to continue to support Dr. Brüning, in spite of his drastic programme, rather than risk the dangers of an alternative Government drawn from the Right, or a dictatorship. Dr. Brüning, however, we expect, will tell the Prime Minister with emphasis that the breaking point is not far off, that the problem of reparations has become for Germany essentially a political problem, and that a Government of the extreme Right, or a dictatorship (by no means an impossibility) would inevitably seek to secure its own position in Germany by making a moratorium for reparations and a revision of the Young Plan the main planks in its platform.

There is no statesman in England who would not feel bound to give these considerations his earnest and sympathetic attention, whatever might be the conclusion he ultimately reached. The emergence of a dictatorship in Germany would be a new and seriously adverse factor in a troubled world economy; and, on other lines, Mr MacDonald will be readily sensible to the fact that the effect of further reductions in German wages and standards of living will intensify the competitive international trade position and increase the difficulties of the export trade of this country. In short, there is a general consensus of British opinion, irrespective of political party, that reparations have demonstrably been, and are likely to be, increasingly a contributory factor in the international economic *malaise*. On the other hand, there is the fact, which cannot be gainsaid and which Germany will do well to take to heart, that the situation of the British Treasury

is such that we are not in a position to make unilateral concessions in the matter of reparation payments, however much we might be convinced that relaxation was dictated by the demands both of justice to Germany and of the self-interest of the world. We have no cash to give, but are only middlemen in this issue of reparations and war-debt payments. If Germany needs relief she must address herself in the last resort to France and America. Public opinion in all countries concerned will do well not to look for any dramatic developments from the Chequers conversations, but to be content if this week-end of frank and friendly discussion of all the relevant facts and possibilities leads to Germany getting the assurance for which she is hoping—that her difficulties and efforts and her political "ardours and endurances" are regarded here with friendly and sympathetic eyes.

A TIMELY CAMPAIGN.

THE meeting at the Caxton Hall last week, at which Mr Lloyd George launched a nation-wide campaign against Protection, was a Party meeting, and the ex-Premier's speech was, therefore, as lively as ever in its partisan debating power. Nevertheless, when the fripperies of political debate are stripped from it, his address reveals a true conception of the circumstances under which Protectionists are striving to lead England to fiscal revolution, and of the need for a campaign to resist their efforts. Thus, although the campaign originates from a Party source, there are many who politically are not followers of Mr Lloyd George who will, as we do, extend to it and its standard-bearer the strongest of good wishes.

Mr Lloyd George did not attempt to compress into a single speech the whole case for Free Trade. He refrained, for instance, from analysing British unemployment by industries, and inquiring which of those industries could benefit from Protection; nor did he waste time in asking how a measure which would entail increased costs of production would help Britain to sell her goods in competitive markets. Indeed, as regards the purely domestic aspect of the case, he confined himself mainly to pointing out the danger of giving shelter to inefficient organisation and equipment, and to showing that even the special experiments in Protection which have been in operation in this country under the McKenna and Safeguarding Acts have been more of a hindrance than a help to industrial progress. To that aspect of the case we shall return in a subsequent issue. For the moment let us follow Mr Lloyd George into his wider international examination of the fiscal problem. Here four main points were stressed:—Firstly that the inefficacy of Protection as a means to industrial prosperity was at this moment being convincingly proved by the plight of Protectionist countries; secondly, that it is as true now as it was at the time of the World Economic Conference in 1927 that there can be no economic revival

until tariffs are abated; thirdly, that there can be no peace and confidence in Europe so long as war rages in the economic sphere; and, fourthly, that the most hopeless method of helping to end this war is for Britain to engage in it herself.

On all these points Mr Lloyd George's arguments were sound and forceful. It is notoriously tempting for a country, as for an individual, when she is sick, to "try something new" and to make experiments, on the grounds that "things couldn't be worse." There was a time some months ago, when weariness and disappointment, and the feeling that Britain was ailing while other countries were reasonably prosperous, were causing a revulsion of feeling towards the Protectionist experiment among British industrialists. But subsequent events have done much to check or even reverse that trend of opinion, and we trust that the new campaign, if conducted in the educational rather than the party spirit, will do much more. For it is beyond doubt that business circles have been profoundly impressed by the spectacle of such great Protectionist countries as the United States and Germany wallowing deeper in the economic slough than Free-Trade Britain. And the explanation of this instructive phenomenon offered by Mr Baldwin, presumably after consultations with his economic advisers, is palpably too thin. Mr Baldwin admits that Protectionist nations are worse off than Britain. "But," he exclaims, "the slump hit Britain first," because of her defenceless Free Trade position. It would be just about as reasonable to argue that because A was a non-smoker and caught a cold, and B and C, who were heavy smokers, afterwards caught worse colds, that therefore heavy smoking was the height of wisdom. The simple fact is that the time has gone for Mr Baldwin or anyone else to pretend that Protection is a panacea for any country, least of all Britain. Facts have opened the eyes of the world, and the pretence can no longer hope to gain the acceptance even of the credulous.

Evidence that the eyes of the world have been opened is abundant. The Protectionist world was not quite sick enough in 1927 to be ready to swallow its pride and face the truth about tariffs. To-day it is very sick, and many happenings, such as the recent discussions at Geneva, the Conference of the International Chamber of Commerce at Washington, and the tone of the comments upon these debates in the Press of the United States, and, indeed, of the whole world, reveal a growing and a spreading recognition of the home-truth that the world can only hope to emerge from the present crisis through co-operative effort, in which the foremost part must be played by a constructive attempt to build up international trade, and free the stream of commerce from the tariff dams which now obstruct it.

With this awakening in obvious process, with the statesmen of Europe almost feverishly engaged in the search for a solution of Europe's tariff problems, the moment is as unpropitious as any could possibly be for an attempt to add Britain to the list of economic war-

farers. For it is by virtue of our Free Trade position that this country, and this country alone, derives the prestige and opportunity to influence the counsels of the nations into saner economic channels. Yet this moment is chosen by Lord Beaverbrook to urge that we should cut adrift from Europe and shut ourselves inside an imperial tariff wall, and by Mr Baldwin for launching a Protectionist campaign. A counter-campaign was urgently needed, and it is good that it has been quickly and energetically launched. The logic of the facts is so powerfully behind it that it will succeed. But its success will be the greater if its protagonists frankly admit, as Mr Lloyd George admitted at its inauguration, that Free Trade by itself cannot cure all present ills. Free Trade, or tariff abatement, is part of a wider policy of international co-operation and appeasement in the political as well as in the economic sphere. Other counts in that policy must include honest work for the international reduction of armaments, an enlightened monetary policy, and the readjustment of the war debt situation. Economic policy must go hand in hand with foreign policy. The vindication to the world of Britain's adherence to Free Trade will ease progress towards a relaxation of tariff warfare, and such abatement will mark the beginning of the return of international confidence, upon which the revival of economic activity in the first place depends.

A STUDY IN MARKET CONTROL.

THE almost unprecedented condition of the commodity markets during the past two years has roused an unusual degree of interest in the question of organised control and organised selling. No more scientific contribution has been made to this subject than the studies published from time to time by the London and Cambridge Economic Service, and the monograph on rubber restriction by Mr J. W. F. Rowe, which appeared last March, is deserving of particular attention.

Mr Rowe briefly outlines the history of the Stevenson Plan, which need not be recapitulated here, and then sets to work to examine it, from the point of view both of rubber producers and of consumers, in order to extract from it all that may be learned about the pros and cons of restriction in general and about the particular pitfalls against which any particular scheme should guard. Addressing himself first to the question whether restriction was necessary at the end of 1922 in order to prevent serious financial losses to the industry, Mr Rowe makes a careful, though admittedly very approximate, calculation of the probable excess of potential production during the restriction years over actual absorption. When these results are qualified by reference to the effects of restriction on consumption, the conclusion emerges that the position would have steadily improved after 1923 and equilibrium might very well have been reached in 1925, so that the case for restriction really rests on the fact that the continuation of low prices throughout 1923 would probably have ruined the whole Chinese community in Malaya. The Malay smallholders, in Mr Rowe's view, would have survived, and the European estates would probably have suffered no more than most other industries suffered during 1921. Mr Rowe therefore concludes that, while the absolute necessity of restriction may be doubtful, it was, on the whole, desirable, though it would have been of far greater value had it been introduced twelve months earlier.

The next question is whether the purely mechanical method of regulating the price by a sliding scale was preferable to a more elastic method. Undoubtedly the method actually adopted proved insufficiently elastic, and did not allow of the release in 1925 of large enough quantities of rubber to meet the boom conditions and curb the exaggerated rise in prices. On the other hand, it had the advantage of certainty; a more adaptable method, even if a satisfactory person or body of persons could have been found to fix the percentages from time to time, would have had the great disadvantage that rubber users would have had far less foreknowledge of the probable course of prices. Mr Rowe suggests that the

difficulty of inelasticity under mechanical regulation could have been met if the Government had held emergency stocks to be released only at specified prices, though he emphasised the fact that really satisfactory working could only have been secured by enlisting the co-operation of the American rubber manufacturers. This would admittedly have been difficult, for the Rubber Growers' Association had always ignored the consumer, a mistake the danger of which is very well illustrated by the history of this experiment.

After careful consideration, Mr Rowe reaches the conclusion that, until the last year of the restriction, standard production was on the whole fairly assessed, and that the pivotal price of 1s. 3d. was approximately right. The raising of this price in 1926 to 1s. 9d., on the other hand, he denounces as a foolish attempt to turn the scheme into a mere monopoly, only explicable by the incredible blindness of the London rubber interests to the immense increase in Dutch native rubber planting. By 1926 enough was known of these new plantings to show that restriction in British territory ought to be terminated with all possible speed, and even if that necessity were not appreciated there was little justification for attempting to maintain the price at 1s. 9d.

Of all the restriction schemes of the last few years, the Stevenson Plan attracted the most widespread interest, for the consumer, as represented or misrepresented by a certain section of the United States Press, became so vocal during 1926 that American newspaper readers might have been pardoned for thinking that the matter was becoming a primary issue of international politics. Justice cannot be done in a brief summary to Mr Rowe's careful and impartial analysis of this question, from which it appears that much of the bitterness was probably due to a serious misunderstanding between the Rubber Association of America and the R.G.A. as to the circumstances in which the Colonial Office intended to exercise its discretionary power of ordering additional releases of rubber. The details of the subsequent diplomatic negotiations have not been made public, but it seems clear that the United States Government were anxious to avoid having too great political importance attached to them, and when they were abandoned as fruitless the United States adopted a purely defensive policy from which Mr Hoover, who framed it, expressly excluded all suggestion of trade reprisals.

The two most important weapons of defence were economy in rubber consumption and the use of reclaimed rubber, and the success attained under these heads is an object lesson to the organisers of restriction schemes as to the danger of losing sight of the consumer when laying their plans. It is difficult to assess the effect on the consumption of rubber of the vigorously prosecuted conservation campaign, as there was a simultaneous check imposed by the boom prices, but Mr Rowe calculates that the campaign reduced the amount of rubber used in 1926 by not far short of 30,000-50,000 tons. The part played by reclaimed rubber was more substantial. The maximum ratio to crude had been attained in 1917, when the price averaged about 2s. 10d. and the amount of reclaimed was 57 per cent. of the consumption of crude rubber, but when the price fell to an average of about 9d. in 1921-22 the ratio still remained as high as 19 per cent., which ought to have drawn attention to the fact that reclaimed rubber has some merits of its own. In 1925 the absorption of reclaimed reached a ratio of 35 per cent., a fact which suggests that there must have been in existence a reserve of plant for its manufacture. In 1926, when the price of crude averaged nearly 2s., the ratio was 45 per cent., and the next year it was 50.5 per cent., though the average price was down to 1s. 6d. Even in 1930, with an average price of less than 6d., it remained over 42 per cent. Though there is little doubt that the use of reclaimed was growing in any case, it would not have expanded nearly so rapidly without restriction and Mr Rowe suggests that if it had not been thus stimulated the United States would have required at least 150,000 tons more crude rubber during 1925-28. During those particular years, he considers it to have been more inimical to the scheme than was the new planting in the Dutch East Indies, though this

position would have been reversed as the new areas came into bearing and the scope for additional use of reclaimed became exhausted.

The other two devices adopted in the United States as a defence against the restriction scheme were less effective. Mr Firestone started a movement for planting new areas outside the probable sphere of restriction; but, though the United States Rubber Company and the Goodyear Company control considerable planted areas, this form of investment has not gained much ground in the United States. Finally, an attempt at organised buying was made by the formation of the Rubber Buying Pool in 1926, but at present the scanty information available leaves its history very much in doubt, and while American manufacturers believe that it had a considerable influence on prices, British producers appear to consider that it was of little importance.

Scarcely less remarkable than the indifference which British rubber producers displayed towards the doings of the consumer in the United States was their blindness towards the development of native planting in the Dutch East Indies. This was already well under way before restriction was adopted, but the R.G.A. seem to have had no idea of the extent of the area involved. In the earlier years this was understandable, since the Dutch themselves did not begin to wake up to it until 1923; but even in 1925, when the Dutch fully realised the situation and its implications, if the British planters in Malaya had recognised it themselves they completely failed to convince the City.

Probably some of the incredulity of Mincing Lane, where the importance of the growth in Dutch native rubber planting was concerned, was due to the wide differences between the economics of estate and native rubber growing. Space does not allow of a résumé of Mr Rowe's most interesting account of the methods of native rubber growing, but the essential points of which the British producers appear to have lost sight are two: the dependence for increase of output beyond a certain point upon the supply of immigrant labour from Java, the elasticity of which supply is a complicated function of many variables; and the fact that as the supply of land is almost unlimited and the planting of rubber largely a by-product of rice growing, the Dutch native can afford to increase his yield per acre by methods which on a European estate would in the long run be uneconomic. It was thus unsound to argue, as the British rubber growers apparently did, that because new planting had virtually ceased in 1920-22, the output of Dutch native rubber in 1926 and 1927 was not likely to be higher than in 1925.

As to the probable importance of Dutch native rubber in the future, investigators seem to be fairly well agreed that by 1935 a potential capacity of over 300,000 tons will have been reached, but it seems unlikely that more than half of that will actually be realised unless the price is very high. Mr Rowe's own view is that, with conditions as they were last spring, the potential output might be nearly attained at a price of 1s. 3d. to 1s. 6d.; but that if the price of rubber were to rise without much change in other prices and in the depression in Java, a price of 10d. might call out a very large volume.

Immediately after the termination of restriction, the outlook for both British and Dutch estates was heavily clouded by this menace of native production, for it seemed as though no price which was sufficiently low to discourage fresh native planting would be high enough to enable average estates to pay their way. Meanwhile the Malay estates were giving a surprisingly high yield, which was at first explained away as a temporary result of the enforced resting during restriction, but which, it gradually became apparent, was nothing of the sort, but the result of a permanent improvement in estate technique. During the restriction period the reserve of labour which could not be employed in direct production was occupied in drainage and other works of permanent improvement whose benefit is now being felt. At the same time, experiments in methods and organisation of tapping have yielded substantial economies, and these, together with the effects of extra resting, have permanently reduced estate costs per unit to such an extent that, writing last March, Mr

"Skandinaviska"

—a centre for transactions in Scandinavian and Baltic currencies.

Phone Stockholm 0101

SKANDINAVISKA KREDITAKTIEBOLAGET

Rowe estimated that the full normal costs, allowing for proper expenditure on cultivation and upkeep, of some 90 per cent. of the output of Malay estates would be covered by a price of 6d. Thus, whereas in the later years of restriction it looked as though the scheme was to produce the effect of making rubber "go native," the actual result has been entirely the reverse, and though native rubber still remains a very important factor—about two years ago the R.G.A. estimated native acreage at nearly 50 per cent. of the whole—the effect of restriction has been a very definite improvement, at any rate for the time being, in the position of estate relative to native cultivation.

The present prospects of restriction of rubber output are obscure. The Maxwell scheme, which was considered by the conference of British and Dutch representatives last March, has not found approval with the Dutch growers; but it is still possible that some agreement may be reached. Even if these were no further prospect of restriction in this particular industry, the lessons brought out by Mr Rowe's analysis would be of value in connection with similar schemes in other branches of production. The most important warnings of general application which may be gathered are the danger of neglecting to enlist as far as possible the co-operation of the consumer; the still greater danger of neglecting to watch the activities of the consumer and to study the possibilities open to him of economising or using substitutes; the necessity of taking into account every possibility of the exploitation of alternative sources of production; and, finally, the possibility that restriction may have far-reaching effects on the future economics of production. As far as the future of rubber itself is concerned, two further considerations have to be borne in mind: one is that, owing to the length of time which elapses before a newly-planted rubber tree comes into bearing, growers who sow the wind of restriction only begin to reap the full blast of the whirlwind some eight years after their scheme has been wound up; the other is the fact that as the major part of the output of rubber is used for motor tyres, its consumption is less influenced by its price than by the state of the motor industry, and is, moreover, liable to be revolutionised at any moment by technical inventions in tyre manufacture. In short, there can be few commodities which present such serious difficulties to organised regulation of the market.

SYNDICALISM IN SPAIN.

(BY A CORRESPONDENT.)

It appears that Leon Trotsky is not actually being encouraged by the Spanish Government to take up his residence in the new Republic. The mere possibility, however, was enough to horrify the ordinary humdrum Spaniard, whose attitude to Communism is that of a child scared by bogies. This almost superstitious fear has been greatly intensified by the recent unfortunate outbursts of extremist violence, so that the renewal of the dictatorship's connection with the Russian naphtha syndicate, though eminently good business, may turn out to be bad politics. Travellers in Spain, struck by the disproportionate amount of literature dealing with Soviet Russia which is displayed in the bookshop windows, may easily conclude that the country is on the way to becoming a prey to Bolshevism. Supporters of the Monarchy, moreover, are not above cultivating the Communist myth

as their most powerful means of discrediting the Republic, and their gloomy prognostications are given regular currency by the foreign Press. It is none the less a myth. Of Communism in the proper sense of the term, promoted from or by Moscow, there is so far very little trace in Spain, and it is a pity that any impression to the contrary should have been created by the facile practice prevailing everywhere, but conspicuously in Spain, of lumping together under the term "Communism" workers' organisations representing fundamentally opposite social ideals or methods.

Barcelona is represented as the focus of this "Communist" movement (now, we are told, financed from Russia via London and the Argentine), partly on account of its industrial importance and partly on account of its reputation for "revolutionary" violence. The dark deeds associated with the Conference Nacional del Trabajo (representing the syndicalists as distinct from the Socialist General Union of Workers) in the years 1910-23 are recalled, and many a bourgeois of Barcelona will tell you to-day that the period of "Communist" strikes and terrorist direct action will begin again as soon as the political situation offers the opportunity. It is the old confusion of the unthinking between syndicalism, originally a French shoot which has been grafted on the indigenous trunk of anarchism (the obverse of Spanish individualism) and extreme State Socialism, a Russian phenomenon which is entirely foreign to the Spanish mode of thought and Spanish conditions, and stands utterly condemned among the workers ever since the exposure by Fernando de los Rios, the present Minister of Justice, which was published nearly ten years ago.

Now the revival of Syndicalism, with its doctrine of direct action, in Catalonia is a reality. The *Sindicato Unico* has won back most of the ground that was cut away from under its feet by the exertions of General Primo de Rivera, and more especially his right-hand man, General Martinez Anido, the ruthless Civil Governor and later Minister of the Interior. Now, as before 1923, the Spanish Socialist Party, so strong and well organised in the rest of Spain, can make no headway there. Indeed, the only competition which the workers' leaders have to meet in that province is that of the *Sindicatos libres* (Free Syndicates) implanted by the Dictatorship and therefore doomed to obloquy, whatever their merits, and, in the country districts, a certain number of specifically Catholic syndicates.

The *Sindicato Unico*, as its name implies, is one big union organised from the bottom upwards as a network of local bodies, in contrast to the General Union of Workers, which receives its orders from a central executive. It has begun to put forth its tentacles even in the *Casa del Pueblo* in several big towns, hitherto monopolised by the Socialists both as a training-ground and as a field of manoeuvres. Thus Syndicalists and not Communists are at the bottom of the disturbances, which have compelled the Government to take strong measures and to maintain martial law in Andalusia. The leaders of the Socialist Union of Workers, on the other hand, have all along made desperate exertions to prevent their men "disgracing the Republic," and on the whole have been successful.

The "political" and certainly non-industrial strikes carried out last November were also in the main a show of strength by the respective bodies that claim the workers' allegiance. The demonstrations of the *Sindicato Unico* in Barcelona indeed assumed such an ugly form that the Berenguer Government made every effort subsequently to cut its claws. Various important centres of the *Sindicato Unico* were closed by Government orders, and although the country was now supposed to be enjoying all its constitutional guarantees a pretext was found to keep them closed until after the municipal elections. This caused considerable heartburnings, and, of course, the Syndicalists' propaganda activity continued unchecked.

The *Sindicato Unico* is professedly non-political. It leaves elections severely alone and concentrates on massing the forces of labour to resist any attack on wages or labour conditions. Even so the various Catalan factions

are busily engaged in competing for its support. The syndicate is determined to retain for its members their share of the fat profits accruing to Catalan industry in the war and early post-war years, whatever may be the changes in the employers' prosperity owing to the world slump. And, as unemployment figures in Barcelona have now risen to over 40,000, there are all the symptoms of a serious industrial crisis in which the power of the *Sindicato Unico* may well be decisive.

At present the "anarchial" note of the syndicalist revolutionary music is predominant. Many close observers of the situation, however, detect signs of a split. At the municipal elections, for instance, the candidatures (in Barcelona) included that of a "Workers' and Peasants' Group," which was an offshoot of this syndicalism and was hailed as a "Communist" candidature. In fact it was fiercely opposed by the official Communist organisation, and the leaders were excommunicated in the best Stalin tradition.

Whether this small nucleus of authentic Communism is destined to gain by this dissidence and to fulfil the predictions of the prophets of woe it is too early to say. The disturbed political situation of Spain in the early days of the Republic is undoubtedly a standing temptation to any of the Bolshevik leaders who have any time to spare from prosecuting the Five Years Plan.

THE UNEMPLOYMENT INSURANCE REPORT.

The first report of the Royal Commission on Unemployment Insurance, published this week, consists of a Majority and Minority Report. The first is signed by Judge Holman Gregory (Chairman), Mr Henry Clay, Dr. Hetherington, Mr Lascelles, and Mr H. M. Trouncer—the signatures of Mr Clay and Dr. Hetherington being subject to the proviso that, in their view, the recommendations "designed to relieve the present burden on the national finances might reasonably in the present circumstances of industry have been carried further." The Minority Report is signed by Mrs Rackham and Mr Asbury.

The Majority Report.

The Majority Report begins with the observation that, by its terms of reference, the Commission was charged with the task of making a wide inquiry into the whole scope of unemployment insurance and the arrangements which should be made outside such a scheme for able-bodied workers unemployed. The signatories would have preferred to present in one Report their conclusions on the whole range of questions. In response, however, to pressure from the Government they have issued this Interim Report on matters represented to them as urgent, namely,

- (1) The increasing indebtedness of the Unemployment Fund out of which unemployment benefit under the Insurance Scheme is paid;
- (2) the increasing cost to the Exchequer of transitional benefit; and
- (3) the suggestion that unemployment benefit is being paid to certain classes of persons in circumstances which the Unemployment Insurance Scheme was never intended to cover.

Before coming to the immediate position, the Report reviews briefly the extent of post-war unemployment and the development of unemployment insurance. With regard to the average level of unemployment, it is observed that the average percentage of the insured population recorded as unemployed at the end of each month since December, 1920, is 12.2, and that since December, 1930, it has been 20 per cent. or over. The present excess over the average is ascribed to the effects of the world-wide depression of the last eighteen months, but the Report remarks that the percentage of 12.2 "represents a persistent and obdurate problem, and, in our view, it would be unwise to treat this experience of the last ten years as transitory, or to assume that it overvalues the risk that has to be provided for in the next few years."

Moreover, "the indications are that unemployment will not fall appreciably in the next few months below the present level. What is necessary

now is to adjust the finances of the Fund to present circumstances, and for the purpose of this Report we do not feel justified in anticipating an average live register of less than 2,500,000."

The Report then goes on to consider the history of the Unemployment Insurance Fund, traces the steps by which post-war Acts progressively departed from the principles of the 1911 Scheme, and shows how the gradual widening of benefits and relaxation of conditions of qualification jeopardised the Fund's solvency, notwithstanding the fact that since 1930 the whole cost of "transitional" benefit has been met by the Exchequer.

Having detailed the various changes made in the rates of contribution and benefit since 1920, the Report finds that, under present conditions, the income and expenditure of the Unemployment Fund balance with a live register of 1,275,000, of whom 900,000 would be qualified for insurance benefit and the balance would consist of persons claiming transitional benefit, uninsured persons and insured persons without a title to benefit.

Ordinary Benefit.

On the basis of an average live register of 2,500,000, the position is as follows:—

Income.		Expenditure.	
	£		£
From employers ...	15,650,000	To claimants ...	61,250,000
From employed ...	13,650,000	Additional payment for dependants ...	13,250,000
From the Exchequer ...	14,850,000	Cost of administration ...	5,000,000
Other receipts ...	400,000	Interest on debt ...	4,500,000
Deficit ...	£39,450,000		
	£84,000,000		£84,000,000

Excluding transitional benefit, the outstanding indebtedness of the Fund proper on May 31, 1931, was £82,810,000, the limit of borrowing under existing legislation being £90 millions. In the circumstances of the present time, the attainment by the Fund of solvency

"appears to us to be an objective which cannot be fully realised without much greater changes in the provisions of the Scheme than we are prepared to recommend." Nor do we think that its attainment is the sole or even the principal consideration to which we should have regard. Nevertheless, we believe it to be of great importance that immediate measures should be taken to arrest the deterioration of the Scheme."

It is, moreover, even more important to preserve the principle of insurance. Under a genuine insurance scheme, and within the limits of the payments contemplated by the scheme, it is possible to pay benefit without reference to needs or without great inquiry. No other form of assistance can be given with this freedom. If payments are entirely at the expense of the State and without a limit of time, the State is compelled to take drastic steps to protect itself.

There are only three ways by which the deficit can be immediately reduced, namely, (1) by a reduction of the period for which benefit is paid; (2) by an increase of contributions; (3) by a reduction of benefit. To achieve the desired result by any one of these methods would require most drastic changes, and the Majority Commissioners therefore decide that they must employ all three. The period of benefit is to be reduced to twenty-six weeks; this will cut off one-seventh of those now drawing benefit and transfer them to transitional benefit. It will save the fund about £9 millions and transfer it to the Exchequer.

Increase of contributions is the most simple and direct way of strengthening the Fund, but for various reasons it is not desirable to do this very greatly at present. In the first place, the contributions of employers are a charge upon trade and industry regardless of profits or the condition of the market; in the case of the workers, though there is a real ground for increasing their contributions seeing that liability to insurance is so much increased, it is not possible to contemplate taking much more from very low wage earners.

It is therefore proposed that in the case of adult male workers contributions should be raised by an additional 1d. from the employer, 2d. from the worker, and 1½d. from the Exchequer with appropriate increases from other classes. This will yield an additional £9 millions of income.

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital and Reserve Funds, £3,600,000.

Head Office: 38, St. Andrew Square, Edinburgh

OVER 200 BRANCHES IN SCOTLAND

LONDON OFFICE: 38, Threadneedle St., E.C.2

Every description of Banking Business transacted.

Finally, it is proposed to reduce benefit, in the case of a man from 17s. to 15s. a week, a woman from 15s. to 13s., adult dependents from 9s. to 8s., but leaving the payments for a dependent child unchanged at 2s. These are "the most favourable rates of benefit which the income of the Fund can provide."

Commenting on these proposals, the Commission observe that it has never been laid down in principle that benefit should represent full maintenance, nor that the worker should be relieved from relying on his own resources or on his savings.

Secondly, the present rates of benefit were fixed when there was less unemployment and when prices were higher. Taking the case of a family of a man, a woman and two children, the present rate is 30s. a week; the Commission's scale would give 27s. a week. In 1924 the payments due to a similar family was 27s., which at the then cost of living is equal to 22s. 8d. to-day.

Transitional Benefit.

Considerable savings could be effected if on the expiry of transitional benefit the beneficiaries were transferred to the Poor Law Authorities, for experience has shown that when benefit is disallowed, many of those concerned do not apply for Poor Law relief. Also, scales of relief are in the main below the scales of benefit. On the other hand, such a transfer means that a burden which is now evenly spread would be concentrated on local authorities, and in certain areas would constitute an insupportable burden on the rates. The Commission is therefore not prepared to recommend that transitional benefit should lapse, in accordance with the present law, on October, 1931, but thinks that the period should be again extended.

They point out, however, that there is no reason why transitional benefit, which is a direct relief charge upon the State, should be paid regardless of the means of the recipient. For the moment, however, they confine their means test to certain classes, viz.:—Single persons residing with relatives from whom they can reasonably expect support; married women and persons in receipt of pensions (other than war disability pensions) or fixed incomes other than from savings. These classes of claimants for transitional benefits should be required to prove that having regard to their circumstances, it is expedient that benefit should be paid to them.

The Commission does not propose any different rate for transitional benefit as compared with insurance benefit—at all events at this stage—but wants the qualification for benefit made more severe than at present by providing that the thirty qualifying weeks of work, which may at present have been worked at any time in the past, should have been worked within the last six years. This will eliminate persons who have really ceased to be in the industrial field.

Again, it is proposed to modify the conditions affecting those who are offered work after a prolonged period of unemployment. The Report doubts whether the present rule is sufficiently effective, under which, after a period an offer of work cannot be ruled out as "unsuitable" merely because it is in a form of employment other than the claimant's ordinary occupation.

We accordingly recommend that the form of condition which was in operation for "extended benefit" before the 1927 Act should be reintroduced for transitional benefit, i.e., that transitional benefit should not be paid to workers who refuse to accept on fair

terms and conditions work other than that to which they were accustomed, but which they are reasonably capable of performing."

Anomalies.

The Report then proceeds to deal with abuses and anomalies, the chief of which relate to intermittent, short-time and casual workers, married women and seasonal workers. As regards intermittent workers proper, namely, those who habitually earn their living on one or two days of the week, e.g., week-ends, at high wages, it is suggested that they should not be regarded as unemployed if they are carrying out this intermittent work unless they can show that they are normally employed in regular insurable work during the other days of the week. This, incidentally, implies that they should be permitted to apply for a certificate of exemption from contributions.

Secondly, special measures may be needed for dealing with casuals; but it is proposed that as an interim measure they should be treated as short-time workers.

There remains the case of short-time workers. The Commissioners recognise that the system of short-time has advantages in dealing with temporary unemployment, and do not attempt at this stage to do more than deal with that part of the problem where workers are able to earn in part of a week relatively high wages. The change proposed is that the present method should be subject to an over-riding limitation of the amount of benefit based on the formula that the amount of part-time benefit actually paid should not exceed a full week's benefit minus half the wages actually earned. Examples are given showing the working of this rule.

Next it is suggested that a married woman should be entitled to benefit only if she has satisfied the statutory authorities—

(a) that she has not abandoned insurable employment; and

(b) that having regard to her industrial experience and to the industrial circumstances of the district, she can reasonably expect to obtain insurable employment in the district in which she is residing.

Finally, a seasonal worker should be entitled to benefit in the off-season only if he can prove to the satisfaction of the Court of Referees—

(a) that he has in the past worked in the off-season for a reasonable time in some insurable occupation; and

(b) that, having regard to the industrial circumstances of the district, he can reasonably expect to obtain insurable work in the off-season in the district in which he is residing.

The effect of these various changes is estimated to relieve the Insurance Fund to the extent of £5 millions a year.

Finance.

The following summarises the finances of the plan:—

EXPENDITURE OF INSURANCE FUND. (Million £.)	
<i>Present total</i>	84
(Including £4½ millions interest on debt and £5 million administration.)	
<i>Deduct</i> —	
Amount transferred to transitional benefit under 26 weeks' rule	9.1
Savings from lower rates of benefit	8.7
Savings on payment to intermittent workers, married women and seasonal workers	5.0
<i>Proposed Expenditure</i>	61.2
TRANSITIONAL BENEFIT.	
<i>Present total in a full year</i>	35
Add transfer from Insurance Fund	9.1
Deduct savings from lower rates of benefit	3.7
Limitation of qualifying period to 6 years	3.3
Enforcement of means test and other minor changes	3.1
<i>Proposed Expenditure</i>	34.0
Total Expenditure at present	119
Total proposed expenditure	95
Savings	24

Of these savings £12.4 millions are in respect of reduced rates of benefit and £11.4 millions from the other changes proposed.

SOURCE OF FUNDS.

The Report ends with the following observation:—

"The Unemployment Insurance Scheme... has prevented serious distress in a period of unprecedented unemployment. To put the Scheme on right lines for the future is worth some effort and sacrifice. We are convinced that the principle of insurance against industrial unemployment has an important part to play in the adaptation of our industrial structure to changing needs."

The Minority Report.

The Minority propose that no changes should be made until the final report has been completed. They disapprove of borrowing and recommend that the whole of the cost in excess of contributions should be met by general taxation.

They dissent from the proposals to limit the period of benefit, increase contributions or reduce rates; "so long as the rate of unemployment benefit is less than a reasonable subsistence level, any variation in the rate of benefit to take account of variations in the cost of living is irrelevant." With regard to transitional benefit, they object to any stiffening of conditions of qualification. As regards short-time workers, they think that the recommendations require further consideration; they agree with the majority in the proposals for dealing with seasonal and intermittent workers; and Mr Asbury, but not Mrs. Rackham, agrees with the Majority findings in the case of married women.

Notes of the Week.

Parliament Resumes.—The House of Commons re-assembled on Tuesday after the Whitsuntide recess, and immediately proceeded to pass the Electoral Reform Bill by a majority of 50. The proceedings were listless and the attendance of members thin (the Prime Minister and the Chancellor of the Exchequer being prominent absentees), and even a vigorous attack upon the measure by Mr Winston Churchill failed to raise the political temperature. Wednesday was even duller, the Scottish Estimates being put down for that day, and, with this convenient arrangement of business, many English members found it in their consciences to take a Derby Day holiday. Thursday saw a slight revival of interest, the Conservatives protesting against the Government's timetable for the Finance Bill, which measure will occupy practically the whole time of the House for the next fortnight. The greater part of this time will, of course, be devoted to the Land Tax, which is practically the only controversial proposal contained in the Bill. In spite of the fact that this tax has not aroused, either in the Labour or in the Liberal ranks, any of the fervent enthusiasm which Mr Snowden hoped for, the passage of the Finance Bill cannot be regarded anything but a certainty, although substantial concessions may be made by the Government in the shape of exceptions from the Land Tax. Indeed, the progress of the Finance Bill will be completely overshadowed by the question of the reform of Unemployment Insurance, which now takes the centre of the political stage. As regards the position of the Government, its tenure of office has clearly been strengthened by the proceedings of the National Liberal

Federation, which demonstrated that an overwhelming majority of representative Liberals from all parts of the country definitely approved Mr Lloyd George's policy of independent benevolence towards Mr MacDonald's administration.

The Honours List.—Mr MacDonald has kept up his reputation for producing interesting Honours Lists, and the one issued on the King's birthday on Wednesday is both laudably free from rewards for purely party services and marked by well-deserved recognition for outstanding work in the realms of business, science, art, music and the drama. So far as the City is concerned, the most noteworthy award is the knighthood conferred upon Mr Archibald Campbell, whose services as Chairman of the Stock Exchange Committee are discussed on a later page in our Stock Exchange section. Among other honours given in the realm of business and economics, the most prominent are the baronetcy conferred upon Sir Herbert Gibson for his services to the recent British Empire Trade Exhibition at Buenos Aires, and the appointment as Companion of Honour of Mr B. S. Rowntree, who is as well known for his social and industrial studies as for his recent constructive work in connection with the unemployment problem. Expert services to the cause of agriculture are recognised in the knighthood received by Mr W. C. Dampier-Whetham. No new peerages are conferred, which was somewhat unexpected in view of the obvious temptation to strengthen the meagre representation of the Government in the Upper House. Among the very few politicians to receive awards is Mr Ben Turner, recently Secretary of Mines, who is knighted.

Church and State in Italy.—The recent outburst of anti-clericalism in Spain has found, though in a distinctly different way, a curious parallel in Italy. Last Saturday, Signor Mussolini instructed the Prefects, acting under the police code, to dissolve the local groups of the *Azione Cattolica*, thereby provoking protests from the Vatican. The motive underlying this step on the Government's part is somewhat obscure. Notwithstanding such symptoms of discontent as emerge from the so-called conspiracy of the Milan Liberals, whose leaders, Dr. Bauer and Signor Rossi, were sentenced, on Saturday, to twenty years' imprisonment, there is no ground for thinking that Fascismo is losing its hold on the imagination of a large section of the Italian people, or that this is a case of a dictatorship becoming more tyrannical through consciousness of internal weakness. On the contrary, the Italian domestic loan has been a success; the country is working hard in the face of the world economic depression; and for all the lack of "liberty of mind," there is no evidence that the Duce's popularity is being seriously impaired. It has been suggested that the official suppression of the *Gioventù Cattolica* was motivated by the desire to obviate the possibility of hostile demonstrations by young Fascists against that organisation. But it seems doubtful whether the alleged Fascist indignation at the supposed attempt of the Church to usurp Fascismo's functions, particularly in relation to workers' welfare, would have developed without Government encouragement. The truth, we imagine, is that Signor Mussolini decided, at the risk of offending Catholic opinion, to make it clear once more that he, and he alone, is the patriarchal head of the nation. In risking strained relations with the Vatican, he may prove to be unwise, but the whole affair appears to have received in the Press outside of Italy somewhat greater publicity than its importance warranted.

The Roumanian Elections.—Professor Jorga appears for the moment to be firmly seated on the parliamentary saddle. With the assistance of Dr. Argetoianu he had succeeded in welding together as a fairly cohesive "election bloc" the Old Liberals and the German (Transylvanian Saxons) and Jewish minority parties, together with his own "independent" following; and this "electoral coalition" is reported to have secured on Tuesday 52 per cent. of the votes cast. Under the Roumanian election law, which gives a bonus in seats to any

party or bloc which obtains 40 per cent. or more of the votes, Professor Jorga's administration will have 70 per cent. of the seats in the Lower House. Although there is a suspicion, at least, that the elections were to some extent "made," the result is clear enough evidence of the National Peasant Party's loss of popularity in the country; and the large decline in the aggregate votes cast appears to point to a distinct degree of apathy on the part of the electorate. In any case, Professor Jorga has now his opportunity to get on with the business of governing without being handicapped by the absence of an adequate working majority in Parliament. His ability to hold together his bloc (he appears disinclined to rely on the distribution of the sweets of office as cement) will depend greatly on the policy which he frames, particularly in the sphere of public finance, between now and Parliament's assembly next autumn.

The Credit-Anstalt.—During the past ten days further important developments have occurred, and there is now good ground for hoping that the corner has been turned. On May 28th the Austrian Parliament passed a Bill empowering the Government to guarantee all credits and advances granted to the Credit-Anstalt from that date onwards until June, 1933. The next day the B.I.S. officially announced that the directors of the bank had agreed upon measures which might come into force at any moment. In addition to the B.I.S., ten of the leading central banks had agreed to give a credit in foreign currency to the Credit-Anstalt, which the latter might use as the need arose. The B.I.S. expressed its confidence in the ability of the Austrian National Bank, with the assistance made available, to carry through its normal business and thus assure the stability of the Austrian currency, and announced that a representative of the B.I.S. was proceeding to Vienna to establish personal contact with the Bank. Early this week a further move was made, for the informal committee which was appointed in London last week has been merged in a strong international committee, including Mr Lionel de Rothschild, Sir Robert Kindersley, Mr C. F. Whigham from the old committee, and also Mr J. H. Clannon of the Chase National Bank, Mr D. B. Grant of the Guaranty Trust Company, Mr L. S. Chandler, junior, of the International Acceptance Bank, Mr A. Schupbach as representative of French banking interests, and Mr A. Beneduce to represent Italian interests. Members representing Dutch, Swiss and German interests will in all probability join the committee in due course. Mr Davies, the secretary to the informal committee, has become secretary to the new committee, whose first action has been to send M. Van Heugel, a managing director of the *Amsterdamsche Bank*, to Vienna with full powers to act for the committee. Meanwhile, at the invitation of the Austrian National Bank, Professor Bruins of the Netherlands Bank has proceeded from Basle to Vienna, where he is ready to act as adviser to the National Bank. Furthermore, the American Reserve Banks have now agreed to join in the credit arrangements in favour of the Austrian National Bank, and it is suggested that the exact help given will take the form of the purchase of commercial bills. As during the fortnight ended May 21st the National Bank's bill portfolio expanded from 69 to 350 million schillings and its reserve ratio dropped from 83 to 63 per cent., such assistance might be very valuable. In any case, it is clear that active and general assistance is now being given, and one great danger, namely, the withdrawal of foreign credits and balances at the end of May, has already been staved off. The main need now is time and patience, but now that international aid has been readily forthcoming, there should be no temptation to press matters. Regarded as a proof of the reality of international co-operation in the spirit of Basle and Geneva, the episode, regrettable though it is, has its brighter side.

The Australian Conversion Plan.—Now that the Premiers' Conference has had to get down to details, it is becoming clear that the problem of converting the Australian internal debt to a 4 per cent. basis is not so simple as it appeared when the broad principle was dis-

cussed. The first point that has had to be decided is the currency of the new loans. Sir Robert Gibson has declared emphatically that Australia must have at least a seven-year breathing space, and the banks further recommended that the currency of the loans should be spread over thirty years. In the end, the loans are to be divided into ten maturities, namely 7, 10, 13, 16, 19, 22, 24, 26, 28 and 30 years, but Professor Giblin has pointed out that this decision departs from one of the original recommendations of the Copland Committee, which was that the whole loan should be redeemable at the Government's option at the end of ten years, on the ground that by that time money may be cheap enough to permit of such an operation. To meet this, the Conference has now decided that there shall be an over-riding option of redemption in 1950. The next detail to be settled was that of the interest on the new loans. Latest cables state that 5½ per cent. stocks, amounting to £450,000,000, are to be converted into 4 per cent. stock at a discount; 5 per cent. stock, amounting to £45,000,000, into 3½ per cent. stock at par or into 4 per cent. stock at a discount, at the holder's option; and securities of £61,000,000, bearing interest at less than 5 per cent., into 3 per cent. stock at a premium or 4 per cent. stock at a discount, again at the holder's option. Holders of tax-free and interminable issues are to be invited to convert into new securities subject to a 22½ per cent. interest reduction, with concessions to the holders of pre-war stocks, and special short-term conversion securities are to be issued to meet the case of overseas trading balances now temporarily invested in short-term stock. Obviously further details have to be discussed regarding both these difficult cases, and in general there are numerous gaps still to be filled in. Meanwhile it is now less certain that these proposals *en bloc* are creating quite so favourable an impression as seemed likely a week ago. The Conference has adhered to the original proposal to impose a surtax of 25 per cent. on interest from unconverted securities, and this element of compulsion has evoked the criticism that the whole scheme would have a better chance of success if it were based solely upon an appeal to Australian patriotism and to the needs of the situation. Further criticism is made to the effect that while the conversion side of the economy proposals is now crystallising, the schemes for reducing other forms of Government expenditure are still nebulous and amorphous. It is clearly essential that these too should take shape without delay. Finally, the attitude of the banks is not entirely clear. A week ago Mr Scullin stated that "financial institutions holding practically half the bonds were willing to convert," but later cables suggest that financial institutions are still reserving judgment. Obviously, if the scheme is to be a success, the sacrifices it imposes upon the bondholder must be shared by other sections of the community, and the Government ought to place this at once beyond all possible doubt.

Our Index Number.—Movements of commodity prices in May unhappily confirmed the indications noted a month ago. At 63.6 our index number shows a fall of 2.8 per cent., as compared with a decline of 1.2 per cent. in April. Thus the period of comparative stability between January and March of this year has proved short-lived. Recent fluctuations of the five group figures are given below:—

AVERAGE, 1927 = 100.

	May, 1930.	Feb., 1931.	Mar., 1931.	Apr., 1931.	May, 1931.
Cereals and meat	82.0	66.4	66.9	70.0	69.0
Other foods	79.0	68.0	67.0	66.6	63.6
Textiles	71.1	50.6	53.7	50.8	48.2
Minerals	84.3	76.9	74.5	72.0	69.5
Miscellaneous	84.4	72.7	69.9	68.6	68.2
Complete Index	80.6	66.5	66.2	65.4	63.6

Changes in the cereals and meat group during May were irregular, but the downward tendency of "other" food-stuffs prices was fairly pronounced, and there was a further general "slide" in the quotations for textile

materials and non-ferrous metals. In the miscellaneous group the recovery in rubber was offset by a fall in the price of linseed oil:—

	Inc. (+) or Dec. (−) per cent. compared with			Inc. (+) or Dec. (−) per cent. compared with	
	Month ago.	Year ago.		Month ago.	Year ago.

The next table gives the figures of our index number recalculated as a percentage of the average for 1913:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	159.9	169.9	210.6	145.2	131.5	159.3
" 1928	145.0	149.4	161.7	111.9	119.3	135.1
" 1929	135.6	136.8	141.9	116.2	112.7	127.2
" 1930	113.4	122.9	99.1	101.6	101.5	106.8
End May, 1930	114.7	125.9	109.5	102.5	105.2	110.9
" Apr., 1931	98.0	106.1	78.2	87.5	85.4	90.0
" May, 1931	96.6	101.2	74.2	84.5	84.9	87.5

If 1924 be taken as 100, the current figure of our index number works out at 54.9, as compared with 56.5 at the end of April and 69.4 a year ago. During the past twelve months the decline has amounted to 21.1 per cent.

Miners' Hours at Geneva.—The prospect of agreement in the Coal Mines Commission of the International Labour Conference seems to be growing more remote. On Tuesday several resolutions were passed on conditions in hard coal mines, providing for a 7½-hours day, bank to bank; a maximum of 60 hours overtime yearly; payment for overtime at the rate of 25 per cent. above the ordinary rate; and revision of the Convention, with a view to the further reduction of hours, within three years of its coming into operation. When, however, the question was raised of special provisions for lignite mines, a deadlock was reached, as the German Government insisted on 150 hours overtime for underground and 250 for open lignite mines, against 100 and 150 hours respectively as proposed by the Draft Convention of the I.L.O. This is strongly opposed by the workers and by the Government delegates from hard coal-producing countries, who fear German dumping. On Wednesday Mr Shinwell declared that if the prospects of agreement were no better when the time came for him to return to Geneva from London, whither he was about to repair for the discussions on British miners' hours, he would remain in London. This announcement appears to have caused much consternation, as it is generally felt that without Mr Shinwell's assistance a compromise will be almost impossible to achieve; but when the Commission adjourned for the rest of the week, agreement was not much nearer. Most Government delegates had by then indicated varying degrees of willingness to accept

the Draft Convention, but the German Government delegate was obdurate, and, without German ratification, the adoption of the Convention would be of little use. It is to be hoped that the British Secretary for Mines will not withdraw his co-operation while there is any possible chance of a compromise being reached, for in the adoption of the 7½-hours Convention lies the best hope for the avoidance of a crisis in the British mining industry, with the expiry, in July, of the period for which the Seven Hours Act was suspended.

Dockers' Wages.—At a preliminary meeting of the workers' side of the National Joint Council for Dock Labour, held before the meeting of the Council last Tuesday, it was decided emphatically to reject the employers' proposals for a reduction in the daily time wage from 12s. to 11s. in the larger ports and from 11s. to 9s. in the smaller ports and for a corresponding percentage reduction in piece rates. In conveying this resolution to the meeting of the Joint Council Mr Bevin stated that the fact that rates of wages had not been altered since June, 1924, gave a false impression of the situation, as output had been so intensified as greatly to reduce the money cost of labour. He suggested that a reduction in piece rates would amount to violation of a pledge and would accentuate the old distrust of workpeople of the system of payment by results. In response to the submission of the employers that under the national agreement both sides are compelled to discuss the conditions of industry when requested, the workpeople agreed to enter into a discussion "without prejudice." How much may be hoped for from such a discussion is not clear; an immediate crisis is averted, and fuller examination of the facts may lead to a more accommodating attitude on the part of the dockers' leaders, but if the present excessive burden of port charges on the shipping industry is to be lightened, Mr Bevin will obviously have to be persuaded to modify substantially his present position. The patent weakness of the employers' case is their failure in the past ten years to press vigorously plans for decasualisation.

International Production.—The first quarter of 1931 witnessed a further decline in the industrial activity of most nations. In the following table we have converted the indices of the physical volume of production of various countries to a percentage of the average of 1924:—

INTERNATIONAL PRODUCTION INDICES.
(1924 = 100).

Period.	United Kingdom.	France.	Germany.	Sweden.	Canada.	United States.
	Board of Trade.	Statistique Générale.	Institut für Konjunkturforschung.	Svensk Finanstidning.	Monthly Review of Business Statistics.	Federal Reserve Board.
	(a)	(c)		(b)	(b)	(b)
1929 Average	111.8	127.5	147.4	129.8	166.4	125.3
1930 Average	103.1	129.6	122.1	126.0	141.4	102.1
1930 First qr.	111.0	131.9	135.2	145.3	149.2	110.5

1931 March	...	122.2	101.48	117.3	132.0	92.68

(a) Quarterly index.
(b) Adjusted for seasonal variations.
(c) Partly adjusted for seasonal variations.
§ Provisional.

A comparison of the past quarter with the October-December period of 1930 shows that the recession was most pronounced in Germany and in the United Kingdom. Although France records a sharp decline in the output of her metallurgical and textile industries, the total volume of production in that country shows only a slight decline, and the seasonal drop in forestry and mining in Canada has been partly offset by increased activity in building and public works construction. There has been no further setback in Sweden, and the index for the United States shows a slight increase from the low level of the previous quarter, which is mainly ascribed to an

expansion in the iron and steel, textile and automobile industries. It is noteworthy that the level of activity in the United States and in the United Kingdom is now well below that of 1924. France, Canada and Sweden, however, have been able to maintain their volume of output considerably above that level. The March figures show a slight expansion of activity in Germany, Canada and in the United States, but later information suggests that this improvement has been merely temporary and will not be maintained during the current quarter.

Europe's Timber.—The comprehensive statistical tables of the approximate exports and imports issued annually by Messrs. William Brandt are now available for 1930. From them the following tables are compiled:—

EXPORTING COUNTRIES.

	1929.	1930.
	Standards.	Standards.
Norway	121,000	103,500
Sweden	1,200,000	1,013,000
Finland	1,200,000	900,000
Russia	829,000	965,000
Estonia	60,000	45,000
Latvia	145,000	194,000
Lithuania	22,500	19,000
Poland via Danzig	294,000	320,000
Germany	41,000	65,000
Czechoslovakia	98,500	97,500
Sundry countries	606,000	512,500
	4,617,000	4,234,500

1912 3,970,500

It will be seen from the first table that while Russian exports have risen, Swedish and Finnish shipments have fallen; this tendency is expected to be more pronounced when this year's statistics are recorded, unless something unlikely happens. Polish shipments also increased last year, as they are doing this year. On the importing side the lesser quantities received in the United Kingdom in 1930 reflect the falling off of industrial demand, and it is quite reasonable to suppose that the total receipts will be still lower this year, although larger supplies are likely to come forward from Russia and Poland. France and Denmark took more timber, but Germany is seen

A Special Supplement to
"The Financial News" on
MONDAY, JUNE 8.

to have felt the effects of declining trade, receipts being well below her usual quantities. The imports of timber by "sundry countries" were above the general average of the past six years, and they should increase, for there are possibilities of a much larger trade on the Continent, as well as in South America and even the United States. South Africa is feeling the pinch of bad times, but has kept well up with her European timber purchases. On the other hand, the paucity of European wood shipments to Australia last year is a sad reflection of the economic position in the Commonwealth.

Electricity Production in Germany.—The electrification of German industry has made rapid strides during the post-war period of reconstruction and rationalisation. With the exception of her Southern States, Germany, like Great Britain, is relatively poor in water-power resources, but the large deposits of lignite in Westphalia and Central Germany from which two-thirds of the total output of electricity is generated, proved to be a ready source of electrical energy. The following table shows the output of electricity during recent years by the principal stations in Germany and by all authorised undertakings in Great Britain:—

ELECTRICITY GENERATED IN GREAT BRITAIN AND GERMANY.
(Million Kwts.)

Period.	Germany. (Principal Stations).	Great Britain. (Authorised Undertakers).
1927	12,120	8,234
1928	14,100	9,073
1929	16,620	10,294
1930	15,960	10,914
1930—First quarter	4,320	3,031
1931—First quarter	3,765	3,185

It will be seen that in Germany the peak of production was reached at the end of 1929, whereas in this country, where expansion has been less rapid, the quantity generated continued to rise throughout 1930 and during the first quarter of the current year. Since the beginning of 1930, the German output has shown a progressive decline which strikingly illustrates the severity of the depression in her industries.

Portuguese Stabilisation.—It is announced that the Portuguese Government proposes to stabilise, as from July 1st, the escudo at a rate of 108.25 escudos to the pound. The nominal parity is now 4.50 escudos to the pound, but the exchange has for several years stood at approximately 108 escudos, and so no disturbance should result from the adoption of the new parity. On the other hand, the "official" rate has lately been 99 escudos, and while this has been ineffective there was a suggestion that it might be adopted as the stabilisation rate. Such a course of action would involve some measure of deflation, which would particularly affect Portuguese exporters, and the Government are probably well-advised to select for the new parity the effective as opposed to the official rate. External support will be necessary to carry the operation through, and it is thought that credits will be obtained, as circumstances are not favourable to the flotation of a long-term external loan. It will be recalled that the League Commission on its visit to Portugal last year recommended the balancing of the Budget, the stabilisation of the currency, and the reform of the central bank. The first of these objects has already been attained, the second is now in process of achievement, and the third is receiving definite consideration.

Phoenix Assurance.—The most satisfactory feature of the 1930 report is the continued progress of the life department, in which a valuation was made for the quinquennial period ended December 31, 1930. A large new business has been transacted each year, the 1930 total being £2,934,512, and the life funds have grown during the period from £14,288,000 to £15,842,000, the latter figure including some £4½ millions appertaining to the closed funds of the British Empire, the Law Life and the

London Guarantee and Accident. The results of the valuation recently concluded, which was made on the same basis as formerly, are as follows:—

	1921-1925.	1926-1930.
Trading surplus earned in quinquennium	£ 700,424	£ 1,046,734
Investment profits taken credit for in quinquennium	137,820	98,011
Brought forward	84,370	128,045
	922,614	1,272,790
Allocations:—		
To Bonuses to policyholders	589,569	864,933
„ Shareholders	155,000	200,000
„ Staff pension fund	50,000	26,492
„ Carried forward	128,045	181,365
	922,614	1,272,790

The company has adopted on this occasion the now common practice of allotting a higher rate of bonus to whole-life assurances than to endowment assurances. The rates of bonus declared are 50s. per cent. per annum for whole life and 46s. per cent. per annum for endowment assurances, calculated in each case on the sum assured. These rates compare with 45s. per cent. per annum on the sum assured for the quinquennium ended December 31, 1925. The whole of the profits in the participating section belong to the policyholders, and the shareholders' interest in the life department is concentrated in the non-participating section, including annuities, in which the whole of the profits belong to them. A potent factor in the increased profits disclosed by the present valuation has been the higher rate of interest earnings, which over the past five years has averaged £4 16s. 1d. per cent. net, compared with a rate of interest of 3 per cent. assumed in the valuation. The corresponding interest earnings for the previous quinquennial period were at the average rate of £4 11s. 5d. per cent. net. The other departments of the company's business have suffered in every case from the prevailing depression. The premium income in the fire and in the general departments shows a heavy decline, and the underwriting profits in all departments are on a lower scale. The total premium income in 1930 was £7,591,000 compared with £7,884,000 in 1922. The detailed underwriting results of each department are shown below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Profits.	Amount of Profit.	Percentage of Profits.
Fire	120,809	3.7	76,262	2.5
Personal Accident	3,624	2.2	1,003	0.6
Employers' Liability	16,082	10.6	8,846	5.6
General	34,321	0.9	30,390	0.9
Marine	...	...	...	...
Life:—				
Phoenix Fund	40,000	...	40,000	...
Law Life Fund	83,174	...	...	...
Sinking Fund	...	...	35,000	...
	298,010	...	191,501	...
Less Items debited to Profit and Loss A/c	121,207	...	143,910	...
Total net trading surplus	176,803	...	47,591	...

The dividend, which was raised from 13s. per share to 14s. per share in 1927, has been maintained at the same rate ever since, and is repeated for 1930. The cost of the dividend last year was £545,000, compared with which interest earnings amounted to £503,000. The maintenance of the dividend for 1930 has thus utilised the whole of the interest earnings and all but £5,000 of the net trading surplus, whereas in 1929 the surplus, after meeting the dividend, amounted to £153,000.

Pioneer Life Assurance.—In his speech at the annual meeting of this small industrial company, the chairman delivered a spirited defence of industrial insurance policyholders in reply to a recent statement by the Attorney-General that such persons were very poor members of Society, and, because of that, needed special protection from Parliament. In claiming that industrial insurance

policyholders are the most sober, intelligent and thrifty of the industrial classes, the chairman pointed to the fact that the number of their policies during the last seven years has increased by 11 millions, the premiums paid by over £13 millions per annum, and the life assurance funds held against liabilities have increased from £37 millions to over £250 millions. Since three-fourths of the premium income of this company is derived from weekly and monthly payments by the industrial classes, it has, naturally, been unable to escape from the effects of the trade depression and unemployment. None the less, the new business in 1930 has been remarkably well maintained at £91,000 in the ordinary department, and £321,000 in the industrial department, compared with £102,000 and £320,000 respectively. The usual annual valuation has been made on the same basis as formerly, and the results of the last three valuations are set out in the following table:—

	1928-29.	1929-30.	1930-31.
Ordinary branch.			
Trading surplus earned during the year	£ 8,593	£ 544	£ 7,909
Investment profits	3,851	1,564	3,424
Brought forward from previous year	1,818	2,262	3,282
	14,262	3,282	14,615
Allocations:—			
To Shareholders	9,000	...	6,000
„ Investment reserve fund	3,000	...	4,000
„ Carried forward to next year ...	2,262	3,282	4,615
	14,262	3,282	14,615
Industrial branch.			
Trading surplus earned during the year	19,948	5,094	17,235
Investment profits	3,965	1,628	3,558
Brought forward from previous year	9,818	9,731	10,453
	33,731	16,453	31,246
Allocations:—			
To Shareholders	12,000	6,000	...
„ Investment reserve fund	7,000	...	26,000
„ Strengthening of actuarial reserve	5,000	...	...
„ Carried forward to next year ...	9,731	10,453	5,246
	33,731	16,453	31,246

After an unpleasant experience in 1929-30, owing to an unfavourable incidence of death claims, the profits have been restored in 1930-31 to about the level of those for the year 1928-29. Since the rate of interest earned on the combined funds was £4 10s. per cent. net in 1930-31, compared with £4 18s. 4d. per cent. net in the preceding year, and the expenses remain at virtually the same level, namely, 15.2 per cent. in the ordinary branch, and 39.5 per cent. in the industrial branch, the improvement is, no doubt, due to a favourable reaction in the mortality experience. These fluctuations are inseparable from the conduct of a small business, and bear hardly on a company such as this showing an annual valuation. The amounts transferred last year to investment reserve fund have increased this fund to £50,000, which is stated to be more than sufficient to meet the depreciation on book values. The whole of the company's business is transacted on a non-profits basis, and no allocations are, therefore, made for bonuses to policyholders. The dividend to shareholders has been maintained at 9½ per cent., the same rate as formerly.

UNITED STATES.

Railroad Situation — Retail Trade — Industry — Foreign Trade — Prices — Money Market — Treasury.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 22.

INCREASING alarm over declining railroad earnings, expressing itself first in a falling market for bonds, and fear that failure to maintain dividends and interest cover at the required points would cause the removal of the securities of many railroads from the list approved under State laws as

YOUR SON'S EDUCATION MUST BE CONTINUED

IF ANYTHING HAPPENED TO YOU, could your children continue their Education on present lines?

Education is far too important a matter to be left to chance—Especially now that you can insure the School Fees. The cost is only a very small percentage of the Fees, and for this the Society will, in the event of your death, pay not only the actual fees, but all other agreed expenses during the remainder of the Educational period.

A copy of the leaflet "The Insurance of School Fees" will be sent to you post free on application to the

Legal & General Assurance Society Limited
10 Fleet Street, London, E.C.4
Assets exceed £21,000,000 General Manager—W.A. Workman, F.I.A.

legal investments for savings banks and insurance companies, has finally caused active steps to be taken by the railroad executives, with the approval of their bankers. Committees have been appointed to prepare new freight tariff schedules, which will be submitted for approval of the Interstate Commerce Commission. The new rates will be proposed in the hope of adding 400 to 500 millions annual revenue to the railroads, provided the present traffic volume is handled.

So far as possible the increases will apply to those classes of freight which are in least competition with motor truck and other forms of transportation, namely, ores, coal, motor cars and bulky commodities usually moving over long distances and in large quantity. Voluntary applications for lower freight rates on commodities hauled by competitors are still being made by the railroads. The railroads were granted an all-round increase in rates in 1921, shortly after their return to private operation following the wartime Government control. Since then there has been a constant whittling down and reclassification of rates, with a consequent considerable decline in revenues per ton. The average increase of 1921 was about 40 per cent., but readjustments to put one shipping point on a parity with others and to wipe out special favours for one industry as against another cut this down to about 25 per cent. within a short time. By now it is doubtful if any of the original increases remain.

Although work has barely begun on the new rate proposals, opposition is developing. In general, the banks and insurance companies, as well as the large body of investors holding railroad securities, favour higher rates, since it is obvious that something must be done to restore railroad credit. No organised opposition has developed, but the more radical brands of politicians and some trade leaders are attacking the proposals as an uneconomic solution of the problem. It is held that, in a period of falling commodity prices, the railroads would only stifle trade further by attempting to raise the price of their commodity. It is, however, recognised that only two alternatives to this course are possible: a general recovery in business or all-round wage reductions. No early trade improvement is looked for, and, if wage reductions are to be sought, it is logical for the railroads first to try to increase revenues. Failing that, they will have more support in cutting expenses in the only remaining way, by reducing wages.

Wage reductions, in the first place, could scarcely help for some time. The law provides for submission of labour disputes to arbitration, and undoubtedly railroad labour would not voluntarily submit to reductions. Arbitration would consume a good many months at best, and would probably be followed by "outlaw" strikes. Meanwhile, the railroads might be beyond help. Even higher freight tariffs, if granted, cannot go into effect for several months. They can become effective within 60 days after promulgation, but a good many weeks will be required to prepare new schedules. However, the prospect of aid is counted upon to bolster failing confidence in railroad securities. Markets have turned somewhat firmer, but railroad earning statements for April are beginning to appear. They are running nearly 25 per cent. under the same month of last year, and traffic is not rising to any great extent.

Reports of improvement in retail trade are heard, and it is noted that the country's largest retail dealer, the Sears,

Roebuck and Company mail-order concern, had a sales volume for the last week in April and the first three weeks of May within less than 1 per cent. of that of last year. Allowing for the lower prices, this meant a greater volume of business. In manufacturing and the heavy industries there is no change for the better. The steel trade has fallen to about 45 per cent. of capacity, and, with the price-cutting freely engaged in by many mills, little profit is being made. At the semi-annual meeting of the American Iron and Steel Institute this week President James A. Farrell, of the United States Steel Corporation, took his fellow steel company executives seriously to task for what he termed their ruinous policy of price- and wage-cutting. He made it clear that both had been carried to great lengths in the steel industry, and did much to dispel the optimistic vapours of Charles M. Schwab, chairman of the Bethlehem Steel Corporation, and presiding officer of the institute.

Motor sales are beginning to taper off, but there is some improvement in electrical output. The building construction industry is gaining a little with the season, but the real estate bond situation is so uncomfortable that not much can be expected from that quarter for some time. General employment in April was about stationary. The picture drawn by certain politicians of another bad winter of unemployment and the necessity for an extra session of Congress to deal with the matter is probably distorted, but real improvement before the end of the year will depend largely on the crops. At any rate, the American view is more cheerful than that taken on the European side.

Foreign trade figures for April were disappointing. Exports, at 217 millions, were the lowest since November, 1914, when prices were higher. Imports, at 187 millions, were 23 millions lower than in March, and the lowest for any month, with the exception of February, since pre-war times. Smaller cotton exports played a part, but it is held that curtailed Russian buying made a substantial difference. Exports to France and Japan were larger; those to Great Britain and Central Europe decreased. Bankers' bills used to finance exports fell 29 millions in April, though the drop of 44 millions in all classes of bills was considered less than seasonal. The explanation lies in the severe cuts in rates initiated by the Federal Reserve Bank, which have transferred much ordinary commercial bank borrowing to the bill market. The commodity price decline continues. The Bureau of Labour Statistics index for April stands at 73.3, a drop of 1½ per cent. The decline in the farm price group was smaller than the general average. Textiles fell sharply, as did petroleum products. Index numbers by groups follow:—

	April, 1930.	March, 1931.	April, 1931.
All commodities	90.7	74.5	73.3
Farm products	95.8	70.6	70.1
Foods	94.6	76.7	75.6
Hides and leather products	102.7	87.4	87.3
Textile products	85.5	69.2	6.6
Fuel and lighting materials	77.9	64.5	61.6
Metals and metal products	98.8	89.0	88.7
Building materials	94.7	81.9	80.9
Chemicals and drugs	91.0	81.9	80.1
Housefurnishing goods	96.2	90.8	90.8
Miscellaneous	78.5	64.7	63.9
Raw materials	89.8	69.4	68.3
Semi-manufactured articles	87.9	72.2	71.1
Finished products	91.9	78.4	77.1
Non-agricultural commodities	89.4	75.7	74.3

The Federal Reserve pressure in the direction of lower interest rates is relentless, and while the effects are appearing but slowly the authorities express themselves as well satisfied. Another cut in bill rates has been announced, and other regional banks have followed with reductions in their discount rates. Call funds have been landing as low as ¾ of 1 per cent. outside the Stock Exchange. Commercial banks are announcing cuts in deposit rates on special or thrift deposits, the usual reduction being from 3 to 2 per cent., and the process of leveling down rates is making progress among out of town banks. Probably before the autumn the savings banks also, which now pay from 4½ to 4 per cent. on deposits, will lower their rates. They are refusing deposits deflected to them from the commercial banks.

So far only the gilt-edged section of the bond market has been helped. Government bonds have risen to new high price levels, and the task of the Treasury will be simplified thereby. A long-term issue, probably with a 3 per cent. coupon, is looked for about June 10. It may offer conversion privilege for holders of the Fourth Liberty Loan 4½ per cent. bonds, not callable at this time. The Treasury deficit has almost reached \$1,000,000,000, and is fairly certain to pass that level before the end of the fiscal year, June 30th. The Under-Secretary of the Treasury, Mr Ogden L. Mills, points out that the deficit includes about 440 millions of public debt retirements, so that the actual increase in book amount of public debt will be less than the apparent deficit. He expresses the Washington conviction that tax increases at the next session of Congress will be avoided, but the Administration is now making frantic efforts to cut expenditures.

FRANCE.

Politics — Oustic Inquiry — Conversion — Coal, Iron and Steel Output — Unemployment.

(FROM OUR CORRESPONDENT.)

PARIS, June 3.

LAST Sunday's spectacular parade of 150,000 "Steel Helmets" at Breslau, in the official presence of the ex-Crown Prince, Marshal Mackensen, and General von Seeckt, and with the telegraphed approval of Marshal Hindenburg, was perhaps the most unfortunately timed form of manifestation that could have been hit upon in view of present Franco-German relations and the general European situation. The bellicose display on the Polish frontier, following the one on the western front a year ago, has had the worst possible effect on French opinion. The corrosive effect on the man in the street of the photographs reproduced here showing the ex-Crown Prince and other German war leaders, in full uniform proudly watching the march past of the Steel Helmets, is to be observed on every hand.

Curiously enough, during the past fortnight or so there has been a marked decrease in French nervousness in regard to the Chequers conference between Mr Macdonald and the German Ministers. For this Mr Henderson's firm stand side by side with M. Briand at Geneva is undoubtedly responsible. The Paris Press comments to-day are exceptionally calm and confident. The Entente Cordiale, it is regretfully observed, is dead, but it is also underlined that "nevertheless not one single international event of importance has occurred since 1920 in which, in spite of all hostile influences, France and England have not been found side by side for the common good." So far as any question of a moratorium or reduction of German reparation payments is concerned, the French attitude is that the problem depends entirely on the United States Government. Now that German reparation payments and Allied war debt payments to America are inseparably bound up together by the Hague Agreement and the Young Plan, any further reduction of Germany's obligations is only possible, it is insisted, if accompanied by a compensating modification of European obligations towards the United States. The apparently steady growth of American public opinion in the direction of at least a reduction of European reparation and debt payments, if only in the interest of America itself, is naturally attracting close attention here.

One of the most interesting domestic events of the week has been the resignation by M. Renaudel, one of the undoubted chiefs of the French Socialists, of his seat on the Oustic Inquiry Commission, of which he has until quite recently been one of the most ruthless inquisitors. M. Renaudel was the president of a parliamentary commission appointed immediately after the Cartellist victory in 1924 to investigate the origin of the political party and other funds used to fight the elections. Unfortunately, the victorious Cartellites arbitrarily limited the inquiry to exposing the origin of the funds expended by the Opposi-

tion parties, and prohibited the opening of any *dossiers* concerning Radical or Socialist war chests. A somewhat similar situation is latent now. The Oustic Commission was demanded by the parties of the Left, in the belief that a good many of M. Tardieu's supporters would be found implicated. The outcome has been entirely to the contrary. A good many *dossiers* remain to be opened concerning affairs with which members of the Socialist Parliamentary Party are alleged to have been connected, and these have so far been rather pointedly left on one side. Amused observers are now speculating as to whether the resignation of M. Renaudel will not result in the inquiry being brought to a graceful conclusion. M. Renaudel has been asked by the President of the Commission to reconsider his decision, but it is thought unlikely that he will do so. Meanwhile the Commission's future, like many other things, depends on what follows the collective resignation of the Cabinet immediately after M. Doumer assumes office on June 13th. M. Briand's position, the great Rentes conversion scheme, and next spring's general elections are only three of the outstanding factors in the situation.

The application of the Rentes conversion plan is becoming more urgent daily. Seven of the eleven issues, yielding nominally 3½, 4, 5 or 6 per cent. respectively, now stand slightly above par (ranging from 102 to 106). The two 3 per cents. are at 88½ and 88¼ respectively, while the 1920 5 per cents. stand at 136½. The 1925 4 per cent. issues are quoted at 131½. Bourse opinion is that the two 6 per cent. issues, which total about 50,000,000,000 francs, should first be dealt with. The question is, what proportion of the holders would ask solely for reimbursement. The Caisse d'Amortissement, although its resources have been reduced to one-half by new burdens thrown upon it for the purpose of balancing the Budget, has still some 9,000,000,000 francs available, which it is considered should be utilised as soon as possible, if the present opportunity is not to be lost. The saving to be effected by the conversion of these two issues to 4 per cent. is estimated at 976,000,000 francs a year. Further delay must inevitably increase the risk of another Budget deficit.

Coal, iron and steel production figures for April show an appreciable drop under each heading. The total output of coal during the month was 4,288,399 tons (25 working days), against 4,627,561 tons in March (26 working days), 4,560,158 tons in April, 1930, and monthly averages of 4,586,000 tons in 1930, 4,577,000 tons in 1929 and 4,369,000 tons in 1928. The output of metallurgical coke by the colliery plants amounted to 408,928 tons, against 432,436 tons in the previous month and 419,348 tons in April last year. In view of the large accumulations at the pitheads, especially in the Northern coalfield, and the increased keenness of competition from British, Belgian, Dutch, Polish and German fuel during the past few weeks, the coalowners are loudly demanding the organisation of a quota system for foreign coal, and the application of stronger protective duties. Belgian coal imports during the first quarter of the year have been 995,000 tons, against 609,000 tons during the corresponding part of 1930. Entries of Polish coal rose from 80,000 tons in February to 110,000 tons in March, and of Dutch coal from 18,000 tons to 32,000 tons.

