The Roubaix troubles are the direct outcome of the faulty and impracticable nature of the national insurance plan. The original Bill was pushed through with scandalous haste immediately before the last General Elections, and two subsequent Bills, practically recasting the plan, were necessary before its application was even begun. Unemployment insurance was expressly kept out of the original Bill, and provision for old-age pensions was struck out during the recasting. The application of the scheme was insisted on by the Socialist Party, which has since, through the labour unions, been largely guilty of rendering it unworkable by supporting a movement to throw the entire contributions on the employers. The difficulties due to the increase of production costs, owing to the application of the Act, have been aggravated by the irritation arising from the intolerable complexity of the working of the scheme, which now constitutes, by universal admission, the worst example extant of French bureaucratic methods.

GERMANY.

Exchange Withdrawals — Credit-Anstalt Repercussions — Reparations — Home Politics — Institut für Konjunkturforschung Report.

(FROM OUR CORRESPONDENT.)

BERLIN, June 16.

DURING the last few weeks the situation in Germany has become most gravely disquieting. Since last Friday the losses of foreign exchange have grown progressively larger and the Reichsbank has come so near to the 40 per cent. legal minimum that last week's average rate of exchange withdrawals could not be maintained for more than another two or three days.

Until the decision of the Procedure Committee, in its session this evening, not to summon the Budget Committee, a decision which is likely to bring about a great improvement in the situation, the position bore a strong resemblance to the state of panic which prevailed last October after the elections, though there was a vital difference in the fact that whereas in October the flight of German capital played a large part in the withdrawals of foreign exchange, this time they have been almost entirely due to the calling in of credits from abroad. The causes of this development are perfectly clear: the repercussions of the Credit-Anstalt crash are growing more and more violent. It was clear from the beginning that such an institution could not collapse without the most serious consequences, but the fire might have been localised if the fire brigade had arrived quickly enough upon the scene. It was the delay of several weeks in rendering effective international assistance to the Credit-Anstalt which allowed the fire to spread so widely. The wave of distrust flowed from the Credit-Anstalt to the Anstalt-Bank in Amsterdam, which is directly connected with the house of Rothschild, permeated, inevitably, all the Succession States in which the Credit-Anstalt operated, and has now spread, quite without reason, into a general flood which has penetrated into Germany as well.

The differences between the Austrian and German banking structure were discussed here last week. The consequences of the Vienna crash, the liquidation of which is at the time of writing not yet in sight, have now been dangerously complicated for Germany by two circumstances. One is the raising of the reparations question. The fact that there has been public talk of an impending German moratorium has given rise to an incredible state of confusion. Naturally there never has been, and never can be, for Germany any question of anything more than the so-called transfer moratorium contemplated in the Young Plan itself; that is to say, of Germany's right to discontinue the transfer of the conditional part of the reparation annuity upon giving ninety days' notice to the B.I.S. After the Chequers conversations it may safely be asserted that the Government of the Reich will only take this step under pressure of the most urgent necessity, and will avoid it if it is in any way possible to do so. Nor are they likely to take any step to bring up the reparation question before Mr Stimson has had time to collect his impressions of Europe.

In any case, the postponement of transfers contemplated in the Young Plan has, of course, nothing whatever in common with a moratorium in the ordinary sense, and would involve no suspension of payments in connection with Germany's private or public loan obligations. Nobody in Germany has thought of such a thing for a moment, but misunderstanding on this question seems to have had an unfortunate effect, especially in America.

The second cause of complications is the confused situation in German domestic politics. The emergency decree, which is intended to meet the immense budget deficit, has had a more hostile reception than the Government expected. It has not met with approval in any quarter. Opposition is equally strong in both Left and Right, and with the Radical Parties reached the point of a demand that the Reichstag should be called. The German People's Party contributed most last week to the acuteness of the panic by their decision to support this

demand, for this decision was taken against the express and urgent warning of the President of the Reichsbank, himself a member of the Party.

This attack was directed less against the Chancellor than against the Foreign Minister and the Minister of Finance. In the end the German People's Party fell into line, but meanwhile its attitude had greatly intensified the enormous difficulties of the Social Democrats. The leaders of the Social Democrat Party knew what was at stake. They knew that a fall of the Brüning Government would make a Fascist dictatorship, with all its political and economic consequences almost inevitable; but under the influence of the growing distress of the masses and the successes of the Communists, the authority of the Social Democratic Party leaders has been very much undermined, so that up to the last moment it was doubtful whether the Government would be able to command a majority in the Procedure Committee against the motion to convene the Budget Committee. Their success in securing the rejection of the motion, against the votes of the Communists, the National Socialists and the German Nationalists, has greatly relieved the situation.

Above all, it is hoped that the withdrawals of credit will now cease. On Saturday the Reichsbank raised its discount rate from 5 to 7 per cent., but this step has so far been ineffective. Market rate simultaneously rose to 7 per cent., and this rate is scarcely adequate with a rate of 1 per cent. in Paris and New York. Nothing could be more illustrative of the chaotic state of world economy than this discrepancy of interest rates.

The Institut für Konjunkturforschung states in its quarterly report that world economic conditions are as devious as those in Germany of any sign of improvement, but that the downward movement has, in general, slackened. One of the favourable symptoms is the increase in industrial production in the United States and in some other countries. On the other hand, the improved liquidity of the international money markets has so far had no influence on the capital markets. In Great Britain the home market has been relatively well maintained, but Great Britain has naturally been particularly severely hit by the decline in the purchasing power of non-European countries.

It is true that in the opinion of the Konjunkturinstitut a change is coming about in the composition of European foreign trade. The crisis is now injuring more seriously the exchange of goods between industrial countries, whereas the decline of trade between manufacturing countries and raw material-producing countries seems to have somewhat slackened. German exports to extra-European countries declined in the first quarter of 1931 by 6.1 per cent. as compared with the last quarter of 1930, whereas those to European countries declined by 19.4 per cent. German exports, especially those of finished goods, have declined substantially since the beginning of the year, and the percentage decline is now approximately the same as that of Great Britain. Owing to the decline in imports, there was still an active balance of 586 million marks in the first quarter, and a further balance of 164 millions in April.

ITALY.

Treasury Bonds Issue — Sinking Fund — Taxation Problems — Economic Indices — Balance of Trade — Emigration.

(FROM OUR CORRESPONDENT.)

TURIN, May 27.

THE subscription to a 4,000 million lire issue of 5 per cent. nine-years Treasury bonds at 95 was closed with a total subscribed of 7,000 millions—a very remarkable success. The issue is intended for repayment of 3,807 million lire 5 per cent. bonds, due on November 15, 1931. The new bonds are very similar to the old ones, carrying the right to a greater number of yearly premiums, viz., eight of one million lire each, eight of half a million, sixteen

of 100,000 lire, etc. Old bonds sold before the issue at 99.50 and bearers were entitled to exchange them for the new ones with a refund of five lire. As the issue was oversubscribed, the excess will be used to ease the situation of the Treasury. How the crisis has influenced it can easily be seen from the following figures (in million lire):—

	June 30, 1928.	June 30, 1929.	June 30, 1930.	April 30, 1931.
Consols	71,604	71,449	71,410	71,368
Redeemable debts	13,224	13,175	13,021	13,003
Treasury current debts	1,618	2,510	3,671	5,113
Totals	86,446	87,134	88,102	89,484

What is the use, except the moral one, of maintaining an appropriation of 300 million lire for sinking fund purposes when the total debts are increasing? The sinking fund system was changed when, instead of the appropriation of the budget surplus, which according to our accounting methods is not always a cash surplus, the fund was allocated a share of the yield of the tobacco monopoly. From May 1, 1930, however, when tobacco prices were raised by an average of 23 per cent. so as to give the desired sinking fund surplus, consumption decreased by an average of 16 per cent, so that no surplus was forthcoming. Together with similar experiences with spirits and sugar, this is a proof of the old truth that low rates are frequently more beneficial to the Treasury than high rates.

A campaign is being conducted at present in favour of a reduction of the wine tax, which is said to check consumption. More than five million hectolitres of the 1929 vintage are to-day still to be disposed of, together with 12 million hectolitres of the 1930 vintage. It is alleged that this is caused by the wine tax, levied at rates varying from 45 to 76 lire per hectolitre. Abolish it, it is urged, and the wine will be sold at an average price of 100 lire and bring 1,700 million lire to the needy wine growers. The difficulty is to find an alternative source of revenue. A 12 per cent. tax on the sale value of all textiles is suggested in certain quarters but it is strongly objected to by cotton and wool and silk manufacturers. Moreover, this tax was tried during the war and was abolished by the present Government in 1923, since it was dangerously damaging a principal branch of Italian industry. Another suggestion is the re-establishment of the flour tax, which was one of the relics of the old Italian States prior to unification and which was abolished in 1884. The existence of the flour tax was one of the chief reasons for the unpopularity of the Government which fell in 1876. From the fiscal point of view the flour tax is certainly better than the customs duty on foreign cereals; because the flour tax would hit the whole 7.2 million tons consumed, whereas the duty is paid only by the 2 million tons imported. If 600 lire per ton are needed as customs duty for obtaining a given result, 170 lire would suffice as flour tax. What is suggested, however, is a flour tax not as an alternative to the custom duty but as a complementary tax; in which case the price of the loaf would be increased, to the detriment of the yield of some other tax.

It is probable that we have reached the limit of taxation. Professor Mortara, in the last chapter of his "Prospettive Economiche" for 1931, which are truly becoming an indispensable handbook for the study of Italian and world economic conditions, makes a well-balanced estimate of taxation incidence in Italy. In current lire the total (state and local) tax yield was 9.2 billion lire in 1913, 14.9 in 1925-26, and 22.5 in 1930-31. If the figures are translated into lire of constant purchasing power, total taxation amounted to 12.3 billion lire in 1913-14, to 14.9 in 1925-26, and to 29.5 in 1930-31. Against a national dividend which is presumably not increased, this increase in taxation looks formidable indeed. Professor Mortara concludes that the moment is certainly not favourable to a reduction of taxation, but as, in 1928, Signor Mussolini checked the depreciation of the lira, when such an achievement seemed out of the question, it is similarly imperative and possible for him to give the lead to the needed reduction of public expenditure.

Bourses are lifeless, with no encouraging features. Economic indices do not yet give any sign of the end of the crisis. State railways yielded in the first four months of the present year 405 million lire for passenger traffic,

as against 468 in the corresponding months of 1930 and 714 million lire for goods traffic as against 927. Passengers carried in April were 7.6 millions against 9.3 millions in April, 1930. Goods maritime traffic is also decreasing. Passengers, however, increased; 355,300 were landed against 344,900 in April, 1930, and 353,600 sailed against 336,000 in April, 1930. This is important, as foreign visitors were always a most important credit item in Italy's international balance of payments.

The excess of imports over exports is also decreasing; it was 983.4 million lire in the first four months of 1931 as against 1,944.6 million lire in the corresponding period of 1930. Though the decrease is useful from the point of view of the present balance of payments, it is of mixed meaning for the future, as it may mean a reduction to the minimum of purchases of raw materials. The General Industrial Confederation has made a very elaborate analysis of the official statistics with interesting results. Taking as 100 the average for 1925 and studying variations of quantities, exclusive of prices, they find that imports of raw materials increased to 116.8 in 1929 and decreased in 1930 to 102.07. In February, 1931, they had further decreased to 100.98, against 116.92 in February, 1930. Total imports decreased from a maximum of 112.88 in 1928 to 103.70 in 1930 and to 90.24 in February, 1931, against 100.44 in February, 1930. Total exports have done better, for they have reacted from the maximum of 114.94 in 1929 to only 109.33 in 1930, and remain at 110.01 in February, 1931, against 110.54 in February, 1930. As to values, we sold in 1930 at 60.57 per cent. of the 1925 basis, and we bought at 63.14 per cent.; in February, 1931, we sold at 50.71 per cent. and we bought at 51.86 per cent. Thus we sold at prices comparatively lower than we were able to buy; but as we sold larger amounts, the slump in international prices made us the gainers at the end of the game.

Unemployment is, as usual at this season, diminishing; there were 670,352 unemployed at the end of April, against a maximum of 765,925 at the end of February. Last year the figures were 372,236 at the end of April, against a maximum of 466,231 at the end of January. How far the increase in emigration has contributed to the decrease of unemployment is difficult to say. Net emigration of working men had decreased continuously from 91,019 in 1925 to 55,438 in 1928 and to 46,731 in 1929. After the Government decided in June, 1930, to resume the liberal granting of passports to would-be emigrants, net emigration increased at once, and reached for the whole of 1930 the total of 176,519. In the first four months of 1931 net emigrants (that is to say emigrants minus immigrants) were 41,002 as against 15,185 in the corresponding period of 1930. Most of them go to France and Switzerland; in April last 5,949 went to France, 5,974 to Switzerland, 1,830 to the United States (including 1,231 going there a second time), and 1,196 to the Argentine. How they can manage to find work in a world full of unemployed is a mystery, and a proof of the great resourcefulness and adaptability of these very hard-working men. In due time the increase in emigration is bound to have a beneficial effect on the emigrants' remittances. Perhaps, as after the 1887 crisis, the first signs of economic recovery will come from poor people.

SWEDEN.

Industrial Profits — Stock Exchange — Production — Foreign Trade — Banking.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, May 28.

OF the twenty-two companies on the "A" list, no less than eleven have lowered their dividends for 1930, while nine have maintained their dividends unaltered, and two show an increased dividend. The first group consists of those concerns which sell their products in the world market, and includes the majority of the timber and pulp companies and also the great Grängesberg ore company, as well as two concerns which are specially sensitive to

the depression, the Skefko and Separator companies. Among those which have maintained their dividend at the same level as last year are the Kreuger concerns, which stand in a class by themselves, and, curiously enough, four of the leading mechanical industries, Asea and the largely international L. M. Eriksson telephone concern, Bofors, the manufacturers of war material, and Svenska Metallverken.

An examination of the total sum of dividends gives a different impression, however, partly because it is the most important concerns which have shown an unchanged dividend and partly because the fall for the remainder was remarkably small. The total dividends distributed during the year for the concerns in question amounted to 179.98 million kronor on a nominal capital of 1,526.52 million kronor. Last year, when the nominal capital on which dividends were paid was of the same magnitude, the corresponding figure was 192.60 million kronor. Thus the average dividend has fallen from 12.6 per cent. last year to 11.8 per cent. this year.

A comparison between the companies quoted abroad and purely domestic companies reveals a sharp differentiation. In the former group dividends fell only from 17 per cent. last year to 16.7 per cent. this year. In the latter, on the other hand, they declined from 8.2 per cent. to 6.8 per cent. To a large extent, of course, the high average dividend is explained by the dividends of the Kreuger concerns; but, even if these are eliminated, the level of the remainder is extremely good, having sunk only from 8.7 last year to 7.2 this year. Though this is very satisfactory, in view of the general depression, it must be remembered that it was only during the later part of last year that the depression seriously made itself felt in this country. Its effects will be seen much more clearly in the accounts for the current year.

This factor helps to explain the extremely pessimistic condition of our Stock Exchange since the latter part of March, and especially in April; but the severe decline in New York, which usually reaches the Stockholm Stock Exchange by way of Swedish shares quoted abroad, and primarily Kreuger shares, has also been a determining influence. The Stock Exchange losses for April amount to the very respectable sum of 316,000,000 kronor, the worst fall in values since the great Stock Exchange crisis of 1929. The whole of the improvement in February and March has thus been cancelled out, and the Stock Exchange value of "A" list shares at the end of April was 159,000,000 kronor lower than at the beginning of the year. This contrasts strikingly with the developments during the same period last year. In spite of incipient depression in April, the four first months of the year showed an increase of 501,000,000 kronor. The greater part of Stock Exchange losses this year are to be found among the purely domestic stocks.

Svensk Finanstidning's index number of production for March remained practically at the same level as that for February. It fell only from 123 to 122 (1923-24 = 100). It is true that the normal for this time of the year is a slight increase, but the decline is almost entirely due to reduction of output in the timber industry, where the extent of the restriction of output is to be explained primarily by the exceptional circumstances created by Russian competition. But for this special burden, therefore, the index number for March might have shown an entirely normal movement. A comparison of developments during the first quarter of this year and last year is, however, less encouraging. Whereas the index number for this period in 1930 was as remarkably high as 149, it was only 122 this year.

The progressive deepening of the depression appears very clearly in the statistics of foreign trade. Imports were maintained at a relatively high level in March, but exports shrank still further. Comparison with last year is, it is true, not altogether fair, because ice conditions then permitted shipments considerably earlier than this year; but, nevertheless, the decline in almost all important export commodities is very marked. Thus shipments of wood goods declined 54 per cent., of pulp 46 per cent., paper 23 per cent. and of iron ore 56 per cent. compared with last year. Still more pronounced was the decline

in certain finished commodities. Exports of ball bearings fell by 45 per cent., motors by 37 per cent., electrical machinery by 27 per cent., separators by 55 per cent. as compared with 1930.

This decline in exports has, of course, affected the balance of payments, and the result is clearly visible in the diminution of the exchange reserves of the commercial banks and the Riksbank. This is due to the fact that private banks in March and April again heavily increased their debts abroad, a tendency which had shown signs of weakening in February. Thus, on short accounts, their connections with foreign banks at the end of April showed a passive balance of 94,000,000 kronor, whereas a year earlier they had an active balance of 106,000,000 kronor. It is evident that this is a reflection of the outlook on the depression which has prevailed during recent months. As no improvement in the situation is counted upon during the next few months, it is clearly more advantageous to borrow at the lower rates prevailing abroad than to borrow from the Riksbank at a considerably higher rate.

DENMARK.

Agricultural Prices and Exports — Industry — Foreign Trade — Shipping — Stock Exchange.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, June 13.

DURING the last few months, prices in Denmark have continued to fall, although not quite as rapidly as before. From 120 in December, 1930, the wholesale price index declined to 117 in February, 115 in April, and 113 in May. The decline has been most pronounced for the principal agricultural export articles, whose prices are now on the whole below their pre-war level. In the course of May, a particularly heavy drop took place in bacon, the top quotation for which has declined from Kr. 102 to Kr. 82 for 100 kilos., and it is very doubtful whether the production is still remunerative. This fall is partly offset by the fact that the prices of grain and cattle food, of which Denmark is a considerable consumer and importer, have likewise continued to decline, but as the remaining elements of the cost of agricultural production have not decreased to any appreciable extent, the economic situation of the principal Danish trade is at present very unfavourable, and considerable pessimism prevails. The farmers are endeavouring to overcome the difficulties by a continued increase of production, and the exports of butter, bacon and eggs are, therefore, of greater volume than ever.

Industrial conditions are still fairly favourable. Without involving any interruptions of work of importance an agreement was arrived at between employers and employees, entailing a reduction in wages costs by 5 to 8 per cent., and industrial peace for the next year has also been virtually secured. Industrial production and employment is fairly good, and unemployment is not very serious, although somewhat in excess of what it was last year at the same time. For April it is computed to be 16 per cent., against 12 per cent. in April, 1930.

Whereas agricultural exports have steadily increased, though at very low prices, the export of industrial products has been somewhat reduced, and in this respect the world crisis has exercised an appreciable influence upon Danish trade. The foreign trade figures for the last few months are as follows in millions of kroner:—

	January.	February.	March.	April.
Imports	125	109	124	119
Exports of Danish goods.....	111	98	109	121
Exports of foreign goods	5	5	8	7
Trade balance	-9	-6	-7	+9

The shipping trade is still working under very adverse conditions, and with a very low level of freight rates, but the tonnage laid up has been somewhat reduced. It reached its peak on April 28th, when 107 vessels, aggregating 218,000,000 gross tons, were laid up; since then many vessels have found employment, and in the course of May the tonnage laid up was reduced to about 170,000 tons.

The serious depression of the great world exchanges in the last few weeks has influenced the situation on the Copenhagen Stock Exchange, but the decline has been comparatively moderate as compared with that abroad. For Danish bonds the decline has been only slight, but it has been decidedly more for shares, and especially for shipping shares. Two important Danish companies have recently declared their dividends. The Great Northern Telegraph Company will pay a dividend of 20 per cent., as for the last few years, while the Danish sugar factories have suffered much from the difficulties of the markets for sugar and have reduced their dividend from 10 per cent. to 6 per cent.

JAPAN.

Banking and Industrial Profits — Foreign Trade — Prices — Gold Imports.

(FROM OUR CORRESPONDENT.)

TOKYO, May 8.

ACCORDING to Mitsui Bomei Kaisha's half-yearly analysis of earnings of Japanese joint-stock banks and industrial joint-stock undertakings, bank earnings show a substantial recovery, while industrial profits disclose a profound, general decline. The aggregate net profits of 250 banks examined in the survey for the second half of 1930 amounted to 71,812,000 yen, showing a very large increase of 9.5 millions, or 15.2 per cent., upon the first half of that year, but a decrease of 7.5 millions, or 9.5 per cent., upon the corresponding half of 1929.

In making comparison with the previous half-year, however, it must be remembered that in the June half-year of 1930 a large number of lesser banks recorded huge losses as the result of the return to gold, and, when we eliminate the figures of those banks, individual institutions generally disclose diminished earnings. Net earnings of 1,000 industrial companies for the past half-year totalled 123,400,000 yen, representing a decline of 14.6 million yen, or 10.6 per cent., and of 124.4 millions, or 50.2 per cent. respectively, as compared with those earned by the same concerns in the first half of 1930 and the second half of 1929. Sharp reductions occurred in almost all the industrial groups in the analysis. Even public utilities, whose profits during recent years have been on the increase, reveal a phase of diminished earnings. But the most noteworthy decline is shown by the textile group, a number of cotton and woollen mills recording again considerable losses. Iron and steel, shipbuilding, shipping, rubber and kilns also disclose an extremely adverse showing. The only bright spot in the dismal picture is the stock and produce trade, whose earnings substantially increased, reflecting a boom based on cheap money. The following table gives the comparison of the last three half-years:—

BANKING AND INDUSTRIAL NET PROFITS.

	No. of Cos.	Second Half-year 1929. Yen.	First Half-year 1930. Yen.	Second Half-year 1930. Yen.
Banks	250	79,334,099	62,303,974	71,812,236
Industrial cos. ...	1,000	247,817,812	138,057,338	123,400,667
Total	1,250	327,151,911	200,361,312	195,212,903

The trade returns for April show that, as compared with the corresponding month of last year, imports fell by 21.4 million yen, or 14.4 per cent., and exports decreased by 35.6 millions, or 30.4 per cent. The smaller percentage change in imports is accounted for by the increased entry of raw cotton, while raw silk and cotton goods are mainly responsible for the larger change in exports. While there was a general decline in most of the principal imports, imports of raw cotton increased by 7,403,000 yen, totalling 41,717,000 yen for April, the largest monthly figure since March, 1930. On the other side, exports of raw silk declined from 24,150,000 yen in April last year to only 14,435,000 yen, the smallest for any month in the post-war years, except the earthquake month of September, 1923. Two years ago the shipments were valued at 68,860,000 yen. Cotton goods exports were also rather poor, the value

being only 14,612,000 yen, as against 23,131,000 yen a year ago.

The upward movement in the general level of prices, which had developed in March, suffered a setback last month. The wholesale index number of the Bank of Japan for April registered a drop of a quarter of 1 per cent. on the month. The decline is chiefly accounted for by the textiles and fuel groups, whereas a number of foodstuffs and building materials moved upwards. The heaviest fall among the textiles was in raw silk and cotton yarn. Under the weight of the sale of the carryover held under the stabilisation scheme, raw silk prices touched 530 yen last week, the lowest ever reached. Cotton yarn also fell severely as a result of the relaxation of restriction.

Despite the outflow of gold to America, the Bank of Japan is increasing its gold holdings. Gold acquisitions by the bank amounted in a month or so to nearly 9.5 million yen, which mostly came from China and Siberia. The bank return for May 7th shows that the gold reserve totalled 842,747,000 yen, as against 833,336,000 yen for the same date in April, while the note circulation contracted to 1,028,329,000 yen, as compared with 1,074,098,000 yen a month ago. Monetary ease continues. Day-to-day loans are now obtainable at as low as 2 per cent.

Books and Publications.

BRITAIN'S LOST LEADERSHIP.

LAST October we published in our monthly supplement an article by Mr A. Loveday, head of the Economic and Intelligence Service of the League of Nations, in which he drew attention to the fact that not only is Britain's share in world trade declining, but that, still more ominous, she is failing to obtain her due proportion of the trade arising out of the development of new industries. By examining our trade figures relatively to those of other groups of countries, Mr Loveday established the fact that neither tariffs nor the inflation of other countries' currencies could be held responsible for our relatively slow advance, and he suggested that the prime cause lay in the rigidity of our economic organisation.

This essay, which was discussed in the *Economist* of October 25th, has now been published,* in fuller form, together with four earlier essays, all written for the general reader, and a technical paper on the measurement of tariff levels. Of the earlier essays, the first deals with economic tendencies in the six years following the Armistice, and traces the growth of economic nationalism, with the consequent increase in insecurity and steady piling up of restrictions, the shifting of the centre of economic gravity from the old to the new world, and the gradual realisation that a return to the economic *status quo ante bellum* was impossible. The second essay traces the rapid growth of the next four years, and another discusses the gold problem in relation to the trade cycle.

The most interesting of these earlier essays, that entitled "Quo Vadimus?" has frequently been referred to in the *Economist*. Its thesis is that owing to the slackening rate of population growth, the change in the age composition of the population, the more rapid production of wealth and the diminution in its inequality of distribution, the character of demand is steadily changing. The consumption of the staple necessities of life is growing much more slowly than that of commodities which cater for the requirements of leisure, and as these latter are subject to capricious variation in demand, and as, further, their value is composed to a much less extent of the value of their raw material content than is the value of the primary necessities, their usurpation of the dominant place in economic life requires a very substantial adjustment of economic organisation. One manifestation of the attempt to meet this condition is the growth of the merger in the United States and the cartel in Europe, and the agricultural counterpart of these is the

extension of the co-operative movement. As a result, business men are faced with the problem of reconciling a highly selective market with mass production.

Whereas America is rapidly adjusting herself to the new conditions, and Europe, more slowly but steadily, is making up lost ground, Britain, in Mr Loveday's opinion, is lagging behind. In common with more than one distinguished foreign observer, he finds the cause in the rigidity and lack of mobility of the British economic system. The authority of Mr Loveday's wide knowledge of world economic conditions, the incisiveness of his arguments, and the conciseness of their presentation lend exceptional weight to this diagnosis.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Cotton Trade and Industrial Lancashire, 1600-1780. By A. P. Wadsworth and Julia de Lacy Mann. (Manchester) Manchester University Press, 23, Lime Grove. 25s. net.

A most interesting and scholarly study of the cotton industry in the period which led up to the industrial revolution.

Stock Exchange's Ten-Year Record of Prices and Dividends, 1921-1930. Compiled and published by Frede. C. Mathieson and Sons, 16, Copthall Avenue. 20s.

An indispensable book of reference. The highest and lowest share prices and the dividends for the last ten years of any company can be seen at a glance.

Chamber of Shipping of the United Kingdom, 1930-1931. (London) Chamber of Shipping, 28, St. Mary Axe.

This annual report contains a remarkable collection of statistical tables and diagrams, covering, *inter alia*, tonnage under construction, tonnage launched, vessels belonging to each nation, movement of shipping, coal output, prices and exports, and freights.

Die Ursachen des Kapitalmangels in Deutschland. By Erich Welter. (Tübingen) Verlag von J. C. B. Mohr (Paul Siebeck). Rm. 13.

A discussion of the sources of capital accumulation, the flight of capital, and the causes of the present capital shortage in Germany.

Sozialstat und Soziale Belastung. By Dr. Felix Boesler. (Berlin) Verlag von Paul Parey, Hedemannstrasse, 28/29. 12 Rm.

A study of the burden of the social services in Germany.

The Law Relating to Banking and Foreign Exchange. By L. Le M. Minty. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 30s. net.

A text book on banking law, in writing which the author has kept particularly in mind the fact that a bank manager's primary interest in the law consists in keeping clear of it.

Audits. By A. E. Cutforth. Eighth edition. (London) Gee and Company (Publishers), Ltd., 6, Kirby Street. 10s. 6d. net.

A full outline for examination students of the main principles of auditing.

The Bankers' Magazine, June, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes an article on the Budget.

The Stock Exchange.

INVESTMENT TRUSTS IN AMERICA.

In a recent article we hazarded the opinion that the remarkable popularity of fixed-trust with the American investing public had been based, not merely on the specious attractions of these institutions as a sales proposition, but on serious dissatisfaction with the results of many management trusts formed in the period preceding the Wall Street slump. This opinion had been independently confirmed by the diagnosis of a leading investment advice agency, the Standard Statistics Company, which, in a recent brochure on investment trusts, has used much stronger terms than any non-American commentator would have dared to employ. Although the company makes no secret of its belief that "the investment trust proper" (i.e., the management trust), "when soundly piloted . . . is the most ideal form of investment vehicle yet devised," it sums up its views on recent events as follows:—"It is indisputable that the success in the sale of fixed trusts must stand as one of the bitterest indictments ever launched against Wall Street. It audibly reverberates the unsavoury accusation 'we will trust them only if their hands are tied.'"

Doubtless, the American investor's reaction against the management trusts has been carried to extreme lengths. Many recently formed American investment trusts are in sound hands, and have been managed on prudent lines. Some of their promoters and advisers, who have taken the trouble to study the history and technique of British trusts, have constantly emphasised the indispensability of conservative financial administration if the investment trust principle is to flourish in a new soil as it has flourished in its native land. Dame Fortune, again, has recently been unfriendly even to the best American trusts. The majority were formed when markets were optimistic and prices high. They have, consequently, been required to bear the brunt of a major decline in portfolio values before they have had a reasonable opportunity to build up their reserves. British investors, however, will be loath to condemn the American managements on this ground alone, in view of the depressing regularity with which the newer British investment trusts, formed by groups with many years' experience, have reported a depreciation of anything up to 20 or 25 per cent. in the market value of their investments this year.

When all allowances are made, however, it is difficult to explain away the contrast between the attitude of British and of American investors towards investment trust shares since the slump began. The Standard Statistics Company's index of the common shares of thirty American investment trusts showed, at the end of last March, a fall of no less than 75 per cent., as compared with the peak point of the boom. According to the index of the Institute of Actuaries, the ordinary stocks of 15 leading British investment trusts declined only 17 per cent. between December, 1928 (which was practically high-water mark in the London market), and the end of March last. Even more significant is the fact that, whereas in Great Britain the great majority of investment trust shares are still standing above the "break-up value" of the assets owned by the respective companies, American quotations are, on the whole, considerably below break-up value.

The Standard Statistics Company has made an analysis of the results of thirty-eight American trusts. At the end of last year the market capitalisation of the common shares of these concerns was equal to only 74 per cent. of the "liquidating value" of the assets behind them. Although investment trust shares appreciated, with the rest of the market, in the early months of 1931, and the ratio of market capitalisation to liquidating value had risen to 92 per cent. by March 23rd, a subsequent retrograde movement reduced the ratio approximately to the December 31st level. The following table, based on the prices prevailing at that date, is an eloquent commen-

tary on the attitude of the American market towards investment trust stocks. The companies have been arranged in descending order of net assets at December 31st last:—

Name of Trust	"Liquidating Value" (per share) of Net Assets, Dec. 31, 1930	Market Price per Share, Dec. 31, 1930	Ratio of Price to Liquidating Value, %
Blue Ridge Corporation.....	4.57	3½	68
Niagara Share Corporation	8.43	6½	77
Continental Shares	15.61	8½	54
Goldman Sachs Trading	12.40	5½	46
Lehman Corporation	75.49	53½	71
Tri-Continental	10.30	6½	61
Shenandoah Corporation	3.32	3½	109
Adams Express	16.40	16½	101
American International	19.94	19½	97
Petroleum Corporation of America..	13.82	6½	50
U.S. and Foreign Securities	9.41	7½	78
General American Investors	5.53	4½	86
Sterling Securities.....	13.48	6½	48
American European Securities	29.50	18½	63
Fourth National Investors	37.36	21½	58
Mayflower Associates	54.93	40½	73
Massachusetts Investors	30.65	31	101
Railway and Light Securities	45.22	36	80
American, British and Continental ..	80.94	49½	61
Commonwealth Securities	12.31	15	122

It will be seen that only four of these twenty companies had a market capitalisation, at the end of last year, higher than the liquidating value of their net assets, while the remainder showed a discrepancy between market value and break-up value varying between 3 per cent. and 54 per cent. In order to obtain an approximate comparison between the experience, in this respect, of American and British investment trust companies, we have analysed the balance sheets of the ten largest British trusts registered before the war and the ten largest registered since the war, whose accounts have reached us since the beginning of this year. In every case, where depreciation in a portfolio has been disclosed, we have reduced the book value of investments to market value at the balance-sheet date by applying the "co-efficient of depreciation" revealed in the body of the report. We have taken all other assets at book value, deducted all liabilities, together with the amounts of debenture and preference stocks outstanding, and have expressed the net assets available for ordinary, thus arrived at, as a percentage of the amount of ordinary stock outstanding. If the resulting figures are related to current market prices, the following results emerge:—

PRE-WAR INVESTMENT TRUSTS.

* "Britain and World Trade." By A. Loveday. Longmans, Green & Co., Ltd. 10s. 6d.

All of the ten pre-war trusts show a market price in excess of our computation of break-up values. A similar observation applies to eight of the ten post-war investment trusts, although the market price of seven ordinary shares in the latter group is standing below par.

Why has the American investor, in a bear market, adopted so much more conservative an attitude towards the investment trust than his British colleague? The compilers of the brochure to which we have previously referred suggest several reasons. In the first place, they declare that the American public lacks a clear understanding of the merits and demerits of investment trust shares, individually or collectively. This, they suggest, may in part be due to the fact that the term investment trust has been too loosely applied. It now includes several hundred concerns, many of which are not legitimate investment trusts. Their misfortunes, however, have tended to bring disrepute on the whole conception.

In the second place, the American public has sold its trust shares less on deliberate calculation than on psychological impulse. The shares of some trusts with commendable past achievements and a relatively strong financial position are selling at a substantially greater discount below liquidating value than those of other trusts whose portfolios have shown more than average depreciation. Nevertheless, the authors of the brochure admit that investment trust managements, in too many instances, contributed to their own discomfiture by their policy before the slump. Some trusts took care to spread their holdings over many industries and countries, and to "protect their senior money by senior securities"—by including in their portfolios bonds and preferred stocks equal to or exceeding the amounts of their fixed-interest capital. Many others, however, were attracted to particular parts of the American bull market, which appeared to offer opportunities for quick capital profits.

This policy was a source of weakness in two distinct ways. First, an unduly large proportion of the assets of these companies took the form of ordinary shares, in a limited number of industries, obtained at inflated values. Secondly, the managements were under a strong temptation to aim at capital profits, rather than a steady income from dividends, and to distribute these profits largely to shareholders, instead of following the British practice of using them to write-down the book value of their portfolios. "They inclined," in the words of the brochure, "to breathe optimism while their British cousins were exhaling and inhaling cynicism." For this complacency they paid dearly when depression reduced their income from dividends, cut off all their opportunities of obtaining profits from market operations, and exposed their portfolios to the full effects of the depression in American equities, without the "buffer" of a large bond holding.

A further reason suggested for the contemporary unpopularity of some investment trusts is that, in the absence of definite limitations on the percentage of total funds utilisable for the purchase of single securities, some managements have become heavily interested in securities of companies sponsored by themselves. Such a phenomenon, though not unknown, has, happily, been rare in Great Britain recently. The accusation that some American managements have regarded trusts under their care as no more than a dumping ground for securities in which they are personally interested, is probably justified only in a relatively small number of cases. More frequently, however, managements have tended to put a special valuation on blocks of shares in their holdings which have carried voting control of other companies. In other words, the distinction between a finance company and an investment trust has not always been clearly appreciated.

Whatever the mistakes made in the past, however, by a number of American investment trusts, the authors of the brochure believe that the principles of investment trust finance have taken firm root in the United States, and will survive the winter of Wall Street discontent. The managements have been quick to learn the lessons of adversity. Their portfolios have been, and are being, re-apportioned on strictly "income" lines. They have reduced their dividends, and are fully cognisant of the necessity for building up a strong reserve position, as and when conditions permit.

In short, the trusts, as a whole, are turning from speculation towards "straight" investment. It cannot be doubted that, along these lines, the future economic development of America should give ample scope for profitable investment trust administration in the future, when the movement has survived its growing pains. Conceivably, the results of the majority of trusts for 1931 will be worse than those of 1930. Companies in sound hands, however, which survive the present economic depression, may offer indubitable attractions to conservative American investors, when the difficulties and disillusionments of recent months have become matters of history.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 23.	June 25.

THE week opened with dealers more inclined to await political developments than to speculate on events, and the approaching account caused a reluctance in entering into new commitments. Business was mostly small and irregular, but the defeat of the Government on Monday caused a short-lived improvement in the Street which however, faded away by the following morning. Later in the week, some bear selling was evident, but it was of no great magnitude. Dealings opened in the Woolworth issue on Thursday.

The continued strength of sterling, and daily influx of gold into the Bank, gave little assistance to gilt-edged securities, which had a tendency towards weakness until Thursday, when the Bank of England's credit to Austria created a better feeling. The market was affected by the unkind reception given to the £2,500,000 Middlesex County Council 4½ per cent. loan, 48 per cent. of which was left with the underwriters. Indians and colonial stocks generally maintained their levels, mainly due to the beneficial effects on sentiment of the recent political developments in Australia, whose stocks continued to strengthen throughout the week. Despite its flotation reception, the Middlesex loan went to a small premium after opening at a slight discount.

The European situation tended to weaken European stocks in the early part of the week, but the announcement of the assistance for Austria had a beneficial effect and there were sharp upward movements among German and Austrian bonds. Among South Americans, Chileans lost ground owing to rumours of an approaching default, but foundation for this rumour is lacking. Improved trade returns, strengthening of the milreis and sinking fund purchases contrived to improve Brazilians.

The railway market was listless. Home Rails advanced early in the week on slightly improved traffic figures, but prices afterwards sagged as a result of bear activities. There was little interest in the foreign rail market, the only appreciable movement being the weakening of Antofagasta, which continued to come on offer.

The tendency throughout the industrial market was one of irregularity and uncertainty, with business at a very low ebb. Internationals opened in an atmosphere of hopefulness, but became irregular. There was an active business in the new Woolworth shares; after opening at 2s. premium the ordinary fell to a slight discount, but the preference maintained a 6d. premium. Electrical shares remained steady after an early advance. Engineering and motor shares were, as usual, dull, but Thomas Tillings continued to rise on rumours of further favourable merger developments. Iron and steel received some support, but the most favoured shares of any market were those of J. Lyons in the provision market. Increased profits, shown on page 1340, and maintained dividends attracted attention to these shares which rose further on expectations regarding the chairman's statements at the coming annual meeting. Rayons lost ground on scattered provincial selling of Courtaulds, and there was a corresponding sagging among textiles. Breweries and tobacco were dull but steady, as were banking and insurance shares. Imperial Chemicals receded slightly, while Cables and Wireless lost ground owing to lack of

attention. Swedish Match stocks improved with the European situation.

Oil shares were very quiet, movements being of an irregular nature. It was expected that Paris would be selling, instead of which a few buying orders came from the Continent, thereby counteracting events in America. Later news of an encouraging nature regarding restriction in Texas assisted slightly, as did news of the decreased daily output of crude oil in the United States. The rubber market continued in its listless state and showed no signs of reviving. Rubber Trusts eased slightly after a firm opening. The tea market was lifeless and there were few dealings. Despite an unsatisfactory report, no ground was lost by Budla Betas.

Although little business was done in the mining market, prices were maintained owing to Kaffir dividends coming up to market expectations. Paris and Johannesburg were indifferent, but Randfontein and Daggafontein improved on a few buying orders, though Johnnies lost owing to bear activity. Rhodesians were quiet, little being reported from this quarter. "Chartered" fluctuated, finishing slightly down, as did Rhokana, but Roan Antelope recorded a small improvement. Among Australians some attention was given to Wilunas and Sulphides.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Business in Wall Street continued at a low ebb, the total turnover of shares on Wednesday last being less than a million for the first time since October, 1926. The tone was no worse than could be expected in view of the large number of factors making for unsettlement, and markets reacted favourably to the improved news from Central Europe and to bank rate advances in Germany and Austria. The bond market, in particular, showed renewed firmness. Some trepidation is felt with regard to the forthcoming publication of the second quarter's reports, which are certain to reflect the intensification of trade stagnation. Railroad shares trended steadily downwards, the market having apparently discounted the company's petition to the Inter-State Commerce Commission for an increase in rates. In that connection it is noteworthy that the Commission has decided to meet the wishes of the railroads and forgo the 90-day delay in calling the hearings, and also to limit the number of witnesses to be heard. An emergency committee has been formed in connection with the railroad investments of the life assurance companies and mutual savings banks, which intends to fight for wage reductions, if the petition for a rate increase fails, as the only means of safeguarding the \$6,000 millions of railway bonds held by the insurance companies and the banks. There is a general feeling in the market, however, that rail dividend reductions are not yet at an end. The speech delivered by President Hoover at Indianapolis, which in-

cluded a defence of the tariff system, was not interpreted as foreshadowing any immediate change of major policy, and its effect on market quotations was negligible.

* 2-hour session.

BERLIN.

Last month brought the heaviest falls since September. The index fell from 96 to 80 between the end of April and the beginning of June, whereas the previous minimum had been 85 at the beginning of January. The declines in foreign Stock Exchanges were the principal cause, and these were sharply accentuated on May 12th when the losses of the Kreditanstalt in Austria became known. The succeeding weeks brought all manner of bad news: the political and financial crisis in Vienna; the unfavourable course of events at Geneva; the success of the National Socialists at the Oldenburg elections; the preparation of the emergency decree, with fresh increases in taxation and internal political difficulties; the fall in German bonds abroad in connection with the discussions of reparations—all these were depressing influences on the Berlin Stock Exchange. General nervousness, combined with sales of securities and the calling in of credits from abroad, which severely depressed the mark exchange led to grave losses only slightly checked by the recovery on June 15th, following the rise in the Reichsbank rate. Of the leading German shares shown in the following table, not one is quoted higher

(Continued on page 1336.)

than a month ago. After those companies whose results fell short of expectations (Karstadt, Zellstoff Waldhof, Lindström, Nardstern, etc.) the most heavy offerings have been of bank shares, especially those of the Darmstädter Bank. But even among market favourites there were declines:—I.G. fell 25, Siemens 28 1/2 and Salzdettfurth 50.

Official "Cash" Quotations in all cases.

AMSTERDAM.

The annual reports of the leading Dutch industrial concerns, such as the Royal Dutch, Philips Lamp Works, Unilever and A.K.U. which were recently issued, all made a very poor impression on the Amsterdam stock market. Shares in Philips Lamp Works dropped from 207 1/2 per cent. to 122 per cent. in the course of a single month, and they now stand at around 109 per cent. The annual report, in fact, discloses that the profits declined from 42.9 million guilders to 12.7 million, whilst depreciation to the extent of 50 million guilders has had to be written off from the reserves. As it is stated that business was satisfactory until the middle of September, the question arises whether the works were operating at a proper margin of profit in the last quarter of 1930, and whether that is still the case. The quotations for Unilever and A.K.U. also suffered pronounced setbacks, although trading was more limited in extent. The profits of the A.K.U. declined from 10.2 million guilders in 1929 to 2.9 millions in 1930, the dividend being passed. Although the final distribution of 7 per cent. brought the total dividend of Royal Dutch up to 17 per cent., against 24 per cent. in 1929, whilst the profits were comparatively satisfactory, the shares dropped from about 225 to below 200. The profits in 1930 were 90.8 million guilders, or 36 million less than in 1929, representing a drop of 28.8 per cent. Comparing this figure with the profits of other big petroleum companies, the Royal Dutch makes a relatively good showing, for the decline in profits of the Standard Oil of New Jersey was 65 per cent. and of the Texas Corporation 68 per cent. Other sections failed to escape the

general weak tendency. In spite of improved crop prospects, tobacco shares were lower. There is some apprehension that the importation of Sumatra tobacco into the United States may be prohibited from January 1, 1932. Sugar shares recovered a trifle towards the close of the month, under the influence of the fairly satisfactory annual report of the H.V.A.; profits reached 63 million guilders against 12.8 millions in 1929. The sugar crop of the Dutch East Indies in the past year yielded 2,702,884 tons, of which 633,000 tons are at present unsold. Rubber shares were dull, and shipping shares were, if anything, more idle. Although quotations stiffened later, as a result of covering operations, the public showed no desire to appear on the market with investment orders.

INVESTMENT NOTES.

The Woolworth Issue and Pre-Allotment Dealings.

Two or three days prior to the issue of the Woolworth prospectus rumours were current in the City to the effect that America was bidding 8s. premium for the ordinary shares of 5s. that were to be offered at 40s. each. The lists for preference and ordinary shares were open for ten minutes in London, and country applications were considered which arrived by first post on the following morning. Dealings started almost immediately afterwards in the Stock Exchange. The ordinary shares changed hands in fairly large numbers between 3s. 9d. premium and 5s. premium above the 40s. at which the shares were offered. For the fully-paid preference shares 20s. 9d. was quoted. Considerable confusion prevailed in connection with these dealings. Stock Exchange firms with orders from clients to buy or to sell Woolworths as soon as the market opened had to decide whether they would execute these or whether they preferred to remain within the strict letter of the Stock Exchange rule which forbids dealing to take place in any shares before allotments or letters of acceptance are out. Financial houses outside the Stock Exchange who deal in stocks and shares are, of course, bound by no Stock Exchange rules in regard to the time at which they should be allowed to carry out their clients' orders. There is nothing to prevent a non-Stock Exchange firm from buying and selling, whether allotments have been despatched or whether the applicants for shares are still in doubt as to the allotments they will receive. The Stock Exchange is as keen as any other business body would be to undertake whatever legitimate business is offered, and in reply to the rule which forbids dealings before allotment, another rule was quoted in defence of the pre-allotment dealings, which permits bargains to be done in the case of new issues where a previous issue of

the same country, corporation or company has been quoted on a Dominion, Colonial or foreign exchange. The shares of the American Woolworth Company have been dealt in, of course, for years past, and those people who have been dealing before allotment in the shares of the English company claim that the rule just quoted is sufficiently wide to cover the transactions in the new Woolworth shares offered on this side, although the latter are in a different company. On the other hand, public interest, which is, after all, the main thing to which the Stock Exchange Committee's attention will be directed, is served by compliance with the rule that forbids dealings before allotment. If it were not for this rule, shady promoters would find it a simple matter to create an atmosphere of artificial strength, and, by this means, to induce purchases of shares at prices that the buyers would subsequently regret having paid. The Woolworth affair has given rise to a good deal of feeling in the Stock Exchange. While in some ways the abrogation of the rule prohibiting pre-allotment dealings might be considered a retrograde step, the necessity of clarifying the present position is beyond dispute.

"Independent" Tobacco Company Profits.—In spite of the fact that the amount of tobacco retained for home consumption increased from 147.6 million lbs. in 1929 to 151.6 million lbs. in 1930, the independent tobacco companies have had to fight hard for their trade, if we are to judge from the mixed showing of their latest reports. Of eight companies whose reports we have analysed, four show improved figures, though in the case of two, Abdulla and Cope Bros., the increase in profit is slight, while one, R. and J. Hill, has merely reduced its rate of losses. Gallaher, which has lately concentrated on its cigarette trade, did well to increase its rate of earnings from 13 1/2 per cent. to 15.7 per cent. seeing that its new factory in the South of Ireland only started operations in the latter part of last year. Of those companies whose profits for 1930 show a decrease Alfred Dunhill is conspicuous for a fall of 59.8 per cent. from £50,690 to £20,336. Godfrey Phillips, which holds the entire ordinary capital of Abdulla, and controls numerous other concerns, including Cavenders, Cohen Weenen, and Thomson and Porteous, has had to find £29,698 to cover the loss made by a subsidiary. It will be seen from the following table of the distribution of profits that in two cases—Albert Baker and Rothmans—the ordinary share dividends have been reduced, and in two other instances—Abdulla and Gallaher—increased:—

Name of Company.	Net Profit, 1929.	Ordinary.		Net Profit, 1930.	Ordinary.	
		Earned.	Paid.		Earned.	Paid.
Abdulla and Co.	£ 80,841	21.0	17.5	£ 80,866	20.4	20.0
Albert Baker	30,663	12.5	15.3	28,245	12.5	14.1
Cope Bros.	42,139	14.3	12.5	44,445	15.3	12.5
Alfred Dunhill	50,690	20.3	20.0	20,336	5.2	20.0
Gallaher	200,425 1/2	13.5	6.5	207,257	15.7	8.0
R. and J. Hill	Dr 33,910	Nil	Nil	Dr 22,320	Nil	Nil
Godfrey Phillips	171,359	24.5	10.0	135,358	15.4	10.0
Rothmans	29,577	67.8	28.1	23,951	33.3	17.5

† Period January 19, 1929, to December 31, 1929.
‡ Before income tax and contingencies.

In the next table the current market quotations are compared with prices this time last year and the yields given on the double basis of earnings and dividends:—

Company.	Market Price per £1 Ordinary Share.		Yield %	
	May 30, 1930.	June 15, 1931.	On Earnings.	On Dividends.
Abdulla and Co.	22 1/2	21 3/4	£ s. d.	£ s. d.
Albert Baker	24 1/4	24 1/4	10 1/4 1	7 10 4
Alfred Dunhill	41 3/4	15 10 1/4	6 13 1	11 10 2
Gallaher	30 1/2	25 7/8	12 5 0	34 3 3
R. and J. Hill	2 1/2	3 1/4	...	6 4 10
Godfrey Phillips	21 3/4	16 1/2	17 6 1	11 17 7
Rothmans	20 1/2	14 3/4	...	6 14 9

* £1 8 per cent. cumulative preference shares. Ordinary shares not quoted.
† £1 7 per cent. cumulative preference shares. Ordinary shares not quoted.

The chairman of Gallaher, at the general meeting in March, stated that the company's cigarette sales continued to show steady and satisfactory expansion. Clearly this company, which is now beginning to reap the benefit of its expansion policy, is to be a powerful new competitor in the cigarette trade. Nevertheless, despite fierce competition, the outlook for the tobacco industry is not unfavourable in comparison with other trades which have to meet a falling consumption as a result of the world slump.

Harland and Wolff.—The latest accounts of this £10 millions shipbuilding and engineering company make sorry reading. Although the gross tonnage output for 1930, at 145,636 tons, was the highest of recent years, the rate of profit earned was again unsatisfactory. After providing £250,000 for depreciation and £12,137 for income tax, net income totalled only £105,746, against £216,749 for 1929. Although, with the amount of £132,307 brought forward, the sum of £238,053 stands to the credit of profit and loss account, the report states that it is not represented by liquid resources available for distribution, so that no dividend can be paid on the preference shares. The ordinary capital has not received a dividend since 1924.

Year to December 31st.	1928.	1929.	1930.
Profit	£ 204,355 1/2	£ 674,873	£ 367,882

Brought forward.....	95,203	107,558	132,307
6% first pref. div.	192,000	192,000	Nil
Carried forward.....	107,558	132,307	238,053

† After provision for depreciation and income tax.

The report indicates that the directors are acting with the voting trustees appointed by the Treasury and the banks to control the Royal Mail group of shipping companies, with which Harland and Wolff is closely associated. It is from the Royal Mail group that a large proportion of the amounts outstanding is due. The directors recognise that the fixed assets must be reduced substantially from the amounts shown in the balance sheet in order to bring them into accord with present-day values, and that the investments in subsidiaries must also be written down. A scheme for the reorganisation of the company's assets and capital will be put before shareholders when the position of the associated shipping companies has been clarified. The liquid assets appear in the balance sheet at £675,444, and the current liabilities at £4,619,757. The £1 6 per cent first preference shares are quoted at 2s. 3d., against a high level for 1931 of 5s. 4 1/2d. and for 1930 of 12s. 4d.

Mexican and Canadian Eagle.—Of the reports of the Mexican and Canadian Eagle Oil Companies the latter makes the more satisfactory reading. Canadian Eagle took over the assets of the old Mexican Eagle outside Mexico. These assets included its interest in the Eagle

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

Oil Transport, the entire share capital of which the company now owns, and the oil purchase agreement with the Venezuelan Oil Concessions. The company refines the oil purchased from the Venezuelan Oil Concessions in the Aruba refinery of its wholly-owned subsidiary, Arend Petroleum Maatschappij, and sells the refined products to the Anglo-Mexican Petroleum, 50 per cent. of whose ordinary share capital it owns. The basis of the purchase price of the crude oil and selling price of the refined oil products in effect guarantees the Canadian Eagle a certain refining profit without involving it in the risks of the oil market. The results for the past two years compare as follows:—

(In Canadian Dollars.)

	1929. Barrels.	1930. Barrels.
Purchases of oil	7,583,200	8,002,758
Shipments of oil	7,194,720	8,130,074
	\$	\$
Trading profit*	5,436,416	6,929,905
Investment reserve	1,000,000	1,000,000
Earned for dividend	4,436,416	5,929,905
Preference dividends	1,229,646	1,094,953
Participating preference dividend (23-88 cents)	204,119	204,119
Ordinary dividend (12 cents)	1,455,393	1,455,393
Earned on pref. and ord.	32.47	44.94
Carry forward	1,655,327	2,884,128†

* Includes interest and dividends from investments, after making provision for depreciation and reserve against fluctuations in value of stocks.

† Less \$1,946,640 premium paid on purchase of preference shares in Eagle Oil Transport and written off.

It will be observed that the company has applied \$1,000,000 to investment reserve, which, together with the depreciation reserve carried in the Arend Petroleum accounts, is sufficient to provide against any possible loss on the eventual disposal of the refinery at Aruba. The directors refer to the investment made jointly with the Royal Dutch-Shell group in the purchase of the Hotel Cecil property on which new offices are being erected for Shell-Mex, Ltd. The Mexican Eagle, which is producing, refining and marketing in Mexico, reports a satisfactory increase in output and sales but a lower revenue therefrom on account of the world decline in oil prices. The results for the past two years compare as follows:—

	1929. Barrels.	1930. Barrels.
Production	11,954,048	12,820,198
Purchases	6,765,805	5,554,263
Sales	14,854,739	18,883,361
	Mex. pesos.	Mex. pesos.
Trading profit	16,868,609	15,249,909
Dividends, interest, &c.	391,266	642,758
Total income	17,259,875	15,892,663
Depreciation	10,166,555	10,074,549
Available for dividends	7,093,320	5,818,114
To statutory reserve	354,606	290,906
First preference dividends	1,224,180	1,153,206
Participating pref. (8%)	272,000	272,000
Ordinary dividends (6%)	2,899,863	3,379,862
Carry forward	2,580,511	3,302,650

The directors refer to a reduction in the export taxes on petroleum, but declare that the existing scale of taxation in Mexico is still an excessive burden, particularly with the low prices prevailing for crude oil and refined oil products. The balance sheets of both companies show considerable financial strength, the amount of British Government securities and cash held by the Canadian Eagle being \$1,490,856 (£306,258) and by the Mexican Eagle \$17,887,225 (£1,832,707). The ordinary shares of Canadian Eagle and Mexican Eagle are quoted at 7s. and 6s. 10½d., to return yields of 7.04 per cent. and 7.15 per cent. respectively. The highest prices this year were 9s. 3d. and 10s. 9d. respectively.

Phoenix Oil and Transport.—Like the Mexican Eagle, the Phoenix Oil and Transport Company, Ltd., is a producing, refining and marketing company, with its sphere of operations more or less confined to one country. Unlike the Mexican Eagle, however, it has had to meet in its markets severe competition from domestic producers and

from imported Russian oil. Market prices have, therefore, been very unfavourable, but this has been offset to some extent by a further increase in the company's production. The results for the past two years compare as follows:—

	1929. 483,013 tons	1930. 613,391 tons
Production		
Trading profit	£ 288,311	£ 267,242
Net profit after overhead expenses	275,577	248,549
Per cent. earned on £1 shares	6.4	5.8
Per cent. paid	5.0	2½
Per cent. earned on 1s. ordinary shares	73.8	65.7
Per cent. paid on 1s. ordinary shares	57.6	28.8
To reserve	60,000	50,000
Carry forward	142,349	233,075

The directors stated that, although the profit earned during the year and the cash resources of the company were adequate for the payment of a final dividend equal to the interim dividend, they considered it wise to conserve those resources. The soundness of that decision will not be disputed, for Roumanian producers have failed to restrict their output, and prices in the domestic oil markets are weak in the extreme. The output of the company in the first five months of the current year showed a further increase, having been at the rate of 700,000 tons per annum, which indicates that the Phoenix Oil has shared wholeheartedly in the folly of overproduction. The £1 ordinary shares of the company are now quoted at 4s. 3d., as compared with a high level of 14s. 1½d. in 1930 and 1931.

