FOREIGN STOCK EXCHANGES.

NEW YORK.

The tone in Wall Street became noticeably firmer at the end of last week, and hurried short-covering gave an appearance of strength at the opening. The public, however, once again failed to come in on a large scale, and the markets became unsettled. Evidence regarding the general trade situation remains conflicting. The steady increase in the activity of the steel industry has been checked, last week's percentage of occupied capacity having fallen from 55 to 53. On the other hand, some of the larger companies declare that the recession is temporary, and that forward business shows an appreciable gain. The same quarters also deny the persistent rumour that price cuts are contemplated in steel products. The public, however, fears that the peak of seasonal demand has been passed, and has sold U.S. Steel and other standard shares. Fox Films have been heavily sold on the publication of new "readjustment" proposals—the movement being ascribed to interests which have withdrawn from the proposed financing plan. The leading railroads have also been subject to selling pressure. Oil statistics are less unfavourable, the latest figures covering

reductions in crude oil output and gasoline stocks, but expectations of consumption of the latter this summer are conservative. Call money advanced this week to 2 1/2 per cent. on heavy withdrawals of Government deposits in connection with the Soldiers' Bonus Loans. The stringency, however, is expected to be purely temporary.

BERLIN.

The inevitable reaction occurred following substantial rises in February and at the beginning of March, but it passed very quickly and without serious falls in quotations. It became evident that the preceding rises were only to a very small extent due to speculative purchases, and were mainly attributable to the activities of small investment buyers, both at home and abroad. Individual shares, of which unfavourable reports were current (Bergmann, Elektrizität, Hamburg South-America Munch) fell substantially, but the bulk continued their upward movement after a brief interruption. Bank shares were popular, as the market had expected more unfavourable results for last year. The greatest demand was for I.G. Farben-

industrie shares, which have regained the level of the middle of 1930 on favourable dividend expectations. Iron and steel, and potash shares improved substantially at the end of March and the beginning of April. The *rente* market was particularly firm, and there was a steady demand for first-class German fixed-interest securities, on which the average yield has fallen to 7 1/2 per cent. Stock Exchange developments during the last few weeks have been dominated by two influences, the political situation and the state of the money market. The international discussion of the Austro-German Customs agreement did not upset the market at all, while, on the other hand, the passing of the Budget and the prorogation of Parliament, together with the internal dissension in the National Socialist camp were received with great optimism. The money market, for the first time for many months, tended to become easier. Rediscounting at the Reichsbank fell off and gold cover was fully adequate, so that the Stock Exchange expects a reduction in the rate of discount from 5 to 4 1/2 per cent.

Official "Cash" Quotations in all cases.

INVESTMENT NOTES.

The Stock Exchange Report for 1930-31.—A "House" correspondent writes:—The report of the Stock Exchange for the year ended on March 25th last shows that 3,982 members paid £196,938 in subscriptions. Subscriptions are regulated according to the year in which a candidate became a member, the amounts ranging from 20 guineas (for those elected before March, 1879) to 100 guineas (for members elected after March 24, 1920). Altogether, the Stock Exchange last year received £433,447 and spent £171,292. The revenue account shows a credit balance of £262,154 18s. 3d., and a dividend of £13 per share (unchanged) absorbs £260,000. The Stock Exchange has a present capital of £720,000 in 20,000 shares, £36 paid. In addition, there are £294,800 of 3 per cent. debentures, secured by a floating charge on the assets, which are represented in the balance sheet by the Property Account, of which freehold stands at £625,524 and leasehold at £527,468. In addition, the "House" holds £159,000 in Treasury bonds and bills. The price of Stock Exchange shares is 182, and the yield is a little under 7 1/2 per cent. The maximum number of shares permitted to be held by any member is 200. Each new candidate for membership must acquire either three shares or one share, according to the terms under which he comes into the Stock Exchange. This ensures a fairly constant supply of small purchasers, though, on the other hand, as older and wealthy members fall out, their estates are likely to provide a considerable number of shares, the absorption of which takes time in days of financial depression. There is no regular Chairman of the Trustees and Managers. Each of the nine members—at present there are only eight, owing to the recent death of Mr. H. W. Henderson—is chairman for one month in turn.

Engineering Company Reports.—Consideration of the latest accounts of those engineering companies which have issued their reports since the beginning of the year, suggests that while they have not entirely escaped the effects of the trade slump, their earning capacity has diminished less than might have been expected. Of the eleven companies whose results for the past three years are tabulated below, five show an improvement in revenue, and six a decline.

† Before Statutory Allocation to special reserve.

In the aggregate, net profits have fallen from £1,557,996 in 1929 to £1,324,794 in 1930, a drop of a little under 15 per cent., but if Vickers, which records a decrease in earnings of £166,045, be excluded from the totals, the fall is only 10.9 per cent. Two companies, Cammell Laird and North British Locomotive, failed to pay a dividend on their ordinary capital, but Sir William Arrol and Company, which last year made no distribution, this year paid 10 per cent. Three companies increased, and five decreased, their ordinary dividend payment.

Cunard Meeting.—Shareholders of the Cunard Steamship Company will have been relieved to hear from their chairman, at the general meeting this week, that the company's prospects are by no means ruinous. The disastrous decline of £1,600,000 in the gross revenue last year may have induced some shareholders to take a gloomy view, but Sir Percy Bates was able to point out that the profit, however microscopic, was earned after providing depreciation amounting to over £700,000. Considering the fierceness of the economic blizzard—reduction in freight tonnage alone was responsible for a drop in revenue of £250,000—the company did as well as could reasonably be expected. The Atlantic trade was not without its satisfactory features. The tourist third-class cabin traffic both Eastbound and Westbound actually showed an increase, a record number of passengers of this class being carried. With regard to the new giant liner of 73,000 tons gross which is at present being built in John Brown and Company's yards at Clydebank, the chairman declared that its construction had become inevitable. The company's weekly express Atlantic service was being undertaken at present by three ships, but modern marine engineering had made it possible to maintain this service with two ships, each making the round trip every fortnight. The company was bound to adapt itself to these new conditions. It would be easy, he said, to design a faster ship, but the speed of the new ship was no greater than was needed for her schedule and her size was no greater than was necessary to make her a paying ship. He added that the contract for the construction of this new leviathan could not have been undertaken unless the Government had guaranteed to absorb, on terms, whatever insurance risks the British market proved unable to take. As regards the payment for this ship, they proposed to make primary use of their annual depreciation earnings. These earnings were not available for distribution by way of dividends, as their retention in the business was necessary owing to the fact that all ships were a wasting asset. No public issue was in contemplation, but recourse would be had to the London bill market, which, he said, had been of such valuable assistance to the company in the past. With regard to future prospects, many economies were being effected, salaries having been cut from the directors downwards, and he believed that, even if there should be a further large drop in revenue, the economies being made would suffice to meet it. In the meantime, the company was striving to open up new forms of travel, particularly to meet the wants of the millions in America who had not yet travelled across the ocean.

Amending the American Transportation Act.—It is somewhat surprising that the proposals to consolidate the Eastern American trunk lines into four large systems have attracted so much attention in London while an event of far greater importance has passed practically unnoticed. On January 21st last the Interstate Commerce Commission addressed a long letter to Senator Couzens, Chairman of the Committee on Interstate and Foreign Commerce, recommending changes in the rate-making provisions and the repeal of the "recapture" provisions of the Transportation Act of 1920. The Transportation Act, changing as it did in many important respects the Interstate Commerce Act of 1887, may be regarded as the charter of the American railroads, just as the Railways Act of 1921 is frequently regarded in a similar light in Great Britain. Section 15A instructs the Interstate Commerce Commission to establish rates "so that the carriers as a whole will, under honest, efficient and economical management and reasonable expenditures for maintenance of way, structures and equipment, earn an aggregate annual net railway operating income equal, as nearly as may be, to a fair return upon the aggregate value of the railway property of such carriers held for and used in the service of transportation." During the last seven years or more the "fair" return has been placed at 5½ per cent. The above quotation is given fully in order to stress the similarity of wording to the British Railways Act of 1921. It will be realised that the proposed basis of earning is different; in the American case it is to be based on a 5½ per cent. return on property investment, which, in spite of eighteen years of

expensive research, has not yet been determined, whereas, with the British railways, the standard revenue is to be equal to the net revenue of 1913, plus certain additions. Just as the British railways, having ceased to be monopolies, have not succeeded in earning their standard net revenue in any year to date, so the American railroads have never as yet succeeded in earning their 5½ per cent. on the estimated property investment, as the following figures show:—

RATE OF RETURN ON INVESTMENT.			
	Per cent.		Per cent.
1920	0.21	1926	4.98
1921	2.84	1927	4.28
1922	3.58	1928	4.71
1923	4.33	1929	4.95
1924	4.21	1930	3.41
1925	4.73		

While the British Act attempted to level up the profitable lines with their less profitable brethren by forcing compulsory amalgamation on a wholesale scale, the American Act left consolidation on almost a voluntary basis, but included a "recapture" clause by means of which 50 per cent. of any excess earnings over 6 per cent. was to be paid to the Interstate Commerce Commission "for the purpose of establishing and maintaining a general railroad contingent fund" to be used to assist the weaker lines. In practice, owing to the difficulties of valuation of railroad properties, this "recapture" provision has not been a success, and the weak line problem has partially solved itself by consolidation; in fact, few Americans would mourn the repeal of this "recapture" clause. On the other hand, to repeal the fair return basis for constructing rate scales is equivalent to eliminating the standard revenue provision of the British Railways Act of 1921. The Interstate Commerce Commission propose to replace it by a vague clause embodying a so-called "rate base," which should be subject to percentage changes as required. The term "rate base" has been borrowed from the Bill proposed by the Radical, Senator Howell (Senate Bill 4005). In practice the proposed "rate base" would be an estimated valuation on 1914 prices, and probably somewhat below the \$25 billions of existing property investment. The railroads will certainly fight the adoption of any such basis for their charges, and the action of the Commission can only be regarded as adding one more to the troubles facing American railways in the form of serious competition from road transport, inland waterways, coastwise shipping and pipelines for oil, petrol and natural gas.

Baldwins.—Though holders of the 6½ per cent. income debenture stock are receiving only 2½ per cent. in place of 3½ per cent., Baldwins accounts for 1930 suggest that the reorganised company was, at any rate up to the end of last December, weathering the economic depression relatively well. It is true that the earlier months of the year were comparatively prosperous for the coal and tinplate trades and even for steel, so that not too much reliance should be placed on 1930 figures as a guide to experience in 1931. Nevertheless, a fall in trading profits from £352,042 to £300,905 is not unsatisfactory, particularly as the figures have been arrived at after allowing for exceptional trading conditions in Australia. The limitation of the income debenture interest enables £20,000 to be put to a hitherto non-existent general reserve, and the small carry-forward is practically unchanged:—

	Years ended December 31,		
	1928.	1929.	1930.
Profit	220,107	352,042	300,905
Depreciation	79,131	80,000	80,000

Deb. discount written off	...	23,811	...
To general reserve	...	...	20,000
Carry-forward	3,399	27,894	27,084

During the year under review the heavy steel activities have been amalgamated with the heavy steel side of Guest,

Keen and Nettlefolds and transferred to a new joint subsidiary, the British (Guest Keen Baldwins) Iron and Steel Company, under a scheme described and analysed in the *Economist* of April 12, 1930, page 840. At that time the transfer of colliery properties was still under discussion, but apparently a conclusion was successfully reached, for this report mentions that the new company has acquired Baldwins' interest in Cribbwr Fawr Collieries. The new company will now, it is presumed, be fully self-sufficient, for it has taken over ore contracts as well as coke ovens. Its creation has altered the appearance of Baldwins' balance sheet. Income notes and shares in the new subsidiary to the nominal value of £2,312,296 are taken into the balance sheet at £2,076,046—which, considering immediate prospects, would seem to err, if at all, on the generous side. The net book value of the properties transferred by Baldwins is given as £1,492,501; the remainder consists of stocks, work in progress and other floating assets. The effect is to reduce Baldwins fixed properties in the books from £3,311,491 to £1,803,638, and stocks, together with debtors, from £1,584,099 to £794,696. As creditors amount to no more than £438,519, and there is £286,436 available in cash and short loans and £317,173 in British and India Government securities, in addition to other investments, the position is fully liquid. It is not evident, however, that any provision has been made to supply the new subsidiary with cash resources. The two striking weaknesses of the balance sheet are the inadequacy of reserves (carry-forward £27,084, general reserve £20,000) and the exceptionally large proportion (for a reconstructed company) of loan capital, which still accounts for £3,731,957 out of a balance-sheet total of £6,601,218. It would seem that, until the new subsidiary pays a dividend, the parent company can scarcely be expected to do more than cover its debenture interest.

London County Freehold.—A "Model" Balance Sheet.

—The accounts of the London County Freehold and Leasehold Properties, Ltd., which were summarised on page 763 of our last week's issue, are of special interest for several reasons. Firstly, they were issued on the day following the close of the company's financial year. Secondly, they record the company's decision to pay regular quarterly dividends on the ordinary shares at definite future dates, any surplus over and above the "regular" payment being reserved for the fourth and final dividend each year. Thirdly, the accounts are presented in really informative fashion. The loans and mortgages are shown on the "liabilities" side of the balance sheet, but are not taken into the total. Instead, they are deducted from the value of properties on the "assets" side, so that the latter figures show the net value of the company's "equity in properties." Similarly, sundry creditors are deducted from liquid assets, while deposits from subsidiary companies (unsecured), are deducted from the valuation of the parent company's interests in subsidiaries. The result is that the shareholder sees on one side of the balance sheet the amount of paid-up capital, the company's surplus and reserves, and the balance of revenue account, while on the other side appear properties, liquid assets, other assets, and interests in subsidiary companies, all on a "net value" basis. Other companies might well consider the merits of this method. It does not involve the giving away of additional information, but the rearrangement of figures already presented as a matter of course, in such a way as to make their real meaning more readily apparent to shareholders who are not professional accountants. Naturally, the method shows up latent weaknesses, and companies which, unlike the London County Freehold, have a "creditors" total exceeding their "quick" assets, may be loath to use it. When any concern, however, has an unusually strong position, it is to its own advantage that shareholders should readily grasp the fact. For instance, in the present case, the method reveals that the assets show a surplus, which the directors calculate at £1,136,029, over and above the share capital of £1,620,000.

Associated Dyers and Cleaners.—This company has not escaped the effects of the industrial depression. Net profit, on an increased capital, has fallen by £25,480 to £55,856:—

Year ended December 31.	1928.	1929.	1930.
Net profit	£ 87,485	£ 81,336	£ 55,856
Preference dividend	21,066	21,666	25,187
No. of times covered	4.15	3.75	2.22
Ordinary dividend:—			
Amount	40,177	40,000	23,250
Earned %	20.75	14.92	7.91
Paid %	12½	12½	6
Employees' bonus	8,800	8,800	...
To reserve fund	15,000	10,000	3,001
To contingencies reserve	...	...	5,000
Special depreciation	...	5,000	...
Inc. or dec. in carry-forward	+ 2,442	— 4,130	— 582

The balance sheet shows that cash has fallen by £32,903 to £37,302. The preference capital is secured by net tangible assets of just over £3 per £1 share. At 20s., the £1 ordinary yield is £6 4s. 4d. per cent., allowing for final dividend of 3½ per cent.

United States Steel Corporation.—The gross receipts of the United States Steel Corporation last year showed a decline of 20.9 per cent. as compared with 1929, net earnings a decline of 46.6 per cent., and profits available per common share a decline of 56.7 per cent. The production for the year averaged 66 per cent. of capacity as against 89 per cent. in 1929. It is reported that the operations in 1930 were the smallest percentage of capacity in any year of the company's history except 1921. Such is the depressing record of the world's leading steel producer.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

A comparative statement of earnings and distribution for the past two years is shown in the following table:—

	1929.	1930.
Gross receipts	1,493,505,000	1,180,935,000
Total earnings	265,839,000	157,710,000
Net earnings	195,448,000	104,422,000
Surplus net income	108,523,000	18,836,000
Preferred dividends (7%)	25,220,000	25,220,000
Common dividends (7%)	63,849,000	60,366,000
Earned per common share	21.19	9.18

In considering the last year's results, it must be borne in mind that 1929 was an exceptional period of prosperity in the steel industry and that the earnings of the United State Steel Corporation were further increased by a special income of \$9,973,572 resulting primarily from a tax refund. The actual income from operations in 1929 amounted to \$19.96 per common share as compared with \$12.50 and \$8.81 per share in 1928 and 1927 respectively on a smaller amount of common stock. The corporation produces a complete line of finished steel products, and in addition has extensive interests in coke, oil, cement, lumber and railroads. As regards last year's operations, the directors reported that the output of rolled and finished steel products showed the greatest, and the cement output the least, falling off. They added that prices appeared well stabilised at the end of the year with a slight advancing tendency. Since the end of the year the production rate of the corporation has risen to about 55 per cent. of capacity, but in the last weekly report there was a decrease to 53 per cent. The common shares are at present quoted at 137½ as compared with a high level of 198½ and a low level of 134½ in 1930.

Kreuger and Toll.—Elsewhere in this issue we discuss the informative economic review which accompanies the accounts of this international finance house. From the shareholders' point of view the report shows that, while it was intended that the company should play a constructive part in industrial amalgamations, many propositions were declined last year, and the acceptance of others was postponed owing to the uncertain economic outlook. Financing operations, consequently, were conducted on a considerably smaller scale, the total trading profits amounting to Kr. 32,186,858. Allowing for interest and dividends received, the total earnings of Kreuger and Toll and N.V. Financier Maatschappij Kreuger and Toll (after eliminating inter-company items and before charging interest on the participating debentures) are shown at Kr. 122,348,054, compared with Kr. 108,563,918 for the year ended December 31, 1929. Of the total net profit, Kr. 90,161,196 is of a recurring nature. The sum of Kr. 41,749,998 is set aside for interest on the participating debentures, leaving Kr. 80,598,056, of which dividend on the share capital for 1929 absorbs Kr. 20,050,000, while Kr. 214,381,636 is carried forward, compared with Kr. 153,833,580 brought in. A dividend of 30 per cent. is proposed on the share capital, and if the proposal of the Board is accepted, a similar rate on the participating debentures. The most important industrial interest acquired last year comprised 410,000 shares (a voting majority) in the L. M. Ericsson Telephone Company. The consolidated balance sheet shows permanent investments at Kr. 337,139,671, while temporary investments total roughly Kr. 108 millions, and foreign government and other bonds nearly Kr. 420 millions. In January, 1930, the company paid the second instalment of \$12,000,000 of the Hungarian loan contracted for in 1928 and in March, 1930, the final instalment of \$8,000,000 of the Yugoslavian loan. In June, 1930, an agreement was made with the Greek Government to take over a 6 per cent. loan of £1,000,000, the payment for which was effected in July, 1930. At the same time, the company also made an agreement to take over Kr. 110,000,000 of the German Government International 5½ per cent. loan of 1930. This loan was to be divided between Kreuger and Toll, Swedish Match, and the International Match Corporation, in proportions to be decided at a later date. As regards the subject of the security for these Government loans—many

of which offer a yield of more than 10 per cent.—the report affirms that "Government bonds protected by income from match concessions seem particularly to fulfil any reasonable demands for safety."

New Capital Issues in March.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in March, and in recent years:—

Monthly Average.	(000's omitted.)			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
1929	16,502	5,081	2,186	23,769
1930	14,220	5,121	2,975	22,316
Monthly Total.	Govt.	Other.		
January, 1930 ...	500	9,033	1,671	13,989
January, 1931 ...	1,800	6,331	Nil	8,249
February, 1930 ...	350	13,034	9,065	22,449
February, 1931 ...	2,450	4,368	13,705	20,573
March, 1930 ...	500	50,912	5,343	57,330
March, 1931 ...	1,750	10,341	1,513	19,094

Last month was distinguished by a semi-revival of activity in the new capital market, though some of the larger issues met with a decidedly mixed reception. Sales of National Savings Certificates exceeded encashments by £1,750,000. Apart from a conversion issue of £3,698,806 of Metropolitan Water Board "D" Stock 1946-66, the largest offers were those of the Ford Motor Company, which issued 2,000,000 £1 ordinary shares to existing holders at £3 per share, and the Lancashire Cotton Corporation's £2,000,000 of debenture stock, the latter obtaining a negligible public response. The Gold Coast issue of £1,170,000 in 4½ per cent. inscribed stock 1960-70 at £98 was the only Colonial Government issue, and a Greek loan of £2,000,000 in 6 per cent. bonds was the first foreign Government flotation of the year. Among the issues for use abroad were £2,000,000 of "Cosach" bonds.

Union Corporation.—The report for 1930 reveals that the downward trend of profits which began last year has not yet been checked. Gross receipts have declined from £457,098 to £274,836, and net revenue of £248,888 compares with £418,034 for 1929:—

Year to December 31.	1928.	1929.	1930.
Profit	£ 520,447	£ 457,088	£ 274,836
Exploration expenses	10,182	2,068	1,856
Directors' fees	9,125	9,125	4,400
Taxes	30,000	5,000	...
Other expenditure	42,558	22,861	19,692
Net profit	428,582	418,034	248,888
Brought forward	103,013	116,595	119,629
Ordinary capital:—			
Earned %	50.2	48.2	28.5
Paid %	44	44	26
Amount	385,000	385,000	227,500
Reserve	30,000	30,000	30,000
Carried forward	116,595	119,629	111,017

Holdings of shares and debentures are taken into the accounts at cost or market prices of December 31st last. At present market prices these assets, with other securities, show a substantial surplus over the balance-sheet figures. An interesting table included with the accounts shows that the proportion of the world output of gold provided by the British Empire has steadily increased from 69.3 per cent. in 1924 to 72.6 per cent. in 1930; while the Transvaal alone accounted for 53.2 per cent. in 1930, compared with 50.4 per cent. in 1924. Last year Union Corporation received 6s. 6d. per share, against 6s. 9d., in dividend from Modder Deep Levels, whose gold output fell from £1,194,605 last year to £1,171,031, the Main Reef

area of the mine having been virtually fully developed. Geduld Proprietary, however, showed both an increased yield and decreased working costs, and was able to advance its dividend payment from 6s. 3d. to 6s. 6d. per share; while its ore reserves stand at a higher level than twelve months ago. Geduld Proprietary duly exercised the right to subscribe for the proportion of the shares issued during the year by East Geduld Mines, where development work has shown exceptionally favourable results. The Corporation has also acquired an interest in Grootvlei Proprietary Mines. The directors appear sanguine as to the ultimate payability of the Northern Rhodesian copper fields, where the Corporation has important holdings. The satisfactory returns from the gold-mining companies were largely offset by the decline in the dividend paid by San Francisco Mines from 3s. 9d. per share to 1s. per share, due to the steady fall in base metal and silver prices. A dividend of 20 per cent. was again received from Polyphonwerke A.G. for 1929, but the British Enka Artificial Silk Company recorded a net loss of £166,607. The company, however, has effected an appreciable improvement in the quality of its product, and has made various economies in production costs. Broadly speaking, the advent of world industrial depression obscured the ultimate effect of the policy, adopted comparatively recently, of extending the company's interests into fields outside the South African gold-mining industry.

MINING NOTES.

Rio Tinto.—Our mining correspondent writes:—Last year's earnings were approximately indicated in the prospectus of the recent debenture issue; consequently the actual figure does not come as a surprise. A decline occurred in the interest receipts, as well as in those from the sale of produce. The balance dividend of 10 per cent. was much in accordance with expectations, but leaves a substantially increased balance to go forward. A net addition of £306,000 has been made to the plant and equipment in Spain. The investment and general fund has been reduced from £2,598,300 to £2,000,000, the difference having been applied in the additions just mentioned and in meeting depreciation on securities. Appended is a summary of the results of the past four years:—

	1927.	1928.	1929.	1930.
Trading profit	£ 1,221,350	£ 1,669,780	£ 1,812,200	£ 1,070,400
Net profit	1,016,840	1,047,080	1,286,280	687,000
Issued capital	3,500,000	3,500,000	3,750,000	3,750,000
Dividends	1,018,750	831,250	1,250,000	506,250
Per cent. (ordy.)	50%	40%	55%	20%
Carried forward	153,450	167,370	203,650	384,370
Property and plant	2,950,690	2,968,980	3,075,450	3,381,520
Investments	923,480	1,615,630	3,060,940	2,565,830

* Before deduction of amount carried to emergency account.

In looking at the prospects it is necessary to take account of the further reduction which has occurred during the current year in some of the company's products. For example, standard copper is now under £43 per ton, as against an average of £54 13s. 6d. in 1930. The company's investments in Northern Rhodesia will not, of course, be immediately remunerative. Presumably the interest on the debenture issue made last March will be largely covered by its re-investment in the coming offer of Rhokana debentures. On the basis of last year's dividend the yield is only 3½ per cent.

Rand Mines.—Adverse conditions based upon the reduction in the final dividend for 1930 are shown by the accounts to have been erroneous. In point of fact the profits display a fresh and fairly substantial increase; the decision of the directors to make a cut in the rate was obviously dictated by the uncertain outlook in regard to one or two of the company's principal holdings. Shares and debentures now figure at £2,526,000, as against £3,089,800 twelve months ago. Liberal allowances have

evidently been made for depreciation, while the net additions during the year were small, as indicated by the appended table. The results of the past three years are summarised below:—

	1928.	1929.	1930.
Dividends on shareholdings	£ 419,330	£ 486,530	£ 500,510
Sundries	123,640	92,310	80,490
Investment realisation profits	19,700	5,910	47,640
Total income	562,670	584,750	628,640
Administration expenses	26,240	29,690	24,360
Taxation	33,740	33,200	37,040

Net profit	492,800	512,370	564,670
† Dividends	511,290	511,290	460,670
Rate per cent.	100	100	90
To reserve account	395,060	477,190	98,230
From reserve account	106,060	...	...
Brought forward	1,205,290	897,800	422,030
Carried forward	897,800	422,030	428,820

† Including forfeited dividends refunded.

The principal changes in the portfolio comprise the acquisition of 10,400 East Geduld shares, the increase from 89,500 to 163,000 in the number of Durban Deeps, and a further reduction in the Daggafontein interest. The two largest individual blocks—607,900 Crown Mines and 301,100 New Modders—are much the same as before. Former at current market price approximately covers the balance-sheet valuation of the entire holding of shares and debentures in some forty different undertakings. The company's Witwatersrand interests as a whole are giving a very good account of themselves; but oil producers are, of course, under a cloud just now, and some doubt is entertained as to the outcome of the company's participation in the Anglo-Spanish Construction Company. Nevertheless, broadly speaking, the position may be regarded as satisfactory. On the basis of last year's distributions the return is about 7 per cent.

City Deep.—With their usual frankness, the consulting engineers of the Central Mining Corporation intimate the need of a drastic change in the plan of operations. It is true that last year's results display a considerable improvement. The working loss amounts to no more than £23,000 as compared with £139,200 in 1929 and a rather smaller amount in the preceding year. Nevertheless, the indebtedness on loan account has in the meantime risen from £219,400 to £424,400, while the ore reserves have shrunk in both quantity and value. Developments during the second half of 1930 were particularly disappointing. To meet this position it is proposed, as from about the middle of the current session, to reduce the scale of crushing from the present average of 95-100,000 tons per month to 70-80,000 tons. This would permit the treat-

Increasing Interest in South American Markets

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branche in South America, in London, Bradford and Manchester; in France, Belgium, Portugal and U.S.A.; with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request, and a Monthly Review of Market information is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8, Tokenhouse Yard, London, E.C.2
MANCHESTER, 36 Charlotte Street. BRADFORD, 23 Eastgate.
Affiliated to Lloyds Bank Limited

ment of better-grade ore; and by incidental economies it is believed that the recent cost average can be retained. Under these conditions it is considered that the company has a "sound chance of earning profits." Even so, the prospects scarcely warrant retention of the shares.

East Rand Proprietary.—Further expansion in both the quantity and value of the ore crushed last year was largely offset by increase in the cost average, the working profit amounting to £137,500, against £135,300 for 1929 and £96,300 in 1928. The advance in costs was only 3d. per ton, due to larger expenditure upon development; but on an output approaching 2,000,000 tons per annum 3d. per ton is an appreciable item. Hence the importance of any concession to the low-grade mines. Of the surplus above mentioned, £101,200 was absorbed by capital outlay, and about £15,000 by miners' phthisis, etc., leaving £26,500—quite insufficient to provide even a small dividend upon the company's capital of £1,500,000. Net cash and investments figure at £185,200. Developments failed to come up to expectations, the ore reserves—as previously announced—showing some reduction in both quantity and value. An improvement is, however, looked for during the current year, as with the more satisfactory position of the incline shafts it will be possible to open up several new levels in "the portions of the mine which have hitherto proved to be the most consistent." Evidently, as regards the near future, much will depend upon the proportion of the profits required for capital outlay.

Modder Deep.—With the main development of the mine completed it is only natural that the ore reserves should display an appreciable shrinkage. Actually the difference corresponds very closely with the tonnage drilled. Hence it follows that the work performed upon the subsidiary ore bodies could not have been at all productive. Indeed, as much is intimated in the report of the consulting engineer. Irrespective of any allowance for sorting and of the 100,000 tons of ore in the hanging wall leaders, the reserves represent about four years' supply.

	1928.	1929.	1930.

Value.....dwts.	9.0	8.8	8.6

*After deduction of directors' percentage.

As usual the carry-forward is represented by net cash assets. The past year's appropriation of £14,000 for miners' phthisis raises the total provision to £62,500 towards an outstanding liability of £144,500. The current market valuation of the 5s. shares is around 22s. The "profit in sight" in the ore reserves may be calculated as approximately equivalent to this amount. There is the possibility that the ore reserves may have been conservatively calculated, also that a moderate further tonnage of payable ore may be opened up in some of the "leaders." Then there is the surplus of cash assets, and the final clean-up after closing down will doubtless bring in a substantial amount. The conclusion, consequently, is that while the shares offer no great attraction as a purchase, it should pay a holder to "see the thing through."

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Scotland, Standard Life Assurance, Wesleyan and General Assurance Society, Anglo-Portuguese Telephone, British Enka Artificial Silk, Gordon Hotels, and John Barker and Company. At the annual meeting of the Standard Life Assurance Company, the chairman said that it was not always possible to avoid

depreciation of investments, and in a year such as 1930 adverse results might have been anticipated. They were able to report, however, that the excess of market value over the balance-sheet figure was greater in 1930 than in 1929. Presiding at the annual meeting of the Bank of Scotland, Lord Elphinstone said that out of 10,600 borrowers 4,300 had overdrafts of £2,100,000 in all, without collateral security, the bank relying on the character and means of its customers.

Redditch Gas Company.—Issue by tender of £15,000 5½ per cent. redeemable debenture stock, minimum price par, and £10,000 ordinary stock. The debenture stock will be redeemed at par at the option of the company on December 31, 1950, or at any time thereafter on six months' notice. The ordinary stock will rank for a standard dividend of 5 per cent., subject to the sliding scale equally with the existing similar stock which has, for the past six years, received a dividend of 7 per cent. with the exception of 1926. The net revenue of the company for the year ended December 31, 1930, was £9,668. covering interest on debenture stock, including the present issue, approximately five times.

[Other Stock Exchange information, including the latest summary of balance sheets, reports and notices, dividend announcements, weekly traffic returns, and profit and loss figures, will be found on page 815, under the heading "Company News."]

OIL OUTPUTS.

AFEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of March are as follows: Production of oil, 45,930 tons; deliveries, 47,310 tons.

THE BRITISH BURMA PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of March as 31,919 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended March 28, 1931, was 222,000 barrels.

AKTIEBOLAGET KREUGER & TOLL

(KREUGER & TOLL COMPANY)

Directors' Report for the Year 1930.

The board of directors of Aktiebolaget Kreuger and Toll herewith submit their annual report for the year 1930, the company's twentieth year of business.

The economic crisis which made itself felt strongly during 1929 has during 1930 become still more severe and has extended its influence to practically the whole world. At the end of the year no clear signs of improvement in the general economic conditions were as yet apparent. This is not surprising, considering the slow progress made towards removing the main causes of the crisis.

While undoubtedly the causes of the present world crisis are numerous, it seems as if two of them are of dominating importance. One of these causes arises from the fact that through the manner in which the exchange values of different currencies were stabilised after the war a lack of equilibrium in the international balance of payments has been created. This has meant that the stability of the international credit structure has been seriously damaged. It is, for instance, evident that the relative power of competition of Great Britain in the domestic and foreign trade to-day is much less than it was before the war. This fact has resulted in a constantly growing excess of imports over exports, whereby Great Britain's normally very large surplus in balance of payments has nearly disappeared. Considering that Great Britain, in the question of foreign assets, is by far the wealthiest of all countries, having practically as large an amount of foreign holdings as all other creditor countries combined, these conditions must be considered as entirely abnormal. As a consequence, Great Britain with its highly efficient machinery for international financing has had to restrict its foreign lending, and other creditor countries have been unwilling or unable to fill the place of Great Britain in this respect. The result has been lack of purchasing power and general depression in many of the economically weaker countries, so that economic conditions in other countries as well have been unfavourably influenced. A rapid restoration of Great Britain's financial power would without a doubt be to the advantage of the world in general, as any surplus funds in the hands of British financiers would most certainly be lent to foreign countries in need of purchasing power. As in the case of Great Britain, Italy has also been handicapped in the competition through the exchange value of the lira having been stabilised at too high a level. Though Germany created for herself an entirely new currency, it may be said that, owing to the unsettled economic conditions at the time, the purchasing power of this currency was stabilised in such a way as to give to the German mark too high an exchange value. On the other hand, the United States has undoubtedly got its power of competition greatly strengthened, not only through the way in which stabilisation of exchange has taken place, but also through the intense development of mass production. As a result of these and some other factors, such as the change of the United States from a debtor to a creditor country, the balance of payments of the United States has, since the war, been increasingly positive. In the last few years France, through reducing the exchange value of the franc, has created for herself a position similar to that of the United States. The increasing economic power of the United States and of France could have formed a basis for a considerable amount of international financing, but in so far as such a development did not take place to a sufficient extent it has led to a constant flow of gold to these countries, particularly during the last two years, with all the depressing and disorganising effects of such a movement. It seems, however, as

if ever-widening circles in the United States and France were beginning to realise that these countries may, to their own advantage, assist in the establishment of an international equilibrium by effecting such changes in their financial machinery as to make it capable of dealing with the surpluses in their balances of payments and also by adopting a policy of credit expansion in case of need, thereby avoiding the importation of gold. In some cases legal or customary restrictions, based on the experiences of a period which knew little of the problems with which we are faced to-day, make it impossible for the competent authorities to take the appropriate measures; it seems obviously desirable that such antiquated restrictions should be removed, if necessary by a change in national legislation.

As a second dominating cause of the crisis must be considered the inadequacy of the present monetary policy to cope with the difficulties which present themselves during a period of rapid increase in savings and in production. Savings are without a doubt necessary for economic development, but they will exercise their beneficial effect only if provisions are made for directing those savings into proper channels. In every country the average individual has a certain desire to save, i.e., to produce more than he consumes, and the instinct of saving seems to grow stronger the more a country develops economically, but, when the savings increase rapidly it may easily happen that the machinery for employing the savings usefully in production proves insufficient. Instead of the savings being employed for the provision of new articles of consumption corresponding to the needs of a population with an increasing standard of living and also for capital investments, these savings may still be utilised simply for increasing the volume of existing commodities, the demand for which is but slowly expanding. The danger of such a state developing is naturally particularly great during a period of rapid technical progress like the present one. In practically any line of production, whether industrial or agricultural, the progress that has been made is so great that with the same number of people employed the production, even without any large capital investments, will show a steady increase. Only in exceptional cases and under certain conditions does the consumption per individual of any special article increase at the same rate as the production. The consequence is that for every year each special line of business is able to give employment to a smaller part of the total population and, unless an economic policy is carried on which stimulates new enterprises and capital investment, practically all lines of production will suffer from an increasing production surpassing the possibilities of disposing of the output which thus leads to a certain amount of unemployment and capital devastation. As a striking example of the modern tendencies of rationalisation it may be mentioned that according to official statistics the total physical output of Swedish industries increased by 32 per cent. from 1920 to 1927, while during the same period the number of workers employed in those industries fell by 2 per cent. It is not always realised that a limitation in the demand for industrial workers will react most strongly on the position of agriculture. The higher birth-rate of the agricultural populations ought to make it a normal feature of modern economic development that there should be a constant stream of workers from agriculture to industry. If that stream is impeded by a reduced demand for new hands in industry, an abnormally large proportion of the population will be employed in agriculture with the consequent increase in agricultural output and this increase, given the inelastic demand for agricultural products particularly in a period with a more stationary population, may easily

Kreuger & Toll Company—continued.

lead to real over-production. No factor is of more importance for the industry's capacity of receiving agricultural workers than the ease with which industrial companies can obtain new funds by increasing their share capital. It seems only reasonable to conclude that, at least for a country which is a sufficiently large producer of agricultural products to exercise a strong influence on the price level of such products, sound conditions on the stock market are essential for the prosperity of agricultural producers. The lending to foreign countries has a still greater bearing on the agricultural situation in the creditor countries as such lending, through stimulating exports, not only facilitates the flow of the surplus of agricultural workers to industry but also influences more directly the world price level of agricultural products.

In no country has the natural saving capacity and therefore the dangers of over production been increasing to the same extent as in the United States, and this has been the case particularly since the war. In addition to individual and voluntary savings there are factors working to create each year considerable sums of forced savings. The constant progress of all the different branches of insurance and the immense funds amassed by the insurance companies constitute for a nation forced savings of which the individuals are more or less unconscious. Another large item of forced savings is represented by the yearly amortisation of the federal debt of the United States, averaging for the past five years not less than 900 million dollars a year. On the other hand it must be remembered that the United States to-day is industrially perhaps more fully equipped than any other country in the world and capital investments in the older branches of industry will, therefore, in the future, probably show a declining curve. Another change of far-reaching importance is the reduced birth-rate and, still more, the reduced immigration which diminishes the need for capital investments in older industries and therefore makes it still more imperative to create favourable conditions for the establishment and expansion of new industries as well as for foreign lending.

It is natural that the problems of production in excess of immediate marketing possibilities did not make themselves felt during the years immediately after the war owing to the great amount of reconstruction work which had to be done during this period. Another factor of importance working in the same direction has been the rapid advance of the automobile industry which has provided new possibilities for capital investments not only in the industry itself but also in the auxiliary branches, such as the oil and steel industries, and above all through the enormous amounts spent on the improvement of highways. It is estimated that present capital investments of this nature in the United States exceed 50 billion dollars. Finally, the tremendous growth of the system of instalment payments in recent years has, as long as the system was expanding, had the effect of appreciably increasing the consumption of numerous articles. It seems as if these factors have all ceased to exercise their stimulating influences at practically the same time. A period of adjustment of the economic life in the United States ought, therefore, to have been a natural development during the year 1929, but that this adjustment has taken the form of the present violent crisis is undoubtedly due mainly to the financial policy carried on during the period preceding the outbreak of the crisis.

Some difference of opinion exists regarding the effectiveness of any monetary steps in combating a general economic crisis. It cannot be doubted, however, that a policy of low rates of interest and low capital return constitutes an effective remedy against a crisis like the present one, provided it can be applied to all different branches of credit and investments. This is rarely the case and during the last years, in spite of very low rates for short-term money, the interest rates for long-term investments, particularly in the case of foreign investments, have remained abnormally high. These conditions indicate serious defects in the financial machinery which cannot be explained solely by pointing to unfavourable political events, which, in many cases, are more the consequence than the cause of the present financial disturbances. As a matter of fact, the economic structure of the world has gradually changed since the time when present banking traditions were established so that these traditions no longer correspond to modern conditions. The disappearance of the great merchant houses and private bankers, who had a wide latitude in the choice of their investments and who were dominating factors in the economic life of the country and the substitution for them of industrial corporations, large deposit banks and insurance companies, all of which are more or less restricted in the use of their funds to clearly specified investments, have tended to divide credits and investments into different classes which have very little connection with each other and to make the whole economic structure more rigid than previously. The consequence is that to-day, at any rate in some of the creditor countries, the central banks are not in a position, except very slowly, to influence the yield rate of the two most important branches of investment, i.e., common shares and foreign bonds. There are ample reasons why the central banks should have no direct influence on the stock market quotations, but similar reasons do not seem to exist in regard to foreign bonds. The regulating of the foreign bond market, which is virtually the same as the regulating of the movements of gold, ought to be one of the chief tasks of the central bank in any creditor country, and there seem to exist no valid reasons why foreign bonds should not be made, in some form or another, the basis of credit with the central banks. In those countries where banks or insurance companies either through regulations or through traditions are prevented from acquiring foreign bonds, a more liberal policy

in this respect should undoubtedly be of great value. It is unfortunate to exclude from the ownership of foreign bonds such institutions as are best able to judge their merits and it is unreasonable to expect that the public, after the experiences of the last few years, should quickly regain confidence in this class of securities unless some leadership is exercised by competent institutions. No problem is at present of greater importance to the whole world than that of restoring normal conditions to the foreign bond market. A revival of this market should, for the creditor countries, immediately have a beneficial effect on the export business, but by far the most important result would be the removal of one of the chief factors which is now constantly depressing the price level for commodities. For this purpose the help of Government and central banks is essential but, apart from any steps which may be taken from official sides, there is a great field for private enterprises to improve and supplement the present machinery for international financing. It has for a number of years been one of the foremost points in the programme of Aktiebolaget Kreuger and Toll to contribute in a small way to this work through one of its branches of business, viz.

The granting of State Credits in connection with Industrial Concessions and other Similar Transactions. The demands for this type of credit have been even larger during 1930 than during 1929, and the company has, during the first half of the year, concluded a number of important transactions regarding the granting of Government loans. As a consequence of agreements made in previous years the company, on January 15, 1930, paid the second instalment of \$12,000,000 of the Hungarian loan contracted for on May 16, 1928, and on March 23, 1930, the final instalment of \$8,000,000 of the Yugoslavian loan contracted for on October 30, 1928. In June, 1930, the company made an agreement with the Greek Government to take over a 6 per cent loan of £1,000,000 at a price of 85 per cent. of par, the payment for which was effected in July, 1930. This loan is secured by the revenues assigned to the International Finance Commission and will be amortised during the life of the match concession previously granted to the Swedish Match Company. In June, 1930, the company also made an agreement to take over Kr. 110,000,000 of the German Government International 5½ per cent. loan of 1930, this being the Swedish tranche. Of the total sum an amount of Kr. 54,000,000 was sold to the Swedish public, while the remaining amount of Kr. 56,000,000 is kept by the company until the market conditions have improved. The first tranche of \$50,000,000 of the German loan of \$125,000,000 contracted for by the company jointly with the Swedish Match Company and the International Match Corporation on October 26, 1929, was paid on August 30, 1930, and the final tranche of \$75,000,000 is due for payment on May 29, 1931. On account of the large amount involved in this case it has always been understood that the loan should be divided between the three companies, but the proportions in which the division should take place were left to a later decision, pending the development of the financial markets. As finally agreed \$50,000,000 will be taken over by the International Match Corporation and \$37,500,000 each by the Swedish Match Company and the Aktiebolaget Kreuger and Toll. This participation in the loan by all of these three companies does not represent any deviation from the programme of co-operation previously established and it is now, as before, the intention that Aktiebolaget Kreuger and Toll should be the chief financing medium for State loans, leaving, however, to the two match companies the possibility of financing by themselves any transactions of this nature, whenever they may find it desirable to do so.

On account of the disorganised state of the foreign bond market during the latter half of the year, the company has during this period carried on a restricted policy in the question of new business, and the only important agreement made during this time has been a contract with the Polish Government concluded on November 17, 1930. According to this contract Aktiebolaget Kreuger and Toll will take over at 93 per cent. of par \$32,400,000 8½ per cent. Polish Government bonds, secured by income from the match concession which was granted to the Swedish Match Company and the International Match Corporation during 1925. In connection with the new loan the match concession has been prolonged for a further 20 years until October 1, 1965, before which date the new loan will be fully amortised. Other important advantages have also been obtained by the Swedish Match Company, the International Match Corporation and the L. M. Ericsson Telephone Company in this connection. The new loan is payable with one-third on February 1, 1932, and with two-thirds on February 1, 1933. Simultaneously with these payments the Polish 7 per cent. loan, acquired in connection with the first match concession and of which at the end of the year 1930 \$4,500,000 remained outstanding, will be redeemed at par.

As may be seen from the consolidated balance sheet the amount of foreign bonds owned by the company has increased considerably during the year. It is the opinion of the board that, at least as far as European Government bonds or bonds of a similar nature are concerned, the present distrust in the financial markets is not justified by any fundamentally unsound conditions in the debtor countries but is mainly due to the disorganisation of the international financial machinery. If all the political and economical problems which are a consequence of the war and the difficulties caused by the present crisis are taken into account it cannot be denied that the progress towards stability and sounder economic conditions has in most European countries been as great as could be reasonably expected. If we consider that during the twelve unusually trying years which have elapsed since the war no default has taken place on any post-war European State loans, it must be

admitted that the present quotations, which in many cases give a yield of more than 10 per cent., give an exaggerated expression of the risks connected with investments of this type. Government bonds protected by income from match concessions seem particularly to fulfil any reasonable demands for safety. The fact that the match is an article of necessity, the consumption of which is particularly stable, makes the income from a match concession unusually reliable. It is also of great importance that the operating of a match concession can, without any great inconvenience, be given over to private enterprises, while the position is entirely different when income from railroads, custom tariffs, etc., is serving as security for a loan. A match concession, therefore, constitutes a real and tangible security while the pledge of income from other sources often has merely a moral value. The board of directors, therefore, are of the opinion not only that the bonds owned by the company constitute a safe and sound investment, but also that at the present book values, which correspond to the market values for similar securities, they offer a great chance of capital appreciation in the near future.

The amount of loans which can be given against match concessions is naturally comparatively limited, and it is, therefore, of great importance to find other objects which can serve as basis for international credits and which, while offering the greatest amount of safety to the creditor, are available in sufficient quantity to play an important rôle in international finance. From this point of view mortgage bank bonds offer great advantages. The mortgage bank business was, before the war, in practically all countries of Continental Europe developed into a very high state of efficiency and at the same time, through laws, regulations and traditions, safeguarded as perhaps no other branch of private business. It is estimated that the city real estate of the average European country represents about 20 per cent. of the total national wealth, and it is, under such conditions, not surprising that mortgage bank bonds before the war constituted one of the chief mediums for international credits. For different reasons the mortgage bank bonds have, since the war, lost their position in this respect, and to re-establish the pre-war conditions would seem to be one of the most constructive steps which could be taken in regard to international financing. For this purpose it seems useful to be able to offer the public securities of a relatively uniform type rather than to have every separate mortgage bank sell its own mortgage bonds. With a view to accomplishing such a purpose Compagnie Centrale de Prêts Fonciers was founded in Amsterdam in September, 1930, with a share capital of Fl. 10,000,000. The initiative was taken by the banking house Lazard Frères in Paris, which, together with other French banking institutions, has the controlling interest. American, British, German, Dutch, Swiss, Czechoslovakian and Swedish interests are also participating. Preparations were also made last year for a Swiss institution of a similar nature, though for different reasons the foundation was postponed until the beginning of 1931. On March 3rd this year Internationale Bodenkreditbank was founded in Basle with a share capital of Sw. Frs. 25,000,000. Leading Swiss banks, as well as American, British, French, German and Swedish banking institutes, have taken an interest in this new Swiss enterprise. Aktiebolaget Kreuger and Toll has participated in the foundation of both the above-mentioned institutions and is represented on their boards.

Shareholdings.—The principles which have been followed in acquiring permanent investments were fully explained in last year's report. In accordance with these principles it has been the aim of the company to choose its investments more with a view to stability of earnings and possibility of capital appreciation than to an immediate high yield. It will be realised that in general the management has succeeded in fulfilling this aim from the fact that of the twelve officially quoted enterprises in which the company has permanent interests only one at the end of 1930 had a market value which was lower than the cost of acquisition. The shares of this enterprise, the Grängesberg Company, were quoted at 244 per cent. of par on December 31, 1930, and were acquired by the company at an average price of 285 per cent. of par. They are at present carried in the books of the company at 230 per cent. of par. The total market value as at December 31, 1930, exceeds with Kr. 48,232,336 the book value of all officially quoted shares held by the company as permanent investments. Of those enterprises which are not officially quoted there is only one, the Swedish Pulp Company, the shares of which may be considered to have depreciated below the cost of acquisition. These shares have, however, been retained at their previous book value, as any possible deficiency in their market value is more than compensated for by the surplus in the value of other shares that have no official market quotation and that are held by the company as permanent investments. In all, the company has important permanent holdings in twenty-one industrial, banking and real estate enterprises. For the year 1930 sixteen of these enterprises show earnings exceeding those for the previous year, while only five show a decline in profits. To some degree this favourable result is dependent upon a large proportion of the holdings of the company being in Swedish enterprises, and also on the fact that Sweden has thus far felt the world crisis less than most other countries. In this connection may be mentioned that as far as is known up to now not one of the thirty-eight Swedish industrial companies quoted on the Stockholm Stock Exchange will fail to pay a dividend for the year 1930.

The most important industrial interest acquired during the past year is 410,000 shares in the L. M. Ericsson Telephone Company, constituting a voting majority in that company. In acquiring this interest the board of directors of Aktiebolaget Kreuger and Toll has had in mind not only the merits of the company as an indus-

trial undertaking, but also the fact that the telephone industry is, to a large extent, working under government concessions in different countries. In connection with such concessions many financing possibilities falling within the scope of the company offer themselves.

The real estate interests of the company have been widened during the past year, due mainly to increased investments in Paris. The permanent interests given in the balance sheet represent actual ownership of property, while the temporary investments are loans given by the company against security of mortgages on city property in different countries.

Two of the banks in which the company is interested, Banque de Suède et de Paris, Paris, and N.V. Hollandsche Koopmansbank, Amsterdam, have during the past year increased their share capital, the one from Frs. 40,000,000 to Frs. 100,000,000 at 170 per cent. of par and the other from Fl. 2,000,000 to Fl. 6,000,000 at 125 per cent. of par. Another banking enterprise in which the company holds an interest, Deutsche Centralbodenkredit A.G., in Berlin, has, during 1930, gone through a highly interesting stage of development through amalgamations with other institutions of a similar nature. It is estimated that Deutsche Centralbodenkredit A.G., together with associated banks, is now the largest institution of its kind in the world, representing more than half of the total private mortgage bank business in Germany. The concentration of the German mortgage bank business thus effected has been considered essential by the leaders of the bank in order to be able to dispose of its mortgage bonds under the most favourable conditions.

The share capital of the American subsidiary, the Swedish American Investment Corporation, has during 1930 been reduced to an amount of \$10,000, and practically all assets have been transferred to the Dutch subsidiary, N.V. Financieele Maatschappij Kreuger and Toll, at the same valuation at which those assets have been carried on the books of the Swedish American Investment Corporation.

Trading Operations.—It has been the intention to develop the company into an institution which could play a constructive part in industrial amalgamations. Many interesting propositions of this kind have been submitted to the company during the year. The uncertain economic outlook, however, has caused the company to decline the greater part of these propositions and of the remaining ones some have been postponed to a later period. Such activities together with participation in financial syndicates, the making of temporary investments and business of similar nature comprise what may be termed the trading operations of the company. On the whole, these activities have during the year 1930 been conducted on a considerably smaller scale than during the previous year. The total trading profits for the year amount to Kr. 32,186,858 : 43. In these profits are also included certain profits on real estate operations.

Earnings.—The consolidated earnings of Aktiebolaget Kreuger and Toll and N.V. Financieele Maatschappij Kreuger and Toll for the year ended December 31, 1930, after eliminating inter-company items and before interest on participating debentures has been provided for, were Kr. 122,348,054 : 29, compared with Kr. 108,563,918 : 13 for the year ended December 31, 1929. Of the total net profit for the year 1930 Kr. 90,161,195 : 66 is of a recurring nature, while Kr. 32,186,858 : 43 emanates from trading operations. In profits of a recurring nature for 1930 dividends and interest on temporary investments are included, as these items, even if the investments themselves may change, are apt to remain comparatively constant. There is every reason to believe that the profits of a recurring nature will continue to show a steady increase. It must be said that the immediate outlook is not particularly favourable for the trading operations of the company, but the management of the company feels confident that with improved conditions in the international financial situation the company will be able to take advantage of its unique position as an international financial institution in a way that will benefit the trading operations of the company.

The following principles have been applied in preparing the balance sheet of the company. For all permanent investments the book values correspond to the cost of acquisition except where the official quotations at the end of 1930 give a market value below such cost, in which case corresponding decreases of the book values have been made. Temporary investments as well as bonds are booked at or below market values at the end of 1930.

Dividends.—The board of directors of the company propose a dividend for the year 1930 of 30 per cent. per share against coupon No. 25. If the proposal of the Board is accepted by the ordinary meeting, the interest rate on the participating debentures will be 30 per cent., payable July 1, 1931, against coupon No. 5.

A short description is given below of some of the most important companies in which Aktiebolaget Kreuger and Toll holds a permanent interest.

Svenska Tändsticks Aktiebolaget (The Swedish Match Company).—The share capital of this company was at the end of last year Kr. 270,000,000, divided into 900,000 "A" shares having one vote each and 1,800,000 "B" shares having 1-1000th vote each. An issue of 900,000 new "B" shares at an issue price of 150 per cent. of par was made in January, 1931. The share capital was thus increased to Kr. 360,000,000. The shareholding of Aktiebolaget Kreuger and Toll consisted at the end of 1930 of 500,000 shares, principally "A" shares, representing a controlling interest.

Kreuger & Toll Company—continued.

The Swedish Match Company, together with its subsidiary the International Match Corporation, has a dominating position in the world's match industry. It operates more than 250 match factories in 43 different countries. Probably no other group of manufacturing companies reaches with its products as many consumers as do the Swedish Match Company and its associated companies. The company operates under state concessions or under special agreements with governments in 16 different countries and has in connection with the acquisition of such concessions repeatedly given considerable loans to different states. Aktiebolaget Kreuger and Toll has to a large extent co-operated in the financing of these loans and as a consequence participates to a certain degree in the profits from different match concessions.

The board of directors of the Swedish Match Company has announced that the profits for the year 1930 are in excess of those for the previous year and that a dividend of 15 per cent. for 1930 will be proposed, this being at the same rate as that for the previous year.

Svenska Cellulosa Aktiebolaget (The Swedish Pulp Company).—Practically the whole of the share capital of Kr. 50,000,000, divided into 500,000 shares of Kr. 100 each, is owned by Aktiebolaget Kreuger and Toll.

The company, which is a consolidation of a number of old-established Swedish enterprises in the pulp and lumber industry, is the most important producer of sulphite and sulphate in Europe. In addition to the industrial plants for the pulp, lumber and paper industries the company owns favourably located water-power of about 250,000 h.p. and 2,000,000 hectares of high-class forest-bearing land. To give an idea of the extent of the forests owned by the company it may be mentioned that the surface-area of the property of the company is more than 60 per cent. of the total area of Holland. This property is valuable not only on account of the high quality of the timber lands on it, but also on account of the excellent transport facilities which are provided by the rivers running through it. The unique state in regard to the transportation of the lumber is characteristic of the forests in Northern Sweden and it gives to these forests a particularly great and stable value. In spite of relatively high wages Sweden is, therefore, in a position to produce pulp under more favourable conditions than any other country in the world and the pulp industry has, during the last ten years, developed into the most important industry of the country. During the past year construction of new plants and modernisation of old ones have progressed in accordance with the programme announced at the formation of the company. This programme also contained the provision that for some years to come no dividend should be paid but that the whole profit should be put to reserves to apply against cost of organisation and expansion.

The market prices for the company's products were very depressed during 1930, but as forward contracts are customary in the pulp business the depression of the market has not affected the result for 1930 very severely, and the total earnings of the company and its subsidiaries have been quite satisfactory, though somewhat below those of the previous year. The hopes entertained at the formation of the company of bringing about economy in production by amalgamation of different units have proved fully justified. The prospects for 1931 are unfavourable as during the year the full weight of the low market prices will be felt, while the cost of production has not, as yet, had time to adjust itself sufficiently to the ruling selling prices. It is, however, confidently felt that the company, engaged as it is in an important basic industry, producing a world-wide necessity, and with its great natural resources and modern industrial plants, is in an unusually good position to meet the temporarily depressed conditions.

Trafikaktiebolaget Grängesberg—Öxelösund.—The share capital of this company is Kr. 119,000,000 divided into 1,190,000 shares of which Aktiebolaget Kreuger and Toll owns 233,332. All shares have the same voting power.

This company, together with the Swedish state, controls unusually rich and easily workable iron-ore deposits in Sweden, estimated at 2,000,000,000 tons. Counted by the contents of iron, the Grängesberg Company controls about 50 per cent. of all iron ore exported from one country to another. The result of the activity for 1930, counting the Grängesberg Company and its subsidiaries, has been the best since the war and in reality the company's profits for the year 1930 have been about Kr. 8,000,000 better than for the year 1929. Both in the subsidiaries and in the mother company ample provisions have been made in order to stabilise the dividends in the mother company in case of a prolonged period of unfavourable market conditions. The profit shown by the mother company for 1930 amounted to Kr. 20,413,976 : 23, compared with Kr. 20,344,501 : 64 for the year 1929. On account of the reduced steel production in the countries buying the company's ore it is, however, anticipated that the year 1931 will show a greatly reduced output and consequently reduced profits, and the company has, therefore, for the year 1930, reduced its dividends to 12 per cent. compared with 17 per cent. for the previous year. There is no doubt, however, that when conditions in the steel industry become more normal the company will be able to increase its dividends.

Telefonaktiebolaget L. M. Ericsson (The L. M. Ericsson Telephone Company).—The share capital of this company is Kr. 100,831,300, divided into 806,651 "A" shares with one vote

each and 1,209,075 "B" shares with 1-1000th vote each. Aktiebolaget Kreuger and Toll has for a number of years had an option to acquire an important holding in this company. This option was made use of during the past year and at the same time an additional block of shares was acquired. Through these transactions the company obtained in all 410,000 "A" shares, constituting a voting majority in the telephone company, and it is the intention to keep these shares as a permanent investment.

The L. M. Ericsson Telephone Company is one of the leading telephone manufacturing companies in the world, and has been the pioneer of the telephone industry in Europe. It is largely through the work of this company that Sweden in the use of the telephone has been the most advanced country in Europe. It may be mentioned in this connection that Stockholm has a greater number of telephones per head than not only any other city in Europe but also than New York and Chicago. Outside of Sweden the company operates factories in Great Britain, France, Italy, Spain, Czechoslovakia, Austria, Hungary, Norway and Estonia. In addition to its manufacturing business the company operates under telephone concessions in different countries, among which may be mentioned Poland, Italy, Argentina and Mexico. It is the intention to establish an intimate co-operation between Aktiebolaget Kreuger and Toll and the telephone company regarding the acquisition of such concessions and the financial operations connected therewith.

There seems to be hardly any industry for which a rapid development in the near future can be forecast with greater certainty than for the telephone industry. The enormous possibilities for development of the European telephone business will be understood from the fact that Europe has only 17 telephones per 1,000 inhabitants, while the corresponding figure for the United States is 163 per 1,000. Corresponding figure for Stockholm is 298 telephones per 1,000 inhabitants.

The profits for 1930 are in excess of those for the previous year, and a dividend of 8 per cent., or at the same rates as that for the previous year, will probably be proposed for 1930.

Fastighetsaktiebolaget Hufvudstaden (The Hufvudstaden Real Estate Company).—This company has a share capital of Kr. 16,000,000, practically all of which is owned by Aktiebolaget Kreuger and Toll.

The Hufvudstaden Real Estate Company owns 87 buildings in Sweden, most of which are located in Stockholm. The value of these buildings as assessed for taxation purposes by the city authorities amounts to Kr. 71,693,000, and the fire insurance value to Kr. 62,416,300. The total annual rents at present are Kr. 7,383,146. The company has played a leading part in developing one of the new streets of Stockholm, Kungsgatan, which in the last ten years has become the main thoroughfare of Stockholm. In connection with the work done by the company in this respect a considerable increase in the value of the properties owned by the company has taken place. In the opinion of the board of directors of Aktiebolaget Kreuger and Toll the shares of the Hufvudstaden Real Estate Company have a value considerably in excess of their book value.

Skandinaviska Kreditaktiebolaget.—Share capital Kr. 87,188,000, of which Aktiebolaget Kreuger and Toll holds 70,000 shares to a nominal amount of Kr. 9,940,000.

A dividend of Kr. 18 a share has been distributed for the year 1930, this being at the same rate as that for the previous year.

Stockholms Intecknings Garanti Aktiebolag.—Share capital Kr. 18,000,000, of which Aktiebolaget Kreuger and Toll holds 6,000 shares to a nominal amount of Kr. 1,800,000.

The board has proposed a dividend of 15 per cent. for 1930, this being at the same rate as that for the previous year.

COMPANY MEETINGS, &c.

BANK OF SCOTLAND.

SUCCESSFUL YEAR—INCREASED PROFITS.

DIVIDEND OF 18 PER CENT. MAINTAINED.

STRONG LIQUID POSITION.

LORD ELPHINSTONE'S REVIEW OF THE PAST YEAR.

The annual general meeting of the proprietors of the Bank of Scotland was held within the head office, Edinburgh, on April 7, 1931, the Right Hon. Lord Elphinstone, K.T., presiding.

In submitting the directors' report, the Chairman said:—

My Lords, Ladies and Gentlemen,—I assume that, as usual, we may hold as read the report by the court of directors of the affairs of the bank as at February 28th last, a copy of which you have no doubt received.

When we met last year the outlook for the immediate future of trade and industry in the country could not be regarded with much optimism, and unfortunately the position has become steadily worse throughout the past twelve months. In view of the exhaustive reviews by leading authorities which have appeared in the Press during the last three months, I do not think it would serve any useful purpose for me to traverse the ground in detail, but we must all be of one mind as to the gravity of the condition of our industries and to the urgent necessity for a substantial reduction of national expenditure so as to relieve some of the burden of taxation.

THE BANK'S BALANCE SHEET.

Turning to the bank's report, deposits at £32,535,468 show an increase of £277,160 over last year, and are our highest figures since 1924. The small deposit accounts continue to be availed of in a very encouraging way.

The note circulation at £2,995,337 shows a small decrease of £45,205, due no doubt chiefly to lessened requirements for wages.

The drafts issued at £664,167 are higher by £193,847, whilst acceptances at £622,408 are less by £180,000, the latter item reflecting the depression of trade.

STRONG LIQUID POSITION.

On the assets side, cash, bank balances, documents *in transitu*, and money at call and short notice amount to £7,654,047, i.e., 21 per cent. of our liabilities to the public bills discounted (including £1,410,000 Treasury bills), and our investments amount to £15,323,623, or 41 per cent., giving a total of £22,977,670, or 62 per cent. of our liabilities to the public in liquid assets.

ADVANCES.

Our advances at £16,722,003 show a decrease of £1,130,280, which was to be anticipated in view of the depressed state of industry and the resulting diminished demand for credit.

All bad and doubtful debts have been fully provided for.

THE DISTRIBUTION OF CREDIT.

Last year I gave you some idea of the distribution of our advances and I think it will interest you to have further information on that point. A recent return showed the following advances current:—

£1,274,000 to farmers and livestock salesmen.
£1,100,000 to produce importers.
£1,300,000 to merchants.
£1,100,000 to insurance and investment companies and stock-brokers.

£90,000 to £1,000,000 each to groups of various trades and industries—(1) timber; (2) fishing; (3) iron, coal and steel; (4) engineering, gas, electricity, motors; (5) shipping and shipbuilding; (6) textile, jute, leather, chemicals; (7) distillers and brewers.

£7,000,000 to about 6,000 customers for varied requirements.

Out of 10,600 borrowers 4,300 had overdrafts of £2,100,000 in all without collateral security, the bank relying upon the character and means of its customers. I might add that out of a total of 1,900 farmers nearly 50 per cent. had unsecured accommodation, which gives some indication of the assistance rendered to this important industry. In addition to seasonal requirements the bank is always ready to consider applications from its customers for the purchase of their farms.

INVESTMENTS.

The investment at £13,283,428 are higher by £1,947,040. They are all British Government securities, with the exception of £172,545 in British Corporation, Colonial Government and other stocks. The market value is very substantially in excess of the value in our books.

BANK PREMISES AND HERITABLE PROPERTIES.

The internal reconstruction of the head office has been completed, and I hope that any of the stockholders who have not inspected the premises since will take an opportunity of doing so. I feel sure that they will be pleased with the changes made. It has been our endeavour to improve the accommodation for the public as well as for the staff. During the year the bank has acquired additional properties for branch premises and agents' houses, and the work of reconstruction and general improvement of branch properties has been continued. The new premises at Sauchiehall Street branch, Glasgow, are well advanced, and will be ready for occupation during the summer. The reconstructed premises at St. George's Cross branch, Glasgow, should be available by the end of May, and the new building at Kilmarnock is expected to be completed in the autumn. The whole properties of the bank, including let properties, stand in our books at £400,000, which is much below the market value.

NEW BRANCHES.

I am glad to state that the new office at Piccadilly, London, opened in December, 1929, has made an excellent beginning and has amply fulfilled our expectations. We have just completed new premises at Giffnock, Glasgow, and the branch will be opened to-morrow for business. We have also arranged for new branches at Marchmont Road and Drumsheugh Place, Edinburgh, which will be ready shortly for business.

RESULTS FOR THE YEAR.

The net profits are	£366,870
Add the balance from last year	172,456
	<u>£539,326</u>

Of that the board suggest the following allocations:—

To Reserve Fund	£100,000
To Bank Properties and Heritable Properties	30,000
together	£130,000
Dividend, 18 per cent. per annum, less tax at 4s. 6d. per £	£209,250
in all	<u>£339,250</u>
leaving to be carried forward	<u>£200,076</u>

With the above allocation the reserve fund is now £2,100,000, making with the balance carried forward a total of £2,300,076

BANK STAFF.

I wish once again, on behalf of the court of directors, to express our appreciation of the excellent services rendered by the executive, managers, agents and staff generally throughout the year.

DIVIDEND.

I have pleasure in moving that the report and balance sheet as submitted be adopted, and that a dividend for the past half-year at the rate of 18 per cent. per annum, less income tax, be now declared, payable on 15th current, making, with the dividend paid in October last, 18 per cent. for the year, less income tax, being the same rate as paid for the previous year.

The motion was agreed to.

The Lord Elphinstone, K.T., and Sir Ralph Anstruther of Balcaskie, Bart., were unanimously re-elected governor and deputy-governor respectively for the current year. Mr William Whitelaw, LL.D., and Sir Robert Tuite Boothby, K.B.E., were re-elected ordinary directors.

Mr H. L. Usher, C.A., and Mr C. E. W. Macpherson, C.A., were re-appointed to conduct the audit of the books for the current year, and a vote of thanks to the chairman terminated the meeting.

JOHN BARKER AND COMPANY, LIMITED.

SATISFACTORY RESULTS.

The thirty-eighth ordinary general meeting of John Barker and Company, Limited, was held on the 9th instant, at 63-65 Kensington High Street, London, W.

Sir Sydney M. Skinner, J.P. (the chairman), said that the year under review had covered a period of widespread economic disturbance and world-wide trade depression. The marked financial difficulties referred to at the previous meeting had become more and more acute. Potential buyers, hard hit by increased taxation and reduced earnings, had held back from buying. Prices of all kinds had fallen, at first slightly and then with unprecedented rapidity. Unemployment had increased by leaps and bounds, and had still further reduced the sum total of available purchasing power.

Fortunately, the company had not been altogether unprepared, stocks being at lower levels than for years past, and the balance sheet showing a strong and liquid position. Adequate funds had been in hand to take advantage of the many opportunities offered from time to time by manufacturers and others faced with great difficulties in disposing of both accumulated stocks and current production, and no mean portion of the measure of success which had attended the efforts of the directors during the past year was due to the exceptional values in all departments of the business, the full benefit of which they had thus been enabled to pass on to their customers.

In addition to external trade conditions, they had still been carrying on their business internally under the severe handicap imposed by their rebuilding operations. Having regard to all the conditions, the directors felt that it was a very satisfactory achievement for the company to have been able to reach within an almost negligible margin the record amount of net profit realised for the previous year. In point of fact, they had been able to show total net profits amounting to £466,139, or £2,545 less than the highest recorded in the history of the business.

Their sound financial position had enabled them most effectively to carry on that policy of value to customers for which the great businesses associated with the company were justly noted, and he was certain that during the past year that reputation had in every way been enhanced. That had been especially brought to their notice during the successful sale held in November to celebrate the Diamond Jubilee of the opening of the business. Appreciative letters and messages had been received from many old customers and friends in all parts of the world.

In earning their gross profits they had found it necessary to carry through a greatly increased number of individual sales transactions in order to arrive at the same monetary result. They had fully maintained the standard of their service to customers, and there were comparatively few increases in any items of expenditure over which the directorate had any direct control. It was proposed to pay a final dividend on the ordinary shares of 15 per cent., making 20 per cent. for the year. That rate had now been maintained for twelve consecutive years.

Good progress had been made with the rebuilding work during the past year. Their general rebuilding programme was proceeding ahead of the contract dates for the widening of Kensington High Street. They were about to face one of the most difficult periods in the first stage of their rebuilding work, and their general rate of progress must to some extent be dependent upon their prosperity, and that, in turn, to some extent reflected the general prosperity of the British nation. The country was still passing through a period of serious financial difficulty, but, in spite of that, national expenditure went on increasing and with it the burden on industry of increased taxation in various forms.

He retained, however, the greatest faith in British industry and its ability to produce goods of the finest workmanship and quality. Signs were not altogether lacking that our leaders of industry, our workpeople and the Government were at last realising that prosperity at home, if it was to be other than that of a very temporary nature, could only be achieved by the progress which British trade made abroad. If only that realisation would mature into constructive effort, such as would enable every industry in this country to do what in effect the company was doing by the remodernisation and re-equipment of their stores, he had little doubt that the present period of economic depression would then give way to a more permanent period of better trade conditions.

The report and accounts were adopted.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.

SUCCESSFUL YEAR—ASSETS EXCEED £10,000,000.

The ninetieth annual general meeting of the members of the Wesleyan and General Assurance Society was held, on the 7th instant, at the Central Hall, Corporation Street, Birmingham, Mr John B. Field, the society's chairman, in the chair.

The Chairman, in moving the adoption of the report and accounts, said:—I venture to express the opinion that the members have good reason to be satisfied with the year's record of achievement.

In the ordinary department the new sums assured amounted to over £1,108,000, while in the industrial department the new sums assured were over £3,200,000. It may perhaps interest you to know that the average sum assured per policy issued in the ordinary department was over £150.

The maintenance of business is an object of primary concern to the society, and, although there is of necessity a continual loss due to deaths and the maturity of endowments, the directors are once again able to record a satisfactory net increase in the premium income of the society. The premium income for all departments combined amounted to no less than £1,833,900, and exceeded that of the previous year by £43,500.

One very special feature of the year, reflecting the depressed state of trade, is made evident in the figures recording the amounts paid by way of surrender values. These amounted in the ordinary department to £84,300, and in the industrial department to over £65,000.

The essential requirement of life assurance is security. It is therefore with considerable gratification that the directors are able to record from year to year the increase both in funds and assets. Reference to the balance sheet will show that for the first time in the history of the society the assets exceed the large total of ten million pounds—the exact total is £10,269,548 9s. 6d.—and the increase on the year is over £755,645. It will be noticed that mortgages on property within the United Kingdom exceed £2,500,000, and that investments in British Government securities, including the investments deposited with the High Court under statutory requirements, exceed £2,700,000.

These two classes of security together amount therefore to over £5,200,000, and constitute more than half of the society's assets. While in no way disparaging the value of the remainder of the assets and investments of the society, which have in fact been most carefully selected and are most rigorously watched, special reference has been made to the two selected classes as indicating why it is that, in a year when so many investments have fallen heavily in value, only £65,000 has been added by the directors to the investments reserve. At the increased figure of £215,000, the investments reserve did at the close of the year fully cover all depreciation in value of the society's assets.

The report specifies that the gross rate of interest on the whole of the society's funds was £5 6s. 7d. per cent., as compared with £5 4s. 11d. for the year 1929, an increase of 1s. 8d. per cent. There is a small decrease in the net rate of interest, owing to the increase in the rate of tax, but, in spite of this increase, the net interest earned on the whole of the funds was more than £5 per cent.

I now come to the actuary's valuation report. The directors have adopted that report, and out of the profits have added the sum of £65,000 to the investments reserve, increasing that reserve to £215,000, to which I have already alluded. They have also transferred the sum of £50,000 from the profits to augment the staff pension scheme fund.

After these transfers had been made there still remained valuation surpluses in the ordinary and industrial departments of £197,030 and £106,366 respectively, and it was with great pleasure that the directors found themselves in a position to declare bonuses in the ordinary department at the same high rate as those for each of the four preceding years, namely, £2 2s. per cent. of the original sum assured for endowment assurances and £2 8s. per cent. for whole life assurances. The cost of these bonuses is £118,290. After making the declaration there is carried forward unappropriated a surplus of £78,740.

The continuance of the profit-sharing scheme in the industrial department is also a cause for gratification to the directors. I ask you to reflect what this profit-sharing scheme really implies. In the first place, it must not be overlooked that the industrial department policies to which it applies are essentially "without-profit" contracts; that is to say, no contract had been entered into between the society and the policy-owners to give them any share in the profits. Nevertheless, the industrial department policy-owners have voluntarily been granted the privilege of having set aside for their benefit three-fifths of the declared divisible surplus of the industrial department.

The report and accounts were unanimously adopted.

THE ANGLO-PORTUGUESE TELEPHONE COMPANY, LIMITED.

A YEAR OF EXCEPTIONAL ACTIVITY.

SATISFACTORY PROGRESS.

FULL AUTOMATIC SERVICE INTRODUCED IN LISBON.

The forty-fourth ordinary general meeting of the Anglo-Portuguese Telephone Company, Limited, was held, on the 9th instant, at Incorporated Accountants' Hall, Victoria Embankment, London, W.C.

Sir Alexander Roger (the chairman) presided.

The Secretary (Mr F. Hollyer) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—The report and accounts, which, with your permission, we will take as read, are in the usual comprehensive form, and very little comment on the actual figures is necessary.

I think you will agree with me that, taking into consideration the general depression of business which unfortunately exists in Portugal as elsewhere, the results obtained for the year are very encouraging. The gross operating receipts amount to £209,355, showing an increase of nearly £20,000, whereas the total working expenses, amounting to £125,160, in which we again include £30,000 for depreciation, are up by approximately £7,000. Owing to higher income tax and the addition of another director to the London board, directors' fees are increased by £535. The gross profit stands at £84,195, as compared with £71,287; the net profit amounts to £60,250, in comparison with £50,941, representing an increase of over 18 per cent.

The net addition to capital expenditure account for the year, after deducting loss on plant replaced during the period, is £172,534, against £91,732 for the preceding year. The issued share capital of the company now stands at £866,092, an increase of £156,070, due to the conversion of debenture stock on January 1, 1930, and additional share capital issued in June last. The reserve for renewals account has been drawn on to the extent of £17,926, largely as a result of a portion of the manual plant being withdrawn from service following the introduction of the automatic system in Lisbon. Although the company's plant continues to be maintained in a high state of efficiency out of revenue, we have two reserve accounts amounting to £79,641, in addition to £54,769 being carried forward. These figures combined represent nearly 11 per cent. of the capital expenditure account. Sundry creditors, London, include a sum of over £17,000 provided to complete the payment for the automatic equipment. A final dividend of 5 per cent., less tax, on the old ordinary shares (making 8 per cent. for the year), and a dividend of 8 per cent., less tax, on the "A" ordinary shares is recommended. This will be the fourth successive year in which the company has paid an 8 per cent. dividend on its ordinary shares.

TRINIDADE EXCHANGE CONVERTED TO AUTOMATIC.

I am glad to report that the conversion of our Trindade exchange in Lisbon has been duly carried out and that on August 30, 1930, all the subscribers connected to the old central exchange were put over to the Trindade exchange. As a consequence of these operations 6,600 lines were converted to automatic working through the medium of up-to-date plant of British and local manufacture.

The ceremony of inauguration was most successful. His Excellency the President of Portugal, the Prime Minister, the Postmaster-General, the Minister of Marine, the acting Military Governor of Lisbon, the British Chargé d'Affaires, and the representatives of the municipality, the commercial associations and chambers of commerce, and many other distinguished and important persons attended. His Excellency the President, after dialling the signal for the automatic service to commence, complimented the management and staff on the efficiency of the service, and, as a token of appreciation and recognition thereof, bestowed upon a Portuguese member of the personnel, who had been in the employment of the company since its inception in 1887, the Insignia of the Order of Industrial Merit. I take this opportunity of expressing the thanks of the shareholders for the interest taken by His Excellency, the President of Portugal, and his Government, in the new plant installed. The company has always received the fullest support from the Government in all matters relating to communications, and, as I have often said before, the company desires in every possible way to collaborate with the Government and municipal officials for the purpose of providing the public with a satisfactory telephone service.

Since the installation took place, extensions to the automatic plant have been made, so that the exchange now consists of 8,500

lines, of which about 7,000 lines are actually in operation. Very nearly half the subscribers in the Lisbon area are now working on the automatic service.

CONTINUED PROGRESS OF THE COUNTRY.

The *Times*, in January last, in reporting upon the successful visit of the Second Battle Squadron of the British Fleet to Portugal, commented on the importance of the traditional friendship existing between the two nations, and pointed out the satisfaction which had been caused to all friends of the Portuguese Nation by the great improvement in its finances and freedom from political reactionary movement during the past four years. General satisfaction in this country was felt by the recognition given in this article to the remarkable progress made by Portugal during recent years.

It has often occurred to me why the amenities of Portugal are not taken advantage of by a greater number of tourists. The main roads are now excellent for motor-car traffic, good hotels are available, and within a few hours of Lisbon and Oporto some of the most beautiful scenery in Europe can be enjoyed. The country possesses numerous buildings of historic value, and its climate is unsurpassed.

The health blood of a nation is said to consist in its communications, and it is an undoubted fact that marked improvements have been made in the railways and in the opening up of new roads. As a further indication of progress, I should like to point out that, in spite of the generally adverse business conditions, there was a net increase in the company's stations of 2,293. The total number at December 31 last was 28,974, the increase for the year amounting to 8.6 per cent.

GROWTH OF THE TELEPHONE HABIT.

In my address to the members of the Telephone Development Association of England on the occasion of its annual general meeting held in December, 1930, I made these remarks:—

"To anyone who has doubts about the future of telephone business, I would recommend a study of the latest official statistics of telephone growth to the end of 1929, which show a world total of just short of 34,500,000 telephones in use at December 31, 1929. This compares with 27,750,000 five years ago and 20,750,000 ten years ago. Europe, with 10,500,000 telephones at the end of 1930, has in ten years doubled the number of her telephones."

Where Governments and private enterprises are able to provide first-class telephone service it is remarkable how consistently the number of telephone users increases in normal times. The trade depression, which all countries to a greater or less degree are experiencing at present, has slowed down the net normal rate of increase, but in Portugal we have not by any means reached a point of saturation, and it seems entirely reasonable to suppose that the leeway will be made up when the business outlook becomes brighter.

TRIBUTE TO THE STAFF.

Before concluding these remarks, I know you will like me to record your thanks to Colonel Pope, the company's general manager, and to the entire staff in Lisbon and Oporto and London on the results of the year's working, which, as I think you will appreciate, was one of exceptional activity.

I now beg to move: "That the report and accounts be received and adopted, and that the dividends therein recommended be paid."

I will ask Mr Kerr to second this resolution, but before putting it to the meeting I shall be glad to answer any questions.

Mr Frederick W. Kerr seconded the resolution, and, in the absence of questions, it was put to the meeting and carried unanimously.

The election of Mr Gordon Forbes as a director of the London board having been confirmed, Mr Frederick W. Kerr and Mr Eustace C. Quilter, of the London board, and Mr Francis Frick and Mr Eduardo Pinto Basto, of the local board, were unanimously re-elected.

Messrs Fletcher, Head, Smith and Company were reappointed auditors, and a hearty vote of thanks to the chairman, directors, management and staff for their able conduct of the company's affairs concluded the proceedings.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

PRODUCTION MUCH IMPROVED.

The sixth ordinary general meeting of the British Enka Artificial Silk Company, Limited, was held on the 9th instant, at Winchester House, Old Broad Street, E.C.

Mr C. T. Pott, in the course of his speech, said:—

From the profit and loss account before you, you will see we made a working loss of £72,139, a part of which is due to the writing down of stocks, which, after adding debenture interest and head office expenses, brought our net loss to £166,607 for the year.

The working loss was made in spite of the quality of our production having much improved, and in spite of the reorganisation of the works carried out during the year having resulted in a satisfactory reduction in costs. We only had the benefit of many economies in costs for a short part of the year, so that their full effect is not reflected adequately in the accounts. Moreover, some important changes have been only effected since the close of the year, and from such we are now benefiting materially. The working loss for the past year is only slightly in excess of that for the previous year, and if you take into account the great fall that has taken place in the meantime in selling prices, you will have some idea of the success we have had in reducing production costs.

FALLING OFF IN CONSUMPTION.

Now, looking at the situation generally, it is clear that the consumption of rayon, in common with almost all other commodities, manufactured or otherwise, has fallen off substantially and is now a good deal below what may be termed normal. It is widely believed—and I share that belief—that the general fall of prices, and the under-consumption which has accompanied it, is, in the main, due to monetary causes and not to antecedent general over-production. But I also believe that the radical change in monetary factors which the fall of prices, and the reduced economic activity, has brought about, will tend in turn to restore the equilibrium and enable the world once more to resume its economic onward march.

Now, reverting to matters of more direct concern to us, we are entitled to say that as a consequence of the great efforts which have been made, we are now producing yarn as perfect in quality and almost certainly as cheaply as that of any other producer in this country. We are not unduly burdened with the cost of experimental work needed in order to keep abreast of progress, as we have the benefit of all research undertaken continuously on a large scale by our parent company, the A.K.U. That company has placed at our disposal some of their best technical men. Production methods are frequently undergoing changes. So-called "rationalisation" is always being undertaken. Thus, at present, there is a tendency to speed up or simplify certain stages of the process of manufacture and to consolidate some of the final operations by delivering rayon to consumers in the form of cones, cakes, &c., instead of in hanks. These changes involve installation of new machinery in certain sections, but such installations are only made by us after the Continental factories of A.K.U. have, by test on a commercial scale, determined the most economical method of achieving the desired results.

POOR PRICES.

The sore point is the price at which production is sold. So far as the home trade is concerned, the price is not fixed by us. Our aim is to get a price for our yarn at least equal to that commanded by any competitor. Naturally we have not been able always to secure the same price as that which is paid for brands which have been established and used for years. We are gradually, however, getting nearer to our goal as our make becomes better known in the trade. In fact, the boot is not infrequently on the other foot now, as in some cases in order to retain our customers we have been obliged to reduce our prices so as to bring them to the reduced level at which better-known brands have been offered to them.

The situation, so far as we are concerned, is in effect simple. We have confidence in our production both technically and with regard to its cost. We are constantly improving our methods and adopting new ones as soon as they have been tried out successfully on a commercial scale by the A.K.U., which is nursing us both technically and financially. We are willing to co-operate with any serious producers in the industry, and will agree to any equitable scheme of co-operation. We believe the present price level unnecessarily low, resulting in ultimate benefit to nobody.

The report and accounts were adopted.

GORDON HOTELS, LIMITED.

BUSINESS MAINTAINED IN DIFFICULT PERIOD.

The forty-first ordinary general meeting of the Gordon Hotels, Limited, was held, on the 9th instant, at the Hotel Metropole, London, S.W.

Major-Gen. Guy Dawnay, C.B., C.M.G., D.S.O. (the chairman of the company), who presided, said that, considering the difficult times through which they had been passing, the accounts must be looked upon as satisfactory. It was true that the net profit for the year under review was just over 14 per cent. less than that shown in 1929, but 1929 was a good year for the company, and the present figure of profit, £102,000, was nearly 4 per cent. higher than the figure for 1928. Generally speaking, the depression hung over them for the whole of 1930. About the middle of the year it was, in fact, giving them some concern; but that period was fortunately followed by an autumn in which their business showed a considerable improvement, partly owing to a satisfactory, though temporary, fluctuation, and partly owing to the ability of the managing director in effecting very appreciable economies, the benefit of which they had since been reaping.

As to the company's seaside properties, he had no different report to give from that which he gave last year, and with regard to the Riviera, the continued depression in that cosmopolitan region was obviously a result of the world depression. It was to their metropolitan business that they were bound to look for the greater part of their profits. Never had policy been more amply justified than had their policy of exchanging old hotels for new—the Grand for the May Fair. He would leave Sir Francis Towle to speak of their interest in the most up-to-date unit of all—the Dorchester.

On the trading account it was seen that the falling off in business done was naturally accompanied by a reduction under the item of "Consumption," and, very satisfactorily, by a greater reduction under the omnibus item of "Working expenses, &c." To have diminished expenditure under that item by £40,000 reflected very great credit on Sir Francis Towle and the management. The balance sheet reflected the consolidation of the old debenture stocks into a new 6 per cent. consolidated first mortgage debenture stock, which was effected during the year. As a result of these transactions the company had made substantial provision out of the leasehold redemption funds towards the reduction of the sum previously standing as the value of its fixed assets. The amount so applied was considerably over £250,000. Further, they had been enabled to create a capital reserve account which amounted to £285,674. Their general reserve also stood well over £250,000. The company was under obligation to take up certain second mortgage debentures in the Dorchester House Syndicate, Limited, forming part of their half-share in the equity of the company owning that property. There remained about £366,600 of the new 6 per cent. consolidated first mortgage debentures at present unissued, which in due course, and when the time was favourable, would be sold, and the proceeds of this sale, together with the funds made available by release of the leasehold redemption investments, would enable them to take up their share of the Dorchester equity and, he hoped, to come before the shareholders next year free from the bank overdraft which this year's balance sheet still showed and with that improvement in the company's cash position which it was the directors' aim to bring about.

As to the prospects for the current year, he did not believe that anyone could tell how long the depression would continue, or when the general recovery of trade and commerce on which they depended was likely to set in. He believed it depended mainly on factors outside their control. He would say that the necessities were four in the following order of urgency: The re-institution of real and rigid public economy; the re-institution of equilibrium between labour costs (wages) in the sheltered and unsheltered trades, respectively; the institution of measures specifically designed to bring new life to the export trades, which were at present in danger of bleeding to death, or being bled to death—it was hardly an exaggeration—and upon which so large a proportion of the country's population lived; and the institution of measures, of which so much was under discussion in political circles at present, designed to assist the internal trade and to increase employment therein. He firmly believed that the economic stress could only be alleviated by such measures as he had named, made effective in the order which he had indicated.

Sir Francis W. Towle, C.B.E. (managing director), said that next week it was hoped to open the Dorchester Hotel, the management of which had been vested in the company, and of which they were part owners. This hotel, in its construction, design, decoration and location, represented the result of the experience of the company's directors and officers extending over many years, and it was hoped that it would prove to be a worthy addition to the amenities of the leading city of the world, as well as a revenue-earner for their company.

The report was unanimously adopted.

THE STANDARD LIFE ASSURANCE COMPANY.

A RECORD NEW BUSINESS.

FUNDS EXCEED £20,000,000.

STAFF LIFE ASSURANCE AND PENSION SCHEMES.

The hundred and fifth annual general meeting of the company was held in Edinburgh on Tuesday, 7th inst., Mr E. M. Beilby presiding.

After commenting on the industrial position in the country, the Chairman stated:—

It is, of course, a well-known fact that when trade is bad and speculative investments lose their attraction people turn to gilt-edged securities and other high-class investments to safeguard their savings, and I am glad to say that a good deal of additional money has found its way into life assurance. This disposition of the public to regard more favourably the safe channel of life assurance as a means of investing their savings was taken advantage of by our branch secretaries, outdoor staff and agents to such good purpose that we are able to report the new business completed by the company during the past year to be a record in its history, nearly £3,150,000 after deduction of re-assurances, or about £350,000 in excess of the previous year's total. This result is very satisfactory, and we shall endeavour with the help of our members to make the outstanding merits of the Standard more widely known so that the public may take full advantage of the benefits and security we offer. I think the public could well afford to pay more attention to the services which can be rendered by life assurance companies. As I pointed out last year, a life policy can prove to be a very good investment, quite apart from the actual life cover, especially in the case of a with-profit endowment assurance.

Having dealt with the revenue account, the Chairman continued:—

You will notice that we have again transferred £100,000 from revenue to the general reserve in the guarantee fund, the amount of the general reserve thus being increased to £800,000 and the guarantee fund to £1,650,000. Our policyholders, besides enjoying the security of a very strong life assurance and annuity fund, have also the full security of the additional £1,650,000 in the guarantee fund. Our total funds have for the first time passed the £20,000,000 mark.

VERY SATISFACTORY VALUATION RESULTS.

The valuation of the company's liabilities and assets was made as at November 15, 1930, the manager and actuary adopting the same stringent basis in valuing the actuarial liabilities as he employed for some years past, the rate of interest assumed for the purpose of his calculations being 2½ per cent. Last year I reported that the market value of our investments was very considerably in excess of the value which appears in the balance sheet. It is not always possible to avoid depreciation, and in a year such as 1930 adverse results might have been anticipated; we are fortunate, however, to be able to report that the excess of market value of our assets over the balance-sheet figure in 1930 was actually greater than it was in 1929. This is mainly due to the fact that a large proportion of our funds is invested in British Government and other securities of the highest class. The results of the valuation enabled the directors to transfer £100,000 to the general reserve—I mentioned this when dealing with the revenue account—to provide a compound reversionary bonus at the rate of £2 2s. per cent. per annum declared last November and to carry forward over £28,000. I think that you will agree that this result is very satisfactory. As you know, our bonus is an annual one, and I may point out that a £2 2s. bonus compounded annually is approximately equivalent to a bonus of £2 4s. compounded quinquennially. From the figures that I have mentioned it is obvious that an even higher rate of bonus could have been given, but it is our policy to declare such a rate as we can reasonably expect to maintain for many years to come, and in such difficult and unsettled times as those in which we are living I feel sure you will agree that the policy adopted is a wise one.

SUCCESS OF MINIMUM PREMIUM CASH BONUS SERIES.

The new series of policies we opened a few years ago—our minimum premium cash bonus series—has proved a great success, and I attribute this success to the fact that we have met a real need of the assuring public. There are many people who particularly wish to secure the largest life assurance protection possible for their families in return for a given annual outlay, and in the past this could only be obtained by effecting a without-profit policy. There is no doubt, however, that many intending insurers have wished that a type of policy were available which, while giving large initial cover, would also allow them a share in the profits; our cash bonus policy exactly meets this need. The rate of premium is but slightly

in excess of our moderate without-profit rate, but by the operation of cash bonuses on the scale now being paid the cost within a few years proves much less under the cash bonus plan than under the ordinary without-profit policy. The minimum premium cash bonus policy should offer particular attraction to those who wish to provide for death duties at the smallest possible cost.

GROUP LIFE ASSURANCE.

During the past year there has been considerable development in our work in connection with group life assurance and pension schemes for large industrial firms. Many employers have felt that it would help the business and promote a feeling of goodwill between employer and employee if schemes could be set on foot whereby the entire staff of a firm could be covered against the risk of death and at the same time for pensions to be provided for them. There are obvious difficulties in the way of commercial firms undertaking such schemes for themselves, and this is where a life assurance company can be of service; I am pleased to say that we have completed life assurance and pension schemes with many large and important firms. The circumstances of different firms vary considerably, and a separate department has therefore been set up by the Standard to look after this branch of our work in order that schemes to meet the exact needs of any particular firm may be prepared expeditiously. I would suggest that any firm interested in this question should write to the head office of the company or to the nearest branch office for particulars.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the four days ended April 4, 1931, amounted to £12,695,600 against ordinary expenditure of £18,630,300. After allocating £295,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £3,136,870, the four days' operations, as shown below, increased the National Debt by £3,092,900 to £7,609,093,000:—

Bank premises and heritable properties	460,000	430,000	400,000

MISCELLANEOUS.

THE NORTH AMERICAN COMPANY.—The forty-first annual report for 1930 states that business during 1930 maintained an enviable equilibrium, with no material interruption of its normally consistent growth and with no impairment of its strength of position or prospects for progress. Business was relatively good compared with other lines of industry; it made a favourable comparison with the somewhat abnormal year 1929 and showed a substantial increase over 1928. Compared with other years of major depression the effect upon our business in 1930 was not so severe, for example, as in 1921. The most important change of the year was the sale, June 12, 1930, of the California subsidiaries to Pacific Gas and Electric Company and acquisition of 32 per cent. of that Company's outstanding common stock. Because of this transaction the 1930 financial statements are not comparable with those of 1929. Gross earnings were \$133,751,381. Net earnings of \$27,003,086 were slightly greater than in 1929, and 19-57 per cent. greater than in 1928, and were equivalent to \$4.53 per share on the average number of shares of North American common stock outstanding during 1930. Consolidated assets on December 31, 1930, totalled \$841,194,192 after the California adjustment. All loans and notes payable shown at that date as \$24,458,778 have since been paid, and at date of report (March 10th) neither The North American Company nor any of its subsidiaries has any bank loans outstanding. Reserves at the end of the year were \$103,670,069, an increase of \$5,727,002. Surplus was \$146,416,571, including undivided profits of \$117,547,114, comparing with surplus of \$125,339,243, including undivided profits of \$96,387,457, at the end of 1929.

Llewellyn and Merrett, Ltd. The slightly lower price of 25s. 5d. per ton has been tendered by the Maris Export and Trading Company, Ltd., for 150,000 tons. The price of the expiring contract for 155,000 tons was 24s. 8½d., c.i.f. Alexandria. A Spanish railway contract for 30,000 tons has been divided among four Cardiff firms. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 14s. 9d. to 15s.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; furnace coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. 6d. to 24s.

IRON AND STEEL.

MIDDLESBROUGH.—There was no weekly market on Tuesday owing to the holidays, and official prices of Cleveland iron are unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. Work is generally resumed at the different local foundries to-day (Wednesday) and some improvement in demand for Cleveland iron is looked for. Up to the present purchases have been confined to parcels for delivery not more than a few weeks ahead, but there is now a slightly more optimistic feeling about which it is hoped will result in some buying for forward delivery. Trade with Scotch consumers is still at a low ebb and any improvement in that direction cannot be looked for under present pressure of Continental and Midland irons. It is said that these are offering at 6s. to 7s. per ton below Cleveland delivered on trucks at Grangemouth. The demand for hematite for early delivery shows some improvement, but as yet very little is being purchased for forward. It is, however, expected that consumers will come on the market in the latter connection before long. Makers are now willing to accept 67s. for early supplies of mixed numbers and 67s. 6d. to 68s. for delivery

ahead, according to quantity and period. Shipments of pig iron for March were the lowest monthly total since the coal strike period of 1926, being only 7,258 tons, but finished materials showed a combined gain of 12,765 tons on February. In the steel trade all the works have now resumed operations. The L.N.E.R. orders are now announced as totalling 40,000 tons British steel rails, in which the three local works, Dormans, Cargo Fleet and Pease (Skinninggrove) participate, along with Samuel Fox and Company, Sheffield, Colvilles and Steel Company of Scotland, Glasgow. Prices of all manufactured materials are unchanged. Ore is an idle market and the price of best rubio remains nominally 16s. c.i.f., and the rate of freight Bilbao-Middlesbrough for early tonnage about 4s. 6d. For forward, higher prices are asked. The total imports of all descriptions of ore into Middlesbrough for March were 66,240 tons, against 56,734 tons in February. Coke is freely offered at 16s. delivered works for good furnace qualities, and a shade less would be accepted for very prompt lots. The total number of furnaces in blast in the district is unchanged at 21, but one has been changed from "specials" to hematite.

SHEFFIELD.—There has been but little production at the local steel works this week. Several of the largest closed last Thursday for ten days. Depression in open-hearth steel is unrelieved. Output is lower than for many years. Requirements of ship-building yards and railways have fallen off badly this year. Substantial orders will be placed shortly in connection with the distribution of the Boxer indemnity fund, which is to be applied to trackwork and rolling stock for the Chinese railways. Sheffield's share will consist chiefly of railway waggons, springs, tyres, axles and buffers. Allied businesses of Sheffield firms in other districts will also benefit by the work. British railway companies are releasing a number of orders for steel material which were held up during the negotiations for wage adjustments on the railway systems. Makers of tool and alloy steels report restricted output but steady demand. Overseas business is rather more brisk, but the volume is still very poor. Trade in hand-tools is also steady, with a slightly improved export demand. Nothing favourable can

UNION CORPORATION, LIMITED.

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS.

In submitting to the Shareholders the Accounts of the Corporation for the year ended December 31, 1930, the Directors state:—
The realised net profit for the year, after deducting all outgoings, including commissions and bonuses paid to the management and staff, is £248,887 15s. 10d., to which £119,623 7s. 11d. brought forward from 1929 has to be added, making a total of £368,511 3s. 9d. An interim dividend of one shilling and threepence per share was paid on November 20th last. The Directors have decided to add £30,000 to the Reserve Account, raising it to £690,569 14s. 7d., and have declared a final dividend of two shillings per share, making a total distribution of three shillings and threepence per share, or £227,500 for the year. The balance of £111,017 3s. 9d. is carried forward to new account. In a period of industrial depression such as the world is now enduring, the position of the gold-mining industry stands out in sharp contrast to that of all others. The general

	Tons milled.	Gold output (and per ton).	Working costs (and per ton).	Working profit (and per ton).	Dividends (and per share).
1925.....	524,100	£1,187,551 (45/4)	£404,704 (15/5)	£782,847 (29/11)	£675,000 (6/9)
1926.....	528,200	1,189,460 (45/0)	403,144 (15/3)	786,316 (29/9)	675,000 (6/9)
1927.....	529,300	1,192,932 (45/1)	407,774 (15/5)	785,158 (29/8)	675,000 (6/9)
1928.....	530,300	1,192,978 (45/0)	419,373 (15/10)	773,605 (29/2)	675,000 (6/9)
1929.....	531,500	1,194,605 (44/11)	417,203 (15/8)	777,402 (29/3)	675,000 (6/9)
1930.....	530,400	1,171,031 (44/2)	419,600 (15/10)	751,431 (28/4)	650,000 (6/6)

The ore reserves at December 31st amounted to 2,050,000 tons, assaying 8·6 dwt. per ton over a stoping width of 79 inches, comparing with 2,550,000 tons assaying 8·8 dwt. over 79 inches at the end of 1929; and, in addition, there are 100,000 tons in hanging wall leader blocks valued at 4·8 dwt. per ton over an estimated stoping width of 60 inches.

	Tons milled.	Gold output (and per ton).	Working costs (and per ton).	Working profit (and per ton).	Dividends (and per share).
1925.....	939,800	£1,380,751 (29/5)	£826,168 (17/7)	£554,583 (11/10)	£464,818 (7/0)
1926.....	976,000	1,402,983 (28/9)	832,708 (17/1)	570,275 (11/8)	498,020 (7/6)
1927.....	983,500	1,366,270 (27/9)	814,893 (16/7)	551,377 (11/2)	498,020 (7/6)
1928.....	979,000	1,239,758 (25/6)	815,095 (16/7)	464,663 (9/11)	448,218 (6/9)
1929.....	1,008,100	1,353,823 (26/10)	816,516 (16/6)	522,188 (10/4)	456,518 (6/3)
1930.....	1,011,000	1,369,152 (27/1)	827,866 (16/5)	541,286 (10/8)	474,779 (6/6)

The ore reserves at December 31st amounted to 6,000,000 tons assaying 6·6 dwt. per ton over a stoping width of 59 inches, which compares with 5,900,000 tons assaying 6·7 dwt. over 58 inches at the end of 1929. The Company duly exercised its right to subscribe for its proportion of the shares issued during the year by the East Geduld Mines, in order to provide funds for the construction of a reduction plant. It may be anticipated that the additional revenue accruing to the Company by reason of its interest in the East Geduld Mines will augment its dividends.

The sinking of the vertical shaft at the EAST GEDULD MINES and the erection of the mill are making excellent progress, and it is anticipated that both will be ready in time for production to begin by the third quarter of this year. The quantity of ore reserves within sight by the time production begins will be exceptionally large, as the following figures (based upon stoping width) indicate:—

	Tons.	Dwt.	Inches.	Inch.-dwt.
At March 31st, 1929	1,900,000	6·60	56½	373
At December 31st, 1929	2,400,000	6·75	57	385
At December 31st, 1930	3,900,000	7·00	58	406

The nominal capacity of the mill is 720,000 tons per annum, and it is anticipated that the actual capacity will prove to be in excess of this quantity.

GROOTVLEI PROPRIETARY MINES.—The Corporation has acquired an interest in this Company which holds the mineral rights over the farm Grootvlei, adjoining the property of the East Geduld Mines on the north-east. The Company has recently concluded negotiations with the Union Government for the lease of 2,500 claims on the farm. Arrangements are being made for the exploitation of the lease area together with

the increase of the mill's capacity from 500,000 to 400,000 tons per annum became effective in June last, but the contemplated further increase to 500,000 tons per annum has been postponed for the time being.

The first five months of the current financial year reflect the further heavy fall in metal prices which has taken place, the working profit being £25,500 from the milling of 163,590 tons as compared with £79,000 from 119,640 tons in the corresponding period of the previous year. During the last five years the blocked-out reserves were increased from 602,000 to 1,763,600 tons and the partly blocked-out reserve from 170,000 to 552,900 tons. In addition, the assets of the Company have been considerably increased by purchase of additional ground, particularly the Clarine property. Apart from the low level of metal prices, therefore, it may be said that the mine has never been in as good a position as it is at present.

For 1929 a dividend of 20 per cent. was paid by the Polymphwerke A. G. on a capital of R.M. 17,060,000, as compared with 20 per cent. on R.M. 12,560,000 for 1928, and 14

level of wholesale commodity prices has declined since September, 1929, by 25 per cent., and this fall has been accompanied by a marked decrease in the consumption of raw materials and finished goods, these two factors bearing with intense severity on enterprise generally. The adoption of the Gold Standard by the greater part of the world, on the other hand, enables the Gold Mining industry to sell the whole of its production at a fixed money price, irrespective of the quantity produced. This industry, therefore, enjoys at all times both a fixed money price for its product and an assured market for its output; while, in times of depression, the fall in the general level of prices not only adds to the real value of the industry's profits by increasing their purchasing power, but also tends to increase the profits themselves by reducing the costs of production.

The results shown by the Modderfontein Deep Levels for the past six years are as follows:—

	Working costs (and per ton).	Working profit (and per ton).	Dividends (and per share).
1925.....	£826,168 (17/7)	£554,583 (11/10)	£464,818 (7/0)
1926.....	832,708 (17/1)	570,275 (11/8)	498,020 (7/6)
1927.....	814,893 (16/7)	551,377 (11/2)	498,020 (7/6)
1928.....	815,095 (16/7)	464,663 (9/11)	448,218 (6/9)
1929.....	816,516 (16/6)	522,188 (10/4)	456,518 (6/3)
1930.....	827,866 (16/5)	541,286 (10/8)	474,779 (6/6)

the mining area owned by the Company, and particulars of the lease and the financial programme contemplated with this end in view will be published when the necessary details and formalities have been completed.

At the end of last year a consolidation scheme was adopted whereby the Rhodesian Congo Border Concession, Limited, acquired all the assets of the Ewana M'Kubwa Copper Mining Company, Limited, in return for shares, and at the same time made an offer to the shareholders in the N'Changa Copper Mines, Limited, for an exchange of shares.

During the year the deposit known as the N'Changa Extension or Chingola was further prospected by drill holes, the results of which fully bear out the previous evidence that a large and remarkably high-grade ore-body exists. Shafts are now being sunk to open up this body by underground development work. A treatment plant to handle 7,000 tons of sulphide ore per day is being erected at the N'Kana Mine, and will be ready for production early next year. This plant will begin by treating sulphide ore from the N'Kana Mine, but, as soon as the N'Changa Extension ore-body has been opened up sufficiently, it is proposed to send rich ore from it to the N'Kana plant for treatment. Production from a joint plant serving the Mufuira and Chambisi Mines will commence at about the same time.

The good record of the SAN FRANCISCO MINES OF MEXICO has been interrupted by reason of the world depression which set in from October, 1929, and which has increased almost continuously since that time. The depression has had a special effect upon base metal prices, which have fallen to an abnormally low level, with the result that the profits for 1929-30 were much reduced. The six years' record is as follows:—

	Working costs (and per ton).	Net profit.	Dividends (and per share).
1925.....	£336,883 (45/5)	£308,148	£281,992 (3/9)
1926.....	399,561 (39/0)	343,558	300,792 (4/0)
1927.....	430,481 (30/10)	320,049	300,792 (4/0)
1928.....	366,316 (24/5)	283,130	281,992 (3/9)
1929.....	415,267 (27/0)	333,539	286,284 (3/9)
1930.....	446,079 (26/5)	88,461	78,271 (1/0)

per cent. on R.M. 20,050,000 for 1927. The Company, in common with other enterprises of alike nature, has suffered from the prevailing general trade depression. Nevertheless, the first part of last year compared favourably with the corresponding period of 1929, and it was only in the latter part of the year that the full effect of current conditions was felt.

The accounts of the British Enka Artificial Silk Co. for last year show a working loss of £72,139, and a net loss of £166,607 after allowing for depreciation, debenture interest, etc. From the technical point of view the year was marked by an appreciable improvement in quality and by many economies effected in the cost of production, but these benefits, while very material, were more than counterbalanced by the heavy fall in the price of rayon.

Holders of Share Warrants to Bearer can obtain copies of the full Report and Accounts on application at the London Office, Princes House, 35, Greenham Street, E.C.2.

THE PENNSYLVANIA RAILROAD

SUMMARY OF ANNUAL REPORT FOR 1930

THE 84TH ANNUAL REPORT of The Pennsylvania Railroad Company, covering operations for the year 1930, will be formally presented to the stockholders at the annual meeting on April 14, 1931. The report shows that although the Company's total operating revenues in 1930 declined over \$112,000,000, it earned a net income sufficient not only to pay 8% dividends and all other charges, but also to provide a surplus of nearly \$11,500,000.

Net income, amounting to \$68,809,818, was equivalent to 10·55% upon the outstanding capital stock at the close of the year, as compared with 17·64% upon the amount outstanding at the close of 1929. Net Income per share (par \$50) was \$5·28 compared with \$8·82 in 1929.

OPERATING RESULTS

	1930	Comparison with 1929
		Increase or Decrease
TOTAL OPERATING REVENUES were	\$570,465,360	D\$112,237,571
TOTAL OPERATING EXPENSES were	427,183,181	D 65,967,412
LEAVING NET REVENUE FROM RAILWAY OPERATIONS of	\$143,282,179	D \$46,270,159
TAXES amounted to	35,661,756	D 4,856,839
EQUIPMENT, JOINT FACILITY RENTS, etc., amounted to...	15,438,866	D 455,251
LEAVING NET RAILWAY OPERATING INCOME of	\$ 92,181,557	D \$40,958,069
INCOME FROM INVESTMENTS AND OTHER SOURCES amounted to.....	55,266,677	I 6,475,177
MAKING GROSS INCOME of	\$147,448,234	D \$34,482,892
RENTAL PAID LEASED LINES, INTEREST ON FUNDED DEBT AND OTHER CHARGES amounted to.....	78,638,416	D 1,914,192
LEAVING NET INCOME (Equal to 10·55% of Capital Stock).....	\$ 68,809,818	D \$32,568,700

After providing for the payment of 8% dividends to the stockholders and for sinking and other reserve funds, \$11,431,273 was credited to Profit and Loss Account.

The financial results achieved last year, notwithstanding marked reductions in business and revenues, reflect not only the Company's large capital expenditures for improvements in service and efficiencies and economies in operation, but also the increasingly cordial and effective co-operation which exists between the management and employees.

W. W. ATTERBURY,
Philadelphia, Pa., April 1st, 1931.
President.

THE PENNSYLVANIA RAILROAD

Carries More Passengers, Hauls More Freight
Than Any Other Railroad in America

SHIP AND TRAVEL VIA PENNSYLVANIA

Stockholders may obtain copies of the Annual Report from J. Taney Wilcox, Secretary, Broad Street Station Bldg., Philadelphia, Pa.

62 lbs., 21s. 6d.; Australian, 22s. 6d.-23s. 3d.; Russian on sample, landed, 20s.-22s.; ex ship, 21s.-24s. per 496 lbs. English, 4s. 6d.-5s. 6d. per 112 lbs.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Apr. 9, 1930.	Jan. 2, 1931.	Mar. 25, 1931.	Mar. 31, 1931.	Apr. 8, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	115½	56½	58	57½	57½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	113½	79½	80½	81½	83

The visible supply of wheat in Canada at 65,290,000 bushels, shows an increase on the week of 301,000 bushels. Supplies a year ago stood at 74,684,000 bushels.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Apr. 4	Cwts. 61,081	Cwts. 171,659	Cwts. 135,452	Cwts. 184,215
31 weeks to Apr. 4	3,681,218	7,523,965	8,117,590	7,927,954
Average price of English wheat per cwt.	s. d. 5 2	s. d. 8 4	s. d. 9 9	s. d. 10 1

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Mar. 28, 1931.....	Cwts. 121,780	Cwts. 59,508	Cwts. 38,360	s. d. 5 2	s. d. 7 3	s. d. 5 10
Apr. 4, 1931.....	61,081	32,316	19,064	5 2	7 5	6 1

WHEAT FLOUR.—Flour prices remained unaltered, with a moderate demand for home milled, but imported makes are still rather difficult to vend. Quotations: London straight run, 22s. 6d.

PLAYER'S

NAVY MIXTURE or NAVY CUT TOBACCO

No man lights his pipe with greater expectancy or smokes it with greater satisfaction than the one who regularly fills it with **PLAYER'S**

110½ PER OUNCE

per sack for country deliveries and 21s. 6d. London area. Of imported, Manitoba patents, 20s. 6d.-24s.; Buffalo ditto, 21s.-25s.; Australian, 18s. 6d.-18s. 9d., ex store, per 280 lbs.

BARLEY.—The market in barley has been dull. Quotations: Californian old, landed, 30s.-35s.; new, ex ship, 30s.-41s. as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, landed, 17s.; ex ship, 16s. per 400 lbs. English malting, 6s. 3d.-13s. 9d.; feed, 5s. 9d.-6s. per 112 lbs.

OATS.—Oats have been firmer during the week. Quotations: Plate, landed, 11s. 3d.; ex ship, 10s. 3d.; Chilean, tawny, landed, 13s. 9d.; whites, ex ship, 19s.; landed, 19s. 9d.; North Russian, landed, 15s.; South Russian, landed, 15s.; ex ship, 14s. per 320 lbs. English, 5s. 8d.-6s. per 112 lbs.

MAIZE.—Feeding stuffs were fairly steady, and with regard to maize, business in Plate new crop is slow to develop. In the absence of competition from other producing countries, sellers refrain from pressing, though occasionally obliged to grant slight price concessions in order to stimulate trading. Quotations: Plate, landed, 20s. 9d.; ex ship, to arrive, 19s. 3d.; March-April, 16s. 9d.; new, April-May, 16s. 6d.; May-June, 16s. 3d.; June-July, 16s. 3d. per 480 lbs. Yellow maize meal, 26 5s. f.o.r. London per ton.

OTHER FOODS.

SUGAR.—The market in sugar has been steady, and the price of British refined sugar has been maintained at the higher level. The market has been strengthened by the news that sowings on the Continent are considerably below those of last year. Mr F. O. Licht estimates the area under beet for the whole of Europe, excluding Russia, at 1,623,000 hectares compared with 1,906,000 hectares last season, showing a decrease of about 14.8 per cent. The figure for Russia is 1,382,000 hectares against 1,044,000 hectares last season, an increase of about 30 per cent. Raw futures have been maintained, and Wednesday's sales included "May delivery" at 6s. 5½d. to 6s. 8d., as against 6s. 4½d. to 6s. 6d. on the corresponding day last week; August, at 6s. 8½d. to 6s. 9½d., as against 6s. 7½d. to 6s. 9½d.; and December, at 7s. 0½d. to 7s. 1d., as against 7s. 0½d. to 7s. 1d. The movements of raw sugar in London and Liverpool are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London ...	2,442	4,128	1,074	2,249	32,930	49,879
Liverpool...	10,332	2,448	10,921	8,278	82,988	140,221
Total tons...	12,774	6,576	11,995	10,527	115,918	190,100
Last week...	9,504	450	20,207	13,754	115,139	194,051

COFFEE.—Coffee has been a steady market, and Costa Rican figured largely in inquiries. Last week's movements of coffee in London were as follows: Brazilian, landed, 204 bags; delivered for home consumption, 48 bags; exported, nil; stocks, 2,872 bags, against 6,077 bags last year. Central American, landed, 6,990 packages; delivered for home consumption, 1,968; exported, 2,527; stocks, 105,276 packages, against 100,602 a year ago. Other kinds, landed, 11,291 packages; delivered for home consumption, 3,205; exported, 1,081; stocks, 103,475 packages, against 115,999 a year ago.

COCOA.—The market in cocoa has been quiet but steady, and prices showed a slight increase. Wednesday's quotation for Acera, fair fermented, April-May, at 20s. 9d. per cwt., f.o.b., London contract, shows a rise of 9d. on the week. Last week's movements of cocoa in London were as follows:—Landed, 24,104 bags; delivered for home consumption, 7,092 bags; exported, nil; stocks, 211,461 bags, against 198,899 last year.

TEA.—There have been no auctions during this week, and business by private contract has been small.

RICE.—Rice has been steady, and slightly higher prices were realised. Wednesday's quotation, for Burma No. 2, cleaned, April-May, in singles to the Continent and to the United Kingdom, at 7s. 10½d. per cwt., shows a rise of 1½d. on the week. Movements in London during the past week were as follows:—Landed, 3 tons; delivered, 33 tons; stocks, 496 tons, as against 2,522 last year.

POTATOES.—As the result of a strong demand which could only be met by limited supplies potatoes showed a further improvement this week at the Borough Market. "Best King Edward" sold at £8 10s. to £9, as against £7 10s. to £8 10s. a week ago.

SPICES.—The spot pepper market has been quiet, but a slight rise occurred in the price of the commodity. On Wednesday, "Black Singapore" was quoted at 6½d., which shows a rise of ½d. on the week. Movements of pepper in London during the past week were as follows:—Black, landed, 29 tons; delivered, 15; stocks, 536 tons, as against 1,001 last year. White, landed, 34 tons; delivered, 21; stocks, 512 tons, against 809 tons a year ago.

MEAT.—There has been no further downward movement in meat prices. Argentine beef was slightly cheaper, but English qualities show an advance on last week. Mutton, both English and New Zealand, was dearer. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,996 tons, as compared with 9,073 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.9 per cent. of the supplies, as against 83.1 per cent. a year ago, and imported mutton, mainly New Zealand, formed 82.1 per cent. of the total supply, as against 83.4 per cent. last year.

The North American Company

60 Broadway, New York, N. Y., U. S. A.

ORGANIZED in 1890, controls through stock ownership four main groups of public utility companies operating in large and important areas of the United States centering in Cleveland, Milwaukee, St. Louis and Washington, D. C. Territories served by subsidiaries have a total area of 18,343 square miles, with a population of 4,910,000, and include 687 communities receiving various classes of public utility service. The electric properties in each group form a distinct interconnected power system.

The North American Company classes as subsidiaries only companies in which it or its subsidiaries own voting control and at least 75 % of the Common Stock. The North American Company does not include in its consolidated income statements undistributed earnings applicable to substantial investments in other large public utility companies, The Detroit Edison Company, North American Light & Power Company and Pacific Gas and Electric Company.

Summary of the Forty-first Annual Report to Stockholders of The North American Company for the Year 1930, by F. L. Dame, President, and Edwin Gruhl, Vice President and General Manager

THE North American Company's business during 1930 maintained an enviable equilibrium, with no material interruption of its normally consistent growth and with no impairment of its strength of position or prospects for progress. Business was relatively good compared with other lines of industry; it made a favorable comparison with the somewhat abnormal year 1929 and showed a substantial increase over 1928. Compared with other years of major depression the effect upon our business in 1930 was not so severe, for example, as in 1921.

The most important change of the year was the sale June 12, 1930 of the California subsidiaries to Pacific Gas and Electric Company and acquisition of 32% of that Company's outstanding Common Stock. This expansion of interests further diversifies the Company's investments and conforms to its long established policy for development on a sound economic basis of the territories served. Because of this transaction the 1930 financial statements are not comparable with those of 1929. Consolidated Income Statement excludes earnings of former California subsidiaries after June 12, 1930 and includes in lieu thereof dividends only on Pacific Gas and Electric Company Common Stock actually applicable to that period. Consolidated Balance Sheet reflects elimination of all assets and liabilities of the former California subsidiaries and inclusion of Pacific Gas and Electric Company Common Stock in Investments, but the substantial increase in that item does not reflect the large excess of market value of North American holdings in Pacific Gas and Electric Company over the value at which the interests in the California subsidiaries were carried prior to transfer.

Investments which are carried in Consolidated Balance Sheet at a value of \$131,107,893 had an

aggregate market value at December 31, 1930 substantially in excess of that figure. Principal investments in public utilities other than subsidiaries consisted of 243,363 shares of Detroit Edison Company Capital Stock, 638,146 shares North American Light & Power Company Common Stock and 1,858,813 shares Pacific Gas and Electric Company Common Stock.

Electric business contributed 86% of Consolidated Net Income from Operation. Electric output for 1930, eliminating former California subsidiaries after June 12, aggregated 5,793,253,914 kilowatt hours and the comparable figures were 5,761,262,772 for 1929 and 5,218,185,968 for 1928, or an increase of 56% over 1929 and 11% over 1928. Curtailed industrial activity due to the general business depression caused a decrease of 3.19% in industrial use of electricity in subsidiaries' territories, but there was an increase of 10.50% in residential use and 1.16% in commercial use. New business added 214,292 kilowatts connected load for industrial customers during 1930 and is of potential importance although not reflected in the year's revenues. Provision for such new business was made by net additions to plant capacity totaling 197,247 kilowatts, compared with additional capacity of 115,100 kilowatts installed by present subsidiaries during 1929. Net additions to property and plant account aggregated \$61,315,766, of which 85% were electric facilities. Electric customers of present subsidiaries at the end of the year totaled 1,067,303, an increase of 10,501.

As reported in the preliminary statement sent to stockholders February 21 Gross Earnings were \$133,751,380. Net earnings of \$27,003,086 were slightly greater than in 1929, and 19.57% greater than in 1928, and were equivalent to \$4.53 per share on the average number of shares of North American Common Stock outstanding

during 1930. After adjustment for elimination of California subsidiaries consolidated operating ratio showed improvement. Appropriations for Depreciation Reserves were 10.67% of Gross Earnings, equivalent to \$2.39 per share on the average number of shares of Common Stock outstanding.

Consolidated assets on December 31, 1930 totaled \$841,194,192 after the California adjustment. All loans and notes payable shown at that date as \$24,458,778 have since been paid and at date of Report (March 10) neither The North American Company nor any of its subsidiaries has any bank loans outstanding. Reserves at the end of the year were \$103,670,069, an increase of \$5,727,002. Surplus was \$146,416,571, including Undivided Profits of \$117,547,114, comparing with Surplus of \$125,339,243, including Undivided Profits of \$96,387,457, at the end of 1929.

The Company's policy of paying dividends on its Common Stock in Common Stock at the quarterly rate of 2½% (1/40th of a share) continues to provide a portion of the capital necessary to take advantage of recurring opportunities for profitable investment in the equities of subsidiaries arising from their steady growth and consequent development of plant facilities. This situation points to the continuing advantage of your Company's dividend policy, which is now in its eighth year. From April 1, 1923 to December 31, 1930 Common Stock increased 174.21% (including Common Stock issued for cash and for properties), while during the same period consolidated net earnings for Common Stock Dividends and Surplus increased 299.62%. Stockholders of The North American Company not including those of subsidiary number 35,096, including 1,400 in foreign countries, and reflect an increase of 21% in the number of Common stockholders.

	Year 1930*	Year 1929
Gross Earnings	\$133,751,380.67	\$147,779,869.32
Operating Expenses, Maintenance and Taxes	69,838,439.45	76,451,594.39
Net Income from Operation	\$63,912,941.22	\$71,328,274.93
Other Net Income	7,461,528.17†	4,553,736.61†
Total	\$71,374,469.39	\$75,882,031.54

	\$841,194,192.16		

‡ On June 12, 1930 the North American interests in the California subsidiaries were sold to Pacific Gas and Electric Company in consideration for Common Stock of that Company. The assets and liabilities of the California subsidiaries, including their preferred stocks and funded debt obligations, accordingly are entirely eliminated from the Consolidated Balance Sheet of December 31, 1930. Such Pacific Gas and Electric Company Common Stock is included in Investments (without any adjustment to reflect the large excess of market value of such stock over the value at which the interests in the California subsidiaries were carried prior to transfer), and represents a substantial part of the increase in this item.

§ Represented by 6,185,384 shares.

Copies of complete Annual Report may be obtained from DILLON READ CORPORATION, 4, Austin Friars, London, E. C. 2, or from Messrs. J. HENRY SCHRÖDER AND CO., 145, Leadenhall Street, London, E. C. 3.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Quiet conditions prevail, and only a small volume of business is reported. English and Continental crushers are showing but little interest in linseed, having apparently covered their immediate requirements. Consequently prices have an easier tendency, current value of Plate on spot and April-May shipment being around £8 15s., with later positions at a slight premium. The quantity of linseed on passage to Europe has undergone further diminution, and at 222,900 tons is 21,300 tons less than last week, and compares with 87,600 tons a year ago. Good progress is being made with the shipment of the Argentine crop, the total for the first three months of 1931 being 717,700 tons, equal to 42 per cent. of the exportable surplus, as against 532,200 tons in the corresponding quarter of last year. The greater proportion of this has been destined for Europe, that sent to the United States being only 63,900 tons, against 226,500 tons. Argentina has still just upon a million tons left for export, which, with 293,000 tons estimated to come from India, gives a total of 1,290,000 tons, against 951,000 tons actually shipped during the remainder of 1930. Cotton seed is quiet, and lower black Egyptian being done down to £6 5s. for April loading. Linseed oil is in moderate demand, but is steady, current value of raw oil on spot at Hull being £17 15s., and delivery to August £17 5s. Cotton oil is quiet, and crude Egyptian, ex Hull, being held for £20 15s., and common edible for £23 10s. Oilcakes are in steady demand, and linseeds quoted cheaper.

HIDE, LEATHER AND ALLIED TRADES.—Owing to the intervention of the Easter holiday there were no auctions of English hides and skins this week, supplies for the fortnight having been disposed of at the previous sale. The small amount of business which has been put through in foreign hides has resulted in a slight weakening of prices for some descriptions, and although the position for the present is not looked upon with any anxiety, the possibility of a lower basis of values is not overlooked. In the South American market, Argentine ox have sold at 6 1/4d., with second ox realising 5 1/4d. Russia has been operating on saladero hides, and this has resulted in a little more activity in these goods. Dry South

American hides remain quiet, with quotations for B. A. Americans unchanged at 7 1/4d., while M. V. Americans are on offer at 7 1/4d. Lower prices have been accepted for Cape hides, which are now obtainable at 6 1/4d. and 5 1/4d. for first and second dry salted, 20/30 lbs., and 7 1/4d. and 6 1/4d. for drys. Australian are inclined to be slightly easier, with little business passing. The market for sole leather has been quiet, but as soon as shoe manufacturers recommence work in earnest, fairly satisfactory business should be forthcoming. Of late more inquiry has been noticed for shoe manufacturing bends, and although business has not resulted in every case, the fact that stocks in the hands of producers of footwear are small should eventually compel them to come into the market for supplies. Bellies and shoulders have received a little more attention, but in order to effect sales prices have to be low. In the upper leather section conditions appear hopeful. The call for patent is still the best feature of this market, but at the same time fair quantities of glacé kid continue to change hands. Box and willow calf are also asked for in moderate quantities, while there has been rather more interest shown in both real and imitation reptile leathers.

RUBBER.—It appears that the Dutch Rubber Committee's efforts to secure the adoption of a restriction scheme in the Dutch East Indies have not yet been successful. This uncertainty, coupled with an increase in stocks and the failure of consumption to show an improvement, resulted in a further fall in prices. A new low record was established on Wednesday, when the spot price of "standard ribbed smoked sheet" touched 3 1/4d. per lb. Wednesday's official closing price at 3 1/4d. was the same as that on the corresponding day last week. Forward positions were slightly easier. Business has been done at 3 1/4d. to 3 1/2d. for May, as against 3 1/4d. to 3 1/2d. last week; at 3 1/4d. for June, as against 3 1/4d.; at 3 1/4d. for July-September, as against 3 1/4d. to 3 1/2d.; at 3 1/4d. to 3 1/2d. for October-December, as against 3 1/4d. to 3 1/2d.; and at 3 1/4d. to 3 1/2d. for January-March, 1932, as against 3 1/4d. to 3 1/2d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows:—Landed, 2,843 tons; delivered, 1,185 tons; stocks at the end of last week at 133,841 tons, show an increase of 1,658 tons, as compared with the preceding week.

THE MONEY MARKET.

MONEY was not too easy early in the week, for the amount re-borrowed from the Bank the preceding week had to be repaid on Tuesday. Rates, therefore, ran up to 3 1/4 per cent. on that day, and though, to judge from the reduction of only £2,514,032 in Discounts and Advances shown in this week's Bank return, the sum due at the Bank was a small one, the market narrowly escaped

having to borrow again. Despite suggestions made in some quarters, the Bank did not apparently render any assistance by special buying of bills. On Wednesday conditions were more comfortable, with 2½ per cent. quoted for both old and new money, and on Thursday they were easier still, with money down to 2 per cent. The reason for this was that the Bank released funds in the form of dividend payments on India stock and Treasury bonds. The market does not expect any great ease in the future, and on Thursday 2½ per cent. was paid for money for a month.

The Bank return reveals a reduction of £4,521,379 in the note circulation, but this still leaves the notes outstanding at £354.4 millions, against £348.8 millions at the end of March. Gold holdings at the Bank are lower on the week by £820,974, the week's acquisitions of new gold being more than offset by earmarkings on Argentine account. This gold has been set aside against the issue of fresh notes in the Argentine, and will be returned to the Bank after the Argentine harvest, when the notes come back from circulation. The combined effect of these changes is to raise the Reserve by £3,700,405, and the Proportion by 2½ per cent. to 49½ per cent. Bankers' Deposits have increased by £1,723,694, as a result of the return of notes from circulation, and the payment of them by the banks into the Bank of England. Public Deposits are lower by £1,490,916, possibly as a result of the dividend payments referred to above.

The Bank succeeded in obtaining most of Tuesday's Cape gold, its purchases amounting to £953,600, while on Monday 250,000 sovereigns from South Africa were duly received. It had, however, to bid 84s. 10½d. an ounce for the bar gold in the market, or otherwise, with sterling at \$4.85½, the gold would have gone to America. Next week £774,000 in bar gold is due from the Cape, and the following week £920,657. Under present conditions the Bank should secure all this amount, except the small quantity needed by India and the trade. Last week a gold shipment of £200,000 from Paris to Germany attracted some attention, but it is understood that this was only a trial shipment, made to test the exchange, and will not be repeated. It is, however, not impossible that it will soon pay to ship gold from Paris to New York.

	Mar. 26, 1931.	Apr. 1, 1931.	Apr. 9, 1931.	Apr. 16, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate ..	1	1	1	1	1½ (May 1, '30)
Discount { Call	1	1	1	1	1½ (May 1, '30)
Houses { Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½-½	2½	2½	...

On Wednesday May bills were quoted at 2½ per cent. and June at 2½-½ per cent., while the market rate on three months' bills was 2½ per cent., with the banks quoting 2½ per cent. to their clients. Four months' bills were quoted at 2½ and six months' at 2½ per cent. These rates should serve, but now that bills held on French and American account are maturing the underlying weakness of sterling is becoming apparent. The Americans are not renewing, but instead are either taking their money home or depositing it for one month in London at 2½ per cent. Some French money, also, has gone home, and that explains the passing improvement in the franc to Frs. 124.17 early on Tuesday. Another consequence is that brokers are getting more bills on their books, but the complaint is heard that there is practically no turn between buying and selling rates. On Thursday three months' bills were again quoted at 2½ per cent., in spite of the easier tendency of money, but 2½ per cent. was described as the top rate of the market. In view of the large amount of foreign money now in London rates should not be allowed to fall any lower.

The March statements of the nine English clearing banks reveal further decreases in deposits and cash,

mainly due to the continued influx of revenue until the end of the month:—

	March, 1930.	December, 1930.	January, 1931.	February, 1931.	March, 1931.
Capital and reserves	130.5	132.2	132.1	132.1	132.1
Acceptances	159.5	117.4	114.9	121.4	121.5
Deposits (including undivided profits, &c.)	1,682.0	1,839.1	1,836.1	1,782.2	1,726.2
Total liabilities	1,972.0	2,088.7	2,083.1	2,035.7	1,979.8
Coin, notes, balance at bank, and cheques in course of collection	235.3	262.0	243.9	233.6	227.3
Money at call	130.6	140.6	141.1	112.9	110.7
Investments	251.8	295.7	306.9	319.3	320.9
Discounts	181.5	319.7	327.7	299.0	238.5
Loans and advances	974.7	912.2	907.4	908.1	919.4
Cover for accept., premiums, &c.	198.1	158.5	156.1	162.8	163.0
Total assets	1,972.0	2,088.7	2,083.1	2,035.7	1,979.8

The seasonal redemption of Treasury bills explains the large reduction in discounts. Acceptances are unchanged, this being possibly a reflection of the recent stabilisation of wholesale prices. There is an appreciable increase in advances, but while it is tempting to adduce this as evidence of better trade, it is more probably due to borrowings for the purpose of paying taxes.

Call rate in New York has remained no higher than 1½ per cent., but this has been a firm rate, and at the week-end no outside concessions were obtainable. Early this week the banks called \$35,000,000 of their loans, the reason given being that they were preparing for further Treasury withdrawals for the purpose of making soldiers' bonus payments. Even so, there is an enormous accumulation of idle funds. Member bank borrowings from the Reserve system have fallen to \$20,000,000, and when last week the United States Treasury offered \$215,000,000 in eight months' 1½ per cent. notes applications amounted to \$908,000,000. Gold continues to come in. Last week's arrivals at New York were returned on Friday at \$1,010,000, mainly from Mexico, and on Saturday \$7,782,000 was received from the Argentine.

The Foreign Exchange market was fairly active, but generally irregular, the tendency being in many cases against sterling. New York went from 4.85½ to 4.85½. Montreal was unchanged at 4.86½, as was Paris at 124.25, after touching 124.30 and 124.19. Brussels weakened appreciably to 34.94½ after 34.92½. Milan appreciated to 92.80, a gain of 3 points. Madrid developed extreme irregularity on the news of the revolution, and depreciated from 44.15 to 47.40 after touching 49.10, often moving half a peseta or so in a few minutes. Amsterdam went sharply against us from 12.11½ to 12.10½. Berlin was unchanged at 20.40, after being better. Switzerland gained ½ at 25.22½. Of the Scandinavian currencies Stockholm gained ¼ at 18.15, Oslo lost ¼ at 18.17 and Copenhagen was unchanged at 18.16½d. The South American exchanges developed an erratic tendency, Rio losing ¼d. on balance at 3½d. and Buenos Aires ½ at 38½d., whilst the quotation for Montevideo was nominal at 32d., against 34½d. in the previous week. The Far Eastern exchanges were firm and steady, the rupee being unchanged at 1s. 5½d., and the yen at 2s. 0½d. Bavaria gained ½ at 12.12. In the forward market New York weakened fractionally to ½ cent and ¾ cent premium for one and three months respectively. Paris was one point better for one month's delivery and two points better for three months' at 15 and 37 centimes premium. Brussels was also firmer at 2½ and 6½ centimes premium. Milan was a point better for one month at 6 centesimi discount, but a point weaker for three months at 22 centesimi discount. Madrid moved from par and 2 centimos discount to discounts of 2 and 4 centimos for both periods. Amsterdam was a little weaker at 1½ and 2½ cents premium, and Berlin practically unchanged at one and 2½ pfennigs discount. Switzerland was decidedly firmer at 2½ and 6½ centimes premium. Silver advanced by ¾d. to 13½d. for both cash and forward, with Chinese and Indian buying against only small offerings. The China silver exchanges improved in sympathy, Hong Kong from 11½d. to 1s. 0d., and Shanghai from 1s. 3½d. to 1s. 3½d.

PARLIAMENT AND THE BUDGET.

It is as well that the Easter recess closely precedes the opening of the Budget, for the members of the House of Commons require all the freshness of mind that a brief holiday may confer to face the stark facts of such a Budget as falls to the lot of Mr Snowden, now happily restored to convalescence, to open on April 27th. We have become accustomed in the difficult times of the past decade to read, year by year, that each successive Budget possesses "abnormal importance" and is awaited with "unusual anxiety." But there can be no doubt as to the justification of applying such phrases in referring to the Budget for 1931-32. In a Special Supplement which is published with this issue, will be found data for reviewing not merely Mr Snowden's immediate task, but the main tendency of national expenditure and revenue in recent years; and few readers, we imagine, will rise from a perusal of the facts in a mood of complacency.

Here are some of the broad outlines in the picture of the national finances covered by the last five or six Budgets. In a period of industrial depression and falling prices, in which every pound of taxation becomes more onerous to the taxpayer, national expenditure, excluding the "self-balancing" services, has been raised from £730 millions in 1924-25 to £799 millions in 1930-31, instead of showing the gradual reduction which the national circumstances demanded and successive Chancellors have promised but not achieved. Moreover, the growth in expenditure has not taken the form of productive and remunerative outlay. Although there has been a slight decline in the cost of the Defence services, the cost of the Revenue and Civil Services has risen between 1924-25 and 1930-31 from £237 to £319 millions, while the actual total sum expended from the Exchequer and from rates on largely eleemosynary social services (other than war pensions) between 1924 and 1929 increased from £262 millions to £342 millions, even before the latest flood of dole expenditure. In short, the increasing sums drawn from the profits of industry and from the individual have been employed not for strengthening the national efficiency or capacity for production, but for a mere redistribution of spending power. Constructive policies, aimed at scientifically fortifying the economic structure of the nation, have been as conspicuous by their absence as have effective attempts to cut the nation's coat according to its cloth. Again, in a period in which the price fall, taking the mean between the wholesale and retail indices, has added some 25 per cent. to the burden of contractual obligations, the net nominal total of deadweight debt has been reduced in six years by no more than £172 millions, and even this reduction is off-set substantially by the borrowings of the Exchequer to finance the Unemployment Insurance Fund. It is true that the reduction in the nominal debt figure somewhat understates the reduction in the annual burden on the Budget, but it is by no means satisfactory to find that, in spite of cheap money rates which trade depression brings, and the consequent automatic saving on the floating debt, the total interest charge has fallen in six years by no more than £19 millions. And in the six years in which these comparatively small reductions in debt burdens have been effected, not less than £508 millions have been taken by the Exchequer in the form of Death Duties. These exactions, which are, in fact, a capital levy collected at the most convenient moment, should, under a sane system of finance, be earmarked for diminishing the deadweight debt.

Such are the circumstances in which Mr Snowden faces the task of raising something in the neighbourhood of £40 millions of new taxation before beginning to deal with the deficits outstanding from the past two years; and his task is rendered the more difficult by the fact that his predecessor, Mr Winston Churchill, during his four years' tenure of office, laid his hands upon almost every available windfall and rifled every accessible Treasury cupboard. His problem is, therefore, without adventitious aid, without adding to the burden of harassed industry, and without aiming a blow at British credit, to find a sum of new money which, unless efforts at debt redemption are

dangerously relaxed, must reach a figure nearly equivalent to the yield from the imposition of a shilling on the Income Tax. That the Chancellor realises the difficulty of his task is abundantly plain. He himself has told the House of Commons that "an increase of taxation in present conditions which falls on industry would be the last straw." He has told a City audience that his endeavours to avoid increased taxation might even lead him to "out-rage his financial principles"; he has warned the rank and file of his own Party that sacrifices will be called for all round; and he has stated, again in the House of Commons, "that the national position is so grave that drastic and disagreeable measures will have to be taken if Budget equilibrium is to be maintained and if industrial progress is to be made."

Precisely how the Chancellor will walk this very straight and narrow path which lies between the imposition of fresh burdens upon industry and the abandonment of financial soundness on which the maintenance of British credit depends remains a closely guarded secret. In a previous article we have ventured to put forward some suggestions as to the way in which this enigma might be solved. These suggestions involved perhaps a greater degree of indirect impost upon the workingman's budget than a Labour Chancellor could for political reasons adopt in any one year, and it is therefore possible that recent hopes entertained in the City that increases in direct taxation will be slight, if any, may be disappointed. But of one thing we are certain, that Mr Snowden will eschew the alluring device of a so-called "revenue tariff" which has been urged upon him from many distinguished quarters, and that he will avoid the disastrous mistake of a radical change in the fiscal policy of this country at a time when such a change would add to the difficulties of precisely those chief export industries in which the large bulk of unemployment is concentrated.

Formidable though the immediate task is of making both ends meet in 1931-32, it cannot divert the Chancellor's attention from a longer view of the future requirements of the national finances. There are only two ways in which for the coming years the burden of the taxpayer can be lightened. One is by resolute reduction of the Supply Services, the other by conversion of the war debt on a lower interest basis. To some extent the two go hand in hand, for large-scale conversion will only be practicable in so far as the City and the investor are convinced that sound financial policy is being pursued both in the direction of adequate sinking fund provision and in the stern retrenchment of all redundant and unproductive expenditure. Mr Snowden will bring the possibility of big savings by conversion nearer in proportion as he satisfies the House of Commons and the country that the Government will consider not merely minor savings, such as the Retrenchment Committee now sitting may recommend, but also such larger savings as may depend on a change in policy. Above all, Mr Snowden's Budget statement is bound to fail to restore confidence unless it states and emphasises the determination of the Government to deal effectively with the whole problem of the "dole."

There is, we think, one further question which any Chancellor in the critical times of to-day must take into immediate consideration, and that is the complete ineffectiveness of the House of Commons as ultimate controller of the national expenditure. In theory the faithful Commons can withhold any grant to the Government which they may consider to be extravagant; in actual practice, if the House fails to vote the wages of a single charwoman for scrubbing the steps of the "Circumlocution Office," the Government regards the decision as a vote of censure involving resignation and a general election. That system is wholly inapplicable to the circumstances of to-day, and we hope that Mr Snowden will indicate that the Cabinet are ready to discuss with party leaders and parliamentary experts of all shades of opinion a change in method of our parliamentary financial procedure which may be conducive to adequate husbandry of the national reserves.

REPUBLICAN SPAIN.

KING ALFONSO XIII. has abandoned his throne and left his country as the result of elections that, technically, decided nothing but the constitution of town councils in Spain. That is, on the face of it, a singular development, but no one doubts that on this occasion, at any rate, the King has diagnosed the political situation with unflinching accuracy. The verdict of Spain has been given against him, in however indirect a form, and he has for the moment bowed to it. All the indications are that he will be found to have bowed to it finally, but the manifesto issued on Wednesday, as Alfonso was leaving Cartagena on the warship that was to carry him to Marseilles, expressly stated that the King had not renounced his rights, but had merely withdrawn from Spain till the country should have given a more deliberate and considered decision than the municipal elections could be held to constitute.

That proclamation, charged undeniably with a certain dignity, was at once a fulfilment of King Alfonso's duty to himself and the long traditions he represents and an oblique appeal to the monarchists in Spain to keep their organisation effective and watch for the time to act. Such an appeal no doubt has point. It is far too soon to assume that the Republic is established and monarchism a spent force. Things may well turn out otherwise. For nearly eight years the anti-monarchist forces have profited by the mistakes of a regime identified closely with the monarch. From now onwards the tide may flow the other way. By wise and clement administration Señor Zamora and his colleagues may weld all Spain together under the republican banner, but their every act will be closely scrutinised, and, if they falter in a task beset with difficulties at every turn, the friends of a King residing somewhere across the frontier and claiming still to be a King of all the Spaniards may become a formidable menace to the new republic.

That is a possibility of which full account must be taken, for only the most superficial of optimists can suppose that in the third week of April, 1931, Spain passed suddenly out of darkness into light. The old regime had damned itself. About that there need be no long dispute. But the new regime has now to justify itself, and, if it fails, it may prove as shortlived as regimes have the habit of being in Portugal next door. But in certain important respects the omens for Señor Zamora, as President of the Provisional Government, are good. The people of Spain have declared themselves against dictatorship and monarchy most decisively, most peacefully, and at the first moment the opportunity was given them of so declaring themselves. Republicanism no longer represents the gospel of a faction. It represents the definite conviction of a majority.

The movement inspires the greater confidence in that it has come gradually. The dictatorship was not unpopular from the first. Disgust with the old party manoeuvres of the political gangs was so widespread that the *coup d'état* of 1923 and the advent of Primo de Rivera were hailed with relief even by some Liberals. They were no doubt sceptical about the promise that the dictator would do his work in ninety days and then quit the stage on which he had so dramatically appeared, but there was something to be said then for a period of firm administration, and in certain not unimportant spheres, like the development of transport, the directorate did get good work done. But that early acquiescence soon wore off, and as the dictatorship lost its popularity, King Alfonso came under criticism too; and accusations grew common that the real purpose of the call to a dictator was to stave off the disclosures which the Parliamentary committee of inquiry would have made on the implication of the Crown in the Morocco disasters. It is significant in that connection that the first declaration of the Provisional Government includes the announcement that it proposes "to submit immediately to judgment those Governmental acts pending examination when Parliament was dissolved in 1923." If the result of that should be to confirm the beliefs widely held as to Alfonso's personal responsibility for what Spain suffered in Morocco, any tide of sympathy for the departed monarch will be considerably checked.

Past evidences of discontent with the directorate and the King it buttressed assume a new significance in the light of the events of the past week. The students' ebullitions, the various military outbreaks, most conspicuously of all the abandonment by Primo de Rivera of his intention to summon a Constituent Assembly in 1929 because he saw it would be manned largely by his enemies, all meant more as indications of a nation-wide discontent than was apparent at the time. There were reasons why the dictators, both Primo and his successor, General Berenguer, were able to keep their hold so long on the helm. Their opponents were divided and without effective leaders, and against disunited foes it is easy to maintain a solid front. But year by year the leaven has been working, and now, instead of a few republican leaders rousing the nation, the nation has offered power to the leaders to use as best they may. The blow to Alfonso might have come a little sooner. It might have come when Sanchez de Guerra landed and the artillery revolted at the beginning of 1929. It might have come at the time of the outbreak at Jaca last November. Those attempts failed, but they might have succeeded, though, if they had, the revolution would have been something very different from the peaceful transfer of power that has just been witnessed. As it has turned out, the first elections held since 1923 gave the republicans a result for which it was worth their while to wait.

Whether it was fair to identify Alfonso with the acts of his dictators may be matter for some debate. But the conclusion must be that, in the main, it was. Even if he did not first institute the dictatorship to shield himself, he has shown repeatedly that he had no idea of making himself the strictly constitutional monarch that Spain might well have tolerated. He preferred to play for the higher stakes, and the game has gone against him. It is to his credit that he has recognised defeat and accepted the inevitable with a grace that commands respect. Now a new and untried administration has before it the tremendous task of remodelling the government of a country in which the people is still the most illiterate in Europe outside Russia, and where the momentary unity achieved conceals fundamental differences, political, social and religious. But Señor Zamora has certain important factors in his favour. Foremost of all is the character of the revolution, a peaceful demonstration by civilians by the methods constitutionally provided for such demonstrations. Second comes the willing acquiescence of the army, sick of being used as a pawn in politics, in the establishment of the *de facto* regime. Thirdly, the Church, on which the monarchy was once pillared, is sufficiently divided in its sympathies to cause little anxiety to the provisional government. On the whole the Cabinet has as free a field as it could hope for.

The immediate programme before it is clear. It was to govern the country and meanwhile prepare for the election of a Constituent Assembly, no longer, it may be presumed, merely to revise the constitution of 1876, but to draft a new constitution on a definitely republican basis. That may present no fatal difficulties. The question whether Spain is to be a unitary or a federal state raises problems far more delicate, for the whole attitude of Catalonia turns on that. Already a Republican Government has been declared at Barcelona; but Colonel Macia, the provisional President, is apparently content that the Catalans should take their place voluntarily in a federal Spanish State. That marks a definite modification of the separatism that has had so strong a hold on Catalonia. But what the other units in such a State should be—will the Basque provinces, for example, demand local independence?—is a problem that may cause the government considerable perplexity.

As to the effect of the revolution on the outer world, it will obviously be less in the case of Spain than of most other countries, for the Spaniards, in a corner of Europe behind their mountain frontier, have lived a life more self-contained than any other people of the Continent. Republicanism will give them a new link with the Spanish republics of Latin America. As a movement to the Left it is already causing some anxiety in France and more in Italy, where the reaction against dictatorship cannot be contemplated with entire equanimity. But the change should, in fact, affect Spain's external relations little on

the political side. On the economic side everything will depend on the efficiency of the new administration. It is true that several of its members lack experience, but man for man they can be assumed to be quite as competent as the Ministers they have succeeded, and so far as actual administration went, Spain has fared well enough in the past eight years. If to the maintenance of that can be added provision for the free expression of the people's will, coupled with a resolute abstinence from the old disastrous party quarrels, Spain should be capable of making steady progress in political stability and material prosperity.

FINANCIAL LIMITATION OF ARMAMENTS.

Pas d'Argent, pas de Suisses—This saying, current in the sixteenth century, shows how old is the realisation of the fact that armed forces are essentially dependent on hard cash; and the idea that limitation of armaments should be effected by limiting the amounts to be spent on armaments in each particular country has repeatedly been put forward at meetings of the League. But though a scheme was worked out in Geneva in 1926 and 1927 to give a concrete form to budgetary or financial limitation, no real progress was made until last autumn, when the Preparatory Commission decided, rather unexpectedly, to make financial limitation one of the main features in the Draft Convention to be put before the Disarmament Conference, which will meet in February, 1932. The Preparatory Commission also agreed (with reservations on the part of only a few Governments) on the principle of publicity in regard to total expenditure on land, sea and air armaments. An expert Budgetary Committee, set up to work out the details of the scheme, has agreed upon a unanimous Report,* which arrives at the conclusion that from a technical point of view the satisfactory working of a scheme of financial limitation and publicity can be secured. This result represents a great step forward on the road to universal limitation of armaments.

In its Report the Committee explains very fully the technical difficulties with which it has had to contend, and how it proposes to deal with them. The presentation of armaments expenditure in the various national budgets varies considerably: in one country there may be one comprehensive Defence Department budget; in another there are separate budgets for the Army, the Navy, and the Air Force; and in many countries a part of the defence expenditure is shown on Colonial budgets or charged to civil departments or autonomous funds. Pensions to officers are sometimes included in the defence budgets, sometimes accounted for under a separate heading. It was soon found that it would be impossible to change the national systems in force; that would have involved all kinds of difficulties, necessitating, *inter alia*, modifications of constitutional laws. Fortunately, such a course proved to be unnecessary. The experts worked out a table—a so-called Model Statement—to be filled in by the various Governments according to a series of carefully-drafted instructions, and it is the figures thus defined which it is proposed to limit in the forthcoming Disarmament Conference. At the end of each budgetary year, when the definite results can be ascertained, each Government will be bound to forward—to a Commission to be set up in Geneva—a return, in the form of the Model Statement, of its armaments expenditure during the past year; and in that way it will be required to show how it has complied with its obligations under the Disarmament Convention.

There have been prolonged discussions in Geneva whether armaments should be limited directly, i.e., by fixing the number of guns, tanks, ships, etc., or, indirectly, by limiting the budget figures. To some extent both methods will, no doubt, be employed. All are agreed that the personnel serving with the colours should be limited directly by fixing a maximum of contingents. No

doubt the number of ships in each tonnage category will also be directly limited, as under the Washington Treaty and the British-Franco-Italian Naval Agreement. But the majority on the Disarmament Commission have formed the opinion that army war material (guns, tanks, etc.) should be limited by financial limitation only. It has been pointed out as a weakness of the system of financial limitation that it allows each country to keep the stocks of material already collected. These stocks certainly play an important rôle for the moment, but, with advancing technique, the material is apt to become out of date and must be scrapped. Whatever decision the Disarmament Conference may arrive at as regards stocks, it seems certain that financial limitation must in the end be the principal method of limiting armaments, first and foremost because it represents the only method of limiting "quality." If the numbers only of separate items were fixed in the Convention it would be natural to expect that each Government would try to improve the armaments allowed to it by raising the quality of each particular unit, just as Germany has improved the quality of her 10,000-ton cruisers authorised under the Peace Treaty by perfecting every detail. Direct limitation, if it were the only method employed in the Convention, might very soon lead to a "competition in quality," to the great expense of the taxpayer. Moreover, a further point is that financial limitation is the only possible method of limiting such items as expenditure on fortifications and barracks, subsidies to industry for the acquisition of machinery, experiments, etc.

It is sometimes maintained that financial limitation suffers from a great defect in so far as the expenditure figures of different countries are not comparable—one country, for instance having a costly army of volunteers, while another has an army mainly composed of conscripts. The experts in their Report admit that the figures which will be obtained from the returns in the form of the Model Statement cannot serve as a basis for a comparison of the volume of armaments in the different countries, but they point out that the figures will in any case give a useful criterion for judging the development of armaments from one year to another in each particular country. Moreover, "non-comparability" may well be found to be not a defect but a positive advantage from the point of view of negotiating a Convention. When discussions centre round directly comparable data it may prove very difficult for the representative of a country to accept a figure which is clearly inferior to that of some other country. He may, however, be able to do so if the agreement does not involve the acceptance in principle of inferiority in any specific arm, but fixes a monetary figure which, because of differences in wages, prices, military systems, etc., cannot be directly compared with that of a neighbouring country. In fine, while the method does not solve the difficulty of fixing initial strength, and might leave the door open to evasion through the use of the sovereign powers of the State in earmarking or commandeering material or demanding free service in various ways, budgetary limitation may make it possible, if the nations so desire, to circumvent many ticklish questions of national prestige.

Moreover, when the representatives of the various Governments demand the right to have certain numbers of guns, ships, etc., not only the negotiators themselves but the general public in the various countries seem often to lose all idea of the costs which the acquisition of the proposed armament involves. It is only when actual budget figures are discussed that people seem to be able to understand that the acquisition of guns and ships costs a considerable amount of money, which must ultimately be borne by the taxpayer. The decision of the Preparatory Commission last autumn to adopt the method of financial limitation was certainly not unconnected with the fact that most States in 1931 have to reckon with deficits in their budgets. The Disarmament Conference of 1932 will be the first of its kind, but by no means the last. It may well be that the method of budgetary limitation, with all its drawbacks and possible shortcomings, may play a rôle which will enable the Conference to arrive at more definite and specific results than would otherwise have been possible.

A QUARTER'S OVERSEAS TRADE.

THE best that can be said of the March trade returns is that they stand comparison with those of March, 1929, as well as those of February stood the corresponding comparison, but reference to the last column in the table below shows that this is scant praise:—

MONTH OF MARCH.
(000's omitted).

	1931.	Increase or Decrease as compared with			
		March, 1930.		March, 1929.	
Imports	£ 70,664	£ -22,785	% -24.4	£ -27,909	% -28.3
British exports	33,989	-19,956	-37.0	-24,534	-42.1
Re-exports	5,438	-2,222	-29.1	-4,548	-45.5
Total exports	39,428	-22,178	-35.9	-29,182	-42.5
Excess of imports over total exports	31,237	-607	-1.9	+1,273	+3.9

Imports of raw materials were £15,066,032, against £24,095,577 in March, 1930; and exports of manufactures fell in the same period from £42,527,275 to £25,644,353.

The totals for the first quarter are shown below:—

FIRST THREE MONTHS.
(000's omitted.)

	1931.	Increase or Decrease as compared with			
		1930.		1929.	
Imports	£ 209,810	£ -73,694	% -26.0	£ -96,153	% -31.5
British exports	103,346	-60,786	-37.0	-77,822	-42.9
Re-exports	17,329	-7,152	-29.2	-12,769	-42.4
Total exports	120,675	-67,939	-36.0	-90,591	-43.0
Excess of imports over total exports	89,135	-5,755	-6.1	+5,562	+5.9

Imports of raw materials during this period were £46,203,681 and manufactured exports £78,399,394, against £78,262,598 and £128,350,710 respectively in the corresponding period of 1930.

It has been possible to derive some reassurance, during the rapid fall of wholesale prices, from the reflection that the steady decline in our foreign trade was largely a decline in values and that the volume was by no means correspondingly diminished. The Board of Trade index of export values for the first quarter of this year is not yet available, but the fall in that index between the last quarter of 1929 and the last quarter of 1930 amounted to less than 7 per cent., while exports in the first quarter of 1931 were 36 per cent. lower than in the corresponding period of 1930, so that this reflection has lost its consolatory value.

The next table shows the volume of some of our most important exports:—

SOME LEADING EXPORTS.

		First Three Months.		
		1929.	1930.	1931.
Coal	tons	13,125,958	15,012,511	10,416,201
Pig iron and ferro-alloys	tons	142,718	106,771	48,419
Railway material	tons	134,320	127,062	47,047
Total iron and steel	tons	1,151,404	983,847	461,187
Textile machinery	tons	31,712	26,851	12,287
Total machinery	tons	142,063	131,421	89,181
Cotton yarn	lbs.	44,166,600	38,106,500	31,403,600
Cotton piece-goods	sq. yds.	1,039,383,000	894,046,100	438,410,300
Wool tops	centals	87,597	71,332	70,943
Woolen tissues	sq. yds.	30,912,600	25,572,300	16,754,700
Worsted tissues	sq. yds.	14,299,500	11,409,900	9,085,800
Linen piece-goods	sq. yds.	18,152,500	19,703,000	16,439,800
Boots and shoes	doz. pairs	208,737	230,938	161,166
Leather	cwts.	76,080	71,963	37,491
Paper and cardboard	cwts.	1,118,786	1,217,242	796,166
Locomotives	tons	9,592	11,285	8,517
Motor cars and chassis	number	10,415	8,789	6,529

Last month the solitary increase shown in this table was a small rise in the exports of wool tops. Now even that has disappeared, while all the other declines without exception have been very greatly accentuated. This is the more deplorable in view of the fact that by the first quarter of 1930 the slump was already well under way.

The only substantial category of exports to show an increase in volume and value is that of motor vessels, and that is in part counterbalanced by a decline in the volume and value of steam tonnage exported. Small improvements are recorded in some sections of the chemical group, but the statistics of this group as a whole present a very similar appearance to those of the others.

Imports of food and raw materials have not fallen quite so much in proportion, as the following table shows:—

RETAINED IMPORTS.

		First Three Months.		
		1929.	1930.	1931.
Wheat	cwts.	25,706,277	20,272,473	21,874,697
Beef	cwts.	3,150,529	2,830,298	3,069,167
Sugar	cwts.	10,853,877	7,618,836	7,054,615
Iron ore	tons	1,263,353	1,335,200	598,097
Raw cotton	centals	4,971,849	3,786,438	2,781,684
Sheep and lambs' wool	centals	1,826,017	1,975,056	2,213,348
Raw silk	lbs.	395,253	511,723	480,085
Flax, hemp and jute	tons	118,665	104,142	69,495
Wood and timber, sawn, soft	loads	444,355	577,562	370,080
Rubber	centals	622,967	808,973	796,400
Crude petroleum	thousand galls.	84,797	68,212	82,314
Wood pulp	tons	309,689	333,932	309,446
Hides, wet and dry	cwts.	207,570	281,354	278,222

Wheat and beef were imported in slightly larger quantities, and one satisfactory feature of the list is the increase in retained imports of raw wool. The increase in imports of crude petroleum occurred in the earlier months; March showed a decline on March, 1930.

Manufactured imports have reflected in very varying degrees the effects of the depression. Those of iron and steel, clocks and watches, woollen tissues, silk yarns, gloves, fuel oil and undressed leather were higher last quarter than in the first quarter of 1930; those of electrical apparatus, films, machinery, manufactures of wood, worsted tissues, cotton goods, silk piece-goods, "other textiles," chemical undressed leather, paper and rubber manufactures were lower. In so far as the finished product of one industry is often an instrument of production for another, it is impossible to argue anything from these figures of manufactured imports without knowing whether a change in the volume indicates a change in the demand or an alteration of the proportion supplied by home manufacture.

From the returns of exports and of imported raw materials, however, the argument is only too plain. They make it painfully evident that during this first quarter of 1931 our principal industries were unable to discern upon the horizon any convincing sign of the dawn of trade recovery for which they are still anxiously waiting.

OMNIBUS REORGANISATION.

(BY A CORRESPONDENT.)

THE general reorganisation of omnibus services, which began with the passing of the Railway (Road Transport) Acts in August, 1928, and the granting thereby to the railways of powers to own and operate road vehicles, has now almost reached the end of its second phase. The first phase consisted of the selection by the railways of the more important omnibus concerns in each area and the purchase of an interest in them equal to that of the next biggest shareholder. In particular, agreements were made during 1929 with (a) the Tilling and B.A.T. group of bus companies, whose subsidiaries served fully half of Great Britain, (b) the National Omnibus Company, with extensive interests in the south-western counties and in East Anglia, and (c) the Scottish Motor Traction Company. These agreements were subsequently worked out in detail with the various affiliated concerns, and furthermore the smaller bus services, operating in the same territories as the companies selected by the railways, were bought out and merged with the "railway" concerns wherever they proved amenable. In the earlier stages very high prices were paid for many of these small independents. Total railway investments in omnibus companies amounted to £2,658,000 during 1929 and £5,863,000 during 1930. By the end of 1930 at least 15,000 vehicles were operated by companies in which the railways were interested.

EVERY DESCRIPTION OF HOME AND EASTERN BANKING TRANSACTED.

Enquiries invited.

The provisions of the Road Traffic Act of 1930 with regard to the "elimination of unnecessary services" and the prevention of duplication, together with the recommendation of the Royal Commission on Transport that the Area Traffic Commissioners should aim at establishing "controlled monopolies of transport," made the railways less eager to pay inflated prices for small omnibus concerns which would probably be compelled to merge their services with the big groups on terms more favourable to the latter when the work of the Area Commissioners became effective. Contrary to expectations, it has been no part of the railways' plans to organise omnibus transport on the same territorial basis as rail transport with the ultimate object of reducing the number of omnibus concerns to four, one to correspond with each railway; indeed, frequently two and even three of the railways have interests in a single bus company whose sphere of influence extends into the territories of all of them. Thus the second phase of omnibus reorganisation was not initiated by the railways, but consisted in the acquisition by Tilling and B.A.T. of an interest in all those "railway" omnibus undertakings in which they were not already interested. The Tilling and B.A.T. concern was formed in 1928 by Thomas Tilling and the British Electrical Traction Co. to look after their joint road transport interests. In 1929 Tilling and B.A.T. acquired, jointly with the L.N.E.R., a controlling interest in the United Automobile Services, who held a dominant position on the North-East Coast; and this policy was continued during the latter part of 1930, when Tilling and B.A.T. secured participation in the Crossville Motor Services of the North Wales, Cheshire and South-West Lancashire area, which had previously been acquired by the L.M.S. The movement has been accelerated this year; an agreement has been reached between Thomas Tilling, the National Omnibus Company, which owns, in conjunction with the railways, the Western National, Southern National and Eastern National Companies; and there has also been an agreement between the British Electrical Traction Co. and the National Electric Construction Co., which in turn controls the Devon General Omnibus Company, City of Oxford Motor Services, and the Western Welsh Omnibus Company. In addition, Tilling and B.A.T., through their subsidiary, the Northern General Transport Company, have acquired a controlling interest in the Sunderland District Omnibus Company, the only considerable "independent" left on the North-East Coast.