The French Admiralty and the P.L.M. and Western State railways are all negotiating for supplies from British exporters. The Bordeaux Gas Company has ordered 60,000 tons from British, Polish and German sources. Tenders for another Midland contract, it is reported, stipulate that only British coal is wanted. Reductions of British export prices are also proving effective in the French market. This factor largely explains why coal imports here increased 41 per cent. last year, while the output of the French mines was only 5 per cent. larger. French critics of the French coalowners insist that the latter's complaints are exaggerated, and that the increased entries of foreign coal are due to the fact that importers are now content with a much smaller profit, whereas the French collieries are still maintaining their rate of profit at from 20 francs to 21 francs per ton (and in certain pits, where the cost of extraction is

especially easy, at from 30 francs to 35 francs a ton). The rate of profit secured by the Saar mines, it is stated, has been brought down from 17 francs to 10 francs per ton. On the other hand, British anthracite exporters are now faced in this country with steadily increasing competition from excellent quality steam coal from the French Far Eastern colony of Tonkin. Large deposits of this coal, lying close to a deep water port, are now being actively worked. The coal is stated to be equal to the best English anthracite in quality, and can be delivered here, in spite of the 11,000-mile voyage, at well under foreign competitive prices.

The total output of pig iron in April is returned as 738,000 tons, against 775,000 tons in March, 854,000 tons in April last year and monthly averages of 841,000 tons in 1930, 864,000 tons in 1929 and 832,000 tons in 1928. The number of blast furnaces in operation was 133, against 153 in April last year. Crude steel production was 675,000 tons, against 722,000 tons in the previous month, 787,000 tons in April, 1930, and monthly averages of 783,000 tons in 1930, 808,000 tons in 1929 and 832,000 tons in 1928. The French metallurgical industry is now feeling the world-wide depression more seriously than hitherto, in spite of appreciable cuts in selling prices, and the outlook in both the home and the export market remains threatening.

Unemployment, as gauged by the official returns of workers in receipt of the dole throughout the country—which have fallen from 51,814 on April 11th to 42,823 on May 23rd—is decreasing, but this is offset by a still larger increase in partial unemployment. The situation has been made worse by the general strike of the textile workers in the Roubaix-Turcoing area. The conflict, which is in its third week, is now showing signs of a collapse. The dispute is due to the refusal of the employers to continue to pay the workers' contributions towards the national insurance fund as well as their own.

GERMANY.

Politics — Ruhr Coal Syndicate — Exchange Weakness — Stock Exchange.

(FROM OUR CORRESPONDENT.)

BERLIN, June 3.

THE domestic political situation at present depends mainly on the new emergency decree, expected in the course of the next few days, which is to effect a further reform in public finance. The great question is whether it is going to be possible to raise, either by taxation or by economies, the funds which will be necessary to balance the Budget without overstraining the psychological situation. The Government is contemplating a general increase in the income tax, roughly graduated, but not really progressive, further reductions in official salaries, additional economies in social insurance, and an increase in the sugar tax and the petrol duty. Most of these are highly unpopular proposals. It certainly seems as though curtailment of the social services has been kept down to a minimum, and the programme in general so framed that it does not ask more of the Social Democrats than is absolutely indispensable, and should actually be less repugnant to them than to the Right Wing of the Coalition, especially the German People's Party, which has steadily stood out against increases in taxation.

In the last few days the Government has made two further concessions to the Social Democrats: Dr. Brüning has announced that he will definitely lower the grain duties if the price of bread does not fall in the immediate future, and the Minister of Labour has declared himself sharply opposed to a second wage-reduction movement. These two announcements may have been made for practical reasons. The reduction of the grain duties in particular is urgently desirable on financial grounds, as the present prohibitive rates, by almost completely preventing imports, are having a bad effect on revenue. It is, however, also in the nature of the political situation that the Government should for the moment look more to the

Left than to the Right. The Oldenburg elections have still further reduced the effectiveness of the moderate parties of the Right, and the consciousness of their weakness is causing them to drift further and further away from the Government bloc in order to evade responsibility.

The attack on the Foreign Minister has now been followed by a similar demonstration against Dr. Dietrich, the Minister of Finance, originating in this case also in industrial circles associated with the German People's Party. This attack, too, was unsuccessful, but it shows that the Government has little more to hope from the Right. It is, therefore, very natural that it should seek its support mainly from the Social Democratic Party, but the relative strength of the respective parliamentary parties is such that the Social Democrats, together with the nucleus of the Government bloc, the Centre and the State Party, cannot unaided give decisive support to the Government. In order to obtain such support one thing above all others is necessary—a success in the sphere of foreign politics. Not even the soundest and most adroit tactics can prevent the Brüning regime from being seriously endangered if it does not succeed in securing an alleviation, in some form or other, of the burden of reparations.

The Ministry of Economy has compulsorily prolonged the Ruhr Coal Syndicate for two months, as the mines were unable to agree on the new regulations. The assessment problem is still the kernel of the dispute. It is the practice of the Syndicate to pay the mines the full prices approved by the Minister, though these prices are only realised in a relatively small part of the market owing to the competition over the rest of the area of British coal and coal from other German districts. The excess which the collieries receive in this way is taken away from them again by a tonnage levy. A vehement discussion has been going on for a long time as to whether the mines which belong to companies which also own blast furnaces ought to pay this tax on the coal consumed within the concern. Originally they were required to do so, but last year a regulation was made, the general effect of which was to limit the levy on coal for companies' own use to 1.5 Reichsmarks per ton. This regulation, however, has still failed to give satisfaction, and at the last negotiations a plan was discussed for adjusting the levy on coal for use within a concern to the world price of iron. The collieries whose interest is mainly in the sale of coal maintained that the mixed companies, by supplying their own ironworks, satisfy a large part of the demand of the German iron industry outside the market, thereby forcing the other mines to sell at a loss, so that it is only fair that they should contribute to the equalisation of the reduction in profits. The mixed companies replied that they too suffered from inadequate profits owing to foreign competition and the fact that their unsatisfactory trade was in the export of iron was irrelevant, since this iron was just coal in a manufactured form. The question now is whether complete agreement can be reached on this principle. So far some 75 per cent. have agreed, but that was not enough to enable the Minister of Economy to put the new regulation compulsorily into force, so he simply prolonged the current agreement. It is rumoured that the Minister will not repeat this expedient, but will allow the Syndicate to dissolve in August if complete agreement is not reached.

One of the unpleasant surprises of the last few days has been the weakness of the mark. The dollar has risen in Berlin within a few days from 4.1980 to 4.2105 and sterling from 20.422 to 20.480, which latter rate is not far from the gold export point. But for the fact that the Reichsbank has placed foreign bills at the disposal of the market, rates would have gone still higher. The amount of foreign means of payment parted with was not indeed very heavy, and is small in relation to the large volume of cover held by the bank, but it was none the less an unpleasant necessity, as it reduces the liquid resources of the Bank.

Simultaneously with the weakening of the mark, German loans, especially the Young Loan, fell sharply in foreign markets. At 67 and 68 this 5½ per cent. loan has reached the lowest level since its issue, and this,

together with the exchange weakness, is evidence of foreign lack of confidence in Germany. The demand for foreign exchange in Berlin was due to the calling-in of foreign credits, though there is at the moment no question of a flight of capital. In sympathy with the general Stock Exchange decline there has been a further rise in interest rates, especially those for long-term capital. All this means that the prospect of a stimulus to German economy from the direction of the capital market is remoter than ever. No alleviation of the depression in Germany is forthcoming from international co-operation.

AUSTRIA.

Credit-Anstalt — Auspitz Lieben — Foreign Trade — Revenue Decline.

(FROM OUR CORRESPONDENT.)

VIENNA, June 2.

THE Austrian National Bank continues to be the principal source for satisfying the monetary requirements of the Oesterreichische Credit-Anstalt, and has taken over some 400 million schillings worth of bills bearing the endorsement of the Credit-Anstalt. These discounts are guaranteed by the Federal Government, and in addition the National Bank has availed itself of the support of the B.I.S. and the other great banks of issue by rediscounting part of the newly submitted bills with them. Individual savings banks, moreover, have been induced under Federal guarantee to re-deposit with the Credit-Anstalt part of the sums they had withdrawn in the early days of the trouble.

In financial circles here the urgent desire has been expressed that the exact position of the Credit-Anstalt should be made known. Such a report is in preparation, and the Austrian National Bank has delegated experts to assist with it. It has not yet, however, been possible to find suitable persons to join the board of the Credit-Anstalt for the purpose of safeguarding the interests of the State or the bank of issue. Negotiations have been carried on with a number of candidates, but again and again difficulties have been encountered. Some eminent Vienna financiers are of opinion that it would have been far better to issue a moratorium for the Credit-Anstalt immediately after its financial difficulties became known. Then the status of the bank could have been examined quietly and a proper balance sheet have been drawn up before according State intervention and far-reaching support by the National Bank.

The anticipated exchange support by the B.I.S. has caused the foreign bill purchases on the part of the public, which on certain days were very considerable, to decline materially. While last week only 5 per cent. of the demands for American paper were accorded, the allotment increased to 20 and even 100 per cent. after the prospect of exchange support had become known. The purchases, however, still continue, especially as the financial authorities have as yet made no definite announcements. In order to assist the Credit-Anstalt, the Federal Government has already paid up 100 million Austrian schillings for the shares it is to take over, though according to the strict interpretation of the law such a payment should not have been effected until a general meeting of the Credit-Anstalt had passed its balance sheet. While in the first few days of its crisis the Credit-Anstalt paid any sum that was recalled and also repaid deposits to its customers without consideration of the respective terms of withdrawal, it now strictly observes all such stipulations. Sums maturing at a later date are either not paid out at all or else a small advance payment is made on them; on the other hand, liabilities within the country are all immediately met. With the foreign creditors, negotiations are in progress the details of which are probably better known in London than they are here.

A second shock has been given to the market by the breakdown of Messrs. Auspitz, Lieben and Company, a firm which until a few days ago was considered absolutely

reliable. It now appears that, like the Credit-Anstalt, this firm had for a long time been contending with serious difficulties, which would have been admitted long before had it not been for the hope of an improvement in the business situation. In this case it is a question of serious abuse of confidence on the part of the heads of the firm, one of whom has committed suicide. The deposits of certain clients are non-existent, and there have been other gross improprieties. Nevertheless, it is thought that in the event of a slow liquidation the creditors would not suffer very severely, especially as the surviving partner, Herr Stefan Auspitz, is the owner of a picture gallery of international repute and as his relatives are also willing to make big sacrifices. The decree of the court initiating composition proceedings in regard to this firm has made it impossible for Austrian firms to exercise restraint for the satisfaction of their claims during a period of 60 days, a fact which has caused great perturbation on the Stock Exchange, as, in the expectation of such forced sales, there have been extensive bear operations within the last few days, for a large part of which cover had to be provided. The Stock Exchange Committee had resolved on shortening the terms of delivery for securities sold, with a view to restricting speculation. At present the state of affairs is nebulous, and very much will depend on whether foreigners prove inclined not only to prolong the credits they have granted the Credit-Anstalt but also to provide considerable fresh capital in exploitation of the Government guarantee envisaged for any new credits accorded to the institute.

The economic situation, even before the inception by the Federal Government and the Austrian National Bank of relief measures in favour of the Credit-Anstalt, was characterised by extreme depression. The final solution of the customs union question at Geneva was awaited with great impatience. Though there is a general opinion to the effect that Austria cannot recuperate under existing conditions, it has been pointed out that the uncertain position entailed by the customs union plan has engendered additional difficulties. Orders have been cancelled, since no one knows what effect German competition will have in the event of the customs union; for example, plans for the establishment of pipe-rolling mills have been discontinued, orders for machinery have been withdrawn, and commerce is also suffering from the state of uncertainty, so that the alleviation of unemployment is delayed.

Foreign trade has made an unsatisfactory beginning; in the first quarter imports fell short by 142.3 millions, and exports by 241.6 millions, of the corresponding returns for the same period of last year. The export of agrarian products, however, shows an increase of 20 per cent. The value of industrial exports declined from 440 to roughly 300 millions. For this reason the drafting of an amendment to the customs tariff is being accelerated; it provides, *inter alia*, for increased protection to agrarian products, which many people fear will entail higher foodstuff prices. Furthermore, the duties on iron and iron goods are to be raised. The finest sorts of cotton yarn are to be on the free list, as there are no corresponding native spinning interests to be protected. The duty on plate glass is to be remitted, so that Czechoslovakia will be benefited. Substantial increases are to be made in the duties on automobiles, and there are to be higher duties on crude oil and timber.

The receipts from taxation are still declining, and it is computed that—allowing for the monopolies and for Federal railway losses—the total deficit in the first four months will amount to no less than 140 million schillings. The decline in the share of the Federal provinces and the municipalities, according to estimates made up to the present, will amount to some 46½ million schillings for the whole year. For Vienna alone, the loss is estimated at 20 per cent. The recently appointed Economy Commissioner has drawn up a programme which—though not yet actually sanctioned by the Government—is likely to be passed in its essential points. He advocates restrictions in the system of bounties, especially those on agrarian products, and demands the fixing of a definite limit to the expenditure, not only of the Federal Government, but also of the provinces, the various economic organisations, and the social insurance institutions. He likewise demands

that no new employees be engaged in the public service and insists that this regulation be enforced far more severely than hitherto.

Until recently the Minister of Finance intended to levy a special tax, not exceeding 4 per cent., on all fixed salaries. This proposal met with the opposition of both civil service and private employees, the industrial concerns objecting on the ground that a cut of wages and salaries is inevitable, and has in many cases already been effected. The electricity industry, for example, has reduced wages by 10 per cent. Such cuts could not be maintained if the Government imposed an additional tax on incomes, thus further impairing the purchasing power of large classes of the population. So far, however, the Finance Minister has refused to abandon his project. Economic conditions, the smaller total tax revenue, and now the relief measures in favour of the Credit-Anstalt, make it impossible to effect the diminution of the rate of taxation which is demanded by all branches of economy. The expenditure of the Federal Government, including investments, has been doubled during the last eight years. Whereas in 1924 the total public expenditure barely absorbed a sum of 1,500 million schillings, it now exceeds 3,000 millions, and the total income of the Austrian nation is estimated at only between 6,000 and 7,000 million schillings.

ROUMANIA.

Little Entente — Commercial Treaty with Germany — Agricultural Situation — Treasury Deficit — Foreign Trade — Economic Situation.

(FROM OUR CORRESPONDENT.)

BUCHAREST, May 21.

The annual meeting of the Little Entente, which was held in Bucharest early in May, showed once more the perfect accord which reigns amongst its members, Czechoslovakia, Yugoslavia and Roumania, on political and economic questions; this was of particular interest, as it assured the unity of these countries in the face of the proposed Austro-German customs union. Nevertheless, the economic importance of such international action should not be exaggerated. The meagre results of the recent cereal conferences have amply proved how difficult it is to reconcile the divergent economic interests of the countries of Europe; but it has caused satisfaction that the change of government in Roumania has in no way involved a change of direction of Roumanian foreign policy.

There were great hopes that the commercial treaty between Germany and Roumania would be brought to a satisfactory conclusion in the course of this month. It was reported that Germany would accord preferential treatment to imports of barley and maize from Roumania, and the temporary suspension of negotiations has caused considerable disappointment, particularly as the raising of the German import duties on cereals last year dealt so severe a blow to Roumanian agricultural interests.

The agricultural situation is one of the principal preoccupations of the new Government. The export duties on cereals have been entirely withdrawn; the cost of transport is being reduced; a programme is to be evolved for the improvement of production, both in quantity and quality, by means of technical advice and the provision of machinery and credit facilities. The Agricultural Bank is in the course of formation, and the State is providing 650 million lei for this purpose out of the proceeds of the last loan and inviting the principal banks to participate. Negotiations are still proceeding, but it is not expected that the banks will be in a position to make a large contribution.

Treasury receipts for the first three months were, as was only to be expected, over 3,000 millions below the estimates, and amounted to about 5,200 millions, a reduction as compared with the same period last year of 2,900 millions. The total expenditure for the three months was fixed by royal decrees at about 7,500 millions, but in view of the insufficiency of the receipts, this sum was

reduced to about 6,500 millions, of which little over 5,000 millions have actually been paid during the three months. The total of the payments effected by the State during the same period of 1930 amounted to almost 7,500 millions. The constant postponement of payments due from the Government is interfering to a considerable degree with the credit system of the country. It is, therefore, the intention of the Government to submit the budget estimates for this year to a searching revision, and considerable reductions in the estimated expenditure of the various departments are to be made.

The foreign trade of Roumania during 1930 shows a substantial balance in favour of this country as regards both quantity and value. The following are the figures for 1930 and 1929 published by the statistical bureau of the Ministry of Finance:—

	1929.		1930.	
	Tons.	Lei.	Tons.	Lei.
Imports ...	1,104,869	29,896,504,000	773,881	22,468,543,000
Exports ...	7,063,132	28,914,934,000	9,214,485	28,495,852,000
Balance +	5,958,263	-981,570,000	+ 8,440,604	+ 6,027,309,000

The considerable reduction, both in quantity and value, of imports during 1930 as compared with the previous year, which is a sign of the great diminution in the purchasing power of the population. The quantity of the exports in 1930 shows a very satisfactory increase over 1929, whereas the value shows a slight decrease, owing to the fall in the prices of cereals, petroleum products and timber. These figures are eloquent testimony of the crisis through which this country is passing. Unhappily, the situation shows no signs of improvement yet. In fact, a feeling of discouragement is gradually gaining ground, and the attitude of irresponsibility or unscrupulousness of the debtor in general has been encouraged by bad legislation and a mistakenly lenient attitude of the courts. This has, of course, accentuated the restriction of credits and has prevented foreign interests from investing their capital in this country, especially as far as trade is concerned.

NORWAY.

New Government — Labour Situation — Oil — Shipping — Money — Fisheries.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, May 22.

THE fall of the Mowinkel Ministry at the beginning of this month was due to the criticism of the Protocol Committee of the Storting with regard to a concession granted to the Norwegian industrial concern Denofa, 50 per cent. of whose capital is in the hands of the British-Dutch company, Unilever. According to the findings of this committee, the granting of this concession was incompatible with the public interest. In spite of the splendid and energetic defence offered by Mr Mowinkel with the support of his ministers and political partisans, the debate proved fatal to his Government. The first Norwegian Peasant Government has now been formed, with Mr P. L. Kolstad, hitherto President of the Odelsting, as Premier; while Mr Braadland, a major in the Norwegian army, has been appointed Foreign Minister. The remaining departments of the Government have been entrusted partly to Peasant members of the Storting and partly to prominent political partisans of the Peasants outside the Storting.

The inaugural declaration of the new Government made no definite promises or clear suggestions as to means of reducing public expenditure or relieving the strain under which trade and industry are labouring, but it certainly acknowledged the necessity of doing something. The Government have announced their intention of endeavouring to maintain "business-like" co-operation with the other political parties. The general opinion is that the Government, originating from a comparatively negligible minority in the Storting, will have to feel their way very carefully, requiring the support of at least three of the more important political parties in every question of importance which they may want to carry through.

Conditions on the labour market have not altered during the last few weeks. The Public Mediator is still engaged in the difficult task of constructing a passable bridge over the chasm dividing the parties concerned. Hitherto he has not considered it expedient to advance any proposal to be put to the vote, and the general idea seems to be that the conflict will be protracted.

The decision of the British Oil Trust to employ their own expeditions to bring home the fresh oil they need for next season has come as something of a surprise to the Norwegian whaling companies. It seems to have been assumed that the agreement of the Norwegian whaling concerns to lay up the whaling fleet would also include the Oil Trust. However, as the quantity of fresh oil required by the Oil Trust for next season is stated to be 300,000 barrels, while the average yearly consumption amounts to at least seven or eight times as much, the consequences may not prove too serious to Norwegian whaling industry.

In spite of the deplorable state of the freight markets, the Norwegian shipowners continue to increase their fleet. The most recent addition to the merchant fleet, the M.S. "Venus," of the Bergenske Steamship Company, was launched at the beginning of this month, and has already made her maiden trip from Bergen to Newcastle. This beautifully constructed ship will make the passage between the above-mentioned ports in twenty-one hours, seven hours less than hitherto required.

Conditions on the money market continue rather easy, but in spite of the recent reduction of the English and American bank rates, it is not considered likely that there will be a reduction of the Norwegian Bank rate at present. Much may depend, however, on developments in Sweden and Denmark. The bond and share market is lifeless, on account of the lock-out, but prices are generally maintained.

The spring cod fisheries in the Finmarken have been extremely poor so far, and the total return of the cod fisheries for the whole country at the end of last week was 35.4 millions, against 57.5 millions at the same time last year. The coast mackerel fishery on the south coast of Norway, however, has been excellent, and large quantities are being exported on ice.

JUGOSLAVIA.

Stabilisation Loan — Stabilisation — Budget — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BELGRADE, May 18.

THE conclusion of a stabilisation loan in Paris on May 5th has been greeted with general satisfaction here, where it is taken as a sign of foreign confidence in the present dictatorial regime. The floating of the loan of 1,025,000,000 French francs has been undertaken by a consortium of banks, with the Union Parisienne at its head, the respective shares being: Union Parisienne 675, Swiss banks 125, Czech banks 100, Swedish banks 50, Yugoslav banks 50, and Dutch banks 25 million French francs. The price of issue is 87½, interest 7 per cent., and term of repayment forty years. Such conditions, while not brilliant, are yet relatively satisfactory, being financially better than those of the recently concluded Polish and Roumanian loans, and, unlike them, not burdened by additional obligations in the form of concessions. The questions of the Ottoman debt and the French holders of pre-war Serbian loans are not mentioned, nor are there any obligations as to purchases from the lending countries. On the other hand, the right of conversion after a period of five years has been granted.

Judging by the declarations of the Minister of Finance and the Governor of the National Bank, of the net total of this loan of 1,900 million dinars (£6,900,000), about 1,000 million will be used for repayment of the state debt to the National Bank, while the remainder will be devoted to public works, chiefly railways and roads. A further 800 million dinars will be gained from a revalorisation of the

metal and bill cover, which has hitherto been reckoned not at its actual, but at its nominal pre-war value, so that the state debt should be reduced from a total of 3,900 millions (£13,900,000) to about 2,100 million dinars (£7,300,000). A further reduction should ensue upon the issue of metal coinage, as provided for by the stabilisation law; while the remainder will be paid off gradually from the annual share of the State in the profits of the National Bank. As the cover of the National Bank, upon receipt of the money from the State and revalorisation, is expected to reach 2,800 million dinars, the fiduciary circulation, which is below 5,000 million dinars, should be covered to the extent of over 50 per cent.

The stabilisation law, published by Royal Decree, which is to come into force on June 28th, fixes the value of the dinar at 26.5 milligrams of pure gold, which corresponds to the value it has maintained during the actual stabilisation since August, 1925. The cover is fixed at 35 per cent., of which 25 per cent. must be in gold; while the maximum of metal coinage is to be 650 million dinars (£2,400,000). The convertibility of paper into gold or bills free for export has also been established for sums exceeding 250,000 dinars (£900).

The Budget for 1931-32, published on April 1st, differs but little from that for 1930-31, both being, in the words of the Finance Minister, the effect of the same regime and financial policy. The total is practically the same, 13,210 millions, against 13,348 millions for 1930-31. Nevertheless, read item by item, the Budget represents substantial savings, which are not reflected in the total because of the increase of the debt service and pensions. The increase in the debt service amounts to 204 million dinars, chiefly as a result of the settlement of the debt to France and partly because of the natural increase of the service of all other war debts. The chief expenditure is as usual on communication (inclusive of posts and telegraphs), 3,475 million dinars, army and navy 2,596 millions, State debts 1,220 millions, and pensions 1,100 million dinars. The chief items of revenue are:—Communications 2,985 millions, State economic enterprises 2,330 millions, direct taxes 1,600 millions, and customs dues 1,488 million dinars. In his explanatory statement the Minister of Finance expresses confidence that the new Budget, like its predecessor, will prove to be balanced, since it introduces no new fiscal burdens and even alleviates some of those already existing.

Trade, as everywhere, continues poor, the fall as compared with last year being about 27 per cent; 23 per cent. in imports and 31 per cent. in exports. Thus the figures for the first quarter read:—Imports 1,342 million dinars, as against 1,740 millions in 1930; exports 1,160 millions, as against 1,696 million in the previous year; deficit in the trade balance 182 million dinars. It is to be noticed, however, that the index figure of prices has ceased to fall, and has even evinced a very slight stiffening both in exports and in home-consumed goods. This applies specially to wheat and maize, of which no great reserve stocks are expected to be left over, partly because the harvest is likely to be late this year, and partly because much has been used for the fattening of cattle and pigs destined for export. This diversion of export corn for cattle feeding is very significant, and there are growing signs that the production of corn and cattle will gradually become equally balanced in this country.

SOUTH AFRICA.

New Party — Native Service Contract Bill — Vital Statistics — Census.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, May 13.

THE Nationalist Party is still in the throes of such troubles as seem invariably to dog the steps of all parties after extended periods of power. The latest and worst menace to their existence is a certain Dr. Steenkamp, member of the House of Assembly for Namaqualand. Dr. Steenkamp is personally well known and popular in his constituency, in

spite of its enormous area. The district, once purely agricultural except for the copper mines, is very poor. The discovery of diamonds might, in some circumstances, have improved its condition, but there is, and has been, for many months, a great deal of distress among the farmers and also among those who have become labourers on the diggings. Steenkamp is a very able man, with a fervent and genuine, if perhaps unbalanced, sympathy with the poor. Originally elected to Parliament as an independent Nationalist, he has continually developed independence. He is now the leader—so far hardly official—of a new "National Farmers' and Workers' Party." The party and its leader are causing the official Nationalists far more bother and anxiety than the official opposition. The arms of the party are much the same as those of the left wing official Nationalists, including republican government. The membership is drawn almost entirely from the poorer classes of Afrikaners, whose views of major questions are apt to be reactionary and ill-informed.

With the present conditions in rural districts—conditions which no Government could remedy or even greatly alleviate—Dr. Steenkamp and his friends seem likely to be favoured with good political weather for some time to come. Their parliamentary tactics are good, and in any case they have little to lose. Unfortunately, the party does not seem likely to be able to develop any policy of constructive value.

A further striking example of the trend of South African legislation affecting natives is provided by the Native Service Contract Bill, which is now before a Select Committee before being read a second time. It may seem curious that the Bill was introduced to the House, not by the Minister for Native Affairs, but by the Minister of Justice—whose able but sinister hand has apparently a firm grasp of the helm of Cabinet policy in many matters which lie somewhat aside from the ordinary business of his department.

The purpose of the Act is to regulate relations between employers and "labour tenants"—a labour tenant being a native who occupies land belonging to a European farmer in consideration of rendering service on the farmer's own farm. By definition, however, the draft Bill provides for service "of whatever nature." The purpose and intention of every line of the Bill is to bind natives to the farmer on whose land they live—and, owing to the inadequacy of native reserves, many thousands of natives must live as squatters on the land of European farmers. The most iniquitous section of all enables native guardians of children under eighteen or sixteen (in the case of males and females respectively) to bind them until that age. The guardian may on behalf of such native (i.e., the minor) enter into a labour-tenant contract or any other service contract with the owner of his domicile binding his ward to render service to such owner or occupier at any place in the Union. The sole protection to the unfortunate minors is that such contracts having a currency exceeding one year must be reduced to writing in a prescribed form. There is no lower age limit.

The provisions for the termination of labour-tenant contracts are, to say the least, more easily comprehensible to farmers than they would be to natives. Moreover "a labour-tenant contract entered into for any period or at any place should not be invalid merely by reason of the fact that it was not entered into in any particular manner or form" (Section 5 (2)). Section 9 provides for the taxation of owners of land who do not exact service from their native squatters. The whole Bill reads like a quotation from "Uncle Tom's Cabin." It may not become law in its present form, but it is scandalous that in these days it should ever be presented to a Parliament of Europeans claiming to be civilised.

According to the latest Report of the Department of Public Health, the vital statistics for the European population of the Union still make satisfactory reading. The birth rate per 1,000 of the European population is 25.8, and the standardised death rate is 10.69; the crude death rate is 10.15, and the survival rate of 15.6 per 1,000 is one of the highest in the world. The infantile mortality rate for Europeans is 70.49, which is lower than in most parts of Europe.

It is very unfortunate that the Government has decided not to take the census of the native and coloured population. The present figures are ten years old, and up-to-date information would have been invaluable for sociological and economic purposes. The wisdom of the decision, even in the present difficult times, has been questioned both publicly and in Parliament. One important phenomenon with which only a census can adequately deal is the urbanisation of the natives, and urbanisation, in the case of respectable natives in regular work, is no bad measure of civilisation.

Letters to the Editor.

THE LAND TAX: A FOREIGN VIEW.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I intrude a foreigner's word in the debate which is going on in your country on Mr Snowden's proposed tax on land? Some people, and it appears that you are of this opinion, think that the tax will make holders more ready to sell or utilise land for buildings or other productive purposes instead of keeping it vacant or covered with gardens, parks or playing grounds. Perhaps this will take place, but not for strictly economic motives.

Why is a plot kept vacant? Because a speculator feels or hopes that, in due course of time, the plot will ripen, so as to be utilised according to his best capability. If we suppose that no tax or other expense is incurred, a plot worth £100 will cost, after twenty years, in virtue of the simple passing of time, £180 12s. 2d. if the rate of interest is 3 per cent., £219 2s. 2d. at 4 per cent., £265 6s. 8d. at 5 per cent., £320 14s. 3d. at 6 per cent. As the future value of the land is, to all practical purposes, independent of the cost, and as after maturity the land value will increase no more, or at a less rapid pace than the interest loss, the holder is greatly interested in hitting the moment when the plot is ripe and sell or build on it. A sale prior to that moment is contrary to public interest, because it will mean building on unripe plots, building for factories or tenement-houses on plots which would, if built on at the best moment, be better used for business or residential or public purposes. Building before maturity means bad planning of cities, increase of public services cost, unremunerative investments. Maximum land value and best land utilisation are inseparable twins.

The tax, as proposed by Mr Snowden, produces no change in the picture. If we suppose, in the absence of the tax, that the plot will ripen twenty years hence, that the rate of interest is 5 per cent. and that the plot is worth to-day £100, it will be worth £265 6s. 8d. then. The tax will mean that the holder will be obliged to pay:—(1) An annuity of 1d. per pound on values which we will suppose increasing from £100 at the present moment to £252 13s. 9d. at the end of the nineteenth year. The present value of such a nineteen-years annuity can be estimated at £7 18s. 2d., and the value at the end of the twentieth year, the moment when the plot will become ripe, at £21; (2) a perpetual annuity beginning at the end of the twentieth year of 1d. per pound on £265 6s. 8d., the value of the plot at the said moment. We can suppose, for sake of argument, that the value of the plot will then stop increasing. If it goes on increasing the reasoning can be duplicated. The value twenty years hence of such perpetual tax is £22 1s. 8d., and the present value £8 6s. 6d. That tax will thus simply change the appropriation of present and future values of plots as follows:—

	Future Values at the moment of Plot Maturity.			Present Values.		
	£	s.	d.	£	s.	d.
To land holder	222	5	0	83	15	4
To State as intermediate taxation during the maturing life of the lot	21	0	0	7	18	2
To State as final perpetual taxation of the ripened and built lot	22	1	8	8	6	6
Total value	265	6	8	100	0	0

The new tax will simply transfer from the holder to the State a part of the future value of the plot. This value cannot but remain unchanged at £265 6s. 8d.; only the present holder or his successor will have to pay taxes up to £13 1s. 8d. If they keep the land they will pay the said sum and be so much the worse off; if they sell the land at once or thereafter they will sell subject to the burden of the tax. Would-be purchasers will

take account of it and pay so much the less. If, for instance, the plot is sold at once, the landholder will obtain for himself only £83 15s. 4d., leaving in the hands of the purchaser a total sum of £16 4s. 8d. towards payment of the new tax.

If this is the sequel of the tax, I submit that it makes no difference whether a purchaser pays £100 for the plot without the tax or £83 15s. 4d. with the tax. The tax is simply a device for transferring to the State a part of the value of the plot. It cannot have any effect on the time and methods of utilisation of the land. The holder will be interested just the same in waiting for the moment of the best maturity of the land if he possesses or buys a plot at £100 without the tax or at £83 15s. 4d. with the tax.

This is, indeed, pure theory. I grant that in real life we are obliged to take account of other than pure economic reasoning. Present values do not change forthwith, future values are not now easily estimated, and manifold frictions exist in this world of ours. Above all, psychological impressions are often more potent than economic reasons. Men accustomed to think in terms of £100 for their plots will become chagrined at the prospect of having to pay taxes on vacant land, which is bearing no present fruit, which is kept just because we or our family were used to it. The tax may turn the scale in favour of selling; and sales may be made to uneconomic men, who will make bad use of the opportunity offered them. In the first years, perhaps for a not too short period, the new tax will have bad effects on the economic and social utilisation of land. Mistakes will be made, for which the country will pay after twenty or fifty years by pulling down factories or cheap houses where other types of buildings should have been erected. Local bodies will then be busy replanning at no mean cost. But these are incidentals of a short-period view. In the long run things must relapse to the state where they would have been without taxation, except that a part of the value of the land will have been transferred to the State. My final suggestion is that it seems inadvisable to begin with a mere 1d. per pound, if the intention is to put up the rate of the tax from time to time. Better 3d. on the pound at once, and so reduce at once the present value of our imaginary £100 lot to £50 (I have supposed it taxed in the hands of a proprietor of many plots, unable to claim exemption under the £120 minimum rule) than three steps up the ladder of 1d. each. As each step is bound to beget psychological mistakes, it is better to have them all at one stroke. As a further query—I don't think myself authorised to make suggestions in this field—I ask if the new tax cannot have any good, bad or indifferent economic and social effects in the long run: if the short-run effects are at best doubtful, cannot any better device be discovered for bringing a few millions to the Treasury? It is a pity that a big enterprise such as the new valuation of all British land should be so imperfectly utilised. There is something in the proposed valuation of land and improvements; but this something can be observed only through a mist.

I stop the letter, however, because I am touching on problems bigger than Mr Snowden's new tax.—Yours, etc.,

THE ELEMENTS OF TAXATION.

WRITING recently in the trade supplement of a Sheffield paper, the Right Hon. J. W. Hills, one-time Financial Secretary to the Treasury, emphasised in strong and simple terms the cleavage of opinion between economist and business man concerning the incidence of direct taxation. To the orthodox economic view that income tax cannot enter into cost of production he opposes the experience of the business man that it can and does. People who receive dividends must, he says, have "some money to spend, and so the prices of the articles produced must be adjusted to give shareholders an appreciable return free of tax." Again, "all income-tax paying staffs must receive salaries on a basis allowing the tax-free remuneration which befits their services and positions." It is not difficult to see why this view should make an almost irresistible appeal to wide sections of the business community, and indeed to all persons above the income-tax limit, since it provides them with an altruistic reason for resisting impositions upon themselves. But whatever may be the motive, there is undoubtedly a widespread tendency to reduce the intricate problem of incidence to

the simple terms outlined by the National Union of Manufacturers before the Colwyn Committee:—"The difference between direct and indirect taxation hardly exists in actual fact . . . the burden becomes automatically distributed by a law of political economy that defies all Acts of Parliament."

It is to an exposition of this problem, with its wide opportunities for distortion, exaggeration and half-truth, that Mr. Silverman* addresses himself in his admirable text-book "Taxation: Its Incidence and Effects." As the title suggests, he is careful at every turn to emphasise the much-neglected distinction between incidence and that vaster, more indeterminate area of disturbance which may be called effect. To the advanced student of economics it may appear that there is little that is new in Mr. Silverman's exposition—a charge that can of course be levelled at most comprehensive elementary text-books. The hypercritical seeker after deficiencies may perhaps complain that the bearing of taxation upon saving, with reference to the varying purposes of saving, might have received more consideration in Part I., which deals with the general principles of taxation. He might add that the more copious treatment of the taxation of unearned increments from land would have given better proportions to Part II., which treats, in turn, of special forms of taxation. But all said and done, Mr. Silverman has provided the ordinary intelligent student of public affairs with something which he has long needed: a lucid and illuminating integration of the social and economic aspects of taxation, presented on practical and even topical lines, and accompanied by a helpful selection of illustrative statistical tables. It must, however, be confessed that, in spite of the objectivity and breadth of view which Mr. Silverman brings to the task of exposition, he has produced a sea of reasoning in which the arguments of Major J. W. Hills cannot remain afloat.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Credit and Currency Control. By D. B. Copland. (London) Macmillan and Co., Ltd., St. Martin's Street. 5s. 6d. net.

A discussion of credit and currency problems with special references to Australia.

Constitutional Law. By E. C. S. Wade and G. Godfrey Phillips. (London) Longmans, Green and Co., Ltd., Paternoster Row. 21s. net.

A well-documented outline of the law and practice of the British Constitution, including English Local Government, the Constitutional Relations of the British Empire and the Church of England.

An Introduction to Politics. By Harold J. Laski. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. and 3s. 6d. net.

A brief and eminently readable little book in which Mr Laski, with his usual persuasiveness, lays the basic problems of politics before the general reader.

The Banker. June, 1931. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Includes an article by Dr. Gregory on "Are Bankers to Blame for the Trade Depression?"

British Banks and Agriculture. By S. Evelyn Thomas. (London) London General Press, Ltd., 6, Bouverie Street. 2s. 6d.

A short discussion of the question of agricultural credit.

Oil and Petroleum Year Book, 1931. Edited and published by Walter E. Skinner, 15, Dowgate Hill, London. 7s. 6d.

An important book of reference on the oil industry. It contains particulars of 620 English and foreign companies, with lists of their officials, full details of their capacity, latest balance-sheet figures, and recent Stock Exchange prices.

Oil Facts and Figures. May, 1931. (London) Frede. C. Mathieson and Sons, 16, Copthall Avenue. 1s. 6d.

A useful pocket collection of oil statistics, with financial details of the individual companies.

The Labour Year Book, 1931. (London) Labour Publications Department, Transport House, Smith Square. 3s. 6d.

A useful political and statistical record of the year.

The Round Table. June, 1931. (London) Macmillan and Co., Ltd., St. Martin's Street. 5s.

Includes, *inter alia*, articles on "France and Germany" and "Is the Five-Years Plan a Menace?"

The Crown Colonist. April, 1931. (London) 33, Tothill Street. 1s.

The preliminary number of an illustrated monthly, which is to be devoted to the resources and activities of the Crown Colonies.

Empire Review, June, 1931. (London) Macmillan and Company, Ltd., St. Martin's Street. 2s.

Includes, *inter alia*, articles on "Spain at the Cross Roads," by Sir Charles Petrie, and "Some Aspects of Australian Finance," by the Hon. Sir John W. Kirwan.

Statistical Abstract of British India. (Calcutta) Government of India Central Publication Branch. 6s.

Wereldwetgevers. By H. S. M. Van Wickevoort Crommelin. With a Foreword by R. A. Fockema. (The Hague) W. P. Van Stockeem and Zoon, Buitenhof 36.

A severe criticism of the International Labour Organisation at Geneva.

Currency Accounts in Sterling Books. By C. Ralph Curtis. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 5s. net.

A new system for the treatment of currency in the books of traders and bankers.

The Boston Stock Exchange. (Boston) Stock Exchange, 53, State Street.

A descriptive booklet.

Kelly's Directory of Merchants, Manufacturers and Shippers of the World. In two volumes. (London) Kelly's Directories, Ltd., 186, Strand. 64s.

A most valuable gazetteer, covering all foreign countries in volume I and British countries in volume II. The commercial directory, which is arranged by towns, contains over 1½ million names, and the whole is indexed in four languages.

OFFICIAL PUBLICATIONS RECEIVED.

THE DUAL SYSTEM OF STABILISATION

By J. TAYLOR PEDDIE, author of "The Flaw in the Economic System," and "The Invariable Standard and Measure of Value." 15s. net.

The "Dual System" explained by Mr. Peddie in his First Edition, does not embody either Free Trade or Protection. It is a system which enables producers to assume control of the price level, to take it away from money, and to promote rising wages and falling prices.

MACMILLAN & CO. LONDON W.C.2

The Stock Exchange.

NEWSPAPER SHARES—I.

THE extent of the public distrust of newspaper shares at the present time may appear extraordinary at first sight. At the end of 1928 the investor was apparently content to receive from the two principal equity shares of the "Rothermere" group—Daily Mirror ordinary and Associated Newspapers deferred—dividend yields of only 4.2 per cent. and 5 per cent. respectively, and from the holding company's ordinary shares—Daily Mail Trust—only 4.6 per cent. free of tax. At the same time, the equity shares of the rival "Berry" group—Allied Newspapers ordinary—were selling on a yield basis of 5.2 per cent. In July, 1929, five months after industrial equity shares on the London Stock Exchange had begun their decline, these shares were still returning comparatively low yields—Daily Mirror, 5.1 per cent.; Associated Newspapers, 5.3 per cent.; and Daily Mail Trust, 5.75 per cent., free of tax—though Allied Newspapers had fallen to a yield basis of 7.23 per cent. on the fear that a war between the Rothermere and Berry groups would be fought *à outrance*.

Since the autumn of 1929 the depreciation has been persistent and devastating. The collapse of the Horne group in 1930 added to the difficulties of the market, for the Carmelite Trust was a large holder of newspaper shares, in particular those of the Rothermere group. No technical difficulty, however, is sufficient to account for the whole of the present depreciation in market values. Apart from Allied Newspapers, which has recently passed its final dividend, Daily Mirror ordinary shares are now returning a yield of over 11½ per cent., Associated Newspapers deferred of over 11 per cent., and Daily Mail Trust of 10 per cent., tax-free. Only the London Express Newspaper ordinary shares, which have a very narrow market, maintain the appearance of some investment confidence. The relevant figures are shown in the next column.

At present prices, the market valuation of the four equity shares of the Rothermere group amounts to only £17,172,815, as compared with £34,675,265 and £55,985,437 at the highest market prices recorded in 1930 and 1928 respectively, while those of the two Berry companies amount to only £3,155,000, as compared with £6,285,000 and £10,792,500 respectively. The preference share capital of United Newspapers, Limited, is now valued at £153,126, as compared with £712,036 in

† Free of tax.

1928. This depreciation is all the more striking seeing that the recent reports of the principal companies, as the next table will show, disclosed no drastic decline in earnings. Apart from the *débâcle* of the *Daily Chronicle* group, which was attributable to unwise direction and finance rather than to conditions peculiar to the newspaper industry, there has been no serious trouble among the big newspaper companies. Of the Berry group, Allied Newspapers, in order to conserve its resources, has passed its final dividend, though its earnings would have allowed a substantial distribution, while the Rothermere group has so far been able to maintain the generous dividends of its principal companies without exception. Indeed, as compared with average industrial earnings last year, newspaper companies as a whole were able to show not unsatisfactory results. There may be no great significance in the figures of such holding companies as Daily Mirror, Sunday Pictorial and Daily Mail Trust on account of inter-company receipts, but it will be seen that, of the chief operating companies, Associated Newspapers reported a decline of 14.9 per cent. in net earnings for the year to March 31, 1931, and Allied Newspapers one of 15.8 per cent. for the year ended December 31, 1930.

If the figures disclosed in these newspaper profit and

loss accounts afford no clue to the catastrophic fall in the market valuations of the equity shares, how may we account for the investor's antipathy to the newspaper industry? We suggest, in the first place, that the investing public is now aware of the precarious poise of newspaper finance—that only a slight decline in advertising revenues will turn a profit on a penny daily into a loss, and that, when a newspaper starts making a loss, it cannot close down, but goes on piling up the loss with the sale of each day's production. The analysis given in the *Economist* of 1929 of the finance of the "Penny Daily" has probably not been forgotten. It was then pointed out that, while the "Penny Daily" sold for three-fifths of 1d. wholesale, its all-in costs of production were in the neighbourhood of 1½d., and that the deficiency had to be made good out of the advertising revenues before any profit was earned. A 10 per cent. drop in advertising revenues may represent the loss of perhaps half the newspaper's net profit unless economies in production costs can be achieved. The most important single item of cost (between 40 per cent. and 50 per cent. of the total), newsprint, is falling. Canadian newsprint is now \$50 per ton, as compared with \$62 in 1928. As contracts, however, have to be made well in advance, the accounts of the companies have not experienced yet the full benefit, and in any case the fall has not been nearly so precipitous as in the case of many raw materials. Again, in certain cases the heavy cost of newspaper insurance has fallen as a result of agreements between the big national dailies. But labour costs and railway transport remain at a high level. Meanwhile, the advertising revenues have fallen considerably, as is shown by the following "space-barometer" figures, which will appear in the forthcoming issue of "The Newspaper Finance Annual," and are reproduced by the courtesy of the publishers of that work:—

* *Daily Mail*, *Daily Express*, *News-Chronicle* (comparison with *Daily News* for earlier figures), *Daily Dispatch*, *Liverpool Post*, *Sheffield Telegraph*, *Newcastle Chronicle*, and *Western Mail*.

† *Daily Mirror* and *Daily Sketch*.

The experience of the two illustrated dailies is not, unfortunately, representative of the national Press as a whole. It will be found that, on an average, the amount of "news" space has declined only 3 per cent. since 1929, while the amount of advertising, revenue-producing space has declined by over 22 per cent. This loss of advertising revenue has put the national newspapers in a hazardous trading position. And the investing public is not unaware of it, even if the trading accounts for 1930 do not disclose it.

Our inquiry so far suggests that the recent fall in newspaper share values has not been merely the result of market liquidation incidental to the decline in security

values generally. Though the 1930 reports of certain well-known newspaper groups show only a moderate contraction in earnings, numerous factors in the newspaper-publishing industry afford a *prima facie* argument for caution in estimating earning prospects in the immediate future. Another aspect of this question will receive attention in a succeeding article.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 9.	June 11.

LITTLE happened during the week to induce any members to absent themselves from Epsom on Derby Day. A dull tendency again prevailed, the gilt-edged market being the only exception. Foreign bonds were depressed. After opening irregularly, Wall Street later showed signs of temporary and technical recovery, but this movement was regarded with caution in London.

Sterling showed improvement, which, with the re-investment of half-yearly dividends, was reflected in the strength of Home Government stocks, some of which reached new high levels for the year. The Bank of England's gold accessions also helped the market. Indian stocks continued to weaken, following last week's decline. Australians relapsed on fears for the outcome of the Premiers' Conference but, with the exception of New South Wales, improved slightly on news of the decision in favour of a 20 per cent. cut in public salaries. The internal debt "conversion" proposals continued to be regarded with mistrust. Home corporation stocks remained steady.

A reaction in the peso caused a fall in Argentine stocks, other South Americans declining in sympathy. The denial of rumours of a moratorium in Brazil, however, produced a slight recovery, assisted later in the week by a cessation of New York selling. After some hesitation regarding the political position, Central European stocks were marked up a little, though next to no buying took place.

Home rails reached new low levels, but subsequently showed a slight improvement. The traffic returns, covering Bank Holiday week, were difficult to interpret. However, very little selling was in evidence. Unsatisfactory crop returns were a bear point for Argentine rails.

(Continued on page 1228.)

THE UNIQUE CHARM OF SOUTHWOLD.

THIS PICTURESQUE SMALL TOWN on the Suffolk Coast is an ideal place for those who desire a few days' complete change and rest. The Town itself, with its wonderful Church and quaint "greens" and great, high Common commanding extensive views over sea and land, is different from the usual seaside resorts.

Across the river is WALBERSWICK, the haunt of nearly all artists and of many famous authors for some fifty years past, and from here are many beautiful walks or rides, either along the beach or across the silent marshes, to the lost city of DUNWICH, or over hilly gorse and heather commons flanked by woods to BLYTHBURGH, with its noble church, or WENHASTON, with the mediæval picture of "The Doom."

From Southwold delightful short motor excursions may be made to FRAMLINGHAM (20 miles), with its vast castle and church, with splendid monuments of the tragic Howards, or to WINGFIELD CASTLE (21 miles), the great Manor House of the ill-fated Dukes of Suffolk, with the beautiful effigy of Elizabeth Plantagenet in the church adjoining, or to ALDEBURGH, THORPENESS (16 miles) and ORFORD, remote from modern life, with the great Norman keep still dominating town and coast.

Southwold provides excellent sea angling, and there is an attractive 18-hole golf course. By train from London it is about two hours to SAXMUNDHAM (14 miles) and a little more to DARSHAM (7 miles), HALESWORTH (9 miles), where motors from hotels meet visitors by appointment.

There is THE SWAN HOTEL, (h. & c. water in every bedroom) in the Market Place, a well-known and most comfortable hotel with a century's reputation (Tel. 6), and also a smaller, THE CROWN HOTEL, an old Georgian Inn recently reconstructed (Tel. 53), both well known for the excellence of their catering.

(Continued from page 1225.)

Industrial quotations improved in the latter part of the week, following the recovery in Wall Street. Transatlantic issues recovered, under the lead of Brazilian Traction, on buying orders from New York. Generally speaking, however, business was very restricted, variations in prices being due to jobbers' markings rather than solid transactions. Cables and Wireless rallied on bear closing. Electricity shares were dull, but there was some forced selling of County of London issues. Under the lead of Fords, motor shares were easier. Iron and steel shares showed little change, and a similar absence of movement applied to textiles, though Courtaulds came on offer. Among tobaccos a recovery was recorded in B.A.T. Breweries generally were uncertain. United Molasses slumped on the postponement of the payment of the dividend on the preference shares, but Imperial Chemical improved. As from Monday next, June 8th, Dunlops will be quoted as £1 units, following the conversion of the 6s. 8d. shares into stock.

Unfavourable reports from America and the Continent caused a further falling away in oil shares. Royal Dutch were again sold, though later in the week the shares recovered slightly on the cessation of Continental selling. The Anglo-Persian final dividend was equal to the most optimistic expectations, and a recovery ensued on bear closing. Rubber shares continued to decline, though commodity was steadier after falling slightly at the 10 1/2 set. Tea shares were lifeless.

The mining market was dull on a lack of inquiries from Johannesburg, while base metal prices again showed a falling tendency. Satisfactory returns failed to help Kafirs. "Chartered" were sold in London and Paris. "Johnnies," however, found buyers and recovered slightly. Randfonteins scored a slight improvement. Though the copper price situation gave rise to considerable uneasiness, purchases by short operators caused a rise in Rio Tinto. Australian mines remained out of favour.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Markets opened after the "Memorial Day" holiday with considerable selling, particularly of railroads and industrials, the former being affected by the general conviction that the securing of an increase in rates would be difficult and might divert still more traffic to competitive forms of transport. Utility shares were affected by the choice by Governor Pinchot, of Pennsylvania, of the present moment for an attack on the alleged inadequate regulation of the four major interests whom he described as controlling 90 per cent. of the electricity generated in the United States. Copper shares were sold on the cut in the Kennecott Copper dividend to an annual rate of \$1 per share, but oils were steadier, despite competitive price reductions, on the publication of figures showing that gasoline consumption in the first quarter of 1931 was 6 1/2 per cent. above the corresponding figure for 1930. The belief that the market was becoming oversold was confirmed on Wednesday, when one of the sharpest rallies of the year was experienced. The immediate cause was an announcement that leading banks had reduced their margin requirements on brokers' loans, which followed the revelation that loans by members of the Stock Exchange had fallen, last month, to the lowest level on record. Even foreign bonds joined in the recovery, on reports that banking houses had subscribed to a pool in order to purchase cheap South American issues in the market. U.S. Steel, American Can and American Telephone were prominent in the rally, and Vacuum Oil jumped several points on the announcement that the Government would not further oppose the merger with Standard Oil of New York. The whole movement, however, was purely technical in character, the continued unsatisfactory position of general industrial activity being indicated, among other things, by a fresh fall in steel operations from 43 to 41 per cent. of capacity.

PARIS.

After a mild and short-lived recovery at the beginning of the month, the Paris market, deprived of all internal support and discouraged by the tendency of the foreign bourses, continued its downward trend. Business was virtually at a standstill, and the smallest sales were sufficient in many cases to take values below the level of the beginning of 1928, before the stabilisation of the franc. The slump was more noticeable among international shares than among domestic issues, Rio Tinto, Canadian Pacific, Central Mining, Shell and Royal Dutch declining sharply. In the French group, electricity shares escaped the general depression, receipts having remained constant; while almost all companies have maintained or increased the dividend which they distributed in 1930. The lowering of official discount rates in New York and London had little influence on the Paris market, the Bank of France having so far maintained its rate at 2 per cent. Money remains plentiful, and the fortnightly settlement was effected at 1/2 per cent.

INVESTMENT NOTES.

Knighthood for Stock Exchange Chairman.—The "House" learned with considerable satisfaction on Wednesday that the Birthday Honours List included a knighthood for Mr. Archibald Henry Campbell, the chairman of the Committee for General Purposes. Mr. Campbell, who is a partner in the firm of Linton, Clarke and Company, first became a member of the Stock Exchange in 1896 and was appointed deputy-chairman of the committee in 1918 and chairman in 1923. Mr. Campbell's varied public services have included a governorship of Guy's Hospital, membership of various War Pensions Committees, and a share in the deliberations of the Greene Committee, appointed by the Board of Trade in 1926, upon whose recommendations the last revision of British company law was largely based. It is by his work for the Stock Exchange, however, that Mr. Campbell is best known, and members of the "House" in general, and the committee in particular, will regard themselves as jointly and severally honoured by the distinction conferred on him. Mr. Campbell's tenure of the highest office which Stock Exchange members have it in their power to bestow has covered both the boom of 1927-28 and the worst slump within the memory of many members. While some critics have contended that the Stock Ex-

change might with advantage have taken a stronger line in checking abuses connected with the flotation of bubble companies during the boom, it is universally agreed that the firmness and promptitude with which the Hatry difficulties were faced and overcome, and the vigour with which the lessons of the crisis were applied, reflected the greatest credit on the body over which Mr. Campbell presided. It is not too much to say that, under his chairmanship, the committee has, not once but many times, given proof of its recognition that its responsibilities are not confined to the wise administration of the affairs of the 3,900 members of the "House," but embrace a large measure of trusteeship for the wider interests of the investing public. By temperament Mr. Campbell is ideally fitted for the chairmanship of a large and responsible body. Himself no innovator, he has shown himself open to conviction of the desirability of numerous reforms. His instinct for the *via media*, and his unflinching urbanity, have been invaluable in holding his team to an orderly and progressive course throughout a very difficult period. Few would be bold enough to assert that the committee has, as yet, exhausted all its opportunities for useful reform. His colleagues will the more readily express the hope that Sir Archibald Campbell may continue to occupy the chair for a considerable time to come.

Foreign Bonds.—The market in foreign bonds both in London and New York has lately been very difficult, and conditions in New York at times have verged on the chaotic. Dealings in a number of cases have become a matter of negotiation, and holders have been made unpleasantly aware that, in New York at any rate, it may be next door to impossible to sell a foreign bond at a time of crisis. The American market has become the sport of rumour. This week it was reported that Peru was unable to continue to meet its interest payments on its external

and internal debts, though the report has not been confirmed. It was also rumoured that Sir Otto Niemeyer had recommended a moratorium for Brazil, but this was subsequently contradicted on Sir Otto's authority. The position of Chile has also become the subject of rumour. Defaults are, of course, "in the air." Bolivia has already requested a moratorium and Uruguay has sent over a representative to London to negotiate with the European bondholders in regard to the suspension of sinking funds. Nor has Central Europe escaped the breath of suspicion. The difficulties of the Creditanstalt led to rumours of the reimposition of the financial control of the League in Austria, while the visit of the German Chancellor and Foreign Minister to Chequers has inspired widespread fears in New York that a moratorium for Germany will be demanded. The following table shows that prices of some foreign Government bonds have fallen to "default" levels both in New York and London, though prices in the London market present a much firmer appearance than those in New York:—

DOLLAR BONDS.			STERLING BONDS.		
	Price.	Approx. Yield to Maturity, %		Price.	Approx. Yield to Maturity, %
Argentina 6%, 1960.....	74½	8.30	Argentina Port of Capl. 5%, 1949.....	80	7 0 9
Berlin 6%, 1956.....	69½	9.06	Berlin 6%, 1957.....	78	8 1 4
Brazil 6½%, 1957.....	36½	...	Brazil 6½% 1927 Loan, 1957.....	44	15 2 6
Chile 6%, 1961.....	60½	10.29	Chile 6%, 1961.....	72	8 12 10
German 7%, 1949.....	99½	7.09	German 7%, 1949.....	69	7 0 0
Peru 6%, 1960.....	17½	...	Peru Guano 7½%, 1948	70	11 15 5
Poland 7%, 1947.....	74½	10.19	Poland 7%, 1947.....	79	9 12 8
San Paulo 8% (Coffee) 1936.....	40	...	San Paulo Coffee Insti- tute 7½%, 1956.....	55	14 12 8

It will be wise for investors to ignore rumours and keep facts in view. In Peru, for example, the Guano sterling loan is specifically secured, and funds are available for the payment of the next coupon. As regards Brazil, it may be pointed out that the 5 per Cent. Funding Bonds of 1898, the 5 per Cent. Funding Bonds of 1914, and the 5 per Cent. Loan of 1903 are specifically secured on the Customs revenues of Rio de Janeiro and other ports. The 6½ per Cent. Sterling Bonds of 1927 are secured by a general bond and by a charge on the gross receipts from certain taxes. The 7½ per Cent. San Paulo Coffee Loan and the 7 per Cent. Coffee Realisation Loan of 1930 are also specifically secured. Nor should talk of a moratorium on Germany's "conditional" annuities upset holders of the 7 per Cent. Dawes and 5½ per Cent. Young Loans, which are amply secured and rank before reparations payments. We do not wish to minimise the difficulties of the debtor countries at the present time. If raw material prices were stabilised at around their present levels the burden of fixed-interest payments abroad would be greatly increased. But we think that the investor should not be misled by the panic prices which have recently ruled in New York.

Lord Kysant in Court.—On Tuesday last, Lord Kysant, chairman of the Royal Mail Steam Packet Company, was charged, at the Guildhall, with making a false statement in the report of the company for 1926, and in that for 1927, with intent to deceive the shareholders. Mr Harold John Morland, chartered accountant, formerly auditor for the company, was summoned on a charge of aiding and abetting. A further summons was preferred against Lord Kysant with reference to a written statement in a prospectus which, it was alleged, he knew to be false in a particular. Counsel for the Crown, in opening the case, declared that Lord Kysant's remuneration from the Royal Mail Company was based on an arrangement under which his Lordship received a commission of ¼ per cent. on the company's gross takings when a dividend of 5 per cent. or more was paid. If the dividend was less than 5 per cent. the remuneration was fixed at £3,000. In 1926, the dividend was 4 per cent. and Lord Kysant received the latter amount, but in 1927 5 per cent. was paid and Lord Kysant's remuneration was, Counsel believed, £26,000. It was alleged that, in each year, the Royal Mail group had made serious losses, but had "raided" the reserves of its "100 per cent. subsidiaries" and purported to have made large trading

profits. For example, R.M.S.P. Meat Transports was alleged to have made in 1926 a trading loss of £21,941, but to have withdrawn £62,500 from reserves and paid £55,000 in dividends to the Royal Mail. In 1927, the Meat Transports Company's profit was £28,657, but a further £25,250 had been drawn from reserves and another dividend declared, absorbing £55,000. Altogether, submitted counsel, whereas the profit shown by the R.M.S.P. on the face of the 1926 accounts was £355,325, there had been, in reality (including the losses of the subsidiaries), an actual trading loss of £804,663. Thus, the 1926 figure was "wrong" by £1,159,988. Similarly, the error in the 1927 figure was £1,120,249. With regard to the second charge, Counsel for the Crown contended that, in connection with a Royal Mail debenture issue of £2,000,000, for the building of Royal Mail House and the general purposes of the company, the prospectus contained a statement intended to convince a reader that the company, during the previous ten years, had made a trading profit of something like £500,000 every year. In fact, it was declared, a heavy trading loss had been suffered during the seven years preceding the issue of the prospectus. The Court adjourned until June 8th, the Lord Mayor, who presided, expressing a hope that the case would be concluded by June 17th.

J. and P. Coats.—In the *Economist* of May 23rd we gave the preliminary profit figures of this famous company for the year 1930. The complete accounts now available show that profit and dividends totalled £1,642,322 against £2,971,272 and interest £248,282 against £295,186. Rents and transfer fees contributed £7,492 and £1,352 respectively. After deduction of charges amounting to £77,931 and directors' fees requiring £11,666, net profit at £1,809,851 was £1,369,724 less than last year:—

	Year to December 31,		
	1928.	1929.	1930.
Net profit	3,429,058	3,179,575	1,809,851

Carried forward	825,954	1,094,279	*361,630

* Subject to auditors' fees, etc.

Though several significant changes have occurred in the balance sheet, it still reveals marked strength, reserve and contingency funds aggregating no less than £5,900,000. General investments have increased from £2,496,251 to £3,598,233, while "shares in subsidiaries" show a small decline. Debtors are up from £1,613,126 to £2,018,013, while stock-in-trade has been reduced from £3,131,167 to £2,488,741 and cash from £4,113,774 to £2,585,480. It is not clear how far the reduction of 17½ per cent. in stock-in-trade is due to a quantitative change and how far to a lower basis of valuation. Creditors total £4,446,578. The company, in short, has succeeded in maintaining a liquid position despite the difficulties of a trying year.

Argentine Meat Company Offer.—A circular has been sent to stockholders and shareholders by the board of the River Plate, British and Continental Meat Company, giving particulars of an offer, received confidentially through Lloyds Bank, to purchase the whole of the company's capital for cash. The terms are £90 for each £100 of 7 per cent. debenture stock, £55 for each £100 8 per cent. redeemable preferred charge stock, 4s. for each £1 ordinary share and 1s. for each 2s. deferred share. The prospective purchaser has also undertaken to pay to the directors remuneration for the year ending July 31st next, but no compensation for loss of office. The offer is conditional on acceptance by holders of 90 per cent. of the out-

standing stocks and shares respectively, or such less percentage, with a minimum of 51 per cent., as the purchaser may elect. The business is now being carried on under the technical management of Messrs. Armour and Company, under an agreement which provides (inter alia) a guarantee of £150,000 per annum for the company, this being the amount required for the interest and sinking fund on the debenture and preferred stocks. This agreement expires on or before July 31, 1933. The directors recommend acceptance, pointing out that for the past eighteen months the company has been earning only the amount of its fixed charges. As a result of dislocation of business, due to intensive competition, the company has found it impossible to preserve intact its working capital, which has been gradually absorbed by payments of fixed charges and by trading losses. At the time of the company's inception exports of meat from the River Plate amounted to approximately 1,000,000 tons annually. To-day the annual total is little more than 630,000 tons. If the agreement with Messrs. Armour were allowed to lapse, it would be essential to provide further working capital, which could probably be obtained only by creating a charge in front of the existing debenture stock. For the stock and share holders, the matter is largely Hobson's choice. There has been some speculation as to the identity of the unknown purchaser, Messrs. Armour being suggested. It would seem that the buyer, whoever he may be, expects to obtain a higher income from the company—possibly as part of a group of meat interests—than it is capable of earning under its present auspices.

Inveresk Meeting.—The general meeting of the Inveresk Paper Company, Limited, held at Edinburgh on May 29th, produced little solid comfort for shareholders. The chairman, Mr B. H. Binder, defended the sale for £1,000,000 of the company's shareholdings in the German concern, Koholyt A.G. He declared that when the final instalment of the price was received, loans and overdrafts from bankers, which a year ago amounted to £1,152,000, would be reduced to £330,000, though other guarantees amounting to £430,000 would remain outstanding. Although the company's reserves account totalled £1,276,500, this would be insufficient to meet the depreciation in value of the subsidiary and associated companies, even under more favourable general trading conditions. A large part of this depreciation, the chairman declared, arose from "unfortunate investments" in newspaper companies. Mr Binder disclaimed any immediate intention on the company's part to borrow further considerable sums of money, but expressed himself as unable to give even an approximate date for the production of a scheme of reorganisation. The chairman denied certain statements made in a circular issued to shareholders by the ex-chairman, Mr William Harrison, in a circular on May 21st. The latter gentleman defended certain aspects of his former policy at some length, particularly as regards the purchase of the *Daily Chronicle*. A vote on an amendment from the body of the meeting to a resolution that Mr Harrison be not re-elected showed a large majority in his favour. A poll was demanded, and resulted in the casting of 1,406,190 votes against and 333,098 votes in favour of Mr Harrison's re-election. Although the latter gentleman has disputed the validity of the proxies against him, the publication of the result of the poll has been followed by his resignation as a director. It may be presumed, therefore, that the eventual reorganisation of the company, when conditions permit, will be undertaken under the auspices and on the initiative of the present board.

Antofagasta (Chile) and Bolivia Railway.—Few concerns in South America have escaped the results of economic depression, and this soundly-administered railway company has been no exception to the rule. Gross railway receipts dropped last year by £632,549 to £1,269,235, while combined railway and waterworks gross revenue was down by £646,874, a decline of 32.39 per

cent. No allocation was made to the reserve fund. The following table shows the results of the past three years:—

Year ended December 31.	1928.	1929.	1930.
	£	£	£
Net profit (after tax)	600,804	687,271	352,640
Preference dividend.....	100,000	100,000	100,000
No. of times covered	6.01	6.87	3.63
Ordinary dividend:—			
Amount	390,499	440,074	256,614
Paid	7%	7%	4%
Reserve fund	100,000	100,000	...
Staff benevolent fund	20,000	15,000	10,000
Inc. or dec. in carry forward .	— 9,695	+ 32,197	— 13,974

The decline in railway receipts was due to the reduced output in the nitrate, tin and copper-mining industries and a smaller "up-traffic" of machinery, fuel, etc. Passenger traffics were also adversely affected. Goods traffic totalled only 864,034 tons, as compared with 1,406,720 tons in 1929. Receipts during the current year to date have declined by 36.47 per cent. as compared with 1929. At the present price of 28½ the ordinary stock yields £15 1s. 11d. per cent. on last year's dividend—a figure indicative of the market's conservative attitude towards the current year's earnings prospects.

Industrial Profits.—April and May, 1931.—Of the 428 British company reports which reached us during the last two months some 277 referred to the calendar year 1930. The total profits of the 428 companies showed a decline of 15.47 per cent. compared with last year. Some 217 reports received during April showed a decline of 10.49 per cent. and some 211 reports during May, a de-

Among the larger companies which reported reduced profits, the newspaper group featured prominently, Amalgamated Press, Allied Newspapers and Associated Newspapers being in the van. The outlook for newspaper earnings is discussed on an earlier page of this issue. Ever-Ready and Chloride Electrical were among the companies announcing small increases.

New Capital Issues in May.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in May, and in recent years:—

Monthly Average.	(000's omitted.)				
	United Kingdom.	British Possessions.	Foreign Countries.	Total	
	£	£	£	£	
1924	7,051	6,023	4,370	17,444

May, 1930	500	15,821	16,438	893	33,652
May, 1931	1,450	381	10,045	11	11,887

Little activity was shown in the new capital market during May. Investments in National Savings Certificates exceeded encashments by £1,450,000. Of the issues made during the month the most important was the £10,000,000 Indian 6 per cent. 1933-34 loan, issued at par, a large proportion of which was left with the underwriters. The only conversion issue was that by the Liverpool Gas Company of £300,000 in 5 per cent. preference stock, at par. The largest public issue was made by Odham's Press, in the shape of £200,000 of 7 per cent. B mortgage debentures, 1954, at £98. The only important issue to shareholders consisted of £100,000 of £1 5½ per cent. cumulative preference shares at 20s. 6d., made by the North Somerset Electricity Company.

Oil Dividends.—The Anglo-Persian Oil Company is paying a final dividend of 10 per cent. on its ordinary shares, making 15 per cent. for 1930 as against 20 per cent. in 1929. This is in accordance with the general anticipation. The market was pleasantly surprised to find that the profit figures for the year, after allowing for debenture interest, Persian Government royalties and income tax at £4,648,579, were only 10.7 per cent. below the figure for 1929 (£5,206,762). The company is providing £487,287 for extra depreciation and £13,000

discount on debentures, and is allotting £550,000 to special reserve funds and £500,000 to reserve for taxation. After these appropriations the carry-forward is increased from £687,064 to £896,675. The shares were slightly harder at 1½ on the publication of these preliminary figures, but it should not be forgotten that the first cut in petrol came in September last year, so that the company had the benefit of nine months of rising consumption at highly profitable prices. The reductions which the oil combines have made in the price of petrol since the autumn of last year have amounted to 5d. per gallon, which, on 200,000,000 gallons a year, would amount to over £4 millions per annum. Drastic reductions in petrol prices have also occurred in the Continental markets, in which the Anglo-Persian is operating. Other dividend announcements of a satisfactory character were those of the Canadian and Mexican Eagle, both these companies maintaining their 1929 rates, which were as follows:—Mexican Eagle: 8 per cent. on the participating preference shares and 6 per cent. on the ordinary shares of 4 pesos; Canadian Eagle: 23.88 Canadian cents on the participating preference shares and 12 Canadian cents on the ordinary shares of no par value. The profit figures have not yet been published. The shares at the present market prices return the following yields:—Mexican Eagle (at 6s. 6d.), 7.38 per cent.; Canadian Eagle (at 6s. 9d.) 7.4 per cent. These dividends suggests that the Mexican Eagle is able to make satisfactory profits from its sales in the domestic market in Mexico, and that Canadian Eagle is assured of a comfortable income from the refining profits, which are, in effect, guaranteed, on the purchase and resale of Venezuelan crude oil.

Shell Transport.—The report of the Shell Transport and Trading Company follows the stereotyped staccato lines of previous years. This is regrettable, since Shell Transport accounts are among the most uninformative of holding company accounts. The directors may consider that the voluminous report of the Royal Dutch Petroleum, their senior partner, provides the public with sufficient information. The objections to this view are that the Royal Dutch report does not go into the hands of British shareholders of Shell Transport, that it is always far too voluminous to be reproduced in the Press, and that it invariably contains, as it did this year, highly contentious political arguments. The results of Shell Transport for the past three years are given in the following statement, showing that profits in 1930 declined by 22 per cent.:—

Year to December 31st.	1928.	1929.	1930.
	£	£	£
Receipts.....	5,492,074	6,527,975	5,074,415
Expenses.....	44,180	24,589	27,927
Directors' fees.....	...	20,000	20,000
Issue expenses.....	...	...	128,366
Preference dividends.....	450,000	450,000	668,251

Ordinary dividend amount..... 4,996,902 6,030,340 4,221,238
Ordinary dividend rate (tax free)..... 25% 25% 17½%
Forward..... 237,604 240,650 249,933
The balance sheet discloses a decidedly strong position. Gilt-edged investments stand at £9,771,379, of which the following holdings are of interest:—£2,198,021 in 5 per cent. War Loan, £4,858,279 in 4½ per cent. Treasury Bonds, and £2,150,717 in 4 per cent. Treasury Bonds. Cash stands at £4,405,486, as against £1,158,483 in the previous year—a position which reflects the additional funds made available by the issue of 5,000,000 7 per cent. second preference shares, which have not yet been fully utilised. The premium on this issue, namely £1,250,000, has been placed to the reserve account and the issue expenses written off out of the profit and loss account. The property account represented by holdings in and advances to sundry companies has been increased by £3,769,393 to £30,882,602, which is in part explained by participation in the share issue made by Venezuelan Oil Concessions last year. The market will look forward to hearing Lord Bearsted's views on the outlook, in view of its increasing nervousness over the continued collapse in oil prices in America.

Burmah Oil Company.—The report of the Burmah Oil Company, which, by virtue of its 3,560,985 ordinary shares in the Anglo-Persian and 1,000,000 ordinary shares in Shell Transport, is now a holding as well as an operating company, discloses a not unsatisfactory earnings position. This may be accounted for by the fact that remunerative prices ruled for three-quarters of the year, while dividends received from Anglo-Persian and Shell were at the 1929 rates. The following table gives a comparison of the results for the past two years:—

	1929.	1930.
	£	£
Net trading profits.....	4,170,788	3,464,201
Net after tax, interest and overhead expenses.....	3,502,856	2,736,013
Preference dividends.....	260,937	249,375
Balance.....	3,071,919	2,486,638
Per cent. earned on ordinary.....	52.4	36.2
Per cent. paid on ordinary.....	30%	22½%
General reserve and other reserves.....	670,000	970,000
Write-offs.....	565,384*	...
Carried forward.....	399,775	612,517

* £65,384 balance of expenses on 5½ per cent. debenture issue and £500,000 written off shares in subsidiary companies.