A Contrast in Oil Producers.—The reports of Lobitos Oilfields, Ltd., and the Colon Oil Corporation, which are both producers of crude oil, but not marketers of refined oil products, present an interesting contrast. Lobitos, which controls Anglo-Ecuadorian Oilfields, and has an interest in the International Petroleum Company (in Colombia), has to sell its Peruvian crude oil chiefly in the American market. Last year it had to meet a substantial fall in market prices in February, partly offset by a subsequent small advance, and a further serious decline in October and again in March this year. The price of light crude oil of 36 Beaumé is now only 33 cents per barrel, as compared with \$1.45 sixteen months ago. The outlook for Lobitos is, therefore, pretty black. Lord Forbes, at the general meeting, on June 11th, stated that the price the company was now obtaining was considerably below cost, so that, unless an early improvement occurred, of which there was no present indication, the company's Peruvian subsidiary must show a loss for the current year. The increase in the revenue of Lobitos for 1930 was explained by the higher profits received from the company's tankers, as the following table will show:—

	1929. 320,820 tons	1930. 345,833 tons
Production		
Profit from steamers	£ 29,238	£ 80,562
Commission on sales of oil	63,235	61,616
Dividend from operating subsidiary ..	40,000	40,000
Miscellaneous	38,900	41,636
Total	171,374	223,814

* Including £50,000 to income tax reserve.

In view of its large cash resources there is no doubt about the ability of Lobitos to emerge successfully from the present depression, but conditions in Peru at the moment could hardly be worse. With regard to the political situation, Lord Forbes said that a few agitators had stirred up discontent among the labour forces in the oilfields, but that the Government had sent troops to the scene and that the general position had improved. The Colon Oil Corporation, in contrast with the Lobitos Oilfields, is in a privileged position. Its subsidiary producing company, Colon Development, has proved two prolific oilfields in the

Colon district of Venezuela—Tarra and Los Manueles (the latter as yet undeveloped) which are believed to excel in size the entire producing areas of the Venezuelan Oil Concession. It is, therefore, a cheap producer and its crude oil, carried to the coast through a pipeline built by its parent company, Colon Oil Corporation, is sold to the Royal Dutch-Shell group on the basis of world prices without further trouble to the company. Last year, the company's production amounted to 696,220 metric tons, and the pipeline, which can carry 20,000 barrels a day, is now working at about 75 per cent. of capacity. In view of the flush production in the Tarra field, drilling elsewhere has been discontinued. According to Mr Agnew, who presided at the general meeting of the company on May 27th, the company is now earning a revenue considerably in excess of cash outgoings, including the payment of interest on \$10,000,000 6 per cent. debentures and supplementary loans. These debentures of the Colon Oil Corporation, which have been largely taken up by British investors, are now quoted in New York at around 50. In view of the depressed state of the oil markets throughout the world, the position of the Colon Oil Corporation may be regarded as not unsatisfactory by the debenture holders.

Lord Kysant—Proceedings Continued.—The hearing was resumed at the Guildhall on Monday last of the summonses against Lord Kysant and Mr H. J. Morland in respect of charges in connection with the affairs of the Royal Mail Steam Packet Company. Mr A. T. Cason, chief accountant of the Royal Mail, continued his evidence as to the preparation of the balance sheet and profit and loss account for 1926, and of the memorandum for auditors. Mr D. N. Pritt, K.C., for the prosecution, questioned the witness as to the information received from Lord Kysant by the directors with regard to transfers from hidden reserves, and as to the taking into account of special credits, of which Lord Kysant was said to have approved. Witness stated that the other directors did not approve of any of the special credits from 1921-1927. Dealing with matters relating to the prospectus charge, witness stated that at the beginning of 1928 the company was over-drawn at its bankers, and letters were read from Barclays Bank on the subject of the overdraft. In the middle of June, witness was shown a draft prospectus by Lord Kysant, who, following a suggestion made by him, altered the word "profits" therein appearing to "balance." The hearing was continued on Wednesday, when Mr C. S. Lewis, the present chief accountant of the Royal Mail, gave evidence as to conversations which he had had with Lord Kysant and Mr Cason regarding the draft prospectus and as to a letter which Lord Kysant had dictated to the effect that the audit of the company showed that during the last preceding ten years the average profits had been sufficient to pay the interest on the present issue many times over. Mr D. I. Conradi, secretary of the Royal Mail, since March, 1919, then gave evidence regarding directorial meetings at which the terms of the £2,000,000 debenture issue were discussed, and subsequently approved. Counsel referred to the minutes of a special general meeting of the company of May 15, 1907, which the witness agreed were to the effect that as from January 1, 1906, if the company paid a dividend of 5 per cent., after writing off depreciation of the fleet, Lord Kysant would receive, as chairman, remuneration based on ½ per cent. of the gross takings of the company. Mr A. H. Milbourne, a joint secretary of the Union Castle Mail Steamship Company, who acted as private secretary to Lord Kysant from about 1912 to 1930, gave evidence regarding instructions which he received from Lord Kysant to change "profit" into "balance" in the draft prospectus which he had prepared. Witness affirmed that nothing was said as to why there was to be no underwriting. The hearing continued.

Barry and Staines Linoleum.—Before the amalgamation, both Barry Ostlere and Shepherd and Linoleum Manufacturing published informative reports, but the accounts for the year to March 31st of Barry and Staines, the holding company, are difficult to interpret in the

absence of a consolidated statement of assets and liabilities. The profit disclosed by the holding company is £100,466, while for the 15 months to March 31, 1930—the change-over period—the net profit was £287,360, part of which represented the trading profit of the Linoleum Manufacturing and the remainder a final dividend from Barry Ostlere and Shepherd. The difficulty of comparison is increased by the note to the profit and loss account, which states that a proportion of the dividend of one subsidiary has been declared out of accumulated profits. The setback marks the first important reverse suffered by either of the principal constituent companies for many years, and is no doubt partly due to reduced consumption by railways, shipping companies and other large buyers of linoleum, and partly to the necessity for writing down inventories. The stock of the Linoleum Manufacturing business at March 31, 1930, stood at £465,368, but the corresponding figure for Barry Ostlere is not available. According to *Economist* figures, linseed oil and jute—the two principal commodities—fell respectively 54.3 per cent. and 39.4 per cent. in the 12 months ended March, 1931. Hence, it is conceivable that a large proportion of the reduction in profits is due to the writing down of stocks. The dividend for the year is 7½ per cent. on the capital as increased by the 40 per cent. share bonus which followed the amalgamation. This dividend represents less than half the amount distributed for the fifteen months' period ending March 31, 1930, but it necessitates an over-distribution of £18,873 of the holding company's income as only 6.4 per cent. was earned. It is, of course, useless to attempt a comparison of the working capital position, but no doubt the chairman will give sufficient information at the forthcoming meeting to indicate that the group's strong finances have been fully maintained. At the present price of 25s. the shares yield 6 per cent.

International Match Corporation.—Broadly speaking, the world interests of the Swedish Match Company outside Sweden are controlled through the International Match Corporation, an American organisation the common shares of which are practically all owned by Swedish Match. The report of the International Match Corporation for 1930 covers, therefore, most of the world activities of the Swedish Match group, and it should prove satisfactory reading for the shareholders. The total sales of the company in 1930 were the largest in its history, and the expansion of the company's activities more than offset the effect of increased tariffs which several countries imposed during the year. Russian competition, according to the directors, lost considerably in importance, reports indicating that Russian exports for 1930 were 40 per cent. below those of 1929. As the following statement shows, the consolidated net profits of the International Match Corporation amounted to \$20,923,626, equivalent to \$8.90 on both the participating preference and common shares, as against \$8.77 for the previous year:—

	Year ending Dec. 31, 1929.	1930.
Operating income	26,213,386	26,749,139
Other income*	...	5,000,000
Total income	26,213,386	31,749,139
Depreciation	2,068,463	2,078,120
Federal taxes	1,050,816	1,326,700
Bond interest	2,460,920	2,430,350
Securities write-down	...	5,000,000
Net income	20,623,530	20,923,626
Preferred dividends (\$4.0)	4,590,000	5,400,000
Common dividends (\$4.0)	3,403,366	4,000,000
Surplus for year	12,630,164	11,523,626
Profit and loss surplus	69,708,068	81,231,694
Earned per share, ptg. preferred	8.77	8.90
Earned per share, common stock	8.77	8.90

Based on 1,350,000 participating preference and 1,000,000 common shares of no par value. Participating preference shares are entitled to \$2.60 per share, and after common shares have received \$2.60 participate equally with common.

* Represents profit from redemption of French Government bonds.

The consistent improvement in profits is due largely to the fact that the operation of Government match concessions

enables substantial savings to be made in manufacturing and selling costs. A provision of \$5,000,000 has been made out of the profits for the year 1930 and applied to reduce the book value of the foreign bondholdings to a figure which is now well below the market value. That substantial profits may be made by the International Match and Swedish Match companies on their foreign bond holdings is evidenced by the redemption of the \$50,000,000 loan by the French Government in 1928, which gave the International Match Company a profit of \$5,000,000. To provide funds for the acquisition of new assets \$50,000,000 10-year 5 per cent. convertible gold bonds were issued by the company in January, 1931, which are convertible into participating preference stock of the company at the rate of 12½ shares for each \$1,000 bond. The participating preference shares are at present quoted in New York at 54½ to yield 7.30 per cent. on the basis of \$4 dividends.

J. Lyons and Company.—This famous firm of caterers has experienced a very successful twelve months, the net profit figure once more constituting a record. All the dividend rates have been maintained and the usual sum of £100,000 is transferred to the reserve fund. The results of the past three years are shown in the following table:—

	Year ended March 31.		
	1929.	1930.	1931.
Net profit	908,950	935,871	942,320
Preference dividend.....	395,545	416,353	419,353
No. of times covered	2.29	2.25	2.25
Ordinary dividend:			
Amount.....	359,161	360,849	363,661
Earned per cent.	32.16	32.39	32.36
Paid per cent.	22½	22½	22½
Proportional and "B" Proportional profit shares	42,750	42,750	42,750
Paid per cent.*.....	4½	4½	4½
Reserve fund	125,000	100,000	100,000
Inc. or dec. in carry-forward	-13,506	+15,919	+16,556

* Dividend of 9 per cent. paid on "B" proportional profit shares.

During the year the item "land, buildings and machinery" has been increased by £218,620 to £10,146,298, while stocks have fallen by £568,924 to £2,302,267. Loans to subsidiaries have declined by £54,160 to £105,517, while their current accounts have risen by £29,797 to £54,932. Debtors are £60,244 lower at £533,573, and the cash item shows a decrease of £25,478 to £515,238. Since creditors have been reduced by £455,413, the excess of current liabilities over liquid assets is £224,496 less at £622,407. The preference capital is secured by tangible assets of 92s. 5d. per £1 preference share. At their present price of 91s. 3d. the £1 ordinary shares yield £5 1s. 9d. per cent.

Manchester Collieries.—The second annual report of this company, registered in 1929 to amalgamate nearly a dozen colliery undertakings, suggests that "rationalisation" is slowly bearing fruit. Profit from collieries and other activities totals £205,170, compared with £141,085, while net profit, after writing £21,192 off overpaid mine rents and setting aside £48,150 for depreciation and amortisation, amounts to £148,306, against £108,215:—

	Year to March 31.	
	1930.*	1931.
Income	159,828	220,369
Directors' fees	2,939	2,821
Depreciation, &c.	48,674	69,242
Net profit	108,215	148,306
Brought forward	...	17,569
Preference dividend.....	90,647	86,162
No. of times covered	1.2	1.7
Earned for ordinary, per cent.....	0.4	1.9
Carried forward	17,569	79,713

* Period March 12, 1929, to March 31, 1930.

Before arriving at the profits of subsidiary companies for the year, £17,524 was placed to amortisation reserve and

£5,876 to depreciation of rolling stock in the books of those companies. The balance sheet reveals a satisfactory degree of liquidity, available assets at £949,284 representing more than three times the total of current liabilities. Stocks have increased from £173,394 to £286,214, and cash is down from £332,015 to £201,807. At 16s. 6d. the £1 7 per cent. preference shares yield £9 6s. 8d. per cent., allowing for the dividend. The £1 ordinary shares are quoted at 4s.

Boots Pure Drug.—The widespread industrial depression has had little effect on the prosperity of this business of druggists and chemists. Income for the year to March 31st last totalled £860,870, against £857,059 in 1930, while net profit, after deduction of the usual generous allowances for depreciation and pensions fund, amounted to £722,264, compared with £724,868:—

	Year to March 31.		
	1929.	1930.	1931.
Profit	892,700	857,059	860,870
Depreciation, &c.	142,548	131,565	137,961
Directors' fees	...	625	645
Net profit	785,152	749,868	752,264
Brought forward	208,308	226,710	229,828
Prof. and pref. ord. dividend.....	96,750	96,750	96,750
No. of times covered	8.1	7.8	7.8
Ordinary dividend:			
Amount.....	435,000	435,000	435,000
Earned per cent.	47.2	45.6	45.4
Paid per cent.	29*	29*	29*
General reserve	200,000	190,000	200,000
Carried forward	226,710	229,828	220,342

* Including bonus of 5 per cent., tax free.

A further £200,000 is added to reserve, which now stands at £1,200,000. A highly liquid position is disclosed, current liabilities of about £630,000 being covered more than twice by available assets. At 5½ the £1 ordinary shares yield about £5 7s. per cent.

Bleachers' Association.—The accounts of this famous northern company, incorporated in 1900 to amalgamate certain firms in the bleaching trade, give details of one of the blackest years since its inception. Trading profits have declined from £769,873 to £308,053, after charging £238,836 for repairs and maintenance. Directors' fees take £2,610, depreciation fund £200,000, and debenture interest £101,250, leaving a net profit of £4,576, compared with £446,979 in 1930. Preference dividend, requiring £136,813, is met by drawing on dividend equalisation reserve to the tune of £90,000, and reducing the carry-forward from £279,414 to £237,177. The directors are unable to recommend the payment of a dividend on the ordinary shares.

	Year to March 31.		
	1929.	1930.	1931.
Net profit	600,107	446,979	4,576
Brought forward	298,072	282,818	279,414

To reserve	100,000	59,187	Dr. 90,000
Carried forward	282,818	279,414	237,177

It is difficult to believe that the present débâcle will prove in the end to be anything more than a temporary setback. Dependent as it is on the most hardly hit of all our industries, the Association has encountered the full blast of the trade recession, and its earning power has suffered accordingly. The balance sheet, however, reveals a reserve fund of £1,050,000 and a satisfactory degree of liquidity. The £1 ordinary shares stood at 6s. 6d. following the publication of the accounts, against a high level of 24s. 3d. in 1930 and of 15s. 6d. early this year.

Daimler-Benz.—The largest German motor-car manufacturing company, the Daimler-Benz A.G., which produces the Mercedes-Benz car, made heavy losses in 1930. The turnover fell from Rm. 130 millions to Rm. 100 millions, and the losses were Rm. 7½ millions, against capital and reserves of 50 and 20 millions respectively. Even more serious than these losses is the further decline, amounting so far to 25 per cent., in the turnover of the current year. Daimler-Benz produces only the more expensive classes of car—the cheapest costs Rm. 6,000—and the demand in Germany at present is very much concentrated on small cars. It is probable that in the course of this year the company will produce a new small car, though competition in that market is already excessive. The price of this company's shares has recently fallen as low as 21 per cent. of their nominal value.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mexican Railway, Madras Electric Supply Corporation, Callenders Cable and Construction, Armstrong Whitworth Securities, Wm. Cory and Son, Hovis, and City Deep. At the annual meeting of Callenders Cable and Construction Co., the chairman said that, in view of the primary importance of railway electrification in this country, he was pleased to inform shareholders that the company had carried out the conversion of one of the suburban lines from Manchester to Altrincham, jointly owned by the L.M.S. and L.N.E. railways. Presiding at the annual meeting of City Deep, Mr F. Raleigh told shareholders that the only alternative to their present policy of reducing the scale of operations and expenditure would be to curtail development to a minimum, gradually reduce tonnage and prepare the mine for closing down.

CAPITAL ISSUES.

THE public had the opportunity to subscribe for two issues during the week. *Middlesex County Council*, which has a good reputation as a borrower, offered £2,500,000 4½ per cent. debenture stock at 101 per cent., redeemable in 1970, and allowing the somewhat low redemption yield of £4 8s. 5d. per cent. The terms were a little high, and 48 per cent. was left with the underwriters. On Wednesday the lists opened for an issue of £3,000,000 5½ per cent. redeemable debenture stock of the *Buenos Aires Great Southern Railway Company* at 95 per cent., giving a flat yield of £5 15s. 6d. per cent. Despite the recent setback in the fortunes of the company, it is not anticipated that there will be any difficulty in meeting the debenture stock, annuity and rent charges for the current year.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, excluding conversion, January 1 to June 13, 1931, £83,088,491. Total, including conversion, recorded January 1 to June 13, 1931, £92,985,476.

Buenos Ayres Great Southern Railway.—Issue of £3,000,000 5½ per cent. redeemable debenture stock at £95 per cent., giving a flat yield of £5 15s. 8d. per cent. and a redemption yield of £5 16s. 7d. per cent. The stock will be redeemable at par by the operation of an annual cumulative sinking fund of 1 per cent., commencing July 1, 1932, to be applied in the purchase of debenture stock under par or drawings at par and accrued interest. The stock not previously redeemed is to be repaid at par on July 1, 1966. The proceeds of the issue will be applied to the repayment of temporary advances from bankers, and will leave a balance in hand sufficient to provide for present commitments and for general purposes.

Middlesex County Council.—Issue of £2,500,000 Middlesex County Council 4½ per cent. redeemable stock, 1950-70, at £101 per cent. Trustees are authorised to invest in this stock. The stock will be redeemed at par on November 1, 1970, unless previously cancelled by purchase or agreement, but the Council will have the option of redeeming in whole or part, at par, at any time on or after November 1, 1950, on three months' notice. The proceeds of the issue will be used for education, highways, bridges, etc., and to the extent of approximately £1,841,517 for the repayment of existing temporary loans.

Littlehampton Gas Company.—Issue by tender of 2,200 £5 "B" ordinary shares, minimum price £5 15s. per share, yielding at that price £6 19s. 2d. per cent. A dividend of 8 per cent. has been paid on the "B" ordinary stock for the past seven years.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**English and Scottish Investors.** Particulars of an issue of £191,040 4½ per cent. debenture stock, 1960-70. **South Metropolitan Electric Light and Power.** Particulars of an issue of £500,000 4½ per cent. debenture stock at 93 per cent., redeemable at par on January 1, 1972.

[Other Stock Exchange information, including the latest weekly traffic returns, dividend announcements, summary of balance sheets, reports and notices, profit and loss figures, oil outputs, and Transvaal gold output statistics, will be found on page 1352 under the heading "Company News."]

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £83,000,000. Annual Income £11,800,000. Full particulars on application.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY
73-76 King William St., London, E.C.4
D. E. WALKER, Manager for the United Kingdom.

AGRICULTURE, INDUSTRY AND FOREIGN TRADE OF LITHUANIA.

By M. LIPCIUS, Director of the Lithuanian State Treasury.

According to its topographical structure, Lithuania is essentially an agricultural country with 76.7 per cent. of the population engaged in agricultural occupations. Of the total area of 5,565,800 ha., about 49.6 per cent. is arable land, 25.3 per cent. meadows and pasture land, 15.9 per cent. forests and the remaining 9.2 per cent. roads, water, &c., unsuited for agriculture. The area under forests is about 885,500 ha., 87.7 per cent. of which is Government owned.

During the past ten years great changes have taken place in the social organisation of the country's agricultural life. Before the World War the distribution of the territory among the inhabitants was quite disproportionate. The manor lords, who represented only 0.1 per cent. of the total landowners, owned over 1,000 ha. each, or 21.6 per cent. of the total area, while the small landowners, with holdings of less than 10 ha., comprised one-third of the total landowners, with only 7.7 per cent. of the land belonging to them. After the country became an independent Republic, a Land Reform Law was passed which empowered the Government to take over all private-owned forests and land from the large estate-owners in excess of 80 ha. This confiscated land was then parcelled out to war veterans, army volunteers, small landowners and to landless people. Up to 1931, 599,551 ha. had thus been parcelled out, and at the present time 112,322 ha. still remain to be disposed of.

Apart from this, it is to be noted that prior to the World War the farmers lived in the villages. Such an arrangement greatly hindered the development of individual farms, and realising this defect, the Lithuanian Government immediately sought to split up the villages and create separate farms. By 1931, 2,325 villages had been split up and 637,795 ha. of workable land redistributed. In this manner the social structure and even the outward semblance of agricultural life underwent a decided change within a very short time. Agricultural methods and the economic aspect altered. Productivity was increased and concentration was withdrawn from grain cultivation and directed to the breeding of livestock. Moreover, drainage work proceeded at a greater pace, and by 1931 1,440,000 ha. had been drained at a cost of 18,300,000 lita.* The total area still requiring drainage is estimated at 2 million ha.

The development of livestock is progressing along two separate lines, viz., pig-breeding and dairy-farming. The following figures demonstrate the unusual progress made in these two branches over a five-year period:—

	1925.	1926.	1927.	1928.	1929.	1930.
Butter export (Mil. klgr.)	0.9	1.7	2.1	2.6	4.1	7.4
Pig export (1,000 head)	48.0	72.0	56.8	41.8	96.5	154.1

It will be seen from the foregoing that dairy-farming is developing very rapidly with a permanent, steady growth, and that pig-breeding has also been on the upward trend for the past two years. This increase would have been even more noteworthy had better conditions existed for placing the produce on the world market. Nevertheless, the rapid development of these two branches has not materially affected the cultivation of grain. The area under seed of the various grains is given below (in 1,000 ha.):—

Cultures.	1927.	1928.	1929.	1930.
Wheat	120	159	198	213
Rye	500	470	451	485
Barley	197	169	214	214
Oats	310	288	350	346

These figures would indicate that the area under grain has remained almost the same for the past three years, except a slight decrease in the area under rye, but with a compensating increase under wheat.

FOREIGN TRADE.

Lithuania's foreign trade is essentially related to its economic development. In the export trade agricultural products dominate, such as foodstuffs, livestock and timber, while imports consist largely of manufactured goods. From 1924 to 1929 the annual value of exports and imports respectively averaged about 250 million lita, i.e., the total foreign trade turnover amounted to about 500 million lita. During the past two years export and import values showed the following increase:—

	(In million lita).		
Year.	Export.	Import.	Surplus.
1929	329.8	306.4	23.4
1930	333.7	312.4	21.3

By dividing the export items into four groups we get the following results for the two-year period:—

	1929.	1930.
Raw and semi-finished material.....	170.0	119.5
Foodstuffs	74.9	131.5
Livestock	62.1	70.1
Manufactured goods.....	22.6	12.6

From these figures it can be seen that important changes have occurred in the 1930 exports, when foodstuffs headed the list. Before 1930, raw and semi-finished materials led in the export

* £ = 48.6 lita.

trade. The shifting of importance to food products cannot be said to be unexpected; it is one of the results of the reorganized agricultural system. Livestock export up to 1929 held a steady position without any marked fluctuation, between 35 and 40 million lita. The sudden jump of the past two years can be attributed to the greater export of pigs. The export of manufactured goods occupies an insignificant place in relation to other items of export as Lithuanian industries are at present not developed beyond supplying the domestic market.

The leading items of export are as follows:—

	(In million lita.)		
	1927.	1929.	1930.
Butter	13.6	31.4	46.9
Fresh meats	6.5	17.1	30.3
Salted meats	0.3	0.05	15.5
Eggs.....	10.9	12.8	11.9
Pigs.....	12.6	28.6	38.6
Timber	20.9	44.8	29.1
Cellulose	23.8	38.3	32.6
Flax and linseed	73.4	47.1	26.9

As regards the values of the above items, the universal agricultural crisis has caused a great drop of prices during the past two years, especially in the case of flax.

The classification of import items according to their value, appears as follows:—

	(In million lita.)	
	1929.	1930.
Manufactured goods.....	165.5	188.9
Raw and semi-finished products	84.9	84.2
Foodstuffs	55.7	38.9
Livestock	0.09	0.3

Among imports, in contrast to exports, manufactured goods occupy first place. In 1930, these included woven materials to the value of 50,900,000 lita; yarns, 12 million lita; and paper, 7,500,000 lita. Second place was taken by raw and semi-finished products, such as fertilizers, 15,800,000 lita; coal, 10,700,000 lita; iron, 9,600,000 lita; fuel oil, 7,600,000 lita; and cement, 5,800,000 lita. Foodstuffs, which occupy third position, include sugar to the value of 14,500,000 lita; herrings, 9,400,000 lita; salt, 2 million lita; etc. The livestock imported was mostly for the purposes of improving the various breeds of animals.

In the total foreign trade turnover, England occupies second position (Germany, first).

	(In million lita.)			
	1926.	1928.	1929.	1930.
Exports to Great Britain	63.1	52.3	57.4	65.0
Imports from Great Britain.....	19.1	19.3	26.0	24.1
Total turnover	82.2	71.6	83.4	89.1

The most important items of trade between the two countries are as follows:—

	(In million lita.)	
	1929.	1930.
Exports to Great Britain.		
Food products	9.1	27.9
Salted meats	...	15.1
Butter	5.1	8.4
Eggs.....	1.7	1.3
Fresh meats	1.4	2.1
Raw and semi-finished products	38.7	31.2
Cellulose	17.0	16.5
Flax and tow	10.6	8.1
Linseed	6.9	4.1
Timber	2.7	1.7
Manufactured goods.....	9.6	5.7
Veneer	8.1	5.0
Cardboard	0.4	0.4
Imports from Great Britain.		
Foodstuffs	10.0	8.7
Herrings	9.4	8.2
Raw and semi-finished products	3.0	2.2
Coal	1.8	0.8
Fuel and mineral oils	0.3	0.4
Metal	0.2	0.3
Manufactured goods.....	13.0	13.2
Cotton fabrics	3.6	3.9
Tinplate.....	3.1	3.5
Cotton yarns.....	0.6	1.4
Woollen goods	1.0	1.0
Woollen yarns	0.4	0.3

From the above table it will be seen that exports to Great Britain consist largely of agricultural products, such as butter, eggs and bacon and semi-manufactured goods, such as cellulose, timber material, and flax, while imports are mainly cotton and wool fabrics, tinplate, and foodstuffs, such as herrings.

Trade relations between Lithuania and England would have shown even greater development if the Lithuanian territory of the Vilna district, with its larger towns and developed industries, had not been occupied by Poland.

COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED.

A YEAR OF ANXIETY.

REDUCTION OF GROSS RECEIPTS.

MR VINCENT YORKE'S ADDRESS.

The 132nd ordinary general meeting of the Mexican Railway Company, Limited, was held on Wednesday, June 17th, at Winchester House, Old Broad Street, London, E.C., Mr Vincent W. Yorke (chairman of the company) presiding.

The Secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—At our last meeting I made no attempt to disguise from you that the results of the half-year which we are reviewing to-day would be most unsatisfactory, and so they have proved to be. The gross receipts, on which the well-being of any railway mostly depends, reached the low figure of about \$31,000 per day, which is even less than the figure of the corresponding half-year, in which the total gross receipts were seriously affected by the disastrous strike of December, 1929. At the same time, as a result of the new working conditions imposed upon us by the settlement of this strike, expenses have necessarily increased in almost every department, and these increases have been accentuated by a fall in exchange which has affected the cost of all purchases from abroad and reduced the value of remittances.

TRAFFIC STATISTICS.

Though I have no wish to take up your time with unnecessary detail, there are one or two features in regard to our receipts to which I will draw your attention. The grand total of passenger receipts shows a decrease of nearly 6 per cent. as compared with the corresponding half-year. This is mainly due to the increase of road competition. The policy followed by the Mexican authorities in the construction of roads seems to me an unfortunate one both for the railways and the general interest of the community. Instead of these roads being constructed so as to radiate out from railheads into the country in need of development and into which, for physical reasons, it is almost impossible for railways ever to penetrate, they have been, and are being, constructed in developed country and directly parallel to the railways. While, therefore, remoter regions will remain undeveloped, road competition is more and more likely to encroach upon our earnings. It is satisfactory to be able to report an increase of some \$18,000 in earnings from first-class passengers during the half-year. This is due to an increase in tourist travel, for which there are great opportunities in Mexico, and which is being carefully fostered by an excellent organisation in Mexico City and by the efforts of the Ward Steamship Line, who are increasing the size of their ships plying between New York and Vera Cruz, and shortening the time of the voyage.

As regards goods traffic, while the total increased by 7,700 tons, foreign goods, which is our best-paying traffic, decreased by 6,300 tons, or in money \$255,000. This is undoubtedly due to the general depression of trade and the decline in Exchange, which, of course, adds to the cost of importations to the importer. The increase of 7,700 tons in the total movement of goods has led to an increase in traffic train kilometres of 9 per cent., but it should be said, in justice to the management, that this work has been done, in spite of the many additions to departmental expenses of which I have already spoken, at an increase of expenses of only 7 per cent.

NET REVENUE.

The total of net revenue for the half-year, including all other receipts, only amounts to the meagre figure of some £17,000, from which loss on exchange of some £6,000 has to be deducted. The receipts, however, on account of indemnity have enabled us to pay our debenture interest without much encroachment on our cash resources.

In view of the low figure of recent and of current earnings, and of the uncertainty of the outlook of business generally, we have decided not to make any further reductions in the amount outstanding in respect of "A" and "B" stocks, which stands at about £327,000. We still have until December 31, 1933, in which to discharge this liability.

I regret that I cannot ask you to draw any favourable inferences from the results of the current half-year. The first two months of this period showed actual losses on operation; since then our general manager has reported that, by readjustments of labour contracts, the shortening of hours and other means, he hopes to reduce expenses by nearly \$50,000 per month. Traffic, however, continue to show a decreasing tendency, and it seems unlikely that the very substantial saving which he hopes to achieve will do more than mitigate a most unsatisfactory situation.

CONDITIONS IN MEXICO

Turning to general conditions, you may remember that at our last meeting I told you that a country which depends for its living on the production of oil, silver, copper and lead must be suffering severely when the prices of all these commodities had fallen to such low levels. Since then the same prices have fallen much lower in every case; silver, indeed, of which Mexico is the largest producer in the world, stands at little more than 1s. per ounce, as compared with 1s. 6d. which till this year was the lowest price on record. It is not surprising, therefore, that business conditions should have gone from bad to worse, and it would be rash to say either that the bottom has been touched, or that there are any definite signs of recovery. The matter of exchange, as regards which Mexico has been remarkably fortunate during the last ten years, is also a very serious matter from our standpoint. Silver currency, in which our receipts are paid, which stood at a discount of 8 per cent. as lately as October last, stands at a discount of nearly 27 per cent. to-day. Such a discount not only adds substantially to such part of our expenses which have to be paid for in gold, but takes a heavy toll from our remittances.

On the other hand, political conditions, which are always liable to disturbance in times of economic trouble, have remained absolutely stable and quiet, which augurs extremely well for the progress of the country as soon as a recovery in business sets in. A new Labour Law is now before Congress; this law, though in many respects unsatisfactory to us, and one against which we have felt it our duty to make various serious representations, is framed in a far more statesmanlike and reasonable spirit than the former law introduced about 18 months ago and fortunately not passed. Meanwhile, our own employees have shown a reasonable desire to help us in the difficult circumstances of the moment, and have agreed to the institution of many economies of which I have already spoken, and for which we are very grateful.

LATEST NEWS.

I will now read a cable just received from our general manager:—

"Every prospect of good cereal crops unless unexpected heavy rain, potatoes and tobacco crops very promising also sugar and alcohol, movement banana shipments to United States increasing with new plantations in Chiapas opened. Textile goods industry working fairly well at Santa Rosa, Nogales and Orizaba, while textile and flour mills are working reduced hours in Puebla. Mexican Eagle Company expect to pump oil fuel here August by new pipe line. Shipments of timber and iron pipe expected from abroad though imports generally have greatly fallen off owing to silver situation; business depression increased by duties on many articles. Labour Law is still the topic of the day and every effort has been made to obtain a hearing from legislators. Congress discussion expected in a few days. Trains running regularly but road competition increasing. All reductions in wages hold good until end of the year. Net oil fuel price recently reduced to 63.75 cents (U.S.). Due banks' consortium all exchange being handled by them at fixed price, but owing to scarcity of American exchange impossible obtain sufficient for requirements."

The news he gives as to harvest prospects is satisfactory, as also is the hope that the banana traffic will increase. This latter traffic, of which we had great expectations, has fallen off considerably lately owing to a great fall in prices of bananas in the United States. On the other hand, the news with regard to the early completion of the pipe line by the Mexican Eagle Company must mean the loss to us of certain regular volume of traffic, which, although carried at very fine rates, and, therefore, not very profitable, we cannot afford to lose just now.

In conclusion, I regret that I have not been able to speak more cheerfully about the situation in which we find ourselves. Unfortunately, we are going through an anxious and uncomfortable time, and it would be wrong for me to attempt to conceal it from you. On the other hand, railways of every description, in all parts of the world, are under a cloud at the moment, and it is difficult to say when it will lift. I do not agree with the general opinion of the financial world in thinking that prosperity will never return to railway business, or that railways will not be able to adapt themselves to changing conditions, or that the Governments concerned will stand by and allow the immense blocks of capital invested in railways to be scrapped by the destruction of their earning power. If there is yet a mission, as I believe, for railways in this and other old countries, still more must there be one for them in a new and undeveloped country such as Mexico.

It only remains for me to speak with pleasure and gratitude of the good work which Mr Holmes, our general manager, and staff are doing for the company. Bad trade, and the fall in receipts which follows it, add enormously to the difficulties and anxieties of the management of a railway, and I feel satisfied that they have done everything that could be done under most awkward circumstances.

The report and accounts were unanimously adopted.

ARMSTRONG WHITWORTH SECURITIES, LIMITED.**A SATISFACTORY PROFIT.****PROGRESS WITH THE DIESEL ENGINE.**

The annual general meeting of Armstrong Whitworth Securities, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, E.C., Major-General G. P. Dawney, C.B. (chairman of the company), presiding.

The Secretary (Mr W. T. C. Cochrane) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen, in presenting the accounts of your company for the year 1930, together with the directors' report, I should have had a satisfactory task to fulfil, had it not been for the acute depression in trade which, as you will hardly be surprised to hear, is bound to cause the current year's operations to contrast most unfavourably with those for the year reviewed in the accounts before you.

I think we are entitled to consider the results for the year 1930 very satisfactory. For, looking at the results of the operations of the Armstrong group of companies as a whole, as you will see, the balance at credit of profit and loss in the consolidated statement which we include with the accounts has risen from £11,700 to £106,000; and this latter figure does not include any profits on the credit shipbuilding operations except such as were actually applicable to, and received in, the year 1930.

A SATISFACTORY NET PROFIT.

The profit and loss account for the year calls for little comment. As you will remember, the net profit for the year 1929 was subject to provision for losses of subsidiary companies, which reduced the balance at credit of profit and loss at the end of that year to £11,714. The net profit for the year under review is £56,959, provision having been already made in the profit and loss account for a small loss incurred by one subsidiary company during the period. The net profit for the year of £56,959 does not include any profits earned by our operating companies during the year, the profits so earned having been retained in the operating companies themselves, in view of the severe depression through which we are passing, and of the uncertain outlook. Taking the above facts into consideration, and bearing in mind the lower rates of interest obtainable in 1930 as compared with 1929, I think you will consider the figure of profit for the year to be very satisfactory.

THE OPERATING COMPANIES.

As regards the three main operating companies, the Engineers Company showed a profit for the year, after making adequate provision for depreciation, contrasting favourably with the loss shown by that company in the previous accounts. As you will see stated in the directors' report, this profit was mainly attributable to satisfactory results in the marine engineering department.

The Shipbuilding Company also showed a profit for the year, after adequate depreciation, against a considerable loss in the preceding year. This was due to shipbuilding contracts taken on credit terms. As the payments in respect of the ships so sold are receivable in instalments spread over several years, the profit now reported by the Shipbuilders Company includes no more than such proportion of the total profit as is actually applicable to the instalments received during the year under review. The remainder of that company's profits in respect of last year's operations will fall to be taken into that company's profit and loss account as and when instalments are received in the current and subsequent years.

Finally, the Ironfounders Company, which was formed since we presented our last accounts to you, has also been able to show a profit after adequate depreciation has been provided for.

PROGRESSIVE DEPRESSION.

I think you will agree that these are satisfactory results when you take into consideration the condition of trade during last year. Your board has had under the fullest consideration what course they should adopt in dealing with the operating companies' profits. Conditions in the engineering business have been steadily changing for the worse for many months past. As you know, shipbuilding in this country may almost be said to have come to a standstill. On the whole of the River Tyne there are not more than four or five berths at present occupied; and you have all read of the great numbers of ships, the huge tonnage of British shipping, now laid up owing to the lack of profitable occupation. In our own works, and in our own shipyards, we are experiencing no ordinary slackening of business. There has been a progressive falling off in orders since the middle of last year. I shall refer presently to the measures which we are taking to develop new fields of activity, and to prepare ourselves to take immediate advantage of any revival of trade—and a revival must come sooner or later. But in the actual circum-

stances, and with no apparent prospect of any early or considerable improvements in the situation, it has seemed to us that our only course, as prudent business men, was to recommend leaving the profits of the operating subsidiaries in those companies for the time being, with a view to the utmost conservation of their resources.

NEED FOR CONSERVATIVE FINANCE.

This brings me back to the second paragraph of our report, and to our recommendation as to the disposal of the Securities Company's profit. While it is true that we are in a strong position as regards liquid resources, we feel that the time is one which calls for the strictest measures of conservation. We have decided, therefore, after close and anxious consideration, not to recommend the payment of a dividend on the first preference shares, but to propose that the balance at credit of profit and loss should be carried forward to next year. Our decision to make this recommendation is one which I believe to be very amply justified in view of the world-wide and unprecedented depression through which trade is now passing; and your board believe it to be the proper and prudent course to adopt, and the course in the best interests ultimately of all shareholders.

I must just make a brief reference here to one other subsidiary company in which we have a controlling interest. Craven Brothers, whose loss in 1929 had to be provided for out of your profit and loss account for that year, has this year operated without loss. Thus the reorganisation instituted by your vice-chairman, Colonel Ionides, who is chairman of that company, has so far shown satisfactory and promising results. Colonel Ionides is now proposing to the shareholders a reconstruction which will strengthen the company's position, and as a result of which we hope to improve the prospects for our considerable investment.

DEVELOPING THE DIESEL ENGINE.

When I spoke last year of the activities of the Engineers' Company, I mentioned an agreement which had been concluded with Messrs Sulzer Bros. of Winterthur, Switzerland, under which we had embarked on the production of Diesel electric rail units. Since that date we have secured an order for four Diesel electric units of 1,700 h.p. each, and have under construction at Scotswood Works three Diesel electric rail coaches and other units.

The use of the Diesel engine is nothing more nor less than applying the same means of propulsion to railway trains as is used on the modern motor car or lorry, with these two differences: that in place of using petrol we use a heavy oil, which is not only much cheaper, but also gives 50 per cent. more mileage per gallon; and that, for the transmission of the power of the engine to the axles of the train we employ the medium of electricity.

We believe that the development of this form of motive power is a matter of outstanding interest. It seems to me that consideration of the exceedingly interesting Weir Report on the electrification of the railways lends colour to that view. Full electrification is unquestionably appropriate to dense traffic areas; but on lines of low traffic density we believe that the truest economy lies in the use of Diesel electric rail units, which are vastly cheaper in first cost than electrification and equally cheap to operate. We believe, in fact, that this system will establish itself as ancillary to electrification and effect substantial savings in capital expenditure to the railway companies.

The interest taken in this new activity is so general as to encourage the anticipation, with the return of normal trade conditions, of a considerable and growing volume of business.

A second development, which I may just mention, is in connection with the manufacture of commercial vehicles. We have become interested, with the Saurer Company of Arbon, Switzerland, in a company which will manufacture the well-known Saurer lorry for the home market and for the Empire overseas. This vehicle, of proved capacity and endurance, is equipped with a Diesel engine using heavy oil instead of petrol. The engine, in weight, revolutions, and performance, compares favourably with the best types of petrol engines. Not only does it use the cheaper fuel, but it only consumes, for a given performance, about two-thirds of the volume. In service the engine has proved itself for reliability and good wearing qualities. The first British-made models will be exhibited at the Motor Show in November, by which time it is anticipated that deliveries will be able to be made.

So much for certain new lines upon which we hope to develop your business in the future, and for the foundations which we have tried to lay for taking advantage of a revival in trade as soon as it occurs. At present it is difficult to detect much indication of an early revival. The prospects are not encouraging so far as the immediate future is concerned. There is, of course, no question but that our industrial difficulties are much accentuated by the world depression. But I feel impelled to express my own belief that there are certain vital flaws in our national economy which, if they

be not remedied, will very possibly prevent our recovery even after the world depression has ceased, just as, in fact, our troubles began some years before the world depression fell upon us.

CAUSES OF THE WORLD DEPRESSION.

There is a general measure of agreement that the main causes of the world depression are wastage of capital in the Great War, and the industrial dislocation resulting from the war itself and from the post-war international settlements; the burden of European debts, rampant economic nationalism, and, lately, the fall in the prices of primary commodities, reducing the purchasing power of the primary producers, and so reacting on the manufacturing communities. These factors are world-wide; but I shall make no apology for mentioning certain others which seem to be more within our own national control.

I suggest that, at present, our whole system is out of equilibrium. Our external trade is vital to our very existence. Our population presses upon us, and cannot, I believe, be absorbed into industry without a revival of our overseas trade. And, in order to make such a revival possible, certain conditions precedent are, I believe essential. The first is the re-institution of public economy—real, effective, and drastic. The second is the re-establishment of the equilibrium, at present lost, between the rates of wages in the sheltered and the unsheltered trades respectively. The third is the necessity for taking into primary account, in any consideration of our economic policy, such measures as will not only avoid damage to our export trade, but will definitely assist its recovery and development.

NEED FOR PUBLIC ECONOMY.

I have said that I believe the first essential to be public economy. I believe it is not widely enough realised what our recent lack of public economy—our present public extravagance—means. Between 1913 and 1929, a period during which the volume of our export trade decreased by 20 per cent., there has been an increase of 250 per cent. in public expenditure. In 1913 the value of our exports exceeded our public expenditure by £222,000,000. But in 1929 our public expenditure exceeded the value of our exports by £365,000,000. Taxation is estimated to absorb almost a quarter of the total income of the whole nation to-day. Does anyone believe that it is possible to rehabilitate our industry and to reabsorb the unemployed, while the State, in taking this huge proportion of the national income in taxation, is depriving industry of the very means which would otherwise be available to facilitate its expansion and development? I must quote a recent aphorism by Sir George Touche, which is wholly admirable:—"A depleted industry can only pay depleted wages, and those only to a minimum of workers. More unemployment follows as a matter of course." It is the promoters and supporters of public profligacy, therefore, who, through the depletion of industry, are really responsible for attacking the standard of living. I do not know of any industrialists who wish to attack the standard of living of the manual workers. Our object is to promote a healthy industry in their interests no less than in yours.

The second condition which appears to me essential is an adjustment of the equilibrium between the costs, and particularly the labour costs, in the sheltered and unsheltered trades respectively. When one realises the disparity between the rates paid in the sheltered industries and those paid in the unsheltered industries, the mal-adjustment is seen to be very remarkable. To take one instance, according to Ministry of Labour figures the standard of hourly time rates for building trade labourers are equal to the rates paid to engineer fitters and turners—skilled workers in an unsheltered industry—and the standard rates for local authorities—unskilled labourers are actually higher than those of fitters and turners. It is to be remembered, of course, that the State and local authorities constitute the largest sheltered industry in the country. This position of disequilibrium is of the gravest import. Its result is that the sheltered, or non-exporting, trades, being either in the position of spending public moneys, or being free from the burden of foreign competition, create for the industries competing in the world market burdens which the latter cannot support. This factor, together with the lack of public economy, is, I believe, causing our external trade to bleed to death.

Let me make myself abundantly clear. I am not suggesting any general attack on wages. But I do suggest that the reaction of abnormal wages in sheltered industries unfairly handicaps our engineers, our shipyard workers, our boiler makers, our moulders and the members of many other skilled crafts.

THE CUMULATIVE BURDENS ON THE EXPORT TRADE.

For the burdens placed on the unsheltered industries by the sheltered are not of single incidence. I must emphasise the point that there is a cumulative burden of charges of other industries

which at all the various stages contribute to the cost of the unsheltered trades' material. The charges in respect of general public extravagance or in respect of social services, doles, non-remunerative expenditures of all sorts, excessive wages paid by the State and local authorities, excessive building trade wages reflected in high rents and house prices, excessive railway wages reflected in railway freights—and railway freight charges on industrial goods have increased about 60 per cent. since the war—all these increase the cost from the mine and quarry to the blast furnaces; they are all added again in the cost of the blast furnaces' products to the steel works and foundries; and again in the cost of the steel which goes to the bar mills and sheet mills, or in the cost of the boiler plates which go into the engineering shops; and, again, for the fourth or fifth time, in the boilers when they pass from the engineering shops for shipment.

As an example of the multiplied burden, take one item alone, that of rail transport costs. In 1913 the railways carried 30½ million tons a month, at a total cost to customers of about £5,360,000; in July, 1930, they carried under 24½ million tons at a cost to customers of £8,200,000. Now, while I am not arguing that the whole onus is to be laid on excessive transport wages, it is clear that in so far as those wages stand at a level which is out of relation with comparable wage standards in the unsheltered trades, the excess attributable to the transport wage-earners' relative advantage constitutes a cumulative burden on industry, increasing in almost geometrical progression through the various stages of manufacture. Coal, lime, coke, ore, have to be transported to the blast furnace for the manufacture of pig iron; pig iron, coal, coke, lime and ore have to be transported to the rolling mills and steel foundry for the manufacture of steel; the steel has to be transported with coal and other commodities to the engineering shops, and so forth. Thus the accumulated load of transport charges is out of all proportion to the cost of the final product. It is to be remembered that the price of a ton of coal includes a number of charges imposed by Government or municipal authorities, as well as of transport, at every stage. And it takes four tons of coal to make one ton of steel.

It has been calculated that of the prices charged by British engineering to its customers, there is only some 30 per cent. which it is able directly to control, the remaining 70 per cent. of these prices being absolutely outside their power either to control or to reduce or in any way to affect. It seems to me certain that there is no hope for our export trade under the intolerable burden of these accumulated pre-charges, these multiplied burdens piled upon it by national profligacy and by the attempt, too successful in the case of the sheltered workers at the expense of the unfortunate unsheltered, to peg the standard of living at a level which is out of relation with world standards.

THE VITAL OVERSEAS TRADE.

We must consider our external trade—in which, as you know, our own business is vitally concerned—as a primary factor in ordering our economic life. The whole nation is living beyond its means. We must set our house in order so that we may be in a position to take advantage of a revival when the world depression passes. I do not wish to exaggerate, but there is reason to fear that our capacity to take part in the recovery may be endangered, apart altogether from temporary world conditions, if we pursue much further the reckless courses upon which we appear to be embarked.

AMENDMENT DEFEATED.

Mr J. H. Clifford Johnston, who said he represented the A. W. Second Stock Trust, which owned the whole of the one million 6 per cent. first non-cumulative preference shares and 350,000 of the 1,100,000 4 per cent. second non-cumulative preference shares, then moved the following amendment:—"That the report of the directors be referred back to them for further consideration, so that they may have due regard to the items upon which the scheme for reconstruction of the company was presented to the creditors and shareholders of the company and in particular to the rights of the non-cumulative preference shareholders," which was formally seconded.

The Chairman said that the board of directors had, of course, given close consideration to the terms of the scheme for reconstruction, and it was quite clear that it had not been intended to turn the company into a mere holding company or trust company. If they were not to give up the operating companies, but to be ready to support and finance them when there was a revival in trade, they had to conserve their resources for the purposes of the group as a whole. He stated that, although in his view the amendment was out of order as involving a negative, he would put it to the meeting in order that the shareholders' feelings might be known.

On being put to the meeting, Mr Clifford Johnston's amendment was defeated by a large majority, only two votes being given in its favour.

The motion for the adoption of the report and accounts was carried with two dissentients.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED.

SATISFACTORY RESULTS—DIVIDEND MAINTAINED.

The thirty-fifth ordinary general meeting of Callender's Cable and Construction Company, Limited, was held, on the 17th instant, at the Waldorf Hotel, Aldwych, London. Sir J. Fortescue Flannery, Bart., D.L., M.Inst.C.E. (the chairman), presiding.

In moving the adoption of the report and accounts, the Chairman said that while they were not able to show the same degree of advancement this year, they were able to come before the shareholders with confidence and congratulation that the company had fared so well in the depressing surroundings of bad trade throughout the world. They had been very fortunate, owing to their extended friendly connections, in securing a continuance of excellent orders for service mains, for household cables, and for wires for internal electrical connections. At the last meeting he pointed out the importance into which this branch of the business was developing, and he was glad to say that it had not only maintained the good expectation which he had had, but it had done even better than they had expected, and still continued as a flourishing and important branch of their trade. The directors considered it their duty to provide amply for depreciation, and after making every necessary deduction they were able, for the twelfth year in succession, to recommend a dividend on the ordinary shares at the rate of 15 per cent. per annum. Important pioneering work in the cable industry was now taking place. Ever-increasing service was demanded from underground mains, involving higher and even higher pressure, which meant new designs and costly experiments. They felt bound to go on and to progress even in front of the times. That constant advance could not be otherwise in view of the wide future before all electrical supply undertakings. In 1930 they had to provide a considerable additional sum for this pioneer work, which to some extent accounted for the reduction in profits.

Great Britain had lagged behind other countries in the use of electricity for power and lighting. There was ample room for all forms of developing power and light in central manufactories and distributing from them to consumers, and no form of such development and distribution need, in his opinion, look forward to the future except with hope and confidence. The lagging behind of this country as compared with others indicated considerable future demand for the employment of all electrical implement manufacturing companies, including cable manufacturers. If railways were to hold their own, they must electrify to a large extent, and some had already begun. They need not, therefore, look with pessimism to the future, but might reasonably hope that with the general revival of trade cable-making generally and Callender's Company in particular would not be the last to participate with profit to the customers, to the workers and to the shareholders.

Sir T. O. Callender, Kt., J.P., M.I.E.E. (deputy-chairman and managing director), said: The year began with a considerable amount of work in hand and hopes for the future, but in March the unexpected fall in the price of copper and other raw materials with which they dealt began and had since persisted in its downward course. As the company had to follow the prices of materials in the rates at which it sold its manufactured goods, that, in itself, made a considerable difference to the company, but what had been of still more importance had been the total lack of confidence and enterprise that that dropping away of values had engendered and which the financial stringency had increased.

Whilst the carrying out of important new contracts hardly existed in the latter part of 1930, the demand for household wires, involving other branch mains or new service cables, and certainly much internal wiring, was increasing.

Among the new developments to which the company had given special attention was that of the electrification of the railways. Only a small portion of the railways of this country was at present electrified, but the extension of electricity for that purpose was considered by engineers and politicians, and, indeed, by all concerned, as of primary importance. It was, therefore, with great pleasure that he had to tell the shareholders that the company had carried out the conversion of one of the suburban lines, from Manchester to Altrincham, jointly owned by the L.M.S. and L.N.E. railways. They had always carried out a certain amount of work in ship wiring, but had recently opened a new department under the charge of his son, Mr T. O. Callender, and in the last few days they had received orders for the cabling on board the giant Cunarder now being built.

Although the twelve months through which they had just passed—that is, from June of last year to the June of this year—had been sparsely strewn with orders, he looked forward with confidence to better times, and to finding the present condition of their factories—full up with work—to be the condition they will find all through the year.

The report was unanimously adopted.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED.

FURTHER CAPITAL FORESHADOWED.

The ordinary general meeting was held, on the 16th instant, at 1 Queen Victoria Street, London, Mr. John G. B. Stone presiding. The Chairman, in moving the adoption of the report and accounts, said:—I am pleased to be able to report that the progress of the company of recent years has been maintained during 1930. The increase in kilowatt hours sold was 5.89 per cent. in excess of 1929. The increase applied to every class of consumer, and a corresponding improvement occurred in revenue.

A balance of £69,010 remains as net profit for the year, being an increase of £3,143. To the net profit has to be added £7,444 brought forward, making a total of £76,454. After deducting the dividend on the 5½ per cent. preference shares for nine months to September 30, 1930, and an interim dividend of 2½ per cent. (actual) on the ordinary shares, there remains for distribution £51,144. The directors recommend that this be appropriated as follows:—(1) Provision for three months' preference dividend accrued to December 31, 1930, £4,493; (2) payment of a final dividend of 5½ per cent. (actual) on the ordinary shares (making 8 per cent. for the year), free of income tax, £26,026; and (3) transfer to general reserve fund, £10,000 (bringing that fund up to £120,000). These provisions make a total of £40,519, leaving to be carried forward to next year's account £10,624.

The overhaul of our generating plant and boilers has been practically completed, and we have now ample plant available for our requirements. This expenditure, which has been considerable, has, as usual, been debited to renewal account. In order to keep pace with the growth of the business, further capital will be required, and we shall be communicating with the shareholders in regard to this towards the end of the year.

It is gratifying to be able to report an improvement during 1930 in the working of the tramway, in which company we hold the whole of the ordinary share capital.

It is thought that the public is now realising the advantages of a regular and ample service on the tramways, as compared with the intermittent service of omnibuses, and steps are being taken to improve the tramway company's rolling stock. I am glad to say that since the beginning of this year there has been a further improvement of 5.3 per cent. in the traffic receipts.

The resolution was unanimously adopted.

DISCOVERY.

Over 400 years ago, Balboa crossed the Isthmus of Panama from the Atlantic Coast and discovered the Pacific Ocean.

To-day, the Isthmus is traversed by the Canal, while other vital arteries of modern commerce are provided elsewhere by the great railway systems which link the two Oceans.

The great and growing trading development of the New World is also largely dependent upon complete international banking facilities, and these are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, EC2

WM. CORY AND SON, LIMITED.

STRONG FINANCIAL POSITION.

The thirty-fifth annual ordinary general meeting of Wm. Cory and Son, Limited, was held, on the 18th instant, at the Cannon Street Hotel, London.

Sir A. C. Cory-Wright, Bt., said that the profits had been earned not only on the extensive trade both in coal and oil fuel carried on by the company in the United Kingdom and from the valuable shipping and lighterage interests which they possessed, but also from dividends they received from investments in subsidiary companies operating abroad, and from the large invested reserves held by the company. The strong financial position of the company had been built up by a cautious and conservative policy pursued since the company's inception.

The operation of the Coal Mines Act had added to the difficulties of carrying on their business in a normal manner. The quota scheme designed with the object of restricting the output of coal, had, more particularly in some of the mining districts, affected the regular supply of coal to the consumer and had, at times, caused inconvenience and involved many industrial enterprises in additional cost, as well as resulting in bunkering and export orders being lost to this country. The fixing of minimum prices had not worked in an entirely satisfactory manner, nor had it assisted the export trade, especially to countries which were able to take advantage of the low prices of coal offered by the foreign producer at prices designedly fixed below this country's minimum figures, which were well known to them. It could hardly be expected that any legislation would immediately overcome all the many difficulties that for so long had troubled the entire coal-mining industry, but it was not unreasonable to hope that the Act might be so adjusted that it would in time help to bring prosperity to the trade.

Generally speaking, their tonnage in nearly every branch had been up to the average of the past few years. In view of the great falling off of the world's trade affecting every class of industry, and, perhaps, none more seriously than that connected with shipping, on which the company relied for making large supplies of coal for bunker purposes, they might have expected a considerable decrease in turnover. It had, however, proved little short of the previous year, and any falling off there had been in their coal tonnage had been more than compensated for by a big increase in their oil fuel trade, which was greatly in excess of all previous years.

The report was unanimously adopted.

HOVIS, LIMITED.

RECORD PROFITS.

The ordinary general meeting of Hovis, Limited, was held, on the 18th instant, at the Caxton Hall, Westminster, London.

Mr A. H. Dence (the chairman) said that it was again their privilege to present a balance sheet and profit-and-loss account which carried on the record of their success of recent years. He was sure it would be agreed that year by year their balance-sheet figures demonstrated increased strength. The profits for the year under review were slightly higher than those for the previous year, and constituted what was at present a record. Such results must, indeed, be satisfactory and cheering to all the shareholders.