There still remain outside the Tilling and B.A.T. group, so far as information is available, two omnibus concerns of the first rank, the Bristol Tramways and Carriage Company, operating about 500 vehicles in the West of England, in which the Great Western has a 50 per cent. interest, and the Scottish Motor Traction group, controlling 2,000 vehicles, which has something approaching a monopoly over all Scotland, except the South-West and extreme North, and in which the L.M.S. and L.N.E.R. between them hold a 50 per cent. interest. Among the smaller concerns there is also the Lancashire United Transport Co., with 200 vehicles. It is not unlikely that Tilling and B.A.T. will round off the basis for the work of rationalisation which lies before them by acquiring interests in these undertakings also. This seems all the more probable as working arrangements are already close between the Scottish Motor Traction Company and the two Scottish subsidiaries of Tilling and B.A.T., the Caledonian Omnibus Company and Scottish General Transport Company. It may be significant that Lancashire United Transport shares have recently been rising.

A number of entirely independent concerns remain, which have either failed to come to terms with the railways or have not been approached by them. The largest of these are Barton Transport, Ltd., of Nottingham, operating about 100 buses; the Midland General Omnibus Company, a Balfour-Beatty Tramway group subsidiary, with 100 vehicles, with which Tilling and B.A.T. are said to be at present negotiating; the United Counties Omnibus Company, of Wellingborough, with 150 vehicles; and the Westcliff-Motor Services, with 120 omnibuses. An attempt is being made in the Midlands to organise the

small independents, under the leadership of Barton Transport, Ltd.; there was a similar episode in the Tyne-side area, where the General County Omnibus Company was reorganised as a merger of the principal independents. The result in the latter case was that the new company sold out to the L.N.E.R. soon after the reorganisation, as had no doubt been intended from the first.

A year ago it seemed probable that the municipalities, which own altogether nearly 5,000 omnibuses, would gradually amalgamate their services with the railways cum Tilling and B.A.T. interests. Successful agreements had been reached with regard to municipal services outside the borough boundaries by the Leeds, Halifax and Sheffield Corporation, and there was talk of the Bournemouth Corporation taking an interest in the Hants and Dorset Motor Services. A definite offer was made by the L.N.E.R. for the Middlesbrough passenger services; a similar offer to the York Corporation was turned down. Progress in this direction has unfortunately been remarkably slow in spite of the fact that a considerable improvement in efficiency would in most cases result from working municipal and local omnibus services as a single unit. There is no technical reason for treating urban transport as a separate problem from inter-urban and local transport. Possibly pressure from the Area Traffic Commissioners may result in a greater eagerness to combine municipally-operated omnibus services with the big "railway" undertakings and lead ultimately to the threefold ownership of the larger operating units, by the railways, Tilling and B.A.T. and municipalities. In fact, this seems destined to come as the next stage in reorganisation. These companies would become the nucleus for the "controlled monopolies" of the Royal Commission on Transport. The railways have now disclosed their hand to the extent of making it quite clear that they do not intend their interest in "local" omnibus services to be too close or direct. The present local joint committees established in different parts of the country, representing road and rail interests, will doubtless continue to work out co-ordination in detail, but Tilling and B.A.T. will clearly be the driving force in the rationalisation of omnibus services as a whole and in their detailed control from the point of view of operation.

UNEMPLOYMENT INSURANCE REFORM IN AUSTRIA.

(BY A CORRESPONDENT.)

THE efforts which Austria is at the moment making to improve her internal finances through a new Bill dealing with the social services, and the reform of unemployment insurance upon which she is engaged are especially worthy of consideration in England, as Austria, like England, depends chiefly on her export trade for her livelihood, and can point in the same way to loss of markets as the main cause of her present unemployment problem.

While most other countries, between the end of the war and the beginning of the present depression, experienced at least one revival of trade, Austria has, since the inflation period, scarcely ever risen out of the trough of the depression, and her number of unemployed has been steadily growing, till in January, 1931, out of 1,300,000 insured workers, 331,000, or 25 per cent., were out of work. The Unemployment Insurance Fund, like that in England, has naturally no pretence to solvency, and

advances to it continue to burden the Federal and Provincial budgets more and more heavily. The situation is complicated by the fact that in 1927 an Act of Parliament was passed for extending the social services which included clauses for the establishment of old age and disablement pensions; though these were suspended from coming into force till economic conditions should improve, the Government has now prepared a Bill to bring in these two new forms of insurance, and at the same time to rationalise the existing forms.

As in England, the chief defect of the Unemployment Insurance Fund is that it is no longer an insurance fund, as the continued economic depression has increased the amount it pays out in benefit far beyond the actuarial mark. Its history resembles that of its English counterpart, except that it first came into existence after the war. When it became obvious that the post-war unemployment problem was permanent, and not to be solved by temporary doles, a contributory scheme was set up in 1920, to whose funds employers, workers and the State were each to pay one-third. This scheme, modified by no less than 25 amendments, is the framework of that now in existence, though the obligation of the State to contribute, except in cases of emergency benefit, nominally ended in 1925. In practice, however, the State is not relieved from the burden, because it advances money to cover the deficit of the fund, and, as no sinking fund exists, these advances must for the present be treated as contributions. Emergency benefit, the burden of which is born by the provinces as well as by State, employers and workers, is contributory only in the sense that a kind of local rate is levied on employers and workers in addition to their ordinary contributions, according to the local degree of unemployment.

The insurance nature of the fund, therefore, is destroyed by the fact that it has had to meet more than actuarial risks, and that it has an outside source of subsidy in the State. Its second difficulty, common again to all insurance funds, is the possibility of its provisions being so abused as to add considerably to its risks. The terms of contribution and benefit vary according to the weekly wage of the beneficiary, and the amount received in benefit may not exceed 80 per cent. of the wage. Further, in emergency benefit, which resembles British "transitional" benefit, and is payable on the discretion of the local District Industrial Commission when an insured person has to his credit insufficient contributions to entitle him to ordinary benefit, the amount received must not exceed 80 per cent. of the ordinary benefit. Owing to these provisions, one form of abuse, the drawing of larger sums in benefit than would be earned by work, has in Austria been partly avoided, but owing to the inclusion of land workers in the scheme another has arisen in country districts, where the peasants, who have always lived in the winter on what they earned in the summer, have discovered that a welcome and unexpected addition to income may be obtained by working during the summer at an insurable occupation and drawing benefit during the winter.

The long-drawn-out depression, and the possibilities of abuse, have combined to destroy the scheme's actuarial basis, and to make it, as in England, a charge on the public funds. Dr. Edmund Palla, secretary of the Arbeiterkammer in Vienna, estimates that in 1931 no less than 235 million schillings will be required. Expenditure under the scheme, unless the alterations of the new Bill are accepted, will come under four heads; for ordinary benefit, payable to those who are qualified by 20 contributions in the preceding year, 150 million schillings are needed. Of this sum, under present conditions, 50 millions would have to be paid by the State. Emergency benefit will require about 54 millions, of which the State would pay about 9, the provinces 18, and employers and insured persons 14 each. *Altersfürsorge*, which in the absence of old-age pensions is paid to unemployed persons of more than 65 years of age, will need 30 millions, to be covered by 15 millions each from employers and workers, in the form of extra local charges like those for emergency benefit. The fourth item is administration costs, estimated at one million schillings.

The restoration of the Unemployment Insurance Fund to solvency is to be attempted through the exclusion of all "extraordinary" risks. It is proposed to begin this by making ordinary benefit payable out of contributions from employers and insured persons alone. (The State's previous advances to the Fund are also to be repaid.) The number of contributions entitling to benefit is to be raised from 20 to 26 in the previous year, or 52 in two years. Emergency benefit is to be removed from the province of the District Industrial Commissions altogether, the proportion contributed by the provinces is to be increased from one-third to one-half, and a dole, giving up all pretence to being insurance benefit, is to be paid by the central Government on terms decided from time to time by itself, but not to exceed 75 per cent. of ordinary benefit. Agricultural and seasonal workers, and persons under 18 years of age, are to be excluded from the scheme.

The chief difficulty in the way of carrying through these reforms is that they are incorporated, as part of a general scheme for restoring the social finances, in a Bill which is to bring in the two new kinds of social insurance mentioned above. It is on the clauses dealing with these points that the Bill as a whole will stand or fall, and these new insurances are likely to meet with considerable opposition. The cost of the new services is estimated at 50 million schillings; and in an attempt to prevent the contributions required to meet this from increasing the net burden falling on industry, 20 millions are to be saved by restricting benefits in the sickness, accident and salaried workers' insurance schemes. The further 30 millions are to be saved by relaxing the labour laws, i.e., overtime pay is to be reduced from time-and-a-half to time-and-a-quarter, the week's pay given to a workman when he falls ill is to be abolished, and there is to be a reduction in the amount and an increase in the qualifying time for the *Abfertigung* or lump sum to which salaried workers are entitled on leaving.

These are the main outlines of a Bill whose passage will be obstructed by all the parties affected by it, except by the Government which introduces it. The employers will object to paying increased contributions for the new services before they feel the benefit of the proposed economies which they are to gain through alterations in the labour laws, for the latter can only be obtained through the alteration of existing collective agreements. Organised labour also complains that it obtains little return for the sacrifices it is called on to make, while the benefit societies are likely to protest against the clauses which limit their activities so as to keep them strictly solvent. Finally, the salaried workers are asked to make considerable sacrifices, with no return except a small lowering of their contributions, in order to release funds for the benefit of manual labour.

Besides the objections of interested parties, there are two important questions of principle to be considered. One is peculiar to the Austrian system of finance. Workers who have exhausted their claims to benefit have to be supported by the provinces and municipalities, and the relations of these to the State and to one another are in financial matters very delicate, all taxation being carefully apportioned between them. It is felt that if the reorganisation of unemployment insurance throws a further burden on the provinces the *Finanzausgleich* or balance between them and the State will be upset, and this would lead to a serious crisis in internal politics. The second question concerns the right of the State to retain a decisive say in the direction of policy by having a third of the seats on the reorganised local boards, and appointing a State official as their chairman, while being released from all obligations to contribute to the Fund.

The fate of the Bill should be watched in England with interest not only because Austria is adding to her social services at a time when most countries shrink from doing so, but also because she is proposing to reorganise unemployment insurance on lines which might be equally well followed in England, if the insurance character of the British scheme is ever to be restored. The discussion over the Bill should also prove valuable if it produces constructive suggestions as to the relation to insurance and to State relief of those whose claim to insurance benefit proper has expired.

Notes of the Week.

Parliament Resumes.—Reassembling on Tuesday after the Easter recess, the House of Commons entered upon a week's programme sufficiently interesting to divert attention from the problems of the approaching Budget. Overshadowing the other events of the week was the Conservative censure motion on unemployment policy moved by Mr Baldwin on Thursday. Earlier in the week the opinion gained ground in some quarters that a Government defeat was likely, owing to the probable depletion of the Government lobby through the abstention of left-wing malcontents and a possibility of a substantial number of Liberals insisting upon recording their dissatisfaction with the ineffectiveness of the Government's policy. Moreover the threat from the Liberals seemed to be definitely increased by the bad impression made by Mr Greenwood's statement on the Housing position in the debate on Tuesday, when it was pointed out that of the Wheatley Act programme of 150,000 houses only one-third had been built in 1930, and this at a time when unemployment in the building trades was rife. The same Minister's Town Planning Bill, debated on Wednesday, had, however, a better reception on the Liberal Benches, and removed something of the acuteness of the feeling that support of the Government was becoming intolerable. Moreover, with many Liberals the deciding factor must have been the realisation of the serious consequences of turning the Government out on the eve of the introduction of the Budget. The Liberal dilemma was formidable, but the decision of the majority of the party to support the Government is to be welcomed on public grounds. Mr Baldwin's motion, if it was to be regarded as a serious attempt to bring about a general election, should have been postponed until the Budget had been presented and the essential Budget night resolutions passed, enabling revenue collection to proceed. Moreover, unless the motion was to be regarded as a mere manoeuvre, reckless in its neglect of possible consequences, it would have been more logical for Conservatives to attack the Government on the charge of extravagant expenditure, than to attempt to unite the two Oppositions in arraigning the Cabinet for failure to deal with a problem on whose means of solution Conservatives and Liberals differ profoundly.

France and the Chequers Visit.—The tension which has again arisen in the international situation on the Continent can be measured by the significance which is apparently being attributed, both in France and in Germany, to the date which has been finally fixed for the visit of Dr. Brüning and Herr Curtius to Chequers. Out of various alternative dates that were offered, the two German statesmen have chosen June 5-9th; and it is understood that the choice of this date, in preference to a date preceding the May meeting of the Council of the League, has been purely spontaneous on the German side, without any promptings from abroad. All statesmen at all times suffer from a plethora of engagements; home affairs are apt to take precedence over foreign affairs—not because they are more important in the long run but because their influence on the political position of statesmen makes itself felt more immediately—and this is the consideration which has led Herren Brüning and Curtius to make the choice of date which they have made. Yet in spite of this fact, which is public property, the postponement of the German visit to England until after the League Council meeting has been celebrated in some organs of the French Press as a French diplomatic victory, and therefore, automatically, in some German newspapers as a German diplomatic defeat. This portentous interpretation of a matter-of-fact arrangement, which really has no international implications, would be amusing if international relations in Europe were not—as unfortunately they are—in a state in which even the slightest additional

adverse factor has to be taken seriously. From this point of view, we have also to regret certain passages in the speech which the President of the French Republic, Monsieur Doumergue, delivered on April 9th at Nice, just before his departure for Tunis. Evidently the President's words would not have been uttered if they had not expressed the considered view of a majority of his Cabinet and of "official circles" at the Quai d'Orsay. The President referred to the proposal for an Austro-German Customs Union as "a sudden and disconcerting event, the present importance and further consequence of which must not be under-estimated"; and the thesis which he enunciated was that, so long as the League of Nations had not at its disposal a military force—an organised international force—strong enough to impose its decisions upon recalcitrants, France must not allow her own material strength to be reduced below the level dictated by her need for security and for the integrity of her home and overseas territories. This pronouncement not only bodes ill for the prospects of the Disarmament Conference. It is also startling because it is a reversion to Marshal Foch's proposal at the Peace Conference of Paris for what would amount virtually to an international army to be maintained, under French control, in order to perpetuate by force "the system of Europe" which France finds to her liking. It represents a revulsion from the whole tendency of the last dozen years, during which we have been gradually moving away from the conception that security can only be based upon military foundations. This is ill hearing. We must take what comfort we can in the resumption, this week, of the conversations between the naval experts in London.

A New Premier in Japan.—The Japanese Prime Minister, Mr Hamaguchi, who was the victim of an attempt at assassination last November, and has since been making a gallant struggle to take up the burden of his office again, has now bowed to the inevitable and resigned from the premiership and the leadership of the Liberal Party. There will be general sympathy for the gallantry of a statesman who has made so determined an effort to ignore the frailty of the human body when he had barely escaped with his life from the assassin's bullet. At the same time, Mr Hamaguchi's actual inability to conduct the affairs of State in his present condition of health was beginning to produce a certain embarrassment and confusion in Japanese politics; and it is satisfactory from every point of view that he has found a successor who is acceptable as a leader to all sections of his party and as a Prime Minister to the Emperor and to the Japanese nation at large. The choice has fallen upon Mr Wakatsuke, whose name became familiar to the world when he was head of the Japanese delegation to the London Naval Conference last year. Last Saturday it was announced that, in recognition of his services in that capacity, he had been raised to the peerage and the same evening it was made known that he had accepted the leadership of the Liberal Party (Minseitō). The new Cabinet, under his presidency, will be installed next week. His leadership is acceptable to all sections of the party, which would apparently have been split if any other of the proposed candidates for the leadership had been adopted by the majority. Moreover, Baron Wakatsuke's accession to office is welcomed by bankers and business men, who feel that he has the strength and the experience to guide Japan through the present economic depression. The depression hits Japan severely. An industrial country, depending on an increasing industrialisation and a perpetual expansion of foreign markets in order to maintain a population which is at present growing at the rate of three-quarters of a million a year, Japan finds herself affected simultaneously by the contraction of the American market for her silk and by the dislocation of the China trade owing to the fall in silver. In such circumstances Japan feels that she cannot afford political uncertainties. Hence the relief at the news that the recent political interregnum (as it virtually was) has now been brought to an end.

Australian Debt Relief.—On Wednesday night Mr J. H. Thomas announced in the House the terms of a new debt agreement between the Imperial and Commonwealth Governments. During the war, the Imperial Government made advances amounting to £92,480,156 to the Australian Government for war purposes, and in 1921, when terms of repayment were discussed, Australia insisted upon bearing the whole cost of her war effort. This principle was embodied in the Funding Agreement of 1921 between the two Governments, which provided that repayment should be at the rate of 6 per cent. per annum, of which £4 18s. 4d. per cent. represented interest, and the remaining £1 1s. 8d. amortisation, which meant that the whole debt would be discharged in 36 years. This scale of repayments was easily kept up until the present trade depression. The fall in primary commodity prices and the cessation of the influx of capital into Australia involved the Dominion in difficulties which are familiar to all. Recently the Commonwealth Government has felt impelled to ask for a reconsideration of the question. Their original request was for a reduction in the rate of interest, an extension of the period of repayments of the principal, and the funding of the half-yearly instalment due on March 31st last. The Imperial Government were unable to concede all these demands, and Australia was reminded that England, too, had her difficulties arising out of the trade depression. In the end, it has been agreed that the Commonwealth may postpone four half-yearly payments, amounting to about £814,000 each, on account of sinking fund. This means not an increase in the amount of future annuities, but a prolongation of the period of repayment by two years. The Commonwealth Government, in accepting this proposition, held that there were good grounds for a further extension, but the Imperial Government pointed out that this would not afford any immediate relief, and expressed the hope that by 1933 the economic position of Australia would have so greatly improved as to render any further revision unnecessary. Meanwhile, the postponement not only relieves the Commonwealth Budget of an annual charge of over £1,600,000 sterling, but also of the exchange losses which would have been incurred in remitting this sum. Thus the Imperial Government have made a friendly gesture to Australia, and there is little doubt that, if conditions have not materially improved by 1933, the gesture will be repeated. On the other hand, there is no need to take so despondent a view at present. As a table in the latest Department of Overseas Trade report on Australia shows, Australia's trade balance is subject to wide fluctuations from year to year, and though 1929-30 witnessed a downward swing, the balance was not so bad as in several other post-war years. Moreover, wool prices have already turned the corner, and, with the general rise in the business curve which should be well under weigh in two years' time, Australia should not find the full scale of repayments an intolerable burden, provided that in the meantime she succeeds in carrying out the necessary measures of retrenchment and readjustment of her internal economy.

Sunday Entertainments.—Early next week the second reading is expected of the Sunday Performances (Regulation) Bill. The Bill, as it stands at present, empowers county councils to grant Sunday opening licences for the purposes of musical entertainments, cinematograph entertainments, exhibitions and debates, provided that they have previously passed a resolution to the effect that it is expedient that Sunday opening licences should be granted in their area. Such a resolution may not be passed unless the council concerned is satisfied that there is in the locality a substantial demand for Sunday opening, and fourteen days' notice must be given during which the council is required to "have regard" to any representations made to them on the subject. The Bill provides for an alternative free day for employees, and it requires the profits from Sunday cinematograph entertainments to be paid to charities approved by the councils. This Bill is designed to legalise a practice which has persisted for years, but which a recent judicial decision has declared to be in contravention of the Sunday Observance Acts. It is clearly desirable to put an end to deliberate

law-breaking and to remove a ban placed upon actions which a large part of the nation has come to regard as reasonable and proper. Whether it is wise to retain in any form a right on the part of a majority—which has in practice fallen into disuse—to dictate to a minority how it may spend its Sunday is open to question; but if, in view of the strong views that have been expressed on both sides or because of the complicated economic questions involved in the case of, say, theatres, Parliament hesitates to repeal the Sunday Observance Acts altogether out of hand, there is very much to be said for leaving the matter in the hands of local authorities. In these days of easy transport the hardship imposed upon a minority who wish to enjoy Sunday entertainments having to seek it outside a particular local area is not a very serious affair and such world stirring questions as to whether a particular form of entertainment is "theatrical" or "musical" are surely matters for local bodies and not for the Imperial Parliament.

Count Bethlen's Ten Years.—Our Buda-Pest correspondent writes:—Count Bethlen, although only 56 years of age, is the senior Premier of Europe, having held un-interrupted office for ten years as Prime Minister of Hungary. His first Ministry was formed on April 15, 1921, when Hungary was on the verge of collapse owing to the ravages of unsuccessful war, the Bolshevik revolution and the Roumanian occupation. Inflation was at its height and the economic resources of the country were depleted. Count Bethlen soon realised that only a common-sense policy could save his country. It was not an easy task to make the Hungarian people realise that the situation created by the Trianon Treaty had to be faced. The ill-fated attempt of King Charles to regain his throne in the autumn of 1921, which nearly brought the armies of the Little Entente into Hungary, was resisted by Count Bethlen, and with the good will of the Great Powers Parliament dethroned the Hapsburg dynasty. The question of the throne is not in the forefront of Hungarian politics. Count Bethlen has stated clearly several times the attitude of his Government that the throne will be filled when the nation, free of foreign interference, can express its will by its only constitutional authority—Parliament. Count Bethlen showed real statesmanship when he succeeded in securing the economic and financial reconstruction of his country through the League of Nations. After having restored law and order, he obtained the help of the Great Powers through the auspices of the League to issue an international loan of 250 million gold kronen, which enabled Hungary to stabilise its currency and to balance the Budget. Count Bethlen wholeheartedly co-operated with the League authorities, notably with Mr Jeremiah Smith, the tactful General Commissioner of the League in Hungary. The League of Nations' control was discontinued in 1926, and the complete financial sovereignty of Hungary was restored at the Hague in 1930, when Count Bethlen succeeded in settling all claims and counter-claims arising out of the Trianon Treaty. By his work of reconstruction Count Bethlen deserves well not only of his country but also of Europe as a whole, because his policy has contributed in no small degree to the pacification of Europe. While pursuing a policy of common sense and peace based on economic co-operation with the rest of the world, Count Bethlen has never failed to emphasise that Hungary is not reconciled to the Trianon Treaty, which placed 3.5 million Hungarians under the rule of Roumania, Czechoslovakia and Yugoslavia. But Count Bethlen is a man of realities, and he knows that Hungary's grievances under the peace treaties can be remedied only by peaceful methods; and his great achievement is that he has made the people realise this. The political stability which Hungary has enjoyed under the leadership of Count Bethlen, amidst the rapidly changing administrations of Central Europe, has greatly contributed to the process of recuperation which began in 1924 with the League reconstruction scheme. At the end of the first decade of Count Bethlen's administration urgent problems await solution in Hungary. There is little doubt that the coming general election will return Count

Bethlen to power, so that he will turn his attention to the pressing economic and financial problems such as the balancing of the Budget, the marketing of the agricultural surplus, etc. Count Bethlen has often been described in the international Press as a dictator like his friend, Signor Mussolini. But this is not correct. Although the vote by open ballot practised in the agricultural districts is used as an argument against Count Bethlen, it should not be forgotten that Hungary went, not long ago, through a Bolshevik revolution, and that the discontent caused by the Trianon Treaty would give a fruitful field for demagoguery at the time of general elections. Count Bethlen's policy of moderation has undoubtedly served the interest of Hungary as well as the peace of Europe, and friends of order and progress can only congratulate him at the end of the first decade of his administration and wish him well for the future.

The Ukrainian Minority Committee.—The first meeting was held in London on Thursday of the Committee of Three which has to consider petitions sent to the League of Nations from the Ukrainian minority in Poland. Mr Arthur Henderson, the Foreign Secretary, is the Chairman of this Committee, which has been established in accordance with the League's procedure for dealing with the grievances of national minorities under the Minority Treaties. The present complaints of the Ukrainian minority in Poland originate in the troubles with the Polish authorities last autumn, which, in turn, followed earlier disorders in the Ukraine during the summer of 1930. But these disorders were mainly local in character and largely the work of individual hotheads and malcontents, who gave vent to their dissatisfaction, for example, by acts of incendiarism; whereas the Polish punitive activities were visited on the local population as a whole, and took the form of beatings on a large scale, the destruction of the premises and stocks of scores of Ukrainian co-operatives, and similar measures. According to reliable sources, this treatment was meted out to scores of villages and hundreds, if not thousands, of individuals in the Ukraine. The Committee of Three, which will have to investigate the entire question, is thus charged with a complicated and difficult task. A satisfactory solution is of the utmost importance to Poland, whose international standing, political, economic and financial, is adversely affected by such disorders; to all the minorities of Eastern Europe, whose faith in the League as an instrument of justice and fair dealing has been severely shaken by its past shortcomings in minority affairs; and, consequently, to the prospects of international peace. It is not improbable that severe pressure will be brought on the Committee of Three to let sleeping dogs lie; but it is to be hoped that Mr Henderson, whose successes at the Foreign Office have already been notable, will courageously take the more difficult path marked out by considerations of justice and humanity.

The Shipbuilding Slump.—Lloyd's Register shipbuilding returns for the first quarter of 1931, issued this week, make depressing reading. During the past three months less than 33,000 tons of new work was put in hand in this country, as compared with 209,000 tons commenced abroad; and tonnage under construction in British yards now amounts to only 694,000 tons, as compared with 909,000 tons at the end of last year and 1,615,000 tons a year ago. The decline in shipbuilding in foreign countries, thanks in large part to policies of subsidy, has not been nearly so severe, and the British percentage of the world total of work in hand has now fallen to 34.7, as compared with 49.4 a year ago and 57.2 in the last year before the war. The total tonnage building in this country still includes nearly 300,000 tons of tankers; and as this residue of the 1929-30 boom in construction of oil-carrying vessels is worked off, total work in hand may be expected to show a further decline. In view of the present position and prospects, it is significant that the Shipbuilding Employers' Federation has invited representatives of the shipyards trade unions to a conference on April 24 for the purpose of discussing the position of the industry.

The Far East Cotton Mission.—Certain details are available of the conclusions reached by the Cotton Mission which has recently completed an extensive visit to China and Japan, together with Hong Kong, Colombo, Penang and Singapore. To a large extent their conclusions are familiar enough. They insist upon Lancashire's dependence upon her foreign markets, and call attention to the fact that her 1930 production was probably less than half that of 1912. Coming closer to their subject, they state that whereas British exports to China and Hong Kong averaged 587,000,000 yards a year in 1909-13, in 1930 they only amounted to 69,000,000 yards. Moreover, in 1913, British exports to those markets were four times the value of Japanese exports; in 1930 they were only one-sixth of the value, and one-ninth to one-tenth of the volume of Japanese exports. Having stated the facts, the Mission proceed to give explanations. One is the poverty of the Chinese to-day, which means that they can only buy the cheapest goods and can pay no attention to quality. Another is the fact that at every stage—from the purchase of raw cotton up to and including the packing of the finished cloth—Japan has an advantage in costs over Lancashire. At some stages the advantage may be small, but the cumulative effect is considerable, and the Mission goes into considerable detail on this matter. A third explanation is that the present system of marketing British goods in China is far from satisfactory. Here again considerable detail is given, but one important factor is that, except in a few established lines, Lancashire goods can only be obtained on indent with a delay of at least four to six months. Japan apparently carries better stocks in China, and, apart from this, stocks can be replenished from Japan at short notice. Thus the Mission feels strongly that a radical reform of marketing methods is needed, and that it is essential that adequate stocks should be carried in China. On the other important question of the difference between Lancashire and Japanese production costs, the Mission can speak only in general terms, but the report is an important piece of evidence in support of the urgent need for bringing British costs into line with those of other industrial nations.

Cotton Trade Problems.—Our Manchester correspondent writes:—The proposals of the Joint Committee of Cotton Trade Organisations relating to surplus production have not met with any enthusiasm in trade circles. In a long statement made by the Joint Committee it is asserted that the time has arrived for a definite programme of action. It is pointed out that the costs of production in Lancashire are higher than in other cotton industries, and that the industry in this country is mainly dependent on export trade. There is no reason to suppose that the cotton industries of other countries will become less competitive, and under present conditions "our productive capacity in the immediate future will largely exceed the demand for our goods as it has done during the last ten years." It is stated that this surplus of productive capacity has contributed to Lancashire's distress, since the internal competition of numerous individual firms has resulted in uneconomic selling and in consequent heavy losses. It is pointed out that means must be found to restore harmony between productive power and prospective demand, and instead of continuing the effort to find employment for all the firms now in existence, and for all the operatives now nominally dependent upon the industry, Lancashire must consider whether it would not be wiser to concentrate production upon the best of the existing machinery and to give full and steady employment to a smaller number of people. The Joint Committee believes that the first step towards any form of reorganisation or towards trade recovery is adjustment of productive capacity to its present and prospective needs. As the detailed basis of such an adjustment cannot be formulated without accurate and complete information, the Committee recommends that an investigator or investigators should be appointed with statutory powers of inquiry, whose duty it should be to secure information for the use of the Committee in preparing a scheme for maintaining a closer relation between capacity and demand. Throughout Lancashire there are thirteen

organisations affiliated to the Joint Committee of Cotton Trade Organisations, and the several associations are now considering the proposals of the Joint Committee. If this suggestion to reduce machinery is carried out it is understood that the scheme will provide for compensation to be paid to those firms which are to be eliminated. This fund will be created by those firms that decide to carry on. For the scheme to be effective it must be surmised that about one-third of the cotton machinery now in existence will have to be scrapped, and it is estimated that a fund of not less than £6,000,000 will have to be raised in order to achieve success. It would be of distinct advantage to the industry for a smaller amount of machinery to be running full time than for the present spindles and looms to be working from 50 to 60 per cent., as under such a change standing charges would undoubtedly be reduced. On the other hand, if the industry is made profitable by eliminating internal competition, Lancashire prices will be higher than to-day, and therefore producers will be in a worse position when competing against other countries. More and more people are becoming convinced that Lancashire can obtain relief only by a material reduction in production costs. Such a development can be achieved by lower wages, longer hours, more modern methods of production, better selling systems and the elimination of middlemen. The proposal which was put out some months ago for the purpose of fixing marginal rates for yarns has not yet been abandoned. In connection with this movement there were different schemes for the American and Egyptian sections. It is now suggested that the two branches should work together, and at a mass meeting of spinners of Egyptian cotton in Manchester this week it was decided to ask the Federation of Master Cotton Spinners' Associations to set up a committee, including representatives of the Egyptian and American sections, to examine the possibilities of a joint convention for the regulation of the trade, and that such committee should obtain from the trade a decision as to the desirability of obtaining from the Government statutory powers for the enforcement of such convention. When similar proposals have been before the trade on previous occasions it has not been possible to secure adequate support to enable the promoters to proceed.

Iron and Steel Production.—The figures of iron and steel production just issued by the National Federation of Iron and Steel Manufacturers do not yet show any definite signs of improvement, but the downward movement appears to have been stayed, and perhaps the industry—like so many others—may be said to be "bumping along the bottom." The output of pig iron in March was 357,100 tons, or a daily rate of 11,500 tons, compared with 318,200 tons, or a daily rate of 11,400 tons in February, and 665,800 tons (daily rate of 21,500 tons) in March, 1930. Three furnaces resumed operation during the month, but as three also went out of blast, the number of furnaces blowing at the end of the month was the same as at the beginning, namely, 81. Steel production in March amounted to 500,100 tons; allowing for the longer month, a slightly lower rate than in February (486,400 tons) and considerably lower than March, 1930 (826,100 tons). That imports of iron and steel should exceed the exports is now a common feature of the trade returns, and it is unlikely to be reversed until buying is resumed on a larger scale from India, Australia and other big consuming markets. Imports of iron and steel in March amounted to 210,500 tons, a rise of 33,000 compared with February, the chief items responsible for the rise being billets, blooms and slabs, which rose by 13,000 tons to 39,300 tons, and sheet and tinplate bars, which rose by 18,000 to 46,200 tons. Exports of iron and steel rose from 143,500 tons in February to 170,300 tons in March, chiefly owing to a rise of 16,000 tons to 20,000 tons in the export of rails, 12,000 tons of which went to South Africa. The following table, which brings out very clearly the change that has come over the industry in the last twelve months, compares the production of pig iron and steel and imports

and exports in each month in the first quarter of 1930 and 1931:—

PRODUCTION, IMPORTS AND EXPORTS OF IRON AND STEEL.				
1st QUARTER, 1930 AND 1931.				
	Fig.	Production.		Foreign Trade.
		Pig.	Steel Ingots and Castings. (In Thousands of Tons.)	Imports. Exports.
1930:				
January	650.0	771.1	310.3	351.8
February	607.0	776.4	259.4	294.3
March	665.8	826.1	280.9	337.7
Total	1,922.8	2,373.6	850.6	983.8
1931:				
January	337.2	402.2	221.8	167.4
February	318.2	486.4	177.1	143.5
March	357.1	500.1	210.5	170.3
Total	1,012.5	1,388.7	609.4	481.2

Production of pig iron in the first quarter this year has declined by 47 per cent., of steel ingots and castings by 41 per cent. Imports of iron and steel are 28 per cent. less than in the corresponding period last year and exports 51 per cent. less.

Joint Stock Companies in Germany.—In the March number of *Wirtschaft und Statistik*, the Statistisches Reichsamt has published an interesting analysis of German joint-stock companies. The following table, which shows the total number and capital of German companies, illustrates strikingly the results of rationalisation during the past five years:—

NUMBER AND CAPITAL OF GERMAN JOINT STOCK COMPANIES.									
	Total number of companies.	Total nominal capital.	Average capital per company.	Companies with a capital below 500,000 R.M.		Companies with a capital of 500,000 R.M. but below 5,000,000 R.M.		Companies with a capital of 5,000,000 R.M. and above.	
					Nominal capital.		Nominal capital.		Nominal capital.
		Mill. R.M.	Mill. R.M.	Number	Mill. R.M.	Number	Mill. R.M.	Number	Mill. R.M.
End 1925	13,010	19,121	1.47	...	...	...	...	...	...
1926	12,343	20,655	1.67	...	...	...	...	...	...
1927	11,966	21,542	1.80	7,408	987	3,860	5,768	698	14,787
1928	11,690	22,885	1.96	7,053	958	3,877	5,774	750	16,153
1929	11,344	23,728	2.09	6,729	941	3,852	5,772	763	17,015
1930	10,970	24,189	2.20	6,437	925	3,751	5,622	782	17,642

While the total capital invested has been continually increasing since 1925, the number of companies shows a marked decline, and the average capitalisation has increased by over 33 per cent. The decrease in the number of concerns has been most pronounced in the case of those with less than 500,000 Rm. capital, while firms with a capitalisation of 5 million Rm. and above have not only increased in number, but their capital has risen by more than 16 per cent. since 1927. At the end of last year companies with a capitalisation of 5 million Rm. and above accounted for no less than 73 per cent. of the total capital invested, while the proportion of capital represented by the small firms was only 4 per cent. This analysis shows how the efforts made by Germany to achieve greater efficiency in the organisation of trade and industry have led to an increasing concentration of activity in larger units.

The Kent Coalfield.—Sewers and drainage are not commonly regarded as agents for the preservation of natural beauty, yet it appears from a paper recently read before the Royal Society of Arts, by Professor L. Patrick Abercrombie, that in the dependence of the human race upon these necessary adjuncts to a gregarious existence lies the best hope of preserving East Kent from an eruption of mining villages. The neighbouring watering-places, in which it appears that more capital is invested in the provision of holiday amenities than is likely ever to be invested in the new coalfield, derive their water supply from the chalk in East Kent, so that building in the new coalfield will have to be controlled in such a way that all drainage is connected with a main sewer, and happily the local authorities will by no means be able to afford a main sewer in every valley. Thus, instead of pithead villages,

the Regional Planning Committee is contemplating either one large central town, which would offer far better amenities to the miners, or, if that proves impracticable, five or six towns of twenty-five to thirty thousand inhabitants each. The Committee, with the support of an Advisory Committee which was started as a result of the initiative of the late Archbishop of Canterbury, under the chairmanship of the late Lord Milner, in which the Ministries of Health and Transport, industrialists, labour, landowners, the public, and local authorities are represented, has already drawn up a plan, but owing to the impossibility of determining in advance the order in which the pits will be worked and the ultimate destination of the coal, this is in many respects incomplete and provisional. Two things seem clear, however: one is that more attention is being given to zoning, to the preservation of rural areas and to the prevention of undesirable housing developments than has ever been given before in the opening up of a new industrial area; the other is that the greatest foresight and watchfulness will be needed if this commendable effort is to succeed and a great industrial development to be achieved with a minimum of disfigurement to the country and a maximum of economy and comfort to the persons involved.

Standard Life Assurance.—During the past generation the Standard has effected a complete re-orientation of its business. Time was when the company was identified almost entirely with business in the Dominions and in Europe, and so recently as 1913, for instance, 75 per cent. of its new business was derived from outside this country. The war, by seriously interrupting Continental business, probably hastened a change which even before that had been in contemplation, and, shortly after the war, the existing business in ex-enemy countries was disposed of on terms exceedingly advantageous to the company. At the present time no new business is transacted in Europe, and it is now concentrated largely in India, South Africa and Canada. Intensive efforts have been made to cultivate a strong connection in this country, and the financial position has been built up to one of great strength. No information is furnished in the report as to the proportion of new business transacted within and without the United Kingdom, but of the total it is probable that a good deal less than 50 per cent. is now transacted outside this country. In 1930 the total net new life assurance business amounted to £3,141,200, this figure being some £350,000 in excess of the 1929 total. In addition, the company has done much to exploit other sources of business in the form of annuities and capital redemption policies. The amount of consideration money received, for instance, for the purchase of new life annuities during 1930 was no less than £640,000, the 1929 figure being £531,000. Apart from immediate life annuities, which have been encouraged no doubt by the company's recent announcement of an improvement in the rates, the total now includes a considerable amount of premium income derived from the transaction of group pension schemes, a new method of pension provision for staffs imported from America. Under these schemes one group contract is issued to cover the whole staff of a firm, and the employee's contributions are fixed usually at the rate of 1s. per week for every £1 per annum of pension purchased. The employer makes himself responsible for the balance of contribution necessary to secure each £1 of pension, and for the whole of the cost of such pension benefits as are agreed upon in respect of service by the employee prior to the commencement of the scheme. A common feature of these schemes is the issue of a group insurance contract in conjunction with the pension scheme, and the total life business no doubt includes a substantial amount of group insurance. The nature of the company's business is such that an expense ratio rather higher than is normal may be expected, but this item has in 1930 experienced a reduction from 18 per cent. to 16.7 per cent. The company's strength lies in its extremely stringent basis of valuation, which, apart from conservative assumptions as to mortality and expenses, takes credit only for 2½ per cent. interest, whereas in each of the last few years the actual interest earnings have

exceeded 5 per cent. The 1930 report includes a *résumé* of the results of the annual valuation to November 15, 1930, and the results of the last three valuations are as follows:—

	1927-28.	1928-1929.	1929-30.
Surplus earned during the year...	£ 342,617	£ 363,988	£ 374,287
Surplus income transferred from guarantee fund	26,091	30,923	36,944
Brought forward from previous year	34,967	21,811	25,717
	403,675	416,722	436,948
Allocations:—			
To bonuses to policyholders...	281,864	291,005	308,428
„ Guarantee fund	100,000	100,000	100,000
„ carried forward to next year	21,811	25,717	28,520
	403,675	416,722	436,948

The guarantee fund referred to in this table now amounts to £1,650,000 and was created five years ago as security for the issue of £850,000 5 per cent. perpetual stock. This stock, which is nominally secured on the guarantee fund, is, in fact, subject to the prior charge of the policyholders in the inconceivable event of a deficiency arising in the life assurance fund. The rate of reversionary bonus to the policyholders remains the same as before, namely 42s. per cent. on the sums assured and existing bonuses.

World Marine and General.—This company is one of the "Northern" group. The whole of the share capital is owned by the Northern, and the accounts are incorporated in those of the parent company. The total premium income shows a small increase at £356,000, and is divided more or less equally between fire and accident and marine business. Although founded originally for the purpose of marine insurance, fire and accident business was added to the company's activities shortly after the war, but in this field the company has been very much less successful than in its own sphere of marine insurance. In 1929 a fire and accident underwriting loss of £14,945 was experienced, and last year, although the loss was reduced, it is still considerable at £9,264. In its marine account, however, on the other hand, the company has again been able to transfer a substantial sum to profit and loss account, amounting on this occasion to £20,000. Moreover, the 1930 account has so far yielded a very low claims ratio, and at the beginning of the second year there is left in the account a sum equal to 69.5 per cent. of the premium income, compared with 61.8 per cent. in 1929. Allowing for items appearing directly in the profit and loss account, the total net trading surplus works out to £10,550, compared with £13,102 in 1929. After paying in addition to the usual 40 per cent. dividend free of income tax a further 25 per cent. in each of the last two years, the company has now reverted to the normal 40 per cent. dividend for 1930, and this is amply covered by interest earnings. The balance sheet is a strong one, for, as compared with a paid-up capital of £100,000, there is a general reserve fund of £300,000, an investment reserve fund of £83,000, and a profit and loss account balance of £242,000.

Wesleyan and General Assurance.—The quantitative progress of this Birmingham society may be observed from the following table:—

Year.	Ordinary Branch.		Industrial Branch.	
	New Business.	Premium Income.	New Business.	Premium Income.
1926	1,020,324	493,641	2,062,614	1,176,600
1927	1,106,974	526,812	2,511,215	1,157,898
1928	969,236	547,331	2,614,914	1,176,775
1929	1,149,558	568,572	3,322,864	1,195,353
1930	1,108,030	589,545	3,298,440	1,217,700

Thus, during the past five years, the new business of the ordinary branch has remained stationary while that of the industrial branch has increased by over 50 per cent. Comparison of the respective premium incomes reveals, however, a quite different state of affairs, for it is obvious that here the ordinary branch, with a business of a more enduring character, has progressed the more evenly and rapidly. From data given in the 1930 report it appears that

the sums assured in force increased during 1930 by £550,000 and £800,000 respectively, whereas new policies were issued (as shown above) for £1,108,000 and £3,298,000. The comparison affords an indication of the much greater wastage which is a feature of industrial assurance business. The profit-earning capacity of the society's business has during this same period of five years shown signs of expansion. With regard to the interest earnings, the net rate on the combined ordinary and industrial branch fund has risen from £4 16s. 2d. in 1926 to £5 0s. 6d. in 1930. The incidence of expenses has shown a less decided tendency, for in the ordinary branch the 1930 expense ratio at 17.5 per cent. was actually greater than the 1926 figure of 16.7 per cent., while in the industrial branch, although there has been a reduction from 41.3 per cent. to 39.9 per cent., the latter figure is still too high. The society makes an annual valuation of its assets and liabilities, and the actuary's report on the 1930 valuation is embodied in the directors' report. The basis for the liabilities remains unchanged except that further progress has been achieved towards placing the valuation of the industrial branch on a purely net premium basis. The figures relating to both the branches are given below:—

	1928.	1929.	1930.
£	£	£	£
Ordinary—

„ Carried forward to next year ...	34,617	37,837	42,722
	141,617	202,531	223,797

In the ordinary branch the same rates of reversionary bonus have been declared as before, namely, 48s. per cent. of the sum assured for whole-life assurances and 42s. per cent. for endowment assurances. In the industrial branch the policyholders were granted in 1927 for the first time participating rights, and it was then decided that future divisible profits should be allocated as to three-fifths to the policyholders and one-fifth each to the ordinary branch and outside staff respectively. The policyholders' portion is utilised each year for the purpose of gradually waiving payment of all premiums after age 65 and so bring existing policies into line with those offered under the society's current prospectus. In accordance with this arrangement the premiums on all those policies benefiting from the 1930 distribution will cease after age 71 provided 21 years' premiums have then been paid. The society is a mutual society, and has therefore no shareholders.

Marine Insurance.—Until two years ago the only information furnished by this company was a highly abbreviated balance sheet. No profit and loss account was published, and the information given did not even include a statement of the annual premium income. The passing of the Companies Act has compelled the company to issue more informative accounts, and for the past two years it has gone to the extreme course of publishing separate underwriting accounts for each of the last three years, the usual practice being to keep open each account only for two years. Thus in the 1930 report the 1928 account has been closed by a transfer to profit and loss

account of no less than £170,000 on a premium income of £868,000. The second year's experience in respect of the 1929 account has not been so favourable, but owing to an extremely good first year there still remains in the account 32 per cent. of the premium income, compared with 32 per cent. in the 1928 account a year ago. The premium income in the now current account, that for 1930, shows a reduction from £829,000 to £756,000. Expenses and first-year claims have absorbed 28 per cent. of these premiums, compared with 24 per cent. of the 1929 premiums in the first year's experience of that account. The normal dividend has been increased from 26½ per cent. to 33½ per cent., and the whole of this is paid to the London and Lancashire, which owns the entire share capital of the company.

The Dunford House (Cobden Memorial) Association announces that the third annual "Richard Cobden Lecture" will be given at the Royal Society of Arts, John Street, Adelphi, on Wednesday, April 29th, at 5 p.m., by Dr. Moritz Bonn, on "The World Crisis and the Teachings of the Manchester School." Sir Herbert Samuel, M.P., will preside.

At a meeting of the Royal Statistical Society at the Royal Society of Arts on April 21st at 5.15 p.m., Dr. E. C. Snow will read a paper on "The Relative Importance of the Export Trade."

The Right Hon. Sir John Simon, K.C., M.P., will, on Tuesday next at 5.30 p.m., take the chair at the first of a course of five weekly lectures to be given by Sir John A. R. Marriott, M.A., on "The English in India, being the Essentials of the Indian Problem." The lectures will be delivered in the University of London, Imperial Institute Road, South Kensington, S.W., and have been arranged by the University Extension Committee of the University.

UNITED STATES.

Business Conditions — Public Finance — Money — Prices — Bank Returns.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 3.

WEAKNESS in the security and commodity markets of the past week reflect disappointment that the moderate expansion in business activity during the first quarter was not greater, and doubts as to whether the slight advance made can be maintained. To allay the growing apprehensions that the country is in for a longer period of slack business than it had anticipated, and that conditions may even grow a good deal worse, leaders of the political party in power, from President Hoover down, have taken occasion to say something reassuring about wage cuts and tax increases. In both matters the reassurances are received by the country with a good deal of reserve.

President Hoover finds that employers in the major industries have kept their promises made to him in the autumn of 1929 not to cut wages, and he is urging, by insinuation, at least, that these promises be extended. At the same time there is a feeling that wages in some industries, at least, as, for example, the strongly unionised building trades, must come down before any notable revival can take place. In effect, of course, the wage bill has been reduced by the generally adopted principle of part-time work, enforced holidays without pay, and other devices used by corporations, while maintaining the hourly, daily or weekly wage scale. Numerous large corporations have bluntly cut wage scales, but with a minimum of publicity. Any broad movement toward open reduction in wages as affecting trade unions in im-

portant industries would meet with forceful opposition. Unemployment in March lessened somewhat, according to the American Federation of Labour, which reported about the usual seasonal fall. Last year employment in March was less than in January.

With regard to taxation, although Congress knows that the only way to secure more revenue is to increase income tax rates on small as well as large incomes, it will probably be inclined to vote a higher scale for large incomes, leaving the small ones unscathed. That was all very well in the prosperous years, but incomes subject to surtax are now much smaller, and it is doubtful whether the revenue could be increased much by attempting to assess them more heavily. Meanwhile, the Treasury can continue its deficit by further borrowing. March income tax collections fell even further than the estimates of the Treasury officials. For the first nine months of the fiscal year the deficit of expenditure over ordinary receipts amounts to about \$800,000,000. This will be the first time since 1919 that the Treasury has had a deficit. Income tax collections for March were \$334,830,000, a drop of nearly 40 per cent. from a year ago. Customs collections have dropped about 35 per cent. for the first nine months. Government administrative expenses have run \$114,000,000 above the same period of a year ago.

The Treasury has just allotted a \$100,000,000 bill issue and has given notice of further borrowing. In May and June \$802,000,000 in bills and certificates fall due, which must be refunded, and probably additional loans will have to be made. Loans for account of soldiers' compensation continue, though at a reduced rate, and they will probably exceed \$750,000,000. Although the Treasury carries on its books an amortisation item in the public debt of \$756,300,000 anticipating the maturity in 1945 of the soldiers' bonus, this is purely a bookkeeping entry and is not public debt in any practical sense of the term. Public debt is, of course, actually increasing with every dollar borrowed by the Treasury on account of these loans and other expenditures. There is some fear that the next Congress, which meets in December, may attempt to extend the payments to soldiers by voting to remit the interest which in theory is charged on the loans now being made. Few pay the interest, but it will be deducted at maturity date of the compensation certificates, and remission of the interest would, in effect, considerably increase the actual cost to the Treasury.

Treasury borrowing has had something to do with holding back corporation capital flotations, which fell sharply this week, but the poor bond market has been the principal factor. This week's statement of the Federal Reserve system shows a rise of \$74,000,000 in daily average currency circulation, due partly to month-end operations and Easter retail trade, and partly to the distribution of cash to ex-soldiers. Firmer call-money rates brought bills to the system's portfolio, increasing total reserve credit outstanding by \$85,000,000. Member banks did not add to their borrowings, and in leading centres they are entirely out of the Reserve Banks. Reserve credit outstanding is at the lowest point since 1924, making allowance for the week's temporary expansion.

On the whole the money market has not been affected much by the Treasury operations, though the shifting of Government deposits, which require no reserves, to private deposits has increased somewhat the reserve requirements of member banks. This has been offset by the further receipt of gold. In the first three months the net gain to the country's gold stock was \$100,000,000, and \$8,000,000 from China and Japan have arrived this month. Gold holdings are now above the highest total previously known, i.e., in May, 1927. New financing, apart from the Treasury issues, was approximately \$700,000,000 in March, according to Federal Reserve Bank calculations. This was three times the February flotations, and the largest total since June, 1930. A good deal more would come out were bond market conditions more favourable.

Industry has fallen back slightly in some directions, and made some progress in others. The steel industry has dropped to about 55 per cent. of capacity, and the

price increases recently announced have apparently failed to stick. Motor buying has been more cautious, and probably will continue so until the spring sales results are known. Railroad traffic, on the other hand, has risen slightly for the third successive week. Business casualties continue heavy and bank clearings are down. The Federal Reserve Board's index of industrial production showed a small rise in February. Commodity prices in March declined, but the rate of decrease was less. Dun's index dropped 0.7 per cent., as compared with 1.6 per cent. in February and 2.3 per cent. in January. Dividend reductions and omissions by corporations continue; they reached a new high level in March, with 115 important reductions and an equal number of omissions.

National and State banks have published statements of condition as of March 25, in response to calls from State and National comptrollers, showing results since December 31. In New York there was a reduction of approximately \$1,200,000,000 in deposits, which cancels the rise from September to December. The decline appears to be more than seasonal, but this is accounted for by the fact that the "float," i.e., uncollected cheques, is smaller, due to inactivity on the Stock Exchange. However, most of the City banks earned their dividends, and only one important institution failed to do so. The margin was small, but prevailing low interest rates made this inevitable.

FRANCE.

Austro-German Agreement — Price Level — Wage Difficulties — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, April 15.

THE Austro-German Zollverein project and the coming presidential election have more than replaced the Budget problem in the mind of the political world as subjects for excited controversy. The announcement that the British Government has made a formal communication to the League of Nations in regard to the Austro-German move has been received with distinct satisfaction here, and has effectively put an end to the stream of anti-British comment on the part of a large section of the French Press, which was previously inclined to regard as unfriendly to this country the negative attitude that was apparently being taken by Great Britain in regard to Germany's bold step. Regret is expressed here that the British Note to Geneva makes no mention in this connection of the Versailles Treaty, which French opinion regards as the corner-stone of the opposition which the former Allied Powers are expected to offer to the proposal.

The immediate effect of the Austro-German announcement appears to have been seriously to prejudice M. Briand's prospects of succeeding M. Doumergue as President of the Republic, and also to have appreciably affected his standing as the mouthpiece of French foreign policy. Germany's defiant policy, as it is regarded here, has proved a blow to this country in many ways, and has undoubtedly caused a severe check—for the moment, at any rate—to the Locarno policy which M. Briand has so long pursued. The harmful effect of the Austro-German step on the Briand European Union project has been all the greater by reason of the unexpectedness of the blow immediately after the check to the Tariff Truce proposal at Geneva, and at a moment when the future of every country's export trade is a source of intense anxiety. The line this country will eventually take in regard to the Austro-German Customs Union project is at present obscure. All that can be said for the moment is that the new development has certainly had the effect of fostering a recrudescence of nationalism in this country and destroying, even to a greater extent perhaps than did the success of the Hitlerists at the recent German elections, much of the good that has been so painfully accomplished since the signature of the Locarno Pact.

The outstanding feature of this country's economic situation now lies in the fact that wholesale prices of

French products are being maintained at an average level of over 50 per cent. above those of imported commodities. The effect of this remarkable situation, taken in connection with the other peculiar and contradictory factors in the country's economic situation, has been to throw the whole French body politic into perhaps worse confusion than has existed since 1914. The absence of any standardised international statistical system renders anything like exact comparison between the situation here and abroad extremely difficult. International statistical shortcomings are apparently to be remedied in the near future, as the result of the effort now being made at Geneva, and this is being ably supplemented by the Government statistical department here, which is now steadily evolving fuller and more satisfactory statistical information.

Unfortunately, as the result of the confusion set up in the public mind by the revaluation of the franc, the French "man in the street" and his wife, to say nothing of the majority of newspaper writers and even a good many politicians, still refuse to recognise even the most accurate statistical data. Even to-day, over five years after stabilisation *de facto* of the franc at its present value, the vast majority of people here still insist on comparing prices in terms of the number of francs involved, and almost totally ignoring the fact that the currency unit is now only one-fifth of its pre-war value.

The last issued general index figure representing the cost of living for a Paris working-class family of four persons is returned as 597 (1914 = 100), against means of 581 in 1930, 556 in 1929, and 519 in 1928. That for food alone is returned as 636, the difference being largely due to the arbitrarily-fixed low rentals still prevailing. The corresponding figures for nine selected typical industrial or agricultural great towns (Amiens, Dijon, Grenoble, Marseilles, Bordeaux, Tours, Angers, Angoulême and Le Mans) vary from 584 to 716 (general) and from 560 to 680 (food alone). The general index figure representing retail prices in Paris at the end of March (which this month for the first time covers 34 articles of common household use, mostly foodstuffs, instead of 13, as in the past) is 630 (July, 1914 = 100), or a drop of 5 points on the month and of 16 since November, as compared with averages of 618 for 1930, 621 for 1929, and 584 for 1928. The general index of wholesale prices (45 commodities) at the end of March is unchanged at 492 (against averages of 543, 623 and 634 respectively for 1930, 1929 and 1928). The general figure for French native products represents a rise of three points, from 557 to 560, while that for imported commodities has fallen from 375 to 370. The figure for foodstuffs (mostly French origin) is 8 points higher on the month (529 to 537), while that for raw materials has dropped from 461 to 453. The general wholesale price figure, reduced to gold, works out at 100 (as for February), or exactly equivalent to pre-war level, as compared with 106 for Great Britain (Board of Trade), 108 United States, 114 Germany and Sweden, 115 Switzerland, 98 Italy, and 95 Belgium.

A sharp struggle is now proceeding between French employers and their respective labour forces (both industrial and agricultural) in regard to wage reductions. The employers insist that, in view of increasingly keen foreign competition (as proved by the foreign trade returns, and by every-day experience in the retail shops), production costs must be brought down. Fractional wage reductions have already been agreed to in the mining industry. In the textile industry the workers have so far refused to accept the proposals put to them. Both industrial and agricultural workers protest against wages cuts on the ground that the cost of living continues to increase. This brings the whole question into the vicious circle constituted by the fact that the cost of living cannot be brought down unless a stop is put to the constant increase of import duties on certain essential products, and that if these duties are reduced, both industry and agriculture would be exposed to keener foreign competition than ever. Figures furnished by the Ministry for Agriculture show that the average price of wheat was 147.43 in 1930, and now stands (good French wheat, at 74 kilos. to the hectolitre) at 180 francs. M. Frédéric Jenny, financial editor of the *Temps*, protests against the existing wide

difference between the index figure representing wholesale prices of French products (chiefly agricultural commodities) and that for imported goods. When the price of wheat in France is nearly three times the price quoted on the international market, he insists, the reasonable limit of protection has been exceeded. "When the work of economic re-equipment has been accomplished," he says, "resumption of exports will become an imperative necessity for French industry, in which event the present protection policy cannot fail to have a harmful repercussion on national activity."

The index figures for industrial production during February, which are issued this week, indicate that the general depression has now reached its turning point. The general figure is returned as 133 as for January (1913 = 100), against a mean of 140 for 1930. The individual figures for six of the nine industries covered remain unchanged. That for the leather industry has risen a point, that for the rubber goods industry is 22 points higher (to 925), and that for motor-car construction 7 points higher (to 598) on the month. Bankruptcies in March were 607, against 558 in February and a monthly average of 521 last year. Unemployment returns for the week ending April 4 indicate that the total number in receipt of relief pay was 51,500, or 685 more than in the previous week. The total on the dole in the capital itself was 262 fewer, while the suburban total was only 40 more.

GERMANY.

Grain Markets and Protection — Unemployment — New Berlin Officers — Insurance Failures — Iron and Steel Output.

(FROM OUR CORRESPONDENT.)

BERLIN, April 15.

SINCE the tariff reforms of last year the German grain markets have lost all connection with developments in the world market. Though it proved impossible to maintain the price of rye during the autumn and early winter, this was due to internal reasons: the overestimate of the crop, the difficulty of accustoming cattle raisers to use rye as fodder, and so on. During the last three months the tendency of both rye and wheat prices on the German market has been upwards. Wheat in Berlin is now about Rm. 290 per ton, against Rm. 250 at the beginning of the year, and rye is 190 compared with 150 at the beginning of the year.

The Government are contemplating these developments with anxiety, for two reasons. The rise in the price of bread, to which the rise in grain prices, if continued, must inevitably lead, would be in sharp opposition to the Government's policy of reducing wages and of at least avoiding any rise in the cost of living. To this end the Government not only allowed the Reichstag to place them under an obligation so to exercise their power of altering Customs duties as to prevent the food index from rising above 133, but even accepted the additional obligation to keep the price of bread down to the level which obtained during the six months before the law came into effect. The Government are thus legally required to do what they can to prevent a rise in bread prices, and they are moreover anxious to do this in the interests of their agrarian protective policy, which they fear would be brought into serious disrepute if bread prices were to rise at this time of general distress. There is also the consideration that, as the farmers have for the most part already sold their grain, the price increases mainly benefit the merchants and millers.

Some weeks ago the Government made an attempt to force down rye prices, but as they would not use their own stocks, bought last autumn, which they wish to keep as a food reserve for the rest of the crop year, this intervention was unsuccessful. The Government have also reduced the quota of home-produced wheat which millers are required to buy from 65 to 50 per cent., but with a duty that is nearly as high as the domestic price that is ineffective; no wheat is imported except what is absolutely indispensable on grounds of quality.

The only measures which would be effective would be, as regards rye, an increased import of fodder, which could be brought about either by a reduction of the duty on barley or by manipulation of the maize monopoly; as regards wheat, a reduction of the duty. The Government seem reluctant to do either, presumably because they fear that it would create prejudice against their tariff policy and rouse violent opposition among the farmers. There is also the danger that a change in the wheat duty would lead to a laying in of stocks which might overburden next year's markets. This consideration has led to a revival of the demand for monopolistic control of wheat imports, but the opposition to such a plan, whether in the form of a State monopoly or of a limited concession to privileged merchants, is very strong.

The second half of March saw the first substantial decline in unemployment since the winter, from almost 5 millions to 4,756,000. Last year the corresponding decline was somewhat greater, but this year a larger part of it occurred among those groups which do not owe their improved employment wholly to seasonal influences. It is not yet, however, safe to infer from the unemployment figures that any real improvement in trade has taken place, for even the textile industry, which has a large share in the increased employment, is greatly influenced by seasonal factors, and the fall in unemployment in those occupations which reflect general business conditions exclusively is still extremely small.

Now that the City of Berlin has had its constitution modified by the Prussian Landtag it has proceeded to elect new officers. It was high time for such an election, for the offices of Chief Mayor and Financial Adviser have been vacant since the Sklarek scandal, but there is every reason to think that the right men have now been chosen. For the Chief Mayoralty the city has secured the services of Herr Sahm, who was formerly at the head of the Free State of Danzig, but had to resign his office, although his own political leanings are in a rightward direction, on account of a conflict with the Right. The steadfastness of character which he showed on that occasion will stand him in good stead in Berlin, for the prolonged lack of firm leadership has allowed party interests to gain more influence than is conducive to the satisfactory conduct of business. The other Mayors, Dr. Elsass and Herr Lange, and the new Financial Adviser, Herr Asch, all have exceptional records of successful financial administration, and their party affiliations are such as to give reason to hope that all the principal parties will in future feel a joint responsibility for the sound and peaceful government of the city.

In the last few weeks several more suspensions of payments and bankruptcy proceedings against German insurance companies have been announced. Many of the bankrupt companies have been small and unimportant, but one important company, the Deutsche Autoversicherungs A.G., of Stuttgart, has ceased payment. This company was only founded in 1928 by the Lucerne bankers, Sautier and Co., and by cutting premiums secured so much business that in its second business year, 1929-30, it received a gross premium income of 17.6 million marks. Of this 10.3 millions were paid to the Rothenburger Versicherungs-Konzern, in Görlitz, which holds shares in the Deutsche Autoversicherung and for which the Stuttgart firm acted as agent for accident and third-party insurance.

The Rm. 3 millions share capital of the Deutsche Autoversicherung is only one quarter paid up, and it has so far been impossible to call up the remainder, as most of the shares are held in Switzerland. The lack of liquidity has been intensified by the fact that, owing to the connection between the principal shareholder and the management, over half a million long-term cash bonds of the Lucerne bank were subscribed for, and these are not dealt in on the Stock Exchange, and probably cannot be realised.

The Rothenburg insurance group will be affected by the suspension of payments to the extent that it will sell its property insurance business to meet the accident and third-party liabilities, and will also have to liquidate its

reinsurance business. The Rothenburger Lebensversicherungs A.G., with an insurance business of over Rm. 100 millions, is affected as a shareholder of the fire and reinsurance companies, as only a quarter of their capital of Rm. 3 and 1 million respectively is paid up. But as the Lebensversicherungs-Gesellschaft still has open reserves, it is thought that its shareholders will not be very severely hit. The State Supervisory Office for Private Insurance did not become responsible for motor insurance until April 1, 1931. Until then this was one of the branches of insurance which are exempt from supervision.

The report of Vereinigte Stahlwerke for the first quarter of 1931 shows a decline in turnover to Rm. 205 millions from 234 millions in the preceding quarter and 327 millions in the corresponding quarter of last year. Exports also declined, for of the above turnover only Rm. 83 millions went abroad, against 104 millions in the preceding quarter and 122 millions in the first quarter of last year. Coal production amounted to 4.7 million tons, against 5.2 and 6.7 millions respectively; coke output to 1.5 million tons, against 1.7 and 2.4 millions; production of iron to 0.81 million tons, against 0.95 and 1.48 million tons, and of steel to 0.96, against 1.01 and 1.56 million tons. The number employed at the end of March was 105,000, against 121,000 at the end of 1930 and of 169,000 at the end of March last year.

AUSTRIA.

Customs Union — Revenue — Social Insurance — Wage Reductions — Business Conditions — Profits.

(FROM OUR CORRESPONDENT.)

VIENNA, April 8.

FOR the last few weeks the question of a Customs union between Austria and Germany has formed the principal topic of discussion in all commercial, industrial and financial circles. Large sections of industry fear that a Customs union may lead to marketing difficulties and enhanced German competition. At confidential discussions which took place at the Industrial Club, it was impossible to secure a majority in favour of a Customs union unless it was to be accompanied by material safeguards for the protection of Austrian industry. The iron industry and the electricity industry support the Customs union wholeheartedly, while in the outfitting industry, the knitted goods industry, the chemical industry, the cement and building material industry, the sugar industry, and in important branches of engineering, there is a leaning to an intermediate tariff sufficiently high to protect Austrian interests. The opinion is general that the Austrian market is too small and that the present intolerable situation can only be improved by enlarging it.

The banks are very reticent in their attitude to the Customs union. Commerce favours the union with as extensive as possible an abolition of all Customs and restrictions, knowing that a change from present conditions could hardly be for the worse. Agriculture is in favour of every possible approach to Germany, whose agrarian duties are higher than those of Austria. One undesirable outcome of the discussion is the cancellation of many orders placed in each country by firms in the other. There are certain optimists who believe that the Customs union will be realised very speedily. Latterly, however, more sober considerations have come to prevail, and it is hoped that various orders that have been suspended may still be renewed. A fact of commercial-political importance is the notice of cancellation of the trade treaties with Hungary and Yugoslavia, without which it would be impossible for increased duties on various agricultural products to come into operation on July 1st. Her trade with Germany, however, continues to be the most important part of Austria's foreign commerce, for during the last few years German imports have averaged from 20 to 22 per cent. of the total Austrian import trade. Germany's share in Austrian exports has amounted to 18 per cent.

The further development of Customs receipts is of decisive importance for Austria for reasons of State finance. Here, as in other countries, the tax revenue has

been falling off of late, and in the first two months of the current year the deficit was greater than in the whole of 1930. This is not surprising in view of the adverse economic conditions. During the past year further numerous enterprises have disappeared, the conditions of income in wide circles of the population have substantially deteriorated, the outcome of the tobacco monopoly has proved less satisfactory, and the decrease of traffic on the Federal Railways has made itself disagreeably felt. It is practically impossible, however, to effect any increase in taxation, since even the old rate of taxation is almost insupportable. Relief must be provided by incisive economies, for which purpose an Economy Commissioner has been appointed. In any case, attention will have to be paid to the report of the Supreme Court of Accounts, which calls for very decisive restrictions on the basis of the last budget.

The Government desires to keep its promise of a reconstruction of national insurance. To this end it is intended to bring into effect the suspended insurance for old age and invalidity, which will entail additional expenditure of at least 50 million Austrian shillings per annum. Since fresh contributions cannot be demanded either of the employees or of the employers, the necessary sums must be provided for by economy in health, accident, and employment insurance, and this is opposed by the trade unions and employees' organisations, which announce their intention of putting up a determined resistance in Parliament.

The authorities have raised the funds they require for housing by the issue of a 7 per Cent. Housing Loan, offered at 95. Of the total proceeds of this loan, amounting to 150 million shillings, 100 millions will be employed for the repayment of advances by the banks. The loan promises to be fully successful, as there is a demand for safe investments bearing a high rate of interest.

A thoroughly systematic reduction of wages and salaries is being effected. The first move was made by the Alpine Montangesellschaft, which cancelled its wage contracts, dismissed all its operatives, and re-engaged them on less favourable conditions. This policy is facilitated by the fall of the cost-of-living index, which has declined by 8 per cent. since the middle of July. In most industries and almost all shops wages have already been reduced. Administrative expenditure has likewise been curtailed. This was the more essential as taxation has only been reduced to a very inadequate extent. Liquidations continue, and in January there were 312 judicial composition arrangements, in February 261, and in March 249.

In its last report the Institute for Business Research asserted that the lowest ebb of depression had been reached, but so far there are very few indications of any revival in business. In order to promote export, the Government has proposed a law by which the credit guarantee for exports to Russia would be increased from 60 to 75 per cent., the duration of credit lengthened from 10 to 15 years, and the rate of interest lowered from 2 to 3 per cent. below the official rate. The Federal Province in which any enterprise desiring to export to Russia has its base of operations would, however, have to participate in the guarantee against possible loss to the extent of 30 per cent.

A sign of the impoverishment of large classes of the population is to be found in the pronounced recession in the consumption of both beer and tobacco, a fact which is also bound to exercise an adverse influence on State finances. Sugar production, on the other hand, has materially increased. Compared with 1929, the area under beet has grown by about 40 per cent., while the home output now covers 85 per cent. of the home demand. The smaller use made of all means of communication, including the Federal railways, the municipal tramways and motor-bus lines, likewise bears witness to a forced economy.

The banks and industrial enterprises are now about to publish their balance sheets. The National Bank underwent a noticeable recession of profits, discount business showing a falling-off in profits by 10.4 million shillings, and foreign bill and currency business a diminution of roughly 9.7 million shillings. This was occasioned by the

very low level of the bill portfolio, which, against an average of 214.6 million shillings in 1929, was no more than 129.5 million shillings in 1930. The smaller revenue from business in foreign bills was due to the lower rates of interest at international centres. Last year the National Bank paid a dividend of 18 shillings; this year the dividend was fixed at 16.65 shillings. The Donau Dampfschiffahrtsgesellschaft, an enterprise which once gave promise of a very successful career, has now been obliged to effect a thorough revision of its business position. The balance sheet shows a deficit of 3.8 million shillings, which is to be covered by recourse to the reserves. The Government has declared itself willing to grant this enterprise a subvention for the purpose of carrying on traffic, which is anything but lucrative on many of its lines; in return for this the State is to acquire a decisive influence on the business operations of the company.

CANADA.

Business — Prairie Situation — Foreign Trade —
Newsprint Industry — Parliament.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 25.

As usual, the advent of spring weather, which permits the resumption of outdoor work, is bringing a certain stimulus to business, but the general situation cannot yet be described as satisfactory. The carloading figure for the week ended March 14th, at 48,245 cars, shows a gain of 139 cars as compared with the previous week, but is still 12,160 cars, or roughly 20 per cent., below the figure recorded in the parallel period of 1930. Unemployment, although it has receded from the winter peak, is still rife, and municipal authorities are reporting that the funds available from public sources for relief works are practically exhausted. Retail trade is well below normal, and in the country districts is being retarded by bad roads. In the larger centres the departmental stores are trying to stimulate it by price-cutting sales which operate to the disadvantage of the smaller merchants.

Merchants and manufacturers are not disposed to make heavy commitments for the year until the tariff and taxation proposals of the Government are known, and this factor is adverse to business revival. The majority of factories are working well below capacity. The motor plants and their accessory establishments, while undertaking a certain seasonal increase in production, are operating at approximately 40 per cent. below the level of last year, and the iron and steel plants and the railway equipment shops are short of orders. On the other hand, the textile mills remain fairly well employed, though, owing to the slackness of demand from the country districts, inventories are piling up and a curtailment of operations may be forced in a few months. The furniture manufacturers are fairly busy, and the boot and shoe manufacturers report some improvement with a volume of business equal to that which prevailed a year ago.

The downward movement of commodity prices shows signs of slackening; the wholesale index (1926 = 100) of the Bureau of Statistics for February was 76.0, as compared with 76.7 in January, but clearly the economic problems of Canada will remain difficult until some rehabilitation of the agricultural and other primary industries is achieved. Many farmers declare that it is a waste of time and money to sow wheat at present prices, and threaten to curtail their acreage, but in the end the reduction is likely to be smaller than has been anticipated, and the Federal Government is encouraging the maintenance of production by generous advances of seed grain. The Governments and business interests are conducting propaganda for the purpose of inducing the Western farmers to direct their energies more to mixed farming, but the farmers' spokesmen in Parliament have been throwing cold water upon these efforts. They aver that large areas of the West, through lack of adequate water supplies, are wholly unsuited to mixed farming, and that in addition, until markets for the finished product are assured, it is

profitless to transform one kind of agricultural glut into another.

The mild weather, supplemented by the relief measures of the Government, has enabled the Prairie farmers to get through the winter, but they have paid very little on their heavy debt obligations, and interest will continue to mount up. The truth is that at the present level of prices of farm products there is just available a bare sustenance for the Western farmers, and there remains the problem of what is to be done about the millions of dollars of capital which the Prairie Provinces have borrowed for different purposes. It is apprehended, moreover, that in the present year Russian competition will be severer than in 1929, and fears are entertained that a substantial portion of the Prairie Provinces of Canada may be reduced to the status of "marginal land."

The returns of foreign trade continue to be extremely unsatisfactory. Exports declined from 66½ millions in February, 1930, to 44 millions last February, and imports from 83 to 53 millions. In February imports from Britain declined from 14 to 8½ millions, which was a proportionately larger fall than the decline in imports from the United States from 33½ to 21 millions; this is a reversal of the tendency of recent months. For the first eleven months of the current fiscal year Canada's total foreign trade, valued at 1,592 millions, shows a decrease of 596½ millions, or 30 per cent., from the preceding eleven months, but the larger part of the decline is attributable to the fall in prices. In the eleven months' period, for example, the value of wheat exported fell by 33 million dollars despite an increase of 39 million bushels in quantity.

The newsprint industry is still struggling with its difficulties, and during February the operations of its mills were little more than 50 per cent. of capacity. Negotiations for a merger of the leading companies which will permit economies and give some centralised control of marketing, are still in progress despite repeated temporary breakdowns, and Mr C. A. Dunning, who was Minister of Finance in the King Government, has taken a hand in the game. He has consented to become Chairman of a committee nominated by security holders of the Canada Power and Paper Corporation, one of the largest units in the newsprint industry. The Corporation has become involved in serious financial difficulties, and the preference dividends of the subsidiary companies had recently to be passed. Plans are now afoot for a reorganisation of the financial structure of the company, and representatives of British and American interests are on the committee which Mr Dunning heads. If this reorganisation can be accomplished the way might be paved for the merger which is desired.

At the opening of the Federal Parliament the Speech from the Throne forecast a very modest programme of legislation, consisting chiefly of amending measures. It did intimate, however, that Parliament would be invited to undertake a further revision of the tariff, though it was explicitly stated that the changes in the British preferential rates would only be in the nature of incidental adjustments. The debate on the Address has occupied the last ten days, and in his opening speech Mr Mackenzie King vigorously attacked the attitude taken by Premier Bennett at the Imperial Conference. Mr Bennett strenuously defended his policy and declared that he would not alter his stand when the Imperial Conference was resumed at Ottawa.

ARGENTINA.

Revenue — Foreign Trade — Railway Rates — Prices —
Freights — British Exhibition.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, March 20.

BOTH financially and commercially the position of Argentina has undergone material improvement during the last month, while politically the country is wholly tranquil, and preparing for the elections that will be held in various provinces during April, May and June. Meanwhile, the Provisional Government is devoting most of its admini-

strative attention to financial matters. As it is determined to balance the budget for 1931, the fall in the revenue, consequent on the reduction of imports, is a matter of serious preoccupation. The last quarter of 1930 and the first two months of 1931 were marked by heavy reductions in the amount of goods imported, and as Argentina's revenue depends largely upon import duties this reacted immediately on Treasury receipts.

The further additional dues imposed by Ministerial decree upon a great variety of imported merchandise have thus a dual aim, the protection of home industries and the increasing of the Government's cash receipts. It may be doubted whether this latter objective will be attained, for additional Customs charges, coupled with depreciated exchange, will certainly check consumption. In official circles such a possibility is not viewed altogether with disfavour, inasmuch as it will help to restore the active visible balance of Argentine trade. Much is hoped from the heavy cereal exports, but, according to the figures for January and February, though the quantities are higher than last year, the value is less. Total exports of all produce for the two months were \$24,325,000 gold below those of last year, while in quantity they were 730,000 tons above the 1930 figures for the same period. Great Britain during 1930 bought Argentine produce to the value of £53,030,645, as against £77,643,154 in 1929, a reduction of 31 per cent. French purchases from this Republic were 49 per cent. less, a reduction out of all proportion to the diminution in French shipments hitherto, which are estimated to have fallen by only 18 per cent. Argentina seems likely to do herself more harm than good by endeavouring to wield the tariff weapon to protect industries whose importance is infinitesimal when compared with the amount, value, and variety of her production of foodstuffs and raw materials.

With a maize crop coming on that has been estimated as likely to yield anything up to 14,000,000 tons, efforts are being made to obtain substantial reduction of railway freights. A suggestion put forward by the Interventor of the Province of Buenos Aires to the effect that the railway companies might be conceded special permission to withdraw gold from the Conversion Office, conditionally on such freight reduction, was vetoed by the Minister of Finance upon perfectly logical grounds. The question of freights and their incidence upon the cost of production is not directly connected with the problem of exchange depreciation. The Government's attitude is that the unforeseen quantity of the harvest is such as to warrant a reasonable reduction, given the low price now ruling for all cereals. Representatives of the railways are at present engaged in defending the point of view that no reduction can be thought of, having regard to the economic situation of the companies at the present time. Whether this attitude will be maintained in the face of the officially expressed wish for a rebate is hard to say. Both morally and materially the railways have right on their side, though it might be to their ultimate advantage temporarily to lay those rights aside for the moment by establishing special, if moderate, reductions on the existing tariff, since it is to no one's advantage that the cultivator should be forced to reduce the area under the plough.

Exchange, though it has improved a little to 39½d. cable, is still a long way below parity, and from now onwards its recovery is likely to be a slow process. Present prices for cereals for prompt delivery in the Buenos Aires market are certainly disappointing. Wheat is \$4.90 paper per 100 kilos, maize \$4.25, linseed \$11, and oats a nominal \$3.40. Maize is relatively dearer than wheat, but this of itself is no argument for calling upon the railways to take a substantial proportion of a loss which is normally chargeable in every country to the grower. Ocean freight rates, owing to the heavy offers of tonnage, have eased off during March, and for boats loading grain on the San Lorenzo range, or even as high up river as Santa Fé, 18s. 6d. for March loading to Antwerp-Amsterdam has been accepted, though from Santa Fé to the Continent 19s. 6d. has been booked for April loading.

The British Empire Trade Fair, which has been open for a week at the time of writing, is acclaimed on all sides

as a wonderful piece of organisation, full of interest, both general and technical in its nature, and a decided eye-opener for the average resident in Argentina. As a show its success is certain; as regards its influence upon the future course of Argentina's purchases it is as yet too soon to speak with any degree of assurance. Prospects are, however, excellent; a certain amount of business directly traceable to the Exhibition has already been closed; and the whole undertaking justifies the untiring zeal of those Anglo-Argentine business men whose unselfish efforts, begun three years ago, brought the embryo of an after-luncheon suggestion to its present maturity.

Books and Publications.

INVESTMENT IN GOLD SHARES.

THE "art" of successful dealing in mining shares calls for more detailed knowledge and understanding of the particular industry than, possibly, any other branch of investment. The investor, however, starts, at the present time, with one advantage. In the mining of base metals the trend of metal prices is a most important factor, but gold commands a relatively "stable" price which, in terms of other commodities, is at present higher than for many years past.

Recognition of this fact has led to a certain revival of Stock Exchange interest in gold-mining shares—more particularly in "Kaffirs." Mr L. L. B. Angas, who last year published a much-discussed work on investment principles, apparently believed that, at the beginning of the year, the Rand offered the "requisite conditions for speculative investment," which he had previously enumerated. He has, consequently, been bold enough to follow up an earlier prophetic effort on the collapse in rubber with a brochure entitled "The Coming Rise in Gold Shares."* Mr Angas, as his title shows, is definitely a "bull," but, if readers are willing to keep this fact in mind, and differentiate between information and exhortation, they will find much relevant material for a judgment on such aspects as the different classes of mines, problems of "life," and amortisation. The short chapter of "Do's and Don't's" is somewhat irrelevant. Despite slight technical inaccuracies, the "Explanations of Mining Terms" will be useful to a lay investor.

Readers who desire to proceed from general principles to specific instances, may turn profitably to Mr Sturzenegger's detailed handbook.† The latter's format is unattractive, but the work compresses into small space a mass of vital material concerning operations at the gold mines of the Rand. The author's object has clearly been to enable the reader to assess the intrinsic value of any particular mine for himself. To each of thirty mines he has applied a uniform method of treatment, so that quick deductions and interesting comparisons are possible. His estimates of "lives" and future dividends, naturally, can be accepted only as "informed conjectures." A useful feature of this work is a set of amortisation tables. As the various mines are arranged geographically, it is regrettable that the indispensable index is not so placed as to be readily discoverable.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Fall of Prices. By John A. Todd. (London) Oxford University Press, Warwick Square. 2s. 6d.

A discussion, illustrated by statistical tables and diagrams, of the causes and possible cures of the fall in prices.

Britain and World Trade. By A. Loveday. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 10s. 6d. net.

This is the book whose forthcoming publication we announced in our Trade Supplement of October 25. Mr Loveday discusses the influences which have governed the development of world production and trade since the war, and his central thesis is that the dislocation which is apparent to-day is primarily due to the accompaniment of a growing instability of demand by a growing rigidity in the mechanism of supply.

Taxation. Its Incidence and Effects. By H. A. Silverman. (London) Macmillan and Company, Ltd., St. Martin's Street. 7s. 6d. net.

A discussion, designed primarily for readers without specialised economic training, of public expenditure and the effects of national and local taxation. Each of the more important categories of taxation is discussed at some length.

International Affairs. March, 1931. (London) Royal Institute of International Affairs, Chatham House, St. James's Square. 2s. 6d.

Contains a number of interesting articles, including: "The American and European Economic Depressions and their Political Consequences," by Dr. Felix Somary; "Germany and the League of Nations," by Herr Wolfgang Schwarz, and "The Convention on Financial Assistance," by Sir Henry Strakosch.

Wages and Regulation of Conditions of Labour in the U.S.S.R. By S. Zagorsky. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 4s.

An International Labour Office publication.

Making Bolsheviks. By Samuel N. Harper. (Chicago) The University of Chicago Press. (London) Cambridge University Press, Fetter Lane. 9s. net.

A reprint of six lectures which described the products of the system of civic training adopted by the Soviets.

The Truth About Industry. By Alexander Ramsay. (London) Philip Allan and Company, Ltd., Great Russell Street. 6d.

A very simple discussion of the means by which the needs of a modern community are supplied, intended for working men with no knowledge of economics.

Purchasing Power and the Pound Australian. By J. B. Brigid. (Brisbane) Fred Phillips. 1s.

A plea for reduction of Government expenditure aided by "an expansion of credit for industry at the risk of some inflation."

The Contribution of Economics to Social Work. By Amy Hewes. (London) Oxford University Press, Warwick Square. 10s. 6d. net.

The purpose of this little book is to induce the social worker to interest himself in the economist's attempts to explain the working of society on its economic side.

Peninsular Europe. By L. W. Lyde. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 10s. 6d. net.

Though not cast in that form, this book really consists of a series of studies of the influence of geography upon racial history.

Teoria Generale della Economia Politica Nazionale. By Professor Filippo Carli. Preface by S. E. Guiseppe Bottai. (Milan) Editore Librai della Real Casa.

A text-book of corporative economic theory.

Some Social and Economic Aspects of the Land Systems of Bengal. By N. M. Pal. (Calcutta) The Book Company, College Square.

An intensive study of the condition of the Bengal peasantry.

BREWERY SHARES AND BUDGET POSSIBILITIES.

EVERY year, at Budget time, there is a certain selling of brewery shares by nervous holders. In the last few weeks this feature has been more than usually in evidence, despite a partial recovery in prices since the turn of this month. It is known that the Budget to be opened on April 27th must, unfortunately, add to the British taxpayer's burden, and although Mr Snowden may be loath to anticipate the findings of the Licensing Commission, the beer tax is an old tax (and therefore, proverbially, a tempting field for a Chancellor seeking new revenue), and the present Government has never been accused of special tenderness towards the brewing industry. Shareholders, in fact, are being sharply reminded that their industry has an indubitable political as well as an industrial risk, which has been accentuated since the United States created a new precedent by refusing the right of the trade to exist at all, legally, in the wealthiest of modern nations.

Mr Snowden's intentions will remain a closely guarded secret for the next ten days, but brewery shareholders, on the principle of preparing for the worst while hoping for the best, may ask themselves what would be the effect on the industry's future earning power of a further addition to its load of taxation. Past history should afford valuable material for an answer, for, in the last seventeen years, the beer duty has been changed no less than seven times. In 1914, it was raised from 7s. 9d. per standard barrel (at which it had been maintained since 1900) to 23s. In 1916, it was further raised to 24s., in 1917 to 25s., in 1918 to 50s., in 1919 to 70s. and in 1920 to 100s. In 1923 a rebate was allowed of £1 per bulk barrel independent of gravity, provided that the duty on any beer was not reduced below 24s. per barrel. The duties on British spirits have similarly been increased from 14s. 9d. per proof gallon to 72s. 6d., and the duties on wines have also been significantly raised.

In 1913-14, a pint of beer, with an average specific gravity of 1.051, was sold retail at 2½d., some ¼d. going to the State in duty, and the remaining 2¼d. to the trade. From 1923-24 onwards, the specific gravity has been round about 1.043 and a retail price of 6d. has been divided as to 2½d. to the State and 3½d. to the trade. In 1914, a bottle of spirits (20 under proof) retailed at 4s., of which approximately 1s. 11½d. went to the Government and 2s. 0½d. to the trade. From 1920-21 onwards, the price of a bottle (30 under proof) has been 12s. 6d., of which the State has taken 8s. 5½d. and the trade 3s. 6½d. In other words, the return to the State on the sale of a single "unit" of beer has increased, since the war, approximately nine times over, and on a "unit" of spirits approximately 4½ times. The return to the trade has increased by 67 per cent. and 74 per cent. respectively over the same period. As the "unit" itself, however, has changed since the war, to the advantage of the producer and the tax gatherer, the real increase in the amount paid by the consumer is greater than these figures indicate.

The increase in price has been accompanied by a significant decrease in consumption. The *per capita* figure for beer, which rose rapidly in the 'sixties and early 'seventies of the last century, and slowly declined in the first decade of the present century, has subsequently dropped from 27.76 gallons in 1913 (United Kingdom) to 20.38 gallons in 1930 (Great Britain only). The consumption of spirits, which was 1.09 gallons per head at the beginning of this century, and had fallen to 0.70 gallon by 1913, was last year no more than 0.25 gallon. Wine consumption declined from 0.41 gallon per head at the beginning of the century to 0.25 gallon in 1913, but has since remained relatively steady, the 1930 figure being 0.30 gallon.

The most significant phenomenon, from the brewery shareholders' viewpoint, however, has been the post-war increase in the national expenditure on liquor by comparison with the pre-war figures, despite the historic decline on the quantitative side. Broadly, while the consumer has drunk less, he has been willing to spend as much, or more, money on the products of "the trade." In 1900, the national "drink bill" of the United Kingdom was estimated at £185 millions. In 1913 it was £167 millions, while in 1930 (in Great Britain alone) it was put at £277½ millions. How is this vast sum divided between "the trade" and the Exchequer? The following table shows the approximate division during recent years.

EXPENDITURE ON DRINK IN GREAT BRITAIN.

	(Million £.)			
	1927.	1928.	1929.	1930.
Total national expenditure on drink	299	288	289	277½
Total paid in taxation	133½	129½	129½	125½
Total profits of breweries*	24	24½	25	25½
Total British tax revenue from all sources*	693	685	677	704
Percentage of drink revenue to total revenue	19.3%	18.9%	19.1%	17.8%
Total British national income†	4,350	4,250	4,400	4,000
Percentage drink consumption to national income	6.9%	6.8%	6.5%	6.9%

* Twelve months ended March 31st of following year.
† Including interest on national debt, which is assessable for taxation purposes.

Note.—The figures of national expenditure on drink in the above table are estimated by Mr. George B. Wilson, the political and literary secretary of the United Kingdom Alliance. The taxation figures are for the calendar year, and are estimated by the Treasury. The brewery profit figures are for the financial year, according to answers given to questions in Parliament.

Drink is admittedly a heavily taxed industry. Though it accounts for only about 7 per cent. of the expenditure of the nation, it contributes nearly a fifth of the total tax revenue of the country. Past experience, however, strongly suggests that the trade has rarely suffered a permanent decline in profits as a result of increased taxation. Though the present beer duty is more than ten times the pre-war level, British brewery profits, as computed for income tax, have risen from £9,970,000 in 1913-14 to £25,500,000 last year. In the past the trade has always succeeded in recouping itself for heavier taxation and decreased consumption by higher retail prices and/or improved internal organisation. "Rationalisation" has been unobtrusively proceeding for many years. Fifty years ago there were 21,000 brewers in the country, to-day there are 1,400. Less than 5 per cent. of the total brewers now turn out much more than half the total beer consumed.

An increase of a penny on a pint of beer would produce about £15 millions to the Exchequer. A year ago Mr Snowden refused to increase the beer tax on the ground that those who paid it for the most part "contributed to the national revenue . . . out of all proportion to their means." This year, however, it is conceivable that a Chancellor who may require to raise from £40 millions to £50 millions from new taxation may be unable to resist the temptation to tax an industry which has achieved outstanding prosperity in a period of general depression. If past experience, however, is any guide it is unlikely that such a step would permanently impair the earning power of the industry. The latter is quite capable of taking a moderate increase in taxation in its stride, either by passing on the increase to the consumer (by way of higher retail prices or reduced specific gravity) or by drawing on the fruits of further improvements in internal organisation.

The most appropriate reaction of brewery shareholders to higher beer duties would thus be not to sell their shares but to exercise increasing discrimination in the choice of their investments. Recent developments in the trade have tended to emphasise the advantages of the larger over the smaller localised breweries. In brewing, as in every other trade, steadily increasing earnings and a conservative dividend policy are the best external evidence of internal strength, from the investor's point of view. The following table shows a number of relevant figures for various concerns which exemplify these attributes to a marked extent:—

Company and Date of Balance Sheet.	Samuel Allsopp (Sept. 30).	Beas, Ratcliff and Grotton (Sept. 30).	Arthur Guinness (June 30).	Mitchells (June 30).	Watney, Combe, Reid (June 30).
Net earnings available for pref. and ord. dividend:—					
1924	95,442	463,059	2,389,624	414,433	702,628
1927	104,873	479,360	2,264,693	558,111	1,188,180
1929	128,240	542,632	2,209,387	641,903	1,377,538

(b) With capital bonus of 20 per cent.
(c) Free of tax till 1929.

Despite temporary fluctuations, the concerns in the above table have an impressive recent record of stability and earning power, which is unlikely to be upset by any moderate upward change in taxation. The "risks" attaching to brewery shares are, indeed, of a different order. The forthcoming report of the Royal Commission on Licensing is an unknown quantity, but it is inconceivable that it will tend to increase the national liquor consumption. On a long view, the decline in the curve of consumption must be a significant factor. It is common knowledge that the greatest falling off since the war has been located among the members of a "younger generation" of more athletic tastes than its forebears.

The scope for economies by way of improved organisation, however, is still extensive, and, for all but a few of the largest companies, the whole field of modern "scientific" publicity remains largely unexplored. The most formidable eventual threat to brewery profits, however, will come not from fortuitous additions to brewery taxation by hard-pressed Chancellors, but from the fact that, in the face of declining consumption, the resources of "rationalisation" are not inexhaustible.

UNILEVER IN 1930.

THE reports of Unilever, Limited, Unilever N.V. and five of the principal subsidiary companies, which were issued this week, emphasise a serious defect in the Companies Act, which does not require a holding company to publish a consolidated balance sheet and income account for the whole of its subsidiary or associated companies.

It is utterly impossible to decipher, from the accounts of the Unilever companies as they are published, the real earnings and financial position of the group, or to discover how the vital question of the writing down of stocks of raw materials has been dealt with. Indeed, the report of Unilever, Limited, adds to the confusion by making

statements on which a lay reader might easily place a mistaken construction. For example, the directors declare that, in spite of the world economic depression, the trading profits of Unilever, as regards its main products, soap and margarine, were maintained last year, although during the second half of the year its subsidiary and associated companies engaged in the crushing industry suffered severely from the abnormal trade conditions, which made it impossible for them to dispose of their products except at a heavy loss. The directors go on to state that the total profits for the year of the two holding companies—Unilever, Limited, and Unilever N.V.—amounted to £4,304,217, as compared with £3,524,784 in 1929. The shareholder reading this statement without knowledge of the facts would assume that the management of Unilever had been extraordinarily successful in increasing their profits in a year of trade depression. Later on in the report, however, he would find out that the two profit figures were not comparable, for the 1930 total includes the dividends received from Lever Brothers and from other new acquisitions which did not come into the 1929 figures. Actually the profits of Unilever N.V. showed a decline from £2,944,401 to £2,483,219 (or by 15.66 per cent.), while the profits of Lever Brothers have declined from £6,213,504 to £5,749,658 (or by 7.47 per cent.), although dividends on the Lever ordinary shares were maintained at 10 per cent. The profit and dividend figures of the chief Unilever subsidiaries and the Niger Company are set out in a note on page 868 of this issue.

The directors of Unilever state that before the allocation of any amounts to reserves, but after the deduction of preference dividends and certain special allocations, the net profits in 1930 represent an earning power at the rate of over 17 1/2 per cent. per annum on the ordinary share capital for the time being employed in the business. This compares with an earnings rate of 22 1/2 per cent. in the previous year.

The following table gives a comparison of the combined profits of Unilever, Limited, and Unilever N.V. and their distribution for the past two years:—

	1929.	1930.
Net profit for the year (after deducting all expenses, directors' fees and taxes)	3,524,784	4,304,217
Dividends on 7% cumulative preferred shares	268,456	353,509
No. of times covered	13 1/3	12 1/8
Dividends on the ordinary shares	1,578,858	2,450,737*
Rate	10%	10%
Dividends of 6 per cent. on the deferred shares	...	6,000
To reserve for dividend tax	62,500	65,000
To general reserve	1,500,000	1,500,000
Carried forward	194,269	123,240

* Includes £100,000, being dividends of 5 per cent. on the £2,000,000 nominal ordinary shares of Unilever, Ltd., issued May 9, 1930.

In considering the balance sheet it must be remembered that the issued ordinary capital was increased in 1930 by £9,718,791, of which £6,000,000 nominal was issued in connection with the acquisition of Lever Brothers, £2,000,000 for cash on May 9, 1930, and £1,003,375 as a bonus to shareholders in June, 1930, out of the general reserve. The remainder, £715,416, was issued in connection with the acquisition of new businesses. The issued preferred capital was increased in 1930 by £1,596,115, of which £1,100,000 nominal was issued in part fulfilment of the acquisition of Lever Brothers and £496,115 was exchanged for preference shares in the English Margarine Works, Limited, the whole of the ordinary capital of which was already held by the Unilever organisation. The deferred shares of Unilever, Limited, amounting to £100,000 nominal, which were formerly held by Unilever N.V., now appear in the combined balance sheet as part of the issued share capital.

As a result of these operations, the issued capital shown in the combined balance sheet is £31,038,573, representing a total increase during 1930 of £11,414,906. After this year's allocation of £1,500,000 reserves will amount to £13,813,928, representing over 50 per cent. of the issued ordinary share capital. The investments as a whole show an increase of £12,512,658, of which sum £9,955,333 is

attributable to the acquisition of Lever Brothers, while the balance of £2,557,325 represents mainly new acquisitions made with the object of extending the direct holding of Unilever to over 99 per cent. of the ordinary share capital of the five principal subsidiary companies.

Stock-in-trade figures do not appear in the balance sheets of the Unilever twins, since these are holding companies. In the accounts of Lever Brothers stocks appear at £1,421,867, against £1,580,403 in the previous year. Lever Brothers itself, however, is in part a holding company, and shareholders have no idea of the position of its own subsidiaries in this respect. It is impossible to ascertain, from the published reports, how far the group has dealt with the all-important question of writing down its stocks of raw material to current market values. In an article in the *Economist* of December 27th last it was stated that, on December 31, 1929, the stocks on hand of the entire group amounted to approximately £16,000,000, and that if these stocks were written down to market values, there would be an inventory loss of over £5 millions. This to-day is no doubt an under-estimate, as the prices of vegetable oils and whale oil have fallen further since December, 1930.

The market did not show any great enthusiasm over the Unilever reports, and is doubtless waiting for a fuller statement from the chairman at the general meeting. The ordinary shares of Unilever and Unilever N.V. are quoted at 38s. 9d. and 40s. respectively, against high levels of 76s. 3d. and 77s. 6d. last year.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 21.	April 23.

The impending Budget cast a shadow over the stock markets. The volume of actual business was better maintained than many dealers would admit, but speculative activity was conspicuously absent. Gilt-edged stocks lacked the stimulus of gold imports, the "setting aside" of amounts from the Bank's reserve more than offsetting the gold secured in the open market. Foreign bonds were affected by further political disturbances in Latin countries. Industrials held their ground until the middle of the week, but were subsequently overshadowed by New York, where the course of events was regarded with a certain trepidation. From the point of view of the "House," the sooner the Budget is out of the way the better. Conservative opinion, on the whole, is that a Budget based less on increased direct than on indirect taxation might, after the first shock, leave the way clear for security appreciation if (and only if) British trade showed preliminary signs of revival during the summer. A "bad" Budget (which relied mainly on new direct imposts) might cause an attempted "flight from taxation."

Gilt-edged were marked down slightly each day, on limited dealings. Both War Loan and Funding Loan were offered, but Local Loans showed a firmer front. India loans, after dropping initially, had a slightly better appearance. Australians were little affected by Mr Thomas's announcement of a War debt concession to Australia.

Further nebulous rumours were reflected in American offers of Brazilians, though the decline was of nothing like last week's dimensions. Argentines lost ground on "politics," and the Portuguese troubles caused a slight weakening of prices, though Spanish bonds, in which there is no active market in London, were scarcely affected by the flight of King Alfonso. German bonds were offered, and, among Far Easterns, Japanese lost ground on rumours of an impending new loan on a relatively high interest basis.

The Home Railway traffic figures were distressing, after every allowance for the absence of comparability owing to Easter week. The market was unwilling to take even small lines of stock, Midland and Scottish especially being marked down. Argentine rails were heavy, on political

developments and the lack of resiliency of the traffic figures. American rails continued their downward course, Canadian Pacific receding in sympathy.

The industrial markets became more pessimistic as the week advanced. The application of Gamages (West End) for a receiver (discussed on page 852) created a mild sensation, though the market had not been unaware of the company's financial difficulties. Courtaulds improved on bear closing, but subsequently reacted. Electrical shares—much the steadiest section of the market—were easier towards the end of the week, though Bournemouth and Poole were firm on the report (dealt with on page 852). General Electrics were harder on the receipt of an important contract. Motor shares were out of favour, except Thomas Tilling, which improved on nebulous rumours of coming road-rail developments. Brewery and tobacco shares receded, less on actual selling than complete absence of investment interest. The market found the Unilever report broadly reassuring, but was unable to understand the internal significance of many of the figures. Turner and Newall were weak, fears being expressed regarding the vulnerability of the company's position to Russian competition. Imperial Chemical reacted after a moderate advance on Northern buying. Bank shares had a declining tendency, but insurance issues held their ground with scattered gains.

The murkiness of the atmosphere in the oil market was perceptibly increased, public and professional buyers alike holding off on the view that the admitted difficulties of the world situation would induce a stringently conservative policy in coming dividends. Shells, Dutch and other leaders declined steadily. Rubber shares obtained no benefit from the Amsterdam announcement of a meeting to form an association for restriction of production. Tea share quotations scarcely moved, despite the satisfactory tone of the week's commodity auctions.

Business in the mining markets remained on a small scale. Kaffirs were more irregular, though West Rand were firm on the publication of a satisfactory report. Rhodesians were marked down in the absence of inquiries. The result of the Rhokana debenture issue was awaited without enthusiasm, the conversion rights being regarded as unattractive at the present level of the shares. Base metal prices showed fresh weakness, which was reflected in quotations for the London Tin group, despite the passing of the ordinance bringing restriction into force in Malaya. Rio Tinto were flat on the news of the Spanish revolution.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Substantial buying orders for industrial leaders caused nervousness among the short-interest at the beginning of the week, and specialities like Westinghouse and Radio Corporation, previously under selling pressure, enjoyed a sharp rally. Unsettledness, however, became more pronounced as the week proceeded, the weakness of motion picture and electrical equipment shares spreading to other groups. Steel shares declined sharply, U.S. Steel reaching a new low record. The public undoubtedly was disturbed by the fresh drop in steel operations from 52 to 50 1/2 per cent. of capacity, which was regarded as only one among several indications that the promised upturn in general trade was again wanting. Rails came under pressure for the same reason, and later utilities joined in the decline, while automobiles failed to benefit from the announcement that good trade was expected during the summer months as a result of the manufacturers' decision to introduce no new models this season. The market's vulnerability to depressing influences has confirmed the views of those who maintain that the earlier improvement in prices was based merely on nebulous hopes of better spring trade, like the much more marked rally of early 1930. The first quarter's earnings figures, which are being published, are not calculated to give much support to the market.

AMSTERDAM.

Important as an Austro-German Customs Union may become for the Netherlands, in view of her close commercial intercourse with Germany, the recent news on this subject has been a factor of surprisingly little influence on the Amsterdam stock market. As a result of better political news from Berlin, however, German bonds registered a substantial advance, under the leadership of Reparations Loan. The course of prices on Wall Street did not offer any stimulus to brisk trading, while the annual company reports so far issued and the news from business and industrial circles were not encouraging. Prices made a somewhat mixed showing. Industrials, especially artificial silks and General Art Silks, were very firm, without any specific reasons for the substantial advance being apparent. Tobacco shares formed a strong feature, recovering considerably on reports from the Dutch East Indies of favourable weather for the new crop. Sugar shares were, if anything, somewhat lower, the reports of the Paris Conference still being fairly ambiguous. The price of the commodity was maintained at about unchanged levels, and there was a total lack of new business of any significance. The tendency of rubber shares was on the easy side, in the absence of any particular news from London as to restriction schemes. Apparently the big Dutch producers are disinclined to make any concessions as to restriction, and in these circumstances there is an absence of the necessary unity for arriving at a satisfactory result. Oil shares were dull and registered only slight fluctuations. No further interest was shown in shipping shares.

INVESTMENT NOTES.

Stock Exchange Advertisements.—A "House" correspondent writes:—Many members have long regarded as inadequate the amounts spent on advertising by the Stock Exchange. The annual meeting of proprietors last Tuesday was the occasion of a spirited discussion on the value or otherwise of the advertisement which the Stock Exchange inserts in newspapers, the terms of which were the subject of sharp criticism from the shareholders' side. The Chairman replied that the £2,000 voted by the Trustees for advertising was handed to the Committee for General Purposes, and the Managers had nothing to do with the way in which it was spent. The expenditure of outside brokers, and the lavish extravagance of the bucket shops, are undoubtedly effective in bringing a good deal of business to both these institutions. The Stock Exchange is often urged to abandon the present rigid rule which prohibits members from advertising, and to allow brokers to appeal to the public for business. There are some 2,600 broker-members of the "House," and if half of the number were to use the Press as a medium for advertisement, the results, quantitatively at least, would be impressive. It is not generally recognised, however, how great is the volume of "advertising" output that goes on from week to week, through the individual efforts of Stock Exchange firms addressed to their own principals. Most clients are familiar with the monthly books of investments which reach them, the expense of which is much more considerable than clients frequently imagine. Numbers of broker firms write a circular letter once a week, once a fortnight, or once a month, to their clients, and upon these circular letters there is expended an amount of care and effort which can only be appreciated by anyone who has attempted to write them. Some brokers send out a nightly letter or report, which is done, as a rule, in their own offices. Others issue short lists of stocks and shares which are on offer in various markets. These lists are sent to country brokers and other clients likely to be interested. Jobbers themselves, while debarred from dealing with the public, supply brokers with lists, details, particulars and suggestions. As regards the official advertisements of the Stock Exchange (which advise people to deal only with members of the "House"), the great stumbling-block is the fact that no names of brokers are recommended to clients, who, having no broker of their own, frequently write to the Stock Exchange for a list of members. The Committee can scarcely recommend any one broker or firm in such cases. The prohibition against individual advertising by Stock Exchange members has been in force for over a century. One day it is possible that some change may be made in the rule. If, however, a referendum were to be taken of present Stock Exchange opinion, the result would be exceedingly difficult to forecast.

Should Trust Companies Publish their Investments?

An old controversy as to the desirability or otherwise of the publication of lists of investment trust holdings, has been given a new relevance by the considerable depreciation in the market value of the investment portfolios of certain trusts, particularly those of relatively recent formation. That the consensus of opinion among the companies themselves is against such publication may be inferred from the fact that out of 200 trusts of which particulars are given in the latest Investment Trust Manual published by a well-known firm of jobbers, only one-third included a list of holdings with their last annual report. The silent majority included concerns associated with some of the oldest and most successfully managed groups. The arguments advanced in favour of reticence are generally based on the danger of misunderstanding by persons who are unfamiliar with the canons of investment trust administration. It has been stated, for instance, that shareholders have shown needless alarm when a list has been found to include a number of securities whose market value is known to have depreciated during the period covered by the accounts, although, in fact, those securities may have originally been purchased at prices far below

contemporary market quotations. Again, private investors have frequently endeavoured to purchase securities given in the list of good investment trusts, only to discover that these were unobtainable by the layman. Further, misunderstanding has frequently arisen as a result of the investor's ignorance of the basic principle that only relatively high-yielding stocks are appropriate fixed-interest holdings for an investment trust, and that securities which may be admirable for "mixing" purposes in a very large portfolio, may be quite unsuitable for a person with limited resources. To those, like ourselves, who have consistently advocated the utmost possible publicity in company matters, these arguments appear far from conclusive. There is scarcely a single figure in any company report which is not liable to be misconstrued by the ignorant, but no one would dream of suppressing its publication on that account. By the nature of things, the subscriber to an investment trust issue gives the directors the equivalent of a blank cheque. He is, at least, entitled to learn how, in the exercise of their discretion, they have laid out his money. Where a trust is being run by a new group, whose abilities are not common knowledge, this check on the policy of those concerned is certainly in the public interest. In America, particularly, where the investment trust idea is comparatively new, the reaction against giving unlimited choice to directors has expressed itself in a demand, in some quarters, that directors should have no discretion whatever, and the "fixed trust" has obtained considerable popularity. As we have endeavoured to show in recent articles, there are certain fundamental objections to this type of investment, but those concerned would do well to recognise the legitimate feeling to which it gives an extreme expression. It would therefore be a graceful act on the part of those controlling the older British investment trusts, whose probity and wisdom are beyond the shadow of doubt, to publish lists of holdings on their own initiative *pour encourager les autres*. As these groups undoubtedly "set the pace" for the whole British movement, an ounce of example, in their case, would be worth a ton of precept.

Building Societies and Property Values.—The building society movement has now attained such vast dimensions in Great Britain that its problems are matters of national interest. The question of the maintenance of interest rates to lenders in a period of cheap money has been dealt with at length by various leaders of the movement in recent pronouncements. There has been a perceptibly downward revision by certain large societies during the last few months. The movement, clearly, is not unaware of the danger of attracting large amounts of "temporary money" whose withdrawal in a subsequent period of more active money-market conditions might cause serious embarrassment. There is, however, another problem of equal importance, to which Mr Harold Bellman, an acknowledged leader of the movement in the South of England, was well advised to devote the greater

INVESTMENT

by L. L. B. Angas.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- The Business Cycle and its influence on the prices of all securities.
- How to detect the beginnings and endings of booms and slumps in single industries.
- Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- Rules for timing both buying and selling and for taking profits and losses.
- Investment policy to be followed by Trustees at different stages of the Business Cycle.
- Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, 20/- London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

part of his speech at the recent annual meeting of the Metropolitan Building Societies Association. The 58 societies affiliated to the Metropolitan Association made new mortgage advances last year of £35 millions. In other words, these societies financed the purchase of properties—mostly new dwelling houses, situated mainly, though not entirely, in the South of England—with a selling value of at least £45 millions. According to Mr Bellman, "no tangible reasons are yet evident that cause (the building societies) to question the provision of another year's business of somewhat similar proportions to that transacted last year." Clearly, the policy followed by the societies is a vital factor in the present level of property values, since the effective demand for dwellings would contract substantially if building society facilities were restricted. Are present property prices at an economic level? Mr Bellman finds that, apart from certain well-known areas where house production is greatly in excess of local demand (which are avoided by all prudently managed societies) the prices of new houses are being fairly well maintained, although a definite decline in the price of building materials has been recorded. During 1930 the drop in the cost of materials averaged about 14 per cent., but as labour costs—which represent about 50 per cent. of the total—have been stationary, the total decline in the cost of production may be put at about 7 per cent. Mr Bellman frankly admits that he can find no evidence of a proportionate reduction in the price of houses. He suggests, as partial explanations (1) the inclusion by builders in the selling price of houses, of an increased number of accessories, by way of gas cookers, refrigerators, payment of legal charges, etc. And (2) a remarkable increase in site values in certain areas. Mr Bellman gave examples of such increases, ranging from 100 to 900 per cent., which he rightly described as a "virulent factor" in the price of property. The speaker may be congratulated on his insistence that the movement should recognise the danger of giving its support to artificial values. Economists will endorse his contention that the societies should not merely reduce their basis of valuation to take account of the 7 per cent. which has been "pared off the builders' costs," but should tighten the conditions under which loans are granted. It is no part of the work of the movement to encourage borrowers who are not prepared to put an adequate personal stake into the purchase price of their houses.

Gamages (West End) Position.—On Wednesday, on the application of Barclays Bank, Mr Justice Farwell granted leave to serve notice of motion for the appointment of a receiver of Gamages (West End), Ltd. It was disclosed that eight to ten writs had been issued against the company, together with a petition for compulsory winding up, and that the bank had taken its step at the request of A. W. Gamage, Ltd. The latter holds 90 per cent. of the deferred shares of the West End company and has guaranteed the dividend on its preference shares, together with the liability of the company to its bank, in respect of which debentures have been given by both companies. The West End company made a public issue, in September, 1928, of 375,000 7½ per cent. cumulative preference shares of £1 (guaranteed by the parent company), with convertible rights, and 125,000 ordinary shares of £1 at par. There were also 500,000 deferred shares of 1s. A further £450,000, it was stated in the prospectus, would be raised on mortgage at 6 per cent. per annum, redeemable over fifty years, from the Duke of Westminster's trustees, this being part of the agreement to grant the building lease. The prospectus estimated that the total proceeds (£500,000 from the public issue and £450,000 from the mortgage), would cover the cost of building (£600,000), of shopfitting, etc. (£100,000), and leave available £250,000 for working capital and the costs of the issue. It would appear that the building costs exceeded the original estimate, and that it was necessary to secure additional assistance for the financing of stocks from the company's bankers, in respect of which debentures were issued both by the West End company and the parent concern. The West End store was opened for business only seven months ago, and, presumably, has been affected by

trade depression. Even the parent company, with its well-established business, admits in an official statement that its own turnover showed a considerable decrease for the year ended January, 1931, and a small trading loss was made. The Holborn company has already paid the preference dividends of the West End company up to January 31st last. The directors are unable definitely to estimate what further loss, if any, will fall upon the parent company in respect of its West End commitments, though they do not anticipate that any portion of the claim of Barclays Bank will ultimately have to be borne by them. They state their belief that their own concern will remain in a position to meet its engagements and continue its business, but do not express any opinion as to the fate of the West End company. Dealings in all the shares concerned became largely nominal on the announcement. The West End 7½ per cent. preference shares, which touched 20s. 3d. in 1929, were called 4s.-6s., and the West End ordinary shares 1s. 3s.-2s. 6d. A. W. Gamage preference were called 5s.-7s. and the ordinary 2s. 6d.-5s.

Rolls-Royce.—The accounts to December 31 last suggest that the market for luxury cars may have felt the draught of trade recession. Trading profit at £136,097 shows a decline of £51,614, as compared with the fourteen months to December 31, 1929—equal to about 15 per cent. on the equivalent twelve months' figure. The unchanged dividend of 10 per cent., however, remains well covered by earnings:—

	Year to 14 Months to Oct. 31, 1928.	Dec. 31, 1929.	Year to Dec. 31, 1930.
Income	185,769	203,456	148,671
Income tax	30,000	35,000	20,000
Directors' fees	...	1,750	1,500
Net profit	155,769	166,706	127,171
Brought forward	30,295	64,685	66,077
Ordinary dividend:			
Amount (before tax)	81,379	95,314	82,376
Earned %	22.8	21.3	17.8
Paid %	10	10	10
Reserve	40,000	40,000	15,724
Other allocations	...	30,000	30,000
Carried forward	64,685	66,077	65,148

A further amount of £15,724 is added to the consolidated reserve fund, which stands in the balance sheet at £694,277, while £30,000 is again allocated to pension fund. The carry-forward at £65,148 is slightly lower than the amount brought in. The balance sheet reveals a strong liquid position, with a cash item of £174,411, debts to the company of £275,494, and investments, most of which are in British Government securities, of £272,679. Creditors total only £259,051. At their present price of 35s. the £1 shares give a yield of about £6 per cent., after allowing for dividend.

Bournemouth and Poole Electricity Supply Company, Ltd.—A satisfactory state of affairs is disclosed in the latest report. Gross revenue, derived from sales of power, rose last year by £19,407 to £265,287, and the net profit was £4,403 higher at £119,814:—

	Year ended 1928.	1929.	December 31, 1930.

Inc. or dec. in carry-forward -922 +2,531 +6,361
 * After deducting allocation of £35,000 (in each year) to depreciation and renewals reserve. † After tax. ‡ Gross.

The number of units sold during the year rose by over 16 per cent. to 18,131,027, while the applications received at December 31 last were 5,128 kilowatts higher at 42,040 kilowatts. Apart from a decline of £3,157 to £22,632 in interest and dividends received, there were increases in all items of revenue. Expenses rose by £13,746 to £131,451. During the year a further 5,000-kilowatt set was installed in the company's generating station. Since the June quarter, 1930, there has been a reduction in the flat rate for lighting supply. Supply has been made available in the area included in the Wimborne and District Electricity Special Order of 1929, and further development is taking place. The Electricity Commissioners have issued an order for the electrification of an additional large area in the county of Dorset, which is awaiting Parliamentary sanction. At their present price of £3 the ordinary shares yield £5 3s. 1d., allowing for the final dividend of 9 per cent.

Alliance Trust.—Despite the trade depression of the past twelve months this old-established investment trust has increased its earnings. Revenue has risen by £16,218 to £692,152, and the net profit, at £359,550, is higher by £3,740. The capital, however, has been increased by a bonus issue of £100,000 preference stock from reserve:—

	Year ended January 31st. 1929.	1930.	1931.
Net profit	315,652	355,810	359,550
Preference dividends	57,200	71,784	69,420
Ordinary dividend:			
Amount	173,250	191,742	194,272
Earned %	35.59%	38.27%	37.43%
Paid %	25%	25%†	25%
Contingent fund	80,000	90,000	95,000
Increase in carry-forward	5,202	2,284	858

† And capital bonus of 10 per cent. in preference stock.

During the year investments increased by £785,951 to £10,840,046. It is stated in the report that the book value of the investments was less than their market valuation on January 31st last. Activities in the company's mortgage fields (which, however, account for only 13 per cent. of the total investments) were unfavourable, and resulted in increased interest arrears. The authorised capital has been increased to £3,250,000 by the creation of 250,000 new £1 shares, some 50,000 of which are to be offered to holders of ordinary shares at a premium of £3 10s. per share. These will rank *pari passu* with the existing ordinary stock as from July 31 next. At 57½ the ordinary stock yields £4 7s. 4d. per cent. Stockholders in the past, however, have received an additional "yield" by way of capital, the company having made six new issues of ordinary capital (including that now proposed) since 1924, on terms securing total share premiums of £1,382,500 to the company and substantial bonuses to stockholders.

United Molasses Meeting.—The directorial explanations and regrets offered to shareholders at the United Molasses meeting last week merely emphasised the fact that "someone had blundered." Mr. F. K. Kielberg, the chairman, admitted that in the estimation of future business a great error had been made, but explained that up to the spring of 1930 there were no signs of trouble on the horizon; indeed, between September, 1929, and May, 1930, record results were achieved. It was on the strength of these that a bonus share issue was made in April, 1930. Criticism was offered by shareholders at the meeting both on this account and on the subject of the payment of the preference dividend. On the major issue—the policy of expansion which has left heavy commitments as a millstone round the neck of the company—the excellent intentions of the board cannot be accepted as sufficient justification for their marked lack of foresight. The headstrong pursuance of a production policy which takes no count of the possibility of market fluctuations is a dangerous speculation. The company now awaits a revival

in the molasses trade, and it remains to be seen how far events will bear out the chairman's suggestion that, the production of molasses in Cuba and the West Indies having greatly declined, a very moderate revival in American consumption may result in a demand for the company's Eastern supply, which at present is being carried as a liability. Shareholders will await with some anxiety the promised interim report in September.

Fox Films Reorganisation.—The important feature of the new financing announced for the Fox Film Corporation is the wealth of banking support which it brings to the board of directors. Mr Wiggin, chairman of the Chase National Bank, becomes a director, and is joined, among others, by the president of the First National Bank of Boston, the president of the First National Bank of Illinois, the chairman of the First National Bank of St. Louis, the president of the Corn Products Company and Mr Cornelius Vanderbilt. The reorganisation of the company involves fresh financing to the extent of \$75 millions, and it is understood that \$30 millions will immediately be issued in the form of 6 per cent. five-year convertible debentures in New York. The balance will be raised by the subsidiary companies, and for the most part will be placed privately. The proceeds of the issue are required to meet maturities of about \$55 millions falling due this month, which may refer to the completion of the purchase of the controlling interest in Loew's Incorporated, an operation which brought about Mr William Fox's downfall. Apart from this public finance, it is understood that \$28,800,000 will be raised on the security of the company's holding in Loew's Incorporated. This holding will be transferred to a specially created holding company—Fox Film Securities Corporation, a name which bears the imprint of the bankers' work. If the Chase National Bank is in future to be behind the Fox Film Corporation, the operation may open a new chapter in the American film industry, which hitherto has been somewhat regardless of economy and conservative finance. For the investor in this country the announcement is chiefly interesting in its relation to the position of the Gaumont-British Picture Corporation. A misstatement regarding the holding of the Fox Film Corporation in the Gaumont-British Picture Corporation has led to a letter from the company explaining the situation for the first time in authentic detail. The Gaumont-British Picture Corporation is controlled, through a majority share interest, by the Metropolis and Bradford Trust, and the control of the trust is vested in 10,000 voting shares, of which 4,950 are held by Messrs. Ostrer and 4,950 by the Fox Film Corporation. The balance of 100 shares is held by the independent chairman, Lord Lee of Fareham, who was nominated and appointed by the two parties jointly. In the event of disagreement between the two parties the ultimate control of the company, therefore, rests with Lord Lee. The latter's position is not altogether a happy one, seeing that the Fox Film Corporation is already believed to have a grievance against the Gaumont-British in that

HARRIS, FORBES & COMPANY LTD

GOVERNMENT, MUNICIPAL,
RAILWAY, PUBLIC UTILITY,
INVESTMENT TRUST AND
INDUSTRIAL FINANCING

the latter has not automatically shown Fox films in its circuit of theatres. So unsatisfactory is the position of the Fox Film Corporation—which put up the greater part of the money to enable the Metropolis and Bradford Trust to obtain a hold of the Gaumont-British, but did not secure voting control—that it is difficult to believe that the new directors, especially the bankers, will be content to leave matters as they stand. They may, indeed, desire to secure either a greater return from their British investment or a sale of their holding.

Whaling Finis.—The Norwegian whaling companies have decided to lay up their fleets in the 1931-32 season. This misfortune involves the throwing out of work of 11,000 men and £10,000,000 of capital. After very high profits had been made in the 1929-30 season, when the price of whale oil was as high as £30 per ton, the whaling companies sent out larger and larger fleets, and equipped the whalers with increased gun capacity. Forty-two floating factories, with 230 hunting boats, were seen in the Antarctic fishing grounds this winter, and record catches were obtained. Yet before the fleets had set sail last autumn the market in whale oil had become nominal. Most of the Norwegian companies had sold their catch forward to the Unilever group in the early part of 1930 at £25 per ton. The British-controlled Hector Whaling Company, on the other hand, missed the market, but, nevertheless, sent out a fleet in September having a gun capacity 25 per cent. greater than in the previous year. The catch of the Hector Whaling Company is reported to be 280,000 barrels, as compared with 200,000 barrels in the previous season, and this huge quantity will have to be stored until the Unilever group re-enter the market. Unfortunately for the Hector Whaling Company, the Unilever group find themselves overburdened by the record catch of the Norwegian Companies, which they had purchased in advance, and have intimated that they will be unable to receive any oil from the 1931-32 catch. Whether the Unilever group will take it upon themselves to acquire next year the unsold 1930-31 catch of the Hector Whaling Company, which, after all, will depress the prices of edible oils as long as it overhangs the market, remains to be seen, but they have intimated their willingness to give preference in their future purchases to those companies which decide to lay up their ships for the present.

Lead Restriction.—In view of the recent decline in the price of lead and its associated products, the rumour that proposals are on foot to add the metal to the long list of commodities whose output has been restricted by agreement will cause little surprise. The market price has recently touched the lowest point for twenty-seven years, falling from something like £26 per ton in April, 1929, to £11 12s. 6d. in March last; while spelter and silver have suffered similar declines, the former reaching the lowest level in its history. While it is almost impossible to obtain accurate statistics of lead stocks, the known warehouse stocks of the United Kingdom suggest that supply has very considerably outrun demand during the last few months, and a serious glut has developed. As a result of negotiations which have recently been proceeding, it is understood that proposals for the restriction of output have been provisionally accepted by most of the producing countries, but that America and Burma are noteworthy exceptions. So far as is known, the proportion by which production is to be reduced will probably be about 15 per cent. of the 1930 output, which, it is hoped, may result in stocks being drawn upon to the extent of about 2,000 tons per month. Whether such a scheme will have to make the same rough passage as has been the lot of similar proposals for other commodities can only be determined by experience. A suggestion has been made in one quarter that the adhesion of America to the plan is a matter of little consequence, in view of the fact that her home market is protected by high tariff walls, behind which the price of lead is maintained above world parity. This contention cannot be accepted as valid. As an important exporter America is clearly in a position to upset any arrangement for restrict-

ing output arrived at without her consent. With regard to Burma, it is believed that an arrangement has been entered into by which the restriction scheme will not apply to the Burmese producers, whose costs are lower than elsewhere; but that Australia will restrict her output by a proportion greater than that applying in the case of the other participants in the scheme. The importance of this proviso is obvious. The Mount Isa Mines expect, under normal conditions, to produce 70,000 tons a year, beginning this summer, an output which in the present condition of the market could only serve to aggravate the situation.

Holland Amerika Line.—This company, which is one of the largest Dutch shipping concerns, has suffered severely from the depression in the freight market:—

	(Thousand guilders.)		1927.	1928.	1929.	1930.
Gross profit	6,876	4,410	3,477	2,552		
Depreciation	4,970	4,520	4,806	3,723		
Interest	1,292	1,475	1,131	1,185		
Net profit	0,614	-1,985*	-2,460*	-2,356*		
Capital	25,000	25,000	25,000	25,000		
6% Bonds	30,000	28,500	27,000	25,500		
Reserves	27,938	26,067	9,012	6,656		
	* Loss.					

The financial position is disquieting. Reserves have declined from 26 million guilders in 1928 to 6.6 millions in 1930. The company now owns 29 steamers, with a value of 109,820,164 guilders, from which depreciation has been written off to the extent of 73,320,164 guilders, leaving the book value at 36,500,000 guilders.

General Mining Group.—Our mining correspondent writes:—Interest is chiefly concentrated upon the West Rand Consolidated. The 1930 report of this undertaking shows a working profit of £238,100, against £187,500 in 1929 and £69,900 in 1928. After providing £31,250 for interest and the like, the balance is transferred to capital expenditure account. The indebtedness to the parent undertaking has been reduced to £216,100—an amount which should easily be paid off during the current year, apart from the possibility of its extinction by issue of the reserve shares. At one time discouraging conclusions regarding the prospects were drawn in view of the necessity of sinking a new shaft in the South. Thanks to the satisfactory nature of the recent developments, the prosecution of this work is in abeyance. Upon resumption, an expenditure of about £286,000 over three years is envisaged. At 4,039,000 tons the ore reserves display a small increase, the value being the same as before. As the outcome of last year's labours, the credit balance of the Meyer and Charlton has been increased from £86,360 to £111,150. The latter sum approximately represents the surplus of cash assets, and is equivalent to over 10s. per share. No distribution has been made since 1927; the next one will take the shape of a liquidation distribution. The New Steyn continues to mark time, but the miscellaneous revenue in 1930 proved insufficient to cover expenses, the credit balance being drawn down by £3,570 to £19,800. At the Witpoort Gold Areas a revaluation of the ore reserves was found necessary. The present total of 364,000 tons, value 6.1 dwts., shows a small decrease in quantity and increase in average. A glance at the balance sheet suggests that little further work will be practicable without the raising of fresh funds.

Anglo-American Group.—A somewhat mixed showing is made by the statements for 1930 of the Rand subsidiaries, which come to hand as we go to press. The less favourable developments at the Brakpan resulted in a decline in average revenue; and as an increased footage was performed the cost average rose. A fall of over £100,000 in the working profit necessitated a small cut in the dividend total. A further but slight recession in profits during the current year is foreshadowed. With the Springs, on the other hand, the 1929 results were improved

upon, thanks to some expansion in the tonnage milled, and the dividend rate was raised to 37½ per cent. An expansion is shown in the ore reserves, and an increase in the 1931 profits is indicated. At the West Springs, an advance in tonnage milled with reduction in the cost sufficed fully to offset decline in grade. The dividend, however, was maintained at 10 per cent. Little change is shown in the ore reserve position. The information given in relation to the Daggafontein was largely anticipated by that published in connection with the recent share issue. The various documents will be discussed in detail in our next issue.

St. John del Rey.—Partly in view of the declaration of a "centenary bonus," it had been anticipated that the report for 1930-31 of this remarkable Brazilian gold-mining enterprise would make a good showing. On the financial side the anticipation proves to have been amply warranted. The net profit amounts to £124,400, against £103,770; and after the payment of a total of 12½ per cent. in place of 10 per cent. the increased balance of £81,370 remains. Of this, £40,000 is transferred to capital working account, leaving £41,370 to go over, or rather less than the amount brought in. The financial position is strong, the company possessing gilt-edged investments to the value of over half a million. The expansion in last year's earnings was attributable to an abundant supply of native labour—due partly to the depression in other industries, a condition of affairs obtaining in the Transvaal. This factor permitted the treatment of a larger proportion of lower grade ore, and the resultant economy in the cost ratio more than counterbalanced the decline in the yield average. On the development side, however, a less favourable story has to be told. Exploration in the lowest level resulted in the opening up of a large quantity of mineral, but of low grade, and at present indications of improvement are lacking. On the other hand, it is believed that lateral exploration in the upper levels will be attended with good results, and increased attention is to be devoted to some of the company's other properties. Still, the position at the moment is that the ore reserves are down by 177,000 tons to 1,278,200 tons, representing about four years' supply at the 1930-31 rate of exhaustion.

Globe and Phoenix.—Distinctly better results were secured last year than in 1929—although the difference was not so great as might be inferred from the payment of 40 per cent. in place of 20 per cent. The development position permitted the treatment of higher-grade ore, giving an operating profit of £126,500, as against £103,800. No violent change is shown in the appropriations for income tax and depreciation. In respect of 1929 the directors followed a conservative policy, transferring £25,000 to a special development reserve. This left the slightly enhanced balance of £19,450 to go forward. On the present occasion £37,200 is carried over. The ore reserves are now placed at 109,200 tons, gross value £567,840, against 100,500 tons, value £485,520, twelve months previously. A study of the illuminating report of the consulting engineer suggests that development prospects are distinctly hopeful. The price of the shares includes an interim dividend of 20 per cent.—as usual, tax free.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Bank of Czechoslovak Legions, John Lewis and Co., Llanelly and District Electric Supply, English Electric, London County Freehold and Leasehold Properties, Paquin, Rio Tinto, Nundydroog Mines, and Balaghat Gold Mines. At the annual meeting of the Llanelly and District Electric Supply Co., Mr A. H. Beatty informed shareholders that the company added 847 new consumers during the year, mostly in the domestic and small power load, a total of 24,546,000 units being sold, as compared with 23,675,000 units for 1929.

Presiding at the annual meeting of the London County Freehold and Leasehold, Sir William Burton said that the board believed that the future would see an increase in the demand for flat accommodation in London, and under present-day costs it would appear to be almost impossible to build at rents to compete with the class of flats which the company mainly owned. At the Rio Tinto meeting Sir Auckland Geddes said that in spite of output restriction, stocks were not far short of four months' supplies, and as one quarter of 1931 had already gone, the world's copper mines would only have to produce for five months from now to meet world requirements for this year.

COMPANY MEETINGS, &c.

BANK OF CZECHOSLOVAK LEGIONS,
PRAGUE.

DIVIDEND 8 PER CENT. AS LAST YEAR.

The tenth annual general meeting of the Bank of Czechoslovak Legions, Prague, was held on April 12th at the Lucerna Hall, Prague.

Dr. Rudolf Rase, the chairman, who presided, said: At the last general meeting our general manager had already stated in his report the beginning of the economic crisis, which, during the past year, culminated in a world crisis and adversely affected every enterprise in the country. We have to thank the far-seeing and prudent management of the leading officers and especially of our general manager, Mr. Sip, that the result for last year was not less favourable than that of past years. You will hear from Mr. Sip's report how advantageously our bank enlarged its activity in Slovakia by affiliating the Slovak General Credit Bank in Bratislava and other smaller banks in Slovakia and Carpathian Russia. We have now a dense system of branches and affiliated institutions throughout the Republic. This was only achieved by hard and systematic preparatory work since the first years of the existence of our bank, which has been of importance not only for our bank, but for the whole State. By serious and productive work in the banking business, we are gaining confidence for a collaboration of the Czech population with that of the countries which were united with the historical countries by the great political change of 1918. Our activity in Slovakia and Carpathian Russia is gratefully acknowledged there by the entire population and commented on most propitiously in the newspapers. This result of our work caused us great satisfaction and gives us full confidence in the further growth and development of the bank in the future. (Applause.)

In the name of the board of directors and of the auditing committee and assuredly of all the shareholders, I take this opportunity to wish Mr. Sip, who this year will attain his fiftieth birthday, good health, that he may continue further his fruitful work. (Applause.) In the name of the board of directors, of the auditing committee and of the shareholders, I have the duty to thank heartily, besides Mr. Sip, also his assistant, Mr. J. Khyn, the managers, the staff in the main office and in the branches and affiliated banks for their good and conscientious work. They merit thanks in the highest degree. The relations between the management and the staff were, as in the past, most friendly. I beg to state that during the past year no claims from shareholders against the management or staff were received.

The general manager, Mr. Sip, turned to the balance sheet and gave an exhaustive explanation of all its items.

The net profit amounts to Kc. 7,716,887.20 and the payment of a dividend of 8 per cent., i.e. Kc. 16.0 per share, as last year, was voted by the assembly. After the usual provision, the reserves reached Kc. 65,000,000.0, i.e. 92.86 per cent. of the capital.

ELECTION OF DIRECTORS.

The retiring directors, General Manager Mr. Frantisek Sip, President Dr. Rudolf Rase, Second Vice-President Mr. Stanislav Zavadilik and Mr. Eduard Nop were re-elected. The members of the auditing committee, Mr. Václav Vondrak and Mr. Theodor Ruzicka, were also re-elected.

At the close, the board of directors held a meeting and re-elected Dr. Rudolf Rase as president, Dr. A. Straka as first vice-president, and Mr. Stanislav Zavadilik as second vice-president.

STATEMENT OF CONDITIONS AS ON DECEMBER 31, 1930.

JOHN LEWIS AND COMPANY, LIMITED.

THE "PARTNERSHIP" SYSTEM.

INCREASED EFFICIENCY.

CURRENT YEAR'S FAVOURABLE START.

The third annual general meeting of John Lewis and Company, Limited, was held, on the 10th instant, at the company's premises in Oxford Street, London.

Mr. J. Spedan Lewis (the chairman of the company) remarked that the report gave all of the information usually withheld from the shareholders until the speech of the chairman at the meeting, and that he had only one supplementary observation to make before inviting questions—namely, that the monthly profit and loss accounts for February and March, the first two months of the new trading year, showed that considerably more profit had been earned than in the previous year.

In view of the very heavy fall of values in the past 12 months and of the specially unfavourable conditions of weather and otherwise he had been agreeably surprised at this advance in these particular months.

The accounts and report and the other motions before the meeting were all adopted unanimously.

After a vote of thanks to the chairman had been moved and seconded, the treasurer of the Industrial Co-partnership Association, Mr. F. W. Rafferty, J.P., took that occasion to express its strong approval of the principles and methods of the company.

The following are sections of the report which was issued with the accounts:—

The turnover was greater than in the previous year by 14.4 per cent. The total stock as a percentage of the total turnover at the end of the year was smaller by 3.2 per cent.

This growth of the sales and improvement in the proportion of the stock are the fruit of the drastic measures that we have been taking to improve the efficiency of the buying and stock management ever since the two businesses came into our hands in the autumn of 1928.

The long-established policy of the old business of John Lewis and Company seemed to us to be sound, and accordingly we have held to it strictly. But recent practice of that policy seemed to us to admit of substantial improvements, and those improvements we set to work immediately and wholeheartedly to make. As we have just said, the figures that we are now reporting to you are their fruit.

In the main the improvement was hardly more than avoidance of the mistake of supposing that small amounts of salary are the same thing as a low rate of working expense.

It seemed to us that in many of the positions in these two houses—and particularly in the more important positions—workers genuinely able to earn far higher incomes would prove relatively cheaper, and they are proving so.

The new part of our business (the former Harries premises) is now no more of a worry to us than is the old familiar business of John Lewis and Company, or than is the business of Peter Jones, Limited, of Sloane Square, which passed in a really desperate condition into our hands 17 years ago, and which has now, with hardly any advertisement, a turnover that is already nearly six times as large, and that grows steadily from year to year, and that is producing instead of the former substantial yearly loss a profit that amounts to a very fair return upon the whole of what was at one time only dubiously existent capital.

We felt that we ought to make this reference to the business of Peter Jones, Limited, in case you may have some doubt whether this improvement in your own business over the results of last year may not represent to some serious extent a mere *tour de force* or a mere stroke of luck, or be in some other way a matter of appearance rather than of reality. No such suggestion could be made in the case of the business of Peter Jones, Limited, and that business, which has increased in each of the last six years, has broken again, even in this year, all of its previous records.

TRADING AND PROFIT AND LOSS ACCOUNT.

The balance of the trading account is £162,713, against £132,056 for last year. It might, perhaps, be more strictly accurate to say that this improvement of £30,657 is really an improvement of £39,490, because, as you may remember, last year's figure of £132,056 would have been worse by £8,800 if the chairman had not taken, as we informed you at the time, upon his personal account certain expenses that he considered in the light of the event to have been unfortunate experiments. This year there have been no such items.

The balance sheet shows a balance of profit carried forward into this current year of £52,457. The preference dividend of £26,250, due February 1, 1931, has been paid, and it is now proposed to declare for the purpose of our special system of partnership a final dividend of £14,000 (2 per cent.) upon the ordinary shares.

This will make 5 per cent. for the year and will leave a balance in hand of £12,207, against a comparable figure of £11,651 last year.

THE OUTLOOK—ATTEMPT OF COMPETITORS TO PREVENT SELLING AT LOW PRICES.

So far as general conditions go we see at present no reason to suppose that we shall fail to maintain through this coming year such results as we are now reporting to you, and we shall be disappointed if we do not make considerable progress, although it is true that, like all traders, we must expect to have to meet competition that will be specially strenuous when times are specially hard—and times were never harder than they are to-day—and although it is true that in our own case such competition is likely for two reasons to be exceptionally keen.

In the first place, we cannot expect that our competitors will like our partnership system. The profits, that they have to pay out as ordinary dividend with little, if any, advantage to the business itself, become under our own system a supplement of the pay-sheet and at the same time a source of fresh capital in the position of ordinary share capital but entitled to a dividend of only 5 per cent. Our present pay-sheet is well up to the normal percentage of turnover for a business of our kind, and the money and shares, that will have been distributed in respect of this year by way of what we call partnership benefit, will have increased that pay-sheet by a further 15 per cent. (disregarding only that small minority of the staff who were for one reason or another disqualified for participation in this benefit). There is a reference to this fact in the report of the auditors.

And this is no more than a small first beginning! There seems to be no doubt at all that as our business grows the distribution will reach 30 per cent., and there seems to be a real chance that in the long run it will go much farther.

Inevitably as years pass the cream of the personnel of the trade will come to us. It is happening already to no small extent. Within the last two years, for example, three of the very best of the buyers of two of our largest competitors have left them in order to join us. The example of these and of other distinguished newcomers will inevitably attract notice in the world of our trade and it will inevitably increase the inclination of other leading experts to join us similarly.

Moreover, if we are going thus to get the cream of the buyers we shall be sure, quite apart from the attractions of our partnership system, of getting also the cream of the selling staff. For the cleverest sellers must naturally prefer to work with the cleverest buyers. And this also is happening already to no small extent.

Now modern industry is very largely a matter of getting the cream of the workers. And our partnership system not only enables us to do that, but also enables us at the same time to sell so cheaply that, at present at all events, we find it practicable to make it an absolutely hard-and-fast rule never knowingly to allow ourselves to be undersold and to be content in a multitude of cases with a price substantially lower than the lowest for which our intelligence department can find the same article in the shops of any of our competitors.

To put it in the simplest terms, all profit in the strict sense of the word, that is to say, what some economists call "windfall" is transferred by our system from capital to labour, but only on condition that labour invests it in the business for a fixed return of 5 per cent. This means in effect, as we have said, that the profit and loss account will be heavily subsidised at the expense of what would be otherwise ordinary dividend, and that the business will accumulate at the same time in the position of ordinary share capital new money upon which it will have to pay only 5 per cent.

Obviously from the standpoint of our competitors we are breaking all the rules of the game and getting thereby an advantage that they simply cannot meet. Of course they can—and presumably they will—comfort themselves with the reflection that the utmost number of customers that we could possibly serve in the whole of our floor space would still leave plenty for them. But still we can hardly expect them to love us, and we must be correspondingly on the alert to defend ourselves against more than ordinary competition.

A chief means of such defence must be publicity, and we feel accordingly that we ought thus publicly to inform you that, in an interview on February 23, two of the directors of a company making a well-known brand of woven underwear told us that their company would cut off our supplies unless we would undertake to

raise our prices nearly, if not quite, to the level of those of one of our competitors.

At that time the average selling prices of our competitors for the same series of articles were above our own by a little more than 12 per cent., and they had complained to the manufacturers that we were selling too cheaply.

We pointed out that the chairmen of the great banks and many other leaders of opinion have been expressing for some time very grave anxiety at the great injury that our country is suffering precisely because retail prices are so high.

We suggested also that it must surely be to the interest of a manufacturer that his goods should be retailed as cheaply as possible and his market thereby widened, and that a manufacturer who has confidence in the merit of his goods can surely afford to ignore threats or hints of withdrawal of custom by retailers who desire higher profit, because those retailers will not really dare to put their cheaper competitors into the position of having a monopoly of the goods in question.

In our own view manufacturers and wholesalers ought to supply without any discrimination any retailers who are prepared to pay the price that they are asking and to make their payments promptly.

The two directors suggested as a way out of the difficulty that they might supply us with the same goods but without the branded name upon them, but they could not agree to our informing the public by window notices or otherwise that the goods really were the same, and they maintained that, as all or almost all of their other retailers charged about the same rate of profit as the particular competitors who had complained to them, they could not take the risk of losing their custom by supplying us if we persisted in selling the goods so cheaply.

We said that if their fears were to prove well founded we would advertise the facts at our own expense and risk, and we suggested that in the long run the public demand for their goods would be rather increased than diminished, but they persisted in taking the contrary view.

Accordingly, we have arranged, as we told them that we should, to get these goods through middle-men (which means, of course, that we have to pay rather more for them), and we shall exhibit with them in our windows a reference to this affair and a mention of our disinclination to allow our policy to be dictated by our competitors.

Of course, it will happen only rarely that the particular competitor who is at the back of action of this kind on the part of one of our suppliers will fail to prevent his own name from becoming known to us.

Within the last few days, for example, the Drapers' Chamber of Trade of the United Kingdom has written to us that it has received from one of its members, whose name, of course, the Chamber does not mention, a complaint that we are selling some other goods too cheaply. The letter amounts to a request that we shall raise our price.

In this case the manufacturers of the goods in question are well known to be far too confident of the public demand for their goods to be disposed to narrow their own market by helping any retailers to make them dear. Inquiry has shown that our buyer has not exceeded the wide discretion that we give to all our buyers to sell very cheaply, and we are replying accordingly to the Chamber.

It may seem to you that even an organisation so large, so well provided, and so firmly established as our own may be in some real danger if the powers of the great modern syndicates are going to be exerted against it in this and in other ways.

Of course, our chairman reckoned with that possibility when he decided to devote his own career to this attempt to put into practice upon a scale sufficient to be a fairly impressive demonstration one possible method of reforming industry from within.

In drafting this scheme he felt that, in view of the powers that were to be attached to the chairmanship, of which he was to be the first holder, he ought to put his own estate into such a position that he would have to lose practically the whole of it, that is to say, somewhere about a million pounds before any of the shareholders, either in your company or in The John Lewis Partnership, Limited, could lose a penny; but, in view of the size of his estate, he intended to take neither interest upon his capital nor pay for his (wholtime) services, and, that being so, he naturally considered this step with very special care. His decision to take it was based upon the reckoning that, if it was in the power of ordinary retailers to prevent the arising in their field of a new type of industrial organisation, they would most certainly not have failed to prevent the arising of the co-operative society.

For the co-operative society is based upon the idea of distributing among its consumers the profit that attached formerly to ownership, just as our own new kind of partnership is based upon the idea of distributing that same profit among the workers, from top to bottom, in proportion to their rates of pay.

Obviously the former idea must be no less provocative than the latter of the hostility of the old order and our chairman reckoned that if the old order failed, as it did, to prevent the development of the co-operative society it would fail likewise to prevent the development of his own idea.

As a matter of fact we believe that our system will beat the co-operative society itself, because it will both get the first choice of the workers and also get from them a better quality of work than even they would give otherwise.

That it can be suppressed by competitors of the old type we have no fear at all.

After all, a business is in reality simply a combination of two masses, a mass of workers and a mass of capital. Our system must plainly secure the best workers—it is in fact, as we have said, already securing them—and it solves the problem of capital by obliging the workers to do what, as a whole, they would not have the imagination and the self-control to do of their own accord—namely, to become capitalists themselves, saving a large proportion of their total earnings and investing it in their own business, and to be content with a fixed cumulative return of no more than 5 per cent.

Our system claims in fact to be a useful experiment in the direction of amending the capitalist system. It is obvious that our own, to say nothing of other countries, is suffering grievously from persistent industrial unrest and that this injures not merely the workers themselves but the whole community, and we all know that many people have come to believe that we shall never have a general state of happiness until the capitalist system has been abolished.

To us this seems to be plainly untrue. To us it seems to be plainly true that capitalism is indispensable to-day and will continue to be indispensable for a very long time, at all events, to come. But it seems to us to be no less plainly true that the capitalist system needs amending.

It has evolved in such a way that some (comparatively few) owners of money and most dealers in money and all possessors of great managerial ability are in a position to take for themselves more than is really expedient for the general good, and, in the main, being human, they take it.

The general mass of the community are, as we see, too little gifted with imagination and with strength of character to cure the trouble for themselves by doing voluntarily that which such systems as ours will oblige them to do.

Civilised communities have come to see that human nature makes it necessary that there shall be laws against excessive usury, but they have not yet come to see that the unlimited dividend and the unlimited overpayment of financiers and managers are themselves likewise forms of mere overcharge and peculiarly disastrous because of their effect upon the fruitfulness of almost all labour and upon the spending-power of the general mass of the nation.

But in any case, Parliaments cannot do very much more than make compulsory upon everybody reforms that a minority have already made voluntarily and have shown to be not only desirable but practicable.

That is why we hope and believe that our own and similar experiments will prove to be a much needed new form of political work. Reformers have been content for too long to tackle industrial problems from outside.

In view of these general considerations, to say nothing of our somewhat remarkable results for this particular, peculiarly testing year, we venture to hope that you will share our own views, that, as long as the people of London require clothes and furniture, we are reasonably certain of at least a modest prosperity.

APPOINTMENT OF DIRECTORS AND AUDITORS.

In accordance with the articles, all the directors (except the chairman) retire, and, being eligible, will, with the exception of Mr M. Watkins, offer themselves at the general meeting for reappointment. The development of the functions of Mr Watkins in our group of companies as a whole has made it desirable that he shall join the board of The John Lewis Partnership, Limited, and leave that of your company, in accordance with our general policy of seeking to keep the directorate of each of our companies as separate as possible, so that each director may be able to devote himself single-mindedly to the particular province of his own company.

In addition to the previous directors, Mr R. J. Ledbrook, to whose very important services a reference has been made in this and in our previous report, has been recently appointed to the board. This appointment, which now requires your confirmation, is in accordance with our general policy of securing as far as possible that our directors are wholtime workers in the business that they are undertaking to direct.

Messrs Price, Waterhouse and Company, were reappointed auditors for the year 1931-32.

LLANELLY AND DISTRICT ELECTRIC SUPPLY COMPANY, LIMITED.

IMPROVEMENT IN PROFITS.

The annual general meeting of this company was held, on the 15th instant, at Winchester House, London. Mr A. H. Beatty, O.B.E. (the chairman), presided.

The Chairman, in moving the adoption of the report and accounts, said: When we met in April last the conditions looked very promising for a substantial increase in the company's profits, and for the first half of the year this prospect was realised. In the second half of the year, however, we were faced with a period of acute depression in the coal, steel and tinplate industries of South Wales, and the conditions changed rapidly for the worse in common with industries in other parts of the country. In the latter part of the year the position was accentuated by the threat of a general coal strike, and several of the collieries and larger works in the company's area closed down, while most of the others are working on short time. The depression seriously affected the company's receipts for lighting and power, and in view of these adverse conditions I think we are to be congratulated upon having turned the year with an improvement in profit, as compared with the previous year.

The Bill promoted last year to abandon light railways and run trolley vehicles and buses passed through all its stages, and received Royal Assent on July 10, 1930. The Act allows until June, 1935, for the change-over, but the directors consider that as soon as possible after the approval of the plans the work of conversion should be taken in hand.

During 1930, in terms of our agreement with the Rural District Council, we took over three non-statutory undertakings operating in the parish of Llandebie and at Tycroes in the parish of Llanedy. The existing overhead distribution systems were remodelled and adapted where possible for our 3-phase 4-wire system, but in one district a complete new system had to be provided. Our high-tension mains were extended into this area with suitable substations, and the last section of the change-over was completed in December last. As a result some 600 new consumers, mostly domestic, have been acquired, of which approximately 350 were connected at December 31st.

In the chairman's speech last year reference was made to the scheme of the Central Electricity Board for Central England and South Wales, in which a new super station for South Wales is contemplated, and to the fact that we had an admirable site for such a station. This site was thoroughly investigated by our engineers, who were quite satisfied that the site was adequate in every respect for the purpose, and a comprehensive report was submitted to the Electricity Commissioners. Despite our efforts we have not so far succeeded in getting the authorities to adopt a site in our area.

We added 847 new consumers during the year, mostly in the domestic and small power load, and a total of 24,546,000 units were sold, as compared with 23,675,000 units for 1929. The maximum load on the station was 6,985 kilowatts, as compared with 6,600 kilowatts last year. The power plant was in continuous service throughout the year. The installed capacity of the station is 17,500 kilowatts, so that after providing for standby we have a surplus of several thousand kilowatts available for disposal.

It is not expected that the Central Board scheme will be in operation for some two to three years, and it is not proposed to extend the grid system beyond Llanelly, so that there is a possibility of some of our surplus power being made available for supplies in West Wales.

Turning to the profit and loss account, the available balance is £60,612. The directors now recommend the payment of a dividend on the ordinary shares of 3½ per cent., less tax, leaving to be carried forward to next year's account £3,480.

I know some of the shareholders will be disappointed that we do not recommend a larger dividend for the ordinary shares, but we hope that after consideration you will agree that the directors are acting in the best interests of the shareholders at the present time in strengthening the reserves.

It is too early to make any forecast of the current year's results. The tinplate and steel industries are still in a depressed state, but there are indications of more stable conditions in the coalfields. We are in a position to take advantage of any improvement in trade conditions, and by continuing the policy of making every effort to increase the lighting and small power side of our business we hope to offset any drop in the larger power accounts. I am pleased to be able to inform you that returns just to hand for the quarter to March 31st last show that the revenue position on the power side is approximately the same as last year, in spite of the appalling conditions. We may, therefore, with some confidence express the hope that when we meet next year we shall be able to show results more satisfactory than those of 1930.

The resolution was carried unanimously.

LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, LIMITED.

CONTINUED PROGRESS.

The twenty-first annual general meeting of the London County Freehold and Leasehold Properties, Limited, was held, on the 14th instant, at the registered office of the company, 114-116, Park Street, London.

Sir William J. M. Burton, the vice-chairman of the company, presided in the absence, through illness, of Mr A. C. Bournier, the chairman of the company.

The speech prepared by Mr Bournier, which was read to the meeting by Mr T. J. Cullen (the general manager), stated that the meeting represented the twenty-first birthday of the company, which, as anticipated, had continued to progress and prosper. Thanks to the policy of the company they were able to offer in well-built mansion-flats, accommodation, situation, and amenities at least equal to, and in some cases superior to, anything offered by their new competitors, and at lower rents than modern construction could provide, except, possibly, in the case of the very expensive flats, of which they held so few. The net revenue balance for the year was £216,511, as compared with £175,025, and actually the net revenue balance was £221,806, £5,295 having been left unappropriated in the subsidiary companies. The board had seen their way to increase the dividend by 1 per cent., to increase the reserves and carry-forward by slightly more than last year, and to increase the disclosed surplus by £146,797. With regard to that surplus, the board had no hesitation in saying that the company's properties and those of the subsidiaries were valued on an extremely conservative basis, with the result that the surplus was very much greater than appeared in the balance sheet. His personal view was that at least £250,000 could be conservatively considered as an additional value to the £3,279,554 set forth in the balance sheet, and they had been advised by an expert that even that additional figure was low. On that basis the intrinsic value of the share was about 34s.

PROGRESS OF SUBSIDIARY COMPANIES.

The prosperity of the parent company applied with equal force to each one of their subsidiaries. They did not take all the subsidiary profits as dividends, with the result that the financial status of each subsidiary improved, and they found themselves in the happy position of "the beautiful mother of even more beautiful children." The financial position both of the subsidiaries and of their company was strong, and by 1965, when the debenture and loan liability should have been discharged, the income from the properties for many years thereafter should enable the payment of much enhanced dividends.

The directors had given the suggestion of quarterly dividends careful consideration, and had come to the conclusion that their business was now so firmly established that they would be justified in paying three quarterly dividends of 2 per cent. each, and recommending a fourth and final dividend of whatever the account of each year might appear to warrant.

The company's progress might be gathered from the fact that their assets had grown from £160 in 1910 to approximately £5,489,799 in 1931, while their net income available for dividend had risen from £106,791 in 1929 to £221,806 in 1931, their dividends in the same period increasing from 9 3/5 per cent. for the fifteen months ending March, 1929, to 11 per cent. for the twelve months ending March, 1931. The fact that on their large capital of £1,620,000 they earned 13 per cent. might mean that their progress was due to their prudence, but they were proud in the knowledge that they had secured the confidence of large financial houses and bankers, the Stock Exchange, and, not the least important, the estate agents on whom they were so dependent for the properties they acquired, and who knew that a square deal was a certainty in the case of their company. The properties were well spread, the demand for flats was good, and he really felt that the company's pre-war erected flats, providing larger and loftier rooms than could be obtained from present-day construction, made effective competition with them extremely difficult.

The board believed that the future would see an increase in the provision of flat accommodation in London, though under present-day costs it would appear to be almost impossible to build at rents to compete with the class of flats which the company mainly owned. The board, therefore, regarded the future prospects as being good. Subject to no further abnormal conditions arising, the revenue account for the past year should indicate what might be reasonably anticipated as the probable future net income, and shareholders would, no doubt, concede that to earn over 13 per cent. on the share capital, having made full provision for the extinction of the leases, was a very satisfactory rate, and evidence that the company's assets were really valuable.

The report and accounts were unanimously adopted.

PAQUIN, LIMITED.

SATISFACTORY RESULTS DESPITE DIFFICULT TRADING CONDITIONS.

The thirty-fourth annual general meeting of Paquin, Limited, was held, on the 15th instant, at Cannon Street Hotel, London, Sir Harry K. Newton, Bt. (the chairman), presiding.

The Secretary (Mr Charles Beavis), having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said that when the shareholders met last April to consider the accounts for the year to December 31, 1929—one of the most successful in the company's 33 years of existence—he was able to state that, although that year had been followed by a period which was somewhat disquieting, yet during the few weeks preceding that meeting there had been signs of a welcome change, and that they were apparently getting over a condition of things which had caused them not a little anxiety. He regretted to say that the improvement did not continue and, difficult as were trading conditions in 1929, they had been infinitely more difficult in 1930. Greatly diminished spending power throughout the world had necessarily had its direct effect upon the company's business, and, in point of fact, their emergence from this most difficult and trying year with so much success was regarded by the board as extremely satisfactory, and must, he thought, have come as a considerable and very pleasant surprise to shareholders. It afforded the strongest possible evidence of the assured position which the House of Paquin held among discriminating women, and he was happy to be able to assure the shareholders that, although, in common with all other houses doing an at all comparable business, their volume of trade had diminished, their reputation and the estimation in which their productions were held had still further increased. This he regarded as of the very highest importance for the future, when the need for drastic personal economy among their clients should be less absolute. When that time would come shareholders would not expect him to prophesy, but it surely could not come until the present most oppressive, almost crippling, load of taxation was lightened.

VALUE OF STOCKS.

Dealing with the balance sheet, the Chairman said it was essential at all times, but especially in times of falling markets, that stocks should be closely watched and well controlled, and he was glad to be able to assure shareholders that this had been done. The stock now stood at £18,578, against £31,775 last year—a reduction of upwards of 40 per cent. Shareholders need have no doubts whatever as to the value of these stocks; they consisted largely of valuable and rare furs, and the prices at which they had been brought into stock were fully in accord with present-day values. With regard to the item of sundry debtors, £260,000, the directors would have wished to see a reduction in this more commensurate with the reduced turnover, but the rapid collection of book debts in times of such acute stringency was not an easy matter, and while for this reason they had not been able to keep the collection quite as close up as usual, shareholders need not have one moment's anxiety as to the value of this asset.

The total of cash, bills and investments amounted to £90,809, against £114,765 last year. The reduction was due, of course, to stringency of money and reduced trade, and, in the circumstances, the cash position could be regarded as highly satisfactory.

PROFIT AND LOSS ACCOUNT.

The profit and loss account showed a credit of £98,378, against £130,813 last year, and the directors proposed to pay a balance dividend of 2½ per cent. on the ordinary shares, making 10 per cent. for the year, together with a bonus of 10 per cent. This made a total distribution of 20 per cent. for the year, against 30 per cent. for the previous year. They were transferring £5,000 to reserve, which would then stand at £80,000, and increasing the carry-forward by £4,178, to £26,721.

As to the future, the success of the company depended upon two things: the prosperity of their customers—over which the company had no control—and their own reputation and prestige. These latter, with the assistance of their managers and staffs, were being maintained, and, if possible, increased, and they might therefore feel perfectly confident that when prosperity eventually returned they would secure their fair share of the business which would naturally result.

M. Francois Debray (managing director) seconded the resolution, and, in the absence of questions, it was put to the meeting and carried unanimously.

ENGLISH ELECTRIC COMPANY, LIMITED.

DIFFICULT TRADING CONDITIONS.

The annual general meeting of the English Electric Company, Limited, was held in London, on the 16th instant, Sir Holberry Mensforth, the chairman, presiding.

Referring to the balance sheet, the chairman explained the considerable alterations in the share capital resulting from the adoption of the reorganisation scheme and the issue of £850,000 of new ordinary shares for cash. The debenture debt had been reduced from £2,018,748 to £1,196,093. He compared in detail the items appearing in the 1930 balance sheet with those of the previous year. As over £560,000 had been written off capital expenditure, under the scheme, no further depreciation had been charged against profits. Losses incurred prior to the reorganisation last June amounting to £72,184 had been charged against the sum available on reduction of capital, leaving a balance of £31,612 to the debit of profit and loss account.

The extraordinary difficulties encountered by the company last year were largely owing to the fact that its reorganisation had coincided with a period of acute trade depression. Moreover, home business available to manufacturers of heavy electrical plant had been disappointing both as to volume and price. Conditions in the export markets had been unsatisfactory, particularly in Australia and India, owing to exceptional conditions in both those countries. Changes had been made in the constitution of the board, and Mr G. H. Nelson had been appointed managing director. The executive and manufacturing facilities of the company had been reorganised and production rearranged as between the various factories, with the result that the company's activities at Preston were now confined to rolling stock; there had also been considerable reductions in staff. He added that the directors were determined that the company should maintain a reputation for first-class service to customers.

Speaking of the future, the Chairman pointed out that orders for the grid from the Central Electricity Board would soon cease, and unless the electrical industry was to suffer a consequent slackening of activity, orders would have to be forthcoming from other sources.

The Chairman concluded by expressing his complete confidence in the quality of the company's products and in its ability to compete successfully with other manufacturers, provided that a revival in trade made it possible for the volume of business to be increased to a point at which the full benefit of the reorganisation could be realised.

The report and accounts were adopted.

RIO TINTO COMPANY, LIMITED.

STRONG FINANCIAL POSITION.

The fifty-eighth ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 16th instant, at the Cannon Street Hotel, London.

The Rt. Hon. Sir Auckland Geddes, G.C.M.G. (the chairman) said that their balance-sheet position was one of great strength. The true quick liabilities at December 31st were almost exactly £750,000, and the true quick assets totalled nearly £1,500,000, quite apart from something over £2,500,000 of investments. In view of the economic position of the world in general, and the base metal and chemical industries in particular, that, he thought, indicated the real strength of the company's position.

The net trading profit, plus interest, etc., was over £1,100,000, but there was a deduction of no less than £454,725 before they reached the available balance of £686,966. That big deduction included a great part of the load of taxes piled on them by the Governments under which they worked. Since 1924 the company had actually made a total operating profit of over £10,500,000, and of that the Governments had taken in taxes £5,305,900, and there did not appear to be much hope of relief. They were paying a final dividend of 10s. per share on the ordinary shares, following an interim dividend of the same amount.

Their sulphur went principally into acids for agricultural fertilisers, their iron into steel, and their copper into electrical machines and installations and multitudinous articles of copper and brass. The state of agriculture throughout the world was deplorable, and the consumption of fertilisers had fallen and was still falling. The steel and iron trades were nearly as bad; indeed, the ironmasters of the world appeared to be almost buried under their enormous stocks of raw materials. In copper, in spite of a restriction on output, in which the company was sharing, stocks were not far short of four months' supply, and, as one quarter of 1931 had already gone, the copper mines of the world would only have to produce for five months from now, on a normal scale, to meet world requirements for this year.

In other words, the immediate outlook was very gloomy. With regard to the more distant future, he was convinced that when the present depression passed, copper was going to soar in price.

The report and accounts were unanimously adopted.

BALAGHAT GOLD MINES, LIMITED.

A DIFFICULT YEAR.

The eleventh ordinary general meeting of Balaghat Gold Mines, Limited, was held, on the 16th instant, at No. 6, Queen Street Place, E.C.

Mr Ernest R. Woakes (the chairman) said that the ore treated during last year amounted to 39,200 tons, as compared with 50,100 tons during 1929, and the production of fine gold, including 180 ounces from auriferous slags, was 22,436 ounces, a decrease of 10,032 ounces. The grade of the ore was somewhat lower, but the percentage of extraction was again good.

The total receipts from sales of bullion, interest, rents, etc., were £91,129, and the costs amounted to £97,926—a loss of £6,797. There was a saving in expenditure, but the intervention of the strike and the lower tonnage treated caused an increase in the working costs. The credits to the profit and loss account totalled £9,798, against which were charged the revenue loss for 1930 and income tax, together amounting to £10,004, leaving a debit balance at December 31 of £206. The company's liquid assets (including £39,059 invested in Government securities), less liabilities, were valued at £54,405, and the stock of materials and stores and goods in transit were represented by the sum of £22,581. In addition to these assets, 3,850 fully-paid shares of £1 each were held in the Kolar Mines Power Station, Limited, and the company had small interests in other mining concerns valued at £1,514. The foregoing recital would have made it clear that it was not possible for the Balaghat Gold Company to declare any dividends as the result of the year's operations.

They had passed through a difficult year; the strike of Indian workmen last April caused a cessation of work in all departments for about three weeks, whilst the programme outlined at the last general meeting called for production on a lower scale pending the intensifying of development work with a view to the discovery of new payable ore bodies. Underground development work had produced quite encouraging results, although no important new ore shoot had yet been exposed. The Balaghat Mine, however, had on several occasions in the past responded to well-directed development, and the board had every confidence that it would do so again. The reserves of ore in the mines were estimated at December 31st at 41,523 tons.