The directors, in their report, adopt a very conservative view of the outlook. They report a definite setback in kerosene consumption in India and a slowing down in the demand for petrol. At the same time heavier imports of petrol and kerosene from Russia and America have left insufficient room in India for the domestic production. In the directors' opinion, the protection of the company's position in the Indian market demands that measures be taken to secure a sufficient quota of the market for the local production. These remarks seem to forecast a dispute with the Standard Oil and Russian oil importers. The balance sheet of the company continues to show great financial strength. Investments in British and Indian Government securities stand at £2,926,051, against £2,676,945, and loans, deposits and cash at £1,723,712, against £1,458,297. The surplus of current assets over current liabilities amounted to £1,883,763. There is no change in the value of holdings in subsidiary and associated companies at £2,283,487, but miscellaneous holdings, which include the Anglo-Persian and Shell Transport interests, are valued at £8,467,334, against £7,380,488. The Anglo-Persian shares are valued at 11s. 8½d., but the others are at cost. In other words, the hidden reserve on the Anglo-Persian holding is allowed to offset the loss on the 1,000,000 shares in Shell Transport, which cost about double the present market value. The Burmah oil shares are at present quoted at 2½ to yield 10.47 per cent. on the basis of the 22½ per cent. dividend.

Venezuelan Oil Concessions Meeting.—At the general meeting of the Venezuelan Oil Concessions, Lord Bearsted was able to disclose a not unsatisfactory position to the shareholders. Although lower oil prices were recorded last year, the V.O.C. actually received, for each barrel of crude oil sold, a price slightly higher than in 1929. Lord Bearsted was, therefore, in a position to contend that the shareholders had been wise in maintaining their contracts with the Royal Dutch-Shell group and not embarking upon independent shipping and marketing arrangements which a minority of shareholders were at one time anxious to obtain. The total quantity of oil sold by the company last year was smaller than in 1929 on account of the restriction agreement made among the Venezuelan producers last autumn, the total production in Venezuela having been reduced from an average of about 375,000 barrels per day in 1929 to a present figure of 308,000 barrels per day. As a result of the economies made by the company, the slightly lower gross revenue was considerably more than offset by reduced expenditure, so that the net profit for the year exceeded that of 1929 by about £175,000.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Suez Canal, Guardian Assurance, Investment Trust Corporation, City of London Real Property, Venezuelan Oil Concessions, Hongkong (Selangor) Rubber, and Ever Ready (Great Britain). Presiding at the annual meeting of the City of London Real Property Company, the chairman made a vigorous attack on the proposed Land Tax, in the course of which he pointed out that, at the present time, the owner of a freehold house in the City, let in suites, was paying in rates and Government taxes three-eighths of the gross rent he received. At the annual meeting of the Suez Canal the chairman referred to the repeated requests from shipowners for a reduction in the canal dues, and affirmed that a reduction in tariffs, made under present conditions, would impose upon the company a further and important sacrifice which would certainly find no appreciable compensation in a corresponding development of traffic.

CAPITAL ISSUES.

The market for new capital remains under the deadening influence of economic depression. The sole public offer of the week was a small first preference share issue by a Sheffield concern, *The Ketton Portland Cement Company*. This company was registered in 1928 and completed its first producing unit in July, 1929, but the prospectus gives only a directors' estimate of profits. The yield on the shares is not high at the present stage in the company's development. No part of the issue has been underwritten. Application will be made for a quotation on the Sheffield Stock Exchange, but not in London, the issue, apparently, being regarded as of interest mainly to local investors.

Ketton Portland Cement Company.—Issue of 150,000 6 per cent. first cumulative preference shares of £1 each at par. No part of the issue has been underwritten. The company was registered on July 13, 1928, to erect a works in Rutlandshire for the production of "Ketco" Portland cement and other products. Profits are estimated at £10,000 per annum, at which figure they would cover dividend on the present issue nearly 4½ times.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction. **Trust Company of London and Scotland.** Particulars of an issue of £250,000 5½ per cent. redeemable debenture stock, 1960/1970, repayable on June 1, 1970, at 101 per cent. **Lea Bridge District Gas.** Particulars of an issue of £35,000 5 per cent. perpetual debenture stock, ranking *pari passu* with existing debenture stocks.

[Other Stock Exchange information, including the latest dividend announcements, summary of balance sheets, reports and notices, and profit and loss figures, and oil outputs, will be found on page 1247 under the heading "Company News."]

Month.	Ending 1931.	Description.	Receipts for Month.		Receipts to Date.		

tion of decline and commencement of something like stabilisation may be not far off, in spite of such obstacles as the accumulations of wheat in North America which remain to be dispersed, the troubles in Brazil, which appear to be perennial, over the coffee crop, and the menace of Soviet Russia.

Recent years have brought many efforts at artificial regulation of trade and prices. Only in the rarest cases can such attempts succeed; satisfaction may be derived, therefore, from the fact that many attempts to restrict supplies and control prices are being abandoned, and that markets are being allowed to find their own level. A freer action of the laws of supply and demand should pave the way to stabilisation of prices, and make possible the working off of the excessive stocks of raw materials which are now in existence. Only after stocks have been reduced to normal dimensions can we look for a recovery in the price level and a return to profitable conditions of business.

I will now move:—"That the report and accounts as presented be and they are hereby received, approved and adopted, and that dividends of £2 per cent., less income tax, on the preferred stock, and £12 per cent. less income tax, on the deferred stock (making, with the interim dividend, 20 per cent. for the year ended May 1, 1931) be and the same are hereby declared."

Mr C. L. Dalziel seconded the resolution, which was carried unanimously.

The retiring director, Mr H. A. Vernet, was re-elected, and, on the motion of Mr Ledger, seconded by Mr Dunn-Gardner, the auditors, Mr C. O. Webb and Mr Lionel Baddeley, were re-appointed.

The proceedings terminated with a cordial vote of thanks to the chairman, directors and staff.

HONG KONG (SELANGOR) RUBBER, LIMITED.

SATISFACTORY TIN RESULTS.

The annual general meeting of Hongkong (Selangor) Rubber, Limited, was held, on June 3, at the registered offices, 7, Martin's Lane, Cannon Street, London, E.C.

Mr W. Arthur Addinsell, the Chairman, in the course of his remarks, said: The feature of the accounts is that the profit from tin interests completely overshadows the results from rubber. The fact that loss was sustained on rubber would not be unexpected. On the other hand, I have no doubt it was a pleasant surprise that the income from tin exceeded £11,000; and that there was a net profit of £9,336.

The success attained by Hongkong Tin, Limited, in the first full year is a matter for congratulation. Their mine is one of the richest (if not the richest) in the Malay Peninsula. Owing to the low price ruling for tin during the current year, the income by way of tribute and dividends will be substantially reduced. For the first four months receipts from tribute have worked out at approximately 50 per cent. lower than for the corresponding period of 1930. For this reason, and also having regard to the low price ruling for rubber, your directors, who are some of the largest shareholders, content themselves with recommending a dividend of 5 per cent. The undistributed profit should be a source of strength during the present crisis.

Last year, when the price of rubber began to fall below the average cost of production, the directors, secretaries and other officials in London voluntarily agreed to substantial reductions in fees, and the Eastern officials and staff readily fell into line. These economies operated as from September 30th.

The question of crop and expenditure has been constantly reviewed. Our policy has been to secure the minimum crop at the most economic figure. By cutting out certain cultivation works we are endangering the healthy condition of the rubber trees, but this is a risk we must take if we are to retain an efficient organisation and minimise the loss on working. There has been no pressure to secure a potential output. As a result, the quantity of rubber secured for 1930 was nearly 100,000 lbs. less than for the previous year.

Your directors are carefully watching your interests, and, having regard to the company's sound financial position, I can congratulate you on securing and retaining a holding in a rubber company which I am confident will justify your selection.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street London, E.C.4.

GUARDIAN ASSURANCE COMPANY, LIMITED.

SATISFACTORY FIGURES.

ALL FUNDS STRENGTHENED.

The ordinary meeting of the Guardian Assurance Company, Limited, was held, on the 1st instant, at 68, King William Street, London, Col. Lionel H. Hanbury, C.M.G. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—"The figures are inclusive of those of our associated companies, except in the life department, where the figures relating to the three accounts are separately stated. The gross new life assurances amount to £1,440,938, which is greater than in 1929, but, after deducting re-assurances, the net new business, at £1,323,404, is less by £9,365 than in the previous year. The claims by death, at £169,979, are less by £78,146, and very well within the expectation, both as to the number of claims and their amounts. Policies matured to the sum, with bonuses, of £163,363, which is also less than a year ago.

The net premium income of the life department is £543,094, against £524,015, an increase of £19,079, and the net income from interest (£272,631) is £3,656 less than in 1929, because of the increase in tax. The consideration for annuities granted is £10,892, against £18,331.

The results of the fire business in 1930, although much better than in 1929, were only slightly less favourable than they had generally enjoyed in the past fifteen years. Their income from premiums was £1,081,336, approximately £27,500 less than in 1929. The losses were £503,500, being £81,980 less than in 1929. The total fire funds amounted to £1,540,700, and they had increased the general reserve fund to £1,000,000. The transfer to profit and loss account was £120,171. In the accident, burglary and general assurance department, the premiums amounted to £775,319, which was less than in 1929 by approximately £23,000, and there was an underwriting profit of £30,389. The total fund was now £710,060, a net increase of £5,460.

With reference to the marine department, they had closed the year 1929 by transferring to the suspense account £29,000, and, assuming that sum was adequate, there was a profit of £6,120, equivalent to 3 per cent. of the premiums. The premiums in the department for 1930 showed an increase of £5,887, and the claims settled were 21 per cent. of the premiums, as compared with 23½ per cent. in the previous year. The amount of the fund at the end of the year was £410,392, approximately £10,000 greater than at the end of 1929, and the transfer to profit and loss account of £19,028 was slightly less than the interest derived from the reserve fund. As to the general trend of marine business, he hoped that the recurring losses sustained by marine underwriters would have a steadying effect on rates of premium and that the new and scientific aids to navigation now fitted to many vessels would tend to reduce marine casualties.

RESULT OF YEAR'S OPERATIONS.

The dividend of 10s. for the whole year was nearly to be met out of the earnings derived from the interest on the several funds. In fact, the aggregated interest, at £197,274, was short of the sum required for one year's whole dividend by £6,320. The fact that the premiums of two of their trading departments, fire and accident, had declined was a matter of concern to the directors, although, on the aggregate premiums, the ratio of the reduction in those two accounts was but 2.6 per cent. The decline was to be ascribed to several causes together resulting in a paucity of new business and to severe competition, which always arose when there was not enough business to go round. In the United Kingdom industries were handicapped by the constantly increasing taxation, which far exceeded that in France, Italy, Germany or the United States, whereas our principal competitors had designed to increase the competitive power of industry by reducing taxation.

Advocates of social reform in these islands did not perhaps foresee some of the results, for they must give them credit that, in their efforts to render labour happier and more efficient by the means supplied by the taxpayer, it had never been intended by those same reforms to deprive labour, by the increasing unemployment, of those very advantages.

They prospered as trade, whether home or export, progressed; a reduction in premium income meant to them a higher percentage in their expense ratio, if in a minor degree. He did not forget that they had been passing through a time when economy had ceased, to a large extent, in some places, to be one of the tests of good management.

On the whole, he thought they might consider that the accounts before them were good in all the circumstances. They had strengthened each of their funds, as they always would do when the results permitted.

The report and accounts were unanimously adopted.

CITY OF LONDON REAL PROPERTY.

THE LAND TAX PROPOSALS.

POSSIBLE EFFECT IN THE CITY.

MR W. E. R. INNES'S VIEWS.

The ordinary general meeting of the City of London Real Property Company, Limited, was held, on the 1st instant, at the Cannon Street Hotel, London, E.C., Mr W. E. R. Innes (the chairman) presiding.

The Secretary (Mr L. A. Kingscote) read the notice and the report of the auditors.

The Chairman, in the course of his speech, said: The net revenue, after all charges, including rates, amounted to £439,029, as compared with £494,954, a reduction of £55,924. To the £439,029 has to be added £161,223 brought forward, making a total of £600,253. The preference dividend absorbs £37,438, and the directors recommend that a dividend be declared for the year on the ordinary shares at the rate of 5½ per cent., less tax—the same as last year—of which three quarterly payments, amounting together to 3½ per cent., have already been made. This will require £341,000. We have added £10,000 to the fund for replacement of freehold properties, leaving a balance of £211,814 to carry forward, an increase of £50,591.

THE CHANCELLOR'S BILL.

Unfortunately, the Chancellor of the Exchequer has selected the present moment for bringing forward his Bill for further taxation of land, and has based the justice of his demands on the grounds that the land is not the property of those who have bought and developed it, but belongs to "the people," in spite of the fact that land is one of the investments authorised for Trustees under the Settled Land Acts, and that mortgages on freeholds are included by Statute in the list of securities they may invest in.

Whenever propositions for land taxes are put forward, it is always claimed that landowners do nothing towards making the value of their property, and pay no taxes, which those making them must know to be untrue. Apart from the fact that the value of the land has been largely made by the capital expenditure of owners, they pay the same Government taxes as other people, and, in addition, contribute a very large share, both directly and indirectly, of the local rates. At the present time the owner of a freehold house in the City, let in suites, is paying in rates and Government taxes three-eighths of the gross rent he receives. When a person enters into a lease of land for development, the rates and taxes are taken into consideration in calculating the rent, so that indirectly the freeholder pays his share. To completely revise the whole system now, and to place all the rates on the landowner, and alter the terms of these contracts, which it has been suggested is one of the principal objects of the land valuation, must be most unfair. It means relieving one party to a bargain of his share of the outgoings at the expense of the other.

The supporters of the Bill talk airily of the land taxes in the Dominions and on the Continent, and suggest that the whole of the local taxation is on the land and none on the buildings. I have had some experience of Canada, and this is not the case where I was. I understand that every province has a different system, but in British Columbia, and I expect in the other provinces where the cities are of recent growth, the taxes are raised partly on the land and partly on the buildings, and together amount to nothing like what we are already paying here. At the time that system was evolved ground rents did not exist, and the tenure was all freehold; so there was no unfairness created between an owner and leaseholder.

POSITION IN THE CITY.

With regard to the City, I feel no doubt the measure will have a retrograde effect instead of that which its supporters maintain they expect. The tax will be a very serious burden, and is admitted to be only the prelude to much higher charges. Two of its worst features seem to me to be that it is intended to provide for further expenditure at a time when we are already overtaxed, and the grounds on which it is sought to justify it. In parts of the City the land is worth as much as the buildings, in which case this new tax in its initial stage will amount to an additional Schedule A charge of from 10d. to 1s. in the £. In a few cases the land is worth much more than the building with a corresponding increase in the tax. Office buildings, like everything else, get out of date, and if people are frightened of the safety of their capital they will hesitate long before they take the risk of replacing them. Should this, as I anticipate, prove to be the case, it will cause severe loss to employment in the building trade.

If the title to the land on which a person wants to borrow money for the purpose of building is claimed by the Government to be

bad, it will be very difficult to find people to advance the necessary funds, and probably even more difficult after the building is completed to find a purchaser. It is likely to end in firms who do not want a whole house, but find it more convenient to rent a suite, either having to put up with old buildings or paying a rent which provides for the tax, because it is too much to expect owners to put up new buildings to be occupied by other people unless they feel a reasonable prospect of a return after the payment of taxes.

VALUATION DIFFICULTIES.

The valuation of land in the City will, if fairly done, involve a tremendous amount of work. It is impossible to say that all the land in a street is of the same value. Parts of the same street vary very much, and those whose business it is to develop property know it is a most intricate business. The value depends so much on the shape of the plot, and its size and to what height the building can be carried, and how it can be lit. In the case of all sites on which the buildings have not been recently erected, plans will have to be drawn to see what accommodation can be provided if the figure is to be arrived at properly. Even where this has been done one hears amongst people best able to judge very considerable differences of opinion as to value, and with conditions as they are to-day it is more than usually difficult to put a figure on the land. A great injustice is done under the Bill to freeholders who have let their land for a term of fifty years or upwards, as they are not allowed any say in the valuation and are not given any right of appeal. The only person who is given any rights in these cases is the tenant, and his interest and that of the owner will probably be conflicting. The only thing the tenant will concern himself with is to try to arrange that the valuation is as low as possible in order to avoid the payment of a share of the tax.

Where, for instance, a landowner has been generous in providing a valuable site on lease for a charitable object, or for working-class dwellings at a nominal rent, if the land is valued on the rent paid the figure will be very low, in which case, if it is subsequently required for public purposes it will be taken for next to nothing and the freeholder will suffer, while, if the market value of the land is fixed as though it were used for its most profitable purpose, a heavy tax will fall on the leaseholder.

In cases where both the owner and the tenant are interested parties they ought both to have a right to a hearing. The appeal as to the value lies only to a single referee, and where the subject being considered runs into millions, as in the case of land in the City, and is of a very complicated nature, I think this is putting too much responsibility into one man's hands, and that an appeal should be allowed from his decision.

TOO MUCH LEGISLATION.

The truth is we are suffering from a surfeit of legislation, and a great part of many business people's time is now taken up more in trying to save as much as they can from the effects of new claims instead of in trying to improve their business. Last year an attempt was made to make us pay income tax on unlet offices, while since January we have had four measures under consideration, the L.C.C. General Powers Bill, the Town and Country Planning Bill, the Finance Bill, and the amendment of the London Building Act. In the L.C.C. General Powers Bill provision was made to make owners erecting new buildings in London set back for street widening, without compensation.

The Town and Country Planning Bill—a Bill held out to be so fair on the ground that one of the principal objects is that where an improvement is made at the expense of the public, which benefits an owner's land, the latter is to pay the whole amount of the assumed betterment to the responsible authority—really provides for something quite different. Under Section 27 it is the owner of any land which is said to be improved by a scheme, and not the public, who is to pay the expenses of that scheme. While Section 19 provides that where any betterment results the owner is to give up the whole of the betterment, before he has realised it, and apparently without any provision for an allowance in respect of his enforced contribution. And now we have the Finance Bill.

UNNECESSARY COMPLICATIONS.

Another cause we have for complaint is that the Bills as they are drawn to-day are so complicated that it takes hours of work to ascertain what they mean, and when they are being expounded by their advocates a description of their terms is given to catch the popular fancy, while their real importance is frequently neglected.

In the case of the Finance Bill, the rules as to how the valuation is to be arrived at are extremely difficult to understand, and probably when cases arise and their meaning is tested in the Courts they will be found very difficult to construe.

The report and accounts were unanimously adopted.

EVER READY COMPANY (GREAT BRITAIN), LIMITED.

LARGE INCREASE IN SALES.

The ordinary annual general meeting of the Ever Ready Company (Great Britain), Limited (Manufacturers of Batteries and Electrical Sundries), was held, on the 1st instant, at the Ever Ready Works, Hercules Place, Holloway, London, Mr Magnus Goodfellow (chairman and managing director) presiding.

The secretary (Mr F. W. Stevens, A.C.A.) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said:—During the year which ended on March 31st last a year of depression and of general shrinking consumption—a careful estimate of the consumption of primary dry batteries of all types used in this country showed an increase of as much as 20 per cent. over the previous year. Careful administration, and the loyal co-operation and hard work of our staff and people, enabled us not only to obtain our full proportion of the increase in consumption, but also to obtain a considerable amount of business previously in the hands of our foreign competitors. The Board of Trade returns showed that such imports were reduced during the year by some 15 per cent. as compared with the previous year.

INCREASED EXPENDITURE TO MEET INCREASED SALES.

At our meeting a year ago I informed you that we had grounds for the belief that our preparations for an increased production would result in our doing an increased business, and it is a matter of great satisfaction to us that we have been even more successful than we had anticipated.

The heavy increase in the sales during the year—not only a record of sales, but a record of increase of sales—necessitated an expenditure of £20,000 in excess of the estimate of £30,000 on buildings and equipment. In addition, we have since sanctioned further expenditure, amounting to £15,000. During the past three years, therefore, we have expended and sanctioned expenditure amounting to £120,000 on buildings, plants, etc., provided for out of accumulated profits and internal resources. I have made a careful inspection of all the factories both here and on the Continent during May, and I am satisfied that our technical and chemical efficiency is higher than it has ever been.

TRADE ASSURANCES OF SUPPORT.

We are grateful to the trade as a whole for the support they have given us in a difficult year, and we believe the large number of assurances of support we have already received for the coming year will assist us in a further increase of business, to the mutual benefit of consumers, the trade and ourselves. It is our intention again to pass on to the consumer the savings in cost of production we have achieved during the year.

The Chairman then dealt fully with the items of the balance sheet, and mentioned that the reserves and carry-forward now reached the total of £612,000, as compared with £534,000 a year previously, being an increase of £78,000. I understand, he continued, that efforts are being made to prevail upon the Chancellor of the Exchequer to exempt profits retained in a business from income tax at 4s. 6d. in the £. Had this change operated during this year, the increase in our reserves would have been considerably more by reason of the saving of the tax we have had to pay on the previous year's surplus.

As to the future, I repeat what I have said to you on a number of occasions, that I believe the public use of primary dry batteries in every walk of life will continue to grow, as it has done during the past twenty years. It will be understood that I include the manufacture and sale of our portable electric lamps and other numerous kindred specialities. I am able to inform you that the sales for the two months to date show an increase over the sales of the corresponding period of a year ago, not only an increase but a greater increase than the corresponding period of last year showed over that of the year before.

In conclusion the Chairman paid a tribute to the work and loyalty of the managers, executive staff and workpeople, and said that he felt happy in the belief that they would continue to support them as they had done in the past.

DIVIDEND PAYMENTS.

Mr A. H. Sheppard seconded the resolution, which was carried unanimously, and a final dividend of 5 per cent. on the preference shares (making the maximum of 10 per cent. for the year) and a final dividend of 25 per cent. on the ordinary shares were declared.

The retiring auditors (Messrs Josolyne Miles Page and Company) having been reappointed for the ensuing year, the proceedings closed with a cordial vote of thanks to the chairman and his colleagues for the excellent results achieved during the year under review.

SUEZ CANAL COMPANY.

RESULTS OF A DIFFICULT YEAR.

The seventy-seventh annual meeting of the Suez Canal Company was held on Monday, June 1st, in Paris.

The Marquis de Vogüé (the President) presented the report of the council of administration, which was substantially as follows:—

The economic crisis, the first effects of which on the Canal traffic were apparent last year, continued and increased during the whole of the year 1930. At the same time, several abnormal factors—the boycott of English products in India, and the depreciation of silver in China—have exerted a detrimental effect on Europe's commerce with certain regions of the Far East. Under the influence of this mass of causes, the activity of the navigation through the Suez Canal has been definitely moderated, the tonnage, for the whole year, falling below the level of 1928. To this decrease in tonnage must be added the effect of the remission of 25 centimes, which came into effect on September 1st; the total result being a decrease in transit receipts of about 80 million francs as compared with the previous year.

It is under such circumstances that one can appreciate the advantages of the prudent financial administration which is a tradition in your company and which you have always approved. Thanks to measures taken during prosperous years, the position of the sinking funds and various reserves is such that we can reduce our allocations to them, which allows us to declare a gross dividend of 650 francs. You will observe, moreover, that this result has been obtained without any call on the special reserve; which remains intact to counterbalance the decrease in receipts which we foresee during the current year.

As you doubtless know, we have been the object, on the part of shipowners—especially British shipowners—of repeated requests seeking to obtain a further and considerable decrease in our transit charge. The arguments which were put before us in support of this demand have been the object of our most careful examination. If, in fact, we could believe that the transit charges of the Suez Canal, are, as some pretend, an appreciable factor of the economic depression, *a fortiori* if we had reason to hope that a lowering of these charges would show, as a consequence, a marked recovery in the traffic of the Canal we would not hesitate to satisfy, at least partially, the shipowners' desires; but the examinations we have made have led us to the opposite conclusions. A lowering of the tariffs made under present conditions would impose on the company a further and important sacrifice which would certainly not find any appreciable compensation in the development of traffic. A time will come, we hope, where, under different circumstances, a decrease would appear opportune, and then we will not fail to put this voluntarily into effect, as we have already done several times in the past; but we refuse to do so to-day under pressure of an opinion which we consider ill-informed. Your company has shown a very large and liberal spirit in the management of a public service of world-wide interest of which it has charge; it will not depart from this attitude in the future, everything being reconciled, as in the past, with the essential safeguarding of the interests of the shareholders.

The total receipts of the year at 1,098,547,518 fr. 64, show a decrease of 91,410,922 fr. 39, as compared with those of 1929. Up to the extent of 80,349,632 fr. 21, this decrease is in transit receipts.

Expenses, at 313,982,702 fr. 93, show an increase of 2,739,468 fr. 37 over those of 1929, the replacement of mooring piles, which we announced last year, alone accounting for an increase of 5,350,000 frs. Economies realised in other directions, luckily counterbalanced a part of this increase.

We propose allocating 40 millions for work on improvements and 20 millions on the writing down of materials.

After all allocations, the excess of receipts over expenditure amounted to 714,484,290 fr., to which has to be added 5,261,918 fr. brought forward from 1929, making a total of 719,746,208 fr. Of this sum it is proposed to distribute among the shareholders 718,309,859 fr. and to carry forward 1,436,349 fr. We propose a dividend of 650 fr. gross and 576 fr. 90 net.

As we have pointed out, the maritime movement of the Canal has shown, during 1930, a considerable decrease, as compared with the year 1929, which, after twelve years of almost uninterrupted progress, had shown a large increase on all previous results. It has even fallen slightly below the level of 1928.

The net traffic only amounted, in fact, to 31,668,759 tons, showing a decrease of 1,797,255 tons on the year 1929 and a decrease of 237,143 tons on the year 1928.

The average time of transit through the Canal is the lowest which has been recorded. It was 14 hours 34 minutes, as against 14 hours 57 minutes in 1929. The number of passengers was 305,202, a decrease of 20,653 on the preceding year.

The world economic position is too unsettled and unstable to allow us to make any definite forecast as to the canal traffic during

the next few months. It does not appear, however, unreasonable to hope that the decrease in tonnage, which reached in April 394,000 as compared with last year, will not increase from then to the end of the year.

VENEZUELAN OIL CONCESSIONS, LIMITED.

INCREASED PROFIT—STRONG CASH POSITION.

The fifteenth ordinary annual general meeting of the Venezuelan Oil Concessions, Limited, was held, on the 2nd instant, at Winchester House, London, E.C.

The Right Hon. the Viscount Bearsted, M.C. (the chairman), in the course of his speech, said:—Since our last meeting the liquidation of the V.O.C. Holding Company, Limited, has been completed, and our accounts now show the combined position. The proceeds of oil sold and the value of oil stocks amount to £4,639,084. The corresponding figure for 1929 was £4,885,597. This reduction in income from the sale of oil is due to our policy of restricting production, which consequently has fallen from 6,469,206 tons in 1929 to 5,878,186 tons in 1930. The financial effect of the lower production has been partly offset by an improvement, mainly due to our being able to produce from selected wells, of over 8d. per ton in the average price realised for our production.

The gross income in 1930 amounted to £4,670,881, a reduction of £217,139 compared with last year. This reduction has, however, been more than offset by economies in expenditure which we have been able to effect during the year. In comparison with 1929, the drilling, production, and field expenses show a reduction from £2,240,129 to £1,889,708. The amount provided for depreciation is practically the same as the corresponding figure in 1929, being now £729,365, against £733,556. The rates, which were used in preparing the 1929 accounts, have again been the subject of careful review, but we have been unable to justify any diminution of our scale.

PROFIT AND DIVIDEND.

The profit for the year is £1,260,756 13s. 3d., as compared with £1,085,665 18s. for the year 1929. With £195,912 2s. 9d. brought forward, there is a total amount at credit of profit and loss account £1,456,668 16s. Out of this there has already been paid the interim dividend at the rate of 5 per cent., less income tax, absorbing £359,868 14s.

The directors now recommend a final dividend of £899,671 15s. being at the rate of 12½ per cent. and making 17½ per cent. for the year, to be paid less income tax at 4s. 6d. in the £ on both classes of shares. The directors further recommend that the cost of Stamp Duty and expenses of the new cash issue of March 24, 1930, amounting to £19,031 4s. 10d., be written off, leaving a balance at credit of profit and loss account of £178,097 2s. 2d. to be carried forward to 1931.

The lower rate of production, together with the success attending recent drilling, and the good results of gaslift have enabled further reductions to be made in our drilling programme. The programme now consists of two strings at La Concepcion in the Maracaibo district, one string at La Rosa, one exploration string at the Curacao anticline to the east of La Rosa, and one temporary repair string at Lagonillas. This gives a total of five strings, as compared with 19 strings at the beginning of last year.

At La Concepcion the extent of the productive territory has been considerably enlarged towards the north. At La Rosa several stepping-out wells were drilled to explore towards the south over a distance of about 5 kilometres, but these wells were unsuccessful in proving the extension of the field in this direction.

ECONOMY IN FIELD OPERATIONS.

Production is being obtained as cheaply as possible, and the yield from individual wells is being improved by the increasing use of modern lifting methods.

Economy has been pressed in all our field operations, whilst, wherever economically sound, new expenditure on extensions has been curtailed.

As was stated in the directors' report, the reduction of the volume of oil sold last year was accomplished by reduction of deliveries under the temporary agreement with the Asiatic Petroleum Company, Limited. This agreement is on a basis similar to the Asiatic contract for 6,000,000 barrels per annum. The situation as regards the other buyer of our oil, the Canadian Eagle Oil Company, with whom we have a contract for the sale of 5,000,000 barrels per annum, is that owing to the increased efficiency of their tanker fleet, they were enabled to offtake considerable quantities in excess of the contractual amount. To provide for these additional liftings, supplementary contracts were made with the Canadian Eagle Oil Company, which expired at the end of 1930. A new supplemental contract, on satisfactory terms, was later concluded covering 1931.

The production for this year up to May 23rd amounted to approximately 1,987,000 metric tons. If production is not increased

above the present level, which depends upon continuance of co-operation between Venezuelan producers, the year's production will be about 4,875,000 metric tons.

STABILISATION OF PRODUCTION.

You are already aware of this company's participation in the efforts to maintain something approaching balance between the production of oil, and the consumption of oil products. At the beginning of 1929, a more or less temporary and rather informal agreement was concluded between the largest producing companies in Venezuela, which had the effect of stabilising the production of oil.

It is a matter of regret that this very sensible policy has not been consistently followed in other parts of the world, but I am sure you will agree with me that shortsighted and destructive over-production in one area, in the face of sensible and concerted policy in another, does not justify a disregard of the same policy by the party who has adopted it, merely to keep pace with the party who has disregarded it.

It is gratifying to be in a position now to say that the producers in Venezuela have recently gone a step further, and that the total production has been reduced from the average of about 375,000 barrels per day in 1929 to the present operating figure of 308,000 barrels per day.

Your company has played its full part, despite the fact that it is in a position almost to double its production.

Throughout the industry the year 1930 has been marked by poor prices both for crude oil and for the products derived from it. In the case of your company, however, we actually received per barrel of crude oil sold a price slightly higher than in 1929.

As a result of economies, the slightly lower gross revenue as compared with 1929 was considerably more than offset by reduced expenditure, and the net profit for the year exceeded the net profit over 1929 by about £175,000, which I think you will agree is, considering all the circumstances, a most satisfactory result.

While I never try to prophesy, and whilst even less value attaches to prophecies made in the face of existing conditions, it would appear that the net revenue at the present rate of production, and at present prices, should not differ greatly from that of last year. I am therefore hopeful that we shall again be able to pay an interim dividend in the autumn.

As you noted from the balance sheet, at the end of 1930 we have bank deposits and current accounts and cash totalling over £2,160,000 after payment of the 5 per cent. interim dividend. This amount, after payment in March of our income tax for 1930-31, has now been built up to £2,700,000, out of which the dividend to be declared to-day has to be paid. I feel that we have good reason to congratulate ourselves on this strong cash position.

The report and accounts were adopted.

UNITED STATES OF VENEZUELA.

Summary of Presidential Message

BY

Dr. J. B. Pérez.

ERA OF PROSPERITY BASED ON PEACE AND INDUSTRY.

The year 1930 will be a memorable one in the history of the United States of Venezuela, not only because it witnessed the Centenaries of the deaths of Bolívar and Sucre, Venezuela's national heroes, as well as the Centenary of the Reconstitution of the Republic, which took place in 1830, but because it was marked by many notable achievements carried out in that great country under theegis of the aptly termed "Government of National Rehabilitation."

Venezuela may be proud of its Government—a Government combining strength with justice, in which the devastating ghost of political strife has been well and truly laid and, further, a constructive Government which has nobly carried out its pledges for the social, economic, commercial and industrial development of a nation blessed with practically unlimited natural resources. The United States of Venezuela find themselves to-day at peace with the world and in the enjoyment of an era of unparalleled prosperity which the President, Doctor J. B. Pérez, in his Presidential Message to the National Congress—the salient parts of which are given below—ascribes to "the brain and guiding hand of General Don Juan Vicente Gómez," Commander-in-Chief of the Venezuelan Army.

Public Works.

After mentioning the many artistic embellishments and works of public utility carried out in Venezuela in the course of the year under review, such as, in Maracay—residence of General Gómez—the statue of Bolívar in the Square bearing the same name, that of General Páez facing the new barracks, the luxurious "Hotel Jardín," or Garden Hotel, a centre of ever-growing attraction to residents and visitors alike, the great Clinic fitted with every improvement devised by modern science, the new hangars and the port for hydroplanes in the Valencia Lagoon, linked with the city of Maracay by an excellent road, and in the Capital—Caracas—the monument to General José de San Martín in the Avenue bearing his name, that to Diego de Lozada, founder of Caracas, and, in commemoration of the Centenary, the reconstruction of the National Pantheon, Municipal Theatre, Yellow House, Central University, Aqueduct of Polvorín and the Seminario, and the Vargas Hospital, the President referred to public works of great importance in the following words:—

"Besides the building of thirty-six bridges and two hundred and fifty-one pontoons, the following hanging bridges were inaugurated: the Libertador Bridge over the Riber Torbes, in the State of Táchira, with a span of one hundred and seventy-two metres, seventy-five centimetres, and the General Juan Vicente Gómez Bridge, over the River Guárico, near El Sombrero, with a span of one hundred and twenty-five metres. In accordance with the pro-

gramme set by the National Government, unprecedented in its scope, many other works were carried out throughout the Republic, a detailed account of which will be given you by the Minister of Public Works."

Agricultural and Stockbreeding.

Proceeding with his Address, the President said:—

"On the eleventh of August of last year I issued a Decree creating a Ministry of Sanitation and of Agriculture and Stockbreeding, basing this step on the importance and development reached in every department of the Public Administration. This new organisation furthers the interest of the national sanitation, placed on a scientific footing by General Juan Vicente Gómez. It will be instrumental in the development, by the most efficacious and adequate means, of the nation's agricultural and stockbreeding industries, and, with the encouragement given to touring, will be a source of revenue that will benefit the National Treasury. The personal example set by General Gómez, an indefatigable worker who spares no efforts in the improvement of agriculture and stockbreeding by careful selection, will give a powerful impulse to the new Department in the management and development of the tasks allocated to it.

"The Ministry has inaugurated its labours by means of preliminary steps for the installation of an experimental farm in Maracay, and the competent authorities have been approached and asked to organise model farms in the different States. With that end in view, two pupils will be sent to the experimental school mentioned above by each of the Federal Entities, in order that they may devote their application to technical studies and give their own regions the practical benefit of their knowledge on their return home. At the same time the proper measures have been taken for the immigration into the country of orderly and healthy people, carefully chosen and well versed in the many labours appertaining to agriculture, and a model colony is being established at San Jacinto, in the State of Aragua."

The Greatness of Bolívar.

At the commencement of his Presidential Message to the National Congress, attended by the whole Diplomatic Corps, Doctor J. B. Pérez, referring to Bolívar, said that the anniversary of the death of the "Liberator," as Venezuela's greatest historical figure is known throughout Spanish-speaking America, had placed in high relief the solidity of the Republic's economic situation and the perfect understanding between Government and people on which the happiness of Venezuela is based.

UNITED STATES OF VENEZUELA—cont.

"Fully conscious of the labours and sacrifices imposed upon us by our great historical past"—the President said—"we have zealously maintained our integrity; we have retained the habits and customs which have made us one of the most free and justly proud people in America; and we are happy in the knowledge that we are consolidating in the mould of democracy a human conglomeration which will register new days of glory and triumph in the annals of Spanish-American civilisation. Our judgment is no longer questioned, and the highways leading to the future are no longer encumbered by obstacles in the form of sinister forecasts. When, under the guidance of an eminent public man like General Gómez, ardent champion of social welfare, a nation cancels in one stroke its External Debt, it can justly be said of it that it has reached full maturity."

Reverting to Bolívar, the President adds:—

"The Yellow Book furnishes you with a detailed account of the spontaneous way in which all nations combined to render tribute to the overwhelming greatness of Bolívar, acknowledging the permanent actuality of his ideals, his perseverance, his indomitable rectitude, his ever magnanimous soul. Whether in collective acts, such as those inspired by the League of Nations and the Pan-American Union, or in countless individual tributes, uniting Governments and peoples in common praise, the Liberator's memory has been hailed with such universal reverence that the commemoration of his death may be said to constitute one of the most profound tributes ever rendered to a great historical character—a tribute, be it noted, appreciated by us with the warmest gratitude. . . ."

Cancellation of the External Debt.

After referring to the old Martini claim, definitely settled by the Court of Arbitration in favour of Venezuela, and to the unveiling of the statue raised in memory of Henry Clay—a gift from the United States of America to the United States of Venezuela—the President, dealing with the important questions relating to the External Debt, the Public Debt, and the National Internal Consolidated Debt, made the following declaration:—

"The External Debt having been cancelled for an amount totalling Bolivares 23,757,634.06, the Public Debt of Venezuela was reduced to the National Internal Consolidated Debt of 3 per cent. per annum, amounting to Bolivares 26,487,741.86, on the first of January, 1931.

"The sum expended during the year in order to attend to the Debt Services totalled Bolivares 26,738,977.97, as follows:—

Interest on the External and Internal Debts . . .	B. 1,367,875.81
Cancellation of the External Debt	23,757,634.06
Amortization of the Internal Debt	1,262,391.33
Expenses	351,076.77
	<u>B. 26,738,977.97</u>

"The Reserve Funds of the National Treasury for April 14, 1931, consisted of cash in hand amounting to Bolivares 44,910,092.49, as follows:—

Amount available in the Bank of Venezuela . . .	B. 43,250,642.93
Amount available in the National Treasury . . .	1,659,449.56
	<u>B. 44,910,092.49</u>

"It should be borne in mind that this is the actual sum available after covering (up to the present period of the financial year) the expenses authorised by the Budget, and in spite of the increasing disbursements of an extraordinary nature incurred during the financial year in order to attend to the various important needs of

the Administration, chiefly those due to the commemoration of the Anniversary of the death of the Liberator.

Government Revenue and Public Services.

"Constant and well-directed efforts have been made by the responsible Ministry for the development of the national sources of revenue, a ceaseless control, technically supervised, being exercised principally on our petrol production, which still holds second place amongst the world's petrol markets, the total produced exceeding 20,153,912 tons, an increase of 308,976 tons on the output corresponding to the year 1929.

"The Postmaster General's Office has witnessed a notable improvement, both as regards internal and international services, owing to the activity of the air lines now functioning with the desired regularity, and our wireless system has benefited similarly, thanks to the installation of a powerful coastal station in Maiquetia. This important service will ultimately result in the establishment of direct telegraphic and telephonic communications between Venezuela and Europe, such communications being made possible by the installation in Santa Rita of an extremely powerful station. Praise should also be bestowed on the national telegraphic services, the development of which is indicative of constant progress.

"Public Instruction, with its manifold activities, continues showing a noteworthy improvement, special attention being devoted to the furtherance of national culture. In order to adequately meet the requirements of compulsory primary education, additional schools have been built in new localities possessing the requisite scholastic population, and the first Centenary of the Liberator's death was commemorated in a fitting manner in every educational institute throughout the Republic.

The National Rehabilitation.

"Peace and industry, on which the cause of the National Rehabilitation is firmly based, have earned for Venezuela an enviable position among the prosperous and cultured countries of the world. Unemployment does not exist in the Republic; the aspirations of our people, centred on the general welfare of the nation and on the concrete realities of life, keep the masses away from internecine troubles which engender crime and incite to rebellion. The propaganda which a few ungrateful citizens carried out abroad against the present political regime brought discredit upon its perpetrators and is now a thing of the past. The revolutionary phantom no longer haunts the slumbers of credulous and timorous people. The Government of Rehabilitation, inspired by the wise axioms of a sacred cause and desirous above all else to extend its protection to the present era of prosperity, pledges itself to continue as heretofore upholding honest labour, developing industry, defending the rights of citizenship, maintaining its protective guarantees and, guided by its international obligations, bestowing its loyal co-operation for the fulfilment of the ideals of fraternity, peace and justice to which all the cultured nations of the world aspire to-day more vehemently than ever before."

The President concluded his Message with the following tribute to General Gómez:—

"When Law and Order predominate; when the citizen feels that his rights are protected and the fulfilment of his duties thus becomes an easy and a pleasant task; when there are no oppressors and therefore no oppressed, every individual being a member of a great spiritual family, the country ceases to be an abstract idea and becomes a pleasurable reality.

"Such is the position in contemporary Venezuela, which has become a living expression of the dreams cherished by its Liberators. Passing through a constant evolution, Venezuela has clearly formed and defined its character, and this national realisation is due solely to a personal and epoch-making impulse which characterises the great task of General Juan Vicente Gómez."

NATIONAL BANK OF THE KINGDOM OF YUGOSLAVIA.

ANNUAL REPORT (Abridged) FOR 1930.

Economic Conditions in 1930.

YUGOSLAVIA as a pre-eminently agrarian state, has been feeling in the last few years the weight of the depression existing in agricultural productions throughout the world. Nevertheless, the poor condition of world agriculture was not able to impair seriously the economic conditions of this country. On the contrary, Yugoslav agriculture has had for a long time quite an exceptional position. Not only did it avoid the full brunt of the crisis, but, particularly at the end of 1929, it recorded an undoubted progress. It was only in the latter half of 1930, when economic conditions in other countries began to deteriorate rapidly, that economic activity here also began to ebb to any large extent. But an analysis of the economic position here very readily shows that it does not display to anything like the same extent the characteristics which are so noticeable in the economic life of many other countries. It is true that, compared with 1929, there was a certain set-back in 1930 in some particular branches. Thus, the volume of foreign trade diminished by 11.4 per cent., the harvest yield, in spite of a larger area sown, decreased by 11.3 per cent., and railway traffic by 7.6 per cent. But if 1930 is compared with 1928, when there was no general economic crisis, a certain advance is shown. The trade balance for 1930 shows a deficit of about 180,000,000 dinars, but in 1928, with a slightly larger total, it was about 1,390,000,000 dinars. The harvest yield in 1930 was 18 per cent. greater than that in 1928, and the number of trucks loaded was practically the same as in that year. The index of wholesale prices which the National Bank works out, taking 1926 as its basis, fell to 86.6. The index figure for 1927 was 103.4; that for 1928 106.2; for 1929 100, and, finally, for 1930 86.6. The heaviest fall in prices was in agricultural produce, but it must be noted at once that the fall was chiefly in the prices of corn and industrial plants like hemp, hops and opium, while the prices of other products fell considerably less. Of the industries which felt most acutely the fall in the prices of their products, and had other special difficulties in addition, the first place may be given to the timber industry. This is clearly illustrated from its exports. Timber exports from Yugoslavia in 1929 amounted to 2,112,868 tons, valued at 1,830,257,354 dinars. In 1930 exports were 1,617,359 tons, worth 1,453,686,185 dinars, representing a diminution in value of 20.6 per cent. The statistics of bankruptcies register an improvement. In 1929 there were 1,063, and in 1930 608, i.e., 455, or 42.8 per cent. less. Although last year turned out to be somewhat poorer than the preceding year as regards the harvest yield (68,279,000 metric cwt.), it represents nevertheless one of the average post-war crops and proves that our peasants are making efforts to raise and improve their production from year to year. Unfortunately we cannot say that their efforts are meeting with the success they deserve, for owing to the pressure of overseas competition, prices have fallen to a very low level, which means that corn production becomes still less profitable. But thanks to the variety of agricultural production in the various parts of the country, and especially of those districts which in addition carry on stock raising and fruit growing, the prices of which fell very much less, and in some cases even rose, the effect of the enormous fall in the prices of cereals has been to some extent moderated. The Government realised the necessity of relieving the position of the peasant, and endeavoured to do something to this end by means of special measures and laws which were put in force during last year. Among these measures, special emphasis must be laid on the foundation of the Privileged Joint Stock Company for the Export of Agricultural Products, which in a very short time has shown extreme activity. Other measures calling for notice are the reduction of the rate of taxation on land from 12 per cent. to 10 per cent.; the reduction of the state tolls on wine by 50 per cent.; the decrease of freights on exported wheat from 20 to 45 per cent., on bran 60 per cent., on smoked meat 23 per cent.; and further the facility of paying arrears of taxation in instalments spread over five years (with interest at 3 per cent. instead of 6 per cent.). Finally, the State will hand over the whole income from dividends on its shares of the Privileged Agrarian Bank. In order to assist the development of agricultural credit, the State River Navigation further reduced its freight for the transport of cereals by 25 per cent. The total value of foreign trade in 1930 amounted to 13,740 million dinars, which compared with 1929 represents a drop of 11.4 per cent. The fall in exports was greater than in imports, and this caused a deficit in the trade balance of 180 million dinars, in contrast with a favourable trade balance in 1929 of 327 million dinars. Exports in 1930 were 4,733,223 tons and were worth 6,780 million dinars, which compared with 1929 shows a decrease of 596,643 tons and 1,142 million dinars, or a drop of 11.1 per cent. and 14.4 per cent. respectively. The

products imported in course of the year amounted to 1,513,584 tons, representing a value of 6,960 million dinars. The imports compared with those of 1929 were reduced by 157,938 tons and 634,637,000 dinars, or by 9.4 per cent. and 8.3 per cent. respectively. The difficulties of the Yugoslav timber industry were extremely great. Prices fell by nearly 30 per cent., while exports fell both in value and volume, especially owing to Russian dumping. The sugar industry worked well, but incredibly low prices throughout the world prevented exports. In the course of the 1930-31 season, the output of white sugar decreased by 22 per cent. as compared with the previous season. The alcohol industry was likewise hit by low prices on the world markets and exports fell heavily in value. The position of the starch, syrup and grape industry is more or less unchanged. The same is the case with oil manufactures which slowed down work to some extent owing to smaller home consumption. The meat industry encountered severe foreign competition. The exports of fresh meat fell last year both in amount and value. Milling, too, is in a very bad way; the mills for the most part are utilising only 20 per cent. of their capacity, and flour exports have fallen to a minimum. The textile industry was very busy, but, as in the preceding year, found the sale of its products somewhat difficult. The factories for the manufacture of tanning extracts did somewhat better than in 1929, and their exports rose both in volume and value. The soda industry did less well, owing to an appreciable fall in exports and home consumption. The exports of the carbide and cyanide industries considerably diminished owing to low prices on the principal markets. The position of the superphosphates industry was rendered hard because of the reduced return on cereal cultivation. Production was therefore much smaller. The wood distilling industries cut down their output by 50 per cent. in the latter half of the year. The decline in building activity meant less employment for the cement manufactures. Exports, too, decreased both in quantity and value. Leather factories had a hard year. Exports rose a little over the previous year, but their value fell by 35 per cent. The paper factories struggled to retain the home market; exports ceased entirely. Glass manufacturing improved owing to large orders from Turkey. The heavy iron industry was well employed, but the manufacturers of iron goods cut down their output in the latter half of the year, while the truck building works ceased altogether. The official statistics of mining production in 1930 show a considerable rise in the output of copper and lead ores, but a decrease in coal.

The Bank and Agriculture.

The National Bank has been paying special attention to the assistance of agriculture. There are two main reasons why agriculture in this country needs aid. First, because 80 per cent. of the population live by it, and secondly, because the prices of the products of agriculture have fallen disastrously. If we desire trade, crafts and industries in this country to progress, it is essential that the yield from agriculture be increased so as to enhance in this way the purchasing power of the masses. Efforts must be concentrated in three directions chiefly for the development of agriculture and its advancement. These are: agricultural credit; standardisation of agricultural products; and organisation of exports. Agricultural credit does not lie, strictly speaking, in the sphere of activity of the National Bank. But the National Bank Act itself nevertheless provides for the grant of loans on the pledge of bonds of the Federations of Agricultural Co-operatives. The National Bank has undertaken this but not to any great extent. It has gone to the aid of the Federations in as far as these have applied to it. Agricultural credit has gained very much from the foundation of the Privileged Agrarian Bank, and the task of the National Bank was thereby much facilitated. Agriculture now possesses one of the greatest monetary institutions in the land, whose portfolio in bills or agricultural obligations can be rediscounted or pledged. Thus the final reserve of agricultural credit is absolutely secured. The Bank management, realising the utmost importance of agricultural credit to this country, and realising that the activity of the new bank ought to be expanded as much as possible, authorised to the Privileged Agrarian Bank a credit of 200,000,000 dinars at the exceptionally low rate of 4 per cent. In accordance with the resolution passed at the 10th regular shareholders' meeting, the fund of H.M. King Alexander I. was founded at the National Bank for the assistance and revival of national agriculture and a sum of 1,000,000 dinars was immediately voted to it. Similarly, in accordance with the decision of the shareholders' meeting, a second sum of 1,000,000 dinars was set aside for assisting the unification and standardisation of national products destined for export.

NATIONAL BANK OF THE KINGDOM OF YUGOSLAVIA—cont.

Statistical Data.

The following statistical data show the bank's business in 1930 in detail, and a comparison with the 1929 accounts show the following differences: The note circulation on December 31, 1930, was 5,396,532,715 dinars, or less than that on December 31, 1929, by 421,433,130 dinars. The average note circulation in 1930 was 5,363,154,060 dinars, or, compared with the average in 1929, which was 5,358,474,890 dinars, an increase of 4,679,170 dinars. On December 31, 1930, the Bank held in coined gold 98,575,852 dinars, or 3,106,205 dinars more than on December 31, 1929; in coined silver 17,581,636 dinars, or 2,694 dinars more; in foreign moneys 1,109,090 dinars, or 211,097 dinars less; in foreign moneys with correspondents abroad 118,855,244 dinars, or 147,764,469 dinars less. The Bank's assets in bills on December 31, 1930, were 1,433,683,790 dinars, or 146,154,831 dinars more than on December 31, 1929. In loans on pledge there were assets on December 31, 1930, of 203,472,463 dinars, or 26,647,831 dinars less than on December 31, 1929; on all loans, apart from State loans, the Bank had assets on December 31, 1930, to a total of 1,637,156,254 dinars, or 119,507,000 dinars more than a year earlier; on all State accounts, excepting the account of the exchange, the Bank had assets on December 31, 1930, of 3,894,642,664 dinars, or 52,542,424 dinars less than a year earlier. The Bank's liabilities on transfer current accounts, payable at sight, amounted on December 31, 1930, to 667,234,583 dinars, or 582,827,100 dinars less than on December 31, 1929; liabilities on various accounts, payable at sight, on December 31, 1930, were 195,619,701 dinars, or 34,790,369 dinars more. The Bank's liabilities on deposit (on the account of the exchange) of the Ministry of Finance in minted gold on December 31, 1930, were 48,152,983 dinars, or 64,017 dinars more than on December 31, 1929; in coined silver 2,021,002 dinars, or 7,536 dinars more. Liabilities on the deposits of the Ministry of Finance in foreign currencies and bills (at the conventional rate) on December 31, 1930, were 65,386,798 dinars, or 79,708,008 dinars less than a year earlier.

Bank Profit and Dividend.

The gross profit on all business last year was 123,951,441 dinars, or 6,973,061 dinars less than in 1929. The total expenses, redemptions and writings off last year, together with the 1,000,000 dinars contribution of the Bank for the encouragement of national agriculture were 55,384,810 dinars, or 475,848 dinars less than in 1929. The net profit in 1930 was 68,566,630 dinars, of which the amount available for shareholders was 23,781,053 dinars. A dividend at the rate of 400 dinars per share was declared.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended May 30, 1931, amounted to £4,760,400 against ordinary expenditure of £7,523,700. After allocating £485,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £154,677, the week's operations, as shown below, increased the National Debt by £3,403,000 to £7,618,905,000:—

(000's omitted.)			
Treasury Bills	£ 11,953	Public Department Advances ..	£ 8,500
National Savings Certificates ..	+ 350	P.O. and Telegraph	400
	+ 12,303		— 890

A complete analysis of the National Debt at March 31, 1931, was printed in the *Economist* of April 4th.

During the year investments in subsidiaries were unaltered, but advances to subsidiaries declined by £43,746 to £67,757. The alterations in other assets were of a negligible character. Loans from subsidiaries have been reduced from £28,100 to £13,000.

BARROW HAEMATITE STEEL COMPANY, LIMITED.—A scheme of arrangement, modifying by extension of time the original scheme sanctioned by the court in January last, was approved at a series of meetings of the security holders at which Sir William B. Peat, C.V.O., presided, and shareholders, at which the Hon. Robert James presided, of the Barrow Haematite Steel Company, by overwhelming majorities in each case. It was explained that in consequence of the world trade depression it had not been found possible to arrange the new finance which the original scheme had authorised, and it was necessary, if the original scheme were to be saved, that the time fixed by the court within which to provide the new money should be extended. The directors believed that if that were done it would be possible to protect and carry on the business until the fresh capital could be raised. The company had been able so far to hold its own and meet all current trading expenses.

BENGAL IRON COMPANY, LIMITED.—At the meeting, held on June 1st, of the holders of the outstanding debentures of the Bengal Iron Company, an amended resolution suspending the operation of the sinking fund for two years was carried, on a poll, by 10,914 votes to 34.

EASTBOURNE CORPORATION THREE PER CENT. STOCK (1920-40).—Williams Deacon's Bank, Ltd., give notice that in order to prepare the interest warrants due June 24, 1931, on Eastbourne Corporation 3% Stock, 1920-40, the books will be closed from June 11 to 24, 1931, inclusive.

(a) Plus bonus of 3d. p.s.

(b) Plus bonus of 6d. p.s.

BARCELONA TRACTION, LIGHT AND POWER COMPANY, LTD.—The board of directors have under consideration the payment of the dividend on the ordinary shares of the Barcelona Traction, Light and Power Company, Ltd., usually made during the month of June, but which it may be necessary to defer owing to the serious fall in the value of the peseta.

CANADIAN WALLPAPER MANUFACTURERS, LTD.—The directors of the Canadian Wallpaper Manufacturers, Limited, announce the payment of a dividend of one dollar per share for the financial year ending April 30, 1931, equivalent to five per cent. on the old common stock, as against ten per cent. for the previous year. A balance of \$307,000.00 is carried forward, as compared with \$252,000.00 brought in from the previous year.

SENA SUGAR ESTATES.—The Sena Sugar Estates is postponing payment on its seven and a half per cent. cumulative preference shares. The directors state that owing to considerable unsold stocks of sugar and the uncertainty of the market it is not yet possible to make an accurate forecast of the 1930 results. A provisional estimate based upon the prices being realised to-day does not justify payment of the dividend. The authorised and issued preference capital is £300,000, and dividend has been paid to December 31, 1929. No distribution has been made on the £1,200,000 of ordinary since the 15 per cent. for 1923.

UNITED MOLASSES COMPANY, LTD.—We are informed by the directors of the United Molasses Company, Ltd., that, in view of the prevailing conditions they do not feel justified in paying the preference dividend due on June 15, 1931.

THE RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LTD.—The directors regret to announce that, owing to the heavy depreciation in the Brazilian exchange and the difficult conditions ruling in Brazil, the trading results for the first half of the current financial year have been adversely affected. The directors, however, have decided to use part of the undivided profits of the company for the payment of an interim dividend of 6d. per share, less income tax, on July 1st next. The share transfer books will be closed from June 3rd to 15th, inclusive.

SWEDISH MATCH COMPANY.—At the annual general meeting of the Svenska match Aktiebolaget (Swedish Match Company), held at their offices at Stockholm, on Saturday, May 30th, the final dividend of 10 per cent. for the year ending December 31, 1930, was confirmed, and is payable on and after June 1, 1931, at the offices of Higginson and Company, fiscal agent.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of May are as follows: Production of oil, 47,640 tons; deliveries, 50,540 tons.

THE ATTOCK OIL COMPANY, LTD.—Production for May, 11,394 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended May 20th: Venezuela, 35,303 barrels; Trinidad, 26,901 barrels; total, 62,204 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended May 16, 1931, was 239,000 barrels. The production for the week ended May 23, 1931, was 235,000 barrels.

SERVICE PETROLEUM COMPANY, LTD.—Production from the company's oil wells at Gura-Onitzei, Moreni and Ceptura for the week ended 17th May, was 4,171 tons (29,197 barrels). Production for the week ended 24th May was 4,781 tons (33,467 barrels).

Commercial Reports.

MARKET SUMMARY.

In the absence of any signs of an improvement in consumption, most commodity markets, overloaded with stocks as they are, experienced a further weakening in prices. The situation in the coal trade continues to deteriorate both in the home and foreign markets, and owing to the uncertainty about hours and wages after July 8th when the seven-hour day is due to become operative, forward business is quiet. Continental competition, following reductions in quotations, is again becoming increasingly severe, both in pig iron and steel. The principal non-ferrous metals experienced a further sharp decline in values, thus establishing new low records. The continued depression in the cotton textile industries all over the world is mainly responsible for the further drop in the prices of the raw material, and in the absence of an improvement in the wool trade raw wool has also been weaker. Jute, flax and hemp have been maintained. Among cereals, wheat prices in free markets are scarcely changed on the week, but it is noteworthy that prices in Chicago, though still above world parity, have sharply declined since June 1st, when the Federal Farm Board ceased to support the market. Among other foodstuffs, sugar has been slightly dearer, but tea, coffee and cocoa have been weaker. Among miscellaneous commodities vegetable oils and oilseeds have again fallen in price, but rubber has been maintained.

THE COAL TRADE.

SHEFFIELD.—The export trade for steam coal is quieter, and comparatively little new business is being booked. Coalowners in this locality feel that the restoration of the former subsidy on exports is necessary to stimulate buying. Prices of best qualities continue firm at 17s. 6d. and 18s., f.o.b. Humber ports. Demand for industrial fuel is restricted and does not improve, and the house coal department is experiencing the usual summer stagnation. Best ordinary house is quoted at 21s. to 22s. at pits. The depression in the market for furnace coke is unrelieved, and output exceeds the needs of the limited number of blast furnaces operating.

GLASGOW.—The Scottish coal trade is still very dull. The business passing consists almost entirely of parcels for prompt or early shipment, forward business being more or less stagnant. The collieries refuse to commit themselves ahead except at higher prices, which foreign buyers are not prepared to pay. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s. 14s. 6d.; splint best, 16s. 3d.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 14s.; trebles, 11s.-11s. 6d.; doubles, 10s. 3d.-10s. 6d.; singles, 9s.; pearls, 9s.; dross, 10s. FIRE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 11s. 9d.; third-class steam, 10s. 3d.-10s. 6d.; trebles, 11s. 6d.-13s.; doubles, 11s. 9d.; singles, 9s. 6d.; pearls, 9s. LOTHIAN.—Prime steam, 11s.-11s. 3d.; secondary steam, 10s. 6d.; trebles, 11s.; doubles, 11s.; singles, 9s.; pearls, 8s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s.; trebles, 11s. 6d.; doubles, 11s.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—Conditions on the market for Cleveland iron do not improve, in fact the depression grows more acute. Trading during the past week has been on an extremely small scale, and at present level of prices there is little likelihood of improvement. Scotch consumers are still buying Continental and Northamptonshire No. 3 foundry iron at many shillings below the price of Cleveland, and only took 3,431 tons from here last month. Midland iron is even coming to this district at under local prices, and it

may not be long before importations of Continental iron into the Tees are resumed. In the meantime local users have to pay the price demanded by makers, but they do so very reluctantly, and only for such quantities as are absolutely required from week to week. In spite of the serious state of affairs, makers made no reduction in the official prices of Cleveland at the weekly market on Tuesday, which therefore remain:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The demand for hematite improves a little, but it is confined to small quantities for early delivery. It is seldom that individual transactions of a few hundred tons take place. Such enquiries, however, have been on the market at intervals, for some time, but courage seems to be lacking to make purchases. Sellers are weaker in regard to prices, and have sold mixed numbers down to 64s., and are still willing to accept this price for early delivery, and 64s. 6d. a few months ahead. In the finished trades very little new business is being secured, and the position is causing anxiety. Prices for home consumption, under the rebate scheme, are unchanged, viz.:—Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other prices are Heavy steel rails, £8 10s.; iron crown bars, £10 10s.; 24-gauge galvanised corrugated sheets, £10 5s. to £10 10s.; 24-gauge black sheets, £8 5s., also for home use. The ore trade shows no change and there is practically no buying. Best Bilbao rubio is nominally 15s. 3d. c.i.f., and the current freight Bilbao/Middlesbrough for early tonnage is about 4s. 3d. Imports of all kinds of ore into Middlesbrough last month amounted to 78,117 tons, against 53,828 tons in April. Coke is being pressed for sale, but there is little demand. Good blast-furnace qualities can now be obtained at 15s. 6d. delivered works. The number of furnaces in operation in the district is reduced to 22, by the blowing out of one producing Cleveland iron at Dorman's South Bank Works towards the end of last week.

SHEFFIELD.—The resumption of work in the local industries after the stoppage was not general until Monday, and the position appears to be much the same as before the holiday. There is no increase of buying, and transactions continue on a hand-to-mouth basis. Orders are numerous but individually small, and the absence of important inquiries is still a disquieting feature of the situation. The output of steel ingots and castings in the Sheffield area in April dropped to 46,500 tons from 69,500 tons in March and 86,800 tons in April last year. The April output of steel in the Lincolnshire area was only 20,500 tons, which figures compare with 38,500 tons in March and 63,100 tons in April, 1930. In Lincolnshire also 30,000 tons of pig iron were produced, compared with 72,300 tons in April last year. Such figures prove how seriously the steel trade has declined this year. Requirements of the automobile industry continue on a considerable scale, but compare unfavourably with a year ago. Demand for steel from shipbuilders still tends to contract. Orders from railway companies maintain former levels. Moderate business is reported for best wires, steel strip and corrosion-resisting steels, but export demand for best tool steels is moribund. Makers of tools, cutlery and plate report unfavourably of the situation, but no further decline in the volume of business passing. A large section of the steelworkers have agreed to a reduction of war bonus of 5s. per week. There are few sections of local workers whose wages have not been reduced this year. A cut of 5 or 10 per cent. on salaries of administrative staffs has also been fairly general in Sheffield.

GLASGOW.—There is really no change in the situation this week, business remaining very quiet, and export trade still showing no expansion. There is plenty of inquiry about, but very keen competition for any business going. Within the week, Messrs Jas. Currie and Company, shipowners, Leith, have placed orders for two steamers, one to be built and engine by Messrs Barclay, Curle and Company, Ltd., Glasgow, who will also build the engines for the second steamer, which is to be built by the Leith firm of Messrs. Henry Robb and Company. Sheetmakers are not finding any greatly increased demand, although very low prices are being quoted.

OTHER METALS.

TIN.—The chairman of the International Tin Committee has announced that the four participating countries have now accepted the recommendations of the meeting at The Hague on May 16th to reduce their output of tin by 20,000 tons. The new quotas, which came into force on June 1st, are as follows:—

	New Quota. Tons.	First Quota. Tons.	Production in 1929. Tons.
Malaya.....	45,355	53,853	69,366
Bolivia.....	28,818	34,220	46,338
Dutch East Indies.....	25,159	29,870	37,730
Nigeria.....	6,513	7,830	10,412
Total.....	105,845	125,773	163,846
Other countries.....	...	...	24,672

According to the Metallgesellschaft A.G., the daily average production (mine output) in April, at 433 metric tons, shows a decrease of 13 tons on the previous month, but the increase of 2,764 long tons in the world's visible supplies at the end of May over those of the previous month estimated by the Statistical Department of the London Metal Exchange, coupled with disappointing reports of consumption, caused a further fall in prices. Wednesday's official closing quotation for "standard cash," at £100 7s. 6d. to £100 10s. per ton, compares with £102 10s. to £102 12s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,607 tons, show an increase of 795 tons on the week.

COPPER.—Despite the reduction in output in April (the Metallgesellschaft A.G. figure for the average daily smelter output, at

3,846 metric tons, shows a decrease of 94 metric tons on March), visible supplies are still increasing because of the poor demand for the metal. This has caused a wave of speculative selling in New York and London. "Domestic spot" in New York, at 8-00 cents per lb. for "electrolytic," shows a decline of 0.75 cent per lb. on the week, and as even at this price no support was forthcoming from American consumers, Copper Exporters, Ltd., reduced their minimum price for "electrolytic," c.i.f., Continent, from 9-025 cents per lb. to 8-775 cents per lb. on June 2nd. In London, prices reached their lowest level on record, and Wednesday's quotation in London for "standard cash," at £34 7s. 6d. to £34 10s., compared with £37 3s. 9d. to £37 6s. 3d. on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 13,464 tons, show an increase of 310 tons, while stocks of rough copper, at 1,296 tons, remained unchanged.

LEAD.—The Metallgesellschaft A.G. reports a decline of 148 metric tons on the previous month in the average daily production of April. Although the New York spot price remained unchanged at 3-75 cents per lb., the lack of support resulted in a further decline in London. Wednesday's official closing quotation for "soft foreign," at £10 7s. 6d. to £10 15s., compares with £11 6s. 3d. to £11 12s. 6d. on the corresponding day last week.

SPELTER.—The scarcity of buying orders in the face of large supplies caused prices to weaken further. The New York spot price for "East St. Louis," at 3-20 cents per lb., shows a decline of 0-10 cent per lb. on the week. Wednesday's official closing quotation in London for "good ordinary brands," at £9 13s. 9d. to £10 5s., compares with £10 8s. 9d. to £10 13s. 9d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Owing to the lack of support antimony declined further from £23 10s. to £24 to £23 to £23 10s. per ton for "foreign," but aluminium was again quoted at £85 per ton, while nickel sold at last week's price of £170 to £175 per ton. Quicksilver was reduced from £22 7s. 6d. per bottle to £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Prices record a further drop of some 20 to 22 points because of the continued poor state of trade and on very fair crop reports covering an area of only 10 per cent. less than last year. Fertiliser sales are considerably less than a year ago, but in view of the enormous prospective carry-over, there is likely to be far more cotton in the world than can be used. It is evident that neither retailers nor manufacturers have sufficient confidence in present prices to induce them to buy in view of future requirements. The time when buyers will appear does not seem to be even in sight. Spot sales for the week May 28th to June 3rd (inclusive) are 19,000 bales, of which 10,350 bales are American, 800 Brazil, 200 Argentine, 2,200 Peru, 3,000 Egyptian, 500 African, 550 East Indian, 950 Russian and 450 sundries. Imports for the same period are 35,280 bales, of which 12,614 are American, 3,519 Brazil, 3,036 Argentine, 2,823 Peru, 5,176 Egyptian, 3,324 African, 3,990 East Indian and 798 sundries. Quotations, June 3rd: American Middling, 4-66; Egyptian Sakel, 7-60; Uppers, 5-60; Brazil Fair, 4-70; Peru G. F. Smooth, 5-10; West African Middling, 4-70; and East African G. F., 5-70.

Manchester.—Buyers and sellers in the market have been slow at getting to work again after the Whitsuntide holidays. Business has also been adversely affected by the further downward movement in raw cotton rates. Trade to a considerable extent has been disorganised and there is little hope of any revival of demand until conditions are stabilised. In the meantime producers and merchants are feeling the ill effects of depreciation in the value of stocks. News from India does not improve and cloth sales have been confined to retail lots. Some inquiry has been about for China in standard makes and fancies, but the low rate of exchange has made transactions very difficult. Not more than a miscellaneous business has been done for the several minor outlets east and west. A fair amount of inquiry, however, has been experienced in home trade fabrics. Reports from weaving districts remain discouraging. Yarn prices have again favoured buyers in sympathy with the decline in the raw material. Spinners have met with a moderate inquiry, but home users and exporters have placed orders with caution.

THE WOOL TRADE.—Bradford.—There is very little indeed in the wool trade at the present time to encourage selling interest. Information received from Australia is meagre, and it is understood that at the sale at Melbourne on Tuesday there was a poor demand for scoureds, also a marked decline has been seen at the Liverpool-East India wool sales. These are the only two events which have served to give anything in the nature of a lead to the raw material, and the position now is that the trade will have to exercise as much

patience as possible until the next series of London sales commence on July 7. The probability of higher values being realised, writes our correspondent, is made rather remote by the fact that 70,000 bales were carried forward from the last series, and that there are other big weights of wool in users' hands awaiting consumption. A large proportion of the latter can be absorbed within the next four weeks, and by that time home and Continental buyers should be ready to operate on a fairly extensive scale. The absence of any big requirements locally, and the unsettled state of affairs on the Continent are, however, now creating a cautious attitude, and until the outlook becomes clearer nobody is likely to indulge in any big speculative operations. The most important test of all will be made when the Australian selling season commences, and with values even around the current level the clip should begin to move freely. The home trade is in a very parlous condition. The price of tops, both merino and crossbred, gradually declines, and while some topmakers may be quoting as high as 24d. for warp 64's, they can be bought at less. It is most difficult to say what is an actual market price. Consumption at the finer end of the trade does not show a great deal of change, but there certainly is a marked diminution in the consumption of crossbreds. At the moment nobody seems disposed to buy crossbred cloths in either dress goods or men's wear, while hosiery demands are exceedingly limited.

THE GRAIN MARKETS.

WHEAT.—The trend of wheat prices during the coming weeks will depend largely on the crop reports from North America, Russia and other European countries. The United States winter wheat crop, which is due to be harvested this month, appears to be in good condition, and the latest estimates suggest that its yield may not be much less than 700,000,000 bushels. The Federal Farm Board has ceased to support the market at the end of May, and since then prices, though still above world parity, have been falling rapidly. Although seeding in Canada is now complete, weather conditions are generally unfavourable, and rains are urgently needed in the Prairie Provinces. The Russian spring crop is somewhat backward, but the acreage sown so far is quite as extensive as last year. Provided weather conditions are favourable, the British winter crop may prove to be slightly larger than last year. On the whole, crop conditions are therefore so far not unfavourable, and prices are scarcely changed on the week, although considerable quantities are still imported by Continental countries. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 26s. 9d. per 496 lbs., as compared with 27s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 25s. 6d., against 26s.; Rosafe, ex ship, 22s. 6d., against 22s. 9d.; Australian, ex ship, 24s. 6d. to 25s. 6d., against 25s. 9d. to 26s. 3d.; and Russian, on sample, ex ship, 22s. 6d. to 23s., against 22s. 6d. to 23s. a week ago.

WHEAT FLOUR.—The market in flour has been dull, and prices were slightly easier. North American shipments during the past week amounted to 129,000 sacks, as compared with 254,000 sacks shipped during the previous week. Quotations: Straight run, delivered country, 22s. 6d. per sack of 280 lbs., as compared with 23s. 6d. last week; delivered London, 21s. 6d., against 22s. 6d. Manitoba patents, ex store, 21s. 6d. to 24s. 9d., against 21s. 9d. to 25s.; and Australian, ex store, 18s. 9d. to 19s. 6d., against 18s. 9d. to 19s. 6d. a week ago.

BARLEY.—Little interest has been taken in barley during the week, and quotations remained practically unchanged. The visible supply in the United States at the end of last week amounted to 5,895,000 bushels, against 6,494,000 bushels at the end of the previous week. Quotations: "English malting," f.o.r., at 30s. to 35s. per 448 lbs., remained unchanged. Californian sold at from 33s. to 43s., as compared with 33s. to 43s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

Trade with South America

The Bank of London & South America Ltd. offers a complete banking service to commercial houses which are engaged in trade with the Latin American countries. With branches at every strategic point, the Bank is singularly well equipped to supply the very latest

information on local markets and trade conditions, to help and advise, and to undertake banking business of every description. For the convenience of its clients a Monthly Review of Market Information is issued free on application and Status Reports on S. American firms are supplied on request.

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8 Tokenhouse Yard, London, E.C.2
 MANCHESTER: 34, Charlotte Street.
 BRADFORD: 23, Hardgate.
 Affiliated to Lloyds Bank Limited.

OATS.—The market in oats has been quiet, and last week's advance in the price of foreign oats has not been maintained owing to the decline in demand. Quotations: "River Plate," landed, 12s. 9d. per 320 lbs., as compared with 13s. last week; "River Plate," ex ship, 11s. 9d., against 11s. 9d.; "Chilean Tawny," landed, 13s. 9d., against 13s. 9d.; and North Russian, on sample, landed, 18s., against 18s.; English white, per 336 lbs., 20s. to 21s., against 22s. a week ago.