The days in which they lived were days of unprecedented trade depression throughout the world. Many of the largest and best-known industries were suffering most severely. With such conditions prevailing, not only in England, but in the United States of America and throughout Europe, they should be grateful for their own success. Not only did they propose to maintain the dividend and bonus on their ordinary shares at the same rate as in the past few years, but the steady price of the company's shares on the Stock Exchange showed that there was some security of tenure of their position to be anticipated.

It would be their earnest endeavour to maintain the safe and conservative policy in the future that they had followed in the past, and they would strive to maintain their dividends at their present level, and also to maintain the financial reserves of the company, which formed so strong a foundation for their trading.

Dealing with the accounts, he said that with the proposal to transfer another £25,000 to that account, they would start the new financial year with their reserve account at £340,000. With the amount brought forward from 1930, the balance from profit-and-loss account carried to the balance sheet was £115,071. The net profit was £118,804, the highest figure yet attained by the company.

He was only too happy to pay once again his tribute to their wonderful commodity, "Hovis" Bread, which was the mainstay and reason of their business. They would continue to press home by every means in their power that Hovis was the most nourishing, sustaining and vitalising bread, and that its regular use contributed very materially to the health and general well-being of the population.

The report and accounts were adopted.

CITY DEEP, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

ANOTHER DIFFICULT YEAR—REORGANISATION OF WORK.

The thirtieth ordinary general meeting of City Deep, Limited, was held in Johannesburg, on May 19th last. Mr F. Raleigh presided.

The Chairman said:—Gentlemen,—Unfortunately our chairman, Mr John Martin, is not able to preside to-day owing to his absence on a short visit overseas.

The City Deep has experienced another difficult and unprofitable year. Working losses, though much smaller than those incurred during the previous twelve months, have continued; the available ore reserve has fallen, slightly in tonnage but appreciably in value; and the indebtedness of the company on loan account has increased. The improvement in the development results recorded in the first portion of the year was not maintained, and values have shown a serious decline during the latter part of 1930 and the current year to date. If that were the whole story, the outlook for the mine would be gloomy almost to the point of hopelessness. It is, therefore, satisfactory to be able, notwithstanding so many previous setbacks and disappointments, to hold out a reasonable prospect of regaining a profit-making position before the end of the current year.

The tonnage milled was increased to 1,157,500 tons, which is 74,500 tons greater than the figure for the previous year. The yield and working revenue per ton milled decreased by 0.164 dwt. and 9d. respectively, but working costs showed a satisfactory reduction of 2s. 11d. per ton milled (a reduction of 4s. 10d. per ton compared with the costs for 1928), with the result that the working loss per ton milled was 2s. 2d. less and the total working loss was reduced to £23,040, as against £139,234 for the previous year.

YEAR'S RESULTS.

The total loss for the year, after adding the interest due on the loan made to the company by the Central Mining and Investment Corporation, Limited, and Rand Mines, Limited, and deducting the difference between sundry minor items of revenue and expenditure, was £39,908. The net cash liability at the beginning of the year was £422,841. Adding to these two amounts the net expenditure of £17,702 on capital account (which is considerably less than was forecasted a year ago) and a small increase of £1,643 in cash assets, the net cash liability at the end of the year was £482,094, against which the company had £115,972 partly invested in shares and interests in co-operative and other concerns and partly represented by stores and materials and by sundry debtors and payments in advance, leaving a net financial shortfall of £366,122. The amount of the loan at December 31st last was £424,373, and at the end of last month £440,964.

The development footage accomplished during the year totalled 47,113 ft., compared with 48,017 ft. in 1929 and 46,524 ft. in 1928. Out of 17,270 ft. sampled on the main reef leader, 9,835 ft. gave payable values averaging 320 inch-dwts. The small footages which were advanced on the south reef and on the pyritic stringers disclosed poor values. The payable ore developed during the year and added to reserves amounted to 963,700 tons, of an average value of 5.95 dwt., i.e., 0.39 dwt. lower than the value of the ore developed during the previous year.

ORE RESERVE.

The estimated ore reserve at December 31, 1930, totalled 1,758,600 tons, of an average value of 6.08 dwts. per ton over a stoping width

of 43.1 inches. Deducting the tonnage contained in shaft and safety pillars, which cannot at present be stoped, the available reserve amounted to 1,268,200 tons, averaging 5.98 dwts. per ton over 42.4 inches. Compared with the position twelve months earlier, the available reserve showed a decrease of 55,200 tons in quantity and of 0.23 dwts. per ton in value. Owing, however, to an increase in the tonnage of ore in shaft and safety pillars, chiefly due to additions to the No. 4 shaft pillar, the total reserve showed an increase of 141,500 tons, although its average value was 0.34 dwts. per ton lower.

When the company began to incur losses, underground work was reorganised in an endeavour to restore the position. It has proved successful in every direction within our control. Improved methods of stoping, suitable for the great depths at the City Deep, were introduced; stoping widths were considerably reduced and working conditions generally improved. Fathoming was increased by over 20 per cent. and maximum scale production attained. All these results, however, have hitherto proved insufficient to counterbalance the factor beyond our control—the continued decline in the value of ore developed.

SMALLER SCALE OF PRODUCTION.

The position has clearly become critical, demanding new measures. It has been decided to reorganise work on a smaller scale of production, for a mill tonnage of 75,000 to 80,000 tons per month, resulting in a relatively improved—though still unsatisfactory—ore reserve position; and enabling the company to effect more readily any changes of policy necessitated by the results of subsequent development. Such a scheme now affords a reasonable prospect of the company regaining a profitable position.

In giving effect to this reduction of the scale of operations, some retrenchment of staff and employees will be unavoidable. This is a regrettable necessity, the more so because those connected with the mine, realising that its very existence has been at stake, have loyally co-operated with the management in their efforts to cope with a most difficult situation. But the only alternative to our present policy of reduction in scale of operations and expenditure would be to curtail development to a minimum, gradually reduce tonnage and prepare the mine for closing down. By adopting a middle course, we are convinced that we are doing the best for all concerned—both for shareholders and employees—and are making it possible to hold out a real measure of hope for future success.

The motion for the adoption of the report and accounts was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended June 13, 1931, amounted to £5,985,400 against ordinary expenditure of £11,993,880. After allocating £485,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £84,546, the week's operations, as shown below, increased the National Debt by £6,578,000 to £7,672,430,000:—

(000's omitted.)

Net arrivals, £4,699,018			

GOLD.

The Bank of England gold reserve against notes amounted to £155,255,902 on the 10th instant (as compared with £151,875,829 on the previous Wednesday), and represents an increase of £7,630,280 since December 31, 1930. In the open market yesterday bar gold was available to the value of about £850,000, of which £774,000 was from South Africa and £76,000 from the Straits Settlements. There was a considerable demand from Switzerland, and the important feature was that competition from that quarter caused the price to be fixed at 85s. 0½d. per fine ounce, a premium of ¼d. over 84s. 11½d., which had been the highest quotation in the open market since January 19th last. The amount taken on Swiss account was £600,000, and the Home and Continental trade secured £30,000 and £52,000, respectively. The balance was available to-day, but with less competition the price was fixed at 84s. 10½d. per fine ounce, at which £107,000 was taken from Switzerland and £53,000 for the Continental trade. It would appear that the gold bought in the open market on Swiss account has not all left this country. The week under review has seen a substantial addition to the gold holding of the Bank of England, mostly in the form of bar gold from Germany, whence about £5,000,000 has arrived since our last letter. The movements at the Bank of England have resulted in a net influx for the week of £5,639,783. Receipts totalled £6,292,635, of which £500,000 was in sovereigns released, £400,000 in sovereigns from South Africa, and £5,392,635 in bar

gold. Withdrawals consisted of £20,834 in sovereigns "set aside," £141,000 in sovereigns taken for export, and £491,018 in bar gold.

SILVER.

Although variations in prices have again been small, the market has remained quietly steady, sellers showing hesitation at declining rates. Support has been given by the Indian Bazaars, which have been rather more active, but America has been willing to meet the market, still selling fairly freely for near delivery. China has both bought and sold. The market continues quiet and shows no decided trend at the moment.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 8th instant to mid-day on the 15th instant:—

IMPORTS.		EXPORTS.	
	£		£
U.S.A.	52,598	British India	31,339

REPORTS AND NOTICES.

GOVERNMENT, &c.

GREEK GOVERNMENT LOANS (ASSIGNED REVENUES).—The following revenue receipts are to hand from Athens for the first quarter of 1931:—

	Drs.	Drs.
New revenues	166,964,956	+ 21,260,237
Old revenues	748,616,139	+ 17,800,003
	915,581,095	+ 39,060,240

Upon the basis of the above receipts and the relative security rights of the various loans, the following figures show the approximate security available for the first quarter of 1931:—

	Security available*.	Service of loan requires	No. of times covered.
7 per cent. Refugee	1,756,406	230,625	7.61
6 per cent. Stab. 1928	1,416,815	171,163	8.04
6 per cent. Pub. Works, 1928	1,221,992	143,869	8.49
6 per cent. Pub. Works, 1931†			
8 per cent. Exch. Ref. Ind., 1926-28	855,575	264,800	3.23
6 per cent. Exch. Ref. Ind., 1928			

* Exchange is calculated at Drs. 375 per £1 (the stabilised rate), and all contingent prior future charges deducted.

† £8,600,000 at present issued. A further £5,400,000 can be issued ranking *pari-passu*. The service of the whole £14,000,000, assuming the balance £5,400,000 issued upon the same basis would then be covered 5.23 times.

MISCELLANEOUS.

HUDSON'S BAY COMPANY.—At the suggestion of the Rt. Hon. Sir Robert Horne, who, in accordance with the decision of the Extraordinary General Court of Proprietors held on January 16, 1931, had acted as arbitrator in deciding three new appointments to the board of directors, the board of the Hudson's Bay Company have held an informal meeting to which they invited a few of the principal proprietors, together with Mr C. L. Nordon and the members of his committee, to meet them in Beaver House. Sir Robert Horne made a statement to the meeting as regards the course

of the proceedings which had taken place since the Extraordinary General Court, and advantage was also taken of the opportunity to introduce to those present the new Governor, Mr Patrick Ashley Cooper, who presided over the meeting. Mr Ashley Cooper briefly addressed the meeting, and in expressing confidence as regards the future of the company, asked for the harmonious co-operation of all the proprietors, which was essential in the difficult times through which the company was passing.

LOW TEMPERATURE CARBONISATION, LTD.—At an extraordinary general meeting of the holders of the prior lien mortgage debenture stock of the above company, held on June 10th, Colonel W. A. Bristow, M.I.E.E., M.I.A.E., F.R.A.E.S., chairman of the company, was appointed chairman of the meeting by the trustees for the debenture stockholders, Sir Gilbert Garney, K.B.E., and Sir Arthur Marshall. The resolution sanctioning the postponement of the date for the redemption of the said stock from July 1, 1931, to July 1, 1936, was carried by an overwhelming majority. Amongst a large number of stockholders present, there were only three dissenters to the resolution, and we are officially informed that over 80 per cent. of the stockholders voted personally and by proxy in favour of the resolution.

PEASE AND PARTNERS, LIMITED.—At the meetings of the 5 per cent. debenture stockholders and the unsecured creditors of Pease and Partners, Ltd., the scheme of arrangement put forward was passed at both meetings by an overwhelming majority. Both these meetings were presided over by Sir Gilbert Garney, K.B.E., F.C.A., who was appointed by the court to act as chairman. At an extraordinary general meeting of shareholders which followed, the alterations in the articles of association made necessary by the scheme of arrangement were unanimously approved.

THE ST. MARTIN'S LE GRAND PROPERTY CO., LIMITED.—The report and accounts for the year ended March 25, 1931, show that the net profit, after providing for tax, was £20,492 (last year, £2,419); the balance brought forward from last year was £2,419 (last year, nil), making £22,911. Out of this sum the directors recommend the following appropriations: Transfer to general reserve, £5,000; transfer to maintenance reserve, £2,500; transfer to rental reserve, £2,000, leaving £13,411. Preliminary expenses to be written off, £3,415, leaving to be carried forward, £9,996. The directors feel that, in view of the large sums which must be set aside in the ensuing four years for the redemption of the first and second mortgage debenture stock, and of the heavy interest charge thereon, the outstanding second debentures should be reduced as far as possible by redemption out of the company's present resources, thus greatly strengthening the position and making possible the payment of satisfactory dividends during the current year and thereafter. It is intended to utilise in this manner a sum at least equivalent to the amount transferred to reserve. It is, however, proposed that an interim dividend for the current year should be paid at an early date.

THOMAS HART, LTD.—The net profit for year ended March 31, 1931, amounted to £388, comparing with £5,247 for preceding year. The amount brought in was £3,842, making £4,230 available, against £7,330 a year ago. The dividend on the ordinary shares is reduced from 15 per cent. to 5 per cent., less income tax. The carry-forward is reduced from £3,842 to £3,068. Total assets are £94,676. Cash is reduced from £13,755 to £11,546. Debtors are at £6,490, against £10,607. Stocks are down from £6,465 to £3,569. Investments at cost stand at £21,727, against £11,560. Creditors, at £435, compare with £177.

INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION.—A regular quarterly dividend of 50 cents per share has been declared, payable July 15, 1931, to stockholders of record June 15, 1931.

THE AFRICAN AND EASTERN TRADE CORPORATION, LTD.—Payment will be made on July 1st of the half-yearly dividend to June 30, 1931, on the 6 per cent. cumulative "A" preference shares, less income tax at 4s. 6d. in the pound.

Commercial Reports.

MARKET SUMMARY.

The past week witnessed a deterioration in the general situation of the commodity markets. Last week's sectional upward movements have mainly been caused by temporary influences, as indicated in the last market summary. The output of coal in May, at 17.3 million tons, shows a drop of 1.3 million tons on the previous month, and there has been no improvement during the past week. The decline in the activity of the iron and steel industries still continues, and there are no signs of an early improvement. Continental pig iron is again shipped to this country in increasing quantities. With the exception of spelter, the principal non-ferrous metals have not maintained the slight advance recorded last week. Among textile raw materials, cotton has recovered a few points, but wool was easier and sales of Bradford goods have been diminishing recently. Flax and hemp were maintained, but jute was cheaper. The demand for viscose and acetate rayon yarn has shown some expansion, and though exports of fabrics were scarcely larger, the home trade still absorbs considerable quantities. Among cereals, wheat has been slightly cheaper, following the announcement by the Federal Farm Board that "it will not pledge itself to withhold its wheat stocks from the domestic market for another year." The principal other foodstuffs have all been weaker, and the fall in tea prices has been particularly sharp. Rubber has been inactive but steady in price, and the market in vegetable oils and oilseeds has been firmer.

THE COAL TRADE.

SHEFFIELD.—Lifeless conditions obtain in the South Yorkshire coal market, although the limited supplies of best quality hards sell readily for export on prompt account. Prices are firm. Demand, however, is extremely poor for secondary quality steams, smalls and house coal. Forward business is very quiet. Best steams are quoted at 17s. 6d. and 18s. f.o.b., and best ordinary house at 22s. at pits.

GLASGOW.—Business remains on a poor scale, with little prospect of improvement in any direction. Shipments last week amounted to only 177,000 tons, which is about the lowest figure for a long time, and the aggregate shipments this year now stand at 4,722,000 tons, against 5,773,000 tons last year to date. Restricted outputs are the rule in all districts, but in spite of this the trend of prices for large coals at least is easy. Nuts are slightly firmer in places, but pearls remain a dull spot. Shipping prices are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 11s. 6d.-12s.; doubles, 11s.-11s. 6d.; singles, 10s.; pearls, 9s. 3d.; dross, 9s. FIFE.—Screened navigation, 10s. 6d.-17s. 6d.; first-class steam, 12s.; third-class steam, 10s. 3d.-10s. 6d.; trebles, 11s. 6d.-13s.; doubles, 11s.; singles, 10s.; pearls, 9s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 6d.; trebles, 12s.; doubles, 11s.; singles, 10s.; pearls, 8s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 12s.; trebles, 11s. 6d.; doubles, 11s.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s. 6d.

CARDIFF.—There has been no improvement this week in the position on the Cardiff coal market. Inquiries have been scarce and the docks only partially employed. On Tuesday about 40 per cent. of the tips at Cardiff, Newport, Swansea and Port Talbot were idle. The demand for anthracite is fairly active, although the volume of the export trade in that coal is less than it was this time last year. For all bituminous descriptions production is in excess of demand, and the Marketing Association has reduced the authorised quota for the September quarter to 9½ million tons, compared with about 10½ millions in the June quarter and 11.6 millions in the March quarter. Prices for all grades are stationary at the scheduled minimum figures. Stocks of smalls continue to accumulate, and it is doubtful whether many of the dumps will be utilised till prosperous conditions are restored to the local iron and steel industries. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 9d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 18s.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; best anthracite, large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; stove nuts, 39s. 6d. to 43s. 6d.; French nuts, 43s. to 46s.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 27s. 6d. to 34s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 22s. 3d. to 22s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The position of the Cleveland iron market continues unsatisfactory, and what is likely to happen in the immediate future is difficult to forecast. Makers seem determined not to make any reduction in the official prices, with the result that business with local consumers becomes more and more restricted, while increased quantities of Midland iron are coming into the district and importations of Continental iron on an important

scale are threatened. Small parcels of the latter have been arriving recently, but larger lots are now spoken of as being under negotiations, if not already sold. Local makers sold a little iron to Scotch consumers last week, but to secure this business important concessions on the official local prices had to be conceded and the tonnage secured was only small as the foundries in Scotland are well booked up in Continental and other iron at much lower prices, and many foundries are working short time. The weekly market on Tuesday was only thinly attended and makers announced Cleveland prices unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. The result was that very little business was done with local consumers and there was practically no demand for export. In hematite the position improves a little in regard to orders for early delivery, but forward business is still very difficult to secure. Stocks are large, but are not being pressed on the market at present figures, so that the furnaces actually producing are getting rid of a good portion of their output. Makers are easier as regards prices and are willing to book mixed numbers for early delivery at 63s., and even a little less than this has been accepted for suitable business. For forward, 3d. to 6d. premium on the prompt price is generally quoted according to period required. In the finished departments new business seems to be held up in anticipation of a reduction in prices when the Associated Steel Makers meet next month. Strong representations are being made by consumers for concessions, and it is difficult to see how these can be avoided in the face of the low prices quoted for Continental material. In the meantime figures under the rebate scheme for home consumption remain: Plates, ½ in. up, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other quotations are: Heavy steel rails, £8 10s.; iron crown bars, £10; 24-gauge galvanised corrugated sheets, £10; and 24-gauge black sheets, £8 5s., also for home use. The ore market continues quite idle. Best Bilbao rubio is now nominally 15s. c.i.f. for early delivery, and the current freight Bilbao/Middlesbrough for prompt boats is about 4s. 3d. Coke is in abundant supply, but the demand is poor. Good blast-furnace qualities are offering at 15s. 6d. per ton delivered consumers' works, and less would probably be accepted. The number of furnaces in blast in the district remains at 22.

SHEFFIELD.—The local iron and steel industry continues featureless and the prevailing depression is intensified by the arrival of the customary quiet season. Indian foundry pig iron is still arriving in substantial tonnages in Scotland and South Wales. Italy has lately bought 15,000 tons of such iron. It is cheaper than British or Continental. The largest local steel works is closing all departments for a week or more for stocktaking shortly. The market for steel scrap is practically moribund. Users are not taking contract deliveries and new business cannot be secured except at abnormally low prices. Such material is 25s. a ton cheaper than a year ago. Trade with Australia is still bad. Firms here are not exporting to Australia a fourth of their former average business. Signs of trade recovery are still absent, and no considerable change for the better is expected until the beginning of autumn. There is a moderate call for tools, cutlery and plate.

GLASGOW.—The situation as regards the iron and steel trades in and around Glasgow is practically unchanged, and it seems now to be generally accepted that no marked improvement can be looked for until after the annual fair holidays in the middle of July. On the whole the volume of inquiries for material, both for export and for home consumption, has been maintained, and there has been a noticeable, though not great, increase in the amount of business done for overseas markets in the manufactured iron and steel trades. Some of the tube makers have a little more work on hand than for some time, but at all plants work is not sufficient to insure regular employment. Makers of semis are still faced with very keen competition from the Continent, and very little business is being done either in home or foreign material.

CARDIFF.—On the Swansea Metal Exchange on Tuesday tinplates were reported a quiet market at from 14s. to 14s. 3d. per basis box. Steel bars were easier at £4 12s. 6d. per ton for the local make and £3 15s. for imported material. Galvanised sheets are down to £10 per ton, with demand still very restricted. Shipments of tinplates last week totalled 86,543 boxes, compared with 93,095 boxes the previous week, and stocks 221,259 boxes, compared with 230,963 boxes. Discussions are reported to be taking place on the question of output and price regulation, but, apparently, no decision has yet been reached. Meanwhile, both production and marketing are free from artificial restraints.

OTHER METALS.

TIN.—In the absence of any signs of an improvement in demand, the news, early this week, of a further increase in stocks in this country resulted in liquidation and lower prices. The slight improvement recorded last week has therefore proved of short duration. Wednesday's official closing quotation for "standard cash," at £101 2s. 6d. to £101 5s. per ton, compares with £103 2s. 6d. to £103 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,366 tons, show an increase of 427 tons on the week.

COPPER.—Disappointing industrial conditions and unfavourable statistics for May caused a renewed decline in values on the London Metal Exchange. Wednesday's official closing price for "standard cash" in London, at £34 6s. 3d. to £34 8s. 9d., compares with £35 3s. 9d. to £35 5s. a week ago. New York prices, both for "domestic spot" and for export, remained unchanged. Stocks of refined copper in British official warehouses at the end of last week, at 15,688 tons, show an increase of 633 tons, while stocks of rough copper, at 801 tons, were 496 tons smaller. According to the

SUMMER DAYS ON THE MID-LAND SEA

Take a Sea Holiday on the Western Mediterranean. Come cruising in Summer-time on the "Mother of Seas" by the beautiful 20,000-ton P & O Viceroy of India. On board you will find pleasant society; rest; or a round of gaiety—as you will. Perfect cooking. Perfect service.

18-day Cruises; from 24 Gns.

Mediterranean, Aug. 22, Sept. 5. Iceland, Norway, &c., July 4, 18.

P & O, Australia House, Strand, W.C. 2.

P & O Tourist Class: Australia from £70 return.
P & O Sea Tours: Marseilles, etc., 14 days from £16.

Metal Exchange, the May approximate copper figures for North and South America are as follows:—

	May.	April.
	Tons.	Tons.
Refined stocks	356,250	328,571
Blister stocks	170,156	173,135
Foreign deliveries, refined	24,107	28,571
Domestic deliveries, refined	40,179	49,107
Refined production	91,964	90,179
Mine production	41,071	41,964

LEAD.—This metal maintained last week's improvement, which was, however, largely due to the absence of selling pressure and not to an increase in demand. In New York the metal again changed hands at 3.75 cents per lb., spot. Wednesday's official closing quotation for "soft foreign" in London, at £11 6s. 3d. to £11 13s. 9d., shows no change as compared with the corresponding day last week.

SPELTER.—There was a slight improvement in demand, both in New York and London, and as there was no selling pressure, prices advanced further. The New York spot price for "East St. Louis," at 3.35 cents per lb., shows a rise of 0.05 cent per lb. on the week. Wednesday's official closing quotation in London for "good ordinary brands," at £11 2s. 6d. to £11 13s. 9d., compares with £10 17s. 6d. to £11 8s. 9d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at the recently reduced price of £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Spot sales for the week 11th to 17th (inclusive) are 29,000 bales, of which 16,350 are American, 1,900 Brazilian, 200 Argentine, 4,000 Peruvian, 1,850 Egyptian, 1,600 African, 1,800 East Indian, 800 Russian, and 500 sundries. Imports for the same period are 16,474 bales, of which 9,737 are American, 1,031 Brazilian, 1,402 Argentine, 1,607 Peruvian, 898 Egyptian, 478 African, 907 East Indian, and 414 sundries. Quotations, June 17th: American Middling, 4.84; Egyptian Sakel, 7.65; Uppers, 5.75; Brazil Fair, 4.90; Peru G.F. Smooth, 5.30; West African Middling, 4.90, and East African G.F., 5.90.

Manchester.—The recovery in prices for both American and Egyptian cotton, writes our correspondent, has caused rather more activity in the Manchester market. Mixed reports, however, have been given out with regard to the amount of business done, and although some manufacturers are able to arrange sales covering the

weekly output, others have not been able to make any progress, with the result that quite a few number of firms contemplate stopping more machinery. A feature of interest has been the larger demand in dhooties for India, and at least one fair transaction has been recorded. Light bleaching fabrics and fancies have also been in request, but orders have been of small weight. Trade with China has not shown any signs of broadening, and a bigger trade for that outlet cannot be expected until there is an advance in the price of silver. Buyers for Egypt and the Near East have not given much support. Some moderate lines have been sold in printing and finishing cloths for South America. The Dominions have continued to purchase from hand to mouth. A fair business has been done in a wide range of fabrics for the home trade. There has been a little more demand in American and Egyptian yarns. Producers have been unable to obtain improved margins.

THE WOOL TRADE.—Bradford.—Nothing very encouraging can be said about the trade in this centre, writes our correspondent. According to a preliminary estimate of the quantity of wool for the fourth series of London sales, there will be about 193,000 bales, including the 70,000 bales held over from the third series. The outlook for merinos seems to be better than for crossbreds, though the aggregate weight of the former belonging to the last clip, which is now in London and in warehouses in the Bradford district, must be fairly large. A good deal of this will no doubt be held against known requirements, but the new clip is coming forward in Australia earlier than usual, which is indicative of a desire on the part of growers to sell. The tendency of prices in Bradford is against sellers. It is impossible to realise prices for merino tops which correspond with the cost in Australia this week, and there is a weakening tendency in crossbreds. Besides this, there is a disposition to sell yarns at lower prices, and bids for merino tops are being made which approach the last slump level. More spinning machinery is running short time, and exports of fully-manufactured goods continue to decline. In spite of all this, there are not lacking evidences of confidence in wool, and reasonably steady values at the next sales should impart a better tone.

THE GRAIN MARKETS.

WHEAT.—Influences of a conflicting nature caused prices to be maintained at about last week's level. On the one hand adverse weather conditions made for a rise in values while the announcement by the Federal Farm Board that it will not "pledge itself to withhold its wheat stocks (which are estimated at 200 million bushels) from the domestic market for another year" acted as a "bear" influence. According to the weekly crop report of the Dominion Bureau of Statistics, the Prairie Provinces are still suffering from drought and the yield of the new crop has been estimated at only 236 million bushels. Although the condition of the Pacific Coast crop of the United States is deteriorating because of the lack of rain, that country's general harvest prospects remain good. Little is known about the progress of the Russian wheat crop, but an official estimate places the area sown at 17,685,000 hectares, of which the Middle Volga region accounts for 2,376,000 hectares, the Lower Volga region for 3,080,000 hectares and the Ukrainian region for 2,275,000 hectares. The condition of crops of other European countries is about average and the area sown in England and Wales, though smaller than in 1930, is promising a satisfactory yield. International trade during the past week has been on a smaller scale, total shipments to all countries, according to Mr G. Broomhall, amounting to 1,905,000 quarters, as against 2,392,000 quarters in the previous week. Shipments to Belgium and Holland show a rise, but France, Italy and the United Kingdom took considerably less. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 27s. per 496 lbs., as compared with 27s. 9d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 26s., against 26s. 9d.; Rosafé, ex ship, 22s. 3d., against 23s.; Australian, ex ship, 24s. 3d. to 25s. 6d., against 24s. 6d. to 25s. 6d. a week ago.

WHEAT FLOUR.—Flour has been steady and prices remained unchanged. North American shipments at 208,000 sacks during the past week show an increase of 25,000 sacks on the week, but as large quantities of this has been sent to non-European destinations,

values remained unaffected. Quotations: Straight run, delivered country, 23s. 6d. per sack of 280 lbs., as compared with 23s. 6d. last week; delivered London, 22s. 6d., against 22s. 6d. Manitoba patents, ex store, 21s. 9d. to 25s., against 21s. 9d. to 25s.; and Australian, ex store, 18s. 6d. to 19s., against 18s. 6d. to 19s. 6d. a week ago.

BARLEY.—The market has been easier because the new Danubian crop is now being offered and that of North Africa is being harvested. The visible supply in the United States at the end of last week amounted to 4,946,000 bushels, against 5,163,000 bushels at the end of the previous week. Quotations: "English malting," f.o.r., at 30s. to 35s. per 448 lbs., remained unchanged. Californian sold at from 36s. to 40s., as compared with 33s. to 43s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—The market in oats has been inactive, and despite the drought conditions in Canada, particularly Saskatchewan, prices showed a downward tendency. Quotations: "River Plate," landed, 13s. per 320 lbs., as compared with 13s. last week; "River Plate," ex ship, 12s., against 12s. 6d.; "Chilean Tawny," landed, 13s. 9d., against 13s. 9d.; and North Russian, on sample, landed, 17s. 9d., against 17s. 9d.; English white, per 336 lbs., 20s. to 21s., against 20s. to 21s. a week ago.

MAIZE.—Argentina is now shipping heavily and the slight rise in values last week has not been maintained. Quotations: "Plate," landed, 17s. per 480 lbs., as compared with 17s. 6d. last week; Plate, ex ship, 15s. 9d., as against 16s. 3d.; Plate, June-July, new, 15s. 9d., as against 16s. 3d. Yellow maize meal, ex wharf, was quoted at £5, as against £5 per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to June 13	Owts. 76,523	Owts. 164,371	Owts. 79,952	Owts. 183,780
41 weeks to June 13	4,595,144	8,969,984	9,336,932	10,312,158
Average price of English wheat per cwt.	s. d. 5 11	s. d. 8 7	s. d. 9 7	s. d. 11 0

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.

June 14, 1930	164,371	18,533	20,276	8 7	7 2	6 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	June 18, 1930.	Jan. 2, 1931.	June 3, 1931.	June 10, 1931.	June 17, 1931.
Winnipeg (No. 1 Manitoba)	148 1/2	101	56 1/2	60 1/2	60 1/2	60 1/2
Chicago (No. 2 Winter)	130 1/2	96 1/2	79 1/2	66 1/2	57 1/2	57 1/2

The visible supply of wheat in Canada, at 48,574,000 bushels, shows an increase on the week of 1,907,000 bushels. Supplies a year ago stood at 60,724,000 bushels.

OTHER FOODS.

SUGAR.—On the whole, the recent improvement in the international sugar situation has been maintained, and refiners are still buying considerable quantities of "raws." In New York, prices of raw sugar have been maintained at last week's level, i.e., at 3-30 cents per lb. for Cuban centrifugals. In London raw futures have been slightly easier. Wednesday's sales included "August delivery," at 6s. 3 1/2d. to 6s. 4d. per cent., as against 6s. 4d. to 6s. 4 1/2d. on the corresponding day last week. British refined has maintained its recent advance. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	413	180	1,234	663	29,793	30,491
Liverpool	15,896	5,530	12,485	9,791	74,471	87,575
Total	16,309	5,710	13,719	10,454	104,264	118,066

Last week 13,120 16,466 15,464 9,755 101,674 122,810

COFFEE.—The demand for coffee has again been quiet at this week's auctions, but prices remained steady, and good Kenya and Central American qualities were readily absorbed. Last week's movements of coffee in London were as follows: Brazilian, landed, 127 bags; delivered for home consumption, 240 bags; exported, nil; stocks, 2,913 bags, against 2,136 bags last year. Central American, landed, 2,417 packages; delivered for home consumption, 6,855; exported, 2,770; stocks, 120,840 packages, against 117,288 a year ago. Other kinds, landed, 1,506 packages; delivered for home

THE MONEY MARKET.

In the same way as, last week, the critical situation developing in Germany found little obvious reflection in the course of rates in Lombard Street, so this week the changed conditions created by President Hoover's moratorium offer had only a limited influence on day-to-day market conditions. Money has been consistently easy. On Tuesday, owing partly to the absence of

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally have a better tone, and in some sections there has been a fair degree of activity. Linseed met with a better demand both here and on the Continent at the close of last week, but consumer's needs seem now to have been met for the present. Plate seed for shipment was dealt in at from £8 5s. (June) to £8 11s. 3d. (October), according to date, since when, in sympathy with lower Argentine options values have eased, seed on spot at Hull and for June shipment now offering at £8 5s., and July-August £8 7s. 6d. An increase in the quantity of linseed afloat to Europe to 130,000 tons, or 27,000 tons more than last week, have rather weakened nearer positions. Calcutta to London, June loading, is reported done at £9 15s. Cotton seed, after a good trade, and higher prices, closes quiet with black Egyptian afloat and June loading offering at £5 2s. 6d. and July £5 5s. Linseed oil is in improved demand from consumers who have bought freely for forward delivery. Prices are firmer, raw oil on spot, ex Hull, now being quoted £16, June-August £15 15s., while £16 has been paid for September-December, and £16 5s. January-April, though there has since been some reaction. Cotton oil also is firmer, and crude Egyptian is held for £19, and common edible for £21. Oilcakes are in poor demand, but prices are steady.

HIDE, LEATHER AND ALLIED TRADES.—Prices for hides from home-slaughtered cattle showed little change at the auctions held at Manchester this week, all ox and heifers selling at the previous week's figures. Cows were slightly weaker on average, although 4d. per lb. more was paid for first heavy clears. Calfskins were steady to a slightly firmer tendency. Sheepskins are still a difficult market, and with large supplies available comparatively poor prices have to be accepted to clear. Business in foreign hides continues disappointing, and with tanners confining their purchases to small parcels the tendency of values, in the main, is to become weaker.

Frigrifics, for which a shade more money has been obtained of late, are an exception. Business in sole leather this week has moved on fairly steady lines, but there have been little signs of improvement in the amount going into consumption. Medium and heavy weight English and wet-salted bends move off regularly, but the call in regard to dry hide stock is mainly for the lighter weights. Mediums and heavies in the latter description are only a dropping sale, while the call for shoulders continues slow. Rough and pinned, bellies, however, have received more attention; fair sales have been made of late, and there are possibilities of further business maturing in this direction from the inquiry coming to hand. Upper leathers are a regular sale in regard to glacé kid and willow calf, and in some quarters orders have been for rather larger quantities. Here and there patent has again come in for more attention, while real reptile skins are a moderate market if quotations are on a rock-bottom basis. Small business is being done in suede and matt leathers, but this class of stock has not received the attention that at one time it was expected to do. Curriers still find business difficult to obtain, and even where orders are forthcoming prices have to be cut to the lowest fraction.

RUBBER.—The market in rubber during the week has been quiet and featureless and prices scarcely fluctuated. Dutch intentions with regard to restriction are still unknown, but the increase in consumption in the United States, from 1,281 tons per working day in April to 1,513 tons in May, provided a steady influence. Wednesday's official closing price for standard ribbed smoked sheet, at 3d. per lb., shows a rise of $\frac{1}{4}$ d. as compared with the corresponding day last week. In forward positions, business has been done at 2 $\frac{1}{2}$ d. to 3d. for June, against 2 $\frac{1}{2}$ d. last week; at 3 $\frac{1}{4}$ d. for July-September, against 3d.; at 3 $\frac{1}{2}$ d. to 3 $\frac{3}{4}$ d. for October-December, against 3 $\frac{1}{4}$ d.; at 3 $\frac{1}{2}$ d. for January-March, 1932, against 3 $\frac{1}{4}$ d. to 3 $\frac{3}{4}$ d.; and at 3 $\frac{1}{2}$ d. for April-June, as against 3 $\frac{1}{4}$ d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,468 tons; delivered, 2,973 tons; stocks at the end of last week, at 138,668 tons, show a decrease of 468 tons. as compared with the preceding week.

Treasury bill maturities and partly to some increase in Stock Exchange demand for accommodation, borrowers occasionally paid $1\frac{1}{2}$ per cent. for advances over night, but the general rate was $1\frac{1}{2}$ per cent. From Wednesday onwards the approach of the end of the half-year began to have its normal effect in increasing the demand for money, and on Thursday, after the Bank rate decision was announced, a moderate sum was borrowed from the Bank for a week on the usual terms. Day loans, however, were still obtainable freely at $1\frac{1}{2}$ per cent., with the same rate charged for renewals, and though it was expected that there would be further borrowing at the Bank, the prospects of a comparatively comfortable end-June position were favourable, since the clearing banks were offering loans into July at $2\frac{1}{2}$ per cent. after endeavouring unsuccessfully to quote a higher figure on the previous day.

Last Friday's Treasury bills were allotted at an average rate of £2 ls. 11.22d. discount, or one shilling below the figure a week before. As a consequence of the easy situation of credit and renewed talk of the possibility of an early reduction in Bank rate, the market rate of discount had a definitely weaker tendency. By Thursday three months' bills were quoted as low as 2 per cent., though in some quarters an attempt was still made to make $2\frac{1}{2}$ effective. Forward business on 90-day bills for delivery early in July was concluded on the basis of $1\frac{1}{2}$ per cent.

Gold movements during the week have been less spectacular than a week ago, but the Bank of England has nevertheless gained substantially. On Monday £400,000 in sovereigns were received from South Africa and £200,000 in bars from Germany; and on Tuesday, thanks to the appreciation of sterling on Zurich, the Bank secured £600,000 Cape auction gold in addition to a further £450,000 from Germany. In view of these further acquisitions and the knowledge that £5 millions in gold will shortly arrive from Australia, the possibility of a reduction in Bank rate on Thursday was canvassed in the market, but the no-change decision accorded with the majority of anticipations. It was felt that no move by the Bank was likely to be made until there was definite assurance that the Hoover plan would go through without hitch. Given such a result, however, there was a general anticipation to look for a 2 per cent. Bank rate in the near future.

	June 4, 1931.	June 11, 1931.	June 18, 1931.	June 25, 1931.	Previous Rate and Date Changed.
Bank Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3 (May 14, '31)
Banks' Deposit Rate...	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount/Call	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
House { Notice ...	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months bills)	$2\frac{1}{2}$ - $2\frac{1}{2}$	$2\frac{1}{2}$ - $2\frac{1}{2}$	$2\frac{1}{2}$ - $2\frac{1}{2}$	$2\frac{1}{2}$ - $2\frac{1}{2}$	...

With gold stocks £2 millions higher at £164 millions, the Bank of England's return this week made an exceedingly strong showing, the reserve proportion having risen $1\frac{1}{2}$ to the high level of $59\frac{1}{2}$ per cent., notwithstanding an increase of £566,000 in the note circulation. Apart from these changes, the only other significant movements were an increase of £10.2 millions in public deposits (reflected in a diminution of £9.8 millions in bankers' deposits) as a result mainly of the continued excess of payments to be made on Treasury bills over current maturities. The present level of bankers' deposits at £61.2 millions appears to confirm the correctness of market anticipations that, though the end of the month should be relatively comfortable, a moderate amount of borrowing from the Bank will be necessary.

Apart from the eagerly watched movements of the reichsmark, which, as recorded below, suffered a disappointing reaction on Thursday, after earlier firm-

ness, the Spanish peseta has attracted most attention in the market for foreign exchange. A break at the beginning of the week, due to pessimism regarding the political situation, was followed by a strong recovery on the news that the Spanish Government had contracted for a foreign credit of £6 millions against shipments of gold. This arrangement has been taken as welcome evidence that the new Spanish authorities are willing to employ their surplus stocks of gold to proper and effective purpose. It was at first rumoured that the origin of the credit and the destination of the gold was London, but this appears to be incorrect, and it is understood that Paris, not London, is involved.

Gold movements in New York during the past week included the receipt last Saturday of \$1.5 millions from the Argentine and \$3 millions on Wednesday from Canada, while, in addition to further unearmarking, \$11 millions in gold from Germany are on the way. Call money has been unchanged at $1\frac{1}{2}$ per cent., and open market discount rates have been steady at $\frac{3}{4}$ to 1 per cent. for 90-day bank bills. Four mutual savings banks in New York City will reduce their rate on deposit from 4 to $3\frac{1}{2}$ per cent. as from July 1st. A further decline of 3 per cent. in steel mill operations is reported, and there was a decrease of 28,437 in the number of loaded cars for the week ended June 13. The application of the railroads to the Inter-State Commerce Commission for a 15 per cent. increase in freight rates has been reserved for further consideration.

At the beginning of the period under review the foreign exchanges remained under the influence of the generally disturbing financial and political conditions on the Continent. Following the American proposals for the postponement of war debts, however, there was a general recovery in rates, led by sterling on New York, which had previously borne the brunt of the withdrawal of funds from Germany and Austria. Subsequently a slight reaction took place and quotations closed below the best. The dollar rate rose at one time to 4.86 $\frac{1}{2}$, and was finally $\frac{1}{8}$ cent higher on the week at 4.86 $\frac{1}{2}$; while the Canadian rate also moved in favour of sterling to 4.89 $\frac{1}{2}$. Paris was 3 centimes cheaper on balance at 124.28, after touching 124.30. In Zurich the pound recovered strongly, on the cessation of German and Austrian demand, from 25.05 to 25.10 $\frac{1}{2}$, but weakened slightly from the best to 25.10. Reichsmarks did not respond as much as might have been expected, being on Thursday $\frac{1}{4}$ pfennig worse at 20.50 $\frac{1}{2}$. Belgas, which were offered up to 34.96 $\frac{1}{2}$, eventually closed at 34.92 $\frac{1}{2}$, after a strong demand from Brussels had caused a reaction to 34.92. Amsterdam and Milan, after touching 12.09 $\frac{3}{4}$ and 92.98, remained practically unchanged on the week at 12.08 $\frac{1}{2}$ and 92.94 respectively. Apart from a further recovery in Swedish kroner from 18.14 $\frac{3}{4}$ to 18.14 $\frac{1}{2}$, the Scandinavian exchanges were practically stationary. The Spanish peseta continued erratic, and after depreciating to 52.25, the closing rate of 51.70 showed a loss on the week of $2\frac{1}{2}$ pesetas. In South Americans, Buenos Aires rose from 34 $\frac{3}{4}$ d. to 35 $\frac{1}{4}$ d., Monte Video from 28 $\frac{1}{2}$ d. to 28 $\frac{3}{4}$ d., whilst Rio lost $\frac{1}{8}$ d. at 3 $\frac{1}{2}$ d. Forward rates were not materially affected, except in Berlin, the heavy discount ruling recently being still further reduced to $\frac{1}{4}$ pfennig and $1\frac{1}{2}$ pfennigs for one and three months. Dollars were at slightly increased premiums of $\frac{3}{4}$ cent and $\frac{3}{2}$ cent, and French francs showed little change at 11 and 30, against 12 and 32 centimes premium. Forward belgas were cheaper at $1\frac{1}{4}$ and 4 centimes premium for the two periods, whilst forward Amsterdam was unchanged at $\frac{1}{2}$ and $1\frac{1}{2}$ cents premium. The Swiss franc forward was around par, as against a small discount last week. Milan also improved slightly at 10 and 30 centesimi, as did the forward peseta at $\frac{3}{4}$ and $\frac{1}{2}$ peseta, as against $\frac{3}{4}$ and $1\frac{1}{2}$ pesetas last week. In common with other commodities, silver recovered sharply from 12 $\frac{3}{4}$ d. to 13 $\frac{1}{4}$ d. for cash and 13 $\frac{1}{2}$ d. for forward, but a relapse followed from these levels, the closing prices being 13 $\frac{1}{4}$ d. and 13 $\frac{1}{2}$ d. respectively. China silver exchanges were erratic, Hong Kong being finally 11 $\frac{1}{4}$ d. after 1s. 0 $\frac{1}{4}$ d., with Shanghai firm at 1s. 4d.

THE BREAK IN THE CLOUDS.

THERE are dark storm-stressed days in which a sudden lull is vouchsafed and through a break in wind-swept clouds there comes a gleam of sunlight. No picture could describe more fittingly the first impression created by the proposal made last Saturday evening by President Hoover, speaking in the name of the American Government, and offering on the part of the United States a one year's moratorium for all inter-Government payments. Though the acuteness of the immediate crisis was scarcely realised by the man in the street in any country outside Central Europe, the instant reaction of almost the whole world to the proposal was one of profound relief, reflected in a burst of psychological optimism on every Bourse. Even before there was any definite assurance that the terms of the offer would meet with acceptance it was recognised that a great step forward in world affairs had been taken, and that President Hoover had risen greatly to a large occasion.

The situation on the eve of this historical announcement and the final course of events which led to it can be briefly summarised. On his return from a visit last week to the Middle West, which seems to have deeply impressed him with the serious state of American trade, industry and employment, Mr Hoover was apprised by his financial advisers at Washington, and doubtless also by cabled advices from Mr Mellon in London, that the crisis in Germany was coming to a head with disastrous swiftness, and that the heavy continued foreign withdrawals of funds, accompanied by growing signs of panic on the part of German depositors, constituted an imminent threat to the stability of the German banking system. In these circumstances President Hoover acted with decision and courage. Though he could not but be keenly sensitive to political complications at home, in view of the traditional attitude of Congress towards any question of debt revision, he arranged rapidly a series of conferences with leaders of the Democratic and Republican Parties in both the Senate and the House of Representatives, and, having secured what he considered to be a sufficient measure of support, announced at 6 p.m. on Saturday, June 20th, that the American Government proposed the postponement during one year of all payments of inter-Governmental debts, reparations and relief debts, both principal and interest, but not including obligations of Governments held by private parties. Subject to the confirmation of Congress, the American Government would postpone all payments upon debts of foreign Governments to the American Government payable during the coming fiscal year on the condition of there being a like postponement for one year of all payments of inter-Governmental debts to the important creditor Powers. The statement went on to observe:—

"The purpose of this action is to give the forthcoming year to the economic recovery of the world and help free the recuperative forces already in motion in the United States from retarding influences abroad. . . . The essence of the proposition is to give time to permit the debtor Governments to recover national prosperity. I am suggesting to the American people that they shall be wise creditors in their own interests and be good neighbours."

Mr Hoover added that he did not approve "in any remote sense" of the cancellation of debts due to the United States, and that America was not involved in the discussion of strictly European problems, of which the payment of German reparations was one. He was confident, however, that the American people did not desire to attempt to extract any sum beyond the capacity of the debtor to pay, and that a broad vision required that his Government should recognise the situation as it existed. Finally, he expressed the hope that, by this evidence of American desire to assist in the early restoration of world prosperity, the United States would be contributing to the goodwill

necessary to the solution of the major question of the limitation of land armaments, the burden of whose maintenance had contributed to bring about the economic depression.

Having regard to all the factors in the American political situation—President Hoover's lost popularity, the near approach of the next Presidential election, the large prospective deficit in the Budget, and the unpalatable prospect of having to make good not only that deficit, but the loss of some £50 millions in war debts, by imposing new taxes at a time when acute economic depression is hitting hard a people grown accustomed to the rising curve of post-war prosperity—this lead given by President Hoover was more than the action of a "wise creditor." It was the gesture of a great man, and, as such, it met at home with its reward. The announcement elicited in the United States a response more favourable than most foreign observers would have deemed possible. Politically Mr Hoover's stock rose almost as rapidly as did the prices of securities in Wall Street under the stimulus of relaxed tension and renewed confidence. His opponents in the Democratic Party and his critics among his own Republican followers were constrained to appreciate that, by his courageous and generous offer, Mr Hoover had once again secured for the United States a leading rôle in world affairs.

In Europe both the reception of the offer and the immediate political and financial effects were such, all things considered, as to confirm Mr Hoover and American public opinion in the realisation that a timely act of statesmanship had been achieved. In Germany, as might be expected, the reaction was an instant sense of profound relief that a breathing space in an intolerable situation had been afforded. The incipient financial panic was at once arrested, and, though there was still immediate need for international banking assistance to tide the Reichsbank over the difficult end-June week, it may well be doubted whether the success achieved in fact by such measures as were concerted to this end could have been realised in the absence of the psychological appeasement afforded by the mere announcement of the Hoover plan.

In Great Britain Mr MacDonald rightly interpreted public feeling by intimating as early as Monday that this country would co-operate wholeheartedly in President Hoover's scheme, and on Wednesday, by which time Italy had informed Washington of her "cordial acceptance in principle" of the arrangement, Mr Snowden made a fuller statement of Great Britain's response to what he described as "a very great gesture on the part of the United States." His Majesty's Government agreed with the United States' view that there was no time for a conference with regard to details, and were prepared to extend the one year's moratorium to payments on relief bonds which they held from other European Governments and also to postpone for twelve months the payment of war debt annuities by the Dominions, in consideration of the suspension of German payments due to them. These proposals would involve the loss of approximately £11,000,000 to the current Budget, a figure which should dispose of any impression that Great Britain, whose already vast voluntary sacrifices in the matter of war debts should not be forgotten, is involved in no financial loss by the application of the moratorium.

That President Hoover's proposals should meet with unreserved welcome in France was not reasonably to be expected. As we show in a Note of the Week, wherein we have endeavoured to present a rough picture of the financial effects of the moratorium on the position of the respective Treasuries, France is arithmetically, of course, the heaviest loser among the European creditors; and though, obviously, the almost inevitable alternative to the

Hoover scheme, i.e., the declaration by Germany of the postponement of the conditional Young Plan transfers, would leave France in an even less favourable position in view of her guarantee obligations under the Hague Agreement, opinion in the Chamber and generally among the French public had been so insistently taught to regard the unconditional portion at least of the Young Plan as a final and inviolable instrument, that the proposal for a 100 per cent. moratorium naturally came as something of a shock. Throughout the week the temper of most of the French Press was so definitely hostile to the whole sense of President Hoover's terms that it was evident that unqualified acceptance by the Government would render its position in the Chamber highly precarious. In the event, though we still await the official text of the French reply, a solution of the difficulty appears to have been sought in a counter-proposal to Mr Hoover, suggesting that Germany's unconditional annuities should be credited to French account at the Bank for International Settlements, but that for the moratorium year they should be utilisable, at the Bank's discretion, for loans to the Agricultural States of Eastern Europe or to Germany itself. This would be a considerable modification of the scheme, and the reception of the counter-offer in Washington and Berlin was awaited on Thursday with some anxiety. One thing is clear: whatever force there may be in French contentions, if the American Government consider that in all essentials the plan must stand or fall in its entirety (and, the offer once promulgated, the broad effect would be endangered by exceptions and reservations), then France would be ill-advised to deny the world, by her refusal to co-operate, the breathing space offered it at the eleventh hour.

It is still too early to attempt any considered forecast of the influence which such a breathing space would have on the future course of world history. Though this week's bullish tone in all the principal Stock Exchanges is a true reflection of legitimate anticipations of restoration of confidence, it is well that enthusiasm should be tempered by recognition that the recovery of the world from the depths of its present economic depression cannot be realised in a day. To the extent that the American reception of Mr Hoover's gesture is significant of the beginning of a reorientation of opinion in the United States towards the question not only of inter-Governmental debts, but of foreign policy in general and tariff barriers in particular, the developments of the past week (provided that hopes of French agreement are not disappointed) may well prove to have marked the turn in a great tide.

On the other hand, the situation in Germany must in any case occasion anxiety. Notwithstanding such modifications in the latest emergency decree as Dr. Brüning might be able to make in the light of the year's postponement of reparations, the strain caused by the pressure of wage reductions, crushing taxes and severe unemployment is too serious for the possibility to be overlooked of a critical situation still arising unless general economic conditions improve before next winter. It is questionable, too, until progress is made in clearing up the obscurity of the more distant future and deciding what is to happen at the end of the moratorium year, whether world trade can attain a full measure of recovery. The nexus of the many complicated problems, fiscal and economic, which, as we point out in a subsequent article, the Commission of European Enquiry is studying, still remains to be unravelled; and the major issue of next year's Disarmament Conference—on whose results the ultimate alignment of American opinion towards European troubles will so largely depend—has still to be faced. We have to travel far along the road of international co-operation (and here let us welcome Dr. Brüning's statesman-like suggestion of a "Franco-German Chequers" in his broadcast speech on Wednesday) before the world can see an end to its present ills. For the moment (assuming that the cup is not to be dashed from the lips) let us indulge not in facile optimism, but in a sense of relief and gratitude that, during the year of grace now granted, the statesmen of all countries may have a chance to approach their problems in a mood not of despair and exasperation, but of regained assurance and hope for the future.

CO-OPERATION AT GENEVA.

In the lucid and instructive report* on the course and phases of the present economic depression, drawn up last May by the Secretariat of the League of Nations, it is observed that "the date at which real recovery begins, and the rapidity with which it progresses, will depend not only on such natural forces as the gradual consumption or decay of stocks, but also . . . upon the economic policy pursued. . . . The world is, in fact, more closely knit to-day economically than politically. The actions of individual countries not only in regard to monetary and commercial policy, which are immediately international in their reactions, but also with regard to what may seem to be merely political or domestic affairs inevitably entail far-reaching economic consequences." In the light of the changed conditions brought into being by the announcement of the Hoover plan, whose general implications we have already examined above, it is particularly opportune to recall to mind what steps have been taken by the Commission of Enquiry for European Union with a view to studying lines of policy likely to remedy the depression.

It will be recalled that, at its third session in May, the Commission of Enquiry, "being convinced that the solution of this problem must be sought in ever more intimate economic co-operation between the States of Europe and the whole world," decided to appoint an Economic Co-ordination Sub-Committee, which is to meet at Geneva on July 6th and which is to make to the Commission of Enquiry any proposals on economic questions that it may think fit, on as wide lines as it desires. The Commission also decided to convene at Geneva on June 24th (i.e., in advance of the meeting of the Economic Co-ordination Sub-Committee on which all the States taking part in the work of the Commission will be represented) a committee of ten economic experts "who, working in contact with their Governments and availing themselves of the work of the economic organisations of the League and of the International Labour Office, will examine in complete freedom and in a spirit of liberal understanding all means which may seem calculated to bring about closer and more profitable co-operation between the different countries with a view to improving the organisation of production and trade in the general interest." The composition of the Experts' Committee, which met at Geneva on Wednesday, is as follows:—

- Belgium.—M. Emile Francqui, Minister of State, formerly Minister of Finance, Vice-Governor of the Société Générale de Belgique.
- Czechoslovakia.—M. Jan Dvoracek, former Minister of Commerce, director of the Zivnostenska Bank.
- France.—M. Duchemin, President of the Confédération Générale de la Production Française.
- Germany.—Herr Clemens Lammers, Assistant Director of the Reichsverband der Deutschen Industrie.
- Great Britain.—Sir Walter Layton, Editor of the *Economist*.
- Holland.—Dr. L. J. A. Tripp, former Governor of the Bank of Java (Chairman).
- Italy.—M. de Michelis, President of the International Institute of Agriculture at Rome.
- Poland.—M. Eugeniusz Kwiatkowski, former Minister of Commerce and Industry.
- Sweden.—M. Björn Prytz, Director of the Société Suédoise de Roulements à Billes.
- U.S.S.R.—Professor Eugene Preobrazensky.

The terms of reference to the Experts' Committee are drawn so widely that it would clearly be unprofitable to speculate at this juncture what course discussions are likely to take and what will be the objectives to which they will give primary consideration. Since, however, the Experts' Committee came into being as a result of the deliberations of the Commission of Enquiry at its May session, it would be natural to assume that the various theses bearing on the economic depression and its possible remedies then put forward by the respective States will necessarily engage the experts' close attention. In order, therefore, that our readers may consider for themselves the extent of *rapprochement* and divergence between the attitudes of the various Governments who have appointed the experts, we propose to give a brief summary of the points of view expressed at the Commission of Enquiry's third session.

* "League of Nations." Official Number, C. 284, M. 134.

In the course of these discussions at Geneva last month the question of the Austro-German customs union inevitably figured prominently in the background, though the delegates were addressing themselves to the consideration of the world economic depression in so far as it affects Europe as a whole. The main point of cleavage was, in fact, that between the thesis put forward by Dr. Curtius on behalf of Germany and that submitted by M. François Poncet on behalf of France. The German view was, briefly, that particular attention should be paid to examining the European situation from the standpoint of customs arrangements and with reference to the failure so far of attempts by multilateral agreements to remedy the situation resulting from the parcelling of the Continent into a large number of small economic territories. The most hopeful line of approach, Dr. Curtius suggested, was that Europe should aim at a progressive enlargement of economic unification, starting from the particular—i.e., agreements between two parties or between regional groups—and going on to the general.