The report was unanimously adopted.

NUNDYDROOG MINES, LIMITED.

HIGHLY SUCCESSFUL DEVELOPMENT WORK.

The tenth ordinary general meeting of Nundydroog Mines, Limited, was held, on the 15th instant, at Cannon Street Hotel, London.

Mr P. C. C. Francis presided in the absence of Mr V. Herbert Smith (chairman of the company), and in moving the adoption of the report and accounts said he thought the shareholders would agree that these were satisfactory.

The receipts on revenue account were £7,373 below those of the previous year, while the expenditure was practically the same, owing largely to increased mining and ventilation charges, which were unavoidable. The working profit of £100,408 compared with £108,051 in 1929. Profit and loss account was credited with the balance brought forward, £11,157, interest on Government stocks, £2,364, and the year's profit of £100,408, making a total of £113,960. The appropriations were on a smaller scale. Transfers were made of £5,000 to reserve fund, £2,000 to insurance and contingency fund, and £15,000 written off capital expenditure. The debits, including the interim dividend of 9d. per share, totalled £54,559, leaving a credit of £59,400, out of which the directors declared a balance dividend of 1s. 9d. per share, payable on the 2nd inst. This distribution amounted to £49,525, and the sum of £9,875 was carried forward to the 1931 account.

It was satisfactory to know that the general position of the company enabled the directors again to pay dividends amounting to 2s. 6d. per share, or 25 per cent., on the capital of the company.

He was pleased to state that the development work had been highly successful, as was evidenced by the improved reserves of ore, which were estimated at 302,827 tons, as against 265,595 tons at the close of 1929, and the three main sections underground gave promise of further favourable results in the immediate future. He was sure the shareholders would agree with him that it was a matter for congratulation that, in spite of the difficult conditions of the year, the satisfactory results he had referred to had been attained.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended April 11, 1931, amounted to £12,004,600 against ordinary expenditure of £9,713,300. After allocating £1,003,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £42,000, the week's operations, as shown below, reduced the National Debt by £1,624,000 to £7,607,469,000:—

(000's omitted.)

Public Department Advances ...	£ 550	Treasury Bills	£ 1,834

BULLION.

The following statistics of imports and exports of gold for week ended April 16, 1931, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From: £	To: £
Netherlands..... 3,150	Germany..... 6,800
France..... 6,703	France..... 33,643
Switzerland..... 5,635	Switzerland..... 5,000
British W. Africa..... 43,191	Austria..... 15,000
British S. Africa..... 1,233,295	Roumania..... 674,152
Straits Settlements..... 64,515	Kenya..... 1,700
Australia..... 200,000	Bombay..... 2,537
British Guiana..... 2,329	Other countries..... 275
Other countries..... 1,160	
Total declared value of imports..... 1,557,978	Total declared value of exports..... 744,572

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931. ARRIVALS.	1931. WITHDRAWALS.
April 10..... Nil	April 10..... 520,000
" 11 Bars bought..... 6,461	" 11 Sovs. set aside..... 10,000
" 13 Bars bought..... 805	" 13 Sovs. set aside..... 175,000
" 14 Bars bought..... 250,000	" 14 Sovs. set aside..... 900,000
" 15 Bars bought..... 953,500	" 15 Sovs. set aside..... 500,000
" 16 Bars bought..... 79,800	" 16 Sovs. set aside..... 1,720
Foreign coin bgt..... 147	" 16 Sovs. set aside..... 300,000
" 16 Sovs. released..... 260	
Total..... 1,541,073	Total..... 2,406,720
Net withdrawals, £865,647.	

Messrs Samuel Montagu and Company write on April 15, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £146,121,526 on the 8th instant (as compared with £144,465,467 on the previous Wednesday), and represents a decrease of £1,504,096 since December 31, 1930. The South African bar gold available in the open market yesterday amounted to about £984,000. The price was fixed at 84s. 10d. per fine ounce, at which the Bank of England secured about £954,000, whilst £20,000 was taken for India and the trade. Movements of gold at the Bank of England during the week have resulted in a net outflow of £815,652. Receipts included £1,040,666 in bar gold and £250,260 in sovereigns, of which £953,600 and £250,000 respectively were from South Africa. Withdrawals consisted of £2,095,000 in sovereigns "set aside," £10,000 in sovereigns taken for export, and £1,720 in bar gold.

SILVER.

The market has been quiet and prices have shown little movement during the past week. A steady tone has been maintained, sellers showing reluctance and the market responding to a small inquiry for covering bear sales. China and the Indian Bazaars have both bought and sold and the tendency at the moment is very undecided. Business with America has been rather limited, the trend in this quarter being rather towards buying than selling. Silver for cash delivery was to-day quoted at a premium of 1d. over two months.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 4th instant to mid-day on the 13th instant:—

IMPORTS.	£	EXPORTS.	£
U.S.A.....	26,930	Hongkong.....	11,667
Australia.....	6,605	British India.....	6,993
Other countries.....	1,026	Straits Settlements.....	3,712
		France.....	4,747
		Other countries.....	6,949
	£34,561		£34,068

REPORTS AND NOTICES.

The board of De Beers Consolidated Mines, Limited, has appointed Sir Frank Meyer, Bart., deputy-chairman of the company in place of the Earl of Bessborough, who is retiring on his appointment as Governor-General of Canada.

Mr Francis Goldsmith, manager of the National Discount Company, Ltd., has been elected to the chairmanship of the London Discount Houses Committee, in succession to Mr R. C. Wyse, who has resigned.

RAILWAYS.

CANADIAN NATIONAL RAILWAYS.—The net earnings for 1930 amounted to \$26,511,000 as compared with \$46,818,000 in 1929. The gross revenue shows a decline of 17 per cent. from \$267,993,000 to \$221,770,000, while expenses were reduced from \$221,175,000 to \$195,259,000. Taking into account the interest on the funded debt, totalling \$50,921,000, there is a net deficit for the year of \$29,219,000, as compared with a deficit of \$7,586,000 the previous year. The interest on Government advances is not included in these figures.

THE PENNSYLVANIA RAILROAD.—The eighty-fourth annual report of the Pennsylvania Railroad Company, covering operations for the year 1930, shows that although the company's total operating revenues in 1930 declined over \$112,000,000, it earned a net income sufficient not only to pay 8 per cent. dividends and all other charges, but also to provide a surplus of nearly \$11,500,000. Net income, amounting to \$68,809,818, was equivalent to 10.55 per cent. upon the outstanding capital stock at the close of the year, as compared with 17.64 per cent. upon the amount outstanding at the close of 1929. Net income per share (par \$50) was \$5.28 compared with \$8.82 in 1929. After providing for the payment of 8 per cent. dividends to the stockholders and for sinking and other reserve funds, \$11,431,273 was credited to profit and loss account.

SAN PAULO (BRAZILIAN) RAILWAY COMPANY, LIMITED.—We are informed that the board have resolved to recommend at the forthcoming general meeting, that after setting aside \$50,000 as a provision for improvements and \$80,000 for income tax, the following final dividends in respect of the year ended December 31, 1930, be paid: On the preference stock two-and-a-half per cent., making, with the interim dividend of two-and-a-half per cent. paid in October, 1930, five per cent. for the year, less income tax. On the ordinary stock 5 per cent., making, with the interim dividend of five per cent. paid in October, 1930, a dividend of 10 per cent. for the year free of income tax, and a bonus of 2 per cent., also free of income tax. Mr Oliver R. H. Bury, M.I.C.E., has been elected chairman of the board of directors, and that Brig.-Gen. The Hon. Arthur Melland Asquith, D.S.O., has been elected a director of the company to fill the vacancy caused by the resignation of the Rt. Hon. The Earl of Bessborough, G.C.M.G., Governor-General designate of the Dominion of Canada. Brig.-Gen. Asquith, as chairman of the Brazil and Parana Plantations, has large interests in the States of São Paulo and Parana.

BANKS.

SKANDINAVISKA KREDITAKTIEBOLAGET.—The directors have written off debts to the amount of Kr. 1,668,303.54 from the profits of the year 1930. For 1929 the amount written off was Kr. 2,983,616. After writing off these sums, the profit for 1930 amounted to Kr. 14,424,849, comparing with Kr. 14,586,755 for 1929. The directors again set aside for taxes Kr. 2,000,000. They also repeat the dividend of Kr. 18 per share on 614,000 shares, absorbing Kr. 11,052,000 as before. The sum of Kr. 1,000,000 is again utilised for reduction of bank buildings account. The carry-forward is increased from Kr. 2,115,067 to Kr. 2,487,916. Current accounts (debtors) stand at Kr. 193,258,233, as against Kr. 104,968,150 at end of 1929. Loans (secured) stand at Kr. 464,624,966, as against Kr. 443,290,045. Bills are slightly lower at Kr. 214,184,034, against Kr. 216,059,896. Deposits and savings accounts have risen from Kr. 380,669,639 to Kr. 410,830,581. Current accounts (creditors) amount to Kr. 188,172,554, against Kr. 189,942,351. The total assets amount to Kr. 1,083,349,953 at end of 1930, as compared with Kr. 968,486,785 at end of 1929.

MISCELLANEOUS.

AGRICULTURAL MORTGAGE CORPORATION LIMITED.—The profit earned for the year ended March 31, 1931, after providing for doubtful debts, was £49,940, as compared with £33,035 for the preceding year. Of this sum £15,588 is written off the expenses of the issue of £8,500,000 of 5 per cent. debenture stock, £3,996 is transferred to a special reserve, and £15,000 to the general reserve. This leaves a balance of £17,758, out of which the directors are able to recommend payment of a dividend of 2½ per cent., per annum, less tax. The report states that the total of mortgage loans completed up to March 31st last was £7,053,078, which compares with £4,168,590 a year ago. The security for these loans consists of mortgages of 467,272 acres of agricultural land with the necessary farmhouses, &c., valued at £11,239,277. In addition loans for £881,395 were approved by the directors subject to completion of legal formalities. Reductions of a total of £104,881 were made in the principal amount of loans during the year. The total of cash at the end of March was £346,873. Investments at cost, representing the loan from the Minister of Agriculture and Fisheries, stand in balance sheet at £650,000. Their market value as at March 31, 1931, was £672,389. Other investments at cost are at £1,800,995. These had a market value on March 31, 1931, of £1,802,107.

AMALGAMATED ANTHRACITE COLLIERIES LIMITED.—The net profit for 1930 after payment of debenture interest, bank and other interest, is £443,255. Profit for 1929 was £439,158, including

reserve for taxation not required. This reserve amounted to £150,340. Adding £168,323 brought in, there is £311,578 available. The board recommend that £500,000 be placed to depreciation and general reserve and that £111,578 be carried forward. The report points out that, notwithstanding the severe depression which prevailed throughout the year in practically all industries, anthracite was in reasonably good demand and the collieries of the company worked fairly regularly. Towards the end of the year, however, difficulties with labour consequent on the necessity for a revision of wage rates, occasioned mainly by a statutory reduction of working hours, which culminated in a complete stoppage of work, have resulted in an increase of production costs at a time when markets are difficult to maintain. Advances from bankers are reduced from £1,820,447 to £1,631,556. Meeting, River Plate House, Finsbury Circus, April 28th, at 12 noon.

CRYSTALATE GRAMOPHONE RECORD MANUFACTURING COMPANY.—Profits for 1930-31 were £76,270 (against £66,539 for the previous year), and it is proposed to place £35,465 to reserve (against £5,000 a year ago), in addition to £104,534 from share premium account, bringing the general reserve fund up to £150,000. The directors have decided to reduce the final dividend to 12½ per cent., making 20½ per cent. for the year (against 33½ per cent. for the previous year), leaving £14,199 to be carried forward (against £13,208 brought in). Goodwill and trade marks have been written down to £1. Cash is at £43,112. The general reserve is now equal to the whole of the authorised and issued ordinary share capital of the company. Meeting, April 22nd, at Winchester House, Old Broad Street, London, E.C.2, at 12 noon.

GODFREY PHILLIPS, LIMITED.—The net trading profit for 1930 amounted to £178,810, as compared with £185,909 for 1929. The dividend on the ordinary shares is again 10 per cent. The carry-forward is reduced from £34,633 to £17,111. The profit does not include any of the profits of certain of the company's subsidiaries which has not been declared as dividends at the date of the balance-sheet. The directors state that the Australian market has been closed to the company for practically the whole of the year and competition has been even more acute in every direction. Cash is higher at £39,732, against £30,251. Debtors are lower at £442,487, against £534,691. Stocks are higher at £875,450, against £740,168. Loan from bankers amounts to £475,000, against £443,000. Creditors stand at £431,069, against £334,928. Reserve remains at £943,817. Meeting, April 23rd, at noon, at 112 Commercial Street, E.1.

HOME AND COLONIAL LIPTON EXCHANGE.—The offer made by the Home and Colonial Stores, Ltd., to shareholders in Lipton, Ltd., to exchange their shares in the latter company for shares in the Home and Colonial Stores has been accepted by the holders of approximately 90 per cent. of the total issued shares, and the directors of the Home and Colonial Stores have allotted the appropriate shares to the Lipton shareholders. Share certificates for the shares so allotted will be posted in due course. In order to give those shareholders in Lipton who have not yet accepted the offer a further opportunity of doing so, the directors of the Home and Colonial Stores have agreed to allow the offer to remain open to them for a short period.

SOFINA.—The profit and loss account for the year ending on December 31, 1930, consisting of the normal period of twelve months, shows a credit balance of fr. 155,432,054.42, while the financial year ending on December 31, 1929, for the exceptional period of fourteen months, showed a credit balance of fr. 116,217,174.52. After allocating the statutory dividend of 5 per cent. on the preference shares, a dividend of 700 francs gross is to be distributed on the 200,000 ordinary shares. In the previous financial year only 97,756½ ordinary shares received a dividend of 700 francs, the 102,243½ remaining shares having received only a half dividend of 350 francs. The report adds that, taken as a whole, the associated companies have not suffered seriously from the present crisis. In various degrees, however, they nearly all show traces of the general slackening in economic activities. The transport companies, moreover, have suffered from the special difficulties imposed on this class of industry by the competition of other methods of locomotion, which difficulties are sometimes aggravated by local circumstances.

UNILEVER SUBSIDIARIES RESULTS.—A profit of £5,749,659 was secured by Lever Brothers, Ltd., for 1930, which compares with £6,213,505 for 1929. The ordinary dividend is again 10 per cent. Special appropriations take £225,000, against £500,000. The carry-forward is increased from £119,192 to £207,794. The Niger Company shows a profit for the eighteen months to December 31st last of £583,943, against £576,666 in the year to June 30, 1929. No preference or ordinary dividends are paid. The carry-forward is £108,018. The operations of Anton Jurgens' Vereenigde Fabrieken (Anton Jurgens' United (Margarine) Works) resulted in a credit to the income account of £1,241,442, against £1,263,110 in 1929. The reserve allocations and the 10 per cent. ordinary dividend are unchanged, £654,042 remaining to go forward, against £675,331 brought in. Jurgens, Ltd., showed a profit of £376,829 for 1930, as against £395,101 for 1929. The ordinary dividend is again 7 per cent. General reserve receives £100,000, against nil, and £178,712 goes forward, against £193,871 brought in. The available profit balance for 1930 of Van den Bergh's Fabrieken, which includes the amount brought in from the previous year, was £518,787, compared with £523,846 in 1929. The "B" ordinary dividend is unchanged at 10 per cent.; £20,833 is again taken to reserve. Reserve for sundry purposes receives £12,500, against £16,667, and £12,334 is carried forward. Van den Bergh's, Ltd., report a trading profit of £620,990, in contrast with £641,079 for 1929. The ordinary dividend is again 25 per cent., tax free, £38,797 remaining to be carried forward.

OIL OUTPUTS.

STEUA ROMANA (BRITISH), LIMITED.—Production of the Steua Romana Company, Bucharest, for the month of March was 85,710 tons.

TOCUYO OILFIELDS OF VENEZUELA, LTD.—Oil produced during March, 1931, 2,348 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during March, 20,050 tons. Oil purchased during March from other companies, 51,750 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended April 11th was: Bolivar district, 74,578 m. tons; Maracaibo district, 17,668 m. tons; total, 92,246 m. tons.

Commercial Reports.

MARKET SUMMARY.

There has been a slight improvement in the situation of the coal trade in South Wales and Yorkshire, but a decline in sales has been reported from Scotland. Although the level of activity in the iron and steel industries is still extremely low, a slight seasonal expansion in business has recently become noticeable, both in the home and export markets. The principal non-ferrous metals have been weak. Lead scarcely responded to the news that the principal producers had agreed to restrict output by 15 per cent. Among textiles the outstanding feature is the improvement in jute. Wool values have been maintained, but raw cotton was slightly easier, and business in Manchester goods continues quiet. Although the home demand for rayon goods is moderate, export business is disappointingly small. The Irish linen trade has been quieter, and it appears that a further reduction in wages is contemplated by the Ulster Trade Board. In foodstuffs, wheat has been firmer because of increased buying from Germany and France, where the milling quota for foreign wheat has been increased. Sugar and tea have been strong, and potatoes advanced further in price. Among miscellaneous commodities, rubber has not shown any improvement because of the absence of a decline in production or an increase in consumption. Hides and leather have been quiet, but the markets for vegetable oils and oilseeds have been slightly firmer.

THE COAL TRADE.

SHEFFIELD.—Conditions of supply and sales have steadied and there is less confusion than of late. Export prompt demand for best steams keeps strong and prices are firm at 17s. and 17s. 6d. f.o.b., but the tonnage of house coal going out has dropped off considerably. Ordinary best house is quoted at 21s. and 22s. There is less surplus small fuel on the market than formerly. Demand for furnace coke continues meagre and prices are from 11s. and 11s. 6d. at ovens.

GLASGOW.—Shipments are again rather on the down grade, and with inland demand declining the market is quiet and dull, washed nuts being notably plentiful and weak. Among round coals, Lanarkshire prime splint is about the best feature, but navigation fuel, not surprisingly, is in slow demand. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s.; splint best, 16s. 6d.; splint second, 15s. 6d.; navigation, 15s. 3d.; navigation second, 14s. 6d.-15s.; Hartley, 15s. 6d.; steam, 14s. 6d.; trebles, 12s.; doubles, 11s.; singles, 9s. 3d.-9s. 6d.; pearls, 9s. 3d.-9s. 6d.; dross, 10s. 3d. FIRE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 6d.-13s.; third-class steam, 12s.; trebles, 11s. 6d.-12s. 6d.; doubles, 11s.-11s. 6d.; singles, 9s. 6d.; pearls, 9s. 6d. LOTHIAN.—Prime steam, 12s. 6d.; secondary steam, 12s.-12s. 3d.; trebles, 12s.-12s. 6d.; doubles, 11s.; singles, 9s. 3d.-9s. 6d.; pearls, 9s. 3d.-9s. 6d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s.; trebles, 12s. 6d.; doubles, 11s. 6d.; singles, 9s. 9d.; pearls, 9s. 9d.; dross, 10s.

CARDIFF.—There has been a slight improvement during the past week in the position on the Cardiff coal market. Most of the large coals are in fairly steady demand, and the current production is readily absorbed, thanks to an abundant supply of tonnage. Monmouthshire coals are relatively the strongest feature, but prices

generally are firm on the basis of the minimum scheduled figures. No announcement has yet been made of the actual placing of the Egyptian State Railways contract for 300,000 tons, but it is confidently expected that South Wales will receive the order. Anthracite coals are generally active and firm. There is little demand for coke, and patent fuel continues a rather neglected market. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Eastern Valleys, 17s. 9d. to 18s. 3d.; Western Valleys, 18s. 3d. to 18s. 6d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 14s. 9d. to 15s.; anthracite best large, 30s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rumbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 27s. 6d. to 34s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. 6d. to 24s.

IRON AND STEEL.

MIDDLESBROUGH.—The tone of the market for Cleveland iron is somewhat brighter, but the volume of business does not expand to any great extent. Consumers still confine their purchases to short periods in anticipation of lower prices later on, but there are no indications of this occurring at present and at Tuesday's weekly market the official figures were reaffirmed at: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 67s., f.o.b. or f.o.t. Only a small business was reported and mostly for local delivery. Makers offer substantial concessions to Scotch consumers, but these are not of sufficient importance to attract much trade, and large quantities of Continental and Midland foundry irons are still going into that area. In hematite a fair number of sales are being made, but mainly in small quantities for prompt or a few weeks ahead. It is difficult to get consumers to place forward business, although they are testing the market from time to time. Prices are slightly easier again and makers have accepted 66s. 6d. for ordinary mixed numbers for prompt, and this is now the general market figure. For forward, 6d. to 1s. more is asked, but this is a matter of bargaining according to the nature of the contract. Two furnaces on the Tees are preparing to blow in on hematite as soon as market conditions permit. Shipments of pig iron are about on a level with last month, the total cleared to the 14th inst. being 3,736 tons, against 3,876 tons to March 14th. In the finished departments, Dorman Long & Company, Ltd., have secured a contract for the supply and erection of about 1,200 tons structural steelwork for the new Victoria coach station in Buckingham Palace Road, London, for the London Coastal Coaches, Ltd. This is an urgent job, and quick delivery of the material is being arranged. Prices of the different materials are unchanged. There is practically nothing doing on the ore market. Best Bilbao rubio remains nominally 16s. c.i.f. for prompt delivery, and the current freight Bilbao-Middlesbrough is about 4s. 6d. Coke is a trifle firmer and makers are not now inclined to shade 16s. delivered works for good furnace qualities for early delivery, while more is asked for forward supplies. The number of furnaces in blast in the district is unchanged at 21.

SHEFFIELD.—The receipt of orders during the stoppage has been disappointing, with the result that a considerable percentage of men who were suspended still remain unemployed. Open-hearth plants cannot find an outlet for more than a fourth of capacity. Business in high-grade tool and special steels has again declined, and this tendency is disturbing the market for ferro-alloys, prices of which are being cut. Prices of tungsten have been reduced 3d. per lb. this month. There are no signs of improvement in the overseas markets and the slump in prices of Colonial and foreign produce is responsible for the curtailment of purchases of plantation tools. Sales of farm and garden tools in the home market are nearly equal to last season, but exports are heavily down. File makers are seriously short of work. Orders for railway material in connection with the distribution of the Boxers Indemnity Fund have not yet been given out, although a certain amount of work will be placed very shortly. Consumption of foundry pig iron is limited. The cutlery and plate branches continue depressed.

GLASGOW.—The continued scarcity of new shipbuilding contracts for Clyde shipyards is reflected in the situation at the West of Scotland steel works, materials for shipbuilders' requirements being one of the most important production items at many of the plants. During the present week there has been a little more buying, but practically all purchasers are confined to small parcels. Sheetmakers intimate a decidedly more active demand for black sheets, Japan being again a buyer of thin sheets, and business done during the present week shows some advance. Tubemakers, bar-iron manufacturers and other departments do not report any improvement. It is announced this week that the Ailsa Shipbuilding Company, Ltd., of Troon, have received a contract to build and engine a single-screw seamer, 200 feet in length, for Messrs. J. Hay and Sons, Ltd., of Glasgow.

CARDIFF.—On the Swansea Metal Exchange on Tuesday tinplates were a shade easier at from 15s. to 15s. 6d. per basis box, compared with 15s. 3d. to 15s. 6d. the previous week. There are inquiries from the Continent and Canada, but demand generally is slow and works continue to be employed at approximately only about half capacity. Galvanised sheets are unchanged at £11 per ton. Increased quantities of Continental steel bars have been discharged at the South Wales ports during the past week at prices ranging from £4 to £4 5s. per ton, but Welsh bars are unaltered at £5. Shipments last week totalled only 68,940 boxes, compared with 87,111 boxes the previous week, and stocks have increased from 240,163 to 255,538 boxes. At a meeting of the manufacturers on Tuesday it was decided to continue the regulation scheme, notwithstanding the withdrawal of the Melingriffith Company.

OVERSEAS TRADE RETURNS.

OTHER METALS.

TIN.—The passing of the "quota" Bill by the Federal Council of the Malay States has not brought about an improvement in the market for tin. Difficulties in the working of the scheme are anticipated, and it may probably take a considerable time until a definite improvement in the position can be looked for. Prices have scarcely improved during the week, and Wednesday's closing quotation for "standard cash," at £114 15s. to £114 17s. per ton, compares with £113 17s. 6d. to £114 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 27,285 tons, show an increase of 291 tons on the week.

COPPER.—The improvement in the statistical position of the metal in America caused a slight advance in prices. Wednesday's quotation in London for "standard cash," at £43 2s. 6d. to £43 5s., compares with £42 11s. 3d. to £42 12s. 6d. on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 10,374 tons, show an increase of 644 tons, while stocks of rough copper, at 1,553 tons, were 40 tons larger. The statistical position in North and South America is set out below:—

	March.	February.
Tons.	Tons.	Tons.
Refined stocks	316,071	324,823
Blister, stocks	177,522	181,015
Foreign, deliveries, refined	33,036	34,821
Domestic, deliveries, refined	66,964	54,464
Refined production	91,071	89,286
Mine production	38,265	42,857

LEAD.—It appears that the negotiations between the members of the International Producers' Pool with a view to reduce output by 15 per cent. from April 1st, have been successfully concluded. The position of the market has therefore been strengthened. Wednesday's official closing quotation for "soft foreign," at £12 15s. to £12 17s. 6d., compares with £12 5s. to £12 13s. 9d. on the corresponding day last week.

SPELTER.—At the beginning of the week the metal improved on increased buying in London, but the subsequent decline in the American spot price to 3.80 cents per lb. brought about a recession in London. Wednesday's closing quotation for "good ordinary brands," at £11 11s. 3d. to £12 2s. 6d., compares with £11 13s. 9d. to £12 6s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, antimony declined in price, and on Wednesday "foreign" changed hands at £24 10s. to £25 per ton, against £25 to £25 10s. on the corresponding day last week. Aluminium and nickel remained unchanged at £85 per ton and at £170 to £175 per ton respectively. Quicksilver sold at last week's price of £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Spot sales for the week 9th to 15th (inclusive) are 31,000 bales, of which 14,160 bales are American, 2,150 Brazilian, 150 Argentine, 3,100 Peruvian, 7,700 Egyptian, 1,450 African, 1,100 East Indian, and 1,190 sundries. Imports for the same period are 27,684 bales, of which 14,625 bales are American, 7,469 Brazilian, 1,057 Peruvian, 3,735 Egyptian, 117 East Indian and 68

for this week's auctions com-
26,934 packages of Ceylon, and

TEA.—The quantities catalogued for this week's auctions comprised 51,347 packages of Indian, 26,934 packages of Ceylon, and

Cheques and Post-office Orders to be made payable to—

THE ECONOMIST NEWSPAPER, LTD., 8, BOUVERIE ST., LONDON, E.C.4.

BRAKPAN MINES, LIMITED. (Incorporated in the Union of South Africa.)

To be submitted at the Twenty-eighth Ordinary General Meeting of Shareholders, to be held in the Board Room, "Ammerosa House," Johannesburg, on Thursday, the 21st May, 1931, at 2.30 p.m.

To the Shareholders, BRAKPAN MINES, LIMITED.

Gentlemen,
Your Directors beg to submit their Report and the audited Financial Statements for the year ended 31st December, 1930, accompanied by the Reports of the Consulting Engineers and the Mine Manager.

CAPITAL.—The capital of the Company remains unaltered at £1,020,000 in 1,020,000 shares of £1 each, fully paid and issued.

PROPERTY.—No change has taken place during the year in your Company's claim holdings, which remain as follows:—

Mynpacht No. 490, 1919, in extent 405-754 acres, equal to	276-06	Claims.
Mynpacht No. 543, 1905, in extent 888-936 acres, equal to	604-80	"
Claims on Farm Benoni No. 3, with Coal Rights on		
73-326 Claims	201-59	"
Claims on Farm Weltevreden or Brakpan No. 5	68-00	"
Claims on Farm Weltevreden or Brakpan No. 5—		
leased from Union Government	1,811-70	"
Claims on Farm Koolbult or Schapenrust No. 7	424-90	"
	3,387-05	Claims.

The undermining rights of seven stands and four portions of stands on Farm Benoni No. 3.
Twenty-one freehold stands in Brakpan Township, on which are erected quarters for the Company's employees.

OPERATIONS.—Technical matters are dealt with in the attached Reports of the Consulting Engineers and Mine Manager, to which your attention is directed.

FINANCE.—From the Working Expenditure and Revenue £ s. d.
Account it will be seen that the profit amounted to 552,044 10 4
Deduct—Donations 3,459 11 10

Add—Dividends on Shareholdings £ s. d. 554,584 13 6
Interest, Commission, Exchange, etc. 7,282 19 7

Leaving a Net Balance of Revenue over Expenditure for the year of 556,876 11 5
Add—Balance to Credit of Appropriation Account at 31st December, 1929 58,288 19 4

Making a total available Credit of 615,165 10 9

Against which the following amounts have been appropriated:—
Government Taxes 141,075 9 11
Government Participation in Profits 54,305 2 6
Reserve for Liability under Miners' Phthisis Acts 23,158 0 0
Dividend No. 36 216,750 0 0
Dividend No. 37 229,500 0 0

Leaving a Balance unappropriated at 31st December, 1930, of 564,788 12 5

To Capital—Registered and Issued: 1,020,000 Shares of £1 each 1,020,000 0 0

As per Balance Sheet, 31st December, 1929. Premium on Shares 998,850 10 0

As per Balance Sheet, 31st December, 1929. Funds Appropriated for Expenditure on Equipment and Development in Excess of Working Capital provided 833,612 8 10

As per Balance Sheet, 31st December, 1929. Unexpended Balance of Capital Fund brought down 2,513 8 1

Sundry Shareholders' Unpaid and Unclaimed Dividends 256,079 18 4

Government of the Union of South Africa Taxation under Income Tax Act, 1925 Participation in Profits under Mineral Lease 55,919 5 0

Sundry Creditors and Credit Balances 54,305 2 6

Reserve Fund for Liability under Miners' Phthisis Act (see contra) 150,225 9 6

Balance of Appropriation Account 69,643 6 2

CONTINGENT LIABILITIES—Shares and Interests in other Concerns 50,376 18 4

The Company is liable for its proportion of the Miners' Phthisis Compensation Funds in terms of the Miners' Phthisis Acts Consolidation Act, 1925 (vide Directors' Report) £3,491,532 6 9

ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LIMITED, Secretaries.
Per W. WESTRUP.

To the Shareholders, BRAKPAN MINES, LIMITED.
We have audited the Balance Sheet dated 31st December, 1930, above set forth, and have obtained all the information and explanations we have required. The Company has kept proper Books and records, and, in our opinion, the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Company.

JOHANNESBURG, 6th March, 1931.

The Capital Expenditure for the year amounted to £6,040 14s., made up as follows:—

Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet	£	s.	d.
	5,818	16	0
Shares and Interests in Other Concerns	221	18	0
	£6,040	14	0

The amount payable to the Government for the year under the terms of the Mineral Lease Agreement is estimated at £54,305 2s. 6d. This figure represents 9-752 per cent. of the profits for the year.

The amount charged to working costs for development was £130,509 10s. 3d. In connection with the annual reserve in respect of the Company's liability under the Miners' Phthisis Act, the amount set aside for 1930 is £23,158. This, with the previous figure of £24,424 9s. 1d. and interest accrued, gives a total reserve of £47,582 6s. 2d. as against the Company's total terminal liability of £215,479 as assessed at the 31st July 1930.

During the year under review the Miners' Phthisis Board has required, and your Company has agreed, that all moneys set aside by the Company in terms of its arrangements with the Board, shall be handed over to Trustees for investment on behalf of the Board. A Trust Fund has been created for this purpose, entitled the Outstanding Liabilities Trust Fund.

DIVIDENDS.
Two Dividends were declared during the year, as follows:—

	Per Cent.	Rate per Share.	Total Amount.
Dividend No. 36	21½	4 3	216,750 0 0
Dividend No. 37	22½	4 6	229,500 0 0
	43½	8 9	446,250 0 0

DIRECTORATE.
In terms of the Articles of Association, Messrs. R. B. Hagart and W. E. Hudson retire by rotation, but are eligible and offer themselves for re-election.

AUDITORS.
You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. A. E. Page and P. Whiteley, retire, but are eligible and offer themselves for re-election.

THE MONEY MARKET.

MONEY has been very comfortable this week, partly because the clearing banks did not make up as heavily as usual, but mainly because of the general suspension of activity in the City pending the opening of the Budget. Another factor explaining the ease is the large quantity of American funds now present in London. Much of this came here early in the year for the purpose of investment in sterling bills at the time when action was first taken to

Economy of Time in Finance

Moodys-Economist Services.

EVERY day the same calculations are made on the same company statistics at hundreds of City offices—a reduplication of work which wastes hundreds of wage-hours.

Subscribers to Moodys-Economist Services are provided with fully worked out statistics and analyses on all standard British, Foreign and American companies. A daily news service keeps the information up to date.

Full particulars are to be had from

MOODYS-Economist SERVICES, KING WILLIAM STREET HOUSE, E.C.4.

make London discount rates more attractive. Now that these bills are maturing, the money so released is, when left in London, being partly reinvested in fresh bills, partly lodged on deposit with the clearing banks, and partly lent to the market. As a result, the market has as much money as it can employ, notwithstanding the fall of Bankers' Deposits this week to £54.7 millions, a level which usually is low enough to give rise to considerable stringency.

Thus in the middle of the week $1\frac{1}{2}$ per cent. was a common rate for new money, with $1\frac{1}{2}$ per cent. for renewals. The discount market has been in a somewhat anomalous position. In order to keep discount rates at the desired minimum, brokers are not buying bills at less than $2\frac{1}{8}$ per cent. Under present conditions, however, relatively few bills are forthcoming at so high a rate, and foreign sellers, in particular, are holding out for $2\frac{1}{2}$ per cent. at most. Hence business is very restricted, especially as the banks, too, are not buying many bills, and while this helps to explain the current ease in money, it means that brokers cannot easily find employment for all their funds. This week the New York rate for bankers' acceptances dropped from $2\frac{1}{2}$ to $2\frac{3}{8}$ per cent., but while this may bring more American money to London, the margin between even the new rate and the existing minimum of $2\frac{1}{8}$ per cent. in London is hardly enough to justify a reduction in London, especially when the premium on forward dollars is taken into account.

	Apr. 1, 1931.	Apr. 9, 1931.	Apr. 16, 1931.	Apr. 23, 1931.	Previous Rate and Date Changed.

The Bank has continued to secure the major part of the gold on offer in London, and this week has only had to pay its statutory buying price. On Tuesday it bought £800,970 of the Cape gold, and on Thursday £500,000 from an "unknown seller." On Wednesday the receipt of £500,000 sovereigns from abroad was reported. Against this earmarking upon Argentine account have been heavy, and so the net increase in the Bank's gold to Wednesday night was only £537,000. The note circulation contracted by £5,919,000 as the result of the return of more holiday currency, and so the Reserve increased by £6,456,000. Presumably owing to preparations for the Funding and Conversion Loan dividends due next week, Public Deposits rose by £5,492,000, and as Government Securities fell by £5,386,000, Bankers' Deposits were reduced by £6,446,000 to the low figure mentioned above. On Wednesday Mr Montagu Norman was re-elected Governor of the Bank of England, and so enters upon his twelfth year of office. Sir Ernest Harvey has been re-elected Deputy-Governor. In these days it seems unthinkable that any one other than Mr Norman should occupy the post, and this is possibly the highest of the many deserved tributes that could be paid to him.

The most interesting development of the week has been the beginning of gold shipments from France to the United States. On Wednesday £700,000 was shipped on the "Paris," and the following day it became known that a further amount of approximately £3,000,000 was to be shipped on the "Europa" at the end of the week. These shipments were made practicable by reductions in freights, and inasmuch as these reductions have now been rescinded, it is by no means certain if further shipments will be made. So far as can be told, what has been happening is that further transfers of French funds to London have depressed the franc against sterling, and as the dollar remained at a premium over sterling, the Paris New York rate naturally reached the export gold point. Hence gold was shipped to New York, and the dollar proceeds of this shipment were sold for sterling. This explains

the rise in the sterling-dollar rate to \$4.86 $\frac{1}{2}$ on Thursday, and this rise is another reason why further shipments may not take place.

Sterling is thus in a stronger position against both the franc and the dollar, but it must be emphasised that sterling is still being supported only by short-money operations, and that neither trade nor long-term capital movements are yet developing to the point where they can take over the load. It is, however, true to say that sterling commands far greater confidence to-day than when steps were first taken three months ago to draw foreign short-money to London. As a following paragraph shows, rates have lately eased in New York, and this is all to the good. Still, the time is hardly ripe for a relaxation of discount rates in London, especially as the last fortnight has been too inactive to provide a true test.

Towards the end of last week money in New York was firmer, with call rate up to 2 per cent., and prime commercial paper quoted at $2\frac{1}{2}$ per cent. Since then money has become distinctly easier. Call rate has fallen to $1\frac{1}{2}$ per cent., with outside money obtainable at 1 per cent., and the rate on bankers' acceptances has been shaded $\frac{1}{2}$ per cent. The returns of brokers' loans issued at the end of last week showed an increase of \$27,000,000 on the week, the latest total being \$1,849,000,000. The trade returns for the first quarter of 1931 give exports at \$711 millions, against \$1,129 millions in 1930; and imports at \$569 millions, against \$893 millions in 1930. Net gold imports for the quarter were \$76.2 millions, compared with \$119.5 millions for the corresponding quarter last year.

The foreign exchange market was more active last week, with steady trading, and the general tendency was in favour of sterling. New York went from 4.85 $\frac{1}{2}$ to 4.86 $\frac{1}{2}$ as a result of the lowering of money rates in New York and the shipment of gold there from France. Montreal lost $\frac{3}{8}$ at 4.86 $\frac{1}{2}$, and Paris lost five points at 124.30. Brussels fell away from 34.94 $\frac{1}{2}$ to 34.95 $\frac{1}{2}$. Milan was two points better at 92.78. Madrid was again very erratic and considerably weaker at 49.00, after touching 47.25 and 49.30. Amsterdam gained $\frac{1}{2}$ at 12.10 $\frac{1}{2}$, but Berlin lost $\frac{1}{2}$ at 20.40 $\frac{1}{2}$, after being a good deal higher, and Switzerland lost $\frac{1}{2}$ at 25.23. Stockholm was better by $\frac{1}{2}$ at 18.14 $\frac{1}{2}$, Oslo gained $\frac{1}{2}$ at 18.16 $\frac{1}{2}$, and Copenhagen $\frac{1}{2}$ at 18.16 $\frac{1}{2}$. The South American currencies were again inclined to weakness, Rio losing $\frac{1}{8}$ d. at 34 $\frac{1}{2}$ d. Montevideo was unchanged at 32d., but Buenos Aires lost $\frac{1}{8}$ d. at 36 $\frac{1}{2}$. The Peruvian Government has issued a Decree stabilising the exchange on a gold basis, the equivalent gold content of the new sol to be 28 cents (U.S.). Notes will be exchangeable for bar gold or for drafts on New York or London. The difference in soles arising out of the revaluation of the currency will be paid to the Government in shares of a new Central Bank, which will take over the functions of the present Reserve Bank. In the Far East the rupee was a little easier at 1s. 5 $\frac{3}{4}$ d. and the yen unchanged at 2s. 0 $\frac{3}{4}$ d. Batavia lost $\frac{1}{4}$ d. at 12.11 $\frac{1}{2}$. In the forward market New York was firmer at enhanced premiums of $\frac{3}{8}$ cent for one month and $\frac{1}{2}$ for three months. Paris was firmer by one point at 16 centimes premium for one month, but weaker by the same margin at 36 centimes premium for three months. Brussels was better at 3 $\frac{1}{2}$ and 7 $\frac{1}{2}$ centimes premium. Milan went to 7 and 23 centesimi discount, but Madrid from discounts of 2 and 4 centimos went to premium quotations of 2 and 6 centimos for the two periods respectively. Amsterdam weakened to $\frac{1}{2}$ and 1 $\frac{1}{2}$ cents premium. Berlin was fractionally better at $\frac{1}{2}$ and 2 $\frac{1}{2}$ pfennigs discount, as was Switzerland at 3 and 7 centimes premium. The silver market was rather weaker, with cash at 13d. and forward at 12 $\frac{1}{2}$ d., a loss of $\frac{1}{2}$ d. and $\frac{5}{8}$ d. respectively. The China silver exchanges reacted differently, Hong Kong losing $\frac{1}{2}$ d. at 11 $\frac{1}{2}$ d., whilst Shanghai was unchanged at 1s. 3 $\frac{1}{2}$ d.

The monthly Trade Supplement published with this week's issue includes a special review of The Decline in the British Wool Textile Industry, by Mr. G. H. Wood.

INDUSTRY AND TAXATION.

"MORE taxes, less bread, and then all the people cheered again," is the description of a scene in one of Lewis Carroll's topsy-turvydoms, but it is hardly likely that, whether or not Mr Snowden couples a wheat quota, threatening the price of bread, with the increase in tax demands which his Budget must inevitably contain, many people will feel inclined to raise even a single cheer on Monday evening. For, even though the Chancellor succeeds in satisfying experts that he has made the best of a very difficult job, the taxpayer, who will have his pocket attacked, cannot fail to regard next Monday's programme as a "bad Budget." Such is human nature. But Mr Snowden's performance must be judged not from the individual, but from the national standpoint, and the main criteria which we should apply are three: Firstly, his success in conserving British credit by a reasonably sound sinking fund policy; secondly, his degree of determination to eliminate public waste, especially through the drastic reform of the "dole" system; and, thirdly, his avoidance of increasing the tax burden on productive industry.

Of these three points the last two are the subject of a cogent manifesto issued this week by Sir William Morris and the executive committee of the newly-formed National Council of Industry and Commerce, and entitled "The Case for the Reduction of the Tax Burden on Industry." With the closely-reasoned plea for public retrenchment, and the radical reform of unemployment insurance, we are in entire sympathy, and our approval of the general lines of the document is strengthened by the discovery that Sir William, who has been advocating a "revenue tariff," has apparently abandoned such a scheme for the purposes of this Budget, and endorses the suggestions recently made in the *Economist* that the 1931-32 Budget should be balanced mainly by increases in indirect taxation which, to quote Sir William, "conform with Cobdenite principles." To be fair to Sir William, he adheres in the manifesto to his advocacy of the eventual imposition of a tariff, and he is at pains to answer the old conundrum which the Free Trader puts to the Protectionist, namely, "How can a tax both bring in revenue and shut out competing goods?" But his thesis is remarkable for a clear recognition of the dangers which a tariff brings in its train. There is the danger of raising costs, and here the manifesto comments, "We shall be no parties to any import duty which unduly or unfairly raises prices charged in this country for comparable products of domestic production." We hesitate to suggest that the only logical outcome of this avowal is the abandonment of all tariff advocacy; but at least we welcome as a first step this realisation of one of the principal difficulties besetting the Protectionist.

Then there is the danger that a tariff would be used by the manufacturers as a shelter behind which slothful avoidance of effective reorganisation might be encouraged. Sir William sees this, too, and says: "We are as determined as Free Traders of the purest strain that the tariff we propose shall not act as a sedative to British manufacturers or a means of giving them unearned profits." How to prevent such consequences we are not told, nor is it plain how Sir William would carry out his determination to obviate the creation of the economic vicious circle of ever-higher tariffs and ever-higher wages on the Australian pattern, although he will not countenance "any such unnecessary and illegitimate result of protection for British industry and agriculture." We hope that Sir William will develop this theme in further manifestoes, for the world has been waiting for a century for the man who could show how a country might obtain the advantages of a protective tariff without incurring the disadvantages to which he refers, and which history has hitherto proved to be inevitable.

For that explanation, however, there is plenty of time, for, as Sir William tacitly recognises, a tariff will not be imposed by Monday's Budget; and we turn rather to one or two important observations upon our present level and system of taxation which the manifesto presents for the Chancellor's consideration. Although it may be argued

in theory, as indeed it was most forcibly held by the Colwyn Committee, that the economic effects of high direct taxation on industry are not so serious as is commonly supposed, yet there is undeniable weight in the emphasis placed by this manifesto on the serious psychological effects produced by such taxation upon those who lead the industry and enterprise of this country. For the prosecution of a successful war, Sir William points out, people will "grin and bear" high taxation. But to-day "the psychological factor of apprehension" is replaced by the psychological factor of apprehension. Moreover, the shorn taxpayer is not satisfied that the money taken from him is being used to the best purpose in promoting national safety or efficiency. "Severe taxation to meet the charge of war is one thing; still severer taxation levied and intended to transfer income from the relatively rich to the relatively poor is another and very different thing and very different consequences follow from it." With such trenchant phrases Sir William drives home an argument familiar to readers of the *Economist*.

Sir William enters on rather more treacherous ground when he examines the comparative weight of the national tax-burden in recent years, and the amounts drawn from industry by way of taxation. To use, as he does, an index number of wholesale prices as a co-efficient for the purpose of expressing the nominal figures of tax revenue in terms of constant purchasing power certainly exaggerates the burden's recent growth, for there has not been a proportionate fall either in individual incomes or in the national income; and it would be possible to pick holes in some of the statistical reasoning which leads to the conclusion that as much as £1,668 millions have been lifted straight out of industry by the tax-collector in the past twelve years. This figure appears to us to be an overstatement. On the other hand, we agree completely with his plea that death duties, being a levy on capital, should be devoted religiously to the cancellation of debt, and with his case for the relaxation of the incidence of taxation on company reserves, which undoubtedly obstructs the adequately frequent re-equipment of industry, puts a premium on rash finance, and diverts money from where it is being productively employed to uses which may not be productive at all.

There is, however, a qualification of a different order which we feel bound to make in endorsing generally Sir William Morris' manifesto. In assuming that the troubles of British industry are due to the fact that it is crippled for lack of capital, we believe that both Sir William Morris and a Swedish correspondent, whose letter appears in a later column, are guilty of a profound and dangerous mistake. Such an assumption is erroneous because it overlooks such vital factors as high production costs, the absence of confidence in the profitability of capital invested, and the reluctance of company managements to submit to the processes of efficient rationalisation. Indeed, this very tendency among industrialists to make the high level of taxation the scapegoat for all their troubles and an excuse for all their shortcomings, goes far towards justifying some of the strictures recently passed by M. Siegfried* upon the British business world.

Nevertheless, in spite of these criticisms, we find so much truth and cogency in most of Sir William's thesis on the burden of taxation that we hope to find some echo of it in the Budget speech on Monday. The immediate Exchequer position doubtless precludes the possibility of even such desirable measures as a lightening of taxation on companies' reserves. But a Chancellor cannot afford to think in terms of a single year, and Mr Snowden, in his long-term view of the national financial prospect, will be as well advised to consider many of the principles laid down by Sir William as he will be to ponder on the dictum of his own Prime Minister that "the national resources are not inexhaustible."

* "England's Crisis." By André Siegfried. (London.) Jonathan Cape. 10s. 6d. (See also *Economist*, March 21st.)

DISARMAMENT IN JEOPARDY.

FEARS of failure are never so bitter as when they arise at the eleventh hour with success in full view; and such are the fears aroused this week by the wholly unexpected crisis over the Anglo-Franco-Italian naval arrangement which was supposed to have been concluded on March 1st last. So positive were Mr Henderson and Mr Alexander that their strenuous efforts at Paris and Rome had been crowned with success that they published the terms of the arrangement in a White Paper. They supposed that, so far as the statesmen were concerned, the work was done, and that all that remained was for the experts to translate their agreement into the technical language of the naval staffs, the foreign offices and the international lawyers. This is a process through which all international agreements have to pass—just as parliamentary Bills have to be put into shape by professional draftsmen. In an agreement like the present, which is technical as well as political in its nature, it is evident that the experts' rôle is unusually important. But, till just before Easter, there was no suggestion that the experts might be commissioned, by any of their principals, to destroy instead of simply to fulfil what the statesmen had done. Unfortunately there is now no doubt that, in the meeting of the experts this week, the very existence of the statesmen's agreement of March 1st is at stake. There is really no doubt, either, that this unhappy turn of affairs is not due to any fault in the statesmen's workmanship. On the issue now raised, the terms published in the White Paper on the 4th of last month do not appear to be ambiguous. It is impossible to avoid the conclusion that the French Government have taken the opportunity of the experts' meetings, which ought to have been merely a technical affair, to go back upon a point of substance—and a vital point—in the agreement to which the statesmen set their hands a few weeks ago.

The point is plain. In the agreement of March 1st the building programmes of France and Italy were fixed down to December 31, 1936, so that it could be calculated now, in advance, what tonnage, in both up-to-date ships and over-age ships, each of the two Powers would possess on that date. The general effect was to give France, at the end of 1936, about the same aggregate superiority over Italy as at present, with a slight diminution of her present superiority in the up-to-date category. In exchange for this temporary stabilisation of existing ratios, Italy suspended, again temporarily and for the same period, her claim to parity with France. It was expressly understood (according to the White Paper) that the arrangement stabilised "no permanent ratio, in any category of ship, as between the members of the British Commonwealth of Nations, France and Italy"; and that, "in particular, no precedent" was "being created for the final solution of the question whether, and if so in what manner, tonnage remaining over-age on December 31, 1936," might "ultimately be replaced."

The meaning of the word "ultimately" is clear. After December 31, 1936, the parties to the agreement would recover a free hand to begin to replace their tonnage that would then be over-age, if they chose to do so and had not entered into any contrary agreement in the meantime. It was hoped, of course, that in fact they would have surrendered this free hand in the interval. The very purpose of concluding this temporary naval arrangement was to give time for the World Disarmament Conference to meet under the most favourable possible conditions, and then to make the date on which the Anglo-Franco-Italian naval arrangement would come up for review coincide with the date when the comprehensive limitation agreement, as between the British Empire, the United States and Japan, which is contained in last year's London Treaty, would come up for review likewise. It was possible, of course, that expectations might be disappointed, and that, if and when France and Italy recovered a free hand on December 31, 1936, one or other of them might still wish to take advantage of it in order to replace the tonnage, that would then be over-age, by new construction. That was a possibility which the agree-

ment of March 1st last left open. It did not, however—and this is surely clear—leave open the possibility that, before December 31, 1936, either France or Italy might construct new vessels, not allowed for in the arrangement, in order to have them up her sleeve and substitute them for an equal amount of over-age tonnage on January 1, 1937.

Such action would evidently falsify the legitimate expectations on which the whole arrangement was based. The basis of the arrangement was the assurance that, if it were carried out, the naval strengths of France and Italy on December 31, 1936, would stand at such and such precise figures; and that if, thereafter, either party did elect to resume its freedom to replace out-of-date tonnage, it would have, so to speak, to start at scratch—have, that is, to start laying down this replacement tonnage on January 1, 1937, if it chose to re-start the competition in naval armaments so promptly, but certainly not one day before. The French demand, which has thrown the whole arrangement into the melting-pot, is a claim that the right, which the agreement gives France, to start laying down replacement tonnage on January 1, 1937, if she still finds, by that date, that she wishes to do so, shall be translated into a right, which the agreement certainly does not give her, to lay down 66,000 tons of replacement tonnage between now and December 31, 1936, so that on January 1, 1937, she may be able, not to lay down new vessels of this aggregate tonnage, but actually to put them into commission. She consents, no doubt, to scrap 66,000 tons of what will then be over-age vessels in exchange, so that her aggregate tonnage superiority over Italy on January 1, 1937, would be the same as it is to be on December 31, 1936, under the terms of the agreement as it stands. But, of course, if she were to get her way, she would have altered the real ratio of naval strength, overnight, in her favour, by this measure in which 66,000 tons of up-to-date ships exceed 66,000 tons of over-age ships in fighting value.

Seeing that this demand, in this form, was bound, it pressed, to make the agreement of March 1st last fall through, the French Government have worked out 30 revised version, and it is this that the French expert, Monsieur Massigli, has brought with him to London. And is being discussed here as we go to press; and, up to the moment, there has been no communiqué in regard to its tenour; but, if report is to be believed, it reproduces the original demand in essence. Apparently France now proposes that the terms of the agreement of March 1st shall stand as they are, save for the terminal date; but that this shall be changed to 1934 or 1933 from 1936 in order that, during this two years' or three years' interval, France may be able to build the 66,000 tons of replacement tonnage which she is bent upon having in hand by the beginning of 1937. As this is only a concession in form and not in substance, it seems unlikely that it can avert the breakdown which is feared.

And supposing that the Anglo-Franco-Italian agreement of March 1, 1931, does break down, what then? It is to be feared that we shall see the unravelling of the whole web of disarmament agreements that has been woven slowly and patiently and laboriously in anticipation of the World Disarmament Conference of 1932. Indeed, the "web" is hardly the right simile; for Penelope's tapestry took as much time and trouble to undo by night as to weave by day. The statesmen's work which is now in danger is comparable rather to a piece of knitting, which unravels automatically down to the first stitch if the last stitch is left open or if the last stitch is wantonly cut after being finished off. If the Anglo-Franco-Italian naval agreement breaks down, the Anglo-American-Japanese agreement, which is embodied in the London Naval Treaty, at once comes into jeopardy. As it is, the submarine tonnage upon which France insists is so perilous to British security that we have only consented to refrain from applying "the escalator clause" in the London Treaty on the understanding that the whole naval question will come under review at next year's Disarmament Conference. "The escalator clause," it will be remembered, gives any of the three parties to the comprehensive limitation agreement between the British Empire, the United States and Japan a right to claim to exceed the

figures on which this agreement rests if it considers that its own security is threatened by the building programme of some fourth party. If the agreement of March 1, 1931, breaks down, this contingency is only too likely to arise for the British Empire, *à propos* of France; and, if that happens, the Anglo-American-Japanese limitation agreement may break down too. And what chance of success has the approaching World Disarmament Conference if all the existing naval agreements go into the melting-pot? It was the existence of naval limitation agreements that made the World Disarmament Conference feasible. If a firm understanding between the five leading naval Powers of the world could be registered and taken for granted before the World Disarmament Conference met, that in itself would reduce its work to the limitation of land and air armaments on the Continent of Europe. This in itself is a tremendous task to grapple with, but it is perhaps just not unmanageable. If the World Disarmament Conference has not only to grapple with that, but to begin it over again from the beginning in the matter of naval armaments, who can imagine that it has any prospect of success?

And if the World Disarmament Conference were foredoomed, by a French act, to failure, what prospect does French statesmanship then see ahead? We are told that France is going back upon the agreement of March 1st because she has been upset over the proposed Austro-German customs union. But if one is afraid of Germany, it seems a strange remedy to break with Italy and to show oneself an awkward neighbour to the British Empire, the United States and Japan. Hitherto, France has maintained that her security requires her preponderance in land armaments on the Continent of Europe. Does she now demand preponderance in all arms, on all elements, against all comers? Does she not see that this must bring her not the security which she seeks, but the very disaster which she dreads—a common disaster for France and for the world?

FOREIGN LOAN MARKETS.—II. PARIS.

(BY A CORRESPONDENT.)

WHILE the temporary cessation of American lending abroad had undoubtedly a large share in the responsibility for the world economic crisis, the reluctance of the French market to lend abroad is unquestionably one of the causes of the delay in recovery. It is, therefore, of considerable importance to ascertain the reasons why Paris does not play a more active part in the issue of foreign loans. Is it due to lack of resources, or to a lack of adequate organisation, or, as in the United States, to the unwillingness of the public to take up foreign securities, or to the reluctance of banking interests to co-operate in the marketing of international loans, or to the policy of the financial authorities?

The first possibility can safely be ruled out, as France obviously possesses a current surplus available for lending abroad, in addition to her huge "short" balances abroad available for re-investment into long-term securities. The persistent firmness of the franc during the last two years or so is in itself a sufficient proof that France could well afford to import foreign securities. As to the question whether France has an adequate organisation for the marketing of foreign securities, the answer is decidedly in the affirmative. After all, before the war Paris was a leading centre for the issue of foreign loans, and her banks have an experience acquired during several generations, which they are not likely to have lost in sixteen years during which their foreign issuing activity has been suspended. Moreover, during the last two years a large amount of internal and colonial bonds have been marketed by the French banks; and the organisation required for the placing of foreign bonds is in no way different from that used for the marketing of internal and colonial loans. In a way, the banking organisation of Paris compares favourably with that of London, for French commercial banks play a much more active part in the issue of loans than their British equivalents. The name of one of them at least has a magic power in the eyes of the French investors, and through the tentacles of their innumerable branches they are in closer touch with the thousands of small capitalists than any London issuing house can ever hope to be.

The explanation which is put forward most frequently is that the French investor, having suffered heavy losses on his foreign investments acquired before the war, has learnt his lesson, and is now unwilling to acquire new foreign securities. There is no doubt that the experience of French holders of foreign bonds has been anything but encouraging since 1914. But it may well be asked whether French holders of French fixed interest-bearing securities, the value of which has been written down to the extent of four-fifths, have fared much better. If we compare their fate with that of holders of Russian bonds the answer is in the affirmative; but if we compare their loss with that on Austrian, Bulgarian, etc., loans which were regulated by agreements with the bondholders, the result is decidedly in favour of the foreign bonds; and if we recall that in a great number of cases the debtors pay in full pre-war gold francs—either of their free-will or through Court decisions—we must arrive at the conclusion that holders of foreign bonds, on the whole, did not fare any worse than holders of French bonds. Thus, if the French investor is still willing to acquire new French bonds—and experience has shown that this is decidedly the case—it would hardly be logical on his part to refuse foreign bonds on the ground of past experience.

As a matter of fact, the experience of 1930 and 1931 in the issue of foreign loans in France does not justify the view that the French public is unwilling to acquire foreign bonds. Indeed, practically every one of the

small number of foreign loans floated was heavily over-subscribed. The Skoda issue last year was a notable success, and the Young Loan met also with fair response. The Roumanian loan which has just been issued was also well received, and there appears to have been a considerable genuine demand for it. Although the flotations attempted have not been sufficiently numerous to afford definite evidence of the attitude of the French public, they are certainly calculated to cast doubt upon the theory that the disillusioned French investing public will have nothing to do with foreign loans.

As for the French banks, they are undoubtedly desirous of doing business; and it is obviously to their interest to take advantage of the international situation and establish Paris as a lending centre. In the absence of any competition on the part of New York or London, they are in a position to pick and choose among would-be borrowers, and to secure most attractive terms. Yet, in spite of this, very few of the negotiations conducted in Paris arrive at any positive results. The explanation is that in most cases French interests rely too much upon their monopolistic position as potential lenders, and demand financial, commercial and political advantages which the would-be borrowers cannot accept, no matter how badly they want the funds. Even if the actual terms of the loan are not onerous, the usual insistence that the greater part of the proceeds must be spent in France, and the political conditions attached to most loan offers, result frequently in a failure of the negotiations. Possibly, when London and New York become once more active competitors, French banks will be willing to accept less in cash and kind. Meanwhile, their attitude is undoubtedly largely responsible for the inadequate activity of the Paris foreign loan market. Their unwillingness to participate in international loans—as illustrated by the cases of the Greek, Japanese, Sao Paulo, Austrian, etc., loans—is also a cause of the restricted activity of the Paris market.

The authorities have undoubtedly done a great deal to eliminate the fiscal obstacles which until last year made the issue of foreign loans practically impossible. That is to say, they have reduced the stamp duty and coupon tax on foreign securities which are now on an equal footing with domestic securities. They cannot go any further in this direction without granting corresponding reductions in the taxation on domestic securities, which is at present hardly possible. At the same time, in some quarters doubts are entertained whether the authorities really want to encourage foreign issues at present. It is an open secret that the Treasury is waiting for the opportune moment for a large conversion operation whereby the whole of the French public debt would be converted on a par 4 or even $3\frac{1}{2}$ per cent. basis. Clearly, this would not be helped by numerous issues of foreign loans of a 7 or $7\frac{1}{2}$ per cent. type, yielding anything up to $8\frac{1}{2}$ or 9 per cent. In special cases—such as the Roumanian or the Polish loan—when political and business considerations are strongly in favour of granting a loan, the authorities give active encouragement; but speaking generally, it would not assist the Government's schemes if the Paris market were flooded with new issues. The French Government realises that some expansion of foreign lending by France is to be desired in the interests of the general situation, but it would seem that they are content for the moment to "go slow," and it is well known that French banks are very responsive to official opinion. Behind these considerations, however, lies the hard fact that in view of the present economic conditions prevailing almost everywhere, it is difficult to point to many borrowers who are in a position to make a strong appeal to cautious investors, whether in France or anywhere else.

Thus there may be a few isolated foreign loans in the course of the next few months, but even when sound borrowers appear it is possible that the French market will not absorb the maximum of which it is capable until after the issue of the conversion loan. Although the strong position of the Treasury and the plethora of funds in the market favour this operation, it is possible that, owing to considerations of a political nature, it may be postponed until after the next elections.

THE LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

THE first quarter of the year has been another discouraging period for cotton spinners and manufacturers in Lancashire. The trade returns show a further contraction in exports and the business done from week to week has given no satisfaction to producers. Conditions in foreign markets have not been favourable for an expansion in turnover, and manufacturers have met with increasingly severe competition from other countries. Owing to the large amount of machinery standing idle, unemployment has continued on a big scale.

Since the beginning of the year there has not been any marked change in raw cotton values. World consumption of American cotton continues on a much reduced scale compared with a year ago; and the outlook for the new crop in the United States is very uncertain. Owing to low values and Farm Board propaganda, there is likely to be a fair reduction in the acreage, but whereas the authorities have pressed for a decrease of 20 to 25 per cent. it is not likely that the reduction will be more than 10 per cent. So far, the climatic conditions in the belt have been fairly good; recently beneficial rains have helped to relieve the absence of moisture during the winter. It is feared in some quarters, however, that boll weevil infestation will be larger than last season and farmers are using less fertilisers than formerly. Egyptian cotton is rather dearer than at the beginning of the year, but it is too early for any definite information to be available with regard to the prospects for the new growth in Egypt. Stocks, in any case, are large.

During the quarter, Lancashire weaving employers made a definite attempt to establish the more looms per weaver system, but there was strong resistance from the operatives and ultimately the employers had to withdraw their demand. The general lockout in the weaving branches, however, lasted a month, while the strike at Burnley went on for six weeks. Many proposals have been put forward for the purpose of reorganising the industry, and the latest scheme is that of the Joint Committee of Cotton Trade Organisations which provides for the elimination of surplus machinery. The proposals are now being considered by the several organisations affected.

A development of considerable importance has been the political truce in India. When the agreement was reached, a more hopeful feeling prevailed in trade circles and, in addition to more indent business in piece-goods, many Manchester merchants bought more freely in anticipation of future wants. During the last few weeks, however, the outlook has become worse, and there are complaints of great difficulties in selling foreign goods in the bazaars. The bulk of the buying has been for Karachi and Madras. Dealers in Calcutta and Bombay are still hampered by substantial stocks of dear goods and these are not easily moved. Trade for China has been adversely affected by the low price of silver and demand for all kinds of staple cloths is still small, though fair contracts have occasionally been arranged in favour of Shanghai and Hong Kong. Reports from Egypt and the Near East have not been encouraging, but some makers have done fairly well for South America. Buying for the Continent has been irregular, but somewhat better conditions have prevailed in the home trade section. A month or two ago the wholesale houses were caught rather short, and owing to the limited output as a result of the weaving stoppage there was a more active demand for stocks. Latterly, however, business has been quieter. It is estimated that during the quarter production in the weaving branch has varied from 50 to 60 per cent. of full capacity, while exports have been as under:—

CLOTH EXPORTS, MARCH QUARTER.

	Linear Yards.	£
1929	1,065,280,300	27,917,484
1930	907,097,200	22,507,208
1931	461,214,000	10,276,796

With regard to spinners, curtailment of output in the American section has been heavy, and the mills have

worked about 55 per cent. of full production. In the Egyptian section there was rather more activity about a month ago, and some idle machinery was restarted; but during the three months the average output has been no more than 70 per cent. of full running. The prices secured for all kinds of yarn have been very poor and few spinning concerns have avoided losses. The following table gives the exports of yarn for the last three months, and for the same period in the two previous years:—

YARN EXPORTS, MARCH QUARTER.

	Lb.	£
1929	44,166,600	5,730,233
1930	38,106,500	4,241,243
1931	31,403,600	2,716,705

In view of present conditions it is almost impossible for the prospects in the industry to be considered with any degree of optimism. There are still indications of trade being lost. Lancashire has not yet been able to reduce her production costs so as to be competitive in the markets of the world, and in the circumstances a large part of the business available is going to other countries. The consumption of manufactured goods is undoubtedly being adversely affected by the low prices ruling for most commodities and the restricted purchasing powers of customers. There does not appear to be much hope of a larger trade with India until a different attitude is presented to this country, and in any case our goods are relatively dear compared with the products of competitors. A rise in the price of silver would no doubt have a beneficial effect upon the business for China, but with exchange at the present level there is still little probability of any big forward movement. In general, there is no likelihood of any appreciable rise in values, for large quantities of raw cotton are assured for the next twelve months, and, in the circumstances, buyers of manufactured articles are in the mood to purchase from hand to mouth, there being nothing to stimulate the anticipation of future requirements.

GOLD MINING IN CANADA.

(BY A CORRESPONDENT.)

CANADA, to-day, ranks as the third most important producer of gold in the world, and, although the value of her annual output is not yet one-fifth of the figure for the Union of South Africa, it is within appreciable distance of the production of the United States. Gold now occupies third place in point of value among Canada's mineral products, being surpassed only by coal and copper. The total production of gold in 1930, from all sources, amounted to 2,107,073 fine ounces, valued at \$43,557,063, as compared with a production in 1929 of 1,928,308 ozs., valued at \$39,861,663.

Gold production is distributed over five provinces, and of these by far the most important contributor is Ontario, which provided in 1930 1,736,855 ozs. This came mainly from two fields, the Porcupine area, which yielded 859,079 ozs., and the Kirkland Lake area, which produced 831,503 ozs. British Columbia was the second largest contributor with 163,490 ozs., of which 100,452 ozs. came from base bullion and ores. Quebec yielded 141,743 ozs., chiefly from the copper gold mines of the Rouyn area, and next came the Yukon with an output of 35,516 ozs., chiefly from alluvial deposits, a sad decline from the production of the famous days of the Klondike gold rush. Manitoba produced 28,197 ozs. In Ontario the output from the Porcupine area was not as great as in 1929, but preparations have been made for expansion during the current year. The Kirkland Lake camp produced 22 per cent. more than in 1929.

Ore taken from the gold mines proper of Canada in 1929 amounted to a total of 4,354,744 tons, of which 4,252,994 tons were milled, while tailings re-treated amounted to 48,707 tons. The greater part of the gold from auriferous quartz was recovered by cyanidation, 1,893,760 crude ounces being secured by this process, as against 162,222 ozs. by amalgamation. The following are the principal

statistics of the auriferous quartz industry of Canada for recent years:—

AURIFEROUS QUARTZ INDUSTRY.

Year.	No. of active operators.	No. of operating plants or mines.	Capital employed.	No. of employees.	Salaries and wages.	Cost of fuel and electricity.	Net value of bullion, ore, concentrates, or residues shipped from mines.
1925 ...	52	52	\$4,964,062	7,052	\$11,931,948	\$1,836,050	\$35,035,361
1926 ...	60	60	103,945,022	7,663	12,540,623	2,083,811	35,171,561
1927 ...	72	76	118,381,468	8,022	12,935,715	2,227,085	37,452,995
1928 ...	98	100	147,693,710	9,066	14,615,990	2,554,657	36,655,330
1929 ...	80	85	135,166,105	8,660	14,258,733	2,579,481	37,275,986

The copper-gold-silver mining industry in Canada is carried on in a group of mines producing ores containing copper, gold, silver and zinc in which copper values predominate. The most important mine of this type is the Noranda mine, owned by the Horne Copper Corporation, in the Rouyn district of Quebec. It operates its own smelter in which, during 1929, it treated 274,879 tons of sulphide ore of an average grade of 7.64 copper, 0.87 silver and \$4.16 gold per ton. The average analysis of the blister copper produced from the smelter showed 99.22 per cent. copper, 12.95 ozs. silver and 2.66 ozs. of gold per ton, and the output of blister copper was 55.2 per cent. greater than the figure for 1929. The Horne smelter also treats copper-gold ore from the adjacent Waite-Montgomery mine and received small shipments from several mines lying across the provincial border in Ontario. The Noranda enterprise is regarded as one of the most promising mining properties in Canada, but the low price of copper has adversely affected its fortunes, and the directors recently felt compelled to suspend the payments of dividends on its stocks which were begun in 1929.

In North-Western Manitoba two large copper-zinc deposits known as the Flin Flon and the Sherritt-Gordon mines are being rapidly developed and equipped with modern metallurgical plants; they are expected to reach production this year, and some gold may be obtained from them. The principal properties operated in this branch of the gold industry are the Hidden Creek and Bonanza mines at Anyox, the Copper Mountain mine near Princeton and the Britannia mine on Howe Sound, about 35 miles north of Vancouver. The Hidden Creek and Bonanza ores are sent to the Granby Consolidated Mining and Smelting Company's smelter at Anyox, while the concentrates secured from the Copper Mountain ores are exported to Tacoma in the State of Washington, as are also the concentrates from the Britannia mine. The principal statistics of the copper-gold-silver mining industry in Canada, 1925-29, are as follows:—

COPPER—SILVER—GOLD MINING.

Year.	No. of active operators.	No. of operating plants or mines.	Capital employed.	No. of employees.	Salaries and wages.	Cost of fuel and electricity.	Net value of ore, concentrates, shipped by mines.
1925 ...	40	41	\$23,200,580	2,374	\$3,555,844	\$413,767	\$7,758,990
1926 ...	76	84	27,936,685	3,403	4,546,493	541,914	9,973,049
1927 ...	118	125	24,232,169	4,083	5,260,095	596,137	9,822,881
1928 ...	164	174	50,994,340	4,777	6,764,309	731,836	15,281,519
1929 ...	140	148	52,546,697	5,243	8,498,755	1,035,133	21,859,535

At present the Canadian public is suffering from the effects of the feverish spell of speculation in which half the country was involved up till the end of 1929. The aggregate sum lost in Canadian mining adventures runs into many millions, and for the time being the public looks very coldly upon such enterprises. Moreover, half the prominent mining brokers in the Dominion are at present in gaol convicted of conspiracies to defraud the public and a variety of illegal operations. Consequently, the whole mining industry has received a blow from which it will obviously take some time to recover. Also the low prices prevailing for copper and other base metals has made it impossible for many mines to earn adequate profit and a number of them are temporarily closed down; but, on the other hand, there is a greater demand than ever for gold, and more attention in the near future is likely to be concentrated upon the gold-producing properties. Mr W. A. Gordon, who has charge of the Department of Mines at Ottawa, is a lawyer who had a large practice in Northern Ontario and enjoys a special knowledge of the mining industry so that hopes are entertained in mining circles that he will promote a vigorous policy for the furtherance of the fortunes of gold mining and other branches of the industry.

IRWIN AND INDIA.

THE new Viceroy arrived in Bombay last week-end, and after a few brief hours of earnest talk at Malabar Hill his predecessor sailed away. Thus watch was changed at the Indian helm, and one of the most eventful and crucial Vice-royalties in India's history came to a close. As Lord Irwin is borne homeward, it is appropriate that his countrymen should try to assess at their true values the significance of the great events that have occurred during his term of office, the contribution which he has made towards solving the problem of Britain's relations with India, and the influence of his exceptional qualities of character in a period of grave crisis for the Empire.

For an alien power gradually and peaceably to transfer the reins of government to a hitherto subject people without either arousing the hostility of an awakening public sentiment by undue delays or risking disaster by precipitate action, there is need, in the most favourable conditions, of very high qualities of statecraft; and the difficulties are immensely enhanced when the parties concerned are a western and an oriental people and the stage a sub-continent. When, therefore, we look back over the years of Lord Irwin's rule, we are not surprised that his critics on the Right speak of him as spineless and as having sacrificed the prestige of the British Raj by hesitating to grapple with the forces gathering round him, while those on the Left declare that though he may claim some credit for having negotiated a last-minute truce with the Nationalist movement, his Viceroyalty will be remembered as one of the most repressive in history, with its Public Safety Bills, its long-drawn-out prosecutions of political criminals, its Press ordinances and the like. There are even some who contrive to fling both stones at once by maintaining that Lord Irwin's Government has given the surest signs of weakness by vacillating between alternate surrender and repression. But this is the easiest of criticisms for the armchair critic to make, and no Viceroy could have evaded it who had conceived it to be his duty to endeavour to secure the co-operation of the rising forces of Indian nationalism in the orderly evolution of Indian self-government.

Whatever the historian may have to say of the detailed acts of Lord Irwin's Administration, the outstanding fact that stands to Lord Irwin's credit is that without having surrendered to the forces of violence, and in spite of the imprisonment of tens of thousands of Nationalist zealots, he has been largely instrumental in changing the trend of events which appeared to be set in the direction of a widening breach between the Government and the most repre-

sentative and vocal organisation of the populace—if not of civil war. It is early days to say how far Congress will march with the Moderates and with Britain towards a generally acceptable solution; but it is a great point gained that the drift in what was obviously the wrong direction has been checked.

In assessing the value of Lord Irwin's achievement, it is not necessary to assume that Congress would finally have succeeded in bringing government to a standstill, or that India would not have tired of the strife. Indeed, over the great part of India the day's work has gone on very much as usual, and the Government has had the means to make its will prevail. Nor, on the other hand, is it necessary to assume that a final constitution, welding the various elements together, is immediately to be achieved. The Congress movement must, however, be regarded as an expression of an all-Indian—indeed, almost an Asiatic—revolt against a position of inferiority to the West. The demand of the East for equality of status in Asia is one which in the long run cannot possibly be resisted. It is, indeed, common form to accept Indian self-government as the goal; but whereas Mr Churchill expects to get there so many generations ahead that it is of no interest to anyone now, and the Simon Commission postponed the issue of responsibility at the Centre until after the achievement of all-India Federation, which they thought was not yet in sight, Lord Irwin thought that the present situation was not a tolerable one, and that some measure of responsibility must be granted at the Centre now, even if it applied to British India alone.

To this sympathetic point of view must be added the influence of Lord Irwin's personality. We doubt if England ever sent a Viceroy to India who has shown a truer understanding and sympathy with the Indian outlook and with Indian aspirations. His deeply religious nature, his obvious sincerity and disinterestedness have made a powerful appeal, even to the most extreme of the agitators, and he held the confidence not only of Mr Gandhi but of many other Indian leaders to a very remarkable extent. It is to-day quite evident that Lord Irwin's personal prestige and the confidence that was felt in his word were among the chief factors that made possible the truce with Mr Gandhi and his committee—an agreement which means that there is a real chance of successfully launching a constitution in accordance with the principles laid down in London, and that the Nationalist forces, or, at all events the larger part of them, are prepared for the first time to co-operate in the definite framing of the constitution and in its working.

But the task is not concluded. If Lord Irwin goes down to history as the man who won the confidence of the leaders of Indian Nationalism, and, having first imprisoned, finally persuaded them to co-operate in the peaceful constitutional development of India, he has left to his successor an almost equally difficult task. The communal question is unfortunately still unsettled, and among all sections in India—including the Congress—no less than in London, it is clearly recognised that a new constitution cannot be successfully launched until an accord is reached in this issue. Mr Gandhi has tried his hand, but so far has failed, and feeling is still running high. Lord Willingdon's long experience of India will be of great help in tackling this first task to which he must at once direct his attention.

It has been suggested that an exception should have been made to the ordinary rule, and that Lord Irwin should have been asked to remain in India for a little longer in the hope that the exceptional prestige which he has acquired might have been available to assist the course of this most baffling negotiation. But during the coming period of construction the responsibility must in any case be entrusted to new hands, and there is much to be gained by Lord Willingdon taking up his task forthwith. It is not so much a case of "swopping" horses while crossing the stream as of harnessing a fresh horse to the coach for a further stage of the journey. Lord Irwin's return will have the very great advantage that he will be available in England during the critical negotiations that must take place at the second and final phase of the Round Table Conference.

Notes of the Week.

The Government's Difficult Week.—Having survived with unexpected ease the major threat to its life conveyed by the censure debate in the House of Commons last week on their unemployment policy, the Government have had to face a series of minor difficulties in Parliament. The questions raised by the Sunday Entertainments Bill were such that divisions of opinion cut across the ordinary party lines, and the House was accorded the opportunity of a "free vote," which it gave, with a substantial majority, in favour of the Bill. But awkward situations arose on Wednesday in both Houses, for on that day the Lords threw out two vital clauses in the Land Utilisation Bill, while in the Commons the Cabinet only saved the clauses in the Electoral Reform Bill relating to the use of motor cars at elections by making substantial concessions on the spot and promising to insert further amendments at a subsequent stage. From the point of view of the party situation at Westminster the most significant point about these two events was that in each case the leader of the attack upon the Government was a Liberal. It was Lord Buckmaster's eloquent thunder which led to the Government's defeat in the Upper House, while the most forceful attack upon the motor-car clauses was made by a Liberal back-bencher. Here again is evidence that the policy of supporting the Government adopted by a majority of Liberal Parliamentarians does not preclude vigorous attacks on minor items in the Government's programme.

The State and Industry.—Both Liberal and Conservative speakers in the debate in the House of Lords mentioned above made it perfectly plain that their ground for rejecting two clauses of the Land Utilisation Bill was their objection in particular to the Government making a large-scale experiment in farming, and in general to the State's intervention in industry. Lord Buckmaster described the Government's proposal to establish an Agricultural Corporation as an attempt to set up an irresponsible and possibly inept body to gamble with a million of public money, and urged that nobody could vote for these clauses unless he believed that the State was a better conductor of business than the individual. Meanwhile hints of further Government intentions to intervene in the organisation of industry were contained in a speech delivered by the President of the Board of Trade at Scurthorpe last Saturday. Mr. Graham concluded a convincing argument against the application of a tariff to iron and steel imports by urging the need for speedier progress in rationalisation and suggesting that, if this were not forthcoming, the Government might step in with methods of compulsion. If we are correct in reading this meaning into Mr. Graham's speech, the Lords' Debate on Wednesday assumes greater significance, for it indicates the nature of the reception which that House is likely to give to projects of interference by the Government in the conduct of industry, even on the lines of the reorganisation clauses of the 1930 Coal Mines Act.

Spain and Catalonia.—The present calm and orderliness in Spain may, of course, be no more than a lull before the storm. Revolutions which have ended in pandemonium have sometimes had their halcyon days first. All the same, this is not the impression which the Spanish Revolution makes at the end of the first week. It opened well, with the first resounding triumph that the principle of representative Government has obtained since the war, and this spirit of constitutionality promises to prevail. The Government at Madrid is making it its first duty to convene a Constituent Assembly. The Assembly will be faced with two major issues: the relations between the Republic and the Roman Catholic Church and the relations between Castile and Catalonia. Meanwhile, it is noteworthy that no serious motion is being made to prejudice either of these grave issues by force. The Church has thrown itself into the monarchical cause, yet hardly any

anti-clerical demonstrations are reported. Again, Catalonia has been struggling for national self-determination since she lost her local liberties more than two centuries ago; yet she has not taken advantage of Spain's momentary paralysis in order to assert her independence by force of arms. On this latter issue, the restraint that is being shown on both sides is admirable; for the Catalan question is one of those national and territorial questions that seem to possess a peculiar capacity for arousing fanaticism among the peoples of the modern world. At Barcelona, the result of the municipal elections of the Sunday before last was a sweeping victory for the Catalan Separatists. The Regionalist-Monarchist followers of the conservative and conciliatory Señor Cambó, whose party was formerly dominant in Catalonia, were heavily defeated, and the Republican Socialists were not in the running. Upon King Alfonso's withdrawal, the power in Catalonia passed immediately to the Separatist leader, Colonel Macia, a returned exile who had attempted a Garibaldian descent upon Catalonia, several years back, from the other side of the Pyrenees. Colonel Macia proclaimed the Catalanian Republic on Tuesday, April 14th; and for the moment it looked as though things would go to extremes. Yet that has not happened, after all. The new republican Governments of Barcelona and Madrid have negotiated across the table instead of taking up arms; and, though the negotiations are not yet concluded, the general outlines of an agreement have emerged. Catalonia is to be deemed to have been an independent republic from the Tuesday to the Friday of last week in order to enable her to enter a Spanish Federation on a footing of equality with the rest of the former Spanish Monarchy. As a member of the Spanish Federation, Catalonia is to be styled, not a republic, but a "generalidad." On the other hand, the Catalans are to draw up their own constitution and present it to the Federal Government of Madrid, which in turn will submit it, with Government approval, to the Federal Constituent Assembly. No doubt there are rocks ahead. Colonel Macia has announced that, if the Assembly does not accept Catalonia's desiderata, she will defend them by all the means in her power. A factor which will work potentially in favour of conciliation and solidarity is the fact that Spain is the market for Catalonia's manufactures. Yet Ulster's attitude to the Irish Free State shows that such considerations may not be decisive. All that we can say is that, under the first test, Castilian-Catalan relations have stood the strain well.

Disturbances in Portugal.—The contemporary upheavals in Spain and Portugal may both be symptoms of that wave of unrest which first appeared in the American part of the Latin world last year, and which now seems to be breaking upon the opposite coast of the Atlantic. Beyond this, a comparison of Spanish and Portuguese events during the last few weeks shows more points of difference than of likeness. In Spain it is evident that the whole nation has been stirred to the depths; and in spite, or perhaps because of this, the revolution, so far, has been remarkably restrained and orderly. On the other hand, the present alarms and excursions in Portugal appear to portend nothing more than another violent struggle for power between political cliques which resemble one another in depending alike upon military force and in being quite unrepresentative of any public interest or cause or aspiration. Whatever its outcome—and on present showing it promises to be abortive—we are unlikely to discover much more significance in its sound and fury than in the perennial revolutions of Central America, of which the most recent examples are the outbreak in Honduras, which we record elsewhere this week, and the Guatemalan and Panamanian affairs at the beginning of the year. In Portugal, on this occasion, the first sign of trouble was a military revolt in an outlying territory of the Republic—the island of Madeira—on Saturday, April 4th. At the end of the week before last a punitive expedition sailed from Lisbon; but at the same moment the Cabinet moved its barracks to the quarters of the Third Regiment of Artillery—an indication that it expected the revolution to spread to the mainland before it could be suppressed at its insular starting-point. Since then, further military revolts have broken out among the

garrisons in some (not all) of the islands in the Azores group; while, on the mainland of Portugal itself a revolutionary airman is reported to have been making the round of the country, preaching insurrection against the Government and winning over successive officers who are instructed to arrest him. Nevertheless, the present dictatorship has so far succeeded in holding its own on terra firma, and even on the islands the situation seems to be turning in its favour. The mutinous garrisons in the Azores have capitulated—except for one detachment which has sailed away to the Canaries—and the revolutionary provisional Government in Madeira appears already to be feeling the effects of the Lisbon Government's policy of putting the island in quarantine. Moreover, the punitive expedition has arrived and has presented the revolutionaries with an ultimatum. On the whole, we may expect this Portuguese revolution to fizzle out—without supposing that Portugal would be a very different place if the revolutionaries were to gain the upper hand. Perhaps the destinies of Portugal are really being decided in the negotiations between Madrid and Barcelona. For if Spain turns into a federal republic in which Catalonia and Galicia stand on an equal footing with Castile, can Lusitania hold aloof?

United States and Central America.—The disorders reported this week from Nicaragua and Honduras may not be very important in themselves, but they have had the effect of bringing into a clear light the change in United States policy towards Latin America in general and towards the Caribbean Republics in particular, which has been taking place under the auspices of President Hoover and his Secretary of State, Mr. Stimson. From the eve of the European War until the eve of Mr. Hoover's accession to office the State Department had been pursuing a forward policy in its relations with Latin American countries. The general features of this policy were a readiness to place the power of the United States Government behind private American interests, for example, in Mexico; and a practice of withholding recognition from Latin American Governments which came into power by violence instead of by constitutional methods. The local feature of this forward policy, in the Caribbean, was a system of maintaining minority governments, agreeable to the State Department, in power by the support of United States marines. This system was applied in San Domingo, in Haiti, and (most notoriously) in Nicaragua. A departure from this policy was portended in the "goodwill" tour which Mr. Hoover made through Latin America as President-Elect, and this gesture has since been followed up in practical ways. Last year, for example, the State Department recognised the new governments which came into power by revolution in Peru, Bolivia, Argentina, Brazil and even in Panama, without inquiring into their constitutional titles. Moreover, in Nicaragua, Haiti and San Domingo, majority governments have been allowed to come into power, even though they have been unfriendly to the United States—as the new regime has been in Haiti, for example. Again, in Mexico, during Mr. Morrow's ambassadorship, American private interests have been given to understand that, since the State Department has come to an agreement with the Mexican Government over the application of Mexican laws to foreigners, American business men in Mexico must take their grievances not to their own Government, but to the courts of the country. Mr. Stimson has now made it clear *à propos* of the disorders in Central and Eastern Nicaragua, that the United States Government will not undertake the protection of Americans throughout Nicaragua with American forces; that Americans who do not feel secure under the protection afforded them by the Nicaraguan Government through the Nicaraguan National Guard (which is trained and led by American officers) had better withdraw from the country or, at least, to the coast towns; and that those who remain will do so at their own risk. The same policy has been announced *à propos* of a revolution which has broken out, meanwhile, in the adjoining republic of Honduras. The Government at Washington is to be congratulated upon the way in which it is acting up to its new policy under difficult

circumstances. The areas affected by the Nicaraguan banditry and of the Honduran revolution are areas in which considerable American private interests—fruit companies and lumber companies—have property and activities and employees. In Nicaragua, within these last few days, several United States citizens are reported to have lost their lives. Mr. Stimson's attitude in the face of difficulty is likely to make a deep impression, favourable to the United States, upon Latin-American public opinion.

The New Government in Roumania.—Some two years ago, when the Transylvanians and the Peasants came into power in Roumania, it looked as if the country had made a new political start. There was a deep and widespread feeling that the cliques of politicians who had reigned so long, and so corruptly, at Bucarest, must be cast out if Greater Roumania was to deserve her name or, indeed, to perpetuate her existence. The coalition which heralded the new era seemed promising. The Peasants brought new blood, and they stood for the vast majority of the population of this agricultural country. The Transylvanian Intellectuals had been in direct contact with western civilisation as subjects of the Hapsburg monarchy, and they had been trained in the hard school of the Magyar domination over the non-Magyar minorities in pre-war Hungary. It was a good combination; but unfortunately fate has been unkind to Dr. Maniu and his colleagues. The melodramatic return of King Carol reintroduced an element of unsettlement and uncertainty into Roumanian politics at an inopportune moment; and since then Roumania has suffered economically, like her East European neighbours, from the difficulty of finding markets for her agricultural exports. Last week, Monsieur Titulescu, a politician of great experience and great adroitness, both as a diplomatist and as a financier, tried his hand at Cabinet-making, and did not succeed. First he tried to form a Coalition Government, but he failed to bring together the National-Peasants and the Liberals (*i.e.*, the former holders of power at Bucarest), let alone the lesser parties. Then he set to work to form a Cabinet of "personalities" and had succeeded—when the King brought down the house of cards by insisting upon the inclusion of Dr. Argetoianu, a politician with a chequered career, whose "personality" is incompatible with Dr. Maniu's. Thereupon, Monsieur Titulescu gave it up, and it has fallen to Professor Jorga to form a Cabinet of "experts"—in which Dr. Argetoianu's name duly appears. Professor Jorga is a historian with a European reputation who was once King Carol's tutor, and has long been in politics. He is a versatile and a distinguished man; yet, with the King's friend, Dr. Argetoianu, as his compulsory colleague, and with Dr. Maniu, the leader of the National-Peasants, in opposition, the new Prime Minister of Roumania may find himself driven into dangerous courses. The National-Peasants still command a large majority in both Houses of Parliament; and this is a majority which has been fairly elected and which remains genuinely representative of public opinion. This kind of majority can hardly be dealt with so certainly as majorities "made" in the traditional manner of Roumanian politics. Dr. Argetoianu is believed to favour a dictatorship. If he does, there may be trouble ahead.

Australian Finance.—Further important developments have occurred in Australia during the past week. On April 17th the Senate rejected the Bill embodying the Commonwealth Government's proposals for reorganising the currency on a fiduciary basis by 21 votes to six. Mr. Scullin at once declared that, in accordance with the terms of the Australian constitution, the Bill would be re-submitted to the Senate, and if, after the lapse of the statutory period of six months, it was rejected a second time, he would at once seek a double dissolution. Meanwhile, the Bill for the relief of wheat growers, for whose financing £6,000,000 of the proposed increase in the note circulation had been earmarked, is to be dropped. In the course of the debate Mr. Scullin made a fighting speech, and Mr. Theodore, the Commonwealth Treasurer, declared that the Commonwealth Bank had stated that it could advance no money beyond the total of £25,000,000

representing Treasury bills lodged against an overdraft in Australia, and the present total of £25,125,000 lent in London upon Treasury bills and debentures. The bank's message ended ominously by saying: "It now becomes the unpleasant duty of the board to advise the Loan Council that the point is being reached beyond which it is impossible for the banks to provide further financial assistance to the Governments." Mr. Theodore replied by challenging the Bank's right to cut off supplies without warning, but Mr. Tranter, the chairman of the Associated Banks, has rejoined by pointing out that Mr. Theodore's allegations against the Commonwealth Bank bear no relation to the truth, which is that credit has been strained to a point beyond which it will not be safe to trade. A few days later Mr. Tranter's assertion was confirmed in a peculiarly distressing way, for the New South Wales State Savings Bank found itself in difficulties, and had to close its doors. It is alleged that the real cause of its troubles was heavy withdrawals by depositors who had been made nervous by Mr. Lang's repudiation proposals, and it is known that a large proportion of the bank's assets are invested in State Government securities or are lent to the State Government. Steps are being taken to merge the State Savings Bank with a hitherto separate institution, the New South Wales Commonwealth Savings Bank, but the task of amalgamation is one of some difficulty, and it is suggested both that Mr. Lang's Government will have to give adequate guarantees to the Commonwealth Government and that special legislation, including an emergency increase in the Commonwealth Bank's fiduciary note issue may be necessary. Such a provision would, of course, be totally separate from the Commonwealth Government's currency schemes, which have just

been rejected by the Senate, and would be of a temporary and emergency character. The immediate situation is tangled and difficult, but a valid corrective to unbalanced pessimism regarding Australia was given this week by the speech delivered in the City last Wednesday by Sir John Kirwan, President of the Legislative Council of Western Australia, who scouted the fear of any real danger of repudiation and stressed his belief that the present crisis, by putting an end to public and private extravagance, would be to Australia's ultimate advantage. As the whole sense of his speech implied, it is essential to review Australia's present troubles with a proper sense of perspective.

The Relative Importance of Exports.—At last Tuesday's meeting of the Royal Statistical Society Dr. E. C. Snow read a paper on "The Relative Importance of Export Trade," in which he suggested that the ratio of wages and salaries involved in connection with export goods to the total wages and salaries bill of the country (calculated by Dr. Snow as 13 per cent.) is a better basis than the ratio of the gross value of exports to the gross value of production (27 per cent.) for estimating the relative importance of exports. He stressed the fact that while exports of manufactured goods have recently declined, manufactured imports have increased, but suggested that as cotton goods, which are manufactured entirely from imported raw material, are steadily losing ground among our exports in favour of manufactures composed to a much larger extent of home-produced material, the consequent national loss in wages and salaries is not so great as that suggested by the decline in the gross figures

NOTES.—Diagram I. Civil Votes exclude Revenue Departments. Diagram IV. "All Sources" include Exchequer Grants, receipts from local rates, and "other" receipts, e.g., employers' and employees' contributions to Unemployment Insurance Fund.

of value. Dr. Snow expressed the view that owing to the increasing keenness of competition in international markets, our export trade can only be maintained by depressing the standard of living, and raised the question whether such a depression is necessary for the purpose of maintaining our food supplies. His own conclusion was that we are still exporting more than the minimum necessary for this purpose, and that the dependence of many overseas food producers upon the British market is sufficiently great to force them to adjust their prices to our ability to pay. In the discussion which followed, his calculations and opinions met with strong criticism, and in view of the great importance of the question for the present fiscal controversy we propose to join issue with them in these columns on an early occasion.

The Volume of Overseas Trade.—Last week we recorded a very substantial fall in the value figures of overseas trade of the first quarter of this year as compared with the corresponding period of 1930. The publication, in the current *Board of Trade Journal*, of these figures recalculated on the basis of 1924 values, more than bears out our assumption that only a small part of this decline was due to the fall in prices. The following table shows our trade during the past five quarters as a percentage of the 1924 average:—

VOLUME OF EXTERNAL TRADE OF GREAT BRITAIN AND NORTHERN IRELAND. (1924=100.)

Period.	Total Imports.	Exports of Imported Merchandise.	Net Imports.	British Exports.
1930:				
January-March.....	109.6	83.5	112.8	99.9
April-June.....	105.6	89.5	107.6	87.4
July-September ...	100.4	69.9	104.2	85.0
October-December	117.0	81.3	121.4	82.7
1931:				
January-March.....	102.9	76.8	106.2	69.2

The decline in net imports in the first quarter of this year, as compared with the corresponding period of 1930, was due principally to the fall in net imports of raw materials, to which wool was the only important exception; but there was also a very substantial fall in retained imports of manufactures, to which vehicles, and especially motor cars, contributed very largely. Net imports of food increased. Exports of food, on the other hand, showed a reduction, and there was a very heavy decline in the volume of our exports of British-produced raw materials, especially coal and wool. The fall in the average value of exports was very much less than in those of food and raw materials—8.5 per cent. against 12.4 and 12.5 per cent. respectively—and the fall in volume very much greater. No group showed an increase over last year's figures.

Cotton Trade Problems.—Throughout the past week, writes our Manchester correspondent, there has been keen discussion in Lancashire of the report of the Cotton Mission to the Far East. On Monday last a conference took place in Manchester between the members of the Mission and the Joint Committee of Cotton Trade Organisations, which was attended by Mr G. M. Gillett, the Parliamentary Secretary to the Department of Overseas Trade, Sir Edward Crowe, Comptroller-General of the Department, and Mr L. Browett, of the office of the Chief Industrial Adviser to the Government. Sir Ernest Thompson, the chairman of the Cotton Mission, developed some of the points raised in the report. He said that with regard to China as a market for Lancashire the first essential was a reduction of costs. There were two reasons for this necessity. Firstly, there was the fact that Japanese costs were lower, in some cases much lower, than ours, and, secondly, China was mainly a price market. In Japan they had seen a mill weaving ordinary sateens with ordinary yarn on looms very similar to Lancashire looms and in that mill a weaver looked after twelve looms. In another mill weaving plain calico one weaver attended twelve to sixteen looms. He then stated: "The Mission was agreed that it would be better to have altera-

tions in the wage lists than for the operatives to have less and less employment and less wages to draw." Sir Ernest continued:—"The Mission considered the present situation as regards distributing methods in China far from satisfactory, and their opinion was confirmed by importing British houses in Shanghai. The report recommended the setting up of an organisation in China to bring Lancashire into closer touch with that market. The goods should be produced on a joint producing and exporting basis. The organisation should be strong enough to hold stocks in Shanghai and large enough to be able to standardise the goods and give bulk orders." The general opinion in the industry is that the report of the Mission confirms the views expressed in many quarters during the last few years that until something is done to reduce costs in Lancashire her trade will continue to be lost and business will steadily contract. It is further held that there is no probability of making any serious impression upon the cost of goods without some action being taken relating to wages and hours of working in the mills. The trade union officials resist any action of this kind. It is also agreed that something will have to be done to reorganise production and distribution. The report of the Cotton Mission to the Far East will now be considered separately by the constituent bodies of the Joint Committee, and at a later date there will be a further meeting of the Joint Committee to receive reports from the different sections and to decide upon action. The Federation of Master Cotton Spinners' Associations has decided this week to proceed with the proposals relating to the regulation of the spinning section on the lines of fixing marginal rates for standard yarns. A committee has been set up including representatives of the Egyptian and American sections for this purpose.

Automatic Cotton Weaving.—Our Manchester correspondent writes:—The Lancashire Cotton Corporation has commenced an experiment in the use of automatic looms at the Higher Walton Mill, Preston, and I was privileged this week to inspect the machinery working. The looms installed comprise the Northrop, the Vickers Stafford, the Platt-Toyoda (a Japanese loom), and the Lancashire loom with the Whittaker automatic attachment. There are batteries of forty looms each and there are also working forty ordinary Lancashire looms, being run under normal conditions. With regard to the automatic looms, each forty are being tended by one weaver, but the operative is assisted by helpers who carry out the duties of carrying, cleaning, etc. The Whittaker Attachment looms are tended by one weaver to every sixteen, with helpers. With regard to the ordinary Lancashire looms one weaver is looking after four looms, and no help is provided. The looms are all producing a standard bleaching cloth, and they are all using identical yarn. The looms are being run at the speeds which are recommended by the various makers. The results are being recorded, and I understand it is the Corporation's intention to publish all the data obtained after about six months' working.

Employment and the Cost of Living in March.—Owing mainly to the seasonal revival in the building and clothing trades and to the recent slight improvement in the textile industries, employment during March was slightly better than in the preceding month. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at March 23 was 21.5, as compared with 21.7 per cent. at February 23 and 13.7 per cent. a year ago. The number of insured workpeople in employment at March 23 is estimated to have been approximately 9,267,200—42,300 more than a month ago, but 713,800 less than in March, 1930. The number of persons registered as wholly unemployed at March 23rd amounted to 1,859,526, as compared with 1,888,716 at February 23rd, and 1,135,768 a year ago. Those temporarily without work totalled 604,089, against 613,692 in February and 407,429 in March, 1930, while the numbers unemployed

among persons usually in casual employment amounted to 116,503 at March 23rd, as compared with 115,250 at February 23rd and 95,602 a year ago. The latest return of the Ministry states that on April 13th the total number of registered unemployed was 2,561,054, of whom 1,862,991 were wholly unemployed and 583,306 temporarily stopped, while the remainder, 114,757, consisted of persons usually in casual employment. The total figure shows a reduction of nearly 20,000 as compared with the previous week. As regards the cost of living, prices continued to fall during March, the index number of the Ministry of Labour at April 1st registering 47 per cent. above the level of July, 1914, as compared with 50 per cent. at March 1st and 57 per cent. a year ago. For food alone the index stood at 29 per cent. at April 1, against 34 per cent. a month before and 43 per cent. at April 1, 1930. The fall in the indices was accounted for mainly by reductions in the prices of eggs, milk, butter and meat.

The Spanish Stabilisation Credit.—A few weeks ago it was announced that an international credit of \$60,000,000 had been arranged for the Bank of Spain, with the guarantee of the Spanish Government, to assist in the stabilisation of the peseta. London bankers had no direct interest in the credit, which was sponsored partly by an American group headed by Messrs J. P. Morgan and Company, and partly by an international group centred in Paris and acting under the leadership of the Banque de Paris et des Pays Bas. This latter group included many of the principal Paris houses and also certain Continental banks. Immediately after the revolution some doubts arose as to the position of this credit, especially as it was guaranteed by the former Spanish Government and as its arrangement had evoked considerable opposition from those who took a leading part in the formation of the new Republican Government. These doubts were resolved at the week-end, when it was officially announced that the credit had never been drawn upon and that it had been decided to close it forthwith. In order to stabilise the peseta, the new Government intends to rely upon existing foreign balances and upon measures now being taken to arrest the flight of capital from Spain. It remains to be seen how far these are efficacious, and, indeed, the revolution probably means that such questions as the determination of the rate of stabilisation will be considered anew.

Polish-Russian Trade.—Our Warsaw correspondent writes:—It is announced from Katowice that the Soviet Commercial Mission has placed a new order with Bismarckshütte and its allied foundries in Upper Silesia (American capital is understood to be strongly represented in these enterprises) for 250,000 tons of structural materials to be delivered during the remainder of 1931. It is furthermore announced that credit up to 18 months will be allowed on this contract, with one of the State financial institutions guaranteeing 40 per cent. of the risk. The value of this order is estimated at 70 million zloty. The Soviets during recent years have taken about 300,000 tons of iron and steel products annually from Polish Upper Silesia. An order for 87,000 tons of products was placed about two months ago, at which time it was reported that the Soviets would not give any more large orders to Polish foundries unless the Government agreed to accept imports from Russia more freely than has been the case up to the present. The placing of the 250,000-ton contract, therefore, indicates that the Polish Government will henceforth adopt a less restrictive attitude towards imports from Russia, and this is more or less confirmed by an unofficial report that Bismarckshütte and other Polish plants will buy principally Russian ores from now on. The Polish Government, it is also reported, will permit larger imports of fish, rubber articles, cotton and certain other products from Russia, and, moreover, have agreed to allow the Soviets to ship merchandise via Poland to Germany. Poland's exports to Soviet Russia in 1930 were officially valued at 129 million zlotys (3 millions sterling), while imports from Russia amounted only to 46 million zlotys.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during March amounted to 910,998 ounces of fine gold as compared with 889,937 ounces produced during February and 914,576 ounces in January. In March, 1930, the output amounted to 889,370 ounces. The following table shows the monthly output since the beginning of 1925:—

Months of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

Total.	9,593,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	2,665,511

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	July, 1930.	Aug., 1930.	Sept., 1930.	Oct., 1930.	Nov., 1930.	Dec., 1930.	Jan., 1931.	Feb., 1931.	Mar., 1931.
Gold mines	201,111	202,257	205,061	206,778	205,030	203,473	209,442	209,777	207,239
Diamond mines	14,670	14,788	14,708	14,482	13,973	13,763	13,865	13,740	13,436
Diamond mines	5,490	5,754	5,767	5,032	4,748	4,607	4,325	4,333	4,106
	221,271	222,799	225,534	226,292	223,751	221,843	227,632	227,850	224,781

There was a decline in the native labour figures for all branches of mining during March.

The National Bank of Hungary.—The Report of the Hungarian central bank begins with a comprehensive view of the international situation during 1930. In the main it covers familiar ground, but it is interesting to observe the Hungarian point of view. Early in the year high hopes were placed upon the reparations settlement at The Hague, a matter which was of especial importance to Hungary, but as the year progressed it became clear that Hungary was involved in the general trade depression, and the situation of Hungarian farmers became particularly difficult. This has reacted upon the general national economy and in particular upon the public finances. On the other hand, Hungary has displayed certain powers of resistance against the depression, and the foreign trade returns suggest that Hungary has to some extent been able to adjust herself to the altered conditions. The Appendices to the Report include very full statements of the bank's own position. During 1930 the note circulation contracted from 500 to 469 million pengös, this reflecting the fall in prices which occurred in Hungary as elsewhere. At the end of the year the bank's holdings of gold and gold exchange amounted to 206 million pengös, the remaining assets of the bank consisting mainly of 298 millions of inland bills, warrants and securities. Thus the bank is in a thoroughly liquid position, and in actual fact has maintained its gold and gold exchange holdings at a fairly constant level during the year. There is a slight net fall in discounts and advances on securities taken together, but this is no more than might have been

expected from the general recession in business and fall in prices. The general impression left by the Report is that Hungary's experience during last year was typical of that of the world at large, and that the nation's central bank has fully maintained its strength during a somewhat difficult period.

Our Budget Supplement—A Correction.—On page 6 of the Budget Supplement, published with our last week's issue, it was stated that receipts in 1930-31 from the Young "Plan" had been transferred to the Debt Commissioners for the reduction of debt. The word "Plan" should, of course, have been "Loan," the reference being to the proceeds (£9 millions) of the Reparations Loan issued in 1930.

INSURANCE NOTES.

Royal Exchange Assurance.—During the last five years the premium income of the life department has grown from £717,112 to £925,966, and the fund from £6,005,289 to £8,535,510; the figures speak well for the energy with which this department is conducted. Last year's new life business again showed an increase, the 1930 total being £2,501,132, compared with £2,273,907 in 1929. A quinquennial valuation has just been completed, with the following results (the corresponding figures for the 1925 valuation being inserted for comparative purposes):—

	1921-1925.	1926-1930.
Trading surplus earned during quinquennium :	£	£
Life assurance fund	702,366	1,327,783
Annuity fund	41,243	52,250
Brought forward	51,984	127,027
	795,593	1,507,060
Allocations :—		
To Bonuses to policyholders	551,888	895,909
„ Shareholders' account :—		
From life assurance fund (10 per cent. of profits)	75,435	130,755
From annuity fund (100 per cent. of profits)	41,243	52,250
„ Bonus equalisation fund	...	250,000
„ Carried forward	127,027	178,146
	795,593	1,507,060

As will be observed, the distribution to the policyholders is a very conservative one, a large part of the balance of trading surplus being utilised to create a bonus equalisation fund. This distribution permits of a reversionary bonus at the rate of 40s. per cent. per annum on sums assured and existing bonuses, compared with 35s. per cent. per annum for the preceding quinquennium. The shareholders' account will benefit during the next five years by an annual sum more than 50 per cent. in excess of the figures taken credit for in each of the five years just ended. The premium incomes in all other departments show a reduction, thus reflecting the general state of trade depression, but the underwriting results are a great improvement on those for 1929. Fire business has produced £1,685,000 in premiums, general business £1,262,000, and marine business £653,000. The detailed results of the past two years are shown below :—

	1929.	1930.	1929.	1930.
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire department	75,135	4.2	129,095	7.7
General department	41,482	3.2	39,387	3.1
Marine department	213,598	28.7	19,830	3.0
Life department	15,087	...	26,151	...
Annuity department	8,248	...	10,450	...
Capital redemption department	1,311	...	2,293	...
Trustee and executor department	16,848	...	12,754	...
Released from taxation reserve	100,000	...	...	...
	44,513	...	200,300	...
Less taxes, expenses, &c.	76,612	...	93,765	...
Total net trading surplus	32,099	...	106,535	...

It should be explained that the foregoing figures relate to the company's business only and do not incorporate, as is usual, the business of the various important subsidiaries. The interest income (which includes in the case of subsidiaries only dividends received) shows a substantial reduction, and is now only just sufficient to meet the company's dividend, which for the sixth consecutive year remains at 27 per cent.

Eagle Star and British Dominions Insurance.—The trading results of this combine are very largely affected year by year by the operations of the life department. Although the life fund amounts to the large total of over £15½ millions, only some £5 millions is represented by the fund of the current series, which in fact only started business in 1919. The remainder is accounted for by the four closed funds of the "Eagle," the "Star," the "English and Scottish" and the "Sceptre." These funds were originally acquired at a cost of £606,000, now written down to £305,000, and their subsequent history as a closed series has been notoriously a great deal more favourable from the point of view both of the with-profits policyholders and the shareholders (i.e., the Eagle Star and British Dominions) than in the days of their independence. Quinquennial valuations of the English and Scottish and of the Eagle funds were made on December 31st last and the results have been reviewed in these notes in a previous issue. The last valuation of the other two closed funds took place in 1928. The yield to the parent company on the written-down value of these investments, after converting the last quinquennial allocations to an annual basis, works out at the very high figure of 17½ per cent. per annum. So far as the current series is concerned the only information furnished in the report is the amount of the new business, which at £2,352,501 shows some reduction on the previous year's total. The total premium income of the fire, accident and marine departments in 1930 was £3,005,000, which compares with £3,249,000 in 1929. The largest department is the general, and this contributed £1,333,000 towards the total, over £100,000 in excess of the preceding year's figure. The diminution in premium income was concentrated in the fire department, and in the marine department where after previous disastrous losses the account has been reduced to manageable proportions. For the first time since 1926 no transfer from profit and loss has been needed to assist the marine department, which now has a fund in excess of one year's income, and may be expected therefore to be self supporting. The detailed results of 1929 and 1930 are shown below :—

	1929.	1930.	1929.	1930.
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
Fire	36,170	3.7	13,409	1.6
Accident	36,470	23.4	43,225	32.7
Employers' liability	742	0.4	1,092	0.6
General	40,341	3.3	52,559	3.9
Marine	25,000	3.9	...	...
Life :—				
Current series	50,000	...	...	...
" Sceptre "	21,487	...	...	...
" Eagle "	...	...	22,000	...
" English and Scottish "	...	...	75,518	...
	160,210	...	207,803	...
Less :—				
Items debited to profit and loss account	98,392	...	97,716	...
Written off acquired closed funds	...	...	50,000	...
Investment fluctuation account	35,000	...	50,000	...
	133,392	...	197,716	...
Total net trading surplus	26,818	...	10,087	...

The usual dividend of 20 per cent. has been declared and the cost of this is covered for the first time by interest earnings without the necessity of a draft on trading surplus.

Atlas Assurance.—The life department of the Atlas achieved in 1930 a fresh record by the issue of new policies for sums assured of £4,243,948 compared with £3,919,560 in 1929. In addition the substantial sum of £135,000 was received as consideration money for annuities granted, the corresponding figure for 1929 being £161,000. Owing to the rise in the standard rate of income tax the net interest earnings have declined from £5 10s. 3d. per cent. to £5 5s. 7d. per cent., but the latter figure, on account of the existence of a substantial hidden margin in the book value of the assets and also because the fund includes a considerable annuity business which is virtually free of tax, is still a very high rate. The interim bonus for the year 1930 has again been maintained at a reversionary rate of 48s. per cent. on the sums assured and existing bonuses. The fire department, although it has experienced a more favourable incidence of loss ratio both here and in America, has been unable in face of the falling price level to maintain its income, and this has therefore fallen to £2,173,000 from £2,332,000. The accident and general account has produced a slightly larger income of £479,000, and the marine account remains at virtually the same figure, namely, £167,000. Besides being an extremely moderate one, this account has been very carefully managed, and ever since it was inaugurated in 1920 no transfer has been made either to or from profit and loss account. The result is that the fund is now equal to two years' premium income, and is acknowledged to contain a substantial hidden earned profit. The detailed results of the past two years are shown below :—

	1929.	1930.	1929.	1930.
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
Fire	194,090	8.3	194,525	8.9
Accident	19,445	4.1	36,398	7.6
Marine	...	...	...	...
Life	21,689	...	22,390	...
	235,224	...	253,313	...
Less items debited direct to profit and loss account	92,899	...	139,140	...
Total net trading surplus	142,325	...	114,173	...

In addition to the items shown as being debited direct to profit and loss account the sum of £54,000 was written off the cost of acquisition of the Montreal Life Assurance Company in 1929, and a further £55,000 was transferred to reserve against uncalled capital. On this occasion the figure in the above table of £139,140 includes £75,000 written off the cost of office buildings, etc., in connection with the rebuilding of a portion of the head office premises. The transference of a further £55,000 to reserve against uncalled capital enables a further 5s. per share to be written off the uncalled liability. The dividend remains the same as in each of the two previous years, namely, 32 per cent. free of tax, but owing to a falling off in interest earnings the gap between the cost of the dividend and interest earnings has widened to £35,000. Nevertheless, the year's operations have enabled the company to add to its surplus resources the satisfactory sum of £79,000, compared with £115,000 in 1929.

General Accident, Fire, and Life.—In 1924 the General Accident purchased the share capital of the General Life Assurance Company, and, since January 1, 1926, all life business has been transacted by this subsidiary. The fund has made rapid progress and has built up a premium income of £473,457, a high figure in relation to a fund of under £3½ millions. Last year's new business was £2,024,481, compared with £1,985,539 in 1929. On December 31, 1930, a valuation of the fund was made, but no indication whatever of the results is furnished in the report, which merely states that " Full details of the valuations and distribution of profits will be furnished in due course in the returns to the Board of Trade." We strongly deprecate this denial of the policyholders' rights to information as to the progress of the business in which they have contractual rights; for few policyholders will incur an outlay of 30s. for the sake of delving into the technical intricacies of Board of Trade Returns. The re-

versionary bonus declared for the five years on the current series is given as 35s. per cent. per annum on the sums assured, and this compares with 25s. per cent. and 35s. per cent. respectively five years ago on General Life policies and General Accident policies. The explanation of these low rates of bonus lies in the interest earnings and expense ratios. The average net rate of interest earned during the last five years works out at the comparatively low figure of £4 7s. per cent., while the corresponding average expense ratio of 20.5 per cent. appears to be on the high side. The Corporation's main business is centred in Fire and Accident insurance, particularly the latter, wherein it has huge interests largely based on U.S.A. casualty insurance. Fire premiums in 1930 produced an income of £605,000, compared with £657,000 in 1929. There was a reduction in Accident premiums, from £6,964,000 to £6,707,000, though the whole of this falling off was concentrated on " monthly and other short-term " contracts, which are now responsible for less than 15 per cent. of the total, compared with as much as 35 per cent. five years ago. No unexpired risk reserve is maintained for these short-term contracts, nor is one necessary, but for the long-term contracts the unexpired risk reserve has been increased from 37 per cent. to 38 per cent. In the table below, however, the figures have been calculated on the common basis of a 40 per cent. reserve. In marine business the Corporation has very wisely been content with a small account, and in this also there has been in 1930 a reduction of premium income, the 1930 figure being £73,000. The detailed results are set out below :—

	1929.	1930.	1929.	1930.
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
Fire	79,886	12.2	72,265	11.9
Accident	246,207	3.5	323,619	4.8
Marine	37,445	39.6	13,752	18.8
	288,648	...	382,132	...
Less items debited to profit and loss account	207,417	...	318,919	...
	81,231	...	63,213	...

For the fourth year in succession the dividend has been increased, and is now at the rate of 56 per cent., though interest earnings alone would have permitted a dividend of 76 per cent. The results of the year's trading may be summarised by the statement that the Corporation's free surplus has been augmented by a sum of £130,584, compared with £154,737 in 1929. In addition, premiums on share capital issued during the year have added a further £206,800. The Corporation's total resources (other than the capital and life department funds) are now equal to 55 per cent. of the premium income, showing a satisfactory increase of 5 per cent. over the 1929 percentage.

UNITED STATES.

Dividends — Stock Exchange — Public Finance — Money — Oil Difficulties — Agriculture and Industry — Failures.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 10.

LITTLE has transpired since the opening of the second quarter to arouse hopes of an early upturn in trade, and the country has been inclined to over-emphasise the evidence of poor times that have already been experienced. Dividend reductions continue. The decline in common stock payments in the past year has been fully as precipitate as was the rise in the boom times of 1929. At present it is estimated that the average yield on common stocks is a little over 5 per cent. and that the reductions of the past year on stocks listed on the New York Stock Exchange mean a decline of nearly \$500,000,000 in annual payments.

Reinvestment demand for stocks and bonds from recipients of the heavy April dividend disbursements has made no great impression on security markets. New capital flotations of the past week were higher than average, mounting to over \$200,000,000, but except for the issues of highest quality, such as the New York State loan, the market has been rather sticky. Removal of syndicate support brought sharp breaks in the recently offered loans for the New York Central and Pennsylvania railroads. Investment bankers say the bond market has the appearance of more strength than it really possesses, and they would be surprised if it could absorb any great volume of new loans in the immediate future, but that does not apply to the Government issues. Terms have been announced for the early April financing, which will be an issue of \$275,000,000 of certificates, maturing in December, and bearing 1½ per cent. interest. Considerable oversubscription is expected and the Treasury may allot upwards of \$300,000,000.

The market had not expected a long-term issue at this time, but the heavy financing which must be done between now and the June 15th tax date and the unwieldy mass of short-term Treasury issues outstanding suggest the probability of a long-dated loan before long. Short-term debt is about \$2,700,000,000. Bill issues of \$214,281,000 fall due in May and certificates of \$590,000,000 mature in June. September maturities are about \$634,000,000 and the December certificates due are \$543,000,000.

The Treasury deficit is steadily rising, at present standing at approximately \$650,000,000. It will rise at least until the June tax collections, which doubtless will fall below the March receipts. First-quarter collections were \$334,000,000. Since the increase in the bonus law provisions, loans to ex-soldiers have amounted to \$379,000,000, bringing the total of all loans on the adjusted compensation certificates plus redemptions paid by the Treasury to the banks to \$680,000,000. The Government's latest estimate for these loans is \$1,000,000. To meet further payments and other running expenses the Treasury in the next fortnight will call an additional \$200,000,000 or so from deposit in commercial banks. Interest on Government obligations due this month amounts to \$149,000,000.

This large-scale transfer of money from investment markets to ex-soldiers and other beneficiaries of Government expenditure has disturbed the money market somewhat, though it has also brought some stimulation of trade. Cheques sent out by the Treasury are slow in returning to the banks as private deposits, and when they do so they require reserves at the Federal Reserve Bank, which tends to stiffen rates. As an offset to this and doubtless also to ensure continuance of easy money as an aid to business revival as well as to Treasury financing, the Federal Reserve Bank has announced a reduction in its buying rate on 60- and 90-day bankers' bills. The new rate is 1½ per cent., and it is bringing in more bills to the Reserve, dealers' holdings having mounted about \$75,000,000 as a result of Treasury operations. Call money has relapsed to 1½ per cent., but is firm at that rate.

Bankers are confident that easy money will continue at least until autumn. Little attention has been given to the various rumours regarding Mr. Montagu Norman's visit, but it is believed that close harmony will be maintained between the Bank of England and the New York Federal Reserve Bank on monetary policy. Governor Harrison, of the New York Bank, has, it is understood, no present plans to attend the approaching annual meeting of the Bank for International Settlements.

Parlous times in the oil industry were accentuated this week by fresh reductions in crude oil prices applicable to the new flush fields in East Texas. Some oil is being bought there at as low as 20 cents a barrel. This new menace prompted the holding this week of a meeting in Washington of representatives from the several south-western oil-producing States. An agreement was reached in principle for uniform laws and a board to direct curtailment and allocation of oil production. Whether the scheme will work remains to be seen, but it is feared that some States may insist on fixing prices for crude

as a condition of limiting output. The large oil-producing factors do not appear to be particularly enthusiastic over the scheme, though anything which might bring about a cut in production would be welcome. Fortunately the season of heavier consumption of gasoline and other oil products is opening.

The drought over the western and central wheat belt has broken, and the Department of Agriculture has raised its estimate of winter wheat output, forecasting a 644,000,000-bushel crop, or 40,000,000 bushels more than the 1930 outturn. If the Department's estimates of the spring planting are borne out, the total crop is nevertheless unlikely to reach last year's harvest. It is at present estimated at 822,000,000 bushels.

Building construction has felt the stirrings of the season. Permits granted in March were 47 per cent. higher than in February, according to Bradstreet's, but were 9 per cent. lower than a year ago. Contracts let in the 37 States east of the Rocky Mountains, as reported to the F. W. Dodge Corporation, were 40 per cent. larger in March. Several sections of the country showed gains over last year. The steel trade has lost further ground, the rate of operation being 53 per cent. Evidently the steel industry this year reached its peak in March, whereas last year activity continued to rise until April. Unfilled orders of the United States Steel Corporation for March rose 30,000 tons, but the smallness of the gain suggests disappointingly small specifications against second-quarter orders. Steel prices continue weak, and it is doubtful if many steel companies are currently earning anything for their common shares. March iron output was 2,032,248 tons, the gain being 7.6 per cent., compared with a rise of 10 per cent. in steel ingot production.

Motor production is rising gradually. Output in March is estimated at 287,000 units. Actual production in February was 229,268 and in March of last year it was 422,043. March production was the highest for any month since June of last year, but the quarter has brought a drop of 34 per cent. compared with a year ago.

Business and banking failures are taking place in large numbers. Bank failures for the first quarter are estimated by Dun's at 270, compared with 124 a year ago, but a number of banks in the south which failed several months ago have reopened. Doubtless a good many insecure western banks which have been nursed along will go under if farm prices do not improve. In the interior money is by no means easy. Country banks which have been well managed are fairly liquid for the most part, but they are reluctant to make loans under present conditions. Business is very slow in the south and middle west, and there is not much hope of improvement before the summer and autumn harvests.

FRANCE.

Politics — Presidential Election Prospects — Franco-British Trade Relations.

(FROM OUR CORRESPONDENT.)

PARIS, April 22.

POLITICAL opinion this week is centred on the possibility that the remarkable victory of M. Herriot, in the Lyons municipal bye-elections last Sunday, may have an unexpected effect on the national situation of the parties formerly belonging to the Cartel des Gauches, and particularly in next spring's general elections. M. Herriot resigned his seat on the municipal council at Lyons (of which he has been mayor for the past twenty-five years) as a protest against the action of the Socialist members of the council in appropriating, by a snatch vote, the right to elect all the delegates to represent the Council at a pending senatorial election in defiance of their alleged tacit pact to share the delegation with the Radical-Socialists under the old cartel arrangement. To bring the dispute to a concrete issue, M. Herriot took the bold step of resigning his seat on the Council and coming forward as a Radical-Socialist candidate at a municipal bye-election to fill a vacancy in one of the wards previously held by a Socialist with a majority of over 1,200. To the

stupefaction of the Marxists, M. Herriot captured the seat outright, at the first ballot, by a majority of over 1,400, three vacancies in other wards being, on the same day, again secured by members of his party.

This victory has put the Socialistic Radicals and the Socialists on the council on equal terms, with 25 votes each, leaving the seven other seats to the Moderates, on whose support M. Herriot has had latterly to rely for a majority. Simultaneously, at a parliamentary bye-election in the Ardèche Department, the Socialists, in defiance of all cartel arrangements, stole yet another seat from the Radical-Socialists, and thus drew level with the latter, with 108 seats each, in the duel for the coveted standing of "largest Party in the Chamber." (Third place is held by the Marin Nationalists, and fourth by M. Tardieu's group.)

Just how all this will work out, in the extraordinarily complex game of French political party warfare, even the most astute parliamentarians do not yet venture to forecast. In view of the pending presidential election on May 13th, and the effect any definite break between the two parties may have on their prospects at next year's general elections, the Socialists are reported to be anxious for an immediate truce with M. Herriot and his followers, but it is impossible to say whether this rumour is well founded. Recent events, in any case, have rendered the political situation here more complex than ever, and the outlook is now such that the future of European peace may largely depend on the solution of the present conflict between these two great Parties of the Left.

Speculation as to the result of the coming presidential election is now taking more definite form. M. Doumer, President of the Senate, remains, since the disappearance of M. Raoul Péret, the most-talked-of nominee, in spite of his seventy-four years. M. Painlevé is regarded as second favourite, with M. Maginot, the present War Minister and one of the younger Nationalist leaders, third, and M. Léon Bérard, Minister for Justice, fourth. M. Briand has apparently lost ground seriously under the repercussion of recent events abroad, and particularly since M. Doumergue's much-discussed "swan-song" discourse at Nice, and the recent opening of what seems to be an organised campaign against his election.

The official announcement that, on the initiative of the British Government, the French Government has agreed to open conversations in regard to what, for all practical purposes, would amount to the conclusion of a new commercial treaty between the two countries, has had the effect of a bombshell on British trading interests here, and apparently in London also. The first public notification that any such negotiations were even contemplated took the form of a *communiqué* from the Ministry for Commerce, published here on Sunday evening, intimating, so indirectly that most people failed to realise the importance of the news, that MM. Elbel and Arnal, two high ministerial officials, would take advantage of a visit they were making to London "to enter into contact with the British authorities and study with them the main lines of the pending negotiations between the two countries in view of the conclusion of a treaty of commerce."

For some reason British official circles here are curiously reticent on the matter. Inquiries in other responsible quarters, however, show that, following on the breakdown of the recent tariff truce project at Geneva, the British Government, in March last, forwarded Notes to the seven other Powers who took part in the Geneva discussions (France, Germany, Italy, Belgium, Switzerland, Poland and Austria) asking them if they were disposed to consider reductions of their existing tariff rates, except where these are already obviously low. Most of the Governments approached are understood to have replied favourably, so that it is probable that not merely one but a whole series of "tariff talks" will be undertaken in the near future. The pending negotiations between Great Britain and France will apparently mark the beginning of the series. That these individual talks will result in any general conversation still remains no more than a possibility, but it is unofficially regarded here as probable.

Franco-British trade relations have hitherto been governed by the commercial treaty signed on February 28, 1882, which has for many years proved most inadequate to meet the greatly modified situation that has arisen in consequence of modern economic and industrial developments and the radical changes that have come over the foreign trade situation as the result of these factors. The British Chamber of Commerce in Paris has for many years been doggedly making representations to the British Government as to the prejudice caused to British national interests by the fact that, although French products enjoy free entry to Great Britain, British goods have to face constantly increasing French import duties. It is refreshing to note that the Chamber has never advocated the imposition of countervailing "protective" duties on French goods entering Britain, but has consistently pressed for action to be taken to induce the French to accord to British goods special and substantial reductions of Customs dues in recognition of the fact that French products are given free entry to Britain. Until last March all these representations from Paris had utterly failed to excite practical response.

The French view of the British Note is largely conditioned by fear that the present protectionist movement in Great Britain may prove successful. The Lille Chamber of Commerce has already addressed a letter to the Minister for Commerce protesting against the British request for tariff reductions, and insisting that such a step would throw open the French home market to British products, and consequently to those of all other countries which enjoy the benefit of most-favoured-nation treatment. The obvious rejoinder is that woollen and cotton products from the Roubaix-Lille area enter Great Britain free, whereas British textiles are subject to fairly heavy import duties in France. More difficult arguments for the British negotiators to overcome, probably, will be those advanced by the French silk manufacturers and wine producers, of which it may be anticipated the French delegates will make good use. The key to the whole French case is probably to be found in the statement made by the Ministry for Commerce in last Sunday's *communiqué*: "The French Government cannot remain indifferent to the protectionist tendencies which are clearly being manifested in Great Britain, and which, should they prove triumphant, will seriously prejudice French interests in a country which has hitherto been the best customer for French exports."

GERMANY.

International Politics — Wages Question — Cabinet Programme — Russian Contracts — March Foreign Trade.

(FROM OUR CORRESPONDENT.)

BERLIN, April 23.

THE international discussion of the Austro-German Customs Union is naturally being followed in Germany with close attention, but without any uneasiness. This applies especially to the vague French counter-project of which so much has been heard in the Press. As far as can be gathered from the French Press, the object of this plan is to grant preference to grain imports from the agrarian States of South-East Europe, apparently in order to immunise them against German "seduction."

It would be matter only for rejoicing to Germany if the scheme succeeded in alleviating the distress of those countries, for the more of their agricultural products Hungary, Roumania, Yugoslavia and the rest can export, and the higher the prices they receive, the greater will be their purchasing power for foreign industrial goods. Germany herself, in the trade negotiations which were interrupted by the change of Government in Roumania, offered preferential duties on maize and barley, without demanding in return any preference on her industrial exports to Roumania; she would be prepared to negotiate with Yugoslavia and the other agrarian States on similar lines. It would, however, be an express condition of

such agreements that the most-favoured nations overseas should make no claims on the basis of these preferential duties, for Germany has no intention of involving herself in a Customs war.

On the same principle it is difficult to see how the French plan could be made practicable, and especially how all the non-German Powers could be brought into line merely for the purpose of rendering otiose the Austro-German Customs Union. Germany is the only large buyer of European corn and other agricultural products, whereas France is to a great extent self-supporting, so that she has little to offer her allies of the Little Entente. As it is entirely a question of political action these economic considerations cannot be swept aside, but at present M. Briand's plan is not very clearly outlined.

The dominance of political over economic problems was also the subject of a much-discussed speech by Herr Oscar Wassermann at the general meeting of the Deutsche Bank und Disconto-Gesellschaft. He said, in part:—"As this crisis has arisen in the last analysis out of the political tension in Europe, and especially out of the unsatisfactory relations between France and Germany, it would, of course, be most certainly and rapidly resolved if a political understanding could be reached with France. It is an erroneous, though widely held, assumption that such an understanding could be tacitly arrived at by degrees on an economic basis by the interweaving of commercial and industrial interests. Mutual mistrust has developed too far, and the subjects of dispute are too important for a political *rapprochement* to be reached by an economic route. Political agreement must come first and economic friendship will follow automatically. To the cause of such political agreement we bring goodwill but empty pockets, unless France considers the secure peace which can never be achieved until our demands are granted, sufficiently valuable to be worth the necessary concessions. . . . This being so, we can only wait until France takes the initiative in bringing about at last the pacification of Europe, or until the honest broker appears to whom this goal appeals."

Dr. Wassermann considers that peace and order are Germany's most urgent needs, and would like to see the authority of the Government strengthened to this end. The accumulation of capital must be encouraged by an appropriate financial policy, but it can only be achieved by economy in every section of society, and with this in view he advocates further reductions not only in money wages but in real wages and salaries.

The Cabinet will have to grapple with the wage problem when it meets this week. The reductions so far effected have averaged from 5 to 8 per cent. and have extended over practically the whole of industry, but they were largely defended on ground that the cost of living fell from 153.8 in 1929 to 137.7 in March, 1931. (Average earnings have, of course, long been below the real earnings of 1928 and 1929 on account of unemployment and short time.) A further reduction of any dimensions would, however, reduce the real hourly wage rate below the level of the prosperous period, and such a policy would arouse violent opposition among the unions, which the Government would find great difficulty in resisting. It may, therefore, be assumed that the Government will only instruct its arbitrators in this sense if it is convinced that trade revival is so far off that further reduction in costs is indispensable.

The Cabinet has a very full agenda. The question of the new duties on agricultural products, demanded by Dr. Schiele and opposed by Dr. Stegerwald, the Minister of Labour, must be settled; a new arrangement for the support of those unemployed who have fallen out of benefit must be organised; the Right Wing of the Government group desires alterations in the unemployment insurance scheme, and there seems to be some question of a reduction in war pensions. The Cabinet is once more faced with a choice of thoroughly unpopular measures, but it seems nevertheless as though the political situation is improving somewhat, for there are many signs that the Hitler Party is losing popular sympathy.

The negotiations between the Soviet Union and a committee of German industrialists on the financing of further Russian imports from Germany were concluded on April 14th. The amount of the Russian orders is not known, but it is believed to be not less than Rm. 300 millions, about two-thirds of which will be for German machinery. The heavy industries and the electrical manufacturing industry will also benefit, while orders for ships, motor cars and wagons are to be discussed shortly. The full economic importance of these orders cannot be gauged until the end of August, when the placing of them is to be completed. The credits which Germany is granting fall into three groups, to be repaid in 17, 24 and 33 months respectively. The Reich and the State in which the firm executing the order is situated are jointly to guarantee the credits to 70 per cent. of the cost of production. The German representatives succeeded in incorporating into the agreement a provision that all disputes in connection with it should be settled in German courts.

Foreign trade in March again showed a large active balance. This time it was not due, as in recent months, to reduction of imports, but to a seasonal rise in exports:—

	Imports.		Exports.		Balance.	
	1930.	1931.	1930.	1931.	1930.	1931.
January...	1,305	717	1,092	775	- 213	+ 58
February...	982	620	1,026	778	+ 44	+ 158
March.....	884	584	1,104	867	- 220	+ 283

Most of the increase in exports occurred in the manufactured goods class, exports of which rose from 591 to 662 million marks.

NORWAY.

Labour Disputes — Industry — Shipping — Foreign Trade — Money.

(FROM OUR CORRESPONDENT.)

TRONDHIEM, April 15.

PUBLIC interest is chiefly focussed on the labour crisis occasioned by the expiry, on March 31st, of most of the wages agreements that had been in effect for over two years. The paper industry was the first to open negotiations; the Public Mediator intervened, but in vain, and the mills stopped work on March 14th. After protracted negotiations, the Public Mediator succeeded in postponing termination of work in the other industries until April 8th, but ultimately his efforts to bring the parties together failed, and 42,500 workers were consequently locked out as from April 9th. The industries concerned are, among others, the iron, mining, textile, sawmill and pulp industries, and to-day another 25,000 workers were included in the conflict, bringing the total number of workers concerned to about 82,500, by far the largest number in any previous labour dispute in Norway, except the conflict in 1921, which affected 120,000 workers. The crux of the dispute is the question of wages and hours, the former of which the employers want to reduce by about 15 per cent. (in some cases less, in other cases more), and as to the latter the workers demand a reduction to 42 hours a week, instead of 48 hours, with proportionate compensation in wages. The hopes of a speedy termination of the dispute are not very high, and the present poor state of nearly all markets, of course, intensifies the seriousness of the situation, which is further accentuated by the stringency of competition.

Several of our largest industrial concerns have now published their balance sheets for 1930, and, although there is a decrease in earnings as compared with 1929, the results are not as unsatisfactory as might have been expected. Our largest paper concern, the A/S Borregaard, recently declared a dividend of 5 per cent., as against 6 per cent. for 1929, and net profits show a decline of about 1.5 million kroner. On the other hand, the total production of the company's mills in Norway, Sweden, Austria and U.S.A. only decreased by about 800 tons. There was a heavy fall in prices during the year, especially as regards sulphate of cellulose, which is now quoted below pre-war price. Though forecasts for the current year are not promising, if the labour dispute is settled in such a way as to enable our industry to compete success-

fully with foreign industries, the outlook will be materially altered.

The protracted depression of the freight markets entails an increase in the amount of idle tonnage, and shipowners entertain no delusions as to the chances of a speedy recovery. In its report for 1930 the Norwegian America Line describes the year as a very difficult one, the one bright feature being an appreciable increase in the east-going traffic on account of the Church festivals in this city last year. The curtailment of immigration quotas now put into effect by the U.S. Government will seriously affect the west-going passenger traffic, while the adverse economic situation in the United States aggravates the gloomy outlook for homeward traffic this year.

The prominent feature in the whaling industry is the decision of the Norwegian Whaling Association to lay up its fleet during the season 1931-32, as the British purchasing group have declared themselves unable to consume the oil from next year's catch. On account of the extraordinary conditions at present governing this industry a Government Bill has been submitted to the Storting to dispense with the collection of the so-called port fund duty from whale oil imported from the Antarctic during 1931 and temporarily stored here.

The value of imports declined during February from 78.1 million kroner to 63.1 million kroner, compared with the same month last year; while exports fell from 58.1 million to 46.9 million kroner. Among import items, cereals, fats and oils decreased in value, while the import of vessels rose from 4.63 million kroner. The surplus of imports during the first two months of this year amounts to 43 million kroner, against 37 million kroner during the same period last year.

The money market has been very much influenced by the many loan transactions which have taken place recently. The withdrawal of funds required for the payment of subscriptions to new loans, as well as Easter and end-of-the-quarter requirements, have brought about a decrease in the deposits with the big Oslo banks, and these conditions were also reflected in the position of the Norges Bank at the end of the quarter. On the Bourse the prominent feature has been the drop in whaling shares during the last few weeks, while the labour crisis, of course, contributed to the lack of interest in industrial shares.

SWITZERLAND.

Bank Results — Gold Standard — Growing Capital Market — Foreign Investment — Public Finance.

(FROM OUR CORRESPONDENT.)

GENEVA, April 4.

THE accounts for 1930 of the Swiss National Bank show a net profit of £284,380, compared with £272,441 in 1929. It has been decided to place £20,000 to reserve, to employ £50,000 in paying a dividend of 5 per cent., and £10,000 in paying a super-dividend of 1 per cent. The remaining £204,380 will be paid to the Federal Treasury, which will, as usual, distribute it among the 22 cantons forming the Confederation.

The principal object of the Board throughout 1930 was to prevent a further rise in the value of Swiss currency, and large quantities of foreign money were bought for that purpose. These foreign currencies were later converted into gold and deposited in London and New York. At the end of 1930 the Swiss National Bank was in possession of over £40,000,000 in gold and gold currencies. The coming into operation of the new legal provision for the replacement of bi-metallism by the gold standard already enabled the bank to issue gold coins during the past year, when £11,920 worth of Swiss gold pieces were put into circulation, while £27,120 of gold pieces of the former Latin Monetary Union was sold to be reminted. The introduction of the gold standard resulted in a big increase of the gold reserve which, after April 1st, oscillated between 62.33 and 69.42 per cent. of the note circulation.

The outstanding banking feature of the past year was the reduction of the discount rate, which had remained unchanged at 3½ per cent. from 1927 to May, 1930, when it was reduced to 3 per cent., while the rate of loans on securities was concurrently brought down from 4½ to 3½ per cent., thus reaching the lowest level recorded for the past 25 years. The ultimate aim of the Board is to put gold coins into circulation again in Switzerland, but the directors thought it better to postpone that part of the programme, for, in the present unsatisfactory economic circumstances, gold coins might be hoarded in Switzerland, and probably exported to the neighbouring countries, with the result that they would have to be replaced not only at the expense of the National Bank, but also at the expense of the world gold market.

The report of the Bank remarks that the Swiss capital market further developed in 1930, and that the importance of this country as a financial centre is growing year after year. This is confirmed by the fact that the deposits and investments of foreign capitalists are increasing, and that the quantity and value of foreign borrowings from the Swiss market are every year bigger. The extraordinary abundance of capital, and the consequent low interest of money, account for the big increase in the issuing of loans, most of which were launched for conversion purposes. While the total of loans issued in 1930 by the Swiss federal, cantonal and communal authorities, as well as by banking, commercial and industrial concerns, reached £49,054,800, compared with £18,712,800 in 1929, the aggregate of foreign borrowings was £15,030,920, against £4,620,600 the previous year. The Federal Government issued only one conversion loan, of £10,000,000, and the Federal Railways a conversion loan of £6,000,000. The interest on Swiss loans ranged from 4 to 6 per cent., and that on foreign loans from 4 to 7 per cent.

Foreign investors are not only depositing their funds in Swiss banks, but they are also buying Swiss Government securities, which partly accounts for the fact that their value has been rising during the year in spite of the unsatisfactory conditions prevailing on the security market. The 1930 index shows that the average value of twelve Swiss Government securities rose from 169 to 198 per cent. Foreign capitalists are also investing their money in houses and buildings, and much business was done in the Swiss towns where big houses with flats have been acquired by foreigners, thus causing the average value of buildings to increase. Despite this, the purchase of houses remains a profitable bargain, as they yield an interest ranging from 5½ to 7 per cent.

The Federal Budget for 1930 estimated receipts at £15,320,000 and expenditure at £15,311,200, but during the year expenditure was increased by about £1,600,000 owing to the payment of various subsidies and to extraordinary expenses, so that at one time a considerable deficit was anticipated. Instead there has been a surplus of £269,288, as receipts rose to £17,324,249, while expenditure totalled £17,054,961. These favourable results, however, were only arrived at thanks to an unexpected increase of £2,000,000 in receipts, which is not likely to recur annually.

During the past year, in conformity with the plan providing for the progressive redemption of the Public Debt, the Federal Government repaid £2,400,000 out of the yield of the Extraordinary War Tax, and paid £1,846,800 to the special fund for the redemption of the debt, which now stands at over £3,880,000, while a further £260,000 was saved on interest and service of the debt. The Government is now preparing for the repaying, at the end of the year, of a loan of £4,000,000, and by means of two loans of £4,000,000 each—the proceeds of which will serve to convert 5 per cent. into 4 per cent. loans—it will effect a further saving of nearly £200,000 in the interest and service of the Public Debt.

Though the 1930 accounts are, on the whole, satisfactory, the rise of about £1,700,000 in expenditure as a result of the grant of numerous and important State subsidies illustrates the weak point in Swiss political life. The Federal Parliament, as well as the Cantonal Governments, with a view to pleasing the electorate, are too inclined to grant subsidies, not only for all sorts of public

works, but also for gymnastic, musical, art and other associations, and the several small sums thus employed form an ever-increasing total. Should receipts decrease in consequence of the economic depression, the Federal Government will be faced with a deficit, and the finances will only be balanced if subsidies and extraordinary expenditure are drastically curtailed.

CANADA.

Crop Conditions — Business — Canada Power and Paper Corporation — Parliamentary Session — Budget Prospects.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 7.

CANADA is being favoured with an early spring, and cultivation of the land is general in the Eastern Provinces. In Manitoba soil conditions are reported to be good, but elsewhere on the prairies there is a serious dearth of sub-soil moisture, and heavy rains will be needed in the next two months to give the crop a reasonable chance. Wheat prices have turned downward again, largely owing to favourable reports about the condition of the winter wheat crop of the United States, but the export demand continues fairly good. Agrarian leaders in the West agree that a scheme of limitation for Canada's wheat acreage such as was suggested at the conference at Rome is impracticable, and accordingly no serious reduction of the wheat area is anticipated. The Federal Government has appointed a Royal Commission to settle authoritatively an ancient subject of controversy on the prairies by determining whether the sale of grain "futures" operates to the detriment of the producers. The Chairman of the Commission is Sir Josiah Stamp, and the representative of the grain-trading interests is Mr Sanford Evans of Winnipeg; the three prairie provincial governments are to appoint a member representing the producers.

There is some evidence of the annual stimulus which the advent of spring invariably brings to Canadian business, but its condition is still far from satisfactory. The car-loading figure for the week ending March 28th, at 49,416 cars, shows a decline of 245 cars as compared with the previous week, but is 8,113 cars below the figure recorded in the corresponding week of 1929. However, the latest business survey of the Bureau of Statistics, relating to the end of February, offers evidence of an improvement in some important factors, and suggests that a turning-point in the economic depression is in sight. Its index of industrial production, after reaching a new minimum in January, shows gains in grain and livestock marketing, in the volume of mining and new construction and in exports of copper, nickel and other minerals. The general weighted index of the physical volume of business for February at 138.9, while it was substantially below the figure for the last two years, compared favourably with the parallel index figure for February, 1927, which stood at 140. Another encouraging factor is a slight gain in the operations of the primary iron and steel industry, and motor production in February showed an advance of 10 per cent. after seasonal adjustment. In March the awarded contracts for new building construction, valued at \$27,311,000, showed a gain of 12.6 per cent. over the figure for March, 1930. Retail trade also is experiencing some improvement, especially in hardware and grocery lines, and sharp cuts in prices, which most merchants have made, are helping the sales of spring and summer clothing. The majority of factories, however, are still short of orders and working well below capacity, and the unemployment situation continues to present a serious problem to many communities. Many of the public works which were undertaken by the Federal and provincial governments by way of relief measures are either completed or on the verge of completion, and before Parliament rose for the Easter recess the Labour group forced a special discussion of the unemployment situation and, submitting evidence of acute distress and hardship in Winnipeg and other places,

demanded further remedial measures on the part of the Government.

The affairs of the Canada Power and Paper Corporation, one of the largest units in the newsprint industry, seem to be approaching a crisis. At the annual shareholders' meeting, held in Montreal last week, Mr J. H. Gundy, the president, announced that a drastic re-organisation of the financial structure would have to be carried out. The company's operations are being carried on at 47 per cent. of its producing capacity, and, although economies have reduced costs of operation by \$1 per ton as compared with a year ago, it was made plain that the earnings were quite inadequate to meet the fixed charges. Indeed, a firm of brokers has circularised its clients to the effect that the interest on the bonds of the constituent companies is unlikely to be paid at the next due date. It was admitted by Mr Gundy that the corporation's bank loans at the end of 1930 totalled \$14,558,000, a figure which has since been increased, and that the banks had refused to give further credit. Mr Gundy stated that there would be no ruthless cutting of capitalisation, but it is difficult to see how very drastic financial surgery can be avoided. The Minnesota and Ontario Paper Company, which is controlled by the Backus interests, had also been placed in receivership, and it seems unlikely that any further progress can be made with the projected newsprint merger until the financial reorganisation of the units which are so deeply embarrassed has been carried out.

The Federal Parliament, after sitting three weeks, has adjourned for an Easter recess of twelve days. Most of the time was consumed in the debate on the Address, which is still unfinished. Mr Mackenzie King, Colonel Ralston and other Opposition speakers vigorously attacked Premier Bennett's attitude at the Imperial Conference; they contended that he ruined any chances of success for his preferential proposals before he started for London by raising the duties on British goods at the emergency session; that his proposals as submitted were unsound and constituted a dangerous departure from the principle that no unit of the Commonwealth should interfere in the domestic policies of another; that, while the other Dominion Premiers had been accommodating and flexible, he had been unbending and dogmatic and that he had alienated British opinion to the detriment of any prospect of securing a better market for Canadian products in Britain. The Progressives joined the Liberals in attacking the Government's fiscal policy, and some of the former advocated as a remedy for the troubles of the prairie farmer that Canada should deliberately abandon the gold standard, arguing that a depreciation of the Canadian dollar by 20 per cent. would operate as a sort of bonus for the export of wheat and other Canadian produce. There was also a lively controversy over a heavy vote of supplementary expenditures which was necessary to cover unforeseen outlays in the fiscal year just ended. Speculation is now rife about the terms of the Budget, which will probably not be brought down until early in May. It is now definitely certain that the deficit will be not far short of 100 million dollars, and as additional expenditures will have to be faced next year, Mr Bennett will have to resort to heavy additions to existing taxation. The reaction of business opinion to feelers in the Press about a "turnover" tax has been unanimously hostile, and the idea has apparently been dropped in favour of an increase in the sales tax to its old rates.

IRISH FREE STATE.

Beet Sugar Crisis — Butter Duty — De-rating — Budget Results — Savings.

(FROM OUR CORRESPONDENT.)

DUBLIN, April 18.

A CRISIS has arisen in the beet-sugar industry which may result in the suspension of operations during the coming season. The sugar factory is offering 38s. per ton as the basic price for beet, and the majority of the farmers who in other years have supplied the factory have refused to accept this price. It is almost certain that very little beet

will be grown unless the price is increased. Meanwhile, the ordinary taxpayer secretly hopes that the deadlock will continue, and that a large sum of public money paid by way of subsidy will be saved. The whole history of the sugar-beet experiment in the Free State is an illustration of the folly and extravagance of deflecting farmers from the naturally profitable course of cultivation.

The Minister for Agriculture has stated that the import duty on butter imposed this winter has cost consumers about £80,000, and has used this figure as the basis of a warning regarding the cost of indiscriminate protection. Duties of between 15 and 33½ per cent. are levied on industrial imports of the value of £14,000,000, and are in practically every case added to the price of the articles on which they are collected. The burden of these taxes on the agricultural community is already heavy, and Mr Hogan stated that "a further extension of tariffs to a large number of items would rob the farmer of all the benefits of all the reductions which he had obtained under the Land Acts."

The State's taking away with one hand the benefit of favours conferred on the farming community by the other is a danger to which it is timely to call attention in view of the proposals to de-rate agricultural land by means of additional indirect taxation. The Report of the De-rating Commission is eagerly awaited, and its publication is expected before the introduction of the Budget. While the recommendations of the Commission are still a matter of conjecture, there can be no disagreement about the necessity of finding large additional revenue from other sources, if the farmers' claim to exemption from rates is conceded. In a country where the majority of the population is engaged in agriculture, it is unquestionable that a large part of the necessary new taxation would be borne by the farmers themselves, and it is doubtful to what extent small farmers would be relieved by the change.

Meanwhile, the agitation in favour of de-rating continues among the farmers, and a strong body of opposition to the proposal is growing among the representatives of urban interests. The Government has announced its intention of granting some measure of relief to agriculture in the forthcoming Budget, but the precise nature of this relief has been kept a closely guarded secret. It is felt that the distresses of the farmers are transitory, arising from falling prices, and that they can be sufficiently alleviated by temporary palliatives, without the introduction of any deep-seated permanent revolution in the system of local government and taxation such as complete de-rating would involve.

The Finance Accounts for the year ending March 31, 1931, are very satisfactory. Revenue at £24,365,196 is in excess of the estimated revenue by £328,296, while expenditure at £25,266,234 is in excess of the estimated expenditure by £1,067,584. The deficit for the year is £901,338, but the greater part, if not the whole, of this amount can be accounted for by exceptional, non-recurrent expenditure. Increases of revenue are shown under the heads of Customs, motor taxes, estate duty, and income tax, and decreases under the heads of excise and stamps. Of the expenditure £4,491,243 was in respect of Central Fund Services and £20,775,341 in respect of Supply Services. The comparative smallness of Central Fund expenditure reflects the low level of national indebtedness which is one of the healthiest features of the finances of the Free State.

One item in the public debt, the growth of which is regarded as a favourable sign, is the Savings Certificates, the old issue of which has been withdrawn to be replaced by a new issue bearing a lower rate of interest. In the eight years during which the original Savings Certificates were on sale, £8,002,700 were issued and £1,056,438 repaid, leaving the amount outstanding £6,346,262. Naturally, the certificates are taken principally by small investors, the maximum individual holding being £500, and the widespread holding of small amounts of certificates is a comfortable guarantee of social security.

Letters to the Editor.

ENGLAND'S CRISIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In these days when public opinion in England is concentrated upon the trade depression and the question of Protection, it might be of some interest for those Englishmen who try to view the situation in England without prejudice to hear some comments of a neutral foreign observer.

Let us leave the present trade depression out of consideration. It is world-wide and by no means characteristic of England only. Ever since the post-war trade boom a constant depression has been predominant in the key industries of the country, coal, iron and cotton. The irresolute way in which remedies have been found and the failure with which they have met, have awakened a feeling abroad that the political leaders of the British nation as well as its financial experts are not aware of the fact that England is facing quite another Europe—not only politically but also economically—than that which existed before the war, and that the economic structure of England to-day is not the same as before the war.

Let us review the above industries. I do not think anyone would deny that if the coal industry in the only three coal-exporting countries of Europe were owned by three companies and the markets divided between them, output being regulated and prices controlled, the business prospects of this industry would be very satisfactory. Both Poland and Germany have controlling organisations which are in a position to negotiate on the part of their respective countries, and I think that England has followed the advice of the Coal Commission in so far as that it has, or at any rate, easily enough could create an organisation endowed with the necessary power. It might be objected that negotiations have recently been carried on for the above-mentioned purpose but have broken down on account of Poland's claim to obtain too great a part of the market. Although I am fully aware of this, the failure makes me believe that the English negotiators have not fully grasped the unpleasant fact that England must be content with a smaller proportion of the coal export of Europe than before the war, and this for the very simple reason that England cannot compete with the other coal-exporting countries on a profitable basis. England cannot possibly force Poland out of the Scandinavian market, for three reasons:—

1. The geological character of the coalfields both in Poland and Germany permits a greater output per worker and day than in England.

2. Wages, especially in Poland, but also in Germany, can, if necessary, be forced down to a much lower level than in England.

3. Poland is absolutely compelled to keep her present proportion of coal exports from sheer necessity of getting currency to meet her foreign obligations. If compelled by English competition she would keep up her coal export with badly paid labour and with the aid of the taxpayers, irrespective of cost and with the sole intention of procuring foreign currency. Why not face facts and act accordingly? It is possible that a coal agreement would involve a reduction in the number of British miners, but such a reduction is nevertheless inevitable. The process of closing down collieries is going on and will surely continue. The remarkable thing is that it has been postponed so long. It is therefore high time for England to cease subsidising foreign competition by cheap coal and put its coal industry on a profitable basis.

The poor state of the iron industry in England has long been a matter of astonishment in foreign countries. Should not England have the same capacity to compete as Germany and Belgium? The talk of German dumping and the higher wages in England cannot explain more than part of the decline. The causes thereof are several, but by far the most important is that the greater part of the factories are totally out of date, the units being too small and the equipment inadequate. These facts are surely evident to the English experts, but lack of capital, and perhaps of enterprise too, has prevented readjustments. Much the same could be said about the cotton industry.

The great question seems to be how to attract the necessary capital, for I presume that technical ability and enterprising spirit are not lacking. One thing is obvious: owing to the crushing burden of taxation and other consequences of the war the saving power of the classes traditionally interested in industry is greatly reduced. The figures of saving banks and other institutions accumulating the savings of the general public indicate, it is true, an increased saving capacity among certain categories of the population; but whatever may be the total saving capacity of the British nation, the character of the saving has without doubt greatly changed. Industrial reconstruction loans have no attraction for the new savers as

individuals, nor for the institutions accumulating their savings. Such institutions are more or less confined to the gilt-edged market.

It seems to me, therefore, a matter of paramount importance to bridge the gap between new types of savings and the market for capital investment. Why not do it by putting industrial reconstruction loans in a class made acceptable to the new categories of savers by the Government's guaranteeing them? There is no need to add a new Government Department to those existing. There is already in existence an institution proper to the supervision of such loans—the Bankers' Industrial Development Company. Loans recommended for guarantee by this institution should be endorsed by the Government, in which case they would surely prove a great success. As they could be emitted on very favourable terms to the borrowers, the Government might deduct a commission for a fund against losses. The idea of the Government guaranteeing private loans might seem shocking to a conservative mind. It does not, however, signify a fundamentally new policy. The British Government has already commenced by guaranteeing export credits.

I will not claim that the proposed scheme is above criticism, but its advantages are great enough to make it worth serious consideration. It does not involve new Government borrowing. The risk of losses is small indeed and would to a great extent be counterbalanced by a reduction in the dole. It would direct capital towards investments that would not only contribute to an immediate relief in unemployment, but would give a future earning power to a part of British industry which is now in a deadlock.—Yours faithfully,

Djursholm,
Sweden.

WALTER LINCK.

April 18th.

[Our correspondent's view is interesting, but we are inclined to suggest that the difficulties of British industry are not to be cured simply by an injection of cheap new capital, without reference to the need of readjustment of costs in many directions.—Ed., *Econ.*]

Books and Publications.

BURDETT.*

As "Burdett," the "Stock Exchange Official Intelligence" has become famous for its high standard of efficiency, and this is maintained in the 1931 issue, edited by the Secretary of the Share and Loan Department, and approved by the Committee of the Stock Exchange. Success has again been attained in condensing the information, without sacrificing any fundamental facts. The book, as usual, opens with chapters on Finance, County Finance, Indian Finance, Dominions and Colonial Finance, British and Foreign Finance and Company Law. A most valuable chapter deals fully with War and Reparation Debts, and attention is given to the funding of the various debts of the United States of America. The main body of the volume gives full financial details of every company or public authority whose securities are listed on the London Stock Exchange, and in the concluding pages will be found the customary information relating to stamp duties, trustee investments, income tax, Bank rate and the like, revised and brought up to date.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The End of the Ancient World. By Ferdinand Lot. (London) Kegan Paul, Trench, Trubner and Company, Ltd., 68-74, Carter Lane. 21s. net.

The central thesis of this very interesting volume, is that from the ruin of the Empire, the barbarian invasion and the expansion of Christianity there resulted a complete transformation of human psychology, and that "between the men of the new and those of the ancient times there will hardly be a thought in common."

A New Exposition of Money, Credit and Prices. By J. Laurence Laughlin. In two volumes. (London) Cambridge University Press, Fetter Lane. 45s. net.

Volume I consists mainly of historical matter, with a small second part devoted to criticism. The first part of Volume II is composed of chapters on the history of credit and the second part to the relation between credit and prices.

The Japanese Population Problem. By L. R. Crocker. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. 6d. net.

A capable study of a problem which threatens, in the author's opinion, to become dominant in the international affairs of the Far East.

Official Year Book of the Commonwealth of Australia, 1930. (London) Australia House, Strand. 5s. net.

An indispensable work of reference, containing official statistics of every kind with explanatory text. As usual, the very comprehensive figures are well chosen and conveniently arranged.

Kimber's Record of Government Debts, 1930. (New York) Overseas Statistics, Inc. (London) London General Press, 6, Bouverie Street. 3 guineas.

A most valuable book of reference. It contains not only the usual particulars of each Government security, but a most useful collection of financial and economic information about the countries by which they are issued.

Annuaire Statistique, 1929. (Paris) Imprimerie nationale.

An extremely useful collection of French official statistics, roughly corresponding to the *Statistical Abstract of the United Kingdom.*

Labor and Coal. By Anna Rochester. (London) Modern Books, Ltd., 16, King Street. 6s.

Labor and Lumber. By Charlotte Todes. (London) Modern Books, Ltd., 16, King Street. 6s.

Labor and Textiles. By Robert W. Dunn and Jack Hardy. (London) Modern Books, Ltd., 16, King Street. 6s.

Studies of three important industries in the United States, from the point of view of the trade unions.

Sixty Years of Branch Banking in Virginia. By George T. Starnes. (London) Macmillan and Company, Ltd., St. Martin's Street. 8s. 6d. net.

A valuable contribution to United States banking history.

THE OIL OUTLOOK.

THE oil industry this year has suffered what can only be described as a piece of bad luck. Its efforts last year to bring production into balance with consumption have been rendered abortive by the chance discovery of a prolific shallow oilfield in East Central Texas. Wells have been brought in twenty-two miles apart, and there is no doubt that a major oilfield some thirty miles or more in length has been discovered. At the beginning of March the production of this new field was only 55,000 barrels a day, but even without the help of a trunk pipe-line its output has already been increased to over 252,000 barrels a day. It is this extraordinary phenomenon which has thrown the American oil industry out of balance once again.

The following table, giving an analysis of the rise in the daily average crude oil production in America since the beginning of the year, shows clearly how the development in East Central Texas has affected the total American oil production:—

DAILY AVERAGE CRUDE OIL PRODUCTION.

(In Barrels.)				
(Figures of the American Petroleum Institute.)				
	Oklahoma.	California.	East Central Texas.	U.S. Total.
Peak for 1929	748,700	890,500	...	2,973,450
	(Sept. 14)	(Sept. 21)		(Aug. 1)
" 1930	707,550	806,000	...	2,722,050
	(Jan. 11)	(Feb. 22)		(Feb. 22)
Week ending—				
Jan. 1, 1931 ...	448,900	537,500	...	2,082,000
Mar. 7, " ...	501,650	523,500	56,050	2,156,700
" 14, " ...	505,800	526,400	82,700	2,190,000
" 21, " ...	572,100	531,900	91,550	2,268,050
" 28, " ...	552,800	530,400	122,100	2,275,350
April 4, " ...	511,550	525,100	144,700	2,252,100
" 11, " ...	513,700	528,900	199,200	2,308,250
" 18, " ...	585,100	526,900	252,600	2,422,000

The substantial increase in the output of Oklahoma in the week ending April 18th is due to the taking of a test flow in the Oklahoma City Field in order to determine the proportionate allowance for producers under the restriction scheme. The new oilfield in East Central Texas was responsible for the balance of the increased production last week and for the whole increase since March 21st.

The increase in crude oil production would not have been so serious if the American refiners had reduced the amount of crude oil run to stills at the refineries. It was their expressed intention not to stock up gasoline during the winter months this year, which is their usual practice, but to reduce the total stocks of gasoline at refineries to 40,000,000 barrels by April 1st, as against 55,000,000 barrels on April 1st last year. The refineries, however, have failed to live up to their good intentions. Stocks of gasoline at refineries increased to over 47,000,000 barrels at the end of March, and on April 18th amounted to 46,384,000 barrels. The next table shows the record of the refiners' failure:—

	Crude Oil run to Still.	Refinery Stocks of Gasoline.
	(Barrels per day.)	(Barrels.)
(Figures of American Petroleum Institute.)		
Last week in—		
1930	2,095,300	39,780,000
January	2,217,400	41,617,000
February	2,266,100	44,792,000
March	2,322,400	47,444,000
April 18th	2,484,300	46,384,000

The present inelasticity in the demand for gasoline makes the problem of over-production in this market all the more serious.

The increasing surplus of gasoline has led to severe price-cutting in both crude oil and gasoline markets. The

next table will show the reductions in representative oil prices this year:—

End of Month.	Gasoline Prices.	Crude Oil Prices.	
	" U.S. Motor " Grade, ex Oklahoma Refinery. Cents gallon.	Sante Fe Springs (Gravity 29° A.P.I.). \$ per barrel.	Mid Continent (Gravity 36° A.P.I.). \$ per barrel.
March, 1930	6.50	1.37	1.20
June, 1930	6.25	1.37	1.29
Sept., 1930...	6.50	1.28	1.29
Dec., 1930....	4.00	1.28	0.95
March, 1931	3.50	0.67	0.59
Apr. 23, 1931	3.50	0.38	0.59

The sweeping reductions in oil prices which have occurred this year are certainly disturbing to oil shareholders, seeing that the operating oil companies must needs effect a further writing down of stocks in their balance sheets. The hope that the balance sheets at December 31st last would have shown the position at its worst must now be abandoned.

What steps have been taken to meet the over-production in America, which, if continued, may lead to chaos or "war" in the oil markets? The Texas Railroad Commission, which is the authority enforcing restriction in the Texas oilfields, has issued an order restricting East Central Texas to an immediate output of 90,000 barrels a day, increasing by 6,666 barrels a month up to 130,000 barrels a day. Certain East Central Texas operators obtained a temporary injunction against this order, but the Texas Attorney-General has ruled that the injunction only refers to the acreage owned by the petitioners, so that the Railroad Commission can proceed to enforce the restriction on the new field as a whole to 90,000 barrels a day. More important than legal decisions is the drastic cutting of crude oil prices in East Texas. At the beginning of this month East Texas crude oil was selling as low as 25 cents per barrel; to-day it is only 15 cents a barrel. At this ruinous level the operators have begun to realise that it is hardly worth while to allow their wells to flow. There is, therefore, some ground for believing that a voluntary restriction scheme will shortly be imposed in East Central Texas and that the worst of the menace has been seen.