MAIZE.—Prices have not recovered from the low level to which they have fallen a week ago, but shipments from Argentina have been smaller than expected. This is mainly ascribed to the fact that the reduction of from 10 per cent. to 20 per cent. in freight rates granted by the Argentine railways will not become operative before July 1st. Quotations: "Plate," landed, 16s. 9d. per 480 lbs., as compared with 16s. 9d. last week; Plate, ex ship, 15s. 6d., as against 15s. 6d.; Plate, May-June, new, 15s. 9d., as against 15s. 9d. Yellow maize meal, ex wharf, was quoted at £5 5s., as against £5 10s. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—	Owts.	Owts.	Owts.	Owts.

PER OUNCE

N.O.T. 2.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	June 4, 1930.	Jan. 2, 1931.	May 20, 1931.	May 27, 1931.	June 3, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	111½	56½	60½	58½	60½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	105½	79½	82½	82½	66½

The visible supply of wheat in Canada, at 45,573,000 bushels, shows a decrease on the week of 1,648,000 bushels. Supplies a year ago stood at 57,430,000 bushels.

OTHER FOODS.

SUGAR.—An improvement became noticeable during the week in the international sugar position following increased buying of "raw," particularly in the United States. Wednesday's quotation in New York for Cuban centrifugals, 96 deg., spot, at 3-23 cents per lb., shows a rise of 0-12 cent per lb. on the week. Raw futures in London have also been steadier. Wednesday's sales included "August delivery," at 6s. 2½d. to 6s. 3d., as against 5s. 11½d. to 6s. 0½d. on the corresponding day last week; December, at 6s. 5d. to 6s. 5½d., as against 6s. 3½d. to 6s. 3½d.; and March, 1932, at 6s. 7½d. to 6s. 7½d., as against 6s. 5½d. a week ago. British refined has been advanced 3d. per cwt. on May 29th and again on June 1st. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	2,612	...	1,401	1,259	31,474	30,702
Liverpool	9,896	1,895	12,036	14,066	72,544	85,397
Total tons	12,508	1,895	13,437	15,325	104,018	116,099

Last week

COFFEE.—Auctions were resumed on June 2nd, but trading was quiet, and although finest qualities received considerable support, prices in general were slightly easier. Last week's movements of coffee in London were as follows: Brazilian, landed, 250 bags; delivered for home consumption, 75 bags; exported, nil; stocks, 2,961 bags, against 1,798 bags last year. Central American, landed, 6,240 packages; delivered for home consumption, 3,784; exported, 2,166; stocks, 129,807 packages, against 119,388 a year ago. Other kinds, landed, 2,310 packages; delivered for home consumption, 1,867; exported, 2,298; stocks, 100,504 packages, against 136,495 a year ago.

COCOA.—There has been a further decline in the price of cocoa, and Wednesday's quotation for Accra, fair fermented, June-July, at 17s. per cwt., f.o.b., London contract, shows a decline of 1s. on the week. Last week's movements of cocoa in London were as follows: Landed, 6,365 bags; delivered for home consumption, 3,797 bags; exported, 588; stocks, 229,705 bags, against 205,857 last year.

TEA.—The quantities catalogued for this week's auction comprised 45,990 packages of Indian, 37,616 packages of Ceylon, and 14,939 packages of Java and Sumatra tea. Monday's auctions of Indian tea met with a good demand, and the prices realised showed little change compared with those obtained before the holidays. Tuesday's opening sales of Ceylon exhibited a steady demand, but later in the day prices weakened, and on Wednesday all but the best Indian varieties declined further.

RICE.—Rice has failed to recover from the low level to which it had fallen recently, and Wednesday's quotation for Burma No. 2, cleaned, June-July, in singles to the Continent, and to the United Kingdom, at 7s. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 38 tons; delivered, 20 tons; stocks, 598 tons, as against 3,010 last year.

POTATOES.—Supplies at the Borough Market were sufficient to meet requirements, but prices were slightly higher. "Best King Edward" sold at £9 10s. to £10 10s. per ton as against £9 to £9 10s. a week ago.

SPICES.—The recent improvement in the pepper market has not been maintained. Wednesday's quotation for "Black Singapore," at 5½d. per lb., spot, shows a fall of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 45 tons; delivered, 10 tons; stocks, 577 tons, against 1,056 tons last year. White, landed, 20 tons; delivered, 48 tons; stocks, 616 tons, against 689 tons a year ago.

MEAT.—Beef and mutton prices at the Smithfield Market have been steadier, but pork was easier. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 3s. 6d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 4s., as against 3s. 2d. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,769 tons, as compared with 9,003 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84-4 per cent. of the supplies, as against 84-0 per cent. a year ago; and imported mutton, mainly New Zealand, formed 87-5 per cent. of the total supply, as against 82-0 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Depressed conditions continue to rule, and very little business appears to be in progress, despite the very low levels to which many commodities have descended. Linseed gained some advantage from smaller Argentine shipments, and a better enquiry from the United States, but this has been lost, and demand is infinitesimal. Plate on spot and shipment to July has

REDUCED PRICES AND INCREASED SALES

A statement by Cadbury Bros. Ltd.

It is our policy, whenever decreases in raw material costs and economies resulting from more efficient manufacture allow, to make an immediate reduction in the retail prices of our goods. A statement of this policy was published in the Press three months ago, when we expressed our confidence in this practice as a stimulant to depressed trade.

The remarkable effect of these price reductions in the last twelve months is shown in the charts below. In each case the reductions in price have been made *without any alteration of quality whatsoever.*

The sales of Block Chocolate (reduced from 1/- to 10d. per ½ lb. for Milk and to 9d. for Plain) have increased 85%. The King George price-group (reduced from 4/- to 3/6 per lb.) has so far increased 46% in sales. The price of Cocoa has been reduced from 6½d. to 6d. per ½ lb. and sales have advanced by 21%. *This latest reduction has actually brought the price of Cocoa 20% below the pre-war figure.*

In each chart shown the percentages represent the tonnage sales from the time of the latest price reduction to the end of May, compared with those of an identical period twelve months ago.

dropped to £8, and August and September to £8 2s. 6d., after business in the latter position had been done rather above this. Calcutta is neglected and easier. The quantity of linseed on passage to Europe is now 97,200 tons, or 10,000 tons less than last week, and compares with 123,000 tons a year ago. Cottonseed has fallen further to a low level which has only once or twice been recorded in the past thirty years. Black Egyptian on spot at Hull offers at £5, which is also about the value for shipment. Linseed oil is somewhat steadier at lower levels, but demand from consumers leaves much to be desired. Raw oil on spot ex Hull mill is quoted £14 10s. per ton, and June and July-August delivery £14. Cotton oil is cheaper, but steady crude Egyptian ex Hull quoting £17, and common edible £19 10s. Other seed oils are lower on the week, and oilcakes unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Hides from home-slaughtered cattle were unchanged in price at the Manchester auctions, which were resumed this week after an interval of a fortnight, while calf skins were steady to a slightly easier tendency. There is a fair enquiry for English hides, and the expectation is that values will remain fairly steady at the week-end sales. With buying of foreign hides much restricted, prices for many sorts are again

inclined to be weaker, and the general position of the market is uncertain. A moderate amount of business has been done in South American wet-salted descriptions, Argentine ox having changed hands at 5 1/2 d., while second ox sold at 4 1/2 d., and Uruguay cows at 4 1/2 d. Dry hides of South American origin are all quoted lower, B.A. Americanos being offered at 5 1/2 d., and B.A. Inservibles at 3 1/2 d. There is very little life in the enquiry for most descriptions of African hides, and business is only possible on a low basis of values. A few sales of Capes have been made at 6 1/2 d. and 5 1/2 d. for first and second dries, while business has been possible in dry-salted at 5 1/2 d. and 4 1/2 d. for the same two selections. Although prices asked for Australians show a decline, business with this country has not improved, and sales are confined to a few small parcels. Rather more interest has been taken in the sole leather market this week, and it would seem that with the resumption of work at the shoe factories orders for footwear have come along a little more freely. In English and wet-salted bends the best enquiry is in regard to light weights, on which tanners are well so'd ahead. Medium weights, in some quarters, are finding more customers, but the turnover in these, as is also the case with the heavier weights, is not large. Producers and distributors of upper leathers have found a little more business forthcoming on such lines as willow calf and glacé kid, while there has been rather more enquiry for box calf.

RUBBER.—Little interest has been shown in the rubber market during the week, which is ascribed to the uncertainty about the views of the Dutch Government in regard to restriction. Nothing is known as yet about the Dutch Committee's report to the Colonial Secretary. Wednesday's official closing price for standard ribbed smoked sheet, at 3d. per lb., shows no change as compared with the corresponding day last week. In forward positions, business has been done at 3d. for June, against 3d. to 3 1/4 d. last week; at 3 1/4 d. for July-September, against 3 1/4 d.; and at 3 1/4 d. for January-March, 1932, against 3 1/4 d. to 3 1/4 d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,198 tons; delivered, 1,779 tons; stocks at the end of last week, at 139,000 tons, show a decrease of 581 tons, as compared with the preceding week.

REASONS FOR
DUNLOP
SUPREMACY

Number One

An aerial view of Fort Dunlop, the stronghold of the British Tyre Industry.

From beginning to end

Dunlop quality rests on a sure and scientific foundation. It is the result of patient research, wide experience, comprehensive testing and knowledge properly applied. Dunlop quality is built upon facts; facts which are obtained by scientific tests. The tests on Dunlop tyres commence with the raw materials, and continue throughout every stage of manufacture right up to the behaviour of the finished tyre in actual service. Dunlop tests are conclusive. They leave no room for doubt.

Fit

DUNLOP
the tested tyre

Secure the maximum benefit from Dunlop tests by checking your own tyre pressures every Friday.

THE MONEY MARKET.

MONEY has again been easy, with plenty on offer outside the clearing banks at 1½ per cent. No making-up by the clearing banks occurred on Tuesday, and the following day calling was comparatively light. On Thursday, however, calling was on the usual scale. The decline of £4,945,000 in Government securities revealed in this week's Bank return suggests that the money borrowed on

Ways and Means by the Treasury to finance the War Loan dividend had been successfully repaid. The absence of Treasury bill maturities on Monday was of assistance here, and it also explains the increase of £3,082,000 in Public Deposits, but it is conceivable that maturities towards the end of the week may again leave the Treasury short of funds. Against this, the War Loan dividend money is beginning to be absorbed, and these two factors may very likely cancel each other.

Meanwhile the market rate of discount upon three months' bills has been in the neighbourhood of $2\frac{1}{8}$ and $2\frac{1}{2}$ per cent., though on Thursday French interests bought a few bills at $2\frac{1}{2}$ per cent. Early in the week there was a tendency to take an optimistic view of the Bank's heavy gold acquisitions, amounting up to Wednesday night to £3,353,000 for a week, and discount rates consequently were inclined to weaken. For reasons discussed below, this was a mistaken interpretation to place upon the gold influx, and it is just as well that rates should since have become a little firmer. Taking into account the uncertain position on the Continent, it is desirable that London rates should not undergo any wide movements, and indeed there is something to be said for a rise in the three months' rate to $2\frac{1}{2}$ per cent.

	May 21, 1931.	May 28, 1931.	June 4, 1931.	June 11, 1931.	Previous Rate and Date Changed.
Bank Rate	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	3 (May 14, '31)
Banks' Deposit Rate..	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Discount / Call	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Houses / Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2-2\frac{1}{8}$	2	$2\frac{1}{8}-\frac{3}{4}$	$2\frac{1}{8}-\frac{3}{4}$	...

Interest this week has centred mainly upon foreign exchange fluctuations and gold movements, Thursday's exchange fluctuations being particularly disconcerting. After several days of weakness, German marks broke abruptly to Mks. 20.52 $\frac{1}{2}$ upon Thursday afternoon, while Swiss francs have steadily appreciated until on the same day the rate had reached Frs. 25.05. Both these rates are well beyond the gold points, so that it would pay to ship gold from Germany to London and from London to Switzerland. This, indeed, has happened since Wednesday of last week. The Bank has added £5,400,000 to its gold stocks, of which only just over a million represented Cape gold. The origin of the remainder has not been disclosed, but there is little doubt that it represents sales by the Reichsbank. Such a transfer, of course, does not depend upon the gold point, but the significant point about it is that it has failed to bring about any improvement in the Berlin exchange.

On the other hand, buyers upon Swiss account have competed strongly for the Cape gold, and at Tuesday's market the Bank had to bid 84s. 11 $\frac{1}{2}$ d. per ounce, or nearly up to its selling price. It is clear that a transfer of funds from Germany to Switzerland is taking place, and unfortunately this can only mean that confidence in Germany is weakening. The Bank was clearly justified in resisting an unnatural gold movement of this character, nor is there any reason for supposing that the Swiss authorities desired it. The main point to bear in mind is that it is a serious symptom of the prevailing *malaise* upon the Continent, and the market should therefore regard the Bank's gold receipts as an untoward and not as an encouraging development. There should therefore be no relaxation of rates in London.

The May averages of the nine English clearing banks reveal a slight increase in deposits, but a slight diminution in cash. This last movement may reflect Whitsun currency withdrawals, and possibly payments for the additional Treasury bills issued in preparation for the War Loan dividend.

The increase in call money from £113.5 to £127.8 millions is clear evidence of the present abundance of short

money. The decline in investments may reflect sales made last May with a view to taking advantage of the

high prices then current in the gilt-edged market. The increase in discounts is probably seasonal, arising from the gradual expansion in the volume of Treasury bills since the opening in April of the new financial year. The contraction in acceptances follows naturally the renewed fall in commodity prices and the failure of trade to revive.

According to a semi-official estimate, applications for the recent issue of £800,000,000 $3\frac{1}{2}$ per cent. 1946-49 bonds offered by the United States Treasury amounted to no less than \$6,000,000,000, and financial opinion in New York regards this as striking evidence of the plethora of short money. Gold continues to arrive from South America, mainly from the Argentine and Cuba, and with call money still at $1\frac{1}{2}$ per cent. and prime commercial paper at $2-2\frac{1}{4}$ per cent., money remains cheap and plentiful. Brokers' loans have fallen to \$1,539,000,000, a new low record. The First National Bank of Chicago, with its trust and savings bank affiliate, has absorbed the Foreman-State National Bank (Chicago) with its affiliate, and the merger of the Central Trust Company of Illinois with another Chicago bank, the National Bank of the Republic, is also announced. Nineteen bank failures have occurred in Chicago this week, mainly among small banks. These are attributed to the depreciation of real estate in Chicago and the neighbourhood.

The foreign exchange market was quiet until Thursday, when sensational movements occurred. Viewing the week as a whole, the New York rate fell from 4.86 $\frac{3}{4}$ to 4.86 $\frac{1}{2}$, but Montreal lost $\frac{1}{8}$ at 4.87 $\frac{1}{2}$. Paris was unchanged at 124.22, after touching 124.29. Brussels improved to 34.92 $\frac{1}{2}$ and Milan gained six points at 92.92. Madrid was steadier than of late, and improved at the close to 48.00, against 51 $\frac{1}{2}$ last week on the news of the French credit to the Bank of Spain. Amsterdam gained $\frac{1}{4}$ at 12.09, but Berlin weakened on Thursday to 20.52 $\frac{1}{2}$. Switzerland improved steadily all the week from 25.08 to 25.05. Of the Scandinavian exchanges, Stockholm lost $\frac{1}{4}$ at 18.15 $\frac{3}{4}$, while Oslo and Copenhagen were practically unchanged at 18.16 $\frac{1}{2}$ and 18.16 $\frac{3}{4}$ respectively. The South American exchanges were again stronger, Rio closing at 34 $\frac{1}{2}$ d., after touching 4d. Buenos Aires gained $\frac{1}{4}$ d. at 34 $\frac{1}{2}$ d., after 34 $\frac{1}{2}$ d., while Monte Video was steady at 28 $\frac{1}{2}$ d. In the Far East the rupee weakened fractionally to 1s. 5 $\frac{3}{4}$ d. The yen was unchanged at 2s. 0 $\frac{3}{4}$ d., and Batavia was firm about 12.10 $\frac{1}{2}$. In the forward market, dollars were rather weaker at $\frac{3}{8}$ cent and $\frac{1}{4}$ cent premium for one and three months, respectively. Paris was quoted at 10 centimes and 27 centimes premium. Brussels weakened to 1 and 3 centimes premium, against 2 and 4 centimes last week. Milan was rather better at 9 and 28 centesimi discount, but Madrid weakened to discounts of $\frac{1}{2}$ peseta for one month and 1 peseta for three. Amsterdam stood at $\frac{1}{2}$ cent. and $1\frac{1}{2}$ cent premium. Berlin was from par and $\frac{1}{2}$ pfennig discount to $\frac{1}{2}$ pfennig and $\frac{1}{2}$ pfennigs discount, and Switzerland went to $\frac{1}{2}$ and $1\frac{1}{2}$ centimes discount. Silver was weaker 12 $\frac{3}{4}$ d. for cash and by $\frac{1}{4}$ d. at 12 $\frac{3}{4}$ d. for market being quiet and small. Of the Chinese exchanges, Hong Kong was unchanged at 1s. 2 $\frac{1}{2}$ d. Shanghai lost $\frac{1}{4}$ d. at 1s. 2 $\frac{1}{2}$ d.

AND AFTER CHEQUERS . . . ?

DR. BRÜNING and Herr Curtius have come, have conversed, and have departed. That the conversations at Chequers would lead to no immediate political decisions was a foregone conclusion, and the results of the meeting were summarised officially in the non-committal *communiqué* that "special stress was laid by the German Ministers on the difficulties of the existing position in Germany and the need for alleviation"; that the British Ministers "called attention to the world-wide character of the present depression and its special influences on their own country"; and that both Governments, being agreed that a revival of confidence and prosperity depended upon international co-operation, would "endeavour to deal with the present crisis in close collaboration with the other Governments concerned." This announcement, it is satisfactory to note, has been interpreted on the whole by the Paris Press without undue alarm or signs of prejudiced hostility—though it is regrettable that on Tuesday in the Chamber M. Briand felt constrained to say that "the Young Plan cannot be changed, for it is final"—while public opinion in Germany seems to have been prepared for the absence at this juncture of any dramatic developments, and has not shown symptoms of dangerous disappointment or despair—the less so since the acceptance by Mr MacDonald and Mr Henderson of the German Government's invitation that they should visit Berlin at some future date has been interpreted as an earnest of a desire to maintain close personal contact between the heads of the respective Governments.

The fact is that in one sense Germany has every reason to be satisfied with the effect, if not the positive result, of the Chequers visit. Apart altogether from the impression created on the minds of Mr MacDonald and the other parties to the Chequers conversations by the frank *exposé* which Dr. Brüning is known to have made of Germany's difficulties, financial, industrial and political, the world-wide publicity given to this meeting has concentrated public attention in every country on the urgent need of co-operative international effort to deal with the critical situation of Central Europe, wherein the whole question of reparations and the future course of German policy in relation to the Young Plan is one of the outstanding factors. Whereas not many weeks ago it was the coming Disarmament Conference which held the centre of the world stage, to-day the limelight by common consent has shifted to the more immediate question of Germany's capacity to pay; and though this issue, as we shall see, is in one sense political, its bearing, and that of the associated question of war debts, on the present trade depression is coming to be recognised as one of the major elements in a world problem whose crux is essentially economic.

In one way this development holds elements of danger, for there is the risk that some sections at least of American opinion may be persuaded to imagine that they see, in the present or coming *démarches* of European statesmen, an attempt once more to postpone coming to grips with the disarmament issue. Indeed, cables from Washington have already suggested that Mr. Hoover's Administration may be inclined to use the creditor position of the United States as a lever wherewith to bring pressure on the Disarmament Conference by holding out no hope of any revision of the debt settlements unless Europe's expenditure on fighting forces is drastically reduced all round. Such an intimation by America, however reasonable in itself, might well defeat its own ends; for it would be apt to be misinterpreted, coming from a country which spends more on armaments than any other nation in the world, and it would be calculated, we are convinced, to produce unfortunate psychological reactions on European opinion which, as it is, would be

prepared, with few exceptions, to back the statesmen in going far along the road towards disarmament. Moreover, one of the major obstacles in disarmament's path is the very atmosphere of uncertainty and nervousness which is being engendered by the renewed talk of a moratorium for Germany—to say nothing of the irresponsible rumours circulated in some quarters of repudiation of all Germany's foreign obligations—both damaging trade and delaying the restoration of confidence and economic recovery. An important item of news in the past week is that both Mr Stimson and Mr Mellon are about to visit Europe. Though it would be premature to conclude that their coming is significant of a change in the attitude of Mr Hoover's Administration or of Congress towards the revision of the debt settlements, it may be that the impressions which they will receive will do much to convince them of the need of advising Washington that the question of reparations and war debts, as part of the general economic crisis, cannot safely be shelved until after the conclusion of next year's Disarmament Conference.

The question is how long we shall have to await the next stage of the *dénouement*. Here it may be well to remind ourselves of the procedure provided for in the Young Plan, as ratified by The Hague Conference of January, 1930. Briefly, it is provided that the German Government, by giving at least ninety days' previous notice, shall have the right to suspend for a maximum period of two years from its due date all or part of the transfer of the postponable part of the annuity payable. Any sum in Reichsmarks the transfer of which is postponed shall be deposited to the account of the Bank for International Settlements at the Reichsbank. Further, at any time when the postponement of transfer is in effect, but not until one year after it has become effective, the German Government "shall have the right to postpone payment for one year of 50 per cent. of any sum the transfer of which shall then be susceptible of postponement." Finally, in the event of any declaration of postponement being made by Germany, or if the German Government declares "that it has come to the conclusion that Germany's exchange and economic life may be seriously endangered by the transfer in part or in full of the postponable portion of the annuities," the Bank for International Settlements shall convene a Special Advisory Committee, consisting of nominees of the governors of central banks, together with four co-opted members; and this Committee shall "forthwith consider the situation in all its aspects . . . and shall indicate for consideration by the Governments and the Bank (i.e., for International Settlements) what in their opinion are the measures that should be taken in regard to the application of the Plan." In the year April 1, 1931-32, the annuity payable by Germany amounts to 1,618.9 million Reichsmarks, of which 660 millions are unconditional and non-postponable.

It will be seen that in so far as the collection within Germany of the means of payment is concerned, the operation of the measures of safeguard in the Young Plan is slow. What would be the nature of the Special Advisory Committee's findings were the German Government shortly to declare postponement it is idle at this moment to speculate. Dr. Brüning will obviously have two considerations in mind before deciding to have recourse to the safeguarding provisions of the Young Plan. In the first place, given the prevailing nervousness in almost every financial centre, a declaration of postponement might have dangerously adverse effects on Germany's commercial credit. In the second place, so far as can be judged, the immediate problem which confronts the German Government to-day is not the practicability of continuing the transfer of the postponable annuities but

the question whether it can continue to balance its Budget by policies of drastic retrenchment and terrific taxation without losing its somewhat precarious hold on office and provoking in Germany a political *émeute* which might bring into being an alternative Government pledged to a programme of repudiation and reckless nationalism.

In a later article we give a brief survey of the financial policy which the Brüning Government has pursued since it came into office, in order that our readers may measure the extent of the burdens and the sacrifices which have been imposed upon the German people during the past eighteen months. In relation to the acute industrial depression and the diminished incomes of the taxpayers, there can be little doubt that fiscally the German Treasury has come perilously near to the end of its tether. Under the constitution of the Reich, the emergency decrees cease to have effect unless submitted to and approved by the Reichstag within six months of the date of their enactment. The risk in connection with the present decree is that a special session of the Reichstag may be forced on the Government in advance of its normal re-assembly next autumn. The question whether the Reichstag is to be at once convened will apparently be settled by an adjourned meeting of the Procedure Committee next Tuesday. Should the decision be for an immediate re-assembly, a political crisis in Germany may be near; otherwise we are inclined to think that the Brüning Government will defer, for a short time at least, making any move in relation to the Young Plan.

Meantime, quite apart from the immediate political uncertainties in Germany itself, the economic crisis, as it affects not only German reparations, but both the situation in Austria and the rest of Central Europe and far wider considerations of credit and financial stability in many countries throughout the world, loses nothing of its urgency. In this crisis, after all, the dominating factor, whose application is by no means confined to the increase in the real burden of Germany's reparation annuities since the Young Committee presented its report two years ago, is the question of the catastrophic fall of prices. In this connection, Sir Basil Blackett, addressing the National Council of Women at Coventry on Friday, emphasised the gravity of the problem which the recent slump in the price level has created.

"In the complex world of to-day," he said, "depending to the extent it does on credit, confidence and sanctity of contract, there are obvious evils in any State intervention to break contracts between debtor and creditor, more especially where the State itself is the debtor and has solemnly pledged the nation's good faith to those whose money it has borrowed, and no sane person can view without trepidation the possibility of national repudiation of debt."

Yet it is not too much to say that the great fall in prices which has been taking place is bringing the whole world face to face with the prospect of at least partial repudiation. For nearly a year now Australia has been painfully struggling with her problems in which the burden of past borrowings plays a considerable part. So has Brazil. Germany's problem is scarcely less acute. The Young Plan for dealing with Reparation, adopted as recently as 1929, seemed at the time to give hope of proving a final settlement, and to leave Germany with a Reparation Debt, onerous indeed, but not beyond her capacity. In 1931, owing to the fall in prices, the money obligation (which can ultimately only be met in goods and services) has become very much heavier in terms of goods and services. Many good judges believe that, unless a rise in prices comes soon to relieve the pressure, Germany will feel herself compelled to demand a re-opening of the question. Not the least of the evils of an unstable price-level is that troubles which are in essence economic, show themselves at the next stage in political form."

Coming from a director of the Bank of England, these remarks will rightly attract widespread attention both in this country and abroad. We would add that we wholeheartedly commend Sir Basil Blackett's courage in stating in round terms what every financial authority in Europe is thinking. To organise effective steps for unravelling the knots of the whole intricate international problem of falling prices, growing debt burdens, fiscal obstacles to trade and obdurate unemployment is the task which statesmen, even more than financial authorities, must face during the coming months. The opportunity is great; the penalties of failure may be greater.

TWO YEARS.

Just two years ago the country passed its adverse verdict upon the Conservative Government's four-year tenure of office, and after Mr Baldwin's prompt acceptance of that verdict, Mr MacDonald took office, for the second time in five years, with a minority of the votes in the House of Commons at his command. It was generally considered at the time that his second Administration was launched under favourable auspices. So much so that Conservatives were heard to complain of the way in which fortune appeared to be playing into their opponents' hands. In fact, the barometer was rising. With the issue of the Young Report, the opportunity for constructive work in the sphere of European appeasement seemed to be bright, while at home a general impression was gaining ground that the volume of trade was slowly but steadily increasing in a manner that promised surely, if gradually, to ease the strain of the unemployment problem. No critical judgment of Mr MacDonald's two years' work can be fair or just, if it does not at the outset give full weight to the effect of the disappointment of that expectation of an uplift in the economic trend. Hardly had he become settled in the saddle than the Hatry affair shook the London markets, and a few months later the huge bubble of American speculation burst, with consequences in the economic sphere which cannot even yet be appraised. Suffice it to say that almost from the day when the present Government took office economic depression set in all round the world and the trend of commodity prices turned sharply downwards, thereby aggravating not merely our own domestic unemployment problem, but also the financial and economic problems of the world at large.

Fortune, then, turned against the Government at the outset of its career. It is properly argued that this very fact should have stimulated the Cabinet to a far more energetic policy for combating unemployment than it has in fact produced. To that just accusation we will return. But first let us hear the Counsel for the Defence on the Government's record as a whole. Admittedly his brief has its strong points, and it will particularly emphasise the work done in the field for foreign policy. Mr. MacDonald started with an outstanding personal success, his visit to President Hoover in the autumn of 1929 restoring a cordiality in Anglo-American relations which had been sadly lacking in the preceding years. Public memories are shorter than ever in these crowded times, but the achievement of rapprochement between the Anglo-Saxon nations is too big to escape a lasting recognition. Mr Snowden followed with a Reparations settlement at The Hague which was loudly and widely acclaimed by public opinion (though not by the *Economist*). Mr Henderson, from the first, took to the Geneva atmosphere like a duck to water, and has worked with an untiring energy and tact for various measures of both physical and economic disarmament. It is not his fault that the value of the Naval Treaty signed in London last year has been impaired by subsequent hitches, any more than it is the fault of Mr Graham, the President of the Board of Trade, that his labours for the stabilisation and subsequent reduction of tariffs have so far yielded little fruit.

In the realm of Imperial affairs, as contrasted with foreign policy, it may be said that results are, at the best, negative to date. Perhaps. But we cannot impute the blame for the nugatory result of last autumn's Imperial Conference to our Government, who were faced with the aggressive demand of Mr Bennett that they should bargain away our traditional fiscal system for reciprocal advantages which, at the best, possessed the most nebulous possibilities. Rather may we applaud Mr MacDonald for countering Mr Bennett's cry of "Canada first" with the answer "Britain first." Again, during these two years it has fallen to the lot of Mr MacDonald to face the Indian problem. Who can cavil at his method of approach? Some may hold that by greater forcefulness he could have obtained some degree of Hindu-Muslim truce. Others sniff and sneer at the "good luck" represented by the Princes' willingness to discuss a Federal

structure. All the same, few outside the anachronistic and scantily supported school of Mr Churchill will endeavour to find in the Indian negotiations a vulnerable spot in the record of the present Cabinet.

When we turn to domestic problems, the Counsel for the Defence will find himself on more treacherous ground. But even here he has not a little to say. The extreme proposals of "Labour and the Nation" for introducing "Socialism in our time" have been carefully eschewed. In recognition of the composition of the House of Commons the general policy has been, if socialistic at all, of the extreme Right Wing. More attention has been paid than in 1924 to the implications of minority government and, after considerable periods of friction, regular consultations are now taking place with the Liberals, who are no longer being treated as mere "brewers of wood and drawers of water." To do him justice, Mr MacDonald has made no inconsiderable endeavours to make Parliament a "Council of State." He did all that could be done to lift the Indian question out of party politics; he invited the co-operation of both Opposition parties for the investigation of means to deal with unemployment; and he yielded to pressure on vital clauses of the Coal Mines Act. All these chapters in the two years' story reveal a more practical deftness in working a minority government than was shown in 1924. As to individual measures, Mr Morrison has done good work with his Road Traffic Act, and Mr Snowden, despite the possible criticism that his last Budget was too easy-going, has tided over very difficult times without serious departures from his orthodox principles.

At this point the Counsel for the Defence must resume his seat, for the Prosecution for the Prosecution has a very serious indictment to press home. It is, in brief, that the Government have dilly-dallied with the whole problem of unemployment. They came into power mainly because they persuaded sufficient numbers of the electors that they had a policy for reducing unemployment. The event showed that they possessed neither a policy nor the vigour and imagination to invent one. But that is the lesser of several counts in the indictment, for the world knows now that Governments can do comparatively little towards curing unemployment in times of world-wide depression. Far more serious are three other counts. The first is that the Government have done nothing by way of leadership or example to arouse the country to recognition of the crisis through which we are passing, nor to check the growing disposition to believe that, thanks to an inexhaustible State purse, the mass of the people may cling indefinitely to standards of life, regardless of whether they are being earned or not. The second count is that, like his predecessor at the Treasury, Mr Snowden has so far utterly failed to translate into practice his unimpeachable precepts of public retrenchment. The third, and far the gravest, is that the Government have been inexcusably dilatory in facing the problem of the finance of unemployment insurance, and have allowed abuses of that system to run away with millions of the public money without making any attempt to step the holes in the sieve. Even now, armed with a courageous Report from a Royal Commission, the Cabinet—to judge by Mr MacDonald's announcement on which we comment in a Note of the Week—while conceding the necessity of dealing with "abuses," is still reluctant to face the full implications of the problem.

That the Government has lived two years, and in spite of certain dangers, appears still to have a fair expectation of life, is due mainly to two causes—the degree of willingness shown not to outrage Liberal opinion and the weakness of the Conservative Opposition, rent in twain by the Baldwin-Beaverbrook battle, lacking in leadership, bankrupt in constructive policy. There are reasons for wishing their life to continue a while; for it would be definitely undesirable to change horses while we are crossing the Indian stream, or to replace Mr Henderson before the Disarmament Conference. Nor is there much likelihood that a general election would give us a better Government. Nevertheless, there is one condition which must be fulfilled if their retention of office is to be justified, namely that the question of unemployment in-

insurance be ultimately faced and public economy pursued in deadly earnest. But even there one is bound to ask doubtfully whether any other Government would be more likely than that of Mr MacDonald to act vigorously and boldly in these matters. Indeed, there are cynics who maintain that no party will take what is assumed to be unpopular action—though definitely required in the interests of the State—because it fears the wrath of Demos. But the heavy fall in the Labour poll at Gateshead, in spite of the fact that the Labour candidate violently repudiated the proposals of the Commission, suggests that the public is more ready to face unpleasant facts than the vote-catching politician is apt to believe.

GERMANY'S EMERGENCY DECREES.

In the following article we give a brief résumé of the budgetary position which has confronted Dr. Brüning's Government, and the fiscal and other measures which have been adopted in an endeavour to meet it.

When the present Chancellor, Dr. Brüning, took office in March, 1930, he inherited an accumulated deficit of 1,283.7 million marks. The Budget of the years immediately preceding had been as follows:—

Year ended March 31,	Million Reichsmarks.	
	Ordinary and Extraordinary Revenue.	Ordinary and Extraordinary Expenditure.
1925	7,757	7,220
1926	7,334	7,444
1927	7,690	8,543
1928	8,961	9,316
1929	9,812	10,887
1930	10,581	10,894

It will be seen that, from 1926 onwards, revenue consistently fell short of expenditure, a state of affairs upon which comment has frequently been made in these columns. One contributory cause of this development has been the unsatisfactory financial relation of the States and Communes to the Reich, which is responsible for raising most of their revenue, but has little control over their expenditure; and with the advance of the depression this weakness has become more serious in its effect.

In consequence of the steadily deepening depression, Dr. Brüning was faced, in addition to this accumulated deficit of 1,283.7 millions, with the prospect of a deficit of 760 millions for 1930-31. As no Budget had been voted by July, an emergency decree was promulgated under the constitutional powers of the President, in which the following measures for the balancing of the Budget were ordained:—

- (1) A temporary increase from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. in unemployment insurance contributions, together with certain reforms in the scheme's administration.
- (2) A special levy of $2\frac{1}{2}$ per cent., effective September, 1930-April 1, 1931, on official salaries which exceeded 2,000 marks per annum after the deduction of 20 marks per month in respect of each minor child.
- (3) A similar charge on recipients, other than widows and orphans, of Reich and State pensions; on wages of public employees not insured against unemployment; and on

60 per cent. of the fees received by those members of the supervisory board of any undertaking who did not participate in the management.

- (4) A surcharge of 5 per cent. on the 1929 assessment to income tax of incomes exceeding 8,000 marks per annum.
- (5) A 10 per cent. surcharge on the income tax of unmarried persons, and a re-imposition of the 25 per cent. by which the tax was reduced in 1927.

The first of these measures was expected to yield 269 million marks, and the others 274 millions. In addition, 217 millions was to be secured partly by economies and partly by shortening the periods during which payment of the tobacco tax might be deferred. The weakness of the arrangement was that it budgeted for an average of 1,600,000 unemployed, whereas the number in receipt of benefit alone had amounted to over 2½ millions by the end of the year, and the total number unemployed was 4,384,000. A second emergency decree was issued at the beginning of December. It reduced, as from February 1st, the wages and salaries of civil servants above 1,500 marks by 6 per cent.; doubled the rate of beer duty levied by the Communes; raised the duty on raw tobacco from Rm. 80 to Rm. 180 per 100 kg., and imposed smaller increases in the duties on cigarettes, cigars and pipe tobacco; and again increased the income tax in the higher income classes. In addition, Budget expenditure for the next three years was limited by the decree to 10.6 milliards. An understanding was reached with the States and Communes that they also would reduce the salaries of their public employees, and the total anticipated saving to Reich, States and Communes under this head was 480 million marks. Reductions were made in certain taxes on land, transport and capital transfer whose crippling effect was held to be out of proportion to the revenue they brought in.

In spite of these measures, the 1930-31 Budget was very far from balancing. The Ministry of Finance has just announced that the deficit on the ordinary Budget was 1,190 millions. Tax revenue was 1,250 millions below the estimates; of this 778.4 millions would have gone to the Reich, 336.6 millions to the States and Communes, and 125 millions to the old age and invalidity insurance funds. The main items of supplementary expenditure amounted to 418.2 millions, of which about 300 millions was directly due to unemployment, and were offset only to the extent of 50 millions by economies. The revenue of the extraordinary Budget was 970 millions, derived mainly from the Kreuger Loan and the sale of Reichsbahn shares; the expenditure amounted to 460 millions, so that a surplus of 510 millions was available to set against the accumulated extraordinary deficit of previous years.

The Budget of 1931-32, which was based on the December emergency decree, was to balance at 10,713 millions, of which 10,466 millions fell to the ordinary Budget. Already a deficit of 940 millions is anticipated, 440 millions of which is in respect of the revenues allowed to the States and Communes, which have additional deficits of their own. To the 495 millions by which the revenue of the Reich (according to the now revised estimates) will fail to cover estimated expenditure must be added 79 millions for supplementary estimates, making a total of 574 millions. In these circumstances, a new emergency decree was signed last week appealing to all sections of the German people to accept the necessary sacrifices, and expressing the hope that this drastic measure would be the last of its kind.

The deficit with which the decree has to deal falls into three sections. The deficit of the Reich, amounting, as stated, to 574 millions, is to be met by economies of 306 millions (of which 101 millions will be effected by further salary cuts, 85 millions by reductions in war pensions, and 120 millions by cuts in departmental estimates), and by increased taxation amounting to 268 millions, of which 110 millions is to come from the sugar tax, 75 millions from the petrol duty, 8 millions from the statistics tax and 80 millions by the introduction of a system of monthly payments of turnover tax in respect of turnovers which exceed 20,000 marks annually. In addition, the deficit in respect of "emergency" unemployment benefit amounts to 245 millions and a further sum of 140 millions was allocated for the provision of work. This is to be covered by a "crisis tax," which is the most important measure in the decree and will be described fully below.

Lastly, the 440 millions deficit of the States and Communes is to be met as to 302 millions by salary reductions of 207 millions, together with 60 millions to be derived from the abolition of wage tax refunds and 35 millions from the new turnover tax. For the remainder, the Government merely commends the State and local authorities "to their own initiative."

The bulk of the contributions exacted from the German people, as this outline shows, consists of salary reductions and of increases in taxation. Details of the individual charges are as follows:—

Public employees, pensioners, and employees of the Reichsbank and the State railways are to have their salaries cut by amounts ranging from 4 to 8 per cent. as from July 1st, and the allowance for the first child is to be reduced from 20 to 10 marks per month. Civil servants' salaries will then be 10-13 per cent. lower than during the years 1927-30. The "crisis" tax is to extend corresponding sacrifices to private employees, employers, members of the professions and other independent workers. It falls into two parts: an additional tax on wages and salaries, and an additional tax on incomes assessed to income tax. Officials, who are subject to salary reductions, and persons who are exempt from the wages tax, will not be subject to these supplementary taxes. The tax on wages and salaries is graduated from 1 per cent. on gross wages not exceeding 300 marks a month to 5 per cent. on earnings of more than 3,000 marks monthly. The supplementary income tax ranges from ¼ per cent. on annual incomes not exceeding 3,600 marks to 4 per cent. on incomes over a million. This "crisis tax," which is to be effective until December, 1932, is expected to yield 385 millions in the current year (this just covers the deficit on unemployment expenditure, together with the appropriation for productive works), and 390 millions next year.

In addition to these direct sacrifices of income, Germany is undertaking certain reforms of unemployment insurance, on somewhat similar lines to those advocated by our own Commission. An attempt is to be made to restore the fund to solvency by a five per cent. reduction in benefits; a shortening of the period during which seasonal workers are entitled to benefit from 26 to 20 weeks, and by granting them only the "emergency" benefit rate; an extension of the waiting period; a tightening of the conditions under which work may be refused; and a means test for minors and married women.

These three emergency decrees by no means exhaust the tale of the growth of Germany's fiscal burdens. Isolated measures have been taken, from time to time, among which some of the most important were the raising to 6½ per cent. for an indefinite period, of the unemployment insurance contributions which took effect last October, and various heavy increases, by administrative order, in the Customs, especially the grain duties. Every section of the community is therefore contributing in a measure to this attempt to raise, in nine months, some 1,200 million marks as a net addition to the burdens already imposed by the Budget. Very approximately, this is equivalent to an additional levy of some 24s. per head per annum. This is no mean deduction at a time like the present, when incomes are being rapidly reduced. Dr. Brüning and his colleagues have met with increasing difficulty in maintaining their parliamentary position, and it remains to be seen whether their courage in facing the necessity of imposing fresh fiscal burdens at a time of acutest economic depression will provoke a serious political crisis.

THE GROWTH OF POPULAR THRIFT.

(BY A CORRESPONDENT.)

SPEAKING at the annual meeting of the City of London Savings Committee early in May, General Seely, Chairman of the National Savings Committee, quoted figures showing that the total savings through various popular channels of thrift had increased from £600 millions in 1914 to £1,433 millions in 1921 and £2,018 millions in 1931. Too frequently there is a tendency to accept statistics of this nature as satisfactory if the totals are large and striking, and to forget that the prime value of statistics is for purposes of comparison. Moreover, any comparison must take into consideration other factors which may have a substantial bearing on the result. The large table appended has been compiled to show the amounts accumulated through the various channels of thrift most readily

available to the small investor in the years 1913 and 1914; 1920 and 1921; and 1927, 1928 and 1929:—

The figures are taken from published official statistics, but cannot be taken as representing the exact total on a definite date in each year, as the accounts of the various organisations comprised in the total are made up to different dates. This fact will not, however, make any substantial difference to the final results. The totals for the years 1914 and 1921 are somewhat less than those quoted by General Seely, but there are some other savings organisations in existence (e.g., the Yorkshire Penny Bank) which are not included in the total.

In 1914 the increase was some £15½ millions, or 2.85 per cent.; in 1921 it was £54,694,000, or 4.12 per cent. In 1928 it rose to more than £90 millions, or nearly 5 per cent., while in 1929 the increase was only £76,318,000, or rather less than 4 per cent. Considered as percentages of the previous year's totals, these increases are not particularly encouraging, for the amount saved each year was apparently little, if anything, more than the interest earned. This, however, does not mean that very little really new money was saved by the "small investor." There is no reasonable doubt that considerable sums were withdrawn from the various organisations for investment in other and perhaps more directly productive ways; for the purchase of businesses, of houses and of lasting assets of all sorts, or for investments in stocks and shares of industrial companies; and that these withdrawals were replaced by savings of new money out of income.

Considering the separate items the two most striking features are the wonderful popularity of Savings Certificates and the enormous growth in the funds of the building societies during the last few years. That Savings Certificates have been popular is not surprising; they have been generally recognised as the best investment for the small investor and also an investment (up to the maximum permitted) not to be ignored by the more wealthy. It is probable that both Savings Certificates and building societies—but more especially the latter—have been used in the last year or two for the investment of substantial funds which would, in more prosperous times, have been invested in industry. This appears to be the most reasonable explanation of the steadily increasing purchases of Savings Certificates during the past two years and of the huge increase in the funds of building societies.

The National Savings Committee by its propaganda for Savings Certificates has undoubtedly done really magnificent work for the promotion of thrift among all classes, and particularly among children and adolescents. The value of this missionary work can hardly be over-estimated, and certainly cannot be calculated in terms of amounts invested. The Savings Certificate, admirable as an investment, has, however, one feature which might tend to cause uneasiness from the national aspect, i.e., it is repayable practically on demand. In 1914 the liability of the State in respect of deposits in the Post Office Savings Bank was £190 millions. In 1929 the liability in respect of the Post Office Savings Bank and Savings Certificates amounted to no less than £768

millions. The existence of debt of this amount, repayable on demand or at only a few days' notice, is apt to be an element of anxiety to the Chancellor of the Exchequer in times of financial stress. As regards the building societies, whose funds are largely invested in mortgages of house property, they undoubtedly have substantial security for their advances at the present time. If, however, through continued depression and a continuance of the general fall in prices a serious and rapid fall in property values took place, the position of many societies might become much less satisfactory.

Returning to the large table, it should be remembered that during the years covered by the figures wide variations occurred in the real value of money in terms of commodities. As a rough measure of these changes the Ministry of Labour's cost-of-living figure is available. Another factor to be considered is the increase in population, as estimated by the Registrar-General. Combining these factors, it is possible to arrive at an estimate of annual savings per head in terms of pre-war purchasing power, as follows:—

(1) Year.	(2) Cost-of-Living Index.	(3) Increase in Savings at Pre-war Value.	(4) Population.	(5) Annual Savings per head at Pre-war Value.
1914.....	100	£ 15,581,000	41,302,000	s. d. 7 6
1921.....	226	24,201,000	42,763,000	11 3
1928.....	156	54,472,000	44,375,000	24 6
1929.....	164	46,535,000	44,491,000	20 11

It is unquestionable that there has been a substantial improvement in average real weekly wages since 1914, and this has been accompanied by an improvement in the standard of living of the wage-earners. The foregoing figures show that a part at least of the increased wages has been saved. In 1914 the great bulk of wage-earners had little or no margin for saving. The margin has been substantially increased, and it is satisfactory to note that, though there was a falling-off in 1929, up to the present world-wide depression large numbers of wage-earners were saving very considerably more than before the war.

SOME RESULTS OF SAFEGUARDING.

THE Chamberlain tariff campaign of a quarter of a century ago led to the publication by the Board of Trade of a series of Blue Books containing a statistical examination of the state of British industry and trade in general and of export industries in particular. Statistics on similar lines have recently been issued by the Board of Trade in the form of two Blue Books, the first* of which refers to the state of trade at home and abroad over the past seven years, and the second† of which gives detailed statistics of leading British industries. The reason why these recent publications have entirely escaped the public attention which was showered upon their earlier counterparts is mainly that they consist almost purely of statistical tables and are issued without the explanatory memoranda which lent outstanding interest to the pre-war reports. They should, however, not be overlooked, and should be placed in the reference library of all students who have time to delve into a veritable mine of statistical information on commercial, industrial and fiscal problems.

Among the important data presented in the second volume is a series of tables setting out the course of events in those industries which have been accorded high tariff shelter under the machinery of the Safeguarding Acts. The results will repay the study both of Free Traders and Protectionists, and they will afford to neither a complete degree of satisfaction. To the latter, certainly, they will come as a cold douche, for one of the chief methods of argument used by our neo-protectionists has been to lay stress upon the wonderful results achieved in those favoured industries to which the supposed assistance has been granted of a heavy duty upon competing products emanating from foreign countries. The figures presented in this Blue Book show that the results

* Cmd. 3737. Price 7s. 6d. † Cmd. 3849. Price 7s. 6d.

have not been very wonderful at all. We set out below the salient figures for five "safeguarded" industries during five years of the operation of "safeguarding." We have chosen the years 1924 and 1929 as the fairest for comparative purposes, because the former year, apart from the brief post-war boom, was the best post-war year for employment, and the latter marked the top of a gradual trade improvement extending over a quinquennium, apart from a break during the labour troubles of 1926. Here are the results for those industries for which quantity figures are available:—

RETAINED IMPORTS.		1924.	1929.
Gloves:—			
Cotton fabric	(thous. doz. pairs)	816.9	1,033.2
Leather or fur	(thous. doz. pairs)	850.8*	621.4
Gas mantles	(thous. gross)	164.7	9.3
Cutlery:—			
Knives	(thous. doz.)	445.0	468.0
Scissors	(thous. doz.)	411.0	491.0
Packing and wrapping paper	(thous. tons)	206.6	176.0
Translucent pottery	(thous. cwt.)	252.7	208.7
Wrought enamelled hollow-ware	(tons)	5,821.0	4,313.0
Buttons and studs	(thous. gross)	8,628.0	11,081.0

* Excluding fur gloves.

BRITISH EXPORTS.		1924.	1929.
Gloves:—			
Cotton fabric	(thous. doz. pairs)	58.8	21.3
Leather or fur	(thous. doz. pairs)	41.1*	52.8
Gas mantles	(thous. gross)	23.1	26.3
Cutlery:—			
Knives	(thous. doz.)	936.0	912.0
Scissors	(thous. doz.)	67.0	73.0
Packing and wrapping paper	(thous. tons)	34.4†	11.0
Translucent pottery	(thous. cwt.)	990.8	794.6
Wrought enamelled hollow-ware	(tons)	2,749.0	3,007.0
Buttons and studs	(thous. gross)	1,449.0	891.0

* Excluding fur gloves.

† Includes large quantity of old newspapers exported to India and Far East.

RE-EXPORTS.		1924.	1929.
Gloves:—			
Cotton fabric	(thous. doz. pairs)	104.8	49.1
Leather or fur	(thous. doz. pairs)	50.4*	55.9
Gas mantles	(thous. gross)	0.8	0.4
Cutlery:—			
Knives	(thous. doz.)	28	25
Scissors	(thous. doz.)	18	4
Packing and wrapping paper	(thous. tons)	0.7	0.5
Translucent pottery	(thous. cwt.)	6.6	2.3
Wrought enamelled hollow-ware	(tons)	negligible	
Buttons and studs	(thous. gross)	1,627	1,223

* Excluding fur gloves.

What definite story can be gathered from these figures? Take the first item on the list—cotton fabric gloves. Here retained imports have risen, and both exports and re-exports fallen by over 50 per cent.—scarcely a triumph for safeguarding. The evidence regarding gas mantles, at first glance favourable to Protectionism, is vitiated by the operation of cartel agreements. Under the heading of "cutlery" there is a slight rise in imports and a slight contraction in total exports. With packing and wrapping paper and translucent pottery the story is one of a decline under all three heads; while the button and stud industry's experience under protective duties is the strange one of a rise in imports and a decline in both exports and re-exports. For the "lace and embroidery" industry only value figures are given; but these for the principal item, namely, "cotton lace other than lace curtains," scarcely reveal the revitalising effect of Protection. In this category between 1924 and 1929 retained imports rose from £185,000 to £304,400, while domestic exports fell from £1,125,000 to £406,600, and re-exports faded away from £1,700,000 to a mere £64,000.

One thing emerges clearly from all these official figures, and that is that the results of the Safeguarding duties have been anything but a convincing proof of the benefits of Protection. In interpreting them, we think that the Free Trader is fairly entitled to go a step further. It is no part of the Free Trade case to deny that individual industries may benefit (at the expense of other sections of the community), by the imposition of a sheltering tariff. On the contrary, it was reasonable to expect that such benefit would be most visible in just these cases, where particular

industries were singled out for individual shelter with unprotected industries all round them. Yet even in these conditions, which were the most favourable imaginable for successful essays in isolated or selective Protection, the results are so mixed as to permit of no general deduction at all. Let us hear no more, then, of the wide extension of "Safeguarding" as the cure for British unemployment.

INDIA AND LANCASHIRE.

(BY OUR CALCUTTA CORRESPONDENT.)

THE figures of India's foreign trade in the year ended March 31st reveal the effects of the world depression, accentuated by political unrest unprecedented within living memory in its range, duration and intensity. It is apparent that every product and every Province has been affected. Exports and imports have slumped concurrently and to almost the same extent. Thus, while imports at 165 crores show a drop of 76 crores, or 31 per cent., exports of Indian merchandise at 220 crores disclose a decline of 90 crores, or 29 per cent. Including imports, exports and re-exports, the total turnover was only 390 crores against 599 crores, a decrease of 169 crores, or 30 per cent.

This decline of 29 per cent. in exports, which may be ascribed almost exclusively to external factors, merits consideration as an indication of the extent to which the contraction in import business is attributable to an all-round decline in purchasing power as distinct from the Congress boycott. That loss of purchasing power has been an important factor making for contraction in India's overseas trade cannot be gainsaid. Nevertheless the boycott has been, and still is, a dominant issue, of particular interest to Lancashire, for it has been directed almost entirely against the import trade in cotton piece-goods, and in that direction has been extraordinarily successful. In this trade the decline, in round figures, was from 1,919 to 890 million yards, and in value from 50 crores to 20 crores.

It would be misleading to suggest that the Irwin-Gandhi pact has brought any relief to the piece-goods trade, or is likely to do so. In effect, except for a change in nomenclature, the boycott persists unmodified and unchecked. An adequate explanation of the influences at work would need to include not only an analysis of the steady development of the cotton mill industry in India, but also an essay on Indian mass psychology as affected by the civil disobedience movement. The position may, however, be briefly stated as follows. Despite any temporary checks, political, administrative or economic, to which it may be subjected, the campaign to render India independent of imported cotton goods will go forward, whatever form the new Indian Constitution may take, until it has achieved its objective. The sole uncertainty is regarding the period within which this ambition can be achieved. It is not a new movement, although it has never before acquired so great a momentum or influenced so large a percentage of the population. Massed behind it, and assuring its eventual triumph, are all the forces connoted by the words "economic nationalism." There is no political exit for Lancashire from this situation.

The movement towards greater self-sufficiency, especially as regards cotton goods, will persist whether Swaraj, as Congress leaders conceive it, is withheld or conceded. In the former event the boycott will be intensified; in the latter event the tariff will be raised high enough, and maintained at the higher level long enough, to encourage the establishment in India of mills equipped to manufacture the qualities of goods now imported. It is not inconceivable that, in such circumstances, Lancashire mill-owners would co-operate in effecting such a transfer of production; in either event Lancashire mills would lose the trade, and the number of workers dependent on the production of goods for the Indian market would be reduced to negligible proportions. These are the facts, and the inescapable inferences from the facts, and no endeavour to ignore them will alter the actual sequence of events. Whether the changeover thus forecast will be completed in one, two or three decades leaves room for

conjecture. But that is virtually the only point in doubt; and Lancashire would be well advised to plan accordingly. If the change is effected gradually so much the better; Lancashire will then have time to find new markets or new industries, while India will escape the defects inseparable from too hasty expansion.

Manifestly if such a programme were to materialise, there would be "offsets" even for Great Britain. Heretofore India has expended approximately 60 crores per annum on imported cotton goods. In the event of that not inconsiderable sum being retained in India, largely in the hands of Indian industrialists, one prediction may be made with absolute confidence. The money will not be hoarded; it will be employed productively, and there is plenty of scope. It is difficult to envisage India, for many decades, becoming a large importer of raw materials and foodstuffs; relatively small and occasional imports under both headings in recent years have occasioned widespread alarm and have already led to the adoption of remedial measures which, when fully applied, should lead to a considerable increase in India's output of all staples. It may be inferred that India will remain a large importer of manufactured products, including commodities which at present either do not figure in the import list or, in present economic conditions, are required only in very small quantities. As a political leader Mahatma Gandhi is at the apex of his power, but his economic programme is already in eclipse. The philosophy of the men who will control the new India will not be that of Gandhi, but of those who see economic salvation only in the indefinite multiplication of human wants; and among the 350 millions in India the enthronement of such a conception will signalise the advent of an era which will make India one of the largest markets for manufactured goods in the world.

Notes of the Week.

The Government and the Unemployment Report.—The announcement made by Mr MacDonald, on Thursday, of the Government's intentions with regard to the recommendations of the Royal Commission on Unemployment Insurance disappoints, on the one hand, the hopes we expressed last week that the Prime Minister would rise greatly to the occasion; yet, on the other hand, it calls in some respects for suspended judgment. Mr MacDonald informed his Party Meeting that the Cabinet had no intention at present to reduce the rates of benefit, alter the scales of contribution, or interfere with the "transitional" provisions. Before deciding on the recommendations made by the Commission under these heads, the Government would await the Final Report. The Prime Minister, however, stated that the Government would proceed with measures to deal with the "abuses" which the Interim Report had shown to be in existence, and that a Bill would be introduced before the recess. If, as we hope we may assume, the payment of benefit to "transitional" recipients who are not in need of it is to be reckoned among the "abuses," the best that can be said at first sight of this announcement is that if the promised legislation is drafted with the sincere determination to eliminate the "abuses" root and branch, the process of moral deterioration which recent Acts have started will be checked, and the ground will at least be cleared for the more radical financial reforms that will be imperative when the Commission has reached its final conclusions. On the other hand, the Government on this basis cannot hope to realise more than one-third of the savings recommended by the Commission, and little will be done to arrest the dangerous course of uncovered borrowing or to relieve next year's Budget.

The Land Tax Dilemma.—The battle over the Land Tax was vigorously begun in the House of Commons this week, and it is becoming increasingly clear that Mr Snowden's proposals, in their present form, have few

enthusiastic friends and a growing host of bitter enemies. Protests have been issued by many representative industrial bodies headed by the Federation of British Industries. Unanimous dislike of the measure has united the Conservative Opposition, while the difficulties of the Government are brought to a serious point by the decision of the Liberals to move an amendment which would in effect change the whole nature of the proposals. The attack was opened in the House on Tuesday, when Sir Basil Peto and Mr Chamberlain presented the traditional case for the landowner and explained that under Mr Snowden's procedure every desirable use of land would be penalised while the land profiteer would go untouched. Sir John Simon followed with an uncompromising condemnation, the tenor of which was that the tax was both unjust and burdensome, and illustrated his argument by tracing the effects of the tax upon shops, mills, factories, shipyards, and educational and charitable institutions. In Sir John's view the tax would be more unfair in its incidence than rates. So far Mr Snowden, although welcomed back to the House on Tuesday, has not spoken in reply. Perhaps he will be able to do so on Tuesday, when the moving of the Liberal amendment will create a critical position for the Government. The effect of this amendment, if passed, would be practically to transform the general tax on all land into a tax on undeveloped land only, since income tax already payable under Schedule A in respect of any unit of land would, under the amendment, be deductible from that unit's assessment for Land Tax. The Liberals have made it clear that they will press the amendment, and it is extremely unlikely that they will retract from the position they have taken up. On the other hand Mr Snowden is believed to be so firmly wedded to his own method of tax that he will not accept the Liberal amendment. A deadlock, therefore, exists, and if a division is taken on the Liberal amendment, a Government defeat is quite possible. There is therefore considerable speculation as to the probable action of the Government. If Mr Snowden and the Liberals are both adamant (and Mr Lloyd George has definitely said that the Liberals are), the only way out of the *impasse* would appear to be the withdrawal *en bloc* of the whole of the Land Tax clauses in the Finance Bill, and it is considered in political circles that there is a decided possibility of this course being adopted. It would, of course, involve a major personal reverse for the Chancellor; but the rank and file of the Labour Party have not shown that they share Mr Snowden's fervid attachment to the Land Tax in its original form, and might not regard its withdrawal as a very serious political matter. However, it is possible that some compromise may be reached, for there exists both in the Labour and the Liberal Party a fairly widespread desire to see a valuation of the land undertaken.

Ottawa Conference Postponed.—The Imperial Conference, which assembled in London last November, failed, mainly because of Mr Bennett's impracticable demands, to make any notable progress on the economic side, and the economic discussions were adjourned for resumption at Ottawa this autumn. The Ottawa meeting will not take place, and apparently it is just as well that it should not. Mr Bennett is still in power in Canada, and a repetition of his demands that Britain should revolutionise her fiscal system in return for dubious benefits, would be hardly helpful, especially in view of the fact that the Canadian tariff on British goods has again been revised in the upward direction. Nor could the conference be representative, for South Africa had decided not to attend, and Mr Scullin and his Cabinet are obviously preoccupied with their own domestic crisis. It is regrettable, of course, that the much-needed work in the sphere of organisation, which was side-tracked last November, should not be taken in hand; but the prospects of achieving anything useful were not great. As for Mr Bennett's latest essay in high protectionism, it is fairly severe on British goods, among which steel plates and machinery will be prominent sufferers. British suffering is, perhaps, only incidental to the victimisation of American imports, which appears to be the main object of the new Canadian tariff. Nevertheless, the whole trend of Mr Bennett's fiscal policy is such as to create the expectation that any Imperial economic discussions in Ottawa would be nugatory. That being so the statesmen of the Mother Country and the Dominions will be better employed in concentrating upon their own various, and in every case, urgent, domestic problems.

The Cawnpore Inquiry.—The report of the Commission of Inquiry into the communal riots which took place in Cawnpore last March, and which resulted in the death of nearly 500 persons, does not attempt to gloss over the responsibility of the authorities for failing to deal effectively with a situation in which the machinery of ordered government lamentably broke down. As to the cause of the outbreak, there has been little dispute, and the report adds nothing to what was already known. The rioting was not directed against the Government, but was a tragic faction fight arising out of the friction between the Moslem and Hindus in connection with the recurrent *hartals* organised by Congress. The crucial phase is described as being the outburst of fury caused by the burning of the Meston Road Temple and the Bazura Mosque on the afternoon of March 24th. The District Magistrate is criticised for his slowness in appreciating the seriousness of the situation that then immediately developed, and it is added that the Governor-in-Council might with advantage have directed a firmer and more consistent recourse to the preventive sections of the ordinary law before the rioting came to a head. Though the U.P. Government acted promptly as soon as they were informed of the insufficiency of the police force at Cawnpore to cope with the rioting at its height, the Commission holds that before the outbreak the size of the police force in that inflammable city was inadequate. For the Provincial Government to act on these findings, so far as they concern administration, is not a matter of difficulty. The District Magistrate will be transferred and the police establishment at Cawnpore strengthened. But it would be idle to pretend that this disposes of the grave significance of this horrible episode in Indian history, the basic cause of which was the fanatical antipathy which exists between Hindu and Moslem. In the correspondence, published this week, which has recently passed between Mr Baldwin and the Prime Minister on the subject of the resumption of the Indian Round Table Conference, Mr Baldwin expressed his "extreme doubt" whether useful results are possible at the Conference so long as the communal atmosphere is so deeply disturbed in India. In his reply, Mr MacDonald, while agreeing that recent outbursts are a serious obstacle in the settlement of Indian aspirations, rightly emphasised the desirability of not postponing beyond September the re-assembly of the Conference.

To put off all attempts at further progress until a Hindu-Moslem concordat is reached in India would be obviously ill-advised, but every friend of India will earnestly hope that no repetition of the Cawnpore tragedy will occur to embitter what is in any case one of the most difficult aspects of the whole problem which confronts the Conference.

The Wailing Wall.—The Commission appointed by the League of Nations, under the chairmanship of M. Löfgren, to report upon the rights in the dispute between Moslems and Jews concerning the Wailing Wall in Jerusalem and the use of the Pavement in front of it, has now published its Report, and its findings have been implemented by Order-in-Council. The conclusions at which the Commission arrives are as follows:—It recognises Moslem ownership of both the Wall and the Pavement, and confirms the existing provisional enactment prohibiting the bringing of benches, chairs, carpets, etc., to the Wall, or the driving of animals over the Pavement. On Holy Days recognised by the Administration, the Jews are to be permitted to bring two tables to the Wailing Wall, and to place on one of them the Ark containing the Scroll of the Law and on the other the Scroll of the Law while it is being read. They are not to be allowed to blow the Ram's Horn near the wall, and the Moslems are prohibited from celebrating the Zikr ceremony close to the Pavement during the Jewish devotions. The Moslems are required to repair the Pavement, but the Administration is to be responsible for repairing the Wall as an historical monument. No political speeches or demonstrations are to be permitted on the Pavement or its surroundings. With these findings the Moslem Arabs, who announced in advance that they would not accept the conclusions of any Commission, should be satisfied, since their claim to ownership of the Wall is in substance recognised, and the prohibition against interference with Jewish devotions is eminently reasonable. Whether reason will prevail, or whether the Jews will be provoked to violent resentment by these findings, it is too early to say. *Tantum religio.* The Mandatory Power, in a situation of considerable delicacy, may well be thankful that it has obtained from the Commission an impartial Report on which to act.

Gold and the Depression.—The latest contribution to this vexed question comes from Professor T. E. Gregory. Writing in last Monday's "Gold Supplement" to the *Financial News*, he takes the view, on the whole, that gold maldistribution is not a major cause of the world depression. His first thesis is that the proof usually put forward of the presumed insufficiency of the gold supply in recent years really begs the whole point at issue, for, according to Professor Gregory, the insufficiency of the supply is presumed to exist from the fact of the fall in prices; and the fact that prices have fallen is explained by the fact that supply has been insufficient. This argument of Professor Gregory would be sound if it happened to be a true presentation of his opponent's case, but Sir Henry Strakosch's memorandum, published in the *Economist* last July, shows that the case for adducing gold shortage and maldistribution rests upon actual calculations of the amount and distribution of the gold in fact available. In particular, Sir Henry pointed out that in 1929 sterilisation of gold in the United States and France virtually caused a shrinkage in the world's monetary gold stocks. Professor Gregory contends that the fall in prices since the autumn of 1929 was not directly due to gold shortage. But the weight of the evidence, we suggest, supports the view that the beginning of the fall in prices and the depression coincided with the generally high money rates imposed in 1929 with the direct object of checking the maldistribution of the world's monetary gold and the abuse of a substantial portion of it as a basis for the pyramid of credit behind the Wall Street boom. The continuance of the depression and the fall in prices may be due to causes no longer directly connected with gold, but the glut of gold in America and the shortage in most of the remaining countries were largely responsible for the initial collapse. We also agree with Sir Basil Blackett that while supplies of gold and credit may be more than

sufficient to meet the world's abnormally low needs of to-day, confidence may be impaired by the belief that supplies will be insufficient to support a larger volume of trade at a restored level of prices. This is an important aspect of the question that should not be overlooked.

Australian Debt Conversion.—To judge from cabled reports, Australian affairs have again made an important move forward. The Premiers' Conference has taken the Opposition Leaders into its counsel, and a resolution has been adopted agreeing not only upon the issue of a new Conversion Loan on the lines described in the *Economist* last week, but also upon a substantial reduction of all expenditure "as a first step towards the restoration of prosperity and the prevention of immediate default and general failure." To launch the new Conversion Loan, a National Appeal Committee, consisting of Mr Scullin, Mr Lyons and Sir Robert Gibson, is to be formed, and it is confidently reckoned that a call to Australia's patriotism will be sufficient to achieve the desired end. Little has been heard this week of any element of compulsion in the conversion scheme, and even the suggestion of a penal surtax upon income derived from unconverted debt has receded into the background. If, as now seems likely, such sanctions are to remain in abeyance until voluntary conversion has been given a fair chance of success, there is no doubt that, from the standpoint of Australia's credit, the decision is wise. So, too, is the determination to press forward with other economies, for, in addition to the direct and substantial contribution that they will make to the rehabilitation of the national finances, they will remove any fear that the bondholder is being singled out for special treatment. The news that the Opposition are now co-operating is also encouraging, for it holds out the hope that Australia is now on the threshold of an united national effort. Once assured of this, the City will be eager to render Australia all possible assistance.

The British Wage Question.—The scope of the movement initiated by employers, under the pressure of the trade slump, to secure a readjustment of labour costs in conformity with the changed level of wholesale prices, is widening progressively. In our last issue we noted the rejection by the dockers of the port employers' proposals. On Thursday of last week the engineering employers intimated to the trade unions that, in view of the unions' decision on May 8th that the employers' proposals in that industry did not contain a reasonable basis of discussion, they (the employers) would put into effect from July 6th a modified revision of existing conditions irrespective of agreement on the unions' part. The employers' modified proposals are complicated, but, briefly, provide that piece-work remuneration shall be reduced by 6½ per cent., and that overtime shall be paid for at the rate of time and a quarter for the first three hours and time and a half thereafter, instead of being reckoned as at present on the basis of time and a half until midnight and double time thereafter. In addition, various alterations governing day and night shifts are proposed. The unions are meeting again on June 17th to consider this ultimatum, and it may be hoped that there need be no question of a stoppage of work. But it is clear that considerable accommodation from both sides will be required if a negotiated settlement is to be achieved. In a closely allied industry, shipbuilding, the following day saw the formulation by the employers of similar proposals for lightening wage costs. Here the employers' proposals are that plain time workers in the large shipbuilding districts are not asked to accept any reduction, provided that payments in excess of the nationally agreed time rates in the district are eliminated. Piece workers, on the other hand, are asked to surrender the remaining seven shillings of the war-time bonus and, in certain instances, the remainder of the so-called "standard ship's cycle" payments, another survival of war conditions. In the case of riveters, a percentage payment to squads, based on output, is proposed in substitution for the seven-shilling bonus and certain other payments.

These proposals, which affect in the main only the better-paid workers, are to take effect from the beginning of September, so that considerable time for negotiation still remains. Finally, the coal owners in South Wales have now announced the reductions which they would seek to make in the event of the seven-hour day being restored on July 7th. The terms represent a reduction of the minimum to be added to basic rates from 20 to 12 per cent., and a cut of threepence per day in the subsistence wage payable to adult workers, which would become 6s. 9d. per day for single men and 7s. 3d. per day for married men with children. In view of the bitterness created in that area by the recent Schiller wage award, these proposals are likely to evoke strong opposition, and, as they may be taken as a pointer indicating what will be proposed in other districts in the event of the Suspensory Act of 1926 being allowed to run out, it is clear that little time can be lost by the Government in making up its mind how a crisis in the coal industry is to be avoided.

Overseas Trade in May.—A preliminary summary of the figures of last month's overseas trade is published in this week's "Board of Trade Journal," from which the following tables are compiled:—

FIRST FIVE MONTHS. (000's omitted.)					
	1931.	Increase or Decrease as compared with first Five Months of			
		1930.		1929.	
Imports	£ 349,354	£ 108,974	−23.8	£ 164,045	−52.0
British exports	169,724	92,282	−35.2	139,125	−45.0
Re-exports	29,664	11,737	−28.4	21,282	−41.8
Total exports	199,388	104,019	−34.4	160,407	−45.8
Excess of imports over total exports	149,966	4,955	−3.2	3,638	−2.4

MONTH OF MAY. (000's omitted.)					
	1931.	Increase or Decrease as compared with			
		May, 1930.		May, 1929.	
Imports	£ 69,633	£ 21,404	−23.5	£ 33,790	−32.6
British exports	33,895	17,117	−33.5	33,542	−49.7
Re-exports	5,747	3,328	−36.7	4,724	−45.1
Total exports	39,642	20,445	−34.1	38,266	−49.2
Excess of imports over total exports	29,991	959	−3.19	4,476	+ 17.6

Comment must be reserved until the full detailed returns are available, but it is worth noting that British exports of manufactures reached the best figure since January, and that May (which had one more working day than April) saw a slight increase on that month in the total of British exports.

The L.C.C. and London Transport.—It was announced this week at the General Committee of Lords and Commons who are considering the London Passenger Transport Bill that an agreement had been reached between the Minister of Transport and the representatives of the London County Council as to the financial terms on which the L.C.C. tramways may be taken over by the new Board, subject to the consent of Parliament and to ratification by the L.C.C. A special class of the London Transport Board stock is to be issued to the amount of the net outstanding L.C.C. tramway debt at March 31, 1932, which has been agreed at the round figure of £8,500,000. The stock will bear interest at the rate of 4½ per cent., and will rank immediately after the T.F.A. stock and in front of the B stock. It will be a trustee security to be redeemed at par at the end of 90 years or at any time after 1975 at the option of the board. The L.C.C. will undertake not to put stock on the market for a period of ten years. In arriving at this settlement—to quote counsel's words—"the promoters had desired not to remain at issue on a matter of that kind with a great local

authority so deeply interested in London transport and its co-ordination as was the London County Council." What might be called the local government questions raised by the L.C.C. in their petition are not covered by the settlement of the financial terms. *Prima facie*, the settlement would appear to be fair and reasonable. The capital expenditure by the L.C.C. on its tramways system has amounted to £17,719,199. It has raised loans to the amount of £12,438,680, and its sinking fund for the redemption of these loans amounts to £4,138,086, so that the net debt outstanding at March 31, 1930, was £8,300,594. In the year ending March, 1930, the L.C.C. paid in interest on this tramway debt £252,481, and to sinking fund £506,144, making a total of £758,625. The total net operating profit of the L.C.C. tramways in that year was £847,205, so that, after providing for debt interest and sinking fund, there was a surplus of £88,580. The acceptance by the L.C.C. of stock to the amount of £8,500,000 as against a total capital outlay of over £17,000,000, would appear to provide fairly for the writing down of non-remunerative assets. Indeed, that the L.C.C. should accept stock bringing in interest of £382,500, whereas it paid out in interest and sinking fund last year £758,625, might seem to be a bad bargain for the L.C.C.; but it must be remembered that of the £758,625 only £252,481 was actually paid in interest and that the Council is keeping control of its sinking fund arrangements, to which, according to counsel, it attaches great importance "on account of the considerable financial advantage involved and the maintenance of their position as an independent local government authority." As regards the Underground group and the Metropolitan Railway, in so far as stockholders receive C stock, their interests will be unaffected, for it was always understood that the stock to be issued in consideration for the tramway undertakings of the local authorities would rank before C stock. It was not, however, assumed that this stock would rank before the B stock, and to this extent the stockholders of the railway companies may have a grievance, if it were found that the amount of the new stock issued was more than seemed fair and reasonable.