The French delegate objected that the German scheme would tend to create in Europe rival blocs, occasioning economic difficulties and arousing political suspicion. It was important not to give up all idea of a universal agreement, such as had been the principle underlying the original Briand plan, in favour of immediate particular agreements. Moreover, tariffs were less a cause than a symptom of the *malaise*; the root of the trouble was Europe's failure hitherto to regulate and control its production and commerce. He envisaged the problem as falling into two parts:—

- (a) *Agriculture.* The acute difficulties of the Eastern European grain exporting countries should be met partly by the International Agricultural Mortgage Credit Company, and partly by the establishment of a preferential regime in their favour, based on quotas fixed periodically and subject to revision.
- (b) *Industry and Trade.* The possibility should be explored of extending the control of production by developing the system of international cartels in order to organise the European market. Since the domestic market would normally be protected by clauses in each cartel, it might be possible to arrange for the reduction of customs barriers on cartelised products exported.

In addition, the Financial Committee of the League should press on with the examination of means to promote the better distribution of investment capital.

The British delegate endorsed the general suggestions of M. François Poncet in the financial sphere, but expressed the view that the cartel plan presented certain difficulties. The question of tariffs and barriers to international trade was of prime importance. High protection, payments of debts and the scramble for gold were sapping the very foundations of our economic system. The British Government would negotiate willingly for any agreement designed to stimulate the flow of commerce.

Italy's attitude was also somewhat critical of the cartel scheme, which Signor Grandi described as being desirable only on condition that international needs could thereby be co-ordinated and regard had to the limited possibilities of the less industrialised countries. A system of preferences would risk creating further obstacles to international commerce; while customs unions, if they left the productive capacity of the linked countries intact, could do little to eliminate the fundamental causes of over-production; on the other hand, apart from political suspicions, such unions might mean the undesirable sacrifice of a weaker to a stronger organisation. Italy therefore suggested that more attention should be given to the possibility of bilateral agreements aimed at the betterment not only of customs relationships, but of common conditions of transport, banking, credit and commercial organisation. Italy would like to see the March, 1930, Commercial Convention put into prompt application.

Of the other States represented, the members of the Little Entente tended naturally, with some qualifications (e.g., Czechoslovakia emphasised the importance of giving attention to the international aspects of unemployment and the possibility of at least stabilising tariffs), to support the principles of the French thesis. Belgium, on the other hand, pointed out the limited utility of the cartel system, whose application to "quality" products would be difficult; Sweden was in favour of the Italian proposal to put into force the 1930 Commercial Convention, while

Holland was reserved on the cartel plan but tentatively supported bilateral treaties as a prelude to general conventions, and Denmark was inclined to criticise any regime of preference, if applied without the approval of all States enjoying most-favoured-nation clauses. The Danish representative also pointed out that the French cartel scheme would necessarily involve the creation of some system of international control.

It would be idle to pretend that from this summary of expressions of opinion there emerges a very encouraging measure of common accord. Nevertheless, there is this hopeful factor in the situation. Though the divergent attitudes of the representatives of the respective countries at the third session of the Commission of Enquiry, when contrasted with the clear-cut unanimity achieved at the World Economic Conference of 1927, might create *prima facie* the impression of hopeless conflict of views in respect to economic policy and methods of co-operation in ridding Europe of its tangled troubles, it is legitimate to recall that an important proposal made at the 1927 Conference was that it should be followed by a meeting of Ministers of Commerce. The hope then was that this might lead to positive action by Governments, but the proposal came to nothing; the opportunity slipped away. To-day, however, the membership of the Commission of Enquiry and of the Economic Co-ordination Sub-Committee, which is to meet on July 6th, consists of Ministers of States all hard pressed to find relief from the economic depression which weighs upon their respective countries and threatens the balance of their national budgets. It is no small thing that the pursuit of means for international economic co-operation should no longer be reserved for non-official economists and leaders of industry, but should now have come directly within the purview of statesmen, meeting each other in frequent session.

RAKE'S PROGRESS.

"WHAT an extraordinary debate this is," remarked Mr J. H. Thomas in the House of Commons at the close of the discussion on the new Unemployment Insurance resolution. We agree with him. The debate was both extraordinary and deplorable. Miss Bondfield, the Minister of Labour, having pressed the Royal Commission appointed by herself for urgent emergency recommendations, declared that she could not implement the Commission's major recommendations just because they were of an emergency nature. Again, Miss Bondfield, although taking a gloomy view of the employment outlook and envisaging an accelerated plunge by the Insurance Fund into the irredeemable depths of bankruptcy, produces not even a hint of any rescue policy, but prefers to devote the greater part of her speech to dubious interpretations of economic theory and to attacks, in the best party manner, on the capitalist system. And, when we turn for comfort to the Opposition, we find Liberal speakers at pains to show that benefit rates can never be reduced, while Mr Baldwin quite unhelpfully says that he has got a plan for dealing with the whole matter, but will not tell us what it is. To cap it all, glimmerings of what Mr Baldwin's plan does not contain were forthcoming in quotations made during the debate from a speech of a Conservative leader in the House of Lords to the effect that his party would not stand either for the increase in contributions or for the cut in benefit rates which the Majority Report of the Royal Commission has just recommended. Nowhere is there a sign of the courage required to face a situation of known gravity, which, as it rapidly goes from bad to worse, threatens the stability of the British Budget.

Miss Bondfield's statement on Monday must be read in conjunction with the Bill drafted by the Government to deal with some—only some, unfortunately—of the abuses in the working of the dole system disclosed by the Royal Commission's Report, and a generous interpretation of the rules of procedure allowed the debate to touch upon both. It was a gloomy story that Miss Bondfield unfolded. The outstanding debt of the Unemployment Insurance Fund, on June 13th, was £85,870,000, and the existing borrowing powers of £90,000,000 would have been

exhausted by July 5th. These, by the resolution introduced by the Minister, are to be raised by £25,000,000 to the total of £115,000,000. If the "live register" of unemployed averages 2½ million this additional borrowing will last out till January, 1932; if it averages 2½ millions, till November, 1931; if a figure of 3 millions is recorded it will be exhausted by October next, and Miss Bondfield found it quite impossible to make any optimistic prophecy as to the figure. This means that, apart from the great and growing Budget burden in respect of "transitional benefit"—the period of which is now to be extended for six months—the State is lending to the fund at the rate of at least £50,000,000 per annum, and even this figure may, if Miss Bondfield's gloomy prognostications come true, be substantially increased. This of itself, then, threatens fully to swallow the whole of the sinking fund allocations of the Budget, and we have ceased the process of debt repayment, which represented to the harassed taxpayer the most hopeful avenue of ultimate relief. It is an exaggerated version of the rake's progress, which, in principle, no one condemned more roundly than Miss Bondfield, when, two years ago, she assumed her present office.

What is she going to do about it? We regret to say that the only answer suggested by a joint perusal of her statement and the Government Bill is that she will do the absolute minimum which, in view of the Commission's Report, could possibly be expected to placate public opinion. Having repudiated the idea of raising contributions or cutting benefits, Miss Bondfield proceeded to draw a red herring across the trail by diverging into a wholly irrelevant and unbalanced survey of the Rueff theory of the relation between wage rigidity, unemployment, and the dole. This theory was examined in some detail in last week's *Economist*, and we need say no more here than that Miss Bondfield twisted the argument unwarrantably to suit her anti-capitalistic argument before explaining, thinly and insufficiently, what the Government will or will not do with regard to the remedy of the abuses—"anomalies" is her euphemism—in the present system, which are so seriously draining the resources of the State; and here we must turn to the text of the Unemployment Insurance (No. 3) Bill. This Bill proposes to set up an Advisory Committee, consisting of a chairman and eight members, three of which shall be appointed after consultation with the Trades Union Congress, three after consultation with the National Federation of Employers' Organisations, and one after consultation with the Treasury. This Committee will advise the Minister in regard to making regulations changing "the conditions and terms with respect to the receipt of benefit" by certain classes of workers. These classes are (1) part-time workers, (2) those seasonally occupied, (3) married women, "who in any prescribed period subsequent to marriage have had less than the prescribed number of contributions paid in respect of them."

The machinery of the Advisory Committee, composed of possibly warring elements, has been criticised as likely to be dilatory in the extreme. Also the procedure proposed represents a most distasteful extension of the system of government by the bureaucracy. On the other hand, there

is substance in Miss Bondfield's view that to pass complicated legislation dealing with a host of categories of cases and circumstances would have been a lengthy business, and that the resulting Act would have lent itself, as former Acts have, to wholesale legal abuse by ingenious claimants. With a shrug of the shoulders, therefore, we may accept the procedure by the Advisory Committee as a *pis aller*. Further, it may be admitted that if the Government are really in earnest in using the powers accorded by this Bill for vigorous action in checking the flow of public money into the pockets of those who are not in real need of it, then something substantial will have been achieved both in the financial and in the moral sense. But we must confess that when we turn back to certain passages of the speeches delivered by Mr. J. H. Thomas at Manchester on Saturday and by Miss Bondfield in the House of Commons on Monday, confidence in the earnest determination of the Government, even within the slender limits set by themselves, begins to wane. It is, indeed, ominous that Miss Bondfield ruled out the application of a means test for dole recipients, and that Mr Thomas's speech suggested that any unemployed person would continue to receive benefit unless a job could be found for him in his own specified occupation, even though alternative work elsewhere might be available. There was a passage in Miss Bondfield's speech which lends itself to the same interpretation. From this it would appear that State money will continue to flow to persons whose household resources are as adequate as those of many workers in actual employment, and to persons who could find work in alternative occupations. If that is really so, then the Government are clearly not in earnest in their proclaimed intention of removing "anomalies" that cost the State dearly.

What, then, is the picture? It is one of the Insurance Fund sinking deeper into insolvency, of the threat to the national budget equilibrium growing daily more formidable, and of all parties in the State lacking the courage to meet the situation. Will they wait until Rome is burnt out before they cease fiddling? Condemnation for cowardice in facing a grave issue must rest primarily on the Government of the day, but the other parties cannot escape their share of the blame.

THE ECONOMIC SITUATION IN GERMANY.

WHEREAS the immediate objective of the Hoover moratorium plan was to counteract the acute "crisis of confidence" in Germany—a crisis brought to a head by the difficulties of the Credit Anstalt, the June emergency decree, the talk of postponement of Young Plan transfers, the withdrawals of foreign credits, and the threatening flight from the mark—there remains behind all recent surface developments the fundamental question of Germany's economic position. What evidence is there for the conclusion that the financial and political strain lately manifested in Germany was the inevitable consequence of her material reactions to the world-wide depression? In an attempt to present some objective evidence bearing on this question, we print below a table

	Total Unemployed (End of Month).	Index of Production.	Railway Goods Traffic.	Imports.	Exports (including Reparations in kind).	Postal Cheques.	Average Hourly Wages.		Shares Index (Monthly Averages).	Wholesale Prices (Monthly Averages).	Cost of Living (Monthly Averages).

HALF-YEAR'S NEW CAPITAL.

It is an old supposition that a period of cheap money provides the borrower with a golden opportunity; but in light of recent experience it will have to be revised. In spite of the cheapness of money and the plenitude of lendable resources, borrowers during the past half-year have found it difficult to pass through the strait and narrow gate that leads to London's new capital market. The fact, of course, is that the great economic depression has combined with the psychology of distrust and political anxieties to create among the investing public, from whom ultimately new capital must be extorted, an unwillingness to finance industrial enterprises, or even to lend freely on the security of long-term bonds. A few very big individual issues have swollen the total, which, however, is only half that of a year ago, but in numbers borrowers have been few indeed. The London new issue market, therefore, has had a very quiet half-year, even quieter than the following rough totals suggest:—

DESTINATION OF NEW CAPITAL.

	First Half of Years.					
	1913.	1927.	1928.	1929.	1930.	1931.
United Kingdom—						
Government	£ Nil	£ 67,153,800	£ 85,211,000	£ 1,600,000	£ 39,960,000	£ 10,250,000
Other	20,324,400	89,869,800	99,310,900	103,815,800	66,618,500	34,392,000
	20,324,400	157,023,600	184,521,900	105,415,800	106,578,500	44,642,000
British Possessions—						
Government	14,324,300	12,813,100	31,423,000	23,590,000	27,000,800	27,736,600
Other	28,678,300	21,529,000	8,754,700	26,374,000	10,154,200	7,852,000
	43,002,600	34,342,100	40,177,700	49,964,000	37,155,000	35,588,600
Foreign countries—						
Government	22,629,500	2,657,500	5,745,100	3,650,000	18,480,000	1,740,000
Other	34,403,100	13,540,600	14,318,100	15,363,800	7,442,200	7,302,900
	57,032,600	16,198,100	20,063,200	19,013,800	25,922,200	9,042,900
Grand total	120,359,600	207,563,800	244,762,800	174,393,600	169,655,700	89,273,500

The British Government total consists entirely of the excess of sales over encashments of National Savings Certificates, and that the figure should be as large in bad times is a welcome fact. Issues for home purposes, other than Government, are barely half those of the first half of 1930, which in turn showed a big reduction on the records of previous years. The British Empire, thanks almost entirely to two big India issues, are much the same as a year ago, but foreign borrowing has faded away to insignificant proportions. The next table gives a further analysis of various classes of borrowers:—

CLASSES OF BORROWERS.

(£ million.)

	Total.	British Government.	Foreign and Colonial Govts.	British Colonies and Foreign Corps.	Foreign Railways.	Mines, Finance, and Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1923	271.4	77.7	95.8	4.8	5.4	15.5	7.7	44.9
Total whole year, 1924	209.3	13.7	90.6	18.8	1.0	12.7	2.3	70.2
Total whole year, 1925	232.2	45.6	30.7	25.3	3.8	18.0	19.1	89.7
Total whole year, 1926	230.7	4.7	54.6	49.2	8.2	26.9	6.2	80.9
Total whole year, 1927	355.1	66.0	67.5	5.4	35.2	11.0	13.4	134.1
Total whole year, 1928	369.0	83.8	56.1	26.4	3.1	49.7	8.7	141.2
1929—1st quarter	96.9	1.9	27.2	0.3	3.8	21.2	4.9	37.8
2nd "	77.4	Dr 0.3	Nil	11.4	Nil	12.9	0.1	63.3
3rd "	18.7	Dr 1.4	2.8	0.4	Nil	2.4	1.1	13.4
4th "	92.2	65.2	Nil	Nil	4.0	5.0	0.3	17.7
Total whole year, 1929	285.2	65.4	30.0	12.1	7.8	41.5	6.4	122.0
1930—1st quarter	87.7	38.4	14.6	15.9	2.7	1.0	6.7	8.4
2nd "	81.9	1.6	30.9	18.8	Nil	6.3	2.0	22.3
3rd "	22.9	3.8	3.0	Nil	0.8	3.0	0.5	11.8
4th "	75.3	21.8	21.8	10.0	1.2	0.1	1.2	16.3
Total whole year, 1930	267.8	65.6	70.3	44.7	7.6	11.5	9.3	58.8
1931—1st quarter	45.2	6.1	14.5	2.7	Nil	5.6	0.1	16.2
2nd "	44.0	4.1	14.9	3.6	2.8	5.9	0.1	12.7

The most striking point about this table is the last column, representing roughly the new financing of home industry and commerce. In the full year 1928 the figure was £141 millions and in 1929 £122 millions. The great depression brought the figure for 1930 down to £58.8

millions, and the first half of 1931 could only show £29 millions. The next table carries our analysis further by sub-dividing the past half-year's issues into twenty-nine categories.

ANALYSIS OF NEW CAPITAL APPLICATIONS.

Description.	First Half-Year, 1930.	First Quarter, 1931.	Second Quarter, 1931.	Total First Half-Year, 1931.
British Government Loans	£ 39,963,000	£ 6,150,000	£ 4,100,000	£ 10,250,000
Colonial Government Loans	27,000,800	12,786,600	14,950,000	27,736,600
Foreign Government Loans	18,480,000	1,740,000	Nil	1,740,000
British Corporation, County and Public Board Loans	32,971,300	2,700,300	3,505,000	6,205,300
Colonial Corporations and Public Board Loans	1,739,000	Nil	Nil	Nil

Total	169,655,600	45,223,900	44,049,600	89,273,500

Of the £27 millions borrowed by Empire Governments India took nearly £22 millions in two issues, and New Zealand's recent issue nearly £5 millions, the remaining £1 million odd going to the Gold Coast. The only foreign Government to test the market was that of Greece, which issued in March a £2 millions 6 per cent. loan at 87, while the June quarter saw no foreign visitor. Among British corporations, Derby and the Middlesex County Council alone figure in the past quarter, though in the first quarter Belfast, Birkenhead, Surrey, Reading, and the Metropolitan Water Board all floated loans. Colonial and foreign corporations, British, foreign and colonial railways, Australian mines, breweries and distillers, oil companies, merchants and importers, and iron and steel and engineering failed to produce a single public issue between them; while the only stores issue was that made by Woolworth in June, which attracted more attention than any other issue of the half-year, especially by reason of the heavy volumes of dealings in advance of official quotation. Details regarding the terms and the subsequent quotations of the outstanding issues of the half-year are given below:—

Month of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, June 24, 1931.
1931.				
February ..	Govt. of India 5½% Stk., 1936-38 ..	12,000,000†	97	92
March	Gold Coast 4½% Stk., 1960-70	1,170,000	98	101
February ..	Surrey County Council 4½% Stk.	1,500,000	99	102
February ..	Reading Corporation 4½% Stk.	700,000	99½	102½
January ..	London Power 5% Deb., 1952	3,000,000	100½	104
January ..	National Shipbuilders Security 5% Deb., 1961	1,000,000	95	10 dis.
March	National Canining Ord. £1	175,083	par	par
March	Rio Tinto Co. 5% Deb. Stk.	2,000,000	91½	9-7 dis.
March	Greek Govt. 5% Public Works	2,000,000	87	82½
March	Lancashire Cotton Corporation	2,000,000	97½	10-17 dis.
May	Govt. of India 6% Stk., 1933-34 ..	10,000,000	par	1½-1½ dis.
April	Corpor. of Derby 4½% Stk., 1951-61 ..	1,000,000	98	101½-1
June	New Zealand Govt. 5% Bonds, 1932-34	5,000,000	99	1½-1 dis.
June	Middlesex County Council 4½% Stk., 1950-70	2,500,000	101	1½-1 pm.
June	Buenos Ayres Great Southern Railway 5½% Deb., 1931	3,000,000	95	1½-1 dis.
June	F. W. Woolworth (Ss. Ord.)	562,500	42	1½-1-4½ d. pm.
June	F. W. Woolworth 6% Cum. Pref., £1	4,860,000	par	10½ d.-1/1½ gm.

† Also £5,000,000 for Conversion Purposes.

With the exception of one or two cases—among which the Woolworth issue was notable—the public have shown as little keenness to acquire new, as they have shown to acquire old, securities, and the underwriters have frequently been left with large proportions of new issues on their hands. The cautious tone of the investment world

is further illustrated by our next table, which shows the issues classified into debentures, preference shares and ordinary shares:—

NATURE OF BORROWING.

	Debentures, Bonds, &c.	Preference Stocks and Shares.	Ordinary Stocks and Shares.	Total.
Year 1927	£ 228,958,000	£ 36,836,600	£ 89,371,400	£ 355,166,000
" 1928	212,817,900	45,062,600	111,177,600	369,158,100
" 1929	137,670,300	31,543,400	116,025,700	285,239,400
" 1930	227,658,500	15,548,800	24,593,300	267,800,600
First half-year, 1930	137,679,600	13,775,000	18,101,000	169,655,600
First half-year, 1931	68,916,900	5,832,800	14,523,800	89,273,500

The great preponderance of issues has again been in the form of fixed-interest securities. New "equity" issues to-day have to possess a special degree of allurements if they are to succeed in inducing investors to part with their savings.

The new capital issues included in our quarterly surveys take no account of Stock Exchange "introductions," an aspect of the capital market which was discussed fully in the *Economist* of July 27, 1929 (page 176). In the following table we show the total amounts involved in these "introductions" during the past nine quarters. "Cash values" are calculated on the assumption that the whole of the nominal value of the stock "introduced" is taken up at the price at which dealings on the Stock Exchange open:—

TOTAL CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION.

	United Kingdom.	Colonies.	Abroad.	Total.
Year 1929—	£	£	£	£
1st Quarter	15,191,600	393,700	3,094,400	18,679,700
2nd Quarter	9,465,500	1,284,400	2,156,400	12,916,300
3rd Quarter	3,574,700	217,100	5,778,300	9,570,100
4th Quarter	733,400	304,400	1,437,500	2,475,300
Total Year 1929	28,965,200	2,199,600	12,476,600	43,641,400
Year 1930—				
1st Quarter	3,982,300	1,477,000	8,399,900	13,859,200
2nd Quarter	839,600	Nil	2,685,100	3,524,700
3rd Quarter	67,200	100,000	601,500	768,700
4th Quarter	3,402,900	1,667,600	721,200	5,791,700
Total Year 1930	8,292,000	3,244,600	12,407,700	23,944,300
Year 1931—				
1st Quarter	2,174,200	632,900	Nil	2,807,100
2nd Quarter	1,121,600	2,366,300	581,900	4,069,800

† Nominal amount of capital introduced, £31,519,934.
‡ Nominal amount of capital introduced, £22,156,480.

This record conforms to the trend shown by the figures given above of open-market flotations. There has been a marked reduction in the number of issues "for public information only" during the past half-year. The total cash involved in these issues amounted to £6,876,900, as compared with £17,883,900 during the first half of 1930. The market is now wondering whether the strengthening of confidence heralded by President Hoover's initiative will increase the flow of applicants for financial accommodation.

THE AUSTRIAN CREDIT ANSTALT.

(BY A CORRESPONDENT.)

FROM the moment of its birth the Credit Anstalt of Vienna stood in the forefront of international finance. Promoted by the Austrian branch of the Rothschilds, with the more than benevolent assistance of the Emperor and Government, aided from the beginning by the best names in Austrian aristocracy, trade and finance, hailed by the whole population as the liberator from poverty, the "Kaiserlich-Koenigliche privilegierte Oesterreichische Credit Anstalt für Handel und Gewerbe" was intended to become a financial power; and it was a power from the first day it came into existence towards the close of the year 1855. In France the Revolution of 1848 and Pereire's Credit Mobilier had broken the monopoly of the Rothschilds; but outside France, though political democracy had suffered a defeat, Saint-Simon's idea of credit by the people for the people had taken permanent root in the

surrounding countries. The Empire of the young Francis-Joseph was at this time an agricultural State, as yet scarcely influenced by the industrial revolution. The land in the most fertile provinces was in the hands of large landowners, and manufacture was carried out mainly by small craftsmen; engineering had just begun; and the building of public utility works was in its infancy. The whole economic system suffered from lack of capital, and the distributive machinery of credit was very defective.

The wars and civil troubles following the accession of Francis-Joseph to the throne had heavily increased the national debt and seriously endangered the currency. Trading and agricultural interests were doing badly and were dissatisfied. When, in 1852, peace seemed to have been re-established, the Government set itself to remedy this state of affairs. In their search for money they received an offer from the Credit Mobilier of France, which undertook to lease the railways for a period of years, the State to guarantee the interest and sinking fund. The group further offered to form a "Central Aktiengesellschaft," a sort of general finance company for Austria according to the precepts of Saint-Simonism, but to be controlled by the Credit Mobilier of France. The Government agreed to let the railways, and they showed a marked interest in the proposed company. Pereire and his friends had carried the war against the Rothschilds into Austrian territory.

S. M. von Rothschild accepted the challenge, and, unlike his relatives in France, won the contest. In 1854 Bruck, one of Austria's ablest Ministers of Finance, launched his programme for the funding of the Austrian debt and the improvement in the economic conditions of the people. The promotion of industry and long-term credit were to be placed in the hands of an institution similar to the Credit Mobilier of France. The charter to form this company was granted to Rothschilds. "Upon request" (from the Emperor) the houses of Rothschild and Laemel combined, and the prospectus of the Credit Anstalt was signed by them, in conjunction with the Princes of Schwarzenberg, Auserperg, the Count of Chotek and Dr. von Haber (as a sort of Government representative). The leading newspapers, which had received free blocks of shares in the new enterprise, gave it a magnificent reception. When the lists for public subscriptions were opened on December 11, 1855, people stood in all-night queues despite a heavy frost, and soldiers had to keep the crowds in order. Promises to obtain allotment changed hands at increasing prices, and money was paid for the official application forms which were provided free of charge by the bank. Its original capital was Fl. 60 millions (£1 equals about Fl. 11), of which 15 millions were offered for public subscription. This amount was forty-three times over-subscribed.

The first activities of the new bank disappointed those who had expected that it would bring credit to every man's door or that it would raise industrial enterprises as by a magic wand. The Rothschilds and their friends controlled the bank, and, by their actions, they gave proof from the beginning that they were only willing to conform to those parts of the teachings of Saint-Simonism they thought to be suitable to the books of their bank. During the first years of its existence the bank's own resources amounted to more than 50 per cent. of its total funds—the art of collecting funds from all parts of the Empire was not developed until later—and it invested these resources in the traditional manner of its masters: namely on the Stock Exchange, in the finance of railways and in general banking business. In all three departments the management displayed great circumspection from the beginning. The original Credit Mobilier and its followers outside Austria declared their first dividends from the profits of their Stock Exchange flotations, and gave very little attention to the development of their banking business, with the result that most of them came to grief in the very first crisis. But the Credit Anstalt successfully weathered the world crisis of 1857 and the crash of 1873, which drastically thinned the ranks of Austria's banks. It selected its debtors very carefully, and, from the beginning, had made its banking business pay its dividend. Although it exerted a great influence upon the Bourses of Vienna and elsewhere, it never tied up its funds either on

Enquiries from merchants regarding shipments to the East and the special facilities available are invited.

the Stock Exchange or in railway finance. From 1857 until 1928 the Credit Anstalt never failed to earn its dividends.

By the late sixties the bank's influence in Austria extended from one end of the Monarchy to the other. It still confined its activities to its traditional business; but, if it failed to obey the precepts of the Credit Mobilier in the investment side of its policy, it succeeded extraordinarily well, through the increasing number of its branches, in collecting funds from all parts of the country, and it achieved this success despite a rising competition which its own example had inspired. About 1870 the bank began to take part in the promotion and finance of railways, banks and certain heavy industries in Switzerland, Germany, Russia and the Near East. The trade depression of the Seventies, which deeply affected some of the bank's leading debtors, induced it to open merchandise departments, which acted as agents and factors for the output of certain of their industrial clients—in the first place for sugar and later for coal and other commodities. Finally, in the Nineties, under the control of Mauthner, Blum—the Blum Pasha of Egyptian fame—and Spitzmueller, the bank took an active part in the conversion of Austria's chief industrial enterprises into joint-stock companies. In 1913, having a share capital of Kronen 150 millions (£1 equals Kr. 25), and with total resources amounting to £40 millions, the Credit Anstalt had an active interest in about fifty industrial joint-stock companies, most of which were the leading enterprises of their branch.

The vagaries of the Austrian Exchequer and the political developments which took place around the monarchy prevented the Credit Anstalt and its Austrian competitors from ever playing a part in international finance similar to that of their German neighbours, although there very few international syndicates in which they were not invited to co-operate. The accumulation of capital in Austria never reached the figures it did in Germany, and the Austrian banks never enjoyed that measure of support from the State which was given by the Reich to its leading banks. For the crisis of 1873 had definitely changed the attitude of the Government and electorate towards banking. The Austrian always instinctively favoured the small craftsman and the small enterprise. The crash of the seventies killed the old Liberalism, not only in politics but in economics as well and gave rise to that spirit of anti-capitalism which has distinguished the bourgeois parties of both old and new Austria just as much as it distinguished their Socialist rivals, and which contributed so much to the final downfall of Austrian banking after the war. However, if the Austrian banks never attained that smashing force in attack of the German D-Banks of pre-war days, the circumstances of their time bred in the Austrian bankers before the war astuteness, circumspection and adaptability in negotiations. They realised better than any one else the limitations of their country and of their own surroundings; they managed all the same to achieve real power and to make their banks pay well-earned dividends, despite the many crises they had to face both at home and abroad.

The war closed a chapter in the history of Austrian banking, and the effect of the Peace Treaty of St. Germain may be summed up in a sentence: the Credit Anstalt was left at the head of a commercial banking structure, divorced from the branches which it had spread through-

out South-Eastern Europe, and with its headquarters situated in a curtailed country whose manufactures were denied an outlet by its neighbours. Helped by the undimmed glamour of the name of Rothschild, the Credit Anstalt emerged from the immediate post-Armistice crisis with its international standing unimpaired. All the world knew that Austria was in need of capital, and the leading houses hastened to offer the Credit Anstalt money and to acquire holdings in its share capital. For a moment it seemed as if the collapse of the Austro-Hungarian monarchy would leave the power of Vienna, and with it that of the Credit Anstalt, almost unaffected. The effects of the franc speculation and the subsequent Stock Exchange collapse in Vienna dealt this impression the first serious blow. The collapse of the Depositenbank and of the Postsparkasse started a series of bank failures. The crisis of 1924 shook international confidence, and foreign capital began to leave. The Succession States, anxious to free themselves from the "shackles of Vienna" and get into their own hands the connection with foreign capital, redoubled their attacks upon Austrian-owned property in their territory.

It must be admitted that the Austrian Government itself did very little to assist its banks. The municipality of Vienna was under the rule of the Social-Democrats, and the main bourgeois party (the Christian Socialists) were lineal descendants of those people who had started the cry of "down with the big enterprises" in the Seventies. To the Social Democrats capitalism was a power which must be destroyed on principle. To the Christian Socialists capitalism, and particularly banking, meant money to the Jew, and it did not matter what happened to the Jew. Hardly any of the taxes which had been put on during the inflation were removed in the subsequent years, and in many cases new burdens were heaped upon the banks. The deepening of the world depression, the tariff policy of the world, and particularly of the surrounding states, and the repeated delays before the flotation of the second Austrian loan, which compelled the State to borrow heavily from the banks, increased their difficulties. Trade and industry went from bad to worse, and the Stock Exchange collapsed completely, its monthly turnover falling to only half a million pounds.

As things have turned out, of only one bank, the Niederösterreichische Escomptegesellschaft, the oldest of all the Austrian joint stock banks, can it be said that its management rightly predicted the course of events and successfully adapted themselves to the rising tide of adversity. All the others remained optimists to the last, getting their banks deeper and deeper into debt by taking short-term money which they re-lent long, and as one after the other collapsed, the position of the Credit Anstalt became ever more dominant, particularly after it had taken over what remained of the assets of the Anglo-Austrian Bank, Limited, a step whose only apparent advantage was that it brought the bank into contact with the Bank of England. After the breakdown of the Boden Credit Anstalt, its greatest rival in pre-war years, which the Government practically compelled it to take over, the balance sheet of the Credit Anstalt amounted to 70 per cent. of the total figures of all Austrian banks taken together. To all intents and purposes it became what popular hopes had meant it to be eighty years before—a central holding and finance company for Austria. Unfortunately the enterprises it was compelled to administer were almost all suffering from the effects of the ten years' depression. In the Succession States and the Balkans the credit which the bank had granted had in most cases also become illiquid. There the ownership of the best industrial companies had long since passed into stronger hands. What was left abroad was in many cases dependent upon the assistance from the bank. All these enterprises required long-term credits and would have necessitated very heavy writing off in the books of the banks. The Credit Anstalt was only able to obtain short-term money abroad, and, as it turned out, its management apparently did not realise the amount of depreciation which the changed circumstances required it to apply to its assets. It could keep going so long as the supply of short-term funds did not show any falling off. The American banking difficulties deprived it of an

important source of money. The continued world depression compelled it to attempt the proper valuation of its assets. This investigation revealed that the bank had lost a good deal, if not the whole, of its share capital. It cannot be said that the managers of the bank were free from faults of commission and omission, and the latter were particularly serious; but they had had to contend with overwhelming odds. With no capital market at home from which to draw resources, and with the continued imposition of new burdens, the Credit Anstalt finally succumbed. Founded thirteen years before the old Austro-Hungarian monarchy came into being, the Credit Anstalt survived its break up for exactly the same number of years. If some people believed after St. Germain that part of the financial organisation of the old empire could be preserved in the body of the Credit Anstalt, they have now learned that at St. Germain the doom of the whole economic system of Austria was signed.

Notes of the Week.

Budgets and Debt Postponement.—The financial effect of the Hoover proposals for the postponement of inter-Governmental war and reparations debt services is exceedingly intricate. We have, however, attempted a very rough and tentative estimate of the extent to which the Exchequers of the four countries most concerned will be affected. The net immediate loss by the United States in the year ending July, 1932, if the Hoover proposal were put into effect would be, in very round figures, £50 millions, and the saving to Germany would be £75 millions. The net loss by France would be some £16.1 millions, made up as follows:—

Receivable by France, year ended June 30, 1932	Payable by France, year ended June 30, 1932
£ Mn.	£ Mn.
From Germany, on reparations account (net)* 39.463	War Debt—
Allied Debts to France... 0.240	To U.S.A. ... 10.288
	To Great Britain ... 12.500
	Share of joint guarantee to Great Britain ... 0.815
	Balance sacrificed ... 16.100
	39.703

* Receivable from Germany £42.9 millions, less £3.4 millions representing the service of the Young Loan and B.I.S. charges.
† Under Hague Agreement.

Of the "unconditional" Young Plan annuities, the share accruing to France in 1931-32 would be some £23 millions, but under the Hague Agreement, in the event of a postponement of Young Plan transfers, France would have to find some £17 millions net in order to complete the "percentage equalisation" fund for the benefit of the other creditor Powers not entitled to such a large proportion of the unconditional annuities. The position of Great Britain would be as follows:—

Receivable £ millions	Payable £ millions
From Germany (net) ... 14.40	To U.S.A. ... 33.10
Share of Reparations	Balance sacrificed ... 10.40
Annuities guaranteed by France, Italy and Belgium ... 1.40	
Reconstruction and relief debt payments ... 2.30	
War Debts—	
From Allies ... 17.80	
From Dominions and India ... 7.60	
43.50	43.50

Since Mr Snowden has announced that inter-Imperial War Debts are to be included in the scheme, Australia would be able to postpone payment of a further £3.92 millions, in addition to the £1.60 millions covered by the existing two years' moratorium, and New Zealand would be relieved of a payment of £1.75 millions. These two Dominions would forgo reparations receipts of £0.83 millions and £0.33 millions respectively. Except in the case of the United States, whose financial year coincides

with the year during which postponement is suggested, the effects of the scheme are divided between the Budgets of 1931-32 and 1932-33. On a very approximate calculation, in which the minor payments have been assumed to be divided between the two Budget years in the same proportion as the major payments, the net advantage to Germany under the scheme would accrue as to £55½ millions in this year's Budget and as to £19½ millions in the Budget of 1932-33. France would sacrifice about £15½ millions under this Budget and about £500,000 in the next. The British sacrifice of £10½ millions (which is additional to the £1.6 millions on which a two years' moratorium has already been granted to Australia) would fall entirely within the current Budget, owing to the fact that whereas the war and reparation debts to us are paid monthly, so that three-quarters of the cost of postponement is incurred within the current financial years, one of our semi-annual payments to America for 1931-32 has just been made. The £10½ millions which we stand to lose by the scheme is therefore composed of a net sacrifice of £11½ millions under this year's Budget, balanced by a net saving of £½ million under the Budget of 1932-33.

Land Tax Progress.—The Land Tax is wending a weary and unhappy way to the Statute Book. It has surmounted, this week, the most difficult obstacle in its path, for, on Tuesday, Mr Snowden moved the new clause insisted upon by the Liberals, in which the penalisation of developed land is substantially mitigated. The terms of the clause, roughly, conform to the forecast given in these columns last week. It provides that for the purpose of the charge of Land Tax "the land value of every land unit not being a unit comprising agricultural land shall be reduced either (a) by a sum equal to four times the annual value of the unit for income tax purposes; or (b) by a sum equal to seven-eighths of the land value of the unit, whichever is the less." The upshot is that land developments will be taken into consideration, and the maximum rate of tax applicable to the best developed land will be as low as ½d. per £ of value. The terms satisfied the Liberals, but the reluctance with which Mr Snowden made the concession was shown by the provocative tone of his reference to it, and Mr Lloyd George was moved to complain of the "offensive and disagreeable way" in which the Chancellor had moved the clause. Clearly, Liberal-Labour amity has not been sweetened by the whole incident. Possibly, Mr Snowden's ill-grace on Wednesday was the result partly of the previous night's proceedings over the question of exempting playing fields, when the Government escaped with a bare majority of seven, and the Liberal flock was so scattered that 20 members of that party voted against the Government, 10 in support of it, and 28 abstained, including Mr Lloyd George and Mr Herbert Samuel. Something was done, however, to conciliate Liberal opinion on playing-field exemption next day, when Mr Snowden explained that he had every sympathy with the exemption of playing fields, but could not extend exemption to commercial sporting ventures. Mr Snowden looks like getting his Land Tax, but the unofficial Labour-Liberal concordat is working anything but smoothly.

The Writing on the Wall.—The results of the last three by-elections are far from encouraging to Labour headquarters. Here are the figures:—

	1931.	Previous Election.	Increase or Decrease.
Gateshead.			
Labour Vote	22,893	28,393	- 5,500
Conservative Vote	21,501	11,644	+ 9,857
Liberal Vote	...	10,314	...
Independent Vote	...	3,688	...
Labour Majority	1,392	16,749	- 15,357
Wavertree.			
Conservative Vote	18,687	16,880	+ 1,807
Labour Vote	10,042	13,585	- 3,543
Liberal Vote	...	11,723	...
Conservative Majority	8,645	3,295	+ 5,350
Ardwick.			
Labour Vote	15,294	20,041	- 4,747
Conservative Vote	14,980	13,177	+ 1,803
Labour Majority	314	6,864	- 6,550

ANNUITIES

are usually purchased for those to whom a guaranteed income is a necessity. The Society has long been associated with Annuity business, and the special facilities available for the payment of Annuities commend it to those seeking Ease, Contentment, and Safety.

LEGAL & GENERAL
ASSURANCE SOCIETY LIMITED
10 Fleet Street, London, E.C.4
Assets Exceed £21,000,000.

At Gateshead and Wavertree Liberal candidates, who had stood at the general election, retired to leave the field free for a Labour-Conservative fight, while a straight fight between the two biggest parties was repeated at Ardwick. Allowing for cross-currents, personalities and local influences, which often count for so much at by-elections, the obvious deduction from the Wavertree and Gateshead figures is that Liberals, bereft of a candidate of their own, voted fairly strongly for the Conservative representatives, while at Ardwick the Liberals, who two years ago had in many cases given a vote of censure against the spineless Conservative administration, now recorded their dissatisfaction with Mr MacDonald's record. The Labour Party may, of course, claim that the results merely represent a perfectly normal swing of the pendulum, and that the swing has not gone far enough to change the representation in the House of Commons of these three constituencies. But it is significant that all three results, all tending so strongly against the Government, have followed the publication of the Report of the Royal Commission on Unemployment Insurance and the Government's refusal to grasp boldly the nettle of dole reform. If it is true that these three elections represent a protest against inadequate tinkering with abuses of the present system, they suggest firstly that public opinion is running ahead of Government action, and, secondly, that the figures may be regarded as the writing on the wall, presaging the decay of the Government's hold upon the confidence of the electorate.

French Naval Policy.—On Thursday, June 18th, when the French Naval Programme for 1931-32 was discussed in the Chamber, the deputies took the Government by surprise by the independence of their attitude. The contentious point was the proposal for a new battleship of 23,000 tons, which would account for 60 per cent. of the tonnage which the Government would like to build during the coming financial year—only the remaining 40 per cent. being allocated to light surface craft, and nothing at all to submarines. This represents a striking departure from the policy of recent years; for instance, last year, when 70 per cent. of an approximately equal aggregate tonnage for new construction was allotted to light surface craft, and the remaining 30 per cent. to submarines. The reason, of course, for this change in French building policy is the appearance of the first German "pocket-battleship"; and in view of this the debate in the French Chamber on this occasion must be regarded as an event of considerable international importance. The Government's proposal for a French 23,000-ton battleship was criticised by the deputies on two grounds: first, that it was neither the most efficient nor the most economical reply to the German 10,000-ton ship that naval experts were capable of devising; second, that it might evoke the construction of a still heavier battleship on the part of Italy. Finally, the naval construction bill was adopted with an amendment, moved by Monsieur Loucheur and accepted by the Government, which cuts down the credit demanded by more than 50 per cent. (from 1,010,000,000 francs to 500,000,000). This will allow the Government to proceed with the construction of the light vessels on its programme, while suspending the laying down of the battleship until this question has received further study and consideration. The importance of this result is that it may delay the construction of the new French battle-

ship until the assembly of the Disarmament Conference, when France may be induced to relinquish the prospective battleship altogether, provided that corresponding concessions are made by other Powers. Here, surely, is an opportunity for Germany to make an effective contribution towards the cause of disarmament—and, if she is wise, she will not wait for this till next February, but will make her gesture straight away, while the French attitude towards President Hoover's proposal is still in the balance. If the German Government were to proclaim now its readiness, as part of an all-round scheme of disarmament, to scrap the already constructed "pocket-battleship" and to forgo the right which it possesses, under the Treaty of Versailles, to build five more of them, this might have a profound and immediate effect on French feelings and French policy. Dr. Brüning has dared to ask greater sacrifices from his countrymen than this. If he were to make this announcement forthwith, we believe that both he and his country would find themselves well rewarded.

The New Austrian Ministry.—Cabinet-making in Austria has been facilitated by the financial alleviation resulting from the Bank of England loan and from President Hoover's pronouncement; and last Sunday afternoon the Austrian Cabinet crisis was resolved by what amounts to a reconstruction of Dr. Ender's late Ministry. In this reconstruction the Chancellorship is filled by Dr. Karl Buresch, the Governor of Lower Austria, a somewhat obscure politician who is a Christian Socialist with moderate views. Perhaps the most significant appointment is the return of Dr. Schober to the Ministry of Foreign Affairs, and the most striking appointment that of Professor Redlich to the Ministry of Finance. Dr. Schober's return presumably signifies that the policy of closer union with Germany is not to be abandoned. As for Professor Redlich, he is a jurist and publicist of international reputation, whose prestige and abilities may be counted upon to put Austrian public finances in order—not merely in the way of balancing the budget, but in the matter of the relations between the Government and the banks. Dr. Schober and Professor Redlich, between them, will give the new Austrian Cabinet the strength which it can hardly be expected to derive from the new Chancellor.

The New Egyptian Government.—Outwardly the opening of the new Egyptian Parliament last Saturday, June 20th, was a triumph for Sidky Pasha—or, rather, for King Fu'ad, whose policy Sidky Pasha has set himself to carry out. To remodel the Constitution, found a new party, hold an election and secure the triumph of the new party at the polls, all in the space of a few months, might seem a great achievement for any government—even in a country where governments have such facilities as they have in Egypt for "making" constitutions, elections and almost anything else they choose. Yet there is one thing—referred to in King Fu'ad's speech from the throne—which it takes two parties to make, and that is a treaty between Egypt and Great Britain. Of course we want such a treaty. Wise men on both sides have made repeated efforts to achieve a treaty during the last decade. Yet there is one condition, laid down by the British Government on former occasions, on which any British Government is bound to insist again whenever the question of resuming negotiations arises: an Egyptian Government which cares to treat with the British Government for a comprehensive settlement, on a treaty basis, of Anglo-Egyptian relations must be genuinely representative of the Egyptian people. And Sidky Pasha is no nearer now to demonstrating the genuine representativeness of his Government in British eyes than he was before the recent elections were held and the new parliament assembled. If Sidky Pasha imagines that British statesmanship would look no farther than the figures of his brand-new parliamentary majority, he is greatly mistaken. For the British desideratum is eminently practical. What we require of any Egyptian Government that seeks to negotiate with us is that it should be able to carry the Egyptian people with it in any agreement with this country with which it is satisfied for its own part. Now

Sidky Pasha's Government is evidently not a government of this kind. The result of the recent elections certainly does not reflect the opinion of the politically-conscious portion of the Egyptian nation. Just because he knows that he is non-representative, Sidky Pasha would be constrained to make higher demands upon Great Britain than, for example, Zaghlul Pasha would have been constrained to make had he still been alive; and it is practically certain that any treaty, however favourable to Egypt, which Sidky Pasha did agree upon would be repudiated by the Wafd, which would find in this its opportunity for returning to power. The moral is that so long as King Fu'ad continues to play his present very dangerous game of ruling Egypt through a party of "the King's Friends," the impasse in Anglo-Egyptian relations will continue.

The Pope Speaks Out.—Last week, when we referred to the Azione Cattolica affair in the *Economist*, it looked as though the controversy between the Vatican and the Italian Government were tailing off into a lengthy exchange of notes, and as though the strong feelings which have flared up recently on both sides were at least being damped down again, if not extinguished, by mutual consent. Meanwhile, on the 21st, the Pope himself has deliberately underlined the continuance, and the gravity, of the dispute in an address delivered in the Vatican to a company of 700 pilgrims belong to the Propaganda Fidei. On this occasion he went so far as to compare the treatment which the Roman Church has been receiving at the hands of the Fascist Government in Italy with the persecutions to which it has been subjected in Mexico and in the U.S.S.R. He declared that the impression of a return to tranquillity, which was being spread abroad by the Italian authorities, was far from being in accord with the facts; that the parties were not on the way to agreement; and that it had not yet been possible even to begin negotiations. This last statement presumably refers to the particular matter of the "congregations" of young persons, placed under the supervision of the bishops and clergy, which have been organised as a means of salvaging some vestige of the Catholic boys' clubs which the Fascist Government has already dissolved. Logically enough, these "congregations" have been dissolved by the Fascist Government in their turn; and here there is for the moment an absolute deadlock—the Pope refusing to recognise their dissolution, while the Government refuses to admit that this is a matter for negotiation. In this affair there does seem to be a certain parallelism between the official policies of Fascist Italy and Soviet Russia. Both regimes are willing to tolerate ecclesiastical organisations for religious purposes in the narrowest sense of ritual and liturgy; but both are inclined to disallow any ecclesiastical organisations which trespass on the domain of social welfare—a field which they deny to the Church and claim wholly for the State. Considering that a Church which is forbidden to carry on any organised social activities can hardly expect to live, it would appear that the issue here raised really is one of great importance and gravity, as the Pope declares it to be.

The Coal Mines Negotiations.—This week has brought us into the crucial period of negotiations between miners and owners, the outcome of which is to decide whether the country is to have a coal stoppage superimposed next month upon its present difficulties, or whether a compromise over wages and hours can be reached. The coal owners met the Cabinet Coal Committee on Wednesday evening, and after further deliberation on Thursday morning informed the Cabinet that they had made an offer to the miners to extend to twelve months their earlier offer to stabilise for six months existing wage scales on the basis of a 7½ hours day. As we go to press the attitude of the miners' leaders to this substantial advance by the owners is not known. There are, of course, difficulties and complications to be overcome, especially in Scotland, where the 8 hours spreadover is in operation, while the hostility of the Yorkshire delegates is inevitable. Again, the position is not rendered any easier by the strike, which began on Thursday in the Cumberland field as a

protest against an award of the National Board giving a 7½ per cent. reduction in wages. Nevertheless, we trust that wise counsels will prevail and that the miners' leaders will persuade the delegate conference to accept the owners' offer at least as a basis for further negotiation. A coal stoppage at this juncture would be so calamitous in its effects upon the whole country, as well as upon all engaged in the coalmining industry, that we cannot believe either party to the present negotiations will split straws or fail to clutch at every reasonable opportunity for settlement.

The Engineering Settlement.—The acceptance by the engineering trade unions of the terms of settlement reached provisionally by the negotiating committees of the employers and the unions last Saturday happily removes one of the threatened disputes which have been casting a dark shadow on the British industrial outlook. The unions appear to have done as well as they could expect in the negotiations. The reduction of piece-work prices for which the employers asked in their final terms was conceded, but the men secured an agreement providing for a distinct improvement in the terms originally proposed for overtime and double shifts. It is now agreed that for the first two hours overtime shall be paid at the rate of time-and-a-quarter, and thereafter at the rate of time-and-a-half, and that night shifts shall be paid for at the rate of time-and-a-sixth for all hours worked. Piece prices are now fixed so as to enable a man of average ability to earn 25 per cent. instead of 33½ per cent. on his base rate. These reductions represent an appreciable sacrifice on the part of the engineers, but it is a great thing for all concerned that a disastrous stoppage should have been averted.

The Hoover Plan and Commodities.—While the immediate effects of the announcement of the Hoover Plan on the world's principal Bourses was a burst of enthusiasm, whose reactions on security prices are described in our Stock Exchange pages, a point of perhaps greater interest is to watch the influence which the proposals have had, and seem likely to have, on commodity prices. In the following table we show the closing prices of a selection of leading commodities at the end of May, on the eve of the announcement, and on Monday and Thursday of this week:—

Date.	Wheat		Cotton		Tin		Copper		Rubber	
	Liverpool futures "July"	per 100 lbs.	American Middling "July"	per lb.	"Standard Cash"	per ton	"Standard Cash"	per ton	"Smoked sheet"	per lb.

* Unofficial Close.

Monday witnessed in every case a sharp rise in quotations. The movement hung fire on Tuesday and Wednesday owing to uncertainty as to the French reception of the plan, but on Thursday the advance was resumed. It would, however, be premature as yet to conclude that a definite recovery in the prices of raw materials has set in, for the improvement which has occurred up to date has been the result of bear covering and changed market psychology rather than of an actual expansion in purchases for consumption.

International Cotton Congress.—A cotton correspondent writes:—The chief feature of the International Cotton Congress, which was held in Paris this week, was the discussion on the causes of the depression in the world cotton industry. The principal speaker was M. André Siegfried, who read a paper on "The Crisis in the Cotton Industry and the World Crisis." He pointed out that a large part of the cotton spinning industry has passed from Lancashire to the Far East and from New England to the cotton growing region in the South of the United States. At the present time the industry was capable of manufacturing more cotton goods than the world could

absorb, productive capacity having been largely increased by improvements in machinery and the working of double and treble shifts. It was reasonable to count on a continuous development arising from a natural increase of population or progress in the standard of living. It was also legitimate to expect the introduction of a great many new uses of cotton. If world spinners and manufacturers were to count upon increased demand as the sole solution of the crisis, an increase of at least one-fifth would be required—an expectation which savoured of somewhat excessive optimism. The solution of the question whether there will be an increase in the amount of cotton used lay, so far as the East and Far East was concerned, outside the cotton industry itself. It depended on the prices of agricultural and mineral products and to a general extent on the political atmosphere prevalent in the world of to-morrow. Mr. Arno S. Pease, formerly General Secretary of the International Federation, in the discussion which followed, said that England's aloofness from the double-shift system had been responsible for the loss of a great deal of her trade. Working in double and treble shifts, there was too much cotton machinery in the world and unless some agreement was arrived at, first in each country and afterwards internationally, the problem would resolve itself into the principle of the survival of the fittest. He expressed the opinion that the present period of evolution would lead eventually to better times. Some English delegates argued that the primary cause of the depression was the now almost universal adoption of the gold standard, and said that the decline in the price of silver deprived manufacturers in gold standard countries of competitive power with manufacturers in silver standard countries. The German delegates said that they were in the position to supply the requirements of Germany, provided that in the fine section they received adequate protection. The secretary of the Belgian Spinners' Association, on the other hand, asserted that European countries would soon have no outlet other than their home market if they did not take up an energetic crusade against protection. On behalf of the French industry it was stated that when monetary inflation ceased in 1926, the rise of the franc exercised a depressing influence and the artificial influences which had worked in favour of the trade ceased, and had been followed by the most intense crisis. The Italian delegates believed that the crisis would not be overcome until the price of the raw material became more remunerative.

America's Budget Deficit.—A transatlantic correspondent, writing, of course, before Mr Hoover's moratorium proposal, gives the following description of the position of the United States Federal finances:—The deficit which faces the Treasury has assumed alarming proportions. On June 2nd President Hoover, after consultation with Colonel Roop, the director of the Budget, issued a statement which attempted to put as favourable a light as possible upon the financial situation of the nation. It indicated that the deficit at the end of the fiscal year would probably not exceed 950 million dollars, and it attributed it partly to the drastic decline in revenues as the result of the economic depression and partly to special expenditures. The sum required to meet the demands of the war veterans under the scheme for making advances on their war service certificates has now reached a total of \$1,100,000,000, and the increased expenditure for the construction of public works to relieve unemployment has already amounted to 540 million dollars. The administration has reason to be gratified with the success of its issue of 800 million dollars of 3½ per cent. bonds, for it was over-subscribed several times. But \$589,000,000 of this issue has to be allocated to the retirement of Treasury certificates due June 15th, and President Hoover in his statement forecast that at the end of the fiscal year there would have been an increase of roughly 500 million dollars in the national debt. He claimed, however, that the situation would have been infinitely worse but for the "economy drive" which was inaugurated last summer and has already saved the Treasury 180 million dollars. But it is a sobering experience for a country to find that it has

reverted in one brief year from a situation where it was retiring its national debt at an amazing rate and showing huge annual surpluses to a plight where it has to face a gigantic deficit and is compelled to indulge in large borrowings to balance its Budget. It is generally taken for granted that a heavy dose of new taxation is inevitable, and the problems involved will provide the new Congress with one of its most fruitful subjects of controversy. The Republican Party naturally dislikes the idea of entering a Presidential campaign burdened with the odium of the sponsorship of new taxation, and it is particularly anxious to avoid responsibility for the sort of taxes which would alienate the big business interests and the support of newspaper magnates. But most of the leaders of the Democratic Party, intent as they are upon demonstrating that their party is free from any infection of radical doctrines, are just as anxious as the Republicans not to forfeit the goodwill of "big business," some of whose leaders have been manifesting a new friendliness to it, and as a consequence there will be a powerful sentiment in Congress in favour of keeping any increase of taxation at a modest level and meeting the deficit to a large degree by borrowing. However, the group of Republican Progressives, led by Senators Norris and Borah, who will hold the balance of power in the new Congress more decisively than in the last, are insistent that there must be new taxation and that it must take the form of levies which will entail greater sacrifices from the richer classes; they want to double the Federal death duties and raise the income tax rates for the higher classes of payes. Faced with this problem it is understood that President Hoover is giving serious consideration to the appointment of a new Commission for the purpose of studying the whole taxation problem and working out new sources of Federal revenue. He has already discussed the question with the Tax Commissioners of several important States and they have urged him to call a national conference of tax experts out of which the Taxation Commission might emerge. For some time past State administrations have been viewing with apprehension the invasion by the Federal authorities of fields of taxation which are claimed to be the preserves of the States, and a Taxation Commission would undoubtedly be instructed to study the problem of closer co-operation between the Federal and State authorities in order to secure an allocation of the fields of taxation which would prevent overlapping and secure more uniformity in the system.

The Irish Derating Report.—Our Dublin correspondent writes.—The whole system of local government and local finance in the Free State is reviewed in the Report of the Derating Commission. The majority report recommends no further relief of rates on agricultural land, and draws attention to the fact that any extended measure of relief would necessitate fundamental reforms in the structure of local government. The Report states that rates amount to less than 5 per cent. of the costs of production of the typical farmer, and are a relatively insignificant burden compared with the cost of feeding stuffs and labour. The conclusion is reached that the remission of rates would have no material effect on agricultural production, the volume of which is dependent mainly on price movements. As to the advisability of transferring to the Central Government the administration or the cost of certain services now paid for by local rates, the possibility of granting relief from rates on condition that production is extended, and the methods of finding the additional revenue that would be necessary if de-rating were adopted, it is pointed out that a large part of the additional taxation required would ultimately be borne by the agricultural community, whose relief would thereby be rendered to a large extent illusory. Finally, the Commission emphasises the superior merits of constructive schemes of expenditure to assist agriculture. Needless to say, this Report has been accorded a hostile reception by the farming interests, who are naturally more anxious for a concrete and immediate relief than for a policy the fruits of which will not be reaped this year or next. The Report represents another declaration of the policy to which the Government has so far con-

stantly adhered of spending public money on agriculture only by way of productive investment and of refusing all claims for subsidies and bounties at the expense of the taxpayer. The wisdom of that policy has been demonstrated by the recent course of wheat prices. Three years ago there was advanced in very influential quarters a serious proposal to subsidise the growing of wheat in the Free State, which, if it had been adopted, would have involved the expenditure of millions of pounds in the last couple of years. At that time the Government's refusal was bitterly attacked by many disappointed farmers; but public opinion has now come to approve the decision. The soundness of the Government's policy of concentrating on the improvement of animal husbandry and dairying has also been justified by the recent course of agricultural prices. It is a matter of common knowledge to-day that the price of animal products has declined far less than that of cereals, and that the countries producing the former have weathered the prevailing "economic blizzard" comparatively well. It is probably not so generally understood that the relatively favourable price level of animal products is likely to be a permanent and not merely a passing phenomenon, owing to the revolution which has taken place in cereal cultivation. The mechanisation of farming and the consequent increase in the output per man employed have definitely lowered the cost of production and increased the volume of the world's principal cereal crops, while no such changes in technique have been introduced in animal husbandry. Another influence operating to produce the same result is the growing demand for animal foodstuffs caused by the general increase in the standard of living. Thus changes both in conditions of supply and of demand appear to be influencing the price situation favourably to the principal Irish agricultural products.