In the meantime a conference is being held at Washington between the Oil States Advisory Committee and the Federal Oil Conservation Board for the purpose of working out a comprehensive programme for the stabilisation of the oil industry. A plan has been considered which limits production in each section of the country to actual local requirements. This plan has the approval of the principal oil companies, but opposition has been voiced by Senator Borah in the Senate, who will agree to no Federal restriction scheme for the oil industry unless the Federal Government is a party to the fixing of oil prices. At the same time the large oil-importing companies have agreed upon the voluntary restriction of oil imports by 25 per cent. Imports of oil into the United States have been at the rate of 100,000,000 barrels a year, which is equivalent to about 11 per cent. of the United States domestic production. A reduction of 25 per cent. would limit imports to an equivalent of 8.3 per cent. of the United States domestic production. This is not a great contribution to the solution of the over-production problem, but it encourages the operators in the American fields to maintain their restriction programmes. The statistical improvement which was effected last year and in the first two months of 1931 is shown in the table on the next page.

For the holder of oil shares it is, unfortunately, clear that 1931 will show worse results in earnings and dividends than 1930. The final dividends in respect of 1930 have yet to be declared by a number of important oil companies, including Royal Dutch, Shell Transport,

Burmah Oil and Anglo-Persian. The Shell Union Oil Corporation, the American subsidiary of the Royal Dutch-Shell group, has passed its common share dividends since June 30th last. The loss of Shell Union dividends for a whole year is equivalent to a dividend of $3\frac{1}{2}$ per cent. on the Royal Dutch and of 4 per cent. on the Shell Transport ordinary capital. Having regard to the effect of the fall in oil prices on the earnings of the wholly-owned subsidiaries operating outside America, it is considered in the oil-share market that the final dividends in respect of 1930 of Royal Dutch and Shell Transport may be reduced to $7\frac{1}{2}$ per cent. or 10 per cent., making $17\frac{1}{2}$ per cent. or 20 per cent. for the year, as against 24 per cent. for Royal Dutch and 25 per cent., tax free, for Shell Transport in respect of 1929. Similar reductions are anticipated in the case of Anglo-Persian and Burmah Oil. These fears of dividend reductions have led to extensive selling of oil shares this week, with a consequently severe decline in market prices. The extent of the fall this year, together with the potential dividend yields obtainable at present deflated levels, are shown in the next table:—

Year ended December 31st.	Dividends, %.			Highest Price, 1930.	Highest Price, 1931.	Present Price.	Approx. Yield, %	On basis of Divs. of
	Last Year.		This Year. Int- erim.*					
	Int- erim.	Final.						
Anglo-Persian Oil Co.	5	15	5	42	24	14	10.45 or 7.85	20% 15%
Anglo-Egyptian Oil Co.	...	22½	...	53½	48½	40½	11.25	22½%
Burmah Oil Co. £1	10	20	10	44	34	22	10.90 or 9.10	30% 25%
Canadian Eagle no par val.	...	12 cts.	...	14½	9½	7.6	6.60	12 cts.
Mex. Eagle ord. \$4.	...	6%	...	15½	10.9	7.7½	6.23	6%
Royal Dutch F1.100	10	14	10	35½	26½	19½	8.46	20%
Shell Transport £1.	10 free	15 free	10 free	5	34	24	7.37 or 6.29	17½% 17½%
Venezuelan Oil Co. £1.	...	20	5	34	...	14	10.90	15%\$

* Final dividend not yet declared.
† Equivalent to 20 per cent. on oil capital.

A comparative table of the fall in American oil shares this year, together with the dividend yields now obtainable, is shown in the next table:—

	1930. Divs.	High. 1930. \$	High. 1931. \$	Present Price. \$	Div. Yield %
Standard Oil of New Jersey	2.00	84	52	39	5.1
Standard Oil of Indiana	2.50	59	38	29	8.4
Standard Oil of California	2.50	75	51	41	6.0
Standard Oil of New York	1.60	40	26	20	7.8
Imperial Oil (of Canada)	1.00	30	18	12	8.2
Shell Union	.70	23	10	6	...
Gulf Oil	1.50	116	75	56	2.7
Texas Corp.	3.00	60	36	25	11.9

It will be seen that the market quotations for the leading British oil shares are much more deflated than those of the leading American. Having regard to the strong financial position of such companies as Royal Dutch, Shell Transport, Anglo-Persian and Burmah Oil, the market appears to be taking an unduly pessimistic view of the ability of these companies to withstand the present depression in the oil industry.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 5.	May 7.

The market refused to take any risks in the week before the Budget. The effect of the usual crop of irresponsible rumours was augmented by a mood of pessimism regarding the economic outlook, which served to bring down the values of certain equity stocks to the lowest points of the year. The best section of the "House" was the Gilt-edged market, where the Bank of England's success in securing the week's offering of "new" gold from South Africa created a favourable impression, the effect of which was heightened by a little "safety first" buying by Budget-apprehensive investors. Foreign news was either bad or colourless. The commodity markets provided the inevitable new "record," rubber filling the rôle by its descent below 3d. Altogether, the period before the Budget has been peculiarly uncomfortable this year, and the mere presentation of the Budget next week will afford some relief, whatever its contents.

Increased business in Gilt-edged stocks left Funding Loan and War Loan higher, while $3\frac{1}{2}$ per cent. Conversion Loan made a good showing. India loans strengthened but Australians lost further ground on the suspension of the New South Wales Government Savings Bank, with its 75 per cent. of working-class depositors. The foreign market was quiet, the only feature of interest being a rally in Brazilians, mainly on covering in New York. Argentines were steady, fears over the Buenos Aires Provincial elections (discussed on page 904), being found to be exaggerated. Little interest was taken in Far Eastern issues.

Selling of home rails was less in evidence. The week's traffic figures, though bad, had been over-discounted and Midland, Scottish showed a modest recovery. Argentine railways, however, were unable to hold their gains, the traffic returns being less satisfactory than had been expected, while some uneasiness was caused by fears of the ruthless disposal by the United States Farm Board of its surplus wheat stocks. American rails again reflected nervousness regarding the trade situation and Canadian Pacifics were easier.

Unsettled conditions prevailed in the industrial market. Numerous fair-sized bear accounts were revealed at the carry-over, but further liquidation became less prominent after the middle of the week. Brewery and tobacco shares were slightly harder on bear closing. Steel and engineering issues were affected by the bad Guest Keen figures and the lower earnings of Babcock and Wilcox (dealt with on pages 905 and 906 respectively). Motor shares were irregular, Dennis being sold before the announcement of a reduced interim dividend. Electrical shares lost ground slightly. Textiles remained out of favour, the provinces being on the whole a seller. British Celanese were flat on the postponement of the first preference dividend, though this step was not unexpected. Selling from Amsterdam depressed Unilever issues, while the Swedish group was also offered, despite the satisfactory results of Swedish Match and Elektrolux. Dunlops showed a further decline on anticipations of a reduced final dividend. Further selling occurred of Cables and Wireless, the position of the preference stock being regarded as less certain. Gramophone shares, with other international counters, suffered from the unsettled mood of New York. Bank shares had a downward trend, particularly those of overseas institutions; but insurance shares mainly held their ground.

The oil market obtained no relief from distress. The position is discussed in a leading article on the preceding page. Royal Dutch and Shells were among the worst sufferers, some of the selling being on Dutch account. Activity in rubber shares was practically at a standstill, following the fall in the price of the commodity below 3d., and the publication of preliminary figures showing a decline in the 1930 profits of the Rubber Plantations Trust from £252,511 to £157,895. Tea shares were steady despite a scarcity of business.

An air of nervousness pervaded the mining markets, where dealings were of much smaller volume. A moderate amount of realisation was sufficient to halt the progress of Kaffirs, some "finance" shares showing a fairly sharp decline. Randfontein were lower on profit-taking. Rhodesians were neglected. The depression in diamond shares was unrelieved. Tin shares responded to a slight rally in the metal, but, among copper shares, Rio Tinto were again heavy.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Markets suffered from further selling, due less to nervousness than cold-blooded pessimism. Railroads were again unfavourably in the picture, the decision of the directors of the Atlantic Coast Line to adjourn the annual meeting and defer the question of the semi-annual dividend being given a possibly exaggerated significance. The March returns of the first seven roads reporting, however, showed an improvement over the previous month. United States Steel declined sharply on the further fall in operations to 49 per cent. of capacity, the shares making a new low record. Cement shares were offered on apprehension over the growing intensity of the price war. Motors were weak, despite the Chrysler announcement that March sales were 60 per cent. above those of February. Political developments in the Central American Republics have had little influence in Wall Street. The first quarter's corporation earnings figures continue to show declines of anything from 30 to 40 per cent., as compared with the first quarter of 1930. The oil position remains unsatisfactory, despite efforts to obtain some measure of control over production from the East Texas field.

INVESTMENT NOTES.

The American Outlook.—The New York stock markets have now lost the whole of their recovery since the beginning of this year. The downward sweep has been orderly, in part the result of scattered liquidation, in the main the result of professional short-selling, prompted by the general disappointment at the failure of trade to show more than a seasonal revival this spring. No heavy volume of liquidation, accompanied by a sharp break in prices as margin accounts are impaired or stop-loss orders are uncovered, has yet appeared. Perhaps it will be avoided in this present reaction, seeing that the public did not participate to any great extent in the upward drive. The following table of security price indices shows that at any rate the false move which the market made this year in anticipation of the trade revival, has now been retraced.

DOW JONES INDICES.

	Low, 1930.	High, 1931.							
	Dec. 16.	Feb. 24.	Mar. 20.	Ap. 13.	Ap. 14.	Ap. 15

(Continued from page 901.)

business is apparently ending. In some industries—electric power, for example—the increase of activity is slowing down, and in others, notably steel, an actual contraction in operations has already begun. The steel industry as a whole is now operating at 49 per cent. of capacity, against a high level of 57 per cent. established in the middle of March. The fall in steel output follows upon a reduction in the orders of the automobile manufacturers who are revising their production schedules to the lowered level of retail demand. There is a report that the Ford Motor Company will shut down for two months this summer while assembling plants work off a large surplus of parts. Business is passing its spring "peak" with the industrial production index slightly lower and commodity prices still trending downwards. The Standard Statistics Company, on the basis of 27 corporation statements, estimates industrial earnings in the first quarter of the year at no less than 35 per cent. to 40 per cent. below those of the same period of 1930.

A New Security Index.—The investor cannot complain that statisticians are ignoring his existence. The fruitful research of the Actuaries has been followed by an equally painstaking revision of the index which the London and Cambridge Economic Service has been compiling for some years past. The result is a new index based on 92 British industrial equities (as compared with 20), the basis of selection being "industrial importance, good standing and stable financial organisation." The companies are arranged in fourteen industrial groups, to which weights are attached in proportion to the net output of the industries in the 1924 Census of Production. Within each group, however, weights have been assigned to individual companies on their market capitalisation in 1924. Prices are taken in the middle of each month, and the index is an arithmetical average. The following table shows the results, at three-monthly intervals, over the last few years:—

Month.	1925.	1926.	1927.	1928.	1929.	1930.	1931.
March	108	113	119	141	143	116	95½
June	106	115	122	143	141	112	...
September	109	116	126	143	144	110	...
December	113	116	131	139	121	99	...

Unlike some recently constructed indices, the new figures are not based on results for an abnormal period. The names on the memorandum* are themselves, as the advertisers would say, "a guarantee of excellence." The "weighting" adopted, however, is a somewhat curious compound of two unrelated factors—net industrial output and market capitalisation—and gives not altogether satisfactory results. If individual shares are placed in

descending order of "weight," the following position emerges:—

Share.	Weight Assigned.	Share.	Weight Assigned.
J. and P. Coats.....	92	William Cory	23
Guest, Keen	41	Gas Light and Coke... ..	22
Babcock and Wilcox... ..	40	P. and O. (Units).....	22
Boots Pure Drug	36.5	Powell Duffryn	20
Stewarts and Lloyds	31	Unilever	20
Deferred.....	31	I.C.I.....	20
Marks and Spencer	28	Maple	19.5
Debenhams Securities	26	Crittall	19
Harrods	24.5		
Guinness.....	24	Total, 17 shares	508.5
		Remaining 75 shares	491.5
			1,000.0

Since 17 of the 92 shares account for over half the total weighting, much of the effort expended each month makes very little showing in the final figures. Nearly one-fourth of the total weighting is given to shares in one of the least active of contemporary markets—that for iron, coal and steel shares. A relatively small variation in a stock such as Powell Duffryn may cancel out much wider movements in active shares like Pinchin Johnson, Carreras, Bass, Columbia Graphophone, or the electric supply companies. The "textiles and clothing" group, (in which J. and P. Coats has a weight of 92, against Courtaulds' 13), accounts for nearly 17 per cent. of the total weighting of the index. But the nine companies chosen for this group are not at all representative of the industries whose output figured in the 1924 Census of Production returns. They are, in fact, mainly textile finishers, thread makers and artificial silk manufacturers. The list includes no linen or jute concerns, and no clothing companies. Any index constructed on these lines, indeed, must come up against the difficulty that certain important British industrial groups—of which textiles are the outstanding example—have utilised the capital facilities of the London market much less than other groups. In short, by using a main weighting system which is purely "industrial" and tempering it with a sub-method based on a Stock Exchange factor—market capitalisation in 1924—the new index runs the risk of falling between two stools.

Argentine Stocks and the Buenos Aires Elections.—The recent elections in the Buenos Aires Province have resulted in a victory for the Radicals. The trade unions in this State are strong, and the result was not unexpected. There has, however, been some speculation as to the possible course of action of the Provisional Federal Government, led by General Uriburu. We understand, however, that, apart from the resignations of a couple of Ministers, there will be no change in the Federal Government until the Federal elections are held. There is at least a possibility that the Radicals may then be returned, but it is regarded as highly unlikely that Señor Irigoyen would, in such an event, be re-elected President, a more likely name being that of his immediate predecessor, Señor Alvear. The present Government, however, has the support both of the Army and the Navy, and its resignation, at the moment, is scarcely on the cards. Recent events, nevertheless, have had a somewhat depressing effect on Argentine stocks listed in London, as the following table shows:—

	April 13.	April 17.	April 21.	April 22.
5% Int. Gold, 1907 ...	94	91	90	91
5% Int. Gold, 1909 ...	94	93	91	91
B.A. (Prov.) 3½ % ...	54	51	50	50
B.A. (Prov.) 5%, 1915 ..	85½	84½	82½	82½
B.A. City 5%, 1914-15 ..	91½	90½	90½	90½
B.A. and Pacific Rly. ...	48	43½	43½	43½
B.A. Great Southern... ..	64	59½	59	58½
Anglo-Arg. Trams (6% 2nd Pref.) £5.....	15/-	15/-	15/-	17/6

Economic conditions in Argentina are somewhat more favourable than for some months past. The recent chartering of vessels for transporting the wheat crop has been heavy. The maize crop, which will shortly be ready for shipment, is of record dimensions.

Rubber Below Threepence.—The outstanding feature of the rubber market has been the drop in price since January. Early in March renewed restriction talk centring round the "Maxwell Scheme"—which was never sponsored by the Rubber Growers' Association—raised the quotation to 4½d., but in the absence of definite news the market has forsaken the shadow of restriction and turned its attention to the substance of an overburden of stocks. The revival of trade has not been sufficient to absorb even reduced shipments of rubber, which amounted to 132,597 tons for the first two months of this year, as compared with 154,109 tons a year ago. The world absorption during January and February, 1931, was 111,139 tons, as compared with 119,715 tons in the same period last year. Such figures as are available for March indicate that world stocks will show a further increase over the February figure of 442,500 tons, which does not include rubber in course of shipment. With a world absorption during 1930 of no more than 713,812 tons, the market has good reason to insist that accumulation of stocks must cease. Dealers, speculators and manufacturers, having been told successively that sixpence, fivepence and fourpence were "pivotal prices" which would curtail production in a drastic manner, have financed enough rubber for at least six months at the present rate of absorption. The heavy March shipments from Malaya—48,467 tons—made no appreciable reduction in Malayan stocks, and on Monday the London price went below threepence. Estate interests sold and speculators liquidated their positions. A good deal of rubber thus sacrificed was bought on American account, and as manufacturers generally are believed to have covered their requirements on each succeeding fall, the market is likely to experience a quiet but anxious time for the next few months, until it becomes apparent that supply and demand are balanced. While it is still too soon to observe the effects of threepenny rubber, there is little doubt but that some estates will be entirely closed down, while many will elect to use such cash resources as they possess to conserve their bark. Native production may be divided

into two groups: (a) Rubber produced by the owner of the trees and by his family, in respect of which no wages are paid; and (b) rubber belonging to moneylenders and native proprietors who employ tappers. It is estimated that the first group can produce about 300,000 tons a year, while the second may have been put out of production by recent prices. As regards European-owned rubber, the estates in Java, most of which grow other crops besides rubber, are probably the cheapest producers, but their output is not estimated at more than 60,000 tons. An equal amount is probably produced in Malaya on estates which, for various reasons, have an all-in cost of under 3½d. It would therefore appear that the present price of 2½d. must prove definitely restrictive to a large proportion of the industry. In these circumstances, economic forces will probably prove the most effective of all restricting agents. Further efforts on the part of would-be "restrictionists" would be detrimental to the industry. The latter's chief desideratum at present is sufficient time to work off its stocks and to consolidate the economies which have contributed to a 50 per cent. reduction in costs during the last year.

Guest, Keen and Nettlefolds.—Ten months ago we wrote: "Despite long-drawn-out depression in the iron and steel trades Guest Keen's profits have been well maintained." This year's story is different, since, in view of the continuance of trade depression which has "seriously curtailed the earning power," the directors "consider it their duty to conserve the company's resources in every possible direction." Profits, after providing for debenture charges and income tax, are reduced from £968,698 to £409,222, while earnings available for the ordinary shareholders (who received 10 per cent. free of tax for the previous eight years) have fallen from £651,591 to £82,490. The decision not to recommend any dividend is readily comprehensible, the more so as profits have been distributed up to the hilt in recent

* London and Cambridge Economic Service, Special Memorandum No. 33: "New Index of Prices and Securities," by A. L. Bowley, G. L. Schwartz and K. C. Smith. London School of Economics, Houghton Street, Aldwych, W.C.2.

years. Provision has not been made in the accounts this year (though it was last time) for the losses of subsidiary companies, on the ground that the undistributed profits of other subsidiaries exceed such losses. The sum involved may be small, but it would not improve the figures. The table below shows how the cover on the preference shares (which are cumulative) has fallen:—

	Years ended March 31,		
	1929.	1930.	1931.

Increase in carry-forward ...	+ 11,365	+ 21,144	+ 82,490

The transfer of all the heavy steel interests in South Wales to the new Guest-Keen-Baldwin subsidiary has been completed by the inclusion of the collieries which serve the Dowlais steelworks. Apparently to meet the difference between the transfer valuation and the balance-sheet valuation, £150,000 has been appropriated from reserves, as well as £161,230 for writing down shares held in the Crown Preserved Coal Company "following the rationalisation of the patent fuel industry in South Wales." These last words deserve elucidation at Wednesday's meeting. The reserve fund, which receives £44,264 from elsewhere, stands £266,966 lower on balance. This decline appears substantial, but it must be set against "shares in subsidiary companies at cost or under, £15,322,677." The real present value of that enormous item is quite unascertainable by outside shareholders, and a clear explanatory statement would be the fairest possible means of restoring their confidence. Its increase of £713,165 this year may possibly be related to a new bank loan of £550,000, of which no explanation is given beyond the fact that it is "in connection with the purchase of certain investments abroad." Including this loan, outside liabilities have risen from £621,019 to £1,034,841, while liquid assets have fallen from £1,228,280 to £929,381—an additional reason for the conserving of the company's resources. The ordinary shares, which touched 36s. 10½d. last year, now stand at 14s. 3d.

Babcock and Wilcox.—Although the dividend has been reduced from 15 per cent., tax free, to 14 per cent., tax free, the total appropriations for 1930 exceed the year's earnings for the first time since the war, and no addition is made to reserve. The accounts show, however, that the trading position has been relatively well maintained, the manufacturing profit (including income from subsidiary and associated companies) showing a decline of only 3½ per cent. at £650,666. Income from outside investments and deposits, however, is £14,949 lower, and the income-tax reserve allocation exceeds that of 1929 by £28,040, so that net profits are down by 9.6 per cent.

Home business has apparently been well maintained, the total balance-sheet figures of stocks, work in progress, and expenditure on orders not invoiced, at £1,687,829, showing a rise of £167,879 over the last twelve months. The weak links in the company's chain have, however, been the Eastern markets, including Australia, and as the accounts from the Indian, Australian and Far Eastern branches are included only for the twelve months to September 30, 1930, it would seem that the effects of the subsequent drop in the Australian exchange and the decline in silver will fall on the accounts for 1931. How far the good showing at home was due to an accumulation of orders the execution of which, a year ago, had been somewhat delayed, will doubtless be made clear at the meeting on May 5th. Financially, the company is far better situated than the majority of engineering concerns in Great Britain, and should weather the international depression with a minimum of difficulty. Recently it obtained a contract of £700,000 for the installation of the County of London Electric Supply Company's power station at Barking—the largest order for boiler plant ever placed in this country. The ordinary shares stand at 47s. 6d., against a maximum of 63s. in 1930, and yield £6 2s. per cent., tax free.

Associated Electrical Industries.—In November, 1928, the Metropolitan Vickers Electrical Company purchased a controlling interest in British Thomson-Houston, Edison Swan Electric, and Ferguson Pailin, its name being altered to the present style. It is probably too early yet to estimate the advantages which have accrued to the holding company from the change, but the accounts for 1930 reveal a slight improvement in earnings in a difficult year. The gross profit has advanced from £365,961 in 1929 to £372,998, while the net profit is slightly higher at £265,318:—

	Year to December 31,		
	1928.	1929.	1930.

* Gross.

The consolidated balance sheet shows a strong liquid position. At 21s. 6d. the £1 ordinary shares give a yield of a little under 6 per cent., after allowing for the dividend.

Swedish Match Company.—Shareholders will be well satisfied with the report of the Swedish Match Company. Too much significance should not be attached to the net profit figure (which shows an increase of 6.2 per cent. at Kr. 57,625,922), as the policy of the company is to transfer from its subsidiaries such profits as are required to meet, with a small margin, the dividend of the parent company. The important statements in the directors' report are that world consumption of matches appears to have increased in 1930 at practically the same rate as in previous years, that the company's total sales were the largest in its history, and that, although its exports from Sweden showed a decrease of about 10 per cent., this was caused purely by prohibitive customs tariffs, which necessitated local manufacture in several countries. In addition to the United States and Australia, two other important markets, China and Egypt, became practically closed to Sweden through the increase of tariffs. Russian

competition, however, has declined considerably in importance.

	Years to December 31.		
	1928.	1929.	1930.
Profit	52,130,000	57,240,000	60,244,000

* Subject to interim dividends and taxes for succeeding years.
† After allowing Kr. 5,157,000 tax and other allocations.

The balance sheet discloses a slight decrease in cash and increase in stocks. Foreign investments have increased from Kr. 124,527,215 to Kr. 128,806,825, while shares in subsidiary and allied companies remain at the same figure of Kr. 297,582,841. A first payment of \$50,000,000 was made to the German Government in August, 1930, being part of the \$125,000,000 loan contracted for in connection with the German match monopoly, of which \$50,000,000 will be taken over by the International Match Corporation and \$37,500,000 each by the Swedish Match Company and Kreuger and Toll. The total foreign loans granted by the Swedish Match Company (including its portion of the German Government loan) amount to only about 30 per cent. of the company's assets. Since the end of the financial year the company increased its capital from Kr. 270,000,000 to Kr. 360,000,000 by the issue of 900,000 new B shares of Kr. 100 in order to provide funds for its subscription to the German loan and other purposes; while a bond loan of Kr. 60,000,000 was issued for subscription in Sweden. The old B shares are quoted at 11½, to yield 7.42 per cent., the present price comparing with a high level of 17½ last year and 13½ this year.

British Controlled Oilfields.—The latest report covers a period of seventeen months ended December 31, 1930. Under a reorganisation scheme the preference capital was written down in October last by 40 per cent. and the ordinary capital by 60 per cent. The capital now consists of £13,461,510 in 7 per cent. non-cumulative participating preference shares of \$5 and \$9,025,600 in common shares of \$5. The following table gives the trading results for the past three years:—

	Year to July, 1929.	Year to July, 1930.	17 months to Dec. 31, 1930.	Annual Rate.
Crude oil production (barrels)	2,601,374	2,714,985	2,869,925	2,025,829
Gross profit.....	£440,171	£395,864	£534,773	£377,487
Net profit after depreciation	£241,115	£149,864	£165,552	£116,860

It will be seen that both production and profits have declined. Moreover, profits, after allowing for amortisation of wells and depreciation, are not yet sufficient to cover the preference dividends, which would require about £188,000 per annum. It is not difficult to understand the fall in profits. The company sells its Venezuelan oil on the basis of market prices for refined oils, and it has therefore suffered from the collapse in the world gasoline markets. The Trinidad oil is sold on the basis of prices at the "Gulf," which have also fallen severely, and the company has further suffered from a modification in the contract price of its Trinidad oil, which it has accepted temporarily. Fortunately for the company, freight rates have also fallen and have offset to a considerable extent the drop in prices. To meet the prevailing depression the company has reduced its drilling commitments and has suspended temporarily all outside exploratory field work. It is therefore dependent on its main El Mene field in the Western area of the Buchivacoa concession in Venezuela and on the Trinidad field (which accounts for a minor part of its total production) of the Trinidad Petroleum Company, whose entire capital it owns. The balance sheet shows, as a result of the capital reorganisation, that there was available \$22,512,830, to which is added \$457,842 assets reserve account, making \$22,970,672. This, with a profit and loss surplus of \$6,223,775 has been used to extinguish the concession

suspense account (\$25,786,974), to write \$976,707 off concessions and \$1,417,799 off oil wells, as well as \$106,706 loss on sale of investments. The company's preference and ordinary shares are at present quoted at 8s. 3½d. and 1s. 7½d., as compared with a high level last year of 8s. and 4s. 10½d. respectively.

Rio Tinto Questions.—Sir Eric Geddes' tempered optimism at last week's meeting has not arrested the decline in Rio Tinto shares, which have fallen this month from 27½ to 22½, against high prices of 47½ in 1930 and 66 in 1929. Some shareholders would seem to have been dismayed by the chairman's revelations of the unconscionable fleecing of the company by various governments. Since 1924, while shareholders have received a net total of £5,269,000 in dividends, governments have received £5,306,000 in taxation. For 1930 taxation has taken 66 per cent. and the shareholders only 33 per cent. of the distributed operating profit. The company is now threatened with a retroactive revision of the percentage basis of the profits tax for six years, the cost of which may exceed the £100,000 which has been provided in suspense. The chairman's confidence in ultimate prosperity, based partly on the belief that copper prices will "rise sharply," sooner or later, and partly on faith in the recently acquired interests outside Spain, was not shared by the whole of his audience at the annual meeting. One critic expressed anxiety over the extent to which the company's principal investments had fallen in the last year, illustrating his remarks with the following table:—

	Last Year.	Present Price.
Davison Chemical	\$40	\$15 noml.
Silica Gel.....	\$30	\$16 "
Minerals Separation	£7	£4 "
Roan Antelope.....	22.6	16.3
Bwana M'Kubwa	£1	5.9
Rho. Selection Trust	55/-	16.3
Congo Border	£15	£6 7s. 8d. noml.

This critic declared that while the balance sheet valuation of the company's investments had been reduced by only £833,000 (or 33 per cent.), the average fall in the market prices of the concerns in the above list was about 60 per cent. It is not clear, however, what the average market decline would be if it were "weighted" according to the relative stake of the Rio Tinto in each business. Other criticisms were that, although the value of pyritic ore was rapidly diminishing, owing to changes in the market for sulphur, the company's Spanish mines had remained in the books at £1,666,000 for several years; that last year less than £20,000 was written off railways, buildings, machinery, etc., valued at over £1,700,000; that rumours had been current of a new German silica substitute which could be manufactured at much lower costs than those of the Silica Gel. Company in which Rio Tinto were interested; and that the recent Tinto debenture issue (which has fallen to 6 discount), had involved the pledging of the company's proved assets in Spain for the purchase of Rhodesian copper investments whose earning power, while doubtless considerable, had still to be proved. Detailed criticism of recent Rhodesian copper company financing was voiced by another shareholder. As these and other points have been canvassed, privately, on a somewhat widespread scale since the meeting, and may have been inevitably exaggerated in their passage round the market, it would be beneficial if shareholders could have an official answer.

Castbury
Maker
of Fine Chocolates.

MINING NOTES.

Indian Gold Mining.—The operations on the Kolar field were last year adversely affected by the labour trouble of the early part of the period, while the increasing depth of the workings is making itself felt in the costs. With four out of the five British-owned undertakings developments also proved more or less disappointing. In the case of the Balaghat the decline in both the quantity and value of the ore milled was of such proportions as to result in a loss. At the Champion Reef a further advance in the value of the ore treated was accompanied by a falling off in the revenue from the retreatment of old tailings, and a reduction of 2½ per cent. to 10 per cent. in the dividend became necessary. The following table contrasts the salient features of the results for the past three financial periods of the five companies:—

	Tons of ore milled.	Mill yield per ton.	Working profit.	Carried forward.*	Ore reserve tonnage.
Balaghat—					
1928	47,950	12½	24,150	7,580	74,130
1929	50,100	13	26,040	7,080	56,000
1930	39,200	11½	16,800	1210	41,520
Champion Reef—					
1928	111,160	19½	39,120	4,690	269,360
1929	101,280	11	52,370	4,250	278,100
1930	91,550	11½	42,580	4,110	229,130
Mysore—					
1928	217,200	19½	177,890	20,040	569,620
1929	213,040	19½	130,710	8,670	517,020
1930	190,830	10½	127,070	8,870	471,420
Nundydroog—					
1928	126,640	9½	93,170	12,770	246,460
1929	129,860	10½	108,080	11,190	265,600
1930	126,820	10½	100,410	9,880	302,830
Ooregum—					
1928	150,000	11	99,930	9,990	295,130
1929	165,450	8½	76,560	13,760	270,800
1930	143,760	7½	18,100	13,190	215,500

* Subject to directors' percentage. † Average assay value.
‡ Loss.

At the Mysore the output was swollen by the treatment of ore from rich pillars, as well as by gold from dismantled plants. Nevertheless, the profit fell off slightly, and the dividend total was cut from 17½ per cent. to 12½ per cent., a transfer of £15,000 being made to reserve, besides an increase in the contingency allowance. The net liquid assets now figure at the somewhat reduced but still substantial amount of £253,500. By the appropriation of £27,000 from reserve, the company's Canadian and kindred holdings have been written down to £8,200. Drawing slightly upon the carry-forward, the Nundydroog was able to maintain its dividend at the previous year's rate of 25 per cent. The company is the only one to show an expansion in its ore reserves. As the outcome of a further all-round deterioration in the position, the Ooregum was only able to pay 5 per cent. upon its preference capital. By the appropriation of £11,000 from reserve, the Canadian holdings have been written down to £3,390.

Brakpan.—The relapse in development values which took place in 1929, writes our mining correspondent, *naturally found reflection in the past year's results. Moreover, with a view to meeting the position in this respect, the footage was increased, entailing an advance in expenditure. By drawing slightly upon the carry-forward, dividends were paid totalling only 5 per cent. less than the rate for the two preceding periods. We contrast the results of the past three years:—*

	1928.	1929.	1930.
Ore crushed	1,016,500	1,028,300	1,040,200
Yield per ton	32¼	33½	32½
Cost per ton	19/9	20/2	21/5
Profit per ton	12/7	12/10	10/7
Working profit	639,760	660,530	552,050
Net profit	562,070	586,370	492,640
Earnings per cent.	55.1	52.5	48.4
Dividends	497,250	497,250	446,250
Rate per cent.	48½	48½	43½
Government participation ..	61,130	90,370	54,300
Carried forward	59,540	58,290	50,380
Ore reserves	2,938,050	2,531,440	2,543,420
Value (stope)	8.21	7.89	7.80

Thanks to the expansion in underground work already referred to, the payable ore opened up amounted to 883,170 tons, as against 741,250 tons in 1929—when, also, a larger development footage was performed than in the preceding period. In last year's "Note" emphasis was laid upon the less reliable character of the Western section of the property. The consulting engineer now intimates that the development of the Eastern section is practically completed. Hence the future depends largely upon the other area. Results here will need careful watching. In regard to the outlook for the current year, it is expected that the decline in grade and increase in expenses will be largely offset by expansion in tonnage milled. On the basis of the 1930 dividend rate the shares afford a gross yield of slightly over 14 per cent.

Springs.—In the case of this company the movement of statistics is mildly but generally favourable. A fresh advance in the rate of dividend left an increased balance to go forward. The further decrease in the proportion of the profits payable to the Union Government—despite the increase in the total—is explained by the procedure under which the amount is arrived at: viz., the calculation of a percentage of the net profits based on the ratio of the latter to recovery. Our usual table follows:—

	1928.	1929.	1930.
Ore crushed	830,600	825,600	836,700
Yield per ton	41/4	41/2	41/5
Cost per ton	20/9	22/1	22/6
Profit per ton	20/7	19/-	18/11
Working profit	853,850	785,460	791,660
Net profit	780,400	716,500	715,250
Earnings per cent.	52.0	47.7	47.7
Dividends	506,250	543,750	562,500
Rate per cent.	33½	36½	37½
Government percentage....	190,480	151,730	138,580
Carried forward	49,220	47,010	61,180
Ore reserves	3,008,640	3,250,240	3,311,370
Value (stope)	9.10	9.30	9.34

Last year the percentage of payability fell below the rather exceptional results of 1929, but the effect of this was more than offset by the increase in the footage, a small expansion being shown by the ore reserves. As with the Brakpan, the treatment plant has been made more effective. For the current year "the yield per ton should at least be maintained," while costs may show a small reduction. Hence some further improvement in the profits can be looked for. At last year's rate of dividend a yield of about 10½ per cent. is indicated.

West Springs.—The progressive falling off in development values constitutes a serious handicap at this property. Last year the earnings more than covered the dividends, but the absence of any appropriation under the heading of Government participation in the profits was more than counterbalanced by the requirement of £20,000 for capital expenditure. It may be noted that little will be wanted this year either for the purpose first named or for taxation. Appended is a comparison of the results of the past three years:—

	1928.	1929.	1930.
Ore crushed	647,300	763,500	815,800
Yield per ton	27/9	24/8	22/8
Costs per ton	19/8	18/2	17/5
Profit per ton	8/1	6/6	5/3
Total working profit	260,600	248,480	213,630
Net profit	248,670	234,920	203,170
Earnings per cent.	13.9	13.1	11.3
Dividends, amount	156,890	179,300	179,300
Rate per cent.	8½	10	10
Carried forward	67,190	92,540	88,440
Government participation ..	27,150	11,980	...
Ore reserves	2,695,520	2,752,680	2,756,150
Value (stope)	6.8	6.34	6.0

* After deduction of directors' percentage.

For the current year a slight further decline in profits is foreshadowed. With the £1 shares quoted under 12s., a high rate of yield is shown. The reason for this is to be found in the development position. Payable values continue to be encountered mainly in the two sections of the mine which have so far been chiefly developed. In the remaining three sections "the disclosures show no improvement."

Rezende.—Some two years ago the end of the mine was regarded as being definitely in sight, work at the lower levels being attended with negative results. Subsequent stoping has consistently disclosed payable ore over a greater width than allowed for in computing the ore reserves. Now the tonnage is estimated at 180,000, or 15,000 tons more than at the end of 1928, although the value is about 1 dwt. lower at 8.7 dwts. The quantity represents fully another two years' supply. The working profit for each of the past three sessions has ruled around £64,000, and the dividends have totalled 2s. 6d. each time. In addition, a 2s. 6d. per share return of capital has lately been made. The ultimate future depends upon the Reliance and Monarch claims in Umpali, Portuguese East Africa, which are being developed under option of purchase. Results so far may be described as mildly encouraging.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Banca Commerciale Italiana, Great Western of Brazil Railway, General Accident Fire and Life Assurance, Morris Motors, Nestlé and Anglo-Swiss Condensed Milk, Simms Motor Units, Schweppes, Godfrey Phillips, Champion Reef Gold Mines of India, and Mysore Gold Mining. At the annual meeting of Morris Motors, Limited, Sir William Morris said that the motor trade of this country was faced with difficulties that seemed to increase rather than decrease year by year, and there was little likelihood that the average prices of British-made motor-cars would fall to any extent in the near future. Referring to the new Road Traffic Act, Mr. F. Norie-Miller told shareholders of the General Accident Fire and Life Assurance that the premiums to cover compulsory third party insurance had been fixed at the very minimum, and it might be necessary to increase them if, as a result of juries giving exorbitant awards merely because the money came ostensibly from an insurance company, the present scale proved insufficient to meet the losses.

CAPITAL ISSUES.

THE ill-success of certain large recent issues has resulted in a "close season" for new public operations, which has been broken this week by only one borrower, the *Panama Corporation*. The proceeds of the latter's issue of £250,000 8 per cent. debenture stock, with conversion rights, are to be used for further machinery and plant and additional working capital. Debentures in a mining concern which has not reached the production stage are, of course, purely speculative. The *Panama Corporation* is, possibly, one of the most intriguing of present-day gambles. Its chief technical adviser, whose name is well regarded in the mining world, believes that the extent and value of the company's areas are "at least as favourable" as those of the Rand formation in South Africa at a similar stage of development. Until the mines

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.," 8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Panama Corporation.—Issue of £250,000 8 per cent. debenture stock at par. Holders of the stock will be entitled to convert their holdings into fully paid shares in the capital of the corporation, ranking *pari passu* with those already issued, at the rate of 10 shares for each £10 nominal of stock. The corporation was registered in April, 1926, and owns four important mining concessions in the Republic of Panama.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**Drake and Gorham.** Particulars of an issue of £60,000 5½ per cent. redeemable debenture stock. The company was incorporated in May, 1901, and carries on the business of electrical, mechanical and hydraulic engineers.

[Other Stock Exchange information, including the latest dividend announcements, weekly traffic returns, summary of balance sheets, reports and notices, and profit and loss figures, will be found on page 919, under the heading "Company News."]

COMPANY MEETINGS, &c.

MORRIS

MOTORS LIMITED

Report of the FIFTH ANNUAL GENERAL MEETING 18th APRIL, 1931.

EXCELLENT TRADING RESULTS FOR
1930.

FINANCIAL POSITION STILL FURTHER
STRENGTHENED.

NET PROFITS OF £1,303,308 10s. 4d.

TANGIBLE ASSETS EXCEED
PREFERENCE SHAREHOLDINGS BY
£4,072,494.

THE fifth annual general meeting of Morris Motors, Limited, was held at the registered office of the company at Cowley, Oxford, at 9.15 a.m., on April 18, 1931, Sir William R. Morris, Bt., chairman and managing director of the company presiding.

The secretary, Mr S. G. K. Smallbone, read the notice convening the meeting, and the auditors' report to the shareholders was read.

The Chairman, in proposing that the directors' report and the balance sheet for the year ended December 31, 1930, be approved and adopted, said:—

I feel that I am justified in stating that we have every reason to be satisfied with the balance sheet for the year 1930, and I presume that I can take the accounts and report now before you as read.

The profit and trading and the interest received for the year amounted together to £1,303,308 10s. 4d., which figure is arrived at after making full provision for depreciation of assets and all contingencies that are likely to arise. As you know, the accounts of the company are always drawn on a thoroughly conservative basis.

The Government securities are shown at their market value as on December 31, 1930, and the sum of £114,382 8s. 7d. resulting from an appreciation of their value during the year is included in the reserve for contingencies, which figure, as you observe, is £517,020 18s. 9d.

NET PROFIT £1,303,308 10s. 4d.

To the net profit on trading and the interest and dividends received on securities, together amounting to £1,303,308 10s. 4d., there has to be added the balance of £118,753 3s. 4d. brought forward from last year and also the profit of £9,407 5s. 1d. realised on the sale of investments, making a total of £1,431,468 18s. 9d. Thus, after payment of the preference dividend of £225,000, and the provision of £257,313 17s. 6d. for the payment of income tax, there remains a disposable balance of £949,155 1s. 3d.

Your directors recommend the declaration of a dividend of 10 per cent. free of tax on the ordinary shares, and in this connection it is not out of place for me to mention that the reserve fund in the balance sheet before you stands at £2,000,000.

In order still further to strengthen the position of the company, the balance sheet value of goodwill, patents and trade marks is being written down by the sum of £391,043 4s. 1d., thus reducing this item on the balance sheet to £600,000, a figure less than half of one year's average profits since the formation of the company.

A sum of £100,000 is transferred to reserve for income tax, and there remains to carry forward to next year's balance sheet the sum of £258,111 17s. 2d.

Your directors have always felt it their duty to take the utmost care of the interests of the preference shareholders, and it is with considerable satisfaction that I am able to point out that at the present time our net tangible assets are £4,072,494 in excess of the preference share capital; further, we have Government securities to the value of £2,802,625, and since the formation of the company its average yearly earnings have been sufficient to cover the preference dividend more than 5½ times.

These results are very gratifying, especially in view of the fact that the latter part of the year 1930 was admittedly a very difficult time for all British manufacturers, and I think you will agree with me when I say that the excellent results shown have only been obtained by the consistent pursuance by your directors of a progressive but stabilised policy and the active promotion of business by every possible means.

As the result of this policy the position of the company is stronger to-day than ever, and its products continue to command wide and well-deserved popularity both in home and overseas markets.

INTRODUCTION OF NEW RANGE OF CARS.

Since the period under review the introduction by the company of the first commercially successful British car to sell at the round figure of £100 was accomplished, and I am glad to be able to tell you that this car—the Morris Minor S.V. two-seater—and the corresponding saloon models on the same chassis have met with a very favourable and encouraging response from the public.

In these days, when the need for the utmost economy on the part of the public is of paramount importance, the introduction of this range of reliable, good-looking and eminently serviceable low-priced motor cars has added considerably to the popularity of the company's products. At the same time, you will be interested to know that the Morris Minor Overhead Valve models continue to maintain their great popularity.

It is not my intention to dilate at length on the successes achieved by our various models in different markets, but I should like to mention the wide appeal which our six-cylinder cars made to the public during the year 1930. To the 15 h.p. six-cylinder Morris Oxford was added a somewhat smaller and lower-priced car—the Morris Major—and these two cars have undoubtedly created a new standard in motoring values. In the higher-priced class the 18 h.p. six-cylinder Morris Isis maintains its position as outstanding value, while in so far as the ubiquitous Morris-Cowley is concerned you will, I am sure, be gratified to know that it commands over seventy per cent. of the total sales in the 12 h.p. class in this country.

There is one point which I would like to emphasise, and that is the wide range of appeal of our products, which vary in price from £100 to £350, thus meeting the demands of all classes.

During the past year we have considerably consolidated our distributor and dealer organisations with improved sales and service results and appreciable benefit to the company.

REDUCTIONS IN PRICES UNLIKELY.

The motor trade of this country is faced with difficulties that seem to increase rather than decrease year by year, and I feel that I am justified in saying that it is extremely unlikely that the average prices of British-made motor cars will fall to any extent in the near future.

The selling price of any manufactured article depends on three factors—the cost of raw materials, the efficiency of the productive organisation, and the quantity sold. I am satisfied that we have a productive organisation that is extremely efficient and very well managed; but the price of raw materials and the potential total sales of cars to-day are very largely governed by factors outside our control.

The purchasing power of the public during the year 1930 was not so high as it has been in previous years, and until some measure of confidence is established among all sections of the community it does not seem to me that this purchasing power is likely to increase greatly.

In addition, British motor-car manufacturers have to face extremely high burdens of taxation. During the year 1930 no less than approximately £42,000,000 was contributed to the National Exchequer by registration and petrol taxation on motor vehicles, and there is no doubt that motor-car users as a class in this country are very heavily over-taxed. This reacts unfavourably on employment conditions in the industry and on the development of overseas business.

The success achieved by the British motor industry under existing conditions is unquestionably a tribute to the policy of the safeguarding of industries. Were it not for the existence of the McKenna Duties the motor manufacturing trade of this country could not hope to achieve the results that it has done. Yet prices have never been lower or the efficiency of motor-cars higher than they are to-day, the fact being that a defended home market assures an output sufficient to maintain economy in production costs and consequently low prices to the public.

OVERSEAS DEVELOPMENTS.

In connection with overseas trade, you will be interested to know that your company is developing and establishing a series of depots in important markets, whereat spare parts and service facilities will be available to augment the activities of our distributors and dealers in these markets.

We now have selling organisations in all the most important markets of the world, and, despite price cutting by foreign manufacturers resultant upon the world-wide depression in trade, we are stabilising our export business. I personally have recently returned from Buenos Aires, and am extremely gratified with the results of the British Trade Exhibition that was held there. There is no doubt that, given stable conditions on the home market, British export trade, both in cars and other products, will show an upward trend in the near future.

Again I want here publicly to pay high tribute to the continued loyalty of the executive, staff and all employees of the company.

I have pleasure in formally moving the adoption of the balance sheet and report.

Mr E. H. Blake, deputy managing director, seconded the resolution, which was carried.

The following were duly re-elected to the board of directors:—

Mr H. Landstad,
Mr A. A. Rowse,
Mr H. A. Ryder,
Mr H. Seaward,
Mr S. G. K. Smallbone,
Mr W. M. W. Thomas,
Mr F. G. Woollard and
Mr H. W. Young.

Messrs Thornton and Thornton, of Oxford and London, were re-elected auditors for the ensuing year.

GREAT WESTERN OF BRAZIL RAILWAY COMPANY.

FACTORS AFFECTING YEAR'S WORKING.

The ordinary general meeting of the Great Western of Brazil Railway Company was held, on the 22nd instant, at River Plate House, London.

Mr Follett Holt (the chairman) said it was with great regret that the board had to lay before the shareholders results which compared so unfavourably with those of the previous year, and especially the directors regretted that, although the debenture interest was earned and paid and the quota for the amortisation of capital was provided, they were unable to recommend the payment of any dividend on the share capital. In the early months of the year the tonnage of traffic carried compared well with the corresponding period of 1929, but it was found advisable to lower certain tariffs in order to meet road competition, and receipts were also affected by the fall in the value of cotton and sugar, whose tariffs within certain limits vary with their market value. As the year progressed, their business, as indeed all business in Brazil, went from bad to worse. The excess of sugar production in the 1929-30 crop caused a slump in price, and the cane planters and crushers became discouraged; this resulted in a very poor out-turn of sugar during the last season, from which the company had suffered and was still suffering severely. The railway they worked was now 1,052 miles in length and could not have been built and equipped for much less than ten millions sterling. Their lease gave them the first charge upon the earning capacity of this property, and from it, during the next 29 years, they had to earn sufficient to pay the interest on and amortise £3,750,000, which was the capital amount they had now at stake. On the face of it, this would not appear to be an impossible task and it would not be, if they could count on a measure of commercial stability in Brazil.

As far as this year was concerned, on account of the small crops, general depression and the low value of the milreis, results were far from encouraging, and the railway would pass through a critical time. They could only keep down expenditure, hope for a better exchange, and that the movement and general conditions in the second half of the year would make some amends. They were all hoping, and, indeed, expecting, that when the world had emerged from the present depressing conditions, Brazil would share in the recovery and that their company would correspondingly benefit.

The report and accounts were adopted.

GENERAL ACCIDENT, FIRE AND LIFE ASSURANCE CORPORATION, LIMITED.

RECORD PROFITS—INCREASED DIVIDEND.

The forty-fifth annual general meeting of the General Accident, Fire and Life Assurance Corporation, Limited, was held, on the 22nd instant, at the head office, General Buildings, Perth.

Dr. William Low, of Blebo, the chairman, said that it was especially satisfactory to propose the adoption of so good a report seeing that the depression in trade during the year under review had been greater than that known in living memory all over the world. Notwithstanding a small reduction in income, their profits had exceeded those of any previous year at £480,000, including free interest earnings, and supplied evidence, if necessary, of the great value and perfection of the company's organisation. Every prophecy as to the future prosperity of the company which had been made by their managing director from time to time had been amply fulfilled, and their company had been placed in the very foremost rank of British insurance institutions.

They could all point with pride to a magnificent balance sheet, which showed that after making very ample reserves for every liability, they had as security for their policy-holders, in addition to a subscribed capital of £2,000,000—£687,500 paid up—a general reserve fund of £1,000,000, nearly £400,000 of carry-forward, and additional reserves in fire and other accounts, bringing the total up to nearly £2,000,000 sterling. They had provided more than sufficient for the depreciation of investments and adjustment of exchange, and their investments and cash totalled eleven and a half millions sterling.

RECORD NEW LIFE FIGURES.

Notwithstanding the depression, the year 1930 showed the largest amount of new life business they had ever transacted, namely, over £2,000,000, and eminently satisfactory bonuses had been declared as a result of the quinquennial valuation. In the fire department there was again a satisfactory profit, and although the accident and general account showed a decrease of £260,000, all in the foreign field, the loss ratio showed an improvement at 60.32 per cent., as compared with 62.46 per cent.

A trustee department had been formed under the management of Mr Mark Lee, who had lately joined the company and had had great experience in that class of business. He, the chairman, felt sure that the department would be appreciated by the company's numerous connections in this country, and would be a source of profit to the corporation, both directly and indirectly.

In the accounts they had strengthened their reserve for unexpired risk, which was now over 38 per cent., although the reserves they had put aside previously for that purpose had proved more than ample to cover that risk.

The marine department was really marking time until the rates showed an improvement. In their opinion they were still too low, and must be increased in the near future.

The profit and loss account spoke for itself. In addition to paying an increased dividend of 1s. at 14s. per share, and placing £160,000 to reserve for depreciation of investments and adjustment of exchange, the general reserve had been increased to the round figure of £1,000,000, £30,000 had been added to the pension fund, and they carried forward the very large sum of £386,890. The total amount required for the dividend was still some £65,000 less than the net interest earnings alone—a very strong position. It was to be hoped that both interest earnings and profits would continue to increase, in which case they could continue the past sound policy of adding steadily to the amount distributed to the shareholders rather than making any spectacular increase, such as might have been justified on last year's results.

THIRD PARTY RISK.

Mr F. Norie-Miller, director and general manager, in seconding the motion, spoke of the increased motor business which had resulted since the coming into force of the new Road Traffic Act. No one, he said, could possibly object to such an Act, but the premiums to cover this compulsory third party insurance had been fixed at the very minimum, and it might be necessary to increase them if, as a result of juries giving exorbitant awards merely because the money came ostensibly from an insurance company, the present scale proved insufficient to meet the losses and expenses.

Another point he would like to emphasise was that, even excluding life profits, which were only quinquennial, the profits were up over £75,000. They were still developing, and had opened 17 new offices in this country. It was the forty-fifth meeting he had attended, and he had seen the company grow to great proportions. The chairman had said that his (the speaker's) prophecies had been mostly fulfilled. In any case, he thought no one could help being proud of the results submitted.

The report and accounts were unanimously adopted.

BANCA COMMERCIALE ITALIANA.

(LIMITED COMPANY INCORPORATED IN ITALY.)

SENATOR CONTI'S REVIEW OF A DIFFICULT YEAR.

The thirty-sixth annual general meeting of the Banca Commerciale Italiana was held, on March 28th last, at the head office of the bank in Milan.

Senator Conti, who presided, said:—Gentlemen,—Last year, when reviewing business conditions during 1929, we drew your attention to the world-wide fall of wholesale prices which had been taking place for many months. Since then, prices have continued to fall heavily. It has been an all-round downward movement, gathering momentum from month to month, with the result that our present economic system is confronted with problems of an unprecedented nature and magnitude. With but very few exceptions, no country and no branch of industry has escaped the effects of this upheaval. Reports from all quarters show shrinkage of production and of trade, growing unemployment, smaller margins of profit, whilst nations, municipalities and public bodies are often at a loss to balance their budgets.

INDUSTRIAL REORGANISATION.

The difficulties with which we have been confronted in our business throughout the year, with the world in the grip of such a wide and acute crisis, need little emphasis. There have been difficult moments in the past. The monetary and currency problems, the inadequate organisation of internal savings and, occasionally, waves of irresponsible speculation, have all, from time to time, provided their crop of knotty problems. Yet, as we had occasion to explain, there was ample justification for the hope that the country might be spared a general crisis of production, but outside influences of such gravity were bound, of course, to react on the situation. Under these conditions, it has become more than ever necessary to proceed energetically with the work of industrial reorganisation.

Among the various transactions of this nature in which we have been instrumental in the course of the year, we would particularly mention our participation in the banking syndicate formed towards the close of 1930, with the co-operation of foreign financial concerns, for the purpose of dealing with the affairs of the group headed by the Società Italiana Per Il Gas ("Italgas") in Turin.

IMPORTANT OPERATIONS.

We have taken a controlling interest in the Società Elettro-Ferroviaria Italiana. Increases of capital made under our auspices include those of the Società Strade Ferrate Secondarie Meridionali from Lire 12,000,000 to 15,000,000, of the Monte Amiata Company from Lire 32,000,000 to about 48,000,000, and of the Underwood Italiana from Lire 1,000,000 to 8,000,000. We were also responsible for the amalgamation of the Cantiere Navale Triestino of Monfalcone, the Stabilimento Tecnico Triestino and the Cantiere San Rocco, both of Trieste, into one concern under the style of Società Cantieri Riuniti Dell'Adriatico; this transaction completes the consolidation of conspicuous industrial interests in Trieste. In the same region, we assisted in the settlement of the affairs of the "Arsa" Company, one of the few Italian undertakings in the coal business. Following up our constant interest in the development of the group of steel and iron industries headed by the "Ilva" Company, we participated in the formation of the Società Anonima Stabilimento di Sant'Eustachio with a capital of Lire 18,000,000.

In another sphere, we took over the management of the syndicates formed for the issue of the third series of debentures of the "Stipel" (Società Telefonica Interregionale Piemonte e Lombardia), for Lire 50,000,000, of the Rinascente Stores, also for Lire 50,000,000, and for the Italian issue of the San Paulo Coffee Realisation Loan for 500,000 pounds sterling. We participated, furthermore, in the syndicates formed under the auspices of the Bank of Italy for the Italian share in the issue made under the Young Plan and for the International Loan to Austria. Lastly, we would mention the increase of capital of the Società Finanziaria Industriale Italiana, effected in April last, from Lire 10,000,000 to 100,000,000.

NEW AGENCIES.

During the past twelve months we opened two new agencies. On the other hand, the Milan, Rome, Turin, Fiume, Abbazia and Cles branches of our auxiliary, the Banca Commerciale Triestina, have been closed; the reorganisation of this bank, now under our control, has been completed, and its business in its particular sphere has made good progress.

The results of our foreign branches and affiliations have again been satisfactory during the past year. Our London office fully maintains its first-class standing and serves as a very valuable link with the financial circles of the City.

Our establishments in North America are gradually extending their spheres of action. The Banco Italiano di Lima, in Peru, fully

LOST.—Within the past twelve months, all over the country, much money invested in stocks and shares; owners desirous re-creating estates.

FOUND.—A gilt-edged security liable to appreciate, not depreciate; carries rights to income tax rebates; buyable in a rising market; creates an immediate estate. Apply LIFE DEPT., THE LIVERPOOL AND LONDON AND GLOBE Insurance Company, Ltd., 1, Dale Street, Liverpool.

**RE-CREATE YOUR ESTATE

AND GLOBE INSURANCE Co., Ltd.**

holds its own, in spite of the revolutionary movements and the disturbance caused by the failure of one of the oldest institutions in that country; the dividend has been brought back to 12 per cent., and the reserve has been strengthened. The Banque Française et Italienne pour l'Amerique du Sud, in the face of difficulties of all kinds arising out of political and economic troubles in the various countries in which it operates, has gone on working steadily; its head office in Paris plays a not negligible part in the development of the acceptance business in that centre.

The various influences to which we have referred have not been offset by profits on financial business, which remains at a low ebb. As a consequence, the balance of the profit and loss account has fallen from Lire 114,000,000 to about 88,000,000. We consider it proper to propose to you that the dividend should be curtailed by 1 per cent., i.e., from 13 to 12 per cent., leaving a balance to be carried forward of Lire 29,694,275.00.

The report and accounts were adopted.

SIMMS MOTOR UNITS, LIMITED.**SOUND AND STRONG POSITION.**

The eleventh ordinary general meeting of Simms Motor Units, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London, E.C.

Mr Frederick R. Simms, M.I.M.E., M.I.A.E., M.I.E.E. (managing director and chairman), said that while the balance sheet was a source of great disappointment to the board as it doubtless would be to the shareholders, the directors felt that when shareholders took into consideration the very great and world-wide depression in trade, the results were not so discouraging as they appeared to be at first sight. The reasons for the decreased working results for the past financial period were mainly due to the universal falling off of trade during the latter part of last year, with consequent somewhat higher cost of production in spite of stringent measures of economy; further to the drop in profits of subsidiary companies; and last, but not least, to the adverse returns from overseas branches. That, it would be realised, could not be anticipated.

The net profit for the year had not proved so satisfactory as anticipated, for it stood at £16,139 as against £44,650 the previous year. The directors, therefore, much regretted that, in view of the state of the trade, they could not see their way to recommend the payment of a final dividend. There existed no doubt, in his opinion, that the general world depression had at last left some mark on the generally prosperous and solid commercial motor industry with which the company was mainly concerned. With only a moderate revival of trade their business, with its many ramifications, should quickly feel the benefit. Apart from that, during the present year, some new and important motor units, completed during last and this year, would doubtless give their business a wider scope for trade.

New overseas branches had been opened at Calcutta and Buenos Aires, where the company's products had also been shown at the British Exhibition. Thus they now possessed twenty-three fully-equipped and stocked branches at home and abroad, staffed by their own highly-trained commercial and technical men ready to take instant advantage of any improvement in trade. While it was impossible at the present time to say much about the future, he would like to emphasise that their business was in a thoroughly sound and strong position, and that, even with a moderate trade revival, it was in a first-class position to make the most of prevailing conditions.

The report and accounts were unanimously adopted.

NESTLÉ AND ANGLO-SWISS CONDENSED MILK COMPANY.

RESULTS MAINTAINED.**POLICY OF EXTENSION.****MR LOUIS DAPPLES' STATEMENT.****CONSOLIDATION OF FINANCES.**

The sixty-fourth annual general meeting of Nestlé and Anglo-Swiss Condensed Milk Company was held on the 17th instant at Cham, Switzerland.

Mr Louis Dapples, the president of the company, who was in the chair, referred in moving terms to the great loss the company had sustained in the death of Colonel J. J. Kohler, one of their most esteemed colleagues, and expressed the great regret of the board that Mr Benjamin Rossier, who had been one of their most active directors since the amalgamation—of which he had been one of the principal promoters—between the Anglo-Swiss Condensed Milk Company, of Cham, and the Société Nestlé, had felt compelled for grave reasons of health to resign his seat on the board.

In briefly reviewing the operations of the past year, he pointed out that the annual report, which in accordance with their custom was drawn up in great detail, had already advised shareholders that their business and results for 1930 had been maintained at the level reached in previous years in spite of the very unfavourable world market conditions which had developed with increasing acuteness during the latter half of the year. The reduction shown in their net profit of about 4,000,000 francs was accounted for by the fact that they had considered it desirable to take into consideration in the appropriate items in their balance sheet the depreciation in exchange that had occurred in certain countries. They had also appreciably reduced the figure of participations in their balance sheet, which still remained a very considerable item, and it was therefore hoped that they would be able to continue to follow this policy.

WORLD TRADING CONDITIONS.

Referring to the extremely difficult situation which existed in all countries, almost without exception, the chairman stated they could only hope that the instinct of self-preservation, which was equally powerful among nations as among individuals, would gradually enable the world to surmount the present great difficulties and to inaugurate a new era of progress for the well-being of mankind. World production had never reached such a high level, not only in industrial output, but also in raw materials.

He reminded shareholders that the world was not constituted in one homogeneous whole, and that the heavy heritage of separate nationalities entrenched behind innumerable tariff barriers in the presumed interests of their own economics constituted a heavy burden of progress of which the consequences were at last making themselves felt in full to-day, but he detected signs of this problem being approached for the first time in history with more comprehension than had previously been the case. Naturally, it would take time for a solution of the many problems besetting the world to-day to be reached, and it might perhaps be that they would see even more difficult conditions before any real improvement set in; but the nations were pressing forward vigorously, the old days of "splendid isolation" were a thing of the past, and he expressed confidence that human good sense would triumph in the end.

COMPANY'S UNRIVALLED GOODWILL.

Everywhere the company enjoyed an unrivalled goodwill, and everywhere their salesmen were working ceaselessly at their posts. Shareholders would have an idea of the difficulty of their task when they considered that half the population of the globe—Russia, China, and India—at least momentarily, were no longer consumers, and that the purchasing power of numerous other countries had been enormously reduced by economic or political circumstances. In this connection he referred shareholders to the Australian exchange, which had dropped by about 30 per cent. in less than a month, to the revolutions in different South American States, and to the price of silver, which, having fallen as low as a shilling, had practically ceased to be a monetary standard, with all the consequent disturbances for countries which had not yet adopted the gold standard.

While they were prepared to see a temporary decrease in their sales in certain markets, on the other hand they looked forward to progress in others where their latest articles were winning increasing favour with an expanding clientele; and with every confidence in the vitality of their company they were going steadily forward with their programme of extending and perfecting their industrial installations in all countries.

A perusal of their balance sheet would have demonstrated to shareholders the prudent method with which they pursued their policy of expansion, which in no circumstances prevented them from consolidating the finances of the company, and they had arranged for the repayment of a further appreciable proportion of their obligations, a policy they had every hope and intention of continuing. Even if some day the removal of tariff barriers should necessitate their dispensing with certain of their factories that had been equipped simply on account of the import duties into the countries concerned, they did not fear that, given favourable conditions, such circumstances would be too heavy a burden for them; but they had, on the other hand, the firm conviction that their solid position in all important centres of production enabled them to face with confidence all the problems which might arise from any new conditions.

Their business was essentially founded on a large turnover of relatively minor individual items carrying only a very modest margin of profit, and if they were able to present interesting final results it was owing to the enormous extension of their sphere of activity, to the rational employment of their large resources, and to the unremitting zeal of their personnel in all parts of the world. Their dividend remained within modest proportions, since in reality it only represented 8 per cent. on the original capital. He invited the shareholders to associate themselves with the directors in expressing to the staff their sincere thanks for the latter's intensive work and loyal enthusiasm.

A NEW INTEREST.

The more their technical and commercial organisation was strengthened the further its ramifications extended. For this reason they had considered it interesting to acquire on favourable terms a participation in the Cirio Company. This company, which had always been intimately connected with Swiss industry and finance, had not only attained the first place in the Italian market, but had also created a most satisfactory export connection; and, combined with the advantages of their own organisation, they believed they were in a position to increase the extension of the latter still further. They hoped also that the highly organised selling organisation of the Cirio Company would prove of valuable assistance in the development of the sales of their own products in Italy. This anticipation was strengthened by their observations of the development of the common activities of the two companies since January 1st last.

A WORD OF WARNING.

The Chairman concluded by uttering a note of warning with regard to market fluctuations in the price of the company's shares. He reminded shareholders that they were not a financial trust, but simply an industrial undertaking, and it was no part of their duty to follow the daily fluctuations in the price of their shares, and still less to intervene to regulate the same. It was also impossible for them to confirm or deny various rumours which arose, or might arise, in the course of a year. They felt that their annual report was always so detailed, and the explanations which they gave at their general meetings were so conscientious, that shareholders could form their own judgment as to whether the company's shares offered a complete security and a satisfactory return for a permanent investment. They had been asked on various occasions if they had the intention to write up the company's shares at the first favourable opportunity to their original nominal value. The directors did not see what advantage would accrue to the shareholders from such a course, which would naturally not have the slightest effect on the net profit to be distributed. If times improved, and if they were able to keep abreast of circumstances while extending their business, shareholders would doubtless have nothing to regret in remaining faithful to the company and in giving them their confidence.

The resolution referred to in the notice convening the meeting was duly passed, and Messrs H. Bersier and H. Gunthert were elected directors to replace the late Mr J. J. Kohler and Mr B. Rossier, retired. Messrs L. Dapples and J. Cuénod, whose terms of office expired this year, were also re-elected.

GODFREY PHILLIPS, LIMITED.

SATISFACTORY RESULTS—POSITION OF SUBSIDIARIES.

The twenty-second annual general meeting of Godfrey Phillips, Limited, was held, on the 23rd instant, at the offices of the company, 112 Commercial Street, London.

Mr Arthur I. Phillips (managing director), who presided, said that the increase under the heading of investments in the balance sheet was entirely accounted for by the company's investment in Godfrey Phillips (Australia) Proprietary, Limited. Last year he explained that, owing to the imposition of prohibitive tariffs, it was no longer possible to trade in Australia with goods manufactured in England. This had been a very serious matter to their company and was reflected to a considerable extent in the profits of last year's trading. They had invested in cash and kind about £87,000 in Australia. The company started operations in October last with, as far as could be seen at this early date, quite satisfactory results so far as volume of trade was concerned. The political situation in Australia had not been particularly conducive to healthy trading, but the directors felt that the capable management out there would overcome the unforeseen difficulties and that the Australian company would eventually pay very well.

The accounts of Abdulla and Company, in which they held the whole of the ordinary capital, continued to be very satisfactory and those of Cohen Weenen and Company showed a satisfactory increase of profit. Messrs Fairweather and Thomson and Porteous, Limited, had both had a satisfactory year. Dealing with the two notes in the profit and loss account referring to subsidiary companies, the chairman said that that which referred to a loss of £29,698, had been occasioned as the result of a now satisfactory effort to meet special competition. To do this, the subsidiary in question in the latter half of the year introduced a new brand of cigarettes, which always necessitated a considerable expenditure in advertising and could not be a profitable adventure at first. It was, however, a trading loss made by a subsidiary that possibly required no provision in their own company's accounts. They were guided in their decision to make the provision at once because otherwise it might have been suggested that out of the greater balance of the profit and loss account they might pay a larger dividend. But the greater balance would have been represented by monies owing to them by a subsidiary which would not be available cash until the loss was made good. No further loss was anticipated on account of this subsidiary. In respect of the United Kingdom Tobacco Company (1929) to which the other note referred, that company had had an unsatisfactory year, but he was informed that it had now turned the corner and was now making profits.

SATISFACTORY BALANCE SHEET.

Altogether the balance sheet disclosed a quite satisfactory state of affairs. The assets were sound; those subject to depreciation were liberally written down; the stock was conservatively valued; the debtors were sound, and the investments were a very great source of strength indeed.

The net balance on profit and loss account for the year was £105,861. In more than 35 years' experience of the tobacco trade he did not recall more generally adverse conditions than those which had prevailed in the past year, and he felt that they might congratulate themselves that they were able to produce such comparatively satisfactory results. Without doubt the dividend they were able to recommend was the direct result of the policy of acquiring interests in specialised businesses as represented by most of their subsidiary companies and amalgamated businesses.

In a reference to gift cigarettes, the chairman said that their company only followed this innovation when it became evident that a large public called for these cigarettes, for it was the board's policy to cater for every class of smoker, and whilst the demand by the public continued, they would, in common with their competitors, continue to supply them.

With regard to this year's prospects, it would take a very courageous man to prophesy four days before Mr Snowden's Budget, and he was loth to do so. He thought that they could avoid trading losses abroad, even though they might do less business in some foreign countries, so that, generally, provided no unprofitable alteration to the existing tobacco duties, in this and other countries, was promulgated, and bearing in mind the cheaper raw material they would have, and the trading for the first three months of this year, they should be able, with the increased returns from subsidiaries, to present accounts at least equal in result to those of last year. Whether, after Mr Snowden had spoken, they would be able to maintain the same distribution remained to be seen; they could only hope he would not be unkind to them and that world conditions generally would improve so that they might again be permitted to pursue the one-time even tenour of their way.

The report was adopted.

THE CHAMPION REEF GOLD MINES OF INDIA, LIMITED.

VIGOROUS DEVELOPMENT POLICY.

The ordinary general meeting of the Champion Reef Gold Mines of India, Limited, was held, on the 23rd instant, at the Cannon Street Hotel, London, E.C.

The Hon. A. T. J. Fraser, D.S.O. (the chairman), in moving the adoption of the report and accounts, said that the tonnage crushed in the past year amounted to 91,545 tons, a decrease of nearly 10,000 tons compared with the previous year. The gold recovered therefrom was 52,728 ounces, showing a decrease of roughly 1,000 ounces; the grade of current ore sent to the mill was 11.78 dwt., against 10.88 dwt., an increase of .9 dwt. per ton. The tonnage of re-treated tailings decreased by 40,000 tons, and, as the gold content per ton was slightly lower, the gold recovery from re-treated tailings showed a decrease of 3,058 ozs. The total decrease of gold won for the year amounted to 3,902 ozs. The working costs amounted to £213,553, a decrease of a little under £8,000, and the profit for the year's operations amounted to £42,578, a decrease of £9,800. After making what they considered due appropriation for depreciation the directors had declared a dividend of 1s. per share, or 10 per cent., against 1s. 3d. for the previous year, and had carried forward £4,109, which was practically the same as last year.

The outstanding event of the year had been the extremely unfortunate strike of their native labour force, which occurred twelve months ago. The actual period over which the strike lasted was about three weeks, but the effect was spread over a considerably longer time. In the first place, after the strike was officially over it was some time before the underground force was working at as full strength as before, and the fact that the mill had to be kept going inevitably caused development to fall behind the programme they would have liked to carry out. The development for the year, therefore, amounted to 4,833 ft., against a footage of 6,224 in the previous year, showing a decrease of 1,400 ft. The result of development on the whole had been fairly satisfactory.

Having referred specifically to certain of the developments, the chairman said shareholders would realise that, good as the ore shoots were that were now being developed, their length and consequently their tonnage per level was not very great. Nor were they likely to continue indefinitely in depth. It was, therefore, absolutely essential to push down as quickly as possible, and also to open out laterally to both boundaries in the hope of picking up other shoots.

The labour position at the moment seemed to show a definite improvement. At any rate, Mr Heathcote, the superintendent, reported that so far he was well up to date with the increased programme laid out for the year.

As he (the chairman) had previously stated—and he thought last year he especially emphasised the fact—the high assay figures frequently shown in the company's monthly development returns must not be taken as indicating in any way the average grade of ore which could be sent to the mill. In the first place, even in the richest stopes the shaling from the walls under the enormous pressures to which the rock was subject at 6,000 to 7,000 ft. was very great. This waste rock was usually too finely divided to be picked out on the sorting belts. Also, these high-grade blocks represented only a proportion of the total ore reserves, and a great deal of lower-grade rock had to go to the mill, otherwise the ore reserves would very soon be depleted.

In spite of every effort towards economy on the part of the staff at the mine, there was no doubt that, as the mine got deeper, and as more and more ground had to be kept open and in good order above the workers, there was a tendency for costs to increase. He could only assure shareholders that all possible efforts both here and in India were being made to keep expenditure at as low a figure as possible.

Sir George S. Barnes, K.C.B., K.C.S.I., seconded the motion.

Mr Arthur Taylor referred to the effect of the strike on the development work during the year, and said that, in view of the fact that the footage accomplished showed a decrease, and the further fact that developments recently had not been quite as good as in the previous year, it was important that the opening of work underground should be pushed forward with all speed possible. The output showed a reduction in the tons crushed and the quantity of old tailings treated. In large measure this was due to the three weeks' stoppage in April, and to adverse weather conditions, which interfered with the handling of the dump material. With regard to the returns for the current year, the tonnage and grade of the old tailings had not yet shown any change, and, while the production from current ore showed some improvement as compared with the first three months of last year, there might be fluctuations, depending to a considerable extent on the results of development work.

The motion was carried unanimously.

SCHWEPPE'S, LIMITED.

RESULTS CONSIDERED SATISFACTORY.

The thirty-fourth annual general meeting of Schweppes, Limited, was held, on the 23rd instant, at 1 Connaught Place, London, Sir Ivor Philipps, K.C.B., D.S.O. (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said that the gross profit for the past year was £298,000 against £330,000 last year, and the net profit at £145,897 compared with £180,285. In view of the trade depression in this country and the deplorable state of affairs in Australia, he thought it would be agreed that the results were very satisfactory. During the past year the board acquired a controlling interest in Kia-Ora, Ltd. This step was taken, as it was thought that as Kia-Ora Lemon Squash was so well-known to the public, it would be a very valuable addition to the company's cordial business, and would enable them to effect considerable economies by the closer working of the two businesses.

There might be some disappointment at the board's recommendation to pay reduced dividends, but it must be remembered that the summer of 1930 was one of the worst experienced for some years, and this, in a business like theirs, made a difference in the sales of such drinks as ginger beer, &c. Further, the spending power of the public was largely affected by the widespread depression, and this had to some extent been reflected in both their home and export trade.

TRADE IN AUSTRALIA.

Their Australian trade had suffered from the severe depression and the uncertainty of the political situation prevailing in that country, and he feared that rock-bottom had not yet been reached. They were, however, more than holding their own in the volume of trade offering, but their profits from this source could only recover in proportion to the recovery in Australia generally. The various Commonwealth and State taxes were making serious inroads into their Australian profits, and no relief could be looked for in this direction for some considerable time to come.

The companies allied to Schweppes, Ltd., had also experienced rather difficult times, but they, like the parent company, were more than holding their own, and, when a trade revival came along, they, as well as this company, would be in a state to take full advantage of it. It must also be borne in mind that a company such as theirs felt the full effect not only of the high rate of income tax, but of the other forms of taxation levied on the industries of the country, and when he told the shareholders that last year the company paid to the Government and other local authorities in respect of rates and taxes more than double the amount of the dividends now recommended, it would be appreciated how urgent was the need for public economy.

The report and accounts were unanimously adopted.

MYSORE GOLD MINING COMPANY, LIMITED.

CURRENT OUTLOOK.

The 51st annual general meeting of this company was held, on the 22nd instant, in London.

The Hon. Lionel Holland (the Chairman) said that when they met last April the outlook was obscured by the strike then prevailing upon the Kolar Gold Field, involving a total suspension of work upon the company's property. The actual strike continued for three weeks, entailing a loss in production of some 8,000 ounces of gold of a market value of some £32,000. If working conditions had remained normal during the year, the production and resulting revenue would have been approximately on the same level as in the previous year.

A year ago he stated that for the next year or two they were not likely to see much variation in returns from those that were then under review. That was how the position still stood. The mine workings were in a thoroughly satisfactory state; their financial resources were substantial, and, unless some untoward incident occurred, he thought the results of the current year's working would be more on a par with those of 1929, but no material improvement in profits could be expected until the development of the mine at depth had proceeded further, and had disclosed a substantial deposit of payable ore which could be included in the ore reserves.

The mining developments of the past year might be regarded as not unsatisfactory. Work on the new discovery referred to last year, in the Southern part of the property, had unfortunately not yet encountered any further ore of value, but in the deeper main levels of the mine they had met with increasing promise in two sections. Meanwhile, pending the discovery of substantial bodies of payable ore in the deeper levels, it was not unsatisfactory that their reserves of payable ore were only very gradually diminished.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended April 18, 1931, amounted to £15,102,700 against ordinary expenditure of £12,859,700. After allocating £485,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £585, the week's operations, as shown below, reduced the National Debt by £1,759,000 to £7,605,710,000:—

(000's omitted.)		
Treasury Bills	+ £ 2,000	Public Department Advances... — 3,750
National Savings Certificates ...	+ 100	4% War Loan — 100
		Exchequer Bonds — 9
	+ 2,100	— 3,859

A complete analysis of the National Debt at March 31, 1931, was printed in the *Economist* of April 4th.

to continue purchasing for short periods and the limited business passing has been of this nature. The weekly market on Tuesday was quiet. Only a few sales were reported, and for fairly early delivery. Official prices were unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The position of hematite is rather weaker. Home consumers are holding off the market in regard to forward supplies, and are only buying in quantities to carry them a few weeks ahead. Makers now willingly accept 60s. 6d. for ordinary mixed numbers for prompt, and a little less has been accepted in odd cases. A few small parcels have been booked for early delivery on export account, and there are other similar inquiries on the market which it is hoped may lead to business. Shipments of pig iron have improved a little, and are now ahead of last month, the totals of all kinds cleared to the 21st inst. being 7,372 tons, against 5,158 tons to March 21st. In the finished departments no new business of importance is reported, but some mills are fairly busy on old orders. The demand for sheets and shipbuilding materials is very poor and the prospects of improvement are not good. Prices for steel materials for home under the rebate scheme are unchanged, viz.:—Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other home quotations are: Heavy steel rails, £8 10s.; iron crown bars, £10 10s.; 24-gauge black sheets, £8 10s.; and 24-gauge galvanised corrugated sheets, £11. In the ore market practical idleness still prevails. Best Bilbao rubio remains nominally 16s. c.i.f. Middlesbrough for prompt delivery, and the rate of freight Bilbao/Middlesbrough for prompt tonnage is about 4s. 6d. The production of coke has been reduced, but there is still ample for current requirements. Early supplies are obtainable at 16s. delivered works for good furnace qualities, but for forward higher figures are asked. The number of furnaces in blast in the district remains at 21.

SHEFFIELD.—The state of the market for steel scrap, which constitutes a reliable barometer of the steel industry, is again weaker, and prices have receded a further shilling or two per ton. Deliveries under contracts are greatly in arrears; there is little interest in forward business; and consumption is at the lowest point since the war. Stagnation continues to be fairly general in all branches of the local iron and steel trade with no visible signs of early recovery. The special steel branch has undergone a sharp decline since the beginning of the month. Steel works are suffering from heavily reduced requirements of the railway companies and shipbuilders, while exports tend to grow less. No orders for railway material and plant in connection with the Boxer Indemnity Fund have arrived here at present. It is understood that the distribution of the work is now under consideration. Cutlery and plate makers are extremely short of orders. There is a moderate inquiry for tools. Wage and salary reductions are being enforced by many Sheffield firms.

GLASGOW.—Business remains disappointingly quiet in the West of Scotland, although the general impression is that there is a little more work on the market. In the steelmaking industry there is no noticeable improvement, but there is greater activity in the finishing trades, although there is still a considerable proportion of plant not in operation. In the sheet trade the export demand for black sheets is maintained, and there is an improved demand for high grade sheets for home consumption. The Continental prices for semis are stiffer, and little business is being placed by Glasgow buyers. Conditions remain dull in the tube trade.

OTHER METALS.

TIN.—The rapid improvement in the price of tin, following the adoption of the restriction scheme, has practically been cancelled out by the fall during the week. It will, however, be seen from the table below that the world's production in March, the first month covered by the restriction scheme, has been on a lower level. Although stocks still weigh heavily on the market, the future outlook for the metal is more encouraging, provided that the working of the scheme does not meet with difficulties. Prices again declined during the week, and Wednesday's closing quotation for "standard cash," at £111 to £111 2s. 5d. per ton, compares with £114 15s. to £114 17s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 27,233 tons, show a decrease of 62 tons on the week. The following table shows the world's mine production (estimated by the Metallgesellschaft A.G.), visible supplies, including "carry-over in Straits" with prices in London:—

	Thousands of Metric Tons.		Average Price "standard cash" £ s. d.
	Estimated Production.	Visible Supplies.	
	Total.	Daily Average.	End of month.
1931 January...	13.88	0.448	50.2
February...	14.36	0.513	53.8
March...	13.82	0.446	53.3
April 22...	...	...	...

COPPER.—The demand for copper still fails to expand, and prices have continued to decline in London and New York. In order to stimulate exports, Copper Exporters, Ltd., have reduced their minimum price, for "electrolytic," c.i.f. Continent, from 10-30 cents per lb. to 10-05 cents per lb. on April 20th. Wednesday's quotation in London for "standard cash," at £42 11s. 3d. to £42 12s. 6d., compares with £43 2s. 6d. to £43 5s. on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 10,489 tons, show an increase of 115 tons, while stocks of rough copper, at 1,427 tons, were 126 tons smaller.

LEAD.—At a meeting held in London, on April 20th, the lead producers agreed unanimously to cut their monthly production to

15 per cent. below the actual production figure of 1930. The reduction is to begin from May 1st and will continue for six months. Before the expiry of that period, there will be another meeting to review the situation. Nevertheless, prices have failed to recover this week. Wednesday's official closing quotation for "soft foreign," at £12 13s. 9d. to £12 18s. 9d., compares with £12 15s. to £12 17s. 6d. on the corresponding day last week.

SPELTER.—Spelter has been dull, and the rumour that one of the principal producers had decided to reduce production by working three weeks out of four had little effect on the market. Wednesday's closing quotation for "good ordinary brands," at £11 5s. to £11 11s. 3d., compares with £11 11s. 3d. to £12 2s. 6d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—The demand for other non-ferrous metals has been quiet, and aluminium was again quoted at £85 per ton, while nickel changed hands at last week's price of £170 to £175 per ton. Foreign antimony again sold at £24 10s. to £25 per ton, and there was no change in the price of quicksilver at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Prices show a small decline from those ruling a week ago. Some sporadic buying earlier in the week and a temporary shortage of contracts caused values to improve a little, but since then they have gradually sagged with sentiment distinctly bearish. The Chairman of the Farm Board recently stated that unless cotton acreage reduced 25 per cent., there was a grave danger that prices would be lower next autumn. So far it looks as though acreage reduction will be no more than 10 per cent. to 12 per cent. Weather reports have been favourable and crop progress in most parts of the belt is up to the normal. Trade conditions continue to be very poor, and the weakness in other commodities is making buyers of cotton hold aloof. Spot sales for the week 16th to 22nd (inclusive) are 29,000 bales, of which 15,980 are American, 3,500 Brazil, 100 Argentine, 3,250 Peruvian, 2,700 Egyptian, 1,400 African, 550 East Indian, 1,270 Russian, and 250 sundries. Imports for the same period are 45,185 bales, of which 13,596 bales are American, 1,638 Peru, 7,056 Egyptian, 2,890 African, 19,621 East Indian, and 384 sundries. Quotations on April 22nd were as follows: American Middling, 5-57; Egyptian Sakel, 8-15; Uppers, 6-35; Brazil Fair, 5-62; Peru G.F. Smooth, 6-02; East African G.F., 6-62; and West African Middling, 5-62.

Manchester.—Demand in the market is slow to improve. General conditions at the moment are against increased activity. Bearish sentiment prevails in raw cotton circles, and traders are undoubtedly being affected by the falling tendency of commodity prices generally. In the cloth section there has been very little encouraging news from India, and demand remains limited. Picketing in Calcutta and some of the up-country markets is intense. Some business continues to be done in light bleaching descriptions and fancies, chiefly for Karachi. Bids for China have not been altogether absent, and isolated sales have occurred in white shirtings and dyed goods. Very little has been done for Egypt. Further operations have occurred in finishing cloths for South America. There has not been much life in home trade fabrics. There are rumours of more weaving employers deciding to go out of business. American yarns have been dull and easier in price when tested. There is a tendency to curtail output on a larger scale. A slack demand has also been experienced in Egyptian counts and rates have favoured buyers.

THE WOOL TRADE.—Bradford.—Two important events which have taken place this week are the termination of the season's sales in New Zealand, together with some active sales in Sydney. These represent two leading sections of the trade—merinos and crossbreds—the former continuing to make excellent prices, while the latter lost ground practically 10 per cent. from recent sales. Early next month the Australian sales will finish for the current season, except the holding of a monthly sale here and there up to the end of June. Our Bradford correspondent writes: "There is no doubt that the large purchases these last few weeks on Japanese account are chiefly responsible for the excellent prices which have been ruling. It is a fact that tops to-day in Bradford are procurable at at least 3d. per lb. less than they are costing out of wool sold in Sydney this week, an anomaly which did not obtain even at the lowest point at the end of January. Why selling prices for tops should have turned so weak and unsatisfactory during the recent interval is an anomaly that needs an explanation, and it clearly shows that neither the spinning nor manufacturing ends of the West Riding trade have been at all commensurate with the excellent demand for wool that took place in Coleman Street last March. One feels that the effect has been almost nil upon the manufacturing end of the

trade, and that March higher values have been to a very large extent discounted." The trade now faces another series of Colonial sales which begin next Tuesday in Coleman Street Wool Exchange. There are available about 163,500 bales—quite sufficient to satisfy all prospective requirements. Opinion about the probable opening results is not unanimous; but if Bradford top prices are anything to go by, merinos may decline 7½ to 10 per cent. and crossbreds a full 10 per cent. A good deal will depend upon the attitude of the Continent.

THE GRAIN MARKETS.

WHEAT.—Despite unfavourable climatic conditions over the United Kingdom during the past week, no serious interruption occurred to agricultural operations. Cereal crops generally present a healthy appearance, though a spell of warmth and sunshine is needed to stimulate growth, both wheat and oats being still rather backward on heavy soils. Supplies of native wheat continue in small compass, and sell readily at full rates both for milling and poultry feed. On the import market, a good business transpired, particularly in Plate and Australian varieties, but initial advances were not maintained owing to liberal first-hand offerings and fluctuating overseas cables. Cargoes of Australian changed hands at 23s. to 24s. 3d. according to size and position, Barusso 63½ lbs. shipping-shipped 23s., Rossa 63½ lbs. adrift 21s. 10½d., and a part cargo No. 2 Northern Manitoba mid-May loading at Vancouver 25s. 9d. per 480 lbs. c.i.f. Shipments are increasing, the total being equal to estimated requirements, while floating supplies were also on a larger scale. Continental and Mediterranean countries continue to operate freely, and indications of liberal purchases needed up to next domestic harvests are confirmed by the larger quota of foreign wheat now permitted to be milled in France and Germany. Reports that the American Farm Board would liquidate its holdings on European markets were officially denied, but efforts will apparently be made to sell 35 million bushels before the end of July, while it is announced that official support will not be extended to the new crop. Prices generally have not advanced in proportion to the large business done of late, sellers being no doubt more anxious to dispose of surplus stock rather than jeopardise the buying movement by holding for a greater rise. Quotations: No. 1 hard Northern Manitoba (Vancouver), ex ship 30s.; No. 1 Northern Manitoba, ex ship 29s.-29s. 6d.; No. 2 ditto, 28s.-28s. 3d.; No. 3, 26s. 9d.; No. 4 Manitoba, 25s. 9d.; Barusso, 63 lbs., 24s.; Rossa, 63 lbs., 23s. 9d.; Australian, 24s. 6d.; Russian, on sample, landed, 23s.-24s. per 496 lbs.; English, 4s. 8d.-5s. 4d. per 112 lbs.

WHEAT FLOUR.—In view of the upward movement in wheat prices quite a good demand was dealt with for home milled flour, and prices marked an advance of 1s. per sack on the week. Imported descriptions also attracted more attention, but the higher selling limits tends to check business in North American makes for shipment. Quotations: London straight run, 24s. per sack for country deliveries, and 23s. London area. Of imported, Manitoba patents, 22s. 6d.-25s.; Buffalo ditto, 22s.-24s. 6d.; Australian, 18s. 9d.-19s. 6d. ex store per 280 lbs.

BARLEY.—The market in barley has again been firmer. Quotations: Californian old, landed, 30s.-35s.; new, ex ship, 30s.-38s. as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 30s.-40s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, landed, 19s.; ex ship, 18s. per 400 lbs.; English malting, 7s. 6d.-10s.; feed, 6s.-6s. per 112 lbs.

OATS.—The market in oats has been strong. Quotations: Plate landed, 13s.; ex ship, 12s.; Chilean tawny, landed sold 13s. 9d.-14s.; whites, landed, quoted 20s.-21s. 6d.; North Russian, landed, 17s.; South Russian, 18s.; Danubian, 15s. 9d.; mixed Canadian feed, 12s.; black plate, 12s., all landed, per 320 lbs.; English, 5s. 8d.-6s. per 112 lbs.

MAIZE.—All feeding stuffs also ruled firm, and a good trade resulted in Plate maize despite large Argentine shipments, while heavy freight bookings indicate a continuance of the shipping movement. Spot and near at hand parcels were held for a substantial premium. Quotations: Plate, landed, 23s. 6d.; ex ship to arrive, 21s. 9d.; new, April-May, 17s. 3d.; May-June, 17s.; June-July, 17s. per 480 lbs. Yellow maize meal, £6 15s. f.o.r. London per ton.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Apr. 18	Cwts. 67,087	Cwts. 118,822	Cwts. 148,778	Cwts. 272,937
33 weeks to Apr. 18	3,846,908	7,797,829	8,385,455	8,418,874
Average price of English wheat per cwt.	s. d. 5 3	s. d. 8 10	s. d. 9 10	s. d. 10 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Apr. 11, 1931.....	Cwts. 98,603	Cwts. 43,154	Cwts. 29,212	s. d. 5 3	s. d. 8 1	s. d. 6 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 23, 1930.	Jan. 2, 1931.	Apr. 8, 1931.	Apr. 15, 1931.	Apr. 22, 1931.
Winnipeg (No. 1 Manitoba)	148½	109	56½	57½	62½	61½
Chicago (No. 2 Winter)	130½	104½	79½	83	83½	81½

The visible supply of wheat in Canada at 64,882,000 bushels, shows a decrease on the week of 1,109,000 bushels. Supplies a year ago stood at 74,742,000 bushels.

OTHER FOODS.

SUGAR.—Agreement has been reached by the Paris Conference on all the main points at issue, including the conditions under which exports may be increased above the "quota." It also appears that a permanent council, to be known as the International Sugar Council, is to be set up at The Hague. Its votes will be distributed as follows: Cuba, 35 votes; Java, 30 votes; Europe, 25 votes. The European votes will be distributed among Czechoslovakia (8), Germany (6), Poland (6), Hungary (3), and Belgium (2). Mr. F. E. Powell, chairman of the Anglo-American Oil Company in London, has been invited to become Chairman of the Council. The market in sugar has again been firm, and prices for "British refined" have been maintained at the higher level. Raw futures have been slightly easier, and Wednesday's sales included "May delivery" at 6s. 2½d. to 6s. 3½d., as against 6s. 5½d. to 6s. 6½d. on the corresponding day last week; August, at 6s. 5d. to 6s. 6½d., as against 6s. 8½d. to 6s. 9d.; and December, at 6s. 10d. to 6s. 10½d., as against 7s. 0½d. to 7s. 1d. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London ...	731	317	2,296	685	30,661	41,448
Liverpool...	20,128	1,485	16,945	10,143	84,271	118,706
Total tons	20,859	1,802	19,241	10,828	114,932	160,154
Last week	12,869	90	15,473	21,010	113,314	169,180

COFFEE.—Good qualities again received considerable support at the auctions, but common sorts have been easier. Last week's movements of coffee in London were as follows: Brazilian, landed, Nil; delivered for home consumption, 247 bags; exported, Nil; stocks, 2,246 bags, against 6,277 bags last year. Central American, landed, 11,995 packages; delivered for home consumption, 4,634; exported, 2,307; stocks, 116,313 packages, against 105,214 a year ago. Other kinds, landed, 9,386 packages; delivered for home consumption, 4,092; exported, 5,576; stocks, 106,496 packages, against 121,879 a year ago.

COCOA.—The market in cocoa has been dull, and last week's prices have not been maintained. Wednesday's quotation for Accra, fair fermented, May-June, at 20s. 4½d. per cwt., f.o.b., London contract, shows a fall of 10½d. on the week. Last week's movements of cocoa in London were as follows:—Landed, 5,628 bags; delivered for home consumption, 11,835 bags; exported, 67; stocks, 211,867 bags, against 205,287 last year.

TEA.—The quantities catalogued for this week's auctions comprised 54,942 packages of Indian, 33,195 packages of Ceylon, and 15,643 packages of Java and Sumatra tea. There was keen competition at Monday's auction for Indian tea, and prices were maintained. Good Ceylon teas sold well on Tuesday, but at the auction of "Indian" on Wednesday, demand was slightly less strong, and common teas showed a slight reaction.

RICE.—The market in rice has been dull, and prices declined further. Wednesday's quotation, for Burma No. 2, cleaned, May-June, in singles to the Continent and to the United Kingdom, at 7s. 4½d. per cwt., shows a fall of 1½d. on the week. Movements in London during the past week were as follows:—Landed, 52 tons; delivered, 25 tons; stocks, 635 tons, as against 2,526 last year.

POTATOES.—Supplies at the Borough Market have been heavy this week, and there was no further rise in prices. "Best King Edward" again sold at from 9d. to 10d. per ton.

SPICES.—The spot market for pepper has been steady, and Wednesday's price of "Black Singapore," at 6½d. per lb., shows no change as compared with last week. Movements of pepper in London during the past week were as follows:—Black, landed, 67 tons; delivered, 20; stocks, 584 tons, as against 967 last year. White, landed, 124 tons; delivered, 42; stocks, 748 tons, against 764 tons a year ago.

MEAT.—The market in meat has been firm, and prices of British and foreign beef advanced several points. English pork and mutton also realised higher prices, but New Zealand mutton remained unchanged. According to the Smithfield Market official report, supplies of meat during last week amounted to 10,073 tons, as compared with 9,243 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.7 per cent. of the supplies, as against 81.3 per cent. a year ago, and imported mutton, mainly New Zealand, formed 86 per cent. of the total supply, as against 82.3 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets on the whole have been quiet but steady, but at the close an easier feeling prevailed. Linseed is in only poor demand and both here and on the Continent and after business in Plate on passage to Hull had been done at £9 and for June shipment at £9 2s. 6d., values have eased, current quotation for seed afloat and April being £8 17s. 6d. and for May shipment £9. Shipment of Indian linseed has commenced, but little business is passing. Calcutta, April-May and May-June offers at £11 5s. The quantity of linseed afloat for Europe continues heavy at 220,400 tons, as compared with 116,300 tons a year ago. Cottonseed is neglected and somewhat lower, black Egyptian, April and May landings, quoting £6 5s. and Bombay £5 5s. Linseed oil was steady and advancing in the near positions early in the week, but has since turned quiet, current value of raw oil on spot ex Hull mill being around £18, and for May-August delivery £17 12s. 6d. Cotton oil is slow, crude Egyptian ex Hull offering at £20 10s. and edible refined at £23. The demand for oilseeds is only moderate and prices of linseeds and cottons are somewhat lower.

HIDE, LEATHER AND ALLIED TRADES.—Prices for both domestic and imported hides have assumed a weaker tendency this week, and with the restricted amount of buying being done by tanners in this country there is a possibility of yet lower values before confidence is restored. At the Manchester sales this week certain weights in second and third and heifers were 4d. per lb. cheaper, while warbled cows made less money. Calf skins remain a fairly steady market, but the tendency in regard to sheepskins is towards lower prices, in view of the difficulty experienced in disposing of wool. Regarding foreign hides the bulk of the business done in connection with South American wet salted has been on account of tanners in the United States. Parcels of Argentine ox have changed hands at the equivalent of 6d., with second ox quoted at 5d., and Uruguayans at 6d. Dry South American hides are considerably weaker, quotations for B. A. Americanos now being 6d., with Montevideo Americanos on offer at 7d. Only small business is passing for most descriptions of African hides, with dry

Capes quoted at 7½d. and 6½d. for first and seconds, and 6½d. and 5½d. for the same selection of dry salted 20/30 lbs. Although no alteration has occurred in the quotations for Australians little business is being done with the trade of this country. A fairly satisfactory turnover has been done in most descriptions of sole leather, and the market remains steady in regard to prices, the only exception being offal. For this the demand is very poor, and in spite of the low figures being quoted for both bellies and shoulders practically no headway is being made. Against this, however, the demand for English and wet-salted hides continues good, particularly in the lighter weights. Dry hide bends suitable for shoe manufacturing purposes have also accounted for a respectable turnover, and although business for the most part is confined to the lighter varieties there has, at the same time, been a moderate call for mediums. Trade in upper leather has moved on steady lines with the bulk of the inquiry confined to willow calf and black and brown glaze kid.

RUBBER.—Since Wednesday last week the price of rubber has continuously fallen until it touched 2½d. per lb. on Wednesday this week. This is the lowest price ever reached and is due to the absence of a decline in production or an increase in consumption. Although costs of production have been considerably reduced during the last year, the present level may be regarded as definitely uneconomic, and will therefore probably act as a corrective in adjusting supply to demand. Wednesday's official closing price for standard ribbed smoked sheet at 2½d. per lb., shows a further decline of ½d., as compared with that of the corresponding day last week. Forward positions were weak. Business has been done at 2½d. to 2½d. for May, against 3½d. to 3½d. last week; at 2½d. to 2½d. for June, against 3½d.; at 2½d. to 3d. for July-September, against 3½d.; at 3½d. to 3½d. for October-December, against 3½d. to 3½d.; and at 3½d. to 3½d. for January-March, 1932, against 3½d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 4,331 tons; delivered, 1,566 tons; stocks at the end of last week at 136,925 tons, show an increase of 2,771 tons, as compared with the preceding week.

THE MONEY MARKET.

MONEY has been extremely tight this week, and on Tuesday up to 3½ per cent. was paid for new money, while the Bank is believed to have rendered assistance by some special buying of July bills at 2½ per cent. The

following day 3 per cent. was paid for new money and 2½ per cent. for renewals, and on Thursday money still remained stringent, and it is understood that a small amount had to be borrowed from the Bank. From the point of view of the discount market it was difficult to understand the stringency, for, with the three months' market rate still pegged at a minimum of 2½ per cent., few bills are coming forward for discount, and brokers in fact are finding their business—and therefore their need for money—reduced to a very low ebb. The key to the stringency, however, is to be found in this week's Bank return.

* * * *

This showed Bankers' deposits to have been reduced to the extremely low figure of £48.9 millions, and when it is remembered that stringency is likely to develop when Bankers' deposits fall much below £60 millions, it is not surprising that even under the present conditions of inactivity the market has found itself short of funds. What has been happening is that the Treasury had for the past fortnight been accumulating money in Public Deposits in preparation for the Funding and Conversion Loan dividends due on May 1st. The net increase in Public Deposits during this period was nearly £10 millions, and in the absence of any compensating changes among the Banking Department's assets, this sum had to come off Bankers' deposits and so be lost to the market. Another, though far less serious, factor was the slight increase this week in the note circulation, due to the public's currency needs at the end of the month. It was clear that this situation was purely temporary, and now that the Government dividends have been released money should become easier.

* * * *

Sterling has further strengthened its position this week against both the franc and the dollar, and the Bank has once more secured the Cape gold, amounting this week to £921,000, at its statutory buying price. Ear-markings, however, amounted to just over £1,000,000, so that even with the £500,000 whose purchase was announced on May 23rd, the Bank only gained during the week ended May 29th a net £488,000. This was not enough to balance the increase of £1,371,000 in the note circulation, so the Reserve fell by £883,000. The Proportion, however, is still 55½ per cent., so the Bank is in a very strong position. Next week £1,061,000 in bar gold is due from the Cape and the following week £825,000. All this should be secured by the Bank without difficulty, as the dollar exchange is now nearly up to par.

* * * *

The Paris exchange has risen to Frs. 124.44, and already suggestions are heard of forthcoming gold movements to London. Such suggestions, however, are somewhat premature. It is not certain what the exact import gold point is, and it would probably take a test shipment to determine it, especially as various houses each have their own methods of conducting such operations. Probably the gold point will be found to lie between Frs. 124.49 and Frs. 124.54, so that the pound has still a little way to rise before it reaches even the lower limit. It is also significant that no more gold shipments from Paris to New York have been arranged since the sailing of the "Europa" on Saturday. Apparently the withdrawal of last week's concessions in freights, together with the rise in the dollar exchange, has been sufficient to check any further outflow.

* * * *

Following the Budget statement on Monday, sterling was at first influenced favourably by the notion, given currency in some section of the Press, that the transfer

from the Dollar Exchange Reserve Account might occasion a demand for pounds. It was subsequently realised that this theory had no solid foundation, and speculative buying of sterling dried up, but the reduction in New York acceptance rates, described in detail below, is also having an effect upon the dollar exchange, both because it encourages foreign houses to draw upon New York instead of London, and because it is attracting American short money to Europe. This week some American interests have been offering money in London for three months at 2½ per cent. With the market discount rate at 2½ per cent., this rate is clearly too high for London brokers, and these offers have been refused. It is conceivable, however, that they will be repeated at lower and more acceptable rates.

* * * *

These developments have made it clear that, apart from seasonal increases in money rates, such as occurred this week in Amsterdam over the end of April, London is at present the most attractive centre for short funds, and that money is likely to come here from New York and Paris, and also from Amsterdam after the turn of the month. Thus the open-market policy of the Bank has served its purpose of re-establishing world confidence in sterling. Now that this has been accomplished, and inasmuch as money rates generally are likely to remain low, the monetary outlook can be regarded as settled.

* * * *

Money has again definitely cheapened in New York, and already talk is heard of a possible reduction in the Reserve Bank's discount rate to the unprecedentedly low level of 1½ per cent. On April 21st and again on April 27th, the New York Reserve Bank reduced its buying rate for bankers' acceptances of not more than 45 days' maturity, and the current rate is now as low as 1½ per cent. The Boston Reserve Bank followed the New York Bank in its first reduction, and New York banks have reduced their buying rates for acceptances for all periods by ½ per cent. Call money is 1½ per cent. These reductions are regarded by some as evidence of an official desire to check gold imports, and the sterling exchange has already responded.

* * * *

The Foreign Exchange market was again fairly active and sterling maintained its recent strength, especially against the franc and the dollar. New York, after touching 4.86½ and 4.86¾, settled down at 4.86¾, a gain of ¼ in two weeks. Montreal was weaker by ½ at 4.86¾. Paris lost 14 points at 124.44, and Brussels lost ¼ at 34.96. Milan fell away from 92.78 to 92.89. The peseta, after a weak opening at just under 49.00, improved to 46.10. Amsterdam went against us from 12.10½ to 12.09½. Berlin weakened from 20.40½ to 20.42½, as did Geneva from 25.23 to 25.24½. Of the Scandinavian currencies Stockholm lost ½ at 18.14½, while Oslo and Copenhagen were unchanged at 18.16½ and 18.16½ respectively. The South American exchanges were variable. Rio improved by ½d. to 3½d., after touching 3½d., but Buenos Aires losing ½d. at 36½d., while Monte Video gained ½d. at 32½d. In the Far East the rupee was steady at 1s. 5½d., as was the yen at 2s. 0½d. Batavia improved from 12.11½ to 12.10½. In the forward market, dollars were rather weaker at ¼ and ⅞ cent premium. Paris was firmer at 17 centimes and 88 centimes premium. Brussels was rather weaker at 2½ and 6 centimes premium. Madrid was decidedly better at 5 and 16 centimos premium. Forward Amsterdam weakened to ½ cent and ¼ cent premium for one and three months respectively. Berlin was weaker at ½ and 2¼ pfennigs discount. Switzerland was unchanged at 3 and 7 centimes premiums. Silver was slightly weaker at 13½d. for cash and 13½d. for forward, but the market was quiet and dull. The China silver exchanges were steady, Hong Kong improving by ½d. to 1s., while Shanghai was unchanged at 1s. 3½d.

ECONOMIST INTELLIGENCE BRANCH.

Inquiries should be addressed to Moodys-Economist Services, 8, Bouverie Street, London, E.C.4.

PLAYING FOR TIME.

WHATEVER the verdict of history may be on Mr Snowden's third Budget, the immediate impression on the public mind was that a difficult situation had been handled with a dexterous simplicity. The conditions in which the speech was made had created a friendly attitude. The imagination, not only of the House of Commons, but of the country, was captured by the spectacle of the Chancellor rising from a sick bed to face the trying ordeal of "opening" a Budget, and triumphing over ill-health by force of will and pertinacity. The warm cheers of sympathy from all quarters of the House, no less than the extremely graceful tribute of Mr Neville Chamberlain, revealed the very high appreciation of the House for the courageous fight which Mr Snowden is making against physical disability. As to the Budget itself, after so much had been said both by Mr Snowden himself and by the Press, about the parlous state of our national finances, there was a general sigh of relief when it was known that the only additional taxation this year was to be twopence per gallon on petrol. But, however natural the inclination to welcome the avoidance of added burdens in hard times, complacency was quickly shaken by closer examination of the Budget. Mr Snowden's previous speeches had led us to expect that he would avoid additional taxation as much as possible. But it had hardly been expected that he would strain his resources to the extent revealed in the Budget or solve his problem by adopting expedients so reminiscent of the methods of Mr Churchill. Mr Neville Chamberlain hit the nail squarely on the head when he remarked half jestingly that the Chancellor had at last approached Mr Churchill, if not in principle, at all events in practice. The House adjourned on Monday night with an uneasy feeling, shared fully by the direct taxpayers throughout the country, that the day of reckoning had only been postponed.

Mr Snowden's Budget is, we think, open to criticism in three directions. In the first place, considering the state of trade and the grave doubt whether improvement can be expected, at all events in the first half of the coming financial year, his estimates of revenue seem to us to be on the optimistic side. A small allowance is made, it is true, for a further sagging in the revenue from Customs and Excise, but Inland Revenue, making due allowance for the full effect of last year's new imposts, is forecast at a total which may well be regarded as sanguine. It is true that Somerset House may claim that, in spite of unexampled depression, Inland Revenue last year—other than Stamp Duty, which was affected by the Stock Exchange slump—closely approximated to the Budget forecast, and this may give ground for confidence in the present figures. It is true, moreover, that the yield of income tax falls very much less than might be supposed in times of depression. Still, allowing for the fact that £3 millions more than last year was expected to accrue in 1931-32 as a result of the higher rate imposed in the previous Budget, the present income-tax estimate represents an expected fall of only 4 per cent. in the yield—a very low figure. As regards sur-tax, last year's increase was calculated to produce an additional £5 millions in a full year; the Chancellor expects to get practically the whole of this. The most remarkable estimate, however, is under the heading of Estate Duties, which in 1930-31 did not yield quite the full amount of estimated increase resulting from last year's advance in the rate. But whereas the Budget estimate last year was £83 millions, Mr Snowden expects this year to get no less than £90 millions, or £3½ millions more than the "full year's anticipated gain." These changes—together with an estimated recovery of £3½ millions in the Stamp Duty yield, for which little justification appears to exist—lead Mr Snowden to the remarkable conclusion that the tax revenue for the year will be not much more than a million less than the current result. We sincerely hope—though without much confidence—that he will be justified by results.

If the Sinking Fund and interest on the Debt had remained at £360 millions, the revenue estimate would have shown a deficit of £42½ millions for the year; but Mr Snowden proposes, for reasons referred to below, to reduce the Debt charges to £355 millions, thereby lowering his prospective deficit to only £37½ millions. In covering this deficit, Mr Snowden is open to the charge of adopting devices which, if things do not go well, will make things very much more difficult in the Budget of next year. The deficit is met by three expedients. (1) He takes into revenue £20 millions out of the Exchange Reserve Fund established during the war. Next (2) £10 millions additional revenue under the head of Income Tax is to be obtained by reducing the concession under which half of personal income tax is paid on January 1st and half on July 1st. In 1931 three-quarters is to be paid on January 1st and one-quarter on July 1st. This means that an extra quarter of the tax, from certain classes of the payers, will be collected within the present financial year. (3) £7½ millions is to be raised from 2d. on petrol. The first of these proposals is open to the double objection that it is using borrowed money for revenue and that it is an expedient which cannot be repeated. When the Exchange Fund was no longer required it most clearly should have been used for repayment of debt. The second item, though a genuine tax receipt, is also non-recurring. It is quite clearly getting more money out of the income-tax payer during the current twelve months, though that long-suffering animal will no doubt much prefer that it should be taken in this way than that the standard rate of income tax should be raised. The important point to bear in mind, however, is that while this year's revenue will be swollen by £10 millions, next year's revenue will drop back to the old figure, and that, if next year's revenue requirements are at the same level as at present, the Chancellor must find some new means of raising the wind. It is true that there will be one last nest-egg of this kind left in 1932, if all income tax is exacted in one instalment, but after that either the rate will have to be increased, or revenue must be raised in some other form. To the tune, therefore, of no less than 80 per cent. of his deficit, Mr Snowden has resorted to non-recurring forms of revenue, a procedure which can only be described as an expedient to be justified by very exceptional circumstances.

The third criticism is that, in his desire to avoid taxation, Mr Snowden has reduced provision for the debt to dangerously low limits. As our readers will remember, Mr Snowden provided, twelve months ago, that the deficit of 1929-30 should be spread over three years. For this year and next year, therefore, there was a matter of nearly £10 millions to be added to the Sinking Fund provision of Mr Churchill. But, justifying himself by a dictum of Mr Gladstone that debt provision should be kept to a minimum when times are bad, Mr Snowden proposes to regard the receipts from the Young Loan, of about £9 millions (an amount which has already been handed over to the National Debt Commissioners), as releasing him from the obligation to meet this deficit out of revenue. As to the deficit of 1930-31—amounting to £23 millions—the Chancellor contented himself with observing that the House of Commons would not expect him to add this to the tax burden at the present juncture. We suggested, a few weeks ago, that, while this might be true, the proper procedure was to add this to the deficit of 1929-30, and to make provision that the fixed debt charge figure of £355 millions should be raised to £360 millions for the next six or seven years. Mr Snowden has not done this, but contents himself for the moment with the lower figure of £355 millions, which gives him a nominal Sinking Fund of £52 millions. When it is remembered, however, that Mr Snowden only balances his Budget by bringing into account £20 millions of borrowed money which has figured as an asset in the national capital account for the last decade, it will be seen that the actual Sinking Fund allocation which Mr Snowden

provides in 1931-32 is only £32 millions, a lower figure than for many years past. Moreover, Mr Snowden, in his brief speech, said not one word about the borrowing for the Unemployment Insurance Fund; but, as we have pointed out more than once recently, the borrowing for this Fund has been perilously near being equal to the total of the Sinking Fund. With amortisation of debt out of revenue at £32 millions for the coming year, and borrowing for the Insurance Fund at, say, £45 millions, we have at last reached the point where we shall be borrowing more than we repay if the Unemployment borrowing is regarded as a permanent part of the National Debt. It is true that one day it may be hoped that the Insurance Fund's receipts will pay the interest on and ultimately repay this debt, but this is looking very far ahead, and, if the debt of the fund continues to grow at its present rate, it is difficult to believe that it will be possible to establish the rates of contribution from employers and employees at a sufficiently high level to repay it.

To sum up: the Budget is a temporisation which does not attempt at this stage to bridge the gulf between expenditure and revenue on the existing basis of taxation. If the balance sheet gives momentary satisfaction on the ground that no further duties are being imposed, its true meaning is to emphasise the Chancellor's references to the need of giving full effect to the recommendations both of the Economy Committee and of the Commission on Unemployment Insurance. The present level of expenditure, apart altogether from the contribution towards unemployment benefit, which is being met by borrowing, is, to-day, some £30 millions above the current revenue yield, and unless something is done in the next few months in regard to extended benefit, or reducing in some form or another the outgoings under the heading of unemployment benefit, there is an inevitable £6 or £7 millions to be added to the estimates of the Ministry of Labour in order to pay extended benefit during the latter part of this financial year. It is truer, therefore, to say the current level of expenditure is at least £36 millions above the current level of revenue, assuming a Sinking Fund of £52 millions; and this is barely sufficient to cover the statutory obligations of the Chancellor for repayment of debt.

There are only four ways in which this gap may be diminished:—(1) By a reduction of the expenditure on unemployment benefit; (2) by reductions proposed in other departments of expenditure by the Economy Committee; (3) by the possible saving from some conversion scheme during the next twelve months; and (4) by a trade recovery which would produce a renewed increase in the yield of Customs and, subsequently, of direct taxation. Mr Snowden has given himself a breathing-space during which he may hope that some or all of these influences may operate. Quite frankly, he admits that his proposals are a "makeshift," and his excuse for not facing the issue sternly now is the apprehensive state of the public mind.

Is this attitude justifiable? Instead of warning the House of Commons that drastic economy is the only way to avoid heavier taxes next year, would it not have been better to make increases now and render economy less unattractive by showing it to be the only way to reductions next year? Time alone can provide the full answer. Mr Snowden is clearly right in realising that further increases in direct taxation now would deepen the psychological depression, and we should have had, under the stressful circumstances of the moment, little criticism to offer of his programme had he made his sinking-fund position less vulnerable by adding to his tax revenue by raising another ten to fifteen millions on tobacco and beer. As it is, Mr Snowden leaves the country to face the possibility of a grim position next winter, supposing (and in the view of recent political history the assumption is by no means extravagant) that the Cabinet and the House of Commons fail to effect major economies and to overhaul the dole system. Such a failure would incidentally render savings by large-scale conversion operations impossible, for such operations can only be carried out with success when the City possesses confidence that the resources of the nation are being wisely controlled. In such a case the country would be faced

with the certain foreknowledge of a substantial increase in taxation in the next Budget, and the results involved would be formidable. An aggravation of "fear psychology" would bring fresh nervousness to capital, which might well develop into a flight from the pound, and would lead to a general contraction of business and enterprise, involving, in its turn, an increase in costly unemployment and a diminution in revenue yield. Stern retrenchment is the only way out, but it is to be feared that Mr Snowden's "playing for time" may have lulled the public into a dangerous oblivion of the emergency. Our once austere Chancellor has gambled heavily in a game in which the dice do not appear to be weighted in his favour.

THE BUDGET ACCOUNTS.

The simplicity of Mr Snowden's Budget and the absence, with one exception, of new taxation, detract, in one sense, from the interest which usually attaches to the Financial Statement circulated, as is customary, after the Chancellor has spoken. On the other hand, the Statement is a document always essential to students of our national finances, in that it presents in concise form the picture of the Exchequer's achievements and estimated prospects. In the first of the following tables we compare last year's original Budget estimate of expenditure (other than the self-balancing items) with (a) the actual issues, and (b) the initial estimate for 1931-32 on the existing basis, i.e., in this instance, before the modification which Mr Snowden proceeded to make in last year's inclusive debt charge:—

EXPENDITURE ON EXISTING BASIS.

	Budget Estimate, 1930-31.	Actual Issues in 1930-31.	Estimate, 1931-32.	Comparison with 1930-31 Estimate.
	£ Mn.	£ Mn.	£ Mn.	£ Mn.
Cons. Fund Services:—				
Debt Interest, &c.	304.6	293.2	303.0	— 1.6
Sinking Fund	55.4	66.8	57.0	+ 1.6
Total	360.0*	360.0	360.0	...
Payments to N. Ireland	6.0	6.4	6.3	+ 0.3
Other Cons. Fund Items	3.3	2.9	3.0	— 0.3
Total	9.3	9.3	9.3	...
Supply Services:—				
Army Votes	40.5	40.2	39.9	— 0.6
Navy Votes	51.7	52.6	51.6	— 0.1
Air Votes	17.9	17.8	18.1	+ 0.2
Civil Votes	295.7	307.4	317.8	+22.1
Revenue Dept. Votes	12.1	11.9	11.6	— 0.5
Total	417.9	429.9	439.0	+21.1
Grand Total	787.2	799.2	808.3	+21.1

* Includes £5 millions addition to fixed (1928) Debt Charge on account of Budget deficit, £14.5 millions, realised in 1929-30. ‡

Since the figures of Supply Services expenditure were already public property, and have been discussed at length in previous issues of the *Economist* and in our Budget Supplement, further detailed comment on this aspect of the accounts would be superfluous. It may be sufficient to remind our readers that the great bulk of the increase of £22.1 millions in Civil Votes represents the additional cost to the Exchequer of transitional benefit to the unemployed, for which, even so, the provision made is £5 to £10 millions below the estimate submitted by Sir Richard Hopkins to the Royal Commission on January 29th. With regard to the 1930-31 cost of national debt interest and management, the Chancellor explained, in the Blue Paper circulated on Budget Day, that Treasury bill interest had amounted to £12.5 millions, against a Budget estimate of £17.3 millions, and an actual cost of £28.7 millions in 1929-30. On account of Savings Certificates' interest, £16.1 millions had been paid out, against £20.3 millions in the previous year;

and, as a result of these two economies, the nominal allocation to Sinking Fund was raised to £66.8 millions, as compared with a Budget estimate of £55.4 millions. The unreality, however, of these nominal figures is brought out in the next article. For 1931-32, Mr. Snowden stated in his speech that he could not confidently rely on the continuance of the extreme cheapness of Treasury bills or the low encashments of Savings Certificates, and consequently put his estimated figure of debt interest and management at £303 millions, or only £1.6 millions less than in his previous Budget.

The next table compares the estimates of revenue, on the basis of existing taxation, with last year's estimates and actual receipts:—

REVENUE ON EXISTING BASIS.

	Estimate for 1930-31.	Actual Receipts in 1930-31.	Estimate for 1931-32.	Estimate for 1931-32 compared with 1930-31 Receipts.
	£ Mn.	£ Mn.	£ Mn.	£ Mn.
Customs	122.7	121.4	118.2	— 3.2
Excise	129.9	124.0	119.8	— 4.2
Total	252.6	245.4	238.0	— 7.4
Inland Revenue:—				
Income Tax	260.0	256.1	248.0	— 8.1
Surtax	64.5	67.8	72.0	+ 4.2
Estate Duties	83.0	82.6	90.0	+ 7.4
Stamps	27.0	20.7	24.0	+ 3.3
E.P.D., &c.	1.7	3.0	2.2	— 0.8
Land Tax, &c.	0.8	0.8	0.8	...
Total	437.0	431.0	437.0	+ 6.0
Motor Duties, Exchequer Share	4.9	4.9	5.0	+ 0.1
Total Tax Revenue	694.5	681.3	680.0	— 1.3
P.O. Net Receipts ...	10.1	10.1	12.2	+ 2.1
Crown Lands	1.3	1.3	1.3	...
Sundry Loans	33.0	32.9	33.5	+ 0.6
Miscellaneous	34.5	34.3	35.0	+ 0.7
De-Rating Account ...	16.0	16.0	4.0	—12.0
Non-Tax Revenue	94.9	94.6	86.0	— 8.6
Total Revenue	789.4	775.9	766.0	— 9.9

In a previous column we have ventured the opinion that the Chancellor's forecasts of prospective revenue verge, in some respects at least, on a scarcely warranted optimism. In his speech, Mr Snowden intimated that Customs and Excise revenue was likely to be affected to the extent of £6 millions by forestalments in a number of articles, particularly tobacco, towards the end of the last financial year. Thus, his estimate for 1931-32 represents a decline of only £1.4 millions on last year's proper revenue. With regard to Inland Revenue, it has to be borne in mind that the taxes imposed in 1930 were estimated to yield in a full year considerable increases above the 1930-31 part-year estimates. These increases, and the consequent "true" changes forecast by Mr Snowden for the present year, are summarised below:—

	Gain from Full Year.	Resulting "True" Estimated Change, 1931-32.
	£ Mn.	£ Mn.
Income Tax	+ 3	— 11.1
Surtax	+ 5	— 0.8
Estate Duties	+ 4	+ 3.4
Total Inland Revenue	+12.5	— 6.5

As regards non-tax revenue, the £4 millions appropriated from the Rating Relief Suspense Account absorbs the whole of the balance available under this head; while Miscellaneous Receipts benefit by £3 millions taken from the Dollar Exchange Account. This sum, Mr Snowden explained in his speech, represented the amount by which the assets of that Account exceeded its nominal figure of £30 millions; in other words, this was the Account's accumulated profit.

Excluding the self-balancing items, the foregoing estimates of expenditure and revenue left Mr Snowden with a prospective deficit of £42.3 millions, always assuming that he continued to carry out his programme of making good the 1929-30 deficit of £14.5 millions by adding a further instalment of £5 millions to Mr Churchill's (1928) fixed debt charge of £355 millions. By conveniently reverting, however, to £355 millions as the inclusive provision for debt interest and Sinking Fund, he was able to call his prospective deficit £37.3 millions. This gap he filled by transferring £20 millions from the Dollar Exchange Account (further reference to which will be found in a Note of the Week) by increasing the duty on petrol from 4d. to 6d. per gallon, with an estimated yield of £7.5 millions in the current year, and £8.3 millions in a full year; and by making three-quarters, instead of one-half, of the Income Tax assessed for 1931-32 under Schedules B., D., and E. payable on January 1, 1932. The estimated gain for the current year of this last "device" is £10 millions.

Mr Snowden's final balance sheet, taking into account £7.5 millions from the increased petrol duty, and his two non-recurring windfalls totalling £30 millions, is as follows:—

I. ORDINARY REVENUE AND EXPENDITURE, 1931-32.

ESTIMATED 1931 REVENUE.	ESTIMATED 1931 EXPENDITURE.
	£ Mn.
Inland Revenue—	
Income Tax	258.0
Surtax	72.0
Estate Duties	90.0
Stamps	24.0
Excess Profits Duty	2.2
Corporation Profits Tax	2.2
Land Tax, &c.	0.8
Total Inland Revenue	447.0
Customs and Excise—	
Customs	125.7
Excise	119.8
Total Customs & Excise	245.5
Motor Vehicle Duties—	
Exchequer Share	5.0
Total Receipts from Taxes	697.5
Post Office Net Receipts	12.2
Crown Lands	1.3
Receipts from Sundry Loans	33.5
Miscellaneous	55.0
Total	317.8
Tax Collection :	
Depts' Votes	11.6
TOTAL 1931 REVENUE	799.5
Appropriation from Rating Relief Suspense Account	4.0
	803.5
II. SELF-BALANCING REVENUE AND EXPENDITURE.	
	£ Mn.
Post Office	58.2
Road Fund	23.4
Total	81.6
National Debt—Sinking Fund	52.1
Surplus	0.1
TOTAL 1931 EXPENDITURE	751.3
	803.5

II. SELF-BALANCING REVENUE AND EXPENDITURE.

Apart from other considerations, the automatic shrinkage of revenue in prospect for 1932-33 totals £37 millions, namely, Income Tax forestalment, £10 millions; transfer of capital and profit from Dollar Exchange Account, £23 millions; loss of Rating Relief Suspense balance, £4 millions. There could be few more convincing proofs of the urgent need for retrenchment.

THE BUDGET AND THE DEBT.

REFERRING to the 1930-31 accounts, Mr Snowden claimed, as he was entitled to do, that it said much for the soundness of our national financial position that, in a year of unparalleled industrial depression, we had not only been able to pay our way, but to make a reduction in the debt. The figures, however, which he employed to justify his

further claim that the reduction had been "substantial" require certain qualifications. We show in the following table the Sinking Fund operations for the past five years:—

SINKING FUND. (000's omitted.)					
	1926-27.	1927-28.	1928-29.	1929-30.	1930-31.
Principal of Terminable Annuities.....	£ 1,044	£ 1,027	£ 991	£ 968	£ 939
Sinking Fund for—					
3½% Conversion Loan	15,099	14,701	16,538	16,113	15,692
4% Consolidated Loan	...	9,210	10,000	10,000	10,000
4% Funding Loan	2,762	2,892	3,026	3,162	3,308
4% Victory Bonds	2,320	2,413	2,510	2,610	2,714
U.S.A. Government Loan	5,141	5,137	5,548	5,548	5,753
Depreciation Fund for 5% and 4% War Loan	2,720	1,666	1,744	...	...
Deficiency on Funding Loan and Victory Bonds surrendered for Death Duties	8,405	12,340	11,489	9,347	12,084
Other securities surrendered for Death Duties	191	162	24	...	4
Total of above	37,682	49,548	51,870	47,748	50,494
"Free" balance	22,318	15,452	5,639	...	16,336
Nominal Sinking Fund	60,000	65,000	57,509	47,748	66,830
Deduct deficit	36,694	...	...	19,343*	23,276
Actual Sinking Fund	23,306	65,000	57,509	28,405	43,554†

* Actual deficit amounted to £14,524,000; the remaining £4,819,000 represents excess interest on Savings Certificates met by borrowing.

† Less accumulated interest on Savings Certificates not encashed, say, £6 millions.

In 1929-30, against the actual Sinking Fund allocation of £28.4 millions, there has to be set £3 millions of net borrowing by the Unemployment Insurance Fund, making the real debt reduction achieved in that year £25.4 millions. In 1930-31, the actual Sinking Fund figure of £43.6 millions represents still less the true position. In the first place, in budgeting a year ago for £23 millions on account of Saving Certificates' interest, included in the fixed debt charge, Mr Snowden stated that this sum was "rather in excess of the provision that actuarial science would require us to make for that liability," i.e., for both interest paid out on Certificates encashed, and interest accumulating on Certificates outstanding. As we have noted in a previous column, the actual amount absorbed by interest paid out on encashments amounted in the past financial year to the unexpectedly low figure of £16.1 millions; but on the basis of Mr Churchill's calculations in 1928, and Mr Snowden's remarks last year, it would appear that about £6 millions must nevertheless be earmarked to meet the accumulated interest liability. Given the system of a fixed inclusive debt charge, it makes little difference, in one sense, whether this sum is debited in any particular year to Interest and Management or to Sinking Fund; but if we desire to arrive at the real amount of debt redemption, it must clearly be deducted from the apparent actual Sinking Fund allocation. This being so, the figure of £43.6 millions, given above, becomes £37.6 millions, against which the Treasury borrowed last year £36.4 millions for the Unemployment Insurance Fund. That is to say, in 1930-31, we redeemed debt out of revenue to the extent of only £1.2 millions, and, even including the £9 millions received from the German Mobilisation Loan and applied outside the Budget to the reduction of debt, the aggregate real reduction in the last two years combined is under £36 millions.

What Mr Snowden will achieve in this direction during 1931-32 remains to be seen; but, as we have already shown, his estimate of £52.1 millions Sinking Fund allocation—contingent as that figure is on many doubtful factors—includes a capital asset of £20 millions in the shape of the Exchange Account transfer, so that only £32 millions are to be provided, according to plan, from revenue. While, on the existing basis, there may well be £45 millions borrowed for the Unemployment Insurance Fund, apart from any borrowings (to whose necessity Mr Snowden referred) on account of the Road Fund. Under

these circumstances, unless and until the City is satisfied that the Government will resolutely determine to effect the necessary reforms and economies, the prospects of a large scale conversion are not propitious.

In the next table we show the amount of debt maturing, year by year, between 1931 and 1965:—

MATURING DEBT.				
Year.	Security.	Internal.	External.	Total.
1931-32	4% War Loan 1929-42 (Balance Unclaimed) ...	350,000	...	1,681,000
1932-33	4½% Treasury Bonds ...	1,331,000	...	116,468,000
1933-34	4½% Treasury Bonds ...	116,468,000	...	269,837,000
1934-35	5% Straits Settlements ...	1,753,000	...	116,361,000
1935-36	5% Treasury Bonds ...	114,608,000	...	133,014,000
1936-37	5½% 20-year Bonds, £136,333,500 ...	105,000,000	28,014,000	316,844,000
1944-45	4½% Conversion Loan, 1940-44 ...	12,804,000	...	2,086,977,000
1945-46	4½% War Loan, 1929-45 ...	2,086,977,000	...	323,048,000
1947-48	5% War Loan, 1929-47 ...	323,048,000	...	...
1964-65	5% Conversion Loan, 1944-64 ...	...	...	...

Fortunately for Mr Snowden, maturities in the current year are negligible and are within manageable limits in 1932-33. In the following year, however, the maturities of 4 per cent. and 4½ per cent. Treasury Bonds amount to £270 millions, and—over-shadowing the whole situation—there is the formidable mass of the 5 per cent. War Loan, whose continued existence necessarily acts as a brake on the appreciation of British Government securities in general. In the final table we bring up to date the extended analysis which we customarily give in our Budget Supplement, by showing the net nominal value of the National Debt at the end of the past financial year, as compared with the position a year ago and on March 31, 1923. The figures for 1914 are added for purposes of comparison:—

NOMINAL VALUE OF NATIONAL DEBT.					
	March 31.	1914.	1923.	1930.	1931.
INTERNAL DEBT.

Rates will be quoted on application.

The effect of various conversion issues naturally obscures the actual process of debt redemption, since conversions below par increase the nominal amount of debt outstanding while reducing the interest burden. Making due allowance for this consideration, readers may derive such satisfaction as they can from noting that, as compared with the post-war peak year, 1923, the net total dead-weight debt has now fallen by approximately £330 millions. The Floating Debt has been brought down to a much more satisfactory figure than the £810 millions at which it stood in 1923; but it cannot be said that progress in dealing with the colossal amount of unfunded debt, other than floating, has been rapid.

While we do not violently dissent from the dictum of Mr Gladstone (now adopted by Mr Snowden) that rigid rules of debt redemption may properly be relaxed during times of economic depression, yet it would be fatal to shut our eyes to the danger of carrying relaxation too far. Inordinate and too prolonged neglect of debt amortisation would carry a threat to the maintenance of British credit, and gravely impair the prospect of lowering (whether by extinction or by successful conversion) the annual interest burden on the National Debt, which represents more than one-third of the nation's annual expenditure.

RAILWAY ELECTRIFICATION.

In September, 1929, the Ministry of Transport appointed a Committee, consisting of Lord Weir, Sir William McIntock and Sir Ralph Wedgwood, "to examine into the economic and other aspects of the electrification of the railway systems of Great Britain, with particular reference to main-line working." That report is now published. Although various inquiries have been previously made into the question of electrification, no comprehensive investigation has ever been undertaken until now. Further, no previous inquiry has had, to the same extent as the present, the cordial co-operation of the railway companies. Not only was one of the leading general managers a member of the Committee, but two of the companies went to the great labour of preparing complete and detailed particulars of important sections of their systems for the express purpose of enabling the Committee to prepare their estimates. Thus, both the personnel of the Committee and the co-operation of the railways warrant serious attention being given to a report which is characterised by careful examination of the problem, sound judgment, and an admirable breadth of view with regard to all the considerations—political, social and economic—involved.

The report starts from the premise that "there exists in the railways an instrument the efficiency of which is vital to our national welfare." In 1929 the British railway system, excluding the Underground, had an issued capital of £1,135 millions; net receipts amounted to less than £43 millions; and there was a further substantial shrinkage of net revenue in the following year. Notwithstanding, however, the two "new and major phenomena—the growth of road transport both for goods and passengers, and the long spell of depression in many industries"—which British railway transport has had to face in recent years, the Committee "do not consider that any developments which have yet taken place are likely to displace the railways from their position as the main agency for the transport of goods and passengers in this country." On the other hand, the Committee point out, "it is quite apparent that, apart from the more normal efforts to achieve reductions in costs, the railway companies must be on the look-out for and examine any more radical change in methods, such as a change in haulage system." It was with this end in view that they approached their task.

After examining the results of electrification abroad, the report notes that in this country, whereas "all electrification of suburban railways has been successful from an economic and technical aspect... we have been unable to find any strong spirit of conviction in railway circles to warrant a belief that any schemes, either comprehensive or sectional, are likely to be adopted." The establishment,

however, of the Central Electricity Board and the "grid" have revolutionised the British situation so far as costs of electrical power are concerned. Thus, there is no *prima facie* reason to consider that the case of Great Britain is exceptional, so far as the economic utility of railway electrification is concerned. On the contrary, the density of traffic—an even more important factor than the cost of power—is greater here than in other countries.

The following table shows the results of the Committee's estimate of the capital cost of the electrification of all standard-gauge steam-operated railways in Great Britain:—

CAPITAL COSTS OF ELECTRIFICATION.		£ millions.
Track equipment	129.7	
Auxiliary power cable	13.5	
Alterations to way and works	13.7	
Electric tractors	136.5	
Running sheds, shops, stores, &c.	4.5	
Spare parts	5.5	
Auxiliary power supplies	2.25	
Interest during construction	12.5	
Engineering expenses	5.0	
Total gross cost	323.15	
Credit Items.		£ millions.
Steam tractors	45.5	
Coal stocks	1.38	
Spare parts	4.5	
Locomotive coal wagons	2.4	
Passenger coaches	2.5	
Surplus plant, &c.	4.0	
Train lighting sets	2.0	
Total credits	62.28	
Net capital cost	260.87	

In addition to this capital outlay of £261 millions, which the Committee suggest should be spread over twenty years, an additional sum of £80 millions would require to be spent by the Central Electricity Board and other authorised undertakers on generating plant, transmission lines, etc.; but the economic return on this sum is included in the price which, in the following estimate of comparative working costs, the Committee have assumed will be paid for electrical energy by the railways. Complete details of the estimated comparison are given below:—

COMPARATIVE WORKING COSTS.			
	Steam.	Electric.	Saving.
Locomotive fuel or electrical energy	£ 12,310,446	£ 11,280,000	£ 1,030,446
Locomotive wages	20,933,425	10,778,712	10,154,713
Repairs of tractors	10,819,012	4,660,000	6,159,012
Water for locomotives	883,666	...	883,666
Stores, clothing and miscellaneous	905,992	453,000	452,992
Lubrication	290,415	102,000	188,415
Maintenance of engine sheds and shops	436,959	175,000	261,959
Guards' wages	4,296,462	3,653,462	643,000
Cleansing of vehicles	933,500	700,100	233,400
Insurance, pensions, &c.	794,250	397,150	397,100
Savings on maintenance of train lighting sets	...	...	513,000
Savings on auxiliary power and light supplies	...	...	840,000
Total	52,604,127	32,199,424	21,757,703

Additional costs of electrification:—	£
Maintenance and renewals of electric track equipment...	3,385,000
Maintenance and operation of sub-stations	1,056,000
Increase in depreciation (renewals) of electric tractors compared with steam.....	20,000
Total.....	4,461,000
Gross savings due to electrification	£ 21,757,703
Deduct extra costs of electrification.....	4,461,000
Net saving due to electrification.....	17,296,703
Additional net revenue on haulage of coal to power stations	254,000
	17,550,703

It may legitimately be argued that the return on capital expenditure disclosed by this estimate is only 6.7 per cent., a figure which leaves but a small surplus over the probable capital charges. But in considering its adequacy, several important factors must be taken into account. Firstly, while there are some hundreds of miles of line with light traffic which, obviously, it would not pay to electrify, the cost of equipping all the lines in the country (except private sidings) has been included. Secondly, although electrification in almost every country has hitherto resulted in increased traffic, no increase is here assumed. The saving is only that derived from working exactly the existing traffic. As with electrification the capital charges are much heavier than with steam, so increases of traffic can be handled with comparatively small increases in cost. Hence, any increase in traffic, whether due to electrification or to revived trade, would add considerably to the percentage return on the capital. Thirdly, the cost of the plant and machinery has been based on the cost of manufacture of such apparatus on the comparatively small scale obtaining to-day, and takes no account of any reduction in cost which should result when a steady programme of output on a large scale and over a series of years is possible. As an instance that the figures of cost are conservative, the price of copper (of which some 330,000 tons would be used) is taken as £70 per ton, against a present-day cost of about £45.

There are, moreover, certain indirect advantages of electrification which it is not possible to assess in cash. The ability to make up lost time, resulting in greater punctuality, and the speeding up of goods trains, shortening the time of goods in transit, is not unimportant, nor is the improvement in value of wayside property. And the general increase in efficiency in other directions, which has followed electrification on the Swiss, French the Italian railways, is well known to travellers. The advantages to the general public cannot be taken into account in a strict profit and loss statement. But it is notable that the auditors of the Swedish railways drew special attention to the saving to owners of merchandise, and to travellers, from the speeding up produced by electrification in Sweden.

From a wider point of view, there are other considerable advantages to be borne in mind. By immensely increasing the "load" on the national system, railway electrification would very much hasten the day when we get the full advantage out of that system in the form of cheaper electricity. The corollary of this is that rural electrification would be possible at a much earlier date and over a much larger field. Secondly, and very important, by greatly increasing the demand upon the electrical manufacturing industry, the scheme would keep that industry fully employed, give it the opportunity of making the economies of true large-scale production, and enable it, in fact, to keep right in the forefront of the world's electrical manufacturing industry. Thirdly, by speeding up the electrification of the country, it would hasten the date when we can get rid of smoke and dirt.

The proposal admittedly involves a great increase in the capitalisation of a transport system already heavily capitalised. The report does not burke this, but states: "The magnitude of this would be unequalled in the history of world enterprise." Twenty years ago its very

size would have prevented its being seriously considered. But when it is borne in mind that the nation has during the past ten years spent on its roads nearly twice as much as the £261 millions proposed to be spent over twenty years, and is still spending £60 millions per annum on roads, compared with the £13 millions proposed for electrification, the proposal comes into better perspective.

Admittedly there is an element of speculation in the scheme; it is possible that the assumption that the traffic of 1929 will be on the railways twenty years hence may not be justified. But on grounds of efficiency, travelling amenities, and, above all, the indirect national advantages which we have mentioned, the case for the scheme is so strong that we trust Lord Weir's Report will go far to overcome in this direction the *vis inertiae* which too often blocks the rationalisation of British industry.

EXPORTS AND EMPLOYMENT.

APART from the insistent question of public expenditure, no economic problem is of more vital present interest to this country than that presented by the relation of exports to employment. The conviction which has formed the bedrock foundation of British industrial and commercial policy for over a century, that this country can only live by exporting, is being challenged by a new school of thought which holds that salvation can only come to the industries of this country through the reservation of the home market. Until recently, it is true, the exponents of this doctrine rarely faced their own implication that to the extent that it was put into practice export trade must be relinquished. Last week, however, at the Royal Statistical Society, this conclusion was drawn with a directness which was as refreshing as the arguments which supported it were unconvincing. In his paper on "The Relative Importance of Export Trade," Dr. E. C. Snow set out to show that the part played by exports in supporting the people of this country has been over-rated in the past, is diminishing in the present, and is likely to diminish yet further in the future.

Starting from an estimate by Mr Flux that the value in 1924 of imported materials on which some industrial operation was subsequently undertaken was £640 millions, while the output of industry, free of duplication, was £2,478 millions, Dr. Snow first proceeds on the assumption that this proportion of 25 per cent. of imported materials applies uniformly to the value of articles ultimately exported. The value of exports in 1924 was £801 millions (allowing 12½ per cent. for the difference between factory and port value, this becomes £700 millions) containing £175 millions of imported raw material. In an attempt to allow for the fact that 25 per cent. is too high a proportion for some industries and too low for others, he reaches the figure of £250 millions as a more likely approximation to the raw material content. Thus the value at the ports of exports, less the cost of their imported raw material content, was £550 millions. In an appendix Dr. Snow, by a different and more elaborate method, arrives at a figure of £600 millions as the value of exports at port less imported materials contained in them. He thereupon splits the difference and takes as his working basis a figure of £575 millions.

There are reasons for thinking that Dr. Snow has tended to underestimate this figure by putting the contained raw material too high. In the case of the cotton trade, for example, he apparently overlooks the considerable part played by bleachers, dyers and finishers in the production of a large part of the goods exported. Further, in treating imported raw materials as entirely the product of foreign labour, he is ignoring the substantial part of their c.i.f. value contributed by the services of British merchant seamen.

His calculation, however, results in the conclusion that the proportion of the total industrial, mineral and agricultural production of the United Kingdom that was directed to export was about 24 (or possibly 24 to 26) per cent. in 1924, while in an article in the *Economist*

(February 9, 1929) from which he quotes, the proportion based on nearly the same definition was given as "between 25 and 30 per cent." Where there is necessarily so much hypothesis and roughness in the computation, it is not surprising that this indefiniteness should result, and his investigation, therefore, does not seriously modify previous conclusions on the subject.

His attempt to estimate the importance of exports in relation to wages and employment is, however, open to more serious question. Dr. Snow calculates from the returns of the Census of Production that over the whole of the textile trade wages, not including salaries, were 50.8 per cent. of "net output." Assuming that the ratio between this percentage for textiles and that for industry as a whole is the same as in the United States, where the proportions in 1923 were 42.9 and 42.6 per cent. respectively, Dr. Snow takes 50 per cent. as a rough guide to the part played by wages in net output, and 55 per cent. as the proportion for wages and salaries together. The amount of wages and salaries, therefore, paid in connection with exports in 1924 would on this basis be £320 millions.

Next, Dr. Snow addresses himself to the task of assessing the ratio of the wages and salaries paid in connection with exports to those paid in the country as a whole. For those groups of occupations covered by the Census of Production reports he takes wages and salaries as 35 per cent. of net output at the place of production, and to this he adds £1,500 millions, arrived at by applying to each of the remaining Population Census groups averages estimated by various necessarily rough devices. This gives a total of £2,485 millions, of which some £2,250 millions may be taken to be wages. The ratio of wages and salaries paid in connection with exports to total wages and salaries is thus 320 : 2,485, or 13 per cent. From this Dr. Snow infers, somewhat astonishingly in view of the wide disparity between sheltered and unsheltered wages, that only one in eight of the gainfully employed population is employed in connection with exports. The implication is that if the importance of export trade be measured by its power of affording employment, its ratio to total production should more properly be regarded as in the neighbourhood of 13 than of 27 per cent.

Upon the strength of these ingenious calculations, criticism of which we reserve for the moment, Dr. Snow bases a further argument that exports are not as important to this country as is commonly imagined. He suggests, quoting the cotton industry as an example, that exported goods contain a more than average proportion of imported raw materials and that "it seems possible, therefore, that the imports of manufactured articles involve more salaries, wages and remuneration of capital proportionately than do the exports," the implication apparently being that there would be more profit for British capitalists and more earnings for British workers if we made the things we at present import instead of those which at present we export.

Finally, after giving figures which suggest that the decline in our exports between 1924 and 1930 was greater in those goods which consist largely of imported raw materials than in those which contain a larger proportion of British labour and that, therefore, the effect of reduced exports upon employment has been exaggerated, he proceeds to deal with the future of trade. His view is that it is impossible to count on a continued rapid development of international trade, that Great Britain's lack of food and raw material resources must restrict her share in world trade to participation in the struggle for that 40 per cent. of it which is composed of exports of manufactures, and that even this participation can only be maintained at the cost of depressing our standard of living. Calculating that on the basis of 1924 prices, we could pay for our necessary imports by exporting £580-£630 millions, and on the basis of 1930 prices by exporting £450-£500 millions (assuming invisible exports other than shipping to remain the same), Dr. Snow argues that we have a comfortable margin and can afford to remain aloof from the undignified and poverty-inducing scramble, as he conceives it, for international markets.

It is impossible, as we have already hinted, to accept these calculations, to say nothing of the arguments based

upon them. In the first place, we unhesitatingly reject his conclusion that 13 per cent. of the population live directly or indirectly by exports. Apart from the fallacy, to which we have already referred, of inferring that the proportion of the population engaged in exports is the same as the proportion of the wage and salaries bill paid in connection with exports, his methods of arriving at the total wage bill and at the wages paid out of exports are unsound for several reasons. Two of these may be particularised: (1) While his working figure of 50 per cent. of net output may for the time be accepted as a reasonable guess, pending completion of the Reports of the Census of Production, his addition of the other occupational groups to the figure thus arrived at for the groups covered by the Census of Production involves serious duplication, since the net output as given in the census reports already includes the proceeds of a large part of this indirect labour. Repeated warnings have been given in the census reports that the net output of manufacturing industry includes the remuneration of a great many services other than those of the persons on the employment roll of the particular manufacturer. (2) Dr. Snow has also failed to allow for those persons who were absent from work at the date of the census, though drawing their incomes from the proceeds of exported goods, a proportion estimated by the Ministry of Labour as 3½ per cent. of those at work.

In view of these and other omissions and of the doubtful nature of Dr. Snow's basic assumption, there does not seem to be any adequate reason for substituting Dr. Snow's wages bill of £2,250,000,000 for the figure of £1,600,000,000 with which other investigators have been content, and which appears as one of the results of the calculations of Sir Josiah Stamp and Dr. Bowley. The position as regards salaries is more obscure, but it is clear that the proportion of 1 in 8 reached by Dr. Snow should be raised to a proportion of something between 1 in 6 and 1 in 5.

Thus the statistical basis of Dr. Snow's paper is far from sound. But even if it could be justified it would afford no justification for some of the deductions which he builds upon it. His argument, for example, that imported manufactures contain more wages than exported manufactures is entirely beside the point, for it would be a fallacy of the most blatant kind to draw the conclusion that it would therefore be to our advantage, from the employment point of view, to cut off *x* millions of imported manufactures and an equivalent amount of exports. It is the amount of "home activity," if we may use a self-explanatory term, embodied in exports that pays for imports which we consume at home. If £100 of exports consists of £30 of imported raw material and £70 worth of services of British labour, organisation and plant, it will pay for £70 of imported manufactures—not £100—the rest paying for the raw material. Whether this £70 of manufacture contains more or less imported raw material than the proportion in our original exports is irrelevant. We must find employment for our productive resources to the tune of the whole £70, and whatever the proportion of imported materials may be we must export our services to pay for it. We could only add that the higher the proportion of materials may be the better for our carrying trade.

An even more remarkable assumption is Dr. Snow's entirely unsupported statement that the importance of the British market for essential food and raw materials is so great that if exports failed to pay for our food and material imports the prices of these imports would be reduced until they did. The special providence which is popularly supposed to watch over the intoxicated would seem to have the whole British race in its care. Again, Dr. Snow assumes that we should obtain the same income from overseas investments and commissions as before, having apparently failed to realise to what a great extent our invisible exports, even apart from shipping services, depend upon the existence of a large export trade. Dr. Snow's discussion of the effect on the foreign trade equation of a reduction in the item "manufactured exports" degenerates into a not very enlightening attack upon economic theory and fails to return to the main issue, so that we never learn, for example, how Dr. Snow reaches his implied conclusion that by abandoning the

"scramble" for a share in the wide and (pace Dr. Snow) still expanding world market and concentrating the competition in the much more limited domestic market, we could avoid an otherwise inevitable decline in our standard of living.

There is something almost frivolous in Dr. Snow's invitation to the country which of all the major countries of the world is the most dependent on export trade to abandon a large part of that trade on the strength of the light-hearted assumptions we have already discussed. Sometimes, however, the appearance of frivolity is necessary to pique inertia into spirited discussion, and if Dr. Snow's paper stimulates closer analysis of our trade statistics and perhaps increases the pressure of public opinion in demanding more exact and more up-to-date information on these vital matters, it will have served a valuable purpose.

SHANGHAI.

WHAT is going to happen to Shanghai? It is a question which nobody can afford to ignore. Suppose, for instance, that Shanghai were to suffer the fate that Smyrna suffered in 1922. The shock would be felt not only throughout China, but throughout the world. Therefore, though Shanghai is not an attractive place, everybody has been taking trouble, and is likely to go on taking trouble, to maintain it as a going concern; whereas the world allowed the lovable Smyrna to perish without lifting a finger. Chinese war-lords, politicians and patriots, who have sacrificed so much that was not their own upon the altars of their egotism or their nationalism, have hesitated during the civil wars to include Shanghai in the holocaust—partly because the golden eggs which this ugly goose lays for everybody are so very lucrative; and partly because all the other beneficiaries from the existence of Shanghai would be roused to action if the goose's life were seriously threatened by the Chinese or by any other of the parties involved.

From the æsthetic and the moral points of view, Shanghai displays the seamy side of both the civilisations which meet in it. Situated on a mud-flat by the estuary of a tidal river, it has the same drab "location" as London or Antwerp or Hamburg or Hull. It has all the clatter and clang, the hurry and pressure of a great modern Western city, without revealing, on the surface, any of those amenities or graces that make urbanism just tolerable in London or Paris. It leaves the observer with a sense that here Mammon is served without any spiritual increment whatever. Yet this is not the last word about Shanghai. When one looks below the surface one begins to see that Shanghai does serve other gods besides Mammon, even though Mammon remains her principal and, in the last resort, her tutelary civic deity. Shanghai has made herself into by far the most important meeting place between China and the Western world. Since the collision with the West is the biggest event, and the biggest problem, in the life of modern China, it follows that everything important which happens nowadays in Chinese affairs happens in Shanghai either partly or altogether. Again, materially, Shanghai has a future to which perhaps none of the great Western cities can now look forward. The present decline in the natural increase of population through the Western World suggests that London and Berlin and New York are unlikely to grow very much further. Yet Shanghai seems destined still to increase indefinitely. Already, her population is nearer three million than two, and she has behind her the vast reservoir of China's population in a China which is perhaps on the brink of the industrial revolution. Situated at the natural junction of sea routes converging from Europe, Japan and the United States, and with fourteen hundred miles of navigable Yangtse in her Chinese hinterland, Shanghai may stand out, before the end of the twentieth century, as the largest, busiest and wealthiest city in the world.

Meanwhile, in her lusty youth, she is a city of dangerous paradoxes—dangerous alike to China and to the rest of us. A modern city whose energies radiate out all over the planet, she is at the same time a mediæval city standing like a tiny island of law and order in the midst of the vast

sea of the Chinese Revolution. The whole of her soil is juridically under Chinese sovereignty; yet in the heart of Shanghai—in the two areas known as the French and the International Settlement—no Chinese armed forces may set foot, and the Chinese civil authorities are represented solely by a Court of Law. On the administrative and the legislative sides, Chinese sovereignty is here in abeyance. In theory these two areas are an aggregate of plots which the Chinese authorities have assigned, on perpetual leases, to a number of foreign private individuals. Actually, the French settlement has become a territory under the French Government's administration, exercised through the French Consul-General, while the International Settlement is governed by a municipal council which, until 1928, was elected solely by the foreign ratepayers.

This foreign municipality on Chinese soil is not amenable to the local sovereign. So far as it is amenable at all to any higher authority, it is more amenable to the whole batch of Governments which, *vis-à-vis* China, possess the privileges of "treaty powers." The municipal Government can only enforce its acts by actions at law in local courts—the consular courts of the "treaty powers" and the Provisional Court of the Chinese Government. Yet the Municipal Council of the International Settlement at Shanghai is far from being ineffective. Indeed, it is one of the few municipal Governments in the world to possess an armed force which is entirely at its own disposal. Between them, the International Settlement and the French Settlement contain nearly half the population of Shanghai, and of these the overwhelming majority are Chinese. In 1928 it was estimated that there were 855,000 Chinese in the International Settlement and 358,000 in the French Settlement, as against 1,513,000 in those parts of Shanghai that are under Chinese administration. At the same date, there were less than 50,000 foreigners in the whole of Shanghai, all told. Yet, in the two foreign settlements the Chinese only reside on sufferance; and hence in the International Settlement, though the Chinese now contribute almost the entire population and pay more than half the rates, they had no representation on the Council until three years ago. In 1928 they were given three seats, and in 1930 five, against the foreigners' nine.

The whole position is anomalous. How can a growing city continue to live under three distinct jurisdictions, every one of which is outlandish in its own fashion? The growth of Shanghai's Chinese hinterland, the Westernisation and modernisation of China, and the modern cult of national sovereignty, are all factors which make for the merger of the two foreign municipalities in the Chinese municipality and the assertion of the Chinese Government's authority over the whole. Easily said; yet it is precisely the two foreign municipalities that have made Shanghai what she is. If the system of uncorrupt, responsible representative municipal self-government which prevails in the international settlement is extinguished, Shanghai's great future is compromised. The very Chinese nationalists who call most loudly for the re-establishment of the Chinese Government's authority in the settlement habitually place their property there in safe custody, send their families there to receive their education, and take refuge there themselves when their own political opponents are top-dogs at Nanking or wherever the Chinese Central Government of the day may happen to reside. How can the municipal administration of Shanghai be unified on the basis of the Occidental system which prevails in the International Settlement? And how can a more or less Occidental municipal Government of Greater Shanghai be co-ordinated with a more or less Oriental national Government of China?

In the autumn of 1929 the Municipal Council of the International Settlement sought light on these perplexing but pressing questions by inviting a distinguished South African, Mr Justice Feetham, to come and advise them with a view to assisting them in formulating some constructive plan or scheme which, while giving full consideration to the aspirations of the Chinese people, will at the same time afford reasonably adequate protection to the great commercial and business interests which have been developed in Shanghai. Mr Justice Feetham accepted

this invitation on conditions that he should be allowed to make an unfettered inquiry, the results of which should be published. He arrived in Shanghai in January, 1930, and the first part of his report was published there last week. In this first part that distinguished adviser gives a comprehensive and authoritative exposition of the facts. His recommendations are to follow in a few weeks' time. It is to be hoped that, when these appear, they will prove to provide the materials for a solution of the Shanghai problem. But the problem cannot be solved except by wholehearted co-operation between all three municipal authorities in Shanghai, between the Chinese and the foreign element in the population of the city and, last but not least, between the Chinese Government and the Treaty Powers.

Notes of the Week.

The Budget and the Political Outlook.—Politically, the meaning of the Budget is that the Government's position is definitely strengthened. Mr Snowden has succeeded in producing a programme which the Liberals will support *in toto*, which satisfies his own supporters, with the exception of an almost negligible left-wing group, and which arouses no battle-fury from the Conservative benches. Conservative opposition to the Land Tax will doubtless be strenuous, but since it cannot come into operation for at least two years, by which time every good Conservative expects his own party to be in office, even this controversy is regarded as academic; and as regards other Conservative strictures upon Mr Snowden's easy-going finance, the sting is taken out of them by the fact, rubbed in most humorously by Mr Churchill in Wednesday's debate, that the present Chancellor has flattered his predecessor by slavishly copying his methods. So the passage of the Finance Bill is a certainty, and the real ordeal for the Government is postponed until the recommendations of the Gregory Commission for the overhaul of the Unemployment Insurance system come up for consideration. We take Mr Snowden's insistence upon economy to mean that he will use all his prestige to insist that the savings to be suggested by that Commission and by the Economy Committee are carried out, and it is to be hoped that the support that he will receive from the Conservative and Liberal benches will enable him to triumph over the spendthrift propensities of his own rank and file. However anxious the Conservatives may be for a change of Government, it is surely inconceivable that they would coalesce with Socialist malcontents to overthrow Mr Snowden on the vital national issue of retrenchment.

The Naval Negotiations.—The British Government's reply to the new French naval proposals was despatched on Saturday—a copy of the British communication being forwarded simultaneously to the Italian Government. The Italian Government has still to make its own reply, and is not expected to do this for several days. In the meantime, both the French proposals and the British answer to them remain unpublished. This much, however, is known: the British Government has declared the French proposals unacceptable, and the Italian Government may be expected to take the same line. It is understood that the merits of the case—which depend upon the interpretation of the three-Power agreement of March 1st last—have been argued in detail in both the French and the British notes. For the moment, it would be idle for the uninitiated to say more on the subject than we said in these columns last week. The new fact in the situation is that the possibility of a break-down of the agreement has become a probability; and in a few days we may find ourselves confronted with an *impasse*. If France insists, after all, upon a race in naval armaments, what are we to do? It is intolerable that we should find ourselves forced to keep pace with her by building ships which we do not want, which will cost us money which we cannot afford, and which will compromise the comprehensive naval limitation agreement

that we have negotiated with such difficulty with the United States and Japan. There is no doubt about what we should have done in pre-war days. We should have come to an understanding with Italy to maintain, between us, a ratio of naval strength, *vis-à-vis* France, which would give each of us the sense of security which we desire. This was, in effect, what we did in our *entente* with France when Germany took the same intransigent line about naval competition that France is taking now. Yet this would be a counsel of despair, because it would lead us straight back into the old system of the Balance of Power, which always overbalances, sooner or later, into a new war. We are now almost faced with the question: Is the policy of France going to drive the world back into this old and disastrous system in spite of all our efforts to substitute for it the better system of international co-operation and disarmament? If the Naval Agreement breaks down, is it worth while holding the Disarmament Conference next February? Would it not at any rate be better to postpone it until after the French elections? But who can guarantee that a more liberal-minded Chamber will be elected, or even that a Government representing a liberal-minded majority in the Chamber will find itself free to pursue an enlightened policy? And will not a postponement, for however good a reason, increase the embarrassments of Dr. Brüning's Government in Germany? The lesser evil seems to be to go forward according to plan; but at the moment it would be difficult for the most robust optimist to regard the future very hopefully.

Dr. Benesh on "Closer Union."—How are we to interpret the speech on the Austro-German proposal for a customs union which Dr. Benesh delivered on Thursday, April 23, before the Foreign Affairs Committee of the Czechoslovakian Parliament? On the one hand, the Czech statesman rejected the plan uncompromisingly; insisted that it had a definitely political aspect which must not be left out of account; and declared that his Government saw eye to eye with the Governments of France, Roumania, Yugoslavia and Poland in the view that the plan was incompatible with the Peace Treaty of St. Germain and with the Austrian Reconstruction Protocol of 1922. So far, so bad; but Dr. Benesh went on to declare that some kind of economic co-operation between the industrial and the agrarian countries of Europe must be brought about; and that, for the sake of the Disarmament Conference, the present dispute over the Austro-German proposal ought to be settled by understanding. Czechoslovakia is in a peculiar position. She is the only one among the East European allies of France that is predominantly industrial and not agricultural. She realises how tempting the Austro-German proposal, with its open invitation to all comers, may be, on economic grounds, to Czechoslovakia's agrarian neighbours and allies of the Little Entente; and she must be acutely aware that if the East European agrarian countries and the two Germanic industrial countries were to come together economically while Czechoslovakia stood aside, Czechoslovakia would find herself in a far worse position than France—economically, and in the long run politically as well. An East and Central European bloc that would merely isolate France would encircle Czechoslovakia and must ultimately engulf her. Hence we may expect to see Czechoslovakia

make more serious efforts than France to avert an East and Central European Zollverein with an Austro-German nucleus by substituting some system of closer economic union that will embrace the whole of Europe from the outset. This is wholesome, and it is also hopeful, since Dr. Benesh is a statesman with a fertile and ingenious mind. Perhaps we may live to see the spectacle of two groups of States in Europe, each accusing the other of malign intentions in putting forward an identical proposal. While each group seeks to deprive the other of the initiative, the proposal for "closer union" in Europe is reiterated in both camps. Here is an opportunity, if ever there was one, for an "honest broker."

The Week in Spain.—All is still quiet in Spain—an achievement which is equally to the credit of the Republican Government and of the Spanish people. Señor Alcalá de Zamora has shown real statesmanship in paying a personal visit to Barcelona in order to get into direct touch with Colonel Macia. The administration of the four Catalan provinces is being left entirely in the hands of the Provisional Government of the Generalidad; and this proof of Spanish good-will and good faith ought to have its effect on the minds of the Catalans when they are drawing up their constitution of Catalonia for presentation to the Federal Cortes. In dealing with a Government at Madrid which shows this spirit, the Catalans will hardly feel the same need for juridical and material guarantees as if they had been compelled to extort their liberties from their Spanish neighbours point by point. The other event of importance this week is the arrest of General Berenguer. It is not yet announced whether he is to be put on trial only for his conduct of King Alfonso's Government since the resignation of the Marquess de Estella, or whether there is also to be an inquiry into his military record in Morocco. During the past year General Berenguer has attempted the impossible task of reconciling a restoration of responsible parliamentary government in Spain with the preservation of the throne. He may have been blind in undertaking the task, and weak-minded in not telling his royal master plainly, at an early stage, that he was asking an impossibility. But, although General Berenguer has postponed the inevitable to no purpose, he has not allowed his futile efforts to save the throne to lead him into courses that could fairly be regarded as politically criminal. Policy and equity alike would counsel the Republican Government to deal with him gently; and, in view of the temper which they have shown so far, there is every reason to expect that they will do so. Meanwhile, foreign observers in Spain report a noteworthy relaxation in the tension of the political atmosphere compared with the conditions that have prevailed for the last two or three years. The Spanish Revolution has meant a return from political fever-heat to a normal temperature. If experience is any guide, this is the kind of revolution that has lasting effects.

Australian Movements.—Affairs this week in Australia have moved along expected lines. The suspension of the New South Wales State Savings Bank has been duly dealt with by the passage of a Bill providing for the absorption of the bank by the New South Wales Commonwealth Savings Bank. Depositors are to be guaranteed against ultimate loss by the State Government, but a moratorium has been proclaimed which may remain in force until December 31st. Needy depositors, however, can withdraw sums up to a maximum of £3 a week. The Commonwealth Bank Act Amendment Bill has been read a second time in the House of Representatives. This measure, which should not be confused with the Fiduciary Currency Bill rejected by the Senate last week, enables the Commonwealth Government to impound the gold reserve of the Commonwealth Bank, releases that institution from the duty of maintaining a minimum 25 per cent. gold reserves against notes, and permits it to issue notes up to a limit of £60 millions. In urging the speedy passage of the Bill, Mr Scullin explained that the Government was under the pressing need of taking over part of the Commonwealth Bank's gold stocks for the purpose of

shipping them to London to redeem £5,000,000 of Australian Treasury bills maturing here on June 30th, which under present circumstances could not be reissued or renewed. Meanwhile, Mr. Lang has added to Mr. Scullin's exchange difficulties by further defaults on the interest on New South Wales loans, including not only the 5 per cent. sterling loan, but the 4½ per cent. loan issued in New York. (Apparently he is no longer discriminating against London.) Mr Scullin has assumed liability once more, and Mr Lang's Government is now in his debt to the tune of £1,500,000. The Australian Loan Council has also met again. It has expressed the somewhat academic opinion that bank interest rates ought to be reduced, and has taken the more tangible steps of deferring the requests by certain States for the issue of special loans, and authorising the issue of an internal loan of £12,000,000, the proceeds to be allocated equally to the relief of wheat growers and to the promotion of unemployment schemes. It has also announced the inception of further economies amounting to £4,300,000, in addition to those of £7,000,000 already disclosed, but no details are forthcoming beyond the fact that the State of New South Wales is not assuming its share. The week's history adds little to the ultimate solution of Australia's troubles.