Indian Economic Councils.—Sir Arthur Salter, the Director of the Economic and Financial Section of the League of Nations Secretariat, was invited last November by the Government of India to visit that country and make suggestions for the organisation of a body to study continuously India's economic problems. In his report Sir Arthur proposes that a Central Economic Advisory Council should be established, with smaller Councils in every province. The total membership of the Central Council, including representatives of the Provincial Councils, of Indian States and of such bodies as the Indian Cotton Committee and the Tariff Board, would, it is suggested, be about fifty, and the best normal method of work would be largely through special *ad hoc* committees and individual investigators. The Provincial Councils should be smaller, averaging about twenty members. In commenting on his scheme, Sir Arthur adds:—

"Its main principle, that of making the system representative of unofficial institutions, is at the basis of the European Councils; the suggested method of working through specialised sub-committees has its closest analogy in Great Britain and at Geneva, though not confined to that example; its main framework of Central and Provincial Councils is adapted to the administrative divisions and areas of India, which are altogether different from those of any country which has in recent years set up a permanent advisory economic organisation."

The Indian Tariff Board has succeeded on the whole in keeping vexed questions of customs duties more or less out of the political arena. If the suggested Advisory Councils can achieve a similar success, they should do good work. Their early establishment, however, seems unlikely, as it is reported that the Government of India proposes that the operation of the scheme should be left to those who will hold office under the new constitution, unless it transpires that the earlier creation of the Councils would be in accordance with the expressed desire of those likely to direct policy in the future.

Earthquake Insurance.—By all the canons of insurance, writes a correspondent, the risk of damage by earthquake is one to be excluded from the policy, and great care and skill have been devoted to preparing clauses wide and strong enough to protect companies from this catastrophe. But for all that, there is always a certain amount of earthquake risk being run by companies and underwriters, some of it as a risk written for its own sake and more of it as a side-line to secure the fire business. The risks written for their own sake in the English market are for the most part taken by Lloyd's underwriters, and much of this business comes from the West Indies, for whose sake about twenty-five years ago an elaborate scheme of earthquake insurance was developed by a Lloyd's firm which ever since has had a large earthquake and hurricane connection in that part of the world. Apart from this specialised earthquake business most of the cover given against the risk is thrown in without premium, or at a small premium where the company or the underwriter is already drawing premiums for covering the fire hazard. The example most familiar to the public is the comprehensive policy, which started simply as a combination of fire, burglary and workmen's compensation insurance for householders, but under the stress of competition has been tricked out with one extra risk after another to tickle the palate of the insuring public. Aeroplanes, flood, riots, broken mirrors, assassination by burglars, death from fire—all these, as well as earthquake, have been added to the original policy without increase in the charge, and if any claims arise from last Sunday's earthquake in England they will be losses unpaid by any premium. It is, in fact, a debatable point whether the modern comprehensive policy, weighted so heavily with these fancy risks, is any longer a profitable form of insurance. In the same way a company that has a commercial fire risk that it wants to keep will often quote a merely nominal premium for the earthquake risk, not because it wants to insure against earthquake, but because it does not want to lose the fire. Restricted by tariff conditions in rating the fire, the company can make generous concessions in the matter of earthquake, and so bring down the mean rate for the two risks combined. The same process has been going on with another catastrophe risk—riots and war, and it is now recognised as a danger that the fire market, so prudently careful to avoid the catastrophe hazard, may buy its fire premiums too dearly with cover for these catastrophic risks which ultimately lie outside the scope of insurance.

Shipping Freight Index Number.—At 95.2 (the average for 1898-13 being taken as 100) our index number of whole-cargo shipping freights in May shows a rise on the month of 1.3 per cent, and is 7.5 per cent. higher than in May, 1930. The following table summarises recent movements of the various group indices:—

AVERAGE 1898-1913=100.					
	Average, 1913.	May 1930.	Mar., 1931.	Apr. 1931.	May 1931.
European Waters	110.0	95.1	86.5	86.0	85.0
North America	113.1	88.5	94.0	95.0	96.6
South America	123.4	91.6	90.5	94.4	94.7
India	106.3	94.2	99.2	94.0	94.8
Far East and Pacific	117.4	74.6	91.9	91.4	96.0
Australia	127.9	87.2	105.0	135.3	104.1
Total	116.3	88.5	94.5	94.0	95.2

The Plate was again the most active market, shipments of Argentine grain absorbing in the early part of May a large number of vessels. Business, interrupted by Whitsuntide, tended to decline towards the end of the month, and rates weakened under the pressure of heavy offerings of ballast tonnage. Apart from South America, the volume of demand showed little expansion, and trade in European waters was definitely less active. In the East, where tonnage is less superabundant, a modest revival of inquiry on some routes led to a slight rise in quotations. Individual changes recorded by the various sections of the index number are given in the following table:—

AVERAGE 1898-1913=100.					
	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	74.8	- 1.1	South America—out-	73.0	...
Bay—outwards	97.2	- 3.7	wards		
Bay—homewards	82.3	- 4.8	South America—		
Mediterranean—out-	97.2	+ 5.3	homewards	116.4	+ 0.5
wards			India—outwards	91.9	- 2.1
Mediterranean—	83.7	- 0.4	India—homewards	97.7	+ 3.8
homewards	96.6	+ 1.6	Far East, &c.	96.0	+ 4.6
North America			Australia	104.1	+ 0.8

Expressed as a percentage of the average for 1913, the total figure of our index number for May works out at 81.8, as compared with 80.8 in April, and 76.1 a year ago.

Wages in Germany.—In a recent enquiry the Statistisches Reichsamt has ascertained the level of wage rates in the principal industries on April 1st this year as compared with that obtaining before the trade depression. The results of this inquiry are set out in the table below:—

REDUCTION IN WAGE RATES, END 1929-APRIL 1, 1931.

Industry.	Skilled Workers.	Unskilled Workers.
Mining	5.6	5.5
Metallurgy	4.6	4.7
Paper mills	6.0	5.9
Printing	6.0	6.0
Textiles—		
Males	5.4	5.1
Females	5.5	5.1
Baking	5.0	4.8
Railways	6.5	4.8

It will be seen that reductions have taken place in all the principal industries, varying from 4.6 per cent. for skilled workers in the metal trades to 6.5 per cent. for railwaymen. Since April 1st there have been further reductions in the wage rates payable in various industries, and in others negotiations are pending. These reductions are, of course, quite apart from the cuts effected by the emergency decrees, whose details are summarised on an earlier page.

Holland and the Oslo Treaty.—It will be remembered that on December 22nd last a treaty was concluded at Oslo providing for an economic rapprochement between the Netherlands, Belgium, Denmark, Norway and Sweden. A Bill for the ratification of the treaty, writes our Rotterdam correspondent, has now been introduced in the Lower Chamber of Parliament in Holland, together with an explanatory memorandum. In two respects the treaty of Oslo differs in principle from the commercial convention of Geneva. On the one hand, the treaty of Oslo is not so far-reaching, as it does not create various groups of nations, but deals with all countries on a basis of equality. On the other hand, the treaty introduces a new principle in that the signatories are to respect each others' interests as far as possible. In the second place, the memorandum continues, it should be observed that the treaty of Oslo is not concerned with conflict as to changes of commercial policy, since commercial policy is not prescribed by the treaty. Thirdly, it is pointed out that the treaty of Oslo is of an entirely pacific nature, and is not directed against any country whatever. From the very outset it has been the express desire that other countries should join the conciliatory methods of the treaty. In Article II the principle is distinctly laid down that a Government which considers that its interests are menaced by other Governments has the right to make concrete proposals for modifying such measures, with a view to avoiding the danger threatened. Any mention of negotiations, as provided for in the original draft of the Norwegian Government, which took the initiative as to this treaty, has been omitted, because it was desired to prevent the tariffs of the signatories from becoming tariffs for negotiation purposes. As regards the protocol, the Governments undertake in the first place to afford their support to the international movement for minimising the obstacles to trade and for benefiting commerce. In the second place the protocol states that with this aim

in view and for the safeguarding of mutual interests, the Governments concerned desire to continue the co-operation initiated in 1930; here the safeguarding of mutual interests is dealt with, whereas in the preamble to the treaty the respecting of each others' interests is provided for. Thirdly, it is laid down that the signatories are to investigate the possibility of extending the principles of the treaty to other matters which might tend to injure the commercial relations between the nations concerned. With regard to this point, it is observed that it will presumably be a subject for discussion at the next conference, which most likely will consider whether the provisions of the treaty as to the future may also be made to apply to the past and to the present, that is to say whether any hindrances to mutual commerce which may already be in existence between the signatories could be modified or abolished.

At the meeting of the Royal Statistical Society, on June 16th, Professor O. M. W. Sprague will read a paper entitled: "Major and Minor Trade Fluctuations." The meeting will be held in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C.2, at 5.15 p.m.

Overseas Correspondence.

UNITED STATES.

Conversion Issue — Railroads — Stock Exchange — New Issues — Money Market.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 2.

The first long-term Government loan to provide for the conversion of a portion of the short-term Treasury certificate and note issues and to secure new money for current purposes, has been announced. The new issue of \$800,000,000, or thereabouts, at a coupon rate of 3½ per cent., was smaller than had been generally expected. Recently Government long terms have been selling on a basis which suggested that the Treasury could borrow at 3 per cent., but it was desired that the issue should have unqualified success, and its small amount points strongly to another long-term offering before the end of the year.

There had been some expectation that the issue would offer conversion for some of the Liberty Loans, probably the Fourth 4½'s, but only the \$589,000,000 in certificates maturing on June 15th were included in the conversion privilege. The new loan immediately went to a premium in the over-the-counter market. It is likely that the Treasury, while anticipating a lively over-subscription, will not allow the allotments to exceed 10 per cent. over the offered amount.

The issue is the largest piece of Treasury financing since the war, though in 1924 there was an issue of \$754,000,000 4 per cent. bonds. The bonds are bound to be popular with the banks, which can subscribe merely by giving the Treasury credit for deposits, the interest rate on which the Treasury recently cut, probably in anticipation of this issue. The new money of more than \$200,000,000 which will be raised through the loan in addition to the certificate conversion is expected to obviate the necessity of further discount bill issues this month, although that will depend somewhat on the size of the June 15th tax collections. The new loan runs for eighteen years, with privilege of calling in fifteen years.

In the first half of the next fiscal year, beginning July 1st, the Treasury will have to look to the maturity of \$1,622,000,000 bills and certificates. Since the March tax date the Treasury has borrowed \$3,037,000,000 on bills and certificates, and with the present issue the total outstanding bonds will be about \$13,500,000,000. The deficit of the present fiscal year will be a billion or more, but the net addition to the public debt will be about

\$638,000,000, since the Veterans' Loan sinking fund had been credited with the bulk of the soldiers' bonus payments. For the fiscal year as a whole new borrowing amounts to \$6,472,000,000 and retirements to approximately \$5,834,000,000. On the tax date the Treasury will collect \$115,000,000 on war debts and pay out \$90,000,000 in interest. Income tax collections this month are estimated at \$300,000,000.

Long-term financing for the next few months will remove much of the short-term burden and prepare the way for the Liberty Loan refunding programme, which will require about \$8,000,000,000, of which \$1,933,000 of the First Liberty Loan is callable next year. Fourth Liberties of \$6,268,000,000 are callable in 1933.

While the Treasury's problems are not simple, the easy money outlook and the immense resources of investors are counted on to smooth the way. Government bonds have been quite strong for some time. The country is now thoroughly alive to the need of economy in Government finance, and while great difference of opinion exists on the question of increased taxation and as to how higher schedules should be framed, the matter contains the germs of no real disturbance. Radical proposals, an inevitable product of depression, are being made, as they always have been, but over the country political sentiment is still overwhelmingly conservative and no major change in policy on the part of either political party, or the formation of a new party with any chance of success, is probable.

As was the case with the recent meetings of the International Chamber of Commerce, the sittings of the Foreign Trade Council were productive of discussion of such international trade problems as the tariff and international debts. Such discussion is valuable in directing attention to the importance of these questions. Naturally, the tariff came in for much criticism, by Americans as well as foreign speakers. Several speakers, including President James A. Farrell, of the United States Steel Corporation, asserted that they could detect a moderate improvement in underlying business conditions, reminding their hearers that some further seasonal recession must be expected.

While at first it appeared unlikely that the railroads would secure higher freight rates, work on the matter has proceeded vigorously and the forces favouring the proposal are growing. It is now believed that the Interstate Commerce Commission will take into consideration the exigencies of the situation, as will many important shippers, particularly as the need for relief is more and more apparent. Formal application for the higher tariffs will be made as soon as the committees representing the eastern railroads can prepare the new files, which will be calculated to bear as lightly as possible on those classes of freight the most subject to motor and waterway competition.

Railroad earnings for April, reports on which are now being published, have run between 35 and 40 per cent. under a year ago, or about the same as for March. Market pressure on railroad shares has continued, but the selling now seems to spring largely from a discouraged attitude on the part of investors rather than from a calm appraisal of the position. Trade developments generally are significant of no change for the worse. The steel trade is receding very gradually, as it usually does until late summer. Railroad traffic is steady. Retail store sales are improving with price reductions.

The Stock Exchange authorities caused a slight flurry by calling for a statement of the short position by their members, but no great effect is noticeable on trading. The Exchange has already taken a firm stand in favour of short selling as a principle, and doubtless wishes to do nothing more than warn of the danger of carrying matters to extremes.

Share prices have fallen to new low levels for the bear market, liquidation in May proving to have been the heaviest since last September. Prices declined an average of about 14.5 per cent. Sentiment seems to be no longer

governed so much by the trade position as by discouragement. This condition is unlikely to last long, and any signs of stability probably would be followed by fairly large investment buying. Average yields on stocks are between 8 and 10 per cent., but the large number of dividend reductions tends to keep the figure from mounting rapidly. Dividend casualties in May amounted to approximately 152, of which 72 were omissions, offset by 53 increases, resummptions or initial payments. However, the number of cuts was the smallest of the past five months and was much below the peak reached in March. It is probable that the worst in that respect is over.

New security offerings for May totalled about \$330,000,000, against nearly \$600,000,000 in April and \$700,000,000 in March. The volume was swollen by New York City loans of \$52,000,000 and a Consolidated Gas Company offering of \$60,000,000 of debentures, the first corporation issue of size for a long time. No substantial issues are in sight, aside from Treasury bonds and municipal loans, but a turn in the bond market would quickly bring out borrowing.

Money continues a drug on the market and is seeping back to the interior but slowly. The stagnation in the bankers' acceptance market is regarded as foreshadowing another cut in the Federal Bank's buying rate. Brokers' loans have declined further, and at \$1,574,000,000 are the lowest since the Federal Reserve Board's records were compiled on the present basis. Corporation money in the call market amounts to only \$173,000,000, or less than the cash resources of each of a number of industrial and public utility companies. Reserve system credit outstanding remains unchanged at under \$900,000,000, and the system's ratio is now up to 85.3 per cent. Gold continues to arrive, principally from South America, and last month's gain was about \$69,000,000, bringing the net gain for the first five months to about \$202,000,000, compared with \$233,000,000 in the same period of last year.

FRANCE.

M. Briand's Prospects — Socialists and Defence — Defence Expenditure — Reparations.

(FROM OUR CORRESPONDENT.)

PARIS, June 10.

M. PAUL DOUMER, the new President of the Republic, is due to take office on Saturday, but whether the resignation of the Laval Cabinet, which will automatically follow that event, will be succeeded by the same Ministry's return to office, still apparently remains an open question. M. Laval himself, who is proving a worthy successor of Clemenceau as a past master of opportunist tactics, has allowed no hint to escape as to his intentions, and, consequently, the immediate future of M. Briand remains the one outstanding topic of speculation in the political world.

All parties agree that the French attitude in regard to Germany's expected demand for revision of the Young Plan, or, at least, for some kind of moratorium, depends largely on whether M. Briand remains at the Quai d'Orsay after the expiration of the current week. The immediate outlook is complicated by the fact that the Foreign Minister has undertaken to address an avowedly Pacifist demonstration on Sunday in the Lot Department, the stronghold of M. Malvy, fellow sufferer with M. Caillaux for his much-discussed attitude during the war. M. Briand's opponents regard his intention to speak at Sunday's gathering as a defiance, and insist that it may prove as fatal to his retention of his portfolio as did Socialist backing of his candidature for the Presidency of the State. M. Franklin-Bouillon yesterday, in another furious attack on the Foreign Minister in the Chamber, bluntly alleged that a good many deputies gave the Cabinet a majority in the recent divisions only on the promise that M. Briand would be thrown overboard on June 13th. Exactly what foundation there is for this statement nobody seems to know, and the Premier himself allowed the statement to pass without comment. On

the other hand, a good many well-informed observers insist that it would be impossible for M. Laval to return to power unaccompanied by M. Briand.

The situation bristles to an exceptional extent with intrigues of all sorts. A good many politicians incline to the view that M. Doumer may decide, as his first important official act, to utilise the situation for the purpose of making an attempt to bring about parliamentary stabilisation by calling on a statesman able to form a Ministry of broad concentration, comprising all the parties between the Marin Nationalists and the Socialists. This has long been M. Doumer's dream, as it has been that of M. Tardieu and others, and is regarded by a large section of opinion as the only solution by which the chaos that has prevailed since the last elections can be overcome. The most likely successor to M. Laval, in such a case, would appear to be M. Lebrun, who obligingly gave way to M. Doumer at the recent Presidential election, and is now favourite in to-morrow's contest for the Presidency of the Senate, which has just been vacated by M. Doumer.

A notable indication of the trend of even "advanced" French opinion is furnished by the issue of a manifesto, signed by MM. Paul Boncour, Renaudel and twenty-three other Socialist deputies and senators, protesting against the anti-nationalist policy in regard to national defence which has for many years been forced on their parliamentary representatives by the extremists among the local party leaders throughout the country. MM. Boncour and Renaudel have for some time been showing irritation against the "pas un sou, pas un homme" policy imposed on them, which has stipulated that the Socialist Parliamentary Party must refrain from voting military credits, and the majority of the Socialist parliamentarians, it is asserted, have already adhered to their manifesto, which has thrown consternation among the extreme pacifist section throughout the country. It is not difficult to realise that behind the declaration lies the fact that a good many of the Socialist deputies realise that, if the present temper of the electorate continues, they stand a serious risk of losing many of their seats at next year's elections, unless they are prepared to follow the same line as the German Socialists in regard to national defence.

French military, naval and air defence credits included in the 1931-32 Budget total 11,610,000,000 francs, or 688,390,000 francs more than for 1930-31. This total, however, includes nothing in respect of the defensive organisation of the frontiers, all provision for which was excluded from the current Budget and passed over to the charge of the Treasury. Under a special law passed on January 14, 1930, the War Minister was authorised to carry out a programme of frontier and anti-aerial defence involving estimated expenditure of 3,300,000,000 francs, bringing total expenditure under this head, after taking into account 542,000,000 francs previously authorised, to 3,842,000,000 francs (in round figures, £31,000,000). Figures made public this week indicate that credits actually opened to date total 1,428,000,000 francs. "In view of the urgent character of the work and of the necessity for it to be put in hand, without risk of being held up in regard to financing, the Government considers it indispensable to ensure forthwith that the whole of the necessary money shall be made available by levy on the resources of the Treasury." The Government considers that the most expedient method to ensure this object will be the opening of a special account with the Treasury, to which will be debited, as the money is required, expenditure up to a total of 2,400,000,000 francs (390,000,000 francs for artillery and 2,010,000,000 francs for engineering works), plus 127,625,000 francs in respect of coastal defences, for which credits have also been authorised. Since the war the defences of large portions of the eastern frontier have been entirely reorganised, and now consist of what is practically a continuous chain of mostly underground fortresses. The programme authorised early last year is understood to have been designed to complete the plans already carried out.

French opinion has received with deep satisfaction the information that, during the Anglo-German interview at the Chequers, M. de Fleuriau was kept informed in detail

of the tendency of the conversations, but so far little beyond the information given in the joint official communiqué issued after the meeting has become generally known. On the whole, the attitude here is one of satisfaction that the Chequers meeting has proved less menacing to French interests than it might have been. It is recognised freely that Germany, as M. Briand emphasised in the Chamber yesterday, would be entirely within her rights in seeking to secure the relief rendered possible under the provisions of the Young Plan. It is equally considered, however, as pointed out last week, that whatever relief is accorded to Germany, that would diminish French reparation payments, temporarily or otherwise, must be compensated for by a corresponding reduction of French debt payments to the United States.

GERMANY.

Chequers — Money Market and Stock Exchange — Emergency Decree — Prospects of Government — Social Democratic Party Conference.

(FROM OUR CORRESPONDENT.)

BERLIN, June 11.

At loggerheads on most subjects, people in Germany are almost unanimous in their interest in the Chequers visit. The same unanimity is not, of course, shown in their expectations of the result, for there is no question of tangible fruits, susceptible of objective valuation. None the less, Germany is eagerly awaiting the results, though in responsible quarters it is realised that too rapid developments must not be expected.

The inadequacy of the preparations for the Paris Conference of 1929 had to be heavily paid for, and the Brüning Government will not repeat that mistake—they intend to initiate during the next few weeks intensive interchanges of opinion with the most important foreign centres, especially Paris and Washington, and their future course of action will depend upon the results of these. Press reports, according to which the Government is about to ask for the application of the postponement provided for in the Young Plan, of the transfer of the unprotected part of the annuities are, to say the least, premature. There is no doubt that the German Government are anxious, if they are given the smallest chance of doing so, to avoid recourse to a moratorium.

So far, the Chequers visit has not had any calming effect on the Stock Exchange. The disturbance caused by the Credit-Anstalt catastrophe is still felt, and the Reichsbank lost about 200 million marks in gold and foreign exchange during the first week of June. The note circulation was reduced to the same extent. The position of the Reichsbank is so strong that these withdrawals are causing no embarrassment, for it still holds 2,300 millions gold and 113 millions of foreign exchange eligible as cover, as well as some 200-300 millions foreign exchange which are probably included among bills and miscellaneous assets.

This drain on the Reichsbank is, nevertheless, exercising a depressing influence on the money market and on the state of mind of business people. The hope that the German money market would share in the advantages of the reductions in money rates abroad has again faded away; the margin between the German rate of interest and that in the lending countries of Western Europe is greater than it has been for years, and there is no question of a reduction in the Reichsbank discount rate, though such a reduction is being widely demanded.

The decline in foreign exchange holdings is, as before, due principally to withdrawals of credit from abroad. The collapse of the Credit-Anstalt gave rise in many foreign financial centres to a general distrust of the financial position in Central Europe, and the effects of such a sentiment are naturally particularly keenly felt in a country so heavily indebted as is Germany. Unfortunately, the world does not distinguish very clearly between the banking and industrial situation in Berlin and that of Vienna. The essence of the difference lies in the very different

relations between the banks and industry. Whereas in Austria the big banks not only hold a majority of the shares of most industrial companies, but also grant them credit to several times the amount of the capital of these companies, in Germany industry maintains full independence in its financial relations with the banks. Even in the midst of the crisis the big concerns in almost every branch of industry still held balances at the banks which exceeded their short-term debts. German economy has greatly improved its liquidity during the depression, but the withdrawals of credit naturally force the banks to show greater caution than is desirable in view of the exigencies of the depression, and this increases the general distrust.

In addition to the main financial provisions of the emergency decree*, the Government are empowered, with a view to diminishing the number of unemployed, to reduce the hours of labour in individual industries to 40 per week without compensation for the consequent reduction in earnings. The execution of the provision will meet with technical difficulties, and also, although the measure was demanded by the Social Democrats and the trade unions, with opposition from the workers, in some instances, as it reduces the earnings of those who have hitherto been in employment for the benefit of those who have not.

It is scarcely possible yet to say what the effect on domestic politics of the emergency decree is likely to be. All the Parties are, of course, dissatisfied with it: those of the Right with the new taxation in particular, and those of the Left with the economies in unemployment insurance and other social expenditure. These two branches of the Opposition, however, weaken each other's force to some extent, for conditions have become such that a Chancellor is more likely to appear to the German People's Party worthy of support if he is violently opposed by the Social Democrats, and the Socialists have more chance of convincing their followers that there are worse people than Herr Brüning if the Right appears dissatisfied with him. All the same, the political basis of the Government has grown narrow, and early next week we shall know whether the Reichstag is to be summoned immediately or not. Motions will be brought before the Reichstag to rescind the emergency decree, and the National Socialists, the German Nationalists and the Communists will undoubtedly support them. Whether Herr Brüning will be able to secure for the rejection of these motions the support of the Moderate Right, on the one hand, and of the Social Democrats, on the other, and to postpone the amendments desired by these groups until the committee stage, depends upon whether he is regarded as the man who can bring to a successful conclusion the reparation discussion opened at Chequers. If the Chancellor can point to satisfactory prospects in foreign politics, neither the Moderate Right nor the Moderate Left will have the courage to overthrow him. If he cannot, the outlook is very doubtful.

The conference of the Social Democratic Party, held at Leipzig last week, gave the Parliamentary Party a free hand to take any steps which it should find necessary in the coming discussions, so that it is authorised, if necessary, to continue to tolerate the Brüning Cabinet. The conference passed, over a very small adverse vote, a motion severely censuring the nine members who voted against the defence Budget in spite of the Party's pledge to support Dr. Brüning. The extraordinary success of the Party leaders can only be explained by the fact that the Opposition was very badly represented. With the death of Paul Levi, last year, they lost their only constructive and convincing spokesman. The really radical wing of the Party has never been effective since, and the leaders have the organisation more firmly than ever under their control, though they realise that control of the machinery is not everything. Even if there was nobody at the conference to give expression to the discontent felt by a large section with the politics of the Party, the existence of this discontent cannot be doubted, and it is no small testimonial to the leaders. The Social Democrats have deliberately risked their popularity in order to pursue a policy which will strengthen the Republic and help to overcome the

present difficulties. Such a policy of deliberate unpopularity cannot, however, be carried on indefinitely, and it is possible that the Party leaders are already feeling the pressure to change it irresistible.

POLAND.

Customs Union — Budget Deficit — Gold Efflux —
Lodz Bank — Textile Industry.

(FROM OUR CORRESPONDENT.)

WARSAW, May 23.

THE Polish semi-official Press is displaying vastly more sympathy towards the French counter-plan to the proposed Austro-German Customs Union than was shown to the original announcement of last March. The latter received no apparent official consideration from the economic angle, and was condemned by the newspapers from the first moment because of its alleged political implications. Practical people, indeed, have been quick to realise the utter futility of the French plan, as disclosed this week at Geneva, for solving the present crisis; but the promise which is held out of financial relief for agriculture in Eastern Europe is pleasing to the Poles. Unfortunately, however, general economic deterioration appears now to have passed the stage where palliatives of the French type, assuming they can be made effective, will afford any lasting relief.

Following the announcement of a Budget deficit of 53 million zlotys for the fiscal year which ended on March 31st, the Cabinet decided to make effective as from May 1st the authorisation previously granted by Parliament to reduce the salaries of all State employees (including commissioned and non-commissioned officers of the Army and Navy, railway workers, police, post-office employees, teachers and pensioners) by 15 per cent. Marshal Pilsudski had apparently not realised that the 15 per cent. reduction would be made applicable also to the Army and Navy, and when the matter was brought to his attention, he forthwith ordered that the reduction should be restored to the Services—despite the fact that the latter are relatively well paid in comparison with the main body of public employees. This discrimination in favour of the Services produced an immediate outcry from railway workers and other public servants, with the result that instructions have since been given for the pay of commissioned and non-commissioned officers of the Army and Navy to be reduced by 5 per cent. as from June 1st. These wage reductions of public employees will save the Treasury about 100 million zlotys during the present fiscal year, but they will be quite inadequate to enable the Minister of Finance to balance the Budget. It is now feared that his minimum revenue expectation for 1931-32 of 2,500 million zlotys (the Budget as voted provides for a revenue of 2,943 millions) will not be realised, since thus early in the fiscal year it is very clear that revenue from virtually all sources is steadily contracting.

Notwithstanding the receipt at the end of April of approximately \$8,000,000, representing the first third of the net proceeds of the loan contracted six months ago with the Swedish Match Trust, the gold and foreign exchange holdings of the Bank of Poland have continued to diminish. The net gold efflux (legal reserve and otherwise) in 1930 was 252 million zlotys. From the beginning of January up to May 10, 1931, gold and foreign bill holdings available as cover have declined from 851 to 797 million zlotys, and foreign balances not serving as cover from 124 to 103 millions—making a total loss in slightly over four months of 75 million zlotys. During the same period the visible balance on foreign trade account has been in Poland's favour to the amount of 80 million zlotys, or a monthly average of 20 million zlotys, as compared with 15.5 millions in 1930. It is assumed that the favourable trade balance now approximately covers foreign debt services and other invisible debit items. The steady efflux of gold may represent in part the nervous transfer of zloty balances to foreign countries.

The recent failure of the Bank Handlowy of Lodz, with heavy liabilities in England, has further directed atten-

tion to the acute difficulties of the cotton-spinning and weaving branches of the textile industry. Since the breakdown on December 31st last of the Spinners' Cartel, which was organised at the beginning of last year for the regulation of production and the enforcement of a uniform and reasonable credit policy, there has been intensive cutting of yarn prices in order to force the weaker mills either to join a new cartel or to go out of business. It was announced a day or two ago that an agreement had finally been reached to form a new cartel and that all the mills spinning American cotton will join. This agreement was reached, however, only after strong Government intervention backed by the threat to impose an import duty on raw cotton with exemption for the mills that are members of the cartel.

While the Lodz situation is causing the authorities, as well as the banks and foreign creditors, a great deal of concern, the fundamental position is perhaps not as dismal as it appears to be. Throughout the present depression the mills have on the average been able to maintain operations at rather more than one shift of eight hours per day, though it is claimed in Lodz that most of the mills cannot operate profitably (under existing credit and price conditions) on less than two shifts per day. As Poland possesses some 1.4 million spindles for more than 30 million inhabitants, compared with approximately 3.5 million spindles for 15 million inhabitants in Czechoslovakia, it is manifest that she has no considerable excess of production capacity, for the domestic market is adequately protected by the tariff on yarn and finished goods. The fundamental difficulties are that much of the machinery is obsolete; that management and merchandising policies are chaotic; and that virtually all the mills are almost devoid of working capital. The solution of their problem undoubtedly lies in amalgamation and reorganisation, but there is so much jealousy and bad feeling throughout the industry that all attempts at rationalisation have so far met with strenuous opposition.

ARGENTINA.

Political Situation — Foreign Trade — Finance —
Money — Freights.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, May 19.

MUNICIPAL elections held in the Province of Buenos Aires resulted in a majority for the Radical Party, whereupon the Provisional Government postponed the forthcoming polls in the other provinces, announcing that on November 8th elections would be held throughout the country, embracing the selection, not merely of representatives for the provincial legislatures, but also of the representatives to sit in the National Congress. At the same time, it was stated that the Government intended to call for the introduction of a measure designed to reform the existing constitution, particularly in relation to the powers now possessed by Congress in the matter of incurring public expenditure, its examination of the credentials of newly elected representatives, and the general functioning of Congress as a body.

Sound Argentine opinion is with the Provisional Government in its desire to prevent, by all the means in its power, a recurrence of those evils which the revolution of September 6th was expressly planned to abolish; the doubt hinges on the direction in which popular opinion may be swayed in the course of the next six months. There are, however, manifest signs of a general if somewhat tardy repudiation by the Radical leaders of the unprincipled politicians who made a catspaw of ex-President Irigoyen in order to further the material interests of themselves and their friends. This is a good omen, inasmuch as the Provisional President, H. E. General Uriburu, has expressly and categorically made public declaration, again and again, of his desire to hand over the government to the party that proves to be the popular choice, provided only that it is clearly understood that "those who brought the country to the edge of the abyss cannot, and must not, return to the government." In this sentiment General

Uriburu has with him all thoughtful and sober-minded citizens irrespective of party. They feel, and very keenly, the stigma cast upon them by the abuses of the late regime, and they also realise that they themselves are in a measure responsible, owing to their blind choice of leaders notoriously unfitted for the difficult task of government under economic conditions which had greatly changed from those prevailing between 1916 and 1922. These feelings are the best guarantee that tranquillity will endure until the beginning of November, active though the political parties are certain to be in the meantime; and if it were possible to ensure a steady improvement in the state of trade and the general financial position, no doubt on this head would exist.

Unfortunately this is where the rub comes in. Trade conditions are far from satisfactory, nor is any marked improvement likely between now and the end of November. Cereal exports for the first four months of 1931 were 5,051,448 tons, valued at \$121,094,708 gold; for the corresponding period last year they were only 3,190,733 tons, yet the value was \$141,024,737 gold. If the total volume and values of exports for January-April, 1930 and 1931, be compared, the disparity is the same, the volume of all products exported, estimated in tons, being 3,845,748 tons, compared with 5,626,190 tons, while the value for 1930 was \$251,416,253 gold, against \$219,445,626 gold in 1931. It is true that imports are falling fast, and that for the first quarter of 1931 the visible trade balance against Argentina was but 1½ million dollars gold, but this squaring of accounts, which should in the nature of things benefit exchange and gradually restore the status of the Argentine peso, is indirectly counteracted by the fact that national revenues, based chiefly upon import dues of divers kinds, are shrinking fast at the very moment when administrative expenditure is heaviest. Despite wholehearted and well-devised plans for reducing official outlay, it is impossible in a country such as Argentina is to-day to use the axe ruthlessly. There is much administrative work in hand that cannot stand still, much less be curtailed, without doing both moral and material damage out of all proportion to the monetary saving effected. Hence the shifts which are necessary to meet current outlay at home and sustain Argentine credit abroad.

Financially, the national position is thoroughly sound, but the reduction of trade has comprised to a certain extent many agrarian, industrial, and mercantile interests whose commitments with the banks in Argentina, and, to a lesser extent, with firms abroad, are out of proportion to their present turnover, though not necessarily unreasonable when viewed in relation to their total assets. Granted that this last sentence needs qualification where many of the smaller import businesses are concerned, the steady purging, indicated by the monthly bankruptcy returns, is leaving the country in a healthier if weak state. Cereal stocks are moving off with rapidity, cattle and general products are selling better (including staples such as wool, of which the greater part of the last clip has been liquidated), and costs of production are coming down in every direction. Provided, therefore, that the orderly readjustment of political and administrative relations continues unbroken, Argentina has rounded the corner, and is now on the way to better conditions, though complete recovery must perforce be slow, and, in certain respects, painful to the individual interests who suffer in the meanwhile.

Conditions in the local money market are somewhat easier, thanks to the operation of the rediscount scheme, and rates for borrowed funds are 6½ to 8 per cent. per annum. Exchange is barely 35d., banks' cable drawing rate on London, and this despite continued if comparatively small shipments of gold to New York for Government requirements. At present there are \$337,370,000 gold in the Conversion Office, and \$40,760,000 gold deposited in legations abroad, and as the total note circulation is \$1,253,646,000 paper, the percentage guarantee, gold against paper at the statutory rate of 44 cents gold per \$1 paper is 68.55 per cent. Quotations for national bonds and the National Mortgage Bank Cédulas are on the whole well maintained, at roughly 4 points under parity for the 6 per cent. bonds, this being but 2 points under the quotations current at the year-end, a fair proof of local confidence.

* Summarised on p. 1261.

CANADA.

Crop Conditions — Business Situation — Conversion —
Unemployment — New Tariff Board — Foreign Trade.

(FROM OUR CORRESPONDENT.)

OTTAWA, MAY 19.

THE Eastern provinces of Canada have rarely had a more favourable spring, for the weather has been consistently fine, with just sufficient rain to provide the necessary moisture. The farmers are well ahead with their work, and both crops and pastures are doing well. On the prairies, however, the urgently needed rains have not yet been vouchsafed in any satisfactory volume. The despondency of the farmers about the outlook is reflected in the largest curtailment of wheat acreage in any recent years. According to the latest agricultural bulletin of the Bureau of Statistics the wheat acreage of Saskatchewan and Alberta is respectively 92 per cent. and 89 per cent. of the 1930 figure, but in Manitoba the cut is only 2 per cent. For all Canada the intended grain acreages for 1931, as reported on May 1st, are as follows, with the 1930 acreages added for comparison:—

	1930.	1931.
Spring wheat	24,082,900	22,152,300
Oats	13,258,700	13,336,000
Barley	5,558,700	4,734,000
Spring rye	357,050	292,150
Flaxseed	581,800	661,300
Mixed grains	1,201,400	1,210,800

The increase in oats, flaxseed and mixed grain would seem to indicate that Canadian farmers intend to devote the greater acreage to producing food for livestock and to go in more for mixed farming.

There is little change to record in business conditions, but retail stores report improvement in some lines of business, particularly in clothing and millinery. There has also been an increase in the production of concentrated milk, footwear and cheese, and the operating ratio of the newsprint mills is rather better than it was a month ago, but in the main the business depression still persists and the carloading figure for the week ending May 9, 1931, at 49,745 cars, shows a decline of 3,356 cars as compared with the previous week, and 11,281 cars as compared with the corresponding week of 1930. However, one hopeful factor was a slowing down in March of the decline in commodity prices. The Bureau of Statistics index number for April was 74.5, as compared with 75.0 on March 1st, and the decline was only 0.6 per cent., as compared with 0.9 per cent. in the previous month.

There has been an encouraging public response to the new Conversion Loan of the Bennett Government. War loans totalling \$1,083,000 bearing interest at either 5 per cent. or 5½ per cent., some of them with tax-free privileges, mature before 1934, and Mr Bennett, who is still his own Finance Minister, decided that the time was propitious for a refunding operation. The rate offered for the Conversion Loan was 4½ per cent. and holders of bonds which did not immediately mature were allowed the benefit of the privileges appertaining to them until the date of maturity. The Government originally set a limit of \$250,000,000 for its loan, but, after a week, \$400,000,000 had been subscribed, so the Government has now decided to make the loan \$500,000,000, and will probably secure the whole sum.

The action of the Canadian Pacific Railway in halving the dividend on their common stock, though foreseen in financial circles, came as a severe shock to the Canadian public on account of the dominant position occupied by the C.P.R. in the national economy. The example thus given is being followed by the Canadian National Railway and will also be imitated by other important corporations. The result will be a general reduction in the wage level, and while the reduction in the purchasing power of the public will have temporary adverse effects upon business, it is generally realised that wages had to come down. The workers of Canada, moreover, are not in a position to resist such a move. In the city of Winnipeg, for instance, where summer employment should be almost at its peak,

there are still 10,000 unemployed, and the cost of their relief is running at the rate of \$70,000 per week. The situation is bad elsewhere, particularly in the mining districts of Alberta; this year the unemployed in the towns and cities can find comparatively little outlet in rural work as the majority of the farmers cannot afford to hire any extra labour.

On May 17th Mr Bennett, in the House of Commons, introduced a Bill for the creation of a new Tariff Board to replace the board which he abolished soon after coming into office. He explained that the new board would be composed of three members, and would, unlike its predecessor, be a Court of Record, by which evidence will be taken on oath. Its main sessions would be in Ottawa, but it would be empowered to sit elsewhere, and, in addition to undertaking the ordinary functions of a tariff board in investigating applications for tariff changes, it would perform duties now carried on by officials of the Department of National Revenue in regard to the interpretation of Customs schedules and by the civil servants who administered the Combines Act. He advanced as his reason for abolishing the old board that it had only been created by Order-in-Council and lacked statutory authority, and also that it had been employed in a scandalous fashion to further the political ends of the King Government. Mr King, who denied these charges, declared that there had been no necessity to abolish the old board, and that it had been properly authorised by Parliament through a vote in the estimates. Progressive members were also critical of the Bill, but it was accorded a first reading.

The foreign trade returns for April are again very unsatisfactory. Imports were valued at \$51,189,376, as compared with \$71,401,839 in April 1930, and exports were valued at \$33,935,075, as compared with \$50,744,139 in April, 1930. Exports are, therefore, down by almost one-third and imports in a rather small proportion.

NEW ZEALAND.

Government Financial Proposals — Earthquake Relief —
Unemployment — Higher Wool Prices.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, April 11.

FOR the past few weeks New Zealand has been watching closely the proceedings of the special session of Parliament, which met on March 11th to consider the Government's financial proposals. Immediately upon his return from the Imperial Conference the Prime Minister commenced an investigation of the effects on the public finances of the heavy fall in export prices and the general depression in business. A statement issued in mid-February outlined the position and the Government's proposals. A substantial deficit was anticipated for 1930-31 (the financial year ends March 31st), and a much more serious shortage for 1931-32 unless drastic economies were imposed. The following figures summarise official estimates of the position to be met before the 1931-32 budget can be made to balance:—

SHRINKAGE IN REVENUE.		INCREASES IN EXPENDITURE.	
£		£	
Customs	2,000,000	Debt charges	200,000
Income tax	500,000	Unemployment	600,000
Railway interest	500,000	Other items	100,000
Stamp revenue	300,000		
Other items	300,000		900,000
	3,600,000	Total deficit	4,500,000

The Government outlined proposals to cover the anticipated shortage which may be summarised as follows:—

£	
10 per cent. reduction in public service salaries	1,500,000
Reductions in other expenditure and financial adjustments	1,250,000
Increase in postage rates	900,000
Additional taxation, direct and indirect	850,000
	4,500,000

In addition it was proposed that, in order to permit some relief to private employers, the Arbitration Court should

be empowered to review current wage awards, which was generally interpreted to mean that general wage reduction would be effected. The Court's awards, however, cover only a fraction, perhaps one-third at most, of all wage workers, and wages have already been reduced fairly generally in occupations not subject to awards.

These proposals were embodied in a Finance Bill and submitted to Parliament when it met on March 11th. In introducing the Bill the Prime Minister, who is also Minister of Finance, announced the results of the first eleven months of the present financial year, and showed that the position was somewhat worse than had been anticipated. For the eleven months the revenue of the Consolidated Fund was £1,878,000 less than for the same period of the preceding year. Net railway revenue had declined by £1,350,000, £600,000 more than was allowed for in the Budget. Customs were £1,090,000 less than in 1929-30, a decline of £367,000 having been provided for. On these two items alone the shortage amounted to over £1,300,000. Other items, including land taxes and stamp duties, had declined, but certain economies had been effected to reduce expenditure. The review of the first eleven months' figures suggested that the deficit for the present financial year would approximate £1,250,000, and immediate and drastic economies were, therefore, necessary.

The Reform Party generally supported the Government's proposals, as did the Press throughout the Dominion, but the Labour Party opposed strenuously any reduction of wages for the lower-paid employees. After a Labour "stone-wall" lasting several days, the standing orders were amended to permit the application of the closure, and legislation was passed providing for a general 10 per cent. reduction in all public service salaries, and for the review of current Arbitration Court awards.

A Bill was also introduced to provide for earthquake relief in Hawkes Bay, which was stricken on February 3rd last. The Government proposes to lend £1,500,000, taken from its reserves, to provide for reconstruction, on easy terms, and to impose a special earthquake tax on all insurances, to be collected by insurance companies. The Bill, however, is complicated and will probably be subjected to considerable alteration before it becomes generally acceptable. The Government feels that it would be inexpedient to attempt to borrow at present, yet certain members of Parliament claim that the funds provided are insufficient, and the conditions ungenerous to earthquake sufferers. Others oppose the insurance tax on the ground that it would prove an inequitable and uneconomic tax on property. There are as yet no adequate estimates of material losses due to the earthquake, but some members are clamouring for an immediate and complete plan of reconstruction. The Bill appears likely to be referred to a select committee for fuller consideration.

Upon his return from England the Prime Minister expressed his strong opposition to the establishment of any method of payment to the unemployed except for work performed, and the Unemployment Board has, consequently, been very busy seeking relief works. Until recently, full award rates have been paid and an effort made to guarantee three or four days' work a week for married men, with a little less for single men. Wages have been paid mainly by the Board, and the work and necessary tools found by local bodies. But the unemployed have increased in numbers, partly because men have been encouraged to register by the prospect of relief work and pay; the numbers to be provided for must increase with the coming of winter; the funds available are running low and must prove inadequate; and, as most of the work is unproductive, the public are beginning to realise that present measures must fail to provide any permanent solution of the unemployment difficulty.

Meanwhile, a more optimistic tone has developed throughout the business community owing to the rise in wool and dairy produce prices. Present levels for wool are estimated at about 50 per cent. higher than the lowest levels reached during last season. But at the lowest point wool prices were only about half the 1914 level, and the improvements to date, appreciable though they are, leave

them still below pre-war standards. But though prices are still abnormally low, and though the rise came too late to make much difference to the total value of the season's exports, the idea is spreading that the worst of the depression is over, and that, once the winter is past, definite progress towards recovery may be expected.

Letters to the Editor.

FASCISM AT HOME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In view of your comments in last week's *Economist* on the present position of Fascismo in Italy, it occurs to me that your readers might be interested in the impressions derived in the course of a brief visit last month to Italy by one who was by no means favourably predisposed to the Duce's regime.

My last visit to Rome—a mere two days' halt en route from England to the Levant—was more than ten years ago, in December, 1920, when the Italians were at the nadir of their post-war disorganisation and disillusionment. At that time the trains in Italy kept to no time-table; one's Italian fellow-travellers seemed at the last gasp; the catchword on their lips was "the war has been a disaster"; at Rome the embankment of the Tiber was decorated—or, if you choose, defaced—with immense charcoal scrawls proclaiming "Viva Trotsky!" and "Viva Lenin!"

My previous visit was nearly twenty years ago, in the autumn of 1911. I came to Rome, that first time, as a student of Ancient History; and in my imagination the modern world was still overshadowed by Antiquity. Nor was this a false perspective in which to view Rome at that time; for in those pre-war days the old Rome of the Cæsars and the Popes really did live with a stronger life than the new Rome which is the capital of modern Italy. That was not so in 1920. The present was then too excruciating to yield precedence to anything less actual than itself. Again, it is not so to-day, when the vitality of modern civilisation has established its ascendancy even in the city which, of all cities in Western Europe, has been the very symbol and incarnation of the past. But this is to anticipate what I have to say; and first I must make a correction. The Rome which I saw in 1911 was not quite pre-war after all; for the Italo-Turkish War over Tripoli had broken out a few days before my arrival, and that war, as one can see in retrospect, was part of the overture to the great Devil's Opera. Already, in 1911, my archaeological zeal for the masonry of Roman buildings and the paving of Roman roads was eclipsed, at moments, by the spectacle of troop-trains crawling to Civitā Vecchia and by the tale, told in secluded mountain villages, of young men gone to the front who would not return. A familiar tale three years later! And its epilogue is the Italy of 1920 and the Italy of 1931, and, in fact, the whole of the world in which we are living to-day. . . .

Tyrannies exist in the world to-day, and they produce an immediate and perfectly definite effect upon the foreign traveller. I have experienced the sensation at least twice myself—to an extreme degree last year upon entering the dominions of the Soviet Government at Vladivostok, and to a lesser degree on entering Turkey at Adrianople not long ago. Proceeding from the known to the unknown, I had woven my expectations of Fascist Italy out of my experiences of Revolutionary Turkey and Soviet Russia. I can only say that I made a bad shot; for, as it turned out, I had no touch of this sensation upon entering Italy last month, nor, indeed, at any time during my stay in the country.

The day of my arrival, in pouring rain, I saw two things in Italy which gave me an unexpected impression. The first thing was the aspect of Turin on that soaking Sunday afternoon. Having two hours to wait between trains and not having seen Turin before, we braved the elements and sallied out of the station into the streets, expecting to have the streets to ourselves. But not a bit of it. The streets were almost roofed over by the umbrellas of the other foot-passengers. The whole population was *en promenade*—determined to enjoy itself in spite of the weather, and succeeding triumphantly. You do not see such merry and vivacious crowds on wet Sunday afternoons in Hyde Park or Kew Gardens. Again, towards evening, as our train was threading its way through the Maritime Alps towards Genoa, it was taken by storm, at a wayside station, by an army of young men and women coming home to the city from a day's outing in the mountains. It was the kind of scene that one may witness in Bavaria or

Austria: the rucksacks and bare knees; the laughter and singing; the simplicity without affectation; the high spirits without vulgarity. I cannot believe that this "Wandervogel" or "hiking" spirit is indigenous to Italy, but evidently it has been well acclimatised. There were similar troops of young people at all the stations on our line till late at night; and everywhere one seemed to feel the same light-heartedness and spontaneity.

Now, if these first impressions were right, they were important, for they were the very antithesis of my first impressions at Vladivostok and Adrianople, where the low spirits and the anxiety of the people at once communicated themselves, like a miasma, to the foreign spectator's soul. I must add that my contrary first impression of Italy under the present regime was confirmed during my stay. The Italians, as you see them *en masse*, just now, in the trains and trams and omnibuses and cafés, look remarkably unoppressed, in both the psychological and the political senses of the word. If "the Regime" does weigh heavily upon them, it is what is called, in military terminology, an "invisible occupation."

Here, of course, one comes up against the inevitable ignorance of the casual passer-by. That "unworried" look on Italian faces may be a testimony to the lightness of Mussolini's yoke, or it may be just a manifestation of the national temperament or the national manners (though, now I remember it, they did not look like that in 1920). I also received other impressions, on my present visit to Italy, which I will give for what they are worth without venturing to decide between alternative interpretations.

For instance, I attended two sessions of the Special Tribunal for the Defence of the State when it was trying a group of Milanese "intellectualoids" (as they are styled in the Fascist Press) who were accused of conspiracy against the Fascist regime. Here, again, I can testify to the atmosphere in court. It was not an atmosphere of fanaticism or brutality. Both the prisoners and their counsel were given a fair opportunity to put their case, and they were not brow-beaten. But I cannot, of course, judge whether the procedure was equitable or the evidence cogent or the sentences not disproportionate to the offences of which some of the prisoners were convicted. I may add, however, that some of the prisoners were acquitted. And I also noticed that, when I mentioned my attendance in court to one or two Italian acquaintances who are active supporters of the Fascist regime, they expressed pleasure that I had gone to see for myself, and this before hearing whether my impressions were favourable or the reverse.

Again, I can testify that in the neighbourhood of Rome there has been a notable increase in cultivation. The wilderness of the Campagna, which used to intervene between the city walls and the vineyards and villages of the Alban Hills, has been invaded by fields and villas and aerodromes and race-courses and wireless stations, until now the Campagna once more wears the yoke of a human master. I was also astonished, on re-visiting the Pontine Marshes, to find fields and farm-houses in a country once made uninhabitable by malaria. It appears that this kind of thing is going on all over the country—especially in the formerly backward South. And at first sight it looks as if this internal colonisation must be the right response to the challenge of a growing population. Yet this view cannot be accepted without qualification, for there is another side to the picture. Critics estimate that this work of reclamation has been performed at a cost which the national finances cannot really bear; they argue that it is wanton to increase Italy's agricultural productivity at a moment when foodstuffs are a drug on the world market; and they point out that, at the present time, both Italian land-owners and Italian peasants complain that their profits are not even covering their taxes.

The reclamation of waste land is only one of the great public works which the Fascist Government has put in hand. It has also been electrifying the railways and improving the road system on the grand scale. To a large extent these activities are the equivalent of that alternative to unemployment which, in England, has been advocated by the Liberal Party but never been taken up by any of His Majesty's Governments. The Fascist Government has plunged into these deep waters up to the neck. Whether it will sink or swim is a question of deep interest for us all.

This brings me to one point in which the present regime in Italy certainly does resemble the contemporary regimes in Russia and Turkey—however widely it may differ from them in other ways. It is an audacious, experimental regime, which is not afraid of "living dangerously" and trying untried methods of meeting unprecedented situations. The classic instance is the "Corporative State," which has been launched in the hope that it may prove to be a positive alternative to Communism. I have come away with a conviction that, while Italy is undoubtedly feeling the world slump like the rest of

us, she is at any rate swimming lustily against the stream. Will she make headway? Or will she be pushed, struggling, backwards? Or will her heart give out under the strain? And, if she does make headway, will that be thanks to Fascism or in spite of it?

I cannot presume to suggest the answers to any of these questions until I have visited Italy again. But I can say here and now, in all sincerity, that the Italy which I have seen on this, my third, visit is eminently worth studying and that she ought to be studied without prepossessions or prejudices.—Yours faithfully,

June 1, 1931.

HISTORICUS.

THE LAND TAX.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Professor Einaudi maintains that, if Mr Snowden's proposed tax on land is instituted, the tax will not make holders more ready to sell or utilise land for buildings or other productive purposes, instead of keeping it vacant or covered with gardens, parks and playing grounds, at least not for economic motives. May I submit that Professor Einaudi's brilliant analysis altogether misses the point?

The problem of the consequences of the Land Tax is not as to whether its institution forces the sale of land which has been kept vacant for economic motives, *i.e.*, in the hope of further appreciation, but as to whether it will compel holders who are keeping land vacant for other than economic motives, to sell more readily. And there is no doubt that it will do so.

As Professor Einaudi points out, the institution of the Land Tax transfers part of the value of the plot from the holder to the State by way of putting an additional annual burden on the holder. As most of the land in question is held by private people, to whom it means a liability rather than an asset, it is very easy to see that an additional burden will have the tendency to force out into the open market land which otherwise would not have been sold. It is the "matured plot" which will be sold and which, without the institution of the tax, would have been kept out of the market. The higher the Land Tax, the greater will be the pressure to sell. Whilst these sales mean maximum land utilisation from an economic point of view, they may be thoroughly undesirable from a higher social viewpoint.—I remain, Sir, your most obedient servant,

44, Gordon Square, W.C. 1

THOMAS BALOGH.

June 9, 1931.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to Professor Einaudi's letter in your issue of the 6th inst., the general formula for valuing the capitalised burden of the proposed tax on land in the case of a vacant plot worth £100 before the introduction of the tax is

$$£ \frac{100}{240} \left(t - 1 + \frac{100}{R} \right),$$

where t = number of years before the plot is "ripe," and R is the assumed rate of interest. This ignores the exemption of the agricultural value of the plot. If this value is £ A , a closer approximation to the present value of the tax burden is

$$£ \frac{100}{240} \left(t - 1 + \frac{100}{R} \right) + \frac{100}{R} \cdot \frac{A}{240}.$$

One curious result of the tax in the example given by Professor Einaudi is that, as the value of the above equations varies directly with t , the longer the period during which the plot is "ripening," the lower the present value of the plot to the owner. The estimation of this period of ripening must be largely a subjective matter, so that the owner will place a higher present value upon his plot in so far as he takes a short view of its chances of appreciation!

Again, purchasers will belong to two classes, (a) those exempt from the tax and (b) those liable. The composite demand schedule for land will thus be altered to an extent depending upon the relative strength of these two classes. The presence of class (a) leads one to infer that the "equilibrium price" of land after the imposition of the tax will be somewhere between the original figure of £100 and the £100 less the full value of the tax burden. Thus owners will be able, on sale, to escape part of the full force of the tax, and the extent to which they will be able to do so will depend upon the number of exemptions granted by the legislature.—Yours faithfully,

Ki Runge, Langley Avenue,
Worcester Park, Surrey.

Books and Publications.

SOUTH AFRICA COMES OF AGE.*

THE eight South Africans who celebrate the twenty-first anniversary of the Union by presenting to their fellow-countrymen a sturdy volume of essays reviewing their country's position, have risen well and truly to the occasion, like the enthusiastic reformers that they all are. Jan H. Hofmeyr, sometime professor, university principal and provincial administrator, for the moment a mere member of Parliament, but still well under forty, contributes the introduction and a study of the administrative problems raised by the provincial system of local government. Professor T. J. Haarhoff and Mr R. F. Currey discuss the philosophical basis and political aspects of South African nationality, culture and language, defence, education and research. Professors E. H. Brookes and S. H. Frankel and Mr J. D. Rheinallt Jones, between them, review the economic consequences of racial differences, of industrialisation, and of the gift of responsible democratic government in South Africa, and Professor Brookes writes also on the public service and the administration of justice. Messrs W. H. Ramsbottom and O. D. Schreiner, members of the Johannesburg bar, contribute thoughtful essays on the franchise and on South Africa's external relations, particularly with the rest of Africa and the rest of the British Commonwealth.

To the onlooker who find much interest, and not a little anxiety, in watching South African events, this volume reveals something more than the erudition and enthusiasm of its young authors, and, indeed, of the rising generation of university men throughout South Africa (for it implies no disparagement of these essays to say that a companion volume, from perhaps another view point, could easily have been collected in the Cape). As the reader passes on from essay to essay the impression grows that the authors are one and all consciously endeavouring to reason with an unreasonable audience. Unpleasant truths are here displayed, but at times with a great parade of extenuating circumstance; unpalatable medicine is concocted, but the dose is diluted to avoid offence to a weak stomach. Inevitably the logic is at times weakened; the specific loses its potency. The essay on South African Nationality concentrates upon the "great differences between the two sections of the South African people" and the need for mutual understanding. It is disconcerting, twenty-one years after Union, to discover that the preoccupation is still how to secure a greater measure of mutual appreciation between English and Dutch, not between European and Bantu. The Bantu and other non-European population are not, according to this essay, to be regarded as an integral part of the South African nation. But they present an urgent problem. "Once our people, of both sections, are determined to tackle this question without prejudice or ignorance, fear or greed, we shall no longer have to ask ourselves why unity has not been achieved" (page 43).

It should not be inferred that the authors are not eager for the improvement of the condition of the non-European inhabitants. The economic essays concentrate on this problem and urge continually the need for such improvement. Here, however, some passages appear to have been written from the heart rather than from the head. "The economy of high wages" is frequently stressed, but never convincingly enunciated. The productivity of the Bantu worker is low "because he can be induced to take a low wage"; if labour "does not cost much to obtain, it will be misapplied, and its productivity will be correspondingly low" (pp. 152-3). The author comes dangerously near to arguing that national production would increase if only the factors of production were more scarce. The case for increasing the scope for the employment of the Bantu worker, by permitting him to develop his capacity and utilise his talents in fields in which he can earn higher wages, rests upon much firmer ground than is always evident from this essay.

* "Coming of Age. Studies in South African Citizenship and Politics." (Cape Town) Maskew Miller, Limited. (London) Simpkin Marshall, Limited. 10s. 6d.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]
*(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Development of Economic Doctrine. By Alexander Gray. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 5s.

A history of economic theory, designed for beginners, in which the author has followed the rare and excellent principle of mentioning "no writer unless I could find space for something like an intelligible account of what he stood for."

Economic Power for Canada. By J. Alex. Aiken. (London) Macmillan and Company, St. Martin's Street. 8s. 6d. net.

An interesting survey of the economic position of Canada, with suggestions as to future policy.

Indian Industry. By M. Cecile Matheson. (London) Oxford University Press, Warwick Square. 3s. net.

The results of a personal survey by two experienced social workers.

Planwirtschaft und Verkehrswirtschaft. By Carl Landauer. (München) Duncker und Humblot, Theresienhöhe, 3c. 9 Rm.

From an examination of the effects of *laissez-faire* in modern economic conditions, Dr. Landauer proceeds to a most interesting discussion of Socialist principles and problems.

La Technique moderne du Crédit à l'Exportation. By Noé Wajner. (Paris) Les Presses Universitaires de France, 49, Boulevard Saint-Michel. 30 fr.

A French treatise on the financing of exports. The second part is devoted to an account of the English discount market.

Das mitteleuropäische Agrarproblem und seine Lösung. By Elemer Hantos. (Berlin) Organisation Verlagsgesellschaft, M.B.H., Leipzigerstrasse, 115-116. Rm. 3.90.

A discussion of the difficulties of the agricultural countries of Central Europe. The resolutions of the relevant international conferences are given in an appendix.

Hundert Jahre Griechische Landwirtschaft. By Dr. Demetrius G. Tsoungos. (Berlin) Wilhelm Christian's Verlag, Unterwasserstr. 8. Rm. 6.

A history of Greek agriculture during the last hundred years.

Movimento Economico dell'Italia. (Milan) Banca Commerciale Italiana.

A useful account of industrial, commercial and financial developments in Italy during 1930.

L'Esprit International, April, 1931. (Paris) Librairie Hachette, 79, Boulevard Saint-Germain. Frs. 10.

Includes articles on the world crisis; the limitation of armaments; the Dantzig corridor; the Pan-American Union; and the relations between Hungary and her neighbours.

The Slavonic and East European Review, March, 1931. (London) Eyre and Spottiswoode (Publishers) Ltd., 6, Great New Street. 6s. net.

Includes an article on the Russian agrarian revolution.

Archiv für Eisenbahnwesen, May-June, 1931. (Berlin) Verlag von Julius Springer.

This periodical is a valuable source of data on railway economics in all countries. The current issue includes articles on railways in South Africa, the Dutch East Indies, Denmark, Belgium, Italy and the Belgian Congo, and there is also the concluding article of a series on British passenger fares. There is a supplement on the electrification of the Berlin railways.

Traffic Tables, January to June, 1931. (London) Fredc. C. Mathieson and Sons, 16, Copthall Avenue. 1s.

Contains traffic statistics and share prices of home and foreign railways conveniently tabulated.

NEWSPAPER SHARES—II.

In a preceding article we discussed the recent drastic fall in the market capitalisation of the shares of many large newspaper groups. We showed that, although profits for 1930 had, in some cases, been relatively well maintained, the earnings position was precarious, in the sense that the newspapers were entirely dependent on receipts from advertising, which alone converted a working loss into a profit sufficient to meet fixed charges and pay dividends. Certain "space-barometer" figures were given, indicating that since 1929 the amount of advertising revenue-producing space had declined on an average by 22 per cent. We suggested that the investing public was not unaware of the precarious poise of newspaper finance, even if the trading accounts of the companies for 1930 did not disclose it.

There is a second cause of the public distrust of newspaper finance. The past rivalries and cut-throat competition of the newspaper peers have shaken the investor's confidence. The public has not forgotten the war in the provinces between the evening journals created by Northcliffe Newspapers, Ltd., and those controlled by Allied Newspapers, Ltd. It is unnecessary to recapitulate the details of this ridiculous war—the rival bidding by the Berry and Rothermere groups for the financial control of local newspapers and the establishment by the Rothermere group of *Evening Worlds* at Newcastle and Bristol by dint of new and ingenious methods of "buying circulation." A truce was unexpectedly signed in June, 1930, when Lord Camrose announced at the annual meeting of Allied Newspapers that the plans for the creation of *Evening Worlds* in Cardiff, Sheffield and Aberdeen had been dropped. But the damage had been done. The investor's confidence had been undermined. Indeed, Lord Rothermere had done his best to dynamite it by going out of his way to "talk down" newspaper shares at a time when Provincial Newspapers, Ltd., a subsidiary of the Inveresk group, was trying to make a public issue of shares to refund its floating indebtedness to its bankers. Lord Rothermere, in having statements published in the *Daily Mail* and *Evening News* at that time enlarging upon the risks of subscribing to newspaper capital issues, could never have considered the consequences of his short-sighted propaganda. Not only did Provincial Newspapers fail to obtain funds from the public, but all newspaper shares suffered a severe depreciation in the market. Incidentally, the banks were forced to take control of the Inveresk Paper Company's affairs, the *Daily Chronicle* was merged with the *Daily News*, and the first serious débâcle occurred in the British newspaper industry. All this deepened the investor's distrust of newspaper shares.

Is there any factor present to justify a recovery in the newspaper share market? It is difficult to find one. As regards the Rothermere group, the *Daily Mail* is now faced with serious rivals, apart from the *Daily Express* in which (together with the *Evening Standard*) it has a 49 per cent. interest. The new *Daily Herald*, in the hands of Odham's Press, made a remarkable debut fifteen months ago and, having started with a circulation of over one million, is now approaching the 1½ million mark. Shortly afterwards, the *News-Chronicle*, formed by the amalgamation of the *Daily News* and *Daily Chronicle*, established itself with an initial sale of over 1,400,000. The *Daily Mail* is apparently losing ground, for its net sales declined last year by 100,000 to 1,793,000. The position of the Rothermere group is further complicated by its inter-company liabilities. The Associated Newspapers, Ltd., and Daily Mirror Newspapers, Ltd., jointly and severally guarantee the capital and interest of £3,000,000 5½ per cent. debenture stock of Northcliffe Newspapers, Ltd., while the Daily Mirror and Sunday

Pictorial Newspapers jointly and severally guarantee £3,000,000 6½ per cent. debenture stock of the Anglo-Canadian Pulp and Paper Mills. The Northcliffe Newspapers, Ltd., which has now secured a 51 per cent. interest in the Hull and Grimsby Newspapers, Ltd., reported a loss of £98,957 in the year to June 30, 1930, after allowing for debenture interest of £165,000. In addition to this liability, Daily Mirror and Sunday Pictorial Newspapers will probably be called upon to find the interest on the £3,000,000 Anglo-Canadian Pulp and Paper Mills debenture stock.

The Berry group, in spite of the reassuring statements of Lord Camrose at the Allied meeting regarding the strong position of the provincial newspapers, remains a cause of no little nervousness among investors. It paid £5½ millions for the Hulton papers, over £2 millions for the Newcastle and Glasgow acquisitions, £1,300,000 for the control of the *Daily Sketch* and *Sunday Graphic* and £8 millions for the Amalgamated Press. The financial structure of the group is undoubtedly topheavy. An examination of the balance sheet of Allied Newspapers reveals that out of the total assets of £9,104,846, copyrights and goodwill accounted for £7,227,760. The company guarantees interest and principal of £991,324 6½ per cent. mortgage debenture stocks of Daily Sketch and Sunday Graphic, Ltd., and £3,000,000 6½ per cent. first mortgage stock of Allied Northern Newspapers. The directors of Allied Newspapers stated in their report that while the trading of some of the subsidiaries of Allied Northern had been affected by the severe competition, the net sales and advertising revenue in all cases had been satisfactory and that the dividends received were more than sufficient to meet the debenture interest and expenses of the company. This is satisfactory so far as it goes—indeed, Lord Camrose, at the general meeting of Allied Newspapers, implied that the provincial newspapers of the group had more than held their own against the onslaught of the Rothermere group—but the accounts refer to the calendar year 1930, and it is hardly necessary to emphasise the fact that advertising revenues have fallen off this year and that the financial position of a newspaper group can very rapidly deteriorate once any subsidiary company begins to make a loss on the daily editions of the papers.

As for the *Daily Chronicle* group, there is a long up-hill task before the management. The old *Daily Chronicle* collapsed partly because it had been committed to a huge capital outlay at a time when the *Daily Herald* had invaded the field of "Liberal" dailies and partly because its principal revenue-producing assets—the provincial newspapers—had been sold for second preference and ordinary shares in a new company, Provincial Newspapers, Ltd., promoted by Mr William Harrison. The passing of financial control of Inveresk Paper into the hands of the banks meant that all the profits of the group had to be first applied to clearing off the bank indebtedness of Provincial Newspapers, Ltd., and of United Newspapers, Ltd. This process may last some considerable time. The position of Provincial Newspapers, Ltd., has been eased by the sale to the Northcliffe Newspapers of a 51 per cent. interest in the Hull and Grimsby Newspapers, Ltd., subject to an undertaking by the Rothermere group not to establish new papers in areas in which the *Daily Chronicle* group is interested; but, even if earnings are maintained, it will be some years before the company will be in the position to recommence payment of dividends on its second preference shares.

The market valuation of the prior charges of the four newspaper groups gives further indication of the cautionary attitude adopted by the investor towards newspaper finance at the present time. In all cases where the earnings cover for dividends has been reduced to

slender proportions, or where the ratio of fixed-interest capital to ordinary capital is high, the market price of the security has fallen and yields are relatively high:—

	High, 1930.	Present Price.	Div. Yield.	Times Div. or Interest is covered.	Ratio of fixed Interest Capital to Ord. Capital.
"Rothermere" Group.					
Assoc. Newspapers, 5% pref. (£1)	19/3	19/6	5.13	16.1	49
Daily Mirror, 8% pref. (£1).....	27/6	27/6	5.82	17.4	25
Sunday Pictorial, 8% pref. (£1)....	25/6	24/6	6.53	7.1	48
"Berry" Group.					
London Express Newspapers, 7% pref (£1).....	20/7	20/-	7.0	1.9	245
"Berry" Group.					
Allied Newspapers, 8% pref. (£1)	22/-	15/-	10.67	1.7	281
Allied Northern, 6½% deb. stk.	100½	85	7.65	...	300
Amalgamated Press, 7% pref. (£1)	21/-	17/-	8.23	2.4	653
Amalgamated Press, 5½% deb. stk.	93½	91	6.11	4.8	653
Daily Sketch and Sunday Graphic, 6½% deb. stk.	106½	101	6.44	...	120
"Inveresk" Group.					
Illustrated Newspapers, 7% pref. (£1).....	15/4½	8/6	16.47	1.4	150
United Newspapers, 7½% pref. (£1)	16/-	5/-	Nil	Nil	86
Daily Chronicle Investment, 7% 1st pref. (£1)	12/-	1/6	Nil	Nil	97

It will be seen that only the preference shares of the Associated Newspapers and Daily Mirror Newspapers, the security of which is not open to doubt, stand on a strictly "investment-yield" basis. It is somewhat surprising to find that the Allied Northern debenture stock, in spite of 1930 earnings being sufficient to cover interest, and in spite of the guarantee of Allied Newspapers, is quoted on a 7½ per cent. yield basis.

The investor may arrive, therefore, at two conclusions; first, that newspaper finance is a difficult matter in a period of depression, because the main costs of production are inelastic and the main item of revenue (advertising) liable to extreme fluctuation; secondly, that the finance of those newspaper companies which have heavy fixed charges to meet, either to banks or debenture stockholders, has become even hazardous. The market's cautionary estimate of prospects in the immediate future may not be very wide of the mark. A general recovery in trade and industry would be the soundest argument for a selective revision of the market's attitude.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 23.	June 25.

AFTER an uneasy opening, the market quickly took on a more cheerful appearance. The volume of business showed a small but perceptible increase.

The gilt-edged market developed strength on the firmness of sterling and a heavy gold influx, the lead being given by long-dated stocks, such as Four per Cent. Consols and Funding Loan. Australians were marked up, following the decision of the Premiers' Conference, at Canberra, to make the internal Conversion operation purely voluntary. New Zealand stocks recovered slightly, despite the tepid reception of the £5,000,000 loan issue, 68 per cent. of which was left with underwriters. Home corporation stocks showed few changes.

Among South Americans, Brazilians showed a marked recovery on the cessation of liquidation and an improvement in the milreis. Argentines were firmer on a recovery in the exchange. Europeans, however, remained unsettled.

Despite disappointing traffics, Home rails improved slightly, but little business was transacted. The refusal of the railways to issue monthly figures of net revenue had no effect on the market. A fair volume of business was done in foreign rails, but prices showed no definite trend.

The carry-over showed a reduction in the bear account among industrials, and the tendency became more cheerful after a quiet opening. Wall Street, after

an indifferent start, sent buying orders to London, improving sentiment and causing a perceptible advance in prices. Transatlantics attracted attention. Radio Corporations lost ground after an early recovery. A later rally was led by Brazilian Traction. Bear covering resulted in the marking up of Cables and Wireless. After some uncertainty regarding the situation in Central Europe, a slight recovery occurred in the Swedish Match Group. Electrical shares were undecided. Rather more attention was given to motor shares. After some irregularities at the outset, iron and steel shares were firmer, Babcock and Wm. Cory showing particular stability. Breweries were more active, Distillers leading the way on buying from the North. Tobaccos held their ground. Textiles improved on inquiries from provincial centres, but Rayons were dull. There was a fair amount of business in the new Dunlop units. On Tuesday, unofficial bids were received from New York for the new Woolworth issue, which was not offered till Thursday. Imperial Chemical enjoyed a further recovery.

In the oil market, prices moved irregularly, an early recovery on rumours of increased prices for Californian crude oils being interrupted by the publication of increased output figures. Paris opened by selling Shells and Royal Dutch, but later showed a little buying interest. In the rubber market, dissatisfaction was expressed at the delay in publication of the Dutch Rubber Committee's report. Little business was reported, and variations were few despite a fall in the price of the commodity. The tea market was dull and inactive, though Consolidated Tea and Lands finished higher. An "Investment Note" on tea profits will be found on page 1282.