India's Foreign Trade.—In 1929-30, writes our Calcutta correspondent, imports of merchandise into India from the United Kingdom were valued at over 103 crores. Last year the corresponding figure was just over 61 crores. Meanwhile, imports from all foreign countries combined, excluding the British Empire, totalled nearly 89 crores, against 116 crores in 1929-30. In the same two years exports of Indian merchandise to the United Kingdom have dropped from 66 to 52 crores, and to foreign countries from 200 to 134 crores. Total imports from all sources in 1930-31, at 165 crores, were 76 crores lower than in the previous year, and exports of Indian merchandise, at 220 crores, were 90 crores lower. The fall in the price of sugar has saved India roughly 5 crores on its purchases for the year. Indeed, the price has fallen so low that the Tariff Board, in the interests of the Indian industry, has recommended a stiff increase in the import duty. Heavier yielding canes have in recent years been evolved by the official experts, and these have spread so rapidly, and hold out the promise of so large an increase in production in the next few years, that the establishment of a large number of modern sugar factories, capable of meeting the requirements now satisfied mainly by the Java product, is held to be essential to the preservation of the indigenous industry. Another welcome decline was in imports of food grains, which in 1930-31 were valued at 2½ crores less than in 1929-30 and at 8 crores less than in 1928-29. The adoption of the Wheat Import Tariff Bill indicates that in future imports of wheat will be permitted only when Indian production falls short of Indian consumption. As only a small percentage of this year's wheat surplus has found a market abroad, it has been deemed expedient to ban imports, excepting only a small quantity required by flour mills situated in Calcutta and Bombay whose contracts had been entered into before a tariff was contemplated. Although imports of raw cotton last year exceeded 6 crores in value, an increase of 3 crores, it has not yet been suggested, except in Congress circles, that a similar ban should be placed on the raw material of the cotton mills, despite the fact that the cotton cultivators in India are so badly circumstanced, owing to a decline in external demand by 19 crores. In cotton yarn and manufactures the decline in imports was of the order of 34 crores,

namely, from 59 to 25 crores, a decline without precedent in the history of the trade. Undoubtedly the boycott, to which this decline is ascribed, was greatly assisted by the economic depression, which would remain a potent factor even if Congress propaganda and picketing ceased. The decline in exports of raw jute exceeded 14 crores, or, compared with 1928-29, 19 crores. In manufactured jute the decline was 20 crores, or, compared with two years ago, 25 crores. Such conditions, even in the most favourable political conditions, would not have left imports unaffected.

Canadian Newsprint Scheme.—Our Ottawa correspondent writes:—The Honourable Charles A. Dunning, the chairman of the protective committee of security holders of the Canada Power and Paper Corporation, whose embarrassments have been a source of serious anxiety to the Government and the banks, has announced the terms of the reorganisation of the financial structure of the corporation, which had been approved of by the committee. The Anglo-Canadian Pulp and Paper Mills, controlled by the Rothermere interests, which had been embraced in the Canada Power and Paper merger, have availed themselves of the terms of their agreement to withdraw from participation in the new scheme; but the other six constituent companies, namely, the Laurentide, the Belgo-Canadian, the Waygamack, the Port Alfred Pulp and Paper, the St. Maurice Valley Corporation and the Anticosti Corporation, will come into the scheme if the shareholders ratify the proposals. The plan contemplates the formation of a new company, which will acquire the undertakings and assets of the constituent companies and will have an authorised capital of \$100,000,000 first-mortgage gold bonds and first-mortgage sterling debenture stock, and 2,000,000 no-par value common shares. Authority is sought for an issue of bonds not exceeding \$65,000,000, but these will not be all issued immediately, and it is estimated that the outstanding capitalisation of the new company when the plan is carried out will be \$51,058,522 first-mortgage gold bonds and first-mortgage sterling debenture stock and \$1,547,141 common shares of no par value. The bonds will be on an income basis for five years ending July 2, 1936, and will thereafter bear fixed interest at the rate of 5½ per cent. They will mature on July 2, 1961. The scheme practically cuts the capitalisation of the Canada Power and Paper Corporation in half, and it has been favourably received in Stock Exchange circles and by the Press as affording hopes that by the elimination of "water" the capital of one of the largest units in the newsprint industry has been reduced to manageable dimensions on which interest can be earned.

Latvia and Her Minorities.—A correspondent writes:—News from Latvia which has recently reached London suggests that the nationalistic Lettish parties are pursuing *vis-à-vis* the minorities a policy which may have very serious consequences. This new and unfortunate policy dates comparatively from recent times. During the first decade after the war Latvia, together with Estonia and Finland, constituted an oasis in Eastern Europe, in which the ruling national majorities and the national minorities enjoyed comparatively peaceful relations. This relatively happy state rested primarily on the statesmanlike conduct of the then Latvian Government, which passed in 1919 a school law granting educational autonomy to the German, Jewish, Polish and Russian minorities. In response to this gesture, the minorities, and especially the German minority, co-operated in the Government and were represented in coalition Cabinets. At a later date, however, nationalistic tendencies began to appear; German and Polish landed property was expropriated; and in 1928 a measure was enacted which excluded ex-soldiers of German nationality from rights in land which was being redistributed to all other ex-soldiers of the Latvian army who had fought in the war of liberation. The successful enactment of this discriminatory measure against members of a minority appears now to have encouraged the Latvian chauvinists to proceed further along the same perilous road. At the present time

a campaign is raging against the Polish minority in one section of the country, while simultaneously steps are being taken to expropriate the German cathedral in Riga and to attach lands belonging to historic German guilds. It is not necessary to have a profound knowledge of Eastern Europe to see that this policy of anti-minority nationalism is both dangerous and unjust. Latvia cannot afford for internal reasons to play fast and loose with the minorities which constitute a quarter of her population, or for international reasons to disregard treaty obligations entered into with the Great Powers.

The Position in Uruguay.—Commercial and financial interests in Montevideo have been seriously alarmed at the fall in the Uruguayan dollar, writes a correspondent, and a memorandum has been addressed to the Government by the managers of the local private banks wherein it has been clearly stated that various popular explanations of the drop, such as the statement that speculative interests in Buenos Aires have purposely driven down the value of Uruguayan currency, cannot be regarded as correct. The basic fault lies in the national expenditure, and only by drastic reduction in this year's budget can the ever-growing difference between receipts and expenditure be substantially checked. Meanwhile the uncertainty prevailing abroad with regard to future regular payment of the debt service has driven Uruguayan bonds down to lower levels than ever before. It has, therefore, been suggested that the \$10,000,000 gold which it was proposed to ship, out of the funds held by the Banco de la Republica, be used to purchase Uruguayan bonds in the New York market, as cover for exchange operations, thereby improving at one and the same time the bond quotations and the rate ruling for the Uruguayan dollar. At the moment of writing it is not certain whether the proposed suspension of the amortisation fund allocated to Uruguayan consols will actually be carried into effect. If at the last moment it is found possible to refrain from taking so grave a step, the favourable reaction upon Uruguayan credit and Uruguayan exchange should be marked. The plain truth is that, for many years past, national expenditure on social services in Uruguay has steadily gone up year after year, whereas the country, in common with her larger neighbour Argentina, has suffered from a substantial decline in the price received for her principal commodities, without, hitherto checking either her general or her private expenditure on imports. It should, of course, be understood that, although it has been proposed to suspend amortisations owing to the heavy depreciation in exchange, which has reached 45 per cent., such suspension refers only to the transmission in foreign equivalents of the statutory sums, with due provision, as usual, for their being set aside here in Uruguayan currency. Unfortunately, owing to the loose wording of the first official statement, both New York and London understood that Uruguay actually proposed to suspend the service of her foreign loans, whereas nothing was further from the mind of the Minister of Finance.

UNITED STATES.

Money Market — Railroad Rates — Business — Foreign Trade.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 16.

THE second quarter's income-tax collections scarcely made a ripple in the money market pool. Natural ease created by the Treasury operations on June 15th, involving, together with corporation dividend payments and other settlements, a turnover of \$2,000,000,000, was accentuated by the arrival of \$7,500,000 in gold from Canada and a release from earmark of \$60,000,000 at the Federal Reserve Bank. Gold releases are believed to be for German account, the gold having been in the form of a French credit on a triangular arrangement. The Bank of

France is the only central bank with sufficient gold held under earmark at the Federal Reserve Bank to account for such heavy releases, and naturally there is no reason for thinking that France was giving up the gold for her own account.

This evidence of French willingness to help Germany and of Chancellor Brüning's determination to take steps, as for example raising the discount rate, toward stopping the withdrawal of short-term credits from Berlin, was well received here. Wall Street feels that the seriousness of conditions in Germany has been somewhat exaggerated, but is less apprehensive than it was over the outlook for political disturbance. It is still felt that the time is not opportune for a reopening of the reparations question, and this country is likely to do nothing towards foreign debt remission at this time.

In a public address, President Hoover has reaffirmed his opposition to tariff reduction as a means of restoring business prosperity. He is equally firm in opposition to any scheme for unemployment doles. A proposal for the abolition of the capital gains tax has again been brought forward. The President made a further plea for confidence and a more cheerful viewpoint.

Because of the large amount of long-term bonds offered to refund maturing short-term certificates and Treasury bills, the Treasury tax date overdraft was smaller than usual, about \$50,000,000, all of which was taken by the Federal Reserve Bank. The overdraft was entirely liquidated on the following day. Since the leading banks agreed not to lend call funds at less than the Stock Exchange rate, which has been pegged for a long time at $1\frac{1}{2}$ per cent., the supply of money in the outside market has been irregular. Recently the outside rate has been $1\frac{1}{4}$ per cent., against 1 per cent. for several weeks previously. Private banks have furnished the principal supply.

Rates charged by banks to customers continue to fall. For the country as a whole they are now at the lowest since 1924 and for New York the lowest since 1927. In this respect the Federal Reserve's campaign for cheap money has met with some success, and the bond market also has noticeably improved recently, though new capital issues continue at a low ebb. Last week's total was only \$7,000,000, and, excluding Government financing, this month's offerings bid fair to set a new low record for a long time. Low interest rates here have been less effective in keeping out gold. South American gold has come because of the debt obligations and poor foreign trade of the Argentine and other countries. The present releases from earmark for German and French account are, of course, due to special circumstances. Canada has begun to send gold, partly because of trading operations in anticipation of higher tariff duties.

Savings banks are finding it increasingly difficult to maintain their old deposit rates, which are 4 and $4\frac{1}{2}$ per cent. Agreement has been reached among the leading institutions to cut interest paid to $3\frac{1}{2}$ per cent., beginning with the July-September quarter. This is unlikely to diminish the savings bank deposits, but the problem of employing the new deposits driven from securities and the ordinary banks, as well as corporation money, will be much simplified.

This week the railroads made formal application to the Interstate Commerce Commission for a 15 per cent. "blanket" increase in freight rates. Assuming no increase in traffic and on the basis of the present economical operation of the roads, it is calculated that the higher rates, if granted, will bring in approximately \$400,000,000 additional net income. Even with this the roads claim that they will be unable to show on an annual basis as much as 4 per cent. earned on their property investment. In their application the railroad executives clearly were pleading for public support rather than for that of the Interstate Commerce Commission, which is, of course, thoroughly familiar with the problem. The application stresses the need for hurry if the bonds of the railroads are to be maintained as legal investments for insurance companies, savings banks and trusts, and if their credit

is to be maintained. Illuminating information is given relative to the growth in railroad operating efficiency in the past few years. It is brought out also that there has recently been a good deal of deferred maintenance. In the first four months, expenditures for maintenance of way has dropped about 25 per cent. and maintenance of equipment about 20 per cent., which accounts in part for the ability of the roads to show as much net income as they have.

On the subject of wages the railroad executives remind the Commission of the "policy of the Federal Government, concurred in by the managements of most leading industries, that the revival of industry and commerce should be predicated, for the time being at least, upon the maintenance of existing wage scales." Mainly because of the long period necessary to determine the question of wage reductions, to say nothing of the public opposition which naturally would arise to wage-cut proposals, the railroads ask for relief in higher rates rather than in wage reductions. Increases in passenger rates is dismissed as impracticable, since too little of that traffic is now available. In fact, the trend has been the other way in passenger fares, many roads having voluntarily cut rates to combat motor-bus competition, but without notable success. Just how much real benefit will flow to the railroads from the proposed rate increases is still a matter of varying opinion, but the increases are fairly likely to be granted. The banks and insurance companies are solidly behind the railroads. They will probably take effect by the first of September.

From President Hoover down, self-appointed prophets have had much to say recently about the prospects for trade improvement and they are all positive that the worst has been seen. This view is shared in generally over the country—provided the harvests are good. So far as current indices of business activity are concerned, some further recession has taken place. The steel industry is down to 38 per cent. of capacity. Motor output is falling moderately, and railroad traffic is running nearly 20 per cent. under a year ago. Electrical output is declining slightly.

Foreign trade results for May were, if anything, better than expected. Both imports and exports were lower, but not appreciably so. Exports of \$205 millions were \$12 millions under last year, and imports of \$182 millions were \$5 millions smaller. February imports were only \$174 millions, but exports last month were the smallest for any month since October, 1914. For the first five months the export excess is \$194 millions, against \$296 millions for the same period of last year.

FRANCE.

The Hoover Proposal — French Impressions — Paris Reply — Revenue Returns — Markets.

(FROM OUR CORRESPONDENT.)

PARIS, June 24.

The first impression here of Mr Hoover's offer was one of incredulous astonishment. French opinion has so pinned its faith to the intangibility of the Young Plan as the sheet anchor of financial security that it refused absolutely to believe that Mr Hoover intends to bring about what is universally regarded here as the tearing up of the "scrap of paper" on which the decisions of the Hague Conference are recorded, and bring down the whole carefully-built-up French financial structure like a house of cards. All illusions were swept away yesterday, when it was circumstantially asserted that Mr Hoover will insist on acceptance of his offer before July 1st, leaving France with the alternatives, in default of compliance, of either carrying out her debt engagements towards the United States (in spite of having been deprived of the means of doing so), or of seeing her credit destroyed.

Still, although three days have elapsed since Mr Hoover's offer was made known, a good deal of indignation has already been blown off, and it now remains to be

seen to what extent this aspect of French feeling will be reflected in the forthcoming debates in the Chamber. The Cabinet has spent two long sittings drafting a reply to Mr Hoover, and it is announced to-night that their answer was this afternoon handed to the American Ambassador here for transmission to Washington. The exact text of the reply is not yet known, but it is understood to be of a temporising nature, as might be expected. The French are not used to American "hustle" in diplomatic matters, and they appear to have very astutely called Mr Hoover's attention to the fact that acceptance of his offer involves, for all practical purposes, abrogation of the Hague Agreement, to which the approval of the French Chambers was necessary before it could become operative. In other words, the Young Plan, which was embodied in the Hague Agreement, stipulates that a radical distinction shall be made between the conditional and the unconditional portions of the German annuities, consequently the French Chambers alone can sanction any new arrangement in conflict with the Young Plan. The French Cabinet is, of course, powerless to accept Mr Hoover's offer, and would certainly prefer, in any case, to receive the opinion of the Chambers before venturing to reject such an offer, however much it might feel inclined to do so. Whether this reply, and the delay which it will necessarily involve, will suit Mr Hoover remains to be seen.

Figures made public here from French sources show that it is estimated that the direct effect on the French revenue of the cessation during the coming twelve months of German reparation payments to this country would result in a loss to the Budget of 1,959,500,000 francs. Figures drawn from American sources purport to show that the French loss of revenue, due to acceptance of the American proposals, would be 2,732,152,000 francs; while the operation of the moratorium clauses of the Young Plan, should France prefer to continue the existence of that system, would result in a net loss of 2,171,000,000 francs, or 561,125,000 francs less. As a compromise, the French reply suggests that the unconditional payments due from Germany under the Young Plan moratorium clauses shall be transferred direct by the German Treasury to the Bank for International Settlements and held there, without conversion into foreign currency, for utilisation in any plans which may be devised for helping Germany and the other Central European Powers out of their present difficulties. The French fear, at bottom, is that, as the result of Mr Hoover's offer being put into operation, German reparation payments will not merely be suspended for twelve months, but for all time, and that with this the Treaty of Versailles itself would also be torn up.

The revenue returns for May, the second month in the new financial year, show a total yield from all normal and permanent sources of 2,688,810,000 francs, against 2,171,928,000 francs in May, 1930, and 3,203,972,000 francs in 1929. The total recoveries for the month were 77,500,000 francs below budget estimates, whereas the yield in April was 30,500,000 francs more than had been expected. Practically the whole yield, as is usual at this time of the year, when the new income tax assessment notes have not yet been delivered, was from indirect taxation. The yield from turnover taxes was 659,672,000 francs, or 153,652,000 francs (say, 19 per cent.) below the recoveries under this heading in May, 1930, which may be taken as equivalent to the recent accentuation in the prevailing depression, so far as this country is concerned. Customs yielded 22 per cent. more on the month than in May, 1930, but this was practically entirely due to recent increases in import duties. The tax on Bourse operations produced only 8,566,000 francs, or less than one-third of the amount estimated for; while the yield from taxes on securities was over 41 per cent. less than budgeted for. Taxes on railway tickets, wines, beer, spirits and mineral waters, theatres and music halls, all showed appreciably higher yields on the month; while motor-car taxes produced nearly 20 per cent. more. The revenue of the Caisse d'Amortissement from tobacco and the special taxes on successions and first transfers of real estate showed a fractional decline under all three heads. Last Thursday's bank statement returned the balance to the credit of the Caisse as 8,319,000,000 francs, so that it is evident the

institution is amply prepared to meet any probable demands for reimbursement of capital in the event of the commencement of application in the near future of the Government's rente conversion plan.

Unfounded reports were in circulation last week that the Government, before the week was out, would formally lay before the Chamber its rente conversion proposals, as to which it is pledged to secure Parliamentary approval before any definite action is taken. It is expected that the two 6 per cent. issues will be taken in hand first, and brought down to a 5 per cent. level, preparatory to further reduction, in the second half of next year, to 4 per cent., which it is believed will be the level to which the 5 per cents. will also be taken. Ordinary 4, 5 and 6 per cent. Rente issues, in view of the coming conversion scheme, now all stand at approximately the same level above par. 1918 fours closed last night at 103.40, 1913-16 fives at 103.075, 1928 fives at 103.175, 1920 sixes at 101.90, and 1927 sixes (redeemable plus the accrued portion of the 50 per cent. premium) at 103.50. It now seems evident that the actual date of the application of the conversion scheme depends for the moment on what kind of solution the American debt moratorium offer may receive. In any case the general budgetary situation renders it imperative that whatever savings can be affected by conversion should be accomplished as soon as possible. Money is badly needed to meet last year's deficit of over £17,000,000, and this year's expected revenue shrinkage.

Meanwhile, the average interest rate offered on new bond issues is steadily rising again, and is returned for May as 4.68 per cent., against 4.60 per cent. in April, 4.55 per cent. in March, and 4.10 per cent. (the lowest yet touched) in February. Practically the whole of this week's new issues offer either 5 or $5\frac{1}{2}$ per cent. The Orleans railway is offering 500-franc 3 per cent. bonds at 374, 1,000-franc 5 per cent. bonds at 975 and 5,000-franc 5 per cent. bonds at 4,860 (with coupon for August 1st in each case), which are being readily absorbed. A Government Bill is to be laid before the Chamber forthwith to bring into operation a large number of measures for the purpose of getting rid of the present huge deficit on the working of the railways. These include a general raising of passenger fares by 18 per cent. (to bring them up to pre-war level), and the reduction from 32 per cent. to 12 per cent. *ad valorem* of the tax hitherto levied on the companies in respect of all tickets issued (and not included in the fares paid by the public). Goods rates, which are already well above pre-war levels, are to be left unchanged.

GERMANY.

The Events of the Crisis — Mr Hoover's Proposal — Stock Exchange — Miners' Hours and Wages.

(FROM OUR CORRESPONDENT.)

BERLIN, June 24.

GERMANY will not easily forget the week which has just passed. The Reich has never been so near to complete collapse since 1923. The tension reached a critical point on two occasions. The first was June 16th, when the question of summoning the Reichstag against the will of the Chancellor was discussed, and the Chancellor announced that the Cabinet would resign if an affirmative decision were reached. At one o'clock the Procedure Committee decided against summoning the Reichstag, but the question of convening the Budget Committee to discuss amendments to the emergency decree was left open until the evening, and the Chancellor was prepared to resign on this question also, thereby putting the Social Democrats under a pressure which seemed likely to bring about the disintegration of the Party. Dr. Brüning himself seemed to have taxed his strength to the limit, and no longer to have the elasticity which is indispensable for such critical negotiations. A similar nervous exhaustion was responsible for the momentous dissolution of the Reichstag in July 1930.

At the last moment an agreement was reached by which the Social Democrats forwent any meeting of the Budget Committee at present in return for the promise that it should be convened after August 1st. This date was that on which the Government had determined to take a decisive step in connection with reparations. Until then, and especially during Mr Stimson's visit to Europe, they wanted a free hand.

The Stock Exchange reacted to the survival of the Brüning Cabinet (whose fall would have meant a Fascist dictatorship and economic chaos) with a sharp rise, and the demand for foreign exchange began to decline on Wednesday. The effect, however, lasted only 24 hours. On Thursday the demand for foreign exchange again reached a disquieting level, and on Friday panic broke out. On Friday and Saturday the Reichsbank lost almost a further Rm. 150, and the gold cover of the note issue fell to the legal minimum of 40 per cent., or even below (it is not at present certain which), so that the Reichsbank was faced with a serious decision. The raising of the discount rate had proved completely ineffective, and the Reichsbank thus had to consider two courses of action: securing power from the General Council, as provided for by the banking law, to go below the 40 per cent. minimum, or bringing about a general credit restriction in order to safeguard the mark. The chief step towards this end consisted in the suspension, on Saturday, of private discount quotations, as the Reichsbank had been for some time the only purchaser of private discounts.

A complete restriction of credit would have come about, had not the Hoover Declaration brought a recovery on Saturday. The restriction could, it is true, no longer be checked, as instructions had been sent out to branches in the provinces on Saturday and Sunday and could not be simply countermanded on Monday morning before there had been time to review the position of the mark. A meeting of the General Council had been called for ten o'clock, but it was already possible to abandon the idea of proposing a reduction of the legal minimum; and the credit restriction was proceeded with only in the mildest form, by merely examining private claims to credit to make sure that they would not be used for undesirable and avoidable purchases of exchange.

By noon on Monday the situation was saved. The Reichsbank had no further need to intervene to any considerable extent in the exchange market. True, there remained on Monday a considerable demand for exchange owing to the calling-in of credits, as the letters which had been despatched on Saturday were not recalled; but there was also a large supply available. Undoubtedly, part of the demand for exchange, especially last week, was due to German purchases in anticipation of possible developments. These speculative positions were partly liquidated on Monday, and, in addition, there was a violent influx of orders from abroad for German shares and bonds.

The Stock Exchange itself reacted to the Hoover proposal with a rise of unprecedented violence. The pressure of purchasers was so great that, although the Exchange opens at 11.30, the opening prices of most shares could not be ascertained until 1.30. The following table shows the scale of the upward movement:—

	June 19.	June 20.	June 22.
Reichsbank	120½	120½	139½
Farbenindustrie	115	117½	139
Siemens	125	128	156½
Salzdetfurth	158½	162½	195
Stahlverein	36½	38½	48½
Reichsbahn pref.	80	80½	84½
Young Loan	67	64½	69
Inscribed stocks, 1948	59	60	66

After the close, and on Tuesday, things grew calmer, and there was naturally a slight weakening. The Stock Exchange has been rendered a little uncertain by the unsatisfactory response in France, though, on the other hand, it is strengthened by the fact that there are probably large bear positions still uncovered.

Mr Hoover's move is naturally regarded here as the salvation from an imminent catastrophe. The proposal

involves for Germany an immediate relief from a burden of some 1.6 milliard Reichsmark, the restoration of confidence, which had been severely shaken, and it means, perhaps also for the world, and therefore also for Germany, the turning point in the trade cycle. An improvement in economic conditions would doubly benefit Germany's public finance: it would reduce the cost of unemployment and increase the tax revenue. That would give the Government a margin with which to make the most urgent modifications in the last emergency decree. The Government will, however, most certainly oppose all attempts to use the reparations savings of one year for remissions of taxation. The Brüning Government may be trusted to use this saving exclusively for the consolidation of German finances, and especially for the repayment of the dangerous floating debt. Everything else depends upon the negotiations which must take place in the coming year upon the whole complex of political and financial questions which are bound up with reparations and disarmament.

The Ruhr Coal Syndicate is opposing the Government's proposal to force a reduction of prices upon it in return for the remission of unemployment insurance premiums. As the syndicate opposes the reduction of prices, and the Government has no power of compelling it, the concession as to insurance premiums is certain to be withdrawn. The State will thereby gain some millions, which will presumably be put aside, to begin with, as a reserve for balancing the budget, or will possibly be passed on to the communes in some form.

The new emergency decree contemplates the possibility of reducing legal working hours to 40 per week, without any compensation for loss of wages. The Government's negotiations with the parties concerned, however, seem to have encountered serious difficulties. As the workers are already heavily hit by the wage reductions and by the new emergency tax, they have little desire to offer themselves up, in addition, as a sacrifice to their unemployed colleagues, and that is what the proposal in the emergency decree, that those hitherto employed should work shorter time in order to make possible the employment of additional workers, amounts to. On the other hand, it is out of the question for the employers to give any compensation for the loss in wages.

AUSTRIA.

Credit-Anstalt Position — The British Bank Credit — Economic Crisis.

(FROM OUR CORRESPONDENT.)

VIENNA, June 22.

In both political and financial circles the opinion is held that the Credit-Anstalt must, in the end, be gradually liquidated. This is scarcely altered by the fact that the State has accepted liability for both Austrian and foreign deposits and that foreign creditors have agreed to prolong their claims for two years. It is considered that a banking institution as big as the Credit-Anstalt will take a long time to liquidate. The internal condition of the bank is still obscure, although chartered accountants from London and a delegation from the Austrian National Bank are working out the position of the concern. In any case, it appears that the original assumption that the loss would amount to 140 million schillings at the outside was much too optimistic. In spite of the big writings off in regard to the claims against several industries appearing in the internal balance sheet, it was believed that these industries might still be carried on, but it is now to be feared that several of them will have to be closed down, and the estimate of the losses of the Credit-Anstalt thereby increased. Furthermore, additional money has been lost in the meanwhile on the share holdings. The shares of the Credit-Anstalt, of which there are considerable batches in the hands of the bank, represent a very doubtful value. For weeks there has been no official quotation, and unofficially

the value of the shares is assumed to be eight to ten schillings, which means that, since the commencement of the crisis, they have fallen a further 75 per cent.

One of the most important questions for the Credit-Anstalt and the associated enterprises is how they are going to get fresh money. At the sittings of the board of the National Bank, and at the negotiations between the banks and savings banks and the Government, the opinion was expressed that the Austrian National Bank had already granted the Credit-Anstalt sufficiently large credits, and that care should, therefore, be exercised in according further credit, because the covering of the requirements of other banks and of the savings banks is very important. If the Credit-Anstalt cannot get any further credit from the National Bank it will be obliged to turn to its big creditors or shareholders, but it will also be obliged to realise in greater measure on its credits abroad and to proceed with the sale of its industrial interests in neighbouring States. In any case, it is probable that several of the enterprises associated with the Credit-Anstalt will be closed, for it no longer has at its disposal the means to keep unprofitable companies going.

On several days last week there was a panic demand for foreign values in Austria. The National Bank was hardly able to cope with the inquiry for notes, though at all times it naturally met demands for withdrawal. The proceedings at the Credit-Anstalt had given rise to considerable public nervousness. Big withdrawals were also made from the savings banks in Vienna and in the provinces. In consequence, all of these institutions had to make substantial calls on the National Bank. In the meantime the position has become easier, withdrawals have practically ceased, and the procuring of foreign notes and values for panic purchases has also diminished. But withdrawals from the Credit-Anstalt are still being made by small depositors. On the other hand, as the Government has accepted liability for old deposits, the savings banks have left theirs with the Credit-Anstalt and also paid in a sum of 50 million schillings. The moratorium at the Amstelbank, with which the Credit-Anstalt and the Vienna Rothschild Bank are connected, is being very much discussed, as large sums of Austrian capital are deposited with the bank, chiefly money which was sent abroad during the period of inflation or shortly afterwards.

The State guarantee to Austrian and foreign depositors the Credit-Anstalt has been the subject of very lively dispute, and largely on account of this question the Ender Cabinet has gone out of office. The late Minister of Finance, Dr. Juch, was very strongly in favour of giving the guarantee. The tension in the financial situation relaxed greatly as soon as the English advance was made against the 150 million schillings in Treasury bonds which is to be issued. This has effected a big improvement in the last report of the National Bank, but nevertheless the Austrian National Bank will shortly be obliged to make use of the second rediscount credit at the Bank for International Payments. The new Government will have to take serious measures to clear up the Credit-Anstalt affairs, and also cut down the national Budget, as revenue from taxation is constantly dwindling on account of the crisis in commerce and industry.

In comparison with the terrible effects of the troubles of the Credit-Anstalt, all the other questions of the moment are insignificant. Economic reports are becoming more and more unfavourable. The Central Association of Industry has protested vigorously against the combating of the financial difficulty by means of fresh taxation. They are decidedly in favour of retrenchment. They point out that in the critical year of 1924 the maximum unemployment figure was 100,000, whereas this year the figure has been as high as 375,000. In the year 1913 taxation amounted to 5½ kronen per head of the population, in 1923 to 14 schillings, and now to 70 schillings. Furthermore, the biggest of enterprises have got into difficulty, their shares are terribly depreciated, the wealthiest of people have lost their fortunes, and the question must therefore be asked: Where are the taxpayers to come from? In addition, the balance sheets published within the last few weeks have been anything but satisfactory. For instance, the Alpine

Montangesellschaft (iron trust) is paying no dividend this year, and 7.4 million schillings are to be written off. Last year a sum of 10.12 million schillings was written off. Iron sales continue bad, and it is quite clear that the investment policy of the company, which for years has always been setting up new plant at great cost, has been a wrong one. The shares are now quoted at 14 schillings. The Danube Steamship Company also reports a loss of 4.27 million schillings for the year 1930, which is to be covered largely out of reserves. Last year the company's loss amounted to 3.78 million schillings. However, the subsidy contract recently concluded with the State will help the company to some extent, but shareholders need not expect any returns for years. On the occasion of the last increase of the capital the fresh shares were paid for at 100 schillings, and they are now worth ten schillings. Serious complaints about business are coming in from the cotton industry. Even the seasonal business is not very satisfactory and there is a decline in exports: Jute factories are working at half capacity. Sales of woollen and knitted goods are better. Foreign trade, too, reflects the stoppages in economic life. Imports for the first five months are given at 910.6 million schillings, which means a decrease of 232 millions in comparison with last year. Exports this year figure at 554.7 million schillings, which means a drop of 236 million schillings as against last year. In order to improve the unsatisfactory state of foreign trade a number of trade treaty negotiations have been entered upon. The treaty with Hungary is concluded. It is the first regional treaty completed in Central Europe. It is a connecting link between the Austro-Italian treaty and the Hungarian-Italian treaty. The three States have made one another certain concessions in regard to goods on which import quotas have been set.

CZECHOSLOVAKIA.

Trade Situation — External Loan — Agrarian Protection — Austro-German Zollverein — Commercial Treaties.

(FROM OUR CORRESPONDENT.)

PRAGUE, June 10.

THE economic depression in Czechoslovakia diminished only slightly during the last two months, and the seasonal trades were the preponderating factor in the revival, which was feeble and later than usual owing to the long duration of winter conditions. The index of wholesale prices in gold, after rising somewhat in April, fell again in May from 110.5 to 110.3, though the food-price index rose. Unemployment diminished as a result of greater absorption of labour in the building trades, agriculture and other seasonal trades, and the figure stood at 289,008 at the end of April.

The Stock Exchange has been very weak lately; the index of industrial and transport shares fell below 100 on May 15th for the first time since 1926. On May 22nd the total Stock Exchange index stood at 98.992, and that of industrial and transport shares at 96.209. Coal extraction declined considerably owing to the diminished needs of industry and also to the diminished consumption of household fuel. The output of pig iron in April fell to 97,915 tons, that of raw steel rose slightly to 136,247 tons.

An attempt to combat unemployment and to stimulate industrial activity has been made by means of state investments and public works; most of the internal loan concluded last March has been earmarked exclusively for this purpose. Industrialists, however, blame the Government for carrying out the scheme too slowly, so that the support it affords is coming rather late.

Parliament has passed an Act sanctioning a new external loan—the first for a long time. The original intention was to contract a loan of 50,000,000 dollars for the purpose of converting the 8 per cent. external loans of the years 1922 and 1924, and, further, to conclude

another loan of about 20 million dollars destined for the reduction of the State debt taken over from the Austro-Hungarian Bank, in order to strengthen the position of the National Bank of Czechoslovakia. In Parliament, however, the new 5½ per cent. loan was limited to only 50 million dollars and is to be used for the conversion in 1932. The loan has been contracted with the Union Européenne Bank, Paris, and Lazard Frères, and it will be offered for subscription on the French, Swiss, Dutch and Swedish markets; at present it is not quite certain whether it will be also offered on the London market.

Foreign trade for the first four months, when compared with the corresponding period of last year, shows a great decline. Imports total Cz. K. 3,614 million, against Cz. K. 5,396 million for the same period in the preceding year; exports Cz. K. 4,253 million, against Cz. K. 5,719 million. The laws for the protection of agricultural products passed by Parliament last year have been producing unexpected effects. The home stocks of rye have been exhausted, with the result that the prices of rye and bread-flour have risen rapidly. For that reason the duty on rye has had to be lowered, and the regulations relative to the forced mixing of foreign flour with home flour had to be relaxed and exports of rye limited. A supplementary duty on pigs was introduced last year, and was to be regulated in such a way as to maintain a certain average price. In spite of this duty and the fact that imports from abroad were very small, the price of pigs fell persistently because of the increasing stocks of pigs at home.

The question of the Austro-German customs union is naturally of great importance for Czechoslovakia, in view of her geographical position and of the great participation of both these countries in Czechoslovak foreign trade. Economic as well as political circles have been profoundly occupied with this question. Mr Benes gave a detailed report in the Chamber of Deputies, in which he repudiated the Austro-German scheme on political and economic grounds, and put forward another solution for the economic crisis on the basis of a European scheme agreed to by the chief interested parties in the spirit of Geneva. This point of view was ultimately adopted as the result of the proceedings in Geneva.

Negotiations are being carried on with Austria regarding the new commercial agreement. The main difficulty in these negotiations consists in the intention of Austria to raise substantially the duty on a number of industrial articles, which will react unfavourably upon Czechoslovak exports. In these circumstances the new tariff agreement, like the last, is likely to result in further mutual increases in the existing tariff level and consequently to further economic alienation.

In negotiations with Hungary the main problem involved is that of reconciling import of agrarian products, especially wheat and flour, from Hungary with the protection of agricultural production in Czechoslovakia. It is early to judge to what extent Czechoslovakia, in her negotiations with Austria and Hungary, could adopt similar methods to those adopted as between Austria and Hungary, for they might lead to conflict with the most-favoured-nation clause. Owing to her widely ramified export interests, Czechoslovakia will consider the general preservation of this clause indispensable. Beside the two commercial treaties just mentioned, a new commercial agreement with Greece is under consideration, and it is also quite possible that a revision of the commercial treaty with Poland and Switzerland will be negotiated this summer.

The International Parliamentary Commercial Conference in Prague has recently concluded. The Conference was primarily occupied with the problem of the economic world crisis, the agricultural crisis and the question of capital circulation. Great attention was attracted by the statement of the rapporteur on this question, the former French Minister of Finance, M. Germain-Martin, who laid stress on the great importance of the British money market and the necessity of co-operation with it.

GREECE.

I.F.C. Report — Bank of Greece — Commercial Agreement with France — Tobacco — Fruit Exports — Stock Exchange — Industry — Conversion.

(FROM OUR CORRESPONDENT.)

ATHENS, June 9.

Gross receipts in 1930 from the revenues assigned for the service of the National Debt, showed a decline of Drs. 268 millions, as compared with the previous year, according to the annual report of the International Financial Commission. This falling off, due, the report says, to a decrease in consumption and in the economic activity of the country, is consequent upon the world-wide business depression and fall of prices. It was manifested especially during the first months of the year, a smaller decline having been observed in the remaining months, thanks, partly, to the raising of certain classes of customs duties. The service of the Debt, plus expenses, required Drs. 1,558 millions, against Drs. 1,469 millions in 1929. A balance of Drs. 2,405 millions was paid over to the Greek Government, as compared with Drs. 2,786 millions in 1929. For the first four months of this year gross receipts of the pledged revenue show an increase of Drs. 47 millions over the corresponding period of 1930.

Exchange on London remained steady throughout the year at the stabilisation rate of Drs. 375 to the £. Notes in circulation amounted at the end of 1929 to Drs. 5,193 millions, or Drs. 496 millions less than a year before; and in 1930 they decreased further to Drs. 4,803 millions. These successive contractions, due largely to the general restriction of business, are partly attributable also to the operation of the Clearing Department established in 1929 and to the replacement of the notes of 20 drachmas and smaller denominations by coins.

The proportion of the gold and foreign exchange reserve of the Bank of Greece to its note circulation and other sight liabilities, fell from 46.35 per cent. at the end of 1929 to 46.11 per cent. on December 31, 1930. The maximum reached during the year was 51.76, and the minimum 43.76 per cent.—the statutory minimum being 40 per cent. A new feature of the Report is a table showing the amounts and the respective percentages of coupons paid abroad and in Greece. According to this table, 74.7 per cent. of the total was paid abroad, and 25.3 per cent. in Greece. These figures do not, however, tell the whole story, for important blocks of bonds belonging to Greeks are deposited, and the coupons presented for payment, abroad.

After protracted negotiations a new commercial agreement with France was signed last month. The question of the importation of Greek wines into France has been settled in a satisfactory way for Greece. Moreover, the French tobacco monopoly undertakes to buy Greek tobacco to a value of Frs. 13,500,000 yearly. Greece is a good customer for French articles: imports from France were Drs. 902 millions in 1929 and Drs. 778 millions in 1930, while exports amounted to Drs. 425 millions and Drs. 401 millions respectively. First in the list of countries exporting to Greece in 1930 came the U.S.A., with goods of a value of Drs. 1,663 millions, and second the United Kingdom, with Drs. 1,384 millions, out of total imports of Drs. 10,851 millions. The best customer of Greece is Germany, whose imports of Greek articles amounted in 1930 to Drs. 1,392 millions on a total value of exports of Drs. 5,918 millions.

The growing difficulties in disposing of tobacco, the principal article of export, have recently led the authorities to a series of decisions aiming at a restriction of cultivation, at an understanding with other tobacco-growing countries for the adoption of a similar measure, at the disposal abroad of old stocks by means of an exchange with imported articles, at the establishment of a central tobacco office for the purpose of formulating and applying a unified programme concerning production and export, and, lastly, at the solution of the tobacco labour problems, which are one of the causes of the present

difficulties. Another question which has attracted the attention of the authorities since last year, and which is on the way to being arranged, is the export of fresh fruit, especially grapes, of which Greece produces abundant quantities at low prices, of good quality and of various types. A company is shortly to be formed under the auspices of the State and with the participation of the Agrarian Bank, the National Bank and other organisations interested in agriculture. The purpose of this company will be to organise and conduct the systematic export to foreign markets of grapes and other fruit, in conformity with the customs and the needs of each market.

Ever since the stabilisation of the drachma the list of shares quoted on the Athens Stock Exchange has been showing, with a few exceptions, an almost continuous decline of prices. Repeated interventions of the banks to support prices have had a temporary effect only, and the downward trend has been resumed after a short time. According to the securities value index number published by the State Statistical Department, the value of the various groups of shares (base, May 14, 1928, the date of stabilisation of the currency), had fallen at the end of March last to 90.24 for the shares of railway companies, 31.08 for those of wine-producing companies, 72.43 for industrial companies, 62.08 for navigation companies, 25.57 for mining companies, 80.21 for building companies, 77.64 for light companies, 52.08 for textile companies and 73.55 for sundry companies. Fixed interest securities alone show an increase. This situation is the combined effect of the world crisis, of local or special causes and, for not a few enterprises, of a defective organisation and inefficient management. In the circumstances, further intervention by the banks, such as is demanded by stock brokers, would not be productive of permanent results, but would only increase the losses they have hitherto suffered from similar previous experiments.

Industrial output for 1930 is estimated at Drs. 6,645 millions, against Drs. 7,157 millions in 1929. On the other hand, though both imports and exports of merchandise show a falling-off last year, the commercial deficit for 1930 is smaller than in the previous year. The returns of foreign trade for the first three months of this year are similar. It has been decided to lower the legal rate of interest from 12 to 11 per cent. The official discount rate remains, for the moment, at 9 per cent., though market rate is in many instances lower. A reduction in the Bank rate is, however, foreshadowed. It is announced that the Governor of the Bank of Greece has submitted his report to the Government concerning the projected conversion of certain internal loans, which would result in a certain economy on the annual charge for interest on the national debt. This conversion, it is added, might take place in the last months of this year.

HONG KONG.

Political Situation — Mr Justice Feetham's Report — Report of Economic Mission — Trade in Woollen Goods.

(FROM OUR CORRESPONDENT.)

HONG KONG, May 14.

AFTER two years of peaceful but undistinguished administration, General Chen Ming Shu fled from Canton last week, having been driven from his post of Civil Governor by the Garison Commander, General Chan Chai Tong. The *coup d'état* was of the mildest character, and has caused no disturbance in Canton itself. It has, however, dealt a severe blow to the prestige of the Nationalist Government, and, coinciding with the opening of the People's Convention in Nanking, has falsified the hopes that the Convention would seal the pact uniting the divergent elements of the nation. The rupture between Chen Ming Shu and Chan Chai Tong came as a surprise, although it was known that there had been friction for some time past. Chen, as the henchman of Chiang Kai Shek, has insisted upon a due proportion of the revenue of the southern provinces being remitted to Nanking,

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Capital paid up and Reserves Drs. 1,205,000,000.

whereas Chan has endeavoured to retain it all for the benefit of the Canton Government. Ultimately Chan proved the stronger of the two, and when dissensions in Nanking resulted in the arrest of Hu Han Min and some of his associates, Chan came out openly as the enemy of Nanking.

Frantic endeavours were made by the Central Government to minimise the events in Canton. Chiang Kai Shek went so far as to make a public statement censuring Chen Ming Shu and bestowing his blessing on Chan Chai Tong; but the latter soon showed that he was not to be mollified, so Chen was summoned to Nanking. Chang Hsu Liang, the young Marshal of Manchuria, also became alarmed and, having hastened to Nanking to make first-hand inquiries, has cabled Chan Chai Tong beseeching him to remain loyal and pointing out the direful consequences of another outbreak of Civil War. Sun Fo, on the other hand, ranges himself beside Hu Han Min, and other leaders are also taking the opportunity of deserting Chiang Kai Shek. It appears, therefore, that the peaceful change-over in Canton threatens the very existence of the Nationalist Government, for all the war lords, some of whom were presumed to be travelling abroad, are beginning to stir again, and even Wu Pei Fu, who long since disappeared from public life, has received a safe-conduct pass to Nanking. The People's Convention, which was to have celebrated the abolition of extra-territoriality and the unification of China, will now dissolve in a very different atmosphere from that in which it assembled.

The publication of the first portion of Mr Justice Feetham's Report on Shanghai is a matter of great interest to all concerned with the future of China in general and Shanghai in particular. For fifteen months Mr Justice Feetham has been diligently pursuing his inquiry into the political, economic and administrative history of Shanghai, with a view to assisting the Municipal Council of the Foreign Settlement "in formulating some constructive plan or scheme which, while giving full consideration to the aspirations of the Chinese people, will at the same time afford reasonably adequate protection to the great commercial and business interests which have been developed in Shanghai." The result of Mr Justice Feetham's labours is shown in Volume I, which not only gives evidence of a most exhaustive study of his subject, but also shows a balanced understanding of a situation which is extremely complicated. In this volume facts are marshalled, classified and substantiated, and while no definite conclusions are reached, the Judge is able to draw many inferences which justify the retention of extra-territoriality, pending the establishment of a constitutional government for China in place of the dictatorship of the Kuomintang. The second and concluding volume of the Report is about to be published, and will contain Mr Justice Feetham's proposals and suggestions in regard to the political future of the Settlement.

The cabled summary of the report of the British Economic Mission has been read here with a good deal

of satisfaction. At last the manufacturers and operatives of Great Britain have had presented to them in a form which demands attention authoritative evidence of the decline of British trade in China. Not only has Japan made tremendous strides in the textile industry, with Germany and America competing keenly in lines formerly the virtual monopoly of Great Britain, but China itself is now in a position to supply many of the needs of its people. The industrialisation of China is making steady progress, and many of the Shanghai cotton mills are shipping their output to markets as far afield as India and Aden. The Economic Mission's appeal to Lancashire to reduce costs all along the line is echoed here, for there is still a big market for British textiles, provided prices are not beyond the reach of the consumer.

At the moment the Hong Kong piece-goods market is busy negotiating business in woollens for next autumn and winter. The buying season is much later than usual, but when it opened some six or eight weeks ago Bradford prices were 15 to 20 per cent. above what dealers here were prepared to pay. The latter have been very stubborn and have refused to improve their offers. At last Bradford as given way, and orders for substantial quantities have been booked during the past fortnight at practically the same price as dealers stipulated at the outset. This business has been booked on the basis of exchange at 1s., as compared with 1s. 6d. a year ago. The further fall in raw wool has, however, helped to bridge the difference, and few lines are costing more than 25 per cent. above last year's local currency price. It is, however, a tribute to the healthy state of the piece-goods market here that dealers can face so substantial a rise as 25 per cent., in the confidence that they can dispose of their goods when they arrive in the autumn.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Les Grands Problèmes Italiens. By Michel Mitzakis. (Paris) Librairie Félix Alcan, 108, Boulevard Saint-Germain. 80 frs.

A most valuable study, by a French financial expert, of the Italian economic and financial situation.

Investment Banking. A Case Book. By Clinton P. Biddle and George E. Bates. (London) McGraw-Hill Publishing Company, Ltd., Aldwych House. 30s. net.

A collection of 84 cases designed to illustrate the problems of the investor and of the investment banker.

The Dual System of Stabilisation. By J. Taylor Peddie. (London) Macmillan and Company, Ltd., St. Martin's Street. 15s. net.

A considerably amplified second edition.

Prospettive Economiche, 1931. By Giorgio Mortara. (Milan) Università Bocconi.

A valuable survey of the money and commodity markets, transport and finance in various countries, and particularly in Italy.

The Manufacturing Industries of the British Empire. Part III. The Union of South Africa. (London) Erlangers, Ltd., 4, Moorgate. 2s. 6d.

A most useful collection of statistics, illustrated by very striking diagrams.

The National Gain. By Anders Chydenius. With an introduction by Georg Schauman. (London) Ernest Benn, Ltd., 154, Fleet Street. 5s. net.

Translated from a work published in 1760 by a Finnish economist who in many ways anticipated the doctrines of the classical school.

Exceptions to the Most-Favoured-Nation Treatment. By Richard Riedl. (London) P. S. King and Son, Ltd., Orchard House, Westminster.

A very clear and concise report; drawn up for the International Chamber of Commerce.

Debentures of Private Companies. By Herbert W. Jordan. (London) Jordan and Sons, Ltd., 116-118, Chancery Lane. 2s. 6d. net.

A useful guide for company officials on the procedure relating to the issue and registration of debentures.

Wechsel und Scheck in Europa und Uebersee. By H. Böttger. (Berlin) Carl Heymanns Verlag. 10 Rm.

A very useful book of reference on the legal requirements and taxation affecting bills of exchange and cheques in over fifty countries. The text is in German.

Marine Underwriting at Rouen, 1727-1742. By Warren R. Dawson. (London) Lloyd's, Leadenhall Street. 7s. 6d. net.

Reprint of the text, interleaved with a translation, of a French document of historical interest.

"Prosperity." By M. J. Bonn. (Berlin) S. Fischer Verlag.

An essay, in German, on superstitions and reality in American economic life.

Ich Dien. The Tory Path. By Viscount Lymington. (London) Constable and Co., 10-12, Orange Street, 4s. 6d. net.

An essay, packed with the purest Tory reflections, on the political and economic situation.

Il Sindacalismo in Inghilterra. By L. A. Miglioranza. (Rome) Edizioni del Diritto del Lavoro.

An examination of the British trade union movement, made with the object of finding what Italian syndicalism has to learn from it.

Nuovi orientamenti della finanza pubblica inglese. By Ernesto D'Albergo. (Rome) Tip. Delle Terme, Via Pietro Sterbini, 2-6.

An essay in Italian on recent encroachments by the State, notably in the Local Government Act, 1929, on the self-governing rights of local authorities.

L'Industrie Moderne et La Fonction du Marchand en Gros. By Carlo Pagni. (Brussels) Goemaere, 21, Rue de la Limite.

A short essay on the functions of the wholesale merchant.

Building Collective Farms. By J. Stalin. (London) Modern Books, 16, King Street. 2s. 6d. and 1s. 6d.

An account, straight from the fountain head, of Soviet agricultural policy.

The Key to Prosperity. By G. A. Cram. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 2s. 6d. net.

The principal remedies advocated for the cure of depression are protection and a general reduction of working hours.

The Financial Post Business Year Book, 1931. (Toronto) The Financial Post, 153, University Avenue.

Contains a very useful collection of Canadian industrial statistics.

Aperçu Statistique de la République Tchèque-Slovaque. Compiled and published by L'Office de Statistique, Prague.

A very useful collection of Czechoslovakian official statistics.

Annuaire Statistique, 1930. Compiled by the Turkish Central Statistical Office. (Ankara) Ahmet Ihsan Matbaası, Ltd.

A statistical abstract of Turkey.

Annals of Collective Economy, September-December, 1930. Edited by Edgard Milhaud. (Geneva) 8, Rue Saint-Victor. Annual subscription £1.

Includes articles on "Public Ownership in America" and "The Economic Significance of Local Government."

The Stock Exchange.

THE HALF-YEAR ON THE STOCK EXCHANGE.

If an investor had been endowed with divine prescience at the beginning of this year he would have argued more or less on the following line. "The first half of 1931 is bound to provide the stock markets with more bad news than the whole of 1930. Hence, my speculations must run on the 'bear' tack. There is no sign of the trade depression coming to an end; there is every indication that it is deepening and that it will take at least another year to restore the equilibrium between the prices of raw materials and manufactured goods. Indeed, the great producers of primary commodities will suffer so severely from the decline in the money values of their export trade that they will not be able to balance their international accounts, in spite of drastic restriction of imports, and will, in some cases, be forced into default. Hence, I will go 'short' of the bonds of those foreign Governments whose finances or economics appear weak, not forgetting that the burden of reparations payments is bound to cause a crisis in Germany sooner or later. Further, the deepening of the trade depression is bound to be reflected in company reports more and more sharply as the half-year runs on. The accounts of most industrial companies did not begin to feel the effects of the slump until the last half of 1930. Therefore, towards the end of the first half of 1931 I must expect ordinary, and in many cases preference, dividends to be passed and directors to express increasingly gloomy views of the future in their reports. Nevertheless, I will not go short of equity shares until the Americans have staged their inevitable show of confidence in a spring-time recovery in trade. In 1930 this bullish demonstration lasted until April; in 1931 I do not expect it to last through March. Just before it collapses will be the time to 'go short' of every description of equity share, with the possible exception of gold mines. And, although interest rates will fall to abnormally low levels, I will confine my purchases, in the field of fixed-interest securities, mainly to British Government funds and high-grade municipal stocks or public utility debentures. I will fight shy of industrial debentures, and especially industrial preference stocks, to which an increasing degree of economic risk attaches the longer the slump lasts, because such stocks are bound to suffer depreciation. I shall bear in mind that, in a prolonged trade depression, only those stocks whose security is unquestionable will continue to react to the cheapness of money."

It would not have been impossible to argue on these lines at the beginning of this year. Yet few investors even attempted it, and the majority, we feel sure, did nothing but hope vaguely for some unforeseen event to change the tone of markets. They have now been treated to Mr Hoover's proposal for a war-debts moratorium—whose stimulating effects on markets is discussed in a subsequent Note—and they will probably hope just as vaguely that Mr Hoover's intervention will allow them to sleep peacefully on their investments for the next six months.

The stock markets behaved in the past six months exactly as we have outlined them in our imaginary investor's argument. The individual movements in markets are clearly brought out in the tables of security prices which we have compiled for this review. Except in the gilt-edged market, business fell to a very low ebb. Indeed, for the average stockbroker, the past half-year was the blackest in history. Further, what activity there was in gilt-edged stocks went mainly into the hands of the large firms handling the business of the banks and financial institutions. It must also be borne in mind that this activity in the gilt-edged market became confined more and more to British Government stocks because of the lack of confidence in other trustee securities. The investor became disturbed by the political situation in India, scared by the financial position of the Australian Government

and nervous even of the economic health of New Zealand. In other words, British Government funds were the only market able to respond to the influence of lower money rates without the risk of outside disturbance. We are not, of course, forgetting the Budget, about which there was nervousness at one time, but although the Budget did nothing to restore the credit of the Government or improve the finances of the country, the Chancellor of the Exchequer, by avoiding a further increase in direct taxation, opened the way for a sustained advance in British Government funds. It was, of course, appreciated that, if it had not been for the intervention of the Bank of England in the discount market, and the maintenance of money rates in London at a higher level than in New York and Paris, the position of sterling would have been precarious, but the discount market loyally co-operated in ensuring that a sufficiency of foreign funds should continue to be attracted to London.

The first table shows the substantial gains which were made by British Government stocks in the past six months. From a yield basis of over 4.3 per cent. the long-dated stocks advanced in this period to a yield basis of 4.26 per cent. A smaller advance was shown by Canadian Government and home corporation stocks. In Indian and Australian Government stocks the market had to withstand the shock of the Gandhi negotiations, the default of New South Wales, and the wrangle among the political parties in Australia as to the best way of saving the credit of the Commonwealth Government. The Gandhi-Irwin settlement enabled the India stocks to recover part of their losses, and recently Australian Government securities have moved upward. New Zealand stocks, however, remain depressed, yielding about 5½ per cent., as against 4½ per cent. at January 1st.

Foreign bonds, with few exceptions, were reactionary up to the last week of June. The South American Republics provided their full share of the shocks. Peru was the first to demand a moratorium, Bolivia followed, and Brazil called for the advice of Sir Otto Niemeyer. San Paulo coffee issues suffered heavy depreciation, but are now showing some recovery on the improvement in the coffee situation. Uruguay bonds fell on the report that the Government desired to suspend sinking funds, and Chile bonds have been heavily sold on the certainty that the country is faced with an adverse international balance. German and Austrian Government bonds were on the verge of collapse before Mr Hoover's intervention. Only

Japanese and Chinese issues offered resistance to the downward trend of the foreign bond market.

With regard to other fixed-interest securities, it became increasingly evident that the market trend of company debentures and preference shares, to which a known or suspected economic risk was attached, was downward. This is more plainly brought out in our tables than in the security price index numbers, although the Actuaries' Index for industrial preference shares now shows a decline of 14 per cent. over the past two years. On the other hand, the fixed-interest securities of public utility concerns, whose security was unquestionable, continued to react to the influence of cheaper money.

The market in railway stocks continued to be one of the most depressing on the Stock Exchange. Home railway stocks were consistently sold on the declines in traffics which were common to all systems except the London Underground, while Argentine railway stocks reacted sharply to the decline in the exchange, the dwindling traffics and interim dividend cuts. Railway prior charges were seen to be among the most vulnerable of fixed-interest securities. An outstanding event for the railway market was the introduction of the London Passenger Transport Bill and the subsequent agreement between the Government and the Underground group regarding the exchanges of stock, which on the whole was well received by the market.