The Dollar Exchange Account.—In announcing his proposal to include in 1931-32 non-tax revenue a sum of £20 millions to be transferred from the Treasury's Dollar Exchange Account, Mr Snowden justified his reduction of this account (but not his raid on it for revenue) by reference to the fact that, consequent on the Hague agreement and the establishment of the B.I.S., it had been possible to arrange for instalments of the French and Italian war debts due to us to be placed to our credit with the B.I.S. in dollars, thus easing the Treasury's task in covering our requirements for payments to the United States. The nature of this account appears to have led to misconceptions. For example, some people evidently imagine that it is an accumulation from revenue; and, again, the suggestion has been made in some sections of the Press that, in "repatriating" the account, \$100 millions might be thrown by the Treasury on the market, with the result that sterling will be in such demand that gold might flow from New York to London, or, alternatively, that the pound might receive steady indirect support for some time because the "transfer" would obviate the need to buy further dollars for the next instalment at least of our debt payments. The facts are simple. As Sir Richard Hopkins explained a year ago to the Select Committee of Public Accounts, the £33 millions capital in the Exchange Account represents the unrepaid balance of £53 millions originally borrowed by the Treasury in the early days of the war on Ways and Means Account, authorised by a Vote of Credit. This revolving fund, utilised to enable us to buy dollars when market conditions are suitable, and so to avoid disturbing the dollar-sterling rate, is obviously made up of dollars and sterling in fluctuating proportions; and there is no warrant for supposing that the "transferred" part could now be used to purchase sterling.

The Machinery of Tax Collection.—A minor, yet important, change announced by Mr Snowden in his Budget statement is that in future the appointment of income-tax collectors will vest in the Commissioners of Inland Revenue, and the collectors will achieve the status of civil servants. Some nervousness has been expressed lest the interests of individual taxpayers will be injured, but Mr Snowden firmly rebutted the contention. He reminded the House that centralised collection under the Board of Inland Revenue was recommended by the Royal Commission on the Income Tax, and has already been put into operation for practically the whole of Scotland and Northern Ireland, and for seventeen large collecting areas in England and Wales, including Bournemouth, Bradford, Bristol, Cardiff, Hull, Halifax, Leeds, Liverpool, Manchester, Newcastle and Southampton. From none of these

areas, according to the Chancellor, have there been any complaints on the part of the taxpayer. Clearly the completion of the process of centralisation is natural and inevitable, and there was no obvious reason why Mr Snowden should postpone it.

Shipping and the Suez Canal.—Though there has been a slight improvement in grain freights during the past fortnight, the shipping depression has been emphasised this week by the publication of the figures of laid-up tonnage in United Kingdom ports on April 1st, which amounted to 1,867,252 net tons British and 22,982 net tons foreign, against 884,180 and 7,974 net tons respectively on April 1, 1930. This grave unemployment of vessels lends point to the agitation on the part of ship-owners for a reduction of Suez Canal dues. We publish below a table showing the dues, the traffic through the Canal, and the dividends paid by the company over the last ten years:—

	Dues.		Year.	Divi- dends.	Traffic. Thous.
	Laden.	In Ballast.			
	Fr.	Fr.		£000.	net tons.
March 1, 1920	8.50	6.00	1920	2.173	17,575
Oct. 1, 1920	8.25	5.75	1921	2.201	18,119
Oct. 1, 1921	8.00	5.50	1922	2.076	20,743
March 1, 1923	7.75	5.25	1923	2.338	22,730
Jan. 1, 1924	7.50	5.00	1924	2.605	25,110
April 1, 1925	7.25	4.75	1925	2.150	26,761
April 1, 1928	7.00	4.50	1926	3.501	26,060
Jan. 1, 1929	6.90	4.40	1927	3.712	28,962
Sept. 1, 1930	6.65	3.32½	1928	4.148	31,906
			1929	4.301	33,466
			1930	...	31,669

The dues have fallen gradually but the reduction over the whole period amounts to only 20.6 per cent., whereas since 1922 the dividends have grown rapidly, with only one interruption. The traffic also grew steadily, apart from the setback in 1926, until 1929, but there was a sharp drop last year. It is said that arrangements are actually being made for ships to come to this country from Manchuria via the Panama Canal in order to avoid the Suez, and it may well be that it would pay the Suez Canal Company to take warning from the drop in its 1930 traffic figures and consider whether it would not pay to encourage traffic during this time of depression by some more substantial modification in its rates than it has yet accorded.

British Production.—The London and Cambridge Economic Service has published its index of the physical volume of production for the first quarter of 1931. Whereas the progressive decline in industrial activity was arrested temporarily by seasonal influences towards the end of 1930, the first three months of the current year again witnessed a sharp downward movement in the curve:—

	(1924 = 100.)	1928.	1929.	1930.	1931.
First quarter	105.7	108.3	109.6	84.8	
Second quarter	103.7	111.0	100.9		
Third quarter	95.4	108.2	90.7		
Fourth quarter	105.2	114.8	92.7		
Average	102.5	110.6	98.5		

At 84.8, the complete index is lower than in any corresponding quarter since 1924; is 12.6 per cent. below the January-March figure for 1930; and shows a drop of 8.5 per cent. on the previous quarter. An outstanding feature is the fact that the recession has been almost general. The figures for steel, oilseed crushing and cocoa are alone in showing a slight increase. The production of coal and pig iron has been unusually low, and the index for shipbuilding has fallen to 50.6 per cent. of the 1924 average. The absorption of non-ferrous metals by manufacturers declined by 23 per cent., and the figure for textiles, including cotton, silk and rayon, shows a drop of 12 per cent. Net imports of paper-making materials were 17 per cent. below those of the past quarter. Although a further marked decline in industrial activity during the current quarter may be averted, present indications suggest that little improvement can be expected in the near future.

British Cotton Growing Association.—Our Manchester correspondent writes:—The annual report of the British Cotton Growing Association shows a loss for the past year of £20,521. This amount is arrived at after making provision for depreciation and reserving a further £1,466 against bad and doubtful debts and £7,441 against investments. The report states that the result is largely due to the persistent fall in cotton values during the time when the crops were being marketed. During the year there passed through the hands of the Association 89,350 bales, against 124,790 bales in 1929. A heavy loss was incurred in connection with the agreement by which the Association purchased all the native-grown cotton in Nyasaland. The price of American futures fell considerably after the buying price had been fixed with the Government, which was some time ahead of the buying season, and owing to the uncertainty as to the size of the crops and the quality it was not possible to cover in futures. Another important factor in the loss was the heavy fall during the year in the basis. The various ginneries operated by the Association produced most satisfactory results. The capacity available proved amply sufficient to deal with all requirements, and no extensions of major departments have been necessitated. It is also stated that the lower raw cotton prices have not so far led to an improvement in trade, and confidence can only be restored when political and economic conditions throughout the world are more stabilised. The cotton-growing industry is passing through a severe test in many parts of the Empire, more particularly as, for various reasons, the prices which are charged to the consumer for manufactured goods have not fallen proportionately with the raw material. Very little more can be done in the way of reducing transport and handling charges on raw cotton, so that, unless conditions change, the industry in the more remote areas cannot be carried on at a profit, and it is necessary to concentrate on those districts which are adjacent to the railways. At the annual meeting of the Association, to be held in Manchester on Tuesday next, a resolution will be submitted proposing that a further refund of 5s. per £1 share should be made to the shareholders. Last year 10s. per share was refunded. The present issued capital of the Association is 477,197 shares of 10s. each fully paid.

A Tea Report.—A correspondent writes:—In common with that of many other commodities, the potential output of tea has outdistanced demand since 1929. Stocks in the United Kingdom at the end of last year were estimated at over 300 million lbs., against 284 million lbs. a year before and 241 million lbs. on the corresponding date in 1928. On the other hand, a decline in price, similar to that of coffee and cocoa, was averted last year by an agreement between the growers in India, Ceylon, Java, and Sumatra to aim at finer plucking, and to produce 57½ million lbs. less than in 1929. The actual decrease in exports from the four countries amounted to only 41 million lbs., mainly because of the failure of the attempt to control native production in the Dutch East Indies. Nevertheless, the reduction proved sufficient to prevent a crisis in the industry, and the average wholesale price of tea in Mincing Lane during 1930, at 15.24d. per lb., showed a decline of only 6.3 per cent. as compared with the preceding year. The agreement has not been renewed this year, and, in view of the importance of the industry, particular significance attaches to the conclusions reached by the Imperial Economic Committee in their report on tea. It should be noted that over 70 per cent. of the tea entering world trade is produced and consumed in the Empire, and that nearly 50 per cent. of the world's exports are retained for consumption in the United Kingdom. The superior quality of Empire tea is reflected by average wholesale prices, which in 1930 amounted to 14.69d. per lb. for "North India," and 18.61d. per lb. for "Ceylon," against 10.22d. per lb. for "Java," and 11.22d. per lb. for "Sumatra." The following table of consumption per head in various countries

clearly points to the direction in which producers should look for an increase in demand:—

CONSUMPTION OF TEA PER HEAD IN 1929 (lbs.).

United Kingdom	9.20	United States.....	0.75
Australia	8.15	Germany.....	0.18
Canada	4.10	France.....	0.08
New Zealand	7.90	Russia.....	0.60
Holland	3.10	India.....	0.18

While it is true that at present coffee takes the place of tea in most foreign countries, the possibility of a large increase in the consumption of tea in these countries must not be underestimated. This possibility is clearly illustrated by the position of Holland, where, despite large imports of coffee, the consumption of tea amounted to 3.10 lbs. per head in 1929, as against 0.08 lbs. in France and 0.18 lbs. in Germany. Russia's imports during recent years have been about 100 million lbs. below the pre-war average, and an increase in the purchasing power of her people will probably result in the revival of tea drinking in that country. In view of these facts, the committee particularly emphasise the need for collaboration among Empire producers with a view to improve the quality of their teas and their marketing methods in order to enable them to hold their own in competition with the Dutch East Indies.

Canned Fruits.—The latest publication of the Empire Marketing Board is a further example of the valuable work being performed by its Economic Section. The Report on the Demand for Canned Fruits is the result of an expert investigation into the home demand for one type of commodity, the consumption of which is showing a very rapid expansion. The estimated output of home-grown canned fruits in England and Wales has shown a threefold increase in the last three years, and the home canning industry has undergone a rapid expansion. The importation of canned fruits has also been increasing. The largest increases in sales have occurred in London and the South, an increase which is explained mainly by "the decline in the prejudice against canned foodstuffs and the increased supply of small-sized cans." The main market for English canned fruits appears to be in the Midland counties. There also appear to be definite differences in consumers' preferences as between different parts of the country. The Report stresses the importance of regular grading in connection with the development of the trade, a point which has been recognised particularly by United States packers. Similar importance is attached to methods of labelling, and here again the standard of American practice appears to be higher. With regard to retail prices, the wide range of prices for canned fruits of the same description is striking, and when account is taken of seasonal changes and differences in quality as between brands which are nominally the same, there remains a variation in price which must be attributed to differences in the trade of individual shops.

The Deep Sea Fisheries.—The landings of wet fish at the ports of Great Britain during the first quarter of the year by British-owned vessels, together with foreign landings and imports, had a first-hand value exceeding £5 millions. British-caught fish alone accounted for over £4 millions. The details, compiled from the returns of the Ministry of Agriculture and Fisheries, are as follows:—

January-March.	Weight in Cwts.		Value.	
	1930.	1931.	1930.	1931.
British caught—				
England and Wales...	2,715,977	2,725,489	£ 3,245,283	£ 3,119,354
Scotland	1,103,070	980,038	923,450	837,875
Shellfish	...	...	75,460	63,754
Total	3,819,047	3,705,527	4,244,193	4,020,983
Foreign landings.....	369,340	393,324	243,430	272,397
Imports	806,018	653,427	1,026,143	875,335

In England and Wales the quantity landed by British-owned vessels was practically identical with that in the January-March period last year, but there was a decline in the aggregate value of £125,929; while in Scotland both quantity and value were less. The average

realised for England and Wales was 22s. 10½d. as against 23s. 7d. per cwt., and for Scotland 17s. 1d. as against 16s. 7½d. per cwt. The landings by foreign-owned vessels were somewhat larger and were equal to 9.6 per cent. of the total landing (British and foreign). The catches of cod, hake and halibut were heavier, but haddocks and plaice showed some diminution. Imports of wet fish from abroad were considerably smaller, both in quantity and value, and were in the main sent by Norway (chiefly herrings), Denmark and Holland. A portion of the British-caught wet fish was exported abroad, viz., 357,123 cwt., valued at £361,409, as against 323,444 cwt. and £355,802. In addition to this we sent abroad cured or salted fish (not canned) to the value of £871,448, against £1,271,576, herrings constituting the great bulk, Poland and Germany being the principal destinations. On the other hand, we imported fish cured or salted (not canned) valued at £92,048, against £176,081; and canned £869,510, against £1,237,417. The re-exports under these two heads had a value of £46,529 and £188,711 respectively.

Union Bank of Scotland.—The latest balance sheet of this Scottish institution conforms fairly closely to British banking experience of the past twelve months. Deposits are slightly higher, and discounts and investments have appreciably increased. Advances have contracted by nearly £2 millions, and there has been the usual sharp fall in acceptances:—

	April 2, 1930.	April 2, 1931.
Deposits	£ 28,262,507	£ 29,133,282
Notes	2,414,224	2,406,820
Acceptances	1,071,313	606,995
Capital, rest, undivided profits.....	2,890,054	3,389,721
Cash	2,856,075	2,622,001
Call money	3,111,022	3,953,403
British Government securities	6,349,871	7,798,230
Other investments	3,399,501	3,401,385
Discounts	2,752,684	3,941,274
Advances	14,602,249	12,752,204
Profits to date	339,310	354,668
Dividend	18%, less tax	18%, less tax

Notwithstanding the fall in advances and acceptances, the profits for 1930-31 are higher than those for the preceding year. It is tempting to read into this increase the theory that the rise in market discount rates since January is already beginning to expand bank earnings, but a brief calculation shows that at the best this can only have affected the Union Bank's profits for the whole year to a very minor degree. The improvement is far more likely to be due partly to prudent management and partly to the increase in the bank's earning assets, arising jointly from the expansion in deposits and contraction in cash. Whatever the explanation, the results are highly satisfactory from a wider point of view than that of the bank's shareholders.

Some Views on the Gold Question.—The French weekly, *L'Europe Nouvelle*, has just published as a special supplement an interesting international symposium on the question of the world's monetary gold. The authoritative character of this publication is shown by the fact that, among its contributors are M. Charles Rist, who contributes a foreword, Professor Henry Clay, Mr George E. Roberts, of the National City Bank, and Dr. A. Landsburgh, together with many well-known French and foreign economists. Another fact which adds to the value of the supplement is that, for the first time, it presents every aspect of the French view of the gold problem, and it is unnecessary to add that French economists view the problem from a different angle to that of Great Britain. On the whole little support will be found for the views of those who, like Sir Henry Strakosch, are inclined to attach chief importance to the shortage and maldistribution of the world's monetary gold as a cause of the depression. On the contrary, a common theory to be found in this supplement is that the depression arises from a disequilibrium between production and consumption, and between various forms of productive capacity, notably between industry and agriculture; and it is significant that this disequilibrium is emphasised not only by French writers, but also

by Mr Roberts and Professor Clay. M. Rist, in his foreword, adopts a guarded and judicial attitude, though he, too, scouts the idea that gold has played any leading part in the depression. He clearly shares the view recently expressed by Sir Josiah Stamp that there is no single or principal cause of the depression. It is natural that many of the writers should have been at pains to combat the idea that France has during recent years consciously succeeded in making out a good case. A concluding editorial paragraph in the supplement, however, recognises that the recent influx of gold has not only placed France in a position of peculiar responsibility, but has given her a chance to re-establish herself in the international long-term capital market. The French gold losses of the past few weeks show that this chance may disappear again, and a striking appeal is made that it should be seized before it is too late.

INSURANCE NOTES.

London and Lancashire Insurance.—Controlling total funds of over £27½ millions and a premium income of £7½ millions, the London and Lancashire comprises one of the largest and—more important still—one of the most consistently successful insurance organisations in the world. Actually the group contains 26 subsidiary companies, six of them, including the most significant, being in Great Britain. These subsidiary companies are carried in the balance sheet of the parent company at the present break-up value of £8½ millions; and the profits of the various companies have been sufficient to wipe out the goodwill included at the time of the original purchase, with the result that the present break-up value exceeds the aggregate purchase price by as much as £350,000. The 1930 report bears out in the main the chairman's prognostications at the annual meeting in May, 1930, and the details are set out below:—

	1929.	1930.
	Percentage of	Percentage of
	Amount. Premiums.	Amount. Premiums.
Fire	£ 397,548	£ 324,132
Accident and General	120,788	85,198
Marine	238,917	187,111
Life	32,184	32,184
Capital redemption.....	1,153	3,007
	790,590	631,632
Less items debited to Profit and Loss Account.....	217,234	200,556
Total Net Trading Surplus	573,356	431,076

Fire premiums have shown a reduction from £3,410,000 to £3,224,000, and the universal intensification of competition has adversely affected the underwriting ratio. As an example of the growth of competition, the chairman cited the case of the United States of America, where, he said, the number of insurance companies of all kinds had grown from 1,103 in 1910 and 1,665 in 1924 to over 2,300 in 1930. In the accident department there has been also a diminution in premiums, the 1930 figure of £2,358,000 comparing with £2,456,000 in 1929, and here again profits are on a reduced scale, due to the results of the two largest sections, motor-car and workmen's compensation insurance. The marine department yielded in 1929 a very exceptionally large profit, but the 1930 profit, though appreciably lower, is still a great deal higher than in any recent year. Premiums in this department totalled £1,269,000 in 1930 as against £1,469,000 in 1929. The dividend for the year 1930 has been raised to the equivalent of 100 per cent. from 95 per cent., and after meeting this distribution there remains a sum of £379,000 to be added to the company's free resources, equivalent to over 10s. per share. During the past six years the break-up value of the company's own shares has been increased out of profits "ploughed back" into the business by an average of 12s. per share per annum. In accordance with last year's decision, part of these free profits have been utilised to double the paid-up capital, and so to increase the amount paid up on each £5 share from £1 to £2.

London and Scottish Assurance.—The underwriting results for 1930 of this company are the best for many years past. Excluding the life department, total premiums yielded £821,000, and the results of each department are set out in the following table:—

	1929.	1930.
	Amount of Profit.	Amount of Profit.
Fire	£ 4,161	£ 10,888
Accident and General	22,806	22,498
Marine	5,365	5,403
	21,602	27,983
Items debited to profit and loss account	23,434	13,959
Total net trading surplus.....	1,832	14,024

The company has been controlled since 1923 by the Northern, and during the last five years has been struggling to rehabilitate itself following upon disastrous marine losses brought to light in 1924 and 1925. The marine has been drastically curtailed, though 1930 premiums show an increase from £134,000 to £171,000 and, as a result of heavy first-year claims on the 1930 account, the fund amounts to just under one year's income compared with one and a quarter year's income a year ago. The last dividend paid was at the rate of 25 per cent. in 1927. By dint of prudent management and by forgoing an income on its investment (costing originally the equivalent of £840,000) the Northern has succeeded in augmenting the free reserves of its subsidiary during the five years 1926-30 by a sum of £265,000, equal to more than twice the paid-up capital. The London and Scottish transacts life business in its own name, and controls also a small closed fund, "the Scottish Metropolitan." New business was completed in 1930 for £825,157, compared with £778,634 in 1929. Forty per cent. of the new business is derived from the Dominions, principally Canada. Companies undertaking life business in Canada are compelled by Canadian law to keep the whole of the reserves invested locally, and approximately a quarter of the total fund of over £4 millions is, therefore, invested in Canadian securities.

Caledonian Insurance Company.—The main interest in the 1930 report will centre on the life department, since 1930 was the occasion of a periodical valuation of the fund. For a great many years the valuation has taken place quinquennially, but the 1930 valuation is the first of a new regime of triennial valuations decided on three years ago as being more appropriate to modern conditions. The technical basis of the valuation is the same as before, and the results of the last two valuations have been summarised in the following table:—

	1923-1927.	1928-1930.
Trading surplus earned during triennium ...	£ 526,935	£ 466,032
Profits from securities.....	130,000	186,000
Brought forward	50,148	80,176
	447,083	732,208
Allocations:—		
To Bonuses to Policyholders (90 per cent. of profits)	330,216	352,629
„ Shareholders (10 per cent. of profits)	36,691	39,181
„ Staff pension fund.....	...	20,000
„ Strengthening of actuarial reserves....	...	20,000
„ Contingency fund	...	200,000
„ Carried forward	80,176	100,398
	447,083	732,208

The reversionary bonus declared in 1927 for the five years then ended was at the rate of 48s. per cent. on the sum assured. The rate for the past three years remains the same for endowment assurance policies, but has been raised to 50s. per cent. for whole life assurances, thus following the practice of a number of life offices in giving recognition to the superior earning power in present circumstances of whole life policies. The contingency fund referred to in this table is a new creation of the past three years, and was brought into being out of realised profits from securities. The fund presumably constitutes an investment reserve, though since "The values of the Stock

Exchange securities . . . are below the current market values, there is in addition a hidden reserve of an unknown amount. The cost of the bonus now declared is again well within the amount of trading surplus, which on this occasion has benefited from a high rate of interest earned, the average of which for the three years at £5 3s. 9d. per cent. was 1s. 10d. in excess of the corresponding aggregate for the previous quinquennium. New life assurance business during the year showed an increase from £1,381,265 to £1,566,915 in spite of a considerable reduction of business from single premiums, and the life fund now stands at £6,884,000. In its fire and general departments, particularly in the former, the Caledonian has more than usually large interests in America, and it is pleasing to observe that the figures in all departments, except marine, show an improvement over those for 1929. The total premium income has risen in these departments from £1,407,000 to £1,416,000, and of the latter rather more than 60 per cent. is due to fire and rather more than 25 per cent. to general business. The detailed results in each department are shown below:—

	1929.		1930.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
Fire	21,337	2.4	13,356	1.5
Accident	839	13.3	1,241	17.7
Employers' liability	178	4	279	6
General	9,122	2.6	14,577	3.9
Marine	12,616	10.8	7,485	5.9
Life	...	...	39,181	...
	1,418		76,119	
Less items debited to profit and loss account	28,465	...	28,729	...
Total net surplus ...	27,047	...	47,390	...

For the fourth year in succession the dividend has been maintained at 87½ per cent., and this payment has again necessitated a small draft on underwriting surplus. Allowing for this, the net result of the year's operations has increased the surplus funds by £38,984 compared with a decrease in 1929 of £37,668.

Law Union and Rock Insurance.—This company, which is a subsidiary of the London and Lancashire, is the medium for the transaction of life assurance business in the London and Lancashire group, though it also transacts fire and accident business in its own name. The life fund, which amounts to the substantial total of £10,880,000, includes two old closed funds, the "Rock" and the "Crown," which together account for about £2½ millions of this total. There was a large reduction in the amount of new life assurance business transacted in 1930, the total being £1,646,429, this figure comparing with £2,161,004 in 1929. Interest earnings on the life fund were adversely affected by the rise in the rate of income tax, and worked out at £4 10s. 9d. per cent., compared with £4 15s. 6d. per cent., and there was a rise in the expense ratio from 14.8 per cent. to 16.0 per cent. The fire and accident income experienced a falling off in 1930, but the total is still a substantial one at £756,000. The detailed results are shown below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	72,045	13.0	72,580	13.8
Accident	20,359	8.6	34,734	15.0
Capital redemption	1,153		3,007	
Life (one-fifth of quinquennium) current series	21,820		21,820	
"Rock" and "Crown" funds	10,364		10,364	
	125,741		142,505	
Less items debited to profit and loss account	30,720		31,421	
Total net trading surplus...	95,021		111,084	

The dividend remains the same as in 1929, namely 14s. per share, but the payment involves a substantial draft on the trading surplus. In addition to the normal dividend, the company has declared for 1930 a special dividend of £3

per share, which absorbs the very large sum of £523,000, and the payment of this sum has reduced the profit and loss account balance to a nominal amount of under £15,000.

Scottish Union and National Insurance.—After a series of consistently successful years this company experienced in 1930 underwriting results of a relatively unfavourable character. The details of the past two years are shown below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	117,792	8.9	46,612	3.5
Accident	952	3.7	1,830	6.8
Employers' liability	4,172	7.7	4,467	8.2
Miscellaneous	10,616	6.4	22,840	13.4
Marine	15,000	4.3	20,000	6.1
	148,532		95,749	
Less items debited to profit and loss account	97,812		74,298	
Total net trading surplus	50,720		21,451	

As will be seen, the falling off in profits is due wholly to the experience of the fire department. Having regard to the fact that fire wastage in this country in 1930 showed an improvement as a whole, some explanation will no doubt be furnished in the chairman's speech at the annual meeting. The company enjoys a very large and steadily growing premium income relative to the comparatively small paid-up capital of only £300,000. Total premiums in 1930 yielded £1,889,000, for which the fire department was responsible for £1,311,000. The dividend is maintained for the third year in succession at 65 per cent., but the natural growth in interest income, which now is more than sufficient to meet this rate, points to an increased distribution in the near future. The company has a large life department with a fund of nearly £11 millions, and a premium income of £720,000. New life business in 1930 amounted to sums assured of £2,223,538, thus showing a substantial advance over the previous year's total of £2,085,022.

"State" and "British Equitable."—Both of these companies form part of the Royal Exchange group though they are conducted separately and their accounts are not incorporated with those of the parent company. Each company maintains its own organisation including branch offices spread over the provinces, and each company transacts business of the same class apparently in competition with each other and with the parent company. The State conducts all classes of business except life business, and the figures of the British Equitable are included in the accounts. The consolidated premium income remains practically the same as in 1929 at £914,000, made up of £680,000 in the fire department, £185,000 in the accident department, and £49,000 in the marine department. The results are set out below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	11,026	1.6	3,398	0.5
Accident	13,500	7.3	12,667	6.9
Marine	5,499	11.6	6,067	12.3
Gross underwriting surplus	7,973		15,356	
Less items debited to profit and loss account	27,990		26,078	
Net trading loss	20,017		10,742	

The dividend has been maintained at the rate of 40 per cent. for the ninth year in succession, but although interest earnings are more than sufficient to meet the cost of this, the dividend has not been earned as a whole in either of the last two years. Life business is transacted by the British Equitable, and the report of this company shows that new policies were issued last year for net sums assured of £534,629, compared with £516,325 in 1929. The life fund now amounts to £1,713,000. No dividend has been paid since 1923, apart from a small payment in 1928

following upon the quinquennial valuation at that time, and none has been declared for 1930. Shares in subsidiary companies stand in the balance sheet of the State at £97,158.

University Life Assurance Society.—The share capital of this society is held by the old Equitable, so that the society operates under very high auspices. No commission is paid for the introduction of business, and the field for its activities is further limited by a regulation restricting policyholders to "members of Universities, public schools, theological colleges and other approved educational institutions." Thus, although the current report for the year 1930 is the 106th in the history of the society's existence, the fund amounts only to £1,299,000, and the premium income to under £100,000 per annum. Last year's new business amounted to £168,785, compared with £167,895 in 1929. In spite of the rise in income tax, interest earnings, which have hitherto been and still are on the low side, having increased from £4 4s. 10d. per cent. net to £4 7s. 8d. per cent. net. The quinquennial valuation took place at the end of 1929, and as a result a reversionary bonus of 50s. per cent. per annum simple was declared for the five years then ended. As an example of the benefits to be derived from a contract with the society the following statement in the report is of interest: "If this rate is maintained a man now under age 35, effecting a policy for £1,000 payable with profits at age 60 or earlier death at an annual premium of £43 10s. will receive £1,625 on maturity of the policy. After allowing for rebate of income tax at 2s. 3d. in the £, this represents, in addition to life assurance, an investment yielding over 3½ per cent. free of income tax."

London and Provincial Marine and General.—This company was established in 1860, and in the year 1913 the control passed to the Yorkshire. Until after the war the only business transacted was Marine Insurance, but in 1919 a Fire and Accident account was inaugurated and the income of that account has now reached almost the same figure as that of Marine. Fire and Accident premiums in 1930 yielded £147,000, and Marine premiums £178,000. The Marine Account has throughout been consistently successful, but the results of the Fire and Accident Account have been on the whole extremely patchy, and in 1930 are unsatisfactory. The detailed underwriting results for the past two years are set out below:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire and Accident	6,273	3.8	8,860	6.1
Marine	35,000	21.3	25,000	14.0
	28,727		16,140	
Less items debited to profit and loss a/c	10,526		9,428	
Net trading surplus ...	18,201		6,712	

The dividend has been maintained at the rate of 10 per cent. free of tax, though interest earnings alone would have been sufficient to have paid over 16 per cent. free of tax.

National Guarantee and Suretyship Association.—The business of this company, whose head office is in Edinburgh, is limited to the transaction of Fidelity Guarantee insurance. The company is controlled by the Northern Assurance Company, and the figures are incorporated in the accounts of the parent company. During 1930 there has been a sharp fall in premium income from £63,000 to £59,000, and a still greater falling off in the rate of underwriting profit, which in each of the three previous years comfortably exceeded 20 per cent. In 1930 the underwriting profit was £4,516, equal to 7.6 per cent., compared with £16,206, equal to 25.6 per cent. in 1929. After meeting items debited to profit and loss account, there remained a net trading surplus of £867 in 1930, compared with £13,187 in 1929. The dividend has been maintained at 12½ per cent., and the cost is now covered by interest earnings with a small margin.

UNITED STATES.

Capital — New Banking Corporation — Prices —
Employment — Wages — Industry — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 17.

REPORTS to the contrary notwithstanding, Mr Montagu Norman on his visit here kept in the background any plan which he may have had for bringing about the establishment of an international reservoir of long-term investment funds, to be made available for needy countries. Bankers here look coldly upon any such scheme, though they are heartily in favour of directing surplus capital in this country into foreign productive channels. Any idea of international control is disliked. American banks are willing to grant short-term credits, but they feel that long-term bond issues must be judged on their merits and offered when conditions in the investment market are favourable. Such conditions are unlikely to be found until greater stability obtains abroad. Some improvement has occurred in the foreign bond market, but yields on old issues are still too high, and the market for them too narrow, to encourage any appreciable amount of new financing. Moreover, much of the recent limited demand for foreign bonds has come from abroad.

An important step to stimulate foreign trade has just been taken by a group of bankers and corporation officials here in the formation of a \$10 million banking corporation which will originate two new categories of bankers' bills. Radio Corporation, International Harvester, General Electric and other exporting corporations have been instrumental in forming the new bank, and it will have the support of the Federal Reserve Bank. It is understood that the Federal Reserve will grant it powers as yet withheld from member banks. The new acceptances will finance goods from the hands of the American exporter to the actual distributor abroad, instead of as at present merely from an American to a foreign port. Bills issued to carry goods to ultimate destination will be made acceptable for discounting at the Federal Reserve Banks.

Foreign trade figures for March are only mildly encouraging. Exports rose \$13 millions to a total of \$237 millions, and imports increased \$36 millions to \$211 millions. Most of the gain in exports was due to larger shipments of cotton, the increase being estimated at \$10 millions. Shipments were 605,000 bales, against 433,000 bales in February. The rise in exports was no more than seasonal, but the gain in imports was more than the usual March increase. Wall Street is cautious about interpreting the import figures as indicating real improvement in foreign conditions. Compared with a year ago, exports were down 36 per cent. and imports 30 per cent. Exports were the smallest for any March since 1914, and imports were the lowest for any March since 1916. Gold imports were approximately \$25.6 millions net, and in addition there was a release from earmark of \$3 millions. Since the end of March about \$15 millions in gold has come in, but the gain for the year to date is not much more than half that of last year.

Commodity prices are weakening again, after some slackening in the decline last month. The situation is particularly unsatisfactory in the oil industry, where the East Texas production is depressing prices. Crude oil sales are reported in that region at less than 20 cents a barrel, and another cut in mid-continent crude is expected. Metal prices are difficult to maintain, and cotton, under the press of favourable planting weather and the promises of a record-breaking carryover, has been sagging. Wheat, on the other hand, has improved in spite of an abnormally large movement of the grain from the farms to market during March. On the average, wholesale commodity prices for March, according to the index of the Bureau of Labour Statistics, fell 1½ per cent., compared with a drop of 2 per cent. in February. Farm groups were firmer, and the chief declines occurred in

finished products and raw materials. Prices for March were 16.8 per cent. lower than a year ago:—

WHOLESALE PRICE INDEX.
(1926 = 100.0.)

	March, 1930.	Feb., 1931.	March, 1931.
All commodities	90.8	75.5	74.5
Farm products	94.7	70.1	70.6
Foods	93.9	77.1	76.7
Hides and leather products	103.2	86.6	87.4
Textile products	86.5	70.4	69.2
Fuel and lighting materials	77.4	69.6	64.5
Metals and metal products	100.6	88.9	89.0
Building materials	95.4	81.8	81.9
Chemicals and drugs	91.2	82.2	81.9
House-furnishing goods	96.5	90.8	90.8
Miscellaneous	78.2	63.9	64.7
Raw materials	89.3	70.6	69.4
Semi-manufactured articles	90.6	72.3	72.2
Finished products	92.0	79.3	78.4
Non-agricultural commodities	89.8	77.1	75.7

The Bureau of Labour has also issued statistics on employment for March, showing virtually no change for leading industries, but a moderate gain in factory employment. For fifteen industrial groups pay-roll totals were seven-tenths of 1 per cent. higher than in February. Decreased employment was noted in the metal and mining industries, oil, public utilities, railroads and wholesale trades. Factory employment was up nine-tenths of 1 per cent. and pay-rolls rose 2.2 per cent. above the level of the previous month. The general index of factory employment for March is 74.8, against 89.8 last year.

Meanwhile discussion of wage reductions is becoming more animated. Wage cuts are spreading, but as yet the strongly unionised trades and great industries, such as steel, automobiles, the building trades and the railroads, have maintained wage scales. Efforts to enforce cuts would probably create labour troubles, but the trend of opinion is steadily drifting that way, as living costs decline and it becomes increasingly difficult to make profits on the old wage scales. The need for lower wages on the railroads is particularly marked, but it would be difficult to obtain them without the tacit consent of the Administration, and that would, of course, create an unwelcome political situation. Most of the oil companies have cut wages 10 per cent. or more, and wages for farm labour are back to the pre-war basis.

Some further slackening has taken place in trade during the week. The steel industry is down almost to 50 per cent. of capacity, and prices are weaker. Motor trade buying of steel is disappointing, but that is partly because so large a share of the motor output is in Ford cars, and the Ford works make a good deal of steel. The General Motors Corporation, which is reported to be selling about 45 per cent. of the motor output of the country, sold nearly 50 per cent. more cars in March than in April, but it is doubtful if the dividend is being covered.

Railroad traffic is still low, but comparisons with the previous year are expected to be more favourable from now on. Dividend reductions among industrial corporations continue and are helping to keep investors on the sidelines. The weakness in shares has also affected bonds and sharply reduced the volume of new issues this week.

Short-term money has maintained a slightly firmer tone, due largely to withdrawal from commercial banks of Treasury deposits. The recent Treasury certificate issue of \$275 millions was oversubscribed several times. It was expected that the Treasury would try to go until December before making a long-term bond offer, but the piling up of short-term obligations may force action sooner. Borrowing under the new soldiers' bonus law continues, but at a reduced rate.

FRANCE.

Politics — Presidential Election — Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, April 29.

M. HERRIOT, following his brilliant raid into Socialist territory in Lyons municipal politics, and his capture of an enemy seat, secured his re-election as mayor last

Sunday by offering the Socialist members the alternative of voting for him or of taking the risk of the dissolution of the council, with the probability of a serious loss of seats. Having thus straightened out matters in his own stronghold, and incidentally strongly reinforced his authority as Radical leader, M. Herriot has now astonished the political world once more by again holding out the olive branch to the Marxists—whom he contemptuously stigmatised a fortnight ago as "revolutionaries in rabbit skin"—with a view to common tactics at next spring's general elections. The Socialists are apparently in a rather more chastened mood since the lesson administered to them at Lyons, and there is, for the moment, a renewed possibility that the Cartel des Gauches may after all be revived. By this the Radicals have apparently everything to gain and little to lose. Many seats have been won by the Socialists largely with the aid of moderate votes cast for the extremist party for the express purpose of eliminating the Radical candidate.

This situation has during the past week or two revived the demand of nearly all parties for a return to the system of *scrutin de liste*, based on a really equitable form of proportional representation. M. Briand some years ago succeeded in replacing the system of *scrutin d'arrondissement*, based on single-member constituencies (except in Paris, with the *scrutin de liste* method based on departmental units), plus proportional representation. M. Clemenceau, however, managed to "gerrymander" the proportional representation clauses of the Bill to such an extent that the new system proved so unsatisfactory in practice, during the two general elections that followed the war, that it was abandoned by universal consent shortly before the 1928 contest, and the old system of single-member constituencies, with second ballots, restored. It is claimed that there are now something like 360 members in the Chamber (representing a majority of about 50) definitely pledged to the adoption of a system of real proportional representation for the coming elections. Among these are important factions of practically all parties, including both the Marin Nationalists and the Socialists, for all have suffered from the results of three party fighting and all are nervous as to the possibility that the real expression of national opinion may again be falsified next spring if present methods of voting are maintained.

Speculation in regard to the election of a new President of the Republic, which is to take place at Versailles on May 13, is now becoming acute. M. Paul Doumer, President of the Senate, is still first favourite, but the situation is expected to remain obscure until the end of next week at the earliest. A point which has been generally overlooked, so far as non-political circles are concerned, is that the installation of a new President of the Republic involves automatically the resignation of the Cabinet. As a rule this has been merely a constitutional formality, followed by the immediate return of the outgoing Ministry to power. There is some speculation, however, as to whether this factor, in view of its possibilities, may not on this occasion play a much more important part in the Presidential election than usual. For one thing, there is a growing feeling here that Germany will very shortly press for drastic revision of the Young Plan for reparation payments, on the ground of increasingly unsatisfactory revenue returns. This anticipated outcome of Dr. Schacht's long campaign since The Hague settlement, together with the unsettled outlook as to the line that may be taken at Geneva in regard to the Austro-German Zollverein plan, is looked upon as directly affecting M. Briand's continuance at the Quai d'Orsay, which has now become one of the dominating factors of the political situation. The Foreign Minister's accession to the *Flysée*, it is insisted in many directions, would clarify the whole outlook and remove several awkward obstacles that may arise in the immediate future. M. Briand himself, although he has as yet refrained from making any statement on the subject, is believed to be prepared to accept nomination as a candidate, and his chances of selection are apparently growing stronger.

Official returns issued this week indicate that the financial year ended March 31st resulted in a total yield from all Budget sources of 45,054,885,000 francs, against 47,988,622,100 francs in the previous twelve months. This apparent decline of 2,873,737,100 francs was due to the large reductions of taxation, and the total revenue was 944,651,200 francs in excess of Budget estimates, based on the anticipated smaller yield consequent on the taxation relief granted. This excess, however, was more than wiped out by the large mass of supplementary credits accorded during the financial year, and the real outcome of the year was a deficit of 2,200,000,000 francs; though this will probably be modified later by the customary annulation of credits to the extent of their unexpended balances. The 1930-31 deficit, according to a statement made in the Senate by the Budget Minister, M. Piétri, is "the largest in real values which has been registered in this country during the past fifty years."

There are—or were—still sufficient surplus funds left at the Treasury to meet the estimated deficit of £17,742,000 on the past twelve months, which explains how it was found possible to avoid imposition of fresh taxes for the current financial year to wipe out last year's deficit. Even this, however, was made possible only by the device of handing over to the Caisse d'Amortissement over £15,000,000 of the normal burden hitherto borne by the Budget, in respect of the annual charges of the public debt service, the arrangement being that the Treasury shall recoup the Caisse for this "loan" from the economies that will accrue to the Budget from the operation of the pending Rente conversion plans. When M. Poincaré, in 1928, created the Caisse Autonome d'Amortissement de la Dette Publique, he insisted on placing it under the protection of a special constitutional law, which it was claimed would place its fund beyond the reach of Finance Ministers in difficulties and render it inviolable. The law in question, however, apparently places no obstacle in the way of the Caisse acting on occasion as banker to the Treasury.

The revenue returns for March show a total yield of 2,787,923,000 francs (as against 2,974,241,000 francs in March, 1930, and 2,982,327,000 francs in March, 1929), the total recoveries from all sources being 3,666,250 francs in excess of Budget estimates for the month. Yield from indirect taxation and State monopolies (exclusive of the tobacco *régie*) was 2,580,299,000 francs, which was 75,457,000 francs less than in March, 1930, but 29,701,750 francs above Budget estimates for the month, which may be regarded as completely satisfactory, in view of the taxation reductions brought into effect under the 1930-31 Budget. The yield from Customs was 129,000,000 francs more than a year ago (due largely to increased import duties, in certain special cases), which practically cancelled out a falling off of 131,781,000 francs (over 17 per cent.) in the yield from turnover taxes (due partly to lower selling prices and partly to a reduction in the rate of the tax). The effect of tax reduction was, in certain cases, a stimulus to trade, is shown by an increase of 13½ per cent. on the twelve months in the yield from the tax on motor cars, which was reduced a year ago. The yield in March alone totalled 24,561,000 francs, as compared with only 9,905,000 francs in March, 1930. The yield from the tax on motor spirit, in spite of the drop in prices, showed an increase of over 10 million francs, or over 20 per cent., over that for March, 1930.

GERMANY.

Cabinet and Food Duties — Capital Accumulation — Reichsbank Results.

(FROM OUR CORRESPONDENT.)

BERLIN, April 29.

THE first task of the Cabinet, which met last week with a heavy programme of work before it, is to be the consideration of agrarian questions. The Food Minister, Dr. Schiele, has renewed the proposals which he brought forward during the Reichstag session for increases in the

import duties on butter, vegetables and pigs. An immediate decision was avoided before by empowering the Government to alter the duties, but now the Cabinet will have to face the problem of deciding what use it is going to make of this power. The most vigorous opponent of these proposals of Dr. Schiele's is still Dr. Stegerwald, the Minister of Labour, who can only justify the reduction of wages which he has effected, and may have to extend, if the Government refrains at least from taking steps which would check the fall in the cost of living and from injuring the labour market by quarrels over commercial policy which would hamper exports.

All the duties for which Dr. Schiele is asking involve treading upon politically very delicate ground. Domestic opposition would be least serious in the case of an increase in the duty on pigs, as prices are at their very lowest, and the breeding and fattening of pigs can only be carried on at a loss; but on the other hand a duty would probably be no use as the depression in prices is the result of domestic over-production. Customs increases for vegetables and butter would undoubtedly increase the political difficulties of the Government.

Herr Schiele will be confronted, during the Cabinet discussion, with the counter demand that the duties on grain, and especially those on wheat, be reduced in order to check the rise in bread prices which has already begun in several towns. None of the other means by which the Government has attempted to stabilise bread prices has been effective, and the ill-conceived idea has been put forward that the Government might evade its legal obligation to stabilise the price by having a new and inferior kind of rye bread manufactured, which would be comparatively cheap, and ignoring the rise in the prices of other grades. Public opposition to this proposal was instantaneous, and it may be taken for granted that the Government will have nothing to do with it.

The Institut für Konjunkturforschung has published a very interesting survey of the accumulations of capital in Germany during the years 1924-28. The production of capital goods, for which much more reliable data were obtainable than for the accumulation of money, was, according to the researches of the Institute, as follows:—

	Milliard Reichsmarks.
1924	8.2
1925	7.2
1926	2.7
1927	11.3
1928	9.9
	39.3

These figures include both new plant and the increase of stocks in industry, agriculture and commerce. Accumulation of German capital proper, however, is represented by the value of these less the 13.6 milliards of foreign debt which was incurred in these years, and to this difference must be added the increase of 2,274 millions in the gold holdings of the Reichsbank, so that the net increase of German capital over the five years amounted to about 28 milliards. This is not a large figure in view of the great increase needed by German economy, and its inadequacy is shown by the high rate of interest, which for long-term loans was never much below 8 per cent. during the whole period, and at times rose as high as 10 per cent.

The 39 milliards gross increase of capital was distributed among the various branches of economy as follows:—

	Million Reichsmarks.
Food production	6.025
Clothing manufacture	5.009
Other manufactures for consumption	3.830
Manufacture of means of production	5.899
Electricity, gas and water	2.656
Transport	6.832
Housing	5.438
Education and welfare	2.408
Public administration	1.340

A substantial part of this capital was thus employed for purposes which are not, properly speaking, productive. Rationalisation of productive processes seems to have absorbed a comparatively small proportion, for even in the large transport item substantial sums are included

which did not directly cheapen production, but were used to improve the safety of the service or to serve such social purposes as shortening the journey of workers between their place of residence and their place of employment.

A syndicate of all the big banks under the leadership of the Reichsbank is issuing the first big internal loan of the current year, consisting of Rm. 150 millions Reichspost bills maturing on August 1, 1933. The interest is 6 per cent. and the price of issue 76, so that the yield will be about 8 per cent. Most of the issue (Rm. 100 millions) is to be used for the repayment of Reichspost bills which fall due next month, the remainder, which will be increased if the issue is successful, will be used for investment purposes. The short-term money requirements of the Post Office have hitherto, like those of the Treasury, been met by the banks. The public is now being called in chiefly in order to enable the banks to take up more Treasury bills than formerly. From the point of view of the capital market the issue is regrettable. Long-term credit was just beginning to be cheaper and this development ought to have been encouraged by the greatest restraint in respect of new issues. An offer by the Post Office of 8 per cent. for fresh funds will tend to prevent the reduction of interest rates.

The Reichsbank has published its annual report. It had long been known that the 12 per cent. dividend would be maintained. Receipts have fallen from Rm. 170 millions to Rm. 127 millions as the rate of discount averaged 4.93 per cent. in 1930, against 7.12 per cent. in 1929. Expenses are almost unchanged, but whereas in 1929 a sum of 46 millions was carried to various reserves, no such provision is made this time. The accounts, therefore, show a net profit of Rm. 40 millions against 25 millions in the preceding year. These profits will for the first time be distributed on the basis laid down in connection with the Young Plan. The Exchequer receives a much larger share than hitherto (18 millions against 5½ millions in the preceding year) and the shareholders 18 millions (12 per cent. on a capital of 123 millions). There has been only a slight decline in the business of the bank in 1930; the volume of bills purchased only fell by 10 per cent. in spite of the depression. Although the increase of capital to Rm. 150 millions, as well as that of the Goldskontbank, was paid for out of reserves, these are very little reduced; capital still stands at 150 millions and open reserves at 337 millions. Even if discount rates and the volume of business were further reduced, the 12 per cent. dividend which has remained unchanged for years seems likely to be maintained.

ITALY.

Railway Traffic and Road Competition — Winding Up of Banca Agricola Italiana — Supervision of Savings Banks — Bourses.

(FROM OUR CORRESPONDENT.)

TURIN, April 20.

THE decrease in railway and shipping traffic continues; during the first two months of 1931 goods unloaded in the ports were 3,622,000 tons, against 4,338,000 in the corresponding period of 1930; goods shipped 1,179,000 against 1,414,000 tons. Goods carried on railways decreased from 9,576,000 tons in the first two months of 1930 to 7,595,000 in the corresponding period of 1931. Passengers decreased from 15,175,437 to 12,542,255. Total traffic receipts, therefore, were reduced from 652 to 519 million lire.

These figures, which are disconcerting enough, have given rise to a lively discussion, as the economic crisis is considered an insufficient explanation of the abnormal slump in the traffic. The spokesmen for the railways denounce road competition as especially responsible for the financial difficulties of the railways, and demand the extension to motor goods transport of the regulations already governing passenger transport. Direct road

competition for passengers is not allowed between places where a regular railway service already exists. State authorisation is required before starting a new passenger service, and such authorisation is given only when the motor service acts as a feeder of railways or when it serves areas not touched by railways. This restriction has not, it is alleged, prevented the growth of auto services, the lineage of public extra-urban passenger services having increased from 40,471 kilometres in 1922 to 85,450 in 1929, and the number of passengers carried in 1927 (the last year for which detailed figures are published) being 31.5 millions, with a revenue of 142 million lire.

It is argued that the same restriction should be extended to the carriage of goods by lorries, which at present is free and offers the keenest competition. Signor Bognetti, president of the largest Italian tourist organisation, the Touring Club, wrote an alarmed letter to the *Corriere della Sera* pointing out that motor cars paid in taxes the whole cost of the upkeep and improvement of the roads which they use, and that the proposed restriction would be an unjustifiable blow to an industry which is growing rapidly by virtue of the facilities it offers to its customers. Incidentally the unrestricted competition for goods seems less dangerous than the restricted competition for passengers, for the freight revenues of the State railways increased from 2,849 million lire in 1927-28 to 3,017 in 1929-30; while the passenger revenue decreased from 1,629 to 1,589 million lire. Even in the first two months of 1931, when the comparison with 1930 was most unfavourable, the revenue from goods decreased only by 36 per cent., while passengers yielded 40 per cent. less. The problem is made worse by the fact that here railways are the property of the State, and that automobile competition is directly damaging the public exchequer. This is a strong argument against State operated railways. Collective interest and technical economic progress should not be made to conflict.

On April 7th all the offices and deposits of the Banca Agricola Italiana, with head offices in Turin, were taken over by other banks or institutes: in Piedmont by the Saint Paul Institute, a three centuries old Turin credit and mortgage bank; in the South of Italy by the Bank of Naples; in Tuscany by the Monte dei Paschi; and in other parts of Italy by several other banks. At the end of March the Banca Agricola Italiana held 850 million lire deposits. The president of the Saint Paul Institute, which is taking over the largest share of the deposits of the liquidated bank, hastened to circulate an interview, assuring its customers that the institute had made itself responsible for these 250 million deposits, only after being amply guaranteed by the cession of assets and other sureties for the corresponding amount. Thus has terminated the career of a bank which enjoyed a mushroom growth immediately after the war. Hundreds of offices were created in the country districts, with the sole purpose of collecting deposits and sending them to the head office in Turin, where it was current rumour that they were diverted to the financing of the Snia-Viscosa and other Gualino concerns. The situation became eventually embarrassed, and the present winding-up and distribution of deposits amongst well-established banks is the final outcome of it. The salvage was made under the auspices of the Bank of Italy, to which is entrusted the supervision of all banks and savings banks.

The chapter on the supervision of savings is perhaps the most interesting part of the first report read to his shareholders by Signor Azzolini, the successor of Signor Stringher in the Governorship of the Bank of Italy. The reduction in the number of banks which was already in progress, continues. Between March 1, 1930, and February 28, 1931, there were cancelled from the lists kept at the Treasury 51 banks because their liquidation was completed, 69 because they ceased to receive deposits, and 35 in consequence of fusion with other banks, making 155 in total. Against this only one new bank was allowed to start business, 73 requests for the opening of new branches of old banks were approved (against 75 similar requests refused) and 85 old branches were

allowed to move in order that they might be better located. The banking organisation is thus slowly becoming more concentrated, but the number of banks is still great; the official list includes, as of February 28, 1931, not less than 200 savings banks, 1,375 banks and banking firms, and 2,387 agricultural co-operative banks (*casse rurali*), making a total of 3,962.

The stock exchanges are lifeless. The only keen demand is for fixed-interest securities, the Milan index rising from 102.01 on January 3rd, to 104.91 on April 11th (December, 1925 = 100). Variable dividend securities are sagging, as many companies are passing their dividends and others reducing them. The index fell between the same dates from 66.42 to 64.70.

HOLLAND.

Dutch East Indies Finance — Capital Issues — Money — Savings Banks — Foreign Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, April 14.

ANNUAL reports for the past financial year have already been issued by several Dutch enterprises, and it is evident from them that 1931 is likely to prove an arduous year for business over here; generally speaking, the various company reports do not express any great optimism, at least for the near future. A number of firms have had to resort to reducing the rate of dividend or to passing it altogether. Apart from the shipping companies, the plantation undertakings in particular are being affected very seriously by the trade depression.

The big drop in the prices of plantation products has even resulted in a deficit on the 1931 Budget for the Dutch East Indies. The deficit on all services was initially estimated at 53.6 million guilders, to which 5½ million have to be added for interest and redemption on the Dutch East Indies 1930 loan, issued at par in November last; but it is now feared that the deficit will, in fact, reach 100 million guilders. As a consequence, the floating debt will have swollen to more than 200 million guilders by the end of the year, unless consolidation is resorted to. Although it may be anticipated that in the next few years the State financial position will be less unsatisfactory, owing to the gradual effect of schemes for economy and rationalisation, there is apparently no prospect of a surplus on the State finances for some time to come. In view of this, the Minister of Finance considers it advisable that steps for the consolidation of 200 million guilders of the floating debt should be taken in hand at once. It can therefore be expected that new Dutch Indies loans to an aggregate of 200 million guilders will make their appearance on the market shortly.

Although last year the activity of the new issues market in Amsterdam was maintained at a level which may have tended to cause some observers to doubt the seriousness of the situation, the results of the operations in the first quarter of the new year have certainly left no more room for doubt. The influence of the depression prevailing had, in fact, already left its mark on the new capital issues last year, not so much on the total amount of the issues, but on the proportion in which the amounts were divided among the various categories of borrowers covering their capital requirements by issues in the public market.

As is apparent from the very small amounts of the flotations on our new issues market so far this year, some change in the factors governing the activity of the new issues market has manifested itself since last year. The fact that greatly increased business in the conversion of loans has been a feature of the first quarter's working suggests that the situation of the money and capital market is at last becoming somewhat consolidated. Public bodies, in particular, have been availing themselves of the opportunity to convert high rated loans into loans on lower terms. Issues of conversion loans were so extensive last month as to account for by far the majority of the issues marketed. Whereas the net total of issues was only 32½ million guilders, the gross total of the issues was about 116 millions, old loans to an aggre-

NATIONAL BANK OF GREECE

Established 1841

Head Office: Athens.
Branches throughout Greece.
New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

gate of 83½ million guilders having been converted into loans at lower rates.

How much smaller the issues have been so far this year as compared with preceding years will be apparent from the following table:—

	(In thousands of guilders.)			
	1928.	1929.	1930.	1931.
January.....	34,737	68,209	51,037	10,444
February	55,116	101,588	55,485	14,200
March.....	92,668	25,820	74,664	32,473
Total, 1st quarter...	182,521	195,617	181,186	57,117

Moreover, most of the issues during the past month were anything but a success, and very little interest was manifested in the issues for account of Greece and Roumania, which amounted to 5 million guilders.

The issues last month again included only an insignificant amount for shares, as is only natural under present circumstances. The only shares issues were 950,000 guilders absorbed by preferred shares in the United Gas Corporation and a small amount in a mortgage bank, the remaining 31½ million guilders being for issues of loans. Thanks to the loan issues for Greece and Roumania already referred to, the proportion of foreign issues showed at least a nominal increase.

Towards the end of the month money rates in Amsterdam were a trifle tighter, as the result of larger end-of-month demands. Lately there has also been more tension on the foreign exchange market. The rates for sterling and marks have nearly reached the gold export point, and, as a result, the Netherlands Bank has been disposing of some of its foreign bills. The Netherlands Bank also decided not to release any more gold coin for inland circulation after April 1, 1931, as such coin was being exported at a premium. The Netherlands Bank's holdings of foreign bills dropped from 250,373,000 guilders on February 2, 1931, to 212,019,000 guilders on April 7, 1931. The firm tendency on the foreign exchange market is largely attributable to the very easy money rates in Amsterdam.

On April 1st the Dutch Post Office Savings Bank completed its fiftieth year of operations. The extent to which this institution has developed will be seen from the fact that the deposits, which amounted to about 184 million guilders before the war, have now grown to about 375 millions. These funds are very cautiously invested, mostly in Government and municipal loans, the Netherlands Bank acting as banker for this purpose. The habit of saving among the Dutch people will be seen from the following table, showing the deposits at the different classes of savings banks:—

	(In thousands of guilders.)		
	End of 1921.	End of 1927.	End of 1928.
P.O. Savings Bank	283,449	329,338	340,505
Private Savings Banks	239,976	327,346	354,419
Country Co-operative Loan Banks	289,710	386,006	423,322
Totals	813,135	1,042,690	1,118,246

According to the official statistics, the imports into Holland during February weighed 2,087,000 tons, with a value of 149.5 million guilders, as compared with 2,561,000 tons and a value of 197 million guilders in January of this year, and 2,371,000 tons and value 201 million guilders in February, 1930. The weight of exports in February was 1,359,000 tons, with a value of 109 millions, against 1,359,000 tons and value 117 million guilders in the preceding month and 1,291,000 tons and value of 144 million guilders in February, 1930. Large quantities of grain from Russia were again included among the imports in February; as was the case in January, by far the major part of the wheat and rye imported came from Russia. A continuance of the large shipments from Russia is expected in the next few months; an enormous quantity of Russian grain was recently bought by a syndicate of firms.

SWEDEN.

Production — Foreign Trade — Balance of Payments — Banks — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, April 17.

WHILE it is quite clear that there is nothing in Sweden equivalent to the, at any rate seasonal, improvement which is discernible in the United States, it cannot be said that the situation has become appreciably worse. The available statistical data leave the picture of the first quarter of the year somewhat obscure. Whereas *Svensk Finanstidning's* index number of production fell from 120 for December to 113 for January, the normal movement being a strong seasonal rise, the February index, which usually shows a slight decline, rose this year from 113 to 123. This cannot, however, be interpreted as a symptom of improvement. The explanation is rather that the January index number considerably exaggerated the actual deterioration of the position. It was, no doubt, quite natural for the usual quietness at the turn of the year to be prolonged when one considered that 1931 as a whole would show restricted markets. For this reason January production was cut down more than the actual situation required. The rationalisation which the leading industries had introduced made it economically more advantageous to close down altogether than to work short time.

The February export figures make this clear, for, almost without exception, they show a decline, whereas among the industries entering into *Svensk Finanstidning's* index number of production the pulp industry was the only one which did not increase its output compared with January. This is not surprising, as the production of pulp in January was maintained at a considerably higher level than that of other industries. Moreover, organised restriction of output is to come into effect in this industry in 1931, and its effects will be seen in the present month.

The statistics of unemployment give an equally obscure picture of the situation. The number of applications for work per 100 vacancies usually shows a seasonal rise towards the end of the year, with its climax in January, after which there is usually a progressive decline. Here, again, the result has so far been contrary to the normal. The figure fell in January to 222 from 328 in December, and rose in February to 232. The explanation of this abnormal development is to be found in exceptional circumstances which are the outcome of the depression. A better criterion, therefore, is the number of workers engaged on the "reserve works" of the Unemployment Commission, which has progressively risen, though the increase in February—the latest month for which statistics are available—was only from 5,100 to 6,300, a figure corresponding to 3,500 a year ago. At the same time the number of unemployed reported to the Commission as seeking work increased to about 40,200, as compared with 16,600 at the end of February, 1930. Though these figures are indisputably worse, they are far from alarming.

The deepening of the depression is more clearly visible in foreign trade. As was to be expected, exports showed a continued and marked decline in February, whereas

imports declined less. A considerable passive trade balance is usual at this time of the year; last year it amounted to 27,000,000 kr., and this year it rose to 35,000,000 kr. In the leading industries the decrease of exports was especially marked. The exceptional conditions in the timber market resulted in a reduction of exports of no less than 59 per cent. Exports of ore were 71 per cent. below the 1930 figure. As compared with an unchanged volume of pulp shipments in January, February showed a decrease of 29 per cent. In the remaining important commodities, on the other hand, the *status quo* was maintained and in some cases there was even a certain improvement. The former applies to many products, such as matches and butter, the latter to pig iron, exports of which rose by 20 per cent., and telephones, of which shipments increased by 29 per cent. Bacon exports exceeded those of a year ago by 37 per cent.

Against this background it is certainly surprising that the balance of payments, contrary to what is usual at this time of the year, showed some improvement in February. Net bank claims abroad were increased by 2,000,000 kr., certainly a modest figure, but in sharp contrast to that of a year ago, when they decreased by 27,000,000 kr. There can be no doubt that accidental circumstances played their part here. The explanation is, indeed, to be found in the figures of movements of capital. They show that in February there was a net import of capital of 12,000,000 kr., which must be regarded in the light of German exports of capital, and, possibly, also in connection with the Kreuger issues of the year. Since February, 1930, showed a net export of capital of 10,000,000 kr., this change alone is sufficient to explain the rise in the balance of payment in February.

In one very important respect February may mark a turning point. As has already been emphasised, 1930 was characterised by a remarkable reduction of the credit demands of the commercial banks on the Riksbank, as they found it cheaper not only to sell their exchange holdings to the central bank, but also to obtain credit abroad at lower rates than was possible at home. This policy was carried so far that the very considerable short-dated claims of the commercial banks at the beginning of last year had been converted by December into a debit. At the same time the demand of the commercial banks on the Riksbank for ordinary domestic account on several occasions sank to practically nil. This development continued during January, but in February a change set in which became even more pronounced in March. The commercial banks in February increased their net foreign claims by 20,000,000 kr., practically for the first time since July last year, though they, nevertheless, still had a net short-date debit of 16,000,000 kr., whereas a year ago there existed instead a net credit of 145,000,000 kr. This seems to indicate a definite turning point, an inference which is confirmed by developments during March. It is also obvious that the peculiar development of last year could not continue this year also. It is true that borrowing abroad must still depend on the margin between home and foreign interest rates, as well as on future prospects. There are, however, evident risks in swelling too much the volume of foreign credit, and, in any case, it has not been possible for the commercial banks to supplement this by selling their exchange holdings to the Riksbank. This, in its turn, has occasioned a very decided increase in rediscounting. It is probable that this development will continue in the near future, and that there will be a reversal of last year's position.

On the Stock Exchange the month of March showed very clearly that the recovery in February was not the result of any definite and general change. Purely domestic stocks were certainly influenced by the Kreuger concern, but only to a very limited extent. As against a rise of 222,000,000 kr. of the latter the improvement in the former was only 57,000,000 kr. As March advanced it became clear that the rise in international stocks, and primarily in Kreuger and Toll, was only a reflex of the reviving speculation in New York, whereas the tone of domestic stocks still remained uncertain and changeable. Subsequently, in addition, international speculation has gradually become less optimistic and there has been a corresponding reaction in domestic stocks.

JAPAN.

New Acts — Budget — Foreign Trade — Banking — Prices — Shipping Merger.

(FROM OUR CORRESPONDENT.)

Tokyo, April 8.

THE annual session of the Imperial Diet terminated on March 28th. The record of the completed session was rather poor, such important Government measures as the Trade Union Bill, the Tenancy Bill, and the Seamen's Insurance Bill all having failed to pass. The Finance Bill, however, the Tax Reduction and Tariff Revision Bills, the Export Industry and Guild Bills, the compulsory cartels scheme, the Mortgage Debenture Bill, and several other measures of lesser importance were carried through both Houses almost in their original form.

In the Budget estimates for 1931-32 approved by the Diet, estimated expenditure totalled 1,489,274,000 yen, including supplementary estimates of 40,374,000 yen. This shows a decrease of 119.3 millions upon the working Budget for the fiscal year just closed. Reductions were made in the land tax, the business tax, and the duties on sugar and textiles, the estimated effect of these changes together amounting to a relief of 9.1 millions this year and 25.6 millions in a full year. In the revised tariff the duty on artificial silk yarns was reduced by 40 per cent., while the duty on certain timbers was raised by 20 per cent.

The Export Industry and Guild Acts provide for the extension of control and regulation to many other branches of export industry than those covered by the existing Acts; the compulsory cartels scheme is a device for enforcing cartel agreements upon the wool, Portland cement, artificial fertiliser, and electrical industries; and the Mortgage Debenture Act empowers the public registry to issue mortgage debentures with a view to facilitating loans on landed property.

The results of the operations of the Imperial Government Railway in the fiscal year ended March 31st show that the passenger train receipts were 258,757,000 yen and the goods train receipts were 177,926,000 yen, making a total of 436,683,000 yen, which fell by 36,918,000 yen short of the original estimates, and was 55,711,000 yen lower than the actual receipts of the preceding year. The decline is the largest ever recorded. The shrinkage in freight traffic, due to the general trade depression, accounts for the larger part of the decrease in railway earnings, but growing competition from road transport also is increasingly responsible.

Foreign trade figures continue to disclose a heavy contraction. The trade returns for last month show that, as compared with March, 1930, imports fell in value by 54.7 million yen, or 30 per cent., and exports declined by 39.7 millions, or 29.2 per cent. The percentage change in imports is considerably smaller than of late, owing principally to the increased entry of raw cotton, while the change in exports is larger on account of the decreased shipments of raw silk in the latter part of the month. The total value figures for the first three months of the year reveal that, in comparison with the corresponding quarter of 1930, imports fell by 195.4 millions, or 37.1 per cent., while exports decreased by 107.5 millions, or 26.8 per cent., the apparent adverse balance amounting to 37 millions, or 87.9 millions lower. It is fairly reassuring that the adverse balance is comfortably smaller.

The Tokyo and Osaka clearing banks lowered the deposit rates on and after April 1st from 4.5 per cent. to 4.2 per cent. in the case of "A" group or larger banks, and from 5 per cent. to 4.7 per cent. in the case of "B" group or lesser banks. The old rates were changed in February, 1929. Savings banks followed suit as from the same day, reducing the rate by 1 rin per diem, or 0.365 per cent. per annum. A reduction was suggested several months before, but it did not materialise, presumably owing to the reluctance on the part of the smaller banks. The changes, it is feared, will accelerate the concentration of funds into bigger institutions, which has been going on since the monetary crisis of 1927. Apparently to avoid disclosing the more uneven distribution of deposits

between bigger and lesser banks, the clearing house committee has decided to discontinue the publication of the position of the individual banks in its weekly return.

The persistent fall in commodity prices appears momentarily to have been arrested. For the first time since March, 1929, the Bank of Japan's wholesale index number for March shows an upward movement, though the percentage change is only one-fifth of 1 per cent. Out of fifty-six articles, twenty-two advanced, eighteen declined, and sixteen remained unchanged. Cotton manufactures are prominent with a marked advance.

An important agreement of co-operation has just been reached between the two leading Japanese shipping companies, the Nippon Yusen Kaisha and the Osaka Shosen Kaisha. The new agreement, in practice, amounts to a union, and its results will be a uniform navigating schedule in international traffic. This co-operation between the two old competitors is welcomed as a case of rationalisation in the shipping industry, where rational organisation and management are badly needed.

Letters to the Editor.

INVESTMENT PRINCIPLES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Perhaps the criticism of my book which appeared in your issue of April 4th, page 733, would be deserved if the facts were as stated by your reviewer. I think, however, that you will be convinced that there has been an unfortunate distortion of the facts and that quite unintentionally an injustice has been done and one which you will wish to rectify.

Mr J. Maynard Keynes, in the speech referred to on page 22 of my book was, I think, one of the first to refer publicly to the compound interest feature which attaches to the shares of progressive companies, where a large proportion of the profits earned goes back into the business.

This practice tends to create confidence in such undertakings, so that the market price becomes, in effect, the estimated present value of expectations. So far from giving no justification for the choice of five years, I say, on page 79, that "it would be imprudent to value an ordinary share, with all its uncertainties" on the strength of expectations of say, twenty years, "as values obtaining in the market justify a much shorter period." The use of five years is justified to bring out a value "that in practical use will give a figure that in most cases will fall between the highest and lowest prices in a moderately active year." (See page 8 and page 104.)

That the market expectations are not always realised, is implied on page 79 and is definitely asserted, page 151; but it takes a good deal to impair seriously the average of five years, and, over a term of ten years it will often be found that the average improvement exceeds our estimate.

The essential points to observe in obtaining a valuation had to be stated. Your reviewer, however, is mistaken in supposing that I discuss the present value of a share "given the dividend rate in five years' time and the yield it will then offer." If those facts were "given" there would be no call to discuss any method of valuation. What I have discussed is the valuation of "an ordinary share, of unfixed dividend, repayable (i.e., by selling), by an unknown sum on the expiration of five years, at a valuation rate yet to be decided," page 80.

The tables, which your reviewer alludes to as "complicated," in reality give, at a glance, as a simple multiplier of the last dividend per share, whatever that dividend may have been, the price that an investor can pay for the share of any company, according to its observed rate of progress, so as to yield him, in the way of dividend and capital appreciation combined, 6 per cent. per annum, on his investment, if his anticipations are realised. The yield per cent. on this price of the last dividend declared previous to purchase, has been calculated and is given in the tables. The usefulness of this addition to the tables is mentioned on page 106 and the remarks made there, and on pages 109 and 113, will show you how misleading it is for your reviewer to suggest that unqualified reliance has been placed on "the results of five past years."

I submit that the tables are not complicated and that, as stated on page 196, "with the help of the tables much may be discovered regarding Stock Exchange values which hitherto has been concealed."

May I ask that in all fairness you allow me to correct these misstatements?—I am, Sir, yours faithfully,
184, Wymering Mansions,
Maida Vale, W.9.
April 15, 1931.

H. COPE WEST.

[With reference to Mr. Cope West's book ("The Root Principle of Investments"; Pitman), our reviewer writes:—"Mr Cope West will probably agree that the utility of his tables is subject to two assumptions: [a] that the dividend rate on a given ordinary share a certain number of years hence can generally be deducted by purely mathematical contemplation of past results (when they have been progressive); and [b] that the ordinary share in question will stand (the same number of years hence) at or above a level representing capitalisation of the estimated dividend on a 4½ per cent. basis. If these foundation-stones of Mr West's method have any practical significance, he does not attempt to prove them by the usual method of research. Every day, experience seems flatly to contradict [a] while [b] seems to be merely the arbitrary choice of a number. No adequate material is offered to show that Mr West's method does 'bring out a value that in practical use will give a figure that in most cases will fall between the highest and lowest prices in a moderately active year.' In 'Common Stocks as Long-Term Investments' (1925) some sort of a basis was found for the following 'law': 'Over a period of years, the principal value of a well-diversified holding of common stocks . . . tends to increase in accordance with the operation of compound interest.' I cannot, however, recall any statement of Mr Keynes which goes beyond this broad generalisation. Whether or not Mr Cope West's tables are complicated is a matter of opinion. But who would wish to use the last five columns of these tables, when the second column gives the dividend which may be expected in one to eight years' time?"—ED., *Economist*.]

Books and Publications.

WOOL MARKETING.

INTRODUCTORY books which serve to give a general idea of the working of individual industries are valuable both to the student of economics and to the business man who has no specialised knowledge of the industry concerned. As a contribution to this group of economic text books, Mr du Plessis' book,* which covers a much wider range than its title suggests, is very welcome. If, however, the experienced member of the trade turns to it in the hope of adding to his knowledge of his own particular section, he may be disappointed, for a number of small inaccuracies take away from the book's claim to be authoritative. The statement, for example, that "skin wools . . . are cheaper than fleece wools" needs modification, and it is not the case that Shropshire wool is "frequently combed with strong merino."

Other internal evidence of insufficient familiarity with the trade is the lack of all reference to the impossibility of standardising woollen types as one of the chief reasons for the survival of the London market, the proposal of a "futures" market in Australia without regard to whether it is wanted or not, and the allocation of space to the Havre "futures" market, which has been dead sixteen years, in preference to those of Antwerp and Roubaix, which are very active. Similarly, in dealing with the mills, the author states that rationalisation is apparently unavoidable, but makes no suggestion as to its application. His unqualified statement that "wool manufacturers have been very negligent in the designing of their products, as well as in the distribution of them" is likely to be sharply challenged by members of the industry.

The virtue which corresponds to these defects is a broadness of outlook which can rarely be attained by specialists who have long been confined to one section of the industry, and this stimulating quality is to be found in the author's suggestions for improvement or developments in marketing, even though these may not always be practicable. The scheme of the book is admirable, and though he writes mainly from the point of view of the grower, Mr du Plessis has tried to survey the industry fairly comprehensively.

* "The Marketing of Wool." By A. F. du Plessis. Pitman. 12s. 6d.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Work. What it has Meant to Men through the Ages. Translated from the Italian of Adriano Tilgher by Dorothy Canfield Fisher. (London) George G. Harrap and Co., Ltd. (London), 39-41, Parker Street, Kingsway. 7s. 6d. net.

A stimulating book, described in the translator's preface as the "vivid narration of a tremendous revolution in men's outlook."

Arbitration Principles and the Industrial Court. By Mary Theresa Rankin. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 7s. 6d.

This analysis of the first ten years' decisions of the Industrial Court forms a critical survey of wage policy during the post-war decade.

The Education of Children Engaged in Industry in England, 1833-1876. By Adam Henry Robson. (London) Kegan Paul, Trench, Trubner and Company, Ltd., 68-74, Carter Lane. 10s. 6d. net.

An interesting study in social history.

A Picture of World Economic Conditions at the Beginning of 1931. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. \$3.00.

Part I consists of a brief general survey of each of the principal countries; Part II is composed of special articles, including "The Problem of Gold and Prices" by Dr. Charles Rist, "Investments of Foreign Capital in Argentina" by Mr. Santiago E. Soulas, and "International Industrial Agreements" by M. Hipolit Gliwic.

Dictionary of Economic and Banking Terms. By W. J. Weston and Albert Crew. Third Edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 5s. net.

A key to the language of the City which is the more valuable in that it offers clear and concise explanations rather than mere definitions.

The Bankers' Magazine, April, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes an article by George R. S. Gallaher on "War Debts and the Gold Standard."

The Journal of Political Economy, February, 1931. (Chicago) University of Chicago Press. \$1.25.

Includes, *inter alia*, articles on "The German System of Arbitration," by William T. Ham, and "The Collection and Division of Revenues between State and Local Government with Special Reference to New York," by M. Slade Kendrick.

The Alliance Year Book and Temperance Reformer's Handbook for 1931. Edited by George B. Wilson. (London) United Kingdom Alliance, 1, Victoria Street. 2s. 6d.

Contains extracts from the evidence before the Royal Commission on Licensing, together with a valuable and very reliable collection of statistics relating to the drink trade.

Towards Industrial Statesmanship. By the Marquess of Londonderry. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 2s. net.

A short essay on the promotion of industrial peace.

Kapitalflucht. By Dr. Wilhelm Koeppl. (Berlin) Wilhelm Christians Verlag, Unterwasserstrasse, 8. Rm. 10.

A comprehensive discussion in German of the flight of capital from Germany and allied questions.

The Stock Exchange.

AGAIN FIXED TRUSTS.

A FEW weeks ago (see the *Economist*, March 21st, page 620) we discussed an American "invention"—the fixed trust. Our analysis suggested that the strongest among the many objections to the fixed trust was its fixity in a world of ever-changing economic tendencies. Since the publication of this article we have received numerous letters from readers, arguing for and against the fixed trust idea, and a number of significant developments have been recorded in the fixed trust "market," including the appearance of the first British trust. We therefore propose to continue our examination of the main features of fixed trust finance, with special reference to investment policy in Great Britain.

It is clear that the disadvantages inherent in the earlier and cruder examples of the fixed trust are being widely realised, especially in America. Endeavours to obviate them are resulting in the emergence of several distinct species of the original genus. The leading example of the "strict" fixed trust is the North American Trust, whose "unit" comprises four ordinary shares of twenty-eight leading American companies. Two objections have been raised to its organisation; that the policy of selling-out all bonus shares, "rights" and "split-ups" will tend to give the holder a decreasing share in the equity of the component concerns, and that the rule requiring the sale within a fixed period of the shares of any company passing its ordinary dividend will ensure disposal, in every case, on a bad market.

Efforts to overcome these objections have resulted in the emergence of so-called "cumulative" trusts and "flexible" trusts. Both types are exemplified in the First British Fixed Trust, which has been formed this month by Municipal and General Securities Company, Ltd. (controlled by J. G. White and Company, Ltd., the London representatives of J. G. White and Company, Inc., of 37, Wall Street, New York). The First British Fixed Trust, Ltd., has been registered at Somerset House with a capital of £100. Purchasers of the Fixed Trust's "units," however, will not be shareholders in the company, but merely holders of trust certificates against shares in other companies deposited with Lloyds Bank. As First British Fixed Trust, Ltd., is a private company it will not be required to publish particulars of its annual profits.

The trust deed of the First British provides that the trustee shall retain in the portfolio all free bonus distributions received in fully-paid ordinary shares (except fractions), and any increased number of ordinary shares resulting from the splitting of shares. The trust's published statement, however, is not quite clear as regards possible limitations to this rule, since another clause is described as laying down that semi-annual distributions to trust shareholders shall include net proceeds from the sale of ordinary shares received as regular dividends up to 10 per cent. per annum. It would also appear that "rights" arising out of new share issues for cash by component companies below the market price will also be sold and distributed to trust shareholders. The trust, in other words, is "cumulative" only to a limited extent, and its regular cash distributions to shareholders may, in fact, include capital as well as revenue receipts.

Provisions for "flexibility" are contained in a clause declaring that shares contained in the trust's units cannot be substituted by those of another company except in cases of reorganisation or merger, but that shares may be sold at the sole discretion of the managers, and the proceeds returned to trust shareholders if (1) the net ordinary earnings of any company fall below the average for the immediately preceding five years; (2) regular dividend payments fall below the quinquennial moving average; (3) it becomes impracticable by reason of the limited amount of ordinary shares available to purchase sufficient

shares for the trust; (4) the component shares are no longer quoted or dealt in on the London Stock Exchange; or (5) any fundamental change is made in the rights attaching to the shares.

These provisions may be not unfairly criticised as an attempt to make the best of both worlds. They reintroduce "the human element"—on the elimination of which the earlier fixed trust promoters laid considerable stress. They leave the shareholder entirely at the mercy of the managers' (not the trustees') "discretion," while they limit the powers of judgment of the managers by conditions which, upon examination, appear in some cases to be ill-advised or unworkable. Rules 1 and 2, for instance, if strictly enforced, might lead to the selling out of perfectly sound shares in companies which, after five years' good results on the upward curve of a trade cycle, encountered a general trade depression. That the promoters themselves have not fully considered the effect of these provisions is suggested by the fact that one of the companies included in their unit—Babcock and Wilcox—might, under their own rules, be eliminated from the list immediately, since its 1930 earnings available for ordinary shareholders were only £575,754, against an average of £695,819 for the immediately preceding five years. Rule 5 is loosely worded. What constitutes a "fundamental change" in the rights of ordinary shareholders? Although Rule 4 appears reasonable, Rule 3 has a latent ambiguity of the first importance, which is only apparent on consideration of the nature of the shares in the portfolio. These are as follows:—

No. of Shares.	Companies.	Approximate Amount Invested at Stock Exchange prices as of April 7, 1931.		Percentage of money invested in each Group.
		Per Company.	Per Group.	
25	<i>Breweries:</i> Arthur Guinness, Son & Co., Ltd., £1 Units	126 9 9		
50	Watney, Combe, Reid & Co., Ltd., Deferred Ordinary £1 Units	127 13 6	254 3 3	8.4

25	Imperial Tobacco Co. (of Great Britain & Ireland), Ltd.	111 0 4	218 18 2	7.2
75	<i>Shipping:</i> Furness, Withy & Co., Ltd.	99 11 9	99 11 9	3.3
1,280			3,029 15 6	100

On paper this appears to be a well-balanced portfolio, though as a long-term holding it is subject to the disabilities which were found to attach to the equally representa-

tive "unit" selected in 1912, which was discussed in the *Economist* of March 21st and 28th and April 4th last. On a close scrutiny, however, it appears that while, e.g., the Imperial Tobacco Company has an ordinary capital of as much as £37,492,625, other companies in the list have a small capital and a limited market. Rolls-Royce, for example, has only £787,176 of issued ordinary capital, Savoy Hotel £738,934, and Schweppes £525,000 of deferred capital. Market dealings in these shares are never over-active, and the floating supply is hardly likely, at the best of times, to exceed, say, 10 per cent. of the issued capital. If the Trust managers obtained orders from investors for large numbers of units, they might find prices, in these cases, rising sharply against them. They might then, conceivably, deem it "impracticable," under Rule 3, to purchase further shares. The clause as it now stands would apparently allow them, at their sole discretion, not simply to suspend further purchases of such shares, but to sell out the whole of the Trust's previous holdings. In other words, the more successful the salesmanship of the Trust, the greater the danger that holders may suffer considerable loss if the managers decide to liquidate certain components under Rule 3.

The efforts made in this case to overcome the more obvious disadvantages of "fixity" are seen to have created new difficulties in their turn. Even if these were satisfactorily surmounted, it would still be open to question whether the advantages obtainable from the mere "spreading" of equity share investments are sufficient to compensate holders for the heavy charges incidental to the acquisition of fixed trust shares. As regards the British venture discussed above, the cost figures include brokers' commission, stamp duties, etc. (say, 2 per cent. of the market value of the components), plus something like 7 per cent. for trustees' and managers' charges and promoters' profits, with a final adjustment to the nearest threepence per two-thousandth part of a unit (equivalent at present prices to a maximum of 0.38 per cent.). The purchaser would thus appear to pay a total "loading charge" at least four and a half times as great as the expenses of a direct purchase on the London Stock Exchange. An investor with anything over £3,000 at his disposal can more advantageously buy the component shares for himself and allow his banker to hold the documents.

So far, public advocacy of fixed trust finance has been confined mainly to the United States, where the flood of fixed trust literature has reached very large proportions. Many thoughtful American students of investment, however, are tending increasingly to criticise the whole conception. One writer has questioned the legal position of "trustees," on the ground that there can be only three parts to a trust—the trust fund, the trustee who manages the trust, and the beneficiaries. This writer declares that the so-called bank trustee is merely the custodian for the corpus of the trust, and that the promoters, who inaugurate the trust, prescribe all the conditions surrounding it, and exercise all discretionary powers specified in the deed, are the real trustees in the eyes of the law.

Mr Leland Rex Robinson, a pioneer of British investment trust principles in America, has attacked fixed trusts as being "merchandising propositions, pure and simple." In an address last year, before the School of Commerce of the University of Chicago, Mr Robinson laid down that a successful investment trust must, *inter alia*, distribute its investment risks among bonds as well as stocks, continuously supervise its investment holdings "with no ulterior motives," maintain a liquid position in order to take advantage of exceptionally favourable buying opportunities, and constantly accumulate reserves out of cash earnings. These are "standard" items in the policy of all successful British investment trusts, which are conspicuously lacking in the case of the fixed trusts. It may be concluded that the latter will appeal to quite a different clientele from the former, and that purchasers of fixed trust shares will be mainly drawn from those who, having relatively small amounts to invest, desire to speculate "for the long shot," in a limited number of equity shares, without the privilege of changing their constituent holdings at will.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 5.	May 7.

THOUGH Mr Snowden's announcement that there would be no further increase in direct taxation was, on a short view, a "bull" point for the Stock Exchange, the uncertainty which characterised the opening of the markets on Monday continued to manifest itself in all but the gilt-edged section. As the week progressed all hopes that with the opening of the Budget a new access of confidence would appear were definitely abandoned, and the tone of most markets steadily deteriorated. News of a serious failure in New York brought a growing feeling of uneasiness with regard to the Wall Street position, which the prevalence of intangible rumours did nothing to allay.

Gilt-edged stocks, which on Monday had a hesitant appearance, strengthened visibly after the Budget, the upward movement being assisted by the strength of sterling and a further influx of gold. Four per cent. Consols were a good feature on Wednesday, though Victory Bonds, exceptionally, were dull. Australians opened rather irregularly, but a steadier tone supervened in mid-week, though New South Wales loans were still a very difficult market. Indian stocks were, if anything, slightly stronger.

Fresh nervousness was apparent among holders of South American issues, the weakness of the exchanges encouraging liquidation. Brazilians were the worst sufferers, while San Paulos declined in sympathy. Chilean loans encountered some realisation, while Argentines were easier, and Peruvian Corporation came on offer. Uruguay 3½ per cent., however, were marked up. Few changes occurred in the Far Eastern section, but among Europeans Spanish Fours lost a fraction.

Home rails continued dull during the earlier part of the week. The publication of the latest traffic returns, however, showing an improvement not wholly accounted for by the fact that the comparable week last year contained a Bank Holiday, reminded listless holders that "traffics" can move both up and down, and gains were recorded on all sides. Undergrounds were a strong feature, on the announcement that a measure of agreement had been arrived at between the promoters of the London Passenger Traffic Bill and Lord Ashfield. Little business was transacted in Foreign Rails, though Argentines continued to show moderate improvements, following somewhat better receipts and a strengthening of the peso.

In the industrial market there were a number of weak spots. News of heavy selling on Wall Street brought marked declines in United States Steel and Radio Corporation, while other Transatlantic issues suffered in sympathy. Cables and Wireless were heavy on fears regarding the preference dividend, while textiles and rayons offered little resistance, English Sewing Cotton in particular showing signs of weakness on dividend fears. Dunlops receded further in the absence of a final distribution, but Forestal Land proved a bright spot, while Ever Ready (discussed in a note on page 958) illuminated the electrical equipment list. Thomas Tilling rose sharply for reasons mentioned in the case of Undergrounds, while Marks and Spencer derived support from a record year. P. and O. units declined and rose again on the dividend cut, but bear covering on Wednesday raised many of the weaklings above the worst. Turner and Newall recovered after a poor start. Breweries and Tobaccos improved after the Budget announcement, but suffered later from profit-taking. Banks were uneventful but insurance shares appeared a trifle irregular.

Oil shares were not greatly affected by the addition to the petrol tax, the imposition having been entirely discounted. Little interest was taken, however, and neither New York nor Continental buyers showed any degree of persistence, Shell and Royal Dutch suffering a fresh setback. Rubber went to a new low level at 2½d., and share values tended downwards. Trusts were not affected by the report (discussed on

page 959). Tea shares again enjoyed a small turnover, and changes were mostly against holders.

In the Mining market, the last lingering hope of a Kaffir boom departed, Central Mining being the only advance among a long list of declines. Public interest was conspicuous by its absence. "Chartered" fought gamely against a wave of depression, which took most Rhodesians to lower levels. Tin and copper both reached new low values, and subsequent rallies failed to lift share values appreciably. Tintos were sold from Paris and Diamond shares took part in the general downward trend.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets showed appreciable weakness. The failure of Pynchon and Company, with the consequential suspension of West and Company, gave rise to a crop of unsubstantial rumours regarding other houses, particularly those with large commitments in foreign bonds. The U.S. Steel Corporation's earnings' statement was another unfavourable factor. Although the normal dividend of \$1.75 was paid, earnings for the first quarter of 1931 were only 5 cents per share of common stock. The shares fell steadily on large offerings. Bethlehem Steel also declined sharply, fears being entertained that the company would show no common stock earnings at all for the first quarter. The weakness spread to many leading issues, including Westinghouse, Allied Chemical and utility shares. Oils and railroads, however, put up a more effective resistance, the later benefiting by the more favourable trend of March earnings. The weakness of Allied Chemical was especially associated with the withdrawal from the board of interests associated with the company since its organisation. Steel production last week was comparatively steady at just under 50 per cent. of capacity. Car loadings showed a slight increase, but were 15 per cent. below the level for the corresponding week of 1930. Mr Cyrus Eaton, banker and industrialist, has announced his withdrawal from the board of Continental Shares, Inc. This involves the shifting of the control of Goodyear Tire and Rubber, United Light and Power, Goodrich, and Republic Steel to a Cleveland banking group. The market hopes that the liquidation of stock pledged as collateral by firms

* 2-hour session.

CANADA.

THE Canadian stock markets during the latter half of March showed a decidedly livelier tone, but as soon as the New York market began to turn downward as the result of adverse business reports, the Canadian markets followed suit, and the second week witnessed a steady retrogression. Another contributing factor was the unsatisfactory earnings recorded in the annual reports of a series of industrial companies whose financial year, coinciding with that of the Federal Government, ended on March 31st. As the result of a continuance of poor traffic returns and the gloomy outlook for Western agriculture, there was considerable selling of C.P.R., and all securities which are dependent for earnings upon Western prosperity were adversely affected. Brazilians also weakened, and the realisation that some very drastic financial surgery would be required to salvage the Canada Power and Paper Company, one of the largest units of the newsprint industry, was a bearish factor for all the newsprint stocks. The bond market was fairly firm, but it is understood that a substantial portion of the last issue of Canadian Government bonds in New York was not immediately

(Continued on page 954.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

taken up by the public. The mining market showed a certain liveliness during the past month, with the gold stocks acting as speculative favourites, but later they experienced a sharp setback. For the week ending April 9th the Bureau of Statistics' "Investors' Index" of industrial common stocks (base 1926 = 100) was 115.5 as compared with 118.1 for the previous week.

INVESTMENT NOTES.

The Budget and the Markets.—The Budget has appealed to the Stock Exchange as a "gilt-edged market's" Budget from first to last. The subsequent rise in British Government funds was the measure of the market's appreciation of Mr Snowden's tender solicitude for the rentier. Further direct taxation was avoided, lip service was paid to the sanctity of the sinking funds, although the pious intentions a year ago of making good future deficits were abandoned—and the impression was left that the Chancellor had confidence in the sterling exchanges and in the continuance of cheap money. The market view is that if Mr Snowden lives up to his stern professions of economy the way will then be paved for conversion operations which Mr Snowden appears to anticipate on a "considerable" scale. The prices ruling in the gilt-edged market before and after the Budget are shown:—

	Before Budget.	April 30.	Yield %.
Consols, 2 1/2%.....	57 1/2	58 1/2	4 5 5
" 4%.....	90 1/2	92 1/2	4 6 2
Conversion, 3 1/2%.....	80 1/2	81 1/2	4 5 9
" 5%.....	104 1/2	105 1/2	4 8 9*

5% War Loan.....	104 1/2	102 1/2	4 17 2
4% Victory Bonds.....	96	96 1/2	4 2 8*

* Allowing for redemption.

The best prices have not always been maintained, but the market has remained active and firm. Elsewhere the Budget effects were less marked. Brewery and tobacco shares were higher, as the absence of fresh taxation forced the "bears" to cover. Oil shares were slightly easier but the additional 2d. on petrol had already been discounted and the nervousness of the market was

attributable to economic rather than political anxieties. The industrial markets were not affected, for while the Budget has left the field clear for recovery there were too many depressing influences—such as dividend cuts and disappointing company reports—to encourage long-term investment buying.

Investment Trusts—A Statistical Guide.—In the *Economist* of April 18, 1931, we discussed the much debated question as to how far it is desirable for investment trusts to publish full details of their holdings. To the investor who is primarily interested in this section of the market, and who feels that information as to the destination of his funds is likely to add to his peace of mind, the necessity of some handy statistical summary, showing which companies give these details, and which refrain from doing so, is clearly evident. Such a guide has recently been issued in the form of a loose-leaf file by a well-known firm of jobbers in the investment trust market. In addition to giving important particulars, including a summary of the last balance sheets and accounts and recent dividends of two hundred companies, together with an alphabetical list of their directors, the volume contains a statistical appendix giving (a) the names of those companies which show the percentage distribution of their holdings as between bonds and debentures, preference stocks and equity stocks, with the appropriate details, (b) the names of those companies which give particulars of the geographical distribution of their investments, and (c) a list of those companies which publish the names of the concerns in which they are interested. From this appendix it appears that one out of every three companies publishes a list of its investments, while eighty-four give the percentage distribution as between the three types of investment, and seventy-two the percentage distribution as between countries. Twenty-three companies show the geographical distribution, without distinction as to type, and eleven reveal the nature of their holdings without showing their geographical distribution. The whole volume should prove to be a mine of valuable information to the holder of investment trust shares, and should greatly facilitate a thoughtful choice as between one company and another.

Dunlop Rubber Disappointment.—The publication of Dunlop Rubber accounts, showing a decline in net trading profit from £2,226,612 in 1929 to £1,160,478 in 1930, came as an unwelcome surprise—though not, it would appear, to the whole of the market. Some leakage of information would seem to have been reflected in selling which caused a fall in the price of the shares from 12s. 3d. to 9s. 3d. in the ten days preceding the report—a most regrettable phenomenon. The report shows that the most disappointing results were concentrated on the last few months of the year. Even so, it should have been obvious to those concerned, by the autumn of 1930, that severe world depression must needs have an unfavourable reaction on their business. Yet in October last a letter to shareholders declared that "the trading position of the company had been maintained in a most satisfactory manner," and as late as January, 1931, the company's sales director, addressing a party of Ulster motor traders, was reported as saying that when the chairman showed what the company had done "the public would be pleasantly surprised." From the report and that of the two main subsidiaries, it is possible to locate the main sources of last year's disappointment. Dunlop Plantations, Limited, earned a net profit of £114,291, against £306,954 in 1929, and Dunlop Cotton Mills, Limited, a profit of £151,445, compared with £271,655. The French company and the Far East group of companies (except the Dutch East Indies company) made profits, but the German company was more adversely affected, and the American, Canadian and Australian subsidiaries suffered "a substantial loss." Losses on exchange and inventory write-offs alone totalled about £600,000. The parent company's

directors, obviously, had no option but to pass the final dividend.

** After depreciation and directors' fees.

† Including £1,500,000 from general reserve.

† Not shown separately.

† £1,000,000 from general reserve transferred to special reserve against investments in and advances to subsidiary companies.

The balance sheet, following last year's model, is a monument of lucid arrangement, but as £15,716,701 out of total assets of £25,639,289 is represented by interests in subsidiaries, the directors would confer an even greater favour on shareholders by publishing consolidated accounts for the whole group. The point is of special importance on this occasion, since some subsidiaries have made losses, and it is not clear whether a special transfer by the parent company of £1,000,000 from its general reserve to special reserve against interests in subsidiaries—which is described as "a measure of precaution"—represents merely a conservative policy of valuation, or is to be related to the trading losses of certain companies. In the latter event, the true earning power of the group last year would obviously be much less than is indicated by the parent company's figures, taken separately. The company necessarily carries large stocks of raw materials and finished goods, etc. (apart from the stock-in-trade carried by subsidiaries). The balance-sheet figure of £2,353,401 is £226,205 below that of December 31, 1929, but in view of the large inventory write-offs referred to in the report, it is not certain how far the physical volume of stocks has changed. The company's position, however, is still satisfactorily liquid, current assets other than stock-in-trade being £2,185,153, against current liabilities (including taxation reserve of £444,300), of £1,093,568. The shares fell to 6s. 10 1/2d. on the issue of the report.

United Newspapers, Ltd.—The report of the directors of United Newspapers, Ltd. (which is controlled by Daily Chronicle Investment Corporation), makes depressing reading, but does not leave the shareholders entirely without hope. It is explained that the trade depression and intense competition which prevailed at the time of the production of the *Daily Chronicle* and *Sunday News* in their new and enlarged forms caused such heavy and continuous weekly losses that the only alternative to ceasing publication was to negotiate an amalgamation of the *Daily Chronicle* with the *Daily News* and *Westminster Gazette*. In the combined newspaper, the *News-Chronicle*, which was launched in June last, the company owns a half-interest, and the directors state that the new paper is now firmly established with a daily average net sale of over 1,400,000 copies, and, since October last, has been on a profit-earning basis. The amalgamation, in their opinion, was in the best interests of the shareholders and preserved for them a valuable asset which would otherwise have become a total loss. The cost of the compensation for termination of staff engagements and other contracts amounted to £101,559, while the loss on obsolescent plant came to £239,322. The copyright of the *Sunday News* has been transferred to a separate company, which has obtained financial support to continue its publication, United Newspapers, Ltd., retaining a 50 per

cent. interest. The company's principal assets, therefore, consist of a 50 per cent. interest in the *News-Chronicle* and *Sunday News*, the freehold premises and plant in Salisbury Square, Fleet Street, and a controlling interest in Provincial Newspapers, Ltd., to which the company sold the *Edinburgh Evening News*, the *Hull Daily Mail* and the *Yorkshire Evening News*. The company's holding in Provincial Newspapers, Ltd., originally consisted of 12,559 7 per cent. first cumulative and 573,335 7 per cent. second cumulative preference shares, and 452,337 ordinary shares of £1, but United Newspapers have since acquired sufficient additional ordinary shares to give control of the company. Although sufficient profits were earned by Provincial Newspapers, Ltd., last year to cover dividends on its second preference shares, no distribution was made in view of the company's heavy indebtedness to its bankers. When these bank advances are repaid, Provincial Newspapers, Ltd., should be able to declare dividends which should eventually enable United Newspapers, Ltd., in its turn to pay its own preference share dividends independently of its earnings from the *News-Chronicle*. The trading operations of United Newspapers last year resulted in a loss of £223,486, which compares with the two preceding years as follows:—

	1928.	1929.	1930.
Profit	245,220	97,258	Dr. 218,914
Income tax	55,000	33,000	4,522
Preference dividends	36,750	36,750	...
Available for ordinary	153,470	27,508	...
Per cent. earned	31.1	4.6	Nil
Per cent. paid	30.0	Nil	Nil
Carried forward	206,813	234,321	10,885

These losses have resulted in an increase in the company's liabilities to its bankers to £502,500. It has also been found necessary to raise further funds by the issue of £100,000 6 per cent. unsecured "B" notes, and £30,000 5 per cent. unsecured "A" notes, the latter being taken at par by certain members of the staff in part payment of compensation. The 7 1/2 per cent. preference shares of the company are quoted nominally at 4s. 6d.

Marks and Spencer.—This company, which is frequently dubbed the "English Woolworth," although its goods are sold at varying prices up to 5s., operates some 150 chain stores in London and its suburbs and in the chief provincial towns. It has yet to feel the trade depression. The experience of its shareholders has been singularly happy, for the net profits have steadily risen over the past five years, and for the year ending March 31, 1931, showed an increase of over 40 per cent. at £624,485. How much of this increase is due to the new money which was put into the business in 1930, and how much to a normal expansion in trade it is difficult to say. In June last,

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

1,000,000 preference shares of £1 were issued, bringing the preference capital up to £1,350,000, and also £1,000,000 of 6 per cent. first mortgage debenture stock. The preference capital was available for little more than half the financial year, and the debenture issue was used to repay existing floating debt. The results and distribution of profits for the past three years compare as follows:—

	Year ended March 31,		
	1929.	1930.	1931.
Net trading profit.....	236,866	438,185	624,486

To reserves	77,500*	117,500	137,500
Carried forward	37,023	51,111	53,105

* Excluding £168,799 premium on shares.

† And capital bonus of 10 per cent. in "A" ordinary shares.

The policy of the directors, who are large holders of the ordinary shares, is to distribute by way of cash dividends about half the actual earnings, and to issue bonus shares by capitalising part of the reserves—a not unwise proceeding in view of the level of existing taxation. The cash dividends this year are increased from 20 per cent. to 30 per cent., and the usual 10 per cent. scrip bonus in the form of "A" ordinary shares brings the ordinary capital up to £798,600. The balance sheet shows a strong liquid position, cash and debtors amounting to £567,222, as against £313,000 creditors, and stock-in-trade to £417,783. The properties now stand in the balance sheet less depreciation at £2,883,714, as against £2,396,465 in the previous year. A relatively high valuation is placed upon the £1 ordinary shares in the market, the price this week advancing to 4½.

Spillers.—An exceptionally satisfactory position is disclosed in the annual report. A loss of £221,510 in 1929 has been converted into a net profit of £372,444, and dividends have been resumed on the ordinary shares. The following table shows the results of the past three years:—

	Year ended January 31,		
	1929	1930	1931
Net profit	176,668	Dr. 221,510	372,444

Paid %	7½	...	10
Co-partnership dividend	712	...	887
Rate %	5.25	...	6.75

Other allocations

Owing to lower commodity prices, the company has had to pay less for stocks maintained for business purposes, while debtors have been reduced, and the company's investments increased by £1,466,834 to £3,084,959. Stocks, on January 31st last, were £661,513 lower at £788,428. During the year the company redeemed £52,100 5½ per cent. 10-year Sinking Fund Notes, 1924-34, leaving an outstanding balance of £441,100. Creditors have risen by £124,882 to £629,574. The 6 per cent. cumulative preference shares are secured by net book assets of £5 4s. 9d. per £1 share, fully paid. The yield on the ordinary is £7 15s. per cent. at their present price of 27s. 9d., allowing for the 10 per cent. dividend.

Swedish Ball-Bearing Company.—Though its interests are world-wide, this company has not escaped the effects of depression. Net trading profit dropped last year by Kr. 7,860,740 to Kr. 14,414,995, but dividends and interest received rose by Kr. 504,029 to Kr. 9,037,806.

After writing off depreciation of Kr. 3,723,275 (as compared with Kr. 3,497,323) and allotting Kr. 2,600,000 less for taxation, net profit was Kr. 4,798,246 lower at Kr. 16,622,884. The following table shows the results of the past three years:—

	Year ended December 31,		
	1928.	1929.	1930.
Net profit	17,458	21,421	16,623
Amount of dividend	15,600	15,600	13,000
Earned %	13.43	16.33	12.78
Paid %	12	12	10
Pensions	186	186	...
Increase in carry-forward	1,672	5,635	3,623

Output fell off in the United States and Germany, but the English and the French factories remain well stocked with orders. A contract for Kr. 4,000,000 was received during the year from the Swedish railways, which may partially account for the 10 per cent. increase in orders in hand shown at the end of 1930.

Johnson and Phillips.—These electrical manufacturers suffered a reduction of £23,708 in net profits last year:—

	Year ended December 31,		
	1928.	1929.	1930.
Net profit	55,831	102,514	78,806
Amount of dividend.....	60,000	60,000	60,000

Dividend equalisation.....	...	...	15,000
Inc. or dec. in carry-forward.....	-4,169	+42,514	-21,194

During the year investments in subsidiaries have been increased by £48,707 to £72,709, while loans to these concerns have risen by £25,852 to £62,650. Debtors have declined by £78,743 to £248,597. Stocks, at £405,969, are £57,120 lower. Creditors have been reduced by £25,467 to £142,717, this item including a reserve for contingencies. At 32s. 6d. the shares yield £6 11s. 2d. per cent.

Ever Ready Company.—In a preliminary statement the directors of this prosperous company announce that, subject to completion of audit, the net profit for 1930 was approximately £306,000, compared with £240,000 for 1929. They recommend a final ordinary dividend of 25 per cent., making 35 per cent. for the fifth year in succession. For reference purposes, we append a comparison of results for the three preceding years:—

	Year to March 31,		
	1928.	1929.	1930.
Trading profit	189,168	215,071	253,899
Net profit	187,964	209,804	243,283
Preference dividend.....	20,000	20,000	20,000
Number of times covered	9.4	10.5	12.2
Ordinary dividend:—			
Amount.....	129,500	148,000	189,980
Earned per cent.	45.4	44.9	41.1
Paid per cent.	35	35*	35
Reserve	35,000	41,130	30,000
Increase in carry-forward.....	3,464	674	3,303

* And capital bonus of 20 per cent.

Since the publication of the last accounts, there have been certain important developments with regard to the business of Lissen, Ltd., in which it was originally understood the Ever Ready Company held an interest amounting to 199,996 of the 400,000 10s. ordinary shares. In January of this year, Lissen, Ltd., was converted into a public company, with a nominal capital of £1,000,000 in £1 shares, of which 500,000 were 8 per cent. cumulative preference shares. At the annual meeting of the Ever Ready Company, held on May 2nd last, the chairman stated that Lissen had continued to make satisfactory progress, the profits for the past three years having totalled £377,000, of which £191,000 had been distributed in dividend. At the

same time, it appeared that the Ever Ready Trust had sold part of its holding in Lissen, in order to allow for the usual spreading of trust company investments. Shareholders will await with interest any further details, appearing in the report or at the meeting, with regard to the relationship of the companies. At their present price of 19s., the 5s. ordinary shares of Ever Ready give a yield of about 10 per cent., allowing for the final dividend of 25 per cent.

Rubber Plantations Investment Trust.—In view of the depression in most Eastern plantation industries this company may be deemed to have done no worse in 1930 than was to be expected. Dividends received totalled £116,174, compared with £167,371, while estate produce account contributed £52,306, against £96,039. Net profit was £71,750 below the 1929 figure. The directors, wisely, have decided against the payment of an ordinary dividend, though 5½ per cent. was earned:—

	Year to December 31,		
	1928.	1929.	1930.
Dividend received	182,897	167,371	116,174
Estate produce account	139,228	96,039	52,306
Gross income	322,125	263,410	168,480
General expenses	7,561	6,861	6,711
Directors' fees	12,437	11,031	3,875
Taxation	67,580	63,617	51,641
Amortisation, &c.	11,900	11,400	7,500
Net profit	222,646	170,503	98,753
Brought forward	60,737	63,383	61,874

Ordinary dividend:—			
Amount.....	270,000	222,012	Nil
Earned per cent.	12.4	9.6	5.5
Paid per cent.	15*	12½*	Nil

Reserve	Dr. 50,000	Dr. 50,000	60,000
Carried forward	63,383	61,874	100,627

* Gross.

The balance sheet still shows a reserve fund of £657,796 and reveals a satisfactorily liquid position. At December 31st last the market value of the company's investments, which are shown at £2,250,464, was £1,628,608, this depreciation, however, being more than covered by the reserve. The total sum invested at the end of 1930 was £2,897,191, distributed as to 88½ per cent. in rubber, tea and coconuts, and as to 11½ per cent. in Government securities, commercial undertakings and undeveloped lands. The present price of the £1 shares is 14s. 6d., the highest price for 1931 being 23s. 3d. and the highest for 1930 39s. 7½d.

New Capital Issues in April.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in April, and in recent years:—

	(000's omitted)			
Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
1929	16,502	5,081	2,186	23,769
1930	14,220	5,121	2,975	22,316
Monthly Total.	Govt. £	Other. £		
January, 1930 ...	500	9,033	1,671	13,989
January, 1931 ...	1,800	6,331	118	8,249
February, 1930 ...	350	13,034	9,065	22,449
February, 1931 ...	2,450	4,368	13,705	20,573
March, 1930 ...	500	50,912	5,343	57,330
March, 1931 ...	1,750	10,341	1,513	19,094
April, 1930 ...	450	10,223	1,228	22,770
April, 1931 ...	800	714	5,226	7,444

The sale of National Savings Certificates was responsible for a net sum of £800,000, against £450,000 in April, 1930. The Corporation of Derby was the sole municipal borrower, raising £980,000 by the sale of £1,000,000 4½ per cent. debentures. The only large industrial issue was that of "Cosach," of £2,000,000 7 per cent. debentures, which promptly fell to a discount. The not very eagerly-awaited Rhokana debenture issue of £4,500,000 7 per cent. debentures to existing shareholders made its appearance half-way through the month.

Insurance Share Index.—During the first quarter of 1930 insurance share values showed, on balance, a small decline, the customary upward swing during the first three months (on anticipations as to coming dividends and reports) having failed to materialise. For this failure the generally depressed state of markets must be held responsible since the reports which have so far been published afford every indication that results for 1930 will be at least as favourable as those for 1929, and in some respects more favourable. The table below exhibits the history of an investment, in 1913, of £1,000 in the ordinary shares of each of twenty-five leading companies. The figures are based on the mean of the highest and lowest prices in each year except in the case of the last two columns, which relate to the middle market prices on the dates specified. In all cases where an issue of bonus shares has been offered due allowance has been made by assuming that the rights are sold and the proceeds utilised to purchase an additional holding in the original shares:—

Sun Fire	1,159	1,933	2,604	2,853	2,729	2,756	2,578
Sun Life	645	1,708	2,138	2,237	2,131	2,116	2,257
Yorkshire	2,293	2,224	3,005	3,041	2,685	2,783	2,628
Average	1,721	2,692	3,330	3,431	3,275	3,277	3,207

During the past quarter the index has fallen from 3,277 to 3,207, a decline of just over 2 per cent. Of the twenty-five companies, the shares of four only show an appreciation—Gresham Fire, Life Association of Scotland, North British and Mercantile, and Sun Life. The Life Association shares have appreciated by some 20 per cent. as a result of the large surplus disclosed on the occasion of the

COMPANY MEETINGS, &c.

ROYAL EXCHANGE ASSURANCE.

SUCCESSFUL RESULTS IN A DIFFICULT YEAR.

QUINQUENNIAL VALUATION RESULTS.

The two-hundred-and-eleventh annual general Court of the Royal Exchange Assurance was held, on the 29th ultimo, at the head office of the corporation in the Royal Exchange, London, Mr Vivian Hugh Smith (the governor) presiding.

The Governor, in moving the adoption of the report and accounts, said: If you will refer to the statement of the combined figures of your corporation and its affiliated companies you will notice that the total assets on December 31st last amounted to nearly 22½ million pounds, which was an increase of more than £600,000 during the twelve months, while the total premium income had decreased by £577,000. This latter figure is largely due to the fact that during 1929 an exceptional amount was received by one of our affiliated companies as single premiums on certain capital redemption policies.

LIFE DEPARTMENT.

In the life department 4,131 proposals were completed and paid for, assuring £2,840,000, of which £339,000 was reinsured; and the average sum assured was £688 per policy. The gross rate of interest earned on the fund was £5 17s. 10d., which was an increase of 2s. 9d. per cent. over 1929.

The year 1930 was the end of the quinquennial period in the life department and the valuation disclosed a total surplus of £1,346,000. The proprietors' share of one-tenth of this surplus, less the amount brought forward from the previous quinquennium with interest, amounted to £130,755, which has been transferred to the proprietors' allocation account.

It will be convenient for me to explain at this point that it is proposed to carry to the profit and loss account each year, until the next valuation takes place, one-fifth of the amount standing to the credit of this account, which includes not only the proportion of the life surplus, but also the annuity and capital redemption profits.

Your directors have already announced the declaration of a compound reversionary bonus of £2 per cent. per annum on all with-profit policies in force on December 31 last, but in addition to this it has been decided to carry forward a sum of £428,000, of which £250,000 has been placed to a special bonus equalisation fund. Your directors consider that it is wise to set this sum aside as a steady factor in connection with future bonuses. I am also glad to be able to tell you that during the past few months it has been found possible to reduce many of the rates of premium in the non-profit section of our life department.

In the trustee and executor department the fees received (for services rendered to clients) amounted to £52,150, an increase of revenue over the previous year of about £2,300. Expenses, however, show more than a normal increase. The fact that the total funds for which your corporation acts as trustee increased during the year by nearly 6 million pounds and now exceed a total of 113 million pounds shows that the initiative taken by your directors some twenty-six years ago in establishing your corporation as one of the pioneers of this class of business in England has been more than justified.

FIRE AND MARINE BUSINESS.

In the fire department the net premium at £1,685,000 showed a decrease of £71,000. It was to be expected that the general depression in trade and the adverse conditions in the United States would affect the world-wide business of your corporation. The losses, however, with the exception of those in the U.S.A., show a considerably reduced percentage; but, unfortunately, our experience in that country, both from the point of view of premium income and loss ratio—like, I think, that of all other insurance companies operating there—has been less favourable than in 1929.

Owing to the large transfers which were made twelve months ago to the departmental accounts from the profit and loss account the interest carried in this and the marine and accident accounts was considerably greater than during 1929. Excluding interest, the underwriting profit of the fire department amounted to £129,000, being 7.7 per cent. of the premium income, and I think you will agree that this is a very satisfactory result in a year which has been full of difficulty. Including interest, a sum of £172,600 has been transferred to profit and loss account.

The marine account shows a premium income of £652,000 and a fund at the end of the year of practically £981,000, which is equivalent to 150 per cent. Conditions have still been difficult. The rates on hulls have been increased during the last few years, but we now find we have to contend with an unwelcome

increase in the cost of claims which counter-balances in many instances the increases in the rates that have been made where the results justified them. Competition in cargo business is still very keen, and many risks are placed in the market to-day at rates which we believe must prove to be unprofitable. Your directors have given and continue to give the closest attention to this section of our operations, but they are of opinion that it is not yet on a satisfactory basis, and unless there is an improvement we may find it necessary to reduce still further our marine premium income.

GENERAL ACCIDENT ACCOUNT.

In the general accident department the premium income at £1,261,000 was £14,000 less than in the previous year; but the transfer to the profit and loss account, including interest, amounted to £73,200, which was slightly better than during 1929.

Conditions have also been difficult in all classes of insurance undertaken by this department, particularly in the employers' liability and motor-car sections. Your corporation and its affiliated offices are very largely interested in motor insurance, and our difficulties have not been lessened by the new law affecting this business, by which all owners of motor vehicles are compelled to insure against their liability to third parties. Legislation on these lines was not favoured by insurance companies, among other reasons because it was believed that it would lead to an increase in the number of claims, as well as in the amount awarded. Whether these fears will be realised remains to be seen, but we can only hope that the attention which has been so prominently drawn to the serious risks run by road users, and the publication of a very carefully considered and practical code of rules for the guidance of drivers, will lead to an improvement in the future. The provisions of the Road Traffic Act have involved the corporation in heavy expenses, but comparatively little new business of a desirable character has so far resulted from its operation.

PROFIT AND LOSS ACCOUNT.

If we turn to the profit and loss account, which is the general reserve fund of your corporation, you will notice that the interest at £102,000 is considerably less than last year. You will have noticed that there is a decrease in the total interest income of your corporation, excluding that in the life department. There are two principal reasons for this. In the first place there is the increase in the income tax, and, secondly, certain foreign insurance companies operating mainly in Australia and the Far East, in which we are interested, have been affected by the unsettled and unfavourable conditions in those territories. It has, therefore, been considered inadvisable for these companies to declare dividends in respect of the past 12 months, and this has contributed to the decreased receipts from interest shown in our accounts. You may like to know that it is our usual practice to carry in our interest income for the year the dividends payable by our affiliated companies in respect of the same year of account—for example, the 1930 dividends are included in the accounts before you. We then have the transfers to which I have already referred and one fifth of the proprietors' valuation surplus. You will be glad to see that in this and the next four years this figure will be considerably greater than the equivalent amount carried during the past five years.

There is a welcome reduction in "Expenses not charged to other accounts" and we again write off £20,000 from "Office property." There are then two items which are new to the account—namely, £25,000 as a contribution to the pension fund and a transfer of £50,000 to "Special contingency reserve." Owing to the failure of certain German reinsurance companies with which we had treaty and other arrangements, your directors considered it advisable to make full provision for any possible losses that might occur, and it is felt that this figure will be sufficient to meet any liability in this respect. After carrying these various figures, the balance of the account at £1,059,000 is £57,000 greater than at the end of the previous twelve months. I think you will agree that, in a year of great difficulty, with widespread depression and financial and political troubles, such a result is satisfactory.

Now I would like to refer for one moment to the method in which our dividend is paid. It is proposed that an adjustment shall be made by increasing the interim dividend in November with a corresponding decrease in the final dividend in the following May.

The resolution was carried unanimously, and the dividend as recommended was approved.

ATLAS ASSURANCE COMPANY, LIMITED.

REVIEW OF ANOTHER PROSPEROUS YEAR.

COMPANY'S STRONG POSITION.

The annual general court of proprietors of Atlas Assurance Company, Limited, was held on Wednesday, April 29th, at the Cannon Street, Hotel, London, E.C., Mr F. A. Johnston (the chairman) presiding.

The general manager (Mr C. H. Falloon) having read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said: It speaks well, I think, for the sound foundations of our business and for the prudence and foresight with which the management have continued to conduct the company's affairs that, in a year in industry and commerce of almost unexampled depression and difficulty, we are able to submit to you what, under all the circumstances, must be considered a very satisfactory report. We have not, of course, escaped a decline in our fire premium income, which is £158,390 lower than that of 1929; but, when you consider the formidable and universal fall which took place in the prices of nearly all commodities during the year under review, I feel you will agree with me that we should congratulate ourselves that the decline in this, the most important part of our business, was no larger. The fact, too, that in a time of declining premium income, from which no fire insurance company has been exempt, the competition for business becomes more keen and more persistent makes the results this company has achieved in 1930 not only gratifying but, I venture to think, encouraging.

Ours is a world-wide business. The circumstances, therefore, which have afflicted, and, unfortunately are still afflicting the United States of America, Australasia and India particularly, and to a lesser degree other parts of the world where we carry on our business, have been prejudicial not only to the development of our interests, but to the general conduct of our affairs. Our management, moreover, have no false ideas of maintaining the fire premium income if the prospects of favourable experience for the company are thereby in any way prejudiced, and our commitments are ruthlessly pruned where experience and judgment demand a prudent retreat. That is wise generalship, and we have no sympathy whatever with exhibiting large figures if they are not calculated to produce satisfactorily proportionate profits.

NATIONAL SAVING FROM FIRE PREVENTION.

In spite of the adverse conditions to which I have referred, the company received in fire premiums the sum of £2,173,179, and has secured an underwriting profit of £194,525, or 8.9 per cent. of the premiums received—as compared with 8.3 per cent. in 1929—a very satisfactory result—(hear, hear)—the loss percentage being 49.8 per cent., against 50.13 per cent. in the previous year. The ratio of our fire expenses has, however, risen from 42.5 per cent. in 1929 to 44.07 per cent. in 1930. This figure looks high and is, naturally, a matter for anxiety, and I need not tell you that it has our unceasing attention. Although we have made some saving in the amount of our fire expenses, the ratio has, of course, tended to rise with the falling premium income; but apart from that it must be remembered that the expenses of an insurance company to-day include not only its normal and unavoidable running expenses for the cost of supplying insurance protection to the public, but the expense, too, of educating that public in the need for the manifold forms of insurance to-day, of supplying to everybody a very great amount of technical and expert advice, and of, year after year, reducing fire waste by investigating the causes of fire, pointing out remedies and encouraging preventive measures. Indeed, the national saving as a result of this work is literally immense, but one of which the public is perhaps hardly aware. The work, indeed, costs them nothing, but is a very great expense to us, in spite of which we have been able year by year to reduce the cost of insurance to the community.

ACCIDENT DEPARTMENT.

Our accident department, which is very efficiently conducted, shows an increased premium income of £12,129, which is, however, less than the usual increase. This was, I may say, solely due to adverse exchanges in foreign fields. The loss ratio was very favourable, being 51.5 per cent. of premiums received, against 53.16 per cent. in 1929, and the percentage of profit was 7.59 per cent., against 4.16 per cent. in the previous year, and yielded a profit of £36,398, against £19,445. This profit is very satisfactory, but on a somewhat higher ratio than we can, under existing circumstances, reasonably expect to maintain.

MARINE BUSINESS.

Our marine income for 1930 is practically the same as that for the previous year, and the settlement thereon equals approximately 24½ per cent. When last year I mentioned that the settlement on 1929 account was high at 31.8 per cent., I said "we were not

unduly alarmed"; events have proved that there was no cause for apprehension, as a favourable second year's claims experience leaves us with a total loss ratio only 2 per cent. higher than 1928 account at the corresponding period of 24 months. The 1928 account continues to run normally, and we can reasonably expect a fair profit. You will observe the marine fund now amounts to over £330,000—an increase of £33,328. I think you will agree with me that this can be considered very satisfactory, as the premium income has not been increased and no interest earnings have been taken into account.

In considering the past year's premium income, it should be borne in mind that, owing to the severe depression in shipping, resulting in the laying up of large numbers of British liners and tramp steamers, heavy returns of premium will be payable on the expiry of the policies. These payments will be included under claims, so you must be prepared for a heavier second year's settlement. An item in connection with last year which may be of passing interest was the loss of the almost new motor liner "Highland Hope." The total amount involved exceeded £900,000, and proved the heaviest individual maritime casualty since the loss of the "Egypt" in 1922. Actually underwriters were fortunate, as cargo interests were comparatively small.

Conditions generally have been uneventful during the past year, except that the marine market on the Continent has still further contracted. This has arisen through the failure of several old-established companies, all of which transacted considerable British marine reinsurance. Fortunately we were in no way adversely affected by these happenings. As a result of the failures the British insurance policy is in more demand than ever from Continental insurers. I mention this in the hope that underwriters will appreciate the fact and will not sell their policy at under cost but will obtain an equitable premium in exchange for the unchallengeable security of a British insurance policy.

RECORD LIFE FIGURES.

In twelve months' time we shall submit to you our life figures of another triennium, which justifies me perhaps to-day in making a comparatively brief reference to last year's experience. You will have been gratified to remark that our life business has continued to expand the volume of new business, having been £4,243,948, against £3,919,560 in 1929, which constitutes a fresh record. It is probable, however, that in 1931 our figures may not show the comparatively rapid growth of 1930 and of recent years. Death claims were again comparatively heavy, but not abnormally so, and the profit for the year was £215,819 0s. 2d., a somewhat smaller figure than that of 1929. The premium income reached in 1930 the record figure of £357,537, and the life fund at the end of the year was £7,260,542, which is also a record figure.

We can congratulate ourselves that in these days of depression we show a surplus of £429,049 over the book price of the life department investments, and that as a result of writing down the value of investments in our books whenever that was possible the life fund yields to-day a return of £5 5s. 7d. net. At the end of the war the life premium income was £266,809 and the funds £2,313,899. To-day they are £357,537 and £7,260,542 respectively, which speaks well for the enterprising vision and ability with which our life department has been conducted, and I am confident that we shall consequently get our full share of new life business in the future.

THE DIVIDEND.

The profit and loss account shows how we dispose of the year's profits. With the amount brought in from the previous year we have a disposable balance of £592,487. From this we credit the pension fund with £25,000, bringing that fund to £225,000 and a little nearer to the amount at which we hope one day to see it. We again put aside £55,000 towards reduction of the uncalled capital, which will, with last year's contribution, give us 5s. per share in hand towards some future definite reduction of the existing liability on our shares. We apply £5,000 to writing down investments, and £75,000 to writing down the book value of our premises. We take £178,000 to pay the same dividend as in the previous year, viz., 8s. per share, free of tax, and we carry forward to the current year the very substantial sum of £219,883.

While the year under review has not been free from the difficulties and anxieties inseparable from a great business, we have fortunately escaped the exceptional and critical troubles which have afflicted so many industries and commercial undertakings all over the world, and I take this opportunity of once more thanking in your name our general manager and his colleagues at head office, our branch managers at home and abroad, and all who serve under them in this world-wide company, for their able devotion to the company's interests during a very strenuous year, and of offering to them our earnest congratulations on its successful completion. (Applause.)

The report and accounts were unanimously adopted.

LAW UNION AND ROCK INSURANCE COMPANY, LIMITED.

A SATISFACTORY REPORT.

ASSETS EXCEED £13,000,000.

MR CHARLES HAMILTON'S SPEECH.

The annual general meeting of the Law Union and Rock Insurance Company, Ltd., was held, on the 30th ultimo, at the head office, 7 Chancery Lane, London, W.C., Mr Charles G. Hamilton (the chairman) presiding.

The secretary and actuary (Mr James Stirling), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I presume that, as usual, you will take the report as read. (Agreed.)

The report we have to submit to-day is, on the whole, a satisfactory one.

FIRE ACCOUNT.

In the fire department the premium income amounted to £523,727, and the losses, less reinsurance, to £246,707, being 47.1 per cent. of the premium income. The premium income is rather less than in the three previous years, but that is not surprising having regard to the world-wide bad trade and the more intensive competition arising out of the reduced volume of business. The total expenses, including commission, amounted to £216,536, or 41.34 per cent. of the net premium income. The amount of the fire reserves is £559,490, and £95,484 has been carried to the profit and loss account.

ACCIDENT AND GENERAL ACCOUNT.

The premium income of the accident department amounted to £232,063, and the outgoings of every description to £196,618. The reserves have been increased to £266,496, and £45,381 has been carried to the profit and loss account.

PROFIT AND LOSS ACCOUNT.

To this account we have also added the profit on fixed-term assurances, £3,007; the shareholders' proportion of life profits, £32,184, and interest, £51,878.

LIFE ACCOUNT.

The net new business was £1,646,429, some £500,000 less than in 1929. In the year following the declaration of a quinquennial bonus, we invariably have to record a reduced new business, and on this occasion the fall has been accentuated by the absence of single-premium business, which, consequent upon the Finance Act of 1930, lost its attractiveness to the public.

The expense ratio was 15.99 per cent. of the premium income. The net rate of interest earned on the life funds was £4 10s. 9d. per cent. The life premium income was £695,109, and the amount of the claims by death £567,253. The death claims, although heavier than in the preceding year, are well within the amount expected.

Our total assets are £13,400,787, and our income £2,067,890. The market value of our Stock Exchange investments is very substantially above the figure at which they stand in the company's books.

ASSURANCE BY MONTHLY PAYMENTS.

Some years ago I drew attention to the revival by insurance companies of an old scheme, life assurance by monthly payments. This method of effecting life policies has, as was to be expected, made a direct appeal to that large section of the public with monthly incomes. Apart from the fact that persons who, in their own phrase, could not afford life assurance, have been shown how the necessary family provision can be secured without being a burden, many have effected policies for larger amounts more nearly commensurate with their responsibilities.

After all, the great difficulty in these days is not to awaken the public to the merits of life assurance, for they are already awake. Everyone admits its value, but unfortunately a very large number of persons are content to be able to say they are assured without giving serious thought to the question of the amount, and its sufficiency for the purpose for which it was effected. What happens when the income stops? The average man should seriously consider this matter. Will the amount of his life assurance policies "keep the home fires burning"?

To help the solution of the problem, we have prepared a scheme of family income policies. Under it, not only is there payable the

sum assured, but in the event of death within twenty years there is payable a substantial income for the remainder of the twenty-year period. The reception which the scheme has had during the few weeks since it was issued suggests that it suits the needs of a considerable section of the community, and I heartily commend it to all our friends and agents.

The Chairman concluded by moving the adoption of the report and accounts.

Mr F. W. Pascoe Rutter seconded the resolution, and it was carried unanimously.

The Rt. Hon. the Earl of Midleton, K.P., proposed the re-election of the retiring directors, Mr Philip E. B. Fooks, and the Rt. Hon. the Earl of Stafford.

This resolution was seconded by the Hon. E. C. G. Cadogan, C.B., M.P., and unanimously approved.

On the motion of Mr Charles Hendry, seconded by Mr Fooks, the auditors, Messrs Peat, Marwick, Mitchell and Company, were re-appointed.

MR RUTTER'S REMARKS.

Mr F. W. Pascoe Rutter: Mr Chairman and Gentlemen, I have much pleasure in proposing a vote of thanks to Mr Stirling, the officers, staff and agents, for their helpful services during the past year.

These are anxious times when it behoves everybody who is anybody to put his best foot forward in order to show that he is the man for the emergency. We are all getting poorer, and while this means that we shall have so much less to spend, there is one thing, and that is, that economy in insurance is false economy. If, then, a man finds that his capital is reduced, and that he has so much less to leave, it is all the more incumbent upon him that, in order to protect those who are dependent upon him, he should adopt the only alternative which is to increase his life assurance. I trust, therefore, that the good work, not only in getting, but in dealing with new business, for which we are so much indebted to those covered by this resolution in the past, may be emphasised and amplified during the ensuing year.

The vote was seconded by Mr Francis Scott and unanimously accorded.

The proceedings terminated with a vote of thanks to the chairman, on the motion of the Rt. Hon. Viscount FitzAlan of Derwent, K.G., seconded by Mr Busick E. Pemberton.

CONSOLIDATED WATER WORKS COMPANY OF ROSARIO, LIMITED.

CONTINUED EXPANSION—DECREASED WORKING EXPENSES.

The thirty-sixth ordinary general meeting of this company was held, on the 28th ultimo, at the offices of the company, 52, Moor-gate, London.

Mr Norman B. Dickson, O.B.E., M.Inst.C.E. (the chairman), who presided, said that the accounts showed a continued expansion in gross receipts, although not in so marked a degree as in some recent years. There was a considerable decrease in the working expenses, so that the increase in net receipts was £11,553. Considering the difficult times, those results might be regarded as satisfactory. Were it not for the large sum of £58,657 debited to revenue for loss on exchange, the board would have been in a position to deal more generously both as regards dividends and allocation to reserve. As it was, they had placed £10,000 to depreciation fund, had written off the whole of the debenture stock issue expenses—namely, £5,489—and recommended paying a final dividend of 5 per cent. on the ordinary shares, making a total of 8 per cent. for the year.

As to the outlook, exchange still remained the principal menace to the company's prosperity, but when one remembered that Rosario, with over 400,000 inhabitants, was the second city in importance in the Argentine, that four large railway systems converged there, and that the port authorities were being forced to study increasing their facilities, he was convinced that their own company, once the Argentine had settled its present exchange and political uncertainties, would continue to progress.

The report and accounts were adopted.

THE UNION BANK OF SCOTLAND, LIMITED.

DUKE OF ATHOLL ON THE TRADE POSITION.

The annual meeting of shareholders of the Union Bank of Scotland, Limited, was held, on the 29th ultimo, in Glasgow.

His Grace the Duke of Atholl, K.T., chairman of the bank, presided.

In submitting the directors' report reference was made by the Chairman to the easy monetary conditions of the past year, which had disproved the exaggerated theories propounded from time to time regarding the effect of Bank rate on trade. It seemed clear that the position on the whole was the reverse of what had been put forward as a theory; that the power of the banks was greatly overrated; and that the state of trade affected short-term money rates far more than the reverse. The existing absence of confidence and optimism was largely due to heavy expenditure on social services which the country could not at present afford, but the world-wide depression ought not to be used as an excuse for not facing our own troubles, which were obvious long before the very rapid fall in commodity prices during the past 12 months.

This country depended to a great extent on its export trade, and if on account of our high standard of living our goods could not be sold in other countries, a lowering of that standard, at least in so far as it was not a high standard of comfort, but one of extravagant spending, would have to take place. The present lack of confidence and absence of optimism had led to an unwillingness to invest capital in industry, and our greatest need was a restoration of confidence in the ability to make profits which would lead to the free flow of capital through all industrial channels.

AGRICULTURE AND INDUSTRY.

Reference was made to reports from the bank's branches all over Scotland, which gave a depressing picture of the situation. Agriculture had been hit in practically every branch during the past year. Harvest weather was unfavourable, good grain crops having been damaged, and the rise in price that might normally have been expected had been entirely neutralised by the continued flooding of our markets with foreign grain produced at uneconomic prices. Last year reference was made to the dumping of German oats. This year we had suffered even more from Russian competition, and all talk of organising farmers and helping them by agricultural credits, co-operative marketing, or State experiments was futile without a measure of control over such imports. The textile trades and heavy industries were also dealt with by His Grace, who, in referring to coalmining, stated that political interference was its bane. Recent legislation had hit the export trade very badly and miners' wages—the first charge on the industry—had been jeopardised.

The history of the bank and its constituent parts compiled by Principal Rait, of Glasgow University, had now been published, and anticipations had been fully realised. The book had been acclaimed on all sides as a masterly work and had formed a valuable contribution to Scottish banking literature.

The bank had continued its policy of branch expansion, and particular attention was drawn to another branch which had been opened in London at 332, Oxford Street—a most excellent position in a busy part of Oxford Street and also commanding Bond Street. The continued expansion of London and the drift southwards had to be recognised whether they liked it or not.

MR PETER RINTOUL'S REVIEW.

Mr Peter Rintoul, chairman of directors, in moving the adoption of the report and accounts, referred to the increase of £870,000 in deposits, now standing at over £29,000,000, and pointed out that cash and money at call or short notice, together with British Government securities and Treasury bills, amounted in all to 58 per cent. of the liabilities on deposits and notes in circulation. Owing to the falling-off in the demand for advances, British Government securities had been increased temporarily by approximately £1,500,000, this addition consisting almost exclusively of short-dated securities. For the first time for several years, advances showed a decrease amounting to £1,850,000, and this was largely due to the falling-off in trade and the lower price of commodities. The total, however, was only about £800,000 less than in 1929, and no doubt when trade recovered they would be called upon to assist their customers with increased banking facilities. The number of individual advances was very large, and they were only too glad to help the small industrialist and farmer as well as the larger concerns.

In conclusion, Mr Rintoul paid a warm tribute to the ability and energy brought to their service by Mr Norman Hird as general manager, and to the loyal support of their very efficient staff.

The report was unanimously adopted, and a dividend at the rate of 18 per cent. per annum declared.

LEGAL AND GENERAL ASSURANCE SOCIETY LIMITED.

ANNUAL GENERAL MEETING—A RECORD YEAR.

SUCCESS OF THE "SAFEGUARD" POLICY.

In commenting upon the record new life business of £11,533,000 achieved in 1930, Mr Romer Williams, D.L., J.P., the chairman of the society, mentioned that the rapid expansion was due in some measure to the new form of contract which the society introduced last year, known as the "safeguard" policy. This policy is especially attractive to the married man with family responsibilities, but its extreme flexibility—a very important feature—makes it universal in appeal.

The "safeguard" policy provides, in the event of the death of the life assured, an income of £3 per week, free of income tax, for each £1,000 of assurance. This is rather more than 15 per cent. interest, and because it is guaranteed and does not necessitate the dependants attending to various details of investment, it is particularly suited to all with dependants inexperienced in financial matters.

Obviously, no insurance company would pay 15 per cent. for more than a specified period, and under the "safeguard" policy the income is limited to an agreed number of years from the date the contract is effected. For example, in the event of the death of an assured within the first year of effecting a policy—where the specified period is twenty years—his dependants would receive an income of £3 per week for the remainder of the "safeguard" period, i.e., nineteen years, and at the end of that time £1,000 in cash. It will be seen that the contract is most effective at the time of maximum financial responsibility.

A £2,000 policy would provide £6 per week, or a £500 contract would secure 30s. per week, and so on, the income being in proportion to the sum assured. If desired an immediate cash payment can be made at death to meet inevitable and urgent expenses.

Mr Romer Williams and Lord Hailsham, who seconded the adoption of the report and accounts, both ventured to predict a great future for the "safeguard" policy.

THE "SAFEGUARD" POLICY

IS THE CHARTER OF FREEDOM FROM FINANCIAL WORRY, both for you and for your dependants. Why? Because, unlike ordinary Life Assurance, it puts first in importance the provision of a guaranteed, tax-free income, payable during the crucial period following your death, and then, at the end of the "Safeguard" income period, a large capital sum. If desired, an immediate cash payment could be made at death to meet inevitable and urgent expenses.

Example:

The Usual "SAFEGUARD" Benefits.

The "SAFEGUARD" Policy secures £3 per week to your dependants for the remainder of a period of 20 years from the date of the Policy, should your death occur in that period, and then the final payment of £1,000. On death after 20 years the £1,000 is payable, or if the policy be effected in Endowment form, the capital sum is payable on survival of the "Safeguard" period.

N.B.—There are many variations of the "Safeguard" contract. Proportionate incomes can be secured, i.e., a £500 policy provides 30s., or a £2,000 policy provides £6 per week.

The annual cost of this remarkable provision is very moderate. Use the enquiry coupon to obtain the cost applicable to your own case.

THE ALLIANCE TRUST COMPANY, LIMITED.**SUCCESSFUL RESULTS OF A DIFFICULT YEAR.****DIVIDEND OF 25 PER CENT. AND BONUS IN PREFERENCE STOCK.****MR DAVID PIRIE'S REVIEW OF POSITION AND PROSPECTS.**

The annual ordinary general meeting of the Alliance Trust Company, Limited, was held in the company's registered office, Meadow House, 64, Reform Street, Dundee, on Friday, April 24, 1931, at 12.30 p.m.

The chair was taken by Mr David Pirie, and after formal evidence of the proper calling of the meeting had been submitted, the secretary, Mr J. K. Greenhill, read the auditors' report to the shareholders.

The Chairman, in moving the adoption of the annual report, said:—

It is now my duty to submit for your adoption the report and accounts for the twelve months which ended on January 31st last.

We are glad to think that you will regard these as, in the circumstances of the time, satisfactory. In submitting our report last year we pointed out that we had then passed into a period of declining trade, lower prices and general uncertainty in which it would be imprudent to commit ourselves to prophecies regarding the immediate future, but that we felt entitled to ask you to rely on the strong reserves of the company and its large margin of earning power to carry us through bad times. Except that the economic weather has got definitely worse, that still represents our view and our attitude to-day.

DISTRIBUTION FOR THE YEAR.

As I have said, however, the showing in the accounts before you will no doubt be considered satisfactory, and I am sure you will approve of the distribution made—a 25 per cent. cash dividend plus the bonus of 10 per cent. recently made in 5 per cent. preference stock, which, as the stock sells at fully par, is equivalent to a further cash dividend of 10 per cent.—and which is, of course, tax free. We are, further, able to place an increased amount—£95,000, against £90,000 last year—to contingent fund and to carry forward £52,063, against £51,206.

The distribution of preference stock without a coincident issue of ordinary stock alters somewhat the traditional proportion in which these two stocks should stand to one another, and to restore this it is necessary to make a new issue of £50,000 of ordinary capital. There appeared to us to be no reason to delay this further, and, accordingly, the letters offering the new shares are in your hands. We are glad to know that the issue has been favourably received—has, indeed, gone to a premium on the market, constituting something in the nature of a further bonus to start this year with.

CAUSES OF ECONOMIC DISTURBANCE.

As I have said, the economic weather has got worse instead of better since we last met you, and what has been well compared to an economic storm broke over the world in 1930. The disturbance spread itself over the whole world and no area of investment has escaped its devastating influence. Endless discussion has taken place as to the cause of the trouble. Perhaps the basic fact that throws most light on it is that while the population has increased since the war by not more than 10 per cent., production of raw materials is estimated to have increased by 40 per cent. The instinct of many financial experts, on the other hand, is to find the cause of economic trouble in monetary conditions. At one time our sorrows were attributed to the scarcity of gold. That view appears to have been more or less abandoned, and we are now more commonly advised that the trouble lies in the maldistribution of the metal. The large body of financiers whose interests lie in the East point to the catastrophic fall in the value of silver—which has reduced the purchasing power of one-third of the human race to a fraction of its former extent—as the worst difficulty we have to face. And so on. A commonsense view, perhaps, finds parts of the trouble in all these factors. And if we look for some ground for hope of recovery in basic considerations it may be found in this, that the cause of the disease lies not in any lack of real wealth, but in a maladjustment in the widest sense of that term. I am not losing sight of the fact that readjustment will be exceptionally difficult in our own country, and, in particular, that the obstacles in the way of the readjustment of our costs of production to world prices appear enormous; still, when readjustment is necessary, the force of circumstances has a way of compelling mankind to find means to effect it, and we must hopefully rely on necessity once again playing its proverbial part in human affairs.

COMPANY'S SOUND FINANCIAL POSITION.

But what directly interests us and other investment companies in all this is that even though readjustment and recovery were

to begin at once, we must in the immediate future continue to suffer. The results to be reported by industrial concerns during the current year can only reflect the troubles of the past, and defaults and reductions in dividends cannot fail to be the order of the day. Trust companies, in short, must pass through a period more trying than the most cautious pessimist ever anticipated. In the past they have reckoned that by a wide spreading of their investment risk a stable revenue position could be maintained, as it was not to be expected that all the world would go wrong at the same time. But the unexpected has happened, and every part of the civilised world is in trouble—often varied in its nature, but in every case severe. We must, therefore, fall back for reassurance on the fact that we have followed that other sound rule of trust company management, viz., to make abundant reservation from the revenue of good years for our protection in bad times. That has been the traditional policy of this company. To it we must largely attribute the strong position in which we find ourselves to-day. Particularly does this policy appeal to our debenture holders, whose primary object is to place their capital and revenue beyond peradventure, and whose support has contributed so much to the prosperity of the company.

WIDESPREAD DEPRECIATION OF INVESTMENTS.

Needless to say also, the present troubles have caused widespread depreciation on investments. *The Bankers' Magazine*, taking 278 securities of the variable-dividend class, drawn from 25 different groups, found a net depreciation in the twelve months ending December last of nearly 20 per cent. A few years ago, when appreciation was large, we told you that we did not place much weight on these fluctuations in Stock Exchange prices, and that remains our attitude in these days of depreciation. We are glad, however, to be able once more to state that at the close of our year the value at which our bond and stock investments stood in our balance sheet was below their market value, and we are satisfied that that has remained the case through the worst of the depreciation.

MORTGAGE CONDITIONS.

As indicated in the report, the conditions in our mortgage fields have been in all respects unfavourable. Agricultural conditions were worse last year than they have been for a quarter of a century, and when we have not only poor crops but poor world prices, it is small wonder that we have been faced with reduced interest collections and a dull real estate market. We are confident, however, that our representatives have done and will do everything they can to meet these difficulties, and that when there is a turn for the better we shall see arrears coming in and our real estate moving again.

I should wish in concluding to again express our appreciation of the loyal and effective services of our staff, and I would include in this expression an acknowledgment of the services of our representatives in the mortgage business in the trying and difficult conditions which they have had to face.

I will not detain you further, but will conclude by moving that the directors' report and accounts be adopted, and that final dividends be declared as therein recommended, viz.:—On £700,000 preference stock at the preferential rate of 4½ per cent. per annum; on £650,000 preference stock at the preferential rate of 4 per cent. per annum; on £750,000 preference stock at the preferential rate of 5 per cent. per annum, and on £1,000,000 ordinary stock at the rate of 25 per cent. per annum, all subject to deduction of income tax.

The resolutions declaring dividends, re-electing a director and appointing auditors were unanimously passed.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

WALDORF HOTEL COMPANY, LIMITED.**STRONG FINANCIAL POSITION.****SIR FREDERICK ELEY'S REVIEW OF POSITION AND PROSPECTS.**

The twenty-fourth annual general meeting of Waldorf Hotel Company, Limited, was held, on the 24th instant, at the company's offices, Waldorf Hotel, Aldwych, London, W.C., Sir Frederick Eley, Bt., presiding.

The secretary (Mr Edward Gardner) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—Before submitting the adoption of the report and balance sheet, which I assume will be taken as read, I propose to give you some details respecting the profit-and-loss account and the company's position generally.

As regards the first named, I am sure that most, if not all, of you will have been prepared for a falling off in revenue, as it would have been strange if we had been able to escape the serious decline which has been general, not only in the hotel world, but in practically every industry in the country, save perhaps the motor section which, thanks to the outstanding ability and enterprise of a few men, and to safeguarding, which has not put the prices up, but the reverse, has more than maintained, indeed increased, the turnover of that particular trade and the numbers of employed.

EFFECT OF TRADE SETBACK.

The depression through which we have been, and are still, passing is the worst that in a pretty wide experience I have ever known, and it is somewhat discouraging to take up one's paper day after day to read of companies and businesses of known repute and long-standing prosperity showing largely reduced earnings, or indeed losses, to say nothing of many which have ceased to exist. It is true that more or less the trade setback is world-wide, but it is a fallacy to console oneself with the knowledge that others are in the same boat; as a matter of fact, from our immediate point of view, it is the other way, because we have in ordinary times an appreciable clientèle from overseas. Arising out of these circumstances there is less need to visit London, and this applies equally at home, while in the wake of these adverse conditions has necessarily followed the reduced spending capacity, more palpably reflected in the apartments which in an hotel of this kind is the chief and most profitable source of revenue.

Varied opinions have been expressed as to the cause of all this, but I believe that, arising from the aftermath of the war and its partially deceptive commercial prosperity, much of which was a paper one soon to become worthless, or nearly so, we were led into the creation of overproduction. If all war debts had been cancelled—a big thing, I know, and not palatable in some quarters—and surplus stocks had been scrapped, the world might have got to work again normally, and this unemployment, with all its attendant circumstances and naturally increasing indebtedness, have been avoided. To-day we are overburdened with taxation which has killed much of the individuality so marked in the backbone of this old country in the past. What we need is such restoration of confidence as will inspire the so-called capitalist, instead of sending money out of the country, to employ it commercially here as in the past. He will only do this on being assured of fair play all round. There is the old saying that it is a long lane which has no turning; let us hope and trust we are nearly at the end of this one.

ALL DEBENTURES ELIMINATED.

Coming to a more cheerful subject—namely, the company's financial position, of which I think we may all be proud—forgive me if I repeat myself in stating that our debentures have all been cleared off, we have no obligations of any kind except ordinary current trade ones, and that our cash in the bank and gilt-edged securities total the very satisfactory figure of over £30,000.

Thanks to a past sound direction—our colleague, Mr Beatty, has been on the board since its inception—reserves, including carry-forward and redemption policies, have been built up of over £200,000 as against our share capital of £350,000. We all of us, of course, welcome good returns on our investments, and possibly some may think that we might have distributed a little more; to those I say, safety first, and remind them that our duty is, as in the past, to keep the hotel in its equipment and services absolutely up to date, and this we claim to have done.

Our tariffs have been much reduced of late, and the board have under consideration going somewhat further in this direction to meet the times, without in any way lowering our standard or giving less in accommodation, efficiency or any other of our services.

As you know, the hotel has now hot and cold running water in all the rooms, and it is not necessary to point out that our situation is second to none, and we claim that under the heads I have mentioned no one can give us points.

I appeal very strongly to our shareholders to support us, as they can directly and indirectly, as, after all, by so doing they will be helping themselves.

TRIBUTE TO OFFICERS AND STAFF.

I desire to place on record our appreciation of the whole of the staff, from Mr Kugi, the general manager, and Mr Gardner, the secretary, to the rank and file, all of whom have served us loyally in a year which has been the most trying of recent times.

Certain economies to which many of our employees have indirectly contributed have been effected, and the directors do not propose for their fees to be continued as before, but to be reduced by 20 per cent.—namely, £500.

I now beg to move: "That the report of the directors and the accounts for the year to January 31, 1931, be received and adopted, that the interim dividend paid on the ordinary shares and the dividend on the preference shares be and are hereby confirmed, and that the final dividend on the ordinary shares of 5 per cent., less income tax, as recommended by the board, be and is hereby declared, the dividend to be payable on May 1st next." I will ask Mr Beatty to second the resolution.

Mr A. H. Beatty, O.B.E., seconded the resolution, which was carried unanimously.

The retiring director, Mr A. H. Beatty, was re-elected, and Messrs George A. Touche and Co. were reappointed auditors.

A hearty vote of thanks was accorded to the chairman, directors and the staff, and the proceedings terminated.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED.**AN ABNORMAL AND DIFFICULT YEAR.**

The ordinary general meeting of the Ooregum Gold Mining Company of India, Limited, was held, on the 28th ultimo, at Cannon Street Hotel, London, E.C., the Hon. Lionel Holland, chairman of the company, presiding.

The Secretary (Mr F. H. Williams, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that, with regard to the past year's operations, although some falling off in revenue was expected at the time of the last meeting, the severe drop in revenue and profit disclosed in the accounts exceeded expectation and must have caused much disappointment.

The production of fine gold was more than 18,000 ounces below the 1929 return, and the revenue from gold sales, after deducting royalty and refining charges, was £255,622—a decline of over £75,000. Working costs and revenue expenditure were less by nearly £18,000, but the balance of profit at £18,101 was lower by nearly £58,500 than the figure for 1929. Of this fall in revenue, a decline of approximately 1 dwt. in the ton in the grade of ore delivered to the mill accounted for more than £31,500, while the grade of the old tailings retreated was unusually low. The tonnage mined last year, 143,761 tons, was 22,000 tons less than in the preceding twelve months. Both mining and development work were grievously interrupted by a series of rockbursts, while the return of gold was also diminished by at least a month's quota through the labour strike on the Kolar field last April. The strike started on April 3rd and ended on the 28th, but the shortage of labour remained serious even after the resumption of work, and it was not until the middle of June that operations could be resumed on their normal basis. It was unfortunate that at a time when most shareholders were faced with the disagreeable necessity of trying to meet increased taxation out of diminished income, the Ooregum Company had had to pass its ordinary dividend for the first time in forty years, and could only pay half of the fixed dividend upon its preference shares.

From the balance sheet it would be seen that, in spite of the unfavourable circumstances affecting the year's operations, the financial strength of the business had suffered but little. Their fluid assets—cash in hand, Government securities and sundry debtors—exceeded their liabilities by over £115,500, which was not £8,000 down on the showing for 1929.

Referring to the underground operations, the Chairman said that a development footage of 5,654 ft. compared with 6,883 ft. during the preceding twelve months. The alternation of rich and poor zones had been a mining feature of the Kolar field. The 73rd level had been driven through all three sections of the mine, and it was their programme now to push on down with all speed to the 76th level, confining development on the intervening levels to the known ore bodies, in the hope and expectation of encountering at the 76th level a re-make of the more important ore bodies met with above in Oakley's and Bullen's sections.

Mr Kenneth B. Taylor, having addressed the meeting and dealt with the mining position, the report and accounts were unanimously adopted, and the retiring directors and auditors, having been re-elected, the proceedings terminated.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED.

LORD EBURY ON THE POSITION AND PROSPECTS.

The annual general meeting of the Army and Navy Co-operative Society, Limited, was held, on the 29th ultimo, at Caxton Hall, Westminster, London.

The Right Hon. Lord Ebury, D.S.O., M.C. (the chairman) said that his forecast at the previous meeting was not favourable, and his predictions had proved correct to a greater extent than he had anticipated. Apart from the fall in the price level of commodities, which, of course, affected the volume of turnover, they had suffered inevitably from the fact that their clientèle was composed of those upon whose shoulders the inequitable burden of taxation fell particularly, resulting not only in their having less money to spend, but in a feeling of insecurity which conduced naturally to a conservation of their remaining resources.

The effects were reflected in the society's trading results, but he wished to make it clear that, notwithstanding the adverse factors, they had actually served more customers in the year under review, which was both a gratifying fact and a healthy sign. Their balance from trading account, including miscellaneous revenue and interest on investments, was £760,785, a decrease of £30,282. On the other hand, expenses, including depreciations and interest payments, were £556,035, an increase of £10,035, which included an increase of £13,413 under the heading of lighting, rates, and taxes. Further, when consideration was given to the fact that an extra week was comprised in the accounts, it would be realised that considerable economy had been exercised on controllable items of expense.

THE DIVIDEND.

With regard to the considerations which had governed the board's decision to recommend a slightly lower rate of dividend, it was with the greatest reluctance and only after the most careful consideration that the board had resolved to recommend that reduction, and it had been arrived at because, notwithstanding the fact that their earnings for the past year would have admitted of the usual dividend being maintained, they were faced with an increased liability of about £6,000 in respect of the subsidy to pensions redemption fund.

Again, they had had three months' experience of the current year's trading in England and seven months of the current trading year in India before them, and, in the light of the depressed conditions prevailing and the general outlook, it had appeared to them inadvisable to recommend any other course.

Among the many grave considerations taken into account by his colleagues and himself in deciding on a conservative policy had been the question of what the future in India held for them. That was impossible to forecast, but conditions there were most unfavourable for British traders. However, never since his connection with the society had the position in regard to their Indian organisation been more satisfactory than it was now. It had taken some time to effect that improvement, but they now had a better and more contented staff; stocks were cleaner, and the business was under better control.

THE OUTLOOK.

Last year he had emphasised the fact that he was by no means a pessimist, and he wished to repeat that assertion, but in his view certain unpleasant facts had got to be faced, and there was no excuse to-day to brush them aside. A significant fact was that even by 1929—before the world depression began—our exports had fallen by nearly 20 per cent. as against 1913, in spite of the fact that the trade of the world as a whole had increased by 25 per cent.

Another fact was that the population of this country had between 1913 and 1930 increased by over 3,000,000 or 8 per cent., while exports of British produce and manufactures had within the same period shown a decrease of fully 30 per cent. No political party to-day had an equal opportunity—he might with equal truth say that no political party ever had a greater opportunity—than the present Government. In his view the trade union leaders held the key to the solution of the greatest part of the problem. The unpleasant fact was that people who were in work had got to be told that they had got to work harder or get less. Probably at the present time it was a case of both, and he was not only referring to the manual worker. That pronouncement would not be popular, but in his view it was the crux of the whole position.

The general outlook could not be described as anything but dark. So far as their business was concerned, the depressed tendency had become much more marked in the current year to date than in the previous year. But one thing was perfectly certain, and that was that their financial strength—the result of a sound and conservative policy in the past—would enable them to weather such storms as might lie before them.

ASSOCIATED ELECTRICAL INDUSTRIES, LIMITED.

STRONG FINANCIAL POSITION.

The thirty-first annual general meeting of this company was held, on the 30th ultimo, at Bush House, Aldwych, London.

Sir Felix J. C. Pole (the chairman) said that the profit for the year amounted to £372,997 against £365,961 in the previous year, an increase of £7,036, and the directors recommended a dividend of 6 per cent., less income tax, on the ordinary shares, leaving £110,410 to be carried forward, an increase of £1,169.

The consolidated balance sheet indicated the strong financial position of the associated group of companies if regarded as a single undertaking.

Notable accomplishments in 1930 included the manufacture of large steam turbine sets for the Portishead station of the Bristol City Council, the Liverpool Corporation and the Battersea station of the London Power Company, and, in addition, a 32,500 kw. set had been shipped to the Victoria Falls Power Company, which had passed its tests and been taken over. They had secured a number of orders for equipments for electrical winders for hoisting from deep mines. Several rolling-mill equipments for steel mills had also been supplied. A new line of induction motors had been brought into production during the year, and a line of silent motors for marine and other purposes had been developed in connection with the acoustics section of the research department. Progress had been made in the art of arc welding, and various new processes were being developed for commercial application. There had been some activity in connection with high frequency induction furnaces for the special steel trades. In these furnaces, high-quality alloyed steel could be produced with an ease and certainty which was unapproached by any other type of furnace. The current for these furnaces was applied from high frequency generators or from thermionic valves.

One of the important fields for the use of electric power was that of railway electrification, and during the last few days a most important report on the subject had been issued, viz., the Report of Lord Weir's Committee on Main Line Railway Electrification in this country. The Report, with admirable clearness and brevity, exposed the full economic and other advantages which would be secured by changing from steam to electric traction in Great Britain. Although the amount of electrification of railways actually carried out here had not been great, the engineering and manufacturing experience available was unsurpassed. The company had carried out electrification contracts not only in this country but in Australia, Africa, India, Holland, Spain and South America, and had accumulated a great amount of experience in regard to the particular system which had been adopted as a standard in this country. The facilities available for the manufacturer of electrical railway equipment were far in excess of any demand that had hitherto arisen, and there was ample capacity for undertaking a programme even of the magnitude contemplated by Lord Weir's Committee. As Lord Weir's Report indicated, the fuller utilisation of the existing facilities for the manufacture of railway traction material would greatly increase the power of British electrical manufacturers to compete in the world's markets for similar contracts, thereby assisting export trade.

It would be seen that the company and its subsidiary companies were concerned in practically all sections of the electrical industry, particularly in heavy electrical engineering.

A year ago he said that there was an increase of orders in hand, but that prices were far too low for manufactures such as theirs, which were the product of the highest degree of engineering and manufacturing skill. Not only had they had to face these low price levels, but in the latter half of the year there was great depression in many industries, coupled with unprecedented unemployment not only here but in certain other countries, and very unsettled conditions in India, China and elsewhere. All this had resulted in curtailment of orders, and he was sorry to say that at the end of the year the Metropolitan Vickers Company had fewer employees than at the end of the previous year. The results achieved in the face of so many difficulties might be regarded as indicating the potentialities of the company when less trying conditions were reached.

What was needed above everything else was a general revival of trade. So far as this country was concerned he was satisfied that protection of our home markets would be of immense benefit to industry and would contribute towards the solution of—if, indeed, it did not solve—the grave problem of unemployment.

Personally, he was extremely disappointed that the Chancellor of the Exchequer had not proposed a tax on imports, bearing in mind the evidence of growing distrust of the maintenance of free trade in this country as opposed to ever-increasing protection elsewhere. This was the only important country in which electrical and other manufacturers received no protection in their home market.

The report was unanimously adopted.

THE EQUITABLE LIFE ASSURANCE SOCIETY.

SATISFACTORY RESULTS—BRIGHT PROSPECTS.

The one-hundred-and-sixty-ninth annual general meeting of the Equitable Life Assurance Society was held, on the 29th ultimo, at 19, Coleman Street, London.

Mr H. L. M. Tritton (the president) said that the new sums assured showed a slight increase on the previous year, and it was satisfactory to record over £1,000,000 of new sums assured—a more pleasing return than the £200,000 to £300,000 which was the pre-war figure. In addition, a large amount of deferred annuity business in connection with pension schemes had been completed. Once again, he added, the report called attention to the figures from claims by death, and, as usual, the average amount paid was appreciably over twice the sum assured.

Obviously endowment assurances did not run so long as whole life assurances, so the results could not look so attractive.

PREMIUM REVENUE.

It would be noticed that the premium revenue had fallen by about £35,000 as compared with 1929. The reason was that in 1929 and several previous years the society received a larger amount of single premiums than last year. The total single premiums included in the premium revenue for 1930 amounted to only £11,000. If, however, an allowance was made for the reduction in single premiums it would be found that the annual premium revenue had substantially increased. In the interest income for 1930 was included a sum of £5,395, part of £10,395 which was received from the University Life Assurance Society.

VALUATION REPORT.

With regard to the valuation report, it had again been the practice to assume a very low rate of interest, such as 2½ per cent., 2½ per cent., or 3 per cent., as likely to be earned on life insurance funds. In their case 2½ per cent. was chosen. Their Actuary had now based his calculations on a rate of 4 per cent. net, which still allowed a reasonable but not an excessive margin.

Finally, the Chairman said that, apart from political troubles or international difficulties or such other events as were outside their control, he thought it could be claimed that the present accounts were satisfactory, the recent valuation gratifying, and the future prospects bright.

The report was unanimously adopted.

AMALGAMATED ANTHRACITE COLLIERIES, LIMITED.

SATISFACTORY PROGRESS.

The annual general meeting of the Amalgamated Anthracite Collieries, Limited, was held, on the 28th ultimo, at River Plate House, London.

Mr F. A. Szarvasy (the chairman) said that for the second year in succession since the formation of their merger it had been his good fortune to present accounts which, from the point of view of profits earned and progress achieved, could be looked upon as eminently satisfactory and encouraging. He thought he was right in saying that 1930 had been the most difficult year which the business community had had to encounter within the present generation, and he wished he could say that the worst had been left behind, but so far the current year had not held out any of the encouraging signs which would lead one to believe that a definite turn for the better had set in.

Their merger had been described as "advancing under difficulties." The difficulties had indeed been great, but the advance was quite satisfactory, and, had it not been for a strike which had affected their accounts for December, the profits shown might have been slightly better. As it was, the gross trading profit was £108,000 better than in the previous year, and the net amount, after allowing for debenture, bank, and other interest and charges, had advanced by £145,000.

The coal industry was one of the most sensitive of all trades, because decreased industrial activity, reduced purchasing power, and trade depression generally produced sharp and quick repercussions. All those adverse conditions had operated against them during the past twelve months, but there was also some more permanent facts, such as coal being displaced by oil, natural gas, electricity, etc., which affected the future outlook. If in spite of those difficulties they had held their own and improved their position by recovering most of the ground lost five years ago, it was owing to the fact that since the establishment of their merger they had been able to regulate prices, not in the sense of trying to realise undue profits, but by reason of stabilisation and the avoidance of seasonal fluctuation.

Their properties were undoubtedly of great value, and, given normal conditions, results should be highly satisfactory.

The report and accounts were unanimously adopted.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

PROGRESS MAINTAINED.

The one hundredth annual general meeting of the Scottish Equitable Life Assurance Society was held, on the 30th ultimo, in Edinburgh, the Rt. Hon. the Earl of Stair, D.S.O., President of the Society, in the chair.

In submitting the report, the chairman of the board of directors, the Rt. Hon. the Viscount Younger of Leckie, D.S.O., made reference to the founding of the Society in 1831, and of its growth since that time, and said:—

To come now to the past year, we are pleased to be able to record what can be claimed as a good year's new business completed in what has been a year of severe depression in almost every direction. The gross amount was £1,580,000, of which £130,000 was reassured, leaving the net amount £1,450,000. The premium income, while smaller in total than that of last year, owing to the absence of large single premiums, is increased by over £11,000 so far as it is an annual income, and our interest income, in spite of larger deduction of £14,000, mainly on account of increased income tax, has increased by £2,000. On the outgo side our claims by death have once more been very moderate, being substantially within the expected amount at £364,499, while those claims which arose by members surviving the date of payment amounted to £241,005. The society's funds were increased by £271,627, and the total assets are less than £200,000 short of £10,000,000.

NEW PLANS OF ASSURANCE—BOOK SAFES.