Advices from America and the Continent helped the mining market. Though the bulk of transactions were of a professional character, there were signs of slight interest, especially for gold mining shares, Randfonteins leading the way on the news of the striking of the new reef. Central Mining were moderately firm, but "Johnnies" remained listless, though a few buyers were attracted by the low price. Despite a slight recovery in the price of tin, the shares showed little movement. Australians were quiet, Wilunas alone registering any improvement. Tintos sagged early in the week, but more than recovered the lost ground later.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets opened irregularly, an initial tendency towards higher prices for a number of stocks being speedily checked by profit-taking. The view, however, that technical conditions were favourable to a moderate recovery in the absence of further heavy selling was confirmed by the anxiety of many bears to take cover on the next rally. This was particularly evident in the rail

(Continued on page 1282.)

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 1279.)

market, where the decision of the New York Central Railroad to pay a quarterly dividend of \$1.50 had a marked effect on sentiment. The market, in its new mood, was disposed to discount unfavourable news, such as the drop of 277,000 tons in the unfilled orders of the U.S. Steel Corporation (which totalled 3,620,000 tons last month, against 4,060,000 in May, 1930), and the failure of a group of twelve banks serving the suburbs of Chicago. The deposits of these banks totalled \$13,000,000. Their failure was ascribed primarily to real estate commitments. The fall in realty values, indeed, is believed to have caused difficulties in a fairly wide area in the Middle West. Market leaders like Western Union, American Can, Consolidated Gas and U.S. Steel, all showed firmness as the week progressed, though in some respects the upward movement had a laboured appearance. Trade advices showed no tangible change in the general situation, though industry was regarded as holding its own, despite a further fall in steel production from 42 to 40 per cent. of capacity. A preliminary estimate places the new public financing in the United States during the first five months of 1931 at \$1,601 millions, compared with \$2,869 millions in the corresponding period of 1930. Bond and note issues accounted for 94 per cent. of this year's total. Of the aggregate proceeds, over 55 per cent. were represented by domestic public-utility financing.

INVESTMENT NOTES.

Quarterly Earnings' Statements.—The recent experience of shareholders in the Dunlop Rubber Company—who remained in ignorance until the end of April of a drastic change in their company's earnings' position which started nine or ten months earlier—has given point to the suggestion that leading British concerns should publish certified earnings' statements at more frequent intervals. The issue of quarterly statements by the leading American corporations, under the rules of the New York Stock Exchange, has, it is claimed, given American investors a far better perspective than that of their British colleagues. During the present slump it has been noteworthy that, on several occasions, the New York market, after showing a tendency to undue optimism, has been brought sharply back to realities by the publication of three months' statements affording a "check up" on prevailing conditions. At a time when earnings are liable to sudden and extensive fluctuations, the advantages enjoyed by American investors—who, on the average, are nine months ahead of British investors as regards real knowledge of their position—are self-evident. The dangers of working in the dark were unintentionally stressed by Sir Eric Geddes when he declared, at the Dunlop meeting, that even if the advisability of an interim dividend last September had been doubtful there would have been "tremendous arguments" in favour of paying it rather than allowing bearish speculation regarding the company's position to rage unchecked for another six months. This is a dangerous doctrine. The work of preparing quarterly statements would doubtless be considerable. The Dunlop Company's accounts, for example, embody the figures received from eighty-five different concerns, operating all over the world, and many other large British companies are in much the same position. Nevertheless, if the alternative, in extreme cases, were the payment of doubtful dividends, there could be no question as to the preferable policy. A contributory factor in the success of the New York Stock Exchange Committee's efforts has been the hearty co-operation of many of the biggest American concerns, especially the U.S. Steel Corporation. The force of example is immensely powerful, and it would undeniably be helpful if some British company, of first-class importance, were prepared to break with tradition and set the ball rolling. For this reason, it is doubly regrettable that the great British railways, in reply to a request signed by every dealer in the Home Railway market of the Stock Exchange, have this week reiterated their previous refusal to publish monthly or quarterly figures of net revenue.

Tea Profits.—In a recent issue (see the *Economist*, May 30, 1931, page 1173) we published a résumé of the current position in the rubber industry. We may now extend our survey to the closely related tea industry.

Though tea prices have declined significantly—particularly those for the commoner varieties—the industry as a whole has escaped the cataclysm which has involved many other primary producing industries in dire difficulties. During 1930, individual companies in Ceylon experienced varying fortunes, as is apparent from the following table showing the results of nine leading companies, representing an aggregate capital investment of £4,964,070. The combined earnings of these companies were equivalent to a return on their capital of 31.30 per cent. in 1929 and 28.75 per cent. in 1930:—

Company.	Net Profit, December 31.		Earned per cent.		Dividend per cent.		Market Price per £1 share.	
	1929.	1930.	1929.	1930.	1929.	1930.	May 30, 1930.	June 10, 1931.

Standard Tea of Cey.								

† Share denomination £10.

The restriction scheme, in force in the industry last year, has now been abandoned, owing to the failure of British and Dutch producers to reach agreement. Each company must thus work out its own salvation. Tea planters will now, probably, abandon all non-paying areas and curtail expansion. Savings must perforce result, since labour costs will be reduced. Tea, as a commodity, has an advantage over rubber, owing to its detailed and careful grading. The better quality teas, in particular, have benefited from this condition, though Northern and Southern Indian blends have suffered heavier set-backs than have those of Ceylon. In February, tea consumption in the United Kingdom showed a slight reduction. Since Easter, however, the tone of the tea market has been more satisfactory.

Lord Kylsant—Further Court Hearings.—Lord Kylsant again appeared before the Lord Mayor at the Guildhall on Monday and Wednesday last, on a charge of publishing reports of the Royal Mail Steam Packet Company for 1926 and 1927 known to be false in a material particular. With him appeared Mr Harold John Morland, formerly the auditor of the company, on a charge of aiding and abetting. A further charge has been made against Lord Kylsant of publishing a prospectus known to be false in a material particular. At Monday's hearings the Lord Mayor ruled that the Crown were entitled to present their evidence as a whole. Lord Plender, the well-known chartered accountant, then described the circumstances in which the Treasury, asked by the Royal Mail group in the latter part of 1929 to postpone the repayment of certain loans guaranteed by the Government, had decided on the desirability of an independent expert examination into the whole position, and selected Sir William McLintock to carry it out. Sir William Plender was proceeding to describe a meeting at the Treasury on May 7, 1930, at which it was decided that reconstruction of the Royal Mail group was not a practicable proposition, when objection was taken by defending counsel to the admission of the evidence. This objection being upheld, Lord Plender's evidence was withdrawn, and it was further held that the defence were not entitled to cross-examine him upon it. Sir William McLintock was then called, and declared that, as a result of his examination, he had discovered that R.M.S.P. Meat Transports, Limited, after charging depreciation, had made a trading loss of £21,945 in 1926 and a trading profit of £28,657 in 1927. The company had brought in various amounts from reserves, and declared dividends absorbing £55,000 each year. This figure Sir William subsequently amended to £49,000 net. Sir William described the various capital transactions as be-

tween the Royal Mail Company and the two "Nelson companies" (Nelson Steam Navigation and H. M. W. Nelson), and referred to various figures in the accounts of Melver and Company and the Pacific Steam Navigation Company, declaring that in 1926 the latter, whose accounts appeared to indicate a profit of £60,532, had made, on his computation, a trading loss of £183,755, after charging depreciation on a normal basis. In 1927 the company's accounts showed a profit of £59,422, whereas, Sir William alleged, a loss of £160,748 had been made. Continuing his evidence on Wednesday, Sir William declared that the remaining "100 per cent. subsidiary" of the Royal Mail, MacAndrews and Company, had shown a loss in 1926 of £52,973, which he himself had placed, after adjustments, at £57,107, and in 1927 had shown a profit of £9,778, which he suggested should be restated as a net loss, after depreciation, of £47,428. In the aggregate, Sir William calculated that the six subsidiaries had made a net loss of £213,669 in 1926 and of £169,606 in 1927. The Royal Mail and its subsidiaries as a whole had suffered losses of £804,663 in 1926 and £630,369 in 1927. The payment of dividends in the two years had been accompanied by transfers from various reserves, some of which—e.g., those for income tax and excess profits duty—had not been disclosed at any time in the published documents of the company. Under cross-examination from Sir Patrick Hastings, Sir William agreed that a case might be made for the views expressed by various eminent accountants as to the propriety of withdrawals from secret reserves without disclosure to shareholders. The Lord Mayor, however, ruled that evidence as to other companies' balance sheets, in this connection, could not be admitted, and Sir Patrick Hastings (for Mr Morland) and Sir John Simon (for Lord Kylsant) announced that, in view of this ruling, they would take no further part in the Court's proceedings, though their junior counsel would remain. Mr Arthur Theodore Cason, chief accountant of the Royal Mail Company from 1913 until May 5th last, gave evidence as to the preparation of the profit and loss account for 1926. The Court adjourned until Monday next.

SUMMER SHELL

The seasonal blending of Shell gives you a petrol more perfectly suited to Summer temperatures than is possible with any fuel blended on a compromise for all-the-year-round use.

Dunlop £1 Units.—Following the refusal of the Stock Exchange Committee to grant permission to deal in 6s. 8d. units of stock, dealings were commenced on Monday last in the new £1 units of stock of the Dunlop Rubber Company, the opening price of 16s. 10½d. being based on the Friday night quotation of 5s. 7½d. per 6s. 8d. share. The company has converted every 300 of its 6s. 8d. shares into £100 stock. This matter was discussed by Sir Eric Geddes at the annual meeting of the company, its objects being to save the very considerable amount of work and expense which in the present state of the law is involved by the use of share certificates for which the use of distinctive numbers is obligatory. By way of example, Sir Eric produced, at the meeting, a certificate for 68,000 shares, which, he declared, required to be endorsed with 444 groups of figures, totalling 7,640 figures. These had to be written out four times by hand in various accounts, registers, certificates, etc., a total of 30,560 figures being thus required to be written and checked, though the shares in that certificate represented only 0.003 of the total issued ordinary shares of the company. While, in the circumstances, the advantages of stock over shares, in this connection, are clear, companies have sometimes hesitated to make the change-over in the belief that parcels of stock of £100 are less easily negotiated than shares of relatively small denomination. The expedient of quoting stock in £1 units, previously adopted in the case of P. and O., and Watney Combe Reid, suggests a convenient way out of the difficulty.

Callender's Cable.—Despite a considerable decline in earnings this company has fully covered its customary 15 per cent. dividends. Its net profits dropped by £74,876 to £256,536. The results of the past three years are shown:—

	Year ended December 31,		
	1928.	1929.	1930.
	£	£	£

Inc. or dec. in carry-forward....	-142,649	+98,012	-76,864

The company has had a satisfactory year as regards orders, but has suffered from falling prices and difficult foreign exchange conditions. Its Indian business has been profitable, and the United States subsidiary has also earned profits under difficult conditions. During the year the parent company's stocks have been reduced by £98,337, but expenditure on uncompleted contracts and prepayments has risen by £78,073 to £469,453. Debtors have been reduced by £76,900 to £1,747,860, and sums due by subsidiaries have risen by £51,947. At 48s. 9d. the £1 shares yield £6 8s. 4d. per cent.

Armstrong Whitworth.—It is rather more than two years since Armstrong Whitworth submitted to its spectacular writing off of losses and reduction of capital. The new company then formed, Armstrong Whitworth Securities, which is entirely a holding company, earned a net profit in 1929, its first year of operation, of £11,715. For 1930 it is able to report a net profit of £52,842, after deducting all fixed charges. The advance is not substantial, but the company is moving at any rate in the right direction. It appears probable, though this is not positively stated in the report, that the profit was derived entirely from interest on its Government and other outside investments. No dividends were received from its three principal subsidiary companies—the engineers, the shipbuilders and the ironfounders. But whereas in 1929

a large provision had to be made against losses incurred by subsidiaries, in 1930 it appears from the consolidated balance sheet that in the aggregate these three subsidiaries made a profit of £37,395, which, however, was not taken into the holding company's accounts. Moreover, adequate provision for depreciation is reported to have been made by each of the three operating companies, and the only losses for which provision has not been made were incurred by other minor subsidiaries in which the Armstrong Whitworth shareholding stands at a nominal figure. The balance sheet shows that during the year the company has found use for much of its surplus cash, partly in the form of debentures and loans to subsidiaries (which have risen from £423,995 to £1,595,180), partly in buying Government securities (which have increased from £180,690 to £534,700). The cash in hand, etc., is reduced from £1,389,697 to £365,859, and in addition £365,000 5½ per cent. notes have been issued during the year to provide further resources. The balance-sheet position, however, still remains satisfactorily liquid. A less encouraging sign is the reduction in work-in-progress from £941,949 to £556,391 in the consolidated balance sheet. At £236,737 the reserve shows little change; it is not large, but the recent writing-down was so drastic that in the aggregate the investments are hardly likely to be over-valued in the books. The non-cumulative preference dividends have not been met this year, but the reconstructed company is now saddled with so small a load of prior charges that if the present rate of improvement continues, some return to the shareholders may not be too long delayed.

British Electric Traction.—In the *Economist* of May 30th we discussed the preliminary profit figures of this prosperous holding company. The complete accounts show gross income of £422,827, compared with £396,261, while expenditure increased by only £8,642. Of the net revenue of £271,005 the participating preference stock absorbed £57,020, and the preferred ordinary stock the usual £106,101. For the fourth year in succession the deferred ordinary stockholders receive a 5 per cent. dividend and a capital bonus of 10 per cent. in deferred shares, to be converted subsequently into stock.

	Year to March 31,		
	1929.	1930.	1931.
	£	£	£
Gross profit.....	330,822	396,261	422,827
Expenditure	133,827	143,180	151,822
Net profit	196,995	253,081	271,005
Pref. dividend	54,685	56,281	57,020
No. of times covered	3.6	4.5	4.8
Prof. ord. div.	106,101	106,101	106,101
No. of times covered	1.2	1.5	1.6
Def. ord. div.:			
Amount.....	7,394	8,384	9,222
Earned per cent.	24.5	54.1	58.5
Paid per cent.	5	5	5
Other allocations	14,789*	16,768*	18,445*
Undivided profits account.....	14,025	65,547	80,217

* Def. ord. stock dividend of 10 per cent.

The balance of £80,217 is added to the undivided profits account, bringing that item to £332,015. Of the bonus distribution of 423,501 ordinary shares and 847,002 6 per cent. preference shares of the Birmingham and District Investment Trust, received in December, 1929, and May, 1930, 292,535 preference shares have since been sold, and the amount realised has been applied in reduction of the book value of the investments, which nevertheless stand in the balance sheet at £5,507,179, an increase of £1,364,902 over those of last year. The remainder of the bonus shares received have been taken into the balance sheet at their par value of £977,968, and the undivided profits account has been increased by that amount. The capital of the company has been augmented during the year by the issue of 16,768 deferred ordinary shares of £1 each. At 122½ the 8 per cent. preference stock yields £6 15s. per cent.

William Cory.—Despite prevailing world depression, this company has enjoyed a very satisfactory year, net profits having declined by only £58,591 to £626,596:—

	Year ended March 31,		
	1929.	1930.	1931.
	£	£	£
Net Profit	740,289	685,187	626,596
Preference dividend.....	42,500	42,500	42,500
No. of times covered	17.42	16.12	14.74
Ordinary dividend:—			
Amount	512,220	513,338	514,261
Earned %	23.84	21.22	19.53
Paid %	17½	17½	17½
Reserve fund	150,000	50,000	50,000
Written off goodwill	...	54,993	...
Increase in carry-forward	135,569	24,356	19,835

The main alteration among the assets is the increase of £216,068 in debtors, now £2,757,248, and the growth of £48,539 to £185,006 in loans to subsidiaries. Deposits declined by £9,253 to £272,165, while creditors were £42,113 greater at £1,780,348. The preference capital is secured by net tangible assets of £34 19s. 11d. per £5 5 per cent. cumulative preference share. At 2½ the ordinary shares yield £7 7s. 4d. per cent.

Antofagasta (Chile) and Bolivia Railway Meeting.

Some interesting comments on the nitrate situation and on the position of British railways in Chile were made by the chairman of the Antofagasta (Chile) and Bolivia Railway Company at the general meeting on June 9th. In the past, the Chilean railways generally had the benefit of good tin and copper traffics when the nitrate industry was depressed, or good nitrate traffics when the tin and copper industries were depressed. At the present time, however, all three are depressed, and the unification of the Chilean nitrate industry has created a very serious situation for the Antofagasta Railway. The company serves 30 nitrate oficinas through the ports of Antofagasta and Mejillones. At the beginning of 1930, twelve of these were producing nitrate, but gradually all closed down except one belonging to the Lautaro Company. The formation of the "Cosach" Company had resulted in the concentration of nitrate production on the two Guggenheim process plants, both of which were situated in the north of the Tocopilla pampas. Tocopilla had therefore become the busy nitrate port of the North, and this meant a complete change in the economic position of the Antofagasta. As far as the railways are concerned, this upset has been accentuated by the falling off of the copper and tin traffics. The situation for the company and other British railways had become so serious that representations had been made to the Government, first, that any nitrate required to be produced from Shanks process plants should be from oficinas situated on pampas served by their railways, and that, as far as the new nitrate oficina "Pedro de Valdivia" belonging to the Lautaro Company was concerned, a part of this traffic should be sent to Antofagasta instead of Tocopilla, at no extra cost or shipping charges. The company and other British railways felt that by their capital and enterprise they had contributed largely to the development and prosperity of the North of Chile, and that until the Guggenheim process plants could be erected on all the pampas, the railways should be given some reasonable traffic in order that they should be able to keep their properties in good shape and receive some return on their business. It would, however, be a long time before new Guggenheim plants were erected. The chairman of the Antofagasta Railway estimated that the total stocks of nitrate were in the neighbourhood of 2,500,000 tons. The average annual sales during the last ten years had been about 2,200,000, so that existing stocks were equivalent to more than a year's consumption. The Guggenheim process plants at Maria Elena and Pedro de Valdivia oficinas were expected to produce in the nitrate year ending June, 1932, approximately 1,200,000 tons, so that unless sales materially increased a great deal of nitrate would not be required to be produced by the Shanks oficinas.

Mining Costs on the Rand.—A special correspondent to the Gold Supplement published by the *Financial News* on Monday last, advances a number of interesting arguments regarding the "profitability" of mining operations on the Rand. He declares that, since the price of gold is constant, working cost alone determines whether or not a gold-bearing reef is payable. The terms "low-grade" and "high-grade," as applied to ore, are purely relative, and may be misleading if they are not related to working costs. The gold mines of Rhodesia, Australia, the Gold Coast, and Brazil, are far richer than the average of the Rand, but the latter's ores are, nevertheless, profitable, on account of the much lower working costs of the mines. The following table, showing the results per ton milled in various areas, affords an illuminating commentary on this statement:—

Goldfield.	Mine.	Tons milled per annum.	Per Ton Milled.			
			Revenue.	Working Cost.	Working Profit.	Div.
Witwatersrand	(Average)	1,000,000	27/7	19/7	8/-	5/3
Southern Rhodesia	Cam & Motor	288,000	39/2	23/1	16/1	10/5
	Sherwood Starr	57,800	46/-	22/10	23/2	8/8
	Globe & Phoenix	72,300	41/1	23/1	18/0	22/1
Gold Coast	Rexende	75,400	36/2	19/5	16/9	9/10
	Ashanti	124,200	101/5	49/10	51/7	Nil
W. Australia	Taquin & Abosso	100,790	33/5	29/1	4/4	Nil
	Associated Gold	56,390	34/3	30/10*	3/5	Nil
Kolar Goldfield, India	Balaghat	39,200	48/-	...	...	Nil
	Champion Reef	91,550	50/-	31/11*	18/1	5/9
	Mysore	190,830	45/4	30/-	15/4	8/1
Brazil	Nundyrroog	128,820†	45/10	31/1	14/9	11/2
	Oreogum	143,760	35/6	33/-	2/6	Nil
	St. John del Rey	202,500	51/9	38/4	13/5	6/9

* Exclusive of development.

† Current ore, exclusive of tailings re-treated.

From the view thus expressed, it follows that a lowering of costs tends not only to make potential mines out of mere gold-bearing reefs, but to increase the "life" of the rich mines, and to enhance the proportion of a given year's dividend which shareholders can regard as "income," by reducing the amount which should be looked upon as "return of capital." These considerations have special relevance in view of the fact that the Rand Low-Grade Ore Commission's Report is impending in South Africa. If this report suggests important measures for reducing costs, and these are put into practice with the co-operation and assistance of the Union Government, shareholders may benefit in several ways. Their mines will have a longer estimated "life." The amount of shaft-sinking and development work necessary to open up a stated quantity of payable ore in a given period on a particular mine, may be reduced, since experience shows that these expenses tend to vary with the level of other costs. Finally, a reduction of costs would bring the Rand a step nearer to complete justification of its claim to be regarded, not as a "speculative," but as a more or less settled industry, whose shares should stand at prices giving an "industrial" rather than a "mining" yield.

Burmah Oil Meeting.—Sir Jorn Cargill, at the general meeting of the Burmah Oil Company, had some hard words to say about the mad orgy of over-production in the oil industry. The fact that the Burmah Oil Company had not been guilty of over-producing did not unfortunately enable it to escape the consequences of the oil glut in the shape of reduced oil prices. Further, the company had to meet reduced values for the whole of its kerosene production owing to the halving under the Indian Budget last year of the difference between the import and excise duties on that product. In spite of a definite setback in the consumption of kerosene and a slowing down in the demand for petrol, the imports into India from Russia and America had increased. As a result of the marketing agreement with the Anglo-Persian and Royal Dutch-Shell groups, imports from Persia and the Dutch East Indies had been reduced to afford a greater outlet for the indigenous production of India. The time had come, in Sir John Cargill's opinion, to require other importers of foreign oils to curtail their imports to a similar extent in the interests of the domestic oil industry. Fortunately, the merger which has now been

sanctioned by the American Government between Vacuum Oil Company and the Standard Oil Company of New York—the two largest American importers in India—may enable a satisfactory solution of this difficulty to be found, for the directors of the Vacuum Oil Company are understood to favour a pacific trading policy. Incidentally, Sir John Cargill justified the reduction in the company's dividend from 30 per cent. to 22½ per cent. on the ground that its investments in the Anglo-Persian and Shell Transport companies would yield less in the current year—actually over £250,000 less on the basis of the lower annual rates of distribution—but he did not say what policy the company would adopt if Anglo-Persian and Shell Transport were to reduce (as seems likely) the rate of interim dividend payable in December next.

The Anglo-Persian Oil Company.—The directors of the Anglo-Persian Oil Company had no important news to record in their annual report. The development of the prolific new oilfield at Haft Kel, halfway between the old Masjid-i-Suleiman field and the coast, had completely confirmed expectations. The company's present small production in Iraq and the Argentine was absorbed by the local markets, and in Albania operations had been suspended. Extensions had been made to the company's refineries in Persia and sales in general have been well maintained. The following table compares the results for the past two years:—

	Twelve months to Dec., 1929.	Dec., 1930.
Net profits	7,500,600	6,717,497
Debiture and other interest	279,717	281,475
Directors' fees	15,017	14,066
Persian Government royalty	1,161,589	1,014,595
Income tax	837,514	758,782
Extra depreciation	352,465	487,218
Discount on debenture stock	11,250	13,000
Debiture stock red. reserve	200,000	200,000
Amortisation reserve	100,000	100,000
Available for dividends	4,543,048	3,848,361
Prof. dividends	875,000	875,000
Balance	3,668,048	2,973,361
Earned on ordinary shares	32.1%	26.9%
Paid on ordinary shares	20%	15%
To other reserves	1,500,000*	750,000*
Carried forward	687,064	896,676

* General reserve, £1,000,000; preference share reserve, £500,000.
† General reserve, £250,000; tax reserve, £500,000.

It will be observed that net profits have declined by 15.3 per cent. last year, and that the directors have pursued a very conservative policy by reducing dividends from 20 per cent. to 15 per cent., although earnings amounted to 26.9 per cent. The balance sheet continues to show a strong liquid position, the surplus of current assets over current liabilities amounting to £5,421,111. No less than £5,554,000 is held in British Government securities and cash. The property account is higher, as the result of additions to refineries, at £6,724,680, as against £5,553,968. The ordinary shares of the company improved on the publication of these figures, and at the present moment are quoted at 1½ to allow a yield of £8 15s. per cent. on dividends of 15 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Suez Canal, Antofagasta (Chili) and Bolivia Railway, Calcutta Tramways, Electric Supply Corporation, Straits Plantations, Burmah Oil, Lobitos Oilfields, J. and P. Coats, Telephone Rentals, W. J. Bush, Geduld Proprietary Mines, East Geduld Mines, and Modderfontein Deep Levels. At the annual meeting of J. and P. Coats the chairman said that the fact that profits had again been affected by the writing down of stock values was not due to their unskilful buying of cotton. In the twelve years before the war, Egyptian cotton fluctuated between 16 pence and 6 pence, and in the twelve years after the war it ranged between 90 pence and 9 pence. To-day it was

round 7½ pence. Presiding at the annual meeting of Straits Plantations, Mr J. McNeill Miller said that though the cost of copra per ton worked out at £8 3s. 6d. f.o.b., which constituted a new low record in the history of the company, the price obtainable for their commodity had been extremely unsatisfactory throughout the year, the average net price showing a falling off of £4 12s. 4d. compared with last year.

CAPITAL ISSUES.

After several weeks of quiescence, the London capital market has become more active. On Monday the *New Zealand Government* offered £5,000,000 of short-dated 5 per cent. bonds at 99. Of the total, £1,000,000 were to be applied to the redemption of Treasury bills and the remainder to productive purposes, in connection with which considerable amounts were to be spent in Great Britain for purchases of material. Although New Zealand's credit in London is good, the issue was left as to 68 per cent. with the underwriters. On Thursday an offer for sale was made by Messrs Rothschild on behalf of *F. W. Woolworth and Company, Limited*. This company was incorporated as a private concern in 1909, as an offshoot of an American company. It has now 444 "three penny and six penny" retail stores in the United Kingdom and Ireland, and in recent years its combined profits have risen from £1,844,489 (in 1926) to £3,684,161 (in 1930). The business has been built up entirely out of profits, its net assets at December 31st last being over £10,000,000. The 6 per cent. preference shares, covered as regards dividends more than twelve times, are an attractive fixed-interest security of a type with which the market is not too well provided. The ordinary shares offer an earnings yield, on the average for the last three years, of nearly 10 per cent. at the issue price. The market regarded the shares as having a valuable equity, though the 5s. denomination and the 35s. premium were criticised in some quarters. Some criticism was also expressed of the requirements that applications should be in the fixed proportion of 25 preference shares to 10 ordinary shares, on the ground that the two stocks were calculated to appeal to different types of investors. Voting control will remain with the present proprietors, the general public being offered the opportunity to subscribe for only 1,944,000 out of an issued total of 15,000,000 5s. ordinary shares. The issue was largely "staggered" in the expectation of a keen American demand for the ordinary. An issue is expected shortly of £3,000,000 5½ per cent. debentures at 95 by the Buenos Ayres Great Southern Railway Company.

ISSUES OF THE WEEK.

New Zealand Government.—Issue of £5,000,000 5 per cent. bonds, 1932-34, at £99 per cent. The principal is repayable at par on July 16, 1934, the Government of New Zealand having the option to redeem the bonds at par, in whole or in part, on or after July 16, 1932, on three months' notice. The sum of £4 millions will be allocated to productive purposes, and the remainder will be applied to the redemption of current Treasury bills in London.

F. W. Woolworth and Company.—Offer for sale of 4,860,000 6 per cent. cumulative preference shares of £1 each at par and 2,250,000 ordinary shares of 5s. each at £2 per share. Of these amounts, 306,000 ordinary shares were placed on the terms of the prospectus, and 941,700 preference shares and 376,680 ordinary shares were placed with the directors and other officials of the company on underwriting terms. The average annual combined profits of this company and its subsidiary for the three years ended December 31, 1930, amounted to £3,281,489, which is sufficient to cover the dividend on the preference shares more than ten times, and is 79.5 per cent. on the present ordinary share capital after providing for the preference dividend. The company was incorporated in the year 1909 as a private company.

West Hampshire Water Company.—Issue by tender of £10,000 5 per cent. perpetual debenture stock, minimum price par; 1,000 £10 5½ per cent. preference shares, minimum price £10 15s. per share, yielding at that price £5 2s. 4d. per cent.; and 1,500 £10 ordinary "B" shares, ranking for a maximum dividend of 7 per cent. equally with existing similar shares, minimum price £12 10s. per share.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**John Taylor and Company.** Particulars of an issue of £120,000 5½ per cent. guaranteed first mortgage debenture stock, guaranteed as to principal and interest by Walker and Homfrays, Ltd. **Primitiva Holdings.** Particulars of an issue of 250,000 6 per cent. redeemable cumulative preference shares of £1 each at par. The company was incorporated in July, 1929, to carry on the business of an investment trust company.

[Other Stock Exchange information, including the latest dividend announcements, summary of balance sheets, reports and notices, and profit and loss figures, will be found on page 1302 under the heading "Company News."]

COMPANY MEETINGS, &c.

BURMAH OIL COMPANY, LIMITED.

SATISFACTORY RESULTS DESPITE ADVERSE TRADING CONDITIONS.

DIVIDEND OF 22½ PER CENT.

OIL POSITION—"WILD ORGY OF PRODUCTION."

INDIAN MARKET CONDITIONS.

SIR JOHN T. CARGILL'S REVIEW OF YEAR'S OPERATIONS.

The twenty-ninth annual general meeting of the Burmah Oil Company, Limited, was held, on the 5th instant, within the Merchants' Hall, 30 George Square, Glasgow.

Sir John T. Cargill, Bart. (chairman of the company), presided, and there was a large attendance of shareholders.

The Chairman: Ladies and gentlemen,—In the first place I have here the certificate of the posting of the notices calling the meeting, and I presume that, as usual, you will agree to the notice of the meeting being held as read, also the report and accounts, and I call on the Secretary to read the auditor's report.

The Secretary (Mr F. G. Holdsworth) read the auditor's report.

The Chairman: Ladies and gentlemen,—I have already asked your kind permission to hold the report and accounts as read, which you have been good enough to give.

When I addressed you a year ago I was in the happy position of laying before you a statement of accounts which had enabled your directors, while dealing with depreciations and allocations to the various reserve accounts on an even more generous scale than usual, to raise the dividend on the ordinary shares from the 20 per cent. at which it had stood for two years to 30 per cent. and to submit to you a balance sheet which I described as the finest and strongest one I had had the good fortune to lay before you in the 26 years I had been chairman of your company. But when referring to the prospects for the year on which we had then entered, and the results of which you now have before you, and with which I am now going to deal, you will doubtless remember that I stressed the world-wide economic depression and political unrest which even then existed, and which, unfortunately, far from lifting, are to-day infinitely worse, and pointed out the danger and impossibility of attempting to make any forecast for the future and contented myself by saying that short of something in the nature of a world-wide upheaval of trade and of the petroleum industry I felt confident that in due course we would be able to lay before you another very satisfactory report and statement of accounts. And, ladies and gentlemen, I feel sure you will all agree that that confidence was not misplaced and that, especially looking to the very trying times we have been passing through and are still in, the report and statement of accounts now before you, and the dividend of 22½ per cent. we are recommending for last year, can be considered extremely satisfactory.

THE YEAR'S CONDITIONS AND RESULTS.

In the past year we had to face—as we still have—reduced values for the whole of our kerosene production—other than our price restriction policy volume—owing to the halving under the Indian Budget of that year of the difference between the import and excise duties on that product. And on top of this, in the autumn, the increasing disparity between world production and consumption of petroleum forced further falls in values throughout the world which the market in India could not and did not escape. The published results for 1930 of some of the greatest stalwarts in the industry speak eloquently of the consequences of the wild orgy of production which has been and is still taking place, and the fact that it has been possible in such circumstances for us to present these results well, I am sure, give you great satisfaction. For if we cannot recommend the same dividend as last year it has been fully earned, even after making our allocations to reserves and writings-off on a very generous scale. I was relying on economies being effected in the costs of our operations and on increased interest and dividends, and a fulfilment of these expectations has substantially mitigated the effects of lower values for our products.

In these hard times, and not least when our country, the whole Empire, and the world at large require all the encouragement to better heart that an occasional oasis in the arid sands of to-day's depression can afford, we should have liked nothing better than to recommend the payment of a final dividend up to that of last year—and not merely to have shown that we have earned it. But just because of these depressed conditions and the uncertainty of the immediate future, not of the petroleum industry alone but of business generally, your directors have felt that a less cautious and

conservative policy than they have proposed might be followed with grave risk.

POSITION OF THE OIL INDUSTRY.

For what is the position of the oil industry itself? The problem of the lack of balance between production and consumption has in effect scarcely been touched. World-wide decline in demand keeps grim pace with such efforts as have been made to control production, and the only glimmer of hope of any early improvement which can be pointed to is the negative one that for the greater volume of the world's production to-day's conditions are ruinous, even although unhappily the truth of this would not appear yet to have got fully home. One need not waste time over academic discussions as to whether the cause of the trouble is over-production or under-consumption. That there is under-consumption for the production which is taking place is sufficiently obvious. Yet despite this obvious fact all sense of proportion seems to have gone, and one even reads of companies proclaiming, and apparently claiming credit for the achievement, that they have drilled the "deepest well ever," while they are perfectly aware that all and more than all the production for which there is an outlet could readily and for some considerable time ahead be provided easily by the wells throughout the world already drilled and producing.

We in Burma and India have not participated in this mad and ill-considered development, with its resultant squandering of valuable and irreplaceable resources. For what other description can be applied to a policy which results in drilling several wells where one well would do, and in employing methods wasteful in the extreme of the gas which is Nature's machinery for moving oil to the surface? That we have studiously avoided this sort of thing and have not contributed to the present chaos, preferring a sound policy of development, does not unfortunately enable us to escape the consequences, in the shape of reduced values, of the insane race for production elsewhere. What, however, we do refuse to accept is that this over-production by others should now require us—who have not increased but have wisely stabilised our production—to reduce our production so as to make room for their overflow in our home markets.

THE INDIAN MARKET.

Despite a definite set-back in India in the demand for kerosene and a marking of time in that for petrol, we see imports from Russia and America if anything greater than before. Our arrangements with our friends the Anglo-Persian Oil Company, Limited, and the Royal Dutch-Shell Group have until recently provided us with the necessary breathing space, as their imports have gradually dropped out to yield to the indigenous production the outlet in India it has required. That margin has now, however, been exhausted, and, as we have said in our report, the time has arrived when we must require other importers of foreign oils to hold back to the extent necessary for India's indigenous production to find its market in India itself. We have not merely our own organisation there to protect. That is important, and we shall certainly protect it. But what is even more important, and especially so in to-day's gravely depressed economic position of India—a depression which is causing the authorities and every one concerned with the well-being of that continent the deepest anxiety—is that we should do what we can to protect the employment of the many thousands of Indians and Burmese for which the indigenous industry provides, and which is being menaced by these imports under the conditions I have described. That duty we shall not shirk.

THE ANGLO-PERSIAN AND SHELL COMPANIES.

It is in, and mainly because of, these circumstances that your board is unable to recommend a larger cash distribution out of last year's profits, but, quite apart from any possible developments in the Indian situation, we must not overlook that the current year will certainly yield us less in dividends on our holdings in the Anglo-Persian Oil Company, Limited, and the Shell Transport and Trading

Company, Limited. Your board's confidence in the strength and stability of these concerns, and in the value of your investments in them, is not, and never has been, inspired by short views. Technically—in respect of command over sources of production and of the means and ability for its disposal—we are satisfied that they were never stronger or better placed than they are to-day, or better organised to stand the stress of such conditions as now rule or to reap the advantages of better conditions when they come about. Nothing of this, however, can completely avoid for them any more than for the rest of the industry the reduced off-take and the diminished values now existing.

THE ACCOUNTS.

Having thus explained why out of such satisfactory results your directors cannot recommend the dividend which normally they would amply justify, I propose, as customary, going through and explaining the more important items in the accounts.

You will observe that at £580,914 7s. 7d. we have applied £52,458 9s. 3d. more for depreciation than we allocated in 1929, and that after charging this the balance of profit taken into the profit and loss account is £2,033,388 7s. 7d. as compared with £2,956,548 9s. in that year. This is increased to £3,464,201 0s. 3d. by transfer fees and interest and dividends amounting to £1,430,812 12s. 8d., which is £216,572 18s. 2d. more than we received in 1929, due mainly to the larger dividends from the Anglo-Persian Oil Company, Limited, and the Shell Transport and Trading Company, Limited. Deducting directors' and the auditors' fees, income tax, subscriptions, employees' provident fund contributions, and interest on the 5½ per cent. debenture stock, aggregating £728,187 15s. 9d., the balance of profit carried down amounts to £2,736,013 4s. 6d. compared with £3,437,472 5s. 4d. for 1929.

ALLOCATIONS TO RESERVES.

From this the board has made the following allocations aggregating £970,000—namely:—

General reserve, £500,000, bringing it up to £2,000,000.

Insurance reserve, £20,000, bringing it up to £560,000.

Fields expenditure equalisation reserve, £100,000, making it a round £1,000,000, at which it is proposed to stabilise it.

Taxation reserve, £350,000.

This last is a new reserve account which it has been thought desirable to create against the fact that the manner of assessment of income tax may mean calls for heavy payments in a year the profits of which itself may have fallen, and also as some provision against the loss which would be involved on excise duty paid stocks when and if such duties or some portion of them—as has been suggested—may be dropped after serving the purpose of meeting what are hoped to be only the temporary exigencies of Indian revenues.

These allocations to reserves amount to £970,000 and compare with £1,170,000 allocated in 1929. You will remember that in that year we applied £500,000 specially to write down investments—really that in the Assam Oil Company, Limited—but on this occasion the board feels that no further provision is necessary, since, despite the very heavy fall which has taken place in the market value of our holdings in the Anglo-Persian Oil Company, Limited, and the Shell Transport and Trading Company, Limited—a fall in which, like our own, these shares are to-day inevitably in the best and worst company—the aggregate value of your investments is still to-day higher than their book cost.

THE DIVIDENDS.

Adding the balance brought forward the sum left to be carried to the balance sheet amounts to £2,165,788 1s. 5d. or some £252,768 10s. 11d. less than the 1929 figure. Out of this the preference dividends for the year and the interim ordinary dividend have taken £828,884 2s., and from the balance of £1,336,903 19s. 5d. your directors recommend a payment of a final dividend on the ordinary shares of 2s. 6d. per share, less tax at 3s. 1½d. per £, which is the United Kingdom rate of 4s. 6d. less Dominion income tax relief. With the interim dividend of 10 per cent., this recommendation will provide a total dividend of 22½ per cent. for the year. The residue of the disposable balance on this basis amounts to £612,517 11s. 11d., which it is recommended, for the reasons I have already so fully referred to, should be carried forward.

I told you last year that of your profits some 40 per cent. were earned apart from our operations in India, and again in 1930 something less than 60 per cent. of them are due to our trading in that market.

BALANCE-SHEET ITEMS.

Turning now to the balance sheet, on the liabilities side you will find the capital position unchanged. "Sundry creditors and credit balances" are down by £623,176 17s. 3d. and the "fire and marine

insurance account" is up, at £1,169,616 12s. 6d., by £70,615 0s. 6d. Reference has already been made by me to the reserve accounts. With the fields expenditure equalisation reserve at £1,000,000, it is felt that it can safely be stabilised at that figure.

On the assets side, the first item, that of "refineries, &c.," shows a net reduction of some £16,898, despite heavy new capital expenditure, the total amount of writing off being £288,325 18s. 7d. The second item, as you know, has been kept now for many years at the very conservative figure of £350,000. The net reduction of the "fields electrification" account is some £70,180 and of the "pipe line" account £31,068. The "tankers and tank installations" item shows a net reduction of some £97,462 and "heritable property and furniture" of £5,700. Then "stocks of plant and stores" are down by £309,160, while "stocks of products" are up by £37,252 and "sundry debtors and debit balances" are down by £100,615. "Loans to employees" have been reduced from £15,184 to £11,862, and have since fallen further. These, of course, are covered by ample security. In the case of "investments" those in "British and Indian Government securities" show an increase of some £249,106 at £2,926,050 18s. 1d., a figure which has since been considerably added to; "miscellaneous" an increase of £1,086,846, at £8,467,334 11s. 5d.; "subsidiary companies," at £1,035,316 are down by some £87,224, due to repayments of debentures; and those in "associated companies" are down by £1,160, due to a small capital adjustment. Under the item of "indebtedness" that of "subsidiary companies" has been reduced by some £310,987, and of "associated companies" by some £468,566. Then the last item of "loans, deposits, and cash" is up by about £265,416, at £1,723,712 9s. 3d.

FINANCIAL AND MARKETING STRENGTH.

By these allocations to depreciations and reserves an already very strong and sound position is very materially strengthened. We have a balance sheet we can be proud of. The conservative finance of which it is the embodiment has paid you well in the past, and I am confident of your agreement with my colleagues and myself that our proposals are no more than reasonable precautions to maintain its soundness through the possibly difficult and certainly less profitable, however temporarily so, conditions which we are already experiencing and may yet increasingly feel.

Liquid cash resources are, however, not enough. And, happily, your position is at least equally satisfactory in respect of those other liquid resources which are the real life blood of your position. For your Burma fields are to-day at the highest state of efficiency they have ever reached and can confidently be relied on to meet the full demands of the stabilised policy of production to which we have been adhering. And so, too, in our refining equipment we possess the technique and the flexibility of operation which enable us to face to-day's difficult and unusual conditions with reasoned confidence. And in marketing strength we have the combined knowledge and experience of ourselves and our partners in Burmah-Shell Oil Storage and Distributing Company of India, Limited. In all three directions I include the men as well as the operations they are engaged in, and I would take this opportunity on your behalf, as well as on behalf of the board, to express to all of them, East and West, our appreciation of their labours so unstintingly and loyally given under far from easy conditions, and for their contributions to the satisfactory results we have been able to submit to you.

The march of time and of service inevitable is depriving us gradually of some of our older and more senior employees, and I would like to take this occasion also to express our deep appreciation of the long, valuable and loyal service in field and/or refinery management which the company enjoyed from, among others, Messrs Hope, Thorburn, and Lockhead, who have recently decided that their time for withdrawing from the East had arrived.

THE ASSAM OIL COMPANY.

Some of you may already have seen and read my speech on the 28th ult. at the annual meeting in London of the Assam Oil Company Limited. Copies of it will in any case be circulated to you as usual with copies of the proceedings at this meeting. In other and more normal market conditions the greatly improved technical position which we have brought about in that company at great expenditure since we acquired our interest in it would have been more strongly reflected than it is in its accounts for last year, but even as it is this has enabled it to make further progress towards the more conservative valuation of its assets and the reduction of the balance at the debit of its profit and loss account. Like others of the smaller indigenous companies, the Assam Oil Company, Limited, can at this juncture ill afford the effects of the narrowing of the difference between import and excise duties on kerosene which was made last year, and in the further increase in both duties which took place in March this year to help to balance the Indian Budget,

it was at least satisfactory that the novel expedient of 1930 of raising revenue by reducing the import duty on foreign kerosene and increasing the excise duty on the product of the country was departed from.

POLITICS AND THE INDIGENEOUS INDUSTRY IN INDIA.

We are naturally keenly watching the movements here and in India and Burma on the political platform, and let me say at once we are doing so sympathetically to the legitimate aspirations of both to a fuller and more responsible participation in the conduct of their Governments. The higher politics of these matters are not a subject for debate or discourse at a meeting such as this, but politics and business are at least to-day, whatever may have been the case in other days, inseparable, and there is one aspect of the political situation in India as it affects not only this company but thousands of Indians and Burmans who are directly and indirectly dependent on it, as well as State and semi-State revenues, &c., on which I feel that some remark is necessary.

As an indigenous industry we have not suffered from anything in the shape of boycott of our products during these difficult times, and have therefore nothing to complain of on that score. On the other hand, while we have no sympathy naturally with the boycott in any form or against any source, there is an old Scots proverb—it may even be a Glasgow one—that we should “gie our ain fish-guts to our ain sea-maws.” This, I take it, did not contemplate exclusiveness but merely a preference, and an admonition that, when there was not sufficient to go round, charity should begin at home.

FOREIGN IMPORTS.

To-day in India, as I have already pointed out, demand for petroleum products is shrinking under the economic distress of its peoples. At the same time—and to this I would specially direct the attention of those who still talk as if there is, or could possibly be, anything in the nature of monopoly applied to those engaged in the indigenous petroleum production of India—excess production of foreign oil by Russia and America is overflowing, *inter alia*, into the Indian market, and assisted by its low prices, and in the former case also by its low costs—since these include nothing for capital charges and next to nothing for wages—and stimulated by the reduced import duties, is menacing the indigenous industry and the employment it provides for these many thousands of Indians and Burmans. I present this case to the devotees of the spinning wheel and “khadder.” For here is an opportunity where their precepts can be applied in an example of seeing to it that the indigenous production is assured its outlet first.

THE COMPANY'S PART IN THE ECONOMIC LIFE OF INDIA.

Despite frequent attempts to make them aware of the actual facts, there is either real or assumed ignorance among some Indian politicians of the part your company plays in the economic life of India. Of course, Burma and Assam are a long way from Delhi or Simla or Bombay—that is one of the problems. But there can be no excuse surely for the idea voiced by a speaker in the last Budget debates at Delhi that “the Burmah Oil Company, Limited, does not even pay income tax.” It is by such statements, however, that bad will is created, and it is of such ignorance of the immense organisation and hive of industry, and of employment of Indian and Burman nationals behind the façade of a British company, that there is born a spirit of prejudice to the façade which is a menace to that much more important interior whose existence is never realised.

The Finance Member of the Government of India, in correcting the suggestion I have referred to, gave some figures showing the value of your company's operations to the economic life of India, but, to emphasise what is behind the façade, and what the more important interior is, let me give our critics in India a few more up-to-date figures which they would do well to remember. And before giving these perhaps I might also point out to them that we are less fortunate than some of our foreign competitors in the Indian market, for while we must pay excise duties when our products leave our refineries they pay import duties only as and when theirs come out of bonded storage in the ports of India, and whereas we pay the maximum of United Kingdom-Indian rate of income tax on ascertained profits they pay income tax on profits calculated on the difference between their invoice costs and the net selling value realised by them in India.

DISBURSEMENTS IN WAGES AND TAXATION.

It is these and the following facts relative to 1929—the last completed record available—which I would like our critics to remember:—

In Burma and India our direct employees numbered about 38,000, and we disbursed annually about Rs. 24,300,000, or, say, £1,822,500, in respect of their salaries and wages.

Through the Tinplate Company of India, Limited, we provided employment for a further 3,000, who received in salaries and wages about Rs. 2,100,000, or, say, £157,500 annually.

Through Burmah-Shell Oil Storage and Distributing Company of India, Limited, a still further 11,503 were employed, principally in distributing the indigenous production, and wages and salaries for these required a further Rs. 9,214,000, or £691,050 annually.

Direct employment in India and Burma was therefore provided by our operations for some 52,503, at an annual cost in salaries and wages of Rs. 35,614,000, or £2,671,050.

Allowing the very low rate of four per family of numbers employed, one can take it that some 210,000 were supported by and are dependent on the continuance of our operations.

In the case of ourselves alone—and neglecting entirely the contributions by the Assam Oil Company, Limited, Burmah-Shell Oil Storage and Distributing Company of India, Limited, and the Tinplate Company of India, Limited—our products in the same year bore Indian State and semi-State and municipal taxation of one form or another, including income tax, royalties, and excise duties, of Rs. 32,665,258, or, say, £2,449,894.

The following disbursements made by Burmah-Shell represent the share for which indigenous production was responsible of its total disbursements in 1930—namely:—Rail and inland steamer freights, Rs. 13,880,000, or, say, £1,041,000; commission, &c., to Indian selling agents, Rs. 10,324,000, or, say, £774,300; wharfage and port dues, Rs. 1,917,000, or, say, £143,775; rents, rates, and municipal taxes, Rs. 504,000, or, say, £37,800; income tax, Rs. 705,000, or, say, £52,875; Independent State duties, Rs. 169,000, or, say, £12,675; salaries and wages, Rs. 10,057,000, or, say, £754,275; stores—mainly Indian-made tinplates—Rs. 8,625,000, or, say, £646,875.

PROVISION OF DIRECT AND INDIRECT EMPLOYMENT.

Surely it requires little reflection on, and little imagination directed to, the implications of these considerable figures to bring home to every one who is not blinded by prejudice how important is the rôle played by your company in providing direct and indirect employment in India and in Burma, and in contributing both directly and indirectly to the revenue requirements of the Indian Empire and to the traffic of its ports, its railways, and its inland waterways.

In conclusion, I would also draw our friends' attention to the fact that whereas tinplate plants here are unhappily either shut down or working short time, India has been given by our efforts, and meantime with no financial advantage whatever to ourselves, a tinplate industry which, despite many difficulties—mainly put in its way from outside—has been a complete technical success and, as I have said, is providing steady and good employment for some 3,000 Indians.

Finally, as regards prospects for the current year, I am sure you will agree with me that in the conditions I have so fully described I cannot be expected, as it would be extremely unwise, to make any prophecy with regard to the probable results for the current year.

I now beg to propose: “That the report of the directors and audited statement of accounts, including the balance sheet and profit and loss account to December 31, 1930, presented to the meeting, be received, approved, and adopted,” and I shall call on Mr R. I. Watson, your managing director, to second this motion. After the motion has been seconded an opportunity will be given to shareholders to ask questions or make any remarks. (Cheers.)

Mr R. I. Watson: I have much pleasure in seconding the motion.

The Chairman: Ladies and gentlemen, Are there any questions anyone would like to ask or any remarks to make?

Mr W. B. Arnott (a shareholder): There is one question, please, that I would like to ask—whether the oil that is being produced by the Burmah Oil Company is being converted into petrol?

The Chairman: I thought that everybody would know, or realise, that a very large proportion of the crude oil is converted into petrol. Mr Arnott: Is it converted into any particular brand or proprietary petrol, such as we get in Scotland or England, so that we may know that it is Burmah oil we are using?

The Chairman: If you go out to India you will find all Burmah petrol under the Burmah brand. We do not ship any to Britain at all. I have already moved the resolution, and I now put it formally to the meeting. Those in favour? Those against? Carried unanimously. (Cheers.)

DIVIDEND RESOLUTION.

Continuing, the chairman said: I have now much pleasure in moving: “That the dividend on the ordinary shares, recommended by the directors, at the rate of 12½ per cent. per annum (2s. 6d. per share), less tax, making with the interim dividend paid in November last 22½ per cent., less tax, for the year, be adopted, and that the

same be hereby authorised to be paid on June 12th, and that the balance of £612,517 11s. 11d. be carried forward.

Mr William Muirhead: I beg to second the motion.

The Chairman: I am quite sure, ladies and gentlemen, you are all in favour of that. (Cheers.)

The Chairman: I have now very great pleasure in moving the re-election of Mr Leonard Gow as a director of the company.

Mr William George: I beg to second the re-election of Mr Leonard Gow as a director.

The Chairman declared the resolution carried.

Mr R. I. Watson: I have now to move the re-election of Sir John Cargill as a director of the company.

Mr Robert Scott: I beg to second the re-election of Sir John Cargill. The motion was carried unanimously.

The Chairman: I thank you very much, ladies and gentlemen.

Mr D. J. Brown: I beg to propose the re-appointment of Mr James Herbert Wilson, C.A., as auditor for the current year.

Mr T. W. Davidson: I beg to second the re-appointment of Mr James Herbert Wilson.

The motion was approved.

The Chairman: That is all the business of the meeting, ladies and gentlemen. I thank you very much for your attendance.

VOTE OF THANKS TO THE CHAIRMAN.

Mr T. F. Donald: Ladies and gentlemen, We have again to-day had the pleasure and the privilege of listening to a very lucid and informing speech from our Chairman, who has as usual dealt very fully with the position and finance of the company. I think that looking to the conditions of the oil trade, and the results published hitherto by other companies who are engaged in the production and distribution of oil and petroleum, that very few of the shareholders can have been much surprised when the directors found themselves bound to recommend a smaller final dividend for last year. It is therefore all the more satisfactory to learn that on the figures they would have been quite warranted in declaring the same dividend as in the previous year, and that this is in a great part due to the economies in cost and to the increase in dividends received; but personally, ladies and gentlemen, I think it is much more satisfactory that, on the exercise of a very wise discretion, the directors determined to reduce the dividend and apply the funds at their disposal by strengthening the additions to reserves and the allocations to depreciation to still further strengthen the very strong and sound position of this company. (Cheers.) I am sure all the shareholders will approve of the conduct of the directors in that way.

The report says, and the Chairman has also stated, that naturally they are unable to give any forecast of the results of the current year. The directors, however, and the Chairman have drawn our attention to the many difficulties and complexities which have to be faced in that connection. I notice that the directors of the Royal Dutch Company in their report state that there is no reason at all for any feeling of panic in regard to over-production in America, and that pessimism is out of place in regard to the petroleum industry. Well, ladies and gentlemen, panic is certainly to be deplored at any time, and pessimism never helps very much, but there is such a thing as due and proper caution. Our Chairman has pointed out that the world is suffering from under-consumption and over-production of oil, and I think we must agree with him and approve entirely of his opinion that the very liberal contributions to reserve and depreciation out of revenue are, in all the circumstances, no more than reasonable precautions. If I may indulge in metaphor, the skilful mariners have foreseen very “dirty weather ahead,” but they have had the ship well “snuggled down,” and, I have no doubt, will bring her safely into port.

“A VAST INDUSTRIAL ORGANISATION.”

The Chairman has shown that the Burmah Oil Company is not a mere money-making machine, but a vast industrial organisation of world-wide importance. He has also drawn attention to the fact of the great good it has done towards the indigenous industry in India and the enormous sums we pay there in taxation, which has never been properly recognised in certain quarters. He has also drawn attention to the many benefits the company give to a very large number of the inhabitants of Burma and India. I hope, Sir John, that that part of your speech, or the whole speech, will be circulated in the proper quarters and given proper attention.

The management of a company of this nature is no sinecure, and I think we may congratulate ourselves that we have such a strong board, and that, in particular, we have a chairman of the business capacity and wide experience and the very high financial ability of Sir John Cargill. (Cheers.) The past year must have involved very great trouble and anxiety, and I am afraid there is no immediate prospect of any great improvement in that respect. It is little we can do to help, but I think I am entitled to give Sir John the assurance that, come what may, he will always have

the complete sympathy and unshaken confidence of his shareholders. (Cheers.) I beg to move a very hearty vote of thanks to our Chairman.

Mr Arnott called attention to the statement that the subscriptions made last year by the company amounted to £20,000 and suggested that that item might be taken into account in the policy to secure economy.

CHAIRMAN'S REPLY.

The Chairman: Ladies and gentlemen,—I do not think I need reply to that in any way whatever. (Hear, hear.) I will confine myself to expressing to Mr Donald personally, and to the whole of you, my great personal gratification for the extremely kind words in which he has proposed this vote of thanks to me, and for the extremely cordial way in which you have received those words. They make me feel, without doubt, that I have the complete confidence of my shareholders. (Hear, hear.) Now, there is no shutting our eyes to the fact that we are passing through very difficult and very trying times. I agree with what I saw Sir George Hunter said the other day, to the effect that he thought it was extraordinarily foolish to make anything in the nature of an optimistic statement unless one was absolutely sure he had good reason for doing so. That is an attitude I have always taken. I have been blamed in some quarters for being a pessimist. I do not agree. I am not that at all. I try to be cautious, and I try never to promise anything that I do not believe will be fulfilled. It is for that good reason that I have been extremely cautious in saying anything about the future. I can say this, however, that last year, as I reminded you, I told you that I was then submitting the finest balance sheet I had submitted during the 26 years I had been chairman of this company. At the conclusion of 27 years I can tell you—and all of you who have any idea of accounts can see it for yourselves—that the balance sheet I have submitted to you to-day is an even finer one than the one I submitted to you last year. (Cheers.)

That balance sheet shows that for years past, ever since I became, as I might call it, the Chancellor of the Exchequer of this company, 27 years ago, the finances of the company have been conducted on these lines: always live well within your income, depreciate your assets liberally, and lay aside plenty for amortisation of your wasting assets, and provide, as my old father dinned into my ears in my early days, always provide something for a rainy day that is sure to come. (Cheers.) These are the lines on which your company has been conducted for all these years, and to-day you see the results of them before you. We are still providing for the rainy day that has come, and that may possibly last for some little time.

EARLY DAYS AND PROGRESS.

There is one personal little thing to which I might refer, if I am not detaining you too long. When I was giving you these wonderful figures of the position to-day of the Burmah Oil Company my memory instinctively took me back to over 41 years ago, when I landed in Rangoon to join as an assistant the firm of Finlay, Fleming and Company, who for many years carried on the entire management of the company. When I landed there the Burmah Oil Company had a small, what I would to-day call almost a derelict, refinery, which was putting through 200,000 gallons of oil a month. There were three European and three American drillers. That was the whole white staff of the Burmah Oil Company of those days. You can imagine, when I cast my thoughts back to that and go over the 40 years that I have been connected in various ways with the management of the company, you can imagine what it means to me to realise the wonderful growth of the company, and, while it is a tremendous pleasure and pride to me to think of that, along with it is the sad fact that to-day I am the only one left in the Burmah Oil Company who was there when I went out 41 years ago. The men of vision and foresight and determination of character: my father and the late Mr Kirkman Finlay, our first managing director—these were the men who had implicit belief in the future of the Burmah Oil Company when they were struggling and could not make ends meet. My one great regret is that these and other pioneers of the industry have not been spared, as I have been, to see the great results that I have put before you to-day.

One word more I would just like to say—to take this opportunity of expressing my own personal deep gratitude to all those who are associated with me in the management and the running of this business, and especially to the managing director, Mr Watson, and the assistant managing director, Mr Whigham. They are “towers of strength” to me. This meeting to-day, I am sure, will be glad when I tell you honestly that it is going to hearten me and strengthen me in my resolve to do my very utmost to carry on the Burmah Oil Company in the successful career it has so long enjoyed. (Loud cheers.)

This concluded the proceedings.

J. AND P. COATS, LIMITED.

RESULTS OF A DIFFICULT YEAR.

MR J. O. M. CLARK REVIEWS THE POSITION AND PROSPECTS.

At the forty-first annual ordinary general meeting of J. and P. Coats, Limited, held, on Thursday, 11 inst., in the Christian Institute, 70, Bothwell Street, Glasgow, Mr J. O. M. Clark (the chairman), in the course of his remarks, said: It is just over forty years since J. and P. Coats, Limited, was established as a limited liability company, and, though I cannot speak from personal experience of the whole forty years, I have no hesitation in saying that the present depression in trade has affected a larger number of markets simultaneously than anything that has been experienced previously, and we have certainly been faced with a greater variety of difficulties during the last twelve or eighteen months than at any other time in the company's history.

WRITING DOWN OF STOCK VALUES.

The reduction in the profits last year is due to two causes: Firstly, to the general falling off in trade in practically all countries and, secondly, to the writing-down of stock values. You have heard it stated from the chair in recent years with almost monotonous regularity that our profits have been affected by the writing-down of stock values, and some of you might reasonably assume that we are most unskilful in the buying of our cotton. If such a feeling exists I want to dispel it. Recognising after the war that cotton was standing at an excessively high price, we have in our cotton buying adopted methods devised to reduce to a minimum any element of speculation. The result has been that the average price of our cotton has never been very far removed from the average price ruling during the year. The writing-down has been due to the fact that during the last twelve years the tendency of cotton prices has been downward. In the twelve years before the war, Egyptian cotton fluctuated between 16 pence and 6 pence, and in the twelve years after the war it ranged between 90 pence and 9 pence. To-day it is round 7½ pence.

LOWEST PRICES FOR THIRTY YEARS.

When I had the pleasure of addressing you last June cotton values had been stationary for some time, but from July onwards they declined steadily until about the end of December, when they reached their lowest level. The prices at which our principal cotton qualities were then quoted were not only the lowest since the war but the lowest for over thirty years. As you are probably aware, it has been our custom to value our stocks at the market price on December 31st, in the event of this figure being lower than the price actually paid for the cotton, and this revaluation includes not only raw cotton, but the material at the various stages of manufacture and finished goods both at the mills and in our depots.

NO INCREASE IN DEMAND DESPITE LOW PRICES.

The present period of stagnation in the world's trade has shaken one theory, which most traders had hitherto looked upon as beyond dispute, namely, that the cheaper the price the wider the demand. In the textile trade in particular, and I believe in many other industries, the fact that raw materials are now standing at considerably lower prices than they have done for years and that manufacturers have cut down their margins until they are frequently selling without profit merely to keep their factories going, has apparently had little or no effect in reviving business, and in our own case we have found that various price cuts have met with only modified response.

REORGANISATION OF COMPANY'S INTERNAL MANAGEMENT.

We have lately undertaken a scheme of reorganisation, in connection with the internal management of the company and its various subsidiaries, with a view to improving the control and increasing the general efficiency. While we have aimed at a certain amount of what is now called rationalisation we have also provided for the decentralising of much detail work which has hitherto been concentrated in Glasgow.

As a part of this new arrangement a separate company called the United Thread Mills, Limited (of which we hold all the shares), has been formed, which will operate the mills in Paisley and those in England as a single unit, and it is hoped that as a result our costs of production will compare more favourably with those of our foreign mills than is the case at present.

PROBLEM OF NATION'S HIGH PRODUCTION COSTS.

The high cost of goods manufactured in Great Britain continues to be a matter of serious concern to us, as it frequently compels us

to choose between permitting business to pass us, and transferring manufacture from this country to one of the many other countries where production costs are lower.

In either case a regrettable loss of employment to our mills in Great Britain is inevitable, and short working time, or a reduction in the number of workers employed, must perforce ensue.

Reduced output means idle machinery and plant, and standing charges per unit of output are thereby increased, so that costs rise still further each time trade is lost or transferred abroad. Thus the process continues; higher production costs and the loss of trade due to them succeeding each other in a vicious circle.

The uneconomic state into which a number of enterprises in this country have been allowed to drift is, I feel, a warning to others which must not be disregarded, and it is surely as much in the interests of the employees as of the shareholders that the management should take every reasonable step to avoid this happening.

THE FUTURE.

As regards the immediate future, it must be evident to you that we are confronted with a period of much uncertainty and not a little anxiety. Trade still shows no signs of revival. The prospect of any substantial recovery in the price of cotton seems remote, and in the absence of any improvement in the demand prices may easily fall still further should America produce a large crop this year.

We may make economies here and there, we may increase our sales to some extent by taking trade from our competitors, but these items are, after all, of trifling importance compared with a general improvement in even a few large markets. If there is one thing that is certain it is that the sewing cotton trade cannot improve by itself. Permanent improvement can only come when there is increased prosperity in other trades on which it depends.

LESSONS OF PREVIOUS CRISES.

The present economic crisis is not unprecedented. It is even doubtful if in respect to actual suffering it can compare with other crises that have occurred in the past, though it is probably more widespread by reason of the fact that owing to improved communications the countries of the world have become more interdependent than formerly. Anyone who will take the trouble to read accounts of the crises of 1893, of 1873, or of 1857 and earlier ones, will find that history repeats itself, that the same causes which contributed to produce the troubles of former days are at the root of our troubles to-day, that they were largely the results of boom periods accompanied by excessive optimism and spending following a war, and that the prices of basic products, after having been wildly inflated, were marked down, not by slow or continuous stages but by movements of extreme violence.

As the former depressions passed so will this one pass, and the readjustment to a lower level of living costs will itself solve many of the problems of inadequate consumption and in due course lead us back to a time of prosperity.

COMPANY READY FOR ANY IMPROVEMENT IN DEMAND.

Taking the long view I feel satisfied that our business is established to-day on a sounder and broader basis than it has ever been, and assuming that civilised people will continue to wear clothes and that no more satisfactory substitute for putting them together will be discovered than sewing cotton or sewing silk, and assuming further that peoples who are at present less civilised will gradually become more so, then there should be a steady and increasing demand for these articles, and J. and P. Coats, Limited, having mills established in so many parts of the world and having an efficient selling organisation, should be in as good a position to supply the demand as anyone else.

As you are already aware, we have decided to pay an interim dividend at the rate of 9d. per share for the first quarter of the current year, and I hope it may be possible to continue the quarterly payments at this rate, but I think it only fair to warn you that we must be guided by circumstances.

In January this year we elected Mr Ian P. Coats to a seat on the board. Mr Coats has been connected with the technical side of the business since January, 1920, and for some time past has been actively engaged in the management of several of our foreign companies.

The report was unanimously adopted.

SUEZ CANAL COMPANY. STATE OF SHIPPING AND THE DUES. POLICY OF THE BOARD.

The Marquis de Vogüé, presiding at the general meeting of the Suez Canal Company, in Paris, in the course of his speech said:—When explaining to you last year the grounds on which it had been decided to make the reduction in dues which came into force on September 1st, in spite of the shrinkage in traffic and the effect which this reduction was bound to have on the revenue obtained from the Canal, your board indicated its ever-present desire to associate the fortunes of the company with those of its clients, so far as this is possible, and it expressed its wish "to offer shipowners a gesture of solidarity which was particularly opportune and particularly awaited."

You know how this gesture was met. A number of British shipowners, urged by the Liverpool Steam Ship Owners' Association, demanded a larger reduction to take effect immediately and declared war against us, calling heaven and earth to witness to the justice of their cause and the iniquity of ours.

The existence of any economic or sentimental reason why we should comply with the demand of the shipowners acting together in this manner has been investigated by us most conscientiously and with all fairness.

TRADE IN THE FAR EAST.

As to any economic reason, as you were informed just now, we would not hesitate to put a new reduction into force if it were proved that it was to be the signal for a revival of traffic. However, nothing could be less certain than this. British commerce is complaining that it is no longer able to maintain the struggle against American and Japanese competition in the Far East, and it blames the Canal dues for this. Nevertheless these dues only represent a minute proportion (1 to 2 per cent.) of the value of the merchandise carried. A reduction, even if it were 30 per cent. as demanded, would not have any appreciable effect on the sale prices of these goods. Furthermore, statistics prove that the United States trade with the Far East has fallen off in the same proportion as the trade of the United Kingdom—i.e., about 33 per cent.—showing here again that the crisis is world-wide.

The present crisis, in fact, is not felt in the same way in every country. A detailed examination of our statistics reveals the fact that of the total shrinkage in traffic passing through the Canal 8½ per cent. is under the British flag and 6½ per cent. under the French and Dutch flags, whereas the others, German, Italian, Japanese, Danish, American, Swedish, etc., each account for between 1.8 per cent. and 0.4 per cent. Surely this can only mean that the falling off in traffic which is reported on every sea route represents, apart from the effect of the world crisis, a reflection of causes peculiar to each country. It has been proved in particular, from official documents, that the freight rates for sailings from British ports are higher than the rates charged at any other ports. One is thus entitled to think that the personal mistakes of Great Britain's commerce, repeatedly given prominence by the most authoritative opinions, perhaps account for more of its disappointments than the Suez Canal dues. A reduction in these dues therefore would be practically ineffectual.

SHIPPING TROUBLES.

Failing any economic reason, could a reduction be defended on sentimental grounds at least? We are, of course, sensible to the distress of shipping, as we are to all the distress engendered by the difficulties of the present time, more so, in fact, by reason of the close ties which unite us to users of the Canal. Nothing would please us better than to remedy their troubles, if we could do so without sacrificing the legitimate interests of the shareholders, whose protection is our first duty. We are able to see clearly the loss which our shareholders would suffer by even a slight reduction in rates, but can we believe that it would satisfy the shipowners? The immediate past gives us the answer.

If there is no reason in fact or reason in sentiment to justify a further reduction forthwith, it must be admitted that external pressure has no power to compel us to introduce it. We attach—wrongly, some would say—great value to our independence as guaranteed to us under our Charter and as exercised under the sovereign control of the general meeting. Recalling the troubled beginnings of our undertaking, the difficulties of every kind with which it met, and the blind opposition of the very interests whose betterment it promoted, we are entitled to say that this independence was hard won. In defending it we are not striving for ourselves alone.

We are at the same time defending the cause of all companies of a private character, whether entrusted or not with a service of general interest, against the unjustifiable and increasingly acute

interference of Governments or of public opinion. In resisting, as we do to-day, the pressure which certain steamship companies wish to exercise, or cause to be exercised, on us, we are perhaps preparing their own defence for to-morrow.

BOARD'S UNANIMOUS DECISION.

While your board, however, has decided that it is unable at the moment to make a further reduction in dues, and I am glad to be able to say that this decision was arrived at unanimously, it is far from considering any change in the policy which it has, with your approval, always followed in the past. It is a fixed principle with us, and, subject to your assent, of which we have no doubt, our very firm intention, always to divide between the shareholders and the shipowners using the Canal, the surplus revenue derived from the normal expansion of world trade. This policy has enabled us during the last fifty years to give shipowners the advantage of reductions in dues amounting in all to 60 millions sterling, while shareholders have seen their income increase by 59 millions sterling.

While the development of commerce is now at a standstill, it is certain that an expansion will set in again. The only uncertain point is when this will be. There are already some signs of improvement—namely, a check in the fall of wholesale commodity prices in Europe, a resumption of certain interchanges between East and West, a slight increase in freights, all these being little patches of blue in a black sky. As soon as circumstances allow of it we are resolved to return to the paths we trod in former times, which, no one can doubt, brought prosperity and high repute to our company.

LOYAL COLLABORATION.

This is our policy now more than ever. It has been the basis of our attitude in the incidents to which I referred a moment ago. Your board is absolutely unanimous on this question, and I am pleased to pay a tribute to the loyal collaboration of those of its members who more particularly represent the British interests, as well as to the clearness with which they have always upheld, even against their compatriots or friends, the views of their French colleagues, which they regarded as favourable to the main interests of the company. In this respect we owe special thanks to Lord Inchcape, our vice-chairman, for his happy intervention in the discussion which arose with the shipowners.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

NITRATE OF SODA POSITION.

The forty-third general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held, on the 9th instant, at Winchester House, London.

Mr A. W. Bolden (chairman and managing director) said that the gross receipts of £1,350,454 were £646,874 less than the previous year. In nitrate, copper and tin one had to go back many years to find a worse position. They carried only 77,000 tons of copper bars compared with 137,000, and there was also a considerable reduction in tin. Of the 30 oficinas served by the company's system, 12 were elaborating nitrate at the beginning of the year, but by the end of the year only one was making nitrate. As the result of introducing every possible economy working expenses showed a decrease of £382,056. The profits for the whole undertaking were £483,343, and a final dividend of 2 per cent. on consolidated ordinary stock, making 4 per cent. for the year, was recommended, leaving £250,838 to be carried forward.

The various companies concerned in the Chilean nitrate of soda industry had practically all signified their acceptance of the terms of Cosach for merging their businesses into that company, which now controlled 95 per cent. of the whole productive capacity. It was claimed that a considerable saving would be effected by this means and an improved situation for Chilean nitrate of soda created in the world's markets. The great depletion in the nitrate industry in their region had had a very serious effect on the business and the people of Antofagasta. While recognising that the "raison d'être" of Cosach was largely the production of nitrate by the Guggenheim process, to effect this might take some time on pampas other than Tocopilla, and therefore the British railways asked that they should be helped by nitrate being produced by the Shanks process on the pampas served by those railways. It was to everyone's advantage that in the interregnum those railways should be given some reasonable minimum traffic in order that they might keep their properties in good shape and receive some return on their business.

At long last the decrees had been signed giving effect to the agreement for the reorganisation of the business of the Bolivia Railway Company.

The report was unanimously adopted.

CALCUTTA TRAMWAYS COMPANY, LIMITED.**"INTENSIFIED AND INDISCRIMINATE COMPETITION."**

The ordinary general meeting of the shareholders of the Calcutta Tramways Company, Limited, was held, on the 10th instant, at 1, Queen Victoria Street, London, Mr John G. B. Stone (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The falling off in the total traffic receipts of £66,631 is due to the world-wide trade depression severely felt in Calcutta, to the prevailing political conditions, including rioting, and, lastly, to the intensified and indiscriminate omnibus competition.

The result is a working profit on the tramways of £131,113. I need hardly say how very much we regret that the result of the year's working does not admit of the payment of a dividend on the ordinary shares, the more so in view of the fact that it is the first time for thirty years that no distribution on these shares has been made.

Dealing now with the omnibus position, whereas in Great Britain, on the Continent, and in the United States of America it has been recognised that unnecessary and wasteful competition in public passenger services is no good to the community, the licensing authorities of Calcutta have adopted a policy of intensified competition. It became impossible to continue to run our omnibuses at a loss, which you will see during the year 1930 amounted to £35,000. We therefore had no alternative but to order the closing down in February 1st last of our feeder omnibus services.