As regards equity shares, it will be seen from our tables that few escaped heavy depreciation. Bank and insurance shares joined in the downward trend, although all

the insurance companies maintained their dividends and only Lloyds among the "Big Five" banks made a reduction in the final dividend. The overseas banks, which

were more exposed to trade depression, showed substantial declines. Another feature of the equity markets was the decline in investment trust stocks. Prices in many cases were quoted "sellers only," and the market in both pre-war and post-war investment companies' stocks became nominal. "Trade" shares which showed greater resistance to selling pressure were those of food and tobacco companies and stores, but especially vulnerable were those of the large industrial combines or mergers, such as Imperial Chemical and Turner and Newall. The "international" shares were the prey of Wall Street selling after March, when the spring-time bullishness had evaporated. Shipping shares were a particularly depressed market as a result of the Royal Mail revelations.

x Ex dividend.

Among the more speculative equity shares, rubber and tea continued in the doldrums, while the oil market had to adjust itself to the reductions in the dividends of the leading companies whose shares hitherto had enjoyed an investment status. Of the mining markets, copper and tin shares were particularly depressed, but a notable exception to the slump was the market in South American gold mines on the recognition that gold producers prosper in a period of trade depression. South African gold shares in January recovered their entire losses of the previous twelve months.

The immediate outlook for the equity markets depends on the reactions to the Hoover proposal of a year's moratorium for war debts. No one supposes that President Hoover has ended the slump, but psychology counts for a great deal. If the public is tempted to buy, it is not impossible that markets will now begin to discount a trade recovery, even if it does not materialise for twelve months. There is no doubt that if a collapse had occurred in Austria and Germany, something like a panic would have developed on the Stock Exchanges. This crisis has been averted. A week ago no one would have dared to have suggested that the bottom of the stock markets had been reached, but to-day, at any rate, there is ground for hope.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. July 7. ACCOUNT. July 9.

The new account opened with an excited bidding for shares—unmistakable evidence that the bears were rushing to cover. This extraordinary change from the gloom of Friday's closing was the result of President Hoover's proposal for a one-year war-debts moratorium. The rebound in prices, which was almost startling, is discussed in our leading Investment Note. After the excitement of Monday, prices reacted pending the statement of the French Government's intentions, but on Thursday markets again moved upward on the lead of Continental and American buying. The settlement of the threatened engineering labour dispute was also a factor in the recovery in British industrial shares.

In the gilt-edged market stocks in many cases reached their highest levels for the year. Sterling was strong, and in the light of the Bank of England's further acquisitions of gold, some dealers entertained hopes of a reduction this week in the Bank rate. Though this did not eventuate, forecasts of an early reduction were made, and there were further rumours of a conversion scheme for short-dated

bonds. Indian, Australian and New Zealand bonds advanced, especially Australian, on the announcement that the Government would extend the Hoover moratorium plan to the Dominions. Home corporations were firmer and maintained their gains.

Foreign Government bonds improved sharply, German issues being the main feature under the lead of the Young loan. Little attention was paid to Austrians. Aided by a strengthening of exchanges, Brazilians and Argentine bonds rose and held their gains. After a prolonged inactivity Chinese loans rose on hopes of better conditions in the silver market.

Home rails showed substantial gains and closed at improved levels despite earlier scattered realisations on the week's somewhat disappointing traffic returns. Foreign rails enjoyed an early improvement due to political developments, and the early closing of the Buenos Ayres Great Southern £3,000,000 5½ per cent. debenture issue. The underwriters, however, were left with 50 per cent. of this issue.

In the domestic industrial market there were signs of intense activity, and prices moved rapidly upward. On Tuesday there was a slight easiness caused by professional profit-taking, but later prices improved even further on hopes of French acceptance of Mr Hoover's plan. International stocks were prominent in the advance, strong Continental and Wall Street buying orders being received in London. Nickels, Radios and Brazilian Tractions were particularly in evidence, and Swedish Match rose sharply. Electrical shares were supported, especially such equipment companies as Callenders and General Electric, the latter being favoured on the annual report. Engineering and motor shares found buyers, but a bad report, disclosing a heavy loss, was a bear point with Guys. Distillers were a leading feature on the maintenance of the dividend and there was buying of the leading tobacco issues. Textiles strengthened and were well maintained. J. and P. Coats closed at higher levels on rumours of a new agreement in the textile trades. Insurance shares firmed up on good investment buying. Dunlops and Imperial Chemicals spurred on bear closing, but Cables and Wireless, after a sharp rise on Monday, sagged on the unsatisfactory May traffic receipts.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

NEW YORK.

Markets took on a fresh lease of life this week, following the announcement of the now famous Hoover plan for a war-debt moratorium. The buying was due at first to bear covering, on fears of a popular buying movement, rather than to any marked public enthusiasm, but there was a general feeling that if the Hoover proposals were accepted they would at least clear the stage for an economic revival. At the same time, it was pointed out that the amount of occupied steel production had declined further to 35 per cent., while car loadings last week were again lower. The bulls predominated, however, and professional profit taking brought only a temporary setback. On Wednesday the volume of trading was the heaviest since early in February, with a turnover of over five million shares. U.S. Steel rose 3½ to par, while Radio Corporation added nearly four points, and other leaders enjoyed marked popularity. The impression was widespread that large interests were accumulating stock. The request of the Interstate Commerce Commission for information as to whether the desired railway rate increases, if granted, would be conferred immediately, and as to what exceptions, if any, were proposed, was interpreted as indicating a strong feeling in favour of some eventual increase. Considerable interest was caused by the advances in silver, lead and copper, but it remains to be seen whether brokers are wise in disregarding other less favourable business indices.

PARIS.

As a result of Mr Hoover's proposals, the Paris market enjoyed a sharp recovery on Monday, though much of the rise was due to the fact that the bears were taken completely by surprise and had to rush for cover in conformity with other bourses. A certain heaviness developed on Tuesday as a result of apprehension regarding the effect of the moratorium on the current budget. However, as the following table shows, representative securities continued their upward trend on Wednesday:—

	June 19, 1931.	June 22, 1931.	June 24, 1931.	June 25, 1931.
Panque de France	15,775	16,645	15,770	15,770

Rio Tinto	1,927	2,255	2,380	2,380
Royal Dutch	20,450	22,700	23,500	23,500

BERLIN.

Following the news of the moratorium proposals, quotations of leading issues on the Berlin bourse went rapidly ahead, purchases on foreign account contributing in no small measure to the advance. The gains were said to be the largest known on the bourse. Prices were unable to maintain their highest levels, however, fears as to the reception of the scheme in Paris militating against the continuation of the upward trend; while a certain amount of profit-taking affected the technical position unfavourably.

AMSTERDAM.

On the Amsterdam Stock Exchange the Hoover pronouncement was considered to be a noteworthy step in the economic regeneration of Europe. The enlarged scale of business, including fresh buying and bear covering, sent quotations to much higher levels, Philips Lamps,

Unilever and A.K.U. being prominent in the advance. A certain hesitancy was noticeable in Tuesday's dealings, accompanied by profit taking, but rumours that France was contemplating a tentative acceptance of the proposals gave renewed strength to several issues in mid-week:—

	June 19, 1931.	June 22, 1931.	June 24, 1931.		June 19, 1931.	June 22, 1931.	June 24, 1931.

INVESTMENT NOTES.

Stock Exchange and War Debts Moratorium.—Heated imaginations in the Stock Exchange saw in the proposals of President Hoover for a one year's moratorium of war debts the dawn of a new era of industrial prosperity. The first effect upon Stock Exchange markets was dramatic, almost electrical. For the first hour or so of business on Monday morning of this week, following President Hoover's pronouncement, dealings were carried on in the various markets under conditions of great difficulty. Prices rose in staccato fashion. Stock Exchange jobbers have been blamed for putting up prices, at the outset, to the extent of 2 to 10 points in stocks and bonds, and correspondingly in the case of shares. The excitement came, not from a sudden accession of buying orders, which were, in point of fact, conspicuous by their absence, but by reason of the huge demand from all over the country for information as to price-changes brought about by the moratorium suggestion. As most investors are aware, a large number of limits to sell stock, as well as to buy, are always present in the Stock Exchange markets. Practically every Stock Exchange broker keeps a "limit" book in which are entered instructions from clients who wish to buy or sell at prices that are not practicable when the orders are given. The sudden letting-in of light into a prospect which previously had been charged with depression, led to such a sharp rise in prices as would have enabled a good proportion of the selling orders to be executed, if clients still wished to sell. The news arrived on the morning of Contango Day—the beginning, that is to say, of a new Stock Exchange account, when in any case reference would be made to clients before these clients' orders, previously given, were carried out. The Stock Exchange practice is to regard a "limit" as being in force for one Settlement only, except when specific instructions are given to renew. Therefore, it became necessary to find out whether these selling limits were in force or not for the mid-July Settlement, dealings for which started on the Monday morning. Besides this, however, it is the habit of many Stock Exchange brokers to refrain from the execution of a limit if anything should happen likely to exercise an important effect upon the prices of the stocks and shares. Therefore, many brokers would, in the ordinary course, have held their hands before selling stock, even at their clients' limits, in the face of a world event of such consequence. Thus, the telephoning and telegraphing of prices, the endeavour to ascertain whether selling limits were "on" or not, and at the same time the execution of a very moderate amount of new buying business, led to a clash and confusion which, with prices flying upwards, produced all the circumstances of a miniature boom. Probably more buying came from bears than from members of the public. The cancellation, in a great many cases, of selling limits removed the stock which the bears considered they would be able to obtain if they deemed it advisable to close their short position. For a time there was a general hunt-round for whatever stock might be on offer, irrespective of the price asked for it. The excitement thus developed by various elements occupied attention to such an extent that it afforded little spare time for discussion of its cause. When the flurry was over, and comparison of experiences between members of the Stock Exchange revealed how small was the additional volume of public business that the news had brought to the House, the first wild upward rush of prices was checked. A few people bought early and were able to

take substantial profits on the bull tack, a matter so unusual as to cause the stock to be turned out promptly, and thereby to colour the statement that a good deal of profit-taking was in progress. Prices reacted further when the news of French opposition to the American proposal was first heard. Later, reports of a compromise offered by France came as a signal for a fresh rush of buying and "bear" closing. The following table shows the extent of the rebound in representative securities as compared with the closing of business on Friday:—

	Price on Friday, June 19th.	Price on Thursday, June 25th.
German 7%	94½	99
German 5½%	66	75½
Austrian 7%	87	90
Brazil Traction	15½	20

Swedish Match "B." Kr. 100	9½	11½
Turner and Newall	26/6	29/3
Royal Dutch	18½	19½
Shell Transport	2½	2½

To sum up, the statement may be ventured that the Stock Exchange is impressed by the prospect of better conditions being established as a result of even a twelve months' moratorium of war debts. A fresh breeze of cheerfulness was badly needed to dispel the almost miasmic despondency into which Stock Exchange markets, members and clients had been plunged, and from which there had seemed little hope of escape.

The Outlook for Base Metals.—Even before Mr Hoover's announcement regarding war debts, the base metals had given signs of an upward reaction, for zinc made a definite move from its low record of £9 7s. 6d., and copper, although it seemed less favourably placed than the others, achieved a brief rally on better Continental buying. The moratorium suggestion, however, created something like a panic among bear interests which have for so long dominated copper and tin, and last Monday saw a rush for cover which produced an advance of nearly £3 in standard copper and £5 in tin; while lead and spelter were marked up by about 20s. The anticipated addition to the price of electrolytic copper was made on Tuesday, the meagre quota offered for sale in Europe by the Exporters' Association being quickly snapped up, and many buyers being left dissatisfied. As a result of this standard copper was, in a number of cases, bought as a hedge. Tuesday afternoon saw a sharp reaction all along the line on news of a weaker Wall Street market and fears of opposition from France to Mr Hoover's scheme, but on Thursday metals again advanced. The remarkable rise in values has been due largely to an optimistic reaction, for although tin is now being assisted by very definite curtailment of production and a zinc cartel is understood to be all but achieved, consumption is far below normal,

and there is no real indication of improvement in that direction. A 15 per cent. cut in lead output is also in force, but this excludes the United States, and there is certainly more than enough lead to meet all present needs. In copper the statistical outlook is extremely poor, for stocks of refined metal at May 31st had risen to 400,000 short tons, and the recent discussion in New York on the all-important question of cutting down output was barren of result. Undoubtedly the world can use an enormous tonnage of copper at the present low price, but the marketing methods of the American sales organisation have sapped confidence, and there is little real hope of a lasting recovery in values until a clearer view can be taken of the general political and economic situation.

The Royal Mail Moratorium.—The terms were announced last week of a further scheme of arrangement between the Royal Mail Steam Packet Co. and its principal creditors. The present moratorium is due to expire on June 30th, and the new arrangement is in the nature of a prolongation of the *status quo* till the end of the year. It is provided under the scheme that the three classes of creditors shall not take steps to enforce their security so long as no execution is issued against any of the company's assets; while the company is entitled to borrow up to £250,000 on the security of debentures issued to rank *pari passu* with the existing 4½ per cent. debentures, which constitute a first charge on the assets. The new scheme incorporates undertakings previously given that the company will not, during the period of the arrangement, make any payment voluntarily with regard to (1) bills to the value of £195,000 subject to a moratorium, (2) £239,000 due to subsidiary and allied companies, (3) calls and uncalled liabilities on investments, totalling £1,616,750, and (4) the guarantee of loans and acceptances of R.M.S.P. Meat Transports. It is pointed out in reference to the scheme that a further half year's dividend on the £5 millions preference shares of the White Star Line will fall due on July 1st next, totalling £162,500, for which the R.M.S.P. would normally be liable under its guarantee, and that after June 30th it would be open under the existing scheme for the White Star Line, the trustees and each individual preference shareholder of that company to sue the Royal Mail; while there would be a renewed danger of the debenture-holders' security becoming enforceable. The court has consequently ordered meetings of the 4½ per cent. debenture stockholders, the 5 per cent. debenture stockholders and the preference shareholders of the White Star for June 30th. At the same time, it is stated that while it has been found impossible to put forward a complete scheme of arrangement within the time available, during the last month matters have advanced to such an extent that a rough draft of a comprehensive scheme is in existence. In the meantime, there has been a slight improvement in trading conditions, and the cash position of the company is consequently better than was originally anticipated. Another member of the Royal Mail group, the Union Castle Steamship Co., practically all of whose ordinary stock is held by the R.M.S.P. and Elder Dempster, announces that, in view of the fact that the final call of 8s. per share (amounting to £399,560) in respect of the company's holding of ordinary shares of White Star Line, has been made, it is proposed to defer the payment of the dividends on the company's preference shares. Holders are reminded, however, that the dividends on the 4½ per cent., 6 per cent. "A" and 6½ per cent. preference shares are cumulative, and the hope is expressed that the resumption of payment will not be long delayed.

The Kysant Case: Defendants Sent for Trial.—The hearing of the summonses against Lord Kysant and Mr H. J. Morland in connection with the affairs of the Royal Mail Steam Packet Company was concluded at the end of last week. Mr F. Fulton, for the prosecution, dealt with Lord Kysant's drawings under the agreement whereby he

was to receive ¼ per cent. of the gross takings if the dividend was not below 5 per cent. Mr Cason, formerly chief accountant of the Royal Mail Company, agreed that Lord Kysant drew £48,337 in 1920, £32,364 in 1921, £23,376 in 1922, £26,045 in 1923, £26,490 in 1924, and £27,165 in 1925. In 1926 the dividend fell to 4 per cent., so that Lord Kysant received only £3,000, to which he was entitled under the agreement. Evidence was given by Mr C. E. Matthews, assistant accountant of the Royal Mail, to the effect that of reserves of £1,920,183 held by the Royal Mail Steam Packet Company and its subsidiary, the R.M.S.P. Meat Transport Co., amounts totalling £1,620,183 were credited to the profit and loss account of the R.M.S.P. Company. The Lord Mayor presumed that these transfers enabled the company to show a profit, although there was a loss in round figures of £49,000. Mr R. S. Stewart, a chartered accountant, gave evidence with regard to the capitalisation of £200,000 of reserves of H. and W. Nelson, Ltd. Mr A. H. McGill, chief accountant since 1916 to the Pacific Steam Navigation Company, stated that sundry amounts, varying from £152,311 to £531,000, were taken from reserves of various characters between the years 1921 and 1927. Mr W. A. Wellington then produced evidence regarding the financial position of McAndrews & Co., and Mr Thomas Smith gave similar evidence on the subject of David MacIver. At the close of the prosecution's case the Lord Mayor said that, as the matter was an unusually serious one, he proposed to reserve his decision until Monday morning. On that day he announced that he had come to the conclusion that a *prima facie* case had been made out against both defendants on the charges against them relating to the report, and against Lord Kysant in relation to the prospectus. He accordingly committed them for trial at the Central Criminal Court, calling upon them to enter into their own recognisances, each in the sum of £5,000, to appear for trial.

London Transport Merger Terms.—It is announced that meetings of the various classes of security holders of the Underground group will be held on July 1st to approve the terms of exchange of the new Transport stocks for the different Underground issues. Details of the proposed terms, which had not been made public at the meeting on May 1st but which have been disclosed this week, are set out in the following table:—

Company.	Existing £100 Stock.	Transport Stock.	Earliest Redemption Year.	Yield.
Central London	4% preferred	85 " C "	1955	£ 8 s. d. 4 5 0
Central London	6% deferred	100 " C "	1955	5 2 0 5 0 0
Met. Dist.	3½% assented 1st pref.	75 " B "	1965	6 0 0 3 15 0

It should be noted that a decision with regard to the final apportionment as between the preferred and deferred ordinary stocks of the Central London Railway is still pending, though it is considered that an average of their respective market prices for the last three years will be the most equitable basis for the division of the £185 of Transport "C" stock which has been provisionally allotted. Accompanying the circulars to shareholders is a memorandum setting out estimates of the capital stocks to be issued by the Board at its inception, and the revenue at its disposal. The Board will have a capitalisation of approximately £100 millions. Half of the balance in each year, after the first two years, following the payment of the charges set out in the memorandum, is to be applied in paying further interest on the "C" stock at a rate not exceeding ¼ per cent., making a maximum of 6 per cent. The whole of the balance in the first two years, and half the balance in subsequent years, is to be utilised in establishing a general reserve fund, which is to be applicable at the discretion of the

Board to certain specified objects, including the development, extension and improvement of the Board's undertakings and the reduction of fares.

General Electric Company.—In view of the obstacles with which even the most favoured industries are having to contend to-day, shareholders in this electrical equipment company should be well satisfied with the year's results. Net profit dropped by £75,404 to £666,382, and after paying preference dividend the directors declared the usual 10 per cent. dividend on the ordinary capital, but did not repeat the 1930 bonus of 4 per cent. The sum of £132,923 was transferred to the reserve account, now standing at £1,290,000. During the year £3,500,000 of 5 per cent. mortgage debenture stock was issued at a cost to the company of £209,923 and this sum was written off the reserve fund. The pension fund received £34,310, leaving £21,785 to be added to the amount carried forward, now £400,880. The results for the past three years are shown in the following table:—

	Year ended March 31.		
	1929.	1930.	1931.
	£	£	£
Net profit	555,642	741,786	666,382

No. of times covered	2.20	2.94	2.64
Ordinary dividend:			
Amount	225,365	315,510	225,364
Earned per cent.	13.47	21.73	18.39
Paid per cent.	10	14	10
Reserve fund	130,000	130,000	132,923
Pension fund	24,662	27,182	34,310
Inc. or dec. in carry-forward	-76,385	+17,094	+21,785

During the year the company redeemed 7 per cent. mortgage debentures amounting to £2,619,760, leaving £880,240 outstanding. Investments in subsidiaries were £646,191 greater at £2,090,448, due to expansion in the supply business. Land and buildings were £224,755 more at £3,577,735 and debtors rose by £210,592 to £2,260,995. Gilt-edged securities at £805,725 showed a reduction of £569,179, while creditors were £156,786 greater at £204,701. The preference shares are secured by net tangible assets of £2 1s. 4d. per £1 preference share fully paid. At the present market price of 40s. per share the yield on the £1 ordinary shares is £5 5s. 3d. per cent.

A. W. Gamage.—As a result of reduced turnover, due to the general depression and lower prices, the directors of this well-known retail store have to announce a net loss for the year to January 31st last of £9,304, against a net profit of £26,010 for the previous twelve months. Trading profits declined from £262,330 to £206,480. After payment of the preference dividend, requiring £9,625, there is carried forward a debit balance of £15,146. No dividend is recommended on the £475,000 ordinary capital:—

	Year to January 31.		
	1929.	1930.	1931.
	£	£	£

Carry forward	11,148	3,783	Dr. 15,146

The report states that during the year one of the company's outlying properties which was no longer required for the purpose of the business was sold, the amount realised being less by £10,863 than the book value. The directors are satisfied, however, that the loss on the

property sold is covered by appreciation in the value of the other properties, most of which stand in the books at pre-war values. Shareholders will be glad to hear that every effort has been made to reduce expenses, and that during the current year there has been an appreciable improvement in the company's trade. Some dissatisfaction, however, was expressed at the annual meeting, on Monday last, with regard to the relationship between A. W. Gamage and Gamage (West End), which has recently gone into compulsory liquidation. The parent company held 450,000 deferred shares and guaranteed the dividends of the 7½ preference shares of the subsidiary company. The extent of the loss which will be suffered by A. W. Gamage is not yet fully ascertainable. The amount due to the company by its subsidiary was stated at the meeting to be £58,000, though the amount realised must depend on the price at which the building and fixtures of the West End company are sold. Provision has been made to the extent of £20,000 against loss to January 31st in respect of the guarantee of the subsidiary's preference dividend, which expired on the order being made for the winding up of the company. The proposal to set up a committee of five persons to act in a consultative and advisory capacity was wisely welcomed by the board on Monday, and there seems no sound reason to doubt that a complete recovery in the company's fortunes will ultimately be effected.

J. Lyons and Company.—In the *Economist* of last week we stated that the current liabilities of this company, as shown by the balance sheet, exceeded the liquid assets by £622,000. It should be explained that, according to our usual practice, we refrained from including "stock in trade," valued at £2,302,267, under the latter heading. In the case of this company, the item in question would, of course, normally include a large proportion of readily realisable assets.

Brazilian Traction, Light and Power Company.—A decline of 4.97 per cent. in the gross earnings of the Brazilian Traction, Light and Power Company in 1930 does not appear unreasonable in the light of the trade depression and the revolution of October, 1930. As a result of the reduction in the operating expense ratio from 43.16 per cent. to 41.26 per cent. the decline in net earnings, before depreciation, was only 1.79 per cent., and this was due chiefly to the decline in the exchange in the last half-year. The directors refer to the further depreciation in the milreis this year which has made it imperative for the company to conserve its cash resources. The dividend on the ordinary shares for the last quarter of the year was paid in stock at the rate of 2 per cent., the quarterly dividend of 50 cents per share in cash having been paid in the preceding three quarters. The ordinary shares representing this stock dividend were taken into the capital stock account at \$20 per share and a corresponding amount was charged to the profit and loss account for the year. In addition to the 2 per cent. stock dividend, a special stock dividend of 1 per cent. was paid in March, 1930, making a total distribution of 3 per cent. in stock and \$1.50 per share in cash for the year. The table compares the earnings and distribution of profits for the past three years:—

	1928.	1929.	1930.
	\$	\$	\$
Net revenues from subsidiaries	14,383,994	17,184,634	16,407,899
Other income	378,625	420,545	438,177
Total income	14,762,619	17,605,179	16,846,076
General expenses	341,015	394,083	420,737
General amortisation	300,000	350,000	400,000
Preference dividends	54,392	30,463	24,315
Ordinary dividend amount	8,013,753	11,471,108	12,051,542
Ordinary dividend per share	34% on old stock & 88 cts. on new shares.	2.00	1.50 plus 3% in stock.
General reserve	5,000,000	4,000,000	...
Surplus	9,947,367	11,306,892	*13,682,533

* From which special stock dividend of 1 per cent., taken at \$25.00 per share, is deducted.

It will be seen that \$400,000, as against \$350,000, has been transferred to the general amortisation reserve. Before arriving at the net revenue of subsidiaries, \$7,745,594 had been allowed for depreciation and sinking funds. The total of the balances at December 31, 1930, standing to the credit of the general amortisation reserve of the parent company and of the depreciation and sinking fund reserves of the subsidiary companies was \$66,071,492. The directors appear to be pursuing a conservative financial policy in paying stock dividends, and as long as earnings of the company increase at a greater rate than that of the increase in the capital stock, the shareholders have no cause for alarm. The company's prosperity as a utility concern supplying electric light, gas, water and telephones is dependent, of course, on the prosperity of Brazil, and it is satisfactory to hear better accounts of the coffee industry on which the welfare of Brazil so largely depends. Indeed, the recent improvement in Brazilian Government bonds reflects an increasing public confidence in the future. The present price of Brazilian Traction common shares is \$20, as compared with a high level of \$29 this year and \$56½ in 1930.

Patons and Baldwins.—In their last report the directors of this Halifax firm of textile manufacturers stated that the sharp decline in profits was due to the exceptional fall which had taken place in wool values, involving a serious writing down of stocks. At the annual meeting the chairman said that a further serious slump in wool prices seemed impossible, and affirmed that, given a stable market, the company need not fear for the future. The accounts for the year to April 30th last give some ground for hope. Net profit, at £112,186, still compares unfavourably with the amount of £133,275 for 1929, but constitutes a considerable advance on last year's figure of £17,596. The net preference dividend of £68,482 is well covered, and the surplus allows the payment of 2½ per cent., tax free, on the ordinary capital, the same rate as for 1930,

when £100,000 was taken from reserve. The carry forward is increased from £36,460 to £40,182.

* Tax free.

Stock-in-trade is valued in the balance sheet at £1,422,020, compared with £1,750,721 last year. A liquid position is revealed, available assets of £692,976 exceeding current liabilities by £372,326. At their present price of 18s. 9d. the £1 ordinary shares give a yield of about £2 14s. 6d. per cent., tax free, allowing for the dividend of 2½ per cent.

Barclay Perkins and Company.—Despite a small decline in the amount of dividends received, the net profit of this well-known brewery company was £2,656 greater at £308,396, owing to an income tax refund of £24,809 being credited to the profit and loss account. The usual dividend rates were maintained and £25,000, as against £20,000, was transferred to the reserve fund. Staff provident fund again received £8,064. The sum carried forward was increased by £3,016 to £74,268.

	1929.	1930.	1931.
	£	£	£
Net profit	209,760	305,740	308,396
Preference dividend	73,800	75,600	75,600

Workpeople's provident fund	8,976	8,064	8,064
Increase in carry-forward	47,695	5,878	3,016

The outstanding features of the balance sheet included the increase of £64,318 to £304,479 in general investments, the rise of £52,035 to £3,067,487 in "tied houses and equities," and the growth of £82,033 to £142,948 in cash. Loans to publicans at £505,448 showed a decrease of £53,486, while dividends receivable were £48,145 lower at £9,688. The liquid assets exceeded the current liabilities by £624,999, which was £55,110 more than in 1930. The preference shares are secured by net tangible assets of £5 5s. 4d. per £1 10 per cent. cumulative preference share. The ordinary shares yield £8 15s. 3d. per £1 share at their present quotation of 26s. 6d.

Stanton Ironworks.—The results which this company is able to show for the year ending March 31, 1931, a period of acute depression in most manufacturing industries, not excluding pig iron, are a notable tribute to the excellence and business foresight of its management, helped by the good luck of proximity to great Midland markets which are naturally protected against foreign iron by expensive rail hauls from the coast. Profits, after providing for taxation and contingencies, have again advanced, this time from £240,532 to £264,193, in spite of the fact that income tax at the higher rate was chargeable throughout the year. For the tenth successive year a dividend of 10 per cent., tax free, is recommended on the ordinary shares, and as the follow-

ing table shows it has this time been amply covered by earnings:—

Years to March 31.	1929.	1930.	1931.
	£	£	£
Profit	192,037	240,532	264,193

{ Amount of dividend	113,671	113,671	113,767

Increase or decrease in carry forward..... - 29,122 + 15,534 + 41,477

The balance sheet maintains the good impression created by the profit and loss account. Properties at £1,838,901 are up by £62,536, while among liabilities the balance outstanding on capital purchases has been reduced from £294,534 to £235,158, and in addition the first instalment of the sinking fund on the Trade Facilities debenture stock has been duly paid, amounting to £51,200. Other outside liabilities are still approximately balanced by liquid assets, and adequate cash resources are in hand. The reserves and the carry-forward together aggregate £940,908, or more than one-third of the share and loan capital. This argues skilful financial policy, but much of the company's success is due to its readiness to adopt new lines of production. It is specialising in and improving its spun iron pipe process, besides making concrete pipes, and it has now completed its plant for crushing and tarring blast-furnace slag for road-making purposes. A covering statement with the report, while affirming that the work of three of the four collieries is seriously restricted by the operation of the Coal Mines Acts, adds the assurance, which few companies are able to give nowadays, that the demand for the main products, iron and concrete pipes, continues good. The fully-paid £1 ordinary shares at 31s. 3d. yield £6 13s. 4d. per cent., free of tax.

Yorkshire Amalgamated Collieries.—This holding company, perhaps the best-known of the post-1926 colliery amalgamations, has just issued its fourth annual report. A year ago it was able to declare maiden dividends. On this occasion the directors have taken the wise step of refraining from recommending any distribution for the time being, in view of the fact that no settlement has been reached with regard to hours and work after July 8th. When this matter has been settled they propose to reconsider the dividend question. The net profit of the holding company declined from £60,673 (to which a windfall of £20,000 from an unrequired reserve was added in 1929-30 to £54,332 in 1930-31, but the profits of the four operating companies are included only to the extent of dividends receivable. The earnings available for the ordinary shares (practically all of which are held by the parent company) of these four subsidiaries were as follows, though the accounting period differs somewhat in each case:—

	1929.	1930.
	£	£
Dinnington Main	70,362	45,464
Rossington Main	47,982*	19,247
Maltby Main	22,585*†	15,966
Denaby and Cadeby Main	Dr. 1,454	96,586

* No depreciation written off.

† Nine months only.

In the latest year depreciation has been charged against profits in every case, and the auditors' certificates are unqualified. The recovery made by the Denaby and Cadeby Main figures is striking, but it has to be noticed that the last financial year of this company ended as long ago as June 30, 1930, and the winter of 1929-30 provided a decidedly more favourable experience for the coal trade than the following one. No important variations are recorded in the balance sheets, all five of which are presented in the report, but they give the general impression that surplus resources have been gradually applied towards repaying bank advances. The collieries are inevitably being affected by the severe depression in all sections of

industry, as the report says, but this group should be as well fitted as most to take advantage of any future improvement in demand.

Scribbans.—This long-established firm of cake and biscuit manufacturers has borne its share of the burden of trade stagnation. Net profit for the year to April 30th last was £41,385 lower at £176,577, but the dividend rates on the ordinary and deferred shares were maintained. The following table shows the results for the past three years:—

	1929.	1930.	1931.
	£	£	£
Net profit	152,315	217,962	176,577
Ordinary dividend:			
Amount	68,000	93,500	92,225
Earned per cent.	11.19	16.54	13.40
Paid per cent.	5	7	7
Deferred dividend	22,667	31,167	30,742
Paid per cent.	14½	19½	19½
Written off preliminary expenses	46,325	92,651	...
Written off cost of acquisition of new business	4,031	4,031	31,665
Development account	...	35,000	25,000
Inc. or dec. in carry-forward	+11,292	-38,387	-3,055

In the circumstances the directors consider the year's results not unsatisfactory. Extensions in Dublin are under consideration, while the additions at Smethwick are proceeding according to plan. The biscuit branch is showing encouraging results. During the year freehold land and buildings rose in the balance sheet by £23,671 and plant by £4,076. Together with a loan of £45,900 made during the year to a subsidiary, these factors have combined to reduce the bank balance by £50,915 to £41,736. Investments at market value are shown at £89,479, or £35,716 less than twelve months previously. The loan from bankers has been increased by £14,349, while creditors are reduced by £6,938 to £61,690. The £1 ordinary shares, secured by tangible assets of 9s 11d., yield £11 4s. 11d. per cent. at their present price of 13s. 3d. per share.

The Rand Midsummer Dividends.—Our Mining correspondent writes:—Taken as a whole, the dividends of the Witwatersrand Gold Mining Companies for the half-year just ending must be written down as uninspiring. Some months ago much was heard of the benefit to gold producers of the fall in commodities generally; but, up to the present, this favourable factor has failed to find any marked reflection in the cost ratio. Indeed, the full statistics of production for April show an average of 20s. 1d. per ton, the same as in April, 1930. For each month of the current year to April the average has ruled above that of last year—19s. 8d. A partial explanation is that some companies have taken advantage of the labour position to carry out an abnormal development footage, the fruits of which will be reaped later on. Still, shareholders who have been looking for increased distributions forthwith will probably not regard the explanation with enthusiasm.

Castbury
Maker
of Fine Chocolates.

In the case of the Rose Deep the question of a dividend has been deferred until the close of the year, capital expenditure being envisaged. Doubts as to the policy of the "Johnnies" Company have been set at rest by the declaration of 7½ per cent. less tax. For the six years ended June, 1929, 15 per cent., tax free, had been disbursed. The position of the company in regard to its diamond and Rhodesian interests entailed what was described as the deferment of the interim dividend for 1930-31, and in some quarters nervousness was felt as to whether any payment would be made in respect of the current year. These fears were not entirely without foundation, for to permit the disbursement now announced it has been necessary to write off £400,000 depreciation from reserves. The New Era returns to the list with a reduced distribution, but the directors of the Anglo-American Corporation of South Africa consider it necessary to defer payment of the interim dividend on the preference stock. Our usual table is given:—

Company.	Total, 1929.	June, 1930.	Dec., 1930.	Total, 1930.	June, 1931.
Brakpan	48½	21½	22½	43½	20

New Era Consol.	10	...	...	...	5
Rand Mines	100	50	40	90	40

* Tax free.

This table does not include declarations made at dates other than June and December.

In a number of cases the improved rates paid for the second half of 1930 are maintained in respect of the first half of 1931. A prominent example of this is furnished by the Sub Nigel. Some optimists, however, had been looking for a renewed expansion. The monthly profits of the Crown Mines had certainly afforded ground for the

Name.....

Address.....

expectation of a fresh increase in the rate, but the directors have chosen to follow a conservative policy. Durban Deep stands out by declaring as much for the current six months as was paid for the whole of 1930. Reductions in the distributions of the Modder B, New Modder and Van Ryn Deep had been foreshadowed by the trend of the monthly returns, although a cut of 5 per cent. in the Modder rate had scarcely been looked for. The announcement by the Robinson Deep B of only 4½d. per share came as a distinct disappointment. True, the returns had shown some falling off; but, at the annual meeting, held in April, the chairman had spoken in terms generally interpreted to indicate the probability of an improvement upon the 7½d. paid in respect of the period following the reorganisation of the "B" capital—about nine months.

Vereeniging Estates.—Our mining correspondent writes:—Having regard to the conditions which prevailed in South Africa as well as elsewhere last year, it is no matter for surprise that this undertaking should have experienced a setback. The net profit amounted to £161,830, comparing with £201,500 in 1929 and £184,200 in 1928, but representing a substantial advance upon the results for earlier periods. A balance dividend of 5 per cent. is declared, making a total of 10 per cent., as against 12½ per cent. for each year from 1926 to 1929 inclusive. In the latest period coal output and sales were well maintained, while good progress was made by the forests and orchards. On the other hand, the farming profits fell off, and the condition of the building and allied trades found reflection in the sale of bricks. The farms now figure at £522,000; estates, etc., £374,300; collieries, £1,190,000; industrial interests, £220,100. As usual, the cash balance is small. Pending the issue of the new £650,000 of 6 per cent. debentures, advances to the amount of £125,100 have been obtained against security. Out of the former sum £350,000 of 7 per cent. debentures is due to be repaid on June 30th; the balance is wanted for new equipment at the Cornelia Colliery and other matters. The company is a well-managed undertaking, and stands to benefit quickly from any improvement in general conditions.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Banco do Brasil, Ottoman Bank, Bank of British West Africa, Bleachers' Association, J. Lyons and Company, British Empire Trust, British Electric Traction, Harland and Wolff, Union Corporation, George Newnes, Henderson's Transvaal Estates, Shell Transport and Trading, Boots Pure Drug, General Mining and Finance Corporation, United Kingdom Tobacco, Beechams Pills, and Scribbans and Company. At the annual meeting of J. Lyons and Company the chairman informed shareholders that during the year they had served in their restaurants, corner houses and tea shops over 160 million meals. This only accounted for a portion of their business, as a very large amount of their turnover was in sales to shopkeepers of similar products to those which were sold in their own shops, and which were produced in their bakeries, kitchens and the ice cream department at Cadby Hall, and in sales of tea, coffee and confectionery. Presiding at the annual meeting of Bleachers' Association, Sir Alan Sykes said that trade with India had become progressively worse throughout the year, the maximum decline being reached in the third quarter, when exports were 67 per cent. less than in the corresponding period of the previous year. For the whole year their exports to this market showed a decline of 54 per cent. from the previous year, or 60 per cent. when compared with 1928-29. At the annual meeting of Union Corporation the chairman said that though the British Enka Artificial Silk Company had again made a considerable loss it was producing rayon of as high a quality, and probably as cheaply, as that of any other manufacturer in England.

ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LIMITED.—The board of directors consider it advisable to conserve at the present time the cash resources of the Corporation and have, therefore, decided to defer the payment of the dividend on the six per cent. cumulative preferred stock for the six months ending June 30, 1931.

AUSTRALIAN ESTATES AND MORTGAGE.—In December last the directors decided to postpone consideration of the payment of the dividend on the £500,000 of 6½ per cent. cumulative preference share capital for the half-year to December 31 last until they had before them the completed accounts. They now announce that, after carefully considering the accounts for the past year, they have decided to make no payment at the present time. The same considerations will require the postponement of payment of the preference dividend for the half-year ending June 30, 1931.

THE INDIA RUBBER, GUTTA PERCHA AND TELEGRAPH WORKS COMPANY, LTD.—In reviewing the company's progress during the first half of the current financial year, the directors are pleased to note that the effects of re-organisation are becoming increasingly apparent. They regret, however, that the results of the half-year's trading do not yet warrant the payment of the arrears of dividend due to the preference shareholders nor the further half-year's dividend due to them on the 1st proximo. It has been decided that the company's financial year shall terminate at September 30th in this and each succeeding year, thus reverting to their former practice.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LTD. (Incorporated in the Union of South Africa).—The directors have declared a dividend of 7½ per cent. (1s. 6d. per share), less British income tax, for the year ending June 30, 1931, payable to all shareholders registered on the company's books at that date. The directors have pleasure in stating that the gross profits of the company have been well maintained. In view of the abnormal depreciation in the market value of certain of the company's shareholdings, the directors have decided to provide such part of this depreciation as has not been met out of profits by an allocation of approximately £400,000 from the company's reserve fund. The transfer books of the company will be closed from July 1 to July 10, 1931, both days inclusive. The dividend will be payable on and after September 10, 1931.

REGG CLOTHIERS, LTD.—Although the general trend of the trading for the first half-year shows a distinct improvement, the directors feel that, while there continues the uncertainty as to prices both of raw materials and finished goods, it would be prudent to postpone again the payment of the dividend on preference shares until the full year's accounts can be taken.

SINGLO TEA COMPANY, LTD.—It has been decided to pay on July 1, 1931, the half-year's preference dividend on the 6½ per cent. preference shares of £1 each of the company. The accounts as at June 30, 1931, are not yet audited, but it is not expected that it will be possible to make any further payment to the ordinary shareholders on account of the year 1930. The preference transfer books will be closed from June 22 to 27, 1931, both days inclusive.

ANNUAL REPORT OF THE BANCO DO BRASIL FOR 1930.

The following is a brief summary of the Annual Report of the Banco do Brasil for the year 1930, placed before the General Meeting of Shareholders on April 30, 1931.

After referring to the world crisis, which has seriously disturbed the economic life of Brazil and increased its already burdensome interior difficulties, the Chairman of the Banco do Brasil, Senhor Augusto Mario Caldeira Brant, mentioned two factors of great importance which have contributed largely to Brazil's economic depression, namely: the over-production of coffee and of home manufactured textiles, which has deprived other national industries of manual and financial support, attracting labour and capital to an artificial boom, the nefarious conditions of which are now being felt. These vast coffee plantations and the rapidly multiplying textile factories erected under the protection of high tariff walls are not considered a genuine source of national prosperity by sound economists, since they have resulted in a surplus of coffee, stored at inflated and almost prohibitive prices, and the textile factories, overstocked with goods produced at exorbitant cost, which were compelled to restrict production. The countless workers who abandoned stable industries attracted by a mirage of sudden wealth are now impoverished, and, in the opinion of the Chairman, "the task of the second Republic will be to liquidate this inheritance of errors, to renounce regional opinion and the policy of premature industrialization of the country, and to re-establish the free play of economic laws."

Caixa de Estabilização.

Continuing his report, the Chairman said:—"At the commencement of last year Brazil had £30,000,000 in the Caixa de Estabilização and in the Banco do Brasil. The predominating opinion in the entourage of the ex-President of the Republic—an opinion tending traditionally towards inflation—did not enable the country to avail itself of the opportunity of establishing the conversion of the national currency. The twenty million pounds sterling received between 1927 and 1929 would have been better applied had they been added to the ten millions held by the Banco do Brasil to back the circulation of 2,570,000 *contos* instead of being devoted to an inflation of 800,000 *contos*. Such a cover, amounting to 46 per cent., could have been turned into conversion purposes after a period of from one to two years. The contraction of currency which would have resulted from the withdrawal of so much paper money per £ exported, supported by a sound and well-advised discount rate policy of the Banco do Brasil, would have certainly diminished the difficulties of the position which has arisen and saved part of the gold deposit necessary for the rehabilitation of our currency. The Caixa de Estabilização created two circulations within watertight compartments. The Banco do Brasil, deprived of natural means of defence, was perforce relegated to an attitude of expectancy. The Gresham Law operated without let or hindrance. . . ." This is described as a "régime of inflation," attended by a demand for more paper money and by legislative measures calculated to stop the exportation of capital, to restrict the importation of certain products and to curtail exchange operations.

Relations with the Treasury.

"The difficulties in which the late Government found themselves brought about the renewal on the 11th of October of the agreement dated April 24th, 1923, between the Treasury and the Banco do Brasil.

"On that date the Treasury owed the Bank 517,563:134\$731, debit balance on account of future revenue and of bills for collection, due and unpaid. In this emergency, the Treasury took up the Bank's issue amounting to 592,000 *contos*, the redemption and conversion fund, including the remaining share of the reserve applicable to this fund in accordance with Clause 3 of the 1923 agreement, being shared between both parties as stipulated. The agreement being rescinded before the term of ten years, the Bank was freed from the obligation of re-selling to the Treasury, at the same price, the £10,000,000 received from the latter in payment in 1923. As a result of these operations, the Treasury was credited with 706,394:982\$954, with which it paid the Bank, remaining with a credit balance of Rs. 188,831:848\$223, of which it disposed to meet its needs.

"With reference to the above operations, it should be observed that if, on the one hand, the Bank was compelled to advance a payment of 706,000 *contos*, thus depriving itself of these funds for the remaining term of the agreement and the subsequent period devoted to liquidation, it was able, on the other hand, to dispose of means which allowed it to strengthen to a considerable extent its reserve fund and to carry over, in accordance with the Government, the sum of 70,000 *contos* to the special liquidation fund formed to meet eventual losses. In this manner, the Bank consolidated its position considerably.

"On the 17th of October the Government duly authorised an issue of 300,000 *contos*, of which the Bank issued 120,000 *contos*, backed by £1,000,000 and a further 80,000 *contos* on its own securities. The governing Junta authorised a second issue of 50,000 *contos*, the amount issued thus totalling 170,000 *contos*. As there was still a shortage of export bills which forced a downwards tendency in the rate of exchange, the Government liberated the £1,000,000 security, fixing the redemption of the issue by the Bank in six years, by means of minimum half-yearly payments of 25,000 *contos*.

"By a decree dated November 22nd of last year, the Government suspended the operations of the Caixa de Estabilização and

the issue and redemption of notes, which services, when re-established, will be carried out by means of bills drawn at sight on London by the Banco do Brasil. The functions of the Caixa de Estabilização, as determined by Law No. 5,108 of 1926, were therefore transferred to the Banco do Brasil, and it is of course clear that this Bank will not be able to exercise such functions until the value of the national currency does not return to that fixed by the above-mentioned Law."

Position of the Banco do Brasil.

Referring to the position of the Banco do Brasil, the Chairman said:—

"The net profits of the Bank in 1930 were Rs. 59,480:515\$840, of which total Rs. 39,310:608\$240 corresponded to the first half-year and Rs. 20,169:907\$600 to the second. The Agencies contributed Rs. 13,776:326\$486, of which Rs. 8,846:701\$865 corresponded to the first half-year and Rs. 4,929:624\$621 to the second. The net profits of the Bank in 1929 being Rs. 71,105:009\$312, the profits for the year under review show a decrease of Rs. 11,624:493\$472. This decrease was, however, compensated as follows:—

"(a) The Reserve Fund, which totalled Rs. 157,965:587\$356 on the 31st of December, 1929, reached Rs. 208,308:621\$895 at the end of 1930, thus showing an increase of Rs. 50,343:034\$539;

"(b) In order to meet possible working losses and to eventually eliminate previous transactions from the credit side, the following amounts were carried over to a special fund: Rs. 28,005:161\$881 in 1929 and Rs. 90,233:783\$687 in 1930, that is, Rs. 62,228:621\$806 more during the past year.

"In this wise, although the net profits for 1930 were below those corresponding to 1929, the position of the Bank improved greatly, not only owing to the increase of Rs. 50,343:034\$539 to its Reserve Fund, but owing to the healthier condition of its credit side arising from the increase of Rs. 90,233:783\$687 in the above-mentioned special fund.

"In accordance with the contract signed in October, 1930, whereby the Federal Government made itself responsible for the Bank's issues, the former will receive for the liquidation of the redemption fund and the conversion of paper money, Rs. 114,394:982\$954, from which will be deducted Rs. 70,000:000\$000 (which will be added to the amount of Rs. 90,233:783\$687 before mentioned) to attend to eventual losses, the balance remaining being added to the reserve fund. On the other hand, the gold deposited in the Caixa de Amortização being liberated (£10,000,025 lls. 0d., represented by Rs. 300,000:766\$510 in the statement of accounts for the year ending December 31st, 1929), the Bank decided to export this gold to cover the deficiency on export bills. As a result of these operations the entries described as 'Gold deposited in the Caixa de Amortização' and 'Fund for the redemption of paper money,' which figured in the statement of account for the year ending December 31st, 1929, for Rs. 300,000:766\$510 and Rs. 123,354:334\$568 respectively, did not appear in the statement of accounts for the year ending December 31st, 1930.

"At the end of December, 1930, the amount in circulation totalled Rs. 170,000:000\$000, out of which Rs. 120,000:000\$000 were issued by order of the late Government and Rs. 50,000:000\$000 in virtue of a resolution passed by the governing body which preceded the present Provisional Government.

"The loans, which totalled Rs. 1,440,227:458\$292 on December 31st, 1929, showed a decrease of Rs. 116,396:042\$135 during the following year. This decrease was due to the liquidation by the Federal Government in October, 1930, of notes issued by that Government to the value of Rs. 145,518:600\$070 which figured in the Bank's accounts before the 31st of December, 1929.

"The deposits, which totalled Rs. 7,679,493:658\$250 on December 31st, 1929, decreased to Rs. 1,331,119:262\$845, thus showing a decline of Rs. 348,374:395\$405 which took place in October, 1930, when the Federal Government withdrew the amount deposited in order to contribute its obligatory share to the fund formed for the redemption of paper money.

"The cash balance, which totalled Rs. 689,896:298\$877 on the 31st of December, 1929, decreased to Rs. 323,292:868\$473 at the end of 1930, thus showing a decline of Rs. 366,603:430\$404, but it must be remembered that the percentage of entries in relation to deposits for the year ending December 31st, 1929 (i.e., 41 per cent.) was too high. The same percentage for the year ending December 31st, 1930 (24 per cent.), showed a return to normal conditions. The dividend corresponding to 1930 was as usual, both in the first as in the second half-year.

"During 1930, ten new Agencies commenced operations, five in the State of São Paulo (Botucatu, Pirajui, São Carlos, Sorocaba and Taubaté), three in Rio de Janeiro (Barra Mansa, Itaperuna and Valença), one in Santa Catharina (Itajahy), and one in Matto Grosso (Ponta Porã).

After acknowledging the valuable services rendered to the Banco do Brasil by the Fiscal Council, the Chairman ended his Report with the following tribute to Sir Otto Niemeyer:—

"I do not want to end this Report without expressing the pleasure afforded us by the presence in this city of Sir Otto Niemeyer, who, at the invitation of the Provisional Government, has lent his valued co-operation and counsel and his universally acknowledged competence to the financial reconstitution of the country."

COMPANY MEETINGS, &c.

THE OTTOMAN BANK.

EXCEPTIONALLY DIFFICULT YEAR.

CONDITIONS IN TURKEY AND NEAR EAST.

SIR HERBERT A. LAWRENCE'S REVIEW OF POSITION AND PROSPECTS.

The annual general meeting of shareholders of Ottoman Bank was held, on the 23rd instant, at Winchester House, Old Broad Street, London, E.C.

General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The secretary (Mr W. P. Sheppard) having read the notice convening the meeting,

The Chairman said:—Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume that it is your pleasure that the report and balance sheet circulated among you should be taken as read. (Agreed.)

Before referring to business matters I have to report with the deepest regret that since the beginning of the present year we have lost the oldest member of our committee, M. Arsène Henry, nominated counsellor of the bank in 1907 and member of the committee in 1911. For nearly 25 years M. Henry gave us the benefit of an authority and experience acquired in the course of a brilliant administrative and diplomatic career. Your committee ask you to join them in expressing their sincere regret.

I must also mention the death, in November last, of M. Albert Mirabaud, who from 1907 to 1919 was a colleague whose sure judgment and conscientiousness we shall not easily forget.

Another of our colleagues, the Earl of Bessborough, has resigned his seat following his appointment as Governor-General of Canada. I do not doubt that I interpret your sentiments aright in addressing to the new Governor-General the congratulations of this meeting and our regrets at losing his services in the Ottoman Bank.

YEAR'S RESULTS.

You will observe that the net profits realised in 1930 show a decrease of £100,000 in comparison with the fairly constant figure of the last few years. We can, however, only feel satisfaction that your establishment has passed through an exceptionally difficult period without worse results, and has succeeded in keeping intact its resources for a more favourable period in the future.

The crisis, severe throughout the world, was felt to the full in the countries of the Near East where our business is carried on. These countries have few industrial resources or reserves of capital to offset the fall in those commodities and agricultural products which are the sources of their revenue. The rural populations experience the greatest difficulty in finding remunerative prices for their crops of cereals, tobaccos and cotton, and find their purchasing power restricted. Stocks accumulate in the hands of the importers of manufactured goods, with bankruptcy as a frequent result. The assistance asked from the banks is no longer the normal financing needed for the agricultural or commercial campaign, but a means of carrying over unsold stocks in the hands of producers or intermediaries.

NECESSITY FOR CAUTION.

Never have conditions imposed on the banks the necessity for greater caution in the granting of new credit, or more constant watchfulness over risks already assumed.

For our part, we have considered it essential, for the credit of an establishment receiving public deposits in territories so extensive and widespread as our own, to keep a central reserve, powerful enough, in all circumstances, to meet the emergencies of so disturbed a situation. In other words, our main preoccupation has been the maintenance of a safe liquidity.

It is clear that this policy involved our keeping important funds in a form which could be rapidly realised. Coupled with the extreme and almost universal cheapness of short money, it was, therefore, inevitable that our profits would be reduced. Nevertheless, the justification of this policy at the present moment, and its merits so far as the future is concerned, are so evident that it cannot fail to meet with your approval.

CONDITIONS IN TURKEY.

With this general survey, which applies to all our groups, I may touch briefly upon the conditions of particular spheres of action

Nowhere has the business of banking met with greater technical difficulties than in Turkey. The Turkish pound is one of the few currencies which have not yet been stabilised and which cannot freely be exchanged against other currencies. So long as this continues a current of capital between Turkey and abroad is impossible, as the incoming of capital is paralysed by the exchange risk, while its outgoing is restricted by the Turkish law of February 20, 1930, and subsequent decrees. The Turkish money market, therefore, is isolated; and the monetary circulation has a rigidity which hampers the action of the banks. Moreover, the economy of the country is purely seasonal.

From September to December, when instruments of credit are needed to move the crops and to finance the business of export, this rigidity is highly detrimental, though the consequences are most felt in the years of abundant agricultural production, as was the case in 1930.

SATISFACTORY CROP YIELD.

Apart from raisins, figs and cotton, which show a decrease in the hinterland of Izmir and in the zone of Adana respectively, the last crop has been favoured by the weather and shows a very satisfactory yield. Cereals are estimated at more than 200,000 tons in excess of 1929, tobacco 45,000,000 kilograms against 35,000,000, and nuts 50,000 tons, against a complete failure of the crop in the previous year. Unhappily, the low world prices in conjunction with high costs of production made it impossible for the cultivator to reap sufficient profit to free himself from old debts. The result has been a very difficult situation for the producing regions, and for most of the banks inevitable immobilisations, especially in Cilicia.

I would mention as symptomatic of general conditions in Turkey the multiplication of bankruptcies in Istanbul and Anatolia, a decrease of 15 per cent. in the movement of the Clearing House, and the heavy fall in fiscal receipts, in view of which the Government has reduced its Budget for the year 1931-32 from £T.222,000,000 to £T.189,000,000.

In these circumstances the necessity of reducing the bank's business programme in Turkey and the impossibility during the dead season of using available funds have weighed on the results of our Siège Central and the Turkish branches.

NEED FOR A STABILISED CURRENCY.

As you see, the lack of a stabilised currency is in constant conflict with the needs of the country, and difficulties will continue until a legal stabilisation, supported by adequate resources in foreign currencies, restores the Turkish pound to the world of sound currencies.

So far as we are concerned, we have given our assistance to the Turkish authorities by keeping at the disposal of the Treasury facilities in foreign currency in excess of our concessionary obligations; we have joined the Consortium of Banks, and we are participating in the capital of the Central Bank, the creation of which, voted on June 11, 1930, is on the point of becoming an accomplished fact.

Last autumn the necessity arose of preventing a rise in the Turkish pound, which would have been prejudicial to the national economy. We accepted from the Government the mission of putting into temporary circulation from the reserve stock the Treasury notes necessary to absorb the excess of foreign exchange offered by exporters. Week by week we publish the number of notes issued and the amount of exchange purchased, which remains locked in our till, the control of these two figures guaranteeing that the operation with which we are charged is a seasonal measure and not a means of inflation.

This operation permitted the accumulation in the space of four months of a reserve of more than £1,000,000. To-day this is almost entirely exhausted, but the measure sufficed to keep the variations of the Turkish pound within extremely narrow limits around the rate of 1,030 piastres to the pound sterling, which was reached after the great crisis in exchanges in November, 1929.

The stability was considerably favoured, however, by various chance factors, such as the contraction of 45 per cent. in imports, an advance of \$10,000,000 obtained against a concession of the match monopoly, and the practically complete suspension of transfers for the external debt.

When these factors cease to exercise their influence, Turkey will again have to face the fundamental problem of balancing its accounts.

EGYPT AND PALESTINE.

Business in Egypt has been very restricted. The fall in the price of cotton weakened the purchasing power of the country, and its commercial balance was affected. At the end of 1930 imports figured at £E.47,000,000, against exports £E.31,000,000. In 1929 imports for the same period amounted to £E.56,000,000 and exports to £E.52,000,000.

The general depression has naturally had an adverse influence on the business of all banking establishments.

As you will have seen from the press, we unfortunately suffered a loss through forgeries and defalcations in Egypt. Other establishments were similarly victims of these forgeries. Our loss was £38,880, which sum has been provided for out of provision for contingencies.

In Palestine the trade depression continued throughout 1930 and general conditions were unsatisfactory.

The construction of Haifa Harbour progresses steadily, and a desert railway survey was taken in hand last November. Conventions with the Iraq Petroleum Company for the construction of a pipeline from Iraq to Caiffa were signed last January by the Palestine and Transjordan Governments.

IRAQ AND PERSIA.

Iraq also has had to face the heavy fall in the world prices of her products, and business of all kinds has been affected.

The Government has rendered valuable assistance to agriculture by remitting taxes and by making advances to cultivators.

The capital position of the Iraq Government is considered favourable in that they have no public debt, internal or external, and important public works in recent years have been constructed without recourse to borrowing.