We have in recent years been the first life assurance office in this country to introduce two special plans of assurance containing very novel and useful features, viz., the "Perfect Policy" and "The Married Man's Policy." You may have observed recently in the press very complimentary references to another new scheme which we have just launched. This is a plan whereby life assurance business in all its forms will be transacted by means of book safes issued by the society. Arrangements have been made so far as regards England for the National Provincial Bank and Lloyds Bank to look after the banking end of the scheme. We are hoping to make similar arrangements with our Scottish banking connections if certain practical difficulties can be met.

The report was unanimously adopted.

HOPE BROTHERS, LIMITED.

EFFECTS OF NATIONAL EXTRAVAGANCE.

The thirty-first annual general meeting of Hope Brothers, Limited, was held, on the 28th ultimo, at the Cannon Street Hotel, London, E.C., Mr Thomas Edward Goodyear (chairman) presiding.

The Chairman, in moving the adoption of the report, said the past year had been one of extreme difficulty. It would be remembered, he said, that at the last meeting he had informed shareholders that the second half of the year had been unfavourable to the company's business. No improvement had taken place during the past year, but on the contrary the unfavourable conditions had been intensified. National extravagance had continued on an increased scale, with the result that even the increased taxation was insufficient to meet the expenditure—and the expenditure of local authorities appeared to be on the same extravagant scale. Local rates had increased in proportion to the company's sales during the last five years by over 30 per cent., and unemployment had increased enormously during the year. It had been encouraged by the iniquitous system of doles, which had been largely extended and which was creating an army of parasites, who were becoming less able or less willing to shoulder the responsibilities of their manhood. The Government apparently wished to maintain a higher standard of living than our foreign competitors, while at the same time inviting them to flood the country with goods produced under conditions which would not be tolerated in this country. He thought a very serious warning should be the fact that last year for the first time our imports of iron and steel were in excess of our exports, and in their more immediate experience the lapsing of the safeguarding duties on gloves in December last had the effect of placing 50 per cent. of the hands on the roll of unemployed, and they themselves had been forced to purchase a larger portion of their supplies from foreign manufacturers. The company had sacrificed a source of revenue and the nation had been saddled with the cost of maintaining those who had been deprived of their employment. Combined efforts were needed to combat extravagance and to promote efficiency if prosperity was to be restored to the country, and until signs of improvement appeared they could hardly look for very prosperous times for their business.

The report was unanimously adopted.

LONDON TRUST COMPANY, LIMITED.

HON. EVELYN HUBBARD ON TRADE OUTLOOK.

The forty-second ordinary general meeting of the London Trust Company, Limited, was held, on the 27th ultimo, at Winchester House, London. The Hon. Evelyn Hubbard (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said the year under review had been one of grave anxiety to everyone engaged in business, and trust company boards had had a very harassing experience in view of the serious decline in values and the reduction of dividend receipts on their investments. Their holdings were widespread, and for the most part in shares of well-known companies, but the "malaise," or industrial sleeping sickness, that had overtaken the world had been so universal that hardly any company had escaped losses, and the consequent effect upon the Trust's revenue was disclosed in the accounts. The board greatly regretted the necessity of retracing the step they took last year in adding to the dividend, but it was not thought wise to maintain it at the expense of either reducing the amount of £20,000 placed to reserve or drawing on the surplus brought forward from previous years.

If the prospects for the present year had shown any signs of improvement, they might have felt justified in drawing on their resources, but he feared that the current year's receipts would be still further curtailed. In this country, unfortunately, their trade was handicapped by a Government policy which tended to discourage rather than to assist industry, and by financial measures which appeared to be inspired rather by a blind adherence to outworn economic maxims, than by any clear recognition of the obvious needs of the present position.

The revenue for the past year at £156,357 was £12,469 less than the previous year, and while £4,439 was accountable to the higher income tax charged on their receipts, the balance of £8,039 was attributable to lower dividends received. The available balance was £114,570, and with the amount brought forward of £47,816, there was a total of £162,386. They proposed to pay 5 per cent. on the preferred and 20 per cent. on the deferred stock, leaving a balance of £46,255 to be carried forward. The market values of the investments exceeded the cost shown in the balance sheet by a substantial amount.

The report and accounts were unanimously adopted.

S. T. D. MOTORS, LIMITED.

COMPANY'S CARS IN THE FOREFRONT.

The annual general meeting of S. T. D. Motors, Limited, was held, on the 29th ultimo, at the Cannon Street Hotel, London.

Sir Travers Clarke, who presided, said that the warrants for the Funding Certificate interest for the three months to September 30th last would be posted on May 12th. As shareholders were aware, the new board only came into being a month ago, and during that short period had been very much occupied in preparing the ground for putting into effect the principal recommendations set out in the accountants' report. Those operations must necessarily take some time to carry out, but they were essential if the company was to be brought back to its rightful position in the motor industry. In the circumstances, nothing was to be gained by any lengthy discussion at the meeting. Examination of the past had shown that there had been some defects of method which were now being remedied. The company's cars had been for a long time household words for elegance, fitness and reliability of service; they would continue to be so, and the board had faith, justified by recent sales returns, that they would consistently advance in public favour, in which connection he might remind the shareholders that they, too, could be good salesmen on behalf of the company.

The balance sheet showed that the company was still under somewhat heavy obligations in respect of the capital liabilities; the position in that regard was being most carefully examined, and generally the board asked for the confidence and forbearance of the shareholders until they had put their house in order, and for the results of the economies now being effected to bear fruit. The decision that the financial years of the parent company and its subsidiary companies must in future synchronise would involve some inconvenience during the current year, but shareholders would appreciate the advantage of the change, as it would mean that each year, on the same date, they would have a full and complete review of the whole position. The board had also arrived at the regrettable but strictly necessary decision that in future one firm of auditors should supervise the accounts of all their companies. That conveyed no hint of reflection on the firms who had done such good service in the past and now severed their connections. The board wished to take the opportunity of thanking Messrs. Turquand, Youngs and Company and the auditors of all the companies for their past valuable and efficient services.

The report and accounts were adopted.

ROYAL LONDON MUTUAL INSURANCE SOCIETY, LIMITED.

CONTINUED PROGRESS.

The seventieth annual general meeting of the Royal London Mutual Insurance Society, Limited, was held, on the 28th ultimo, at Winchester House, London.

The Chairman, Mr Alfred Skeggs, F.C.I.I., the managing director, in moving the adoption of the report and accounts, said: It is a source of great satisfaction that I am, once again, able to congratulate the policy holders upon the continued progress of the society.

The premium income for the year amounted to £4,030,134, showing an increase of £188,927 over the previous year. The number of new policies issued in the branch was 1,052,757, assuring the sum of £17,181,040. The industrial life fund at the end of the year amounted to £16,504,869.

The quinquennial valuation as at December 31, 1930, disclosed a surplus of £2,119,923, of which £1,023,660 has been used to provide reversionary bonuses to policy holders. The bonus is at the rate of £1 per cent. per annum upon the sum assured in respect of the years 1926 to 1930 on all policies (other than pure endowment) which had been not less than ten years in force and on which the premiums were being paid on the valuation date. A special additional bonus ranging from £5 per cent. to £15 per cent. has also been declared on policies which had been at least 30 years in force. £500,000 has been transferred to the investment reserve fund, and £301,982 carried forward unappropriated.

With regard to the ordinary life branch, the premium income of the branch during the year amounted to £1,216,014. The increase in the sum assured over the previous year was £136,134.

The valuation as at December 31, 1930, disclosed a surplus of £855,349. A reversionary bonus has been declared upon participating policies at the rate of £2 per cent. per annum upon the sum assured for each year of the quinquennium. This absorbs £819,324, leaving £36,025 to be carried forward unappropriated.

With regard to the profit and loss account, the balance at the end of the year amounted to £95,076, as compared with £78,092, balance at the end of 1929.

Turning to the balance sheet, you will observe that it now totals £24,160,866, or £2,228,780 in excess of the total of the previous year. The various funds set out in the account have been increased by no less than £2,221,052.

The resolution was carried unanimously.

JAMES W COOK AND COMPANY, LIMITED.

IMPROVED RESULTS.

The thirty-fourth annual general meeting of James W. Cook and Company, Limited, was held, on the 24th ultimo, at 130-135 Minories, London.

Mr W. J. Clarke (chairman and managing director) said that the present position of trade generally in the shipping world was at last, he believed, beginning to be realised, and he was hopeful that the efforts that were being made to remove the oppressive conditions of employment which now existed would meet with success. This was much to be hoped for, for, unless they could keep down costs in London, the percentage of trade to leave them would grow more and more, and a time would come when they would only have here what was consumed in the London district and environs. Under present conditions it was a matter for great thankfulness that the directors could present a balance sheet showing an improvement on previous years, and it would be seen that once again they had been steadily adding to their property and plant account both in craft and warehouses.

With regard to their lighterage department, he was glad to say that the relationship between the company and their clients was of the happiest, and it was a certificate of merit that so much business was carried on and maintained in unbroken continuity year after year without binding contracts beyond the best contract of all—good will.

As to the outlook, the atmosphere of depression induced by the constant reports of disappointment and failure on so many sides made it very difficult to see the silver lining they were all searching for, but the directors were determined to see that, taking the business as a whole, they secured for it the best measure of success that could be obtained by attention and assiduity from January 1st to December 31st.

The report was unanimously adopted and a dividend at the rate of 15 per cent. per annum for the past half-year on the ordinary shares, making 10 per cent. for the year, less income tax, was declared.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED.

"EXTENSIONS" NEGOTIATIONS WITH GOVERNMENT.

The sixty-ninth ordinary general meeting of this company was held, on the 28th ultimo, at Winchester House, London. The Right Hon. Lord Hunsdon (chairman) presided.

The Chairman, having referred to the circumstances in Brazil which brought about the cessation of negotiations with the Government as to the extension and modernisation of the existing drainage system, went on to say that, in spite of this setback, the Provisional Government had realised the importance of this question and, as one of their first administrative acts, had requested the company to resume negotiations. The Board responded to the request of the Government, and submitted a programme of work which, while not so extensive as that contemplated in 1930, would satisfy the immediate needs of the city, and would not involve an expenditure in excess of the company's cash resources. Owing to the lack of confidence which existed in all parts of the world, it might be suggested that it would be advisable, from a strictly financial point of view, that the company should retain its cash rather than invest it in an extension of the drainage system. But it should be remembered that this cash represents reserves and sinking fund for the amortisation of the company's assets at the end of the Concession, when these assets should revert to the Government. The Chairman proceeded to explain how the company's present proposals would render these reserves unnecessary. In the contract they were now discussing the board had suggested to the Government certain provisions which he believed would be for the benefit of all concerned, the most important of which referred to the arrangements which were made some 70 years ago for the termination of the company's present contract in 1947.

He felt sure that it would be in the interest alike of the Government and the working of the system that the company's plan should be adopted which would abolish the "Avos" (the Portuguese word for "fractions") proposal altogether, and would leave the company to continue their work unless and until they were bought out at a reasonable price. This would, of course, render the company's sinking fund and reserves to a great extent unnecessary, and would enable them to carry out the extensions now contemplated.

The report and accounts were unanimously adopted.

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED.

SUCCESSFUL YEAR'S OPERATIONS.

Presiding at the general meeting of the Eagle, Star and British Dominions Insurance Company, Limited, held on Thursday, April 30th, Sir Edward Mountain, Bart., J.P. (chairman), in moving the adoption of the report and accounts, said the life department, which had shown excellent results in the past, continued to develop and expand. New policies, numbering 2,104, were issued for sums assured of £2,488,501, of which £2,352,501 were retained. They continued to offer simple and up-to-date forms of insurance policies at moderate rates of premium—including a specially attractive "family policy." The total life funds stood at £15,657,155, showing an increase of over £409,000 during the year.

QUINQUENNIAL RESULTS.

The rate of interest earned on the life funds, after deduction of the increased income tax, was £4 15s. 1d. per cent. The quinquennial valuations of the two closed funds, the "Eagle" and "English and Scottish," made at the end of 1930, disclosed highly satisfactory results. The surplus in the case of the "Eagle" fund was sufficient to permit of the allocation of a simple reversionary bonus of 10 per cent. per annum for the five years, and in the case of the "English and Scottish" the surplus revealed enabled the declaration of a compound reversionary bonus at the rate of 7 per cent. per annum for the five years. These bonuses, he thought, were truly remarkable.

The premiums in the fire department were £867,802, showing a small decrease, practically the whole of which was in the United States. He was pleased to say, on the other hand, the remainder of their income in the foreign field was well maintained, and their home fire income continued to expand. After providing for a reserve of 40 per cent. of the premium income, the net profit for the year amounted to £13,409.

In the accident department the ordinary premiums for the year amounted to £68,722, and the special premiums to £63,545. As a result of the year's operations the sum of £43,224 had been transferred to profit and loss account.

In the general insurance department the premiums amounted to £1,332,610, being an increase of over £100,000 on the preceding year. The claims paid and outstanding amounted to £656,628, and after providing for the usual 40 per cent. in respect of unexpired risks, £54,294 was transferred to profit and loss account, a substantial increase on last year.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, it would be seen that net interest from investments was £146,925, which more than sufficed to pay their whole dividend distributions without having to draw on the general trading profits of the company, and without taking into account any profits from their life department, which alone averaged over £80,000 per annum for the last five years. After transferring the sum of £50,000 to investment fluctuation account and writing off £50,000 from the cost of life businesses acquired and providing for dividends of 20 per cent. on the ordinary shares, 6 per cent. on the preference shares and 10 per cent. on the preferred ordinary shares, the balance carried forward in the profit and loss account, after providing for the final dividend instalment, showed an increase of £13,545.

The report and accounts were unanimously adopted and the proceedings closed with a vote of thanks to the chairman, directors and staff.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended April 25, 1931, amounted to £11,056,700 against ordinary expenditure of £5,703,600. After allocating £1,598,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £26,077, the week's operations, as shown below, reduced the National Debt by £3,739,000 to £7,601,971,000 :-

(000's omitted.)			
Treasury Bills	£ 211	Public Department Advances	3,900
National Savings Certificates	250	P.O. and Telegraph Money	300
	461		4,200

A complete analysis of the National Debt at March 31, 1931, was printed in the *Economist* of April 4th.

CONQUISTADORES!

It is a far cry since the adventurous days of the Spanish Conquistadores and their pioneer expeditions to the ancient American civilisations.

To-day, a great and growing volume of overseas trade is transacted annually by the Republics of the New World, and unrivalled facilities for every description of modern banking business are afforded by

Commercial Reports.

MARKET SUMMARY.

The coal trade remains depressed in Scotland, but exports continue to expand in Yorkshire. The recent improvement in South Wales has been maintained, but colliery owners find it increasingly difficult to dispose of the cheaper grades of small coals. Little headway is being made by the iron and steel industries and scarcely any improvement has taken place in the principal consuming industries. The downward movement in non-ferrous metals has continued during the week, and on Thursday tin touched £104 10s. per ton. Although the current production of tin, copper and lead has been adjusted to the low level of consumption, the size of stocks prevents a rapid rise in values. Among textiles, wool prices were lower at the opening of the third series of London sales. The demand for Bradford goods has remained quiet. Raw-cotton prices have again been slightly lower, and there has been no expansion in the foreign demand for cotton goods. Rayon fabrics experience a satisfactory turnover for home consumption, and exports to Canada and South America, though still small, have recently shown an improvement. Flax and hemp have been easier, but a further rise has taken place in jute in anticipation of a short crop in India. The tendency of foodstuffs is irregular. Trade in wheat is still active, but prices are slightly lower. Sugar has been quiet, and "British refined" has been reduced by 3d. per cwt. Coffee was in good demand at the auctions, but cocoa and tea declined. Meat prices show little change. Among miscellaneous commodities, the outstanding feature is the low price of rubber. Hides and leather were easier, and the market in vegetable oils and oilseeds has been quiet.

THE COAL TRADE.

SHEFFIELD.—The export coal market continues to improve, a steady tonnage going away with prices steady at 17s. 6d. to 18s. f.o.b. Business, however, is still mainly for prompt shipment. With a larger output available, supplies are easier to obtain. There is less surplus fuel on the market, however, than for a long period. Output of industrial fuel is being absorbed at firm prices. Demand for domestic fuel and coke for heating is easing off, but good for the time of year. Foundry and furnace coke are in slightly better demand, with an increase in price of a shilling per ton. Best ordinary house coal is quoted at from 22s. to 23s. at pits.

GLASGOW.—One or two brighter features have arisen this week, but aggregate business is disappointingly small, the dullness resulting from the poor export demand being accentuated by the seasonal falling-off in some requirements. Washed nuts are plentiful in all districts, and weak in price, although some demand from the near Continent has come forward for Lothian doubles. Steam coal prices show no further declines, but the market is no more than steady, only Lanarkshire splint and Fifeshire navigation being at all well placed. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 9d.; splint best, 16s. 6d.; splint second, 14s. 9d.; navigation, 15s. 3d.; navigation second, 14s. 6d.—15s.; Hartley, 15s. 6d.; steam, 14s.; trebles, 12s.; doubles, 10s. 6d.; singles, 9s.; pearls, 9s.; dross, 10s. FIFE.—Screened navigation, 16s. 6d.—17s. 6d.; first-class steam, 12s. 3d.; third-class steam, 11s. 6d.—11s. 9d.; trebles, 11s. 6d.—12s. 6d.; doubles, 10s. 6d.; singles, 9s.; pearls, 8s. 9d. LOTHIANS.—Prime steam, 12s.; secondary steam, 11s. 6d.; trebles, 12s.—12s. 6d.; doubles, 11s.; singles, 8s. 9d.; pearls, 8s. 9d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s.; trebles, 12s.; doubles, 11s. 3d.; singles, 9s. 6d.; pearls, 9s. 6d.; dross, 9s. 6d.

CARDIFF.—Business on the Cardiff coal market continues inactive, and during the present week the supply of tonnage has been exceptionally scarce. On Tuesday, the daily dock statement issued by the Great Western Railway Company showed that of 93 tips only 62 were working, and that at the Barry Docks alone 12 were idle. Collieries are dependent almost entirely on their contract commitments, but fortunately these are heavy enough to absorb practically the whole of the current output of large coals, while for some of the Monmouthshire grades the prices quoted were slightly above the minimum schedule. On the other hand, colliery owners are finding it extremely difficult to dispose of the cheaper grades of small coals, and at some pits the dumps of these coals are even larger than they were before the stoppage in January last. The price restrictions of the statutory regulation scheme prevent them being disposed of at such values as they would be able to command in a free market. The joint audit for the South Wales coalfield for the three months ended last January shows a trading loss of £185,542, or 5-4d. per ton, compared with a profit in the previous three months of 3-57d. per ton, and with a profit of 9-94d. per ton in the corresponding period ending January, 1930. These unfavourable returns are attributed entirely to the fortnight's strike in January, when there was a loss in output of nearly two million tons, and in the coal export trade of over one million tons. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 6d. to 18s. 9d.; Western Valleys, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 9d. to 18s. 3d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 14s. 9d. to 15s.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove

IRON AND STEEL.

MIDDLESBROUGH.—Extreme dullness continues to characterise the market for Cleveland iron, and transactions during the past week have been of very small volume. Local and inland consumers are only buying what they require for short periods ahead, as they consider that prices must come down soon or foreign iron will be coming into the district again. It was thought by some people that makers would announce a reduction at the weekly market on Tuesday, but this did not occur and the official prices fixed on January 5th last still rule, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The amount of business transacted was of small extent and mostly for home account. Increased trade with Scotch consumers is impossible at present prices and for the same reason export orders are only obtainable for odd destinations and very small quantities. Hematite iron prices are somewhat weaker. A few small orders for prompt delivery have recently been offering, and rather than let them pass works have accepted 66s. for mixed numbers, which is now the general market quotation, although for forward delivery higher prices are asked. There is, however, very little inclination on the part of consumers to contract ahead. Stocks at makers' works on the Tees are reported to be gradually decreasing. In the finished trades, heavy steelmakers have a fair number of old orders that keep them moderately employed, but new business is scarce. The sheet trade continues inactive and there is practically no demand for shipbuilding materials. The ore market shows no improvement and the price of best Bilbao rubio is nominally lower at 15s. 9d. c.i.f. for early delivery. The rate of freight Bilbao-Middlesbrough for prompt boats is about 4s. 6d. Coke is in slow demand, but producers adhere to 16s. delivered works for good furnace qualities for early delivery, and more is asked for forward. The number of furnaces in blast in the district is unchanged at 21.

SHEFFIELD.—The local iron and steel industry remains inactive.

There has been no change of importance for a period of six months, while the tendency continues downward. Orders are numerous but of little weight, and a discouraging feature of the situation is a marked paucity of inquiries such as would indicate the placing of substantial business in the future. Two of the chief feeders of the steel trade, railways and shipbuilding, are buying less to-day than at any former time. The distribution of orders for railway material from the Boxer indemnity fund has not yet begun, but it cannot long be deferred. The matter is in the hands of several leading consulting engineers. There has been a distinct loss of confidence in business circles lately. The outlook in the overseas markets fails to improve. Prices of iron and steel material are unchanged, but a good deal of underquoting is found in alloys for making special steel owing to the big reduction of demand for ferro-chrome, ferro-silicon and tungsten. The output of non-corrosive iron and steel continues large, but business tends to flag and progress has been checked. Acute depression is found in plate and cutlery, but tools are meeting with a fair home demand. Trade in plantation tools has never been so bad.

GLASGOW.—Signs of improvement are still lacking in the West of Scotland iron and steel industries and it is impossible to keep plants running. In almost every branch the amount of export business being done is far below normal and the home demand, though well maintained, is not nearly sufficient to absorb anything like the output for which works are equipped. The demand for finished material is on the whole better than that for raw steel and semis, but even here it is unsatisfactory. Sheet makers are relatively better employed than many other branches, although they too are not able to employ all the mills. There is no change in prices.

CARDIFF.—Conditions in the South Wales iron and steel trades are unaltered. Imports of Continental pig iron, iron and steel

BARCLAYS BANK

LIMITED

Head Office: 54 LOMBARD ST., LONDON, E.C. 3.

And over 2,100 Branches in England and Wales.

 DEPOSITS, &c. (31st December, 1930) £349,273,283

bars, and other partly manufactured products have continued to increase, and the delivered prices are the lowest experienced during the present depression. South Wales steel bars, however, remain unaltered at £5 per ton. Tinplate prices are a shade better at 15s. 3d. to 15s. 6d. per basis box, compared with 15s. to 15s. 6d. the previous week, but galvanised sheets continue a very inactive market at £11 per ton.

OTHER METALS.

TIN.—The low level of activity in the tin plate industry and other tin-using trades, coupled with the realisation that it must take a considerable time until stocks are reduced to a normal level, caused a further decline in prices. Wednesday's closing quotation for "standard cash," at £107 17s. 6d. to £108 per ton, compares with £111 to £111 2s. 5d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 27,330 tons, show an increase of 107 tons on the week.

COPPER.—Although production of copper has been slightly below consumption since the beginning of the year, prices fail to improve, and reports of a slight setback in industrial activity in the United States had a depressing effect on the metal. On April 29, Copper Exporters, Inc., further reduced their minimum price, for "electrolytic," c.i.f. Continent, from 10.05 cents per lb. to 9.80 cents per lb. Wednesday's quotation in London for "standard cash," at £41 13s. 9d. to £41 15s., compares with £42 11s. 3d. to £42 12s. 6d. on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 11,254 tons, show an increase of 765 tons, while stocks of rough copper, at 1,422 tons, were 5 tons smaller. The following table shows the world's smelter production (estimated by the Metallgesellschaft A.G.), stocks in America and Europe, and prices in London:—

	Production (Thousands of Metric Tons)		Stocks (rough and Average Price refined)		Standard cash
	Estimated	Daily	(End of year—)	per long ton	
	Total	Average	month.	£ s. d.	
1930 Monthly Av.	136.4	3,484	543.3	54 10 9	
1931 January	116.8	3,768	532.9	45 0 10	
February	117.7	4,203	526.9	45 15 5	
March	121.4	3,915	518.3	44 18 5	
April 29	...	...	...	41 14 4½	

LEAD.—Despite the adoption of a restriction scheme by the lead producers, the metal has so far failed to recover. On the contrary, the prices realised this week show a slight fall. Wednesday's official closing quotation for "soft foreign," at £11 17s. 6d. to £11 18s. 9d., compares with £12 13s. 9d. to £12 18s. 9d. on the corresponding day last week.

SPELTER.—The market has been weak following a further reduction of 10 points in the American spot price to 3.40 cents per lb. Wednesday's closing quotation for "good ordinary brands," at £10 12s. 6d. to £11 1s. 3d., compares with £11 5s. to £11 11s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—The demand for other non-ferrous metals has been quiet, and aluminium was again quoted at £85 per ton, while nickel changed hands at last week's price of £170 to £175 per ton. Foreign antimony again sold at £24 10s. to £25 per ton, and there was no change in the price of quicksilver at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Prices have moved in a narrow groove during the week and quotations show a fall of about seven points. The markets continue to be very dull and depressing, the weakness in the New York Stock Market having an unsettling effect. Weather news during the week has not been quite so favourable as of late, some light frosts have been reported in the Eastern belt and cold winds and rain in the West have interfered with seed germination. Spot sales for the week 23rd to 29th (inclusive) are 30,000 bales, of which 15,900 are American, 2,600 Brazilian, 200 Argentine, 3,400 Peruvian, 3,600 Egyptian, 900 African, 1,000 East Indian, 2,140 Russian, and 260 sundries. Imports for the same period are 21,456 bales, of which 6,121 are American, 3,100 Brazilian, 1,517 Peruvian, 6,297 Egyptian, 739 African, 3,017 East Indian, and 665 sundries. Quotations to-day are: American Middling, 5.53; Egyptian Sakel, 8.20; Uppers, 6.38; Brazil Fair, 5.58; Peru, G.F. Smooth, 5.98; West African Middlings, 5.58; and East African G.F., 6.58.

Manchester.—Throughout the past week there have been very few indications of business on a larger scale and the majority of buyers have continued their policy of operating from hand to mouth. Although there has not been any particular decline in raw material rates, bearish sentiment is still very pronounced and undoubtedly traders are discouraged by the low prices ruling for all commodities. News from India has not improved and cloth sales have been of retail dimensions. Merchants continue to be advised of picketing in the bazaars to prevent the sale and clearance of British goods. Only isolated transactions have been mentioned for China, chiefly in fancies. Limited quantities of bleached shirtings have been sold for the Near East. A little more activity has prevailed in printed and dyed goods for South America and West Africa. Rather better reports have also been received from the home trade. It is a struggle for most manufacturers to prevent loss of ground. The yarn market has been slow and rather irregular. Only a restricted business has been done in American and Egyptian counts for home use and export.

THE WOOL TRADE.—Bradford.—The opening of the third series of London sales last Tuesday was not characterised by any very excited demand for the raw material, but the large attendance of buyers showed that there was real interest in the situation. The decline in both merino and crossbred tops in Bradford during the interval made lower prices for practically all descriptions inevitable, but as bidding proceeded good merino wool was very little, if any, cheaper than last March, and ordinary merinos did not exceed 5 per cent. decline. This was a satisfactory result in view of the fact that the merino offerings were neither large nor specially attractive compared with what was forthcoming on many occasions at the last sales. Continental competition has not yet done very much towards establishing the level of prices, but it is understood that there are some good buying orders in the background. Crossbreds leave a good deal to be desired in both the prices realisable in Coleman Street and consumption in Yorkshire. The decline in greasy wools ranges from 10 to 15 per cent., whilst shipe lambs are down about 15 per cent. The position in Bradford is practically unchanged. Quotations for both merino and crossbred tops are steady, but there does not seem to be any great amount of new business. Topmakers report increased inquiries, but these seem to be put out as a test of opinion regarding London rather than an indication of further actual requirements.

THE JUTE TRADE.—Dundee.—Mainly as the result of an advance in prices of raw jute, the trade generally has shown improvement. Buyers of both jute yarns and cloth have displayed considerably more interest and business has broadened out. Spinners have been able to establish an advance in their prices for jute yarns, but manufacturers have found it hard to get buyers to concede a fraction more. The prospects of a short crop of jute for next season are responsible for the rise in values of the fibre. Conditions for the growth of the new crop and also for the completion of sowings have not been good and the area covered to date is very considerably reduced compared with that of last year. Sellers of the raw material are very reserved and are not offering freely, and it seems to be quite possible that the low prices ruling this season will not be reverted to. Values are generally about £3 up from the bottom limit touched and spinners have missed their opportunity of buying. They have, however, had little encouragement to add to their stocks, owing to the lack of demand for jute yarns and cloth for many months past. Unfortunately, prices of Calcutta goods have not increased, and there is talk of a further restriction of output in India, which may on this occasion be confined to heavy goods. Stocks are still very large, and at the end of March in Calcutta there were 248,194,000 yards of hessian cloth and bags and 71,267,000 yards of sacking cloth and bags. The price of Daisee assortment is now £17 lowest, with threes at £16 15s. and fours at £15 5s., April-May. Tossa assortment is quoted at £18, threes at £17 15s., and fours at £16 to £16 10s., according to mark. Good lightnings and first marks are sparingly mentioned, the latter being purely nominal at £20, while a few parcels of Red H lightnings are offered at £18, April-May. One or two small sales of Daisee assortment have been made on the spot at the low price of £16 5s. ex warehouse. Yarns are very firm, with 1s. 11d. the very lowest now for common 8-lb. cops and 2s. for 8-lb. spools, which are the rates being paid for the small lots changing hands. Very few spinners will take these limits, however, and the majority are either not sellers or they are asking 1d. more in each case. Twist is firm at 3½d. for 3-ply 8-lb., and sacking yarns have noticeably improved to 2½d. for 24-lb. weight and 3½d. for 8-lb. chains. Rove is also dearer at £19 10s. wanted for 48-lb. and £16 5s. for 200-lb. The finer yarns have been in further demand for export to Brazil, and prices are now 1d. dearer at 2s. 10d. for second quality 8-lb. Rio warp, 2s. 6d. for third and 2s. 3d. for fourth. Carpet yarns have been brighter. Jute cloth business has improved, but there are still few substantial orders being placed. Occasionally manufacturers have obtained better prices, as in the case of the very light-weight Hessians, but business is still taking place at 2½d. for 10½ oz. 40-in. Hessians and from 1½d. for 8-oz. Linoleum Hessians have again been bought this week for the home trade, after one million yards purchased for America last week. Heavy goods are quiet but steady.

THE GRAIN MARKETS.

WHEAT.—Although recent heavy rains have hampered field work in most parts of the country, spring seeding is generally well ahead, and there is little evidence of any appreciable decrease in acreage. Winter crops present a healthy appearance on light soils, but still backward on heavier land. Supplies of native wheat were in small compass and trend of prices firmer. On the import market, a better tone was in evidence following the recent reaction in prices, sellers showing more reserve in face of renewed Continental buying, which encouraged shippers to raise their limits. France has been an active

purchaser of Argentine descriptions, and the milling quota of foreign wheat has been further raised to 25 per cent., against only 5 per cent. permissible last year. Germany is also buying Australian grades freely, which gives rise to expectations of an early reduction in the excessively high import tax. Continued large freight bookings from Argentina, North America and Australia, particularly for May loading to Continental and Mediterranean ports, indicates heavy shipments during that month. In view of increased European requirements up to the next domestic harvests, the undertone of the market remains steady, but large accumulations of old wheat in North America still proves a depressing factor in the general situation, and the uncertainty attaching to United States Farm Board holdings in particular gives rise to a good deal of anxiety, now that the new winter crop will shortly be moving. Shipments continue on a liberal scale, with a further increase in floating supplies to Europe. Quotations: No. 1 hard Northern Manitoba (Vancouver), ex ship, 28s. 9d.; No. 1 Northern Manitoba, ex ship, 28s. 3d.; No. 2 ditto, 27s. 3d.-27s. 6d.; No. 3, 26s.; No. 4 Manitoba, 25s.; Barusso, 63 lbs., 24s.; Rosafe, 63 lbs., 23s. 3d.; Australian, 25s.; Russian on sample, landed, 23s.-24s. per 496 lbs.; English, 5s. 4d.-5s. 6d. per 112 lbs.

WHEAT FLOUR.—The demand for home-milled flour was on quieter lines, but millers maintain the recent advance following the recovery in wheat prices. Imported makes are steady on spot, but business in shipment parcels is limited, North America offers being above buyers' views. Quotations: London, straight run, 24s. per sack for country deliveries, and 23s. London area. Of imported, Manitoba patents, 23s.-26s.; Buffalo ditto, 22s.-24s. 6d.; Australian, 19s.-20s., ex store, per 280 lbs.

BARLEY.—The market in barley has been steady. Quotations: Californian old, landed, 30s.-35s.; new, ex-ship, 30s.-41s. as to sample, Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, landed, 19s.; ex-ship, 18s. per 400 lbs. English malting, 7s. 6d.-8s. 9d.; feed, 5s.-6s. per 112 lbs.

OATS.—The market in oats has been firm. Quotations: Plate, landed, 13s.; ex-ship, 12s.; Chilean tawny, landed, 14s.; whites, landed, 21s.-22s.; North Russian, landed, 18s.; South Russian, 18s.; Danubian, 15s. 9d.; mixed Canadian feed, landed, 12s.; ex-ship, 10s. 9d.; Black Plate, landed, 12s. per 320 lbs. English, 6s. 4d.-6s. 8d. per 112 lbs.

MAIZE.—Of feeding stuffs, a firm tone governed the market for maize, with a high premium for spot and adhoc parcels. New crop positions, however, were not so well supported, owing to large supplies coming forward. The first official Argentine estimate indicates a crop of 43,357,000 quarters, and although below commercial estimates, it is 5½ million quarters greater than the previous record production of 1927. Quotations: Plate, landed, 22s. 6d.; ex-ship to arrive, 21s. 3d.; new, April-May, 17s.; May-June, 16s. 9d.; June-July, 16s. 9d. per 480 lbs. Yellow maize meal, £6 15s. f.o.r. London per ton.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Apr. 25	Cwts. 97,129	Cwts. 174,140	Cwts. 168,682	Cwts. 278,138
34 weeks to Apr. 25	3,944,037	7,971,969	8,554,137	8,697,012
Average price of English wheat per cwt.	s. d. 5 3	s. d. 9 0	s. d. 9 11	s. d. 10 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Apr. 18, 1931	Cwts. 67,087	Cwts. 26,739	Cwts. 24,375	s. d. 5 3	s. d. 7 3	s. d. 6 0
Apr. 25, 1931	97,129	22,944	29,382	5 3	7 3	6 0
Apr. 23, 1927	160,033	38,435	51,513	11 6	10 9	8 4
Apr. 28, 1928	278,138	56,229	37,442	10 5	11 1	12 2
Apr. 27, 1929	168,682	35,975	39,684	9 11	10 9	9 9
Apr. 26, 1930	174,140	69,063	22,545	9 0	7 9	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Apr. 30, 1930.	Jan. 2, 1931.	Apr. 15, 1931.	Apr. 22, 1931.	Apr. 29, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	105½	56½	62½	61½	59½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	101½	79½	83½	81½	81½

The visible supply of wheat in Canada at 61,876,000 bushels, shows a decrease on the week of 3,006,000 bushels. Supplies a year ago stood at 74,631,000 bushels.

OTHER FOODS.

SUGAR.—A slight reaction has followed the recent upward movement in sugar prices. The turnover in raw and refined sugar has been somewhat smaller, and British refined sugar was reduced by 3d. per cwt. on Tuesday. Raw futures have also been slightly easier, and Wednesday's sales included "May delivery" at 6s. 0½d. to 6s. 1½d., as against 6s. 2½d. to 6s. 4½d. on the corresponding day last week; August, at 6s. 4d. to 6s. 4½d., as against 6s. 5d. to

6s. 6½d.; and December, at 6s. 7½d. to 6s. 8½d., as against 6s. 10d. to 6s. 10½d. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London	1,392	553	1,850	1,289	30,503	40,712

COFFEE.—There has been a keen demand at the auctions, and prices are on a higher level than last week. Last week's movements of coffee in London were as follows: Brazilian, landed, 2 bags; delivered for home consumption, 120 bags; exported, 81 bags; stocks, 2,047 bags, against 6,190 bags last year. Central American, landed, 9,452 packages; delivered for home consumption, 4,629; exported, 2,624; stocks, 118,512 packages, against 108,279 a year ago. Other kinds, landed, 8,989 packages; delivered for home consumption, 2,943; exported, 2,824; stocks, 109,718 packages, against 124,581 a year ago.

COCOA.—The market in cocoa has again been dull and prices declined further. Wednesday's quotation for Accra, full fermented, May-June, at 20s. per cwt., f.o.b., London contract, shows a fall of 4½d. on the week. Last week's movements of cocoa in London were as follows: Landed, 4,385 bags; delivered for home consumption, 8,903 bags; exported, 268; stocks, 207,081 bags, against 201,184 last year.

TEA.—The quantities catalogued for this week's auctions comprised 48,917 packages of Indian, 30,466 packages of Ceylon, and 14,784 packages of Java and Sumatra tea. Although fine qualities again met with keen competition at the auctions, there was little interest in medium and common teas, which realised lower prices.

RICE.—The market in rice has again been dull and prices declined further. Wednesday's quotation, for Burma No. 2, cleaned, May-June, in singles to the Continent and to the United Kingdom, at 7s. 3d. per cwt., shows a fall of 1½d. on the week. Movements in London during the past week were as follows: Landed, 51 tons; delivered, 20 tons; stocks, 666 tons, as against 2,509 last year.

POTATOES.—The Borough Market has again been well supplied, and although demand was easier, the recent advance in prices has been maintained. "Best King Edward" again sold at from £9 to £10 per ton.

SPICES.—The spot market for pepper has been quiet, but prices were maintained. Wednesday's price of "Black Singapore," at 6½d. per lb., shows no change as compared with last week. Movements of pepper in London during the past week were as follows:—Black, landed, 2 tons; delivered, 13; stocks, 573 tons, as against 1,016 last year. White, landed, 45 tons; delivered, 43; stocks, 743 tons, against 784 tons a year ago.

MEAT.—The market in meat has been steady, and prices are scarcely changed on the week. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,325 tons, as compared with 8,254 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.0 per cent. of the supplies, as against 85.4 per cent. a year ago; and imported mutton, mainly New Zealand, formed 82.3 per cent. of the total supply, as against 82.8 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally are quiet, and only a small business is passing. Linseed has declined in sympathy with an easier Argentine exchange, and some trade is reported at the lower levels. Current value of Plate on spot at Hull and forward to May being around £8 15s. with June and July something above this figure. For September-October, £8 17s. 6d. has been paid, Calcutta to London. April-May has been done at £10 10s. The quantity of linseed on passage to Europe shows a slight diminution to 211,500 tons, which is 11,000 tons less than last week, and compares with 128,300 tons a year ago. Crushers both here and on the Continent, are only moderate buyers, owing to the demand for oilcake falling off. Cottonseed is weak and lower. For Black Egyptian on passage to Hull £6 3s. 9d. has been accepted, and April and May loadings quote around £6 2s. 6d. Demand for linseed oil is only small. Prices declined in sympathy with seed, but have since steadied. Raw oil on spot, ex Hull mill, is now quoted £17 15s., and May-August delivery £17. Cotton oil is quiet. Crude Egyptian, ex Hull, being obtainable at £20 10s., and common edible at £23 5s. Other seed oils are inclined easier, and further reductions have been made in the mill prices of oilcakes.

HIDE, LEATHER AND ALLIED TRADES.—Prices for ox and heifer hides showed further weakness at the auctions held at Manchester, when several weights in both clear and warbled ox and heifers made ½d. per lb. less money. Cows were from ½d. to ¾d. per lb. cheaper, while bulls and irregulars were lower by ¾d. per lb. Calf skins were steady at the previous week's figures. The market for sheepskins is unsatisfactory, and prices generally are weak. Only small business is passing in connection with foreign hides, and then mostly at lower values. As a matter of fact, tanners have little confidence in the present basis of quotations, and there is a general feeling that further concessions will have to be made before buying is resumed on anything like a reasonable scale. In the South American market the United States trade has been operating in wet salted Frigorifics, but with no support from other directions, prices are considerably lower, Argentine ox having changed hands at 5½d., and Montevideo ox at 5½d. Trade in sole leather during the week has been of fair dimensions, but it is doubtful if the aggregate turnover has been up to that of the previous week or so. Demand

absorbing a fair quantity of short money, so that, although the discount market is still relatively inactive, funds are not too plentiful. Three months' bills are still quoted at the agreed minimum rate of $2\frac{1}{8}$ per cent., but as this rate is only applicable to bills of 63 days to three months' maturities, some competition has sprung up for 60-day bills. Thus, early July bills have lately changed hands at $2\frac{1}{8}$ per cent. A line of £500,000 Uganda three months' bills was successfully placed at $2\frac{1}{8}$ per cent., which is a good rate from the borrower's standpoint.

	Apr. 16, 1931.	Apr. 23, 1931.	Apr. 30, 1931.	May 7, 1931.	Previous Rate and Date Changed.

The Bank return reveals a further increase of £1,255,000 in the Bank's gold stocks, due mainly to its acquisition on Tuesday of the bulk of the Cape gold on offer in the market. Next week £825,000 in bars is expected, and the following week £918,000 in bars and £200,000 in sovereigns. £443,000 is also due from the Argentine about May 20th. The Bank's gold stocks now stand at £147.5 millions in the Issue Department. The note circulation expanded by £6,402,000, partly as the result of end-of-the-month demands by the public, so the Reserve has fallen by £5,147,000. Payment of Government dividends on May 1st explains in part both the contraction of £11,679,000 in Public Deposits and the increase of £9,648,000 in Bankers' Deposits noted above, but another explanation is to be found in the fact that this week's Treasury bills were applied for mainly for payment on May 9th. Government Securities have expanded by £4,825,000.

This week the most important news has come from abroad. As a subsequent paragraph shows, cuts in the New York Reserve Bank's buying rates for bankers' acceptances were accompanied by reductions in the Boston and Philadelphia rediscount rates, while late on Thursday it became known in London that the New York rediscount rate had been reduced from 2 per cent. to the very low figure of $1\frac{1}{2}$ per cent. Money, too, has become very cheap in Paris, and both the franc and the dollar exchanges have responded. It is true that sterling lost ground early in the week, but this was probably due to covering of forward positions opened earlier in the year, and the fact that the relapse was only temporary bears witness to the new fundamental strength of the pound.

In these circumstances it is hardly surprising that suggestions have been heard in the market of an approaching reduction in Bank rate here. Until the New York rediscount rate reduction was announced, such suggestions were premature, but now that New York has come down, a different position has clearly arisen. At times of change it is unwise to make too dogmatic forecasts, but there is no doubt that the situation of sterling arouses far less anxiety than it did even a few weeks ago. Thus, while it may still be too early to look for a reduction in Bank rate, it is conceivable that it may not now be thought so necessary to maintain by agreement a minimum market discount rate of $2\frac{1}{8}$ per cent.

Were market rate to be left free to find its own level, it might very likely fall to about $2\frac{1}{2}$ per cent., and the question is whether such a rate would be so low as to involve the risk of expelling some of the French and American short money now in London. Probably it would not, in view of the low rates prevalent in Paris and New York, and this seems to be a tenable view even when allowance is made for the cost of covering the exchange by forward sales of sterling. This theory, however, would have to be tested practically, if and when such conditions

arise, and so once more it is unwise to be too definite. The discount market, of course, would welcome the removal of the "peg" on the three months' market rate, for it is common knowledge that it has had the effect of restricting business. On balance the situation is developing to the point where its removal would be a justifiable risk.

A reduction in Bank rate is, of course, another story, and, in any case, must be preceded by a freeing of discount rates. A $2\frac{1}{2}$ per cent. Bank rate might easily mean a market rate of under 2 per cent., and such a rate is hardly high enough to be safe. Here, again, the situation must be allowed to develop, and here again it is still inadvisable to express a definite view. For the moment it is sufficient to note that the situation is swinging round in favour of sterling, and so of lower money rates in London, and not to expect too much to happen at once.

This week money in New York has moved on to a definitely lower plane. On Wednesday the New York Reserve Bank made a further reduction in its buying rate for bankers' acceptances, when it announced that it was prepared to buy bills of up to 30 days' maturity at the new record low rate of $1\frac{1}{2}$ per cent. Dealers followed suit by reducing their rates on all bankers' acceptances by $\frac{1}{2}$ per cent. The same day it became known that the Boston Reserve Bank had reduced its rediscount rate from $2\frac{1}{2}$ to 2 per cent., and the Philadelphia Reserve Bank its rediscount rate from $3\frac{1}{2}$ to 3 per cent. With call money at $1\frac{1}{2}$ per cent. and at 1 per cent. outside the market, everything pointed to a lower rediscount rate in New York, and on Thursday the expected announcement was made, the rate being lowered from 2 to $1\frac{1}{2}$ per cent.

The Foreign Exchange market continued fairly active, and, after a temporary relapse, sterling recovered its recent strength. New York fell away to 4.86 $\frac{1}{2}$, but recovered at the close to 4.86 $\frac{1}{2}$, the week's highest rate. The Montreal rate was also $\frac{1}{2}$ cent higher at 4.86 $\frac{1}{2}$. Paris moved in sympathy with the dollar, closing at 124.45, against 124.44 a week ago. Brussels was on offer, the rate rising to 34.98 $\frac{1}{2}$, and Milan was steady at about last week's level. The peseta lost ground, closing at 46.90, after erratic movements between 46.10 and 47.50. A further depreciation in Dutch guilders took the Amsterdam rate to 12.11 $\frac{1}{2}$, or a loss of $1\frac{1}{2}$ cents on the week. Reichsmarks were steady between 20.42 and 20.43. The South American exchanges depreciated. Buenos Aires losing $1\frac{1}{2}$ d. at 34 $\frac{3}{4}$ d., Rio $\frac{3}{4}$ d. at 3 $\frac{3}{4}$ d., and Monte Video $1\frac{1}{2}$ d. at 31d. In the Eastern exchanges both the rupee and the yen were steady at last week's levels. In the forward market dollars moved with the variations in the spot rate, closing at premiums of $\frac{3}{8}$ cents for one, and $\frac{1}{2}$ cents for three months. Paris forwards were at premiums of 16 and 39 centimes. Forward Brussels was slightly more offered at $2\frac{1}{2}$ cents and $5\frac{1}{2}$ cents premium. There was a consistent demand for forward pesetas, the closing margins being at premiums of 3 cents and 14 cents. Amsterdam forwards were in demand at premiums of $\frac{1}{4}$ cents and $1\frac{1}{4}$ cents, respectively. Wider discounts prevailed for forward Reichsmarks at $1\frac{1}{2}$ and $2\frac{1}{2}$ pfennigs for the respective periods. The premium on forward Swiss francs decreased, at $2\frac{1}{2}$ and $5\frac{1}{2}$ centimes for the two periods. Silver was mainly weaker at 13d., but improved at the close to last week's levels of 13 $\frac{3}{4}$ d. for both spot and forward. Hong Kong was 1s. and Shanghai 1s. 3 $\frac{1}{2}$ d.

BANKING SUPPLEMENT.

With this issue of "The Economist" is published a special Supplement dealing with banking conditions at home and abroad. It includes an analysis of British banking earnings, and also of the policy of the Bank for International Settlements, and deals with the banking situation in the United States, France and Germany.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's-Economist Services, 8, Boulevard Street, London, E.C.4.

THE REFORM OF UNEMPLOYMENT INSURANCE.

THE Royal Commission appointed to consider how the Unemployment Insurance Scheme can be made "solvent and self-supporting," and what arrangements are appropriate to the case of unemployed workers unable to qualify for inclusion in a scheme of insurance, has had submitted to it this week important memoranda of evidence from the two leading representative bodies of employers and employed—the National Confederation of Employers' Organisations and the General Council of the Trades Union Congress. The Commissioners, in view of the extent of the rapprochement which the Melchett-Turner conferences achieved in the relations between capital and labour, may perhaps have hoped for some measure, at least, of agreement in the evidence put forward by these partners in industry; but any hopes they entertained have been disappointed. The submissions in most essentials are poles apart.

The T.U.C., who had first innings, began their evidence with the statement, which nobody could challenge, that the administration of unemployment benefit has long ceased to be on an insurance basis. This development, however, was not to be deplored or rectified; it should be accepted, perpetuated and universalised. To discriminate between different categories of the unemployed meant, in derogatory terms, the pauperisation of some; the remedy was the pauperisation of all. That is to say, the contributory system should be swept away; maintenance should be the right of everybody; and the whole cost of unemployment benefit, on a substantially higher scale than at present (the figure proposed for a married man with three children was 45s., as compared with 32s., per week), should be borne by the Exchequer; and the Treasury should also assume the charge of cancelling the fund's existing indebtedness.

"Neither the workers nor employers, except as taxpayers, should be burdened with the cost of maintaining the unemployed. At present the employer's contribution has to be paid by him whether he makes a profit, or does not. . . . The emergency should be met by a special unemployment levy on all incomes, whether from earnings or from interest and profit. The levy would be on a percentage basis . . . varied from time to time in accordance with the amount required . . . (but) not to exceed 1 per cent. on incomes up to £250 per annum."

The levy, according to the T.U.C.'s proposals, would be deducted at the source in the case of employed persons, and would be collected, through the existing income-tax machinery, on the basis of gross receipts from profits and investments. Subject to disqualification in the event of flagrant refusal to accept "suitable employment," all employed persons should be eligible for benefit, regardless of means or needs, and administration of benefit, in accordance with principles enacted by Parliament, should be rendered "more flexible" by handing over the management of this great national fund to a board of three nominees of the T.U.C., three nominees of the employers' organisations, two official members, and an independent chairman.

There are certain features of this extravagant scheme of "work or maintenance" which are so obviously impractical as to suggest that it may be a tactical manoeuvre motivated by the reluctance of the T.U.C. to assume responsibility for participating in an attempt to purge the present system of its extravagances and other grave defects. The suggested upward revision of the rates of benefit would exceed the present actual wages of large sections of workers (and these are at the utmost limit, if not in many cases beyond the maximum, that industries can pay), while the cost of the scheme would increase unemployment by adding enormously to the existing grave burden of direct taxation. Nevertheless, in certain points, notably its recognition of the danger of making the burden of unemployment benefit a charge entering into the costs of production and its acceptance of the idea of broadening the basis of direct taxation, the T.U.C.'s memorandum is on firm ground.

To these points we shall return; but, first, we may conveniently consider the other side of the picture presented by the employers' evidence. Prefacing their recommen-

dations with a survey of the now only too familiar history of the progressive development of insurance into undisguised relief paid in the form of benefits, the National Confederation strongly maintain that merely to remove from the existing system the more flagrant "abuses," to which attention has of late been prominently drawn, would not in itself offer any true solution of the problem. At its root lies the fact that "the use to which unemployment insurance has been put in the past ten years has fostered a belief that this country has unlimited resources which can enable it to act as a universal provider against all ills by paying weekly benefits which are demandable as a legal right, without conditions attached and without reference either to the recipient's own contributions or his needs." The memorandum proceeds:—

"Such a belief is the negation of that spirit of thrift, independence and sense of individual responsibility which Unemployment Insurance was intended to develop, and we go so far as to say that the fostering of that belief is insidiously sapping the whole social, financial and industrial stability of the country. . . . In our view, the system of Unemployment Benefits as operating since 1921 has, by preventing unemployment from acting as a corrective factor in the adjustment of wage levels and costs of production, been responsible, in no small measure, for aggravating the very disease which it has been trying to relieve."

The Confederation agrees with the T.U.C. that the existing debt of the Unemployment Insurance Fund should be transferred to the Treasury in order that a revised scheme may not be saddled with a heavy initial burden. For the future it is suggested that the solvency of the Insurance Fund proper should be safeguarded by placing it under the control of a board of trustees. The weekly rates of contribution should ordinarily never exceed one shilling and threepence for adult males, payable in equal proportions by the contributor, the employer and the State, and the total number of benefits payable to any individual should bear a direct ratio to the number of contributions paid and should be limited to a fixed maximum in any single year. The board of trustees should be empowered to modify the amount of weekly benefit (the Confederation imply that, in view of the fall in the cost of living, the present scale should be revised downwards) and to vary the "ratio" and "yearly limit" rules to such an extent as might be necessary to ensure the fund's solvency, with a further power for that purpose to increase the rates of contribution up to a maximum of 1d. for each of the three contributing parties.

To meet the case of those unable to qualify for benefit under the revised system, the Confederation recommends that other unemployed persons should be dealt with by a system of "relief," the fundamental principles of which should be (a) that relief should only be given after adequate enquiry and assessment of need; (b) that relief should not be given to any applicant who refuses to accept work which he is reasonably capable of performing even though it is outside his normal occupation; (c) that a proper co-ordination of the existing public assistance and employment exchange services should provide the machinery for administering that relief; (d) that the system should be under the general supervision of a Statutory Commission appointed by Parliament for the purpose; and (e) that the cost of the system should be an Exchequer charge subject to the local authorities bearing only such proportion as may be deemed necessary to ensure economic and efficient administration. With regard to the scales of relief, the Confederation suggests that these should be governed by the determinations of the Statutory Commission and should follow the principle of being sufficiently low "not to tempt the individual to improvidence while he is at work, or tempt him to prefer relief to work when he is unemployed, or be such as to interfere with the mobility of labour or create and maintain rigidity of wage rates and costs of production."

There are several points in this evidence with which we find ourselves in agreement. It is important in our view that in any new scheme a clear distinction should be drawn between insurance benefits proper and payments made after the former have ceased—and that for two reasons. The first is that it is hardly desirable to retain

the contributory principle in order that both employers and employed may have as strong an incentive as possible to reduce unemployment to a minimum and thereby ultimately reduce their own rates of contribution. The second, and even more important, reason is that when this form of self-help is exhausted, and unemployment becomes a direct charge on the community, the latter is entitled to insist on more stringent rules regarding transfer to other occupations and in the case of appropriate classes of the employed upon some form of training. We are well aware of the objections of those who argue that such a distinction suggests that there is some stigma attaching to those who have been out of work for, say, 33 weeks, but none on those who have been only out 32 weeks. There is, of course, none; and in this connection we think it unfortunate that the Confederation have used the word "relief" in regard to exceptional unemployment payments. But the case for taking more drastic steps as time goes on to secure the transfer of labour in the national interest is overwhelming. We are therefore strongly opposed to the desire of the T.U.C. to obliterate what appears to us to be a most valuable principle—contributory insurance.

We do not admit, however, that it is practicable, under existing circumstances and considering the probabilities of the next few years, to reduce the present rates of contribution or to limit them in advance by Statute, however desirable it might be to relieve employers' costs of a proportion of this burden. In this matter the determining factor must obviously be the rates of future benefit; and here we would suggest that the Royal Commission should give careful consideration to the possibility of modifying the present system of a national flat rate. Given the essential need to maintain the incentive of the individual to find work, it follows that a national flat rate should be less than the minimum wage obtainable for employment in the worst paid industries in the most depressed districts. This, however, would palpably not meet the needs of unemployed persons in, say, London. Hence there is a strong case to be made for either having different scales of benefit in different industries and localities, or, alternatively, making benefit proportionate to the wages earned by the contributor when in employment.

With regard to those whose claims to insurance benefit lapse, but for whose support some maintenance must, by common consent, be provided, the proposals of the National Confederation appear to us to be broadly on the right lines. There is, however, one point in the recommendations to which we are inclined to take exception, namely, the proposal that the cost of relief should be absorbed in the national budget subject to some contribution from local authorities. We agree that it is impossible to add to costs of production the whole burden of financing our present exceptional unemployment, and, as we have already said, we welcome the T.U.C.'s recognition of the objections to saddling enterprise with a charge payable regardless of profits. But there appears to us to be a grave danger in sinking the cost of non-insurance relief in the general expenditure of the Budget. To do so must necessarily tend to obscure from public attention the real crux of the problem, which is not how to finance unemployment, but how to reabsorb into industry its recipients.

It is, we are aware, frequently argued that there is something financially vicious in earmarking any tax for a specific purpose, but, in the special case of unemployment, at any rate, we are of opinion that there is much to be said for having two separate and self-contained funds, the one an insurance fund proper, the other a fund for financing the provision for exceptional unemployment. Such a fund might well draw its revenues from a special surcharge on incomes, including, as the T.U.C. has suggested, those of weekly wage earners, whose employers would be required to make a deduction at the source. To impose such an emergency levy *ad hoc* would, in our view, be definitely preferable to making the Exchequer finance unemployment out of its general Budget revenue—a course certainly entailing the imposition of more taxation whose purpose, as time went on, would be lost sight of, and whose removal would, as always, be difficult to guarantee when the emergency had passed.

CLOUDS OVER CHINA.

FROM last autumn until the past few days the situation in China has been more promising than at any other time since the beginning of the Revolution—now more than twenty years ago. While brigandage on the grand scale has still been rife in the South, there has been no regular civil war; and while the negotiations between the Nanking Government and "the Treaty Powers" over the abrogation of extra-territoriality have dragged on, the likelihood of a general settlement of relations between China and the Powers in the near future has been fore-shadowed by certain auspicious events: for instance, the rendition, last October, of the British leased territory of Wei-hai-wei and the invitation extended in November by the Municipal Council of the International Settlement at Shanghai to Mr Justice Feetham, to report and advise on the situation in the principal treaty port of China. Only last week, we commented on the situation at Shanghai, *à propos* of the publication of the first part of Judge Feetham's report. The second part, setting out his recommendations, is expected to appear in a few weeks. Meanwhile, however, the political skies in China have suddenly become overcast in the disconcerting fashion of Chinese political weather. The breakdown of the Sino-British negotiations over extra-territoriality is announced, and at the same time there is a threat that the dissensions between politicians at Nanking and the activities of brigands south of the Yangtse may between them breed another civil war.

The issue at Nanking is important: it is the issue between a single-party oligarchy, of the type that prevails to-day in Italy and Russia, and some alternative form of Government which would probably be democratic in appearance and dictatorial in reality. Sun Yat-sen, the father of the Chinese Revolution and founder of the Kuomintang, laid down that the Revolution was to pass successively through the stages of military dictatorship and party tutelage on its way to the definitive stage of parliamentary democracy. After the hoisting of the Kuomintang flag over Peking in the summer of 1928, it was announced that the period of militarism had come to an end and the period of tutelage begun; but the tutelage of the Kuomintang has proved not only irksome to Chinese military dictators, but grievous to the Chinese people. The local organs of the Party in the provinces and sub-districts have done little constructive work—they have made hardly any contribution to the restoration of order and prosperity—but they have exercised an effective tyranny to their own personal advantage with little or no control on the part of the central organisation of the Party.

Their deserved unpopularity is one of the factors which accounts for the persistence of brigandage and the recurrence of military pronunciamientos in the provinces; and when the last civil war—between the Nanking Government of the one part and Fêng and Yen of the other—was brought to an end last autumn by the intervention of "the Young Marshal" from Manchuria, Chang Hsüeh-liang, the rescuer of the Central Government, made it a condition that the Kuomintang organisation should not function in the provinces under his control. This condition was by no means disagreeable to President Chiang Kai-shek; and thereafter Chiang and Chang, in concert, persuaded, or compelled, the Kuomintang to agree to the calling of a national convention with a view to bringing "the period of tutelage" to a speedy end. The convention is due to meet this very month; and, in anticipation of its meeting, Hu Han-min, the principal champion of the continuance of Party tutelage, has been arrested by Chiang Kai-shek and interned.

There is always, however, a covert connection between the political intrigues and rivalries at Nanking and the aspirations after local autonomy in the provinces. And it now looks as though President Chiang had scotched the opposition to his policy at the centre of China only to stimulate it on the periphery. There are ominous indications that Canton, the mother of the Chinese Revolution, is preparing to join forces with the war-lords

of the adjoining province of Kwangsi—a recalcitrant military power which Chiang Kai-shek has several times defeated but never quite succeeded in breaking up. This is a portent, for the sister provinces of Kwangtung (Canton) and Kwangsi have seldom been on the same side in the almost infinite variety of permutations and combinations through which Chinese politics have passed since 1911. Taken in conjunction with the ill-success of Chiang Kai-shek's endeavours to suppress brigandage in the Yangtse Basin, this new threat from the South is very disquieting.

This, then, is the internal situation in China at the moment when the Sino-British negotiations over extra-territoriality have come to a standstill. It will be remembered that, as long ago as December 28, 1929, the State Council at Nanking, acting on instructions from the Central Political Council, issued a mandate to the effect that all foreign nationals in the territory of China who were enjoying extra-territorial privileges on that date should abide by the laws, ordinances and regulations duly promulgated by the central and local Governments of China on and after January 1, 1930. This drastic gesture was qualified by a saving clause providing for the execution of the mandate through a series of constitutional stages; and it was understood, as between the Nanking Government and "the Treaty Powers"—Great Britain in particular—that, in the meantime, the *status quo* was not to be disturbed and that the negotiations for an agreed abrogation of extra-territoriality were to continue.

Last Monday a new mandate was issued at Nanking announcing that the procedure laid down in the mandate of December 28, 1929, has now been carried out; that a plan for the application of Chinese law to the nationals of "the Treaty Powers" in China has been drawn up; and that, since more than sixteen months have elapsed without the negotiations between Nanking and the Powers resulting in agreement, the new regulations are to be brought into force, by the unilateral act of the Chinese Government, as from January 1, 1932 (or, according to another report, from October 1, 1931).

The rock on which the Sino-British negotiations have come to grief is a stipulation, on the British side, that there shall be four reserved areas—the treaty ports of Shanghai, Tientsin, Canton and Hankow—to which the proposed agreement for the abrogation of extra-territoriality shall not immediately apply. In answer to questions in the House on Wednesday, Mr Henderson stated that, in the view of the British Government, these ports must be excluded from the operation of the Treaty "until such time as necessary changes have been effected in the municipal administration at those ports to meet the new situation created by the abolition of extra-territorial rights." Since the four ports contain, between them, the great mass of foreign interests and foreign residents in China, and since at the same time, and for this very reason, these four ports are at present the

principal focuses of China's economic life, it is equally natural that the British Government should insist upon this reservation and that the Chinese Government should refuse to consider it. Here is the *impasse*, and it is a formidable one—though, pending the publication of the second part of Judge Feetham's report, we may perhaps indulge in the hope that he may have discovered some way out of the difficulty at Shanghai which could be followed in the other three treaty ports likewise.

Meanwhile, on the Chinese side, it has been announced that the new regulations, applicable to the nationals of Treaty Powers in China five months or seven months hence, include the following points: Special courts are to be set up in a number of places, including Shanghai, Tientsin, Mukden, Canton, and, presumably, also Hankow, for the trial of civil and criminal cases in which foreigners are involved (the term foreigners being restricted, for this purpose, to the nationals of Powers which still possessed extra-territorial rights in China on December 28, 1929). Outside the jurisdiction of these courts, foreign defendants may petition to have their cases tried in special courts. Advisers shall be attached to special courts, who shall not necessarily be Chinese. The advisers may submit written memoranda to the courts, but may not interfere with their judgments. Arrest and search are to be carried out in accordance with the Chinese criminal code, but foreigners arrested are to be handed over for trial within twenty-four hours, and they may be represented by foreign lawyers. Violations of the police regulations will be dealt with in the police courts, which will be empowered to impose fines up to \$15 (Mex.).

From this summary it would appear that the new regulations are based upon those which were introduced in Northern Manchuria after the voluntary abandonment of extra-territoriality by the Soviet Government half-a-dozen years ago. Does the Chinese Government really mean to apply the same system throughout China, by a unilateral act, to the nationals of all the remaining Treaty Powers, without the consent of the Powers themselves? That would, of course, be asking for trouble next October or January; but probably the statesmen at Nanking, who are often driven by necessity to live from hand-to-mouth, are thinking, not of October or January, but of this present month of May. It is not unlikely that the key to their present action, *à propos* of extra-territoriality, is to be found in the new threat to their authority at home. If we divine correctly, the present gesture is directed not so much towards the foreign Powers as towards the Chinese people. The Nanking Government, threatened once more by dissension in the capital and disaffection in the provinces, wishes to proclaim that in its foreign policy it is a stalwart champion of the national cause. As to what will happen at Shanghai or Tientsin when the date comes for the new mandate on extra-territoriality to take effect—perhaps it is more pertinent to ask what is going to happen, first, in Nanking and in Canton, before the present month runs out.

THE NEW LAND TAX.

In debating Mr Snowden's Land Tax proposal this week the House of Commons was in a position of considerable difficulty, for it was only shown the skeleton of the scheme, vital details of which will not be available until the Finance Bill is published. And in this matter of land taxation, as all who followed the discussion of 1909-10 will vividly remember, detail is all important. Any such project involves a host of intricate questions, and until it is known what is the precise manner in which the Government propose to meet such problems as are raised by methods of valuation and the scope of exemption, it is impossible to pass final judgment on the particular plan which Mr Snowden has advanced. The outlines of it can be explained in a few words. A flat rate of a penny in the £ is to be imposed upon bare site value of every unit of land over £120, with the exception of purely agricultural land, sites occupied by churches, hospitals and publicly-owned playing fields being among other exempted properties, the list of which will, presumably, be lengthened in the course of discussion. The valuation is to take place as at August 1, 1931, and is estimated to occupy two years, and revaluation is to be undertaken every five years. That practically exhausts the information at present at the disposal of the public.

In these circumstances both Parliament and the Press have of necessity concentrated rather upon the principles and the probable broad effects rather than on the exact nature of the proposal. It was as clear from the tone as from the text of the Chancellor's speech in the House of Commons on Monday that with him the motive force behind the plan is political and social. His two great aims are to free the land for the people, and to ensure that where land gains in value through services rendered by the community, the community shall take to itself a part of the benefit. We agree with the Chancellor and his school of thought to this extent that wherever owners of land can unreasonably withhold it from proper development for the benefit of the community, or can extort fantastic prices from the community, legislation to prevent so glaring a social abuse deserves the support of all good citizens. The coming of the motor and other means of rapid transport, however, have tended very considerably to moderate the effects of an evil which was much more serious a few decades ago, when the tendency was still to pack the population, as well as factories, into restricted urban areas. This view of the land question is tending rapidly to become out of date. Moreover, the community has armed itself with legislation compelling the landowner to sell at a fair market price computed by a tribunal to be that which could be reasonably received by a willing seller.

A much more important aspect of the land question, in our view, is that of increment in land value due to State or local services paid for out of the public rates or taxes—in particular, the building of roads. Here we entirely agree with Mr Snowden that such values are a proper target for the tax gatherer. The Chancellor has, however, abandoned any attempt to impose an increment duty such as that contained in the land taxation scheme of 1909, on the ground that such a duty is impracticable, although in a Town Planning Bill, now before the House of Commons, some attempt is made to meet the problem by rendering it possible for local authorities in urban areas to obtain for the community the betterment value created by public services. Such values have been secured by various devices in many countries. Mr Snowden's plan will give a very modest proportion of such increment to the Exchequer whenever periodical revaluations are made, but we should like to see a more determined effort made to touch a source of revenue which it is generally agreed may be equitably taken by the State, and the heavy taxation of which would not hamper development.

Objection has been raised to the tax on the ground that it is a capital tax on property, the profits or interest from which are already heavily taxed. In so far as land is appreciating in excess of the normal capitalised value of the income which it yields, either because it is being held

back from development or for any other reason, this objection against an additional capital duty is not valid. But for most land it is probably true. It is for this reason that a flat rate tax of the kind proposed cannot equitably be levied at a heavy rate without creating an excessive discrimination against a particular form of property. The tax, however, is naturally a very strong attraction to a Chancellor, for though there is room for a difference of opinion as to the final incidence of this as of every other kind of tax, we agree with those who hold that this is one of the most difficult of all taxes for those upon whom it is levied to pass on. It is therefore likely to have very little effect upon trade and industry.

A second criticism to which Mr Snowden, in our opinion, has not given a satisfactory reply, is with regard to the proposal to exempt land of a value of less than £120. If one of his aims is to broaden the basis of future taxation—as it is the avowed aim both of Labour back benches and of Mr Lloyd George—why does he propose to exempt property of the value of less than £120? The tax as proposed at present does nothing to broaden the basis of taxation. It does, in fact, impose the whole of its burden upon those who already bear the main brunt.

We very much regret that Mr Snowden did not see his way to give an estimate of the yield of this tax. The cost of valuation is estimated at £1½ millions—and may ultimately prove to be considerably higher—of which £400,000 will fall on this year's Budget, though there is no hope of any return for two years. This is a large sum and—followed, as it will be, by periodical revaluations—is likely to make a considerable hole in the yield of the tax. Again, so long as the amount of the proceeds is entirely vague, there is a danger that unjustified hopes of solving Budget difficulties from this source may divert attention from the unpopular course of public retrenchment. We shall not attempt to rush in where the Chancellor fears to tread. Mr Snowden himself observed in the debate that any estimate he might give might be absurdly low or fantastically high. Bearing this warning in mind, we would only observe that Sir Josiah Stamp in a recent issue of the *Statistical Journal*, gave—within wide limits of error—figures of £4,500 millions as the value of buildings (including sites), and £950 millions for "Land," including farm buildings, etc. A penny in the £ on this combined total would yield £23 millions a year; but as most of the agricultural value will be exempt and most of the former figure represents the buildings on the site, the yield can only be a fraction of this total.

Mr Snowden has not really made clear the whole of his difficulties in dealing with this question of land taxation. In our view there are two desirable things waiting to be done. One is to secure a substantial proportion of the enhancement of land values which is being created every day by public expenditure upon roads; and the other is gradually to transfer part of the burden of rates from buildings to sites. The de-rating plan has made this less urgent from the point of view of the prosperity of industry, but it is still a desirable reform in regard to residential and business premises. We regret that in dealing with this question Mr Snowden should have adhered to traditional methods instead of tackling these two problems.

FOREIGN LOAN MARKETS.—III. MINOR CENTRES.

(BY A CORRESPONDENT.)

Two previous articles, which appeared respectively in the March 21 and April 25 issues of the *Economist*, dealt with the position and prospects of the New York and Paris markets for foreign loans. It remains to consider four minor Continental markets, viz., Amsterdam, Switzerland, Sweden and Italy. None of these markets is capable by itself of handling a large foreign issue, but each of them is of importance as an auxiliary market for international loans, the main part of which is placed in one or several of the leading centres. They are, moreover, in a position to take up comparatively small foreign

loans even without the co-operation of any of the principal markets; and the Swiss, Dutch and Swedish markets have acquired considerable importance through their activity in issuing small foreign loans, either jointly or individually. While issuing activity in the leading foreign loan markets has been at a low ebb during the last two years, Dutch, Swiss and Swedish houses have continued to do a fair amount of business, and rendered valuable services to borrowers in urgent need of funds. They have thus been able to establish connections which are likely to prove valuable, even after the resumption of full activity in the leading centres.

In their rôle of auxiliary markets where parts of large international loans are placed the minor centres are also capable of rendering very useful services. While leading centres usually find it difficult to come to terms with each other, owing to the keen rivalry between them and to their ambition to assume the lead of the international group, difficulties of such a nature do not handicap the co-operation between a leading centre and the minor centres. The secondary markets are well aware of their limitations, and do not as a rule compete with the leading centres for any large transaction. They are quite content to occupy a secondary part in the international banking group, and are willing to take a small participation in any loan which appears to them a good business proposition. They remain strictly neutral in the fight for supremacy between London, New York and Paris, and are equally willing to assist either of the three centres in the marketing of foreign bonds.

The market which, among the minor centres, has been affected to the greatest extent by the depression is Holland. The slump in colonial produce has reduced considerably the profits constituting the principal resources which enabled the Dutch market to absorb a large amount of foreign securities before the crisis. Moreover, as the amount of foreign loans issued in Holland before 1929 was greater than the amount absorbed by the other secondary markets, the losses suffered by Dutch investors were more considerable than those of Swiss or Swedish investors. In addition, an abnormally large amount of foreign dollar bonds issued in the United States with Dutch participation has found its way to the Dutch market during the last three years, so that the public is to a great extent saturated with foreign bonds. Notwithstanding these circumstances, Dutch issuing houses have participated in the majority of international loan transactions during the period of depression. They realise the advantages of maintaining the continuity of their foreign issuing activity, even if the transactions result in an occasional loss, as was the case during 1930. The mentality of the Amsterdam market and of the Dutch public is even more international than that of the London market and of the British public; they do not insist that the Dutch portion of the international loans should be issued in guilder, and any attempt to oppose foreign lending on the ground of its effect upon home trade would be waved aside without hesitation.

Switzerland has recently made remarkable progress in the field of international issuing activity. It may, in fact, be said that she has gained during the last two years in relative importance to the same extent as Holland has declined. This is the result of the heavy influx of foreign funds seeking refuge from taxation or from possible currency depreciation. Switzerland has been suffering lately from an acute *embarras de richesse*, owing to the excessive supply of short-term funds and the difficulty of employing them profitably. Swiss banks have had to resort to various means to discourage the inflow, which continued unabated in spite of their decision not to allow any interest on new deposits. There have thus been ample resources available for lending abroad. Although the practice of investing short-term funds in long-term loans may be open to criticism, there is no doubt that a large percentage of the short funds recently placed in Switzerland will be kept there for some years at least; and their reinvestment in foreign bonds to a moderate extent need not be regarded as unsound. While some years ago the foreign issuing activity of Swiss banks met

with a great deal of local opposition on the ground that it was diverting capital from home industries, objections of this nature have disappeared completely owing to the plethora of funds and the slackening of demand, during the depression, for home requirements. Thus one of the principal obstacles to the development of the Swiss market for foreign loans has ceased to exist.

Sweden participates in foreign loans in two different ways. Its leading banks join international syndicates and acquire a small portion of international loans, in the same way as Dutch or Swiss banks do, though the amount is usually smaller than the Dutch or Swiss participation. Apart from this, a series of special transactions—some of them of very considerable magnitude—have been carried out by Kreuger and Toll. During the early years of the expansion of that concern in the sphere of international finance, it proved to be a serious rival to international banking groups; lately, however, Mr. Kreuger has worked in close collaboration with the leading banks of various centres, and, instead of undertaking the whole amount of loans, he is inclined to take over a participation of considerable importance. The great part of the foreign bonds thus marketed does not come to Sweden, either directly or indirectly, but is financed mainly through share or debenture issues abroad. This, however, does not reduce the importance of Stockholm as a lending centre; after all, the true rôle of an international banker is to re-lend abroad the funds he borrows abroad.

The Italian loan market belongs to a different category from the Swiss, Dutch and Swedish loan markets. Its activities are more influenced by considerations of a political nature. In most cases when Italian banking groups have undertaken to co-operate with international syndicates in the placing of a loan, the political motive has played a prominent part. In fact, for political reasons, Italian financial interests have undertaken on a few occasions to issue loans independently of other markets. As is well known, Italy does not possess any net surplus available for lending abroad; she is a borrower rather than a lender in international relations. The policy that inspires her international issuing activity is none the less wise, for it tends to increase the financial prestige of the country and to establish close links with the leading financial markets.

A revival of issuing activity in the principal centres is not likely to make any considerable difference to the four minor markets for foreign loans. Although the number of loans they issue independently of any of the big centres may decline, the number of transactions in which they take a participation will doubtless increase. The banks of the leading centres welcome the co-operation of the auxiliary markets, as it enables them to conclude loans beyond the absorbing capacity of their own market, and it places the issues on a broader international basis, which is decidedly an advantage from the point of view of both borrowers, issuing houses and investors.

BRITISH AND BELGIAN STEEL WAGE-COSTS.

The following article by a Belgian correspondent gives an account of an investigation made by Belgian business men and economists into comparative iron and steel costs of Britain and Belgium, the end in view being to determine what part differences in wages play in competition. The results are interesting and important. If they are substantiated, they suggest that the figures produced by the International Labour Office of comparative real wages in Brussels and London, though possibly correct for those cities, are not true for the industrial centres. They show further that arguments for Protection, based on the assumption that the Belgian worker is sweated and is on an unduly low standard of living, are unsound; also that the real wages of the Belgian worker have improved more than those of the British worker as compared with the pre-war situation. The writer very properly draws attention to the important fact that, in talking of sweated labour in relation to competition, it is vital to draw a distinction between money wages and real wages. It is perfectly true

that it is money wages which the British manufacturer has to take into account in his bill of costs. For many decades these wages have been relatively high in Britain; but hitherto we have overcome this disadvantage by superior efficiency, or by cheaper material, or by closer proximity to the market, or by our commercial advantages in buying and selling. If these factors no longer enable us to bridge the gulf in nominal wages, we must either give up selling or adjust our costs. Unless we can re-establish a sufficient lead in efficiency, we must reduce our nominal wage and price level to that of our competitors.

In his address to the shareholders' annual meeting, the Governor of the National Bank of Belgium recently observed:—"One reads sometimes that the expansion of our industry is due to low wages and long hours of labour. The eight-hours' day is nowhere better kept than in Belgium. As to wages, I may refer to three facts. A few years ago a British municipality had an investigation made of wages in the electrical works of Charleroi. The investigation proved that real wages (i.e., in relation with the cost of living) were as favourable as those of the British workmen. A few months ago we had an inquiry made into the wages of the iron and steel industry in both countries. This investigation was conducted by an impartial economist and two distinguished experts in the steel industry. It proves beyond any doubt that if there be a difference in nominal wages—although smaller than often believed—it is made good and, perhaps, more than compensated by accessory advantages which the Belgian industry gives to its labour and by the cost-of-living and other secondary conditions. Finally, an important German mining review states in its December, 1930, number that real wages in the Belgian coal industry are the highest in Europe, Great Britain included."

The detailed results of the two inquiries referred to may be of interest to readers of the *Economist*. In August, 1927, electrical manufacturers of Charleroi had tendered the lowest price for important supplies to an English municipality. When the tender came up for approval, the criticism was made that the lower price of the Belgian factory could only be obtained by underpaid and over-worked labour. Thereupon it was resolved that an inquiry should be made on the spot. This was done, and the necessary information was obtained by the municipality's delegate—not from the Belgian manufacturers, but direct from the labour unions, to whom he carried introductions. The British inquirer found that the Belgian workmen on the whole were considerably better off than they were in 1914; in spite of the reduction of working hours to the eight-hour day, their purchasing power was from 25 to 28 per cent. higher than before the war. If nominal wages in 1927 were lower in Belgium than in England, real wages, expressed in purchasing power, were at least as high; after paying for food and rent, the Belgian industrial workman had a larger "free" balance than his British comrade; the workmen in Belgium generally looked well fed, healthy and contented; and, in short, the idea that Belgian labour was "sweated" was quite baseless.

The more recent inquiry, which relates to the iron and steel industry, was made last year simultaneously in Great Britain and in Belgium. The Governor of the National Bank of Belgium appointed the inquirers, and his choice fell on a distinguished economist, professor at one of the Belgian universities, and two leading industrialists, occupying eminent positions in Belgo-Luxembourg steel manufacturing. The delegation went to England and Scotland, and also to the principal steel mills in Belgium and Luxembourg; and, after a very thorough and objective examination of all the elements of the problem, they reached several interesting conclusions. As to nominal wages, they found that the amount of accessory and other collateral advantages which were paid by the Belgian and Luxembourg industry to their labour exceeded by far what was done by the British industries. They rightly considered that these collateral benefits—e.g., family allowances, cheap rent on houses belonging to the factory, medical and other social services, greater regularity of employment, etc.—ought to be added to nominal wages. For instance, in the case of the British

worker in the metal industry, account should be taken of 10.5 weeks per annum of unemployment on the average for the years 1923 to 1929, as compared with a corresponding figure of 1.9 weeks of unemployment per annum in Belgium. Again, social advantages other than unemployment insurance may be calculated to cost 9d. per week in England; in Belgium, one may consider 5 per cent. of the wage bill an average charge for the social expenses of factories, apart from the cost of family allowances. Taking these factors into consideration, the average weekly wage of the British metal worker amounted to 54s., or 472.50 Belgian francs; while the Belgian worker got 326 francs. Thus, average nominal wages were in Belgium equal to 69 per cent. of average British wages, while the proportion ran up to 76 per cent. in Luxembourg. Without taking the respective risks of unemployment into consideration, the figures were 63 per cent. and 68 per cent. respectively.

The inquirers then investigated the purchasing power represented by these wages and the general conditions of life of the labour classes in both countries. The various items of the family budget were examined separately. As to housing conditions, it appeared clearly that the Belgian workman is very definitely better off than his British colleague. Rents are at most half as high in Belgian industrial districts as in British, viz., 56 to 350 francs a month, with an average of 175 francs, against about 400 francs in Great Britain. Moreover, an important percentage of the houses are owned by the workmen (25 per cent. in Seraing, 52.8 per cent. in La Louvière, 60 per cent. in Marchienne-au-Pont), while in newer districts houses are put at the disposal of workmen by the factories at especially low prices (56 to 200 francs a month). A number of facilities are also given to people who want to buy or build a house.

As for food, taste and customs vary so much from one country to another that a direct comparison of budgets is scarcely possible, and the most scientific method of comparison is to determine what amount of food families can buy in each country on about 60 per cent. of their budgets, which is the usual proportion in both countries. Using this method, the inquirers found that differences in nominal prices were 23.7 per cent. in favour of Belgium, if the composition of the British food budget of the 1904 inquiry was taken as standard, and 32.5 per cent. according to the Belgian standard elicited by the 1921 inquiry. The differences in price apply, of course, to staple products and do not take into consideration such things as vegetables, poultry, rabbits, which are very cheap in Belgium, often raised in home gardens, and extensively consumed. For clothes, transport, taxes, entertainment and other articles, price comparisons showed a still bigger discrepancy in favour of the Belgian worker.

A final question was then investigated: Whether the difference in wages and hours of labour in both countries was greater at present than before the war, at a time when the British iron and steel industry was holding its own, while cheap costs of living and low nominal wages already prevailed in Belgium. An inquiry made in 1908 by the Board of Trade gives the necessary basis for comparison, and the investigation showed that the discrepancy in daily nominal wages now existing is not substantially different from what it was before the war, and that any possible increase is more than compensated by greater differences in the cost of living. In 1908 Belgian weekly nominal wages were equal to 63 per cent. of British wages in the industries then investigated (metal not included), while in 1913 the proportion was 75 per cent. for the iron and steel industry; but, at that time, Belgian living costs were 81 to 89 per cent. of British, according to the budget chosen as standard.

It seems thus established beyond doubt that the present success of Belgian and Luxembourg iron and steel works does not depend on a lower standard of living of their labour. Other factors explain the present difficulties of the British industry, the principal cause being that if a few British factories are up to date—and these are able to compete—the great majority have fallen behind the times in equipment and organisation. If a

period of prosperity or artificial means like Protection allowed a number of the older plants to be used again, this would simply mean that the cost of iron and steel thus obtained would be higher than the present British average. With the older, less efficient British plants it would be impossible to produce on competitive terms for any length of time.

CANADA'S GRAIN PROBLEM.

(BY OUR OTTAWA CORRESPONDENT.)

THE problem of the fortunes of the graingrowers of the prairie provinces is still a source of profound anxiety to the Federal Government, their provincial administrations and the business and financial leaders of Canada. Mr Bennett, speaking in the House of Commons on April 21st, essayed to refute the pessimistic accounts of the western situation given during the debate on the Address by Liberal and Progressive members; he contended that, while there were temporary difficulties as the consequence of a mad speculative fever and the calamitous competition of cheap Russian wheat, the situation of the prairie country was being limned in unjustifiably dark colours for political ends. He also discerned certain hopeful features, pointing out that during the first eight months of the present crop year the export sales of wheat to Britain had amounted to 96,170,518 bushels, as compared with 69,398,672 bushels in the previous parallel period, and in the first quarter of the present year France had taken 7,538,600 bushels of Canadian wheat, as compared with 1,213,789 bushels in the same period of 1930. But competent observers who have recently visited Western Canada are convinced that the prairie provinces are up against something more serious than a normal cycle of agricultural depression, and that to extricate them from their difficulties will be a long and painful process. Thanks to an unusually mild winter and the relief measures undertaken by governments, there has been no toll of life through starvation during the past six months, but Eastern merchants and manufacturers are grimly aware of the scantiness of the purchasing power of the prairie farmers, and the banks and mortgage companies know that there has begun to pile up a mountain of indebtedness of which there is no prospect of immediate liquidation.

The price of wheat is now hovering a little above 60 cents (No. 1 Northern) and any upward fluctuation is invariably followed by a sharp setback. A recent crop survey of the grain market situation compiled by the Dominion Bureau of Statistics showed that the stocks of Canadian grain on hand on March 31st were 275,190,000 bushels, or 46½ million bushels more than the figure of 228,646,000 bushels recorded on March 31, 1930. The experts had forecast smaller stocks, and had not calculated that the farmers still held 88½ million bushels, or more than double the amount in farmers' hands a year ago. The bureau estimates that, provided exports are maintained at the rate of 5 million bushels per month for the remaining four months of the crop year, and there is a fairly extensive consumption of grain for livestock feed, the carryover on August 31st may be kept down to 115 million bushels; but even then it will be 3 million bushels above the parallel figure for July 31, 1930. And when to it are added the heavy stocks of wheat in the hands of the Federal Farm Board of the U.S. there threatens to overhang the market a huge surplussage of North American wheat, which can scarcely fail to keep prices depressed, especially as there is now the prospect of a bumper crop of winter wheat in the U.S.

Faced with these conditions, the graingrowers of the prairies are not disposed to take any roseate view of the immediate outlook. There are signs that there will be some curtailment of grain acreage, but it will not be more than 7 per cent., and the short crop which is predicted owing to dearth of subsoil moisture will do little good if nature is bountiful in other graingrowing countries. Accordingly their spokesmen are vociferously demanding some assistance in their travail. They realise that they

SKANDINAVISKA KREDITAKTIEBOLAGET

neither can induce the Bennett Ministry to guarantee a fixed price for wheat nor can they get the machinery established for a compulsory pool. So they have begun to agitate for the revival of the Canada Wheat Board, which controlled the marketing of Canadian grain during the later war years, and the Manitoba Legislature has passed a resolution urging this step upon the Federal Government. So far the Bennett Ministry has not given any overt encouragement to the idea of reviving the Canada Wheat Board, and it will probably defer any pronouncement upon the grain marketing problem until it has had time to consider the report of the Royal Commission headed by Sir Josiah Stamp, which it appointed to determine authoritatively an ancient subject of controversy in the west, whether trading in grain futures operates to the detriment of the producer.

The Stamp Commission heard an abundant volume of evidence representing the viewpoints of different interests, and it revealed the existence of three definite and distinct schools of thought on the subject of trading in "futures." One school, which represents the private grain dealers on the Winnipeg Grain Exchange, holds that trading in "futures" is a beneficial and necessary practice because it provides insurance for the trade against price changes, widens and stabilises the market, and facilitates credit. Another school, which represents the radical element among the farmers who are agitating for a compulsory wheat pool, contends that the "futures" market encourages public gambling, especially by the farmers, and provides opportunities for manipulation of the market which are taken advantage of to the detriment of the farmer. Between these two schools of thought there lies an intermediate body of opinion whose most effective spokesman was Mr. George Langley, a leader in the agrarian co-operative movement who was once in the Saskatchewan Cabinet. It takes the view that trading in "futures" is sound in principle and helpful to the farmer, but that it is inadequately supervised and lends itself to market operations which often are disadvantageous to the graingrowers. It argues that there is too much "mystery" about the workings of the "futures" market; that the volume of trade is too large by comparison with the physical stocks of grain; that it is subject to violent fluctuations which do not represent changes in supply and demand; and that there are times when it gets completely out of control. The idea of Government supervision of the grain exchanges has been repeatedly put forward, and Mr. Langley argued that they should be transformed into publicly incorporated institutions with the functions of a public utility and regulated and supervised as such.

The officials of the pools refrained from giving any evidence until the final Canadian session at Winnipeg, when Mr. A. J. Macphail, who is chairman of the Central Selling Agency of the Pools, and also president of the Saskatchewan Pool, testified that the great majority of the prairie graingrowers are strongly of the belief that the effect of trading in "futures" is to curtail the returns for their labours, but lack definite proof for their belief because no adequate data are available for any intelligent study of the problem. He favoured Governmental supervision of the grain exchanges, and argued that if an unbiased study of records and statistics under Government supervision revealed that "futures" trading was a beneficial process, the suspicions now prevalent in farmers'

minds would be dispelled. Mr Cairns, the statistician of the pool, supported his arguments with a lengthy brief, in which he contended that, in the long run, it paid the farmer to carry his own risk instead of transferring it to the "futures" market by hedging. He declared that the present failure of the "futures" market to assume "anything like the risk-carrying function so commonly attributed to it" was an additional contributory factor to low prices; speculators, tamed by their experiences in the debacle of 1929-30, now hesitated to come into the market, with the result that the necessary buying to absorb "hedging" sales was not present, and price recessions followed. On the other hand, at the same session, Dr. J. W. T. Duvel, chief economist of the U.S. Government's agency for the administration of grain "futures," strongly endorsed the system, and Dr. Alonzo Wright, of Leland Stanford University, argued that it smoothed the inter-seasonal as well as the extra-seasonal wheat price curve with respect to both short-term oscillations and longer-term variations.

In certain agrarian circles the apprehension prevails that the appointment of the Stamp Commission was a preliminary move in a well-planned campaign for the extirpation of the co-operative pools, but a more plausible theory is that its real objective was to secure from a high economic authority like Sir Josiah Stamp a pronouncement in favour of the practice of "hedging," and there would be a reasonable motive for such an aim. It is improbable that the Canadian banks, in view of their experiences of the last two years, would be willing to finance the wheat pools for a larger initial payment than 25 or 30 cents on the 1931 crop, and such a sum would leave a pitifully small margin to the farmer after he had paid his threshing costs. But if the prejudices of the "pool" element among the farmers against "hedging" could be overcome by a report which supported the practice, and if the pool managers were allowed to hedge their deliveries of wheat, then they could pay out to the pool members the full cash value of their crop and there might thus be secured some temporary relief from the present economic embarrassments of the prairies. But the major problem of finding adequate foreign markets will still await solution, and involved in it is the question of the merits of the "Canada First" fiscal policy of the Bennett Ministry which is destined to be a subject of fierce political controversy during the coming years.

Notes of the Week.

The Commons and the Taxpayer.—The "swell turn" in this week's programme of Parliamentary Variety—the land tax debates—is discussed in a previous article. On Tuesday, "filling space," a thin and listless House addressed itself to the consideration of the Report stage of the Budget's Ways and Means resolutions. *Voces et praterea nihil.* Appeals were made in political faith, if not in hope, by the Opposition—that petrol used by agriculturists should be exempt from the increase in the duty; that the sur-tax limit should be raised from £2,000 to £2,500 per annum in order to relieve the "fine flower of professional and commercial individualist enterprise" from some of its present crushing burden; and that the standard rate of income tax should be reduced from 4s. 6d. to 4s.—but the reply in each case was that of the importuned in lands where alms, rather than taxes, are insistently demanded. *Makash flouiss:* sponsoring, in the Chancellor's absence, a Budget with no margin to spare (if this description fits a gambler's effort to conceal a deficit), Mr Graham had no difficulty in demonstrating convincingly that there was "no cash" wherewith to placate the Government's petitioners. This being so, what room for economic advantage or fiscal justice? Conservatives in the faithful Commons had perforce to be content with having secured from the Government spokesman the admission that income tax at present abstracts £54 millions annually from the reserves of joint stock undertakings.

The Naval Discussions.—The Italian reply to the French demand for a revision of the Arrangement of March 1st was despatched last Saturday, May 2nd. Neither this nor any of the other notes that have been exchanged between the French, British and Italian Governments during the last few weeks has yet been published; but it is understood that the Italian Government is taking the same line as the British. It finds itself unable to accept the French demand which—in the opinion of Rome, as well as London—overthrows the foundations on which the arrangement of March 1st was based. At the same time, the Italian Government associates itself with the British Government's counter-proposal. The gist of this counter-proposal seems to be that the British and Italian Governments agree to allow France to begin to lay down replacement tonnage in 1935, instead of 1936, if France is able to obtain the consent of the Naval Conference which is to meet in the former of these two years. This concession gives France a privilege, since the parties to Part III of the London Treaty of last year have bound themselves absolutely not to begin laying down the corresponding replacement tonnage in their own navies until the year 1936 has run out. Yet there seems little hope that this counter-proposal will be accepted by the French Government—at any rate, to judge by the tone of the French Press, which either passes the counter-proposal over lightly or else dismisses it as derisory. This is the situation which will confront the European Committee on the 15th and the League Council on the 18th of this month. When the statesmen meet one another again in person, will they be able to overcome the deadlock which has arisen out of the diplomatic correspondence? The consequences that will follow, if the deadlock remains, are exceedingly serious, as we pointed out last week. There is a real danger, not only that next year's disarmament conference may be stultified in advance, but that the great progress which we have already achieved in the agreed limitation of naval armaments may be undone. It is difficult to understand how, in this matter of disarmament, the French Government can be so reckless in thwarting the desires, not only of Italy and Germany, but of the British Empire, the United States and Japan. The world plainly wants disarmament; and those who defy the spirit of the times do so at their peril.

The Disturbances in Egypt.—The internal political situation in Egypt is taking a serious turn, and unfortunately Great Britain cannot wash her hands of it so long as the present anomalous relations between the two countries continue. In the Anglo-Egyptian negotiations of last year, His Majesty's Government on the one side and the Wafd on the other made strenuous efforts to place Anglo-Egyptian relations on an agreed treaty basis. The failure of these negotiations in London when they seemed within sight of success was followed in Egypt by the fall of the Wafd and the installation of a dictatorial Government, headed by Ismail Pasha Sidki, in the interest of King Fu'ad. This has led to a *rapprochement* between the Wafd, under the leadership of Nabhas Pasha, and the Liberal Party, under the leadership of Muhammed Pasha Mahmud—a statesman who had played a rôle not unlike Sidki Pasha's present rôle in 1928-9. Faced with a hostile combination of the two parties which, between them, represent the overwhelming majority of articulate political opinion in Egypt, Sidki Pasha has attempted to create at least a semblance of a party for himself; but his most effective stroke has been to alter the electoral law and to arrange for the holding of a general election. With this new law, and the power of "making" the elections which a Government—and especially a dictatorial Government—in Egypt enjoys, Sidki Pasha hopes to obtain a Chamber so efficiently packed that he can afford to allow it to meet and thus fulfil the condition—on which Great Britain has insisted and will insist again—that any treaty which may be negotiated between the British and Egyptian Governments must receive parliamentary approval on the Egyptian as well as on the British side before it comes into

force. It remains to be seen whether the British Government would be content with the approval of the kind of Parliament in Egypt which Sidki Pasha is working to produce. Meanwhile, the date of the Egyptian elections approaches, and tension in Egypt rises *pari passu*. The opposition parties are calling upon their followers to boycott the elections on the ground that these are to be held under an unconstitutional and illegal electoral law. The Government are prohibiting the opposition from preaching the boycott on the strength of a clause in the very electoral law the validity of which the opposition parties refuse to recognise. During the last few days this situation has given rise to encounters between the opposing political forces. That which took place on May 1st was a comedy. The opposition leaders, breaking through a cordon of police, boarded at Cairo a train which would normally have conveyed them to Tanta, only to find the carriages which they had taken by storm detached from the train and side-tracked in the desert, whence they returned to Cairo in taxicabs, while their constituents at Tanta awaited their coming in vain. On the other hand, last Sunday, when a number of Wafd leaders succeeded in making their way from Cairo to Beni Suef by motor-car, they and their supporters came into collision with the police, with the result, this time, that four persons were killed and 27 (including 15 policemen) injured. The leaders of the Wafd are now under arrest; but this may enhance and not diminish their influence. King Fu'ad would do well to study the history of King Alfonso.

Madeira.—Labour Day—which was so exemplarily peaceful in Madrid and which passed off without catastrophe, though not without disturbance, in Barcelona—was celebrated by alarms and excursions in Lisbon. The taxi-cab drivers went on strike and strewed nails in the streets to discourage black-legs (if the term is applicable to would-be strike-breakers on wheels); there was some bomb-throwing by the Government's opponents and some rifle and machine-gun firing by their supporters; three deaths and forty non-fatal casualties are reported. Nevertheless, the revolutionary movement seems to be distinctly on the wane on the Portuguese mainland, and the present dictatorship is probably safe again for the moment now that, in the islands, the collapse of the revolt in the Azores has been followed by its collapse in its last stronghold, Madeira. The punitive expedition from Lisbon landed in Madeira on Wednesday of last week and gradually drove the rebels out of their positions—working its way slowly through the mountains—until resistance ceased on Saturday. The rebel leaders have either surrendered or have taken refuge on board H.M.S. London—one of the two British men-of-war which have been standing by in case there might be any incidental danger to British lives and property. On Monday, Mr Henderson stated in the House of Commons that the Portuguese Minister for Foreign Affairs has given an undertaking (subject to the concurrence of the Portuguese Minister of Marine, who is now in Madeira) that, if the refugees on board H.M.S. London surrender, their lives will be spared. Fortunately, the casualties during the three days' fighting in Madeira appear to have been very light, and no molestation of British subjects is reported. Thus the political situation in Portugal returns to the *status quo*, and we may question whether it would have become very different if the opposition had succeeded in seizing power by the forcible method by which the existing regime has retained it. The whole affair seems to have been rather a meaningless ebullition of the Central American type. Yet it does not follow that Portugal is destined to remain in this unsatisfactory condition for an indefinite time to come. She can hardly remain unaffected by the profoundly important events that are taking place in the neighbouring country with which she marches on all her land frontiers. The real stirring of the depths which we are witnessing in Spain is something infectious; and the future of the whole Peninsula may be involved in the transformation of the centralised Spanish Monarchy into a republican federation of regional autonomies.

Westminster Bank Leaflets

¶ Points before Travelling. Notes on the Protection of Travellers from Loss. ¶ Thirty-nine Advantages of an Account with the Bank. ¶ The Saving Habit, an outline of the Home Safe system. ¶ The Postal Account, a service for those living in outlying rural districts. ¶ The Financial Machinery of the Export and Import Trade, or the function of the Documentary Credit. ¶ Foreign Exchange, with particular reference to Forward Exchange. ¶ Safeguards for Travellers, a warning against carrying foreign notes. ¶ Securities, their Custody and Supervision. ¶ Wills, Trusts, and Settlements, the Bank as an Executor.

41 Lothbury, London, E.C.2

Australia's Choice.—On May 6th Sir Robert Gibson, the chairman of the Commonwealth Bank, was summoned to the Bar of the Senate at Canberra to give evidence on the Commonwealth Bank Act Amendment Bill. This action of the Senate was almost, if not quite, unprecedented, and in some ways it is to be deprecated, as it placed Sir Robert in a very difficult position. Sir Robert's evidence, however, was so illuminating as to disarm all criticism of this character. He began by giving a valuable piece of testimony on the relations between the Commonwealth Bank and the Bank of England, which he defined as those usually existing between two central banks; he was certain, he said, that the Bank of England would give Australia all possible assistance, either by favourably influencing the London market or in any other way thought desirable. Later he denied the suggestion that the Bank of England was bringing any pressure to bear. This statement alone should do much to dispel current misconceptions in Australia. Next, Sir Robert came to his relations with his own Government. The Commonwealth Bank's advice was not sought with regard to the measure before the Senate, and the Bank had declined to ship gold to London in anticipation of any amendment of the Act requiring a statutory gold reserve as at present in force. The London situation was that in addition to bank overdrafts amounting to £5,000,000 due by various State Governments, there were £5,000,000 of Australian Treasury bills maturing in London on June 30th. Under present conditions it would be impossible to place fresh bills in London except at a price which he, Sir Robert, did not think Australia ought to pay. Sir Robert was next questioned on his attitude to a purely fiduciary note issue. In reply, he alluded to the recent decline in confidence in Australia, even when the gold reserves of the State were supposed to back that confidence. Senators could imagine what might be the confidence in a purely fiduciary issue. Subsequent questions came directly to the crux of the situation. Sir Robert referred to his letter of March 6th, in which he informed Mr Theodore that the Bank's resources in London were exhausted, and agreed that it was reasonable to assume that there was a danger of default unless special steps were taken. Opposed as he was to shipping gold, it was undoubtedly preferable to a default. Pressed as to whether there were a third alternative to gold shipments or default, Sir Robert contented himself with a simple affirmative, but the scene in the Senate that immediately followed showed that Senators were under no doubt as to his opinions. In conclusion, Sir Robert reiterated the Bank's opposition to any departure from the gold standard. The real point was that even if Australia did part with her gold, it would only defer the day of reckoning with her London creditors, or in Sir Robert's words, would not furnish any permanent safeguard against default. Thus the choice before Australia is not that between default and

gold shipments, but between default and the third alternative that Sir Robert had in mind. If Sir Robert's evidence leads to the Senate's rejection of the Bill, the date at which the electors will have to make that choice may be brought nearer.

Our Index Number.—The recession in the wholesale price level which developed in March, after a slight upward turn in February, became more pronounced last month. At the end of April our index number recorded a fall on the month of 1.2 per cent., as compared with a decline of one-half of 1 per cent. a month ago. The current figure of our index number is 19.9 per cent. lower than that for the end of April, 1930. Recent movements of the five groups are summarised below:—

AVERAGE, 1927 = 100.

	Apr., 1930.	Jan., 1931.	Feb., 1931.	Mar., 1931.	Apr., 1931.
Cereals and meat.....	84.9	67.4	66.4	66.9	70.0
Other foods.....	80.8	69.5	68.0	67.0	66.6
Textiles.....	72.9	49.2	50.6	53.7	50.8
Minerals.....	85.6	75.3	76.9	74.5	72.0
Miscellaneous.....	83.2	72.6	72.7	69.9	68.6
Complete Index.....	81.6	66.3	66.5	66.2	65.4

During April there was an appreciable upward movement in cereal prices, with the exception of rice, and, though coffee, cocoa and butter cheapened, imported meat and bacon were both dearer. In contrast, however, to the tendency of foodstuff prices, raw materials, where changed, showed an almost general decline, to which the only exceptions were jute and (as a result simply of the increased duty) petrol:—

	Inc. (+) or Dec. (-) per cent. compared with			Inc. (+) or Dec. (-) per cent. compared with	
	Month ago.	Year ago.		Month ago.	Year ago.
Wheat, Foreign.....	+ 7.8	-35.7	Flax.....	- 2.8	-41.7

Cotton yarn.....	- 4.0	-26.3	Sulphate of ammonia.....	...	...
Cotton cloth.....	- 4.8	-17.6	Creosote.....	...	+7.7
Wool, English.....	- 7.1	-18.7	Miscellaneous.....	- 1.9	-17.5
Wool, Australian.....	- 4.3	-10.2			
Wool tops.....	- 7.7	-11.1			
Silk.....	- 6.8	-42.3			

In the next table we show our index number recalculated as a percentage of the average for 1913:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscel- laneous.	Complete Index.
Average, 1924.....	159.9	169.9	210.6	145.2	131.5	159.3
" 1928.....	145.0	149.4	161.7	111.9	119.3	135.1
" 1929.....	135.6	136.8	141.9	116.2	112.7	127.2
" 1930.....	115.4	122.9	99.1	101.6	101.5	106.8
End Apr., 1930.....	118.8	124.6	112.5	104.0	103.6	112.3
" Mar., 1931.....	93.6	106.8	82.7	90.6	87.1	91.1
" Apr., 1931.....	98.0	106.1	78.2	87.5	85.4	90.0

If 1924 be taken as 100, the current figure of our index number works out at 56.5, as compared with 57.2 at the end of March and 70.5 a year ago.

The Little Entente and Tariffs.—The annual conference of the Little Entente which ended at Bucharest on Tuesday appears to have devoted most of its attention, as might be expected, to economic issues, and particularly to the question of tariffs. According to the brief reports which have reached London, Dr. Benesh, who had set out in a very temperate and fair-minded speech at Prague on April 23rd the objections of Czechoslovakia to the proposed Austro-German Customs Union, apparently persuaded his Roumanian and Yugo-Slavian confrères to join in united opposition to the scheme; the counter-attraction offered them is understood to have been a system of preference which M. Briand is in process of elaborating for the purpose of facilitating the general exchange of agricultural against manufactured products between Eastern and Western Europe. It remains to be seen what these countries will have to say on the whole question at Geneva, but in the meantime what may prove to be a tactical move has been taken in the reported decision of the countries of the Little Entente to inaugurate immediately a system of tariff preferences between the three States. This decision, which would appear to be aimed at opening the Czechoslovakian market to Roumanian and Yugo-Slavian cereals in return for preferential treatment to be accorded to Czech manufacturers, is of obvious importance internationally in that it raises once more the whole issue of the Most-Favoured-Nation clause. M. Benesh rightly claims that he has made no secret of his advocacy of such a modification, but has time and again brought the matter before the League. On the other hand, he has no desire to see Europe split into rival fiscal groups, but seeks a more general solution. This latest step is a counter move which may force the discussion on to a broader plane. Clearly the League's Commission of Enquiry for European Union, when it meets next week, will have plenty to discuss.

Politics in Roumania.—On a later page will be found a letter from our Bucharest correspondent giving an account of the developments in the political situation of Roumania, on which we commented in a Note of the Week on page 886 of our issue of April 25. A correspondent who has recently visited Bucharest has also sent us his impressions of the position there. He writes:— "The suggestion of the *Economist* that the Jorga Government may develop into a dictatorship is somewhat misleading. It is traditional for the party in office, even if only a one-man party, to become the party in power in Roumania, and there is little doubt of the ability of Professor Jorga and his colleagues to obtain a working majority of some kind in the next Parliament that will enable them to conduct the Government in a strictly constitutional sense. They will presumably secure the co-operation of some of the minor parties, and perhaps even of the so-called Liberals, to enable them to do so. The Jorga Government, however, will be nothing more than a stopgap affair that will 'carry on' as best they can until the situation crystallises. The country's political destiny, in other words, is still in a period of transition, and it is very problematical what the final outcome will be. The people are thoroughly disgusted with each of the varieties of party government that have been inflicted on them since the war, with Ministers and important officials almost without exception thinking more of their own private gain than of the public good. The principal function of the Jorga Government will be to put a curb on bribery and the misappropriation of public funds and national wealth, and to make a strenuous effort to restore Budget equilibrium. It is distinctly unfortunate for Roumania that Mr. Nicholas Titulescu, brought from London for that purpose, was unable to form a National Government or a coalition comprising the leaders of all the major parties. While King Carol undoubtedly desired Minister Titulescu to succeed in his mission, he was not at the critical moment given the royal support which he had the right to expect. In other words, the King allowed himself to be persuaded by certain advisers that the appeal to the country which would have had to be made on the programme of a Titulescu Government might

produce a result that would be distinctly embarrassing to the King himself; Mr Titulescu, it is claimed by those in a position to know, asked for an immediate and 'free' election on a programme that would have been decidedly disturbing for the party leaders. He is understood to have demanded nothing less than financial control over Roumania by the League of Nations, and furthermore to have insisted that the private fortunes of former Ministers and leading Government officials must be subjected to close scrutiny by a Parliamentary Commission—with the State having the right to confiscate fortunes found to have been illegally obtained. Only those who are closely familiar with the way public business for many years has been transacted in Roumania can realise the disclosures that would result from a searching inquiry of this character. The failure of King Carol at the critical moment vigorously to support Mr Titulescu's minimum programme was a blunder, but not an irreparable one, since the Jorga Government is merely a play for time. Irreparable damage would only have been done had the King followed the counsel of certain of his advisers and proclaimed a dictatorship. He is now, as it were, 'on the fence,' and in course of time must come down either on the Titulescu side or on the side of those who would prefer to see the country governed through the Army rather than through Parliament. There is no reason in the meantime to fear that the Jorga Government will develop into a dictatorship. Mr Titulescu himself advised the King to entrust the Premiership to Professor Jorga, and it is no secret that the new Premier has sought the advice of Mr Titulescu on practically every step he has taken since the Jorga Ministry was announced."

British Trade with the Far East.—The report of the British Economic Mission to the Far East makes the same disquieting reading as the other similar reports which have appeared during the past few years. Our exports to the countries of the Far East have declined alarmingly since the war; imports into China are 23 per cent. higher than in 1913, but British exports to China are one-third lower. This state of affairs is attributed largely to our inability to make goods at prices which can compete with those of Japanese manufacturers, but the report states that the defectiveness of British publicity is also very largely responsible, and makes various suggestions for cultivating among the Chinese a demand for British goods. The British wool textile industries are warned against the danger of being overtaken by the same fate that has already befallen the cotton industry in respect of Japanese competition. Yorkshire wage costs per unit of production are calculated to be two-and-a-half to three times as high as those in Japan. The report also states that the question of freight rates both on imported raw wool and exported finished products calls for serious investigation. Though the Mission regard Japan principally as a competitor, their report also contains proposals for improving the position of British exports in the Japanese market. One of the most important of these proposals is for the maintenance by British manufacturers or groups of manufacturers, especially in the iron and steel and engineering industries, of resident technical experts in Japan. The other recommendations—one wonders how long it will be before these exhortations, reiterated by every body which is called upon to give advice on British export trade, will be taken to heart—relate to the need for closer study of market requirements, for proper packing and labelling, adequate advertisement, and the adaptation of catalogues to the market in which they are intended to be circulated.

Lancashire and India.—Our Manchester correspondent writes:—The representatives of the Lancashire cotton industry, both employers and operatives, are losing patience with regard to the position of India, and there are signs of the agitation growing against the policy of the Government. Last week a demonstration was held in Blackburn, attended by 3,000 people, when Mr J. H. Grey, the chairman of the Cotton Spinners' and Manufacturers' Association, and Mr Andrew Naesmith, the secretary of

the Operative Weavers' Amalgamation, spoke from the same platform to voice a protest against the continuance of the boycott of Lancashire goods and the increase in the import duties. This meeting was followed by the conference in London between Lancashire cotton trade representatives and the Conservative members of Parliament for Lancashire constituencies. The event of importance, however, was on Tuesday last, when Sir Arthur Haworth, the chairman of directors of the Manchester Royal Exchange, submitted a resolution to the members on similar lines to that supported at the Blackburn meeting. The members of the Royal Exchange, who numbered about 8,000, supported the motion unanimously and with enthusiasm. It is an exceptional thing for the directors of the Exchange to allow action of this kind, the previous occasion being in 1917, when a resolution was then passed with regard to an increase in the India import duties on cotton goods. The opinion in Lancashire is growing that the time has arrived when her voice should be heard in London on this matter. Manchester merchants are being advised that dealers in the bazaars are afraid to purchase British goods, and in most centres the picketing is just as severe as before the agreement was reached with Mr Gandhi. It is urged that the spirit of the arrangement is not being carried out by the Congress Party, and it is further believed that the authorities in London have not been aware of the effect of the boycott and higher import duties upon Lancashire trade. It is true to say that from the point of view of trade, conditions have become distinctly worse since Easter.

World Cotton Trade.—The Quarterly Bulletin of the Federation of Master Cotton Spinners' and Manufacturers' Associations, published this week, contains reports from the leading countries of the world with regard to the state of trade. In Austria the situation has grown worse during the last few months, there being a reduction in exports and in home trade sales. It is pointed out that in January last only 586,000 spindles were running full time, as against 677,000 in January, 1930, and 764,000 in January, 1929. It is admitted that 25 per cent. of the spindles have been out of action during the past two years. In Belgium spinners continue to restrict their production. Stocks of yarn are approximately twice as large as they were a year ago. A special report with regard to China says that many factors have combined to reduce the volume of business on the market since November, 1930. Low exchange, the new duties and the stoppage of work in Lancashire have prevented all indent orders. Dominating factors in the market situation have been the fall in the price of silver and the imposition of the new import tariff. The report from France does not show any improvement in the deplorable situation. Short time is now being worked in all cotton industrial districts, and amounts to one day per week generally. The situation in Germany was unchanged at the beginning of the first quarter of 1931 as compared with the previous report. In every section sales remained very few, and were generally limited to small quantities for short-dated delivery. It is stated that conditions in the spinning section of the trade in Holland are far from satisfactory. Some mills are working short time, and it is very difficult for spinners to sell their production. In most cases prices are unremunerative, and the prospects are far from hopeful. In the manufacturing section conditions have also become gradually worse. With regard to Hungary, spinning mills are working at full capacity, although some of the weaving mills are running only four days a week. It is significant that the report on India says that the increase in the tariff on cotton piece-goods in April, 1930, and the boycott of foreign piece-goods early in the year gave impetus to cotton mill activity, and at the close of the year the industry was operating full time, with some mills working double shifts. In Italy there is much difficulty in disposing of cloth. There is a tendency to reduce operations in the weaving section, and consequently in the spinning branch. The anticipated improvement in the state of business in Switzerland has not materialised; while in individual cases a return has been possible from short time to full time employment, there have been other cases where recourse to still further restrictions has been unavoidable.

Midland Coal Prices.—On May 1st, writes a Leeds correspondent, a new standard of minimum prices for coal came into operation in the Midland area, as defined by the Coal Mines Act. The minimum prices were advanced one shilling a ton for domestic coal, two shillings for industrial fuel, and two shillings and sixpence for coal supplied to public utility concerns. Some time ago minimum prices were fixed, based upon the average prices over a period ending in April, 1930, less 10 per cent. The effect of the increase has so far been negligible because the new minima do not reach the current selling price. One result has been to bring into being contracts for delivery a considerable time ahead. The day before the new scheme came into effect substantial contracts with public utility concerns, which were due to expire next October, were received for a further period of twelve months from that date, and therefore were not affected. It will take nearly two years before any scheme of increased prices affects these supplies. Colliery owners are endeavouring to increase the price of coal used for industrial purposes, but in practice it is proving difficult. During the last twenty years great changes have taken place in industrial processes and these have demanded higher quality coal, and coal possessing particular qualities for particular work. In the present state of industry the demand for this coal is not good, and in any event colliery owners are left with large quantities of other grades which can be used by public utility concerns. Being able to give orders for very large quantities of coal they are in a favourable position to secure low prices. Another effort on the part of the colliery owners to ensure better prices is being made in discussions with the coal merchants. The proposal now under discussion is that the producer and merchant shall in conjunction secure certain selling prices. A considerable obstacle to an agreement is the action of the co-operative societies, who naturally wish to conform to the fixed prices upon which the customer, where he is a member of the society, secures a dividend of, maybe, two shillings or more in the pound. In this part of the country the co-operative societies handle a very large proportion of the retail trade, in some instances as much as fifty per cent. The coal merchants say there is not sufficient margin of profit on coal for them to cut their prices to that extent, and they cannot make up their profit on groceries or other articles sold by the co-operative societies.

Over-production and Trade Cycles.—At a recent meeting of the Academy of Political Science in New York Mr Carl Snyder, of the Federal Reserve Bank of New York, put forward some interesting and provocative suggestions with regard to the generally accepted conception of the business cycle. Mr Snyder stated that an examination of world statistics showed that the widest variations in production occur in the food groups, and that as these variations are dominated not by the acreage planted but by the yield, they must be attributed primarily to the weather, not to business conditions. Further, Mr Snyder found that among raw materials the rate of growth in production was highest among the minerals, whereas the fluctuation in world production was least in that group, and he inferred that people have been led by the violent month-to-month fluctuations of particular commodities in particular countries to suppose much greater variations in world production than actually take place. If world statistics do not disclose these cyclical variations while the statistics of individual countries do, Mr Snyder's inference is that the causes of business cycles must be local, and should not be sought in conditions within the fluctuating industries themselves. Further, Mr Snyder argued that as the present depression and that of 1921 have been distinguished from all others by their universality, some generating cause must have been present which did not exist before in the same degree, and that this could not have been over-production, as that explanation had already been advanced many decades before. The logic of this last point is hardly water-tight,

but the suggestion that the same interpretation will not necessarily account for both pre-war and post-war trade depressions may well prove fruitful. Finally, Mr Snyder made the interesting point that from 1923 to 1928 the growth in production resumed its pre-war rate of about 3 per cent. per annum, suggesting that there are some inherent forces in modern industry tending to make for a long-period uniform rate of growth. He hazarded the prediction that this rate will tend slowly to increase, as it will be a long time before the rate of increase in food production changes, while other products expand more rapidly than the total. This led him to some very optimistic conclusions as to future prosperity. The fact that the rate of increase in most industries just before the crash of 1929 was not materially different from the normal, reinforced Mr Snyder in the conclusion to which the preceding arguments had led him, that the cause of trade cycles is not to be found in over-production. We hope that Mr Snyder will follow up these interesting negative results by equally stimulating positive suggestions.

The British Bank of South America.—The continuance of the trade depression and the peculiar difficulties of Brazil made it inevitable that the accounts of this institution, which operates mainly in that country, should have revealed for 1930 a further decline in net profits. The actual magnitude of the contraction in profits is equivalent to a dividend of 1 per cent. on the issued and paid-up capital, but in view of the uncertain outlook, the board are wisely recommending a 2 per cent. reduction in the dividend from 10 to 8 per cent. The salient features in the accounts are shown below:—

	Dec. 31, 1928. £ thou.	Dec. 31, 1929. £ thou.	Dec. 31, 1930. £ thou.
Deposits.....	5,350	4,991	4,364
Other accounts.....	2,137	2,306	1,757
Bills for collection	1,949	1,473	1,039
Cash	2,415	2,790	2,358
Bills receivable.....	1,821	1,289	1,031
Investments	(a)	333	163
Other accounts.....	4,886	4,417	4,114
Gross profits to date	365	314	292
Expenses	264	214	202
Net profits	101	100	90
Dividend	10%	10%	8%

(a) Not shown separately.

The balance sheet is not very informative, but it is clear that circumstances have combined to bring about a general curtailment of the bank's activities, and the directors are to be congratulated upon their success in reducing expenses by £12,000. A bank of this character has its own fortunes so closely bound up with those of the area which it serves that it is difficult to discern an immediate recovery. At present, shareholders must content themselves with the knowledge that the strength and liquidity of the bank remain unimpaired.

Rotterdamsche Bankvereeniging.—Our Amsterdam correspondent writes:—Owing to the trade depression, the Stock Exchange crisis, and the lower money rates in 1930, the Rotterdamsche Bankvereeniging—one of the big Dutch banks—shows a decrease in its earnings. Revenue dropped from F. 19,027,000 to F. 15,204,000, and the gross profits total F. 6,347,000, against F. 9,497,000 in the previous year.

	1927.	1928.	1929.	1930.
		(In thousand guilders.)		
Earnings	16,542	18,234	19,027	15,204
Expenses	8,811	9,235	9,530	8,857
Gross profit	7,731	8,999	9,497	6,347
Depreciation	818	1,112	1,444	729
Interest	711	728	758	405
Reserves	1,750	2,100	2,500	...
Net profit	4,453	5,059	4,795	5,212
Dividend	5%	5%	5%	5%
Capital	52,623	52,590	50,000	50,000
Reserve	23,491	23,650	20,215	20,201
Deposits.....	77,752	81,193	76,354	81,734

The dividend, however, was maintained at 5 per cent., while depreciations and reserves are substantially lower than in the previous year, F. 729,000 against F. 8,944,000 in 1929. The balance sheet reveals a strong liquid position. Deposits increased from F. 76,354,000 to F. 81,734,000.

INSURANCE NOTES.

Legal and General.—A purchaser of Legal and General shares in 1925 (the year preceding the last quinquennial valuation) at the average price of that year would have paid £6 per share for investment. The market quotation is now £15½ per share and in the interval the income per share has risen from 8s. in 1925 to 8s. 6d., free of tax, in 1930. Here, surely, is a little paradise for shareholders; and it is founded in the first place on a life fund of over £20 millions, which since 1919 has issued only "without profits" policies (the rights of existing "with profits" policyholders being limited to a maximum bonus of 38s. per cent. compound), and in the second place on a young and growing fire and general business which already provides by way of underwriting profit and interest earnings more than three-fourths of the current dividend. Taking the latter first, the premium income showed a further increase in 1930, and since 1925 has risen from £216,000 to £350,000. For the most part the profits have been retained in the underwriting funds, but, calculated on the usual basis of a 40 per cent. unexpired risk reserve, the profits of the past two years are as below:—

	1929. Percentage of Amount. Premiums.	1930. Percentage of Amount. Premiums.
Fire	148 0.1	11,888 6.1
Employers' liability.....	1,293 6.9	812 4.3
Accident.....	7,829 6.3	4,513 3.3
Less income tax	9,270	17,213
Plus net interest earnings..	2,000	2,500
Total sum available for dividend	7,270	14,713
	48,017	48,456
	55,287	63,169

The dividend has been raised from 37½ per cent., free of tax, to 42½ per cent., free of tax, and now costs £85,000. At the last quinquennial valuation of the life department in 1926 the shareholders' portion of the trading surplus amounted to £243,000, equivalent to £49,000 per annum, so that the real earnings in 1930 available for dividend amounted to £112,000. The volume of new business transacted in the life department continues to show every year a remarkable increase, the figures for the last three years being as follows (all—be it noted—on the basis of without profits):—

	1928. Sums Assured. £	1929. Sums Assured. £	1930. Sums Assured. £
Life Assurances:—			
Ordinary business	3,387,118	3,366,004	4,928,857
Decreasing term and group insurances...	4,259,783	4,587,860	6,603,848
Deferred annuities.....	7,646,901	7,953,864	11,532,705
Sinking fund assurances	997,622	740,375	1,062,693
	16,291,424	16,647,043	23,528,103

The increase in 1930, as in previous years, has been common to all classes of business; and in proportion to its size the company transacts a larger new business than any other British office. The fivefold increase in deferred annuity business is a reflection of the company's largely advertised activities in the field of group pension schemes for the staffs and workpeople of industrial firms.

London Assurance.—The year 1930 marks the close of another quinquennial period in the life department and the customary valuation has been made. During these five years the life fund has increased by over £2 millions and now stands at £6,400,000, while 12,000 new policies

for net sums assured have been granted and the premium income has grown from £515,000 to £608,000. The results of the last two valuations are shown below:—

	1921-1925. £	1926-1930. £
Trading surplus earned during quinquennium	528,165	870,840
Brought forward	31,226	191,823
	559,391	1,062,663
Allocations:—		
To Bonuses to policyholders	308,800	578,402
.. Shareholders	58,768	96,350
.. Strengthening of actuarial reserves	...	282,000
.. Carried forward.....	191,823	106,911
	559,391	1,062,663

It will be observed that no credit has been taken for investment profits during the last ten years, and the assets are stated to be considerably in excess of the book values. The cost of the bonus now declared is well within the profits earned, notwithstanding an increase in the rate from 40s. per cent. to 45s. per cent. per annum of sums assured and previously existing bonuses. The division of profits between policyholders and shareholders in the case of the London Assurance is more than usually favourable to the latter since they are entitled to 20 per cent. of profits from pre-1911 policies, and to 10 per cent. from post-1910 policies; but as the calculation is determined by visible profits they have derived no advantage on this occasion from the considerable sum (£282,000) utilised to strengthen internal reserves. Nevertheless the department will contribute to profit and loss a sum of £20,000 in each of the next five years compared with £12,500 per annum during the quinquennium now ended. Turning to the figures of the fire and other departments, it has to be borne in mind that the company now adopts the practice followed by the Royal Exchange, of excluding the results of its subsidiary companies. The total premiums of the parent company yielded £2,615,000 (approximately £100,000 less than in 1929). The fire department is the largest, with premiums of £1,274,000, and the marine department contributes a disproportionately large total of £947,000. For some years past the underwriting results in the aggregate have been poor and, except for some relief in the marine department, the 1930 figures show no improvement. The detailed working of the years 1929 and 1930 are set out in the following table:—

	1929. Percentage of Amount. Premiums.	1930. Percentage of Amount. Premiums.
Fire	17,886 1.3	16,751 1.3
Accident.....	1,110 7.6	3,618 21.3
Employers' liability.....	10,006 20.5	8,983 19.3
General	55,675 15.4	40,314 12.2
Marine	45,516 5.0	9,805 6.7
Life	12,500	12,500
Less items debited to profit and loss account	62,609	15,503
Total trading loss	28,293	38,049
	90,902	53,552

The dividend has remained unaltered since 1925 at the rate of 45 per cent. and the cost is comfortably within the interest earnings. Shares in subsidiary companies (the British Law, the Vulcan Boiler, the London Associated Reinsurance, the Guildhall, and the Manhattan) stand in the balance sheet at £1,451,000 and yield 10 per cent. on dividend received.

The Equitable Life.—Though it is now the oldest existing life office, having been founded in 1762, the "Old Equitable," as it is affectionately called, has by no means lost its capacity for surprises, for, along with the annual report for 1930, there is published a report by the actuary on a valuation for the four-year period ended December 31, 1930, a report which is claimed by the chairman in his speech at the annual meeting to be "an epoch-making document." Shortly stated, the society has, in place of a net premium valuation, valued its liabilities on the

basis of experience rates of mortality, interest, etc., with a specific reserve for future bonuses. The net premium method of valuation, which has come to be regarded as a conventional standard, involves the employment of rates of mortality, of interest and of expense, all of which are completely artificial. So far as the Equitable is concerned, the method was based on the use of the O^x Table of mortality (founded on data fifty years old and showing rates of mortality approximately double those now ruling at the main assuring ages), a rate of interest of 2½ per cent. (compared with average earnings exceeding 4½ per cent.), and a provision for expenses equal to 18 per cent. of the office premiums (compared with an average expense ratio of approximately 7 per cent.). Valuations such as this, based on factors far divorced from reality, have long been regarded by actuaries as liable to produce misleading results, and most of them have felt the need for an internal valuation based on more reasonable anticipations of the various factors concerned. The Equitable is the first office openly to abandon the net-premium method and to regulate its policy publicly by a realistic basis. The new basis employed by the Equitable utilises for mortality the Eastern Counties Rural Districts table (founded on the 1921 Census), a rate of interest of 4 per cent., and a provision for future expenses approximately equal to the present expense ratio. The crux of the new basis is that, whereas under the old method the provision for future bonuses was wrapped up in the margin between the interest earnings and the rate assumed in the valuation, under the new method future bonuses are valued and specifically reserved for, in this case on the scale declared at the preceding valuation in 1926. A comparison in the report is given between the results of the old and new bases, but the following table seeks only to compare the last two valuations on the old basis:—

	1922-1926.	1927-1930.
	£	£
Trading surplus earned during valuation period.....	670,412	543,226
Investment profits realised during valuation period	53,790	14,603
Brought forward	160,000	215,517
	884,202	773,346
Allocations:—		
To bonuses to policyholders	651,510	605,996
.. general reserve fund	17,175	...
.. carried forward	215,517	167,350
	884,202	773,346

It may be observed that the cost of the bonuses now declared exceeds somewhat the trading surplus earned, as it is the deliberate policy of the management to make up to the older members for the omission of a bonus during the war years. For the whole-life assurances the scale of reversionary bonuses ranges from 32s. 6d. per cent. to over £10 per cent. For endowment assurances the reversionary bonus is 32s. 6d. per cent. per annum compound plus a further 15s. per cent. per annum on the sum assured, payable only on survival of the endowment assurance term.

Friends' Provident and Century Life.—The Friends' Provident transacts, on mutual principles, all classes of life assurance and annuity business, and since 1918 has owned, as an investment, the share capital of the Century Insurance Company, which transacted in its own name both life business and fire, accident and marine business. The life business of the Century is now operated as a closed fund. The Friends' Provident funds transacts the new life business of both offices, while with-profits policyholders of the Friends' Provident have a direct inducement to place their fire and accident business with the Century in that the profits thereby created are ultimately returned to them by way of dividend on the Friends' Provident's investment. Unfortunately, the Century has, during the last 12 years been only moderately successful. The collapse of the City Equitable group of companies involved the Century in a heavy and unexpected loss, and the underwriting results of the fire, of the accident, and of the marine departments have in all cases been extremely patchy. Last year's total premium income amounted to £743,000, of which £342,000 was in the fire department,

£265,000 in the accident department, and £136,000 in the marine department. The detailed underwriting results of the last two years are shown below:—

	1929.	1930.
	Amount of Profit.	Amount of Profit.
	£	£
Fire	1,362	—19,012
Accident	2,136	1,755
Marine	—18,951	—20,054
Life	23,164	...
	7,711	—37,311
Less items debited direct to profit and loss account ..	6,302	8,987
Total net trading surplus..	1,409	—46,298
Add net interest earnings..	45,995	43,991
Total amount available ...	47,404	—2,307
Less cost of dividend	33,600	32,550
Net increase in surplus assets	13,804	—34,857

In view of these underwriting results the company has prudently kept the dividend well within the net interest earnings, so that there has remained in both years a substantial sum wherewith to increase the surplus resources of the company. In 1930, however, after meeting the usual dividend of 12 per cent., there was a net depletion of surplus resources from the year's operations of £35,000, compared with an accretion of £14,000 in 1929. The Friends' Provident has evidently made further progress during 1930. The new life business has advanced from £1,645,844 to £1,846,728, and this increase has taken place wholly in with-profits assurances. Curiously enough the increase in business has been largely due to a reversal of the prevailing tendency by an actual substantial increase in the amount of business transacted by single premiums. The incidence of single premium business has also affected the expense ratio and reduced it from 17.6 per cent. to 15.6 per cent. Interest earnings remain at a high figure, the net rate having worked out to £5 3s. 1d., compared with £5 4s. in 1929. The balance sheet contains a statement that the assets are in the aggregate fully of the value at which they appear. On this occasion, however, the Stock Exchange securities show a depreciation on book values of £71,000 and this is, presumably, covered by the margin in book values of properties and ground rents. The shares of the Century Insurance Company stand at a book value of £700,000, and at this figure yield exactly 6 per cent. on the dividend received.

Car and General Insurance.—This company is one of the pioneers in motor insurance, and in this field, after 27 years of existence, it still occupies a leading position. During 1930 the sum of £803,000 was collected in premiums from motor-car insurance out of a total premium income of £1,133,000. The underwriting profits have been maintained in the aggregate at much the same figure as in 1929, except that the marine department has required a transfer of £10,000 from profit and loss account. The detailed figures are set out below:—

	1929.	1930.
	Amount of Profit.	Amount of Profit.
	£	£
Fire	4,038	11,394
Accident	3,906	942
Employers' Liability...	12,975	11,017
Motor	30,446	34,532
Miscellaneous	3,290	6,312
Marine	253	—10,000
Sundries	589	788
	48,411	42,361
Less items debited to profit & loss account ..	7,359	15,553
Total net trading surplus	41,052	26,808

The company enjoys the advantage of a remarkably small capital, consisting of £25,000 of 5 per cent. preference shares, and £26,436 of ordinary paid-up capital, the whole

of the ordinary shares being held by the Royal Exchange. As a result, the dividend is at a very high rate, being for the last two years 200 per cent. Interest earnings are sufficient to cover the cost of this with the exception of a small balance.

Northern Assurance.—The shareholders of this company have reaped in 1930 their recurring harvest from the valuation of the life department funds. Three separate life funds are maintained (a "with-profits" fund, a non-profits fund, and an annuity fund), and the shareholders' rights are of great potential value; for, although the "with-profits" fund belongs exclusively to the policyholders (and the expenses are limited to a figure of 10 per cent. of the premiums), the shareholders are entitled to the whole of the profits in the remaining two funds. The basis of valuation remains the same as before, and the results of the past two valuations are set out below:—

	1921-1925.	1926-1930.
	£	£
Trading surplus earned during valuation period:—		
With profits fund.....	19,072	717,878
Non-profits fund	131,319	125,448
Annuity fund	7,476	53,097
Investment profits taken credit for during valuation period:—		
With profits fund.....	267,497	17,960
Non-profits fund	55,085	7,281
Annuity fund	44,460	...
Brought forward	15,957	87,280
	540,866	1,008,944
Allocations:—		
To Bonuses to policyholders	278,586	665,542
.. Shareholders:—		
From non-profits fund	125,000	100,000
From annuity fund	50,000	25,000
.. Investment reserve:—		
Non-profits fund	...	25,000
Annuity fund	...	15,000
.. Carried forward.....	87,280	178,402
	540,866	1,008,944

A reversionary bonus for the quinquennium 1926-1930 has been declared at the rate of 50s. per cent. per annum on the sums assured (compared with 55s. per cent. for the preceding valuation period), but the interim bonus for the current quinquennium has been limited to a rate of 45s. per cent. The results of the previous valuation in so far as they relate to the "with-profits" fund were for a period of two years only, so that they are not really comparable with those for the period now under review. With regard to investment profits, a sum of £109,000 has been realised from sales since 1925 (in addition to the sums mentioned in the above table), and this has been utilised as an internal reserve. The accounts relating to fire and general business incorporate the figures of the various subsidiaries and show that the total premiums have fallen from £4,962,000 to £4,802,000, mainly due to a heavy decline in the fire department. The underwriting profits, as set out in detail below, make on the whole a satisfactory showing:—

	1929.	1930.
	Amount of Profit.	Amount of Profit.
	£	£
Fire	23,183	53,315
Accident	152,566	139,567
Marine	—5,365	—5,403
Non-profits life fund	...	100,000
Annuity fund	...	25,000
Leasehold redemption fund ..	...	5,000
	170,389	317,479
Less items debited to profit and loss account	83,389	114,278
Total net trading surplus..	87,000	203,201

Since 1920 the dividend has been at the rate of 85 per cent., and the same rate is again declared for 1930. Owing to a somewhat declining premium income, the interest earnings have also been falling, with the result that the "gap" between them and the cost of the dividend has now widened to a sum of £59,000.

Motor Union Insurance.—Though the results of the various departments are somewhat mixed, the 1930 report makes on the whole a decidedly better showing than its predecessor. Like the Car and General, the company is controlled by the Royal Exchange, which, by its ownership of these two companies, now has a commanding position in the motor insurance market. In 1925 and 1927 the company had to face devastating losses in its marine department, while the course of the substantial fire account has run anything but smoothly during the last six years. However, the marine account is now reduced to merely nominal size, while the fire account showed in 1930 a small margin on the right side, compared with a heavy loss in 1929; but the most striking feature of the 1930 accounts is a large deficit on the department handling miscellaneous insurances, where the claims alone have greatly exceeded the premiums. The details may be seen from the table following:—

	1929.	1930.
	Amount of Profit.	Amount of Profit.
	£	£
Fire	—36,890	1,353
Accident	6,646	5,608
Employers' Liability	14,992	8,353
Motor	—15,638	94,812
Miscellaneous	8,677	—53,492
Marine	...	...
	—22,213	56,634
Less items debited to profit and loss acc't ..	2,317	9,847
	—24,530	46,787

The events referred to above compelled the company to pass its dividend in 1927 and 1928, but payments were resumed in 1929 with a declaration of 20 per cent., and this has been repeated for last year. The price paid by the Royal Exchange for control in 1927 was £9 15s. per share, and at this figure the yield to the parent company on its investment is just over 2 per cent.

World Auxiliary Insurance.—This company is of post-war growth, and, by reason of a large shareholding interest held by the World Marine and General (itself a subsidiary of the Northern), is closely associated with the Northern group of companies. For many years past the underwriting profits have been on a uniformly satisfactory level, and although this feature is maintained in 1930 as regards the marine account, the fire account shows a heavy loss. The total premium income has risen from £440,000 to £478,000, of which £303,000 was in the fire department and £175,000 in the marine department. The complete figures are set out below:—

	1929.	1930.
	Amount of Profit.	Amount of Profit.
	£	£
Fire, Accident and General	—211	—27,197
Marine	15,000	20,000
	14,789	—7,197
Less items debited to profit & loss account ..	9,674	7,855
Total net surplus ...	5,115	—15,052

The dividend has been maintained at the same rate as in each of the three previous years, namely, 6½ per cent., and the interest earnings enable this payment to be made with a comfortable margin.

Sea Insurance.—Like so many of the old-established marine companies, the "Sea" branched out after the war on a general business in fire and accident insurance. This step was no doubt taken with a view to preserving old marine connections, but in almost every case it has been attended by unfortunate results from the underwriting point of view. In the case of the "Sea," fire and accident premiums during the last six years to an aggregate amount of £1,148,000 have involved a total

underwriting loss of £67,000. The 1930 report shows an intensified loss in these departments:—

	1929.		1930.	
	Amount.	Percentage of Premiums.	Amount.	Percentage of Premiums.
Fire	£ 3,181	— 1.8	£ 5,740	— 3.0
Accident	— 2,090	— 3.3	— 14,547	— 20.5
Marine	32,481	6.0	34,842	5.7
	27,210		14,555	
Less taxes, &c.	1,439		9,398	
Total net trading surplus	25,771		5,157	

The marine figures include the final profits of the 1928 and 1929 underwriting accounts respectively. The 1930 account, with a rather smaller premium income, but a less favourable first year's experience, enters upon its second year with 57.3 per cent. of the premiums in hand compared with 59.5 per cent. in the case of the 1929 account a year ago. The dividend has been raised from 16½ to 17½ per cent., and is covered by interest earnings.

Overseas Correspondence.

LEAGUE OF NATIONS.

Austro-German Plan — Disarmament Conference — Agricultural Credits.

(FROM OUR CORRESPONDENT.)

GENEVA, April 27.

THE provisional agenda of the next session of the League of Nations Council, which opens on May 18, has just been published; together with the business to be done at the Commission of Enquiry for European Union, which opens on May 15, it makes a formidable array of questions to be considered, including some of first-class importance. Interest centres primarily on the discussions arising out of the Austro-German Customs proposals and on several aspects of the disarmament problem. The Austro-German plan figures on the agenda both of the European Commission and of the Council, and the present indications are that the British proposal that the Council should examine the compatibility of the plan with Austria's international obligations may give way for the time being to the broader basis of discussion which will take place in the European Commission, at the request of the German Government.

There are undoubtedly awkward possibilities in asking for a legal opinion; it would be difficult to decide which would be the more embarrassing politically—a decision that the plan is legal or a decision that the plan is illegal. It seems wiser to tackle the problem in the wider sense in which the German Government intends to raise it in the Commission, namely, under the general terms of the development of Customs relations in Europe. The German Government's note says that it is desirable to discuss this problem once more in view of the failure of the Geneva Convention of 1930; Germany is to make at the same time a communication with regard to the aims which she is pursuing in this connection in agreement with the Austrian Government. This puts the problem where it ought to be. Germany and Austria claim that their plan is in accordance with the spirit and the aims of the European Commission and the European Commission is the proper place to consider how far this is so and to what extent the other States of Europe may be able to collaborate in the Austro-German initiative. What-ever is to be said for or against the methods or substance of Austro-German policy, there is no doubt that it has usefully stirred up those who have been too complacently satisfied with mere talk. No one seems to know much about the so-called counter-proposals from Paris, and so far as can be judged they seem to have little relation to the real problem. The results of the discussions in the European Commission will be communicated to the

Council, and the Council's consideration of the legal point will no doubt depend upon what happens in the Commission.

This controversy, and the renewed difficulties raised by France over the provisional naval agreement with Italy will not help very much in the Council's examination of disarmament problems. The selection of a President for the Disarmament Conference (a point left over from the January session) is still open, and the only definite development seems to be the final disappearance of any hope for those who have pressed Dr. Benes' claims. There has been a good deal of speculation about the possibility of appointing Mr. Henderson, and also, it may be said, a good deal of support for it. He would undoubtedly be a good president and would be acceptable to most countries, but, judging by French tendencies in these days, it is not to be expected that France and her friends would be any more enthusiastic about him than they are about the Conference itself. Still less would they be disposed to favour the holding of the Conference in London. The Council has to make the final choice of the seat of the Conference, and for this purpose will have before it a report from the Secretary-General on the facilities which can be afforded by Geneva.

There are two new proposals from the German Government. The first suggests the drafting of a standard questionnaire on the state of armaments in various countries. They are not content with the British Government's suggestion that these data, in preparation for the Disarmament Conference, should be provided on the basis of the table attached to the Draft Convention drawn up by the Preparatory Commission. The Germans want, among other things, the provision of information on armaments stocks. The other German proposal aims at excluding from the Disarmament Convention the publicity which the Convention calls for on civil aviation. The view of the German Government is that, while it has no objection whatever to such publicity, it is a matter which should not be contained in a disarmament convention but in the form of a separate international convention. It sees no reason why, if civil aviation is included in the Disarmament Convention, merchant shipping should not also be included. Both these are points that have been matters of controversy for years. In the present state of affairs there is little hope of any substantial concessions to German criticism of virtually everything that is being done for the preparation of the Conference. Their mood is one of criticism and suspicion of every step that is taken either by individual members of the Council, by the Council as a whole, or by officials of the Secretariat. There is distinct danger in this growing assumption of isolated German virtue.

Among the rest of the thirty odd questions before the Council are the minorities situation in Upper Silesia, on which the Polish Government is to inform the Council of the action taken on the Council's resolution at the last session; the resumption by the Council Committee of the examination of the minority petitions from the Ukraine; and several acute questions between Poland and Danzig. The European Commission and the Council will have the report of the Financial Committee on agricultural credits, for which a draft scheme has already been prepared by a delegation of the Financial Committee. The general character of this scheme was considered by a sub-committee of the Commission this month and was approved in principle by twelve Governments, comprising the eight countries which took part in the Warsaw Conference, and Belgium, France, Switzerland and Greece. The other countries represented on the sub-committee, while not in a position to make formal declarations, expressed sympathy with the general principles on which the scheme is based and with the object for which it is proposed. Such modifications as the sub-committee suggests will be left to the consideration of the Financial Committee, which meets early in May.

The draft plan proposes the organisation of an agricultural mortgage credit company, which will be a limited liability company constituted under the auspices of the League; before it can come into operation an international

convention will have to be concluded. The authorised capital will be 50 million dollars, but will be limited at the beginning to a first block of 5 million dollars. As soon as the company has been founded, a special reserve, equal to the first block of subscribed capital, will be furnished by the contracting Governments in the form of advances carrying interest. The total value of bonds issued by the company may not exceed ten times the paid-up capital and special reserve. The funds will be used for making long or medium-term loans to national mortgage credit companies, which will lend this money on first mortgages upon immovable property exploited agriculturally. The main purpose of the scheme is to provide credit facilities in Central and Eastern Europe, where conditions have been very bad and where economic activity has been gravely hampered by usurious rates of interest. It is unlikely in any event that the initial capital can be subscribed before next autumn.

UNITED STATES.

Business — Money Market — Capital — Farm Board — Public Finance.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 25.

FURTHER gradual seasonal recession in business activity and the continued decline in security and commodity prices are accentuating the bearishness of the financial district, but over the country generally the warmer weather and good crop prospects are promoting more cheerfulness. The failure this week of Pyncheon and Company, one of the largest Stock Exchange firms, came somewhat as a surprise, as it had been taken for granted that the bank which had been carrying the firm for a year or more would continue to do so. The bank's ostensible reason for letting go was that the firm's affairs were too involved to give hope of extrication. It is believed that the real reason was a dispute growing out of the recent financing of the Fox Film Company, in which the brokerage house had become rather heavily involved. It is well-known that a number of brokerage houses are being kept afloat by banking help, but with the exception of one or two small concerns it is not expected that this most recent failure will mean a change in policy by the banks.

The rising tide of gold imports and the energetic action taken by the Federal Reserve Bank to discourage the influx of funds from abroad by cheapening the New York money market have had no influence on the security and commodity markets. The Central Bank cut its buying rate on bankers' bills, bringing the asked quotation on 90-day maturities to 1½ per cent., the lowest ever in effect here, and a full ½ below the discount rate. Opinion differs on the outlook for a lower official charge, for a reduction below the current 2 per cent. rate would be little more than a gesture, which might not have an altogether happy interpretation. Member banks in this district have, for a long time, been entirely out of debt at the Federal Reserve Bank. On the other hand, cutting the bill rate has already put more Reserve Bank credit into the market. Purchases of bills at the local institution this week were \$16 millions, and for the system were \$20 millions. Discounts and Government security holdings were unchanged. Against a reserve ratio for the system of 84.5 per cent., the New York Bank has a ratio of 87.3 per cent.

Brokers' loans dropped \$5 millions this week, after a moderate rise in the previous week. The absence of any sharp decline in borrowing in the face of the drooping prices of stocks suggests a weakening of the stock position, and while a good deal of liquidation has undoubtedly come from investors' strong boxes, much of the current brokers' loan total is due to the stickiness of some recent bond offerings. The lack of absorption has discouraged new offerings, the week's total being less than \$20 millions, and since only the Government section of the bond market has been firm, the prospect for a revival is not very bright. Railroad bonds naturally have suffered with the

decline in railroad share prices to new low levels. However, current reports that some of the large insurance companies are disposing of their railroad bonds are exaggerated. What is happening is that some of these companies have become more cautious buyers of rails and have increased their proportion of public utility bonds.

Early reports on earnings for March indicate that the railroads are beginning to do somewhat better, but their continued loss of traffic to motor trucks and buses, and the general business depression, are hurting. One or two receiverships in the south-west would not be surprising unless conditions improve considerably before long. Fortunately, the public is finally becoming aroused to conditions, and some States have recently passed regulatory laws which are helping to remove unfair motor competition.

With the receipt, next week, of \$16 millions in gold from France the addition to the country's gold stocks this month will be approximately \$40 millions, and since the first of the year \$116 millions. A shipment of \$7 millions is on the way from Argentina and this, added to the net releases from earmark since the first of the year of \$17.5 millions, will bring the total gain for the four months above the addition for the same period of last year. Before the Reserve Bank took action to curb rising gold imports by cutting bill rates, importing bankers had predicted an inflow from France of around \$100 millions. The idea that gold might go from here to London is scouted, no such rise in sterling being thought probable. Some gold is likely to go to Canada in the next two or three months.

The Department of Commerce reports that foreign loans here since the first of the year have been only \$118 millions. Obviously, the market and the state of mind among investors is not very favourable to new foreign lending. Cancellation of the Spanish credit, which, admittedly, was desired by the bankers, has been followed by a remission to the Bank of Spain of the commissions collected in advance; there was a legal question involved inasmuch as the loan was made to the Central Bank of the Kingdom of Spain, guaranteed by the Kingdom. The credit was of the revolving variety and was for a period of 18 months, with no provision for renewal.

A flurry was caused by reports that the Farm Board intended to dispose of its wheat holdings abroad, but official denial quickly came that more than the 35,000,000 bushels held at seaboard would be sold. In most quarters the idea of holding the grain indefinitely is much disliked since the Board's holdings of both wheat and cotton are paralysing the markets. The prospect that purchasing will be resumed is rather slim, but another wave of bank failures in the west might force the Government to it.

Poor corporation earning statements for the first quarter continue. Such strong and well-managed corporations as General Motors and General Electric failed to cover their dividend requirements. United States Steel Corporation, which will publish its accounts next week, also fell far short of covering its dividend. It is estimated that fully half the 500 or so active stocks on the Stock Exchange have reduced or omitted dividends since January 1, 1930, and probably the movement has yet to reach its climax. Financial difficulty is, nevertheless, not serious outside real estate fields. The number of mortgage foreclosures and possessions by taxing authorities is rapidly mounting and is already at a very high total.

Alarm over the outlook for higher taxes and the growing Governmental deficits is spreading slowly but surely. President Hoover has announced plans to cut more than \$300 millions from the 1932 budget, but a heavy deficit is a certainty in any case. For the fiscal year, beginning July 1st last, the deficit is now more than \$800 millions. President Hoover placed soldiers' bonus loans to date at \$912 millions, with an additional \$140 millions applied for. This high total will not, of course, end the matter. Income-tax collections for first quarter were \$334 millions and not more than \$300 millions is likely for the June payments. The Treasury continues to borrow on discount bills and a moderate-sized long-term bond issue is expected, since the short-term debt is constantly growing

more unwieldy. Depressed trade conditions are bound to keep alive the radical political agitation, but current sentiment over the country is strongly against a special session of Congress. In the absence of any unexpectedly severe economic or financial disturbance the legislative holiday will last until the regular session next December.

FRANCE.

Presidential Election — M. Coty — Agricultural Programme — Coal, Iron and Steel Output.

(FROM OUR CORRESPONDENT.)

PARIS, May 8.

THE Presidential election remains the feature of the political situation, and, though it is only a week before the vote at Versailles, the situation is just as puzzling as ever. In view of the impending discussion by the League of Nations of the situation set up by the Austro-German Zollverein project, the outcome of next week's voting may be of vital importance. If M. Briand is elected, France will be without an authoritative voice at Geneva, at what all parties here regard as one of the most important international conferences since the Peace Treaty was signed. It is not surprising that some bitterness is being expressed here at the apparently lighthearted manner in which the French leaders agreed to the Geneva gathering being fixed for a date that must inevitably clash, for all practical purposes, with the inelastic provisions of the Constitution concerning Presidential elections.

The first more or less definite intimation that M. Briand has decided to be a candidate for the Elysée occurred yesterday, when the Chambers reassembled after the Easter recess. The order paper in the Lower House called for a date to be fixed for the nine interpellations of which notice has been given in regard to the Anschluss problem. The Government proposed that this supreme debate before the Geneva gathering should be fixed for Friday this week. The Left, for tactical reasons favouring M. Briand's own desires, insisted on Thursday being chosen, and a show of hands gave them a majority. The Government, in the circumstances, refrained from pressing the matter to a formal division, leaving M. Briand with a valuable twenty-four hours' advantage, from many points of view. M. Briand is expected to take full advantage of the opportunity to regain the ground he undoubtedly lost when he first faced the Chamber immediately after the sudden revelation that the two "Central Empires" had stolen a march on Europe. His speech on that occasion disappointed even his friends, and obviously helped appreciably to harden the growing opposition against his stay at the Quai d'Orsay.

M. Briand, it is now clear, will have the wholehearted support of the Unified Socialists, who are banking on the advantage his presence at the Elysée might give to them if, as they confidently expect, they return after next spring's elections as the largest party in the Chamber. The attitude of the Radicals, who in no way sympathise with the doctrines of the Socialist International where French foreign policy is concerned, has not yet been defined. M. Heriot's recent article in the *Dépêche du Toulouse* suggests that a certain amount of searching of heart is going on among himself and his friends as to the wisdom of a continuance of French policy on Locarno lines.

The opposition to M. Briand outside the Chamber is being vigorously—even ruthlessly—led by M. François Coty, who is now, since his incontestable victory over the boycott declared against him and his newspapers over a period of nearly two years by the entire French Press, respectfully regarded by all parties as a formidable factor of a kind never before existing in French politics. M. Coty was the inventor of the Caisse d'Amortissement as a means of replacing France financially on her feet, and he backed his proposal by offering to start it by a gift of 100,000,000 francs from his private pocket. His *bête noir* is double-headed, and comprises, first, M. Briand, whom he is roundly accusing of aiming at delivering France help-

lessly over to the Socialist International, by the operation of "the Locarno policy of concessions to Germany," and, secondly, the Banque de Paris et des Pays Bas, which he insists is "a bank too powerful in the State," doggedly and successfully despoiling France in the interests of international finance.

M. Coty, as the owner of the *Figaro* and the *Ami du Peuple*, occupies an incomparable pulpit, which is steadily drawing towards it the anti-Socialist and anti-Communist masses. The *Ami du Peuple* has now the second largest circulation in the country. A few days ago M. Coty disclosed the reason for its foundation. M. Briand and his friends, he says, falsified the original organic basis of the Caisse d'Amortissement to such an extent that, instead of being able to function in a manner that would have brought about the automatic stabilisation of the franc, it was rendered useless for the object in view. "It was torpedoed by MM. Briand, Peycelon, Raoul Péret, Loucheur and others," M. Coty alleges, "and France lost 500,000,000,000 francs of liquid capital, which would have been avoided if the Caisse had been created according to the original principles approved by five of the most qualified jurists and economists of the day." M. Coty states that, in view of what was happening, he withdrew his offer of a contribution of 100,000,000 francs towards the foundation of the new organisation and devoted it to the creation of the *Ami du Peuple*, for use as an arm against those responsible for the defeat of his plans.

M. Tardieu, undiscouraged by the fact that his great programme for reinforcement of the national economic equipment was regrettably modified, to suit party political exigencies, has this week secured the approval of his Cabinet colleagues for a long programme of legislation in the interests of agriculture. During the recess the former Premier, in his new post as Minister for Agriculture, has spent a good deal of his time in studying means to remedy some of the more pressing evils that affect the country's largest industry during the present crisis. M. Tardieu, both during his own Premiership and before, always insisted that one of the great sources of his country's strength is that, while fostering as much as possible her development as an industrial nation, she has never lost sight of the fact that her agricultural production must never be allowed to become subordinate to her manufacturing capacity. This doctrine explains to a great extent the almost inexplicably frequent changes in the tariffs for the protection of French agriculture that have latterly excited adverse criticisms from a good many foreign writers. The Minister for Agriculture has now been authorised to bring in Bills for improving the juridical and fiscal status of agricultural co-operative societies, for the creation of a national trade mark for French agricultural exports, for imposing marks of origin on imports of foreign produce, for encouraging the culture of flax, hemp, chicory and hops, etc. Bills already before the House are to be pushed forward and Commissions are to be appointed to consider propaganda plans in connection with wine exports, and to revise the present system of farm leases, compensation for improvements and other matters.

Coal production figures for March, which are issued this week, show a small fractional drop of 2,700 tons in daily output on the month, and a decline of 173,000 tons (slightly over 3½ per cent.) as compared with March, 1930, tonnage. Total output from the French mines was 4,627,561 tons, against 4,799,883 tons in March last year. The labour force employed was 2,300 units smaller than in February and 5,000 smaller than in the previous March, when 301,835 units were on the payrolls. The output of the Saar mines was 529,982 tons in March (against 479,400 in February), and arrivals of foreign coal totalled 2,283,500 tons (against 2,165,000 tons). British coal imports were 1,188,000 tons (against 1,043,500 tons); German, 346,225 tons (against 428,000 tons in February), including "reparations coal"; and Belgo-Luxemburg, 421,322 tons (344,762 tons). Total coal imports, which during the first quarter of 1931 were 7,501,000 tons, against 9,084,000 tons in January-March last year, have latterly been increasing, but there is ground to foresee that this improvement may henceforward be nullified owing to the restoration, as from April 28th, of the

preference rates formerly given to French coal destined for points in the West of France, in the shape of a rebate of 15 per cent. on transport charges.

Total output of pig iron in March was 775,000 tons, against 726,000 tons in February, and 898,000 tons in March, 1930. Crude steel production totalled 722,000 tons, against 693,000 tons in February and 848,000 tons in March last year. The output of metallurgical coke by the French colliery plants, however, continued almost as large as in March, 1930 (432,430 tons, against 443,909 tons). French export prices have fractionally declined, but quotations remain without change at home.

GERMANY.

Agricultural Duties — Bread Prices — Declining Revenue — Unemployment Expenditure — Economies — I.G. Farbenindustrie — Ruhrgas A.G.

(FROM OUR CORRESPONDENT.)

BERLIN, May 6.

THE Cabinet has now reached agreement on the revision of the duties on agricultural products, and has raised, by a decree of April 30th, the rates on pulses, barley, bacon, lard and pigs. At the same time the Food Ministry announced that wheat imports would be facilitated, not by lowering the duty, but by granting a drawback on limited quantities to certain specified mills. It remains to be seen whether this somewhat roundabout method will produce the desired effect on bread prices with sufficient expedition. Meanwhile, the price of bread is rising steadily and creating great political difficulties for the Government, who will probably avail themselves of the cartel decree to make an attack on the Bakers' Association. Past experience does not, however, suggest that such an attempt is likely to be successful. It is, moreover, doubtful whether a reduction in the price of wheat alone would suffice to bring about a fall in the price of bread, and whether an increased import of barley would not also be necessary in order to release for bread purposes the quantities of rye which are now being used as fodder. A small relaxation in favour of barley imports has already been granted.

The farmers' demand for higher duties on butter has been refused, for fear not only of the effect on consumers, but still more of political difficulties and possibly even political quarrels with the agricultural countries of Europe, which have a substantial interest in the export of butter to Germany. It is unfortunate that the trade treaty negotiations with Roumania have once more been postponed. Political influences from Paris and Prague evidently were partly responsible for this, for the German representatives had already set out and had to be recalled because Roumania once more refused to participate in the proposed conference. If, however, Germany is prepared to import more Roumanian produce, especially maize, an agreement will be possible before long.

It is particularly important at present for the Government to avoid any blunders in connection with the bread price question, for they will have need of every ounce of their prestige this summer in order to carry a series of highly unpopular measures. It is already extremely probable that the Budget for 1931 will not go according to plan. Receipts so far seem to be falling a long way short of the estimates, which is not surprising, as although the estimates were conservative as compared with those for 1930, they were a long way in excess of the actual receipts for the preceding year. Expenditure on unemployment relief is going to be much heavier than was originally allowed for, as the recovery in the labour market is so far proceeding very slowly, though it is impossible to make any definite estimate at present as the late spring has delayed the recovery in agriculture and building. There will at any rate be heavier expenditure on emergency benefit for those who have exhausted their actuarial right to benefit but continue for a limited period to receive support from the State.

The financial condition of the communes is a source of even more urgent anxiety. They are responsible for

the maintenance of those unemployed who have been out of work too long to be eligible either for benefit proper or for emergency benefit. The number of these increased until very recently and their reinstatement in industry will be particularly difficult as so long a period of unemployment has naturally undermined their capacity to work. As with the Reich, the finances of the States and Communes are in difficulties owing to the reduced receipts from taxation, and especially from the income tax, the bulk of the receipts from which are passed on by the Reich to the self-governing communities.

Incisive plans for dealing with this situation are no doubt being hatched by the Government. Increases in taxation will as far as possible be avoided. There will have to be an amalgamation of emergency benefit with the relief provided by the Communes for those who have been unemployed too long to be eligible for other forms of benefit. This would effect a substantial saving, though at the expense of one of the most needy sections of the population, for it would mean that persons who formerly drew emergency benefit would in future only receive the lower rate of communal relief. Further reduction in official salaries would go down with the mass of the people, for in a period of such severe unemployment their certainty of tenure is regarded as a very great advantage. It would, however, arouse a dangerous degree of resentment in official circles if the indemnities which they had counted for the current year were curtailed.

The Budget for 1931 contemplates the redemption of over Rm. 400 millions of debt, an effort which the people could be expected to make in a year of severe financial crisis. There is some hesitation in carrying out this redemption now that it has been included in the Budget, but the Government realise that they cannot possibly avoid taking some unpleasant decisions, and they possess a great asset in the moral credit which accrued to them from the way in which they met the difficulties of last winter. Whether, however, they will be able to continue throughout the summer their tactics of securing the support both of the Social Democrats and of the Conservative groups as far to the Right as Count Westarp is very doubtful. Still, even if they were forced to choose between Right and Left, there would be no serious danger of a crisis, for no party except the National Socialists and the Communists has anything to gain from such a crisis. There is, therefore, every probability that Herr Brüning and his colleagues will be able once more to persuade the German people to take bitter medicine for their economic and financial ills.

At the general meeting of I.G. Farbenindustrie, on June 3rd, the same 12 per cent. dividend, which has been paid since 1928, will be proposed, but this year the 2 per cent. bonus will not be forthcoming which was distributed last year out of the American compensation payments. The surprise of the directors' report consists in a reduction of capital by Rm. 85.63 millions to Rm. 713.72 millions, attributed to purchases made for the purpose of supporting the shares. Large quantities of shares were also acquired from those holders who wished to invest the proceeds in shares of the I.G. Chemie, Basle, and, in addition, I.G. shares to the nominal value of 24.71 millions were taken over from the Rheinische Stahlwerke in the new year in exchange for 41.19 million shares of Riebeck'sche Montanwerke. This capital reduction diminishes the amount required for dividends by Rm. 10.3 millions.

The I.G. report is, however, obscure on many points. It is not known how many shares were bought for purposes of supporting the market, nor at what price the purchases were made. The proceeding bears a certain resemblance to that of the Deutsche Diskonto Bank. In so far as these purchases were made at a loss, the loss must have been met out of hidden reserves. Possibly fuller information will be provided by the balance sheet, to be published shortly.

Ruhrgas A.G., the company which was formed in 1927 by all the large coal mines of the Ruhr area, to utilise the by-product gas of the coke ovens, shows a loss of over Rm. 5 millions for 1930. The company concluded

long-term agreements with many cities and industrial undertakings, even beyond the Ruhr area, and laid gas pipes from the works to these cities. At the end of 1930 800 kilometres of pipes were in use, and the output of gas in that year amounted to 710 million cubic meters, but in 1928 an output of 1,000 million cubic meters was counted on for 1930 and better prices were expected. The substantial loss is mainly due to the heavy interest payments with which the company is burdened by the great capital cost of its equipment. Its debt amounts to Rm. 70 millions, and its capital to Rm. 25 millions. Even the anticipated increase in its output to 950 million cubic meters may not suffice to provide a dividend on the share capital.

ROUMANIA.

Political Situation — National Peasant Party's Record — M. Jorga's Government.