Now, as to the future, we realise that tramways require to be modernised to meet the new conditions now prevailing, but we have been handicapped by the difficulty arising from the terms of our concession, which gave the municipality the right of purchase in 1931, renewable thereafter at periods of seven years.

Summarised, the concession is in perpetuity, but with the right of purchase by the municipality as a going concern at seven-year periods. Having passed the first period, your directors decided to commence the modernising of the tramways.

With the re-establishment of normal conditions there seems no reason why the tramway business should not resume its former prosperity, as the curve showing returns in cash receipts, in spite of the reduction in fares, is rising in comparison with the same period last year.

The resolution was carried unanimously.

STRAITS PLANTATIONS, LIMITED.**RESULTS OF A DIFFICULT YEAR.**

The thirty-second ordinary general meeting of the Straits Plantations, Limited, was held, on the 8th instant, in the Council Room of the Rubber Growers' Association, 2, 3 and 4, Idol Lane, London, Mr J. McNeile Miller (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—We have during the past year produced 6,806 tons of copra, this being some 400 tons in excess of our production for the previous year. The crop of nuts averaged 2,736 per acre of the acreage in bearing, but the average number of nuts required per ton was disappointing, being 4,369, as against 3,675 for the previous year. Shortage of rain seems to have been responsible for the nuts running so small. The cost per ton works out at £8 3s. 6d. f.o.b., and the all-in cost, exclusive of freight and selling charges, at £8 9s. 8d., both of which, I think I am correct in stating, constitute a new low record in the history of the company, and compare with the respective figures of £9 7s. 6d. and £9 14s. 3d. for the year 1929-30.

Unfortunately, the price obtainable for our commodity has been extremely unsatisfactory throughout the year, the average net price obtained showing a falling off of £4 12s. 4d. per ton as compared with last year, and of no less than £6 15s. 3d. per ton as compared with the year before that.

During the twelve months under review the average market price c.i.f. per ton of copra was £17 8s. 11d., and as we managed to sell our crop at an average c.i.f. price of £17 18s. 6d. we cannot blame either ourselves or our agents for missing the best of a very bad market.

As it is, we have secured, including the amount received for interest on our investments, a net profit of approximately £36,500, which represents a return of 8½ per cent. on our paid-up capital.

After careful consideration, the Board have come to the conclusion that the best recommendation they can make is that set out in the report—namely, to transfer £5,000 to reserve and declare a dividend at the rate of 6½ per cent. If this meets with your approval, we shall carry forward some £2,000 more than the sum brought in from last year's accounts.

The crop for the current year is estimated at 6,650 tons, out of which we have sold 1,520 tons at an estimated average net price of £9 13s. 4d. per ton.

The resolution was carried unanimously.

W. J. BUSH AND COMPANY, LIMITED.**FINE CHEMICALS INDUSTRY.**

The thirty-fourth annual general meeting of W. J. Bush and Company, Limited, was held, on the 8th instant, at Great Eastern Hotel, London.

Mr James M. Bush (chairman and one of the managing directors), in moving the adoption of the report and accounts, said:—I do not propose to take up your time by expounding at length or in detail on the effect of the prevailing world-wide trade depression on our business. I feel, however, that I should make one exception, and refer in particular to our position in Australia, where we have large interests. The fall in the value of the Australian £ has brought about certain complications in preparing our accounts. With the approval of our auditors, we have taken our Australian assets at par, but at the same time have created a special Australian exchange contingency reserve to cover depreciation of these assets, which, we hope, will only be temporary.

We have many old and loyal customers in Australia, and we sincerely hope, and have the greatest confidence, that eventually the Australian people will overcome their present financial troubles.

This company was the first to take up the manufacture in Great Britain of a large number of important fine chemicals, many of which were badly needed during the war period. We realised at the time that our processes were not commercially efficient under peace-time and Free Trade conditions. We had confidence, however, that the Government would not let us down and involve us, and other chemical manufacturers similarly placed, in a big loss of capital. Under the conditions afforded by the Key Industries Section of the Safeguarding of Industries Act, we have had time in a number of cases to increase our efficiency to a point which we have reason to believe is equal to that reached by the best Continental practice.

The field is so vast, however, that we can only regard this industry as not yet fully developed, and much has to be done before this country reaches this position. In our opinion, the discontinuance of the Key Industries Section of the Safeguarding of Industries Act would be a great discouragement to English chemical manufacturers, would inevitably involve big capital losses, increase unemployment, and jeopardise national safety.

As trade depression has become still more accentuated since the commencement of the current year, we cannot look forward to an early revival of the average profits we have made during the past few years.

The resolution was carried unanimously.

ELECTRIC SUPPLY CORPORATION**PROGRESS OF UNDERTAKING.**

The twenty-ninth annual general meeting of the Electric Supply Corporation, Limited, was held, on the 8th instant, at Winchester House, London, E.C.

Mr John G. B. Stone (the chairman) said that in their own undertakings the net increase in lamp connections was slightly greater than in the previous year, and in the case of their subsidiary companies they showed a decided step forward. In the Central Sussex group the bulk supply of electricity did not become available until right at the end of the year, and until they had actually obtained it, they had had to hold back the connection of new consumers so as to bring them in on the new system and not on the old.

Stepping was still waiting for the bulk supply and standardisation of the system, but the Haywards Heath, Uckfield, Hassocks, and Hurstpierpoint areas were now supplied in bulk from the Central Electricity Board, enabling them to distribute energy at standard frequency and pressure. The figures shown for the other subsidiary companies indicated an extremely healthy rate of progress. At Chelmsford considerable expenditure had been made towards the cost of changing the system. The work was being carried out under the terms of an agreement between the corporation and the Corporation of Chelmsford.

The receipts for the year, at £96,029, were £544 more than in 1929. That was in spite of a drop of 787,822 units and £2,997 in the Dumbarton revenue, arising from the depressed state of the shipbuilding industry of the district. Their working expenses, at £61,571, had increased by £1,205 over the figure for the previous year, due in great part to the heavy local rates. They proposed to transfer to the repairs, renewals and depreciation fund £5,436, bringing it up to £67,000, and to distribute a final dividend of 7 per cent. on the ordinary shares, making 11 per cent. for the year. Considerable progress had been made in development of their various subsidiary companies, especially in the Central Sussex area.

They had made a small profit of £5,018 on construction work carried out for their subsidiary companies and that sum has been carried to the investment reserve account as a reserve against their investments in those companies.

The report and accounts were unanimously adopted.

TELEPHONE RENTALS, LIMITED.**POSITION STRENGTHENED AND DIVIDEND INCREASED.****STABILITY OF THE BUSINESS.**

The second ordinary general meeting of Telephone Rentals, Limited, was held, on the 10th instant, at the Cannon Street Hotel, London, E.C.

Mr. Fred. T. Jackson (the chairman), in the course of his speech, said: I would remind you that on comparison with last year it must be borne in mind that, although your company received a full year's dividends, the administration expenses charged against such revenue only represented expenses for five months of the year, expenses for the previous seven months having been taken up by the Telephone Manufacturing Co., Limited, then holders of the subsidiary companies' shares.

The profit for the year amounts to £62,520, as compared with £64,274, from which has to be deducted income-tax amounting to £14,190, giving a net available balance of £48,330, which, added to the balance of May 31, 1930, of £38,747, gives us a total of £87,077. From this figure has to be deducted the final dividend for the year May 31, 1930, less tax, of £11,625 net, and the interim dividend paid on account of the current year, absorbing a similar amount, totalling together £23,250, which gives us an available balance of £63,827. Of this sum we have passed to general reserve £30,000; the dividend of 3½ per cent. which we recommend (making 6 per cent. for the year) will absorb £16,275 net, leaving £17,552 to be carried forward to next year.

A STRONG BALANCE SHEET.

I think you will agree that the balance sheet we have placed before you is a very satisfactory one, particularly taking into consideration the extraordinarily difficult time we are living in, and that, although the balance sheet for the year ending May 31, 1930, was a strong one, the one before you now is immensely stronger, particularly in reference to the cash position and the small liabilities.

For the past year we appropriated over £2,000 more than in the previous year to our depreciation and special reserves, and the combined reserve accounts now amount to over £376,000.

During 1930 our revenue from rentals increased by a sum running into five figures. This achievement is very satisfactory, for the year 1930 has been one of the most difficult within my memory. One can say that, with the exception of those trades which have benefited from the McKenna and Safeguarding Duties, the year has been one of unparalleled depression. Yet, in spite of this, we have held our own, the profit earned being only very slightly less than that for the calendar year of 1929, and this profit has been arrived at on a really conservative basis.

THE OUTLOOK.

The stability of our business is such that I am confident that the results of our trading during 1931 will not be far short, if at all, of the results now before you. I can say this with the knowledge gained over the first five months of the year.

The fact that the general business of the country, as a whole, is in a worse state than it was last year cannot be denied, but I feel that it is worse than it need be. There is a general tendency to sit back and say there is a world-wide slump as an excuse for bad trade instead of working at greater pressure and trying to get more business, which would be of benefit to all industry.

The sales side of our New System companies at a time like this works with greater intensity and leaves no stone unturned in its endeavour to get new business. Yet here and there outside our organisation I am continually meeting young men with a strong disinclination to work as they should do. They think that from 10 o'clock to 4 o'clock is a good day's work. They want longer and longer holidays. Business was easy twenty-five years ago compared with conditions to-day. Is the period coincident with keen competition the time to take it easy? I say most definitely "No." It is the time for greater exertion. The class I am criticising are not drawers of the dole. They are all in the great middle class, and unless they acquire the will to work harder, we shall never get less unemployed.

INDIVIDUALISM IN BUSINESS.

Our business is one of the few which provides apparatus necessary to almost every trade and profession in the country. In consequence, we are in touch with all industries. There is a great deal to be learned from this contact. Apart from those trades which are protected, we cannot say that any one particular trade is doing better than another, but we do find this: the businesses which are doing best are those which are not so big that the men at the head cannot keep in touch with all the principal activities in development and organisation. We find that those in control of these businesses are very ready to take advantage of any apparatus the

use of which will improve their organisation and result in economies. A New System telephone installation will save its annual cost over and over again.

It is not possible to abolish individualism or personality and still retain a successful business. The moderate-sized businesses are weathering the storm best because the head of the firm usually regards the business he is in as himself, and works for the pleasure of achievement rather than for money. Money follows achievement, but never place money first. The result will be neither. Unfortunately, the number of these moderate-sized efficiently-run businesses is all too small, but they do show what can be done in bad times. We consider that it is still necessary to adopt a conservative attitude in the distribution of dividends, but, in spite of the bad times, we have increased this by 1 per cent.—perhaps a modest increase, but a good augury for the future.

The report and accounts were unanimously adopted.

LOBITOS OILFIELDS, LIMITED.**IMPROVED RESULTS.**

The twenty-third annual general meeting of Lobitos Oilfields, Limited, was held, on the 11th instant, at Winchester House, London, E.C.

The Rt. Hon. Lord Forbes, P.C. (the Chairman), said that he was glad to be able to submit accounts which showed an improvement as compared with the preceding year. The operation of the steamers during the past year was successful, and the profits, considering everything, were wonderfully good. The prospects for the immediate future, however, were not good. They doubted if the ordinary rate of depreciation was sufficient, believing, as they did, that the valuation of the steamers should stand, as far as practicable, at a definitely realisable figure, and the directors had, therefore, transferred £100,000 from reserve account to a special tank steamers' reserve account.

The net result of the year's operations was a credit balance of £182,000 as compared with £125,000 for the preceding year, which allowed them to recommend a dividend of 10 per cent. and to make liberal reservations, including the transfer of £50,000 to the general reserve account. By carrying forward an adequate sum, and having substantial liquid reserves, the board would be in a better position than would otherwise appear likely to continue payment of dividends without entire dependence upon the results of a particular year, and also to re-undertake expansion the moment such a course appeared desirable. Conditions generally had greatly changed for the worse since the termination of the financial period. World production had shown a large increase during the past five months, but perhaps the chief menace to better prices came from Russia. The conclusion to be drawn was that Russia was deliberately trying to nullify the effects of curtailment made elsewhere. She was also extending her shipments to and disorganising markets in all parts of the world. The company was also threatened in another direction by the large increase in the production of light oils and the reduced premium obtainable for the high grades such as theirs.

As to prices, during the past year the Mid-Continent posted price of light crude oil varied between \$1.45 and \$1.20 per barrel, but from 95 cents in November it had fallen to 33 cents now, which was considerably below the company's costs. Despite the difficult conditions, the directors took the view that a proved field such as that of Lobitos, producing high-grade oil on the seashore in favourable conditions, fortified by a strong financial position, would be able to stand against the storm as well as any other oil-producing enterprise.

The report was unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd."

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GEDULD PROPRIETARY MINES, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

YEAR OF PROGRESS AND IMPROVED EFFICIENCY.

At the thirtieth ordinary general meeting of shareholders in the Geduld Proprietary Mines, Limited, held at Johannesburg, on May 15th, Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks, said:—The past year was again one of progress and improved efficiency in many directions, and the net result of operations was an increase of £18,261 in the dividends paid and an increase of £12,322 in the unappropriated balance carried forward. The ore mined exceeded our previous record by 23,545 tons, and the proportion sorted out as waste and discarded was increased to 18 per cent., so that 1,011,000 tons were milled, which was nearly 3,000 tons more than the record set up in the preceding year. The total production from this tonnage was 322,883 fine ounces of gold, equivalent to slightly under 6·4 dwt. per ton milled, and 26,195 fine ounces of silver. The total revenue was £1,369,152, equivalent to 27s. 1d. per ton milled, which was respectively £15,330 and 2·7d. above the corresponding figures of the previous year. Working costs, at the very creditable figure of 16s. 4½d. per ton milled, show a reduction of 1½d. The working profit was £541,286, and the addition of sundry revenue of £29,592, derived chiefly from interest on surplus funds and claim licences brought the gross profit to a total of £570,878, which shows a satisfactory improvement of £22,102 on the previous year.

After providing £73,799 for taxation and £2,179 for donations to sundry charities, there remained £494,900 to be carried to the appropriation account, raising the amount in that account to £685,172. Out of this a further £6,000 was set aside towards the company's proportion of the outstanding liability under the Miners' Phthisis Act; £474,778 was distributed in two dividends totalling 32½ per cent., which was £18,261 or 1½ per cent. more than for the previous year; and, after meeting the directors' additional remuneration in accordance with the Articles of Association, there remained to be carried forward to the current year's accounts a balance of £202,594, which was £12,322 more than the amount brought forward from the 1929 accounts. This balance was represented as to £111,636 by cash and as to £90,958 by cash assets. These figures do not, of course, include the balance of capital funds which are available for subscription of shares in the East Geduld Mines, Limited. You will see from the balance sheet that that figure stood at the end of the year at £248,476, which is sufficient to meet our commitments in this connection.

DEVELOPMENT WORK—ORE RESERVES.

The development work completed during the year amounted to 15,771 ft., which, though slightly less than in the previous year, more than sufficed to maintain the ore reserves position. The recalculation at the end of the year disclosed an increase of 100,000 tons for the year and practically no change in value or width, the total being 6,000,000 tons of an average value of 6·6 dwt. over an estimated stoping width of 59 ins. In addition to our own development, 12,459 ft. of development work was done for our eastern neighbour, the East Geduld Mines, Limited, all the ore and waste rock from which was hoisted through your mine. This work, as well as that of the three preceding years, has produced a considerable tonnage of good grade ore from development faces which, in accordance with our working agreement with East Geduld Mines, Limited, becomes the property of your company. The milling of this ore has conserved to a corresponding extent your own ore reserves and has helped materially to provide a reasonable recompense for the very valuable services and facilities your company has rendered to the East Geduld Mines, Limited.

CURRENT YEAR'S OPERATIONS.

During the first four months of the current year operations have proceeded on about the same scale as last year and the results obtained have been in every respect very similar. The gross profit for the period is approximately £185,500, which is almost identical with that for the corresponding period of last year.

Turning now to the development done in the property of the East Geduld Mines, Limited, in which company we hold, as you know, a very substantial share interest, I am very pleased to be in a position to inform you that the work disclosed highly payable values throughout the year, a particularly gratifying feature being the exposure of the richest ore in the deepest workings. As already mentioned, 12,459 ft. were developed during the year, bringing the total since work commenced in January, 1927, to 60,129 ft. The ore reserves at the end of the year showed the very substantial increase of 1½ million tons and a quarter of a dwt. in value to a total of 3,900,000 tons of an average assay value of 7 dwt. over an

estimated stoping width of 58 ins. Apart from a very difficult period when the inflow of water reached a rate of over 2 million gallons per day, the sinking of the first vertical shaft has proceeded steadily and expeditiously to the reef, which was intersected about six weeks ago. The erection of the reduction plant, which will be capable of treating about 60,000 tons per month, has also progressed quite satisfactorily and at the moment there is every reason to expect that all arrangements for the commencement of production will be completed in about two months' time, which will be earlier than I indicated when addressing you a year ago. I am sure you all will agree with me that in our holding of about 35½ per cent. of the East Geduld capital we have a very valuable asset; in fact, the present market value is equivalent to about £1 per Geduld share.

The report and accounts were adopted.

EAST GEDULD MINES, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

HIGHLY ENCOURAGING RESULTS.

At the fourth ordinary general meeting of shareholders in the East Geduld Mines, Limited, held at Johannesburg, on May 15th, Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks, said:—It gives me pleasure to review to-day another satisfactory year in the company's short history, in the course of which the sinking of the No. 1 Vertical Shaft has continued successfully and expeditiously; the ore developed has shown a substantial improvement both in percentage of payability and average value; the ore reserves have been greatly increased in quantity with a higher average value, and satisfactory progress has been made with the erection of plant and equipment preparatory to starting milling operations.

EXPENDITURE AND CAPITAL.

The total expenditure from the inception of the company to the end of last year was £930,996, which includes £347,833 for development work and other expenditure as detailed in the balance sheet before you. At the end of this period the capital called up amounted to £980,988 and sundry revenue totalled £6,171 net, so that there was a balance of £56,163, of which £3,306 was represented by cash and the remainder by cash assets. At that date the uncalled capital amounted to £519,012, which it is anticipated will approximately suffice to cover the cost of bringing the mine to the producing stage. As far as we can see at present, there will be an over-expenditure in connection with shaft sinking, due to the excessive amount of water encountered in the course of sinking operations, but there will be savings in other directions, and the net over-expenditure should not be more than about one per cent.

THE YEAR'S WORK.

Turning now to the work done during the year, I am sure you will have been highly gratified with the results communicated to you through the medium of the periodical progress reports. The development footage for the year amounted to 12,459 feet, of which 8,860 feet on reef were sampled and 5,065 feet or 57 per cent. were found to be payable, the average value being 618 inch-dwt. These results were 15 per cent. higher in payability and nearly 24 per cent. higher in average value than those for the preceding three years from the commencement of operations. It is a particularly gratifying feature that the highest grade ore disclosed as yet is contained in the deepest workings. For example, on the 6th level, which is the lowest level yet opened, there had been driven up to the end of last month 880 feet on reef which disclosed an average value of 14·6 dwt. over 47 inches, equal to 688 inch-dwt. During the four years that work had been in progress up to the end of last year a total of 60,129 feet of development were accomplished, 41,865 feet on reef were sampled and 18,855 feet were found to be payable, the average value being 531 inch-dwt.

ORE RESERVES.

At the end of the year the ore reserves amounted to 3,900,000 tons of an average value of 7 dwt. over an assumed stoping width of 58 inches, which was an increase of 1½ million tons in quantity, a quarter of a pennyweight in value and an inch in width as compared with the figures given a year ago.

During the first four months of the current year a further 2,902 feet were completed and 1,630 feet on reef have been sampled of which 935 feet or 57 per cent. have been found payable, the average value being 638 inch-dwt. This brings the grand totals to 63,031 feet developed, 43,495 feet sampled, 19,790 feet payable, with an average value of 536 inch-dwt.

There has been a progressive decrease in the rate of development during the current year, and it has now been almost suspended until the shaft is completed.

As you are aware, the shaft intersected the reef at the end of March. It should reach its final depth of 3,225 feet by the end of this month, and thereafter the cutting of shaft stations, ore passes and bins, pump stations and surmps have to be completed.

It is expected that everything will be in readiness for the commencement of hoisting operations within the next two months, which will be earlier than I anticipated when addressing you a year ago.

The erection of the reduction plant, which will have a nominal capacity of 60,000 tons per month, has proceeded smoothly and steadily throughout the year and, provided the remaining work progresses according to schedule, as we confidently expect, crushing operations should commence earlier than anticipated, possibly within the next two months.

GOLD PRODUCING PROSPECTS.

Under the lease contract with the Government we had five years in which to decide whether we would sink a vertical shaft and erect a reduction plant; however, in view of the success that has attended every phase of our operations, it seems extremely likely that not only will this equipment have been installed, but we will be producing gold on a large scale in just over four and a half years from the inception of the company. At the same time I feel that shareholders should be warned not to expect too much just at the start. A large labour force has to be gathered and trained, stopes have to be opened out, all plant and equipment has to be tuned up to capacity and there is likely to be considerable absorption of gold in the plant during the early stages. It seems likely, therefore, that the first declaration of output may not take place till the end of September, and that it may take until about the end of the year to get the mine fully into its stride and producing normal results. Shareholders will, I think, agree with me that the results achieved to date are highly encouraging from every point of view and indicate a successful and prosperous future.

The report and accounts were adopted.

THE MODDERFONTEIN DEEP LEVELS, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

GRATIFYING DEVELOPMENT FEATURE

At the thirtieth ordinary general meeting of shareholders in the Modderfontein Deep Levels, Limited, held at Johannesburg, on May 15th, Mr P. M. Anderson, chairman of the company, presided and in the course of his remarks said: The past year's results have been in keeping with the high standard we have been accustomed to, except that, owing to the lower ore reserve value, there was a reduction of about 9½d. in the yield per ton milled, which was reflected in a reduction of 5 per cent. in the dividend.

The ore milled during the year amounted to 530,400 tons. The net result was a revenue of £1,171,031, equivalent to 44s. 1·88d. per ton milled, which was £23,573 below that of 1929 when the average per ton milled was 9·55d. higher. A slight increase took place in the working costs due to an increase in the labour force, the gross working expenses per ton milled being 15s. 9·86d., which, however, was the lowest rate achieved by any gold mine on the Witwatersrand.

PROFIT AND DIVIDEND.

The resultant working profit of £751,431, equivalent to 28s. 4d. per ton milled, was £25,971 or 11d. per ton less than that for 1929. Owing to the fall in interest rates during the year sundry revenue was less at £16,096, bringing the gross profit for the year to £767,527, or £27,392 less than in 1929. Out of this £105,865 was paid in taxation, and a total of £1,616 was donated to sundry charities, leaving a net profit of £660,046 to be carried to the appropriation account, which, together with the balance brought forward from the previous year's accounts, gave a total of £803,318 to be dealt with. A further sum of £14,000 was set aside towards the company's share of the outstanding liability under the Miners' Phthisis Act, and, after providing for two dividends totalling 130 per cent., or 6s. 6d. per share, a balance of £138,318 was carried forward. The dividend distribution for the year was lower by 5 per cent., or 3d. per share, than those of the preceding five years. The balance carried forward to the current year's accounts is represented as to £100,150 by cash and as to £38,168 by cash assets.

DEVELOPMENT WORK.

The development work done during the year totalled 6,331 feet and was concentrated even more on the upper leaders than in the previous year, the percentage being 91 in 1930, compared with 80 per cent. in 1929.

Taken as a whole the occurrence and value of the upper leaders is so erratic that it is not possible to estimate the tonnage that will ultimately be mined from these sources, but results to date make it obvious that the value will not be high.

A very gratifying feature was the opening up of a further tonnage of good grade ore on the main reef in the course of splitting up areas which had previously been regarded as unpayable.

The ore reserves as recalculated at the end of the year consist of 2,050,000 tons on the main reef of an average value of 8·6 dwt. over a stoping width of 79 inches and 100,000 tons in Hanging Wall Leader blocks valued at 4·8 dwt. over a width of 60 inches. The Main Reef reserves thus showed a decrease for the year of half a million tons and a fifth of a pennyweight in value, while the Leader reserves were 10,000 tons less but a tenth of a pennyweight higher in value than when calculated a year previously.

CURRENT YEAR'S OPERATIONS.

During the first four months of the current year the scale of operations has been fully maintained but, as was to be expected from the further decrease in the value of the ore reserves, the revenue per ton of ore treated has been about 1s. below the 1930 average. Working costs have been slightly higher at about 15s. 11d., so that the net result of the operations for the period is a working profit of about £6,000 less than that earned in the corresponding period of last year. Development operations have continued to be confined mainly to the prospecting of the Upper Leaders, with the results similar to those of the past.

The report and accounts were adopted.

Government Returns, &c.**NATIONAL ACCOUNTS.**

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended June 6, 1931, amounted to £8,329,100 against ordinary expenditure of £55,263,500. After allocating £610,000 to Sinking Fund and having allowed for an decrease in Exchequer Balances of £211,508, the week's operations, as shown below, increased the National Debt by £46,947,000 to £7,665,852,000:—

	10 Bars bought	451,400		11 Sovs. for export	16,000
	Sovs. released	100,000		Bars sold	50,848
	11 Bars bought	1,600,900			
Total	3,469,163		Total	151,042	
Net arrivals, £3,318,121.					

Messrs Samuel Montagu and Company write on June 10, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £151,875,829 on the 3rd instant (as compared with £151,017,471 on the previous Wednesday), and represents an increase of £4,250,207 since December 31, 1930.

In the open market yesterday bar gold was available to the value of about £1,136,000, of which £1,038,000 was from South Africa, £43,000 from West Africa, and £55,000 from the Straits Settlements. There was again some competition from Switzerland, but bids from that quarter were limited to 84s. 11½d. per fine ounce, and at the fixed price of 84s. 11½d. the Bank of England was able to secure about £1,038,000. Demand for Home and Continental trade absorbed about £23,000 and £65,000, respectively. An important feature of the week was the acquisition by the Bank of England on the 8th and 9th instant of bar gold from Germany amounting in all to about £1,900,000.

Movements of gold at the Bank of England during the week have resulted in a net influx of £3,374,769. Receipts totalled £3,469,163, of which £1,150 was in sovereigns received from abroad, £100,000 in sovereigns "released," and £3,357,947 in bar gold, whilst withdrawals consisted of £35,000 in sovereigns taken for export and £59,394 in bar gold.

SILVER.

The market has presented no fresh features, the tone during the past week being quiet and fluctuations in prices very small, quotations varying only between 12½d. and 12¾d. The Indian Bazaars have been rather inactive, and operations have been mainly on behalf of America and China. The latter has given support, making purchases to cover bear sales, but America has been a free seller of silver for near delivery on most afternoons. There are at present no indications of any important movements.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 1st instant to mid-day on the 8th instant:—

IMPORTS.		EXPORTS.	
	£		£
U.S.A.	43,112	British India	23,173
Mexico	93,540	Other countries	15,086
Canada	10,500		
Other countries	6,553		
Total	153,705	Total	38,259

HYDRO-ELECTRIC SECURITIES CORPORATION.—The earnings for the month of March, 1931, of the subsidiary and affiliated public utility companies of the Standard Gas and Electric Company in which, directly or indirectly, Hydro-Electric Securities Corporation has made its principal investment are as follows: Gross earnings, \$13,529,164, decrease as compared with March, 1930, \$353,864; net earnings \$6,598,399, increase \$20,195; aggregate gross earnings for the 12 months to March 31, 1931, \$156,208,014, decrease as compared with the corresponding period last year \$2,674,241; aggregate net earnings \$73,606,608, decrease \$1,577,618. The figures for each period are for properties now comprising the system; the earnings of properties sold are not included.

INDEPENDENT INVESTMENT COMPANY, LTD.—The report for the year ended March 31, 1931, shows net revenue for the year, after deduction of income tax, amounted to £21,856, which compares with a net revenue of £20,245 for the preceding year. Preference dividend for year, less income tax, absorbed £9,975, against £10,080. The dividend on the ordinary stock is 5 per cent. for the year, less income tax, absorbing £5,636, comparing with a dividend of 7½ per cent. for preceding year, less income tax, which absorbed £9,849. The carry forward is increased from £19,804 to £25,048. During the year Mr. Ian Macpherson was appointed to a seat on the board, and Mr. T. J. Carlyle Gifford, W.S., has resigned. Investments at cost stand on balance sheet at £671,416. It is shown in the balance sheet that the market value of the company's investments on March 31, 1931, was £535,972. In the balance sheet dated March 31, 1930, investments at cost, after deducting capital reserve fund, was £647,500, with a market valuation on March 31, 1930, of £680,683. Meeting: Winchester House, London. July 22nd, at 3 p.m.

BURMA CORPORATION, LTD. (Incorporated in India).—Owing to the unprece-
dented fall in metal prices the directors regret to announce that, in their opinion
the payment of any further dividend for the current year would not be justified.

MASSEY'S BURNLEY BREWERY.—The directors of Massey's Burnley Brewery
have decided to pay no interim dividends on the six and seven per cent. cumulative
preference shares. Last year full dividends were paid, with an interim of 3½ per
cent. on the ordinary shares.

KREUGER AND TOLL.—At the annual general meeting of Aktiebolaget Kreuger
and Toll (Kreuger and Toll Company), held at their offices in Stockholm on
Saturday, May 30th, the dividend of 30 per cent. for the year ending December 31,
1930, was confirmed, and is payable on and after June 1, 1931, at the offices of
Higginson and Company, fiscal agent.

HARRISONS AND CROSFIELD, LIMITED.—The directors have declared the following
dividends:—Cumulative preference shares: 6 per cent. per annum for three months
ending June 30, 1931. Income tax will be deducted at the rate of 4s. in the £.
Preferred ordinary shares: 10 per cent. per annum for six months ending June 30,
1931. Income tax will be deducted at the rate of 3s. 9d. in the £. Warrants will
be posted on June 30th to shareholders on the register at that date, including
approved transferees in respect of transfers lodged at the company's office not
later than June 13th.

A. W. SECOND STOCK TRUST LIMITED.—Notice is hereby given that interest
at the rate of 2½ per cent. will be paid on the Income debenture stock of the company
on account of arrears for the year ended December 31, 1929. The transfer books
will be closed from June 7th to 20th inclusive, and the warrants posted on the
19th instant. No dividend has been received to date on the company's holdings
of 1,000,000 Armstrong Whitworth Securities Company, Ltd., 6 per cent. first
non-cumulative preference shares, 350,000 second non-cumulative preference shares,
and on the Vickers-Armstrongs, Ltd., 6 per cent. "B" preference shares.

RUSTON & HORNSBY.—Ruston and Hornsby, Ltd., announce that they will not
pay the dividend on the preference and ordinary shares for the year ended
March 31st. The debit balance includes provision for losses on the Australian
Exchange, and the charge for depreciation has been placed against capital reserve.
It is stated that depression has been much more severe, and much of the business
obtained has been at unremunerative prices owing to keen competition. The wages
of the entire office staff, including the directors, have been reduced by 10 per cent.
Nothing was paid on the ordinary shares for 1929-30, distributions being confined
to the dividends on the preference shares for the year to December 31, 1929. In
1928-29, the ordinary received 2½ per cent.

Commercial Reports.

MARKET SUMMARY.

The past week was characterised by sectional upward movements
in prices, mainly as the result of temporary or seasonal influences.
The general situation of the commodity markets shows no improve-
ment. The coal trade remains depressed, and only Yorkshire and
South Wales are able to maintain exports at a reasonably satis-
factory level. The demand for house coal has fallen off, and
industrial consumption fails to increase. The level of activity
in the iron and steel industries is very low, and, owing to the
lower quotations by Continental makers, British firms find it difficult
to maintain their proportion of orders both at home and abroad.
The wave of speculative selling of non-ferrous metals has temporarily
ceased, and tin, copper, lead and spelter all show a slight improve-
ment on the week. Among textile raw materials, cotton declined
further, mainly owing to favourable reports of the American crop,
wool was also easier because of the absence of any improvement in
the sales of finished goods. Raw jute has been steadier, but the
turnover of yarn and cloth fails to increase. High-class rayon
fabrics are still in good demand in this country, but exports make
little headway. Among cereals, wheat has been firmer, which is
mainly ascribed to the drought in Canada. It is noteworthy that
wheat prices in Chicago have once more returned to international
parity, following the cessation of the intervention of the Federal
Farm Board through its subsidiary, the Grain Stabilisation Cor-
poration. Among other foodstuffs, raw sugar has again been firmer,
but there has been a sharp fall in tea prices, particularly those of
the commoner varieties. Among miscellaneous commodities, hides
have been cheaper; but certain vegetable oils show a slight improve-
ment; while rubber, owing to the uncertainty about Dutch intentions
as regards restriction, has failed to recover.

THE COAL TRADE.

SHEFFIELD.—Best steams for prompt shipment are in brisk
demand and firm at 17s. 6d. to 18s. f.o.b., but there is little forward
business about. Members of the trade are anticipating the early
resumption of a subsidy for export trade. Demand for industrial
fuel remains sluggish, and there is a glut of small coals at the pits.
Sales of house coal have again dropped off, and some factors have
already reduced their prices. Best ordinary qualities are quoted
at 22s. and 23s. at pits. The call for blast furnace coke continues
on a restricted basis, and good qualities can be bought at the low
price of 11s. 6d. at ovens.

GLASGOW.—There has been no improvement in the Scottish coal
position. Demands continue to run on quiet lines, and with supplies
still plentiful despite restricted outputs the tendency of prices
remains easy. Nuts, however, have firmed up a little during the
week. Current prices for the shipping trade are approximately as
follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. to
14s. 6d.; splint best, 16s.; splint second, 14s. 6d.; navigation,
15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 14s.;
trebles, 11s. 6d.; doubles, 10s. 6d. to 11s.; singles, 9s. to 9s. 6d.;
pears, 9s.; dross, 10s. FIFE.—Screened navigation, 16s. 6d.
to 17s. 6d.; first-class steam, 11s. 9d. to 12s.; third-class steam,
10s. 3d. to 10s. 6d.; trebles, 11s. 6d. to 13s.; doubles, 10s. 9d.;
singles, 9s. 6d.; pears, 9s. LOTHIAN.—Prime steam, 11s.;
secondary steam, 10s. 6d.; trebles, 12s.; doubles, 11s.; singles,
9s. 6d.; pears, 8s. 9d. Ayrshire.—Unscreened navigation,
16s. 6d.; jewel, 17s.; steam, 13s.; trebles, 11s. 6d.; doubles, 11s.;
singles, 9s. 3d.; pears, 9s. 3d.; dross, 9s. 6d.

CARDIFF.—The outstanding event in the South Wales coalfield
this week has been the submission by the colliery owners of their
proposals to meet the contingency of the restoration of a seven-hour
shift on July 8th next. Their provisional application is for a
reduction of the percentage payable on the standard rates from
20 to 12, and of the three grades of subsistence wages of 7s. 6d.,
7s. 3d., and 7s., by 3d. per day in each case, as well as for the
discontinuance of the flat allowance of 4d. per shift to boys between
16 and 21. Under the terms of the new wages agreement the right
to apply for a review of existing wage conditions is given to either
side in the event of a statutory change in the hours of work; if such
a change does take place, the proposals are to be considered by the
joint board, and the casting vote of the independent chairman is to
be binding on both sides; if not, they will be automatically with-
drawn. The Executive Committee of the South Wales Miners'
Federation is to meet on Saturday to consider the owners' proposals,
but the men's leaders have already unofficially declared their
intention to resist any further reduction in wages, and are bringing
pressure to bear on the Government to give them a new Minimum
Wage Act. Conditions on the coal market show very little change,
but notwithstanding the scarcity of current inquiries, the volume
of exports is being well maintained. The Buenos Aires Electricity
Works have placed a contract for 120,000 tons of German sized
coals for delivery over 1932. This decision conforms with the
policy adopted in recent years of dividing the requirements of the
Buenos Aires Electricity Works between British and German
suppliers. The greater part of the 1932 supplies will be obtained
from South Wales. With a view of easing the small coal position,
prices to patent fuel manufacturers have been reduced by 2s. 6d.
per ton, and by 3s. 6d. for banked smalls; to other consumers
minimum prices are unchanged. The Best Admiralty large grades
are a quiet market, but other large qualities are in steady demand.
The following are the current approximate quotations:—Best
Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d.
to 19s.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys,
17s. 9d. to 18s. 3d.; Black Veins, 18s. 6d. to 18s. 9d.; best small
steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls,
13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 37s. 6d.; Red Vein
large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; stove
nuts, 39s. 6d. to 43s. 6d.; rubbish culm, 8s. 6d. to 9s. 6d.; foundry
coke, 27s. 6d. to 34s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex
ship, 22s. 6d. to 23s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—There is no favourable feature in the
market for Cleveland iron and conditions continue very depressed
all round. Producers are able to sell very little iron at present
prices, and what they dispose of is mainly to local consumers for
early delivery. Recent efforts to secure more business in Scotland
at important concessions of the official figures have met with very
little success, and, although local consumers have to pay the price
asked, they do so very reluctantly and curtail their purchases as
much as possible. The result is that more Midland iron, which can
be got cheaper, is being brought into the district, and purchases
of Continental iron are also reported. The position of local makers
appears to be a difficult one. They say present costs do not admit
of a reduction on the ruling official figures, and yet seem to recognise
that only a substantial cut will enable Cleveland pig iron to compete
in outside markets or even retain the local trade. Such a move
they hesitate to take and at Tuesday's weekly market they
announced official prices again unchanged, viz.: No. 1, 61s.;
No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b.
or f.o.t. Very few orders were forthcoming and the tone generally
was very despondent. In hematite iron there is not much demand
for forward delivery, but a fair number of orders are being booked
for moderate-sized lots for early requirements. The bulk of this
business is for home consumption, but a few parcels have been sold
for export to the Continent and there are other inquiries circulating
for shipment abroad. With more iron available makers are rather
weaker in regard to prices and although sales of mixed numbers
have been made within the last few days at 64s., this has been shaded
for attractive business. For delivery a few months ahead about
64s. 6d. is asked. In the finished trades new business is difficult
to secure and operations will be curtailed in some departments
unless fresh orders come to hand very shortly. Prices are generally
unchanged. In ore, consumers are well provided for by stocks
on hand and quantities to receive against contracts and there is
practically no fresh buying, although spot cargoes are offering
from time to time at very low figures. Best rubio is nominally
15s. 3d. c.i.f. for prompt, and the current rate of freight Bilbao/
Middlesbrough is about 4s. 3d. Coke is in ample supply, but there
is a very limited demand. Good blast-furnace qualities are freely
offered at 15s. 6d. per ton delivered consumers' works. The number
of furnaces in blast in the district is unchanged at 22.

SHEFFIELD.—The absence of elasticity in the demand for iron
and steel material is extremely disappointing to producers in this
area. Hopes of some revival after Whitsun have not been fulfilled.
In the heavy sections further recession has taken place, output and
turnover being less to-day than four or six weeks ago. The weakest
sections of the heavy departments to-day are shipbuilding and
railway material. The recent cut in prices of billets has not satisfied
the shipbuilders, who are insisting on further concessions. Wages
of a large number of steelworkers have just been reduced substan-
tially as the result of conferences between the employers and the
Unions concerned. Raw materials have come down considerably,
notably steel scrap. Basic scrap at the present price of 40s. is
25s. less than at the beginning of last year. Makers of special and
other high-grade steels report comparatively little doing in exports,
and the home demand is only moderate. Orders for all kinds of

LECTURES.

Two Lectures on Some Histori- cal Parallels in Taxation.	Dr. ANDREW BROWNING, D.Litt., M.A.
Three Lectures on the Econo- mics of Taxation.	Mr. JOHN BUYERS, M.A.
Tariffs and Markets.	Mr. EUGENE RAMSDEN, O.B.E.
(a) At Home.	
(b) Abroad.	
Tariffs and Prices.	Mr. ROBERT BOOTHBY, M.P.
The A B C of L. S. D.	Mr. J. S. WARDLAW-MILNE, M.P.
The Effect of Direct Taxation on Industry	Mr. F. WIGGLESWORTH, M.A., F.S.S.
Currency and Banking.	Mr. A. WIGGLESWORTH.

Fees, including Board and Tuition, £3 10s.

Full particulars of this and of further Courses of general interest
throughout the Summer and Autumn from the Secretary,
The Bonar Law College, Ashridge, Berkhamsted, Herts.

material lack bulk, and less than a third of the melting capacity of
Sheffield and Lincolnshire is operating. If matters do not improve
shortly, a further curtailment of production may be necessary.
Quietude is general in hand tools, cutlery and plate, with a moderate
but regular business for steel for automobile construction.

GLASGOW.—There is nothing to indicate any real improvement
in the situation in the West of Scotland. The continued depression
in the shipyards reacts unfavourably on practically all the industries
in Glasgow and the Lanarkshire area, and business is being carried
on under very difficult conditions involving only the partial employ-
ment of plants. The same conditions prevail in practically every
trade, and although in the sheet trade there is more evidence of
a revival in export demand, prices at which business is offered are
quite unremunerative, and in many cases when accepted it is only
for the sake of keeping plant in operation, although sheetmakers,
like others, are not able to keep plants running full time. Tube
makers also are poorly employed, and in the bar iron trade business
remains very quiet. Continental prices are exceedingly low, and
manufacturers are competing keenly for such business as there is
to be placed. It is believed that, when Continental makers come
together towards the end of this month, that an endeavour will
be made to increase and to stabilise prices.

CARDIFF.—On the Swansea Metal Exchange, on Tuesday, it was
announced that the official minimum price for steel bars had been
reduced from £5 to £4 12s. 6d. per ton. Foreign bars, however, are
ruling down to £3 15s. Tinplate prices are a shade steadier at from
14s. 3d. to 14s. 6d., and there are indications of an improving
demand. Galvanised sheets are easier at £10 per ton, compared
with £10 5s. the previous week.

OTHER METALS.

TIN.—The wave of selling appears to have ended, and the news
of the adoption of the new restriction quotas by the participating
countries gave rise to a steadier tone in the market. Wednesday's
official closing quotation for "standard cash," at £103 2s. 6d. to
£103 5s. per ton, compares with £100 7s. 6d. to £100 10s. on the
corresponding day last week. Stocks in London and Liverpool
at the end of last week, at 30,942 tons, show an increase of 332 tons
on the week.

COPPER.—Although the downward trend in prices has been
arrested this week, there has been no definite recovery. Consump-
tion statistics show no improvement. "Domestic spot" in New
York was again quoted at 8.00 cents per lb. for "electrolytic," but
Copper Exporters, Inc., again reduced their minimum price for
"electrolytic," c.i.f., Continent, by 0.25 cents to 8.525 cents per lb.
at the end of last week. Wednesday's official closing price for
"standard cash" in London, at £35 3s. 9d. to £35 5s., compares

with £34 7s. 6d. to £34 10s. a week ago. Stocks of refined copper in official warehouses at the end of last week, at 15,055 tons, show an increase of 1,591 tons, while stocks of rough copper, at 1,297 tons, were 1 ton larger.

LEAD.—Lead experienced a better demand this week, and as sellers adopted an attitude of reserve, prices showed a slight advance in London. In New York the metal again changed hands at 3.75 cents per lb., spot. Wednesday's official closing quotation for "soft foreign" in London, at £11 6s. 3d. to £11 13s. 9d., compares with £10 7s. 6d. to £10 15s. on the corresponding day last week.

SPELTER.—This metal also benefited by the firmer tone in the New York and London metal markets. The New York spot price for "East St. Louis," at 3.30 cents per lb., shows a rise of 0.10 cent per lb. on the week. Wednesday's official closing quotation in London for "good ordinary brands," at £10 17s. 6d. to £11 8s. 9d., compares with £9 13s. 9d. to £10 5s. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at the recently reduced price of £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Although there is not much change in prices from those of a week ago, fluctuations have been more violent. Continued favourable weather in the cotton areas and weakness in the stock markets caused some selling, but slight recoveries in the New York stock market showed the cotton position to be somewhat oversold. The Fossicks Bureau yesterday gave their estimate of reduction in acreage as 10.2 per cent., and Cochran's Bureau estimate the condition at 67.7 and acreage reduction as 10.2 per cent. American cotton forwarded the world mills during last week was 201,000 bales against 162,000 for the same week. Last year, the average for the past four weeks being 204,000 bales as against 168,000 bales for the same weeks last year. Spot sales for the week 4th to 10th (inclusive) are 23,000 bales, of which 10,750 are American, 1,650 Brazilian, 300 Argentine, 3,500 Peruvian, 2,950 Egyptian, 1,500 African, 1,200 East Indian, 700 Russian, and 450 sundries. Imports for the same period are 24,176 bales, of which 8,847 bales are American, 517 Brazilian, 667 Argentine, 3,630 Peru, 6,446 Egyptian, 1,482 African, 2,019 East Indian and 568 sundries. Quotations, June 10th: American Middling 4-53, Egyptian Sakel 7-20, Uppers 5-49; Brazil Fair 4-68; Peru G.F. Smooth 5-08; West African Middling 4-68, and East African G.F. 5-68.

Manchester.—The attitude of buyers in the Manchester market during the past week has been dictated by the fluctuations in raw cotton prices. When advances have taken place the rise has been distrusted, and although values are on a low level traders see no reason why a further decline should not take place. Demand in piece-goods has been of limited extent and manufacturers who are able to maintain production consider themselves very fortunate. Business for all markets has been scrappy and an order of even moderate dimensions is seldom mentioned. Only isolated sales have taken place for India and business for China has been confined to sorting-up lines. The turnover for the remaining minor outlets has been quite unimportant. Spinners of American and Egyptian yarns have reported rather more price-testing, but very few serious attempts have been made at arranging business. The accumulation of stocks is being kept down by the large amount of machinery stopped.

THE WOOL TRADE.—Bradford.—Though there is a fairly cheerful tone in the wool trade the situation lacks anything of a really encouraging nature. Very little news has been received from Australia or any other selling centres, and no definite test is being made of raw material values. Some users, writes our correspondent, seem determined to speculate on a further decline when wool markets again become active. There is, however, a feeling among those accustomed to handling wool, that the present decline has gone far enough. Information received this week from South Africa indicates that the market is about cleared out, and whilst short and other inferior wools are not easily saleable, there is very little left, and what is coming to hand is being disposed of fairly readily. So far as Cape wool is concerned it is now certain that the next clip will begin to come forward without any big surplus to hinder its sale, and the outlook for merinos generally is fairly good. According to mail information from New Zealand there is still a considerable quantity of unsold wool there, and this, along with the stocks held in this country, means that an enhance-

ment of crossbred values is out of the question unless big requirements develop which are not now in sight. The smallness of the demand for tops has resulted in slightly lower prices being accepted for merinos. Spinners have evidently been able to force the hands of some of their clients, and it is understood that botany yarns have been sold at distinctly less money than the nominal price of the market for tops. Even the aggregate turnover, however, is so small that prices cannot be said to have been fairly tested, or a real guide given to the future movement of wool.

THE JUTE TRADE.—Dundee.—Conditions in the jute trade have not improved. A sharp decline in prices of Calcutta goods, following the refusal of the Indian Jute Mills' Association to ratify the recommendation of their Committee to stop work for one week each month for three months has had an adverse effect on trade generally. At the end of May, stocks of heavy goods in Calcutta showed an increase, but hessians showed a decrease compared with those at the end of April. These stocks are still large and have a depressing influence on the market. Despite this, however, prices of raw jute have displayed a tendency to advance on account of speculative interest in Calcutta. The new jute crop reports are now quite satisfactory, but it is expected that the crop will be a late one, besides being considerably less than those of recent seasons. Whether it is that there is not so much raw jute remaining up-country or not, it is certainly very difficult for shippers to buy in Calcutta, and the imports into that centre are now very light. Up to the end of April the imports this season totalled 8,977,000 bales, compared with the forecast of 11,231,000 bales for the whole season to June 30th. Offers to this market have been scarce, but his has been due more to the apathy of spinners than anything else. Old crop prices have included Fuji-M at £17 17s. 6d. and Asahi Lightning at £17 7s. 6d., while Mahabir Daisee assortment rules at £17, Mahabir Tossa assortment at £17 15s., and Mahabir Tossa 4 at £16 10s., June shipment. New crop has been more freely quoted this week, including good First Marks at £20, Lightnings from £18 5s. to £18 15s., Hearts at £17 10s., Motial Tossa 2-3 at £18 10s., and Prangal Daisee 2-3 at £17 5s., September-October shipment. Jute yarns are very quiet, but prices are quite steady all round. Buyers of hessian descriptions are unwilling to pay more than 1s. 10d. for common 8 lb. cops and 1s. 11d. for 8 lb. spools, but spinners are rigidly adhering to 1s. 10 1/2d. and 1s. 11 1/2d., respectively. Only trifling lots are being sold. Twist is from 3 1/2d. for 3-ply 8 lb., and sacking yarns are quiet at from 2 3/4d. for 24 lb. web and from 3 3/4d. for 8 lb. chains. Rove is steady, unchanged, at from £19 for 48 lb. and £16 for 200 lb. Fine yarns are in small request and prices are nominal. Carpet descriptions are slow. A small steady business is passing in jute cloth. Buyers are making rather more inquiry, but hesitation is still displayed in buying more than sufficient to meet their immediate needs. Values remain notably unchanged at from 2 3/4d. for 10 1/2 oz. 40-in. hessians and 1 1/2d. for 8 oz. Linoleum hessians are quiet and heavy goods are of small interest.

THE GRAIN MARKETS.

WHEAT.—During the past week markets have been strongly influenced by crop conditions in North America. The drought conditions which have prevailed in Canada have been alleviated in certain areas of Eastern and Northern Manitoba and Southern and Northern Alberta, but the situation continues precarious in the large wheat-producing areas of central Saskatchewan and Alberta. It is generally expected that the coming crop will be smaller than that of last year, and, expressed as percentages of long time average yields per acre, the condition of wheat at the end of May has been estimated at 81, as against 97 for the corresponding date last year. Although the dry weather has recently extended into the north-west of the United States the condition of that country's crop are still satisfactory. In contrast to the situation in Canada, the British crop would greatly benefit by a spell of warm and sunny weather. The adverse conditions prevailing in Canada has resulted in a buying movement under the influence of which prices showed a slightly firmer tendency. In view of the heavy stocks in producing countries it is, however, improbable that quotations will show a substantial rise in the near future. It is interesting to note that prices in Chicago, following the cessation of buying by the Grain Stabilisation Corporation, have once more returned to international parity. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 27s. 9d. per 496 lbs., as compared with 26s. 9d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 26s. 9d., against 25s. 6d.; Rosafe, ex ship, 23s., against 22s. 6d.; Australian, ex ship, 24s. 6d. to 25s. 6d., against 24s. 6d. to 25s. 6d. a week ago.

WHEAT FLOUR.—Flour has experienced a steady demand during the past week, but it is expected that North American shipments will increase and thus lower the price. North American shipments during the past week amounted to 184,000 sacks, as compared with 129,000 sacks shipped during the previous week. Quotations: Straight run, delivered country, 23s. 6d. per sack of 280 lbs., as compared with 22s. 6d. last week; delivered London, 22s. 6d., against 22s. 6d. Manitoba patents, ex store, 21s. 9d. to 25s., against 21s. 6d. to 24s. 9d.; and Australian, ex store, 18s. 6d. to 19s. 6d., against 18s. 9d. to 19s. 6d. a week ago.

BARLEY.—The scarcity of home-grown barley resulted in a firmer tendency in prices, and foreign varieties, both for malting and feeding purposes, were well maintained. The visible supply in the United States at the end of last week amounted to 5,163,000 bushels, against 5,895,000 bushels at the end of the previous week. Quotations: "English malting," f.o.r., at 30s. to 35s. per 448 lbs., remained unchanged. Californian sold at from 33s. to 43s., as compared with 33s. to 43s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—Although the demand for oats remains quiet, prices advanced following unfavourable crop reports from Canada, where rain is urgently needed. Quotations: "River Plate," landed, 13s. 6d. per 320 lbs., as compared with 12s. 9d. last week; "River Plate," ex ship, 12s. 6d., against 11s. 9d.; "Chilean Tawny," landed, 13s. 9d., against 13s. 9d.; and North Russian, on sample, landed, 17s. 9d., against 18s.; English white, per 336 lbs., 20s. to 21s., against 20s. to 21s. a week ago.

MAIZE.—The low level to which maize prices have fallen a fortnight ago acted as a strong stimulus to buying in this country and on the Continent. This activity caused a slight recovery in prices during the week in spite of considerable shipments from the Argentine. Quotations: "Plate," landed, 17s. 6d. per 480 lbs., as compared with 16s. 9d. last week; Plate, ex ship, 16s. 3d., as against 15s. 6d.; Plate, June-July, new, 16s. 3d., as against 15s. 9d. Yellow maize meal, ex wharf, was quoted at £5, as against £5 5s. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to June 6, 1931.....	Owts. 81,244	Owts. 84,388	Owts. 67,167	Owts. 174,435
40 weeks to June 6.....	4,518,521	8,905,613	9,265,980	10,128,378
Average price of English wheat per cwt.....	s. d. 6 0	s. d. 8 7	s. d. 9 7	s. d. 11 0

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
May 30, 1931.....	Owts. 101,821	Owts. 14,659	Owts. 33,617	s. d. 5 10	s. d. 6 7	s. d. 6 11
June 6, 1931	81,244	3,660	16,716	6 0	8 2	7 0
June 4, 1927	131,275	10,481	31,288	12 6	11 6	9 11
June 9, 1928	174,435	18,566	13,576	11 0	10 11	13 0
June 8, 1929	67,167	9,771	11,888	9 7	10 0	9 6
June 7, 1930	84,388	14,572	7,372	8 7	7 6	6 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	June 11, 1930.	Jan. 2, 1931.	May 27, 1931.	June 3, 1931.	June 10, 1931.
Winnipeg (No. 1 Manitoba)	148 1/2	114 1/2	56 1/2	58 1/2	60 1/2	60 1/2
Chicago (No. 2 Winter)	130 1/2	104 1/2	79 1/2	82 1/2	66 1/2	57 1/2

The visible supply of wheat in Canada, at 46,667,000 bushels, shows a decrease on the week of 1,906,000 bushels. Supplies a year ago stood at 57,970,000 bushels.

OTHER FOODS.

SUGAR.—Increasing confidence in the Chadbourne scheme and therefore in the stability of the sugar position is responsible for increased buying by refiners. Raw sugar prices continued to advance. Wednesday's quotation in New York for Cuban centrifugals, 96 deg., spot, at 3-30 cents per lb., shows a further rise of 0.07 cent per lb. on the week. Raw futures in London have been firm. Wednesday's sales included "August delivery," at 6s. 4d. to 6s. 4 1/2d., as against 6s. 2 1/2d. to 6s. 3d. on the corresponding day last week; December, at 6s. 7 1/2d. to 6s. 8d., as against 6s. 5d. to 6s. 5 1/2d.; and March, 1932, at 6s. 9 1/2d. to 6s. 10d., as against 6s. 7 1/2d. to 6s. 7 1/2d. a week ago. British refined has maintained its recent advance. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

Liverpool.....	12,465	15,268	13,949	8,829	71,060	91,836
Total	13,120	16,466	15,464	9,755	101,674	122,810

SUMMER IN ICELAND

Cruise by P & O in the warm July air of the Northern seas to Iceland, where the mountain slopes are bright with flowers, and a kindly, cultured people wait to welcome you.

There are cruises by the 20,000-ton electric ship *Viceroy of India* to the Northern Lands on July 4th, July 18th and August 1st. On board you will find pleasant society; rest—or a round of gaiety, as you will. Perfect cooking. Perfect service.

Come Cruising! Send for our Picture Handbooks:—

P & O CRUISES

(F. H. Grosvenor, Manager) 14, Cockspur St., S.W.1.

P & O, 130, Leadenhall Street, E.C.3.
P & O, Australia House, Strand, W.C.2.

P & O Tourist Class: Australia from £70 return.
P & O Sea Tours: Marseilles, etc., 14 days from £16.

TEA.—The quantities catalogued for this week's auction comprised 48,995 packages of Indian, 39,595 packages of Ceylon, and 15,659 packages of Java and Sumatra tea. A slightly easier tendency prevailed during the Indian auctions on Monday. The large quantities of Ceylon teas offered for sale on Tuesday caused a further reduction in the prices realised, and during Wednesday's Indian auctions only finest qualities met a satisfactory demand. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyssa-land.
May 9, 1930...	s. d. 1 2-04	s. d. 1 4-63	s. d. 1 6-71	s. d. 0 10-36	s. d. 0 11-95	s. d. 0 9-43
May 14, 1931...	0 10-26	1 4-61	1 4-63	0 6-99	0 7-49	0 5-95
May 21, 1931...	0 10-27	1 1-85	1 3-96	0 7-08	0 7-72	0 6-83
May 28, 1931...	Holiday					
June 4, 1931...	0 9-94	1 3-55	1 2-65	0 6-76	0 7-79	0 6-72

RICE.—The quiet demand for rice caused a further decline in prices, and Wednesday's quotation for Burma No. 2, cleaned, June-July, in singles to the Continent, and to the United Kingdom at 6s. 10 1/2d. per cwt., shows a fall of 1 1/2d. as compared with last week. Movements in London during the past week: Landed, 17 tons; delivered, 33 tons; stock, 1,174 last year.

with 8,994 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.8 per cent. of the supplies, as against 83.2 per cent. a year ago; and imported mutton, mainly New Zealand, formed 84.9 per cent. of the total supply, as against 87.9 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—A spurt in demand for seed both here and on the Continent towards the close of last year led to an appreciation in value, but this has been followed by a recession in price. Plate, on spot and June shipment, around £8 5s. and later positions at a small progressive rise to £8 10s. for October. Calcutta is quiet, the price to London being £9 17s. 6d., June-July. The passage to Europe, at 103,000 tons, is 5,800 tons, and compares with 113,000 tons a year ago, when it was at a fair level, while the export of seed has been

fair amount of interest, but, even so, Argentine ox are now quoted at the equivalent of 5d., while cows are offered at 4 1/2d. Business has been done in dry South American hides at 5 1/2d. for B.A. Americanos, and in B.A. Inservibles at 3 1/2d. Sales of African hides are only possible when offers are made at the right figure, and for Capes 6 1/2d. and 5 1/2d. are considered somewhere round about the correct prices for first and second drys, with drysalted, 20/30 lbs., in the region of 5 1/2d. and 4 1/2d. Hardly any business has been done in Australians for this country, but dry-salted Queensland meats have been sold to the Continent at about 5d. There has been a slight improvement in the inquiry for sole leather, and considering the state of trade during the previous fortnight the position appears to be a little more hopeful. In English and wetsalted bends sales this week have been concerned more with the heavier descriptions, with only a limited amount of inquiry for light and medium weights. Dry hide bends for shoe-manufacturing purposes also have received more attention, and although producers of footwear continue to

ing that the turn of the half-year, short of unforeseen happenings, may be comfortably negotiated. On Thursday new money commanded generally 1-1½ per cent., while old day-to-day loans from sources other than the clearing banks were renewed at 1½ per cent.

Under pressure of abundant funds seeking employment the market rate of discount was barely maintained. Applications for the £35 millions of Treasury bills offered last Friday totalled £56.9 millions, and the whole of the bills were allotted at an average rate of £2 2s. 11.59d. per cent., as compared with £2 3s. 7.89d. per cent. a week before. During the week, on the one hand, the market has been a somewhat unwilling seller; on the other hand, except for a moderate demand from the clearing banks for August and September Treasuries, buyers of bills have not been greatly in evidence. Turnover has been small, and, though the rate generally quoted shows little alteration at 2½-3½ per cent., the competitive rate has been no better than 2½ per cent. At this level, however, the rate has shown signs of resistance, due to natural apprehension at the gravity of the situation in Central Europe.

The banking position in Germany is discussed in an article on page 1312, and the information given there may be amplified by a study of the significant changes which have taken place in the last three returns of the Reichsbank. Here are the main items.

	May 30. Rm.	June 6. Rm.	June 15. Rm.
	(000's omitted.)		
Gold—In hand.....	2,182,689	2,040,561	1,567,459

Foreign currency reserve.....	186,181	112,956	104,309
Bills and cheques	1,816,432	1,765,960	2,032,654
Advances	167,182	69,876	154,848
Note circulation	4,299,122	4,079,250	3,888,610
Cover of note circulation (%).....	59.9	59.2	48.1

The decline of Rm. 624,756,000 in gold stocks in the first fortnight of June is the more impressive when it is remembered that the latest figure was made up before the heavy gold losses of the early days of this week and also before Monday's Reparations payment of £7,500,000, which is also understood to have necessitated gold transfers. The rise in the holding of bills and cheques also deserves careful examination. The fact of the fall between May 30th and June 6th, notwithstanding considerable internal rediscounting, suggests that sales of foreign bills may have rendered the composition of the June 13th figure less favourable to the international position of the Reichsbank than that of the bill figure for May 30th.

	Mar 24, 1931.	June 4, 1931.	June 11, 1931.	June 18, 1931.	Previous Rate and Date Changed.

A striking reflection of these substantial gold movements was to be found in the Bank of England's return. Including receipts from Germany and the release of 500,000 sovereigns, against withdrawals (it is suggested, on German hoarding account), of some £350,000 in bars, the Bank gained £5.7 millions of gold on the week, and, as circulation fell by £2 millions, the reserve was £7.7 millions higher and the proportion 58.0 per cent., against 55.1 per cent. a week ago. In the Banking Department, Government Securities showed a decline of only £2.3 millions, while discounts and advances were up by £2.8 millions—a movement presumably connected with the advance to the Austrian National Bank—so that, notwithstanding an increase of £5.4 millions in public deposits, bankers' deposits were up by nearly £2 millions, at £71.4 millions. In other words, the Bank, desirous possibly of keeping conditions comfortable as some alleviation to the general feeling of nervousness, did not take steps to neutralise fully the gold influx. Whether this policy will be continued depends obviously on the ability of the market to maintain discount rate at what is regarded as a safe level, and on the course of the foreign exchanges.

Call money in New York this week has ruled steady around 1½ per cent., while open market discount rates have been unchanged at ½ to 1 per cent. for 90-day bank bills, and 1½ to 2 per cent. for six months' bills. On Tuesday gold to the value of \$4.5 millions was received from Canada and on Thursday \$2 millions in gold arrived from Peru. On Tuesday the Federal Reserve Bank un-earmarked \$31.7 millions of gold. This represented gold held in New York on French account transferred to the Reichsbank as an offset against shipments of gold from Berlin. Three small Middle-Western banks closed their doors on Tuesday, and on Wednesday the failure was announced of a bank in Toledo, Ohio, with \$20 millions deposits.

The foreign exchange market has had an anxious week, but movements on balance have not been wide. New York moved slightly in our favour to 4.86½. Montreal weakened to 4.87½. Paris, after touching 124.17, lost three points on balance at 124.25. Brussels weakened from 34.92½ to 34.95½. Milan was unchanged at 92.92. The peseta, after being steady all the week, showed signs of falling away again towards the close, and weakened from 48.00 to 48.95. Amsterdam was ½ better at 12.08½. Berlin, after Tuesday's political improvement, reverted to last week's figure of 20.50. Switzerland moved fairly sharply against us at 25.05. Of the Scandinavian exchanges Stockholm improved from 18.15½ to 18.14½. Oslo gained ½ at 18.16½ and Copenhagen was unchanged at 18.16½. The South American currencies were again rather irregular, Rio losing ½d. on balance at 3½d. after being 4d. Buenos Aires lost ½d. at 34½d. and Montevideo ½d. at 28½d. In the Far East the rupee was unchanged at 1s. 5½d. The yen was better by ½d. at 2s. 0½d. In the Pacific, Peking improved to 12.09½d. In the future of trade during the previous fortnight the ½ per cent. and to be a little more hopeful. In English and weaned bends sales this week have been concerned more with the heavier descriptions, with only a limited amount of inquiry for light and medium weights. Dry hide bends for shoe-manufacturing purposes also have received more attention, and although producers of footwear continue to

IN THE THICK OF THE STORM.

It is doubtful whether, at any period since the world depression developed in 1930, those responsible for guiding financial and economic affairs have had a more anxious time than during the last ten days. Apart from events in Austria, the chief outward symbol of a critical situation was perhaps the very unusual step of summoning the governing body of the Reichsbank on a Saturday and the raising of its rate by 2 per cent. from 5 to 7 per cent. There has been some inclination, particularly in America, to suggest that the accounts given of German difficulties are exaggerated propaganda for the purpose of obtaining concessions. But the continued withdrawal of funds from Germany by foreigners and the attempts of the Germans themselves to transfer their capital overseas are hard facts, and only those who are wilfully blind can attempt to deny that not only Germany, but many other countries of Europe also have been passing through a very difficult time. It is not that any new economic fact has developed, but rather that the strain is beginning to tell, and that in various countries the effects are beginning to be felt of the difficulties created by the long-drawn-out and severe fall of prices, by the restriction of trade, by the withholding of further supplies of foreign capital to countries whose economy has been fed by foreign loans, and by the far-reaching effects of slump psychology both among business people and among the masses of the population.

It is true, there is some ground for thinking that the strain of a week ago has, during the last two or three days, been momentarily relaxed. For, though the Reichsmark, after Wednesday's recovery, was again weak on Thursday, the flood of withdrawals of funds from Germany seemed to have slightly abated; while substantial relief has been afforded to the immediate position in Central Europe by the promptitude with which the Bank of England has accorded a £4 million credit to the Austrian National Bank at a moment when it was becoming more and more clear that delay might prove fatal. The troubles of an acute depression like the present are, however, by no means confined to the financial or even to the economic sphere, but spread into the field of politics. Seldom, indeed, can it have happened that on a single day four important Governments should be simultaneously in jeopardy, yet that was the situation on Tuesday of this week. The crisis in London was an internal affair; but those in Berlin, Paris and Vienna were definitely connected with the European situation, and, in the last of these cases, led actually to the downfall of the Government. The fall of the Austrian Cabinet took place after the signature of the document guaranteeing the payment of the debts due to the foreign creditors of the Credit-Anstalt, and should not therefore interfere with the efforts that are being made to save the Austrian situation, for there is no reason to doubt that the signature will not be honoured by any succeeding regime. But the stiff internal opposition to such necessary measures illustrates both the formidable nature of the tasks that may have to be performed by Governments before we are out of the wood, and also the greatness of the difficulties involved in economic relationship by financial co-operation.

The French problem was in the main a personal affair. M. Franklin-Bouillon's attack was beaten off with comparative ease, and even if he had succeeded in driving M. Briand from office, there is no reason to assume that this would in any way have diminished France's desire to see a solution of the present crisis, not merely for the sake of her political friends in the Little Entente, but also because of the repercussions which must inevitably occur if economic chaos were to develop in Europe. M. Briand's departure would, however, have created a new difficulty, for his name stands for a reassurance to the rest of the world of the good intentions of French policy. And such reassurance is more necessary than ever to-day, when the French attempt to make assistance for Austria con-

ditional upon the abandonment of the Customs Union project, has given rise to the unfortunate impression that French statesmen are not averse from making political capital out of economic and financial crisis.

Without doubt, however, the storm centred round Dr. Brüning's head. The Procedure Committee decided on Tuesday to call together neither the Reichstag nor the Budget Committee, but those who have been disposed to imagine that recent proceedings in Germany have been a political manoeuvre, would do well to study the state of public opinion in Germany (which a correspondent graphically describes on a later page) and to accept at its face value the statement of the Chancellor that this second cut in wages and salaries which he has made is the last that he will be able to carry through, unless Germany gets some relief from the burden which the fall of prices has so immensely increased. Dr. Brüning's victory has given a short breathing space; it has done nothing to mitigate the "hard core" of the crisis.

There are, however, some grounds for thinking that we may have turned the corner, or at all events, that our difficulties have been localised. One of these is the existence of the B.I.S. There can be no doubt whatever that, though there may still be great differences on monetary policy, there is much closer contact and a better understanding between the world's chief central bankers, since the B.I.S. came into existence a little more than a year ago, than has ever been the case hitherto. This has been illustrated by several incidents in the last few weeks, and when the history of this difficult period comes to be written, it may well emerge that the newly-founded B.I.S. will have played a great rôle in staving off financial disaster. The second ground for hope is the statement made last Saturday by Mr. Castle, the American Under-Secretary for War, to the effect that if it were necessary for Germany to ask for a moratorium, the United States might find it necessary to reconsider the war debt situation. This is a very definite change of tone from that adopted recently by Mr. Mellon, before the International Chamber of Commerce, when he said that events had proved that reparation and war debt payments could be made without serious difficulty. American investors have put large sums of money in Europe, both on long term and on short term, and the United States, therefore, has much interest in collaborating to prevent a European collapse.

We are not among those who think that a suspension of reparation and debt payments would solve all our difficulties. The profound economic disharmony created by the slump of prices cannot be cured solely by such means, and in any case Europe is only one of several storm centres. The United States itself may indeed well point out that Germany's budget is by no means the only one which is heavily in deficit. But the growing burden imposed upon Germany by her foreign debt payments is doubly irksome, because it involves so huge a payment overseas and because of its political character. Its repercussions tend to prevent the appeasement of Europe and to render more difficult the international co-operation which the situation requires. Any action taken to suspend the burden of reparations would have a far greater psychological effect than the mere money involved would justify.

But the economic difficulties remain. For years they have been talked about at Geneva with very little concrete result, but under the pressure of economic necessity and of the action taken recently by Germany and Austria, the more ambitious projects have been abandoned, including the grandiloquent scheme of M. Briand for a United States of Europe, and the European Committee, as a matter of urgency, has set up a number of special committees to make specific proposals in a few short weeks to be considered by responsible Foreign Ministers before the Assembly meets in September. The task of

reconciling conflicting views of economic organisation, of monetary theory and of the relation of the State to industry is no light one for the experts called upon to frame schemes of practical action. But we believe that it is one of the results of the strain of adversity that Europe is more in a frame of mind to take concrete action now than at any previous time.

Finally, it is some consolation to Englishmen, who in recent years have heard so much of the decadence of Britain, to find that, instead of being regarded as the weakling of the European family of nations, she is now looked to by other countries for support. This phenomenon should do something to restore the prestige of Britain in the eyes both of her own citizens and of the Continental peoples, who will not perhaps be less ready to believe the fable, so assiduously propagated, that the days of British economic strength have passed away for ever.

THE LAND TAX DAY BY DAY.

THE deadlock between the Government and the Liberals over the land tax has been resolved. The threatened dissolution of Parliament will not take place. That is the net result of several days of negotiation, and, whatever the view taken of the compromise which was eventually reached between the two parties, it is surely preferable to the complication of present difficulties and uncertainties by the feverish strife of a general election. Curiously enough, the *dénouement* was accompanied by the introduction of an element of comic relief. For when the Liberal amendment, which had been the cause of all the fuss, came to be moved in the House of Commons on Tuesday, the Chairman of Committee promptly ruled it out of order. This decision took all three parties and their leaders completely by surprise; but the House of Commons, even in these grim days, retains its sense of humour, and surprise quickly melted into mirth. Of a truth, the dividing line between tears and laughter is narrow.

However, the ruling out of the Liberal amendment to Clause 20 of the Finance Bill does not mean that all the time and energies spent by the Cabinet and the Liberal leaders in reaching a *modus vivendi* have been wasted. On the contrary, the fact remains that the Liberals had developed a definitely hostile view of certain aspects of the land tax, and, whether this particular amendment had been ruled out or not, a clash with the Government over a matter of principle was inevitable. The clash has come and gone, and it has had the effect of leaving the land tax in one important respect less open to objection than it was in its original form. The story of the "crisis" and its solution can be told in few words. Mr Snowden proposed to tax all land (apart from certain exemptions) at the rate of 1d. per £ on the site value. The Liberals maintained that it was unjust to apply this burden to "developed" land, that is, to land the value of which has been raised by the energy or enterprise of its owner in putting it to good use. They therefore drafted an amendment the effect of which was to permit the owner of a unit of land to deduct the amount of income tax payable under Schedule A from the amount assessed for land tax. This proposal cut at the roots of the "all-round simplicity" of Mr Snowden's plan and threatened a substantial loss of revenue, and it appeared for a time that, while the Liberals could not withdraw from their championship of the owner of "developed" land, Mr Snowden would stand firm against both infringement of principle and a prospective reduction of revenue. In the event, neither proved to be altogether intransigent. After protracted discussions the Government agreed to accept the Liberal proposal that an owner of developed land should not bear the new burden, and to meet the Government's views the method of securing this object was altered and a new Liberal amendment framed. Under this it was provided that from the value of his land as valued for land tax an owner may deduct four times the value as valued for purposes of Schedule A. For this substantial concession the Government insisted

upon a *quid pro quo*, and the Liberals for their part agreed that even where the land tax valuation does not exceed the Schedule A valuation, there shall nevertheless be imposed a tax at the rate of 1d. per £. The redrafting of the amendment in this sense saves Mr Snowden from a surrender of principle, and it also has the advantage in the eyes of the Government that, as a tax proposal is involved, it does not come within the purview of the House of Lords. On the other hand, the Liberals have achieved at least the major part of their object of protecting the owner of developed land from new burdens. Since the amendment was ruled out, the Government have promised to give time to a new clause in similar terms at a later stage. Its passage then is a foregone conclusion, and one of the most serious injustices proposed by the Bill will be removed.