The project to introduce a national Iraq currency based on sterling has been advanced by a report from Sir Hilton Young. The project follows approved lines; its convertibility into sterling is to be secured by the maintenance of an actual sterling reserve, and the unit is to be the dinar with an exchange value of £1 sterling. It is hoped to introduce this currency towards the end of 1931.

In view of the increasing importance of Kirkuk, the bank opened a branch there in January, 1931.

In Persia our branches have been handicapped by the dislocation of business resulting from the break in the kran exchange in the early part of the year.

In March, 1930, the Persian Government took steps to fix the exchange rate at the arbitrary figure of kran 60 to £1 sterling, and all exchange operations came under the control of a Commission in Teheran established by the Government. In February, 1931, the official rate was again altered to kran 90 to the pound sterling.

In January of this year a sub-branch of our bank was opened at Sultanabad, the centre of the carpet industry in the neighbourhood of Hamadan.

OTHER SPHERES OF ACTIVITY.

Our secondary branches in England and France have each suffered from the crisis peculiar to their respective regions:—Stagnation of the cotton industry at Manchester, the crisis in colonial produce at Marseilles, the low price of cereals and olives in Tunis, and the decrease in tourist traffic at Nice.

Our London and Paris offices suffered from the cheapening of the rates for short-term loans.

The Levant States under the French Mandate in some degree during 1930 escaped the general distress, and our filiale, the Banque de Syrie et du Grand Liban, succeeded without difficulty in maintaining its dividend at 11 per cent. The circulation of its notes, a legal currency based on the French franc, showed an increase of more than one-third—from 174,000,000 frs. to 234,000,000 frs.

In Yugoslavia there was a fall in the price of cereals, but the country sold its cattle and fruit under good conditions, and the monetary stability has just been secured by a legal stabilisation.

The results of the Banque Franco-Serbe, which was reorganised two years ago under our auspices, have permitted the distribution of a dividend of 5 per cent.

Our more recent creation, the British-French Discount Bank, Limited, carries on, as you know, business in Athens and the Piræus.

In the present state of the Greek market the bank could not, with prudence, have any other aim than to secure its position for the future. A prudent management has brought it safely through the many failures which occurred in the course of the year. Its profit and loss account shows a small credit balance which the general meeting held to-day has decided to carry forward.

In Macedonia the Oriental tobacco market remains dangerous. The same restrictions of credit have been imposed on the two branches of our establishment at Salonika and Kavalla.

I regret that I cannot speak any more favourably either of Roumania, where we are interested through the Bank of Roumania, Limited, or of Cyprus, where we are interested both through our own branches and the Agricultural Bank of Cyprus, Limited.

In these places, as in others, it is useless to look for profits until there is an improvement in world conditions.

PROFIT AND DIVIDEND.

Before submitting the balance sheet to your approval, I would remark that it has been prudently drawn up, in accordance with our traditions. Those assets which through the exigencies of our business have been invested and kept in currencies other than those of the balance sheet have been converted into pounds sterling at the rate of December 31, 1930.

As drawn up, the accounts for the year 1930 show a balance of £110,952. With the amount brought forward of £27,319, the total at our disposal amounts to £138,271. To adhere as far as possible to the policy followed since 1926, we propose to you that this sum should be divided into two parts; the first, of £75,000, will be distributed to you, and represents a dividend of 3s. per share; the second, of £40,000, will serve to strengthen our provisions for eventualities. If you are so good as to follow our recommendations, the dividend will be payable on June 29 at Istanbul, London, and Paris, free of all tax in Paris, and there will remain a sum to be carried forward of £23,271.

In order to fill the vacancies which have occurred in your general committee, we have called on M. Roudy, one of the managers of the Banque de Paris et des Pays Bas, an establishment with which we have close relations, and Sir Gordon Nairne, whose past connection with the Bank of England will be known to all of you.

You will be asked to ratify these elections, and to re-elect those members whose mandate expires this year.

Finally, it is an agreeable duty to address in your presence to the staff of the bank, both at home and abroad, an expression of our satisfaction and thanks.

THE RESOLUTION.

I now beg to move: "That the report and accounts now read be received and adopted; that the dividend for the year ended December 31, 1930, be fixed at the rate of 3s. per share, and that this dividend be payable in Istanbul, London, and Paris on June 29, 1931." Before I put the resolution I am at your disposal to answer any questions which are addressed to me.

M. Charles de Cerjat seconded the resolution, which, in the absence of question or comment, was carried unanimously.

The Chairman next moved: "That M. Anathase Roudy and Sir John Gordon Nairne, Bt., be, and they are hereby, elected members of the General Committee."

Mr A. C. Gladstone seconded the motion, which was unanimously approved.

On the proposition of the Chairman, seconded by Lieutenant-Colonel Sir Albert Stern, K.B.E., C.M.G., it was unanimously resolved: "That M. le Baron Hottinguer, M. le Comte Pillet-Will, and General the Hon. Sir H. A. Lawrence be, and they are hereby, re-elected members of the General Committee."

VOTE OF THANKS TO CHAIRMAN.

Mr Gordon Jacobs.—Gentlemen, before this meeting disperses I should like to propose that a hearty vote of thanks be accorded to the chairman for his very able and lucid speech. That a smaller profit has been earned and a smaller dividend is to be distributed, in these difficult times, is easily understood. The figures placed before us to-day are, I think you will agree, a fine achievement in the circumstances, and we can rest assured that our interests are being well safeguarded. I should like to join with the chairman in an expression of thanks to the management and the members of the staff at home and abroad.

Mr A. Addiscott seconded the vote, which was unanimously accorded, and, the Chairman having made a brief acknowledgment, the proceedings terminated.

BLEACHERS' ASSOCIATION, LIMITED.

YEAR OF UNPARALLELED DIFFICULTIES.

CONDITIONS IN VARIOUS MARKETS.

SIR ALAN SYKES REVIEWS POSITION AND PROSPECTS.

The thirty-second ordinary general meeting of Bleachers' Association, Limited, was held at Blackfriars House, Manchester, on Tuesday, June 23, 1931. Sir Alan J. Sykes, Bart. (chairman of the company), presided, and after expressing his regret for the death of Mr Andrew McNab, one of the original directors of the Association, and the retirement of Mr. George Hamilton, also an original director, the Chairman said:—

When I addressed you last year I pointed out that the financial year 1930-31 had opened under far less favourable conditions than the year 1929-30 with which I was then dealing, and that, unless there was a very marked improvement, it was inevitable that the profits of our business must show further contraction.

Uncertain as the outlook then was, I doubt whether many of us anticipated a continuation of the disastrous decline in prices and the accompanying depression throughout the whole of the past year, and, although I felt obliged to warn you of the probability of less favourable results, I certainly did not at that time think that we should suffer to the extent that we have done.

LARGE DECREASE IN EXPORT TRADE.

The extent of the decline in the volume of our trade is illustrated by the export of bleached cotton piece-goods from the United Kingdom. During the past financial year such exports amounted to 724 million square yards, compared with 1,244 millions in the previous year and 1,376 millions in 1928-29, that is, a decrease of nearly 42 per cent. compared with 1929-30, and more than 47 per cent. compared with 1928-29.

Our export trade in bleached goods in the past year was at a lower level even than in the world slump of 1921, and we have nothing worse on record since the years of the American Civil War of 1861-65.

An output 42 per cent. below that of the previous year is not sufficient to employ one-half of that portion of the capacity of the bleaching industry which is normally devoted to the export trade, and here, in one sentence, you have an explanation of the shrinkage in our profits during the past year.

Reduced exports to Asiatic markets account for 75 per cent. of the total decline in our export trade in bleached goods. Africa accounts for a further 12 per cent. of the decrease, and North and South America for some 6 per cent. or 7 per cent., the balance being almost equally divided between Europe and Australasia.

By far the greater part of the decline in our trade with Asia is to be found in the four principal markets of India, China, the Dutch East Indies and British Malaya, and a brief review of the conditions affecting our trade in those markets will throw some light upon those influences, other than the world depression, to which I have referred.

INDIA.

Trade with India became progressively worse throughout the year, the maximum decline being reached in the third quarter when exports were 67 per cent. less than in the corresponding period of the previous year. For the whole year, our exports to this market showed a decline of 54 per cent. from the previous year or 60 per cent. when compared with 1928-29.

India has suffered a marked decline in purchasing power by reason of the fall in price of her principal agricultural products, as evidenced by an average decrease of 40 per cent. in the declared value of her principal exports between the first quarter of 1929 and the first quarter of 1931. It must not be assumed, however, that the full effect of this reduced purchasing power would react upon India's capacity to acquire imported cotton goods, for within the same period the declared value of such imports also declined by nearly 30 per cent. and our own records of exports to India show a decrease in the average price of bleached goods of rather more than 33 per cent. within the same two years.

Our trade with India has been further hampered by the increase in price due to the higher import duty. Although a slight preference is accorded to British goods, the duty has afforded a further measure of protection to the Indian mills and their production has increased. Japanese competition in this market is becoming more severe and, within the past year, Japan has doubled her imports of bleached goods into India. Signs are not wanting that, unless those responsible for the policy of the trades unions in the different sections of the cotton industry appreciate more fully the seriousness of this country's position, and are courageous enough to bring

plain facts home to those whom they represent, our share of the trade must rapidly diminish, as it already has done in China. If those upon whom this responsibility rests require any backing to assist them in such a campaign, surely this is readily available in the evidence brought back by those who represented their interest on the British Economic Mission to the Far East.

Of the several causes contributing to the serious decrease in our trade with India, the boycott of foreign cloth, and especially British cloth, has been by far the most important. The undertaking that the boycott should not be used as a political weapon has made no appreciable difference in its effectiveness as an instrument for an unwarrantable interference with the liberty of the consumer and for the prejudice of our trade. The value of that undertaking would appear to consist solely in the fact that it affords an excuse to the responsible Government of this country and of India for doing nothing to remedy an intolerable abuse on the grounds that the undertaking is being complied with. That the responsible Government should remain passive in face of a direct attack on British trade, carried out by threats and coercion from a self-constituted organisation, is, to my mind, a cause for legitimate protest.

We are asking for no privilege in India if we suggest that, having regard to what we have done for that country, we are at least entitled to fair play. That is all we do ask, and, until we get it, I can hold out little hope of substantial improvement in our business.

CHINA.

In China, the decline of trade has been relatively greater even than in India, and, in the past financial year, our exports were less than one-third of the volume in 1929-30 and less than one-quarter of that in 1928-29. The immediate cause of this exceptional contraction was the continued fall in the price of silver from an average of nearly 27d. per ounce in 1928-29 to an average of less than 16d. in 1930-31, that is, a decrease of more than 40 per cent. Since March the price has declined still further to a point a little above 12d. per ounce. Circumstances have favoured the cheaper products of the Japanese cotton industry, and it is not surprising to find that imports of bleached goods from Japan have increased during the past year.

DUTCH EAST INDIES AND BRITISH MALAYA.

In the Dutch East Indies and in British Malaya we can attribute the loss of trade, in part, to reduced purchasing power consequent upon the exceptional fall in the price of rubber and, in part, to the increased competition of Japanese cloth.

This survey of market conditions could be extended, but, in almost every case, the story is similar, and I have probably said sufficient to indicate that the past year has been unparalleled in the difficulties which it has produced. The position was not improved by the unfortunate stoppage of work in the weaving section of the industry in January and February, which entailed a marked reduction in the volume of cloth available for process.

ECONOMIES EFFECTED.

Faced with an unprecedented contraction in the volume of our output, our main concern has been to secure the maximum of economy in our costs of production, a task which, as I have said on previous occasions, is by no means easy in a business where fixed and indirectly variable charges (including labour) form so large a part of the total expenditure.

By agreement with our operative employees we have secured a reduction in wages, not to the extent which we had hoped, but, fortunately, without a dispute involving any interference with production, although the prolonged negotiations which were necessary have deprived us of any benefit from this economy in the year under review. In addition to this, a substantial reduction in fees, salaries and standing wages has been voluntarily accepted by every other employee of the association, and in this category we include the chairman and directors, and all the managing staff, but this does not represent the full extent of the sacrifice which has been entailed in many cases where remuneration is based to a considerable extent upon results.

During the past year we have closed three of our smaller works with a view to economy by the concentration of output, and arrangements have been made for three or four more of the smaller and less efficient works to be closed. We have only taken this step after the fullest consideration and with considerable regret, but the present position is so serious and the outlook so uncertain that we must

explore every avenue leading to economy. It is inevitable that the remedies we are compelled to apply should result in the creation of more unemployment, but it cannot be too fully recognised that the rigidity of wages, especially in sheltered industries, and the attempt to maintain a higher standard of living than is justified by the volume of production are the immediate and most potent causes of the high level of prices which is handicapping our export trade. Moreover, the maintenance of a system whereby the proceeds of production are taxed, in order to maintain in idleness those who have been thrown out of work, must entail a permanent contraction in the output of our industries. But if the obvious remedy is to be allowed to function it is necessary that the artificial protection enjoyed by the sheltered industries should be removed.

This handicap of high prices was fully stressed in the Report of the Committee on the Cotton Industry, which was issued during the past year, and has been emphatically endorsed by the recently published Report of the British Economic Mission to China.

You will be aware that the Joint Committee of Cotton Trade Organisations is contemplating steps to effect a reduction in the output capacity of the cotton industry to accord more closely with demand, thus demonstrating in fact the principle to which I have just referred, but progress in these matters is slow, and, in the meanwhile, foreign competition is becoming keener.

THE ACCOUNTS.

The Chairman then referred to the accounts which were presented in the same form as last year, and in which the figures showed little change by comparison with the previous year. The decrease of £136,039 in the value of land, buildings, etc., was accounted for by the fact that the amount of depreciation written off was largely in excess of the expenditure which had been incurred on capital account during the past year.

The value of the shares of the subsidiary companies showed no change, but the advances to those companies were somewhat lower as their financial requirements had fallen in consequence of the reduced volume of business. Investments appeared at about the same amount as in the previous year, and the investments contingency reserve, £57,375, was more than sufficient to meet any market depreciation thereon.

YEAR'S PROFIT.

The gross trading profit brought into account, after charging £238,836 in respect of repairs and maintenance, and including a transfer from tax reserve account amounting to £25,087, was £308,436, that is a reduction of £461,815 compared with the previous year. The reduction in the charge for repairs and maintenance was attributable mainly to the reduction in working time, and to efforts that had been made to reduce expenditure to the lowest level possible, but this had in no way detracted from the condition of the works, which had been maintained in a high state of efficiency. The profit had been increased by a transfer of £90,000 from the reserve for equalisation of dividends, and the available balance, including the amount brought forward from the last account, was £373,990.

The directors had already paid an interim dividend on the preference shares at the rate of 5½ per cent. per annum for the nine months ending December 31, 1930, amounting to £102,609. They recommended that a further dividend be paid on the preference shares for the three months ending March 31, 1931, at the rate of 5½ per cent. per annum, amounting to £34,203, and that the balance of £237,178 be carried forward to the next account.

After an expression of thanks to the managing directors, staff and all employees of the association, the Chairman continued:—

You will have appreciated from what I have already said the reasons which have actuated the directors in their decision to recommend no dividend on the ordinary shares in respect of the past year's trading, and I can assure you that it is with the greatest regret that they have felt compelled to disturb the continuity of a distribution which had remained unbroken for twenty-one years.

THE FUTURE.

It is impossible, under existing conditions, to make a reliable forecast of the future, but I can say that the immediate prospect is not encouraging.

The present year has opened with trade at a slightly lower level than at this time last year, but, although there are, as yet, no signs of improvement, there is at least no indication of further deterioration.

The future must depend, in the main, upon factors which are almost entirely beyond our control—a halt in the decline in world prices and either an improvement in the purchasing power of agricultural communities or a reduction in the costs of manufactured articles to accord more closely with the lower level of prices of primary products—a rise in the price of silver, or, failing that, some means to restore a measure of stability to Eastern exchanges—the restoration of fair trading conditions in India—it is to deve-

lopments such as these that we must look for any substantial improvement in our trade.

Meanwhile, the shareholders may rest assured that the directors are doing everything within their power to reduce costs and to secure the maximum of economy in production whilst maintaining the works of the association at the highest point of efficiency. If I may adopt a nautical metaphor, the vessel is in first-class trim and we are prepared to take advantage of the first breath of the wind of returning prosperity.

The resolution approving the report and accounts was moved by the Chairman, seconded by Mr Arthur K. Davies, supported by Lord Colwyn, and carried unanimously.

LORD COLWYN'S VIEWS.

Lord Colwyn said that he felt it his duty at that particular period to come and stand by those who had had such a struggle in the last twelve months and give them whatever support he could in the unexampled difficulties which they had had to face. There was depression everywhere—particularly in Lancashire and Yorkshire—greater than any that he had seen in his lifelong business, and there were difficulties to be fought against which were nearly unsurmountable.

He said that it was because of the difficulties that he knew their concern had been fighting against that he had come to tell them to have courage and go on with the work they were doing. Bleachers' Association was a great organisation, fine, efficient and honourably conducted. He reminded them that they must not expect too much, and not to be disappointed under the circumstances that there was no dividend on the ordinary shares.

The retiring directors were re-elected on the motion of Mr H. W. Arnold, seconded by Mr Frank Rees.

On the motion of Mr W. B. Morison, seconded by Mr P. B. Brown, the joint auditors, Messrs Jones, Crewdson and Youatt and Messrs P. and J. Kevan were re-elected.

The meeting terminated with a vote of thanks to the Chairman, moved by Mr D. Q. Henriques and seconded by Mr S. E. Nightingale. This was carried unanimously, and the Chairman expressed on behalf of himself and his colleagues his appreciation of the resolution.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED.

INCREASED PROFIT—PROPOSED DEBENTURE ISSUE.

The thirty-fifth ordinary general meeting of the British Electric Traction Company, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London.

Mr J. S. Austen (chairman of the company), in the course of his speech, said: I am in a happier position than are many chairmen in these times, in that I am able to announce an increased profit for the past year. Our revenue is £18,000 better than it was last year.

A long time ago I told you that it was my ambition to get back for you the £1,000,000 which you lost when your capital was written down. A start was made by giving you deferred stock which, after the bonus to-day, will amount to £200,000. I have tried to produce a scheme which will provide a little more income for those who want income and some cash for those who want cash, whilst still retaining their stock. What we propose to do is to create £1,000,000 debenture stock and then to give £500 of that stock to every holder of £100 of deferred stock, and, of course, proportionately. That is £5 debenture stock for every £1 of deferred stock held.

Then we propose to set aside out of the surplus profits—after paying the dividends on the preference, preferred ordinary and the deferred ordinary stocks—£60,000 a year—which is equal to 6 per cent. on the proposed debenture stock—as a service fund for that stock. If a holder of £100 of deferred stock keeps his £500 of debenture stock he will get £15 a year interest, which equals 15 per cent. on his deferred stock, but we propose to discontinue the payment of the 5 per cent. cash dividend on the deferred stock, so that the increase will be only 10 per cent. We also propose to reduce the annual stock bonus on the deferred stock from 10 per cent. to 5 per cent.

As to the prospects of the current year, there are one or two considerations which I should like to put before you. The first is that our total dividends from investments last year were £376,000. Out of that £300,000 was derived from companies in which we are actively concerned in the management, and only £76,000 has come from outside investments. With regard to that £300,000, so far as I know, that income is just as likely during the current year to be more as it is to be less. Anyhow, the balance of loss, if any, cannot be sufficient seriously to affect the position. Then again, we are still very largely interested in omnibus companies, and just at present I know of no class of investment which is quite so sound as an omnibus company.

The report and accounts were unanimously adopted.

J. LYONS AND COMPANY, LIMITED.

FURTHER PROGRESS RECORDED.

ADVANTAGES OF UP-TO-DATE ORGANISATION.

REDUCTION IN PRICES TO CUSTOMERS.

CREATION OF ADDITIONAL 7 PER CENT. PREFERENCE SHARES

MAJOR ISIDORE SALMON ON THE YEAR'S ACTIVITIES.

The thirty-seventh ordinary general meeting of J. Lyons and Company, Limited, was held, on the 23rd instant, at the Trocadero Restaurant, Shaftesbury Avenue, London, W.

Major Isidore Salmon, C.B.E., D.L., J.P., M.P. (one of the managing directors), presided.

DIRECTORS' REPORT.

The report of the directors for the year ended March 31, 1931, states that:—

The balance from Trading Account shows:—	£	s.	d.
A profit of	942,320	5	4
Amount brought forward from last year.....	33,226	5	2
	<u>£975,546</u>	<u>10</u>	<u>6</u>

From this amount is to be deducted:—

	£	s.	d.
Dividend on 5% Preference Shares paid to November 30, 1930, and proportion provided for period to March 31, 1931	32,353	5	0
Dividend on 7% Preference Shares paid to March 31, 1931.....	280,000	0	0
Dividend on 8% Preference Shares paid to March 31, 1931.....	80,000	0	0
Dividend on 6% Preferred Ordinary Shares paid to September 30, 1930, and proportion provided for period to March 31, 1931	27,000	0	3
Interim Dividend (1s. 8d. per share) on Ordinary and "A" Ordinary Shares already paid for the half-year ended September 30, 1930.....	134,689	8	4
Interim Dividend (4d. per share) on Proportional and "B" Proportional Profit Shares already paid for the half-year ended September 30, 1930	15,833	6	8
And the directors propose to deal with the balance as under:—			
To place to reserve (making a total of £1,400,000)	100,000	0	0
To pay a dividend of 2s. 10d. per share on the Ordinary Shares and "A" Ordinary Shares for the half-year ended March 31, 1931.....	228,972	0	2
To pay a dividend of 6-8d. per share on the Proportional and "B" Proportional Profit Shares for the half-year ended March 31, 1931.....	26,916	13	4
To carry forward to next account	49,781	16	9
	<u>£975,546</u>	<u>10</u>	<u>6</u>

During the financial year the following establishments have been opened:—

74/6 Church Street, Blackpool.
49/50 High Street, Guildford.
108 New Oxford Street, W.C.1.
35/39 Golders' Green Road, N.W.11.
49 Albemarle Street and 6 Dover Street, W.1.
10 Central Parade, High Road, Wembley.
41 Alfred Place, South Kensington, S.W.7.

Additional premises have been acquired and will be opened in due course, and negotiations for other premises are proceeding.

With a view to providing further capital to meet certain proposed building costs and the general requirements of the business, the directors have decided to invite the shareholders to assent to the creation of 1,000,000 additional 7 per cent. preference shares to rank in due course *par passu* with the 4,000,000 7 per cent. preference shares already existing in the capital of the company and the notice of meeting includes a resolution for such purpose. There is no present intention to issue these shares, but the directors think it advisable to obtain the power so that they may be able to utilise it whenever in their opinion it should be expedient.

Messrs I. M. Gluckstein and B. S. Gluckstein retire from the office of directors, and being eligible, offer themselves for re-election. Messrs George Dee and A. C. Watkins, employed directors, retire and are eligible for re-election.

Messrs Turquand, Youngs and Company, the auditors, retire and are eligible for re-election.

The dividends received from subsidiary companies have been included in the company's trading account. In the aggregate the profits of the subsidiary companies exceeded the declared dividends. Losses of subsidiary companies so far as they concern this company have been dealt with in this company's accounts.

CHAIRMAN'S SPEECH.

Mr H. H. G. Bennett (one of the secretaries) having read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with cheers, said:—Ladies and gentlemen,—It is my pleasure to meet you once more at the annual meeting. We are to-day presenting our thirty-seventh balance sheet and it is an equal pleasure to report that in spite of the continued depression of trade we have maintained our position and are able to produce figures fully equal to anything that has gone before. That is indeed a matter for congratulation and it has been accomplished by taking time by the forelock, reducing prices, taking full advantage of markets and continuing the process of reorganisation which is always going on in the endeavour to be what is usually described as "up-to-date."

I do not propose to spend much time in going through the figures, which are from year to year so regular that they call for little comment.

You will, I am sure, understand that this effect is not obtained without very careful control of our many departments and of our multitudinous productions. It is the result, as I dare say I have said before, of carefully watching each separate item of production having regard to the cost of material, the cost of manufacture, and the cost of distribution.

OVER 160,000,000 MEALS SERVED.

In the year under review there has certainly been a diminution in spending power, and if each person is spending less the only way to maintain profits is by serving a greater number of people. That we have succeeded in doing. Last year we served in our restaurants, corner houses, and tearooms over 160,000,000 meals. This, as you know, only accounts for a portion of our business, because a very large amount of our turnover is in sales to shopkeepers of similar products to those which are sold in our own shops and which are produced by our bakeries, kitchens, and the ice cream department at Cadby Hall, and in sales of tea, coffee, and confectionery. It may interest you to know that these sales to shopkeepers amount to over 3,000,000 lb. weight a week or 75,000 tons per annum.

PRICES REDUCED—WAGES MAINTAINED.

We have met the reduced spending power by a reduction in prices which, this year, has amounted to something like half a million pounds sterling. We have maintained wages and by that careful supervision which I have mentioned the balance available for distribution we are able to show (which might in the present condition of trade have been expected to be less) is, indeed, as you see, slightly more.

It is becoming a fashion in certain quarters to decry the making of profits, and one is almost expected to make an apology for there being any. We do not offer any apology. Production must have capital, and capital can only be maintained by profit. There must be a surplus or there will be no room for growth, whether of population or in the standard of living, and none of us want to see things at a standstill, not even the wildest Communist. If capital cannot earn a profit it will soon cease to be capital, and I commend this statement to the consideration of some of those people who are foolish enough to say that capital and labour are opposed or that either can get along without the other. (Hear, hear.)

ALLOCATION OF PROFIT.

To come to the figures: the balance from trading account amounts to £942,320, and is £6,450 in excess of last year. (Hear, hear.)

In the allocation of this amount, given on the first page of the report, you will no doubt have observed an increase of £3,000 in dividend on the 6 per cent. preferred ordinary shares. This is

accounted for by 66,667 of those shares which have been issued for the purchase of the capital interest in a laundry which has been under our control for some years now and where we had taken an option to purchase. After some years' experience we decided to declare that option. The profits accruing from that concern are more than sufficient to pay the interest on the shares we have issued. The Laundry undertakes a large amount of work for the Strand Hotel, Limited, and that company has purchased from us for cash a proportion of the laundry company's capital, based upon the ratio of the work undertaken for the hotels to that undertaken for us.

There is a small amount of increased dividend due to the issue of shares to managing directors. We have repeated this privilege again this year as a gesture of acknowledgment of their services, and it is understood that you approve this when you pass the resolution accepting the accounts as presented.

I do not think the rest of the figures on the front page need any comment.

You will have seen that it is not proposed to pay any more dividend, but to pay as last year and to place again as last year a sum of £100,000 to reserve.

BALANCE-SHEET CHANGES.

The major changes in the balance sheets are as follows:—

Freehold land and buildings, plant, machinery, &c., the main item among the property and assets, is increased, in round figures, by £200,000, which is very modest considering the steady expansion of business.

Shares in subsidiary companies have been increased by the transaction that I referred to in dealing with the figures of profit on the front page of the report. Loans, which I explained last year, have been reduced by some £50,000, but the current accounts of the subsidiary companies have increased by £30,000. Stock in trade is down in round figures £570,000, I think you will agree a very satisfactory position having regard to the present state of the markets and falling prices.

On the debit side of the balance sheet, capital is increased by the issue of the 6 per cent. shares which I have referred to. The creditor accounts are reduced by half a million, an item one would expect to see in view of the reduction of stock, seeing that the stock represents the requirements for a very short period of trade. The amount due to subsidiary companies has also been reduced by £80,000.

There is nothing more in these figures, I think, which needs comment.

CONSTANT PROCESS OF REORGANISATION.

Going back for a moment to the question of profit earning, I have said that we have made a contribution to the public by reduced prices and that we have maintained wages. Those two things together mean that the wages are worth more; in other words, that they have effectively increased notwithstanding that they may remain at the same nominal amount.

I have said how this is done and the process is commonly called organisation; but organisation undergoes change just as the products and the demands change, so there is a constant process of reorganisation. There is, for example, a growing tendency on the part of the housewife to purchase ready prepared meals for home consumption. This is a tendency of which we have taken advantage in our numerous tearshops and Corner Houses, where a large variety of dishes is available in attractive form and at prices which are equally attractive. The advantages of economy, variety, and efficiency in this service are widely recognised by housewives. That is one of the many ways in which reorganisation of the business takes place in the process of keeping up to date.

MODERNISATION AND EXTENSION.

Another, which also is directly seen as well as felt by our customers, is the modernisation of existing tearshops which is always going on side by side with the acquisition of new sites in London and various parts of the country. But that has been part of our policy from the earliest days of the company: the very first shop we opened was in advance of anything then existing—we aim to keep that leadership by not merely making our newest shop the best yet but also by constantly bringing the others up to the highest standard we have achieved. Accompanied as all this is by reductions of prices, we can, I think, justly claim that we are giving our customers better value than ever in surroundings which are unequalled anywhere. Still a third way in which reorganisation goes on lies in the replacement of manufacturing plant and equipment by the most advanced and improved types with a view to ensuring the utmost efficiency and economy in production which in turn is reflected in the prices at which the goods are sold. A fourth example is in the provision of incentives to efficiency in our personnel, making the reward

commensurate with the effort, on the principle, not of the utmost output for a minimum reward, but of each member of the team pulling his weight and sharing proportionately in the success achieved.

VIRILE MANAGEMENT.

It seems to me that what is required in the present condition of British trade and industry is more virility, more foresight and a greater effort than ever both on the part of the employer and the employee. It is in times like these that virile management comes into its own; and I feel that, without undue conceit, we can claim from the results we have put before you to-day that our business has that quality. (Hear, hear.)

Some of this may sound like self-advertisement—setting up a claim that Lyons are more advanced than some other trades—but we don't think this will be denied, and we are not making a claim that we are by any means perfect—there is still plenty of scope for all the brains and energy we can find. We do not propose to rest upon our laurels lest they should fade away.

RECENT DEVELOPMENTS.

It will be appropriate to refer at this point to some of our more recent developments. You will have seen from the report that seven new tearshops have been opened during the financial year and that other properties have been and are being acquired for that purpose. We have opened an extension to the Strand Corner House, incorporating with it a part of the adjoining property, acquired two or three years ago, of which we obtained possession during the year under review. Then there is the site in Oxford Street between Old Quebec Street and Portman Street which we acquired some years ago, and to which reference has been made at these meetings from time to time. It was originally our intention to utilise part of this site, when it came into possession for the erection of a Corner House. We have, however, modified our plans, having after mature consideration come to the conclusion that complication would probably arise from the close proximity of one of our Corner Houses and the hotel, with restaurant facilities, intended to be erected by Strand Hotel, Limited, on the adjoining site to the westwards. As those of you who are shareholders of the Strand Hotel, Limited, will have already heard, we have now agreed with that company to combine the two businesses on the hotel side. For this purpose we are forming a separate company, the capital of which will be divided equally between the two parent companies. The site has already been cleared and the erection of the new structure commenced, the two companies contributing cash as required to meet the building costs.

Since the close of the financial year we have been honoured with another Royal visit to our factories. On this occasion it was their Royal Highnesses the Duke and Duchess of York who paid a visit to Cadby Hall and were good enough to express their keen interest in and approval of what they had seen.

A LOYAL AND KEEN STAFF.

I should like here to pay a tribute to the contribution our vast staff makes to the successful results we are able to show. Though this has become a regular feature of our yearly report to you the tribute is, I can assure you, a sincere one. The efforts of the staff constitute one of the most important factors in achieving success in any business and we are indeed fortunate in having a staff of outstanding loyalty and keenness.

INCREASE OF PREFERENCE CAPITAL.

The notice of meeting which you have received contains a resolution for the creation of a further 1,000,000 7 per cent. preference shares and on that I should like, in conclusion, to say a word. The last increase of our capital was made in 1927, when we created 2,000,000 7 per cent. preference shares, of which half were issued in that year and the remainder the following year. Since then, the expanding business has been financed from the company's resources and by mortgages on newly acquired property. The development of the Oxford Street property which I have mentioned and the general needs of the business will, in due course, call for the issue of further capital—it may be this year—although there is no immediate prospect of it; and we thought it desirable to have the shares available for issue rather than trouble you with an extraordinary general meeting for the sole purpose of creating them.

THE DIVIDENDS.

I now have very much pleasure in proposing the following resolution:—“That the report of the directors and the balance sheet submitted to this meeting be and are hereby adopted; that the payment of interim dividends of 1s. 8d. per share on the issued ordinary and “A” ordinary share capital of the company and 4d. per share on the proportional profit and “B” proportional profit

share capital of the company for the half-year ended September 30, 1930, be and is hereby confirmed; and that a dividend be paid for the half-year ended March 31, 1931, of 2s. 10d. per share to the holders of ordinary and “A” ordinary shares of the company and 6d. per share to the holders of proportional profit and “B” proportional profit shares of the company who were on the registers on June 9, 1931.”

I shall be glad if a shareholder will second that resolution. (Cheers.)

DIRECTORS AND MANAGEMENT COMPLIMENTED.

Sir Richard Sennett,—Ladies and gentlemen,—With your kind permission I shall have very great pleasure in seconding the resolution. The chairman, of course, is clarity itself, so that, after the speech which he has delivered, there is not very much left for me to say. We know that the million of money asked for to-day is quite a large sum even in these days of wonderful sums paid to film artists; but when one comes to look at the enormous ramifications and magnitude of this business one realises that it is really no more than a coffee-stall keeper asking for £10 in order to paint and varnish his premises. Lyons, we are told, are very lucky people. There is really no question of luck about it, ladies and gentlemen; it is a question of jolly hard work. (Hear, hear.) Things don't turn up; they have to be turned up, and Messrs Lyons's directors are the gentlemen who seem to know how to do it. We all know very well how they have managed this business in the past. I personally have been a shareholder for many, many years, and I am only green with envy to think that I have not put all my small amount in this company instead of putting it into other fiddling things that have not exactly “gone to pot” but are at a very, very great discount to-day. Lyons, as you know, have not only conquered the London suburbs, Manchester, and other places, but even lately nine of their young ladies have gone to Lucerne and “taken the cake” there. (Laughter and cheers.) Ladies and gentlemen, I will not detain you any longer; I formally beg to second the resolution. (Cheers.)

The Chairman having replied to shareholders' questions, the resolution was put to the meeting and carried.

Mr Harry Salmon (one of the managing directors) proposed the re-election of Mr I. M. Gluckstein and Mr B. S. Gluckstein, the retiring directors.

Mr J. G. Shield seconded the motion, which was unanimously adopted, and Mr B. S. Gluckstein briefly thanked the shareholders for his re-election and that of his colleague.

Major M. Gluckstein (one of the managing directors) then moved the re-election of Mr George Dee and Mr A. C. Watkins as employee directors of the company. This was seconded by Mr Symonds and unanimously agreed to, and Mr Watkins, on behalf of Mr Dee and himself, thanked the shareholders for this expression of their confidence.

On the proposition of Mr A. J. Wood, seconded by Mr Shield, Messrs Turquand, Youngs and Company were reappointed the company's auditors for the current year.

THE NEW 7 PER CENT. PREFERENCE CAPITAL.

The Chairman then proposed the following resolutions:—

1. That the capital of the company be increased to £9,925,000 by the creation of 1,000,000 additional 7 per cent. preference shares of £1 each, and that accordingly the following provisions in regard to the said 7 per cent. preference shares shall have effect (that is to say):—

(a) The 1,000,000 7 per cent. preference shares hereby created shall carry the right to a fixed cumulative preferential dividend at the rate of 7 per cent. per annum on the capital for the time being paid up or credited as paid up thereon respectively, and such dividends shall be payable half-yearly on the 1st day of April and the 1st day of October in each year.

(b) The said 7 per cent. preference shares shall rank both as regards dividend and return of capital to the extent of the amount paid or credited as paid thereon *pari passu* with the existing 7 per cent. preference shares in the capital of the company already issued, and with any other 7 per cent. preference shares created as hereinafter mentioned next after the 5 per cent. preference shares in the capital of the company already or hereafter to be created or issued, and in priority to all other shares in the capital of the company, but shall not have any further right to participate in profits or assets.

(c) The company is to be at liberty from time to time to create and issue further 7 per cent. preference shares, ranking in all respects *pari passu* with the 7 per cent. preference shares previously created.

(d) The said 7 per cent. preference shares shall not confer on the holders the right to attend or vote either in person or by proxy at any general meeting of the company nor to have notice

of any such meeting unless the dividend on such 7 per cent. preference shares or any part thereof is and so long as it is in arrear for 28 days in any year nor shall such 7 per cent. preference shares qualify any person to be a director of the company.

2. That the directors be and they are hereby authorised to issue the said 1,000,000 7 per cent. preference shares to such persons at such time or times and on such terms as the directors shall from time to time determine.

Mr Gollop seconded the resolutions, which were put to the meeting separately by the chairman and carried unanimously.

The Chairman, in thanking the shareholders for their attendance, announced that the dividend warrants would be posted that evening.

VOTE OF THANKS.

Mr Wood said he was sure the shareholders would not wish to separate without passing a very hearty vote of thanks to the chairman and directors, as well as to the managing staff and employees of the company, and congratulating them upon the very successful result of their labours during the past year. That result was simply marvellous, and he was sure that the whole of the shareholders felt deeply indebted to the directors and the staff for the able manner in which they had conducted the business. (Hear, hear.)

Mr Shearme seconded the motion and expressed warm appreciation of the efforts of those included in it.

The vote was accorded with acclamation, and the Chairman having made a brief acknowledgment the proceedings terminated.

“SHELL” TRANSPORT AND TRADING COMPANY, LIMITED.

POLICY OF CONSERVATION OF PRODUCTION.

VISCOUNT BEARSTED ON THE OUTLOOK.

The annual general meeting of the “Shell” Transport and Trading Company, Limited, was held, on the 23rd instant, at the Cannon Street Hotel, London.

The Secretary (Mr E. A. Smith-Rewse) having read the notice convening the meeting and the report of the auditors,

The Right Hon. Viscount Bearsted, M.C. (chairman of the company), presided, and, in the course of his speech, said:—During the year we issued 5,000,000 7 per cent. preference shares of £1 each at 25s. per share. The premium therefrom, amounting to £1,250,000, has been added to the reserve account, which now stands at the sum of £8,131,609. The profit and loss account, after having had charged to it the whole expenses of the new issue, shows a reduction in the balance carried to the balance sheet of £1,581,589 and amounts to £5,139,401. The directors recommend a final dividend on the ordinary shares of 7½ per cent., making, with the interim dividend of 10 per cent., a total dividend of 17½ per cent., free of tax. All depreciation necessary has been fully covered by the companies in which you are interested, and the directors are quite satisfied that all the properties, either in your books or in those companies in which you are interested, stand at a figure well below their real value, as is proved by their yield. The profits from which your dividends are payable are the result of trading operations, and your reserves have in no way been depleted. (Hear, hear.) The affiliated companies have the whole of their stocks of oil and material free and unencumbered.

STRONG LIQUID CASH POSITION.

I would particularly call your attention to the strong liquid cash position, which shows that the Shell Company alone had at the end of the year in cash and securities, mainly gilt-edged, over £14,000,000 sterling. We are thus amply equipped for seeing through the period of prolonged depression from which, in common with all other commodity trades, we are now suffering.

For the first time for a great many years the group's production showed a decrease, namely, from just over 25,000,000 tons in 1929 to just under 24,000,000 in 1930. This was in no way due to any falling off in the productive capacity of our fields, from which we could easily have produced at least 29,000,000 tons had the demand been existent, but was entirely brought about by our consistent policy of conservation, which we have steadily advocated and observed. Our available fleet has now a carrying capacity of about 2½ million tons, and carried during 1930 nearly 20,000,000 tons of oil. Owing to the falling off in demand we have been compelled to lay up several ships, but these are gradually coming into service as our chartered vessels go off hire, and by the middle of 1932 we should have no vessels unemployed. Our many producing interests are all in excellent condition and in almost every case capable of

considerably increased production without much additional expenditure. This particularly applies to the United States of America, Venezuela, the Dutch East Indies and Roumania.

POSITION IN THE U.S.A.

The position in the oil industry in the United States perhaps calls for comment in view of our large investment in the Shell Union Company. Of recent years the proven reserves within the United States have been largely increased. Unfortunately, the industry in the United States has been unable to prevent some of these additional resources from being brought to the surface instead of being treated as reserves, thus creating a definite over-production within the country. The building up of huge stocks has thus resulted in a serious collapse of prices of both crude oil and refined products. Signs are not wanting that the seriousness of this situation is becoming more generally recognised, and there is a disposition amongst State Governments to promulgate laws having for their purpose a prevention of waste by the orderly development of new fields. There are also increasing signs that the industry in the United States can and will organise so that these wasteful methods shall once and for all be avoided and production kept within the safe limits of actual consumption. The development of such plans must of necessity take a considerable time, but, in spite of the recent fall in prices, I am more hopeful than for some time past that we are nearing this correcting movement. So far as the Shell Union Oil Corporation is concerned, it naturally prospers or suffers with the industry in the United States, but its position both as regards cash and reserves is unusually strong, and can well afford to await the trend of events. The passing of dividends is necessitated by the prevailing low prices, but the ultimate prosperity of the company is beyond doubt.

In Mexico results have been satisfactory, and we received dividends at the same rate as for 1929 from our investment in the two Eagle companies. Our refinery in the Argentine, to which I referred last year, is now completed and in operation, and we are able to proceed with our plans for further development in that country.

HOTEL CECIL PURCHASE.

I have been informed that a good deal of criticism has been levelled at us in connection with the purchase and reconstruction of the Hotel Cecil, and, therefore, wish to give you your directors' appreciation of the position. For more than two years prior to the purchase of the Hotel Cecil we were conducting a search for suitable and sufficient office accommodation, or alternatively for a site upon which it might be erected. Eventually, the Hotel Cecil site was offered to us, and suggested itself as easily the best solution of the problem with which we had so long been faced.

In spite of increasing competition, much of it from new directions, the popularity of Shell motor spirit throughout the world has been maintained. There is evidence of the same appreciation as ever on the part of motorists of its unassailable quality, its uniformity and reliability, and of its availability even in the remotest villages. At the same time, it must be admitted that price-cutting is rampant to-day, particularly in the cheaper qualities of petrol. We have never instituted price-cutting, but the policy of your board is that we must hold our share of the trade here by meeting it, no matter to what lengths we may have to go in order to keep an outlet for our production.

CONDITIONS AFFECTING THE INDUSTRY.

The present depression in the oil industry is obviously due to causes which are outside the scope of the industry itself, and it is to the statesmen of our own and other countries that we must look for remedial action in these purely political complications. The news we have recently received seems to betoken a realisation of these facts, and, what is more important, an attempt to begin constructive dealing with them. But I still hold that the way must be long and rough, and the effect of any remedial measures, if and when adopted, as opposed to suggested, cannot be felt immediately. Still, things have begun to move in the right direction, and one can perhaps take a more hopeful view of the world to-day than a week ago. At present, I say unhesitatingly that the business depression has been largely brought about by almost universal Governmental interference with the immutable law of supply and demand. I claim that our policy of conservation of production, of scientifically adjusting supply to demand, is the only sound and logical method. But in our industry, as in many others, overwhelming stocks exist, and I can see no hope of a readjustment of values till they are liquidated, however big a realised loss on book values such liquidation may entail on those who have not, like our group, consistently taken their stocks at well below ruling market price, however low that may be.

The report and accounts were unanimously adopted.

BRITISH EMPIRE TRUST COMPANY, LIMITED.

SUCCESSFUL RESULTS IN A DIFFICULT YEAR.

The thirtieth ordinary general meeting of the British Empire Trust Company, Limited, was held, on the 22nd instant, at the Great Eastern Hotel, London.

Mr J. Davidson (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that with the possible exception of the year 1914-15, following the outbreak of war, they were now considering the results of the most difficult and trying year the company had experienced during the twenty-five years for which he had been responsible for the management and direction of the company.

In common with other financial companies, the company had been adversely affected in three ways: firstly, by the fact that profitable financial business had been almost impossible to obtain during the past twelve months; secondly, depreciation in the value of securities had been, with a few exceptions such as British Government and Dominion of Canada Government stocks, continuous and severe; and thirdly, interest rates on well-secured loans and first-class investments had fallen substantially. As an example of the last mentioned, he pointed out that the average rate earned on British Government Treasury bills, of which the company, owing to the nature of its business, usually required to hold a substantial amount, was only £2 5s. 7d. per cent. for the year ended April 30, 1931, as compared with £4 17s. 1d. per cent. for the previous year.

Under these circumstances he felt that in recommending final dividends of 2 per cent. on the preferred ordinary and 3 per cent. on the deferred ordinary shares, making total dividends of 5 per cent. on the preferred ordinary and 7 per cent. on the deferred ordinary for the year, the company had satisfactorily surmounted a most difficult period, especially bearing in mind that depreciation had been fully provided for and that the capital of £845,259 and reserve fund of £225,000 remained intact. He reminded the shareholders, however, that the company was not merely an investment trust company which could afford to disregard depreciation of its investments: it was formed to carry on a financial business of a wide and general character, and to succeed in such business it was essential that its capital should be unimpaired and that its standing and credit, which were among its most valuable assets, should be kept on a sound and unquestionable basis.

Moreover, there was nothing in the immediate outlook which justified the company in assuming that it might not suffer further depreciation during the current year, nor would he be justified in assuming that conditions which had shaken some of the soundest preference and debenture stocks might not, coupled with the low rates earned on first-class securities, lead to some temporary reduction in their interest and dividends from investments and interest on loans. So far as he could judge, however, at the present time, the company should be able to maintain dividends on at least the present level unless conditions became worse than he anticipated. Canada, in which they were largely interested, had, as a producer of large quantities of primary products, suffered severely as the result of the great fall in prices. Wheat, lumber, newsprint, metals, and many other commodities were at unnaturally low prices, having regard to the cost of production. The decreased purchasing power of the producers of these commodities had, in turn, reacted on every branch of her industrial activity. Canada, during the year 1930, reached the record output of 2,089,766 fine ounces of gold, as compared with 1,928,308 ounces the previous year. The production of silver, copper, lead, zinc, and petroleum also increased as compared with 1929, and while there were slight decreases in the production of nickel, asbestos, and coal, and lower prices prevailed for all minerals, except gold, the total value of minerals produced in 1930 was \$278,470,000, as compared with \$310,850,000 the previous year.

After referring to some of the more prominent Canadian companies with which the Trust was closely associated, the chairman said it was gratifying to be able to record that the West Gloucestershire Power Company, Limited, had made excellent progress in 1930. The report for that year showed an increase in units sold of no less than 10,500,000—an increase of approximately 79 per cent. over the previous year. The gross revenue increased by 32½ per cent. The year 1931 has opened well, the figures of units sold for the first five months from January to May being 11,265,395, as compared with 10,141,769 units in 1930—an increase of 1,123,626 units. The company's power station at Lydney had been included in the Central Electricity Board's scheme for South-West England and South Wales as one of the "selected" stations, from which the Central Electricity Board would purchase supplies. The "selection" of the company's Lydney power station for the national scheme would facilitate future development and would ensure that the company's requirements for electricity would be obtained in the most economical manner.

The report and accounts were unanimously adopted.

HENDERSON'S TRANSSVAAL ESTATES, LIMITED.

STRONG POSITION—DIVIDEND MAINTAINED.

The nineteenth ordinary general meeting of Henderson's Transvaal Estates, Limited, was held, on the 24th instant, at River Plate House, London, the Right Hon. Lord Stanley of Alderley, K.C.M.G. (chairman of the company), presiding.

The Secretary (Mr F. R. Cunningham) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Turning to the balance sheet, the issued capital of the company is decreased by £140,924 7s. as the result of the resolutions for the return of capital passed at last year's meeting.

The distribution of cash was carried out without any difficulties, and out of the £140,924 there only remains the sum of £2,102 to be collected by shareholders.

Amounts due to subsidiary company at the close of the financial year was £288 less than last year.

Sundry creditors are £2,749 higher, the whole of this sum being in respect of unappropriated income-tax balances at present in suspense.

Reserve for depreciation in investments, &c., remains at £100,000.

Turning to the other side of the balance sheet. The figure against "subsidiary companies" is £42,880 lower, due to the reduction in the capital of the Henderson Consolidated Corporation £38,551, and £6,408 Second Debentures of the Delagoa Bay Development Corporation, Limited, redeemed during the year.

Properties, plant, &c., stand at £4,200 less—£3,000 representing the normal annual depreciation on the by-products plant, and £1,200 repayment of advances made to that undertaking.

Government stocks are £55,609 less, having been realised to provide moneys for the repayment of capital, but during the year an additional £40,238 has been put into Treasury Bonds, so that the actual balance representing our holding in gilt-edged securities was, on March 31, 1931, only £15,371 less than at March 31, 1930.

Other stocks and shares are reduced by £68,494, our realisation of shares in Daggafontein Mines being responsible for most of this sum.

The market value of our quoted stocks and shares, which includes our holdings in Government securities, is higher than the cost at which they stand in the books of the company. The book value of our holdings in subsidiary companies is on a very conservative basis, and in this connection I would point out that the reserve for depreciation still stands at the substantial figure of £100,000.

Sundry debtors were £11,365 higher; most of this sum has since been received, and the balance is quite secure.

Cash in London is £29,626 lower, that in Johannesburg £14,972 higher. The reduction on balance is due to the repayment of capital.

Turning to the revenue and expenses account, London expenditure is increased by £986, of which £775 is directly attributable to the costs of reduction of capital. Johannesburg expenses are £55 lower on balance, higher administration expenditure being more than compensated for by a reduction in Transvaal provincial tax.

London revenue is £1,007 lower, in consequence of income from Government securities being reduced, as previously mentioned.

Johannesburg revenue is £1,084 less, profit on sale of land being only £25, as compared with £1,421 last year.

The balance of profit for the year carried to the balance sheet is £36,335, making, with the amount brought forward from last year, £46,872 to the credit of profit and loss. We have already paid you an interim dividend representing £17,606, leaving an unappropriated balance of £29,266. Out of this we recommend the payment of a final dividend at the rate of 2½ per cent., less income tax, making a total of 5 per cent. for the year ended March 31st last, leaving a balance of £18,345 to be carried forward to the current year.

We also declare an interim dividend of 2½ per cent. in respect of the current year, both dividends to be paid simultaneously.

The Chairman, having dealt with the company's various properties, continued:—Our policy during the very disturbed times through which the financial world has been passing has been directed to the conservation and strengthening of our liquid resources and the maintenance of the rate of dividend paid. The results which have been laid before you, in my opinion, furnish ample confirmation of the wisdom of the board in following the policy, laid down. After the repayment of capital, we reckoned we should still have in cash and Government securities a sum amounting to £127,000. What is the position now? In cash and Government securities we have over £200,000—(hear, hear)—we are paying a dividend at the same rate, and are carrying forward a higher sum to the current year. I quite realise that we might have secured higher rates for our money, but I think you will all agree that had we tried to do so we must have run the risk of destroying the very satisfactory position in which we are at the present time.

The report and accounts were adopted.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

STRONG AND SOUND FINANCIAL POSITION.

The annual general meeting of this corporation was held in Johannesburg on the 23rd instant.

Sir George Albu, in the course of his address, stated that the report and accounts reflected the results of an abnormally difficult time in the financial world, during which the resources of many business concerns had been severely tested. Nevertheless, the corporation had weathered the storm well and was in a strong and sound financial position.

The decreased profits were entirely due to the adverse market conditions prevailing, and, as they were insufficient to provide for the depreciation in certain stocks, etc., the directors had decided to transfer £100,000 from general reserve for that purpose.

Since the close of last year there had been a fairly general and substantial appreciation in the market price of the shares of many companies in which the corporation was interested. As a result the considerable margin which existed in the values of stocks and shares over the figures at which they appeared in the balance sheet at the end of December had been substantially increased. The surplus of liquid assets, apart from stocks and shares, over current liabilities was well over £500,000, which, having regard to the unprecedented period of financial stress experienced during the last two years, was extremely satisfactory.

The profits of West Rand Consolidated Mines for the five completed months of the current year were £117,777, and thus showed an increase of £20,000 compared with the corresponding period of 1930. The profit for May of £25,001 represented a further record. The actual ore reserves exceeded 5,000,000 tons, or sufficient to supply the plant for over five and a half years. The outlook for this mine was distinctly favourable, since, apart from the very satisfactory scale of profits, the company's indebtedness to the corporation had been reduced from £216,125 at the end of last year to about £70,000 at the present moment.

In conclusion, the Chairman stated that, if South Africa was to maintain her present position, it was essential for her to reduce the high scale of taxation, and to amend the restrictive legislation which was holding up prospecting and mining operations to a large extent. He was hopeful that the Government, which had recently shown its realisation of the value of the mining industry to the country, would alleviate the position.

SCRIBBANS AND COMPANY, LIMITED.

SATISFACTORY TRADING RESULTS.

The fourth annual general meeting of Scribbans and Company, Limited, was held, on the 24th instant, at the Hotel Victoria, London, W.C.

Mr Philip E. Hill (the chairman), in moving the adoption of the report and accounts, said:—We have made a profit for the year of £259,593, which is comparable with £284,410 for the previous year, a difference of some £25,000. But, in making this comparison, it should be borne in mind that we have carried out considerable developments of the business, and, although last year we provided a sum of £35,000 for this purpose, we have not used any of this money, but have taken the whole of the expenditure out of this year's trading profits. In addition, we have written down our Stock Exchange investments, so, taking these facts into consideration, the trading results for the year are satisfactory.

Our Stock Exchange investments stand at £89,000 odd, as compared with £124,000 odd in the previous year, the difference of £35,000 being accounted for partly by sales and the balance by the amount written off. You will notice that the loans to our subsidiary company have been increased by some £46,000, this being required in connection with the completion of its new factory and plant.

The year under review has admittedly been one of the most difficult in the history of our country, and I think we should all be exceedingly grateful for the results achieved.

We have increased our trading facilities at Smethwick, and it is anticipated that the whole of the extensions will be completed by the end of August next. Our Irish business continues to be satisfactory, and we are satisfied that it offers scope for further profitable expansion. To meet this we are arranging immediately to extend our works in Dublin. The biscuit business continues to be satisfactory, and our new works are completed and producing. They represent the last word in the shape of biscuit factory and machinery, which we hope will enable us to earn increased profits.

The outlook during the last day or two has improved, consequent upon America's proposal to postpone payment of interest on the war debt, but the trading position is still full of very considerable difficulty. Our average profits during the last three years have exceeded £250,000 per annum, and, if nothing untoward occurs, I hope that this will be maintained in the ensuing year.

Mr Louis Nicholas, F.C.A., seconded the motion, which was carried unanimously.

UNION CORPORATION LIMITED.

STRONG CASH POSITION.

MR P. M. ANDERSON'S REVIEW OF POSITION AND PROSPECTS.

The ordinary general meeting of shareholders in the Union Corporation, Limited, was held at Johannesburg on May 29th. Mr P. M. Anderson presiding.

The Chairman, in the course of his remarks, said:—

The world-wide depression which set in from October, 1929, and which became accentuated during 1930, has had its effect on our net profit; which fell from £418,034 to £248,888. I need not remind you of the precipitous decline in share and security prices, especially towards the end of last year, nor of our custom of providing currently and fully out of receipts for writing down any assets that may stand in our books above the market prices ruling at the time we make up our accounts. In accordance with this custom we have devoted a considerable part of the profits we had realised to writing down our shareholdings, which in the aggregate continue to show, as you will have seen from the directors' report, a very substantial margin of unrealised profit.

LOWER RECEIPTS.

But this is not all, for our receipts from dividends declined, mainly owing to a reduction in the distribution made by the San Francisco Mines of Mexico, and there was also a falling off in our income from interest, owing to the low rates ruling in the short money market, and in commissions, owing to the curtailment of business activity generally. If one has regard to the severity of the world depression, the wonder, perhaps, is not that the profits were so much reduced, but that they have not fallen off by a much greater amount, such as has been the case with most companies engaged in business similar to our own.

We have added to the reserve account the usual amount of £30,000 out of profits, raising it to £690,570, and have paid dividends amounting to 3s. 3d. for the year, as compared with 5s. 6d. for 1929, while the amount carried forward is £111,017, as against £119,629.

BOOK COSTS OF HOLDINGS.

The book cost of our share and debenture holdings, after making due allowance for writing down shares to the market prices of December 31st, stands at £2,057,152, which compares with £2,107,420 a year earlier. Our cash position remains strong, the cash assets, excluding debtors, amounting to £1,979,609, while our total liabilities figure at £2,243,350, each of these items being about £90,000 below the previous year.