(FROM OUR CORRESPONDENT.)

BUCHAREST, April 25.

THE resignation of the Government just before the Roumanian Easter holidays came sooner than was generally expected, and the solution of the political crisis which has at last been found, after long and protracted negotiations, in a Jorga Cabinet could hardly have been predicted three weeks ago. The National Peasant Government went out of office presenting the country with a bouquet of fresh laws passed during the last Session by which it crowned a career extraordinarily prolific in new measures—not all wisely inspired. The hopes with which the late Government was received when it came into power in 1928 were perhaps extravagant. Certainly the task confronting it at that time was by no means easy and was rendered yet more difficult by the advent of the acute economic world crisis which found Roumania, in consequence of previous bad administration, in a very weakened condition. Unfortunately, the Government did not always grapple with the problems that presented themselves in a prudent and statesman-like fashion. Especially since M. Maniu retired, the demagogic elements of the National Peasant Party gained in influence. Some of the later laws, in particular, bear unmistakable traces of having been introduced with an eye on the polling box. At the same time, the administrative reform, much advertised when it was proposed as the most necessary means of reorganising the Civil Service, proved in its application very costly and was undoubtedly used with the object of presenting plums to faithful adherents of the party. On the whole the effect produced in the country by the enormous output of new laws during the last two years is a feeling of bewilderment. The legislative machine has been worked at too high a pressure; and it is probable that the National Peasant Party has lost a good many of its supporters, especially in the business community.

The severity of the economic crisis and the absence of any prospect of amelioration in the near future prompted the King to make an appeal to the various political parties to come to an understanding for the formation of a National Government. M. Titulesco was entrusted with the difficult task of bringing together the heterogeneous elements of the Roumanian political world, but even his persuasive ability and ingenuity, supported wholeheartedly by the King himself, was not able to overcome the divergence of party interests and the practical difficulties of satisfying his own requirements and those of the various leaders. After a fortnight of uncertainty he had to admit failure, and the King called on M. Jorga, his old friend and former tutor, to step into the breach. M. Jorga stands apart from all the other political leaders. He is one of the most highly esteemed men in the country; his reputation for integrity is undoubted; and he is regarded as a man of lofty ideals. In the political arena he is the leader of a small party composed principally of professional men and people of culture. For the formation of his Government he has been able to secure the assistance of M. Argetoianu, an

old political hand, who has held office in previous administrations and whose influence and political acumen will be particularly valuable in the negotiations with different parties whose support will be necessary for the firm establishment of the new Cabinet.

For the moment the relations of the new Government to the various parties and in consequence the course of events in the immediate future are very obscure. It appears that M. Duca, the leader of the Liberal Party, is inclined to lend his support. This would mean a general election at which the relative strength of the Liberals and the National Peasant Party would be put to the test. On the other hand, the present Cabinet does not appear to find great favour with the National Peasant Party, which has the majority in Parliament now. At any rate, if M. Jorga wishes to govern with the Parliament, he has to obtain the support of one of the great parties, the Liberals or the National Peasant Party. This will make him at once largely dependent upon the good will of the party of his choice to which he would have to make far-reaching concessions. It will be seen that the path of the new government is by no means strewn with roses. Indeed, it is bristling with difficulties, and the immediate outlook is wrapt in mystery. There are, however, three declarations of M. Jorga which seem like beacons in the general obscurity, namely: that it is not his intention to institute a dictatorship; that he wishes to uphold the value of the currency; that he will not dissolve Parliament unless forced to do so by the attitude of Parliament itself. Apart from this, his utterances prove that he fully realises the extreme need of the country and that the only remedy lies in an honest administration and in intensive work by every member of the community.

CANADA.

Crop Conditions — Business — Problems — Trade Returns — Federal Revenues — Estimates.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 21.

IT is many years since Canada enjoyed such an early spring. In the Eastern provinces the farmers have made good progress with cultivation, and, thanks to timely rains, there is already a good growth of pasture. On the prairies, however, while the spring is equally early, the lack of moisture in wide areas is serious and the problem of soil drifting is widespread.

The general resumption of outdoor work and the advent of warm weather have given, as usual, a certain stimulus to trade and a slight upward trend has been apparent in the business situation during the past fortnight. Reduced prices have also had a favourable effect in the retail trade; there is a steady normal distribution of groceries, and the public has begun to purchase light summer clothing earlier than usual. The carloading figure for the week ended April 11th, although it is 7,502 cars below the figure recorded for the parallel week of 1930, shows a gain of 4,392 cars over the total for the previous week. There is, however, not much evidence of any gain in industry; the textile mills, the boot and shoe factories and the furniture plants are fairly well employed, and have good orders on hand, but most other industries continue to operate well below capacity and under difficult conditions. The spring programme of new construction is decidedly modest, and the value of the building permits issued in March was placed at \$9,906,567, a decline of roughly 25 per cent. from the figure recorded in March, 1930. The winter lumber cut was only about 60 per cent. of normal, and yet is in excess of the demand, though there are some signs of improvement in consumption. The fishermen on the two coasts are suffering from unsatisfactory markets and poor prices for their catches. There has been an advance in the operating ratio of the newsprint industry, but it has been accompanied by a further cut in the price of newsprint by a group of important companies; they have agreed to a reduction of \$3 per ton, which is to be retroactive from January 1, 1930, until May 1st, and thereafter to a

further cut of \$2 per ton. Last year the average price was \$55 per ton, and it will now be lowered to \$50, which will not help the prospect of earning interest on newsprint securities. On the other hand, mining operations, particularly in the goldfields, have received an impetus from the lowering of the costs of production. Navigation is now open on the St. Lawrence, and Montreal and Quebec are profiting thereby at the expense of St. John and Halifax.

The trade returns for the fiscal year 1930-31, which ended March 31st, have now been published and give the total value of Canada's foreign trade at \$1,723,800,496, a decrease of \$669,377,000 as compared with the figure of \$2,393,177,586 recorded in the previous year. The import and export figures are as follows:—

	1929-30.	1930-31.	Decrease.
Imports	\$ 1,248,239,516	\$ 906,807,285	\$ 341,431,631
Exports (domestic and foreign)	1,144,938,070	816,993,211	327,944,859

The adverse trade balance, if only domestic exports are taken into account, was \$107,096,873, which is roughly 21 million dollars less than the figure for the preceding year.

The returns secured by the Department of National Revenue during the last fiscal year reflect the consequences of the economic depression. Customs revenues, placed at \$129,149,568, are down by 48 million dollars, Excise taxes \$36,861,044, by 25 millions, and Excise duties \$57,291,602, by 7½ millions; the only increase of revenue has been from income tax, which at \$71,048,022 is up by two million dollars. Full data are not yet available, but it is clear that the decline in revenue for 1930-31 will be in excess of 70 million dollars. Faced with this situation and the prospect of increased expenditure for unemployment relief and other things, Mr Bennett has, by exercising firm pressure upon the Departments, reduced the main estimate by nearly 38 million dollars to a figure of \$386,394,408. The heaviest cut was in "public works," for which the estimate is reduced by 16 million dollars, but the national defence estimates are also down by a million and a half and aviation by 2½ million dollars. There are also sharp decreases in the immigration and land settlement votes and the capital expenditure on railways and canals is reduced by nearly eight million dollars. One line of economy which the Government is taking is to dismiss civil servants, and in Ottawa already two hundred have been compulsorily retired, while more are expected to share the same fate. During the debate on the Address some criticism was directed at the huge expenditure of the Canadian National Railways upon the new terminals at Montreal, and from different quarters strong pressure has been exercised upon the Government to halt their construction until times improve. This could only be done at grave political risk, for the Quebec Liberals would at once allege that the Conservative Party was once more giving proof of its inveterate hostility to the Province of Quebec.

ARGENTINA.

Monetary Difficulties — Obscure Political Situation.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, April 24.

FINANCIAL conditions in Argentina considerably altered during the early part of the month. Some alarm was caused by the steady diminution of currency due to gold withdrawals by the Banco de la Nacion, and the proximate need for funds wherewith to handle the heavy maize crop that is now assured and likely to be moving overseas by the end of April. Argentina's aggregate "means of payment" should be ample for handling her present volume of trade, for both imports and exports have shown a steady reduction in values, nor is there any likelihood of price recovery during what remains of the current year. Yet the local monetary position is far from liquid, the actual cash holdings of most local banks being decidedly

low, with no present means of increasing them at short notice. The circulation recently stood at \$1,165,120,695, as compared with \$1,260,686,284 paper on December 31, 1930.

To allay this anxiety, and increase for the time being the notes in circulation, the Government has decreed a return to the system of gold deposits in Argentine legations abroad, the paper equivalent of which will be available here on receipt of cable advice to the effect that such deposit has been made. There are, however, special provisions which differentiate this decree from previous measures. In the first place, permission must be obtained from the Ministry of Finance before such deposits may be entertained, the technical adviser in this connection being the Banco de la Nacion, which institution will also charge a commission, based upon the difference between the rate of interest ruling at the centre where the deposit is made and the rate current in Buenos Aires. Exactly what this commission will be cannot be determined beforehand, but it is said that at the present time it amounts to ½ per cent. for London deposits and 1 per cent. for New York. The equivalent in paper dollars at \$11.45 to the pound is paid over by the Conversion Office, and the gold must be freed within six months by means of a return of the note equivalent, otherwise it passes into the possession of the Conversion Office. This institution is furthermore empowered to take gold deposits locally on similar conditions. How far this will go in providing additional cash facilities in Buenos Aires has yet to be seen. It is manifestly beneficial to cereal exporters, and they have already made use of the facility, an example which the banks will not be slow to follow if they are able to find safe and profitable employment for the resultant local funds, though institutions enjoying ample credit in Europe will doubtless find it more profitable to supply their currency needs by selling cable transfers. It is also symptomatic that from at least two distinct quarters an appeal has been made to the Government for a renewal of the practice of rediscount, and it is very much to be feared that this latter solution of present difficulties, disguised inflation though it be, will be forced upon the Government against its better judgment.

It is still impossible to say what the final outcome of the elections in the Province of Buenos Aires will be. There is talk of a call to "national" elections, a sort of plebiscite; still more common is the expression of a belief in the early coming of a dictatorship, and the probabilities point to some form of unitarian as opposed to federal direction of Argentine affairs being eventually adopted, though not quite in the crude form that is suggested to the minds of most people by the term dictator. What is urgently desired by all classes of Argentine society is economic stability and as early a return as may be to normal conditions of finance. Recent Cabinet changes have been in their essence merely the relieving of the ministers of the Provisional Government who had borne the strain of the past six months and desired, as well as deserved, a rest. They have been replaced by men of equally outstanding high character, ability and discretion, and who are wholly free from the slightest suspicion of axe-grinding. On the Minister of Finance falls the heaviest burden of the moment, for he has to continue the policy of economy which from the outset has been one of the planks in the platform of the Provisional Government, and has also the task of taking in hand, and that at once, the twin difficulties of banking and currency reform. In a speech delivered on the occasion of installing the new President of the Banco de la Nacion, Señor Adolfo Casal, his predecessor, Dr. Enrique Uribe, now Minister of Finance, stated plainly that the time had come for establishing a Central Reserve Bank, together with banking legislation governing capital liabilities, the preferential protection of depositors, and the superintendence of banks. Complete freedom from Government interference must be a *sine qua non*, and the management of both the Central Reserve Bank and the Superintendence Department can only be entrusted to competent men, neither wealth nor position nor good intentions compensating for absence of ability and experience in banking practice.

Establishment of a Central Bank was not the only innovation foreshadowed in the Minister of Finance's

speech. "We must," said he, "go as soon as may be to a tax on incomes." This is no idle threat, but may be taken as an official indication of the early introduction of this tax. It will at first be applied to profits of limited companies and commercial enterprises of analogous nature, the charge being on a reduced scale and the principle of strict equality being observed. Meanwhile studies are to be made with a view to gradual extension of the tax. Important as this news is, it remains to be seen how far the proposed measure will be put into practice, since many limited companies are at present showing losses.

Books and Publications.

PROFESSOR HOBHOUSE.*

Mr Hobson and Professor Ginsberg have produced a book which will be read with great satisfaction by the large number of persons who have reason to cherish Hobhouse's memory with affection and gratitude, and with great profit by all students of philosophy. Professor Ginsberg's contribution consists of seven chapters on Hobhouse's work, and it thus forms an excellent introduction to the study of Hobhouse's books. Mr Hobson writes as one of Hobhouse's oldest friends and gives an illuminating account of his character and temperament.

It is easy to see from this account why Hobhouse achieved distinction in different fields, for he possessed an unusual combination of qualities. Mr Hobson speaks of "the union of a powerful intellect with a profound emotional nature." He had all the force that belongs to enthusiasm which is controlled and directed by a steady judgment. In some respects he lived under a constant strain. A great many people are interested in the pursuit of truth who are not specially concerned about practical justice in the world around them. Many reformers eager for improvement in the conditions of social life watch the speculations of the man of science with a cold detachment. Hobhouse cared intensely about both, and he was always afraid of sacrificing one duty to the other. "You know," he wrote when he was twenty, "that I am a little speculative by nature and always in danger of caring more for knowing truth than for doing good." But this combination made him a most inspiring teacher and it enabled him to give life significance and range to a subject which, when he first devoted himself to it, was still on its trial. In the same way it gave him the incentive necessary to his philosophical writing. For his sense of duty to the cause of knowledge kept him to his larger task, pursued through many years that were dark with disappointment and distress about public affairs, just because the cause of knowledge was so clearly in his eyes the cause of progress.

When Hobhouse turned to practical affairs he was everything that a philosopher is supposed not to be. Nobody could hear him debate or discuss a practical problem without seeing that his mind was swift, lucid

and constructive. This made him an admirable leader writer. Mr C. P. Scott speaks in this volume of his great services to the *Manchester Guardian* and Mr B. Hobson quotes a letter written by Lord Morley about his articles on the Boer War. "I cannot sufficiently admire the acuteness, industry, grasp and power with which Hobhouse has carried on this fight. It is one of the finest pieces of journalistic ability (in the highest sense) that I can remember." These gifts, together with his essential fairness of mind, found scope in his later life in his service as Chairman of Trade Boards. "In the opinion of all who were able to judge," wrote Mr Mallon, of Toynbee Hall, "he was the most eminent of the many distinguished men who have been connected with trade boards, and he communicated to them something of his own sanity and serenity and wisdom." Few men were so helpful or so ready when judgment was wanted or so generous in helping friends or a public cause.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Economic Disarmament. By J. H. Richardson. (London) George Allen and Unwin, Ltd., 40, Museum Street. 7s. 6d. net.

A study, by a former member of the research staff of the International Labour Office, of the possibilities of international co-operation.

Policy and Ethics in Business. By Carl F. Taeusch. (London) McGraw-Hill Publishing Company, Aldwych House.

A very elaborate study which, after an opening chapter on the social and religious background of business in the United States, goes on to discuss trusts, the ethics of price policies, unfair trade methods, advertising, output regulation and cancellation of contracts. Recorded cases are constantly quoted by way of illustration.

Economic Problems of Modern Life. By S. Howard Patterson and Karl W. H. Scholz. Second edition. (London) McGraw-Hill Publishing Company, Ltd., Aldwych House. 18s. 9d. net.

A discussion of modern economic problems which runs parallel with the usual first course in economic theory, and should be of great help to students in assimilating it.

Goldstandard und Arbeitslosigkeit. By Dr. G. W. Schiele-Naumburg. (Halle) Gebauer-Schwetschke Druckerei und Verlag A.-G. Preis 1.50.

A German pamphlet on the monetary situation.

New Zealand Official Year Book, 1931. (Wellington) W. A. G. Skinner. 7s. 6d. net.

An exhaustive collection of official statistics which is indispensable to any reference library.

International Labour Review. April, 1931. (London) George Allen and Unwin, Ltd., 40, Museum Street, 2s. 6d.

Includes articles on "Some Effects of the Agricultural Depression on Agricultural Labour"; "The Effect of Falling Prices upon Labour Conditions in New Zealand"; "New Statistics of Collective Agreements in Germany."

Le Società Anonime a Catena. By Luigi Einaudi and Edoardo Giretti. (Turin) Arte Grafiche-Ditta Fratelli Pozzo.

An Italian essay on interlocking holdings.

KREUGER AND TOLL.

The investor who surveys the varied activities of Kreuger and Toll may find it difficult, at first sight, to discover a common purpose binding together many of the varied parts of the undertaking into a single, and highly successful, financial trust. The connecting link is, in fact, the personality of Mr Ivar Kreuger. The company developed in accordance with Mr Kreuger's idea of financial service which directed itself first to the Swedish Match Company, then to other Swedish industries, and finally to world industry as a whole. In pursuing these great ambitions, Mr Kreuger has contrived to serve also the interests of his shareholders and few will deny that the results have been gratifying.

The activities of Kreuger and Toll have three distinct branches. The first is the granting of Government credits in return for concessions—for the most part Government match monopolies for the Swedish Match Company or International Match Corporation in which the company holds a controlling interest. The usual procedure is for

Kreuger and Toll to take over the whole of the Government loans in connection with these match monopolies while Swedish Match and International Match hold the industrial or commercial investments. As Swedish Match often acquires Government bonds at prices above the market quotations, Kreuger and Toll receives in such cases, on taking over the bonds, a participation in the match monopoly profits.

The second branch of the company's business is that of an investment trust—the holding of shares in industrial, real estate and banking companies of the highest standing. The original object in this case was the acquisition of permanent investment assets of a type radically different from Government bonds, in order to strengthen the financial structure of the company. In choosing these investments the directors had in mind companies owning important natural resources or carrying on business of such a nature that the holding of a large share interest did not entail management responsibilities. So

1. Skandinaviska Kreditaktiebolaget (11.4 per cent. interest).
2. Stockholms Int. Gar. A/B (10 per cent. interest).
3. Banque de Suede, Paris.
4. Hollandsche Koopmansbank, Amsterdam.
5. Other investments in banks.
6. A/B Hufvudstaden (95 per cent. interest).
7. Cie. Centrale de Prets Fonciers.
8. Deutsche Central Bodencredit (largest in Germany).
9. Unspecified mortgage interests.
10. Luosavaara-Kilrunavaara (Iron ore). All ordinary stock.
11. Swedish Government, owns preference stock.
12. Nordavenska Malmbelt (Iron ore).
13. A/B Hematit (ore), £1,312,000.
14. Oxelosund Railway, Örebro-Kiljings Railway, Strasså-Stora Railway (£802,000).
15. Gellivara Mines (£388,000).
16. Power, engineering and other interests.
17. Control of thirteen companies (largest producers of sulphate pulp in Europe).
18. Jönköping och Vulcan Fabrics A/B (£2,000,000).
19. För. Svenska Tandsticks A/B (£2,200,000).
20. Katrinefors (paper mills).
21. Överum Bruks A/B.
22. Trummer and Company (£200,000).
23. British Match Corporation (1,856,250 shares).
24. Fabrica Nacional de Fosforos, Sto. Domingo.
25. Cia. Chilena de Fosforos, Chile.
26. Interest in eight other companies (£1,780,000).
27. Polish Match Company.
28. Cia. de Fosforos Del Peru.
29. Nittedals Match Factory, Norway.
30. Bryn and Halden Match Company, Norway.
31. Soc. de Telephones Ericsson, Paris (manufacture).
32. Cia. Interriana de Telephones, Argentine (operating).
33. Cia. Sudamerica de Telephones, Buenos Aires (operating).
34. L. M. Ericsson, Finland (operating).
35. Greece, jointly with Siemens (operating).
36. Turkey (operating).
37. Polish Telephone Company (operating).
38. Soc. Ezerizi Telefoni, Naples (operating).
39. Spanish L. M. Ericsson (manufacture).
40. L. M. Ericsson, London (manufacture).
41. L. M. Ericsson, Warsaw (manufacture).
42. Nederlandische L. M. Ericsson (manufacture).
43. Soc. Ericsson, Rome and Genoa (manufacture).
44. Numerous smaller subsidiaries.

for the shares acquired for permanent investment, in addition to Swedish Match, have been in Swedish enterprises. They comprise: (1) a 99.9 per cent. interest in the Swedish Pulp Company, an amalgamation of the leading Swedish companies in the pulp and timber industries; (2) a 20 per cent. interest in Trafikaktiebolaget Grängesberg-Oxelösund, which, with the Swedish State, controls the most important iron ore deposits in Sweden; (3) a 95 per cent. interest in the Hufvudstaden Real Estate Company, owning properties mainly in Stockholm; (4) an 11.4 per cent. interest in Skandinaviska Kreditaktiebolaget, together with minor interests in many foreign banks; and (5) a 55 per cent. (voting) interest in the L.M. Ericsson Telephone Company, which was acquired last year.

The permanent shareholdings of Kreuger and Toll as a whole are distributed over 21 industrial, banking and real estate companies, of which last year only five showed a decline in profits. Of the 12 holdings officially quoted only one—the Grängesberg—had a market quotation lower at December 31st last than the cost of acquisition—namely, 244 per cent., against 285 per cent.—and this has now been written down. Moreover, the market value of all the officially quoted investments was Kr. 48,232,336 in excess of the book value of nearly Kr. 519 million, disregarding temporary investments of Kr. 107.8 millions.

The third branch of the company's activities is that of short-term financing, particularly in the matter of industrial amalgamations. For reasons of taxation, these "trading" operations are mainly conducted through a Dutch subsidiary—N.V. Financieel Maatschappij Kreuger and Toll. In this connection the company has established close co-operation with commercial banks throughout the world, enabling it to obtain reliable and first-hand information about economic conditions or business developments in foreign countries. The full extent of the company's ramifications is shown in the chart accompanying this article, which is based on data compiled by Mr F. P. Persson, with whose permission it is reproduced.

The growth of the three branches of the company's business in the past two years is shown in the following table:—

	(In millions.)	
	Years ended Dec. 31.	
	1929.	1930.
	Kr.	Kr.
Foreign Government and other bonds†	318.2	419.8
Permanent investments	577.7	518.8*
Temporary investments and syndicate participations	94.4	297.6

* After writing down by unknown amount.

† Eligible as collateral for Secured Debentures.

What is to be Kreuger and Toll's next development? There are two major possibilities. First, the company is helping to develop the market in mortgage bank bonds. To re-establish the position of mortgage bonds as a medium for international credits the Compagnie Centrale des Prêts Fonciers was founded in Amsterdam in September last year, with a capital of Fl. 10 millions, and in March, 1931, the International Bodenkreditbank was founded in Basle with a share capital of 25,000,000 Swiss francs. In both these companies Kreuger and Toll participated, together with the leading American, British, French, German and Swedish banks and finance houses. The object of these institutions is to offer the public securities of a relatively uniform type instead of the varying mortgage debentures issued by separate mortgage banks. The development of the mortgage bank business is regarded favourably by all the leading central banks as a means of easing the present world depression.

The second direction in which Kreuger and Toll seems bound to advance its financial business is in the telephone industry. The acquisition of a controlling interest in the Ericsson Telephone Company last year is of first importance. This company is one of the leading telephone manufacturing organisations in the world, and has been the pioneer of the telephone industry in Europe. Outside Sweden it operates factories in Great Britain, France, Italy, Spain, Czechoslovakia, Austria, Hungary,

Norway and Estonia. In addition to its manufacturing business, it operates under telephone concessions in different countries, in particular Poland, Italy, Argentina and Mexico, the last country being shared with the International Telephone and Telegraph. It is the intention of Kreuger and Toll to establish as intimate a financial co-operation with the Ericsson Telephone Company in the acquisition of Government concessions as it has done with the Swedish Match Company. Whether the control of Ericsson Telephone by Kreuger and Toll will lead to a "war" with the powerful American interests in the competition for Government telephone and telegraph concessions remains to be seen.

The investor in Kreuger and Toll has the choice of secured debentures, participating debentures and ordinary shares. The 5 per cent. secured debentures are covered up to 120 per cent. by specially pledged securities such as Government bonds and mortgage bank bonds. The participating debentures, ranking for 5 per cent. and for an additional 1 per cent. for each 1 per cent. paid on the share capital, are designed to enable the small investor to acquire a holding in the company. Some Kr. 76,000,000 of shares have been issued, including Kr. 10,000,000 of "A" shares and Kr. 66,000,000 of "B" shares, all of Kr. 100. The two classes rank equally, except that the "A" have one vote and the "B" one-thousandth of a vote per share. It is the company's policy to limit dividends and interest on the shares and on the participating debentures to an amount which can be covered by "recurring profits," i.e., by interest on the foreign Government bonds and dividends on the permanent shareholdings. The financing or "trading" profits, being variable, are rightly disregarded for dividends purposes. The following table, based on the consolidated income and surplus account, gives an analysis of the recurring and variable profits in the last three years:—

Capital:—	1929.	1930.
	Kr.	Kr.
Shares	76,000,000	76,000,000
Participating debentures	139,166,660	139,166,660
Secured debentures	185,167,910	182,238,806
Recurring profits*	\$53,000,000	93,790,532
Trading profits	59,838,283	32,186,858
Total profits	112,838,283	125,977,390
General expenses	4,274,365	3,629,336
Net income	108,563,918	122,348,054
Per cent. paid.....	30%	30%
Per cent. earned†	72%†	56.8%
Carried forward.....	153,833,579	214,381,636

* Interest on secured debentures of K. & T. have been deducted from interest received from bonds.

† On shares and participating debentures.

‡ On average amount of capital outstanding in year.

§ Approximate.

The participating debentures and shares of Kreuger and Toll are sometimes criticised on the ground that, apart from normal industrial and trading risks, a large political risk is present as a result of the vast holding of foreign Government bonds. The latter, however, are less than 27 per cent. of the company's assets as given in the last balance sheet, and in most cases the Government loans have a specific security—the first charge on annual payments or royalties made by the Swedish Match to the Government for the lease of the match monopoly. The amount of the loan is generally fixed so that the service is covered by the Swedish Match payments with a margin of 25 to 50 per cent. Further, considerable capital profits accrue to the company as these Government loans are redeemed by the operation of the sinking funds. In the last report the directors were at pains to argue that the Government bond holdings were a "safe and sound investment" with considerable possibilities of capital appreciation. That the market, however, rates the political risk in Kreuger and Toll securities higher than the directors is evident from the present quotation. At 23½ a yield of 7.0 per cent. is obtained on the "B" shares on the basis of dividends of 30 per cent. The highest price for these shares in 1930 was 83½ and in 1929 42½.

THE UNDERGROUND AGREEMENT.

A MEETING of the stockholders of the Underground Electric Railways Company of London, on Friday of last week, confirmed a provisional agreement between Lord Ashfield and the Minister of Transport regarding the transfer of the undertaking to the London Passenger Transport Board. Lord Ashfield made it plain that if Parliament included in the Bill terms to other undertakings better than those granted to the Underground group, the agreement came to an end. It is difficult, however, to conceive of better terms, for Lord Ashfield has undoubtedly made a good bargain on behalf of his stockholders.

To understand the somewhat complicated provisions of the agreement, it is first necessary to define the stocks to be issued by the Board, and the manner in which the income of the Board is applied. In the order of their charge upon revenue the stocks are as follows:—"A" stock, carrying interest at 5 per cent. or 4½ per cent.; T.F.A. stock (guaranteed by the Treasury and issued in exchange for the debentures guaranteed under the Trade Facilities Acts), carrying interest at 4½ per cent.; "B" stock, carrying interest at 5 per cent.; and "C" stock, carrying interest, which is dependent on each year's earnings, at the rate of 5 per cent. for the first two years and increasing to 5½ per cent. and then to 6 per cent., subject after ten years to sinking fund payments required to redeem "A," T.F.A. and "B" stocks within a term of 90 years, the sinking fund ranking after 5½ per cent. has been paid on the "C" stock.

The first three classes of stock are trustee securities, and it is thought that, under present monetary conditions, these will be valued in the market at under a 5 per cent. yield basis. The "C" stock for the first two years is expected to command a yield basis of 5½ per cent.; that is, to stand at 90. As regards the holders of the prior charges, the "common fund" companies—London Electric, Metropolitan District, Central London, Central and South London, Lots Road Power House and London General Omnibus Company—are treated as follows:—

In exchange for	To be received
(1) Debentures and rent charge—stocks.	4½ per cent. "A" and/or 5 per cent. "A" stocks to produce the same annual interest.
(2) T.F.A. 4½ per cent. stocks.	4½ per cent. T.F.A. par for par.
(3) Guaranteed stocks, preference stocks and income debentures.	5 per cent. "B" stock to produce the same annual interest.
(4) Ordinary shares	"C" stock at rate of £92½ "C" per £100 old (subject to certain adjustments in the case of L.G.O.C. ordinary).

As regards the tramway companies, the exchanges are on the following basis:—

	In Exchange for.	To be received.	Present Market Prices.
(1) Metropolitan Electric Tramways:—	4½ deb. stock 5% deb. stock. Pref. shs. Ord. shs.	{ £50 4½% "A" and £45 5% "B" stock £100 5% "B" stock 75% "C" stock 30% "C" stock	{ 81-86 81-86 3s.-5s.
(2) London United Trams—	4% deb. stock Pref. shs. Ord. shs.	{ £50 5% "B" and £25 "C" stock 30% "C" stock 12½% "C" stock	{ 65-70 3s.-5s. 1½d.-7½d.
(3) South Metropolitan Electric Tramways and Lighting.	Tramways only.	£75,000 "C" stock	
(4) Tramways (M.E.T.) omnibus company...	Whole Undertaking	£182,635 4½% "A"; £101,545 5% "B"; and £348,014 "C" stock.	
(5) Union Surplus Lands.....	Whole Undertaking	£88,889 4½% "A" and £238,936 "C"	
(6) Union Construction and Finance	Whole Undertaking	£365 "C" stock	

The total stock to be issued to the Underground group will be £27,237,585 in "A," £11,883,648 in "B," and £20,073,428 in "C" stock, a total of £59,194,661.

It will be seen from these exchanges that the prior charge holders of the "common fund" companies lose nothing in interest and probably gain in security. This particularly applies to the 5 per Cent. Income Debentures of the London General Omnibus Company, which are to receive "B" stock, so that holders will be in the possession of a trustee security. As regards the tramway companies, the holders of the prior charges gain not only in security but in part in income, seeing that the preference stockholders of these companies are not at present receiving dividends.

As regards the equity shares of the Underground Electric Railways, it may be a source of satisfaction to shareholders to find that the company retains intact its interest in the Associated Equipment Company, though the right of that company to supply omnibus chassis and spare parts to the L.G.O.C. is restricted to a period of ten years. The Underground Company also retains its interest in the North Metropolitan Electric Power Supply Company, and will have the right to buy on agreed terms the shares now owned in that company by the Metropolitan Electric Tramways, Ltd. Further, the Underground will maintain intact its interest in the South Metropolitan Electric Tramways and Lighting Company, as well as a small holding in the Metropolitan Railway Company. It is proposed to form a new holding company to take over these outside assets, and to distribute shares of this new holding company direct to shareholders of the Underground. At the same time, the Underground Company will be wound up and the stock which it receives from the Board will be distributed to its shareholders.

Lord Ashfield estimated that, of the present Underground dividends of 8 per cent., three-quarters were derived from transport undertakings and one quarter from the outside interests. In exchange for the transport undertakings every holder of 100 Underground shares of £1 should receive £115 "C" stock. This implies that the holder of 100 Underground ordinary shares, now in receipt of an income of £8, will receive in the first two years £7 15s., and thereafter £8 6s. 6d., when the interest on the "C" stock rises to 5½ per cent., and £8 18s. when the interest on the "C" stock rises to 6 per cent. Lord Ashfield added that the terms on which the undertakings were to be transferred were such that, on the results for the past three years, the Board should enjoy an income more than sufficient to pay the specific rates of interest on the "C" stock. An important protection for the stockholders is the provision that, if interest payments on the "A," T.F.A. and "B" stocks are in arrears for three months, or interest on the "C" stock in arrears for three consecutive years, the respective stockholders may apply to the Court for a receiver and manager. Other safeguards are that new capital must be raised in proper proportions from all classes of stock, thus maintaining the relative security of the different stocks and that the Board will be empowered to charge such fares as will enable it to meet its interest requirements. On the whole, Lord Ashfield is to be congratulated on securing a settlement with the Minister of Transport which is a model of sweet reasonableness, the acceptance of which will sensibly improve the prospects of the Transport Bill's eventually reaching the Statute Book.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

AGAIN prices in most markets took a turn for the worse, and though movements were frequently irregular, the trend was unmistakably downwards. Several commodities showed fresh weakness, while the recurrence of uneasy rumours from America induced an underlying nervousness. Gilt-edged stocks, however, provided a

(Continued from page 1007.)

noteworthy exception to the general tendency, and, apart from a mild reaction in mid-week, movements were mostly in favour of holders. A considerable investment demand on home and foreign account was assisted by a further influx of gold and a recovery in sterling. War Loan was exceptionally strong; and Funding and Victory Bonds made good progress. Australians at first evinced some heaviness on the latest customs figures, but later recovered somewhat in common with India loans. Home corporations reflected the strength of gilt-edged stocks.

In the foreign market Brazilian issues were again noticeably weak on fears as to the financial stability of the country, and considerable liquidation resulted, Rescissions losing as much as four points on Wednesday. State of Bahia 5's declined further, while Peru Corporation became a nominal market on the April revenue returns. Argentines and Chilians were quiet. Chinese loans slumped on the announcement that negotiations with regard to the treaty ports had temporarily broken down, but a smart recovery ensued on the following day. Europeans developed weakness in mid-week, and "Young" bonds were sold from Amsterdam. Hopes that this week's railway "traffics" would offer favourable comparison with last year were badly disappointed, and declines in most home rail stocks left quotations at new low levels in several cases. Argentine traffic figures were not unsatisfactory, but the shares were marked down all round. Leopoldinas were sold on the week's figures, while Canadian Pacific suffered a sharp setback on news of the dividend reduction.

In the industrial section, many shares continued to display marked irregularity, but sellers predominated, and the tone was extremely unsettled. Electrical equipment shares had an uncertain appearance, General Electric in particular proving a weak spot, with Associated not much better. A wave of forced liquidation from Glasgow was responsible for a sharp fall in J. and P. Coats and Distillers, which, however, rallied subsequently. Engineering shares were not affected by the Pease and Partners moratorium scheme (outline in a Note on page 1013). Further liquidation of Pinchin Johnson occurred as a result of somewhat amorphous fears, while Harrisons and Crosfield did not escape unwelcome attention. Wall Paper deferred suffered from the reduction in dividend, while Murex, which proved a bright spot on Monday, were unable to hold their rise. Cables and Wireless and the "Record" leaders shared in the weakness induced by less satisfactory news from America.

The oil share market displayed a certain hesitancy, and changes followed one another in quick succession. A firm opening was succeeded by renewed selling of Royal Dutch and Shell, but a recovery took place when Amsterdam set up a further demand on Thursday, despite the disappointing showing made by Shell Union. Rubber shares lost ground steadily throughout the week, there being no desire to take on fresh commitments until

the commodity showed some sign of stability. United Sua Betong and Trusts again led the decline. Tea shares were again in the doldrums, and prices were lower where changed.

The mining share market was still under the influence of declining metal prices, which in several instances against established low records. Kaffirs showed considerable resiliency after a poor opening, and with Paris and the Cape in support, Randfontein, Daggafontein and Crown Mines led a modest advance. Northern issues were dull at first, but later shared in the improved tone, and "Chartered" improved on Paris buying, while Rhokana showed signs of movement. Tin shares were harder in a few cases, and Tintos were a better market, after touching the lowest point for many years.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Further selling this week was attributable to bad business and depressed sentiment rather than to special factors connected with the death of Mr George F. Baker, the veteran banker and financier. The question of the possible liquidation of a part of Mr Baker's large holdings in leading American enterprises was discussed, but it was generally agreed that arrangements had been made before the decease which would obviate the selling of any large block of shares. At the same time, it was thought possible that the First National Bank of New York, which Mr Baker built up and raised to its present eminence, would be merged, in the near future, with another institution in the Morgan group. Though some stocks showed a slight recovery in mid-week, every rise in price tended to bring out selling, which was particularly heavy in the case of U.S. Steel. The Corporation's unfilled orders were expected to show a decline of 75,000 to 100,000 tons. Its operating ratio has now fallen below 50 per cent. of capacity, thus cancelling the increase of the last three months. The steel industry as a whole was working last week at 46 per cent. of capacity, against 48 per cent. in the preceding fortnight. Car loadings, similarly, have shown a slight decrease instead of the increase anticipated. The promised spring revival has not matured, and industry, if anything, is slowly slipping back. Some utility shares have shown liveliness at times, but industrials generally have been lower, with American Can under particular pressure. The heavy selling of Brazilian bonds which occurred was due to persistent rumours of default—a contingency calculated to react unfavourably on the position of certain American concerns.

* 2-hour session.

BERLIN.

The spring recovery came to an end early in April. In two months prices gained on the average about 20 per cent., thus wiping out part of the heavy declines of the end of last year. Lack of confidence in the political and economic stability of Germany after the elections was the cause of the decline at the end of 1930, and increasing confidence and business optimism the cause of the recovery. Until the beginning of April these political considerations rendered the course of the Berlin security market independent of markets abroad, but during last month Berlin again came under the influence of the unfavourable market situation in New York, London and Amsterdam. Sales on foreign account and increasing uneasiness over the uncertainty of economic developments abroad contributed in no small measure to the reaction in Berlin. The liquidity of the money market, due partly to the depression and partly to seasonal causes, came to an end in the last few weeks; renewed threats of a Budget deficit necessitated an issue of Treasury Bills and of Reichspost Bills, and these issues struck a severe blow at the loan market. An important fixed-interest security, the 7 per cent. preference shares of the Reichsbahn, fell from 91 to 87 1/2 in a few days. Moreover, the condition of the Reichsbank does not permit the hoped-for reduction in the rate of discount, so that no stimulus to activity can be

looked for from that direction. Bank shares have been especially depressed and are now at the lowest level for five years. Coal and iron lost about 15 per cent., and the decline of Siemens from 188 to 159 shows how severely the favourites of the Berlin stock exchange have suffered from selling. Potash shares have undergone an equally sharp fall, but I.G. Farbenindustrie, with an unchanged dividend, have been better maintained.

Official "Cash" Quotations in all cases.

* Dividend off this month.

PARIS.

The beginning of this month, which brought with it four days of respite in the shape of the Easter holidays, saw no alteration in the inactivity of the Paris market. Prices displayed considerable irregularity, events in Spain exercising an unfavourable influence. Rio Tinto suffered a sharp relapse, but the day following the declaration of options quotations sensibly improved. The settlement of the 15th was satisfactorily effected, with money at 1/2 per cent. During the second fortnight the markets were devoid of interest, with an insignificant amount of business and a steady downward trend of prices. The tone was heavy, and the fact that there was no inclination on the part of the public to take advantage of the low level of prices discouraged optimism.

INVESTMENT NOTES.

"Narrow Markets."—A "House" correspondent writes to point out that the recent firmness of gilt-edged stocks, and the "narrowness" of the market in many other securities, are not altogether disconnected phenomena. Five per cent. War Loan, he declares, continues to be one of the most liquid stocks in the House, in spite of the consistent prejudice with which it is regarded by trustees and others who, for years past, have considered it as a short-term investment. From the point of view of market leadership, however, Conversion 3 1/2 per cent.

Stock is generally accepted as setting the standard by which gilt-edged and other yields are measured. The market in Conversion stock is as free and flexible as is that in War Loan itself, and the same condition of easy negotiability attaches to most of the stocks in the list of British Government securities. This advantage is the more conspicuous, since, in some other parts of the "House," dealing has become a matter of greater difficulty than usual. There are still many instances of stocks and shares that can be more readily sold than bought, but others have temporarily lost their popularity with the investing public. A certain amount of realisation goes on automatically, emanating from executors, capitalists requiring money for the purchase of houses or businesses, and from other quarters. This regular stream of selling is, in the ordinary way, offset by an equally steady absorption by parties whose money has accumulated through the receipt of dividends, legacies and business profits. For some time past, however, selling has gradually been obtaining the upper hand. In a falling market, while one seller tends to make many sellers, prospective buyers hold their hands, preferring to await a lower level of values. These conditions inevitably make for a narrowing of markets. Dealers widen their quotations, or frankly admit that they have no buyers. Though the receipt of such information frequently causes stockholders to inveigh against the Stock Exchange, narrowness of markets is abhorred even more by members of the "House" than by investors. If those with money to invest prefer to leave it on deposit with their banks, the latter, in periods of inactive trade, have little option but to invest it in gilt-edged securities. A contributory factor in the strength of British Government stocks has been distrust of other certain trustee stocks, like Australians, and the passing of most Home Railway investments under a cloud.

The Supplementary List.—The Supplementary List of the London Stock Exchange appears this week in a new and improved form. The List corresponds broadly with the record of quotations on the New York Curb Market, with the important difference that whereas the Curb Market is an entirely separate institution from the New York Stock Exchange, the London Supplementary List has always been published by the trustees and managers of the Stock Exchange, and has related to bargains done between members within the walls and under the rules of the "House." Broadly, the securities included in the List are those which, on account of their relatively recent issue or for other reasons, have not yet qualified for eventual inclusion in the Official List. They range, at the present time, from shilling deferred companies, whose powers of survival are occasionally doubtful, to the "new" shares of highly reputable companies like Unilever, influentially backed stock like the National Shipbuilders' Security debentures, various Home Corporation issues, and the 4½ per cent. stock of the Central Electricity Board. The List is thus much more than the "graveyard" it is sometimes reputed to be. In the past the List has shown merely the price and the date at which business was last done, and although provision has been made for the taking out of "dead" securities after a given time, the prices shown have in many cases related to bargains done some weeks earlier. Cases have occurred in which specially arranged bargains, of relative ancient date, have been used by unscrupulous outside share manipulators as a basis for peddling dubious shares at largely fictitious values. The new "Supplementary List of Securities Not Officially Quoted," however, has a column for "Nominal Quotations," based on what the market regards as the present value of the securities, whenever the market is willing to make a price. The present List shows, however, that for various reasons it is impossible in many cases to obtain even nominal quotations. To take an example chosen at random, page 4 of the List for May 6, 1931, contains 246 securities, but nominal quotations are given for only 94. Possibly, the position in this respect will be improved as the market becomes more familiar with the new List. The latter also shows the denomination of each security and the last ex dividend date. Altogether, the Com-

mittee may be congratulated on a reform which has certainly not been produced out of due time. Whether the change in itself will seriously hamper the dealings of doubtful "shops" cannot be ascertained until the next market boom arrives.

Industrial Profits.—Some 217 British company reports reached us during the month of April, 153 of which covered the calendar year 1930. The total profits disclosed by the 217 companies showed a decline of nearly 10½ per cent. as compared with the previous year's accounts, the only groups reporting higher profits than in 1929 being, broadly, certain public utilities, finance and retail trading:—

Group.	Number of Companies.	Net Profit (after payment of Debenture Interest). All Reports received during month of April, 1931.	Increase or Decrease.
		1929-30. £	1930-31. £ %

Other companies	61	18,579,372	17,593,857 - 5.30
Total	217	28,788,645	25,769,402 - 10.49

Among the larger companies which were happy enough to report increased earnings last month, as compared with 1929, were Amalgamated Anthracite, Spillers, and Marks and Spencer. Contrariwise, the list of companies which failed to maintain their previous earnings position included Dunlop Rubber, Guest, Keen and Nettlefolds, Lever Brothers, and United Newspapers.

Building Material Companies.—The reports issued during the past few months by companies whose interests lie chiefly in the manufacture of bricks, tiles and cement suggest that, in spite of a fall in the prices of building materials, which a prominent London building society manager recently estimated at 14 per cent., the manufacturers of such materials practically maintained their profits last year. The London Brick Co., which is the largest of the four producers whose results appear in the table below, actually increased its profit from £273,000 to £313,143, while Sussex Brick recorded a small advance and maintained its dividend. The decline in the revenue of Eastwoods was reflected in a reduced distribution, though the "cut" was of a precautionary nature, the dividend previously paid being more than covered by earnings:—

Name of Company.	1928.			1929.			1930.		
	Net Profit.	Ordinary.		Net Profit.	Ordinary.		Net Profit.	Ordinary.	
	£	%	£	£	%	£	£	%	£
Eastwoods	75,237	23.2	15	74,710	23.0	15	68,240	21.2	12.5

Marblehead	16,194	35.3	53	28,842	51.8	90	27,751	81.3	70.0
Sussex Brick	36,305	34.6	22.5	25,419	21.0	22.5	27,088	24.2	22.5

* Fifteen months.

Despite the keen competition which still prevails in the manufacture and supply of cement, two of the largest companies show increased profits for the past year. Associated Portland Cement, whose results were described in our issue of March 28th last (page 686), records a trading profit of £534,781, against £575,484, but income from other sources has increased from £359,631 to £420,369. British Portland Cement, which is controlled by Associated, shows a gross profit of £731,948, against £721,992, and net revenue of £348,123, compared with £337,817,

the ordinary dividend being maintained at 15 per cent. Meanwhile, the ill-fated member of the quondam Horne group, Allied Cement Manufacturers, which passed into the receiver's hands last January, recently received an offer for its own assets and those of its subsidiary operating concerns which, it is understood, will, if accepted, permit the repayment in full of the debenture stock of Allied Cement, Greaves, Bull, and Lakin, and the publicly-held preference capital of Dunstable Portland Cement.

British Match Corporation.—The latest accounts of this £6 millions holding company, which includes in its investments all the ordinary shares of Bryant and May and J. J. Masters and Company, show that net profits for the year 1930 have declined from £493,930 to £461,387, revenue from investments being £26,679 less at £480,314:—

Some £40,000 is written off goodwill, and £94,789 is carried forward, compared with £67,466 brought in. The balance sheet is liquid, creditors amounting to only £10,897, while the cash item is as much as £326,504. At 23s. 9d. the ordinary £1 shares give a yield of £5 5s. 6d. per cent., free of tax, allowing for final dividend.

Pease and Partners Moratorium.—In September last an Advisory Committee, consisting of Mr George Balfour, Mr John Ferguson and Sir Gilbert Garnsey, was appointed to investigate the position of this coal and iron company and its subsidiaries, and to advise as to the steps which should be taken for financial and commercial rehabilitation. A scheme of arrangement, following in a modified form the recommendations of the Advisory Committee, has been prepared, which proposes to grant a moratorium to the company in respect of certain secured and unsecured creditors' claims. The report of the committee points out that from 1924-25 onwards the company, with its subsidiaries, made operating losses each year, with the exception of 1929-30 when the net loss was about £82,000. Economies in administration and costs of production had been made, which were calculated to produce savings amounting to £100,000 in a full year, but unless additional capital is found, the company will be forced to submit to the appointment of a receiver for its debenture holders. The report goes on to say that "plans are maturing of a far-reaching nature for closer working or sectional amalgamation in the iron and steel and coal industries, and this is clearly not the time to put the business under the hammer, or to embark on a scheme of financial reorganisation which might be materially affected by those plans." For the present, therefore, the 5 per cent. debenture stock holders are asked to agree (*inter alia*) that the interest on their stock becoming due on October 1, 1931, and on each half-yearly date thereafter, down to and including October 1, 1934, shall, during the period ending on December 31, 1934, be payable only out of available profits, while the sinking fund obligations of the company, in respect of the years 1932 to 1934 inclusive, shall be met only out of any surplus of profits after payment of interest. In so far as instalments of interest and sinking fund payments are not met out of profits they will be payable on January 1, 1935, together with interest at the rate of 5 per cent. per annum on all instalments in arrear. The unsecured creditors of the company coming within the scope of the scheme for amounts of over £250

are asked to agree to the postponement of payment of their claims (other than the first £250) until the three months next following December 31, 1934, when they will be paid by the company, with interest. To provide additional capital, the company is to be authorised to borrow up to £400,000 on prior mortgage debentures or debenture stock secured on the Thorne colliery. As the 4 per cent. debenture stock is irredeemable and carries a first floating charge on the undertaking, it has been decided to continue payment of interest. The Advisory Committee will remain in office until December 31, 1934, with special powers for safeguarding the interest of the parties to the scheme. Such schemes of arrangement make dismal reading for creditors and stockholders, but needs must when the devil drives.

Gramophone Merger Terms.—Details are now available of the proposed amalgamation between Columbia Graphophone and the Gramophone Company. According to the official circular, a new holding company is to be formed with the title of Electric and Musical Industries, which will purchase the shares of the merger companies. Holders of the ordinary shares of the Gramophone Company will receive an equal number of £1 fully-paid ordinary shares in the new company, and holders of the 5 per cent. preference shares an equal number of £1 fully-paid 6 per cent. cumulative preference shares, redeemable at the company's option on or before January 1, 1950, at 22s. 6d. per share. Holders of ordinary shares of Columbia Graphophone will receive an equal number of £1 fully-paid ordinary shares in the new company, and holders of every five 7 per cent. preference shares, six £1 fully-paid 6 per cent. cumulative preference shares. The offer is conditional on acceptance by holders of 90 per cent. of the issued share capital of each class of both companies. If and when it becomes binding, the directors intend to distribute a dividend of 3s. per share (less tax) on the ordinary shares of each company, while the directors of Columbia Graphophone will distribute by way of bonus in the form of voting trust certificates, the company's holding

of shares of no par value in the Columbia Phonograph Company, Inc., of America. The circular states that the benefits accruing to both companies working under one control will be considerable, since unnecessary duplication will be eliminated, and economies will be obtained from the reorganisation and co-ordination of manufacture and marketing in almost every country in the world. The nominal share capital of the new company will consist of 460,000 £1 6 per cent. cumulative redeemable preference shares and 5,806,000 ordinary shares of £1 each.

On April 1, 1930, the company acquired a well-established business in Buenos Aires, and a new item of £114,943 in the balance sheet represents the cost of the business. To finance this purchase, £100,000 of India 5½ per cent. stock, 1932, valued in 1930 at £101,192, has apparently been sold. Stocks have risen by £165,853 to £734,503. Debtors at £38,718 are £13,698 lower, and cash is £143,175 down at £18,168, while creditors have risen by £68,932 to £147,669. The preference capital is secured by net tangible assets of £2 7s. 10d. per £1 share, counting "Goodwill and trade marks, Buenos Aires, at cost" as a tangible asset. The £1 ordinary shares stand at 11s. 3d. per share.

Amalgamated Tobacco Trust.—The report of the Amalgamated Tobacco Trust, Ltd., for the year ended January 31st last, raises numerous questions. The company was a 1928 registration, with the familiar capital structure of that period, including a large total in preference shares and a small total in ordinary. The company acquired 48 retail tobacco concerns in Great Britain, Mr D. Cosmo, the then managing director, estimating that in a normal year net profits should be not less than £30,000. The chairman was, and is, the Earl of Drogheda. Unfortunately, certain events led to the resignation of Mr Cosmo, and an "exhaustive overhaul" by the board revealed "serious differences in the certified values of the stocks," while further inquiry convinced the board that there was "no room for doubt" that the valuations placed on the businesses and stocks taken over were assessed by those concerned at figures which reflected the exaggerated optimism of 1928, and bore no relation to the depressed conditions which subsequently prevailed. The accounts to January 31, 1931, show an adverse balance of £2,773 after making a special stock adjustment of £4,261, the whole of the trading profit having been earned in the second half of the year. The auditors, however, qualify their report by stating that depreciation should be written-off freehold and leasehold premises, fixtures, fittings, trade utensils and trademarks. The assets referred to (including goodwill) have a total balance-sheet valuation of £90,747, and if the "dead" assets of formation expenses, and the accumulated loss balance be added, the total represents some 65 per cent. of the £196,021 on the assets side of the balance sheet. The mystery deepens on reference to the report, which shows that the auditors (Messrs. Oscar Berry, Froude and Company), are retiring and do not offer themselves for reappointment. At the meeting on Tuesday next the board will support a shareholder's nomination of another firm of chartered accountants as auditors. For the satisfaction both of the shareholders

and the retiring auditors it may be hoped that the fullest possible explanations will be forthcoming at the meeting. *Prima facie*, it is undesirable that auditors who, in pursuance of what they regard as their duty towards the shareholders—on whose behalf their examination of accounts is made—may deem it necessary to publish details of their failure to see eye to eye with the policy of the directors, should run a risk of losing their office. Without reference to any special case, it may be stated as a general principle that any system which puts a premium on time-serving is thoroughly vicious.

The Copper Position.—Though the recent slump in the £5 ordinary shares of Rio Tinto (which have been down to 20, ex coupon, against maxima of 66½ in 1929 and 47½ in 1930) is attributable, as we suggested in our issue of April 25th last, to other factors besides the weakness of the metal markets, the unsatisfactory outlook for copper is undoubtedly affecting the whole share position to a significant extent. Writing on the outlook, a trade correspondent declares that, in common with other non-ferrous metals, copper has suffered from bearish influences in Wall Street, the price quoted on the London market having declined to the lowest point for thirty years. Since January 1st various fluctuations have occurred in the Copper Exporters' quotation for electrolytic, but so far there has been a net reduction of about £5 per ton to £45 c.i.f. The last cut made by the American sales organisation signally failed to attract European buyers, who hesitated to buy in any quantity on account of price cutting in the States, where copper changed hands at 50 points below the equivalent of the export quotation. There are huge accumulations of refined copper across the Atlantic (totalling 354,000 short tons at April 30th), and it is due to this fact and the failure of the producers to effect a drastic and speedy reduction in the accumulation that buyers are showing such reluctance at what is almost a "record" low level. The monthly production of refined copper has now fallen to a round 100,000 short tons, and, if consumption were anything like normal, stocks would soon be reduced to manageable levels. Unfortunately, there is at present no prospect of better demand, for ultimate users are holding back, and the manufacturing interests are buying on a strictly hand-to-mouth basis. However unpalatable the fact may be, everything points to the likelihood of a still lower quotation for the metal. Confidence has been shattered and a figure definitely below last year's lowest point must be expected before an upward turn comes.

General Mining.—No dividend had been looked for in respect of 1930, writes our mining correspondent, but a greatly improved financial position had been anticipated. This expectation proves largely justified in the event. The balance sheet as at December 31st last shows surplus liquid assets to the amount of £263,800, against £144,100 twelve months previously. Moreover, thanks to repayments on the part of the West Rand Consolidated, the total under debtors and advances has been reduced from £452,200 to £280,200. In 1930 an operating profit of £61,150 was made, against £112,200 in 1929, while depreciation now calls for the substantially increased amount of £204,200. Accordingly it has been necessary to transfer £100,000 from general reserve, leaving £19,000 to go forward, or less than one-third of the sum brought in. Stocks and shares figure at 968,200; they are stated to show, at market prices, a substantial margin over the foregoing amount. During the current year further substantial repayments will be made by the West Rand Company. The last dividend was 5 per cent. in respect of 1928.

Anglo-French Exploration.—After figuring in the dividend list for the seven successive years ended in 1929 this company finds itself compelled to fall out. Last year's net profit amounted to £22,900, against £55,080, and on the present occasion it has been necessary to

provide £69,600 for depreciation. This leaves only £16,500 to be carried forward, as compared with £63,200 brought in. Save in respect of the portfolio, no very striking changes are shown in the balance sheet. This is the first time for many years that a valuation of the company's assets has shown a deficit. The £1 shares are now quoted at 10s., against 22s. at one time in 1930.

Tin-Dredging Results.—With output restriction in operation, as well as a reduced price for the metal it is no matter for surprise that the profits both of the Pengkalen and the Tekka-Taiping for last year should show a marked falling-off. In the case of the Pengkalen, also, the yield from one of the dredges declined appreciably owing to the removal of the machine to a new site. As a partial compensation, the second dredge treated a larger quantity of ground at a reduced cost ratio. Even with the assistance of £1,600 profit on sale of investments, and a cut of £5,000 (to £10,000) in the depreciation allowance, the profit came out at only £20,360, in place of £72,800. Accordingly, the dividend on the preference shares amounted to no more than 15 per cent. and on the ordinary to 5 per cent., against 50 per cent. and 40 per cent. respectively for 1928-29. The somewhat increased balance of £27,180 goes forward. But for a profit of £7,640 on sale of investments the Tekka-Taiping would have been faced with a deficit, the net profit amounting to only £6,100. Thus only 3d. per share could be paid, in place of 1s. 9d. The carry forward of £19,200 is more than brought in. Despite the operation during 7½ months of an additional dredge, the output was slightly below the previous year's total at 513 tons.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Underground Group, London and Lancashire Insurance, Friends Provident and Century Life Office, Scottish Union and National Insurance, English and Caledonian Investment, Anglo-American Debenture Corporation, Monte Video Waterworks, Lunuva (Ceylon) Tea and Rubber Estates, and Spillers. At the annual meeting of Spillers, Sir Malcolm Robertson quoted figures showing that the current value of the 4-lb. loaf in Germany was 1s. 5½d., in Italy 7½d. to 10d., in Sweden 1s. 6d., in U.S.A. 1s. 4½d., in Canada 1s. 1d., in Australia 11d., and in Great Britain, which had a free market in wheat, 7d. Presiding at the annual meeting of Lunuva (Ceylon) Tea and Rubber Estates, Mr H. J. Welch said that, at present prices, to produce a full crop of rubber would mean a greater money loss than producing a restricted crop, or even no crop at all—a fact which should induce many companies to stop tapping, preserve the bark, improve the health of the trees, and await the inevitable return of a more economic price. The Underground meeting is discussed in a leading article on page 1007.

CAPITAL ISSUES.

THE new issue market remains in a comatose condition. During the present year only £56½ millions have so far been offered for subscription in London, against £134½ millions in the corresponding period of last year, and £194½ millions in that of the boom year 1928. The sole operation of the week was a debenture stock issue by *Odhams Press*—a business which has shown rapid expansion and doubled its profits in the last five years. The issue, the proceeds of which will be used for further expansion, is a fairly well covered industrial proposition.

Odhams Press.—Issue of £200,000 7 per cent. "B" Mortgage debenture stock at £98 per cent. The stock is redeemable by June 1, 1934, by means of a sinking fund commencing in 1935, which is to be applied annually to the redemption of such stock either by purchase at or below 102½ per cent., or by drawings at 102½ per cent. The company reserves the right to redeem the stock, in whole or part, at any time after December 31, 1934, at 102½ per cent. on six months' notice. Net profits for the year to December 31st last totalled £300,612, covering interest on the debenture stock, including the present issue, over five times.

Sutton District Water Company.—Sale by tender of £80,000 7 per cent. maximum ordinary stock in lots of £100 each at a minimum price of £130 per cent.

[Other Stock Exchange information, including the latest dividend announcements, summary of balance sheets, reports and notices, profit and loss figures, and weekly traffic returns, will be found on page 1026, under the heading "Company News."]

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended April 15th: Venezuela, 36,031 barrels; Trinidad, 25,006 barrels; total, 61,037 barrels. Production for the week ended April 22nd: Venezuela, 36,204 barrels; Trinidad, 20,994 barrels. Total, 57,198 barrels.

MEXICAN EAGLE OIL.—The production for the week ended April 11, 1931, was 194,000 barrels. Production for the week ended April 18, 1931, was 214,000 barrels. Production for the week ended April 25, 1931, was 212,000 barrels.

COMPANY MEETINGS, &c.

THE LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED.

COMPANY'S GOOD RESULTS MAINTAINED.

MR PASCOE RUTTER'S INTERESTING REVIEW.

The sixty-ninth ordinary general meeting of the London and Lancashire Insurance Company, Ltd., was held on Wednesday, May 6, at the Chief Administration Offices, Chancery Lane, London. Mr F. W. Pascoe Rutter, Governor and Chairman, presided over a large attendance of shareholders.

The Secretary, Mr T. Wallas, having read the notice convening the meeting and the report of the auditors,

The Governor, in moving the adoption of the report and accounts said: Before I proceed to comment upon the accounts, may I be permitted to submit to you some reflections upon what is termed "the world situation." For you will bear in mind that our tentacles are fixed in almost every quarter of the globe, and that there is probably no concern other than a commanding British insurance company which is so affected, and bound to be affected, by happenings abroad, and, therefore, by the state of turmoil under which the world at present is labouring.

Amongst the operating causes of the world's demoralisation are over-production of raw materials, consequent low prices of commodities, and the hoarding of gold by the United States and France, at a time when the world's dislocation cried out for delicate and unselfish finance. These undoubtedly are all factors, but I submit that they are rather the consequences than the original cause. What we are all suffering from is the inevitable and logical result of the war. Instead of realising that the world was vastly impoverished—that the war had entailed a dead weight of debt and loss—both material and spiritual—it was actually regarded by countries and individuals as a fulcrum for a new era of prosperity and extravagance. We are now experiencing the natural and inevitable deflation.

Apart altogether from the actual impoverishment we are now reaping the fruits of the so-called self-determination in the growing nationalism rampant throughout the world.

Within our own Empire—and without—that spirit of nationalism has been generated, in many cases prematurely, and to the prejudice of the world's equilibrium. You have seen it in China, Australia, South Africa, and now in India. Great countries, upon which we have been accustomed to rely as prominent purchasers of our exports. And so we have had to face a situation where other countries have been endeavouring to be self-contained, thus reducing the volume of their imports, and causing a corresponding reduction in our exports.

GREAT BRITAIN'S POSITION.

But the trouble so far as Great Britain is concerned is deeper than this. At the greatest juncture in our history, there has been a lack of foresight. We have been badly led. Of all the nations of the world, we have been especially handicapped. Firstly, by an overwhelming debt, and coincident with it, an abnormal and increasing expenditure on social services, when everybody knew, or certainly knows now, that we have to face a diminishing income. This, our Socialistic expenditure—unemployment, health, workmen's compensation, old age pensions and poor law relief—if taken at the rate of 100 per cent., compares with an average of 19 per cent. for France, Germany, Belgium and Italy. Secondly, by the consequent taxation, so heavy and so searching that it has proved to be an insidious, but none the less real, levy on capital, which must, *pro tanto*, retard our recovery. This taxation, if taken at 100 per cent. per head of the population, compares with an average of 45½ per cent. for Germany, France, Belgium and Italy. And, thirdly, by the continuance of that national system peculiar to this country, under which the hours of labour are limited and wages maintained. Our wage levels, if taken at 100 per cent., contrast with an average of 57 per cent. for Germany, France, Belgium and Italy. The Trades Unions themselves know that, without a radical revision in this vital respect, it will be impossible for the trade of our country to recover.

For, we must remember, as I emphasised last year, that we are dependent upon our exports for our existence, more dependent than any other country. We are told, what is the undoubted fact, that one of the present anxieties is the disparity between wholesale and retail prices. That disparity is particularly applicable to Great Britain. For, other Continental countries (notwithstanding their tariffs, which have proved a real shield of protection) have—by the devaluation of their currencies; by the consequent scaling down of their indebtedness and the ensuing saving in taxation; by reductions

in wages, and other economies—been able, by hook or by crook, to bring down the rate of the goods which they sell to less than 120 per cent. of the pre-war level.

International commerce is really an exchange of goods. That exchange must be based upon a reasonable parity. How, then, can we Britons possibly expect to sell our goods, when the cost of living in this country, is 150 per cent., and our rate of wages—the basis of our export prices—is 170 per cent., of what they were pre-war?

THE U.S. DEBT SETTLEMENT.

One further reflection I am impelled to make, and that is as regards our indebtedness to the United States.

Due to the ever-present tendency of our friends across the Atlantic, in their virile atmosphere, to get rich quickly, their over-production came to roost very sharply in 1930. There is, however, one important consideration we must bear in mind. It has now been reasonably demonstrated that the exacting terms of the service of our debt to America have not benefited that country financially, and, indeed, may have actually helped to precipitate their industrial trouble.

And yet we, who have let others down so gently, continue to be burdened with this heavy annual payment to the richest of the Allies.

Not only so—but the war heralded a new epoch, during which it became the fashion to shamelessly resort either to depreciation of the national currency, or actual default. It may not surprise you to learn that in one form or another, no fewer than 21 countries—mainly Continental—have defaulted on some of their securities, or depreciated their currencies. It is, therefore, remarkable that we, with all our difficulties, are still able to maintain our balance, even if uncertainly, on our pristine pedestal of financial prestige.

GREAT BRITAIN'S INVISIBLE EXPORTS.

Having then brought before you the question of our actual exports, let us consider our invisible exports, which have been so helpful, and even essential, to us in past years. Indeed, they are our sheet-anchor. They are representative of our traditional supremacy in our enterprise and commerce overseas. Shipping, banking, insurance and income from foreign investments—all four show a definite retrogression in 1930. Shipping has fallen off by 18 per cent., and the prospect for 1931 is still worse. Income from overseas investments has fallen by 13 per cent. And, as regards banking and insurance, you can form your own judgment from the accounts and statements which have been published. I am satisfied that if we reckon a 20 per cent. reduction in the real profits of 1930, as compared with the years immediately preceding, it will prove to be a conservative estimate.

We are going through our *via dolorosa*—a hard road—and it is only by realising that our status as a great nation is at stake, that we can begin to put our house in order, and look with confidence to the future. But, I have a profound conviction that the country's backbone—that stratum of commonsense, the prerogative of the Britisher—is there still. There are glimmerings here and there that the gravity of the position is being realised, and if this is followed by rigid, ruthless economies, by a determination to cut down our expenditure and our cost of living, from top to bottom, we may gradually, very gradually, regain a large part of that commercial ascendancy of which we were, twenty years ago, so proud.

That, then, has been the world as we have found it, and it has been our task as an insurance company to make the best of it. We have often been successful in periods of adversity, but this time you would have wondered if we had escaped entirely the effects of the universal depression. Even as it is, the results which I will now explain are such that the general manager and his associates may, I submit, be reasonably proud of their work in such a difficult year as 1930.

UNDERWRITING RESULTS.

When considering the following figures, you will bear in mind that they are in all respects consolidated. That is to say, they represent the combined results of the "London and Lancashire" and all its subsidiaries. In this way you arrive at the only true index of a company's aggregate operations.

Our fire premiums amounted to £3,223,833, a reduction of £186,206, and although, as the direct consequence of this reduced

income, the expense ratio increased by 2½ per cent., the net corrected profit amounted to £324,116, or just over 10 per cent., as compared with 11·6 per cent. in 1929.

The accident premiums at £2,358,342 showed a reduction to the extent of £97,395, and the net outcome was a surplus of £85,157, or 3·61 per cent., as compared with 4·92 per cent. in the previous year.

The marine premiums were £1,268,516, a reduction of £220,580, and the profit was £186,843, or 14·7 per cent. against 16 per cent. in 1929. This handsome surplus was produced, in almost the same proportions, by our two companies, "The Marine" and the "Standard," and it must be a gratification to you that, in such times, which have been particularly adverse to marine insurance business, both our companies should continue to yield such an excellent contribution to our aggregate results.

Summarising the total results, therefore, we have a premium income of £6,850,690, which is £504,181 less than in the previous year, and, notwithstanding the heavier expense ratio, which has affected all departments, we still show a profit from the year's operations of £596,116, or 8·7 per cent., against 10·3 per cent. in 1929.

After deducting British income tax, the net surplus for the benefit of the shareholders is £435,406, against £580,779 in 1929.

RESERVE FOR UNEXPIRED LIABILITIES.

There is one feature about these results, to which I may perhaps call your special attention.

It relates to the 40 per cent. premium reserve to provide for the unexpired liabilities. Now the 40 per cent. reserve has been customary with almost every company for many years past, and is a recognised deduction in order to approximately ascertain the profit which has been really earned. But, with proper modesty, I may be allowed to assert what I think you have already realised, that the quality of the business of the "London and Lancashire" is distinctly above the average. Consequently, in our case, and in a number of other cases, a 40 per cent. reserve is more than sufficient. Taking our business as a whole, I am satisfied that 30 per cent. would be nearer the mark.

Bearing this in mind, therefore, you will appreciate that the profits which I have recited are really in excess—perhaps to the extent of £50,000—of what would be shown, supposing the unexpired liabilities could be worked out meticulously to their ultimate conclusion.

This is a point which I think shareholders as well as directors should remember, because it means that, when our income is progressing, as it did so spectacularly during the war, the 40 per cent. reserve is an unduly severe correction, whereas, when the income falls off, as it did in 1930, it has the converse effect.

THE LIFE ACCOUNT.

Our interest in the life business can be dealt with in a very few words.

You will remember that the "Law Union and Rock," who transact all the life business for our account, completed their quinquennium in 1929, and, as often happens, the first year after the quinquennium is not outstanding as regards new business. It is generally looked upon as a period for acquiring a fresh impetus for the new quinquennium.

The main thing is that the life income amounted to £1,188,786, and, with a reserve fund of £10,879,590, apart from the large funds covering the fire and accident business, the "Law Union" is relatively as strong as its parent company.

HOME BUSINESS GOOD.

An analysis of all these underwriting results would demonstrate to you that, as regards our own home business, both fire and accident, the outcome of our operations was quite good—rather better than last year, which was hit by a severe fire loss experience in the spring.

We cannot yet form a definite opinion as to the effect of the new legislation upon the claim ratio, but an examination of proposals which have been received indicates that there were few motor-car owners who were not already insured, whilst in the case of motor cycles a much larger percentage had evidently gone uninsured.

We should have preferred it the other way about.

EXPERIENCE ABROAD.

Looking abroad, Canada—one of our strongholds—maintained, I am glad to say, its satisfactory reputation. But China and India evidenced the effects of the disturbances which have become notorious. China's politics have, latterly, shown signs of settling down, but the marked fall in the value of silver, and, therefore, of Chinese currency, has prejudiced the volume of our business.

India has always loomed large in our foreign operations. 1930 inevitably suffered from the commercial boycott, from the general depression, and not less from Anglo-Indian apprehensions as to the future. We can only trust that the resumed deliberations of the

Round Table Conference may bring, not only a permanent settlement, but a settlement which will effectually protect and even encourage renewed enterprise on the part of the British community.

Australia has been another considerable anxiety. Only a fortnight ago, our deputy-general-manager, Mr Rogers, set off for Australia to study and deal with, not only the question of conditions, but of personnel. We have a considerable stake out there—a large business, and, consequently, an important amount invested in their securities. These investments for the time being naturally show a substantial depreciation, but we may bear this philosophically, as we can wait for the eventual recovery, and, in the meantime, can record with satisfaction that the result of our underwriting during the past year was quite good. Indeed, notwithstanding a diminished income due to the adverse exchange, 1930 proved to be as profitable as usual.

New Zealand recently had its own disaster in the shape of an earthquake destructive both in lives and property, costing the country in money anything from £3/4,000,000. Mainly consequent upon our historic Jamaica litigation in 1908, the legal liability of insurance companies in case of earthquake was very specifically defined, and, so far as we are concerned, it is quite improbable that we shall sustain any loss of moment.

THE UNITED STATES.

But the one blot upon the large canvas of our operations happened to be the United States, where we made little or no profit on the fire business, and where the casualty business proved to be an important detriment. Indeed, taken as a whole, the United States, for the first time in ten years, yielded us a loss. It happened that, last year, the United States encountered the worst gale of industrial and financial trouble which it has experienced in its history. There was, consequently, a perpendicular drop in premium income. Taking 28 groups of the largest British and American companies, the total premiums fell off to the extent of \$59,072,000, or just over 9 per cent. This reduction in income naturally and unavoidably sent up the expense ratio for all companies with a bound. At the same time, there was another serious factor. It does not always happen that, when times are bad, fires are more prolific, but this did occur in 1930, and the published figures indicate that for the same 28 groups of companies the loss ratio showed an increase of 6 per cent.

With these adverse factors, almost unprecedented in their severity, it will not surprise you to learn that the net outcome of our fire operations in the United States was £102,000 worse than in 1929.

The casualty business was even more difficult than the fire, and the account, particularly in the fidelity and surety department, suffered severely by reason of the financial trouble prevailing.

Here again, we are watching closely, and the rigidity of our operations should have an ameliorative effect during the present year, even if the depression continues.

INTEREST AND DIVIDEND.

Reverting to the figures which appear in the printed accounts you will find that our net interest and life profits for 1930 yielded almost exactly the same figure as for 1929, viz.:—£557,369 against £559,596. There would, in the ordinary course, have been an appreciable improvement, but this was negated by the extra 6d. in the income tax, the cost of which amounted to approximately £20,000. The interim dividend having been increased in accordance with our promise last year, the total dividend is now 20s. per share. As you will have seen from the report, we have decided to transfer £500,000 to the general reserve fund, which will thus become £1,500,000. Our total reserves amount to the significant figure of £10,085,389.

A further gratifying feature of our impregnable financial position is that, whilst 1930 was notorious for its collapse in so many directions, we did not suffer by the depreciation of our securities. On the contrary—thanks to the bulk of our investments being in gilt-edged loans and bonds—the value of our holdings, and, therefore, of our inner reserve, was actually increased. Even now, notwithstanding the situation in Australia, we are as well off in the aggregate as we were at December 31, 1929.

THE FUTURE.

Referring to the future, the Chairman said:—I cannot reasonably anticipate any general improvement in those conditions in the early future. We have not relaxed, and we do not intend to relax, the principles and traditions which time has built up, and, if we have to encounter worse conditions, we are prepared for them so far as is humanly possible. To this end we are all the time indebted, not only to the management—particularly the chief officials, Mr Hendry, Mr Rogers, and Mr Wallas—but to the staffs, who continue to live up to the high standard of efficiency which has accounted for so much of our past prosperity.

The Deputy-Chairman (Mr Charles G. Hamilton) seconded the motion, which was unanimously carried.

The usual formal business having been disposed of, votes of thanks to the Chairman, Directors, Representatives, and Agents of the Company terminated the proceedings.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE.

MORE THAN £2,000,000 OF NEW BUSINESS.
GENEROUS BONUS RATES CONTINUED.

The annual meeting of the Friends' Provident and Century Life Office was held, on the 6th instant, at the Holborn Restaurant, London.

Mr Harold J. Morland, M.A., F.C.A. (the chairman), who presided, said:—Fellow members,—During a year of ebbing trade and severe losses in many classes of industry, life assurance institutions received a special measure of support from the public by way of new business. With many investors, life assurance policies were the only assets which increased in value, in contrast with the heavy depreciation of ordinary securities. Many thoughtful persons were therefore desirous of adding to the amount of their assurances, thus making good the inroads on their estates arising from the general misfortunes of the time.

NEW ASSURANCES.

The grand total of new assurances (including sinking fund assurances for £270,329) issued by the Friends' Provident and the Century during 1930 was £2,364,916, which was £273,960 more than for 1929 and £434,377 in excess of the amount for 1928. In 1930 the new business exceeded £2,000,000 for the second time.

MORTALITY.

The claim experience of the year has afforded a somewhat remarkable illustration of the effect of incidence of claims upon the amount of the profit from favourable mortality. The amount of the claims was unusually high, being 88 per cent. of the "expectation." Nevertheless, so fortunate was the office in the range of policies which became claims by reason of the death of the lives assured that the death strain was comparatively low. A profit of £83,000 from favourable mortality resulted, which was the largest sum accruing in any one year from this source in the experience of the office.

INVESTMENTS.

The productivity of the investments was well maintained. The gross rate of interest was 1s. 7d. higher at £6 1s. 4d., but the extra 6d. in the pound on the income tax nullified the increase in the gross rate, and reduced the net rate to £5 3s. 1d. How long this condition will remain it is not possible to forecast, but on the 1930 figures there is a margin of interest earned of £2 3s. 1d. per cent. over the 3 per cent. assumed by the actuary in his periodical valuations of liabilities.

The general depression has also adversely affected the market values of nearly all classes of securities, whether in London or other financial centres. On the stringent basis of Stock Exchange selling prices, the book values of the holdings totalling £2,870,316 are shown by the directors' certificate at the foot of the balance sheet to be £71,059 more than market value. On the other hand, the present worth of other investments was sufficiently in excess of the book values to warrant the directors in certifying that the assets regarded in the aggregate were fully of the value appearing in the balance sheet.

BONUS RATE.

The members will recollect that as at December 31, 1929, the directors declared a compound reversionary bonus on normal with-profit assurances at the rate of £2 2s. per cent. per annum for the five years then ended. The directors also authorised interim bonuses at the full rate of £2 2s. per cent. per annum to be payable during the current three-year period, with power to reconsider the rate at any time if thought advisable to do so. I am glad to inform you that the directors have authorised the continuance of this generous scale of bonus.

CENTURY ACCOUNTS.

The Century has paid the usual 12 per cent. dividend on the paid-up capital, and after providing for all outgoings of the past difficult year, the balance carried forward on profit and loss account was £68,689, as compared with £103,546 brought in. The total funds of the company, including paid-up capital, were £3,415,643, an increase of £114,553 for the year. Notwithstanding the severe depreciation in Stock Exchange securities during the past two years, the book values were still covered by market values.

FRIENDS' PROVIDENT BALANCE SHEET.

The total funds of the Friends' Provident advanced during 1930 by £396,978, and amounted to £6,824,846. Inclusive of the

resources of associated companies, the aggregate funds for the first time reached £10,000,000.

On previous occasions I have referred to the great services which life assurance institutions can render to those who require protection for their families and other dependents, but the uncertain conditions of the present time have caused me to give some consideration to the contribution which the office can make to the special needs of to-day. Most investors have suffered depreciation of their holdings during the past two years, and if the securities are of commercial type the potential loss amounts probably to a substantial percentage of the capital employed. It may be hoped that with the advent of better times much of the depreciation may be recovered, but there is no certainty of this recovery being complete in many instances. In any event, recovery may occupy a considerable period during which not only will estates which fall in on the death of the owner be smaller as the result of the depreciation, but realisation to meet death duties and other outgoings will be particularly disastrous because of the special difficulties in arranging a sale under "slump" conditions. To such investors a life assurance for the amount of the depreciation will not only be a good investment in itself, but will ensure the ultimate restoration of the estate to its former value.

Many investors are concerned as to the securities which may be bought without grave danger of depreciation, or even of loss of income and capital. To such investors I would suggest that they should consider the merits of a single-premium whole of life assurance, with profits, for a substantial sum in relation to their total capital. Such an investment does not, it is true, yield an annual income, but instead it increases from year to year by the attachment of bonuses. The advantage of the wide "spread" of the life office's investments is secured. The rate of interest yielded is an excellent one. At death there is a cash reserve fund available for discharge of legacies and payment of death duties, thus enabling securities which must otherwise be realised at a sacrifice to be nursed.

CONTINUOUS DISABILITY INSURANCE.

In the case of another class, which includes most of our younger members, the principal income-producing asset is good health. The income of many business and professional men ceases within a short time of a breakdown in health, and it is most desirable that the financial consequences of such a contingency should be insured against. Often the type of insurance benefit secured is under a policy which provides a weekly allowance during illness for only a limited period. Such a policy can be discontinued by the company irrespective of the necessities of the insured in the event of deterioration of his health. The Century Insurance Company was the originator of the more valuable type of sickness insurance known as continuous disability insurance. Under this scheme compensation is payable during breakdown of health until age 65 is attained, however long the illness persists. This scheme can be made use of to cover particular standing charges such as life assurance premiums. Thus, whereas a life policyholder may find it difficult to maintain his life assurance in force if prolonged ill-health overtakes him, in consideration of a small additional annual payment his life policy can be endorsed with a provision that the life premium will cease during prolonged illness, without detriment to the life assurance benefits provided by the policy.

Your directors desire to express their sense of indebtedness to our general manager, Mr Tapscott (who is also managing director of the Century), to Mr Little, the general manager of the Century, and to all the officers and staffs of the combined offices. As chairman of both companies I watch with admiration the skilful administration of our principal executive officer, and I appreciate to the full the loyal service of our departmental heads and branch officials. I feel sure that all my fellow members will wish to join in this expression of gratitude.

I have much pleasure in moving: "That the revenue accounts and balance sheet and report of the directors for the year ended December 31, 1930, be received, approved, and adopted."

Mr Francis J. Clark, J.P., seconded the resolution, which was unanimously adopted.

A cordial vote of thanks to the chairman concluded the proceedings.

UNDERGROUND GROUP.

LONDON PASSENGER TRANSPORT BILL.

An informal meeting of the debenture stockholders and stock and shareholders of the companies comprising the Underground Group was held, on the 1st instant, at the Central Hall, Westminster, S.W., to hear a statement as to the terms upon which, subject to the approval of Parliament, it is proposed to transfer the several undertakings to a board to be set up under the London Passenger Transport Bill.

The Rt. Hon. Lord Ashfield, in the course of his speech, said: This Bill empowers the Minister of Transport to set up a board to which are to be transferred all the local passenger transport undertakings within the London Traffic Area. The transfer is to be compulsory, and since it is not intended that you shall receive cash in respect of your present interests, but that you shall receive stocks of the board instead, you are inevitably concerned with the many aspects of the project covered by the Bill.

The stocks of the board, to be called London Transport Stocks, are as follows:—"A" stock in part carrying interest at 5 per cent. in part carrying interest at 4½ per cent., both ranking *pari passu*. "T.F.A." stock, carrying interest at 4½ per cent., to be issued only in respect of debenture stocks guaranteed under the terms of the Trade Facilities Acts, which guarantee continues under the Bill. "B" stock, carrying interest at 5 per cent. The "A," "T.F.A." and "B" stocks to be trustee securities and to be redeemable at par on or after agreed dates. "C" stock to be dependent upon each year's earnings for its interest, the rate of interest not to exceed in each of the first two years 5 per cent., or thereafter 6 per cent. per annum, subject to the provisions of paragraph 3 below. The "C" stock to be redeemable at par after twenty-five years at the option of the board.

For the past three years the holders of ordinary stocks of the four Underground Railway Companies have been receiving dividends at the rate of 5 per cent. When, in place of every £100 of their present holdings, they have received £92 10s. in "C" stock of the board, they will, for the first two years, when the interest upon the "C" stock is limited to 5 per cent., receive a return at the rate of £4 12s. 6d. per cent. on their present capital. After two years they are to receive 5½ per cent. upon their holding of "C" stock, which means that their return upon their present capital would be £5 1s. 9d., and when, as we expect, the board pays out of its further income, an additional one half of one per cent., making 6 per cent. in all, they will receive a return upon their present capital at the rate of £5 11s. per cent. At that time they will be at least one-half of one per cent. better off than they are to-day.

It is estimated that the Underground Company should have at its disposal roundly £12,500,000 of "C" stock. Subject to the provision of any moneys which may be required for the winding-up and to enable the various arrangements to be carried through it is thought that there should be sufficient "C" stock to permit every holder of ordinary shares in the Underground Company receiving £115 of "C" stock in exchange for every £100 in nominal value of ordinary shares held by him. At the present time a holder of ordinary shares in the Underground Company is receiving dividends at the rate of 8 per cent. It is estimated that of the 8 per cent. now paid at least 6 per cent. is attributable to holdings in the transport companies to be dealt with under the Bill. As against this 6 per cent. which he now receives, a holder of £115 of "C" stock should receive by way of interest during the first two years, when the interest on the "C" stock cannot exceed 5 per cent., 5.75 per cent., and thereafter, when the interest upon the "C" stock rises to 5½ per cent., 6.325 per cent., and, if the "C" stock should, as may be anticipated, pay 6 per cent., 6.9 per cent. To all these rates of interest must be added the dividends which he will receive from his shares in the proposed new holding company. These are expected to be equivalent to another 2 per cent. Admittedly, the aggregate interest in respect of the first two years is fractionally lower than the dividends which have been paid in recent years on the Underground shares, but after the first two years the holder of such shares may expect to receive interest equal to or exceeding by almost 1 per cent. his present return. The upshot of the arrangement is that the Underground shareholder, after two years, should receive not less than he does to-day, with an expectation of a further 1 per cent.

I have no hesitation in recommending the acceptance of the terms as being in your best interests and as affording you as good prospects in the future as you might fairly expect. I have assured the Minister that, upon the terms which I am putting to you, he shall have my fullest support, not only now but when the Bill has passed through Parliament.

A resolution was passed approving what had already been done by the board and authorising them to continue negotiations with the Minister of Transport and bring them to a conclusion.

ENGLISH AND CALEDONIAN INVESTMENT COMPANY, LIMITED.

TRADE DEPRESSION AND SECURITY VALUES.

MR E. S. ARLISS ON THE OUTLOOK.

The fourth annual general meeting of the English and Caledonian Investment Company, Limited, was held, on the 5th instant, at the registered offices, 3, London Wall Buildings, London, E.C.

Mr Edward Sydney Arliss (chairman of the company) presided. The Secretary, having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report, said:—In a review of our balance sheet the first item to be noted is the value of our investments. Last year when I addressed you we were able to report that the value of our investments was slightly in excess of the book value. Since then, however, prices of securities in all the markets of the world have continued to fall heavily.

CAUSES OF FALL IN PRICE OF SECURITIES.

This is due to a variety of unfavourable factors, the chief of which are the prolonged and severe depression in trade throughout the world, the unprecedented fall in the prices of the primary commodities, political unrest in the East, in South America and elsewhere, and the general lack of confidence engendered by these and other circumstances. We naturally have not been immune from these influences.

At March 31st last it will be seen that the market value of our investments was £499,778, which represents a depreciation of 14.13 per cent. on the book cost of the investments. This compares very favourably with the depreciation reported by the majority of investment trusts formed at about the same time as our own. Moreover, whereas the rate of depreciation on our investments during the year works out at under 15 per cent., according to the Securities Index of the "Investors' Chronicle," the depreciation over the same period on a representative list of 176 securities amounted to 25 per cent. Our position, therefore, from an assets standpoint can be regarded as being not unsatisfactory.

Your directors adhere, of course, to the policy of keeping the risk of investments widely distributed. At March 31st last there were one hundred and twenty-nine investments in the company's portfolio. They consist of Government bonds, debentures, preference and ordinary shares, and include holdings in one hundred and thirteen different undertakings situate in twenty-four different countries.

THE NEW DEBENTURE STOCK.

An item which appears in the balance sheet for the first time is the 4½ per cent. redeemable debenture stock, 1970-75, of which £38,980 had been placed at the close of the financial year. In December last, we decided to take advantage of the company's borrowing powers to create debenture stock to the extent of £250,000, which sum represents but half the amount we are entitled to issue on the present issued capital of the company. In order to keep the expenses at a minimum, it was decided not to resort to a public issue, but to offer this stock to the preference and ordinary stockholders in the first instance, and to place it in parcels from time to time, as opportunity offers. This stock is well covered both as to principal and interest, and we shall be pleased to receive applications for any amount from £10 upwards at the present price of 87 per cent. At this price the yield is £5 3s. 5d. per cent.

The whole of the expenses incurred in creating the debenture stock and in issuing the amount outstanding at the date of the balance sheet has been written off out of the surplus realised during the year on the sale of certain investments. The balance of this surplus has been transferred to the contingency fund.

PROFIT AND DIVIDEND.

Turning to the profit and loss account, we see that the investment income for the year is £33,685. This compares with £31,702 for the previous year. After deducting, however, in each year from investment income the amount paid in the way of interest on borrowed money, the result is an increase this year of a little over £1,000. The net profit for the year is £27,752. It is proposed to pay a final dividend on the ordinary stock of 3½ per cent. actual, making 6 per cent. in all for the year, the same as for the previous year, and to carry forward the sum of £3,840, against £3,467 brought in.

As to the future, it would not be wise to prophesy. Economic, political and industrial conditions throughout the world have not yet improved, but I think that I am justified in expressing confidence on one point, and that is, that when general conditions do improve, our company should be one of the first to reflect the improvement.

The report and accounts were unanimously adopted, and the proceedings terminated with a cordial vote of thanks to the chairman and directors.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED.

MR. H. J. WELCH ON RUBBER POSITION.

The twenty-fourth ordinary general meeting of the Lunuva (Ceylon) Tea and Rubber Estates, Limited, was held, on the 4th instant, in the Council Room of the Rubber Growers' Association, 2, 3 and 4, Idol Lane, London, Mr H. J. Welch (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The general reserve now amounts to £245,000. If allowance is made for the net surplus assets, after deduction of the final dividend to be declared to-day, the planted areas stand in the books at the net figure of £44 12s. 6d. per acre, as against £44 11s. 5d. last year.

Although market prices for tea were generally lower during 1930, this company increased its selling price by over 1d. per pound. This is a further proof of the soundness of the policy which has been steadily pursued of providing every facility for and encouraging the manufacture of "quality" teas. The teas produced by this company are well above average, and are of a class for which there should always be a good demand at remunerative prices.

The cost of production of rubber last year was the lowest on record for this company. The company rested all its rubber areas during May, and for the greater part of the year it rested the whole of its rubber areas on the tea-cum-rubber estates. Selective tapping was adopted on the remainder. Having regard, however, to the continued fall in price and to the accumulation of world stocks, the board has recently decided to stop tapping altogether, and put all its rubber estates on what is known as a "caretaker basis."

The resting of rubber estates improves the health of the trees, preserves the bark and gives greater yields when the trees are again brought into tapping. Closing down, however, means a certain dislocation of organisation and labour forces. Notwithstanding this, however, the directors are of opinion that in the existing circumstances the policy adopted will justify itself.

After providing a sum of over £25,000 for depreciation the net profit for the year amounted to £39,634, which is equal to 16 per cent. upon our issued capital. A final dividend of 7½ per cent., making 12½ per cent. for the year, is recommended. It is interesting to recall that this, added to previous dividends, makes an average of 19 per cent. per annum paid during the last ten years.

Although this company is principally a tea-producing company and its rubber areas represent only a little more than one-third of its total planted acreage, perhaps a few remarks from me upon the general rubber position may not be thought out of place. The fundamental cause of the present unfortunate position is, in my opinion, that the world absorption of rubber last year was, and still is, below what would, but for the world-wide industrial depression, be the normal absorption. The demand is at present abnormally low, due to causes that are general and not specific to the industry. . . .

Is there, then, no remedy for the unfortunate position? I think there is—economic forces are working all the time to reconcile production with absorption. Unfortunately, their operation has been delayed by the hope constantly held out of international restrictive legislation. The economic forces would operate more quickly if the efforts to find a satisfactory basis for legally enforced restriction were now definitely abandoned.

In this connection I heartily welcome the statement made last week by Mr W. Shakspeare, the chairman of the Ceylon Association in London, at its annual meeting. He said: "Let us face the fact that restriction by legislative means is practically dead and gird ourselves to meet the situation."

If this view is more generally accepted I believe many more producers will recognise that, in view of the low prices and the heavy stocks and considering the matter from the point of view of their own interests only, it will now pay them further to restrict production or to stop tapping altogether. At present prices to produce a full crop will mean a greater money loss to a company than producing a restricted crop, or in many cases no crop at all. This should cause many companies now to decide to do what this company has decided—namely, to stop tapping, preserve the bark, improve the health of the trees and await the inevitable return to a more economic price. . . .

While, therefore, the outlook for the immediate future is very depressing, because the world trade conditions show no signs of improvement, when world trade does revive the plantation industry will be able profitably to supply its commodity at a lower price than ever before, and this lower price will not only enable it better to compete with the native producer, but also will encourage the extended uses and demand for our product.

The resolution was unanimously adopted.

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY.

RECORD NEW LIFE BUSINESS. GRATIFYING SECURITIES VALUATION.

The Right Honourable The Earl of Mar and Kellie, K.T., Chairman, presided at the 106th annual general meeting of the shareholders of the Scottish Union and National Insurance Company, held at Edinburgh, on May 6, 1931. In moving the adoption of the report and accounts for the year 1930, he stated that it is very satisfactory to find that in a year of such adverse industrial conditions the new life business of the company at over 2½ millions gross and nearly 2¼ millions net exceeds all previous records. It is also satisfactory to find that the claims by death are less than they were in 1929 by £72,000.

FIRE ACCOUNT.

In the fire account the premiums are down by about £15,000, and the losses, including contributions to fire brigades, are up by a little over £48,000; but, notwithstanding these adverse features, a sum of no less than £112,000 has been transferred to profit and loss account from this account. We consider this to be a very satisfactory showing in what is generally regarded as having been a very difficult year for fire insurance companies.

ACCIDENT, EMPLOYERS' LIABILITY AND MISCELLANEOUS ACCOUNTS.

The accident, employers' liability and miscellaneous accounts together showed premiums amounting to over £251,000, which is an increase over the previous year of £6,000. The profits realised and transferred to the profit and loss account are £35,000, an increase of £16,000 as compared with 1929. The aggregate profits from these accounts are larger than have been shown heretofore in any single year.

MARINE BUSINESS.

As regards the marine account, the premium income for last year is about £26,000 lower than the previous year; but the losses are down by nearly £40,000, so that a sum of £20,000 (i.e., £5,000 more than the previous year) was transferred to the profit and loss account.

PROFIT AND LOSS ACCOUNT.

In the profit and loss account it will be observed that the directors propose to add a further £50,000 to the special reserve in the fire insurance account. The result is to bring the fire insurance fund up to 111 per cent. of the year's income in the fire account. After this transfer has been made, the balance carried forward to profit and loss account is only some £18,000 less than the amount brought in, and this balance is sufficient to cover over three years' dividends at the present rate.

Notwithstanding the very severe fall which has taken place in the value of Stock Exchange securities generally, a valuation of our Stock Exchange securities as at December 31st last reveals that the securities are worth considerably more than the figures stated in the balance sheet.

MONTE VIDEO WATERWORKS COMPANY, LIMITED.

The fifty-second ordinary general meeting of the Monte Video Waterworks Company, Limited, was held, on the 5th instant, at the offices, 52, Moorgate, London.

Mr. N. B. Dickson, O.B.E., M.Inst.C.E. (the Chairman), who presided, said that the net receipts for the past year had amounted to £209,340, an increase of £24,914. In a year when the company had been unable to add to the number of their services, this was a satisfactory result; they had recovered the decrease in net receipts shown last year due to the reduction in tariff which came into force when permission to lay the new main was granted by the Government.

Coming to the charges on the net revenue, the position was not so happy, as the loss on exchange amounted to no less than £56,418, and represented over 4½ per cent. on the ordinary capital. The distributable balance was £194,322, as against £219,833 in the previous year. The reduction in the dividend on the ordinary stock from 8 per cent. to 6 per cent. for the year was not only rendered advisable by the results of the past year, but was, to some extent, a precautionary measure in view of the outlook for the current year. As to the prospects for the current year, they must look for any increase in their income to new services which were now being rapidly connected to their system, and to an increase in the consumption of water by their present customers now that they were in a position to give a more ample supply. The decisive factor in the case—and the one regarding which it was almost impossible to prophesy—was the rate of exchange.

The report and accounts were unanimously adopted.

SPILLERS LIMITED.

EXCELLENT TRADING RESULTS.

DIVIDEND OF 10 PER CENT.

The Right Hon. Sir Malcolm A. Robertson, P.C., G.C.M.G., K.B.E., presiding at the annual general meeting of Spillers, Limited, at Cardiff, on Saturday, said that he had accepted the chairmanship of the company with the utmost possible diffidence, but he would endeavour to justify the confidence which the other members of the board had placed in him, and which he trusted the shareholders would confirm.

The profit of the company for the year amounted to £413,592 19s. 4d., and the payments made out of these profits, including a transfer of £100,000 to the reserve for depreciation of investments, left available for disposal £275,890 14s. 9d. The directors proposed to deal with this by the payment of a 10 per cent. dividend on the ordinary shares and 6½ per cent. on the co-partnership shares, and to carry forward the balance of £129,546 4s. 3d. to the next account.

The year under review had shown severe declines in values of both wheat and coarse grain, owing to the natural lack of confidence among buyers, due partly to the supply being in excess of the demand, and partly because the amount of the excess was impossible to gauge.

Russia had re-entered the world market as an exporter on a large scale, while the countries which had increased their production since 1914 in order to cope with the world demands were producing as much as, and even more than, they had done during the intervening years.

The position had been aggravated by the restriction of imports of foreign wheats in France, Germany, and Italy, and the market would be affected for a long time by the heavy stocks held by the Farm Board in the United States, which sooner or later would have to be liquidated.

The general effect of this and of our free market in wheat might be illustrated by the current value of the 4-lb. loaf in different countries, for instance: Germany 1s. 5½d., Italy 7½d. to 10d., Sweden 1s. 6d., United States 1s. 4½d., Canada 1s. 1d., Australia 11d. as compared with Great Britain and Northern Ireland 7d.

MILLERS AND QUOTA SYSTEM.

It had been suggested that in order to help the home farmer it was desirable that the British millers should use a definite percentage of home-grown wheat and that simultaneously a guaranteed price, the estimates of which varied enormously, should be established for such wheat as was millable. This latter necessarily involved a subsidy which, if the British taxpayer was willing to bear it, would not affect the millers.

To the quota system, however, there was a number of objections, some of them possibly not insuperable. Very little home-grown wheat was used by the port millers, partly owing to price, partly owing to the cost of transport, and partly because it was impossible to ensure a regular supply of English wheat in sufficient quantities and of regular quality. Of the native wheat some, although millable, went to the poultry breeders, and the question arose as to whether the latter would be entitled to the subsidy, and if not, whether the poultry breeder would have to buy imported wheat.

The suggested system of certificates representing English wheat which the port miller might buy from the country miller might easily lead to gambling and to an ultimate increase in the price of flour. Owing to variable climatic conditions, the quota would have to be adjusted year by year according to the crop, and, speaking generally, the company and the British millers as a whole would be strongly opposed to the imposition of such a system, which was considered unwise, uneconomic, and unnecessary.

In regard to the suggested quota for Dominion wheat, it did not appear to be realised that, for instance, the strong wheats of Canada were not interchangeable with the soft white wheats of Australia, and it would be a delicate and difficult matter to apportion a global quota between the different Dominions.

Millers, however much they might be averse to interference with their present free market, would be compelled to bow to reasons of major policy which affected the whole nation, especially if it involved the increased employment of home labour.

WHEAT DUTY PROBLEMS.

While it was said that the British electorate would never agree to a duty on wheat, it was demonstrable that a moderate duty on foreign wheat would not only be more easy to work than a Dominion quota, but would probably have no effect on the price of flour or bread, and would give an obvious advantage to the Dominions.

So far as Russian wheat was concerned, even under a quota system it would have to be strictly limited in view of the fact that on account of the conditions under which it was said to be pro-

duced and transported, Russia might be able to secure the whole of the non-quota market at the expense of Argentina, in which this country had over £500,000,000 of capital invested.

The importation of flour, which had recently again been increasing, and now amounted to over 10 per cent. of the total consumption, would have to be dealt with if the British millers' costs were to be artificially increased, as otherwise the additional advantage given to overseas millers would be disastrous. The case for the prohibition of importation of flour was unanswerable. It would enable our home mills to work nearer to capacity (which would still be in excess of the country's consumption), and would place something in the neighbourhood of 6,000,000 cwt. more wheatfeed on the market for the benefit of the British stock breeder.

SUGGESTED IMPORT BOARD.

The policy of establishing an Import Board for the purchase of wheat in bulk should also be mentioned, but no one had explained the advantages which this policy was supposed to have over the present system, which had secured for our home population the cheapest flour and bread in the world.

The policy of the company had been affected by the rationalisation of the flour-milling industry, which had led to the shutting down of certain redundant mills, as a consequence of which the company had been able to concentrate on the selling of their products within economic distances of the plants. Accordingly, notwithstanding the heavy decline of the prices of commodities, the company had been able to show such satisfactory results. All possible steps had been taken to eliminate the market risks on grain and anything in the nature of speculation.

All the company's products continued to give the highest degree of satisfaction to their customers, and the shareholders should enhance the value of their own property by buying the company's goods wherever possible.

The chairman concluded my moving the adoption of the report and accounts, which were approved.

The retiring directors and auditors were re-elected, and a resolution fixing the directors' remuneration was carried.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED.

DIVIDEND MAINTAINED.

The forty-first ordinary general meeting of the Anglo-American Debenture Corporation, Limited, was held, on the 7th instant, at Winchester House, London.

Mr Richard S. Guinness (the chairman) said that he thought the stockholders would share the board's satisfaction that, in such times of stress, while they could not expect to escape a certain measure of depreciation, they had, so far, weathered the storm so well, and were able to recommend a dividend equal to that paid in the previous year. The income from investments and trustees' fees had been more than maintained, amounting to £174,486—an increase of about £1,450 compared with the previous year. The amount available for ordinary stock dividend and reserves was £94,675, and, after paying the dividend of 15 per cent. they were allocating £25,000 to reserve and increasing the carry-forward by £2,175. They were sorry to break the record of the past nine years, in each of which there had been either a bonus declared or an increase in dividend, but the serious political and financial situation existing throughout the world doubly compelled a policy of prudence.

The investments had been valued on the usual conservative basis, and showed a fall compared with last year, but there was still a substantial surplus on book values. In addition, they had the reserve account and the carry-forward, amounting, together, to over £328,000, or 73 per cent. of the ordinary capital, as an additional margin. The number of investments was 609, and the average was, therefore, just under £4,000, distributed as to three-quarters in fixed interest-bearing securities and one-quarter in equity stocks. In these days of world depression well-balanced geographical distribution had not allowed the company to escape wholly from its effects, but the widespread distribution both geographically and industrially, combined with the relatively small investment in any one security, had certainly been one of the factors which had enabled them without serious impairment to meet the calamities of the past year.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended May 2, 1931, amounted to £9,172,900 against ordinary expenditure of £26,466,400. After allocating £515,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £58,187, the week's operations, as shown below, increased the National Debt by £17,867,000 to £7,619,838,000:—

Messrs Samuel Montagu and Company write on May 6, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £146,279,564 on the 29th ult. (as compared with £145,863,946 on the previous Wednesday), and represents a decrease of £1,346,058 since December 31, 1930. In the open market yesterday about £1,060,000 of bar gold from South Africa was available. The price was fixed at 84s. 10½d. per fine ounce, at which about £25,000 was taken for Indian and trade requirements. The Bank of England secured about £1,029,000 at the statutory buying price. Movements of gold at the Bank of England during the week have resulted in a net influx of £1,217,480. Receipts consisted of £66,800 in sovereigns, of which £63,000 was from Australia, and £1,169,679 in bar gold. Withdrawals totalled £18,999, of which £12,000 was in sovereigns taken for export. According to the daily announcements made by the Bank of England, the total amount of sovereigns "set aside" during the first four months of this year was £5,754,533, whilst the amount "released" from "set aside" during the same period was only £2,192,848. It is understood that a large proportion of the amount "set aside" has been for account of Argentina.

SILVER.

There has been little change in the market during the past week, and, although prices showed a tendency to ease slightly, sellers did not press and the undertone remains steady. China and the Indian Bazaars continued to work both ways and the latter quarter has sent a few buying orders for immediate shipment. The off-take, however, has not been sufficient to maintain a premium on cash delivery, even rates for both positions having been quoted since the 1st inst. America has bought on occasion, but on the whole has been more inclined to sell than of late.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 27th ult. to mid-day on the 4th inst.:—

IMPORTS.	£	EXPORTS.	£
Germany	10,991	Miscellaneous	15,155
France	17,500		
Mexico	81,633		
Other countries	14,760		
	£124,884		£15,155

NOTICES.

Branches of Barclays Bank (Dominion, Colonial and Overseas) have been opened at Tabora (Tanganyika) and Clanwilliam (Cape), and a sub-branch has been opened at Rondebosch-Main Road (Cape).

The Midland Bank announces the opening of new branches at 22 and 24 Bethesda Road, Blackpool, and 411 Gloucester Road, Horfield, Bristol. Night safe banking facilities, already available at more than 440 offices of the Midland Bank, are in operation at these two new branches. A new branch has also been opened at 606 Coventry Road, Small Heath, Birmingham. New sub-offices are also open in Queen Square, North Curry, near Taunton; 3 Mor Awelon, Moelfre, Anglesey; and Cattle Market, Reading.

Barclays Bank, Ltd., announce the opening of new sub-branches at Bosham and at Reading Cattle Market.

THE BROKEN HILL PROPRIETARY COMPANY, LTD.—The Broken Hill Proprietary Company, Ltd., has received a cable from the head office in Melbourne announcing that no half-yearly dividend will be paid.

TURNER AND NEWALL.—Interim dividends of 3½ per cent. on the preference shares, payable on June 20th, and 2½ per cent. on the ordinary shares, payable on the 24th inst. A year ago the dividend on the ordinary shares was 5 per cent. The directors add that in future dividends will normally be payable on the preference shares about June 20th and December 20th, and on the ordinary shares approximately the end of July (interim) and the end of January (final). In common with all other undertakings, the company is feeling the effects of the economic crisis, but not, it is stated, in a degree calculated to cause any anxiety to the directors. They consider that in view of the present state of the world's commerce it is expedient for the company to conserve its resources.

Commercial Reports.

MARKET SUMMARY.

The export demand for coal has remained satisfactory in South Wales and in Yorkshire, but the falling off in household requirements is being increasingly felt. The industrial demand continues on a low level. The recent improvement in the iron and steel industries has not been maintained, and Continental competition is again becoming increasingly severe. Non-ferrous metals declined sharply at the beginning of the week, and on Monday tin sold below £103 per ton. Among textile raw materials American cotton declined further, but wool values have been maintained at last week's level at the auctions in London. Flax has been maintained, but hemp and jute showed a slight decline. Reports from Lancashire are depressing. The demand for Manchester goods is dull, and the turnover is below the current output. The home demand for rayon fabrics has improved, but little headway is being made with exports. With the exception of wheat, the food markets are less firm, and in many cases prices show a decline. Among miscellaneous commodities, rubber has advanced slightly on the news that several companies have decided to reduce or to stop tapping.

THE COAL TRADE.

SHEFFIELD.—Prompt delivery for export business in best steams continues brisk and prices firm. Difficulties in connection with the quota system are gradually being overcome and supplies are better than for some time past. Forward buying is, however, very scarce. Current prices are 17s. 6d. to 18s. f.o.b. Humber ports. Demand for industrial fuel tends to shrink and smalls are accumulating at the pits. The call for house coal has declined lately and there are ample supplies. Prices continue firm, best ordinary South Yorkshire brands being quoted at 22s. and 23s. at pits. Secondary qualities are easier. The depression in furnace coke is being accentuated owing to the restricted demand for coke for heating. Quotations for this fuel vary from 11s. to 12s. per ton at ovens.

WORKINGTON.—The coal trade, after one of the best Aprils experienced for many years, is dull. The seasonal decline is almost in full swing. The Irish demand is poor, and industrial fuel and local landsale are both sluggish accounts. Prices are steady. Best round is 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b. Small, 16s. 6d. per ton. Best house coal, 31s. 8d.; and house nuts, 30s. at station. Gas coal, 28s. per ton. West Coast coke is in fair request at from 17s. 9d. to 18s. 3d. per ton.

GLASGOW.—The seasonal falling off in home demand has become more pronounced since the change-over to summer time, and the result is an increase in supplies available for shipment and a consequent further weakening in the position on this branch. Practically all kinds are in abundant supply, especially washed smalls, and the collieries have resorted to short-time working to prevent further accumulations. Aitken navigation and Lanarkshire prime splints are two firm features among round coals. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s. 9d.; splint best, 16s. 6d.; splint second, 14s. 9d.; navigation, 15s. 3d.; navigation second, 14s. 6d.-15s.; Hartley, 15s. 6d.; steam, 14s.; trebles, 12s.; doubles, 10s. 6d.; singles, 9s.; pearls, 8s.; dross, 10s. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 3d.; third-class steam, 11s. 6d.-11s. 9d.; trebles, 11s. 6d.-12s. 6d.; doubles, 10s. 6d.; singles, 9s.; pearls, 8s. 9d. LOTHIAN.—Prime steam, 12s.; secondary steam, 11s.; trebles, 12s.-12s. 6d.; doubles, 11s.-11s. 3d.; singles, 8s. 9d.; pearls, 8s. 9d. AYLESBURY.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s.; trebles, 12s.; doubles, 11s.; singles, 9s. 6d.; pearls, 9s. 6d.; dross, 9s. 6d.

CARDIFF.—The general position on the Cardiff coal market is unchanged. Large steam coals and all special grades of anthracite have maintained a steady tone, while, on the other hand, smalls, and particularly bituminous qualities, continue very weak. The depression in the iron and steel industry is restricting considerably the demand for slacks, and the stocks of these coals are to-day greater than they have been for very many years. The fear has been expressed that the action of the Newcastle and Durham colliery owners in reducing their minimum prices of small coals by 2s. 6d. per ton will further prejudice the South Wales export trade, and the matter is to be considered by the Central Council under the Coal Mines Act. The shipments of coal from South Wales in April showed a substantial improvement compared with the previous month, while those of patent fuel were even greater than in the corresponding month last year. There is a proposal on foot to arrange an agreement between colliery owners and merchants for the better regulation of the local house coal trade. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 3d. to 19s. 9d.; best dross, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 9d. to 18s.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 14s. to 14s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 27s. 6d. to 34s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. 6d. to 23s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—There has been no improvement in business in Cleveland iron during the past week, and consumers seem more determined than ever only to buy what is actually required a week

OVER ONE HUNDRED YEARS OF SERVICE.
SCOTTISH UNION & NATIONAL
 INSURANCE COMPANY.
ASSETS EXCEED - £15,500,000
FIRE. LIFE. ACCIDENT. MARINE.
 London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1.
 Edinburgh: 35, St. Andrew Square

or two ahead, feeling convinced that a reduction in prices must soon take place. Makers, on the other hand, argue that costs do not admit of any reduction in selling prices of iron, and as they are able to dispose of the current make they must be content with the position as it exists at present. No change was made in the official prices on Tuesday

GLASGOW.—In the West of Scotland the general impression seems to be that business is slightly better, but the improvement is slow and noticeable only in the lighter branches of the industry. Steel makers and steel re-rollers are finding business exceedingly quiet, and wrought iron makers have difficulty in securing orders sufficient to warrant keeping works in operation. The Glasgow pig-iron market is exceedingly quiet. The slight improvement which has been in evidence in the black sheet trade during the past two weeks is still maintained, and makers have been able to keep a larger number of mills in operation than for some time past; the forward bookings are not quite satisfactory nor sufficient to ensure that these mills will be kept in operation for any prolonged period. Business in galvanised sheets for export does not show any expansion, but the home demand is steady.

CARDIFF.—The depression in the tinplate industry has led to the service of notices closing down the Elba works at the King's Dock, Swansea, and there are reports that the output pooling scheme will be abandoned next month. Prices have been a shade easier at from 15s. to 15s. 6d. per basis box, compared with 15s. 3d. to 15s. 6d. the previous week. The output of tinplates in January and February was only 105,000 tons, compared with 155,000 tons in the first two months of 1930, and of galvanised sheets 59,900 tons, compared with 165,100 tons. Galvanised sheet prices are unchanged at £11 per ton, tinplate bars at £5 and foreign bars at £4 6s. per ton.

OTHER METALS.

TIN.—On Monday the metal touched £102 17s. 6d. per ton "standard cash" as compared with about £120 at the end of March. Later in the week, however, prices recovered to some extent, and Wednesday's closing quotation for "standard cash," at £105 10s. to £105 12s. 6d. per ton, compares with £107 17s. 6d. to £108 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 28,007 tons, show an increase of 677 tons on the week. According to the London Metal Exchange, the world's visible supply, excluding "carry-over in Straits," amounted to 48,462 tons, as against 45,607 tons at the end of March.

COPPER.—Copper has also been easier in London, but Copper Exporters, Inc., maintained their minimum price for "electrolytic" c.i.f. Continent at 9-80 cents per lb. Wednesday's quotation in London for "standard cash," at £40 6s. 3d. to £40 8s. 9d., compares with £41 13s. 9d. to £41 15s. on the corresponding day last week. Stocks of refined copper in official warehouses at the end of last week, at 11,441 tons, show an increase of 187 tons while stocks of rough copper, at 1,310 tons, were 112 tons smaller.

LEAD.—Lead was in better demand, and although there was a fall in price early in the week, it subsequently recovered slightly above last week's level. From the table below it will be seen that the daily rate of production in March showed a decline on February. Wednesday's official closing quotation for "soft foreign," at £11 17s. 6d. to £12 2s. 6d., compares with £11 17s. 6d. to £11 18s. 9d. on the corresponding day last week. The following table shows the world's smelter production (estimated by the Metallgesellschaft A.G.), stocks in the United Kingdom and prices in London:—

(Thousands of Metric Tons.)

	Estimated Production.		Stocks.	Average Price
	Total.	Average.	U.K., end of year-month.	per long ton.
1930 Monthly				£ s. d.
average	137.9	4-532	8.5	18 1 1
1931 January...	131.1	4-228	10.7	13 17 6
February	125.6	4-486	13.4	13 13 1
March	132.1	4-261	13.8	13 8 6
May 6	...	...	...	12 0 0

SPELTER.—Little interest has been taken in spelter and Wednesday's closing quotation for "good ordinary brands," at £10 13s. 9d. to £11 3s. 9d., compares with £10 12s. 6d. to £11 1s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—The lack of demand caused a reduction in the price of antimony from £24 10s. to £25 per ton for "foreign" to £24 to £24 10s. Aluminium and nickel remained unchanged at £85 per ton and £170 to £175 per ton respectively, while quicksilver sold at last week's price of £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Spot sales for the week, April 30th to May 6th (inclusive), are 24,000 bales, of which 11,390 bales are American, 900 Argentine, 2,400 Brazil, 3,000 Peruvian, 3,510 Egyptian, 900 African, 850 East Indian, and 1,050 sundries. Imports for the same period are 31,327 bales, of which 18,439 bales are American, 100 Argentine, 231 Brazil, 2,522 Peruvian, 6,316 Egyptian, 2,139 African, and 1,580 sundries. Quotations on May 6th: American Middling, 5-35; Egyptian Sakel, 8-30; Uppers, 6-32; Brazil Fair, 5-40; Peru G.F. Smooth,

5-80; West African Middling, 5-40, and East African G.F., 6-40. Prices show a slight fall on the week, the weakness in the New York Stock Market has rather overshadowed unfavourable weather reports.

Manchester.—The trade situation in Lancashire has shown very little change since a week ago. The dullness of demand in yarn and cloth has not been relieved, and many producers have continued to lose ground. The turnover is less than the current output. On the whole, there is more doing in home trade fabrics than in goods suitable for shipping. Very few workable offers are being received from India, and operations for China are confined to odd lots. Some producers of printing and finishing styles are meeting with fair orders for South America and West Africa. It is rumoured that some action is about to be taken with regard to prices for bleaching. There has been a restricted demand in American and Egyptian yarns and reports are being circulated of more mills closing down for an indefinite period.

THE WOOL TRADE.—Bradford.—Though there is not quite the same firmness at the London sales, writes our correspondent, the demand for wool is fairly healthy. Certain influences are operating to take the keen edge off Continental buying. The reports received about the financial position in Germany are disturbing, and things are not going too well among users of the raw material in France, there being the probability of resistance on the part of the operatives to a reduction in wages. This week French support in London has not been quite so strong, but on the whole merinos are selling fairly satisfactorily, with sufficient call for clothing descriptions to maintain them around the opening level. Pieces, bellies and locks of Continental style have found quite satisfactory competition. This week withdrawals have been larger than last, but these have largely comprised second-hand offerings on which a profit is not immediately realisable, and if the sales in Sydney this week are any guide to what London offerings ought to be worth, there is justification in refusing to accept the bids forthcoming for the wools in question. Crossbreds admittedly still leave a good deal to be desired. Wool merchants and top-makers in Bradford report that very little new business has been done this week. Apart from the buying which is being done in London, the raw material is neglected, and tops are only saleable at prices which do not cover cost. Spinners are not prepared to pay more than 24-24 1/2d. for good 64's tops, and quite a decent warp can be bought at 25d. In crossbred tops, anything below 50's is on the easy side, and whilst 40's carded are quoted at 1 1/2d., and 40's prepared at 1 1/2d., either quality can be bought at 1/2d. less.

THE GRAIN MARKETS.

WHEAT.—The recent spell of cold weather in this country has had a harmful effect on the winter crop, besides causing considerable delay in field work. The continued scarcity in British wheat has resulted in a rise in prices. The international position has shown some improvement and prices are somewhat higher, owing to the increasing demand from certain European countries. The United Kingdom, France and Italy continue to import large quantities, and it appears that Germany, whose requirements are considerable, may facilitate imports by means of a substantial rebate on all wheat taken by mills. A marked advance in wheat prices in the near future is, however, improbable, considering the large stocks held by the main producing countries. It should be noted the conditions of the new crops will from now on play an important part in the determination of prices. Reports about American winter crops have so far been satisfactory, but weather conditions, both in North America and Russia, have been unfavourable to spring sowing. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 29s. per 496 lb., as compared with 28s. a week ago; No. 2, Northern Manitoba, Atlantic, ex ship, 28s. 6d., against 27s.; Rosafe, ex ship, 24s. 3d., against 23s.; Australian, ex ship, 26s. to 26s. 9d., against 23s. 9d. to 24s. 6d.; and Russian, on sample, landed, 24s. 6d., against 23s. to 21s. last week.

WHEAT FLOUR.—The demand for home-milled flour has been maintained, and prices are slightly higher. Quotations: Straight run, delivered country, 24s. 6d. per sack of 280 lb., as compared with 24s. last week; delivered London, 23s. 6d., against 23s. Manitoba patents, ex store, 22s. 6d. to 24s. 6d., against 21s. 6d. to 24s.; and Australian, ex store, 19s. to 19s. 6d., against 18s. 9d. to 19s. 6d. a week ago.

BARLEY.—The market in barley has been firm, and prices are a shade higher, mainly because of the absence of Russia as a seller. Quotations: "English malting," f.o.r., at 30s. to 35s. for 448 lb., remained unchanged. Californian sold at from 3s. to 43s., as compared with 30s. to 38s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 26s. to 32s. a week ago.

OATS.—Little interest has been shown in oats, but prices have been maintained. Quotations: "River Plate," landed, 12s. 9d.

per 320 lbs., as compared with 13s. last week; "River Plate," ex ship, 11s. 9d., against 12s. 3d.; "Chilean Tawny," landed, 14s., against 14s.; and North Russian, on sample, landed, 18s., against 18s. a week ago. English white showed an advance of 1s. at 19s. to 20s.

MAIZE.—Argentina has shipped large quantities of maize during the last week. As there has not been an increase in demand, prices declined sharply. Quotations: "Plate," landed, 21s. 9d., per 480 lbs., as compared with 22s. 6d. last week; Plate, ex ship, 17s. 9d., as against 21s. 3d.; Plate, May-June, new, 16s. 6d., as against 16s. 6d. Yellow maize meal, ex wharf, was again quoted at £6 10s. per ton.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat.....	Owts. 95,326	Owts. 161,749	Owts. 167,009	Owts. 289,262
1 week to May 2.....	4,039,363	8,133,718	8,721,146	8,985,274
35 weeks to May 2.....	s. d. 5 5	s. d. 9 0	s. d. 9 11	s. d. 10 10
Average price of English wheat per cwt.....	s. d. 5 5	s. d. 9 0	s. d. 9 11	s. d. 10 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.

Cents per 60 lb.						

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS FOR THE YEAR 1930. To be submitted at the Annual General Meeting to be held in Johannesburg on June 9th, 1931.

The working profit for the twelve months ended 31st December, 1930, after deducting Administration expenses, amounted to	£62,675 12 2
The unappropriated balance brought forward was	61,150 4 2
Making the total available profit.....	£123,825 16 4
To which was added an amount transferred from General Reserve	100,000 0 0
Which was dealt with as follows:—	
Amount appropriated to cover depreciation in market value of certain Stocks, Shares, &c.	£204,182 3 10
Amount paid for Taxes	606 10 2
Leaving a balance of unappropriated profit to be carried forward of	£204,788 14 0
	£19,037 2 4

The Directors considered it advisable to carry out their usual practice of writing down all investments to or under the market price ruling at the end of the financial year, and to effect this it was necessary to transfer an amount of £60,000 from the General Reserve, which was thus reduced to £300,000. The amount written off as depreciation, viz., £204,182, is largely in connection with the Corporation's holdings of Oil, Diamond and Industrial Shares. Taken as a whole, the shareholders of the Corporation at market prices ruling at the end of last year, show a substantial margin over and above the figure at which they appear in the Balance Sheet.

The large amount which it has been deemed advisable to provide for depreciation on stock and share holdings is not an ascertained loss, but may be recovered in whole or in part by reason of any revival in the depressed markets obtaining at the close of last year. Since that date there has already been a substantial appreciation in market prices for certain of the stocks and shares then written down.

The Directors also desire to point to the very liquid character of a large proportion of the assets shown in the Balance Sheet. Almost the whole of the Advances against Securities are at call or short notice. The available funds should be substantially increased by the repayment during the current year of the remaining liability of the West Rand Consolidated Mines to the Corporation. Therefore, the financial strength of the Company is such that advantage could readily be taken of entering on any new business that might offer promising returns.

The principal interests of the Corporation are in the following Companies:—

Meyer and Charlton Gold Mining Co., Ltd., Van Ryn Gold Mines Estate, Ltd., West Rand Consolidated Mines, Ltd., Witpoort Gold Areas, Ltd., New Steyn Estate Gold Mines, Ltd., East Rand Proprietary Mines, Ltd., and the Phoenix Oil and Transport Co., Ltd. The Corporation also holds various mining properties, real estate and leasehold property, &c.

BALANCE SHEET at 31st DECEMBER, 1930.		CR.	
To Capital—		By Stocks and Shares, including Participations	£968,235 11 5

RICE.—The market in rice has again been dull and prices declined further. Wednesday's quotation, for Burma No. 2, cleaned, May-June, in singles to the Continent and to the United Kingdom, at 7s. per cwt., shows a fall of 3d. on the week. Movements in London during the past week were as follows: Landed, 9 tons; delivered, 40 tons; stocks, 635 tons, as against 2,408 last year.

POTATOES.—Supplies at the Borough Market were plentiful, but requirements could easily be satisfied. Prices, however, have been maintained, and "Best King Edward" again sold at from 49 to 510.

SPICES.—Business in pepper has been on a small scale, and prices were slightly easier. Wednesday's price of "Black Singapore," at 6 1/2d. per lb., shows a decline of 3d. as compared with last week. Movements of pepper in London during the past week were as follows: Black, landed, 12 tons; delivered, 29; stocks, 556 tons, as against 994 last year. White, landed, 91 tons; delivered, 69; stocks, 765 tons, against 781 tons a year ago.

MEAT.—The market has been slightly easier. On Wednesday, Argentine beef (chilled hindquarters) were sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 4s. 2d. to 4s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 4d., against 2s. 10d. to 3s. 4d. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,722 tons, as compared with 9,011 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.9 per cent. of the supplies, as against 83.0 per cent. a year ago; and imported mutton, mainly New Zealand, formed 85.2 per cent. of the total supply, as against 84.3 per cent. last year.

MISCELLANEOUS COMMODITIES.

HIDE, LEATHER AND ALLIED TRADES.—Prices for hides from home slaughtered cattle were again lower at the auctions held in Manchester this week, several weights in both clear and warbled ox and heifers recording a reduction of 1d. per lb. Cows were from 1d. to 1 1/2d. per lb. cheaper, while the demand for calfskins was

sufficient to maintain last week's prices. Sheepskins remain difficult to sell and lower prices are anticipated. There has been a further weakening of the position of the market for foreign hides. In the South American market small sales of Frigorific ox have been made on the basis of 5 1/2d., while 5 1/4d. has been paid for Uruguay ox, and 5d. for lights. Dry South American hides are a slow sale, with B.A. Americanos quoted at 6 1/2d., and M.V. Americanos at 6 1/4d. African hides are all offered at lower figures with 7d. and 6d. asked for first and second dries, 6d. and 5d. for dry salted 20/30 lbs. Australian hides are lower on the average. Although a fair amount of trade is passing in sole leather, inquiry has inclined to be less active, particularly on account of the shoe manufacturing section. For English and wet salted bends the call has covered all weights to a greater or lesser extent, but the bulk of the business done has been in connection with medium weights. Turnover in regard to upper leather maintains a reasonable dimension, and although no bulk business is passing, the regular receipt of numerous small orders makes for fairly satisfactory trading.

RUBBER.—The expectation of the introduction of a restriction scheme, which had delayed the adjustment of output to current demand until the recent break in prices, no longer exists. Several companies have already announced a reduction or a complete cessation of tapping. This move, which is the beginning of an ultimate adjustment of supply to requirements, resulted in a slight strengthening of the market. Wednesday's official closing price for standard ribbed smoked sheet at 2 1/2d. per lb., shows a rise of 1/4d., as compared with that of the corresponding day last week. Forward positions were steadier. Business has been done at 2 1/2d. to 2 3/4d. for May, as against 2 1/2d. last week; at 2 3/4d. to 3d. for June, against 2 1/2d. to 2 3/4d.; at 3 1/4d. for July-September, against 2 1/2d. to 3d.; at 3 1/4d. to 3 1/2d. for October-December, against 3 1/4d. to 3 1/2d.; and at 3 1/4d. to 3 1/2d. for January-March, 1932, against 3 1/4d. to 3 1/2d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,691 tons; delivered, 1,218 tons; stocks at the end of last week at 138,438 tons, show an increase of 473 tons, as compared with the preceding week.

THE MONEY MARKET.

TWO-AND-A-HALF PER CENT.

MONEY was wanted early in the week, with rates running up for a time on Tuesday to 3 per cent. There was little apparent justification for these high rates, and by the following day easier conditions prevailed, while on Thursday morning the rate was barely 2 per cent. The demand for money on Monday and Tuesday seems to have origin-

ated mainly from the Stock Exchange, where, as in previous weeks, the activity in gilt-edged stocks is absorbing a fair quantity of funds. The discount market was comparatively inactive, notwithstanding the "unpegging" of the three months' rate.

The release on Friday of the control over the discount market was followed by an immediate reduction in the three months' market rate to $2\frac{3}{4}$ per cent., while last week's Treasury bills went at a shade over the same figure. This was a drop of $\frac{3}{4}$ per cent. below the former "pegged" rate of $2\frac{1}{2}$ per cent. No further decline took place up to Thursday noon, when the announcement of a $2\frac{1}{2}$ per cent. Bank rate was made. The first reaction to this change was that the rate was called nominally $2\frac{1}{8}$ per cent. and talked lower, but until the decision of the clearing banks as to the rates they would charge for weekly loans was known, little actual business in bills was done. As a result of the banks' decision to adhere to a full 2 per cent. for weekly fixtures, the market was placed in a somewhat anomalous position. On Thursday afternoon, day-to-day money was called $1\frac{1}{2}$ per cent. but discount rate was more or less effective at $2\frac{1}{4}$, it being understood unofficially by the market that the Bank of England authorities did not desire to see the rate fall below $2\frac{3}{8}$ per cent. as a minimum.

The general considerations of the aims and consequences of the reduction in Bank rate are dealt with in a leading article. From the market's point of view the decision of the joint stock banks makes the lowering of the official rate somewhat meaningless since, apart altogether from any question of the reimposition of a semi-official peg, the rate on weekly loans is ultimately the bottom limit of the range of discount rates. Since, however, it is known that the authorities are not yet prepared to approve of the London market rate dipping appreciably below $2\frac{1}{4}$ per cent., the maintenance of the weekly loan rate at 2 per cent., as an alternative to the "pegging" of the rate by other means, has no great disadvantages.

	Apr. 23, 1931.	Apr. 30, 1931.	May 7, 1931.	May 14, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	2½%	3 (May 14, '31)
Banks' Deposit Rate.....	1	1	1	1	1½ (May 1, '30)
Discount of Call	1	1	1	1	1½ (May 1, '30)
Houses' Notice ...	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

As regards future movements of discount rates, everything depends upon the course of the foreign exchanges. As we suggest elsewhere, the dollar need not be regarded as a particular danger point, but it would be shortsighted to overlook the fact that French short money in London, augmented by sums placed here since last winter, amounts to a considerable total. Even though France now has a large adverse visible trade balance, items such as reparations receipts and the expenditure of tourists (and the tourist season is now beginning) probably go far to neutralise her excess of visible imports. Moreover, investment abroad of French long-term capital is still not developed enough to serve as a make-weight to any repatriation of French short-money caused by the London rate falling below the point at which it would become unprofitable to leave short balances on this side of the Channel. The Paris rate will require to be closely watched during the coming weeks.

The impression left by the April average of the nine English clearing banks is very mixed. The relapse in acceptances practically to their January level is very disappointing after the recovery of the intervening months, and from the banks' standpoint the further decline in their deposits is disconcerting. The reduction of £3.3 millions in cash reflects in part the currency withdrawals by the public over the Easter holidays and in part the contraction in bankers' deposits at the Bank of England

at the end of April, due to the accumulation of funds at that time by the Treasury.

	April, 1930.	January, 1931.	February, 1931.	March, 1931.	April, 1931.
Capital and reserves.....	130.5	132.1	132.1	132.1	132.1

Investments	251.7	306.9	319.3	320.9	318.2
Discounts	207.5	327.7	299.0	258.5	209.1
Loans and advances	968.0	907.4	908.1	919.4	923.8
Over for accept., premises, &c.	198.1	156.1	162.8	163.0	157.0
Total assets	2,001.7	2,083.1	2,035.7	1,979.8	1,945.6

The continued expansion in advances is somewhat surprising. There has been no improvement in trade, and the increased activity in gilt-edged securities would hardly account for it. It may be the aftermath of the heavy income-tax payments of previous months. The big fall in the banks' bill portfolio confirms the suggestion made on a subsequent page that a large proportion of the Treasury bills now maturing are held in special quarters.

The reduction in the New York Reserve Bank's rediscount rate from 2 to $1\frac{1}{2}$ per cent. has been followed by equivalent reductions in the rediscount rates of the Cleveland, Chicago, St. Louis and Dallas Reserve Banks. Their rates now range from $2\frac{1}{4}$ to 3 per cent. Allowing for the fact that rates always rule higher in the interior than in New York, money is now on a very cheap basis. Following the New York reduction, prime commercial paper was quoted at $2\frac{1}{4}$ per cent., while call money early in the week eased from $1\frac{1}{2}$ to 1 per cent., though on Wednesday it rose again to $1\frac{1}{2}$ per cent. A further reduction in the Reserve Banks' buying rate for bankers' acceptances were announced on Wednesday. This brings the rate down to 1 per cent. up to 15 days and $1\frac{1}{4}$ per cent. from 16 to 120 days. The move is regarded as being aimed at furthering a general "easy-money" policy, following the refusal of the New York Clearing House Committee to cut interest payments on deposits.

The Bank rate reduction unsettled the foreign exchange market, and caused the chief rates to move against sterling. New York fell from 4.86½ to 4.86. Montreal gained ½ at 4.86½. Paris went from 124.45 to 124.24, after touching 124.20. Brussels improved from 34.98½ to 34.95. Milan was a little better at 92.89. Madrid again fluctuated widely with the political disturbances and went from 46.90 to 48.80, after being more than once over 49.00. Amsterdam improved sharply from 12.11½ to 12.10½, and Berlin gained a point at 20.41½. Switzerland moved against us to 25.23½. The South American currencies were again weak and variable, Rio losing ½d. at 3½d., and Monte Video ½d. at 30½d. Buenos Aires, on the other hand, improved by ½d. to 35½d. In the Far East the rupee was firm around 1s. 5½d., as was the yen at 2s. 0½d. Batavia was better at 12.11. In the forward market one month's dollars were unchanged at ½ cent premium, whilst three months' were rather firmer at ¾ cent premium. Forward Paris declined to 11 and 30 centimes premium, against 16 and 39 centimes premium last week. One month's Brussels was ½ centime weaker at 2 centimes premium, three months' remaining unchanged at 5½ centimes premium. Milan was at 6 and 22 centesimi discount for the two periods. Madrid weakened from 3 centimos premium to 1 for one month and from 14 centimos premium to 10 centimos premium for three. Amsterdam was steady at ½ cent premium for one month and 1½ cents premium for three. Berlin was not much changed at 1 and 2½ pfennigs discount, as was Switzerland at 2½ and 4½ centimes premium. The silver market was dull, prices declining by ½d. to 13½d. for cash and by ½d. to 13½d. for forward. The China silver exchanges were not much affected, Hong Kong remaining unaltered at 1s. 0d., whilst Shanghai lost ½d. at 1s. 3½d.

WISDOM AT WASHINGTON.

TIME and place conspired to ensure that the maximum of world-wide notice should be accorded to the biennial meeting of the International Chamber of Commerce which took place at Washington last week. For, apart from the obvious fact that the height of a raging epidemic is the psychological moment for the public deliberations of eminent doctors, it was also very much to the good that at such a moment the American public should be put into closer touch with the views of European industrialists and should hear plain speaking on the causes of the great economic depression both from them and from their American counterparts. It happens, too, as it does not always happen at such Conferences, that the pronouncements of many of the leading delegates were well worthy of so important an occasion; and the reports of the week's proceedings provide abundant food for thought to the rulers and business men both of the United States and of Europe, not because any new diagnoses or remedies for the current malady were forthcoming, but because the general effect of the discussions was to leave three great problems standing out clearly as transcending all others—namely, Disarmament, Tariffs, and International Debts.

The first of the three was chosen by President Hoover as the theme for his opening address to the delegates, in which, dismissing all other factors as merely contributory, he declared that "reduction of the gigantic waste of competition in military establishments is, in the ultimate, of an importance transcendent over all other forms of economic effort." Again, in referring to next year's Disarmament Conference, the President said: "Of all the proposals for the economic rehabilitation of the world I know of none which compares in necessity or importance with the successful result of that conference." Every European will agree that the failure of that Conference, spelling, as it would, a continuance of armament competition, leading in the natural course to the next great clash of nations, would be a world calamity of the first order. But it is as well that other notable speakers filled in the gaps in Mr. Hoover's address by emphasising what to every student of European affairs is a truism, that the disarmament problem is not merely one of reducing the physical strength of armies, navies and air forces, but also one of co-operating to relieve the present economic, political and psychological tension, from which springs the atmosphere of insecurity and apprehension, that holds back the Governments from embarking upon the reductions in military preparation which the state of their Budgets so powerfully and so universally demands. In the economic sphere, the nations are at war, and in that war, we would remind Mr. Hoover, the United States is a protagonist, whose power to bring about an armistice is unique, arising as it does from her dual position as a high tariff country and as the ultimate creditor at the end of a chain of international war debts, which both as a political irritant and as a cause of monetary disequilibrium plays no small part in prolonging both the psychology and the actuality of economic depression.

In view of these paramount considerations we may be pardoned for finding Mr. Hoover's exclusive insistence on physical disarmament unsatisfying, and for regretting the impression conveyed, whether rightly or wrongly, by the brief cabled reports of the speech of Mr. Mellon, Secretary of the Treasury at Washington, that the American Government are not willing to avail themselves of the elastic provisions of the tariff—a method of initiating a general economic détente which lies ready to their hand. Indeed, with the prospect before them of a very large deficit in the current Budget, American official utterances show no reflection of the growing feeling in America that it might be in her interest to take the initiative in measures designed to revive the commerce of the world. More comfort is to be derived from the terms of the final resolution adopted unanimously by all the delegations, including the American, and in the plain-spoken economic common sense that came from the lips of American

business leaders. The resolution, while placing the necessity for peace and physical disarmament in the foreground, recognised that, on certain principles—defined by previous resolutions of the International Chamber—impartial re-examination of the effects of international war debts on international trade was permissible, if warranted by changed economic conditions; condemned unfair tariff discrimination; and urged immediate utilisation of the "machinery provided by some countries for the adjustment of tariff inequalities." More than that could not, perhaps, be expected from a resolution framed to secure general unanimity, and, in particular, the signature of the United States delegation; and that a deal of economic wisdom may be read between the lines is suggested by such American speeches as those of Mr. Melvin Traylor, President of the First National Bank of Chicago, who, according to the Washington correspondent of the *Times*, uttered a "scathing denunciation" of the business and financial policies of his own country and declared:—"We have not failed because of ignorance of economic theories, but because of our utter disregard and defiance of all economic laws." This indictment followed closely upon addresses given at the Academy of Political Science, in one of which Mr. Russell Leffingwell, the well-known American banker, called for "an effective demand on the Governments of all nations, including our own, to stop this war of tariffs and subsidies with which they are strangling the world's trade," while in another Mr. John H. Fahey claimed "that international trade is unlikely to revive on the scale we have a right to expect unless present excessive tariffs are modified," and urged that in such modification the United States could and should lead the way.

Meanwhile, European delegates to Washington have by no means wasted their opportunities. Herr Bergmann, the German spokesman, stressed the importance of reviewing the ramifications of the effect of reparation payments on international commerce, and Signor Pirelli, the Italian industrialist, talked of the "persistence and progressive growth" of the "European deficit" and sought a way out that would be to the mutual benefit of Europe and America. Nor were our own British delegates lacking in constructive contribution. In a striking appeal for greater economic freedom, Sir Alan Anderson asked:—"Must we continue the practices which limit sales? Must we play beggar-my-neighbour until we prove our folly by bringing international commerce to a standstill? Good credit and free buying will soon restore us, but, until we are once more prepared to buy from each other, the more we struggle to produce and refuse to buy, the less we shall sell." Sir Alan was supported by Dr. W. H. Coates, director of Imperial Chemical Industries, who exhorted the high tariff countries to "black out the red tariff lights before which trade traffic now halts in hopeless immobility," while in a thoughtful paper surveying the world depression Sir Arthur Salter deftly unravelled the threads of debts, tariffs, fear psychology, gold maldistribution and parochial economics which run through the tangled European skein.

Once again the captains of industry of every country have met in conclave and pointed out to the Governments and the peoples the only road that leads to economic salvation. They have heard once more reiterated, emphasised, underlined, at a moment when all must have learnt much in the hard school of adversity, the immutable truth of economic law, which, briefly stated, is that, in proportion as the free flow of commerce is blocked, the production of the nations will be restricted and the recovery of their prosperity effectively impeded, and the peace of the world jeopardised by the strain of economic warfare. Has the great depression and the world-wide proof of the failure of economic warfare humbled their narrower pride, so that at long last they will listen? Or will they still harden their hearts and "evermore come out by the same door as in they went"?

CUSTOMS UNION AND STATESMANSHIP.

SPEECHES on the German-Austrian Customs Union project have now been delivered by three leading European statesmen. Monsieur Benesh spoke on the subject in the chamber at Prague on April 23rd; Monsieur Briand on the night of Friday, May 8th, at the climax of a debate, which had continued over several days, in the French Chamber; and next day, Saturday, May 9th, Dr. Curtius replied to Monsieur Briand at the annual dinner of the Foreign Press Association in Berlin. Though we commented on Dr. Benesh's speech at the time of its delivery, the full text was not then in our hands. A comparison of the Czechoslovak Foreign Minister's observations on the Austro-German plan with those of Dr. Benesh's French and German colleagues shows off Dr. Benesh's statesmanship to advantage, and, at the same time, throws light on the nature of the chief problem with which the Council of the League, and the British delegates on the Council, have to grapple this week at Geneva.

The debate in the French Chamber showed that, for Monsieur Briand and his interpellators, the issue was largely personal. Was the German-Austrian *démarche* to stultify and discredit, in the eyes of the French people, the policy of reconciliation which Monsieur Briand has been pursuing for the last half-dozen years? Monsieur Briand was concerned to defend his own policy while denouncing the idea of the Anschluss. His success was registered in the voting on the resolution—a skilfully framed document, which the Chamber eventually adopted, in each of its three parts, by large majorities, in the second part unanimously. Monsieur Briand's own estimate of his personal triumph in this crisis was revealed in his eleventh-hour decision, after long hesitations, to stand for the Presidency of the Republic. Behind these political manoeuvres in Paris we can discern a deep anxiety in France lest, in the international politics of Europe, Germany may regain the initiative and may use it to undermine, in one point after another, the *status quo*, to which the French people is still inclined to cling blindly and fanatically.

While the French are thinking in these terms of the initiative and the *status quo*, Dr. Curtius's speech revealed once again that the Germans are thinking primarily—as “under-dog” is apt to think—in terms of prestige. Though Dr. Curtius expressly deprecated this attitude of mind, he displayed it himself when, in the crucial passage of his speech, he laid it down that the legal question must not be complicated by economic considerations and political wishes. In fact, for Germany, the ultimate issue raised by the proposal, and by the opposition which it has aroused, is the question whether Germany has really been readmitted to fellowship in the comity of nations on a footing of equality with her neighbours. Germany is willing to submit to an international tribunal the question whether the plan is in consonance with a treaty which she has signed, because any other Great Power might be required to submit to the same kind of legal investigation. But supposing the legal issue is decided in Germany's favour. The Germans are waiting to see whether, in that event, other nations will still interpose their veto, not because the Austro-German plan is contrary to the treaties, but because Germany is Germany and Austria is Austria: because they are defeated countries to whom their opponents in the late war can still dictate in virtue of a superiority of military force. On this issue, Dr. Curtius must perforce take the German national view, as Monsieur Briand must perforce take the French national view on the Anschluss, and this for the same reason in both cases: no statesman, in either country, who failed to pay homage to national opinion on such points could hope to remain in power.

Thus Monsieur Briand's and Dr. Curtius's speeches both reflect national political exigencies rather than international economic realities. It is only when we turn back to Monsieur Benesh's speech of April 23rd that we find those realities discussed frankly and constructively; and this reaction on the part of the Czechoslovak Minister for Foreign Affairs is very much to his credit, for the outcome of the present crisis matters even more to Czechoslovakia than to France or to Germany. If it is a question of

status quo, the very existence of Czechoslovakia is bound up with the sacrosanctity of the peace treaties, whereas France, at the worst, has only Alsace-Lorraine at stake—though it seems clear that Germany has renounced Alsace-Lorraine quite genuinely and not merely in external form. Again, if it is a question of the initiative, Czechoslovakia is exposed to the danger of losing hers as a consequence of this very first German move, whereas France would have many more counter-moves at her disposition, even if Germany were to win this first move in the new game of European diplomacy which seems to be beginning now. Finally, if it is a question of prestige, Czechoslovakia, having at last regained her national sovereign independence in the peace settlement, sees herself once again in danger of being subordinated, in fact if not in name, to the hegemony of the German-speaking countries by which her territory is encompassed on three flanks. Thus, in the circumstances, the Czechs would have more excuse than either the French or the Germans for violence and hysteria, whereas, in fact, Monsieur Benesh's speech is the most sober, reasonable and well-balanced contribution to the debate on the Austro-German project which any European statesman has yet made.

This is not to say that Monsieur Benesh's outlook is not coloured by his position as Foreign Minister of a “successor-state” of the Hapsburg Monarchy. His speech has, of course, to be discounted from this point of view. But Czechoslovakia is something else besides a “successor-state.” She is a European country, situated in the heart of the continent, astride the border between the industrial West and the agricultural East, and, therefore, sensitive to the peculiar economic difficulties of both parts of Europe under stress of the present world-wide economic crisis. These features in Czechoslovakia's position are reflected in Monsieur Benesh's outlook, and it is this element in his speech that lends it authority.

Whether or not we agree with the answers that Monsieur Benesh gives to the questions that he raises, we shall agree that he has raised those questions which are really fundamental. He takes it for granted that some kind of closer economic union in Europe is indispensable for the general welfare of the Continent. He embraces this view not, like Monsieur Briand, with the perfunctoriness of a statesman who feels that his own country is quite comfortable as she is, though perhaps she ought to make some gesture to satisfy her friends, but with the conviction of a statesman who feels that, in the long run, life will only be possible for his own country within the larger framework of European solidarity. In this matter, Monsieur Benesh's sincerity is hardly open to doubt. And, with this mental background, he asks two questions: First, would the German-Austrian project, if realised, help or hinder the cause of European economic solidarity? Second, supposing that the project is opposed by Czechoslovakia and her friends, not on merely legal grounds, but on this fundamental economic ground of European welfare, what is the alternative line of international action, leading towards the goal of European solidarity, which the Austro-German scheme would jeopardise?

Monsieur Benesh's answer to the first question is that the legal, political and economic aspects of the scheme are inseparable; that the scheme is the first step towards the Anschluss; and that the ultimate effect would be to divide Europe once again into two closed and mutually hostile camps. “We are convinced,” he says, “that we shall, in any case, arrive at a United Europe; but the path followed by the Customs Union between Germany and Austria, and the new political and economic blocs formed beside it, and against it, would mean the achievement of the union of Europe, perhaps only after new conflicts.” He declares, however, with emphasis, that it is not sufficient to take up a merely negative attitude towards the Austro-German scheme. He looks forward to establishing “a state of affairs for the whole of Europe more or less like what the German scheme is designed to produce merely for Central Europe.” He expresses the opinion that “there will be no peace in Europe without an understanding between Berlin and Paris.” And he propounds definite international policies for dealing with both the agricultural and the industrial crises from which

Europe is suffering (Czechoslovakia being a country which is affected by both crises alike). In propounding industrial remedies, he does not hesitate to prophesy that the industrial life of the continent will have to be regulated by international agreements between the Governments to a far greater extent than most Europeans at present contemplate. “I am convinced,” he says, “that the development of international economic life is moving along this path, and if Europe does not wish to experience a long period of very painful ills and disturbances, it must make an attempt to put into effect this solution of the international economic crisis.” Nor does Monsieur Benesh hesitate to criticise the current commercial policy of his own country in this light.

Altogether, Monsieur Benesh's speech is an important event. Mr Henderson's action in causing the legal aspect of the Austro-German plan to be referred to the Council of the League, with an eventual reference to the Permanent Court, was a wise first step. But, whichever way the legal decision goes, that cannot either settle or eliminate the economic issue that lies beneath. This will have to be taken up, and Monsieur Benesh's speech opens up certain possibilities which British statesmanship might be well advised to explore in the immediate future.

BANK RATE.

ON Thursday of this week Bank rate, which had remained at 3 per cent. since May 1, 1930, was reduced to 2½ per cent., a figure at which it had not previously stood since October 7, 1909. The analogy between the course of Bank rate since the Wall Street crash in the autumn of 1929 and the history of the aftermaths of the slumps of 1907 and 1921 is not without interest. From the high point of 7 per cent., which it reached on November 7, 1907, Bank rate fell by quick stages to 2½ per cent. on May 28, 1908; that is to say, the complete gamut from high to low was run in less than six months. In the post-Armistice slump the first reduction from the peak of 7 per cent., established on April 15, 1920, was made on April 28, 1921, and the low point of 3 per cent. was not attained until July 13, 1922. Thus, the period of decline lasted for nearly two-and-a-quarter years. In the present phase of the financial cycle it has taken twenty months to achieve an aggregate reduction of 4 per cent. in Bank rate.

During the ten days before the Bank's decision events in the monetary world moved fast. The story began on May 6th with the decision of the New York Reserve Bank to make a further reduction in its buying rate for short-dated bankers' acceptances, bringing the rate to the record low level of 1-1½ per cent. The Boston and Philadelphia Reserve Banks followed suit by immediately reducing their rediscount rates by ½ per cent. to 2 and 3 per cent. respectively, and on May 7th the New York Reserve Bank lowered its own rediscount rate from 2 to 1½ per cent. Four more reserve banks, Cleveland, Chicago, St. Louis and Dallas, reduced their rates by ½ per cent. on the following day; and, outside New York, the general run of rediscount rates is now between 2 and 3 per cent.

In London the response to New York's lead was rapid. On May 8th the three months' market discount rate was “unpegged” and at once fell from the agreed rate of 2½ to 2½ per cent., while the new Treasury bills issued that day were at an average rate of £2 5s. 11.07d., or very little over 2½ per cent. During the early part of this week, partly as a result of firmness of short money rates, the rate for three months' Bank bills was nominally maintained near 2½ per cent., but this quotation in practice was barely effective, and, on the eve of Bank rate reduction, the rate in competition was no better than 2½ per cent. Following the reduction, market rate was first called 2½ to 2 per cent. or less, but later, when it became known that the clearing banks had decided not to make any reduction in their existing rate of 2 per cent. for weekly loans to the money market, and that the Bank of England did not desire that market rate shall fall below a minimum of 2½ per cent. a quick reaction occurred, and at the close of business the market was endeavouring to make 2½ per cent. effective.

The immediate effect of a 2½ per cent. Bank rate on the foreign exchanges was negligible, partly owing to the fact that the Paris market was closed on Thursday, Ascension Day, and partly, it would appear, because the reduction was more generally anticipated abroad than in London, and had already been discounted to some extent in the foreign exchange market. Thus, the spot Paris rate had fallen from 124.45 francs on May 7th to 124.29 francs at the close on May 13th, while the dollar rate had similarly moved against us from 4.86½ to 4.86¼. It remains to be seen, however, what the ultimate effect of the reduction will be, and, though the improvement in sterling during the past four months and the strengthening in that period of the gold position of the Bank of England mean that it is less essential than it was to attract fresh foreign short money to London, any large-scale repatriation of the foreign funds which have been placed here since the New Year might have disagreeable repercussions.

So far as the dollar rate is concerned, little anxiety need probably be felt, since, on the basis of the rate obtainable on bankers' acceptances in New York to-day, and taking into account the premium on three months' dollars, there is no reason to suppose that a substantial proportion of the American short funds now in London would be withdrawn unless market rate in this centre fell appreciably below 1½ per cent. On the other hand, a similar calculation, though in this instance the basic data are less precise, leads, in the case of Paris, to less reassuring conclusions, and the possibility cannot be overlooked that were market rate in London to decline much below 2½ per cent. there might in present conditions be a considerable efflux of French short money, leading conceivably to a renewed loss of gold to France. In this connection, the consideration has to be borne in mind that in order to make provision for the War Loan dividend due on June 1st, the Treasury will have to make heavy issues of bills during the next few weeks, and a weekly issue of £45 millions is quite possible. Moreover, most of the Treasury bills maturing within the next few weeks are believed to be held in quarters where their proceeds will not normally become available to the market. Hence the prospective supply of bills is likely to be fully equal to all demands, and it is possible that the Bank of England authorities—their “hint” given—are relying on this factor to maintain market discount rate within ½ per cent. of Bank rate without the need of reimposing an actual “peg,” a course which from the market point of view has many objections.

In the following article we refer to some wider questions arising out of central banking policy in relation to the price level. No doubt the hope that the present reductions here and elsewhere would help to support the commodity markets and encourage an expansion of industrial enterprise was in the minds of the Bank directors. But we may perhaps draw the inference that a more immediate objective is to further a conversion operation by the Treasury. The monetary situation is exceptionally favourable for such schemes, and unless we take the defeatist view that the present depression will be indefinitely prolonged it would be well to seize an opportunity of relieving the taxpayer that may not occur again for several years. It is significant, as our Paris correspondent reports on a later page, that a French *Rente* conversion is believed in Paris to be imminent, and it may well be that the present Bank rate reduction has been made with an eye to assisting the British Treasury to follow suit at no distant date.

THE CAUSES OF THE CRISIS.

THE address of Dr. Sprague last Tuesday to the English Speaking Union was not a very encouraging statement, for he began by telling his audience that, as a result of his recent visit to America, he was quite unable to see a single gleam of light on the economic horizon. His speech, however, was of interest chiefly because of his analysis of the causes of the present crisis. His position as adviser to the Bank of England would, in any case, lend weight to his views, but he rather deliberately went out of his way to

state that, in diagnosing the causes of the crisis, he was expressing the views of the three chief central banks of the world. His analysis must, therefore, be regarded as a very authoritative pronouncement.

Dr. Sprague divided the various theses regarding the present crisis broadly into two classes. One attached chief importance to monetary causes and looked for the solution in an expansion of credit; the other attributed present difficulties to economic disequilibrium. Dr. Sprague did not deny that it might be possible to expand credit in present circumstances, and further added that there was sufficient agreement between the central banks to enable joint action to be taken if it were thought that this were really desirable. He went on to say, however, that the central bankers of the world supported the second thesis mentioned above. The prices of agricultural products had fallen too much relatively to those of manufactured products. This was due to an excessive production in relation to the demand for these agricultural goods. It took a very long time, however, to reduce production in proportion to the world's demand for this class of commodity. The reduced purchasing power of agricultural communities called for a diminished production of manufactured goods. This was achieved by a closing down of production and unemployment, but not by a reduction of price. On the contrary, high wages and agreements between manufacturers had maintained a comparative stability in manufactured prices. If equilibrium was to be restored, it was necessary to increase production of certain commodities for which there was an elastic demand.

For many such products there was an almost indefinite capacity to increase consumption provided prices were low enough. Dr. Sprague instanced houses, furniture, etc., but it was precisely the prices of such commodities or services that were being maintained. He, therefore, reached the conclusion that better conditions would most quickly be established by readjusting prices of manufactured goods to the new level of agricultural products and not by any attempt to raise agricultural products to the artificial level of manufactured goods. This adjustment might be achieved by dictatorial methods in some Continental countries, but Dr. Sprague evidently looked in the main to the free play of economic forces; and he concluded with a powerful plea that everything should be done to hasten such readjustment and perhaps even to some extent to guide the future production into those channels where an active demand would be likely to be experienced. To stimulate prosperity by an inflation of credit, which, in his view, would only have the effect of maintaining the prices which needed readjustment, would mean to delay the ultimate recovery of the world.

It is no doubt true that, as Dr. Sprague maintained, the contraction of production in agricultural output, and to some extent in raw materials and metals, is a slow and painful process; but before his thesis can be accepted as it stands, one or two obvious objections must be met. In the first place, it is usual for raw products to fluctuate violently in times of economic depression or boom, and it would surely be asking for the maximum of disturbance to attempt to adopt as the general price level the lowest point reached by raw products in times of unexampled slump. Further, an attempt to re-adjust on such a level would mean that the burden of fixed charges (including, in particular, in this country, the national debt) would become an enormous weight on the whole economic system. If all prices and wages are drastically reduced it is not reasonable to suppose that the public would endure such fixed charges without a proportionate scaling down. Seeing that many international charges are involved in this matter, it is clear that Dr. Sprague's solution would lead us into a very great number of serious difficulties. Moreover, the readjustment of wages on the scale suggested would clearly involve political repercussions of a very far-reaching character. In economic problems the simple theoretical solutions have often in practice to give way to practical considerations, and it is surely clear that all over the world the troubles of the present time will be very much mitigated if the price level is restored to something like that which has prevailed in recent years.

This view was voiced on Tuesday evening by Lord D'Abernon, whose address to the Royal Empire Society

developed a diametrically opposite thesis to that of Dr. Sprague. Lord D'Abernon rebutted the "over-production" theory by quoting figures for 1928, 1929 and 1930 for wheat, copper, silver and cotton (which showed a very modest increase in world production in those years), and the theory of disequilibrium between prices of manufactures and raw products by the argument that cheap raw materials are good for industrialists. The former of these arguments needs, however, to be dealt with over a longer period than the crisis years themselves, and account must be taken of the movement of stocks, which in all the cases mentioned are of the greatest importance. The second argument ignores the fact that a reduction of manufacturing costs is of little avail if one's customers are bankrupt. Nor was Lord D'Abernon altogether convincing in briefly dismissing as causes of the depression the heavy taxation involved in maintaining excessive armaments and the trade obstacles in regard to which the International Chamber of Commerce at Washington has been ventilating its opinion. But he was on much firmer ground in emphasising the importance of stability in the price level and the disruptive effect on the whole economic system of violent general changes. Events have shown conclusively that "in the presence of a violent and continuous slump, even the most solvent nations may find themselves in difficulties." Lord D'Abernon's plea for stability, moreover, is not incompatible with the thesis of Dr. Sprague that considerable adjustments are needed between the level of manufacturing and agricultural prices, and that for various reasons the world has not been producing all commodities in the right proportion. But, so far as this is the case, what is required is that there should be a change in *relative* prices—not that the general level should fall. Such a movement is particularly harmful when—as in the present case—it is very precipitate and is carried to exaggerated lengths by the very ruin and bankruptcy which it carries in its train.

Lord D'Abernon, who did not attempt to examine by what means stability can be attained, admitted that "it would be an exaggeration to say that the crisis is one of notation only." The truth is obviously to be found somewhere between those who attribute the whole trouble to monetary policy and those who consider that monetary policy has nothing to do with the matter. We should be sorry to think that central bank opinion adhered to the latter view in its extreme form, and if practice is the best proof of principles, the recent action of leading central banks culminating in the lowering of Bank rate this week by the Bank of England, shows that so far as in them lies, the central bankers are desirous of encouraging trade revival by persisting in, and pressing to the limit, the policy of cheap money.

THE WHEAT CONFERENCE.

THE conference of wheat-exporting countries, to be held at Canada House on May 18th, has for its objects the regulation of wheat exports for 1931-32 and the stabilisation of wheat prices. These are its immediate and concrete aims; and in a period of catastrophic fall in prices the importance of such an attempt cannot be exaggerated. But the convening of the conference has a greater importance as demonstrating the desire of producing countries to replace unfettered competition by the method of conference and agreement. The fact that the chief grain-exporting countries are coming together to discuss their trade problems is a matter of great significance; for if it is attended by a fair measure of success, it may exercise a great influence on future methods of world-marketing. But whether it will prove possible to introduce any element of international control in a commodity of such world-wide distribution remains to be seen.

The forthcoming conference is an outcome of that convened recently at Rome by the International Institute of Agriculture. The Rome conference, attended by delegates from forty-eight countries, represented all the wheat interests concerned, grain-importing as well as grain-exporting countries. But though it led to useful discussions and some elucidation of the character of the crisis, it

failed to yield any practical results, because of the divergence of interests between the two classes of representatives; for not unnaturally importing countries refused to abandon their policy of tariffs and bounties and agree to a reduction in their home production. The Canadian delegates, therefore, recognised that, at least in the immediate future, the problem of marketing wheat could be solved only by a conference strictly limited to the representatives of the chief grain-exporting countries. Hence, the conference now convened will endeavour to reach an accord simply between exporters.

The task which the conference is set is indeed formidable. Even the first and preliminary problem, that of obtaining constant and accurate knowledge of the import demands and export supplies of the wheat market, is likely to present very considerable difficulties. This is due not to the unreliability of international statistics, but to the fact that the very basis of calculation is insecure, and that uncertainty surrounds practically every factor in an estimate either of demand or of supply. Therefore, though the importance of arriving at an approximately definite view of the available reserves and capacity of the market is obvious enough, it is bound to remain more or less an academic question. The practical and crucial task of the conference will be the business of assigning to each country a definite share of the market. The problem bristles with difficulties. To allot any country a share will be no easy task, and the small countries will probably be as hard to satisfy as the big exporters. But probably the most difficult business of the conference will be to establish some agreement with the U.S.S.R. Indeed, it may be asserted that the success or failure of the conference will depend very largely upon the attitude taken up by the Russian delegates. It would be interesting, therefore, to know in what mood and with what expectations Russia is participating in the conference.

Russia's trump cards in any negotiations about grain exports are, first, her freedom from that dead-weight of huge accumulations which is proving so heavy a burden to Canada and the United States; and, secondly, her confidence in her ability greatly to increase her production of cheap wheat, raised on land which pays no rent, by means of large-scale mechanised cultivation. Whether this position of tactical strength will make Russia irreconcilable, or whether the disadvantages which she will suffer from renouncing her freedom in the world market can be offset by the advantages she will gain by entering into an international agreement, time alone will show. The attitude adopted by the Soviet delegates at Rome certainly suggests that they may be rather hard bargainers. There they insisted that Russia claimed as a right her old pre-war position in the wheat market. What such a claim implied was left vague at Rome; it will be the business of the London conference to resolve and define it.

In pre-war times Russia's position in the grain market was a predominant one. She was the leading shipper of wheat, and the price at which Russian wheat was selling was one of the main factors in fixing world prices. That Russia could again reach a position of predominance is not unlikely, though this would involve not only an enormous increase of production in Russia, but a corresponding contraction of production in other grain-exporting countries. But if Russia regains her position, she will secure it not as a concession to her own notion of fairness, but as a result of grim economic warfare. Russia may claim the "right" to export now as much wheat as she exported in pre-war times; but her right to do this is obviously qualified by similar rights possessed by other wheat-growing countries.

Should the Soviet delegates reaffirm and press this alleged right, they would, of course, be acting in strict accordance with the revolutionary tradition, which favours declaratory diplomacy. But this would not necessarily hamper the conference greatly, since it is concerned not with future developments in general, but merely with the strictly practical business of marketing crops for the year 1931-32. The assignment of the U.S.S.R.'s share in this season's market should present no unsurmountable difficulties, since it will obviously have to be based not on Russia's pre-war, but on her last year's receipts. parison of various estimates suggests that those exports amounted to 90 million bushels, or a little over half of what Russia exported in pre-war times. It is quite conceivable that Russia will claim that her quota of this year's market shall allow for an increase of 10 to 12 per cent. on her last year's exports, on the ground that her wheat crops this year are expected to be 10 to 12 per cent. higher than last year; but this, after all, is a minor question and should easily admit of a compromise.