This is not the only way in which the threatened burden of the land tax has been lightened during the past week. On Monday night Mr Snowden made a statement on the subject of exemptions which he proposes to allow. He promised to move an amendment exempting "charities," and from his phraseology it appears that this term will cover churches, colleges and schools, so far as the latter are not run purely as commercial ventures, and lands owned by them. Large numbers of playing fields will find exemption in this way, and even for those, such as cricket clubs and golf courses, which do not, there is some hope of alleviation; for the Minister of Health has tabled an amendment to Clause 26 of the Town Planning Bill, which will provide that, where an undertaking is given that such fields will not be used for building purposes, such undertaking will be taken into account in the valuation of the land, with the result that a material reduction in land tax assessment would ensue. So, day by day, Mr Snowden's universal land tax travels a little further into the realm of fair discrimination, and its burden grows by degrees beautifully less. When it has gone far enough in that direction to satisfy the House of Commons, how much of the prospective yield will be left? The irresistible process of concession and exemption robbed Mr Lloyd George of his revenue twenty years ago. Will history repeat itself to the discomfiture of Mr Snowden?

THE GERMAN BANKING SITUATION.

(BY A SPECIAL CORRESPONDENT.)

BERLIN, June 15.

It is only natural that financial opinion in Great Britain, and still more in the United States, should be apprehensive of the repercussions on Germany of the Austrian banking difficulties, in view of the juxtaposition of the two countries, their close economic and financial association, and their desire to enter into still closer commercial relations. In point of fact, although the Austrian crisis has spread its influence throughout Central Europe and turned an already strained situation into one of acute difficulty, the actual and direct effect of the Credit-Anstalt affair in Germany has been less than might have been expected. The German banks' direct commitments were insignificant in comparison with their total assets, and like the British banks they have in most cases refrained from calling in their credits. Moreover, the liquidity of German banks is much greater than that of Austrian banks and their actual long-term loans and participations in German industrial concerns are more limited in scope than is generally realised. Indeed, of recent years German banking practice has in this respect tended to draw closer to that of Great Britain.

The following table is based upon the returns of the leading German banks at the end of April last, and thus presents a fair picture of the position immediately prior to the crisis that culminated in the raising of the Reichsbank's rediscount rate from 5 to 7 per cent. at the end of last week. The banks included are the Deutsche Bank und Disconto Gesellschaft, the Dresdner Bank, the Darmstadter und National Bank, the Commerz und Privat Bank, the Reichs Kreditbank, and the Berliner

Handelsgesellschaft. It is, thus, a picture of the banking position as a whole—not of any individual bank:—

ASSETS.		Million Rm.
Cash in hand (including foreign currency).....		128
Credit balances with banks of issue and clearing institutions.....		90
Cheques, bills and Treasury bills.....		2,529
"Nostro" balances with other banks payable within three months.....		981
Contangos and loans against securities quoted on the Stock Exchange.....		358
Advances on goods consigned or warehoused.....		1,828
Total liquid assets.....		5,914
Investments.....		190
Holdings in syndicates and joint operations.....		174
Investments in other banks.....		117
Loans and advances on current account.....		5,833
Premises.....		185
Sundries.....		25
		12,438

LIABILITIES.		
Capital.....		588
Reserves.....		330
Creditors:—		
(a) Acceptance credits granted by foreign banks and drawn against by customers.....		1,791
(b) Balances of German banks.....		1,059
(c) Other deposits.....		7,832
Distribution of (b) and (c) above—		
Payable within seven days.....		3,657
Payable within three months.....		4,802
Payable after three months.....		432
Acceptances.....		600
Other liabilities, including net profits to date.....		237
		12,438

The two main items among the banks' "liquid" assets are (a) cheques, bills and Treasury bills, (b) "nostro" balances with other banks, and (c) advances on goods consigned or warehoused. Many of the bills held under item (a) are eligible for rediscount at the Reichsbank. "Nostro" balances with other banks, and (c) advances on goods consigned or warehoused amounted to about 80 per cent. of the total. These are immediately available to meet foreign withdrawals. Advances on goods represent the liabilities of the banks' customers in respect of bills drawn by them against credits opened for the German banks by their foreign agents. It will be seen that there is a rough balance between this item and the per contra entry "acceptance credits granted by foreign banks." Both items are well secured and self-liquidating, and vary mainly with the course of trade. The bulk of these advances are secured by collateral and, when unsecured, represent advances to customers of such high standing that some bankers prefer them to secured advances.

Investments represent almost entirely securities admitted to quotation on the Stock Exchange. In any case this is a relatively small item. So, too, are holdings in

syndicates, representing the banks' participation in industry. These amount to only 1.4 per cent. of the banks' assets, a fact which should not be lost sight of in England. Finally, come "Debitoren," i.e., loans and advances on current account, mainly against collateral. To sum up the assets, 47.6 of them are liquid, and 47.0 are "Debitoren." Investments, participations, premises, etc., only amount to 5.4 per cent.

On the liabilities side, the two main items are acceptance credits—already explained—and other deposits. Acceptances granted by the banks themselves are comparatively small. So, too, are the banks' capital and reserves. Capital was written down as a result of the inflation, and the smallness of the banks' present capital is one reason for the decline in the banks' participations in industry and of the present-day greater approximation of German to British banking practice. In fact, when allowance is made for the need British banks are constantly under of renewing or extending their advances (theoretically short-term) to industry, the difference is comparatively small.

The main question of the moment, however, is the vulnerability of the German banking system to foreign withdrawals of funds. Estimates which were recently made available suggest that, even after the heavy withdrawals of the past few weeks, the leading institutions are still in a position to meet further calls without danger. At the end of 1930 it was estimated that the foreign indebtedness of the big German banks amounted to Mks. 4.75 milliards. Since then withdrawals have reached a total of practically one milliard, leaving outstanding indebtedness at Mks. 3.75 milliards.

Of this last sum Mks. 1.75 milliards represent foreign bank acceptance credits drawn against by the German banks' customers. These credits would only be cut down as a last resort if everything else failed and there was a general breakdown. In actual fact, curtailments to date have been relatively small and have to a large extent emanated from provincial American banks, some of whom are themselves in difficulties and are having to mobilise every cent they can to satisfy their own customers. Here Germany is the victim of American, and not of her own, troubles.

This leaves a debit balance of 2 milliards. Against this the German banks have been adding to their own foreign assets, for the Hitler crisis of last autumn gave them a very salutary and useful warning to increase their liquidity both at home and abroad. Their foreign assets have recently been estimated at Mks. 1.75 milliards. On this assumption, even if all foreign balances other than acceptance credits were withdrawn, the banks would only be Mks. 250,000,000 short. Long before this had happened, the banks would have taken steps to meet the emergency. The first step they would take would be to rediscount bills at the Reichsbank in exchange for foreign currency—action that they are entitled to take.

At the beginning of this week the Reichsbank, whose disclosed reserve amounted to Mks. 1,870 millions, still

together, we should expect to find a connection, under the condition stated, between the Wages/Prices curve and the unemployment curve.

Now for the qualifications:—

(1) Changes in demand may not be adequately reflected in price. Thus the recent falling-off of demand for British exports has led to a marked decrease in their volume without greatly lowering their prices. But since (a) the fall in import prices reflects the lowered purchasing power of our customers and hence the decreased demand for our exports, while (b) the reduced purchasing power of our export industries reacts upon other British industries, by decreasing the demand for their products, the "Rueff" curves show a better correlation than those of individual industries.

(2) The proportions of "capital" and "labour" used may change. For example, demand, wages, and prices may remain the same, but some labour may be displaced by machinery and thrown out of employment. Such "rationalisation," however, has not taken place on a large scale either in this country, or in France, or (to the extent that is sometimes supposed) in Germany. (This can be deduced, I think, from the correspondence between the production curve and the employment curve in all three countries.)

(3) Other costs may move in a different direction from wage-rates. Thus the price of cotton goods might rise, not because of increased demand for them, but because of a rise in the price of raw cotton. On the other hand, a fall in "other costs" might compensate to some extent for a rise in wage-rates, or for the failure of "sticky" wage-rates to fall. The fact that wages form some 70 per cent. of the costs in coal-mining probably explains why the correlation is greater there than in other industries.

(4) Production per worker may alter. For example, each worker may produce more than before, thus enabling full employment to be maintained at the old wage-rates, although the products of the industry fall in price. In such a case, the fall in prices would reflect increased production and not reduced demand. The rise in wage-rates in Germany and, to a less extent, France, between 1924 and the end of 1929 was made possible mainly by increased productivity.

CHART III.—Relation between Wage Rates and Prices × Production and Unemployment in Germany.

Source of data as for Chart II.

CHART IV.—Relation between Wage Rates and Prices × Production in France.

* Since average wage-rates are available only for the particular months shown, all the other figures relate to those months. All data from the quarterly Bulletins of the Statistique Générale de la France. The wage-rates are daily rates for adult males in 38 occupations outside Paris. The prices are wholesale prices of (29) nationally produced commodities. The production and unemployment indices are the official ones.

We can allow for both (1) and (4) in the five British industries for which data are available, by using the relevant index of production for each industry. The correspondence between the curve of "wages ÷ prices × production," and the curve of unemployment is marked in every case. Similarly, the application of a general index of production gives a close correlation for Great Britain, Germany and France. The curves for France and Germany are shown in Charts III. and IV. The danger of this method is that the causal relationship between production and unemployment (more being produced when more men are employed) may be alleged to swamp the causal relationship which the curves are intended to show. But if the amount demanded alters, this is usually reflected in a corresponding change in the amount produced, but not necessarily in a change in prices.

IV.

It seems clear that the difficulty of "verifying" economic principles by statistical data is as great in this field as elsewhere. A fall in prices may show (inter alia) either decreased demand of decreased costs. Similarly, a fall in wages may show either a smaller demand for labour or a change in Trade Union policy, while an increase in productivity per worker may show either improved methods of production or the raising of the "margin" through the dismissal of the least efficient workers. Wages and prices might both remain unchanged in the face of great changes in (external) demand, and consequently in the amount of unemployment. And so one might continue. The conclusion is simply that we must not make statistical "evidence" carry more weight than it can bear; we must consider it in the light of our whole knowledge of the relevant facts.

It would be quite wrong, for example, to deduce that the most appropriate remedy for unemployment is *always* reductions in wages. Sometimes greater initiative or better organisation by employers is required. In the case of post-war Britain, however, there is ample ground for the empirical conclusion that the lack of flexibility in wage-rates and in working conditions has been responsible for a considerable part of our unemployment. The "Rueff" curves—although I cannot help feeling that their high correlation is *partly* a coincidence—support this view; but it is a view based on observation and economic principles rather than on statistical data. And it does *not* follow that the appropriate remedy is an *equal* reduction of wages all round—by, say, ten per cent. What is required is more flexibility in wage-rates, working conditions and methods of production. Intelligent adaptation to a changing situation is still the key to progress and prosperity.

THE CANADIAN BUDGET.

(BY OUR OTTAWA CORRESPONDENT.)

THE long-delayed Federal Budget was submitted to the House of Commons on June 1st by the Prime Minister in his capacity as Minister of Finance. Mr Bennett claimed with some justice that it was the first real Budget that Canada had been offered for many years, inasmuch as he essayed an estimate of revenues for the present fiscal year which his immediate predecessors had omitted to do. He placed the total revenue for the fiscal year 1930-31 at \$356,215,000, as compared with \$446,182,000 in the previous year; and since expenditure had been \$440,060,657, as compared with \$398,442,247, there had been a deficit of roughly \$84 millions. He estimated the direct national debt on March 31st at \$2,610,608,316, from which active assets valued at \$349,000,000 had to be deducted, leaving the net national debt at \$2,261,608,316; but he also reminded Parliament that account must be taken of indirect obligations aggregating \$1,269 millions, of which the Canadian National Railway account was responsible for \$1,237½ millions.

In reviewing the Government's financing during the past year he claimed that the recent conversion loan had resulted in approximately \$640 millions (out of a total of \$1,085 millions of War Loan issues) being converted at a lower rate of interest. Towards the financial situation of the Canadian National Railway system he adopted a critical and decidedly pessimistic tone. He quoted statistics to show that since it had become a unified system in 1923 it had incurred an aggregate loss of \$346 millions. Of this sum \$253 millions was on account of unpaid interest on cash advances totalling \$604 millions, which had been made by the Federal Treasury. The most serious feature was the fact that the revenues fell short by \$86 millions of meeting operating expenses and fixed charges to the public. Moreover, he pointed out that even this figure took no account of the \$17½ millions which the Treasury had had to find for the special concessions accorded to the Maritime Provinces by the Maritime Freight Rates Act passed in 1927. He dwelt upon the enormous increase of \$400 millions in the capital

investment in the railway since 1923, and argued that the most ominous feature of the situation was the fact that despite this increase of investment the gross earnings of the railway in 1930 were less than in 1923. He severely criticised the King Government for allowing the executives of the Canadian National Railway to expend money without any serious check, but declared that while his Government would exercise severe scrutiny upon the railway expenditures, it must not be regarded as the enemy of the public-owned system. This part of his speech was obviously intended to impress the country with the seriousness of the problem involved in the fortunes of the Canadian National system.

In his review of the trade treaties existing between Canada and other countries, Mr Bennett declared that New Zealand's abrogation of the British preferential rates (by which Canadian exporters expect to be so severely hit that they are pressing for negotiation for a new treaty) for Canadian imports was tantamount to a declaration of commercial war. For this state of affairs he laid the blame upon the King Ministry. In regard to the treaty with Australia, he said that negotiations were still proceeding. He also hinted at an impending revision of the commercial treaty with France, and laid it down that his Government would insist upon a revision of all commercial treaties which were not mutually advantageous. A few days later it was announced that the treaty with Australia had been signed, though its endorsement by the Australian Parliament may take some time. The terms are not yet disclosed, but it is said that, in return for substantial preferences for her wines, canned tropical fruits, oranges and dried fruits, Australia is to give Canada the benefit of her intermediate tariff on lumber, paper and fish, and of the British preferential rates on several other commodities. There are also said to be concessions in respect of the Australian duties on Canadian cars.

Mr Bennett asserted that he had found it impossible to undertake the general revision of the tariff which he had contemplated, but, as it is, the changes proposed in the Budget affect approximately 200 items and are a second long step in rounding off the "Canada first" policy of high protectionism. It is estimated that the tariff changes will affect 200 million dollars' worth of import trade, and since the revision of last September affected a similar volume, at least half of Canada's total imports are now to experience the impact of the Bennett protectionist policy. Practically every country which does business with Canada is hit by the tariff change, but the United States is the chief sufferer; moreover, despite the assurance in the Speech from the Throne that the British preference would only be incidentally affected, British trade will suffer heavily in different lines. In round figures the major items affected by the tariff are as follows:—

In Million Dollars.	
Coal	\$52
Coke	5
Machinery	24
Manufactures of iron and steel	15
Tea	13
Oranges	10
Corn	7
Furniture	5
Magazines	\$5
Leather	4
Steel plates	3
Bacon, hams, etc.	2
Canned fruits	2
Canned vegetables	1
Clock movements and parts	1
Cocoa butter	1

In the interests of what is called a National Fuel Policy, a special drive has been made against coal imports from the United States. For the first time in history American anthracite coal is subjected to a duty of 40 cents per ton, and as British anthracite is left free, there may be a transference of business from American to British coal exporters. The duty on American bituminous coal is raised from 50 to 75 cents per ton, and that on coke to \$1 per ton. Provision is also made for substantial subventions designed to cover part of the freight rates from the coalfields of British Columbia and Alberta to the prairie markets, and from the Nova Scotia mines to the markets of Ontario and Quebec. There are also important changes in the motor schedules for the purpose of substituting the complete manufacture of motor vehicles in Canada for the assembling of imported parts, and the entry of used cars is completely prohibited. In the iron and steel schedules there are increased duties on miscellaneous manufactures

Swedish Stocks and Bonds

We deal in all Securities.

SKANDINAVISKA KREDITAKTIEBOLAGET

Phone Stockholm 0101

which will affect British exports as well as increased duties on leather goods and pickles, and there is a sharp addition to the duties on furniture. For purely revenue purposes the duty on tea, which the Liberals had removed, has been restored, and there are additional imposts on fruits and vegetables.

Apart from the actual alterations in the duties there are three notable features of the tariff revision:—

(1) New steps are taken to prevent manufacturers from exploiting the tariff by increasing prices. Last September Mr Bennett placed on the Statute Book a clause empowering the Government to deprive manufacturers who raise prices of their protection, but the plan was found unworkable, as in most cases only a few manufacturers of any given article raised their prices, and the Government hesitated to punish all for the sins of a few. There are now included in the Budget amendments which will authorise the Government to compel any manufacturer who increases his prices to pay an Excise tax equal to the tariff on his goods.

(2) Mr Bennett, who has always been an advocate of retaliatory fiscal tactics, seeks authority from Parliament for more power to conduct tariff wars against other countries. In the Customs Act there is a section which empowered the Government to impose a sur-tax upon the goods of any country which failed to give Canada equitable tariff treatment; this tax was low and had rarely been applied, but the Budget provides that the sur-tax be fixed at 3½ per cent., which would certainly be high enough to prohibit most imports on which it was levied.

(3) One of the fundamental principles of the Canadian tariff has been that nothing was to be considered duty-free unless the Tariff Act so stated, but only a small tariff has hitherto been imposed upon all articles not specifically enumerated. Mr Bennett enunciates in his Budget the principle that all goods, unless stated by the tariff, are not only dutiable but dutiable at the high rate of 25 per cent., which means that all new inventions, new articles, new fruits, etc., will have to pay this rate unless Parliament specifically decrees otherwise.

An innovation in the Budget is the imposition for the first time of a heavy tax upon American newspapers and magazines entering Canada, for the obvious purpose of reducing the inflow of these periodicals. The Budget also makes an attempt to give some help to the Western farmers by a provision respecting freight rates on exported wheat, which is tantamount to an export bonus of 5 cents per bushel. Critics suggest that this benefit will, at least in part, go to the European importer, and that only a direct bonus would achieve the ostensible purpose.

For the coming fiscal year Mr Bennett estimated the revenue on the basis of the existing taxation at \$325,000,000 and the expenditure at \$430,000,000, which left a gap of \$105,000,000 to be bridged. Of this sum, \$20,000,000 will be capital expenditure, which he will meet by borrowing, and of the remaining \$85 millions he proposes to raise \$78,175,000 by fresh taxation. This would still leave a prospective deficit for the current year of approximately \$7 millions, which might disappear if trade improved and revenues increased. Of the new imposts the most important is a sharp increase in the sales tax, which is raised from 1 per cent. to 4 per cent. Moreover, in addition to this flat rate there will be a special excise sales tax on all imported goods, which will have to pay 5 per cent. The exemptions to the sales tax have also been drastically reduced. The income tax has been subjected to complete revision, and the effect is to ease the burden slightly on people with relatively small incomes, and very substantially for the millionaire class, the maximum rate being cut from 45 per cent. to 25 per cent., and to increase the burden upon the middle class with incomes from \$10,000 to \$40,000 per annum. A special tax of 2 per cent. is to be imposed on income earned in Canada by non-residents of this country, and family corporations are to be abolished. The corporation income tax is

increased from 8 per cent. to 10 per cent. Mr. Bennett forecast that, as a result of the changes, the yield of the income tax, which was roughly \$71 millions last year, would be reduced to about \$58 millions.

The three-cent postage rate is restored by an increase of 1 cent in all existing rates, and the two-cent stamp tax on cheques, from which cheques of \$10.00 or less were exempt, is now to be generally applied. The postage rates on newspapers are increased on all newspapers possessing a circulation of more than 10,000 copies, with the exception of religious, agricultural and scientific publications.

Mr Bennett has made a bold effort to balance the Budget for 1931-32 under difficult conditions, and no Finance Minister has given the Canadian people such a frank and detailed account of their exact financial position. The Conservative Party and papers give the Budget their cordial approval, and even the *Manitoba Free Press*, the leading Liberal paper of the West, finds it less deplorable than it expected. Liberal and Progressive opinion in general, however, is very critical, and in opening the debate for the Liberals, Colonel Ralson subjected the Budget to a comprehensive arraignment as a preliminary to moving a severely censorious amendment.

GERMANY IN TRAVAIL.

The following letter has been addressed to the Economist by an English correspondent who has lately visited Germany and has set down, without partiality or prejudice, the impressions which he derived of that country's inner crisis, the "politische Umschwungsbewegung" with which Dr. Brüning, and Europe, have to reckon.

I ARRIVED in Berlin on Monday, June 1st, when the Chancellor and the Minister for Foreign Affairs were on the eve of their departure for England. I left on Sunday, the 8th, just after the conversations had begun at Chequers and the new Notverordnung (Emergency Order) had been published in Germany. I spent my week in talking with people of many kinds: officials in the Foreign Office and in other public offices (including the Reichsanstalt for Unemployment), bankers, Salvation Army officers, foreign diplomats, politicians, and above all a small number of private friends whom I always see each time that I visit Berlin. Thus, during this critical week, I was able in some measure to look at Chequers, and the world crisis, through German eyes.

What a different picture from that which I had brought home with me from my last visit to Berlin, three years ago! Or rather, what a strange and sinister contrast between the outward aspect of the city—the houses, the streets, the omnibuses—and the people's state of mind, as revealed in their discourse and, indeed, in their countenances before they opened their mouths to speak. The Berlin that is built of bricks and mortar and stone and steel is substantially unchanged. It is true that the motor traffic in the great thoroughfares is noticeably thin and that the prices of the goods displayed in shop windows are still more "derisory" than they are, nowadays, in London. There are also many more police and many more beggars in the streets (and in Prussia a host of beggars is perhaps a greater portent than a host of policemen). In general, however, the material, inanimate Berlin is still what it has always been. In the well-to-do quarters the houses still receive that last coat of paint and the gardens that last wash-and-brush-up that are often lacking in the corresponding quarters of London and Paris. And as for the poorer quarters, a Londoner can still walk right through them without realising that he has been exploring "the slums." For, in Berlin, such slums as disfigure London and New York have always been unknown. A population with less—and to-day far less—purchasing power than the urban proletariat of the English-speaking countries lives in streets where there are no smells, no garbage or waste-paper strewn about, and no children whose clothes are not neat and clean.

These things will endure so long as the German variety of Western civilisation continues to exist—and nobody

that I met in Berlin expects it to be blotted out of existence before the beginning of next winter! Nevertheless these material phenomena—even if they still have at least five more months of existence ahead of them—can hardly blind any but the most superficial observer to the psychological realities. For the essence of a city is not the bricks and mortar but the souls of men; and in Berlin to-day men's souls, in all classes and in all walks of life, are troubled to their depths. The contrast, in this city, between the neatness and precision of man's works and the doubt and gloom and foreboding which reign over his thoughts and feelings, strikes the foreign observer at every turn; and it is just in this contrast that the danger lies. For a people which has created this clean and orderly and upstanding city will not acquiesce tamely in a state of pauperism and idleness from which it can now see no prospect of redeeming itself by hard work and efficiency. The contrast, and conflict, between the Prussian tradition, externalised in the streets and buildings of Berlin, and the present plight of the German people, necessarily breeds a state of mind which, short of the intervention of some *deus ex machina*, can only lead to revolution.

As one goes about the city talking to the people, one becomes more and more conscious of the tension, the sense of nervous expectancy, and the inability to penetrate the darkness which shrouds the coming winter. Germany has just emerged from the winter of 1930-31, and at this moment her people might be supposed to be feeling "sufficient unto the season is the evil thereof." Actually, the shadow of the winter of 1931-32 has already cast its chill and gloom over this early summer's light and warmth. In German minds to-day the advent of next winter portends the end of the world. "I am thinking of sending my boy to a German university," I said to one of my German friends. "When?" "Say, about two years from now." "Two years! Why, what is the use of talking about anything in Germany two years hence?" Incidental ejaculations of this kind, made spontaneously without any thought of political effect, reveal how deep and genuine is the foreboding of disaster.

What do the Germans fear? They fear an almost automatic political revolution when the economic pressure which the Government is putting upon individuals becomes at last quite intolerable. The Government are determined, as far as they are concerned, not to repeat the history of 1922-23. They are taking draconian measures to keep the public economy and the public finances of Germany sound. But these measures are all taken at the private individual's expense in the form of drastic rationalisation, which swells the ranks of the unemployed in the middle as well as in the working class; drastic reduction of unemployment benefits (already startlingly low on English standards) and of official salaries; drastic increases in taxation, direct as well as indirect. The fear is that, at the sharp touch of next winter, the individual may be goaded into political revolt against the personal economic sacrifices that are being demanded of him by the State.

Which do they fear more: the National Socialists or the Communists? The Germans to whom I talked—and almost all of them belonged to the moderate middle parties between the two violent extremes—did not seem to regard the distinction as very important. "The young men will overthrow the present regime as Nazis and then reign in its stead as Communists," was a frequent reply. What is in a name? The reality is that, in the present state of Germany, and of the world, the young men of all classes in Germany are in a revolutionary frame of mind, which threatens, by next winter, to express itself in action unless the situation changes in the meantime.

My German informants did, however, distinguish very clearly between the disinherited and exasperated young men of this class and that. The higher the class, the greater the technical qualifications, the deeper the disillusionment. And, accordingly, that majority of people in Germany—and I believe it is still a majority—which dreads revolution is particularly afraid of the "Akademiker," the young men who have been through the universities to qualify as doctors and lawyers and engineers, and to find themselves stranded as an unemployed intellectual proletariat. These, one hears, will be

the spear-head of the revolution—as Hitlerites to-day, as Communists to-morrow, but as revolutionaries day in and day out. They are revolutionaries not because they believe that this revolutionary programme or that will bring them salvation (for that matter, all these programmes are remarkably vague), but because they are frustrated and disillusioned in their own individual lives. The spur that goads them is emotional and irrational. "Life has misused us! We will hit back at life wherever we can see a target; hit back at the Government, the capitalists, the Jews, the foreigners! No matter, so long as we strike a blow. We cannot make our own position worse, and by some miracle we may make it better. At least we shall enjoy the satisfaction of relieving our feelings! At the worst we shall perish out of a world which has given us nothing to live and work for!"

This is the rising note of revolutionary despair in Germany. But, through its strident tones, one can also hear, albeit faintly, another note which sings, not of the vindictive destruction of this world, but of a retreat from this world to another. Even in Hitlerism there is a strain of what one might unkindly call "uplift," or, more sympathetically, asceticism, renunciation, spirituality. But, apart from this, and by its nature almost unorganised, there is now on foot something like a religious movement in Germany: a revulsion from the materialism of the modern Reich to the idealism which reigned during the preceding age of adversity. The strength of this movement cannot be expressed in statistics. Perhaps it can be gauged by the strength of the regard for Dr. Brüning, the man of the hour, who is also a man of religion. If Dr. Brüning has so far succeeded, without precipitating a revolution, in obtaining from his countrymen one material sacrifice after another, it is because his countrymen know that the Chancellor's personal life is austere and unself-seeking.

Dr. Brüning may fall, as many heroes have fallen, in venturing upon superhuman tasks. But the spirit which he symbolises—"three-quarters saint and one-quarter Prussian"—will assuredly survive in Germany, even if the waters of revolution are destined, next winter, to go over her soul. In the ordeal of great nations, creative evolution finds the chance to do its work.

Notes of the Week.

The Government and the Dole.—Before the House of Commons resumes discussions of the Finance Bill in general, and in particular the compromise between the Government and the Liberals over the Land Tax, it will have to face on Monday the graver and more urgent problem of the dole. The borrowing powers of the Unemployment Insurance Fund, which now stand at £90 millions, are approaching exhaustion, and the Government will come to the House for authority to extend those powers to the tune of a further £25 millions. The White Paper explaining this demand shows that on June 8th the Fund was in debt to the extent of £85,870,000, and that (excluding accrued interest) the debt has been increasing at an average weekly rate of £1,010,000. The Government also propose to extend by six months the period of transitional benefit. This extension is estimated to be likely to cost some £20 millions, of which about £5 millions will fall in the financial year 1931-32, increasing the Budget provision under this head from £50 millions to £55 millions. Naturally, in view of the recommendations of the interim report of the Royal Commission, the House will expect to be told, quite clearly, before it votes these powers, what steps the Cabinet propose to take to deal with the abuses disclosed by the Report. It is now accepted as a certainty that the Government will not implement at once the major recommendations directed to re-establish the solvency of the Fund, but will leave that matter over until the final report of the Commission has been received. In this major aspect of policy temporisation is politically possible, but the matter of the abuses brooks no delay, for if confronted by absolute inactivity on the part of the Government, the

House of Commons would not be likely to agree to an extension of the Fund's borrowing powers, and such refusal would create a tense political crisis. Some immediate legislation must therefore be promised, and the dual problem for Mr MacDonald, as he looks right and left, is how little will satisfy the Liberals, and how far he can carry his own supporters. Monday will provide an acid test of the Government's willingness and ability to face up to the grave aspects of the situation.

Finance Bill Points.—The Land Tax has occupied so large a part of the parliamentary stage that a number of important points raised during the progress of the Finance Bill debates have passed almost unnoticed. Among these is the extension of the currency of Savings Certificates. The first series, issued between 1916 and 1922, were due, after several extensions, to expire on March 31, 1932, the amount of principal and interest falling due to be repaid at that date amounting approximately to £150,000,000. A second series is due to expire on September 30, 1933, the amount in this case being about £57,000,000. Then there is a third series—the current series—in which case the amount of principal and interest outstanding at the end of last year was stated by Mr Graham in the House of Commons on Wednesday to be about £255,000,000. The resolution passed on that day extends the first series to 1940, and it is sufficiently elastic to enable the Treasury to deal with the later series by means of extension as occasion arises. Another transaction of the House on Wednesday was the passage of a resolution authorising the Treasury to make advances not exceeding £9 millions to the Road Fund and to borrow for this purpose. Powers for temporary borrowing already exist, and the new resolution authorises borrowing of a more permanent nature in the shape of loans repayable between 1936 and 1941. The necessity was explained by the Minister of Transport to arise from the two "raids" on the Road Fund made by Mr Churchill in his Budgets. The annual discussions on Government assistance to the beet sugar industry have been proceeding, and special interest has been lent to them by Dr. Addison's agreement with the producers to mitigate the automatic fall in the subsidy this year from 13s to 6s. 6d. per cwt. by the grant of an extra 1s. 3d. per cwt., which is to be repayable in the event of a rise in the price of sugar by more than that figure. The resolution authorising this grant passed through to the report stage on Tuesday, but was strongly criticised by Sir Herbert Samuel, who argued that the subsidy and other allowances made by the Government exceeded the total value of the sugar produced, and claimed that through the subsidy only 12,000 workers had been put into employment at enormous cost. The whole question of the policy of the subsidy will be the subject of full debate at a later stage of the proceedings.

Monsieur Briand and his Opponents.—Monsieur Briand has once again emerged victorious from a trial of strength with his critics. Monsieur Laval has not only included him in his Cabinet, but has made his inclusion a question of confidence. The issue was raised this Tuesday, June 16th, by a fresh attack upon the Foreign Minister on the part of his inveterate assailant, Monsieur Franklin-Bouillon; and, when the vote was taken, the Government prevailed by 312 votes against 261. So far, so good; yet there is another side to the picture. The Government's victory was secured by the support of groups on the Right, which have no sympathy with Monsieur Briand's policy, but which voted on his behalf simply on the calculation that, if Monsieur Laval's Government went out—Monsieur Briand and all—this might open the way for at least a temporary regime of the Left. This vote gives some colour to the view that Monsieur Briand actually does disservice, by remaining at the Quai d'Orsay, to the cause which he had at heart by giving cover to colleagues who favour a very different policy from his and who invariably make his policy give way to theirs when it comes to the point. Might not the interests of Europe, and incidentally of France herself, be served better if a Government of the Left, in which Monsieur Briand was not included,

were to come into power in Paris? To this question there are two answers. In the first place, with the present composition of the Chamber, any Government of the Left would be almost certainly ephemeral. And in the second place, even if such a Government were to come temporarily into power, there is no guarantee that it would find itself able to go any further in the direction of international conciliation than Monsieur Briand has succeeded in going. Continuity of foreign policy is a phenomenon which presents itself in all countries, and not least in France. So, when all is said, we may be content to see Monsieur Briand remaining at the Quai d'Orsay, sorely though he may be handicapped by a body of colleagues who all stand so well to the right of him. His eloquence, his resourcefulness and his familiarity with the technique of international politics are personal assets that are peculiarly his own. As things are, we cannot see the possibility of France finding a successor whose ability to "deliver the goods" would so far exceed Monsieur Briand's as to outweigh the loss of those peculiar qualifications which he always brings to his task.

Powers Spiritual and Temporal.—When the Lateran Agreements were signed two years ago it seemed, on a superficial view, that the Holy See had attained a prospect of peace and security such as it had never been able to look forward to since the beginning of the Italian Risorgimento or, indeed, since the French Revolution. The outlook is different to-day, when Pope Pius XI finds himself in conflict with the Governments of Great Britain (apropos of Malta), Spain (apropos of the anti-Catholic movement there) and Italy (apropos of the affair of the Azione Cattolica). Paradoxically, the relations between the Vatican and France are now good, while the settlement of the religious conflict in Mexico seems to be holding firm likewise. On the other hand, the Maltese dispute, which has been temporarily quiescent, seems likely to flare up again when the Royal Commission, which is now concluding its investigations in the island, presents its report. As for the situation in Spain, the Government has definitely succeeded in putting a stop to the popular outbreaks of violence against ecclesiastical persons and property; but this at the price of taking certain precautionary, or punitive, measures which Señor Alcolá Zamora and his colleagues would probably have refrained from taking if they had been entirely free agents. The most signal case is the deportation, by the Spanish Government, of the Primate of Spain, Cardinal Segura, the Archbishop of Toledo, who had fled the country at the time of the popular outbreaks against the Church in the middle of last month, but had since returned to Spain after a visit to Rome. Last Sunday, June 14th, the Cardinal was arrested, and the next day he was taken in a police car to the frontier. This measure may placate anti-clerical feeling in Spain, but only at the price of exciting feelings on the Catholic side. The Catholic reaction against the present regime in Spain showed its strength in the demonstration which was held last Sunday at Pamplona, and which was followed by a clash between Catholics and Republicans. Meanwhile, in Italy, the exchange of notes between the Segreteria di Stato at the Vatican and the Palazzo Chigi continues; and while an eventual compromise in regard to the status and activities of the Azione Cattolica seems inevitable, it does not yet appear how the compromise will shape itself. The fundamental reason for the Fascist animus against the Azione Cattolica is perhaps a jealousy of any organisation in Italy which does not depend on the Fascist Party and is not stamped with the Fascist impress. Anti-clericalism is one of the traditional ingredients in Italian nationalism. And those Italian nationalists who have taken the line that Fascism has come not to destroy but to fulfil the work of the Risorgimento probably feel more at home when Church and State in Italy are at loggerheads than when they are in concord. As for the ostensible ground of complaint—namely, that the organisation of the Azione Cattolica was largely in the hands of ex-members of the former Partito Popolare—it must be remembered that the Partito Popolare included Catholics of many political persuasions

besides the radical element which was most closely identified with Don Sturzo; and it is not unlikely that some of these more conservative ex-Popolari should have found scope for their activities in the Azione Cattolica. On the other hand, it is hardly likely that an organisation so closely under the control of the Vatican should have taken to its bosom the radicals of Don Sturzo's way of thinking, who found no more favour with the Pope than with the Duce. Meanwhile, the underlying ground for the conflict remains, and will not easily be removed.

The Patiala Manifesto.—Second thoughts are not always the best: we cannot compliment the Maharajah of Patiala on the terms of the statement which he has issued in reply to the questionnaire recently circulated by the Chamber of Princes on the proposed scheme of Indian Federation. In striking contradiction to his speeches at St. James's Palace last winter, the Maharajah now explains that his acceptance then of the federal principle was merely conditional, and that recent changes in the political situation have confirmed his conviction that it would be neither wise nor politic for the States to adhere to the proposed scheme, which he describes as "vague, indefinite and diaphanous." He attacks the proposed Federation on the ground that it incorporates arbitrary powers of paramountcy, involves the danger of encroachment by the Federal Executive and threatens the very existence of the small States. It would appear that the explanation of this remarkable *volte face* is not unconnected with the replacement of the Maharajah of Patiala by the Nawab of Bhopal in the Chancellorship of the Chamber. However that may be, the Patiala manifesto adds a new complication to an already difficult problem, and, though there seems no serious likelihood that any of the other major States will thereby be deflected from their policy of supporting the federal scheme, the influence of the Maharajah on a number of the minor States may well introduce an unfortunate element of discord in the Chamber.

Future of Shanghai.—Some weeks ago we commented on the first part of the Report on the International Settlement at Shanghai which has been made by the distinguished South African Judge, Mr Justice Feetham, at the request of the Municipal Council. This first instalment, which was of a historical and descriptive character, has now been supplemented by the second and last instalment, which deals with policy and action. This second volume, having been published in Shanghai only this week, is not yet available in *extenso* in England; but sufficiently full accounts of its contents have been cabled to make its purport clear. Judge Feetham's recommendations are conservative. The practical steps which he recommends to be taken forthwith would appear to be little more than adjustments of administrative detail; but they must be read in the light of two considerations: they are put forward as the first steps in a continuous process of change; and they are governed by the principle of fostering co-operation, in the administration of Shanghai, between Chinese and foreigners. Judge Feetham rejects the idea of any immediate rendition of the International Settlement at Shanghai to the Chinese Government—even if rendition were to be made conditional upon the grant of a municipal charter which would temporarily maintain the present regime intact at the will of the Chinese Government in substitution for the treaty rights and the prescriptive rights of the foreign Powers. In view of the present state of China, he regards the rights of the Powers—which carry with them some important obligations—as an indispensable guarantee for the maintenance of those values which the International Settlement stands for: values so important for China as civil law and order, economic progress, administrative efficiency and purity. From this standpoint, he looks forward to a transition period which will be measured "not in years but in decades." There is perhaps, however, a danger that an investigator whose task is to concentrate his attention upon Shanghai may look at Shanghai in *vacuo*; whereas in reality the International Settlement and its Chinese

hinterland form an inseparable whole. From this wider standpoint it may be remarked that Judge Feetham himself propounds that the abolition of extra-territoriality in China at large would necessarily entail the rendition of the International Settlement at Shanghai (extra-territoriality supplying a vital element in the municipal administration) unless the Shanghai area were specially excepted. Whether or not Shanghai and certain other treaty ports are to be excepted from an agreed abolition of extra-territoriality in China as a whole has been in fact the stumbling block in the recent negotiations at Nanking between the Chinese Government and the British Minister, Sir Miles Lampson. And even if the British negotiator gets his way, the moratorium for the abolition of extra-territoriality in Shanghai will assuredly be measured not in decades but in years. In the rate of change at Shanghai—which is the crux of the Shanghai problem—there will probably have to be a compromise between the optimum vote from the standpoint of Shanghai and the optimum vote from the standpoint of China.

Australia Meets her Bills.—Australia has taken another drastic step in the right direction. Faced with market bill maturities of £5,000,000 to be met in London on June 30th, the Government decided to ship gold to London for the purpose. The decision was sanctioned, on Wednesday, by the Canberra Parliament, which, by 59 votes to 3, passed a bill authorising the shipment and also the consequential reduction of the statutory gold cover for notes of the Commonwealth Bank from 25 to 15 per cent. The latter measure is not without its dangers, but it is clearly better than default upon the June 30th bills, which would have seriously impaired Australian credit, and it is a sounder method of procedure than previous proposals. Moreover, the gravity of the measure is palliated by the insertion into the Bill of a definite proviso that a progressive return should be made to the old statutory cover ratio of 25 per cent., which is to be achieved within three years. At the same time, it is announced that the maturity of the Government's £5,000,000 obligation to the Westminster Bank has again been postponed from June 30th to September 30th. So day by day the Commonwealth Government is warding off the most pressing of its financial dangers. Of the serious difficulties that remain, however, a reminder is forthcoming this week in the disclosure by Mr Lang of a deficit of £8½ millions in the Budget of New South Wales.

Central Banks and the Crisis.—In the paper on "Trade Fluctuations," which he read to the Royal Statistical Society last Tuesday, Professor Sprague, Economic Adviser to the Bank of England, amplified, without greatly adding to, the theme of his recent address to the English Speaking Union, which has already formed the subject of comment* in these columns. The essence of his thesis was a denial of the proposition that trade recovery should be brought about by positive action by the world's central banks through the medium of credit expansion. The root cause of the present depression was, he said, the disequilibrium between the prices of agricultural products and those of manufactured goods—a disequilibrium perpetuated by such measures as the holding of stocks off the market, the imposition of tariff barriers, or the contraction of production. Trade recovery, with an accompanying rise in the general price level, pre-supposed the re-establishment of something like the former equilibrium between these groups of prices, but the equilibrium could not be secured through an upward movement in the prices of the commodities which had experienced the most extreme decline. All that central banks could be expected to do was to maintain easy conditions in the money markets and to enable the commercial banks to supply additional credit if and when trade revived. We remain unconvinced of the validity of Professor Sprague's conclusions and, though we are not disposed to challenge the thesis that wages and other costs in manufacturing processes require some readjustment to meet present conditions, we still want to

know, as a matter of practical application, how long Professor Sprague thinks it would take to drive down wages and salaries to something like their pre-war level. Even if the process were not appallingly complicated by the existence of a burden of fixed interest charges, both internal and international, which such deflation would make more and more onerous, could the re-establishment of equilibrium on these lines be brought about in time to prevent the present depression creating really critical financial, to say nothing of political, consequences? If there were really no alternative to a reduction of all wages and prices to the present level of agricultural prices, the whole world would indeed be faced, as Sir Basil Blackett said last week, with "the prospect of at least partial repudiation"—not to speak of serious social disturbance, of which recent events in Germany have given due warning.

France and Central Europe's Needs.—The semi-official announcement made here, writes our Paris correspondent, that a group of French financial and industrial experts is about to make a tour of investigation in the Central European countries for the purpose of studying on the spot their economic and financial situation has crystallised French attention on this subject. The projected mission is the outcome of conferences between the Ministers for Finance and Commerce with the Governor of the Bank of France and other authoritative persons. It is understood that the party will consist of six representatives of the banks, nominated by the Minister for Finance, and six leading industrialists, selected by the Minister for Commerce. In order to remove misconceptions, the Finance Ministry has issued a formal *communiqué* explaining that, although the mission has the approval of the Government departments named, it is not of an official character, and that, further, contrary to statements published here, it has no connection whatever with financial operations concerning the Austrian Creditanstalt. French opinion has latterly been somewhat irritated by suggestions from foreign sources that French capital should be more freely placed at the disposal of the weaker European countries. Emphasis is laid here on the fact that, during the past two years, large amounts of French money have been advanced, on long-term loans, to Germany, Roumania, Poland, Belgium, Finland, Austria, Bulgaria and Jugoslavia. These total over £50,000,000, while a loan to Czechoslovakia is pending. These loans, it is pointed out, have been made in spite of the fact that France is herself badly in need of money for internal purposes, and notwithstanding the fact that several of the countries named have for years past deprived French holders of their issues of the greater part of the money invested by insisting on paying interest and redemption in depreciated paper instead of gold, and are still, like many other countries, continuing this practice. There are now indications that, while French capitalists are perfectly willing to continue the time-honoured policy of lending abroad, they will in future insist that loans issued here shall be accompanied by much stricter financial guarantees than in the past, and particularly by undertakings that a given proportion of the money so lent shall be expended for the benefit of French industry, which it has not been in many instances in the past.

Postscript to the Hatry Crash.—Last Friday, nearly two years after the first reverberations of the Hatry crash, Clarence Hatry's Italian associate, John Gialdini, was convicted by the Milan Court on the charge, brought at the instance of the British Government, of falsification of documents and conspiracy to defraud. The sentence was one of five years and ten months imprisonment, but one year is remitted under the Public Amnesty granted last year on the occasion of the marriage of the Prince of Piedmont. For Gialdini to have escaped scot free by his flight from England, while his associates suffered, would have outraged justice; and it is satisfactory that, with the conclusion of this trial, *finis* may be written to an affair as discreditable as it was exceptional in the records of the City of London.

* See *Economist*, May 16, 1931, page 1037.

Overseas Trade in May.—The full returns of May overseas trade are now available. The totals, which were published last week, were:—Imports, £69,632,532; British exports, £33,895,429; re-exports, £5,746,855. The import figure shows a further slight fall, but exports of British goods are slightly higher than last month, though hardly more than half the corresponding figure two years ago. The following table shows retained imports, for the year to date, of some of the more important foods and raw materials:—

RETAINED IMPORTS.		First Five Months.		
		1929.	1930.	1931.
Wheat	cwts.	45,533,132	34,201,424	37,625,943
Beef	cwts.	5,136,190	5,259,846	5,253,328
Sugar	cwts.	17,815,728	13,226,309	14,029,122
Iron ore	tons	2,235,829	2,353,612	1,012,176
Raw cotton	centals	7,150,162	5,269,684	4,099,022
Sheep and lambs' wool	centals	3,212,719	3,119,760	3,787,255
Raw silk	lbs.	1,715,272	2,070,299	1,363,448
Flax, hemp and jute	tons	168,447	144,651	115,077
Wood and timber, sawn, soft	loads	739,532	939,031	600,600
Rubber	centals	1,887,155	1,283,399	1,141,140
Crude petroleum	thousand galls.	180,220	185,098	173,645
Wood pulp	tons	591,243	583,146	467,084
Hides, wet and dry	cwts.	342,540	461,705	446,053

The three foodstuffs shown here maintained or improved last year's level, but of the raw materials wool alone shows an increase, though in May itself, as compared with May, 1930, there was also an increase in imports of flax, hemp and jute, while oilseeds, which are not shown in the table, have also been imported in greater quantities this year. This table is closely paralleled by the table of exports, where the only increase is in exports of wool tops:—

SOME LEADING EXPORTS.		First Five Months.		
		1929.	1930.	1931.
Coal	tons	23,210,341	24,491,358	17,534,573
Pig iron and ferro alloys	tons	257,577	169,457	84,153
Railway material	tons	215,772	193,380	97,449
Total iron and steel	tons	1,933,982	1,546,571	836,596
Textile machinery	tons	55,867	42,175	21,835
Total machinery	tons	243,519	216,918	145,787
Cotton yarns	lbs.	73,322,600	62,038,600	52,921,900
Cotton piece-goods	sq. yds.	1,710,247,400	1,329,184,500	715,092,100
Wool tops	centals	145,279	114,470	123,490
Woolen tissues	sq. yds.	45,208,000	35,875,700	23,428,700
Worsted tissues	sq. yds.	20,803,900	16,021,700	12,579,100
Linen piece-goods	sq. yds.	31,431,507	30,753,600	27,746,000
Boots and shoes	dozen pairs	181,397	401,230	277,661
Leather	cwts.	139,646	125,697	67,203
Paper and cardboard	cwts.	2,059,221	1,943,599	1,298,118
Locomotives	tons	15,977	20,383	11,274
Motor cars and chassis	number	18,120	14,356	10,427

Everything else is badly down, and the May figures, taken by themselves, are not much more encouraging. There seems to be no definite indication as yet of any improvement, actual or impending, in this country's external trade.

Miners' Hours.—As we go to press we learn that the result of the final voting on the I.L.O. draft convention on hours of work in coal mines was carried by 81 votes to 2. On Tuesday the first reading of the convention was carried by 67 votes to 16. All the employers' amendments were rejected, and the only significant Government abstention, from the European point of view, was that of Poland. In the form in which it has emerged from the conference, the convention applies to all coal mines, and requires that time—reckoned from bank to bank—shall not exceed 7½ hours a day. In underground mines not more than sixty hours overtime annually (to be paid for at not less than time and a quarter) may be worked; and in lignite mines, seventy-five hours' overtime annually is permitted, with an addition of a further seventy-five hours in exceptional cases. Clauses are also incorporated in the convention allowing work on Sundays and national holidays in exceptional conditions, and also an extension of the daily limit to 8½ hours when it is agreed between coal owners and miners that certain continuous tasks require this extension. The fact that all the Government delegates of the main coal-producing countries on the Continent, with the exception of Poland, voted with Great

Britain in favour of the convention on Tuesday appears to augur well for its final ratification. But it remains to be seen whether the prospects of uniform limitation of hours on the proposed basis (this corresponds approximately to a 7½-hour day, British reckoning) will avail to ease the critical situation which confronts the British mining industry in the immediate future. During the coming week-end, negotiations between the owners, the miners' leaders and the Cabinet Coal Committee will be continued; and on Tuesday a national delegate conference of the Miners' Federation will meet to hear the report of its negotiators and to decide policy. Apart from the Yorkshire delegates, who are likely to press for a reversion to the 7-hour day, the general feeling of the miners in most districts seems to be in favour of accepting the continuance temporarily of a 7½-hour day, provided that a definite assurance is given that there will be no further wage reductions and that some improvement will be made in the rates now payable in South Wales. The possibility of the owners giving any sort of guarantee to this effect seems doubtful, and, in any case, this solution would not get over the difficulty of Scotland, where an 8-hour "spread-over" is still being worked. Unless the Cabinet Coal Committee can devise a very persuasive formula before Tuesday, the delegate conference will clearly require the most judicious handling if trouble is to be avoided.

Employment and the Cost of Living in May.—There was no marked change in employment during the first three weeks of May. Some improvement was recorded immediately before Whitsuntide, but in a number of firms in the North and the Midlands the holiday period was extended over the last week of the month. According to the *Ministry of Labour Gazette*, among insured workers in Great Britain and Northern Ireland the percentage unemployed at May 18th was 20.8, as compared with 20.9 per cent. at April 27th and 15 per cent. at May 26, 1930. It is estimated that there were approximately 9,380,700 insured persons in employment on May 18th. This was 24,000 more than at the end of April, but 464,500 less than a year ago. The total number of persons registered as wholly unemployed on May 18th was 1,840,562, as compared with 1,848,170 a month ago, and 1,164,468 a year ago. Those temporarily stopped on May 18th numbered 530,907, against 556,978 at the end of April, and 509,621 at May 26th last year, while of those usually in casual employment the number unemployed was 115,468—503 more than a month ago, and 19,506 more than a year ago. The latest returns of the Ministry show that by June 8th the total number of registered unemployed had risen to 2,602,898, including 1,844,978 wholly unemployed, 643,169 temporarily stopped, and 114,751 normally in casual employment. May saw a fall of two points in the cost of living, the index number of the Ministry of Labour at June 1st standing at approximately 45 per cent. above the level of July, 1914, as compared with 47 per cent. on May 1st, and 54 per cent. a year ago. For food alone the corresponding indices were 27.29 and 38 per cent. respectively. The fall in the indices during May was chiefly accounted for by reductions in the prices of tea, dairy produce and coal.

Iron and Steel Production in May.—Any consolation that can be taken from the iron and steel production figures for May just issued by the National Federation of Iron and Steel Manufacturers lies in the fact that there was no further downward movement. Production of pig iron amounted to 346,500 tons, compared with 323,200 tons in April and 614,500 tons in May a year ago. The average daily rate was 11,177 tons, which differs by only 0.3 per cent. from the average daily rate in the first five months of the year. The fact that the variation from this average is not more than 3 per cent. in any one of the first five months of the year seems to suggest that the bottom has been reached even if there are as yet no signs of a definite upward tendency. Steel production in May amounted to 435,100 tons, which was somewhat

higher than in April (397,400 tons), but much below the 691,900 tons recorded in May a year ago. Since the April figures were affected by the Easter holidays and May by Whitsun no very accurate comparison is possible. Imports of iron and steel rose from 193,400 tons in April to 227,800 tons in May, the highest figure for the year. The items chiefly responsible for this increase were sheet and tinplate bars, which rose from 43,600 tons to 60,200 tons, and billets, blooms and slabs, which rose by 6,500 tons to 38,000 tons. Pig-iron imports continued at the comparatively high rate of 25,000 tons. Chiefly owing to the decline of exports of railway rails, which, after being 20,000 tons in March and 25,000 tons in April, fell to 3,100 tons in May, the total exports of iron and steel declined by 20,400 tons to 167,500 tons. Thus, the excess of imports over exports, which had been reduced to 5,500 tons in April, was widened to 60,300 tons in May. Although exports of most products registered a decline, exports of pig iron increased by 6,200 tons to 19,200 tons. Reductions took place in prices of certain products during the month, reducing the price index to 105.5, compared with 106.9 in April.

Cotton Trade Census.—Our Manchester correspondent writes:—The Joint Committee of Cotton Trade Organisations has this week sent out the questionnaire to all the firms in the spinning and manufacturing sections of the cotton industry in connection with the inquiry which is to be conducted into the production and potential capacity of the industry. The main object of the inquiry is to ascertain the actual production of principal types of cloth and yarn during the past three years, and the maximum possible production assuming that full time had been worked. With this information it should be possible to indicate broadly in what sections of the trade the gap between actual and possible production is most pronounced, and it will provide a basis for any remedial measures that may be required. The Committee has appealed to the trade to make a satisfactory response so that the necessity to seek compulsory powers from the Government will not arise. The work of classification will naturally require a considerable time, and, although it is requested that the forms should be returned not later than June 27th, it is not expected that any report will be made to the Joint Committee before the middle of July. The strictest precautions, of course, have been taken to maintain the confidential character of the returns made by individual firms.

International Cotton Congress.—The fifteenth International Cotton Congress will be held in Paris on Tuesday next and the two following days, when over five hundred delegates from the twenty-three countries will attend. The opening ceremony in the Chamber of Commerce will be presided over by M. Rene Laederich, the head of the French Cotton Spinners' Association, and welcomes to the delegates will also be given by Comte de Hemptinne, the President and one of the founders of the International Federation of Master Cotton Spinners' and Manufacturers' Associations; M. Rollin, the Minister of Commerce in the French Government, and other notabilities. On the following day (Wednesday) the Congress will devote an entire session to consideration of the causes of the depression in the industry throughout the world, and the best means of removing them. Papers on these subjects have been prepared by delegates from all affiliated countries, and the discussions which will arise cannot fail to attract world-wide attention as they are the considered opinions of experts engaged day by day in the management of the cotton trade. The English delegation will be headed by Mr Fred Mills, the President of the Master Spinners' Federation.

The Public Trustee.—The twenty-third annual report of the Public Trustee, covering the twelve months ended March 31st last, contains the significant observation that "the general economic depression made the administration of trusts peculiarly difficult and anxious throughout the year." The number of new cases accepted was 1,008, as compared with 1,004 in the previous year, but their

aggregate value, £13,606,570, showed a slight decrease. The great use made of the office of the Public Trustee by small testators is illustrated by the fact that about 60 per cent. of the new cases accepted represented estates of under £5,000 in value. The nominal value of the total stocks held by the Public Trustee at the end of March was £205.4 million, against £200.8 million a year ago. Of this total the principal holdings were as follows:—

	Million £
British Funds	60.8
Colonial Government and Colonial and Foreign Corporation Stocks	31.4
Home Rails	28.1
British Corporation Stocks	18.6

In view of the serious depreciation which has occurred in the second and third of these large items, the difficulties and anxiety of the Public Trustee can be readily appreciated.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during May amounted to 910,279 ounces of fine gold, as compared with 882,337 ounces produced during April and 910,998 ounces in March. In May, 1930, the output amounted to 916,213 ounces. The following table shows the monthly output since the beginning of 1925:—

Months of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
January	825,632	796,270	839,782	843,857	876,432	882,801	914,576
February	753,925	753,924	779,339	816,133	815,234	818,188	839,937
March	825,479	834,340	860,511	877,580	866,529	889,370	910,998
April	787,519	803,303	824,014	825,907	872,123	868,606	882,337
May	813,249	849,214	859,479	886,186	897,598	916,213	910,279
June	780,251	852,145	855,154	862,363	856,029	887,867	...
July	818,202	860,134	851,861	867,211	889,480	912,652	...
August	808,218	843,854	863,345	891,865	889,601	921,081	...
September	797,347	839,939	872,118	849,553	889,533	903,176	...
October	812,832	853,296	855,743	897,720	888,590	926,561	...
November	787,633	840,276	848,059	872,484	861,593	884,753	...
December	791,455	836,157	851,225	859,761	851,134	908,492	...
Total.	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	4,458,127

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Sept. 1930.	Oct. 1930.	Nov. 1930.	Dec. 1930.	Jan. 1931.	Feb. 1931.	Mar. 1931.	Apr. 1931.	May 1931.
Gold mines	205,061	206,778	205,030	203,473	209,442	209,777	207,239	206,770	207,109
Coal mines	14,706	14,482	13,973	13,763	13,865	13,740	13,436	13,242	13,305
Diamond mines	5,767	5,032	4,748	4,607	4,325	4,333	4,106	4,030	3,689
Total	225,534	226,292	223,751	221,843	227,632	227,850	224,781	224,042	224,103

The number of natives employed at the gold and coal mines showed a slight improvement, but the number employed at the diamond mines showed a rather pronounced decline.

Fire Losses.—The statistics published this year continue to show an improvement in the fire losses both in this country and in the United States. Those in the United Kingdom for May are estimated to have totalled £400,000, compared with £546,000 in May, 1930, while the United States figure for April was \$41,424,000, compared with \$43,551,000 in April, 1930. The detailed figures for the last three years to date are set out below:—

	1929.	1930.	1931.
United Kingdom—	£	£	£
January	1,086,000	1,387,000	794,000
February	733,000	632,000	678,000
March	1,677,000	796,000	1,350,000
April	1,160,000	600,000	488,000
May	930,000	546,000	400,000
Total for five months	5,586,000	3,961,000	3,710,000
United States and Canada—	\$	\$	\$
January	44,713,825	42,847,000	44,090,449
February	41,520,290	43,206,940	41,776,051
March	41,277,814	42,964,392	44,074,362
April	36,845,795	43,550,996	41,423,764
Total for five months	164,357,724	172,569,328	171,364,626

The moderate improvement so far recorded is an off-set to the declining premium revenue occasioned by the universal trade depression. Of the factors which have been responsible for this improvement, credit must be given to the companies themselves for a more effective pruning of risks carrying a high degree of moral hazard in both countries, but more particularly in the United States of America.

Norwich Union Fire Insurance.—Though not up to the high standard of previous years the 1930 report nevertheless shows that this society has augmented its free resources last year by a sum of £45,000, equal to rather more than £1 per share. This amount has in fact been applied out of the profits to pay off the remaining amount of the uncalled liability on the £25 shares. In this sense the year 1930 marks the close of an epoch. It will be remembered that the control of the society passed in 1925 from the Phoenix to the Norwich Union Life, and that at that time the capital stood at 44,000 shares of £25 each with £12 10s. paid up, i.e., the uncalled liability amounted to £550,000. In the interval the entire uncalled liability has been wiped out from profits. In addition, the total premium income has been increased from £4,034,000 to £4,118,000, and the departmental and other reserves are now equivalent to 89 per cent. of the premiums compared with 82 per cent. in 1925. The features of the 1930 accounts are the same as those which have been noticed in analyses of other composite companies, namely, a dwindling premium income, especially in America, and a reduced margin of profit. The details are set out below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	100,333	4.6	66,248	3.2
Personal Accident	2,287	1.8	582	1.4
Employers' Liability	17,681	7.0	4,480	1.8
General	61,372	4.0	56,614	3.9
Marine	— 5,280	— 2.7	7,500	4.4
	176,393		135,424	
Less taxes, etc.	46,411		64,155	
Total net surplus	129,982		71,269	

The reduction in premium income has had a corresponding effect on the interest earnings, which, after deducting debenture interest, amount to £186,724. The dividend has been maintained at £6 per share, and costs £213,000.

UNITED STATES

Stock Exchange Recovery — Oil Merger — Debt Questions — Treasury — Railroads — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 9.

THIS week the security markets have enjoyed a striking recovery, after three months of almost uninterrupted decline. Although a rally from purely technical considerations was overdue, and no one saw in it a rainbow which promised a definite end to the bear market, it did a great amount of good. The fog of heavy pessimism which has stifled Wall Street and has helped to keep down the spirits of other sections of the country lifted considerably, and there has been a noticeably lessened tendency to sell securities merely because of discouragement and without the urge of real necessity or a sane appraisal of future prospects.

Encouraging developments were not lacking. Along with the intelligence that central banking co-operation

had been obtained to see Austria through her financial crisis, testimony was given that local banks were offering more assistance to the markets. This aid came through a reduction in margin requirements on security collateral against loans. The new policy was initiated by the larger banks and quickly followed by all the others, and shortly by the Stock Exchange firms. The banks announced that on call loans they would henceforth require only 20 per cent. more collateral than the face value of the loan, against 25 per cent. heretofore asked. Brokerage houses decided to carry on margin shares selling under \$10 a share, which had been contrary to the majority practice.

Taken alone this greater liberality was of no great importance. Its effect was none the less great, inasmuch as the market supposed that the banks expected no extensive break. So far as Wall Street loans are concerned, liquidation has continued to this time, in spite of the high yields obtainable on the best grade of shares and the bait of 1 per cent. and under for call money. All but the gilt-edged bonds have taken their cue from shares, the foreign sections being particularly weak. In May deflation in Street loans amounted to \$216,444,474, to a new low record total of \$1,434,683,000.

More important than these developments was the decision of the Government to drop its legal opposition to the proposed merger of the Standard Oil Company of New York and the Vacuum Oil Company. Both are units segregated from the original Standard Oil Company, under the Supreme Court decree of 1911, which brought about a division of the parent company into thirty-three companies, with independent management, but, of course, with share interests of varying amount retained by the Rockefellers and other principal owners of Standard Oil. Dissolution of the old Standard Oil trust was the acme of the Government's "trust-busting" activities, in which the aid of the Sherman law was invoked.

Merger plans for Standard of New York and Vacuum were drawn up about two years ago and approved by the directorates in 1929. The Department of Justice at once began court proceedings to prevent the merger. The case was tried last summer and decree permitting the merger granted in the Federal courts early this winter. The Government had given no indication of whether it would appeal to the Supreme Court. It announced that it would drop the case only on the last day of the time allotted for filing an appeal. It is generally believed that the Standard Oil Company of New Jersey (the original Standard Oil) will in turn seek to reunite some of its former units with itself, particularly the Standard Oil Company of California, a non-competing concern. Tentative negotiations were begun a year or so ago, but were dropped pending the outcome of the Vacuum case.

It must not be supposed that the Sherman law, designed to promote free competition and to prevent combinations of corporations in "restraint of trade," will become a dead letter. No one seriously wishes that to happen. However, this law was passed forty years ago, and the need for an overhauling of its provisions, or at least for a more up-to-date application, has been increasingly felt by serious people. Free competition as practised in a number of basic industries, of which oil is a shining example, has worked for chaos, as much to the detriment of consumers as to producers and marketers, and, it is felt, is doing much to prolong the business depression. Oil proration, copper curtailment agreements, and railroad mergers indicate the swing of the pendulum. In deciding not to carry to the legal limit the Standard-Vacuum contest official Washington evidently appreciates the changing aspects of the economic situation.

Whether Washington will change its mind on the subject of international debt payments is another matter. There is a strong body of opinion in Wall Street and among economists and others that the debt burdens should be reduced in the interest of a smoother flow of world trade, but this view is not shared by the country at large. Perhaps those who pay the larger share of the taxes would be willing to see either cancellation or sharp reduction, but they are a small minority. An overwhelming portion

of the population rather thinks that the settlements already made are too liberal, and it is doubtful if, with an election coming on next year, any Administration would stand on a debt-reduction platform. Should deep cuts be made in European armament expenditures, the picture would probably look different. This is not to say that Washington and the country are indifferent to the seriousness of the European situation, but our own Treasury deficit of around \$1,000,000,000 and the prospect of higher taxation provide a poor setting for debt reduction proposals.

In well-informed quarters in Wall Street it is thought that Germany can probably make out a good technical case for a moratorium on the conditional portion of reparation payments, but advice here would be against such a move at this time. It is held that the temporary advantage to the Reichsmark would be more than offset by the longer term injury to German credit.

The Treasury is preparing the way for another long-term bond issue. It has announced the calling of Series C of the 3½ per cent. notes, issued in 1928, redeemable on six months' notice. Of the \$607,399,000 originally issued, about \$451,000,000 are outstanding. The notes will be redeemed on December 15th. Other maturities on that date bring the total to \$995,168,000. Series A and B of the 3½ per cent. notes, amounting to \$1,100,000,000 were retired last spring. In addition to the December maturities, the Treasury has to provide for \$625,000,000 of maturing certificates on September 15th.

Oversubscription to the latest long-term issue of \$800,000,000 was heavy, the amount applied for being \$6,000,000,000. Allotment of \$821,410,000 is announced. In fixing a coupon of 3½ instead of 3 per cent., as it could have done, the Treasury made sure of heavy subscription; but the large amount applied for is partly due to the existence of a good deal of timid investment money. It is thought likely that the called 3½ per cent. notes will be met by a fresh offering of the recent bonds, since provision for that has been made.

Another encouraging aspect of the business situation is the progress being made by the railroads in preparing their case for higher freight rates. At first this move was looked upon with a good deal of disfavour, and the railroad executives themselves were a trifle lukewarm. More recently it has appeared as the only salvation, save a sudden and sharp increase in general trade, and the weakness of the railroad bond market has increased the activities of large investors in favour of higher rates. Meetings of executives of southern and western roads have been held, and it is planned to make a simultaneous application for all the roads of the country. Probably a horizontal increase of 15 per cent. will be applied for, and, if granted by the Interstate Commerce Commission, adjustments may be made later so as to cause as little diversion of traffic to motor trucks and waterways as possible. It is hoped that a 10 per cent., or \$400,000,000, actual increase in operating revenues will flow from higher rates.

Trade continues to feel the effects of seasonal slackness, but the nearness of the harvests is sustaining hopes of better times this autumn. Some improvement took place in placing of building construction contracts in May. Automobile output for May in the United States and Canada is estimated by the National Chamber of Commerce at 338,300 units, a drop of about 4 per cent. from April, the usual seasonal decrease. Railroad traffic is barely holding steady, and steel activity continues to decrease slightly. The operating average for the country is now down to 40 per cent. of capacity. In May steel ingot output averaged 45.3 per cent. of capacity, against 49.2 in April.

The Department of Agriculture has estimated the condition of the spring wheat crop as unusually low for the season. However, the bright prospect for the winter crop make it certain that total production will be well above last year. Both cotton and wheat stiffened momentarily with the upturn in stocks, but have since been uncertain on conflicting crop news. Wholesale commodity prices dropped further in May, the Bradstreet index showing a 3 per cent. and the Dun index a 2½ per cent. recession.

FRANCE.

Politics — Budget — Production — Textile Strike.

(FROM OUR CORRESPONDENT.)

PARIS, June 17.

THE accession of M. Paul Doumer has been received with general satisfaction. M. Doumer's long and able public career and unblemished past have convinced his fellow-countrymen that, with the helm of the State in his hands, the country is assured of wise and honest leadership, and that there is no danger that it will be plunged into adventure or suffer the risk of dangerous innovations. Born in the humblest circumstances, in a small provincial town, M. Doumer has worked his way to his present post by his own unaided merits.

M. Doumer's accession to office last Saturday definitely solved the problem of the immediate future of the Laval Cabinet, and, more especially, of that of M. Briand. M. Laval, in accordance with French practice, formally presented the new President with the collective resignation of the Cabinet. M. Doumer accepted it, and immediately requested the ex-Premier to resume office, and this, obviously in accordance with a pre-arranged programme, he immediately did. All question of M. Briand's departure was thus removed, and equally all question of any attempt by the new President to bring about the advent of a Ministry of Concentration, including M. Herriot and his friends, that would be assured of a more stable majority than the existing Cabinet, and bring the uncertainties of sterile party strife to an end. The situation, therefore, remains curiously interesting—and obscure.

This was confirmed by yesterday's fresh interpellation of the Government by M. Franklin-Bouillon, who again furiously attacked the Foreign Minister in person, taking his opportunity from M. Briand's much-discussed presence on Sunday at the gathering of former soldiers at Gourdon, one of the Radical Socialist provincial strongholds. M. Briand's Gourdon speech was eloquent, but void of any real exposition of his own situation so far as the present controversy is concerned. The outstanding feature of M. Franklin-Bouillon's attack was his emphatic assertion that MM. Tardieu, Maginot and Flandin, Ministers respectively for Agriculture, War and Finance in the Cabinet in which M. Briand holds the post of Foreign Minister, "urgently urged us to vote against M. Briand at Versailles." The immense majority of the Ministry, the speaker added, did the same, and they insisted that the present Foreign Minister was "a national danger." The Ministers named were sitting, as usual, with M. Briand on the front bench, and all ignored this direct challenge. In the result, on a motion of confidence, the Government secured a majority of 52, which M. Franklin-Bouillon received with the promise that he would return to the attack next week. Radical Socialists, Socialists and Communists, in the hope of provoking another Ministerial crisis, voted solidly against the Government, but the expected split in some of the groups who normally support the Government did not occur. Once more M. Laval's keen sense of parliamentary under-currents proved supreme, and it seems likely that on this factor—unless the German leaders indulge in further serious blundering—the future of the Ministry will depend.

Party preparations for next year's General Elections will henceforward be a factor of prime importance in the political world. This, indeed, was the underlying fact in the Opposition's hope that M. Franklin-Bouillon's attack would result in a Government defeat. The programme forecast was a repetition of M. Steeg's tactics before Christmas, when the new Cartellist Cabinet met the Chamber and promptly adjourned the House until after the New Year holidays. Were another Cartellist combination to succeed M. Laval, as most likely would be the case, an equally prompt adjournment until October, with unfettered control of the Home Office machinery meanwhile, would be of inestimable electoral value to the parties of the Left.

Details presented to the Chamber showing the results of the financial year ending March 31st indicate that revenue in hand down to May 1st in respect of the 1930-31 Budget totalled 51,356,877,000 francs, or 1,086,685,000 francs more than expected. This apparent surplus, however, was more than swallowed up by supplementary expenditure authorised after the Budget was adopted. Exactly what the real outcome of the year will be is not yet ascertainable. What is known is that, on the figures available on May 1st and since laid before the Chamber, the provisional deficit then amounted to 933,000,000 francs. There still remains other supplementary expenditure, yet to be brought into the account, amounting to 1,201,000,000 francs, which would bring the total supplementary credits for 1930-31 to 3,101,685,000 francs (equivalent to about 6 per cent. of the total expenditure originally voted), and thus leave the net deficit on the year at around 2,143,000,000 francs. This constitutes the other side of the medal representing the sweeping reductions of taxation which began under the Tardieu Ministry. M. Paul Reynaud, in defending his financial policy in the Chamber this week, when attacked by M. Georges Bonnet, a former Budget Minister, said the Chamber, instead of voting the 1,541,000,000 francs of relief proposed by the Ministry, increased the amount to 2,200,000,000 francs. This total was subsequently further increased by M. Bonnet and his Cartellist friends to 3,500,000,000 francs.

Industrial production figures for the month of April show a further small decline, although not so much as had been expected. The general index figure covering the nine principal industries (except agriculture) is 131 (1913 = 100), or only a single point lower than in March, against means of 140 for 1930, 139 for 1929 and 127 for 1928. With the exception of the leather industry, which remains unchanged at 111, or a point above the mean for last year, and the rubber trade (also unchanged at 930), the only drop of more than a point is in the motor-car industry, which has gone back from 596 to 581, as compared with a mean of 640 for 1930. There are indications that the May outputs will show more important recoils. The figure representing mining output, it is already known, dropped five points, to 108, during May, while the building industry also fell back a point.

The textile industry remains the only large trade in which production is below the 1913 volume, the figure for April being 81, or 19 per cent. lower than before the war. This will register a marked further recoil for May, owing to the general strike in the Roubaix area, which has now been proceeding for over a month. It now appears likely that the offer of the employers to reopen their factories next Monday to such of the workers as are prepared to pay their own insurance dues in the future, will result in a substantial renewal of work. There has been a recrudescence of violence in the poorer quarters of Roubaix this week, with erection and destruction of barricades in the streets and the sacking of one or two shops. This is alleged to have been due entirely to Communist agitators, and none of the arrests have involved textile workers.