The assigning of quotas for the other big wheat-exporting countries, the United States, Canada, the Argentine and Australia, is not complicated in the same way by a rapidly changing situation. It nevertheless bristles with difficulties; and even if rival claims can be reconciled, what is it desired to attain by a policy of rationing exports? If it were certain that we are suffering only from a temporary glut, the problem would be comparatively easy. But the conference has to face the outstanding fact that all the measures that have so far been taken have tended to make the condition of disequilibrium permanent by creating an abnormal surplus which is still hanging over the market and has removed all confidence in recovery. Rationing of export, unaccompanied by reduced acreage, merely tends to enlarge the surplus, while persistence in the policy of maintaining prices and stimulating production in all importing countries lessens the international demand.

Sir Daniel Hall, in his concise and wise survey of the situation on Friday, expressed the opinion that consumption as a whole has not been appreciably reduced, and though bread-eaters do not eat much more bread merely because it falls in price, better trade and less unemployment would tend to increase demand which in any case is steadily expanding with increasing population and a rising standard of living in backward countries. Apart, therefore, from seasonal variations, he regards it as "a dangerous assumption that too much wheat is being grown." But the surplus remains, the amount held in the U.S.A. alone being no less than two-fifths of the annual requirements of the importing countries of Europe. With the lesson of coffee, rubber and a dozen other products whose marketing has been "controlled" before their eyes, the delegates to the present conference will need to walk with very great wisdom if they are to relieve the market from its abnormal depression. That this end is devoutly to be wished is, however, common ground; for all the industrial nations are suffering from the reduced purchasing power of primary producers all over the world. The proceedings of the conference will be followed in all countries with the very closest attention.

COAL TRADE DEVELOPMENTS.

(BY A CORRESPONDENT.)

IMPORTANT developments are expected in the near future concerning the marketing activities of the British coal industry. A meeting has been held in Sheffield this week for the purpose of reviving the Central Collieries Commercial Association in its application to the whole Midland area under the district scheme of the Mines Act. In more than one respect most of the coal owners in the area, which

includes Yorkshire, Nottinghamshire and Derbyshire, are of opinion that the provisions of the Coal Mines' Act do not go far enough if the industry is to get the full benefit of regulation of output. There is a majority already in favour of the re-imposition of the voluntary levy to assist the export trade. It is believed that the coal owners will lose more than the threepence a ton levy if the export trade declines to its former level. Either the quantity of coal formerly exported will be thrown on to the inland market or the restriction of output must be applied with greater severity to the economic disadvantage of the working of the collieries.

Although the volume of exports from the Humber has not diminished greatly owing to the continuance of old contracts, the volume of new business reveals a rather alarming prospect for the future. The levy was continued up to September 30th, and the subsidy on exports up to December 31st. Contracts entered into with the benefit of the subsidy have mostly still some time to run, but the outlook when they expire is far from hopeful. Before the establishment of the Central Collieries Commercial Association in 1928, the export from the Humber in the previous twelve months totalled 2,566,733 tons. Two years later they had risen to 7,018,712. With the cessation of the subsidy there is certain to be a big fall; and this week there comes also the report of a Yorkshire exporting firm which has placed a large order for Polish coal for its Belgian market.

Two considerations which influence Midland coal owners in favour of the resuscitation of the Association and the levy are the continuity which the levy would enable them to preserve in foreign markets, and the prospect of an increased quota if the volume of exports increased. They attach great importance to the first of these factors, because, if foreign buyers are compelled every now and then to buy Continental coal, they are likely permanently to transfer their custom. The levy would also enable Midland owners to adjust their costs to the level of the other exporting districts, particularly the North-East Coast, where the rail charges are shillings a ton cheaper. The question of a levy is receiving attention also in other parts of the country, and a proposal may be put forward in the near future for a national levy. This would present, however, quite a different problem to that of a Midland subsidy. In that area the bulk of the coal for the home market is raised, whereas in some districts it is very largely for export.

A majority for the resuscitation of the Association is assured, though whether there is a sufficient majority to take immediate action is doubtful. A recalcitrant minority may attempt to hold up the scheme. The promoters, however, believe that they will be ultimately successful; and they argue that, if the Association were to function once more, it would provide the effective machinery for implementing an agreement as to selling prices with the coal Merchants' National Federation. Discussions with the Federation have been going on for a considerable time, and a draft agreement has been prepared. Apart from the Midland area, Lancashire and Cheshire are taking a keen interest in this subject, and South Wales coal owners also are turning their attention to it. It is proposed to set up local committees representative of coal owners, merchants and the co-operative societies to fix prices for given areas, or zones. If the remaining difficulties can be overcome, it is believed that the revenue of the industry can be substantially increased.

To overcome the difficulties of the co-operative societies, a proposal has been put forward that the coal owners should enter into separate agreements with the Coal Merchants' National Federation and the Co-operative Wholesale Society representing the co-operative societies. The question of dividend will be difficult of adjustment, because, however it is manipulated, any profit will eventually find its way into the pockets of the members. Until such time as there is an amendment of the Act to allow district councils to enter into agreements with the Federation and the C.W.S., the work must be done by some voluntary body. For this reason those in the Midland area who have been concerned with the discussions with the Federation desire to see the Central Collieries Commercial Association working once again.

THE PRINCE SPEAKS OUT.

THE Prince of Wales did not go to South America for his health. Nor did he go for pleasure or amusement. He went there to help British industry not merely by opening the Buenos Aires Exhibition, but by studying for himself the trade conditions and the trade opportunities of the sub-continent, and he has lost no time in sharing with British industrialists the knowledge gained and the conclusions drawn from an arduous and exacting tour. At Birmingham on Monday, and at Manchester on Tuesday, His Royal Highness addressed big and representative audiences of business men, and gave them not the soft soap of useless flattery, but a penetrating analysis of their shortcomings and practical advice on the measures by which lost markets might be regained. This very delicate task he performed with forcefulness and tact.

Why are British exports losing ground in South America? And how can the ground be recaptured? The Prince's answers may be summed up as follows: Our manufacturers have a tendency to adhere too closely to pre-war types of goods, and to ignore changes in taste and fashion in this decade of rapid transition. We used to rely on quality and durability to sell our goods. To-day, people do not want things to last too long. "The taste of the world is becoming as fickle as women's fashions." We should, therefore, compete with foreign prices "by sacrificing some of the high finish and solidity we have been accustomed to give, without affecting mechanical efficiency and usefulness." Again, we need to study the needs of the market more closely, and abandon the idea that South Americans will buy what we think they ought to buy. They prefer bright things, and, therefore, we must give up sending sombre things. Principals of firms should make personal visits. Spanish should be used in catalogues and learnt for purposes of conversation. We are far behind in advertising, and must learn to "put things over" in the North American manner. The system of multiple agencies should be replaced by group representation. Special attention is desirable to new fields such as transport and aviation.

That, in the briefest and baldest terms, sums up the Prince's conclusions and advice, and he is unquestionably right in almost every point. Indeed, his entire thesis is borne out by the detailed investigations carried out last year by the British Economic Mission, of which Lord D'Abernon was the head. Lord D'Abernon and his colleagues found, for instance, that "we are reproached with inadaptability and with persistent adherence to what Great Britain thinks good, to the exclusion of what South America wants." Indeed, they detected shortcomings in almost every branch of British effort in the South American market, and the introduction to their report contained the following indictment:—

Our failure to capture even a small proportion of these trades (i.e., motor trade, agricultural machinery and roadmaking plant) may be attributed to inability to produce on a sufficiently large scale, insufficient finance, high prices, unsuitability to South American needs, defective salesmanship—including inadequate advertisement, inadequate service, inadequate showrooms, inadequate range of choice.

In a word, we are fighting a modern battle with antiquated pre-war weapons.

The Prince has dotted the i's and crossed the t's of the D'Abernon report, and in doing so has performed by no means the least of his outstanding services to the country. He, if anyone, can, to quote his own phrase, "put it across." Similar criticisms of the British exporter's nonchalant "take it or leave it" attitude have been made by many foreign critics and by many British observers. But the kindly strictures (to take one recent and most prominent example) of Professor Siegfried, though they touch us on the raw for the moment, are apt to be forgotten in a week. The reports of trade missions, however prominent the Press displays, are but a nine days' wonder. But when the most prominent and most popular and most widely-travelled of all the King's subjects lends to such strictures and recommendations the weight of his unrivalled prestige and wide experience, and takes the trouble to press home the lessons in person with his well-known energy and tact, we may at last hope to see concrete results. Happily, the

first-fruits are already visible, for, before the week was out, the Federation of British Industries announced the appointment of a special Argentine Committee to study the situation as revealed by His Royal Highness. To recover lost markets requires, as the Prince says, determination and patience, and in the struggle he is anxious, as ever, to "pull his weight." No man could have "pulled his weight" more effectively than he has done already, and let us hope that he will find his reward in seeing that he has infected the British exporter with his own determination, enthusiasm and practical common-sense.

Notes of the Week.

Parliament and India.—The debate on India in the House of Commons on Wednesday night was interesting less on account of any pronouncement made by the Government (Mr. Benn, in fact, had little to say other than that he was anxious that the Round Table Conference should be resumed as early as possible) than for the indication which it gave of the attitude of the Opposition parties. The continuation of peaceful picketing and the serious loss of Lancashire's trade under the modified boycott were naturally bound to bulk large in the minds of the Conservative and Liberal spokesmen. For the policy of "Churchillism" there was no evidence of any substantial support, and the great majority of the House clearly recognised that, if there is one thing which bayonets cannot achieve, it is the promotion of the sales of cotton goods. But, though the tone of representative speeches from all quarters of the House showed unmistakably that Parliament is in no mood to go back upon the principles laid down by the Round Table Conference last winter, it would be idle to pretend that there were no signs of growing uneasiness, occasioned partly by some of Mr. Gandhi's recent statements, partly by the continued failure to achieve any agreement between Mohammedans and Hindus, and partly by the feeling that, for all Mr. Benn's disclaimers, the negotiations as a whole were tending once more to drift. Sir Samuel Hoare probably voiced the feelings of most Conservatives when he emphasised the necessity of keeping in the forefront the safeguards laid down last January and of reminding India that, in the last resort, the great constitutional advances, upon which the Round Table Conference agreed, depended for their successful realisation on greater goodwill than had so far been displayed by Congress.

The French Presidential Election.—The Presidential Election by the French National Assembly at Versailles this Wednesday, May 13th, resulted in the defeat of Monsieur Briand by Monsieur Doumer on the first ballot by a margin of 41 votes. Thereupon, Monsieur Briand withdrew his candidature, and Monsieur Doumer—who, in the first ballot, had failed by seven votes to obtain the necessary absolute majority—obtained it on the second ballot by 504 votes to 334. The new President is a man little known outside France. He is a statesman of recognised integrity, with a distinguished though not very exciting political career, and he is reported to be moderate for a conservative—though there is no touch of moderation in such of his supporters as Monsieur Millerand and Monsieur Franklin-Bouillon. On the whole, Monsieur Doumer, in the Presidential chair, may be expected to take rather than give the cue, and to take it from political leaders who are more to the right than he is. Monsieur Doumer's personality, however, is not the most important feature in the election result. The significant questions are, first, was the defeat of Monsieur Briand a symbolic gesture of hostility in France towards "the Briand policy" of reconciliation in Europe? And, second, what are Monsieur Briand's political prospects now? We fear that the first of these two questions has to be answered in the affirmative. During the election campaign, Monsieur Briand was dubbed "the man of peace" and Monsieur Doumer "the man of war." The

appellations are crude, but they indicate the way in which French minds are working. This is the French *riposte* to the Austro-German plan for a Customs union; and in the light of what happened at Versailles on Wednesday, it would appear that the vote in the Chamber in Paris, last Saturday, in favour of the subtly-framed motion of confidence in the Government was a vote against the Austro-German plan and not a vote for Monsieur Briand. Monsieur Briand was ill served by his friends when they pressed him to stand for the Presidency at the eleventh hour. It is strange that such a master of parliamentary tactics should not have divined the temper of the National Assembly and acted on his own judgment. It is more pertinent to ask what is Monsieur Briand's political future? When he returns from presiding over the European Committee at Geneva, which is in session now, will his place on the stage of international politics know him no more? His position in France has, of course, always been precarious—since the day in January, 1922, when he was hunted from power by President Millerand and the Chamber in the middle of the International Conference of Cannes. The Conservatives, who have dominated the French Government without a break since the fall of Monsieur Herriot's Ministry half a dozen years ago, have barely tolerated Monsieur Briand even when they have found him indispensable. They have perpetually clipped his wings and pulled him back to French earth whenever he seemed to be meditating some flight of international statesmanship. The reaction of French opinion to the Austro-German plan, followed by Monsieur Briand's personal loss of prestige in consequence of his defeat on Wednesday, are likely to make the Conservatives believe that they can throw this opportunist-idealist overboard at last. If so, we are faced with the prospect of a Europe in which both Stresemann and Briand have disappeared from the international stage. This prospect is dark.

A Serious Turn in Spain.—The law and order which distinguished the first phase of the new Republican regime in Spain has unhappily been broken during the last few days. The fault does not lie with the Republican Government, which had refrained from political persecutions and had left the Monarchists completely free to work for their cause in the election campaign for the Constituent Assembly. Nor does the fault lie with Don Alfonso. As lately as May 5th the Monarchist newspaper, *A.B.C.*, of Madrid, published an interview with his late Majesty, in which he declared that, behind and beyond the Monarchial and Republican causes, there was the question of the national welfare of Spain, and in which he discountenanced the movement, among army officers, for refusing to give a promise of fidelity to the new order. When this admirable temper was prevalent on both sides, it seemed not too much to hope that the course of the Republican regime might continue to run smooth. The trouble began, on Sunday, in Madrid, in an "incident" in front of the headquarters of the Monarchist Association. There was a clash between the Monarchists and the crowd, which was followed by an attack upon the *A.B.C.* office. This incident has every appearance of having been unpremeditated, fortuitous, and the work of a few hot-bloods on either side. Unfortunately, it has unleashed the far stronger and more dangerous force of militant anti-clericalism. On Monday there were widespread attacks upon religious houses in Madrid, and seven of them were set on fire. Martial law was proclaimed in the capital that afternoon; but next day similar outrages occurred in the provinces, particularly, it would appear, in the South. The worst news came from Malaga, where there has been a systematic destruction and looting of churches and other religious buildings and a wholesale flight of ecclesiastics. Even the Primate of Spain, Cardinal Segura, has left Toledo and crossed the frontier into France. Moreover, though the Government have taken energetic steps to suppress these disorders, they have yielded to the insistence of revolutionary deputations which demanded punitive action against the Monarchist leaders. General Berenguer has been re-arrested, the military court which had acquitted him has been dismissed, a number of prominent Royalists, including several who had been

ministers under the Dictatorship, have been arrested likewise, the Monarchist *A.B.C.* and the Clerical *El Debate* have both been suspended from publication (though the order against the Clerical organ has since been revoked). Unhappily, these are well-known symptoms in the histories of revolutions that have gone wrong. It is to be hoped that the forces of order may succeed in recovering control while yet there is time. The popular animosity in Spain against the Roman Church is comprehensible. During the time immediately preceding the fall of the Monarchy the Church had given the appearance of being more royalist than the King himself. But it is a calamity that, after the victory of the Republican cause, old scores should be paid off in this barbaric way. It is not thus that the Republican cause can be served.

The Week in China.—There are two important pieces of news from China this week. First, it is announced that the suspended negotiations on extra-territoriality, between Mr C. T. Wang and Sir Miles Lampson, are to be resumed. In the second place, the People's Convention, which assembled in Nanking last week in accordance with a decision taken last autumn, has begun to debate, in committee, the draft for a provisional constitution for the Chinese Republic. From the reports at present to hand this draft appears to be a compromise between the school of political thought which wants to prolong "the period of tutelage" under the aegis of the Kuomintang, and the school which wants to replace the present system of one-party government by something more in the nature of parliamentary democracy at as early a date as possible. The democrats have succeeded in introducing into the draft a number of provisions designed to safeguard the liberty of the subject: e.g., liberty of conscience, speech and the Press; the right of association and privacy of communication; and the requirement that there must be due process of law before a citizen may be subjected to arrest, imprisonment, forcible entry and search of dwellings or confiscation of property. These provisions figured in an abortive Bill of Rights which was introduced not long ago—only to be defeated by the oligarchic element in the Kuomintang. The reappearance of these provisions in the new draft constitution represents a reverse for the oligarchs, as far as it goes. At the same time, it is surprising that the swing of pendulum has not gone much further, considering that the arch-oligarch, Hu Han-min, recently came into open conflict with President Chiang Kai-shek and suffered the penalty of being arrested and interned. It might have been expected that the President, having scored this political victory, would have attempted to follow it up by depriving the Kuomintang of its constitutional powers in the government of the Republic. The discomfiture of the Kuomintang would be much more likely to result in an untrammelled dictatorship by President Chiang Kai-shek and his Manchurian colleague, Marshal Chang Hsueh-liang, than in a democratic regime. Moreover, it is well known that neither the President nor the Marshal bear the party any love. It is, therefore, somewhat surprising to find that, in a draft constitution which has been introduced with the President's ostensible approval, the regime of tutelage by the Kuomintang Party is maintained. If this is to be it is to be hoped that there will also be some reform in the manner in which the party oligarchy is exercised—particularly in the local branches. Until such a reform is carried through, the internal political condition of China will not become stable, whatever the People's Convention at Nanking may say or do.

The Irish Free State Budget.—Our Dublin correspondent writes:—The only question that aroused any interest in the Free State Budget, which was introduced last week, was whether the Government had decided to accede to the farmers' demand for relief from local rates. Apart from this, the Budget was expected to reveal no changes of importance, as the existing taxes are yielding just sufficient revenue to meet current expenditure without either a deficit or a surplus. Ever since the British and Northern Ireland derating scheme came into operation there has

been incessant agitation in the Free State for equivalent relief, despite the difference between the conditions in the two countries. Nearly two years ago the Government appointed a very representative commission to advise on the probable effects on production and employment of additional relief to local taxation, and the report of this commission, which had been awaited with much interest, was published on the very eve of the Budget statement. The publication of the report disclosed that the members of the commission were divided in their opinions. The majority report, signed by ten members, including the chairman, recommended that no relief should be given on the grounds that the existing agricultural depression was in no sense attributable to the burden of local taxation, and that any remission from rates that might be granted would be illusory in view of the increased indirect taxation that would necessarily accompany it. Any additional expenditure on agriculture, it was suggested, should take the form of constructive assistance to the industry by means of education and credit facilities, and not the form of a "dole" in relief of rates. The minority report, signed by seven members, agreed with the majority in rejecting the claim for complete derating, but recommended that a sum of £1,000,000 should be devoted to increasing the grants from central funds for the relief of local taxation of agricultural land. In the event it appeared that the Government had taken a compromise course, by increasing the agricultural grant by the sum of £750,000. One half of the additional grant is to be allocated on the same basis as the existing grants, while the other half is to be allocated in proportion to population with the object of increasing the relief in densely populated or congested counties. The money required for this relief to local taxation is to be raised by a tax of fourpence per gallon on petrol and an additional tax of one-halfpenny per pound on sugar, which are estimated to yield £450,000 and £315,000 respectively. This concession, like all compromises, was received with scant gratitude by the Opposition parties. The general criticism of the Opposition was that the Budget was drawn up in the interests of the upper and middle classes, whose votes at the forthcoming election the Government is anxious to retain. Mr de Valera described it as "a party fund budget." The changes in taxation, apart from those already mentioned, are trivial. The tax on racecourse betting is to be repealed, principally with the object of demonstrating to the racing community that the Government is not to be blamed for the unsatisfactory condition of affairs on the Irish turf. The duty on sound films is raised from one penny to threepence per foot, and the entertainments tax repealed on entertainments in which artistes appear in person. The object of these changes is to discourage the disemployment of orchestras in picture houses. The stamp duty on the flotation of new companies is reduced from one pound to five shillings per cent. in the hope of attracting companies to register in the Free State. This concession is very popular in banking and commercial circles in Dublin. The revised estimates for 1931-32 are as follows:—

Revenue	£ 25,425,000
Expenditure	25,408,000
Surplus	17,000

The Budget is constructed on the sound and conservative lines which have always characterised the finances of the Free State.

Australian Bank Bill Rejected.—The chief item of Australian news this week is that, on Wednesday, the Senate at Canberra rejected the Commonwealth Government's Bank Act Amendment Bill by the overwhelming majority of 24 votes to 4. The Bill, it will be remembered, provided for the shipment to London of £5,000,000 of gold in order to meet the maturities of Commonwealth bills due for repayment on June 30th. No doubt the senators were led to this decision by the evidence given before them last week by Sir Robert Gibson, the chairman of the Commonwealth Bank, and summarised in these columns last week. This decision adds to the obscurity of the situation, and Mr Scullin's next step will be anxiously awaited. Provision still remains to be made for the

£5,000,000 of Treasury bills maturing June 20th, but it is understood that a loan of similar amount, repayable to the Westminster Bank at the same date, has been renewed for a short period, and that the Commonwealth bills held by Australian trading banks in London have been renewed until August 4th. Mr Scullin is obviously faced by a position of extreme difficulty, and the near future will show whether this rebuff from the Senate will make a parliamentary dissolution inevitable.

Overseas Trade in April.—The April trade returns are a shade better than those of the last few months. Even exports were slightly higher per working day than in March, and the percentage decreases in imports, exports and re-exports respectively as compared with April last year were all substantially lower than the corresponding percentages last month. While part of this is due to the fact that prices are not falling as fast as they were this time last year, some small part of this very modest gain appears to be genuine. The two tables below show the figures for April and for the year to date, compared with the corresponding periods of each of the last two years:—

	MONTH OF APRIL. (000's omitted).					
	Increase or Decrease as compared with					
	1931.	April, 1930.		April, 1929.		
Imports	£ 70,020	£ -13,895	% -19.5	£ -34,108	% -33.1	
British exports	32,483	-14,379	-30.7	-27,762	-46.1	
Re-exports	6,589	-1,255	-16.0	-3,788	-36.5	
Total exports	39,071	-15,634	-28.6	-31,550	-44.7	
Excess of imports over total exports	30,949	+ 1,739	+ 5.9	- 2,558	- 7.6	

	FIRST FOUR MONTHS. (000's omitted.)					
	Increase or Decrease as compared with first Four Months of					
	1931.	1930.		1929.		
Imports	£ 279,785	£ -87,596	% -31.3	£ -130,231	% -31.8	
British exports	135,829	-75,165	-35.6	-105,584	-43.7	
Re-exports	23,917	-6,408	-26.0	-16,557	-40.9	
Total exports	159,746	-83,573	-34.4	-122,141	-43.3	
Excess of imports over total exports	120,039	- 4,023	- 3.2	- 8,090	- 6.3	

Such improvement as there has been, however, has not been sufficient to produce any perceptible effect on the table of leading exports shown below, in which wool tops, largely owing to greatly increased purchases by Canada, are the only item to show an improvement on last year:—

	SOME LEADING EXPORTS.			
	First Four Months.			
	1929.	1930.	1931.	
Coal	17,882,080 tons	19,435,310	14,018,705	
Pig iron and ferro-alloys	189,436 tons	136,871	62,121	
Railway material	169,533 tons	161,232	83,571	
Total iron and steel	1,491,208 tons	1,251,842	669,052	
Textile machinery	42,493 tons	33,696	16,472	
Total machinery	184,707 tons	170,930	116,599	
Wool yarns	57,236,600 lbs.	49,589,700	42,235,700	
Cotton piece-goods	1,388,797,400 sq. yds.	1,111,095,700	573,603,500	
Woolen tops	111,145 central	95,441	98,904	
Woolen tissues	37,559,800 sq. yds.	30,571,700	20,055,900	
Woolen d. tissues	17,165,700 sq. yds.	13,395,400	10,752,000	
Linen, sec. goods	24,221,500 sq. yds.	24,323,500	21,961,300	
Boots and shoes	252,360 doz. pairs	324,080	219,913	
Leather	103,456 cwts.	92,913	53,092	
Paper and cardboard	1,511,069 cwts.	1,547,272	1,057,491	
Locomotives	11,599 tons	16,826	10,456	
Motor cars and chassis	14,165 number	11,357	8,378	

Among items not included in the above table the export of motor vessels continues to show an improvement on last year, though at the expense of a more than counterbalancing decline in exports of steam vessels, and exports of silk piece-goods are higher than in the first four months of 1930. Almost all categories of chemicals, on the other hand, are substantially lower. Imports of grain and meat were again higher than last year, but most of the important categories of raw materials, except wool, wet hides and

petroleum, show a decline, and most manufactured imports, with the exception of wool and artificial silk tissues, are lower. These returns definitely suggest that trade is at present growing no worse, but at this season of the year so negative a conclusion is hardly reassuring.

Coal-Mining Results in 1930.—A combination of the last four quarterly statistical summaries, issued by the Mines Department (that for the quarter ended December 31, 1930, was published this week) enables us to give, in the following table, comparative figures of the British coalmining industry's working in the four years since the coal stoppage of 1926:—

	1927.	1928.	1929.	1930.
Tons disposable, millions...	221.8	211.5	230.4	214.2
Wages.....	Mn. £ 117.8	Mn. £ 100.2	Mn. £ 105.7	Mn. £ 99.7
Stores and timber.....	20.2	17.0	18.0	17.2
"Other" costs	29.2	27.4	26.6	24.9
Total "net costs" *.....	172.9	150.0	156.0	147.1
Proceeds.....	167.5	140.2	160.2	150.8
Profit or loss	-5.4	-9.8	+4.2	+3.7

Miners employed† (000's) 961 881 894 875
Output per man-shift, cwts.† 20.60 21.29 21.69 21.61

* Including royalties, and after deducting proceeds of miners' coal. † Mean of quarterly averages.

It will be seen that a substantial part of the ground gained in 1929 was lost last year, with a decline of over 16 millions in disposable tonnage; and the consequent decline in profits, although smaller than might have been expected, is one that the industry, in its present condition, could ill afford. The next table shows the quarterly trend of results per ton disposable:—

Quarter. ended.	Per Ton Disposable.					Thousand Miners Employed	Output Per Shift
	Proceeds.	Costs.		Profit.	Loss.		
		Wages.	Total.				
Dec., 1928	s. d. 13 5½	s. d. 9 2½	s. d. 13 8½	s. d. 0 3	s. d. 0 3	851	Cwts. 21.80
Dec., 1929	14 3	9 2	13 3½	0 11½	0 11½	904	21.78
Mar., 1930	14 5½	9 1½	13 4	1 1½	...	911	21.94
June, 1930	13 10½	9 5	14 0½	...	0 2	886	21.32
Sept., 1930	13 9½	9 5½	13 11½	...	0 2½	853	21.34
Dec., 1930	14 1½	9 3	13 7½	0 6½	...	849	21.84

The rate of output per man-shift in the December quarter was not quite so satisfactory as in the first three months of the year, and the increase of 1½d. per ton in wage costs and of 1½d. in other costs was aggravated by a loss of 3½d. per ton on proceeds. The disposable tonnage in the October-December quarter amounted to 52.6 millions, as compared with 60 millions in the first quarter of the year and an average of 50.3 millions in the two summer quarters. The concluding table gives comparative results per ton disposable for the principal districts in the December quarter of 1929 and 1930:—

District.	Quarter ended December 31st.					
	1929.			1930.		
	Proceeds.	Net Costs.	Profit (+) or Loss (-).	Proceeds.	Net Costs.	Profit (+) or Loss (-).
Scotland	s. d. 13 1½	s. d. 12 4	s. d. + 0 9½	s. d. 13 1½	s. d. 12 10½	s. d. + 0 2½
Durham	13 2	12 5	+ 0 9	12 11½	12 7½	+ 0 3½
S. Wales	15 4½	15 4½	+ 0 11½	15 7½	16 1	+ 0 3½
Yorkshire	14 0	12 8½	+ 1 3½	13 7½	12 9½	+ 0 10½
N. Derby & Notts.	14 0	12 9½	+ 1 2½	13 8½	12 6½	+ 1 2½
Lancs. & N. Staffs.	17 0	16 4½	+ 0 7½	17 0½	16 5½	+ 0 7

The loss of 6d. per ton in the South Wales district is to some extent explained by the fact that in the case of this field the figures refer to the quarter ended January 31st last, and in that month a fortnight's strike occurred, with a consequent raising of costs per ton. In view, however, of the absence of any signs of immediate trade recovery, and bearing in mind the possibility of a crisis in the next few months on the question of hours, the prospects for the industry as a whole in 1931 are not encouraging.

Cotton Trade Reorganisation.—An important meeting of the Joint Committee of Cotton Trade Organisations was held in Manchester, on Friday, May 15th. About a month ago, writes our Manchester correspondent, the Committee issued a statement to the effect that, in their opinion, it was desirable that some scheme should be formulated for the purpose of facing the problem of redundant machinery, the proposal being that there should be a definite scrapping of machinery in order to reduce production to present demand. Since then, the constituent organisations have considered this question, and their views are now being submitted to the Joint Committee. It is well-known that considerable diversity of opinion exists throughout the industry as to the desirability of action of this kind. It is being urged in several directions that there is little likelihood of production costs being reduced without some alteration in producing methods in the spinning mills and weaving sheds. At the annual conference of the United Textile Factory Workers' Association, held at Blackpool this week, a resolution was passed which stated that rationalisation was only useful as a step to communal ownership, and that any attempt to improve the industry by displacement of labour, increasing working hours, the introduction of the two-shift system, or reduction of workmen's wages was doomed to failure. It is significant, however, that Mr Henry Boothman, the General Secretary of the Operative Spinners' Amalgamation, in criticising the resolution, complained that such a policy meant that the attitude of the operatives was "No" to every proposal. He said it was no use saying they would never agree to a two-shift system until they knew what it implied. When such a change was suggested they would have to examine it from every point of view, and it might result in less hours per day being worked. He held that to say "No" to every suggestion put forward to improve the cotton trade was foolishness and nonsense. There has been a good deal of interest in trade circles as to the attitude of the operatives towards the proposal of the Joint Committee that machinery in Lancashire should be scrapped.

Iron and Steel Production in April.—Iron and steel production showed a further slight recession in April according to the figures published this week by the National Federation of Iron and Steel Manufacturers. The number of blast furnaces in operation fell by three during the month to 78, and the production of pig iron declined from 357,100 tons in the previous month to 323,200 tons in April, a fall, taking into account the number of days in the month, of 6 per cent. Steel production fell from 500,100 tons to 397,400 tons, part of the decline, but not the whole of it, being due to the Easter holidays. The excess of imports over exports was reduced in April to 5,500 tons, since imports fell by 17,100 tons to 193,400 tons and exports rose by 17,600 tons to 187,900 tons. Although imports of iron and steel as a whole declined, imports of pig iron rose from 20,500 tons to 24,600 tons, mainly due to the increased imports from the Continent. The April exports were the highest in any month since November last; there was a welcome recovery in the exports of galvanised sheets (from 15,700 tons to 27,200 tons), while exports of railway rails also increased by 5,000 tons over the previous month. The following table shows the production of pig iron and steel in the chief producing countries in the first quarters of 1930 and 1931 respectively:—

	Pig Iron.			Steel Ingots and Castings.		
	First Quarter.		Per-centage Decrease.	First Quarter.		Per-centage Decrease.
	1930.	1931.		1930.	1931.	
United Kingdom	1,922.8	1,012.5	47	2,373.6	1,388.7	42
Germany	3,016.3	1,657.0	45	3,597.5	2,312.3	36
France	2,543.6	2,256.2	11	2,375.1	2,127.3	10
Belgium	991.8	751.8	23	1,004.9	727.1	27
Luxemburg	718.8	522.1	27	646.2	497.3	23
U.S.A.	8,912.6	5,453.1	39	12,143.5	8,033.9	34
Total	18,105.9	11,672.7	36	22,138.8	15,086.6	32

It is noticeable that production both of pig iron and of steel has declined most in the United Kingdom and that the decline has been more severe in Germany and the United States than in France, Belgium and Luxemburg.

The World Rayon Industry.—The rayon production and consumption figures for the first quarter of the year, writes a correspondent, reveal a slight, but by no means impressive, improvement in the industry's position. It is estimated that output totalled 99,475,000 lbs., while consumption amounted to 101,300,000 lbs. In view of the fact that there was a reduction in stocks in the United States of five or six million lbs., it will be appreciated that the trading position in the rest of the world was not good. Britain happily proved an exception, there being a small but healthy reduction in stocks. The only country showing a marked increase in output was Japan, which is doing a very large export trade in manufactured goods. Most of the other countries showed a restriction in output, but the position generally does not point to the likelihood of any marked increase in prices, though, as demonstrated by the recent action in Germany, some stiffening here and there will undoubtedly take place. It is anticipated that the more rationalised working of the German market will pave the way to an international agreement, but it should not be assumed that any immediate solution of the industry's troubles is likely to come about. Happily there are no indications that the popularity of rayon is on the wane.

Sugar Restriction.—On Saturday, May 9th, writes a correspondent, an international sugar convention, providing for the regulation of exports over a period of five years, was signed in Brussels. The convention, known as the "Chadbourne export restriction scheme," was initiated four months ago, and was discussed in the *Economist* of January 10th and 17th. Final agreement on all outstanding points was reached between the various interests at a recent meeting in Paris. The main questions then settled related to the supervision of the working of the scheme, and to the conditions under which the allotted quotas may be exceeded. It has been agreed that exports may be increased by 5 per cent. if the average world price for sugar of a basis polarisation of 96 degrees has been established at the equivalent of 2.00 cents (U.S.A.) per lb. f.o.b. Cuba, for prompt shipment, for a period of 30 consecutive working days. At a price of 2.25 cents a further increase of 2½ per cent. in exports may be permitted, and, should the quotation reach 2.50 cents for the prescribed period, the quota may again be increased by 2½ per cent., or by 5 per cent. if no increase has been granted at 2.25 cents. The scheme will be controlled by an international sugar council presided over by Mr Francis E. Powell, chairman of the Anglo-American Oil Company. The council possesses 90 votes, out of which 35 have been allotted to Cuba, 30 to Java, and 25 to Europe. The European votes have been distributed as follows: Czechoslovakia, 8 votes; Germany, 6; Poland, 6; Hungary, 3; and Belgium, 2. The three main producing countries which remain outside the convention are Russia, Peru and Santo Domingo. Negotiations with Russia had to be abandoned, but it is expected that the discussions with Peru and Santo Domingo will lead to a successful conclusion.

The Credit-Anstalt.—The revelation of the troubles recently experienced by this well-known Austrian banking house comes as a reminder of the difficulties with which Austria has long been faced, first as a result of the war and lately as a result of the world-wide trade depression. Dismemberment under the terms of the Peace Treaties, currency dislocation, high tariffs dividing her former markets into watertight compartments—all have inflicted their toll of loss; and when to these must be added the trade depression of the past year it is not surprising that symptoms of economic *malaise* should have arisen. Fortunately, it is already clear that the difficulties of the Credit-Anstalt are already being taken successfully in hand, and the very frank and reassuring statement issued

this week should go a long way to dispel doubts. The troubles of the bank began when it took over the Bodencreditanstalt at a time when that institution was in serious danger. This rescue work naturally entailed considerable losses, which, in the end, have proved greater than had been anticipated, and are now estimated at 60 million schillings. Further losses, we are told, are due to writing down of bad debts and from the depreciation of the bank's securities. These are the direct consequence of the depression, and raise the bank's total losses to 140 million schillings. Against this sum there are available the bank's paid-up capital of 125 million schillings and reserve fund of 40 million schillings, which are more than sufficient to cover the deficiency. Thus, the bank appears to be in a liquid position, and the loss falls entirely upon the shareholders. There is, however, a need for replenishing the bank's working capital and for restoring to its customers their normal margin of safety; and this task is already being undertaken. The Austrian Government, with the unanimous support of all political parties, has decided to provide the bank with fresh capital in exchange for new shares, which it will gradually dispose of as circumstances permit, and the necessary funds will be raised by the issue of three-year Treasury bonds and will not impose an additional burden upon the budget. The Austrian National Bank and the Rothschild interests are also taking appropriate shares in the work of reconstruction, and a representative of the B.I.S. has gone to Vienna in case he is needed. Concerted national and international action of this kind should have a decisive and reassuring effect, if the event should prove that the disclosed figure of 140 million schillings represents the full tale of the bank's losses, and that its assets have been drastically written down so as to reflect the consequences of trade depression in all its severity. The bank's shares are said to be mainly in strong hands, and this will mitigate the results that otherwise arise from the fall in their value. These events inevitably constituted a serious menace to the economic situation in Austria, and all concerned are to be congratulated upon the frank, prompt and energetic manner in which the episode has been dealt with.

Shipping Freight Index Number.—Based, as it is, on average monthly quotations, our index number of whole-cargo shipping freights in April shows little change in comparison with the March figure, the actual movement being a decline of one-half of 1 per cent. As compared with the position a year ago, the current figure, 94.0, represents a rise of 4.8 per cent. The following table summarises recent movements of the various group indices:—

	Average, 1913.	Apr., 1930.	Feb., 1931.	Mar., 1931.	Apr., 1931.
European Waters	110.0	94.4	87.1	86.5	86.0
North America	115.1	91.2	93.4	94.0	95.0
South America	123.4	95.9	94.6	90.5	94.4
India	106.3	94.8	96.9	99.2	94.0
Far East and Pacific	117.4	76.3	90.9	91.9	91.4
Australia	127.9	85.5	108.6	105.0	103.3
Total	116.3	89.7	95.2	94.5	94.0

Towards the end of April there was a considerable increase in the activity of grain-chartering from the Plate, and, to a minor extent, from Canada and the United States. On the other hand, the Eastern trades were very dull, apart from the conclusion of a few Australian fixtures; and in European waters both coal and ore business was slack. Individual changes recorded by the various sections of the index number are given below:—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	75.9	- 3.2	South America—outwards	73.0	...
Bay—outwards	100.9	+ 1.8	South America—homewards	115.9	+ 7.9
Bay—homewards	87.1	...	India—outwards	94.0	- 4.3
Mediterranean—outwards	91.9	+ 2.6	India—homewards	93.9	- 6.3
Mediterranean—homewards	84.1	- 1.5	Far East, &c.	91.4	- 0.5
North America	95.0	+ 1.0	Australia	103.3	- 1.7

Established 1836. Assets Exceed £21,000,000
General Manager: W. A. WORKMAN

Expressed as a percentage of the average for 1913, the total figure of our index number for April works out at 80.8, as compared with 81.3 in March, and 77.1 a year ago.

The French Railway Loan to Poland.—Our Warsaw correspondent writes:—An extraordinary session of the Polish Diet was called in the latter part of April to vote the necessary Bills required for the French loan to complete and operate the new railway line intended primarily for transporting coal from Upper Silesia to Gdynia on the Baltic. Parliament approved the concession of this line to a joint Polish-French private enterprise known as the Compagnie Franco-Polonaise de Chemins de Fer, with legal domicile in Paris. The Conseil d'Administration of the company held its first meeting on May 4th, at which it was announced that all the necessary formalities connected with the granting of the concession had been complied with, and it was accordingly decided to proceed with the first issue of bonds. Securities will be issued up to a total of about one milliard francs by the company through the medium of Schneider-Creuzot and French banks. The first "tranche" will be for 400 million francs, with a coupon of 6.5 per cent. and an issue price of 94. Out of this "tranche" the Polish Government will be reimbursed for investments made on the northern and southern sections of this line, which have already been completed. A second "tranche" of 300 million francs, it is expected, will be issued in May, 1932, and the balance of the loan in May, 1934. The Polish Government guarantees as to interest and principal the bonds issued by the company, which has been granted an operating concession of the Upper Silesia-Gdynia line until 1975, with the Government retaining the right of prior purchase. It is maintained by Polish official sources that the loan has considerable political importance, since it gives French capital participation in an enterprise located in territory as to which there is, and will continue to be, a dispute with Germany over political sovereignty; that it finally opens up the French money market to Polish loans; that coal exports to the Scandinavian countries will be greatly facilitated when the new line is ready (the concession contract calls for its completion before the end of 1934); that the use of Polish materials, equipment and labour will be greatly stimulated by the rapid completion of the line; that the State Budget will henceforth be relieved of an annual expenditure of some 200 million zlotys for construction of the line; that the competitive power of the port of Gdynia will be greatly increased; and that it is expected Czechoslovakia will avail itself of the improved transit facilities which this line will offer for overseas traffic. The Government newspapers are elated with the loan; the principal Opposition groups in Parliament, nevertheless, declined to vote in favour of the concession for the reason that it is apparent that the Government has not laid all the cards on the table. In other words, there are undoubtedly conditions attached to the loan that have not been made public. The guarantee of the Polish Government to meet principal and interest on the bonds sold to the French investor and the assurance which has been given locally that transport rates on coal from Upper Silesia to the seaboard over the new line will not be so high as to restrict the continued increase in Polish coal exports to the Northern countries substantially confirm the surmise made in these columns on

April 4th that the Government will continue to subsidise coal exports by means of uneconomic freight rates and by meeting the services of the loans, if necessary, out of Budget revenue. In due course, it is hoped and expected, an agreement will be reached between Great Britain, Germany and Poland on the matter of coal exports in general and on shipments to the Scandinavian markets in particular. If and when such an agreement finally eventuates, subsidising coal exports by means of unprofitable freight rates and low port charges would no longer be necessary, so that the operation of the new line could then be made very profitable for the concessionaire.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during April amounted to 882,337 ounces of fine gold as compared with 910,998 ounces produced during March and 839,937 ounces in February. In April, 1930, the output amounted to 868,606 ounces. The following table shows the monthly output since the beginning of 1925:—

Months of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Pine Ore.	Pine Ore.	Pine Ore.	Pine Ore.	Pine Ore.	Pine Ore.	Pine Ore.
January	823,692	796,270	839,782	843,857	876,452	882,801	914,576
February	753,925	753,924	779,339	816,133	815,284	818,188	839,937
March	825,479	834,340	860,511	877,380	866,529	889,370	910,998
April	787,519	803,303	824,014	825,907	872,123	858,606	882,337
May	813,249	849,214	859,479	886,186	897,598	916,213	...
June	780,251	852,145	855,154	862,363	856,029	887,867	...
July	818,202	860,134	851,861	867,211	889,480	912,652	...
August	808,218	843,854	863,345	891,863	889,601	921,081	...
September	797,247	839,939	842,118	857,731	849,553	903,176	...
October	812,832	853,296	855,743	897,720	888,690	926,561	...
November	787,633	840,276	848,059	872,484	861,593	884,753	...
December	791,455	836,157	851,225	859,761	851,134	908,492	...
Total.	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	3,547,848

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Aug. 1930.	Sept. 1930.	Oct. 1930.	Nov. 1930.	Dec. 1930.	Jan. 1931.	Feb. 1931.	Mar. 1931.	Apr. 1931.
Gold mines	202,257	205,061	206,778	205,030	203,473	209,442	209,777	207,239	206,770
Coal mines	14,788	14,706	14,482	13,973	13,763	13,865	13,740	13,436	13,242
Diamond mines	5,754	5,767	5,032	4,748	4,607	4,325	4,333	4,106	4,030
	222,799	225,534	226,292	223,751	221,843	227,632	227,850	224,781	224,042

There was a further decline in the native labour figures for all branches of mining during April.

Liverpool and London and Globe.—Though the operations of this company in 1930 resulted in a trading surplus, the amount was much smaller than in recent years, and the company has experienced a shrinkage in premium income in every department. Fire premiums have fallen from £4,846,000 to £4,699,000, while miscellaneous premium income has fallen from £5,428,000 to £5,282,000. Apart from the life department, the total premium income in 1930 amounted to £10,751,000. Fire premiums have shown a dwindling tendency throughout the last five years, and the whole of the increase in total premiums during that period has occurred in the miscellaneous branch, which includes, of course, motor car insurance. The underwriting results of the last two years are shown below:—

	1929.		1930.	
	Amount of Profits.	Percentage of Premiums.	Amount of Profits.	Percentage of Premiums.
Fire	260,242	5.4	256,340	5.5
Personal accident	900	.4	2,245	1.0
Employers' liability	20,142	11.6	26,239	15.8
Miscellaneous	146,652	2.7	64,968	1.3
Marine	33,435	8.3	29,078	8.2
Life	23,000		23,000	
	484,371		271,934	
Less items debited to profit and loss account	154,636		152,468	
	329,735		119,466	

The company is controlled by the Royal, and the dividend has been raised by a steady 2½ per cent. each year for

many years past. This increase is repeated for 1930, with a result that the dividend is now at the rate of 67½ per cent., absorbing £560,000, compared with interest earnings of £499,000. The net addition to surplus assets amounting to £58,000 is the smallest in any recent year. In the life department the net new business of the year amounted to £1,903,289, compared with £1,715,731 in 1929, and the life and annuity fund combined are now approaching the £10 million mark.

Alliance Assurance.—Including the life department the total funds now amount to the impressive total of £34 millions. Of this the Life, Annuity, and Sinking Funds account between them for nearly £24 millions; and these include some £6 millions belonging to the closed funds of subsidiary companies. In spite of the virtual cessation of single premium policies, the new life business transacted in 1930 was on a larger scale, the total being £3,210,646, compared with £3,027,438 in 1929; and both the annuity fund and the sinking fund show evidence of a substantial volume of new contracts having been issued last year. Under the stimulus, it is believed, of staff schemes and group insurance contracts, the life department has shown considerable expansion during the last five years. During that period the life fund has grown from under £12 millions to nearly £16 millions, and the volume of new business has increased by almost 50 per cent. As regards the profit-making capacity the interest earnings at about £4 9s. 6d. per cent. net are on the low side, though expenses are limited to the moderate figure of 10 per cent. The characteristic features of the accounts relating to the other branches of the business are the extraordinarily high rate of profit consistently shown by the fire department (the business of which is largely concentrated at home), and the comparatively large "gap" between interest earnings and cost of dividend. The existence of this "gap," which in lesser companies would constitute ground for criticism, is in the case of the Alliance abundantly justified by the high level of the departmental underwriting profits. A detailed analysis of the past year's results shows that these features are again present in the 1930 accounts:—

	1929.		1930.	
	Amount of Profits.	Percentage of Premiums.	Amount of Profits.	Percentage of Premiums.
Fire	331,548	16.1	324,793	15.9
Personal accident	— 12	...	2,457	6.0
Employers' liability	27,579	12.2	40,678	18.9
Miscellaneous	65,255	6.8	101,755	10.8
Marine	9,286	1.6	24,277	4.6
Transfer fees	9,469		9,796	
	443,125		503,756	
Less items debited direct to profit and loss account	262,188		256,736	
Net trading surplus	180,937		247,020	
Add net interest earnings	360,215		355,160	
Total available for dividend	541,152		602,180	

Since 1927 the dividend has been at the rate of 18s. per share, and this rate of distribution is repeated in 1930. The cost of this dividend is £488,250, and requires, therefore, a substantial draft on trading surplus wherewith to meet the payment.

North British and Mercantile.—Particularly on the American Continent, where its interests are large and important, the North British and Mercantile has felt the effect of the universal trade depression, and the premium income shows a shrinkage in all departments. Nevertheless, except in the fire department, where the underwriting ratio of profit has fallen from 9.9 per cent. to 6.7 per cent., the profits have been maintained, and, indeed, somewhat increased. The fall in premium income, which has been most pronounced in the fire department, amounts to

£600,000, and the 1930 total is £5,784,000. The underwriting results are set out in our usual table:—

	1929		1930	
	Amount of Profits.	Percentage of Premiums.	Amount of Profits.	Percentage of Premiums.
Fire	443,544	9.9	262,436	6.7

Total net trading surplus	484,543		700,694	

The company has always maintained a close relation between interest earnings and the cost of the dividend, and the steady rise in the former has enabled an increase in the rate of dividend to be declared in ten out of the last eleven years. The 1930 dividend is at the rate of 92 per cent., compared with 88 per cent. in 1929, and the cost of this is within the net interest earnings. The company transacts a large and increasing life assurance and annuity business, and the quinquennial valuation of this was made at the end of last year. In the life assurance fund, which amounts to over £26 millions, 90 per cent. of the profits belong to the policyholders and the balance to the shareholders; but the whole of the annuity profits, where the fund exceeds £3½ millions, and the whole of the sinking fund profits, belong to the shareholders. The valuation has been made on the same basis as in 1925, and the results of the last two valuations are as follows:—

	1923-1925.	1926-1930.
Trading surplus earned during valuation period	£ 1,224,313	£ 3,205,479
Investment profits brought into account	...	26,436
Brought forward	37,148	54,880
	1,261,461	3,286,795
Allocations:—		
To Bonuses to policyholders	1,125,241	2,739,235
„ Shareholders	81,340	422,046
„ Carried forward	54,880	125,514
	1,261,461	3,286,795

The 1925 valuation was in respect of a three-year period, and for that period a reversionary bonus of 36s. per cent. per annum compound was declared. For the quinquennium now ended the increased profits have enabled a reversionary bonus of 40s. per cent. per annum to be declared.

Scottish Equitable Life Assurance.—Early in 1831 a few gentlemen in Edinburgh who deemed it expedient to form a Life Assurance Society issued a circular letter inviting attendance at a meeting to be held at the Waterloo Tavern on March 29th of that year. The result was the Scottish Equitable. In the third year of its existence a premium income of £7,000 had been built up, and the fund amounted to £16,000, and during that period the society had been fortunate enough to experience only two death claims amounting to £300 in each case. By the fifth year progress had become rapid, the premiums had grown to £10,000 per annum and the fund to £40,000; and now in the centenary year ended March 1, 1931, the premium income is £650,000 and the fund is £9,603,000. Owing to the cessation of single premium business, there has been a falling off in total new business from £1,530,000 to £1,451,000, but the chairman rightly emphasised in his speech that "these figures consist entirely of individual policies taken out for the purpose of provision and include no blocks of group assurances or staff insurances, which represent a substantial proportion of the business of some of our competitors." The chairman went on to advocate what we have ourselves felt to be necessary, namely, the separation in annual reports of business under these special schemes from ordinary provident life policies. The society has been active in introducing new schemes, and one of those recently launched contemplates the payment of life assurance premiums by means of book safes issued by the

society. Arrangements have been made with the National Provincial Bank, Limited, and with Lloyds Bank, Limited, in England, under which the moneys deposited in these home safes will be credited periodically to the depositor's banking account at interest and thereafter transferred by the bank to the society in payment of premiums. The last quinquennial valuation of assets and of liabilities took place on March 1, 1928, when a reversionary bonus of 38s. per cent. per annum compound was declared. The directors, after considering all the circumstances, have decided to mark the society's centenary by increasing the rate of interim bonus for the current quinquennium from 38s. per cent. per annum compound to 40s. per cent. per annum compound.

At the meeting of the Royal Statistical Society, on May 19th, Dr. E. C. Rhodes will read a paper entitled "Labour and Output in the Coal-Mining Industry in Great Britain." The meeting will be held in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C.2, at 5.15 p.m.

Corporation Earnings — Failures — Money Market — Trade Situation.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 30.

DISCOURAGEMENT over the business outlook has increased. It has been partly a reaction from the continued decline in share and commodity markets and has caused further selling of securities. Actual changes in the trade position are unimportant, and there appears to have been at least no more than the usual seasonal recession from the early spring peak of activity, but as at this time last year, reports on earnings for the first quarter and consequent dividend reductions are opening eyes which had been closed to the true situation.

Publication of the earnings statement of the United States Steel Corporation was the outstanding industrial event of the week. The regular quarterly dividend of \$1.75 a share was voted on the common stock, which was somewhat reassuring. Although in well informed quarters it had not been expected that the Corporation would be able to earn anything on its common shares, the report proved to be a disappointment to the rank and file. Largely by skimping depreciation charges, the Corporation reported earnings sufficient to cover preference dividends and leave a balance of 5 cents a share for the common shares. In the preceding quarter the regular dividend was not covered, so that in the past six months about 25 millions have had to be taken from surplus for dividend payments. United States Steel has surplus and reserves of around three-quarters of a billion, but cash and Government securities are less than 200 millions, much of which is needed for working capital.

While the directors have been willing to dip into surplus for two-thirds of the final 1930 dividend and for virtually all the first quarter's payment this year, it is unlikely they will pay a full year's distribution of more than 60 millions by depleting the cash resources. Second-quarter earnings are unlikely to show any improvement, and therefore the market is attempting to discount a cut in the rate. Other steel companies are making a worse showing than the leader, and are reducing their dividends.

The general tenor of the industrial corporation reports, which are running close to 40 per cent. under the net income of the first three months of a year ago, and the immediate outlook are increasing the talk of wage cuts. Some industrial leaders are strongly opposed to general reductions in the pay scales, though a good many companies have already cut wages. The tendency is growing,

especially among bankers and economists, to regard wage reductions as inevitable and, in view of the sharp reductions in living costs, as bringing no hardship. Industry generally is awaiting the lead of some such organisation as the Steel Corporation or a large railroad. Labour will, of course, bitterly fight any attack on existing wage scales, and the possibility of a "showdown" on this question is one of the disturbing elements in the situation.

Wall Street is full of the rumours of trouble which usually mark the fag end of a sharp bear movement in stocks. Plausibility is given some of them by the failure of the large firm of Pyncheon and Company and a smaller satellite, but while some small houses may be obliged to close, no important institution is believed to be in danger. With respect to the trading corporations or investment trusts and one or two inflated holding companies, much will depend on how far the decline in prices deflates their assets. It must be expected that small bank failures will continue throughout the interior for several months.

Although the New York Federal Reserve Bank made no change this week in its discount rate, the matter was carefully considered, and some members of the board are known to favour it. A reduction would be unpopular among the banks, and opinion generally opposes it, for the reason that it would not be effectual in stimulating the bond market or business, nor would it be likely to stop the gold influx, except possibly that from France. The reduction to 2 per cent. last year was made mainly as a gesture, but it created fresh apprehension over business without helping anybody. At all events, the best practical means of cheapening credit in this market has already been taken by the Reserve authorities. For the second time in a week the New York bank has cut its bankers' acceptance buying rate, the asking rate on 90-day bills now being 1½ per cent., the lowest on record.

Open market rates now leave the discount rate high and dry, but while the lower bill rate is bringing bills to the Reserve Bank, the member banks of this district are borrowing so little money that a lower discount charge would make no difference. Discounts for this district are only 30 millions, and the New York City banks are entirely free of debt to the Reserve Bank and have been for a long time. The Reserve system added 18 millions in bills to its portfolio this week. Government security holdings were unchanged. Member banks, to provide for May 1st dividend disbursements and other financial settlements, borrowed 20 millions, the entire operation taking place in the interior. This increase in Reserve credit amounted to only 48 millions for the system, which also gained gold and raised its reserve ratio to 84 per cent. The week's imports were 11 millions, excluding approximately 15 millions that arrived late to-day but were not reported on the Reserve Bank tabulation. Bankers here expect more gold to come from France.

The failure of two Stock Exchange houses and the reorganisation of one or two others have helped to bring deflation in brokers' loans. The drop this week was 114 millions. Total loans of 1,730 millions are still 14 millions above the lowest figure reached on February 4th last. At the same time, the member banks of the Reserve system throughout the country are reducing their loans on securities, thereby forcing sales, most of which are coming on the New York Stock Exchange. Reporting member banks in leading cities last week revealed a decline of 56 millions in security loans, the total of 7,138 millions being 1,186 millions less than a year ago. These reporting banks hold approximately 40 per cent. of the banking resources of the country. Member banks also continue to report lower commercial loans, a reflection of the seasonal drop in business activity. To keep their funds employed they are constantly adding to bond investments, the week's rise being 55 millions and the total 2,057 millions above a year ago.

If the banks are buying bonds, individual investors are holding aloof, and another week has passed with virtually no new capital issues apart from another Treasury bill issue of 60 millions. This latest issue is to provide for early May maturities, and will doubtless be followed by several more before the June 15th tax collection date.

Trade results are encouraging only in so far as they show no swift decline in factory production or retail distribution. The trend is now downward, but it is a gradual recession. The steel industry has dropped another point to around 48 per cent. of capacity, and it is likely that the average rate for the remainder of the second quarter will be lower than that, making it impossible for the steel companies to earn anything on their common stocks. Railroad traffic is somewhat better, having gained slightly over the past fortnight.

FRANCE.

Presidential Election — Impending Conversions — Prices — Import Duties — Industry — Crop Prospects.

(FROM OUR CORRESPONDENT.)

PARIS, May 13.

To-day's presidential election at Versailles was expected to be full of surprises, and the forecast has proved justified. In political circles it is widely felt that M. Briand was ill-advised to accept nomination, under what was largely Socialist pressure, at a moment when the Parliamentary sands are unusually treacherous; and there is a widespread belief that the veteran Foreign Minister for once misinterpreted the meaning of the handsome vote of confidence (by 419 against 43, with 102 Socialist abstentions) which the Ministry secured in the small hours of last Saturday morning on a resolution which definitely pledged the Chamber to oppose all attempt to bring the Austro-German Customs Union project into operation. Opinion generally appears to consider that the Foreign Minister's position has been weakened by his failure to secure election.

Circumstantial reports are current that the application of the long-pending Rente conversion plans is now imminent. Between to-day's presidential election and June 13th, when the Chief of State will assume office, there should be, under normal conditions, a period of comparative calm, in view of the fact that the Ministry must automatically resign and leave the organiser of a new Cabinet to be nominated by the new President. It is widely felt that this period of political truce would be admirably suited to the application of the conversion scheme, and there seems to be good ground for believing that it will be so used. It is expected that the new conversion issue will be a 4 per cent. loan, issued at about 98½, which would probably best suit existing conditions.

Already the Crédit Foncier and many of the leading private companies have carried through bond conversion operations, and it is expected that the large existing issue of 6 per cent. 21 A bonds, issued jointly by the six great French railway companies, will undergo conversion almost immediately. The new loan for Yugoslavia, of which 675,000,000 francs of 7 per cent. bonds, issued at 87½, is to be offered here, and the coming 400,000,000 francs issue of 6½ per cent. bonds for the completion and extension of the Kattowice-Gdynia railway across Poland cannot be regarded as serious obstacles to a massive Rente conversion operation, although their terms are apparently much more attractive than any new 4 per cent. Rente issue would seem to be in any other country but this. One important factor in the situation is the need for the Treasury to be able to reimburse the Caisse d'Amortissement for the obligation it undertook under the Budget to assume charge this year of some 1,900,000,000 francs of debt service payments hitherto borne by the Budget, which it was understood would be made good out of savings to be effected by Rente conversion. Irredeemable three per cent. Rentes at the end of April stood at 89½, redeemable threes at 92.45, 1917 fours at 104.20, 1920 redeemable ("Caillaux") fives at 136.75 (with guarantee against exchange), 1915-16 fives at 104.75, and 1920 sixes at 105.52. The average rate offered by new bond issues in April was 4.60 per cent., against 4.55 per cent. in March, and averages of 4.69 per cent. throughout 1930 and 5.36 per cent. in 1929.

The index of wholesale prices at the end of April is 494 (as in January), as compared with 492 in March and a mean of 543 in 1930, of 623 in 1929, and of 634 in 1928. The detailed figures (July, 1914 = 100) are as follows:—

	Articles.	Jan.	Feb.	Mar.	April.
General index.....	(45)	494	492	492	494
French products.....	(29)	567	557	560	566
Imported products.....	(16)	364	375	370	365
Foodstuffs.....	(20)	553	529	537	548
Raw materials.....	(25)	462	461	453	449

The outstanding feature of the table continues to be the remarkable difference between the wholesale prices of French products and those of imported goods. These had means respectively in 1928 of 619 and 660. In 1929 the situation was reversed, and prices of imported goods dropped below those of French products (635 against 602). By the end of last year the figure for French products was almost exactly 50 per cent. higher than that representing prices of imported goods, and this approximately represents the situation at the end of April. The practically universal dumping which now prevails accounts, of course, to some extent for this unusual circumstance; but probably an even more important factor in maintaining French prices at their present high level is the lavish use which is being made of the power of the Government to modify the Customs tariff at will. Since March, 1930, import duties affecting some 150 items in the French minimum tariff have been in most cases very substantially increased. The Chamber on Thursday last formally approved a Bill increasing the import duty on butter to 400 francs per 100 kilos., or over 3½d. a pound. Consumers are mildly protesting that the cost of living does not appear to be growing cheaper; but so far as the working classes are concerned, there is still no sign of popular discontent, no doubt owing to the fact that wages in the majority of industries are governed by cost-of-living sliding scales. Exporters, however, appear to be beginning to realise that the falling off in foreign trade is to some extent, at least, due to French prices being too high, and complaints are being voiced to the effect that, however beneficial to agriculture this continual raising of the tariff wall may be, the advantage to the native producer is being largely nullified by the falling off in export trade. "By continually raising our prices," says one well-known writer, "we have almost entirely lost the British butter market and been replaced there by Australia, New Zealand, Argentina, Denmark, Holland, and even South Africa." The sharp increase in the butter tariff has been largely due to the desire to keep out Soviet butter.

Industrial production figures for March, which are issued this week, suggest that output on the whole continues steady, the general index figure for the principal nine industries being returned as 132 (1913 = 100), against 133 for January and February, 136 for October, and means of 140 for 1930, 139 for 1929, and 127 for 1928. The metallurgical industry, which has suffered more than any other during the past few weeks, shows a drop of four points (117 to 113) on the month, but still remains 13 per cent. above its pre-war level, although 12 points below its 1928 and 1930 means and 16 points below the record mean set up in 1929. Textiles, mining and motor-car output were each a nominal fraction lower. The rubber trade expanded a further 5 points to 930, largely owing to the record low prices of rubber. Unemployment is now apparently well on the downward trend.

Crop forecasts for the coming harvest, based on conditions on May 1st, are appreciably below those for the corresponding period of 1930 as to quality, but fractionally better, except in the case of wheat, as to quantity. The total area under winter and spring wheat on May 1st is returned as 5,055,910 hectares, against 5,256,810 hectares last year. This drop of rather over 200,000 acres has been due to the abnormally rainy winter, which held up sowing operations. The area under spring sowings this year totals over 311,000 hectares, against 91,000 hectares last year. The average quality of the new wheat crop is returned as 66, as compared with 73 last year at the same date.

GERMANY.

Employment — Housing — Unemployment Commission — Berlin Finance.

(FROM OUR CORRESPONDENT.)

BERLIN, May 13.

The condition of the German labour market during the last few months has not proved so unsatisfactory as had been generally expected. After reaching its seasonal maximum in February, the number of unemployed has declined by some 700,000 against 600,000 last year. It is true that, without counting workers on short time, there are still 4.3 millions unemployed in Germany, against 2.7 a year ago. This is a fantastic figure, in all conscience, but recovery was bound to come later this season owing to the long duration of wintry weather.

In addition to the delay imposed by the weather, building activity has been severely hampered by causes only very indirectly connected with the general business situation. In previous years it has only been possible to continue the building of houses, in spite of the high rate of interest, by the grant of cheap mortgages from public funds. These funds were maintained by half the yield of a rent tax payable by the owners of pre-war houses, which was supposed to be compensated for by the fact that the mortgages on the older houses were for the most part wiped out by the inflation. The other half of the proceeds of the tax was used for general purposes by the States and Communes. This year, under the pressure of financial difficulties, part of the half which really ought to have been used for housing purposes has had to be deflected to other uses, so that fewer mortgages can be granted, and in consequence fewer houses can be built.

According to Government regulations mortgages at reduced rates are henceforward only to be granted to those builders who are confining themselves to the erection of small houses or flats at relatively low rents. This restriction was necessary because, in spite of the great housing shortage, some of the new blocks of moderately large flats are impossible to let, for in the present depression a large part of the population can no longer pay the rent of a newly built four or five-roomed dwelling, even with the aid of the reduction of interest by the State. The restriction is, however, very hard on the building industry, and it is somewhat ironical that a big exhibition of building technique should be being opened in Berlin just at this moment, simultaneously with a strong propaganda movement for the restriction of building. While the total decline in unemployment is about 14 per cent. the corresponding decline among building operatives, as far as it can be deduced from trade union statistics, barely amounts to 3 per cent., and if there is to be any improvement this year at all it will have to begin at once. There has, on the other hand, been a substantial increase in the demand for labour in agriculture.

The Unemployment Commission has now published the second part of its report. While the first part was devoted to proposals for improving the distribution of the existing demand for labour, and recommended a reduction in working hours to that end, the new report aims at suggesting means for increasing the opportunities of employment. The principal recommendation of the report is that no stone should be left unturned to obtain foreign capital for the development of the power industry, the improvement of the existing road system—the construction of new motor roads and canals is expressly discountenanced as uneconomic—the undertaking of agricultural improvements, and the promotion of land settlement. The Commission utters a warning against excessive restriction of house building. They also consider that the "labour conscription" for which there is a wide demand is not a suitable method of relieving the labour market, but they recommend a similar scheme on a voluntary basis. This system would consist of the employment on agricultural or similar work of groups of workers who cannot at present find employment at the customary or tariff wage, in return for a lower wage or for mere maintenance, while the State would be responsible for seeing that no depression of the general wage level resulted. In recommending this scheme the Commission are evidently relying very much on the desire of the unemployed to shake off the moral depression caused by the long duration of unemployment and the sense of their own superfluity.

The sale of the Berlin electricity works is now complete, as the municipal courts have sanctioned it. Berlin is thus freed of its floating debt burden as far as is necessary to ensure a sound financial policy. The short-term debt amounts nominally to 500-600 millions, but 100 millions of this was borrowed from the municipality's own funds. The sale of Bewag brings in 210 millions, and this, apart from a small reserve which is to be used for the time being to meet expenses in connection with the social services, is available to meet the debt. Some 150 millions have been lent by other public credit institutions which are not requiring payment for some time. About 100 millions have been lent to the city by the Danatbank and Kuhn-Loeb, who are prepared to extend the loan; this credit will be met later on out of the proceeds of the sale of a minority holding in the Berlin Gasworks, for which preliminary negotiations are already being conducted with every prospect of success. It will thus be possible to dispose of all the pressing demands for repayment.

The sale of so large a share in the municipal electricity works on such unfavourable terms was naturally a heavy sacrifice, but the result has been not only the recovery of financial freedom of movement by Berlin itself, but the freeing of the German money and capital markets from the perpetual danger of heavy demands for money by the capital. Only a relatively small part of the Bewag issue will come into the market, and that, especially the German share, will be easily absorbed, as the terms finally decided upon include a 10 per cent. dividend guarantee. If this dividend is not earned, the electricity tariff is to be raised.

HUNGARY

Politics — Budget — Austro-German Customs Union and Hungary — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BUDAPEST, April 27.

ALTHOUGH the mandate of the present Parliament does not expire until the end of the year, there is much talk in political circles of elections in June, or in the autumn. That members of the House of Deputies anticipate an early dissolution is demonstrated by the lack of interest with which they treated the Budget. The general debate on the Budget came to a sudden end on the second day, as not one of the 29 members who were notified to speak was present. In view of the fact that urgent financial and economic problems await solution in the near future, it

would be in the interest of the country to hold an election as soon as possible. There is little doubt that Count Bethlen, whose Government secured political stability for the last ten years, will be returned with a safe majority.

The Budget estimates for 1931-32, which were voted in the first reading on April 24th, forecast a revenue of 878.8 million pengő, and an expenditure of 878.3 million pengő. As the financial year ends on June 30th in Hungary, only the figures of 1929-30 are available for comparison. Actual revenue in 1929-30 as published by the monthly return of the Finance Minister, amounted to 953.9 million pengő, and expenditure to 953.7 million pengő. In the first seven months of the present financial year the total receipts of the Treasury amounted to 481.5 million pengő, as against 546.0 million pengő in the same period of 1929-30. Expenditure in the first eight months of the present financial year is returned at 646.5 million pengő, as against 662.5 million pengő in 1929-30. As expenditure did not decrease enough to offset the fall in the revenue, there is a deficit of 91.5 million in the first eight months of the current budgetary year. It is hoped, however, that the departmental receipts of the Treasury due in May and June will improve the situation, and with the proposed economies and latent reserves and by loan operations if necessary the Budget will be balanced. In view of the fact that expenditure in 1929-30 amounted to 953.9 millions, and will in all probability exceed 900 million pengő in the present financial year, the estimates of 878.3 million pengő for 1931-32, if strictly adhered to, mean a considerable saving which was very much needed. The Finance Minister warned the House of Deputies that the estimates for 1931-32 cannot be exceeded without threatening the budgetary equilibrium which the Government is anxious to safeguard by all means. Fortunately, bad as economic conditions are at present in Hungary, the maintenance of budgetary equilibrium is facilitated by the fact that more than 55 per cent. of the total expenditure is due to personnel and pension services, and only about 10 per cent. to fixed charges such as the service of the National Debt and Reparations. There is also scope for a moderate increase in receipts, the more energetic collection of tax arrears and increases of certain taxes which had been reduced in recent years. Of course, the main problem of Hungarian finances is the same as that of all other countries, to adjust the State Budget to the lower price level brought about by the fall in agricultural prices which has considerably diminished the taxable capacity of the population.

The Austro-German Customs Union plan and its probable effects on Hungary are widely discussed here. The Government has, however, wisely refrained from committing Hungary, and the Minister of Foreign Affairs has declared that the only possible attitude for Hungary is to wait and follow the developments closely. The decision of the Council of the League of Nations is therefore awaited with great interest. In the meantime, negotiations for a new commercial treaty with Austria are making good progress. Austria denounced the commercial treaty which had been in operation on the most-favoured-nation basis from 1926 and expires on June 30th. The new treaty provides for preferential quotas, railway and credit facilities, but nothing has been officially stated so far. There are rumours that negotiations with Czechoslovakia—with which country there has been a Customs war since December, 1930, when Czechoslovakia denounced the existing treaty—will be resumed in May for the conclusion of a new treaty. Hungary, being vitally interested in the marketing of her agricultural surplus, would undoubtedly gain if she could become a member on equal terms of any greater economic unit which imports cereals and cattle. Therefore, both the Austro-German project and the counter plan of Monsieur Briand, vague as it is, are in the forefront of politics. Hungary is fully conscious of the difficulties in the way of realisation of a customs union, or even of preferential or regional tariff treaties.

Foreign trade in the first quarter of 1931 resulted in an adverse balance of 12.6 million pengő, as against a surplus of 20.4 million pengő in January-March, 1930. Exports dropped from 218.4 million pengő in 1930 to 130.3

million pengő; imports have fallen from 198.0 million pengő to 142.9 millions. This contraction is due in the first place to the decline in prices and the diminished purchasing power of the population and to a lesser extent to the cessation of trade relations with Czechoslovakia on account of the customs war. The small deficit of the first quarter of 1931 is insignificant, as the bulk of Hungary's export trade falls to the second half of the year when harvest is finished. It is as yet too early to make forecasts for the crops. After the cold days of March and the first weeks in April the mild weather of the second half of April improved crop prospects, but the world prices of cereals are anything but cheerful now, and offer very poor prospects. The London Conference of wheat exporting countries will be attended by delegates from Hungary, but in the absence of the chief exporting countries this conference cannot solve Hungary's difficulties. What Hungary needs is to sell her surplus at satisfactory prices to the industrial countries. As Hungary's purchasing power depends entirely on the marketing of her agricultural surplus, it is also in the interest of the industrial countries to come to equitable terms with Hungary whether on the most-favoured-nation or a preferential or regional basis. As the Austro-German customs union project has shown Europe that something must be done to put an end to the mania of protection, it is hoped in Hungary that whatever the decision of the Council of the League of Nations may be, the case for a new departure in the commercial policy in Europe will be so overwhelming that the League will be unable to refuse the Austro-German plan without suggesting something better.

SWITZERLAND.

Foreign Trade — Unemployment — Money Market.

(FROM OUR CORRESPONDENT.)

GENEVA, April 25.

THOUGH the foreign trade returns show how seriously Switzerland is affected by the general economic depression, a small improvement was noticed during March. During the first quarter of the year imports totalled £21,867,852, compared with £25,620,637 during the corresponding period of 1930, a drop of £3,752,785, or about 14.6 per cent. The decrease in raw materials was especially heavy, a sign that home industry is not very active. Exports, on the other hand, aggregated £14,507,253, against £18,500,348 in 1930, a decrease of £3,993,095, or nearly 21.6 per cent. It is true that prices have gone down since last year, which partly accounts for the decline; but there was also a drop of about 19 per cent. in the quantity of goods exported. All the exporting industries are hit by the slump, but principally the watch-making, silk, cotton and machines industries, the aggregate exports of which, during the first quarter, were 29 per cent. lower than last year. Conditions have, nevertheless, improved since the beginning of the year, as shown by the following monthly figures:—

	Imports.		Exports.	
	1930.	1931.	1930.	1931.
January	8.3	7.3	5.9	4.6
February	8.2	6.9	6.3	4.7
March	9.1	7.6	6.3	5.2
	25.6	21.8	18.5	14.5

Commercial exchanges with Great Britain during the quarter were slightly inferior to those of last year; imports from her totalled £1,052,000, or about £250,000 lower, and exports to her were £2,420,000, a drop of £14,000 on the corresponding period of 1930. There are some prospects of British imports into Switzerland developing in the course of the year, principally in the case of motor cars, as a result of the Geneva International Automobile Salon held last month. For the first time, the number of British car exhibitors reached five, namely, Austin, Daimler, Humber, Morris and Rolls-Royce, and it is said that business was good. More Austin, Morris and Rolls-Royce cars are now seen in Switzerland, but there is room for many more, as automobile experts are of

opinion that Switzerland is capable of absorbing another 8,000 cars in the near future.

Despite the small improvement recorded in March, economic conditions are unsatisfactory. Unemployment is particularly severe in watchmaking and textiles. The number of unemployed was nearly 20,000 at the end of March, a drop of about 6,000 on the month. The decline is due to seasonal causes, mainly in connection with hotels, the building industry, and agriculture. The home market, which so far seemed to have remained sound, now shows some signs of slackness. The earnings of the railways and transport undertakings were lower than last year; but, on the other hand, there is great activity in the banking industry. Foreign funds continue to pour into the Swiss banks, one of which received in a single day £1,800,000 from Germany. Money is abundant and cheap, and interest on long-term deposits has been lowered from 4 and 3½ per cent. to 3½ and 3 per cent. since the end of last year. The favourable condition of the money market accounts for the fact that the Federal and Cantonal Governments, as well as banks and industrial concerns, are converting the loans issued a few years ago at 5½ and 5 per cent. into loans at 4½ and 4 per cent.

SOUTH AFRICA.

Trade Improvement — Workmen's Compensation Bill — Revenue — Gold Mining — Railway Budget.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 8.

To readers overseas the South African identification of General Hertzog's name with "the depression" would perhaps be something of a surprise. There are thousands of farmers and of the less experienced type of business men in this country who believe or have believed that the Prime Minister caused the depression by his speech of warning eighteen months ago. Perhaps they will now give him equal credit for the signs of improvement to which he referred in a speech in the country town of Clanwilliam a few days ago. He said, with special reference at the moment to the wool market, that there was no doubt that there were signs of improvement, but that farmers must also help themselves by their own efforts and by some sacrifices in articles and habits not strictly necessary to a proper standard of living.

On March 25th the Minister of Labour introduced into the House the new Workmen's Compensation Bill—a measure recognised on all sides as being very badly needed. The Bill proposes to establish a Workmen's Compensation Judge and a board of three members. The judge will have the powers of a Supreme Court judge, and the conditions under which an appeal is to be allowed from his decision are few and very closely defined. The duties of the board are to be to enquire into accidents, to assist in preparing claims, to present them to the judge, to fix rates of assessment and assume control of funds to be set up under the proposals, to collect information in regard to industrial accidents, and to present an annual report to the Minister. Rates of compensation for temporary total disablement are fixed at 60 per cent. of the workman's monthly earnings, but the judge may increase this to the full rate of wage; after six months the rate of compensation is to be 50 per cent. of the earnings. For permanent total disablement there is to be a monthly pension, and for permanent partial disablement the compensation is to be in a lump sum 16 times the monthly earnings up to £20. In the case of death, a widow, or other total dependant, is to receive two years' earnings or £500, whichever is less; while allowances are also provided for children under sixteen years of age. Compensation for natives whose earnings do not exceed £13 6s. 8d. per month is to be fixed at 60 per cent. of earnings for three months, but may be extended for a further three months by the judge. The Bill is the outcome of the investigations of a committee appointed some time ago by the Minister of Labour; it is to go to a Select Committee before the second reading. It is understood that the original committee had before it the Workmen's

Compensation Laws of all countries from which they could readily be obtained.

In his Budget speech, Mr N. C. Havenga, the Minister of Finance, had to confess to having been over-optimistic last year. Perhaps his long run of surpluses had clouded his judgment. The statement revealed a deficit for the current year of £1,700,000, against which the Minister proposed to set last year's surplus of £488,000. He considered that 1931-32 revenue would fall short of expenditure by £1,676,000, so that the estimated deficit at the end of next year would be £2,880,000. The Minister hoped to reap £715,000 from an increased duty of 3d. per gallon on petrol, £220,000 from a reduction of income-tax abatement, £505,000 from tariff adjustments on tea, millinery and piece-goods, and £600,000 from a restoration of the 2d. rate for letters. These, with other smaller proposals, are expected to reduce the £2,880,000 deficit by over £2,000,000.

The Customs revenue for the year just closing will be about £7,300,000, nearly £2,000,000 less than last year, and £1,150,000 less than the estimate. Of this drop, £600,000 is due to the fact that imports of motor vehicles fell from £5.34 millions to £2.23 millions. The total loss of revenue owing to reductions in motor transport expenditure was about £750,000. It is satisfactory to note that while the total figures of imports and exports fell by £14 millions, imports alone fell by £19 millions from last year's figures—which the Minister considered to be excessive at that time. The Minister referred to the position of the gold-mining industry as the mainstay of the economic structure of the Union, and pointed out that the severe depression in other industries and the poor season for agriculture had enabled the industry to secure adequate supplies of labour and to make new records in production. He also announced that the Government had concluded negotiations for the leasing of 2,500 claims at Grootvlei—so we shall have another mine developing on the Far East Rand. The area is a very promising one.

The Minister of Railways introduced his Railway Budget after his colleague of the Treasury. Mr C. W. Malan does not convey the impression of being so strong or so able a man as Mr Havenga, and he has, moreover, a very difficult task in managing the finances of an industrial concern employing so many supporters of his Government. His deficit was not far short of £800,000, of which he proposed to draw £105,000 from the Rates Equalisation Fund and to carry forward the balance. The decrease in revenue occurred under all heads, in approximately the same proportions, and the Minister fears that it is still continuing. He estimates that the position at the end of March next will show a deficit of £600,000 on that year. The accounts for the year 1929-30 revealed a deficit of £394,000, and for the year now closing £799,000—so that at March 31, 1932, the railway accounts might be expected to show an accumulated debit balance of £1,800,000, with no immediate prospect of discharge or of escape therefrom. In the circumstances certain cuts in local allowances to staff were proposed and had been applied in part.

Letters to the Editor.

THE AUSTRO-GERMAN ZOLLVEREIN.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Perhaps you will permit me to express amazement at seeing how little account is made in the general talk about the Austro-German Zollverein project of the fact that such a move is clearly contemplated in the standing Commercial Treaties of Italy with Austria and Germany, and of Great Britain with Germany.

Indeed, the first of these Conventions, the Treaty of Commerce between Italy and Austria, dated April 11, 1923, and therefore subsequent to the Geneva Protocol of 1922, by article 11, agrees that the general Most-Favoured-Nation Clause does not apply (I quote the French official text): "aux obligations imposées à l'une des Hautes Parties contractantes par les

engagements d'une Union douanière déjà contractée ou qui pourrait être contractée à l'avenir."

The same exception in identical terms is stipulated by article 12 of the Commercial Treaty of Italy with Germany, dated October 31, 1925; and it has been inserted likewise in article 4 of the Commercial Treaty between Great Britain and Germany dated December 2, 1924.

At least as concerns Italy and Austria, this special Convention is not a post-war novelty, for article 11 of the Treaty of Commerce now in force simply repeats article 7 of the old Treaty with the Austro-Hungarian Empire of February 11, 1906, which lasted until the war.

In point of fact, I may recall that in 1906 a Zollverein existed between the Austro-Hungarian Empire and the little Principality of Liechtenstein, which since 1924 has formed a Customs Union with Switzerland.—I remain, with compliments, Dear Sir, Yours truly,

Bricherasio, Turin.

EDOARDO GIRETTI.

Books and Publications.

THE REFORM OF LOCAL GOVERNMENT.

It is almost a commonplace, nowadays, that no political party in this country will touch the reform of local government if it can possibly help it; that the setting up of even the largest and most learned commissions of inquiry (like the Royal Commission on Local Government or the earlier Commission on London Traffic) produces nothing but volumes of interesting information, and reports which are in effect only a helpless statement of the difficulties involved; and that the only way in which to secure the passage of even a reform to which practically all sections subscribe is to tie it to the tail of some other question of immediate urgency, as when, for example, the abolition of the Board of Guardians was carried through in connection with experiment in rating reform. Far-reaching reform in any field appears certain to encounter widespread and obstinate opposition; but where, as in the case of local government, a distinct uncertainty of aim on the part of the reformers is added to a ferocious conservatism on the part of all the bodies to be reformed—let those who doubt it study Mr Robson's almost theological hatred for the County Councils' Association—the outlook seems poor indeed.

Mr Robson's extremely interesting book* illustrates the difficulty very well, while affording, by the very fact of its publication, some hope that we may gradually approach a little nearer some sort of solution. The two largest sections of the book are devoted to a criticism of the present structure and the present functional powers of local authorities. In these two sections Mr Robson does not make any criticism that is particularly new, though, by gathering together and conveniently arranging a great deal of material gained both from practical experience and from the evidence given before the Royal Commission, he succeeds in presenting a clear and impressive picture of the ridiculous structure of present-day local government and of the scandalous inefficiency and lack of social service which results both from its structure and from the portentous growth of the doctrine of *ultra vires* which is now one of the chief barriers preventing the cities of England from being like the city of Munich. Mr Robson wishes, as indeed do most friends to local enterprise, to remove the senseless and expensive restrictions on local government activity, not necessarily by a general Enabling Bill, but at least by giving general powers to the larger local authorities to embark upon any enterprise which is not scheduled upon a "reserved list"; and he is prepared even to agree to a fairly strict limitation of the amount which may be borne upon the rates for some of the wider and newer activities.

Obviously, the present position, as compared, say, with that of American and Continental cities, is unnecessarily hampering, and if local life is to continue, must be reformed in some such way as Mr Robson suggests. But

* "The Development of Local Government." By W. Robson. Allen and Unwin. 12s. 6d.

any attempt to translate this reform into immediate legislation brings one up against the problems outlined in his chapter on structure, where he shows convincingly that the existence of a very large number of small and poor authorities running such enterprises not only makes for inefficiency but actually hinders progress. Nor is this lamentable situation to be blamed solely upon the smaller authorities; the daggers-drawn rivalry between county and county borough has also much to do with it. Mr Robson's own remedy is to increase considerably the number of county boroughs, and to make the county councils responsible for all the remaining area of the county, thus in effect turning the smaller towns into district committees of the county council; while at the same time he proposes to enforce co-operation of the larger authority for services, such as land drainage, which need a wider area of control. If this is not done, he correctly remarks, there will be an increasing tendency to remove altogether some of the more important services from local control and place them under a central department, as the Desborough Committee was inclined to propose in the case of the police. But also, on his own showing, if this is not done, many persons will feel qualms about conferring general enabling powers on the existing authorities, fearing, in fact, lest history should repeat itself and a new service be created at haphazard which will turn out to have exactly the same disadvantages as beset, for example, any conscientious attempt at region-planning. An increase of the powers of local authorities without a simultaneous reform of their structure seems to present grave difficulties.

The above points are the chief burden of Mr Robson's book, which should be of real assistance to all who are trying to think on these problems. Space forbids more than a mere mention of the valuable chapter on "The Municipal Civil Service," a subject on which Mr Robson is an acknowledged expert, or his detailed study of the effects of the present chaos in the public health services. The chapter on "The District Auditor" might have been made fuller and more suggestive. Elsewhere Mr Robson has warned us of the sinister growth of that dangerous and unget-at-able bureaucrat; but the position needs to be stated over and over again, and some remedy, if possible, suggested.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Criticism and Other Addresses. By Sir Josiah Stamp. (London) Ernest Benn, Ltd., 154, Fleet Street. 15s. net.

The subjects of these, the principal non-technical addresses given by Sir Josiah Stamp during the last two years, range from "The Economic Background of the Gospels" to "Accountancy in 1965." Most of them are economic in character and the fact that the economist was writing in a philosophic mood gives them a peculiar interest.

The Economic Situation of Great Britain. By Sir Walter T. Layton. (London) London General Press, Ltd., 6, Bouverie Street. 2s. 6d.

Reprint of an article in the *Revue de Paris*, in which Sir Walter Layton calls attention to some of the more encouraging factors in this country's situation which are apt to be left out of account. The article was designed, not as a reply but as a complement to the criticisms of Professor André Siegfried.

The League Committees and World Order. By H. R. G. Greaves. (London) Oxford University Press, Warwick Square. 14s. net.

An indispensable complement to the many more theoretical books on world co-operation which have appeared recently. Mr Greaves devotes a chapter to each committee, discussing the problems which confront it and the manner in which it tackles those problems.

Economy and Naval Security. By Admiral Sir Herbert Richmond. (London) Ernest Benn, Ltd., 154, Fleet Street. 8s. 6d. net.

A timely plea for clearer thinking on the question of naval disarmament. The author makes practical suggestions designed to promote economy and to facilitate international agreement.

Le Dumping Soviétique. By Boris Eliacheff. (Paris) Marcel Giard, 16, Rue Soufflot. 15 francs.

A scientific study of the problem presented by Soviet dumping, with suggestions for concerted action.

Soviet Foreign Trade. By J. M. Budish and Samuel S. Shipman. (New York) Horace Livesight, Inc. \$2.50.

A study based on official sources of Soviet foreign trade with special reference to the United States.

Bolshevism at a Deadlock. By Karl Kautsky. Translated by B. Pritchard. (London) George Allen and Unwin, Ltd., 40, Museum Street. 6s. net.

An examination of the Five-Year Plan which leads to the conclusion that the Plan is economically unsound and that Russia is heading for bankruptcy.

Forced Labour in Russia? (London) British Russian Gazette and Trade Outlook, Ltd., Walter House, Bedford Street. 3d.

A collection of "facts and documents" designed to show that reports of forced labour in the Russian timber camps are grossly exaggerated.

La Crise Agraire. By Simon Enyedi. (Budapest) Imprimerie du Pester Lloyd.

A brief discussion of the wheat problem.

Movimento Commerciale del Regno d'Italia nell' anno 1927. Vol. II. (Rome) Istituto Poligrafico dello Stato.

The Italian trade returns for 1925-27 analysed by countries of origin and destination.

Rhodesian Manual, 1931. (London) Mining and Industrial Publications of Africa, Ltd., Africa House, Kingsway. 21s.

Contains the fullest information on everything the tourist or settler might want to know. There are chapters on the history and political organisation of the country, information on land purchase and housing, detailed accounts of all branches of agriculture, mining and mineral resources, and chapters on sightseeing, sport and motoring.

Legal Notes for C.A. Students. By D. G. Steen and R. Browning. (Edinburgh) William Hodge and Co., Ltd., 12, Bank Street. 6s. net.

A textbook intended to provide such general legal knowledge as is needed for accountancy examinations in Scotland.

The Law of Bankruptcy in Scotland. By Wm. Elder Levie. Third Edition. (Edinburgh) Wm. Hodge and Co., Ltd., 12, Bank Street.

A popular handbook.

The Horrors of the Countryside. By C. E. M. Joad. (London) The Hogarth Press, 52, Tavistock Square. 1s. 6d. net.

A collection of essays, depressing because so painfully true, on the terrible things that are happening to the British countryside.

The Countryman, April-June. Edited and published by J. W. Robertson Scott at Idbury, Kingham. 2s. 6d. An antidote to the above.

The Stock Exchange.

FIXED INTEREST STOCKS AND TRADE DEPRESSION—I.

IN theory, trade depression should tend to raise the prices of fixed-interest stocks, since it is commonly accompanied by a fall in money rates and a transfer of investment resources from equity to prior charge securities. So far as British Government stocks are concerned, the present industrial recession has been true to type. During the last eighteen months the yield on Three and a Half per Cent. Conversion Loan—a typical long-dated security—has fallen from £4 12s. per cent. to £4 6s. per cent., while the Actuaries' Investment Index shows a rise of nearly 5 per cent. in representative gilt-edged prices since the end of 1928.1

In most other cases, however, the experience of fixed-interest stockholders has been disappointing. The majority of the foreign bonds quoted in London are those of primary producing countries whose national income has been disastrously reduced by a fall of 30 per cent. in commodity prices over the past two years. The decline, over the same period, of about 35 per cent. in the average market price of Brazilian bonds and of 30 to 40 per cent. in that of Australian stocks, is readily comprehensible. Though depression in this country has proceeded to less extreme lengths, the enhanced "industrial risk" attaching to many British debentures and preference shares has more than offset any tendency to place a higher valuation on their "fixed" monetary yield. Whenever the public has regarded the "risk" as remote, prices have improved, the Actuaries' Index, for example, showing that investment trust debentures have appreciated by 5 per cent. and investment trust preference shares by 2½ per cent. over the last 2½ years. On the other hand, the same Index shows that, during this period, representative industrial debentures have fallen in value by 4 per cent. and industrial preference shares by as much as 14 per cent.

In normal times the equity earnings of any company provide a "cover" for debenture and preference holders. How far has the advancing tide of depression reduced this cover? An approximate answer may be based on our compilations of industrial profits, which show that 813 British companies which published their reports between January and April last, earned £93,506,000, a decline of £11,099,000 (10.6 per cent.), as compared with their previous earnings. From these profits, which were struck after debenture requirements of £11,857,000, total preference dividends were paid amounting to £24,085,000. Thus, if fixed-interest requirements had been identical in both years, the average debenture interest of the 813 companies would have been covered 9.8 times by the earnings of 1929 and 8.9 times by those of 1930. Preference dividends, on the same assumption, would have been covered 4.34 times in 1929 and 3.9 times in 1930.

These figures, so far as they go, are reassuring. They suggest that the net earnings of the 813 concerns might fall by nearly 75 per cent. without leaving any portion of preference dividends uncovered, in the aggregate. This statement, however, must be qualified by two considerations. First, the profit statements so far published do not show the full effect of current depression on earning power, since they include profits earned during the relatively favourable early months of 1930, and in the case of holding concerns may be based, in part, on dividends earned by subsidiaries in 1929. Secondly, the aggregate figures give no idea of the immense "spread" of profit fluctuations over individual industries, and, still more, over individual companies.

Some idea of the varying fortunes of different industries may be obtained by grouping the net profit figures pre-

viously given (with supplementary figures for a number of banks and home railways) under different industrial groups, in the order of relative stability:—

Group.	Number of Companies.	Net Profits (Reports published during first four months of 1931.)		Increase or Decrease.
		1929-30.	1930-31.	
Canals and docks.....	2	£ 17,492	£ 26,106	+ 49.25
Telegraphs.....	2	115,028	143,963	+ 25.50
Tramways.....	11	749,951	818,451	+ 9.00
Electric light and power.....	36	6,397,105	6,794,703	+ 6.21
Gas.....	43	3,751,814	3,874,119	+ 3.26
Trusts.....	86	6,589,795	6,548,121	+ 0.81
Waterworks.....	19	955,097	945,732	- 0.98
Breweries.....	27	2,840,372	2,786,969	- 1.90
Financial, land, &c.....	26	1,619,600	1,583,973	- 2.20
Shops and stores.....	48	6,952,142	6,594,976	- 5.00
Miscellaneous.....	283	55,937,565	51,910,709	- 7.27
Banks.....	23	17,235,190	15,270,737	- 11.39
Hotels and restaurants.....	9	489,575	422,253	- 13.75
Tea.....	26	869,980	721,610	- 17.05
Iron, coal and steel.....	42	5,560,717	4,586,232	- 17.52
Railways.....	6	35,647,853	28,970,365	- 18.73
Motor and cycle.....	14	3,407,008	2,767,394	- 18.77
Textiles.....	26	5,695,150	2,560,023	- 55.05
Oil.....	1	28,318	12,371	- 56.31
Shipping.....	14	1,325,961	546,136	- 73.89
Rubber.....	98	1,501,470	Dr. 144,213	- 111.09
Total.....	842	157,488,162	137,746,730	- 12.53

Allowance must be made for the over-weighting of some groups by the reports of a few large companies, and for the absence of sufficient reports in other cases (e.g., oil, telegraphs and canals) to make the figures really representative. Broadly, however, the greatest stability has been shown, so far, by public utility concerns—tramways, gas and electricity—followed by companies engaged in brewing, retail trading and finance. The worst results have been revealed by shipping, textile manufacture, and "speculative" primary industries, like rubber.

It is in these latter groups that fixed-interest holders have most to fear from the continuance of depression. Reductions in earnings of the order of 50 to 75 per cent. are obviously sufficient to threaten the "cover" of prior charges.

In this connection a crucial factor may be the relative importance of preference shares and debentures in the capital structure of a given company—or, to use a convenient term, the capital "gearing." A "high-gear" company, having, say, £5 of debenture and preference capital to every £1 of ordinary capital, may in good times show phenomenally large earnings per ordinary share. Whenever profits are tending to contract, however, its prior capital may be in a much more vulnerable position than that of a "low-gear" company, having, say, only 10s. of fixed-interest shares per £1 of ordinary capital.

In some cases this factor is of particular importance. Broadly, companies in industries requiring a large initial fixed-capital outlay tend to have a "high-gear" structure, while those which turn over their capital relatively quickly have a "low-gear" structure. For example, in the case of the four British group railways, the ratio of debenture and preference stock to ordinary stock is as 2.98:1. Among the 596 industrial concerns whose results were given in our last quarterly "Industrial Profits" article (see the *Economist*, April 11, 1931, page 775), some 21 brewery concerns had a "gear-ratio" of 1.72:2, 31 electric lighting concerns a ratio of 1.53:1, and 16 waterworks a ratio of 1.34:1. On the other hand, 26 textile concerns had a ratio of only 0.59:1, and 222 "miscellaneous" concerns a ratio of 0.60:1.

This factor is of even greater importance as regards the position of individual companies. The following table

shows the "gearing" of 11 large British concerns whose debentures and preference shares are widely held:—

Name of Company.	Total Debenture Capital.	Total Preference and Preferred Capital.	Total Ordinary and Deferred Capital.	Amount of Fixed Interest Capital per £1 of Ord. Capital.
	(£'000)	(£'000)	(£'000)	£
Unilever.....	2,596	11,419	0.23	0.23
Courtauld.....	8,000	24,000	0.33	0.33
Imperial Chemical.....	22,214	54,458	0.41	0.41
Bleachers.....	2,250	2,488	1.24	1.24
Cunard.....	4,420	2,500	1.24	1.24
Guest, Keen.....	1,775	6,535	1.29	1.29
Dunlop.....	6,306	4,400	1.36	1.36
Fine Cotton Spinners.....	2,750	3,940	1.52	1.52
Great Western Railway.....	38,152	67,082	2.19	2.19
London Midland and Scottish Railway.....	114,381	205,577	3.36	3.36
Cables and Wireless*.....	43,435	8,543	5.09	5.09

* See text below.

The gearing varies enormously, from that of Unilever, which has only £0.23 of fixed-interest stock in front of every £1 of its equity stock, and of Courtauld, which has only £0.33, to the London, Midland and Scottish Railway, with more than three times as much fixed-interest as equity stock, and Cables and Wireless, with more than five times as much (if the 7½ per cent. "A" ordinary stock be included with the fixed-interest capital).

The facts so far elicited suggest that while holders of British industrial debentures and preference shares still enjoy, in the aggregate, ample income cover, the decline in earnings in the more depressed industries and companies has gone sufficiently far to call for discrimination in investment policy, in certain cases. The ultimate security for preference shares—and even for debentures—is earning-power. In its absence, prior rights are apt to prove a broken reed. When profits are falling the relative speed and scope of their decline, rather than the absolute extent of the "cover" previously available for dividend requirements, may be deciding factors from the viewpoint of fixed shareholders. These considerations will be discussed at length in a succeeding article.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.	
TICKET. May 19.	ACCOUNT. May 21.

THE increasing irregularity and indisposition of the stock markets during the past week or two culminated this week in a series of all-round declines, which, in many cases, took quotations to fresh "record" low levels. Though liquidation was by no means of alarming proportions, dealers were unwilling to take on new commitments. All markets shared in the decline, and though anticipations of a fall in Bank rate (which proved well founded) induced slight bear covering on Wednesday, the effects of cheaper money were confined to gilt-edged stocks.

Even the gilt-edged market opened the week in poor style, in sympathy with a decline in sterling, but later additions to the Bank's gold reserve induced a recovery, accentuated by Thursday's announcement. Indian and Dominion issues were quiet, but, in general, shared the downward trend. Brazilian loans again enjoyed an exceptional recovery on a better view of the country's financial prospects. Renewed bearishness was apparent among Cillians, while Argentines relapsed, the movements of the peso being again far from satisfactory. Fresh support was forthcoming for Japanese bonds, but in the European section Austrians declined when the predicament of the Credit Anstalt became known, and German bonds were also extensively sold. Home Rails were adversely affected by Sir Ralph Wedgwood's evidence at the Railway Rates Tribunal, and fears for the status of some of the Prior stocks induced a pronounced slump, which took most prices to new low levels. The Home Rail position is discussed in a Note on page 1058. Foreign Rails were no better, heavy selling of Antofagasta following the cut in dividend, while Argentine Rails were marked down all round on the weakness of the peso.

Once again the Industrial market displayed considerable irregularity, but the trend was consistently downward. Transatlantic issues showed relative firmness at first, but as the week wore on they, too, were dragged into the vortex of depression. Electrical supply shares were out of favour, and, among engineering shares, Stewarts and Lloyds deferred were sold from the provinces. Confidence in textiles was upset by the unsatisfactory report of Fine Cotton Spinners (analysed on page 1060). The report of J. and P. Coats showed a large reduction in profits, but the maintenance of the dividend for the March quarter favourably surprised the market. Imperial Chemical and J. Lyons both came in for some forced selling from the North, the weakness of the former reflecting in part the decline in British Alizarine profits. Harrods came on offer, together with other stores, while breweries and tobaccos were alike dull, though the former strengthened in mid-week on the publication of several satisfactory interim dividends. Motor shares made a mixed showing, but in general lost ground. Insurance shares were heavy in the earlier sessions.

The oil share market showed a temporary improvement after the declaration of the V.O.C. dividend. Some strong buying of Royal Dutch and Shell preceded the announcement of the final dividends made on Wednesday evening, but disappointment over the figures induced further liquidation in all the leaders. The rubber share market enjoyed only a very meagre turnover, the fluctuations of the commodity having little effect on prices, which shared in the general tendency. Teas were as cheerless as ever, Budla Betas and Jokais leading all-round declines.

The mining share market remained dull throughout the week. Buyers were almost non-existent, and in the absence of support from Paris and Johannesburg prices drooped steadily. In the Kaffir section, Randfontein alone enjoyed a momentary improvement, but among Rhodesians, "Chartered" initiated a series of declines. De Beers deferred suffered a further shrinkage. Australians were marked down, and tin shares receded. Copper reached a new low level at £38 17s. 6d., but Tintos relapsed rather in sympathy with market psychology than with the metal.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Although prices showed no recovery, railroads on Tuesday reaching the lowest point since July, 1924, the immediate volume of liquidation showed signs of having spent itself. The weakness of rails was due mainly to continued anxiety over the absence of a check to the decline in earnings, an immediate factor being the announcement by the New York Central of a deficit of \$145,000 for the first quarter of the year, after allowing for taxes and charges, compared with a net income of

\$8,470,000 for the same period of 1930. Movements in all markets, however, became irregular as the week progressed, selling being intermittent and concentrated on individual issues, like J. I. Case, which is expected to reduce its dividend after next week's directors' meeting, and U.S. Steel, which was forced down to a new low level. The Corporation was working at 48 per cent. of capacity last week against 49 per cent. the week before, and the steel industry as a whole at 46 per cent. Last week's car loadings showed a rise of 16,019, but this was less than the normal seasonal movement. The chairman of the Farm Board has stated that Pacific Coast wheat is being steadily sold. A prominent exception to the prevailing market trend has been Woolworth, whose directors have approved a plan for the conversion of the English concern into a public company and the payment of a stock dividend to the parent. Details of the latter, with the announcement of a public capital offering, will be published in due course.

INVESTMENT NOTES.

Home Rail Position.—Though liquidation of Home Rail stocks was in the main of quite modest dimensions during the past week there were signs that diverse fears as to the future of the railways were crystallising, with unfortunate consequences to market quotations. Jobbers were at one time quoting three-point margins for trustee stocks in the Chancery List, and in the absence of support prices fell to new low records throughout the list. The following table demonstrates the extent of the decline:—

	Prices of 1930.		Price May 6.		Price May 12.		Yield.	
	Highest.	Lowest.	£	s.	£	s.	d.	s.
Great Western Ord. Stock.....	94	62 1/2	55 1/2	50	11	0	0	0

London and North Eastern 4% 2nd Pref. Stock.....	63 1/2	37 1/2	30 1/2	26 1/2	15	1	9	0
Southern Railway Def. Stock.....	32 1/2	21 1/2	18	15	8	6	8	0
Southern Railway 5% Pref. Ord. Stock.....	76 1/2	63 1/2	56	49	10	4	0	0
Southern Railway 5% Pref. Stock.....	96 1/2	82 1/2	83 1/2	83 1/2	5	19	9	0

No one factor was wholly responsible for the collapse of confidence. The announcement that the "Big Four" lines proposed to co-operate with the Passenger Transport Board in regard to their suburban traffic was interpreted by the "House" as a bear point, though the scheme, in its present form, has long been urged by all the companies. Hazy talk of electrification and possible nationalisation schemes added to the general feeling of insecurity. At the same time, the evidence of Sir Ralph Wedgwood at the Railway Rates Tribunal—in which Sir Ralph pointed out that the aggregate decline in traffic of the four lines to date was £5 1/2 millions, while the award of the National Wages Board meant a saving in a full year of little over £4 millions—was regarded as auguring ill for the immediate future. In the following table the declines in gross receipts are given for the first nineteen weeks of 1931:—

Company.	Passengers.	Merchandise.	Coal and Coke.	Total.
London Midland & Scottish.....	£ 566	£ 1,523	£ 158	£ 2,247
London and North Eastern.....	526	1,128	451	2,105
Great Western.....	315	521	462	1,298
Southern.....	278	131	50	379
Total.....	1,685	3,303	1,041	6,029

While there are as yet few signs of trade revival, it is probable that a too pessimistic interpretation has been placed upon the traffic receipts. Whereas the returns so far this year have compared with relatively good figures in 1930, the next seven months will afford comparison with an unfavourable period of 1930. Thus, though the aggregate decline to date totals over £6 million, it is quite possible that the fall will shortly be arrested. On the basis of estimates which have been put forward in the case of the Midland and Scottish, for instance, the decline, which so far totals £2,247,000, may not greatly exceed £4 million for the whole year. In that event,

the effects of the wage award—which means something like £1 1/2 millions to the L.M.S. this year—coupled with further economies which are being made in working expenses, should help to safeguard the trustee status of the preference stocks. It would seem that, given the absence of any further industrial trouble, particularly in the coal industry, the market is putting an unduly unfavourable construction on the home railway outlook.

Lord Kysant Summoned.—A rumour current on the Stock Exchange early this week, to the effect that Lord Kysant, chairman of the Royal Mail Steam Packet Company and other shipping concerns, had returned to this country on a semi-official request, appeared to be disproved by the Attorney-General's statement on Tuesday. This declared that no attention should be paid to the report that the Public Prosecutor would apply for summonses against "a world-famous business man." Less than twenty-four hours later, however, it was learned that two summonses had, in fact, been served upon Lord Kysant in relation to the affairs of the Royal Mail Company. In an interview with a Press representative, Lord Kysant is reported as having said that the summonses related to statements, alleged to be false in a material particular, in the Royal Mail Company's reports and balance sheets for the years 1926 and 1927, and had been issued from the office of the Director of Public Prosecutions. Summonses have also been served on Mr H. V. Morland, the auditor of the reports in question. The summonses are returnable for June 2nd next.

Dunlop Rubber Meeting.—Much the most satisfactory feature of the annual meeting of the Dunlop Rubber Company on May 8th last was the information given by the chairman, Sir Eric Geddes, regarding reductions in the costs of production. In spite of increased local rates and a tax now equal to 6d. a gallon on petrol (of which it uses 1,200,000 gallons a year) the company has effected such economies in its factories that, apart altogether from lower raw material prices, the goods produced in 1930 cost approximately £1,000,000 less to manufacture than they would have done in 1924. Similarly, costs of production on the company's rubber plantations have been reduced from 5 1/2d. per lb. f.o.b. in 1929, to 4.49d. in 1930, and a little over 3d. this year. The Dunlop directors remain wholeheartedly opposed to restriction in the rubber industry, either on voluntary lines or by Government intervention. The only hope for the industry lies, in their opinion, in the speedy elimination of the inefficient and expensive plantations. The reduction in manufacturing costs puts the company in a position to take immediate advantage of any turn in trading conditions, but when this will come, Sir Eric refuses to prophesy. In the first half of 1930 the company held its position remarkably well and was in some respects better off than in 1929. It was only in the second half of the year that the economic blizzard developed full force and upset the company's calculations. Indeed, sales abroad for the six months to July reached a new high record, but the slump at the end of the year was so severe that the yearly average sales in overseas markets made a low record. As regards the writing down of inventories, the total amount involved, including exchange losses, exceeded £600,000. This, in Sir Eric Geddes' opinion, could not have been avoided. The company's forward commitments of cotton and rubber at the end of the year were sufficient in quantity only to meet fixed contracts for the supply of tyres, and represented about one month's sales. Sir Eric dismissed as ridiculous the suggestion that the company had been speculating in raw materials. Less satisfactory was his statement regarding the leakage of information before the dividend announcement. Between May 20th and 27th, there was a fall of between 3s. and 4s. in Dunlop rubber 6s. 8d. shares, which are at present quoted at 6s. 6d. Sir Eric did not believe that there had been any leakage from the select few who knew the results before they were made public, and promised to devote his energies

to discovering where the leakage arose, if leakage there was. In the present temper of the markets, very little selling is calculated to depress the shares of even the strongest companies to a disturbing extent. The chairman's speech did not explain the reasons for the special transfer of £1,000,000 from general reserve to special reserve against interests in subsidiaries, on which we commented in our review of the year's results, in our issue of May 2 last.

Retail Hosiery Companies.—The recently published accounts of four men's outfitters—Austin Reed, Hope Bros., Horne Bros., and Meakers—suggest that, while in general there has been no falling off in business, the necessity of writing down stocks to current market prices has in most cases involved an appreciable decline in gross receipts. The accounts of Austin Reed for the year ended February 20th last show a trading profit of £117,552, compared with £125,424 for the previous twelve months. After deducting all expenses, but before placing £7,000, against £9,000 to income tax reserve, net revenue totals £78,281, compared with £85,939. Dividend on the increased ordinary capital is maintained at 15 per cent., absorbing £27,194, against £22,624. The sum of £20,000 is placed to reserve account, against £30,000, and £26,440 is carried forward, a slight advance on the amount brought in. The report of Meakers discloses a trading profit of £57,715, representing a decline of a little over £9,000; while net profit, after deduction of all fixed charges and after placing £5,000 to amortisation of leases account, amounts to £29,907, compared with an amount of £16,932 for 1929, struck after writing £20,000 off premises and fixtures. Last year's dividend of 5 per cent. on the ordinary shares is repeated, and is satisfactorily covered by earnings, while £2,712 is written off preference share issue expenses and £19,319 carried forward, against £18,813 brought in. Hope Bros.' results show a falling off in trading profit of roughly £17,000 to £71,604. Net profit amounts to £55,441, compared with £72,702 in 1929. The ordinary dividend is reduced from 10 per cent. to 8 per cent., the percentage earnings being just equivalent to the previous distribution. A further £10,000 is written off goodwill, and £1,000 added to benevolent fund. The carry-forward item is reduced by some £4,000. The report of Horne Bros. reveals a decline in income from £107,895 to £63,268, in spite of the fact that "the turnover for the year has been maintained to within 3 per cent. of the previous year." Though nothing was earned on the ordinary capital, the dividend is maintained at 5 per cent., with a consequent reduction in the carry-forward from £60,250 to £25,230. The £1 ordinary shares of Austin Reed give a yield of about £6 12s. per cent. at the current price of 2 1/2, while the ordinary shares of Hope Bros., at 3 1/2, yield about £8 5s. per cent., allowing for final dividend where necessary. The ordinary shares of Meakers and Horne Bros. are not quoted.

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

Fine Cotton Spinners.—The report makes no better reading than was to be expected. After payment of debenture interest totalling £110,000 and fees of £8,759 to a board of twenty-nine directors, there is a net loss of £345,703. For the third year in succession reserves are drawn upon, this time to the extent of £400,000, which makes possible the payment of the final dividends on the preference and preferred ordinary capital. The ordinary dividend, naturally, is passed:—

Year to March 31.	1929.	1930.	1931.

Carried forward	214,167	183,135	40,432

The balance sheet does not reveal a liquid position, cash and debtors amounting to £748,396, while on the other side £110,517 is owing to subsidiaries, £772,443 to trade creditors, etc., and £346,273 to the company's bankers. Among its assets, the company includes investments in subsidiary companies totalling £3,121,665, at about which figure they appeared in last year's returns. Reserve fund is reduced from £1,157,959 in 1930 to £737,959. The ordinary shares stand at 12s., against 21s. earlier this year.

Welsh Associated Collieries.—This combine was formed in January, 1930, by an exchange of shares, to bring under one management the old Llewellyn group of colliery companies, other colliery properties controlled by Guest, Keen and Nettlefolds, and the coal-selling organisation of Gueret, Llewellyn and Merritt. It controls about one-quarter of the whole South Wales output, though its properties are concentrated on the central steam-coal area of the coalfield. The first report, covering a period of just over eleven months to December, 1930, shows a net profit of £208,611, equivalent to roughly 2½ per cent. on the issued capital—a not unsatisfactory result in the unkindly circumstances. The profit would suffice to cover the dividend on the preference shares, which are cumulative, but the directors have decided to conserve their resources rather than to make any distribution. This policy may be readily understood from a glance at the balance sheet, which shows cash at £13,386 only, stocks at £59,492, and sundry debtors at £41,281, against creditors £235,132 and loans (including bankers' advances) £1,193,475. The company has evidently found it necessary to advance considerable sums to its subsidiaries for working capital (amounts due from subsidiaries exceed amounts owing to them from the parent company by £667,010) and to maintain a large bank overdraft for this purpose, pending the possibility of an intended debenture issue, which the unsettled conditions of the coal trade have hitherto prevented from being arranged. The directors state that very substantial economies have been effected, and that the amalgamation of interests has been completely justified—a claim which the profit figures certainly support. It is the more to be regretted that a merger of this sort for the elimination of waste was not brought into existence long ago, instead of the purely financial transferences and combinations of which the South Wales coal industry has had too much experience in the past. The company's directly owned colliery properties, lands, plant, etc., were valued at the end of the year by an outside firm of mining engineers at £321,004 over their previous book values; the new valuation has been adopted for the balance sheet, and the surplus taken to capital reserve account, enabling formation expenses and a small earlier loss to be written off therefrom, and leaving a net balance of £274,071 in the account. Shares in subsidiary companies, entered at cost, amount to £7,450,592, or more

than four times as much as the directly owned properties. It is unfortunate that economic and other conditions in South Wales are likely to make 1931 a difficult year for the company's operations.

Canadian Pacific Dividend Reduction.—At a meeting on May 6th, the directors of the Canadian Pacific Railway Company decided to declare a quarterly interim dividend of 3¼ cents, equal to 1¼ per cent. actual, per \$25 share, this being no more than half the rate maintained for the previous twenty years. Shareholders who had listened to the president's speech at the annual meeting, on the same day, were fully seized of the reasons for the break with tradition. Mr E. W. Beatty showed that a drop in gross earnings of \$19,308,000 in 1929 was followed by a further drop of \$28,830,000 in 1930. The latter was the heaviest decrease, with but one exception, recorded in any single year in the company's history. In one respect, however, the company is in a more advantageous position than its counterparts in Great Britain, since it has been able to effect economies, particularly in labour costs, on a much more significant scale. In 1929, working expenses were reduced by \$10,758,000 and in 1930 by a further \$23,934,000. These economies were effected not primarily by dismissals of staff—the average number of employees on rail operations last year being only 5.9 per cent. below 1929 and 8.01 per cent. below 1928, a year of heavy traffic. The company's policy has been rather to effect a shortening of time among the staff. Including the results of further measures which take effect this month, the reduction in expenses represents between 10 and 11 per cent. of the wages paid to employees in offices, stations and shops. A similar "cut," in which directors will share, has been made in the salaries of officials, from the president downwards. As a result, expenses have been further reduced, in the first three months of this year, by an amount equivalent to \$1,659,000 a month, so that a fresh decline of \$5,920,000 in gross earnings has been reduced to one of only \$943,000 in net earnings. Shareholders, however, have the president's assurance that, in making these economies, the company has not allowed its property to fall below a normal level of efficiency. A co-operative effort between the Canadian Pacific and the Canadian National Railways is being made to eliminate wasteful forms of competition. Apart from what the chairman described as the "growing influence" upon railway earnings of road competition, the date at which the normal dividend can be restored must obviously depend upon economic conditions in Canada, over which the company has little direct control. Meanwhile, it is clear that, in the light of Mr Beatty's speech, all possible steps are being taken to reduce to a minimum the impact of depression on net revenues, and that the exceptional strength of the company's internal financial position qualifies it to withstand, without question, the worst economic blizzard. The ordinary shares have fallen to 30, and yield 4.17 per cent. on the basis of a 5 per cent. dividend and 8.34 per cent. on a 10 per cent. dividend.

Brazilian Finance.—In view of the recent extreme fluctuations in the market prices of Brazilian bonds, special interest attaches to the informed review of the whole situation given by the chairman of the British Bank of South America at the annual meeting on Thursday. The chairman stressed the fact that Brazil was entirely dependent for its prosperity upon its export trade. In 1930, he declared, Brazil suffered greater difficulties than at any other time in her history, and these were accentuated, directly and indirectly, by Stock Exchange movements in the United States. The collapse in coffee prices produced a fall in her exchange, and a gradual paralysis of her commerce and industry, which led directly to the revolution. Coffee accounts for approximately 70 per cent. of Brazil's exports. Since the issue of the £20,000,000 Coffee Realisation Loan the Provisional Government, to cope with the situation, had purchased all the coffee in store except that purchased by the State of San Paulo in connection with the Realisation Loan. Of the

emergency issue of 300,000 contos of reis, authorised by the Provincial Government, the amount so far issued amounts to 170,000 contos. The chairman declared that Sir Otto Niemeyer, in his report on Brazil's finances, would probably stress the advisability of forming a central bank. Although certain difficulties stood in the way of such a proposal, he believed it to be in Brazil's best interests. The Provisional Government was carrying out a determined economy campaign. The total savings in expenditure and the yield from new taxes were expected to reach 800,000 contos of reis. The magnitude of the task is shown by Brazil's trade returns. In 1930 exports declined by £29,061,000 to £65,770,000, but imports dropped by £33,034,000 to £53,619,000, leaving a "favourable" trade balance of £12,151,000, against £8,178,000 in 1929.

City of Vilna Bonds.—On February 5th last bondholders were informed that interest payments would be resumed on May 15, 1931, after a lapse of sixteen years, and were advised against selling their bonds at the then ruling price. Negotiations were stated to be proceeding for the settlement of the debt. The facts may be briefly summarised. In 1912 the City of Vilna raised £449,160 in 5 per cent. bonds of 189 roubles, 945 roubles and 4,725 roubles, equivalent to £20, £100 and £500 respectively, redeemable within sixty-two years by means of annual drawings. The amount now outstanding is £446,820. At the time of the flotation Vilna was in Russian territory, and part of the proceeds of the loan were placed in banks in Petrograd for a period of not more than three years. In 1915 the Germans occupied Vilna, and 612,000 roubles were lost, later, when the Bolsheviks assumed power in Russia. This sum represented 23 per cent. of the total loan, and the war wiped out the greater part of the remainder. In the post-war negotiations the city claimed that the loan should be revalued under the Polish valorisation laws, since it was issued in currency obtaining in Vilna in 1912 and not in terms of sterling. In 1925 a registration of these bonds was carried out, and has had an important part in the settlement which has now been made. Holders coming within the registrations yesterday received interest covering the past six months. On lodging their bonds with the British Overseas Bank within the next three months they will receive new bonds of equivalent face value. Thus, the holder of a bond of 945 Imperial roubles (£100) will receive a new bond of £100 bearing interest at 5 per cent., redeemable before November 15, 1990, by annual drawings and purchases. Holders not included under the 1925 registration must give proof of their nationality on May 21, 1925, within the next three months, though holders who find difficulty in doing so may obtain an extra three months' grace. The terms also provide for the virtual assumption of responsibility by the Polish Government. The Bondholders' Committee in London, which claims to represent approximately £350,000 of the total issue of £449,160, has issued a protest against the proposed differentiation between some bondholders and others, which it declares was not mentioned in the course of the negotiations with the Polish Government. It contends that the terms are "impossible of fulfilment in the case of bearer bonds, which change hands with the freedom of a bank note." The committee also states its intention to continue negotiations in regard to the arrears of interest to November 15th last, amounting to £77 10s. per £100 of stock.

Gillette and Auto-Strop.—In commenting on the announcement of the reported merger of the Gillette and Auto-Strop interests (see the *Economist*, October 11, 1930), it was hinted that, although Gillette's assets at the end of 1929 stood at nearly ten times those of the Auto-Strop company at the same period, Gillette was by no means likely to be the leading partner in the new combination. That this forecast was accurate is suggested, not only by the actual terms of the merger, but by the number of leading positions in the new combined company which are to be occupied by Auto-Strop

members. At the annual meeting of the new company, held on April 21st last, Messrs Frank J. Fahey, Thomas W. Pelham and Ralph E. Thompson, former Gillette directors, were not re-elected. In the new combine, Mr King Gillette continues as president, and Mr J. E. Aldred, of the banking house of Aldred and Company, as chairman of the board. The active direction of the new company has, however, been placed in the hands of Mr Henry Gaisman, who has been appointed chairman of the management committee of the Gillette Auto-Strop Company. Mr Gaisman is the inventor of the Auto-Strop razor and blade, and the founder of the Auto-Strop Company. It was the alleged infringement of his rights that led to the legal action against Gillette and the subsequent merger. Although the sales and advertising of the Gillette, Auto-Strop and Probak lines (the last-named is a separate product of the Auto-Strop Company) are all to continue in vigorous competition, the handling of the giant advertising account has been entrusted to the agents of the former Auto-Strop Company. The advertising budget for the year will be practically as large as the amounts spent by Gillette and Auto-Strop in 1930, and may total £1,200,000, the proportion of announcements allotted to the various products being 788,000,000 for Gillette, 555,000,000 for Probak and 157,000,000 for Valet Auto-Strop. Campaigns will be run in virtually every country in the world. Before its acquisition of Auto-Strop last winter, the Gillette Company was reputed to be doing 75 per cent. of the world's safety-razor business. It is believed that the merger has increased the Gillette-Auto-Strop proportion to about 85 per cent.

German Industrial Dividends.—Most German industrial companies publish in April their results for the preceding calendar year, and as the quarterly dividend is an unknown institution in Germany, and there are no reliable reports by the companies apart from the annual balance sheet, these provide the first official information the public has received as to the effect of the depression upon the course of business. Recent dividend announcements have, in fact, been more favourable than was anticipated, writes our Berlin correspondent. True, the average dividend, as far as it is yet ascertainable, has fallen by 1 to 2 per cent., but in spite of cautious accounting and substantial allocation to reserves, many companies have still been able to maintain their dividends unchanged. The credit banks, with the exception of the Reichsbank, have all reduced their dividends, most of them by one-third, but the mortgage banks have maintained their distribution unchanged. Shipping company profits are substantially reduced, though Hapag and Lloyd have been enabled by special receipts to pay 6 per cent. against 7 and 8 per cent. respectively last year. The following table shows the dividends of some of the chief German companies:—

DIVIDENDS PER CENT.

	1929.	1930.		1929.	1930.
Coal and Iron—			Electricity—		
Vereinigte Stahlwerke	6	4	Siemens & Halske	9	7
Phoenix	6½	4½	Siemens-Schuckert	14	14
Mitteldeutsche Stahlwerke	8	6	Brown Boveri	10	7½
Harpener	6	0	Gesfired	9	5
Buderus	6	4	Lahmeyer	10	9
Oberbedarf	6	0	Engineering—		
Ilse	10	10	Demag	5	5
Potash—			Schless-Defries	7	7
Salzdetfurth	15	15	Linde's Eisemaschinen	14	15
Aachener	10	10	Schubert & Salzer	16	12
Westphalen	10	10	Ming	10	0
Burbaach	12	12	Miscellaneous—		
Wintershall	12	8	Sarotti (chocolate)	11	7
Building—			Goldschmidt (chemical)	5	0
Holzmann	8	8	Sachtelen (chemical)	12	12
Berger	20	20			
Grün & Biffager	15	15			

It is evident from the dividend announcements that coal, iron and steel-producing companies have suffered severely from the economic crisis; only those which produce lignite have maintained their dividends. Electrical results are uneven, but here as in engineering the setback is slight. Potash and building firms have done very well. The chief textile companies have not yet announced their dividends.

Shell Union Oil.—The passing of the dividends on the common shares since June, and the publication of unsatisfactory earnings for the first three-quarters of the year, had prepared the market for a disappointing annual statement from the Shell Union Oil Corporation, but scarcely for the calamitous figures which have now been disclosed. There is, however, one comforting feature about the Shell Union statement, namely, that the Corporation maintains its conservative policy of writing down its stocks of oil to current market values—a virtue which cannot be credited to some American oil companies. Approximately half the amount allowed for depreciation and drilling expenses represents actual depreciation or the writing down of inventories. The trading results and the distribution of the profits of the Corporation are shown in the following table:—

	1928 \$	1929 \$	1930 \$
Gross income (less minority interests)	68,606,789	72,848,909	48,142,537
Depreciation, depletion, drilling expenses, &c. ...	44,012,282	50,478,786	46,700,224
Interest on debentures, including amortisation of discount and expenses...	4,199,486	4,796,874	6,537,887
Balance	20,395,021	17,573,249	Dr. 5,095,574
Preference dividends	...	1,045,000	2,200,000
Available for com. divs....	20,395,021	16,518,249	Nil
Available per share	\$2.04	\$1.26	Nil
Common divs. paid	14,000,000	18,285,986	9,148,867
Common divs. per share ...	\$1.40	\$1.40	75c.
Surplus	6,395,021	Dr. 1,757,737	Dr. 16,444,441
Brought forward	30,628,358	37,023,378	35,265,642
Carried forward	37,023,379	35,265,642	18,821,201

In spite of the heavy loss, there is still a comparatively large surplus, carried forward, of \$18,821,201. Moreover, the liquid financial position of the Corporation has been well maintained. The balance sheet discloses total current assets of \$101,863,701, as against current liabilities of \$28,394,177. The trading results, however, are bad, and those of the first quarter of this year are even worse. A loss is shown, after interest, depletion and depreciation (including the writing down of crude oil stocks by \$1,000,000), of no less than \$9,903,472, as compared with a loss of \$3,155,008 in the corresponding quarter of 1930. At the present level of retail prices, few American crude oil companies are earning profits, except the pipe-line companies which are handling a glut of oil. Shell Pipeline Corporation, for example, earned in the first quarter \$3,787,985, against \$3,671,181 in the corresponding period of 1930. In view of the heavy loss reported for the first quarter, it seems doubtful whether the Shell Union directors will consider it wise to continue to pay preference dividends which are not being earned. When the turn in the oil industry comes, the Corporation will, of course, be able to advance quickly to a dividend-paying position, seeing that, unlike many other companies, it will have no further writing-down of inventories to effect. The 5½ per cent. convertible preferred shares, which have been as high as 78 this year, have fallen to 27, and the common shares, which were as high as 25½ in 1930, and have been 10½ in 1931, are now quoted at 4½.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.,"

8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Oil Dividends.—The dividends declared by the Royal Dutch-Shell group of companies, on the whole, have been of a reassuring nature. Of the producing companies, while the Anglo-Egyptian Oilfields has reduced its dividends from 2½ per cent. to 1½ per cent.—as a result, doubtless, of difficulties in the Egyptian markets, which have been flooded by cheap Roumanian and Russian oil—the Venezuelan Oil Concessions has declared a final of 12½ per cent., making 17½ per cent. on its increased capital. This is equivalent to 23½ per cent. on the old capital, on which 20 per cent. was paid in respect of 1929. In view of the fact that the V.O.C. is now restricting production to 25 per cent. of its 1930 output, this dividend has come as an agreeable surprise to the market, although the directors had previously announced that the aggregate profit for 1930 would be approximately the same as that earned in 1929. The dividends of the holding companies were made known on Wednesday. Royal Dutch declared a final of 7 per cent., making 17 per cent., and Shell Transport a final of 7½ per cent. tax free, making 17½ per cent. tax free for the year. Thus in each case the final dividends were halved, the decision being in accord with general expectations in the market. The two companies have been deprived of Shell Union dividends for the last half of 1930 (equivalent to about 3½ per cent. on their respective ordinary share capitals), while the earnings of their wholly-owned shipping and marketing companies have been adversely affected by the 1930 decline in oil prices and consumption. The prices of Royal Dutch and Shell ordinary shares fluctuated widely on these announcements, and closed on Thursday at 17½ and 2½ respectively, as against 19½ and 2½ at the beginning of the week. The Burmah Oil Company is paying a final dividend of 12½ per cent., making a total of 22½ per cent., against 30 per cent. for 1929.

Tin Restriction.—A good deal of importance is attached to the meeting of the representatives of the Dutch East Indies, British Malaya, Bolivia and Nigeria, comprising the International Tin Commission, which is convened at the Hague for to-day, May 16th. It is generally assumed that the inter-Governmental Commission will recommend severer output restriction. It has also been rumoured that one of the countries outside the international restriction agreement (possibly Siam) will "join up." Clearly, the rate of restriction so far enforced has been insufficient to bring supplies and consumption into equilibrium. There was an increase in visible supplies and carry-over in the East last month of a little over 3,000 tons, following an increase in the first quarter of the year. From £123 a ton in the middle of March the price of tin has fallen to below £103 a ton, though at the moment of writing it is slightly harder at £104½ per ton. The anxiety of high-cost producers to tighten up the restriction scheme is easily understood. The part played by Signor Patino, for example, in the restriction movement, may be viewed in the light of the annual report of Patino Mines, which has just been issued. Allowing for a profit of £82,055 from the railway, there is an actual loss on mining operations of £240,059, as against a profit of £1,079,099 in the previous year. The Patino Mines are the largest tin producers in the world. Their output last year was 17,100 tons of fine tin, against their present quota of 15,000 tons under the restriction scheme. The average cost per ton was £118 9s. 5d., excluding depreciation, though actual costs in the last quarter of the year were reduced to £109 16s. 7d. The latter figure, however, was raised to £135 2s. 6d. after allowing for depreciation and depletion. It is not altogether difficult to understand the opposition to the restriction scheme expressed by the low-cost producers in Malaya, who declare that they have been compelled to reduce their output by 22.62 per cent., compared with only 16.4 per cent. in the case of the Dutch East Indies.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Bank of South America, Alliance Assurance, Commercial Union Assurance, Liverpool and London and Globe Insurance, World Auxiliary Insurance, Yorkshire Insurance, Oriental Telephone and Electric,

British Shareholders Trust, Calcutta Electric Supply, Cawnpore Electric Supply, London Asiatic Rubber and Produce, British Match Corporation, and Dunlop Rubber. At the annual meeting of the London Asiatic Rubber and Produce Company the chairman pointed out that the fact that about half the world's output of rubber was produced by Asiatic smallholders, of many different races and languages, scattered over a number of countries, made it impossible for any satisfactory and equitable system of voluntary restriction of output to be organised. At the annual meeting of the British Match Corporation the chairman referred to the company's Scottish timber estates, situated at the head of the Holy Loch on the Clyde, where Bryant and May owned close on 7,000 acres, which they were afforesting with timber particularly suitable for the match business. Up to the present 3½ million young trees had been planted on an area of 1,500 acres. The speeches of the chairmen of the British Bank for South America and the Dunlop Rubber Company are discussed on pages 1060 and 1059 respectively.

COMPANY MEETINGS, &c.

DUNLOP RUBBER COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

UNPRECEDENTED FALL IN RAW MATERIAL.

SIR ERIC GEDDES ON POSITION AND PROSPECTS.

The thirty-second ordinary general meeting of the Dunlop Rubber Company, Limited, was held, on the 8th instant, at the Whitehall Rooms, Whitehall Place, London. S.W., the Right Hon. Sir Eric Geddes, G.C.B., G.B.E. (the chairman of the company), presiding. Mr C. Tennyson (the secretary) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: My Lords, Ladies and Gentlemen,—Those of you who heard or read my speech at the last general meeting of shareholders will have realised that the causes which have brought about the result of last year's trading, and possible effect of these causes, were then very present to the minds of your board. You will remember that I dealt somewhat fully with the unfortunate effects of taxation and political uncertainty on the position of British industry, referring to these as factors which, looking to the future, we could not disregard. I continued in these words: "But it is not only at home that we trade, a large proportion of our business is export business, and when one looks at the unrest and disturbance, financial, political and economic, in every quarter of the globe—Australia, India, China, Egypt, South America, Russia, Poland—I doubt whether in the history of organised business there has ever been a time when greater uncertainty existed."

Unfortunately, the events of the past year have given to these adverse factors the fullest possible weight. Here at home, high and ill-adjusted taxation and continued political uncertainty have maintained their adverse influence. Moreover, the unrest and disturbance in our export markets to which I made reference developed to a degree which your board, in spite of the most careful study, could not foresee. Indeed, I do not think that anyone, whether statesman, economist or man of business, foresaw the full intensity of the depression, nor the suddenness with which the economic avalanche was to descend upon us in the latter part of the year. This avalanche has resulted in unbalanced Budgets in many of the most important countries of the world. In our own country there has been a deficit of over £37,000,000. In America, an adverse balance of over £160,000,000 is anticipated.

In Australia, the year closed with a deficit of £13,000,000, and in Italy the first eight months showed a deficit of about £11,500,000, which is four times as great as the deficit at the corresponding date last year. Causes which have so staggered Governments were bound to upset the calculations of commercial and industrial companies also, and it is not surprising that in almost every branch of business profits are being heavily reduced and even turned into losses.

FALL IN RAW MATERIALS.

Our own company is, as you know, international, doing an unusually large proportion of its business overseas in every quarter of the globe. It was inevitable, therefore, that we should feel in full severity the force of the economic and political blizzard which has overwhelmed the world. It will perhaps be well for me to remind you of the chief factors of this depression as they affect our own business.

The most startling feature has perhaps been the unprecedented fall in the price of raw materials and foodstuffs. To take those materials which are most important to this company, rubber fell during the year from 8d. to 4½d. per lb. As you know, the price has fallen much lower since then. Cotton fell from 9.24d. to 5.34d. over the year, and the same has been true of almost all, if not all, of the principal commodities, wool, copper, tin, wheat, for example, all having fallen somewhat in the neighbourhood of 40 per cent. Many people think that falling prices of foodstuffs and materials must be beneficial to the world, but this is emphatically not true of such a landslide as that from which we are now suffering. Low prices mean an excess of supply over demand. The producers of these materials, who are the most important customers for manufactured goods, cannot sell their produce, and, therefore, have no money to buy manufactures, and the continually falling price level makes purchasers hold off the market in the hope that, by doing so, they will be able to buy more cheaply later on. Meanwhile, producers, in the hope of some form of voluntary or Government restriction being enforced upon the market, or in a desperate effort to secure some return towards the reduction of their overhead charges, continue to produce, with the result that stocks accumulate, thus depressing price levels still further, and still further postponing the day of

liquidation and return to normality. I could give you a number of index figures illustrating these points, but, in the interest of brevity, I have contented myself with putting certain figures in tables and graphs at the end of the speech so that you can consider them at leisure. They will repay study as they show quite clearly the causes which have so materially contributed to the reduction of the earnings of your company during the past year. Not only has the purchasing power of our important customers been curtailed, but in countries like the Far East, where we have done good business, the fall in exchange has torn the fruits from our grasp.

The most remarkable feature of the slump has been the extent to which it developed towards the end of 1930.

I have referred to political disturbances in various parts of the world, but there is one in particular which has affected our trade seriously and is still doing so. I refer to India, one of our most important overseas markets. Our business there in the first half of 1930 showed definite increases over 1929, but later the political disturbances in many parts of the country and the pronounced boycott of British goods so affected our business that by the end of the year our turnover showed a substantial drop as compared with 1929. Incidents of this kind, and I could cite many more, are entirely outside the control of your board.

I hope I have made it clear that your company could not possibly have escaped these adverse conditions operating throughout the world during the latter part of 1930.

THE ACCOUNTS.

The total profits from all sources for 1930, after providing for depreciation in the accounts of the whole group of companies, amounted to £1,250,963, as compared with £2,307,354. There has, therefore, been a decrease in profits of about 46 per cent. Out of these net profits for 1930 the dividends on the preference shares of the Dunlop Cotton Mills, Dunlop Plantations, and Dunlop Rubber Company (India) have been paid, absorbing £309,750, and also interest on debentures, loans, etc., £399,789, leaving a balance as shown by the profit and loss account of £541,424. Adding to this balance the £782,328 brought forward from last year, the sum of £1,323,752 is available for disposal. Out of this we have transferred to taxation reserve £100,030, bringing that reserve up to £444,300, as shown in the balance sheet. The preference dividends for the year, less income tax, absorb £290,625, and the interim dividend at the rate of 6 per cent., less income tax, paid upon the ordinary shares on October 11th last absorbs £365,074, leaving a balance of £568,023, which it is proposed to carry forward to next year. In view of the falling off in the profits no further distribution to the ordinary shareholders can be made.

When year after year I have told you that our efficiency was never so high, and that our costs of production were falling, I have sometimes felt that perhaps I failed to make myself understood, and that my audience did not appreciate what I meant. I want you to realise what the statement means.

First, let us remember that our costs are inflated with crushing taxation necessitated by National Debt obligations and charges for social services undreamed of a few years ago; by very high local rates; and now there is 6d. a gallon tax on petrol, which is one of our raw materials, and of which we use 1,200,000 gallons a year. Our competitors abroad have no such burden to bear, yet we are still, owing to our very competent management, able to produce at competitive costs, which is something of which we have reason to be proud.

Put it another way, our progressive economies at Fort Dunlop alone since 1924, eliminating material cost, have been so great that if the production of 1930 had been at the costs of 1924, the cost of converting the raw material into manufactured products would have been approximately £1,000,000 more than it actually was.

ECONOMIC BLIZZARD.

For the first half of the year 1930 profits held up remarkably well, and in some directions were ahead of 1929. It was not until the last quarter of the year that the economic blizzard developed its full force, and it was the conditions during this period that upset our calculations. Nevertheless, the profits are substantial, and indicate what the company could have achieved had world conditions been normal.

The general economic conditions of 1930 I have already described. Their effect upon the affairs of your company has been that in the last three months of the year there was a heavy fall in sales, particularly in our Continental and overseas markets. For example, our overseas sales of motor covers from our home factories for the first six months of 1930 were nearly a high record for the past six years, but by the end of the year sales had so dropped that our total for the twelve months made a low record.

From almost a high record for the six months to July we drop to a low record for the twelve monthly period. The slump at the end of the year was the more remarkable as our past experience has been that in the export field the second half-year is generally better than the first half-year.

Other consequences of the economic depression were a heavy fall in foreign exchanges, particularly in South America, China, Australia, Spain and Persia, which directly involved your company in serious book losses, not all of which, I am glad to say, represent realised losses to date. Similarly declining values made it incumbent on us to write down our inventory valuations for balance-sheet purposes, but this again does not altogether mean a realised loss. Under the heading of exchange and inventories for the whole group of companies, the total amount involved exceeds £600,000, but no part of this, so far as it does represent a loss, could have been prevented.

In September, when the board was considering the payment of an interim dividend, the figures then available, which were as up to date as possible, and which fully justified the payment, gave no indication of the avalanche that occurred in the later months of the year.

In the notice accompanying the interim dividend it was stated, "I am instructed by the board of directors to advise you that the trading position of the company has been maintained in a most satisfactory manner during the first six months of 1930." This statement was fully justified by the results for the first half of that year from home sales, export shipments, and sales of overseas factories.

We have not been alone in feeling the effects of the storm that has raged over the industrial world in general and the tyre and rubber industry in particular, and it may interest you to know that, taking the published figures of the twelve largest rubber companies in America, they show that whereas in 1929 profits totalled \$37,196,000, in 1930 the corresponding figure was a loss of \$20,488,800. These figures, I think, give a striking illustration of the effects of the unprecedented slump that has taken place during the year under review, a slump most severely felt in the export field, where we are for better or worse involved to a far greater extent than most competing tyre companies.

The balance-sheet position, I think you will agree, is a very strong one, as there is a surplus of current assets over current liabilities of £3,444,986, this surplus having increased during the year by £570,413.

FUTURE PROSPECTS.

You will expect me to say something now as to future prospects. You will remember that last year, speaking, as I said, with a full sense of responsibility, I referred to certain favourable factors in our then position. I will quote my own actual words:—

(1) The quality of our products, as proved by very complete records, was never so high.

(2) Our plant throughout the organisation was never so up to date or in better condition.

(3) The efficiency and economy of our tyre and rubber factories were never greater, and the wages of our employees have improved with the increased efficiency and have steadily risen since the reconstruction.

(4) Our relations with our employees have never been better, and are excellent.

These statements I can still, with the same full sense of responsibility, repeat to-day, and although unfortunately I cannot say, as I did last year, that the demand for our products throughout the world has never been so high, I can and do assert that our proportion of the available world business has never been so great as it is now.

I can repeat also what I said of our plantations. They are producing at the lowest figure which they have ever attained and with a record weight of rubber per acre and in total. In 1929 the average f.o.b. cost for rubber for all our estates over the year was 5½d. per lb., and you will remember that I forecasted a cost for 1930 of less than 5d. In fact we have in 1930 reduced this to 4.49d., and still further reductions are in prospect. For this year we estimate a cost of a little over 3d. without any relaxation of upkeep. You will see, therefore, that as soon as trading conditions revive, the company is in a position to take immediate advantage of the opportunity.

Unfortunately it is impossible yet to forecast when this opportunity may arise. The depth of the depression is without precedent,

and its duration already exceeds past experience. The indication is that recovery will be a long and painful process. The great accumulation of stocks to which I have referred, and political and economic conditions in such countries as Australia, India, Germany, Spain, South America, Italy and the East are serious adverse factors.

FISCAL PROBLEMS.

In our own country there is also an element of uncertainty due to political conditions. The demand for a change in our fiscal system has been growing insistent during the past few months, although it seems that the present Government has decided to ignore it. I referred last year to the vital importance to this company and to the automobile and allied industries as a whole of retaining the McKenna Duties. I am glad to say that these duties are still in operation, but other industries have lost the modest protection which they enjoyed, and the McKenna Duties are threatened.

I will not go into this controversial question to-day, except to call attention to one all-important argument which I do not think politicians or even economists have ever appreciated at its real value. I mean the very great change which the development of mass production has introduced. Mass production, depending as it does on heavy capital expenditure on machinery and equipment and a heavy annual expenditure on research, supervision, and control, involves a great increase in those factors of cost which do not vary, or vary very little, with the rise and fall of output, and a substantial decrease in the relative importance of the cost which does so vary.

This expenditure, which makes for economy, cannot be undertaken unless there is a reasonably secure market of sufficient volume to ensure the necessary minimum demand which is required to cover the non-varying cost. There is no way of securing such a market except under a fiscal system which will reserve the necessary proportion of the home market to home manufacturers. Unless this is done, our industries not only cannot themselves obtain the full benefit of mass production economy, but they become exposed to the full force of attack from mass production industries in competing countries. These industries, having a secure home market, are able to sell their surplus production here well below full production cost—in fact, at any price which will secure them even a small return towards their overhead expenses.

BOARD'S VIEWS ON RUBBER RESTRICTION.

The discussion which has been going on intermittently for many months regarding the possibility of restriction in the rubber plantation industry is another factor of uncertainty which is affecting us very adversely. Your board are unanimously and wholeheartedly against any proposal to reimpose restriction, either voluntarily or by Government intervention. As I said last year, we feel that there is a big future for the plantation industry, provided scientific production and economic management are generally adopted. The best hope for the plantation industry is the speedy elimination of the inefficient and expensive plantations. So long as it is believed that there is a chance of restriction, the inefficient producers will hang on and maintain excess production. It is the view of your board, therefore, that the sooner the bogey of restriction is finally laid, the sooner will the rubber plantation industry return to prosperity.

I am afraid the world picture which I have drawn is a somewhat gloomy one. We can at least derive encouragement from the intrinsic strength of the company's position, which the events of the closing months of last year have in no way impaired. On behalf of your board, I can repeat with all conviction the closing words of the speech which I made to you in this room last year:—

"We view the future with confidence, and in the knowledge of our conserved strength. What we require is the renewal of trade so long overdue. We are fully equipped to cope with it. So far as we are concerned, we shall go on in faith and courage, developing the great organisation which you have entrusted to our hands."

I hope that with that statement shareholders will feel that the board has fulfilled its trust to them in the care of their interests in every possible way. Other companies in the same industry as ourselves have suffered very much more severely than we have. We have made economies which are startling in their magnitude. We feel that in the interests of everyone we are doing our best all over the world, and I hope that my speech has brought that home to you. No one regrets more than I and my colleagues do that this should have been a lean year; but it is not a Dunlop lean year; it is a world lean year, and we have made a very fair and substantial profit.

Sir J. George Beharrell, D.S.O. (managing director), seconded the resolution, which was carried, after the Chairman had fully replied to questions and observations of shareholders.

ALLIANCE ASSURANCE COMPANY, LIMITED.**RECORD NEW LIFE BUSINESS.**

The annual general Court of the Alliance Assurance Company, Limited, was held on the 13th instant, in London.

Mr C. E. Barnett (the chairman) said that a year ago he referred to the proposals then before Parliament relating to single premium policies, and deplored the fact that the Chancellor of the Exchequer, in his attempt to legislate against what had become an abuse, was inflicting injustice and hardship on the companies which had confined themselves to business of a perfectly legitimate character. Fortunately, the Chancellor eventually yielded to the strong representations made to him, and the proposals were amended. In the result all the policyholders who took out these single premium policies with the company had the satisfaction of knowing that the privileges which they were led to expect when they effected the policies would be allowed to continue.

Notwithstanding the cessation of this particular form of single premium policy, the actual net new life business completed during the year amounted to £3,210,646, which was £183,208 above that of 1929, and was the largest amount ever transacted in one year by the company. The premium income, however, in the active Alliance account was £82,321 less than in the previous year, and this drop was due entirely to the large diminution in the single premium business. The Alliance life and annuity funds increased during the year by £811,715, and the total life and annuity funds, including the closed funds, amounted at the end of the year to £22,300,375.

FIRE AND MARINE RESULTS.

In the fire department the company had a fairly satisfactory year having regard to the prevailing conditions. The premium income, £2,046,170, was only £13,638 less than in the previous year and, in view of the great depression in trade and the consequent reduction in stocks held by merchants and others, they could not complain of this comparatively small reduction in income. The surplus on the account, after providing for unexpired risks and including interest, was £447,876, which was only a few thousands less than a year ago.

From the marine account they had been able to transfer to profit and loss the sum of £73,232, which compared with £59,002 transferred a year ago. Moreover, this year they had set aside £40,000 to provide for future claims, as compared with £25,000 similarly set aside a year ago. The results, therefore, showed a substantial improvement. During the year marine underwriters had had under very serious consideration the unfortunate results of the rate cutting which had been going on for some years. When trade improved it might reasonably be expected that these efforts to put marine business on a healthier footing would show satisfactory results.

ACCIDENT DEPARTMENT.

As to the accident department, the Road Traffic Bill referred to a year ago, had now become an Act, and its insurance provisions came into force on January 1, 1931. It was feared that claims from third parties would be more frequent, and that there might be a tendency on the part of juries to award larger damages, as it would be assumed that in every case an insurance company would have to pay. Notwithstanding the increased liabilities, the offices generally had decided to make no change in existing rates of premium for the present, but the experience would be carefully watched, and the rates of premium reviewed when sufficient information as to the results of motor business was available. The company obtained some new business towards the end of the year, but most of it was not of a specially attractive character.

There had been a further setback in workmen's compensation premiums, owing to the continued depression of trade. In addition, they had taken steps to cancel a section of the business in Canada which had proved unprofitable, and the result was that the total premium income on the combined accident accounts for the year was some £50,000 less than in 1929. It was gratifying, however, that the actual profit on the accounts was substantially higher, and that they had been able to transfer £140,916, in addition to £63,352 interest, to profit and loss account.

The profit and loss account showed that they had carried £100,000 to reserve and £50,000 to pension reserve, and that the balance carried forward was £1,230,964, which was practically the same as the amount brought in.

In conclusion, the chairman announced his retirement from the office of chairman, after having served as a director of the company for fifty years.

The report was unanimously adopted, and a dividend of 18s. per share (less income tax) for the year was declared.

A vote of thanks was passed to the chairman, directors and staff, coupled with a request that the chairman should have his portrait painted and hung in the board room.

YORKSHIRE INSURANCE COMPANY, LIMITED.**FAVOURABLE RESULTS IN DIFFICULT YEAR.**

The hundred and seventh annual general meeting of the Yorkshire Insurance Company, Limited, was held, on the 12th instant, at the Royal Station Hotel, York, Sir James Hamilton (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, after referring to the changes in the directorate and those of associated companies, said: Last year I referred to the unfavourable conditions prevailing in the world of commerce and finance, and its effect on insurance business generally. Notwithstanding this, we then reported an increase of £141,000 in our premium income in the fire and accident departments. It was hoped that the trade conditions in 1930 would show some improvement, but this has not been so. This is reflected in the reduction in our fire and accident premium incomes, which are less by some £76,000. That the decrease is limited to this amount speaks well for the energy put forth by the company's officials and agents. The abnormal situation in the United States is accountable for a drop in income in excess of the £76,000 mentioned, thus indicating that elsewhere we have more than succeeded in maintaining our position.

INCREASE IN NEW LIFE BUSINESS.

In the life department, despite the adverse circumstances prevailing, we are able to report an increase in the new life business of about £83,000 sums assured, after deducting reassurances. I wish to bring to your notice a new scheme of life assurance which we are undertaking; the contract is called the "security" policy, and, briefly, it provides a much larger income in the event of the policyholder's death within 20 years than could ordinarily be obtained by investment of the capital sum assured. The scheme is capable of variation in details to suit individuals—for example, on the basis of a nominal sum assured of £1,000 provision can be made for the payment, should the life assured die within 20 years, of: (a) £250 to cover immediate needs; (b) an income of £3 per week for the remainder of the 20 years; and (c) at the end of that period a cash payment of £750. While, if the life assured survives the 20 years, the sum of £1,000 is payable at death, and after age 65 no further premiums are payable.

DEPARTMENTAL ACCOUNTS.

I will now briefly run through our departmental accounts, the figures relating to which are in front of you.

Life Account.—The net new sums assured were £1,653,048, an increase of £82,888, while the claims by death £166,055 are less by £16,146. The life fund has been raised by £378,632 to £6,854,204, the expense ratio being 12.9 against 13 per cent.

Sinking Fund Account.—The premiums are £35,226 against £36,399, and the fund £313,365 as against £302,377.

Fire Account.—The premiums £1,026,784 show a reduction of £41,592 for the reasons already explained. The losses £527,992, a reduction of £37,073, and the sum of £125,544 is transferred to profit and loss account, as compared with £107,704 last year.

Accident Account.—The premiums £1,348,010 show a reduction of £34,634 and the losses £761,293, an increase of £14,359, but the sum transferred to profit and loss account is greater than last year by £18,722—namely, £80,643.

Marine Account.—The premiums £543,160 show an increase of £26,193. Only the interest £20,473 is transferred to profit and loss. The fund is now standing at £609,003, an increase of £27,755, and represents 112 per cent. of the premiums.

I am pleased to report that a valuation of our Stock Exchange securities on the basis of market prices at December 31st last discloses a small increase on the values of the previous December 31st.

PROFIT AND DIVIDEND.

Summarising the position, in the departmental accounts, other than life, the underwriting profit, excluding interest on the departmental funds, amounted to £157,745, as compared with £117,102 in 1929. Adding the net interest and deducting the taxes, expenses and contributions to the staff pension fund, as shown in the profit and loss account, the net profit for the year is £161,088, as compared with £140,468 in 1929. Realising the difficult times through which we are passing, I hope you agree with us in considering we have every reason to be satisfied with the past year's results. The directors recommend that the dividend be 9s. 6d. on the £1 fully-paid shares, and 4s. 9d. on the partly-paid shares, which is the same as for the previous year, and 1s. 6d. per share on the new 5s. fully-paid shares.

On the two former classes of share an interim dividend was paid in October, and it is proposed that the balance be paid forthwith. The report was adopted.

**COMMERCIAL UNION ASSURANCE COMPANY, LIMITED.****SATISFACTORY RESULTS IN A DIFFICULT YEAR.**

The sixty-ninth annual general meeting of the Commercial Union Assurance Company, Limited, was held, on the 12th instant, in London.

The Right Hon. Sir Robert Horne, G.B.E., K.C., M.P. (the chairman), in the course of his speech, said:—The year 1930 was one in which the majority of people in all parts of the world were glad to see come to an end.

The business of insurance, though it is one of the steadiest amongst the branches of human activity, could not escape from the adverse influences. At home, although the previous premium income was well maintained, progress was not so marked as usual. Abroad, with the exception of America—and even in such a disturbed country as China and such an unrestful region as India—results were, in the circumstances, satisfactory. In the United States, however, there was a decided decline.

FIRE AND MARINE ACCOUNTS.

The premium income of the fire department amounted to £6,774,315, being £866,651 less than that of the previous year. The greater part of this decrease is attributable to the United States. There has been transferred from the account of the fire department to profit and loss a sum of £185,000. This leaves the fire fund at £7,495,291, being 110.64 per cent. of the premiums, compared with 102.49 per cent. in 1929.

The marine department achieved remarkably favourable results on the year's working. The net premiums, at £698,828, showed an increase of £13,941 over those of 1929, while the claims paid and outstanding amounted to £319,700. It was thus rendered possible to transfer to profit and loss the same amount as last year, viz., £200,000, and, after fortifying the reserves, to leave the marine insurance fund at £1,194,349. This figure represents 170.91 per cent. of the premiums, compared with 168.7 in 1929.

ACCIDENT DEPARTMENT.

In the accident department the premiums amounted to £8,658,457, showing a decrease of £127,125 on the figures of the previous year. If we except the United States, our accident account, at home and abroad, has shown excellent results. Our decline, as in the case of the fire department, is due entirely to the setback in the United States.

The passing of the Road Traffic Acts in Great Britain and Northern Ireland was the outstanding feature of 1930.

In order to give the new measure every chance of success we decided, along with other insurance companies, not to increase our rates of premium, although many considerations would justify the view that risks are now greatly multiplied. It remains to be seen whether the present rates will prove sufficient to meet the additional liabilities and expense which the Act has placed upon insurance.

Of the other classes of business which are transacted in the accident department—personal accident, fidelity guarantee, burglary, public liability, plate glass, engineering—I am glad to say they are all in a healthy condition. From the accident account there has been transferred to profit and loss the sum of £70,000. Although, owing to the adverse factors to which I have referred, the revenue account of the accident department shows only a profit of £370, we felt justified in taking the sum of £70,000 to profit and loss in view of the generous fund by which the account is buttressed. This transfer leaves the fund at £5,824,608, being 67.27 per cent. of the premiums, as compared with 67.74 in the previous year.

RECORD LIFE BUSINESS.

In spite of unfavourable economic conditions the life department had a successful year. We issued 8,030 policies, assuring over £4,500,000 gross, or, after deducting reassurances, over £4,385,000 net. These figures constitute records in the history of the company, surpassing even those of the best year—1920.

The directors recommend the payment of a final dividend of 10s. 3d. per share, less income tax, making a total for the year 1930 of £1 0s. 6d. per share, less income tax. The funds of the company, excluding the share capital and after providing all necessary reserves for ascertained and estimated liabilities, show a surplus of over £12,500,000. We may, therefore, without undue pride, congratulate ourselves on the powerful position which we hold and our ability to meet with equanimity all vicissitudes of fortune.

The report and accounts were unanimously adopted.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED.**SATISFACTORY YEAR'S BUSINESS.**

The meeting of the World Auxiliary Insurance Corporation, Limited, was held, on the 12th instant, at Winchester House, London, Captain the Right Hon. C. C. Craig, D.L. (chairman) presiding.

The Chairman, in moving the adoption of the report, said, with regard to the fire, accident and general account, the fund brought into this account from December 31, 1929, amounted to £129,713, to which was added premiums £302,724, interest £7,960, and transfer from profit and loss account £30,000. After paying all claims and outstanding commissions and expenses, the fund at December 31 amounted to £151,831. In the marine account the premiums for the year amounted to £175,353 and interest £7,584, which items, added to the fund of £189,952 brought in, gave a total of £372,890. Claims paid on 1929 and previous years amounted to £101,882, and on 1930 account to £41,689, or 23.7 per cent., and expenses to £9,612, leaving a marine fund of £192,121 after transferring £27,584 to profit and loss account. The profit and loss account showed that, after paying the dividend of £18,750 in April, 1930, the balance brought in amounted to £29,993. To this was added £16,204 for interest not charged to other accounts, and the transfer from marine account, making a total of £74,336. After paying sundry charges, there remains a balance of £65,927. In view of the substantial amount of the reserve funds, and any increase in dividend being, in the opinion of the board, inadvisable at the present moment, the directors had decided to take advantage of the opportunity of strengthening the fire and accident account by transferring from his account the sum of £30,000.

The investments taken at cost and cash on deposit amounted to £921,631. Last year he had referred, he said, to a depreciation of £33,000 existing at December 31, 1929, on the market value of the investments. He was happy to say that not only had this depreciation been wiped out, but their investments had considerably appreciated.

When it was realised how the world-wide economic depression had added to the difficulties of all classes of insurance, he thought it a matter for congratulation that they had been able to increase their fire and accident premium.

The report was unanimously adopted.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY LIMITED.**1930 RESULTS.****A SATISFACTORY YEAR.**

The ninety-fifth annual general meeting of the Liverpool and London and Globe Insurance Company, Limited, was held, on the 13th instant, at the company's head office, 1 Dale Street, Liverpool.

The Chairman, Mr A. Allan Paton, C.B., referred to the fact that the company now operates in 96 countries, and stressed the importance of personal contact in the development of business with overseas connections. He mentioned that the general manager and his assistants had, during the past year, visited 37 countries abroad, whilst representatives from 11 other lands had been welcomed in this country. Mr Paton commented upon the interesting fact that of these 96 countries the major number had different currencies, and the question of foreign exchange, therefore, demanded keen and constant attention in addition to the problems of underwriting.

PROGRESS IN THIRTY YEARS.

The Chairman gave interesting figures comparing the company's position to-day with that of thirty years ago. Sums insured in the fire department had increased from four hundred and thirty-three millions sterling to approximately one thousand five hundred millions sterling, whilst in the life department, whose business is almost wholly confined to Great Britain, the assurances had risen from eight millions to twenty-one millions sterling.

CLAIMS PAID EXCEED £3 PER MINUTE.

Since its foundation 95 years ago the company had paid claims at the average rate of over £3 a minute, night and day, the aggregate exceeding one hundred and sixty-one millions sterling.

1930 RESULTS.

The total underwriting profits amounted to £271,934, and total funds were increased by £610,185 to £24,692,646.

Fire premiums amounted to £4,699,243, the profit of £256,340, or 5.45 per cent., comparing with £260,243, or 5.38 per cent., in 1929. In a year such as 1930 this was very creditable.

Accident premiums totalled £5,695,890, on which there was an underwriting loss of £36,484.

On marine premiums of £356,211 a satisfactory profit of £29,077, or just over 8 per cent., was recorded.

RECORD LIFE FIGURES.

1930 proved a record year in the life department. The net new business reached £1,903,289. The rate of interim bonus on whole-life policies was raised to the high figure of 48s. per cent., an increase fully justified by the department's financial position.

The report and accounts were adopted and a final dividend of 13s. 6d. per share was declared, making 27s. per share, less income tax, for the year, against 26s. in 1929.

The retiring directors were re-elected, and a vote of thanks was passed to the management, staff and agents. A cordial vote of thanks to the chairman concluded the meeting.

BRITISH SHAREHOLDERS TRUST, LIMITED.

DIVIDEND MAINTAINED.

COMPANY'S SATISFACTORY POSITION.

The ninth ordinary general meeting of the British Shareholders Trust, Limited, was held, on the 11th instant, at the Cannon Street Hotel, London, E.C.

Mr Follett Holt (chairman of the company) presided.

The Secretary (Mr F. Charlton Fry, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman said:—Gentlemen,—The resolution before the meeting is "That the report and accounts to March 31, 1931, submitted to the meeting, be and they are hereby approved and adopted." I will ask the Managing Director, Mr Edgar Crammond, to second this.

Mr Edgar W. Crammond (managing director): I beg to second the resolution.

The Chairman, continuing, said:—At a time when dividends are being passed or cut in all directions it must have been a relief to our shareholders to learn that our earnings even in such a calamitous time were sufficient to enable the directors to recommend a dividend of 7 per cent. on the share capital, the same as last year, and to increase the amount to be carried forward to the revenue account of the current year to the substantial figure of £31,827. If it had not been for the conservative policy that we have observed with your full consent in the past, that is to say, if we had not placed on one side substantial sums to reserve, in view of the general depreciation that has occurred in investments, we should not have been in the strong position in which we are to-day.

A SOLID AND SATISFACTORY POSITION.

From the report you will have noted, I have no doubt, that after deducting the depreciation in our investments, which amounts to 16.3 per cent., from our reserve and carry-forward, we still have our capital of £538,212 intact, and in addition to this assets to the cash value of £230,000. So you will see that our position remains very solid and satisfactory and is one that need cause you no anxiety as to the future.

Our funds are well spread geographically and otherwise over some 185 investments, and among these are British Government and other stocks which are held not only for safety but for the ease with which they can be readily converted into cash when necessary for the purposes of our business.

As indicated in the report, our issuing house has had a busy but somewhat fruitless year. We have been concerned in many investigations, and still have under examination and observation issues that may materialise under rationalisation and other schemes. One issue only, as reported, was made during the past year, and it was of a character that was readily accepted by the public. For the rest it is, I am sure, obvious to you that conditions call for patience with the knowledge that, through not only the reputation but the ability of this house to handle it, we shall receive our good share of business when times are more normal and opportune.

As our present financial year dates from the first of last month, there is really nothing that I can say of any usefulness as to the prospects of the current year. All I can do is to express the hope, which I am sure you will all re-echo, that business in our country will respond to all the efforts that are being made to sustain and improve it. Meanwhile, as far as we are concerned, we shall do our utmost to maintain the solidity and efficiency of this house.

The resolution was carried unanimously, and a final dividend of 4 per cent., making 7 per cent. for the year, less tax, was approved.

The retiring director (Mr B. H. Binder, F.C.A.) was re-elected, and the auditors (Messrs. Price, Waterhouse and Company) were reappointed.

A hearty vote of thanks to the chairman, directors and staff terminated the proceedings.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY, LIMITED.

TAX FREE FINAL DIVIDEND OF EIGHT PER CENT.

SIR HENRY McMAHON'S ADDRESS.

The thirty-seventh ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held, on the 11th instant, at the Great Eastern Hotel, Bishopsgate, London.

Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I., &c. (chairman of the company), said in the course of his speech: The result of the year's working, as you will have seen, is a slight increase in the company's net revenue from £99,521 to £100,001; and with the carry-forward from last year added, there is a balance of £110,392 available for disposal, after payment of the usual interim dividends, as against a corresponding amount of £104,530 for 1929. Out of this we propose to pay final dividends for the year of 3½ per cent., less tax, on the preference shares, and 8 per cent., free of tax, on the ordinary shares, which requires £52,223 12s.; to place £15,000 to general reserve; and to carry forward the balance of £43,168 18s., or £3,361 17s. 11d. more than last year. Having regard to the very difficult conditions which have prevailed throughout the past year, I venture to think that this result may be regarded as by no means unsatisfactory.

DEPRECIATION AND RENEWALS.