We have never ceased to regard the development of gold mining interests on the Rand as our chief concern. Indeed, we have for many years been preparing for extending our interests in the Far East Rand, and our efforts are now coming to fruition. I refer to the East Geduld Mines, which, after the development which has continued since the beginning of 1927, has erected its reduction plant and is about to enter the producing list; to Grootvlei, in which we more recently acquired an interest from the African and European Investment Company, and which, with the assistance of a lease granted by the Government, it is proposed should be opened up under our management; and to Vlakfontein No. 21, the property of the Lydenburg Gold Farms, Limited, in which we have been interested for many years and which it is also proposed to test with a view to turning it to account if satisfactory results are obtained. We are therefore taking a leading part in opening up the farther East Rand.

The affairs of the Witwatersrand gold mining companies in which the corporation is principally interested were then reviewed by the chairman on the lines of the addresses from the chair at the recent general meetings of these concerns.

VALUABLE ORE BODIES ACQUIRED THROUGH MERGER.

In regard to interests held elsewhere he said:

As mentioned in the annual report, the interests of the Bwana M'kubwa Copper Mining Company, Limited, and the N'changa Copper Mines, Limited, were merged during the year with those of the Rhodesian Congo Border Concession, Limited, and the latter company has now changed its name to the Rhokana Corporation, Limited. During the negotiations which preceded this consolidation we took up the attitude that the Rhodesian Congo Border Concession, Limited, would have been better off if it had remained unattached. We still think so, but nevertheless the assets acquired by the consolidation are very valuable, and we have confidence in the future of the enlarged company. In particular, the ore body at N'changa West continues to show excellent development results, and there is little doubt that it is the largest single body of such high grade copper ore in the world. With this ore body and the other very important ore bodies at N'changa and N'kana, acquired through the consolidation scheme, it is reasonable to assume that ultimately the company will be one of the world's most important copper producers. In view of the high grade of the Northern

Rhodesian ore bodies in general and of the N'changa West ore body in particular, the costs of production should compare favourably with other large world producers.

SAN FRANCISCO MINES OF MEXICO.

The world depression has hardly had a more severe effect than upon the prices of metals which are basic raw materials. Lead, zinc and silver have fallen this year to one-third of the prices of 1925, when those prices were high, and to a little more than one-half of the quotations of 1913. The fall was considerable even during the year to September 30th, and as a consequence the dividend of the San Francisco Mines of Mexico, Limited, was only 1s. per share as compared with 3s. 9d. to 4s. for each of the preceding five years. The world production of these metals has been reduced in each case instead of being increased in the normal fashion, but the reduction has been insufficient to equalise with the demand, which has been exceptionally low and which has resulted in material increases in the unsold world stocks. A consequence of the fall in prices so far as the San Francisco company is concerned has been that half of the projected increase in the milling programme has been postponed until better times, though the first half went into commission last June. During the current financial year there has been a further falling off in profits, due to the same cause. Apart from this the mine is in an excellent condition, and the blocked-out and total reserves are four and a half and six years ahead of the mill, a position which is exceptional for a Mexican mine.

BRITISH ENKA ARTIFICIAL SILK COMPANY.

The British Enka Artificial Silk Company, Limited, again made a considerable loss, attributable to the extraordinary fall in price of rayon, which was aggravated by a considerable amount of unnecessary price-cutting in the trade. The company is now producing rayon as high in quality and probably as cheaply as any other manufacturer in England. It has, moreover, the unstinted support of the A.K.U., the powerful Continental combine, which lends its aid in all technical matters and in finance. The outlook, therefore, is not devoid of encouragement.

POLYPHONWERKE AKTIENGESELLSCHAFT.

Trading in the case of the Polyphonwerke Aktiengesellschaft has been at low ebb in harmony with general conditions. Whilst the company paid dividends of 20 per cent. per annum for the previous two years, the dividend for 1930 was reduced to 12 per cent. In the gramophone record field the company has in Central Europe a high reputation, which is gradually spreading, as indicated by the encouraging development of its export trade.

The report and accounts were adopted.

BEECHAM'S PILLS, LIMITED.

HOME SALES MAINTAINED—PROGRESS OF THE SUBSIDIARIES.

MR PHILIP E. HILL'S STATEMENT.

The third ordinary general meeting of Beecham's Pills, Limited, was held on Thursday, June 25th, at the Victoria Hotel, Northumberland Avenue, London, W.C.

Mr Philip E. Hill, the chairman of the company, in moving the adoption of the report and accounts, said:—Ladies and gentlemen, we have made a net trading profit for the year of £163,492 7s. 7d., which is some £39,000 less than the profit for the previous year; £21,000 of this is accounted for by profits of a non-recurring nature, and the balance by the fall in the company's export business, which can hardly be wondered at, having regard to world conditions which are undoubtedly the most difficult experienced in our time. It should, however, be a source of the greatest satisfaction to all of us that our home sales have been fully maintained.

Although it looks as if the slump in the world's trade may now be stayed if those in authority exercise ordinary common sense and prudence, there are still many difficulties to be overcome, and one must be ultra-conservative in anticipating future trade profits. With this fully present in our minds your board are of opinion that the profits for the ensuing year should be materially increased.

The acquisition of Yeast-Vite, Limited, has been fully dealt with in the report, and therefore it is unnecessary for me to go over this ground again other than to say that the business is progressing satisfactorily, and the trade so far this year is in excess of that of last year. Our other subsidiaries, which include Veno's, Pritchard and Constance, Sherleys, etc., have shown a steady improvement during the last few months.

In recommending a reduced dividend on the deferred shares, it may be suggested that your directors have erred on the side of caution. Be this as it may, we are satisfied that in the interests of all concerned it is the best policy to pursue.

Mr Louis Nicholas, F.C.A., seconded the motion, which was carried unanimously in the absence of question or comment.

A hearty vote of thanks to the chairman and directors closed the meeting.

HARLAND AND WOLFF, LIMITED.

RESULTS AFFECTED BY SHIPPING DEPRESSION.

The annual general meeting of Harland and Wolff, Limited, was held, on the 25th instant, at Winchester House, Old Broad Street, London, E.C.

Mr F. E. Rebbeck, J.P. (chairman and managing director), presided, and, in the course of his speech, said: When I accepted the invitation of the voting trustees and my co-directors to become chairman of the company, I was fully conscious of the difficulties attached to the position, and realised that, while it was a mark of their confidence, it was accompanied with great responsibility. Nevertheless, from my intimate knowledge of the personnel, the plant and the organisation of the company, I felt convinced that Harland and Wolff could face the position with courage, and the conviction that there is still a future for the great shipbuilding and engineering companies in this country.

As you will see from the report, the year's working has resulted in a profit of £105,745, after providing a sum of £250,000 for depreciation. The result is not such as you and I would desire to see as the outcome of a year's working in this large undertaking; but, in view of the prevailing depression in the heavy industries, it cannot be regarded as altogether unsatisfactory.

Unfortunately, with the steady falling off of work in the yards, the present year much show a much less satisfactory result. The entire absence of new inquiries at this season of the year means that no new work is likely to come forward in time to influence the current year's results.

We built motor vessels ranging in size from the White Star Liner "Britannic," of 27,000 tons, to a small sternwheel steamer, recently delivered for service in Nigerian waters. The first-named vessel has already established a high reputation in the North Atlantic for sea-going qualities and economical working, and we have under construction at Belfast a sister vessel for the same owners. Several important vessels were also delivered to the Union-Castle Line, and in the course of the year we completed the machinery conversion for a third large passenger vessel for the Canadian Pacific Steamships, Limited. At the end of the past year we had also in hand the fine new motor passenger liner "Reina del Pacifico," which has since been delivered to her owners, the Pacific Steam Navigation Company. This vessel, unique in many respects, has just returned to this country after completing a very satisfactory maiden voyage to the west coast of South America. She should prove a valuable acquisition to the Pacific Company's fleet and worthily uphold the prestige of British shipping, having, amongst other attainments, established a record for low fuel consumption.

The work in hand at Belfast includes the White Star motor liner "Georgic," 27,000 tons; and a motor liner of 14,000 tons for the Nelson Line, also the Elder Dempster new passenger liner "Achimota" is approaching the finishing stage. We have two vessels for the Anglo-Saxon Petroleum Company, Limited, under construction at Glasgow; and, in addition to the machinery for all these vessels, we are also constructing land engines, including a fine installation of Diesel engines for the Bank of England.

As indicative of the extraordinarily rapid falling off of work that took place in the year under review, and which is taking place to a still greater extent during the current year, I want to give you a brief statement of the number of men we have employed in the past and now employ, because there is no better index of the prosperity or depression in the industry. At the time when the industry was fairly well occupied, in 1923, we gave employment throughout our organisation to about 48,000 men, and at the beginning of 1930 the number had only fallen to 44,000; whereas by the early part of 1931 the number had fallen to exactly half, namely, 22,000 men. These figures include the men employed by our subsidiary shipyards, steel works and collieries, and they show the difficulty of our position, for standing charges like rents, rates and supervision cannot be brought into immediate conformity with such rapidly diminishing numbers of men employed.

During my remarks I have given you a plain statement of the actualities of the situation. The present state of the industry generally does not permit of any other treatment. But, having placed the facts regarding the outlook quite clearly before you, I would like to say, in conclusion, for the benefit of those shareholders who are not already aware of the fact, that you have in our different establishments the best-equipped shipbuilding, marine engineering and repair works to be found anywhere. The organisation is in a healthy condition so far as its technical ability is concerned, and is backed by a capable and willing body of hard-working men; and, without fear of contradiction, I say we have an undiminished ability to deal with the biggest and most progressive developments that are likely to be met in the future. Optimism is not fashionable at the present time, but I sincerely hope pessimism will not take its place.

The report and accounts were unanimously adopted.

BANK OF BRITISH WEST AFRICA, LIMITED.

EFFECTS OF BAD TRADE.

The thirty-seventh annual general meeting of the Bank of British West Africa, Limited, was held, on the 25th instant, at 37, Gracechurch Street, London, E.C.

The Right Hon. the Earl of Selborne, K.G., G.C.M.G. (the chairman), said that the profit shown was only £24,568, as compared with £121,821 last year, and nothing had been allocated to the contingency fund which they had been building up during more prosperous years, or to the premises and furniture account. The balance to be carried forward was £30,000, as against £53,432 last year. It was an unpleasant duty to present a report which proposed to reduce the moderate dividend of 6 per cent. paid by the bank during recent years to 4 per cent., but he had no apology to make on the subject.

The directors had drawn attention in the report to the advantageous position in which the bank stood owing to its reserves and liquid position. He wished to stress that fact again because never had it been in a sounder or stronger position than it was that day. The reduction in the profits was not caused by any losses made by the bank, but simply by the fact that the year covered by the accounts under review had certainly been the worst year for trade known in West Africa since the establishment of the bank there.

Quite naturally, the West African did not understand why his produce should have fallen so much in value. He suspected that he was not being fairly treated, and did not understand that he was the victim of a world-wide depression. He ceased to cultivate, or held up his produce, or sold it slowly and only as he was forced by his wants to realise something. The inevitable consequence was that the volume of the demand for money and goods fell off; there was comparatively little outward or inward flow of business, and the banks suffered with the rest of the community.

So far as he could see, the current year was going to be a worse year for the trade of the world than last year, and they, no more than any other bank, could escape the consequential falling off in business. Until Mr Hoover made his famous proposal on Monday last, he (the chairman) had not been able to see that the clouds were lifting anywhere. That proposal was the first ray of hope. If goodwill and a full appreciation of the seriousness of the consequences to the world at large of rejecting that proposal prevailed and the proposal, with all its implications, was frankly accepted, last Monday might prove the turning point of the world's misery.

The report and accounts were unanimously adopted.

UNITED KINGDOM TOBACCO COMPANY (1929), LIMITED.

CURRENT YEAR'S PROSPECTS.

The second annual general meeting of the ordinary shareholders of the United Kingdom Tobacco Company (1929), Limited, was held, on the 23rd instant, at Winchester House, London.

Mr Arthur Donn (chairman of the company), in moving the adoption of the report and accounts, said that the year under review had been one of grave anxiety. In the early months of 1930 they were faced with the most worrying and unsatisfactory trade conditions both abroad and in the home market. They had always been dependent on their export trade to India, China, and Australia, and the sale of 10 for 6d. cigarettes in the home market for the bulk of their revenue. They found that, owing to the general boycott, their business in India practically collapsed, their business in China was not profitable, owing to the fall in the price of silver, and their trade with Australia was reduced to minute dimensions, owing to the imposition of prohibitive tariffs. They also, like most manufacturers, found a serious falling off in the sale of better lines, owing to the fierce competition of coupon cigarettes. It was the duty of the directors to find a solution to the many difficulties which presented themselves, and he thought he could say that they had grappled with them successfully, although it had been a tough job. The problem of the lost export trade was tackled with determination and new markets were developed. In the home market they practically concentrated their efforts in promoting the sales of their coupon cigarettes—Bandmasters. He was happy to say that their efforts had so far been successful. The directors had arranged to prepare the accounts for the first six months' trading of the current year to June 30, and it would undoubtedly be as cheerful for the shareholders to hear, as it was for him to say, that although the first six months of the year in the cigarette business was not usually the best, he fully and confidently expected that the accounts would disclose that they had made a trading profit sufficient to reduce substantially—if not actually to extinguish—the adverse balance standing upon the profit and loss account at December 31, 1930.

The report and accounts were unanimously adopted.

BOOTS PURE DRUG COMPANY, LIMITED.

RECORD TURNOVER.

The forty-third annual general ordinary meeting of Boots Pure Drug Company, Limited, was held at Station Street, Nottingham, on June 25, 1931, the Right Hon. Lord Trent, chairman of directors, presiding over a large attendance of shareholders.

The Secretary (Mr A. Sugden) having read the notice convening the meeting, the minutes of the last annual meeting were taken as read and confirmed.

The report of the auditors, Messrs Sharp, Parsons and Company, chartered accountants, was then read by Mr J. C. Parsons.

Mr H. B. Holthouse, the oldest director, paid a tribute to the memory of the late Lord Trent, and the meeting stood in silence for a minute.

The Chairman said: Ladies and Gentlemen,—I should like to express publicly my appreciation of the kindness of my fellow directors in so readily postponing this meeting from the date originally fixed until to-day, and hope that this has caused no great inconvenience to the shareholders.

The facts concerning my father's business life are so well known that any comment from me would be superfluous; but I think you would like to know that although he had taken no part whatever in the management of the business since 1920, whenever his state of health permitted it he was keenly interested in hearing about the firm's activities and development, even up to a few weeks ago.

Following our usual custom, I presume that we may take the directors' report and balance sheet as read. At the end of March our colleague, Mr Ratcliffe, retired from the board. He had been with the firm 43 years, and had worked from the position of cashier up to that of director in charge of merchandise. Though he was active and well he felt that, having reached the age of 65, he should now make way for a younger man and devote his time and energy to some other form of public work. There is a great deal of work in a large city like Nottingham which can only be carried on by such public-spirited men as Mr Ratcliffe. He had always taken a great interest in the young people on our firm, and it is interesting to note that many of the younger departmental managers owe a great deal to his training and encouragement. I am sure he has the best wishes of us all in his retirement.

Turning now to the balance sheet, you will see that freehold properties are up £136,638, which is largely accounted for by the steady progress which has been made with our new manufacturing laboratories at Beeston.

Plant and fittings show an increase of £47,517, which is £6,716 more than last year.

Sundry debtors show an increase of £9,895.

Stock in trade shows a decrease of £105,655, which, in view of the present trend in prices, is a very satisfactory feature.

The amounts owing by subsidiary companies show an increase of £208,265.

On the other side of the balance sheet you will see that creditors show a decrease of £43,122.

We have transferred £30,000 to the general staff pension fund, which is £5,000 more than last year. £11,247 interest has been added to this fund, against £9,521 last year, and it now amounts to a total of £266,189. Last year we paid £13,800 to those members of our staff who had had to retire through sickness or advancing years.

Turning to the profit and loss account, you will notice that the balance, after deducting various charges, is £722,264, which I am sure you will agree is highly satisfactory in times like these. I need hardly say that these profits are the result of trading operations.

After payment of all preference and preferred share dividends, and after payment of four quarterly dividends of 6 per cent., less tax, on the ordinary shares, we have a balance from the year's profits of £265,514, which, together with the balance from last year, amounts to £495,342. Your directors recommend the payment of a bonus of 1s. per share, free of income tax, on the ordinary shares, absorbing £75,000, the same as last year, and a transfer to the reserve fund of £200,000, leaving £220,342 to be carried forward to next year.

The increase in the number of customers was nearly 7,000,000, and, in spite of the drop in prices and the lower purchasing power of the public, our turnover was much the largest the company has ever had. From these facts, together with the figures which I have just read to you, there is only one conclusion to be drawn, that is, in spite of all the difficulties, and they have been many, that the year's results are satisfactory. In order to get these results, every process in our organisation, whether in the laboratories, warehouses or offices, is under constant revision with a view to efficiency and economy, and wherever improved methods or machinery can be introduced, we are doing so.

Concurrently with this, we are striving the whole time to improve

our service to our customers, and I am satisfied that we have never given better value to the public than we are giving to-day.

Satisfactory progress is being made with the second unit of our new plant at Beeston, which, when complete, will be a model works in every respect, and we hope to start production there during 1932.

Realising our responsibility to our millions of customers, we have made it a matter of principle, not only to afford the utmost possible service to the public in our branches, but also to carry out and support researches directed to the prevention and cure of diseases in every possible way.

This we do by means of original investigations carried out in our own laboratories, and also by assisting workers in the field of medical science by preparing for them, often at considerable expense to ourselves, various drugs for clinical trial. Acknowledgments in medical and scientific journals bear witness to this fact. Our contact with important hospitals and with the leading representatives of medical and scientific research in this country has enabled us to improve and extend our range of special medical products. In a time of general trade depression, from which the chemical industry as a whole has not escaped, it is a matter of pride to record that the department manufacturing our fine and medicinal chemicals has had a record year, and that the demand for our brands of staple fine chemicals, such as aspirin and insulin, continues to increase rapidly.

In accordance with our policy and duty to medical science in this country, we have introduced new products of our own manufacture, and have imported products to assist in the treatment of various diseases. For some three years past we have made and marketed a liver extract in powder form, prepared by the official process, for the treatment of pernicious anaemia. This is necessarily expensive, owing to the method of manufacture, and, acting upon representations made to us, we now produce an extract of liver in fluid form, which costs less than the powder, and which has also been tested and found to be efficient clinically.

It is our policy to provide for our customers, not only the best medicines obtainable in the British Isles, but also to investigate the value of medicinal discoveries introduced in other countries. Published information showed us that the concentrated serum for the treatment of pneumonia, introduced by Felton, was saving many lives. After investigation we arranged to place our distributing facilities at the disposal of the Lederle Company, who are one of the manufacturers of this special serum, for supplying this valuable remedy throughout the country, and it has now been arranged that we shall be the distributors in Great Britain for all Lederle products.

During the year our research department has been keeping abreast of the trend of modern scientific opinion, particularly on the medicinal side. A prominent feature in recent medical literature, both in this country and elsewhere, has been the question of antiseptics, especially for use in midwifery, and of methods of evaluating them in the laboratory. Our bacteriological department has consequently made many tests upon the new and previously known antiseptics by a number of different methods, and in this way accumulated a sound basis of knowledge on which to build in future.

Some of the results of our researches have been published in scientific journals during the last twelve months; amongst them are papers dealing with our new antiseptic, Amyl-meta-cresol, the valuation of carbolic powder, the mode of action of insulin, and the syntheses of compounds allied to the active principle of ipecacuanha.

In spite of world-wide depression, I am pleased to say that our export trade has grown very satisfactorily during the past year.

Our retail companies have opened 33 new branches during the year, and the total number on March 31st last was 911.

The new shops at Cambridge and Norwich to which I referred in last year's report have now been opened some months, and show a satisfactory increase in business.

We have also rebuilt our shop at Coventry, and reconstructed our premises at Grainger Street, Newcastle, where we have instituted a 24-hour service. This has been greatly appreciated both by the doctors and the general public. During the last twelve months we have kept the whole of our 17,000 employees on full time, and a large number of men have been working on our extension at Beeston, and, in addition, we have spent over £200,000 on structural work to improve our various properties, and thus contributed in a small way to prevent unemployment from becoming worse than it is. Whilst the outlook for business in general is uncertain, we have satisfactory reserves, sufficient liquid assets for our requirements, stock in a healthy condition, and last, but not least, a loyal hard-working staff, who can be relied on to do their utmost for the success of the company.

I now move that the accounts be accepted, and that the appropriations out of the profits, as printed in the directors' report, be hereby approved.

Mr J. E. Greenwood, M.A., LL.B., A.C.A., seconded the adoption of the report, which was carried unanimously.

GEORGE NEWNES, LIMITED.

ANOTHER SUCCESSFUL YEAR.

The thirty-fourth annual general meeting of George Newnes, Limited, was held, on the 25th instant, at the offices of the company.

The Rt. Hon. the Lord Riddell, the Chairman, said: Ladies and gentlemen, notwithstanding trade depression, we are again able to present a satisfactory profit and loss account. The profit amounts to £154,184, compared with £155,284 last year—a difference of only £1,100.

We propose to pay a final dividend on the ordinary shares at a rate of 9 per cent., making 15 per cent. for the year, together with a bonus of 5 per cent. We also propose to transfer £7,500 to the sick and pension fund and for staff bonus, to transfer £10,000 to general reserve, and to carry forward £59,523, compared with £57,101 last year. In dealing with the subsidiary companies we have only taken credit for dividends paid by them to Newnes as holders of the ordinary shares in these undertakings. We have not taken credit for sums carried forward by our subsidiaries, or for amounts placed by them to reserve. These amount in the aggregate to a substantial sum, and may be regarded as nest-eggs for George Newnes, Limited.

STRONG BALANCE SHEET.

To turn to the balance sheet. The increase in sundry debtors is due to an increased turnover in certain departments. The balance of the £100,000 borrowed by *Country Life* from bankers to purchase the business of Messrs W. H. and L. Collingridge has been paid off. Notwithstanding this expenditure, on March 31st Newnes and its subsidiaries had standing to their credit at their bankers a total sum of £233,000.

We are entitled to claim that sound conservative finance has been largely responsible for the success of our business, which is capitalised at a very moderate figure, both as to preference and ordinary shares. There are no debentures, except those of subsidiaries held by Newnes.

Having referred to the list of important publications controlled directly or indirectly by the company, numbering twenty-five weeklies and monthlies, the Chairman proceeded to say:—The company and its subsidiaries also own unencumbered freehold and leasehold properties of very considerable value. The bulk of these have been purchased out of the company's reserves and profits—that is, without raising fresh capital. The same remark applies to our great printing works at Exmoor Street, Notting Hill—one of the largest and best-equipped works in the kingdom. When we established these works some years ago, the company formed to acquire them, in which we hold all the ordinary shares, issued £150,000 debentures to the public, but these have since been paid off by Newnes and Pearson's out of their reserves and profits, and they now hold the debentures.

In view of these results I need hardly tell you that our publications have been doing well. We continue to cater successfully for all tastes and all classes. Considering the depressed conditions obtaining in some of our overseas markets, circulations abroad have been well maintained.

" TIT-BITS " JUBILEE.

This autumn *Tit-Bits* will celebrate its jubilee. Its fiftieth birthday will be marked by special numbers of a most interesting and appropriate character. Sir George Newnes made two great inventions, first, *Tit-Bits*, which revolutionised the presentation of printed matter, and, second, the *Strand*, which, under the editorship of my friend and colleague, Mr Greenhough Smith, revolutionised magazine production. *Tit-Bits* was, perhaps, the more important, as it awakened writers and readers to the advantages of brevity and simplicity. It is gratifying to think that a publication which has exercised such an important influence upon the English-speaking world is still in a highly-flourishing condition.

During the early part of the year, my colleague, Mr Edward Hudson, visited India to superintend the photographing of New Delhi for *Country Life*. The wonderful pictures now appearing in that paper are the fruits of his visit.

So far as the present year is concerned, I shall make no prophecies. Our business more than most depends on general trade conditions. If other trades are doing well, we do well. If other trades are doing badly, we suffer in consequence. A revival in trade

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street London, E.C.4.

LOST.—Within the past twelve months, all over the country, much money invested in stocks and shares; owners desirous re-creating estates.

FOUND.—A gilt-edged security liable to appreciate, not depreciate; carries rights to income tax rebates; buyable in a rising market; creates an immediate estate. Apply LIFE DEPT., THE LIVERPOOL AND LONDON AND GLOBE Insurance Company, Ltd., 1, Dale Street, Liverpool.

RE-CREATE YOUR ESTATE THROUGH THE LIVERPOOL AND LONDON AND GLOBE INSURANCE Co., Ltd.

depends in a great measure on a reduction in taxation. Like most other businesses, we are suffering from heavy taxation, which prevents us from starting new enterprises that would provide employment and, we hope, additional profits.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Frank Newnes, Bart. (vice-chairman), seconded the resolution, and the motion, having been supported by Sir Neville Pearson, Bart. (vice-chairman), was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended June 20, 1931, amounted to £11,619,500 against ordinary expenditure of £21,721,000. After allocating £610,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £134,523, the week's operations, as shown below, increased the National Debt by £10,846,000 to £7,683,276,000:—

(000's omitted.)

Public Department Advances...	+ 10,200	Bank of England Advances.....	- 2,500
Treasury Bills	+ 3,027	Road Fund.....	- 281
National Savings Certificates...	+ 400		
	+ 13,627		- 2,781

A complete analysis of the National Debt at March 31, 1931, was printed in the *Economist* of April 4th.

NOTICES.

Barclays Bank announce the opening of a new branch at 39 Hill-side, Stonebridge, N.W.10.

At the organisation meeting of the board of directors of the National City Company, held on June 8th, which followed the meeting of trustee shareholders at which the present board was re-elected, the directors re-elected all executives of the National City Company with the exception of Mr Ronald M. Byrnes, who has retired as vice-president of the company. In addition, the following executives were elected: Mr Hendrik R. Jolles as vice-president at the head office in New York; Mr Gordon M. Morier as resident vice-president, with headquarters in London; Mr Henry Mann as resident vice-president, with headquarters in Berlin.

REPORTS AND NOTICES.

Mr William May, of Messrs Slaughter and May, has been elected a director of the Trustees Corporation, Ltd.

Mr A. E. Bell has been elected chairman of the Northern Maritime Insurance Company, Ltd., in place of Sir Gerald H. Ryan, Bart., who had signified his desire to relinquish his office as chairman, but who will continue as a director of the company.

Mr Arthur M. Walters has been elected chairman of the London Guarantee and Accident Company, Ltd., in place of Sir Gerald H. Ryan, Bart., who had signified his desire to relinquish his office as chairman, but who will continue as a director of the company. Mr Percy John Pybus, C.B.E., M.P., has been elected a director and deputy chairman of the London Guarantee and Accident Company, Ltd.

Sir Thomas Royden, Bt., C.H., has been elected chairman of The Union Marine and General Insurance Company, Ltd., in place of Sir Gerald H. Ryan, Bt., who had signified his desire to relinquish his office as chairman, but who will continue as a director of the company. Mr George Brookhurst has been elected deputy chairman, and Mr Percy John Pybus, C.B.E., M.P., has been elected a director of The Union Marine and General Insurance Company, Ltd.

The directors of Williams Deacon's Bank, Ltd., announce with great regret that Mr Reginald Thomas Hindley, owing to ill-health, has found it necessary to resign his position as general manager of the bank, a post he has occupied for the last sixteen years. To fill the vacancy thus created the directors have appointed Mr Harold Bradburn and Mr Richard Dobson, assistant general managers, to be general managers of the bank.

GOVERNMENT, &c.

STATE OF SAN PAULO.—Messrs. J. Henry Schroder and Co. are authorised by His Excellency the Minister of Finance of the State of San Paulo to publish the following announcement:—Owing to temporary exchange difficulties, the Government of the State of San Paulo has requested its bankers, in order to meet July 1st payments of interest and amortisation of the State of San Paulo 6 per cent. external sterling loan of 1928 and the next service of the State of San Paulo 7 per cent. (waterworks) loan of 1926, to utilise temporarily the service reserve funds held by them for such emergencies, which reserves will be reconstituted as soon as possible. The service of the Government of the State of San Paulo 8 per cent. sterling bonds, 1921, and of the State of San Paulo 7 per cent. coffee realisation loan, 1930, will be remitted regularly as usual.

STATE OF SAN PAULO COFFEE INSTITUTE 7½% STERLING BONDS.—Messrs. Lazard Brothers and Co., Limited, announce that the monthly remittances made to them by the State of San Paulo Coffee Institute during the six months December, 1930, to May, 1931, in respect of collections of the special gold tax of one gold milreis on each bag of coffee moved in the State of San Paulo amounted to £541,170. The tax so remitted constitutes the specific security for the 7½ per cent. sterling bonds of the institute, the half-yearly service of which requires £423,538. As already advertised, the coupon due on July 1st will be paid on that date. In addition, the reserve fund, amounting to one-half year's service money, namely, £423,538, is intact and is held in London in sterling by Messrs Lazard Brothers and Company, Ltd., in accordance with the contract.

MISCELLANEOUS.

H.M.V.-COLUMBIA MERGER.—Shareholders are reminded that the last day for depositing forms of acceptance and relative transfers accompanied by share certificates with Messrs Morgan, Grenfell and Company, 23 Great Winchester Street, E.C.2, is June 29th. If for any reason the share certificates cannot be produced, the necessary forms should be lodged with a covering letter of explanation.

THE UNION-CASTLE MAIL STEAMSHIP COMPANY, LIMITED.—The board of this company have had under consideration at their meeting, on June 23rd, the question of the payment of the dividends on the 4½ per cent., 6 per cent. "A," and 6½ per cent. preference shares, due July 1st next. The board have reviewed the matter exhaustively in all its bearings, and have come to the decision with much regret that, in view of the fact that the final call of 8s. per share (amounting to £399,560) in respect of the company's holding of ordinary shares of White Star Line, Ltd., has been made (of which £100,000 has been paid, and the balance will be paid in due course), the payment of the dividends on the company's preference shares should, for the time being, be deferred. The South African trade, in which the company is mainly engaged, has not hitherto suffered so severely from the acute general depression as has been the case in many other ocean trades, and the results of the company's working may, in the circumstances, be regarded as satisfactory. The directors remind the preference shareholders that the dividends on the 4½ per cent., 6 per cent. "A," and 6½ per cent. preference shares are cumulative, and hope that the resumption of the payment of dividends on these shares may not be long deferred. We are notified by the company that the half-year's debenture interest, payable on August 1st, will be met.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.—Net income, 1930-31, was £443,142. For 1929-30 it was £449,882. Ordinary dividend is 5 per cent., as before. Carry forward, 1930-31, was £118,426. For 1929-30 carry forward was £112,783.

The Royal Exchange Assurance announces that Mr S. Beresford Shaw, at present district manager of the South West London office, has been appointed manager of the West End branch as from July 1, 1931.

Commercial Reports.

MARKET SUMMARY.

The United States Government's proposal for the postponement, during one year, of all payments on inter-Governmental debts, reparations, and relief debts caused an upward movement in the principal wholesale commodity markets. "Bear" covering was, however, more in evidence than new buying, and on Tuesday a slight reaction became noticeable. The situation in the coal trade is still deteriorating, and in South Wales the position of the pits appears to be worse than at any time during this year. In the iron and steel industries the level of activity continues to decline. Non-ferrous metals advanced sharply, and tin is now substantially above the low level reached last week. Among textile raw materials, cotton recovered to some extent, but wool values are still low. The trade in finished goods has not improved. Among cereals, wheat has been slightly firmer, while barley, oats and maize were maintained at last week's level. The principal other foodstuffs all show an improvement on last week, when many of them reached their lowest level this year. Among miscellaneous commodities, oils and oilseeds advanced sharply, but hides failed to recover, and rubber, though slightly dearer than last week, was dull.

THE COAL TRADE.

SHEFFIELD.—Extreme quietude prevails in the South Yorkshire coal trade. Best quality steams for export sell fairly readily, but smalls and secondary qualities are a drug on the market. There is little or no contract booking. Export buyers regard current prices as being too high. The house-coal trade is quiet, the recent reduction of prices having had no effect. Demand for industrial fuel and furnace coke continues to diminish with easing prices. Best steams are quoted at 17s. 6d. and 18s., f.o.b.; best ordinary house at 18s. to 20s. at pits; and blast-furnace coke at 11s. and 11s. 6d. at ovens.

WORKINGTON.—The coal trade has slumped. The Irish market has never been more unsatisfactory, and one of the collieries at Workington employing 1,400 men has been idle for three weeks. There is a good deal of coal lying under load. A crisis has arisen on account of the reluctance of the men to accept the National Board's award of a reduction of 7½ per cent. in wages. Two ballots already taken resulted in a majority for a rejection of the award, but the result of the third ballot this week was not known on Wednesday. Prices are unchanged. Best round is 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b. Small, 16s. 6d. per ton. Best house coal, 31s. 8d.; and house nuts, 30s. at station. Gas coal, 28s. per ton. West Coast coke is from 17s. 9d. to 18s. 3d. per ton.

GLASGOW.—Conditions show little change in the Scottish coal trade. As a result of the continued restriction of outputs, supplies are, perhaps, not now greatly in excess of the demand; nevertheless, no difficulty is experienced in arranging tonnages of practically any quality, and prices show little or no improvement. Among large coals Fife first-class steams are firmly held, while among nuts singles are steadier than other sizes. Current prices for shipment are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 11s. 6d.-12s.; doubles, 11s.-11s. 6d.; singles 10s.; pearls, 9s. 3d.; dross, 9s.—FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s.; third-class steam, 10s. 3d.-10s. 6d.; trebles, 11s. 6d.-13s.; doubles, 10s. 9d.-11s.; singles, 10s.; pearls, 9s. 3d. LOTHIANS.—Prime steam, 10s. 9d.-11s.; secondary steam, 10s. 3d.-10s. 6d.; trebles, 12s.; doubles, 11s.; singles, 10s.; pearls, 8s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 12s.; trebles, 11s. 6d.; doubles, 11s. 3d.; singles, 9s. 6d.; pearls, 9s. 3d.; dross, 9s. 6d.

CARDIFF.—Colliery owners and exporters on the Cardiff coal market report an extreme slackness of new business, and with the expiration of contracts the position of the pits is probably worse to-day than it has been at any other period this year. Notwithstanding the reduction in the quota for the June quarter, many pits are working irregularly, and the authorised production for the September quarter has been further reduced to approximately about 70 per cent. of the standard tonnage. The docks are only partially employed, and on Tuesday the official returns of the Great Western Railway Company showed that only 59 tips were working, leaving 39 idle. Quotations are nominally unchanged at the minimum schedule figures. The competition of Scottish gas coals at prices substantially lower than those for South Wales gas qualities is receiving the attention of the Marketing Association, and the advisability is being considered of referring the matter to arbitration under the powers of Part I. of last year's Coal Mines Act. Patent fuel remains depressed, while pitwood prices are lower than they have been during the past five or six years. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 18s.; best small steam, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite

best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 27s. 6d. to 34s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 21s. 6d. to 22s.

IRON AND STEEL.

MIDDLESBROUGH.—There are no signs of improvement in the market for Cleveland iron, writes our correspondent, and business is practically at a standstill. Furnaces are getting rid of the bulk of the present limited output against old contracts, but many of these will expire at the end of the half-year, and what will happen then is extremely doubtful. Producers seem determined to adhere to the present official prices, and if this attitude is maintained local purchases will be restricted as much as possible, as users are not likely to buy ahead, particularly as concessions are being given to Scotch consumers to the extent of shillings per ton. This procedure has aroused a rather bitter feeling amongst local founders, and they are taking increased quantities of Midland iron, which they are able to buy on much better terms, notwithstanding the heavy carriage from producing works. Purchases of some Continental iron have also been made, and although no large quantity is definitely named as having been sold, it is likely that imports from the Continent will increase very shortly. There was almost an entire absence of business at Tuesday's weekly market, and official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.o.t. Business in hematite is still confined to lots for early delivery, and although these orders are increasing in number there is a marked disinclination on the part of consumers to contract ahead. No doubt they are influenced in this policy by the recent weakening in prices, and are waiting to see whether there is likely to be any further fall. In the meantime, mixed numbers are obtainable at 62s. 6d. for early delivery, and for delivery a few months ahead 3d. to 6d. more is asked. There is little new to report in the finished trades, but works keep moderately employed on old contracts. It is not expected that there will be much fresh buying until after the British Steel Makers' meeting next month, when prices will come up for revision. The ore market is practically stationary. Best Bilbao rubio is nominally 15s. per ton c.i.f. for early delivery, and the current freight, Bilbao-Middlesbrough, for prompt loading, is 4s. 3d. Coke continues a weak market, with supplies in excess of demand. Spot lots of good blast-furnace qualities have been sold at 15s. 3d. per ton delivered works, and can still be obtained thereat, and possibly a little less. The number of furnaces in blast in the district is unchanged at 22.

SHEFFIELD.—The stagnation in the iron and steel branches is unrelieved, writes our correspondent, but the prevailing pessimism has been modified by the American proposal for a war debt moratorium. Work to the value of several million pounds in connection with the disbursement of the Chinese Boxer indemnity fund has been allocated to a number of British manufacturers of rails, rolling stock, axles, tyres, springs, stores and so forth, and the placing of the orders will be carried out next week. Sheffield firms are receiving a substantial share of the work. Several local works are still closed for stocktaking, and this reacts on the market for scrap and other kinds of raw materials. Prices continue to tend downwards. Substantial orders for both heavy and light steel are few and far between and the output of the Sheffield works has shrunk further since the beginning of the month. Makers of tools are affected by the general depression, but to a lesser extent than those interested in crude materials. Orders from the automobile industry are relatively poor. Shipbuilding requirements are at a low ebb. A substantial trade has developed in stainless and other special steels for aircraft construction. The depression in cutlery and plate and in the export trade is as pronounced as ever.

WORKINGTON.—The position has weakened since last month, writes our correspondent, the volume of business having shrunk to such an extent that two furnaces have had to be damped down in the southern part of the district. There are now only six remaining in blast between Workington and Ulverston, but the make is ample to satisfy needs, and no important reduction of the heavy stocks that have been carried since last autumn has been effected. Local consumption has dropped on account of the closing of the steelworks at Barrow. Scottish and South Wales requirements are lower than they were a month ago, and there has been some easing off in the Midland and Continental demand. The outlook continues to be uncertain, and even unfavourable. Everything depends upon what happens in the steel industry, and as far as that is concerned there is little expectation that operations in the rolling mills on the present scale can be prolonged after the end of July. East Coast competition has become severer, and prices are accordingly inclined to droop. Nominally, Bessemer mixed numbers are quoted at £3 11s. 6d. per ton at Glasgow; £4 0s. 6d. at Manchester; £4 2s. 6d. at Sheffield, and £4 4s. 6d. at Birmingham. Low-phosphorus iron is in fair request at from 2s. 6d. to 5s. per ton above these figures. Malleable iron is in quiet request at £5 15s. per ton delivered at Birmingham, and there is little doing in ferro-manganese at £10 15s. to £11 5s. per ton home. During the month the mills at Workington have been engaged on home and foreign rails, sleepers and fish plates. Native ore at from 18s. to 18s. per ton is in smaller local request, and very little metal is being sold to East Coast or Scottish smelters.

GLASGOW.—Whilst business on the whole remains very quiet in the West of Scotland, bookings by local machinery makers and structural engineers (who are experiencing a very quiet time) have been on a somewhat more satisfactory scale during the present week. Sheet makers also have been able to secure a fair amount of export business, both in black and galvanised sheets, prices,

however, remaining at recent low levels. In almost all other branches business remains exceedingly quiet, and it is impossible to keep works running at anything near capacity. Continental quotations for semis are still exceedingly low, but very little business is being done in this district.

CARDIFF.—Business in the tinplate trade continues very quiet, and prices are easier at from 13s. 9d. to 14s. 3d. per basis box. The affairs of the pooling scheme are being wound up, and it is regarded as improbable that any further attempt will be made in the immediate future to resuscitate any form of artificial regulation of either output or prices. Galvanised sheets are a weak market at £9 15s. per ton; bars are also weak at £4 12s. 6d. for the local make and £3 15s. for foreign steel.

OTHER METALS.

TIN.—Under the influence of favourable reports from Paris about the working of the International Pool prices, tin advanced sharply last Friday. A further upward movement was caused by President Hoover's proposals on Monday, but a slight reaction took place later in the week. According to the Metallgesellschaft A.G., the daily average mine production of the metal in May at 418 metric tons shows a decline of 6 tons per day as compared with the previous month. Wednesday's official closing quotation for "standard cash," at £107 17s. 6d. to £108 per ton, compares with £101 2s. 6d. to £101 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,894 tons, show an increase of 528 tons on the week.

COPPER.—The general upward movement in prices during the past week included copper which, on Wednesday, was quoted in New York at 8.50 cents per lb. for "electrolytic," domestic spot, as compared with 8.00 cents per lb. a week ago. Copper Exporters, Inc., promptly raised its minimum price for "electrolytic," c.i.f., Continent, from 8.525 cents per lb. to 8.775 cents per lb. Wednesday's official closing price for "standard cash" in London, at £37 12s. 6d. to £37 15s., compares with £34 6s. 3d. to £34 8s. 9d. a week ago. New York prices, both for "domestic spot" and for export, remained unchanged. Stocks of refined copper in British official warehouses at the end of last week, at 15,688 tons, show an increase of 633 tons, while stocks of rough copper, at 801 tons, were 496 tons smaller.

LEAD.—Lead also improved and was quoted at 4.25 cents per lb. for "spot" against 3.75 cents per lb. a week ago. Wednesday's official closing quotation for "soft foreign" in London, at £12 15s. to £13 2s. 6d., compares with £11 6s. 3d. to £11 13s. 9d. on the corresponding day last week.

SPELTER.—This metal has been firm. The New York spot price for "East St. Louis," at 3.55 cents per lb., shows a rise of 0.20 cent

"THE INVESTORS' CHRONICLE"
20 BISHOPSGATE, LONDON, E.C.2

per lb. on the week. Wednesday's official closing quotation in London for "good ordinary brands," at £12 16s. 3d. to £13, compares with £11 2s. 6d. to £11 13s. 9d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at the recently reduced price of £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—The market has improved considerably on the strength of President Hoover's proposed moratorium of war debts. The market opened very excitedly immediately after the announcement some 35 to 40 points advance, and though some profit-taking caused a recession of a few points, the market has remained fairly steady since then. The advance so far has not brought about much stimulus to trade, though short covering has been noticeable. Crop news continues to be favourable, but the plant has a critical time before it. Spot sales for the week 18th to 24th (inclusive) are 30,000 bales, of which 12,250 bales are American, 1,400 Brazilian, 700 Argentine, 6,500 Peruvian, 2,850 Egyptian, 1,950 African, 1,700 East Indian, 610 Russian, and 1,040 sundries. Imports for the same period are 48,964 bales, of which 26,555 bales are American, 1,290 Argentine, 3,554 Peruvian, 11,458 Egyptian, 3,176 African, 2,239 East Indian, and 693 sundries. Quotations, June 24th: American Middling, 5-17; Egyptian F.G. Sakel, 7-90; F.G.F. Uppers, 6-16; Brazil Fair, 5-22; Peru G.F. Smooth, 5-62; West African Middling, 5-22, and East African G.F., 6-22.

Manchester.—The event of importance in the Manchester market during the past week has been the effect of President Hoover's proposal. His announcement last week-end caused a striking advance to take place in raw cotton prices. A more cheerful tone prevailed in the Manchester market, but at the same time buyers have not been prepared to give out orders on a freer scale. Here and there, of course, merchants have been compelled to obtain cover. There has been rather more activity for India, and scattered sales have taken place in light bleaching fabrics and fancies. The rise in the price of silver has been a favourable development, and this should help trade with China. A few more orders have been booked for Egypt and South America. The better demand for the home trade has been maintained. There has been more business done in American and Egyptian yarns. The general trade outlook can be considered rather brighter.

THE WOOL TRADE.—Bradford.—Topmakers are not yet prepared to commit themselves heavily either as buyers or sellers. Spinners and manufacturers are passing through a difficult period. It is now too late for any more dress goods business this season. The wages dispute is another disturbing factor, but anxiety to keep or obtain employment and to get such orders as are available may easily be the strongest factor in deciding the policy of employers and employees.

THE JUTE TRADE.—Dundee.—There are still no signs of improvement in the jute trade, and business remains as dull as ever. Prices of Calcutta goods have fluctuated to a little extent during the period, without showing much actual alteration, which also applies to the raw jute position. There were rumours that the Indian Jute Mills Association was again to consider the question of further curtailment of production, but this came to nothing. The manner in which stocks of heavy goods have increased in Calcutta must be causing some concern, and it is thought that the mills may take steps to keep them down. It will be remembered that at the last change in the working hours of the mills there were 24 per cent. of the hessian looms stopped, but the sacking looms were allowed to run as formerly. The stocks of hessians in Calcutta at the end of May were 220,458,000 yards, and heavy goods were 102,316,000 yards, while the stocks of hessians in the United States were 150,000,000 yards and the quantity afloat to that country from Calcutta was 102,000,000 yards. The stocks in United States at January 31st last were 185,000,000 yards. The average monthly consumption for the first five months of this year by the United States was 57,000,000 yards. The first Government forecast of the jute crop will be published in Calcutta on July 15th, but the district returns will be known on July 7th, estimating the area which has been sown for raw jute during the coming season. The weather for the growing crop has been quite favourable recently and sellers of the new crop for forward shipment have reduced their prices. The rate for Daisoe assortment has come down to £15 and has been accepted several times for October-November shipment. Old crop Daisoe, however, still rules at £16 5s., with £16 10s.

wanted for Mahabir assortment, while Tossa-2/3 is at £17 7s. 6d. for Mahabir and £16 15s. for single mark of threes, Fuji-M First Mark at £17 7s. 6d., and Asahi Lightning at £16 17s. 6d., June-July shipment. Jute yarns are quiet and there is very little business taking place. Common 8-lb. cops are occasionally dealt in in small quantities at 1s. 10d. and 8-lb. spools at 1s. 11d., if delivery is taken from stock, but the market value is still 1s. 10 1/2d. and 1s. 11 1/2d. respectively. Other yarns are quiet and more or less nominally unchanged. Twist is from 3 1/2d. to 3 3/4d. for 3-ply 8-lb., sacking weft from 2 3/4d. for 24-lb., and 8-lb. sacking chains from 3 1/2d. Rove is steady at £19 lowest for 48-lb. and £16 for 200-lb. Fine yarns have been purchased by Brazil to the extent of 100 tons. Carpet qualities are dull and nominal at from 3 1/2d. for 14-lb. warp. Jute cloth prices are steadily maintained at from 2 1/2d. for 10 1/2-oz. 40-in. and from 1 1/2d. for 8-oz. Only small quantities are being bought as a rule and buyers' wants are easily supplied from stock. The holiday period is approaching and it is expected that the works will be closed this year for an extended time.

THE GRAIN MARKETS.

WHEAT.—The situation in the principal wheat market centres has been dominated early this week by President Hoover's proposals, which resulted in "short" covering at rising prices. Continuous unfavourable crop reports from Canada, particularly Saskatchewan, and rumours that the Federal Farm Board might consider, contrary to its recent announcement, to hold its wheat stocks off the market for another year, were further strengthening factors. The Federal Farm Board subsequently denied this rumour, which resulted in a slight reaction, which was later accentuated by reports of the favourable progress of winter wheat harvesting and the news of showers in the North-West of the United States. On balance, prices showed little gain on the week. Wednesday's quotation in Chicago for No. 2 Winter, "July," at 58 1/2 cents per bushel, shows a rise of only 1/2 of a cent., as compared with the corresponding day last week. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 27s. per 496 lbs., as compared with 27s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 26s., against 26s.; Rosafe, ex ship, 22s. 3d., against 22s. 3d.; Australian, ex ship, 24s. 3d. to 25s. 3d., against 24s. 3d. to 25s. 6d. a week ago.

WHEAT FLOUR.—The upward movement in wheat prices early this week had little influence on the market in flour, which remained quiet. North American shipments at 190,000 sacks during the past week show a decrease of 18,000 sacks as compared with the previous week. A large proportion of these was again destined for non-European countries. Quotations: Straight run, delivered country, 23s. 6d. per sack of 280 lbs., as compared with 23s. 6d. last week; delivered London, 22s. 6d., against 22s. 6d. Manitoba patents, ex store, 21s. 9d. to 25s., against 21s. 9d. to 25s.; and Australian, ex store, 18s. to 18s. 6d., against 18s. 6d. to 19s. a week ago.

BARLEY.—Barley has been a quiet market during the week and prices are scarcely changed on the week. Quotations: "English malting," f.o.b., at 30s. to 35s. per 448 lbs., remained unchanged; Californian sold at from 36s. to 40s., as compared with 36s. to 40s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—Oats have been dull and easier in price. There has been a slight increase in buying in this country, but shipments, particularly from the Argentine, are increasing, which prevents an improvement in prices. Quotations: "River Plate," landed, 12s. 9d. per 320 lbs., as compared with 13s. last week; "River Plate," ex ship, 11s. 6d., against 12s.; "Chilean Tawny," landed, 13s. 6d., against 13s. 9d.; and North Russian, on sample, landed, 16s. to 17s. 6d., against 17s. 9d.; English white, per 336 lbs., 20s. to 21s. against 20s. to 21s. a week ago. Despite the large shipments from the Argentine, values have not fallen further. An early recovery from the low level to which quotations have recently fallen is, however, unlikely. Quotations: "Plate," landed, 17s. 3d. per 480 lbs., as compared with 17s. last week; Plate, ex ship, 16s., as against 15s. 9d.; Plate, June-July, new, 16s., as against 15s. 9d. Yellow maize meal, ex wharf, was quoted at 25s. as against 25 per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	June 25, 1930.	Jan. 2, 1931.	June 10, 1931.	June 17, 1931.	June 24, 1931.
Winnipeg (No. 1 Manitoba).....	148 1/2	94 1/2	56 1/2	60 1/2	60 1/2	62 1/2
Chicago (No. 2 Winter).....	130 1/2	88 1/2	79 1/2	57 1/2	57 1/2	58 1/2

The visible supply of wheat in Canada, at 51,156,000 bushels, shows an increase on the week of 2,582,000 bushels. Supplies a year ago stood at 62,666,000 bushels.

OTHER FOODS.

SUGAR.—Early this week "raw" sugar advanced on "bear" covering, but there was not much new buying in evidence. In New York, Cuban centrifugals, 96, spot, at 3-40 cents per lb., show an advance of 0-10 cents per lb. on the week. In London, raw futures have been slightly firmer. Wednesday's sales included "August delivery," at 6s. 4 1/2d. to 6s. 4 1/2d. per cwt., as against 6s. 3 1/2d. to 6s. 4d. on the corresponding day last week. British refined has been maintained. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	12,439	621	1,253	795	35,613	30,317
Liverpool...	13,115	16,922	12,919	15,329	74,674	89,168
Total.....	25,554	17,543	14,172	16,124	110,287	119,485
Last week...	16,309	5,710	13,719	10,454	104,264	118,066

COFFEE.—Coffee has been in quiet demand at this week's auctions, but good Costa Rica qualities realised steady prices. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 92 bags; exported, nil; stocks, 2,331 bags, against 1,946 bags last year. Central American, landed, 4,937 packages; delivered for home consumption, 4,313; exported, 2,823; stocks, 118,653 packages, against 118,825 a year ago. Other kinds, landed, 2,396 packages; delivered for home consumption, 2,340; exported, 1,042; stocks, 91,643 packages, against 135,759 a year ago.

COCOA.—A sharp upward movement characterised the market in cocoa. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, June-July, at 23s. per cwt., f.o.b., London contract, shows a rise of 3s. per cwt. Last week's movements of cocoa in London were as follows: Landed, 3,946 bags; delivered for home consumption, 5,516 bags; exported, 23; stocks, 228,408 bags, against 202,978 last year.

TEA.—The quantities catalogued for this week's auction comprised 44,897 packages of Indian, 28,314 packages of Ceylon, and 12,514 packages of Java and Sumatra tea. At the auctions of Indian tea last Monday, prices for all varieties showed a substantial recovery from the low levels touched last week, and buying was on a larger scale. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.	
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
June 16, 1930	1 1/2	1 1/2	1 3/50	1 5/53	0 10/43	0 11/79	Nil	Nil	1 2/50					
May 26, 1931	0 9/94	1 3/55	1 2/65	0 6/76	0 7/79	0 6/72	0 11/41							
June 11, "	0 8/35	0 10/92	1 1/35	0 5/85	0 6/36	0 5/92	0 10/07							
June 18, "	0 7/91	0 9/64	1 11/57	0 5/50	0 6/20	0 5/45	0 9/05							

RICE.—Rice has been a steadier market this week, and prices showed an improvement on last week. Wednesday's quotation for Burma No. 2, cleaned, June-July, in singles to the Continent, and to the United Kingdom, at 6s. 10 1/2d. per cwt., shows a rise of 3d. as compared with last week. Movements in London during the past week were as follows: Landed, 41 tons; delivered, 22 tons; stocks, 578 tons, against 1,380 last year.

POTATOES.—The seasonal scarcity of "old," and insufficiency of new potatoes tends to keep prices at a relatively high level. At the Borough Market, "Best King Edward" sold at £11 per ton, while new English potatoes were quoted at from 14s. to 18s. per cwt.

SPICES.—The spot pepper market was steady, but prices showed no improvement on last week. Wednesday's quotation for "Black Singapore," at 5 1/2d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 20 tons; delivered, 54 tons; stocks, 505 tons, against 955 tons last year. White, landed, 31 tons; delivered, 58 tons; stocks, 575 tons, against 952 tons a year ago.

MEAT.—At the Smithfield market, beef and mutton were steady, but pork was dearer. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 3s. 10d. to 4s. 6d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 4s., against 3s. 4d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,770 tons, as compared with 8,159 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.5 per cent. of the supplies as against 81.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 81.6 per cent. of the total supply, as against 83.3 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Oilseeds and their products generally felt the influence of the American War Debts proposal, and prices all round advanced in varying degree. Doubts, however, as to the attitude of France in particular has caused a pause, and speculators are inclined to wait on events. Linseed, helped by an advance in the Argentine exchange rate and a fair demand, moved up quickly, and Plate afloat and for June loading was held for £8 12s. 6d., while for September up to £8 16s. 3d. was conceded. Current value on spot at Hull and shipment, including July, is £8 12s. 6d., and September £8 15s. The quantity of linseed afloat for Europe is now 122,600 tons, or 7,400 tons less than last week, and compares with 115,000 tons a year ago. Cottonseed is also firmer, and black Egyptian, after falling below £5, has hardened, June and July loading quoting £5 5s., and August £5 7s. 6d. Linseed oil advanced sharply in sympathy with seed, raw oil on spot being held for £17 15s., and June-August delivery for £17 5s., ex Hull. Cotton oil is firm and dearer, crude Egyptian, ex Hull, quoting £19 10s., and common edible £21 15s. Oilcakes are in slow demand, as is usual at this time of the year.

HIDE, LEATHER AND ALLIED TRADES.—Ox and heifer hides were a better market at the sales held in the early part of this week, several weights in both clear and warbled classes at the Leeds auctions advancing by from 1/2d. to 1/2d. per lb. Similar conditions were noticeable in regard to first clear oxhides at the Manchester sales, while cows and bulls were unchanged from the previous week. Calfskins are a steady market, but the position of sheep pelts remains unsatisfactory, and low prices have to be accepted in order to effect sales. Although there has been no improvement in the turnover of foreign hides, and the market continued very weak until Monday, there is a feeling that the position will shortly show some alteration. There are slight indications of this already; the drop in values has been stayed for the time being at any rate, and there seems to be rather more confidence on the part of buyers, although operations for the most part are still confined to parcels for near requirements. In the South American market wet-salted Argentine ox have been sold to the United States at 4 1/2d., while cows have changed hands for the same destination at 4 1/2d. Sales of dry hides have been made on the basis of 5 1/2d. for B.A. Americanos, with M. V. Americanos quoted at 5 1/2d. More inquiry has been met with for African hides, and although business continues difficult, sales of Capes have been made on the basis of 5 1/2d. and 4 1/2d. for dry-salted 20-30 lbs., and with 6 1/2d. and 5 1/2d. paid for the same selections in drys. Unbathed Adis Abebas are offered at 5d. Certain Continental countries are inquiring for Australians, but for the time being there is a certain

amount of hesitation on the part of buyers to pay the figures asked. In some quarters rather more inquiry has been met with in regard to sole leather, but at the same time consumption is still below normal. In English and wet-salted hides a fairly satisfactory demand continues to be met with for medium weights for the repair trade, in addition to which most tanners appear to have quite respectable contracts on their books for the lighter averages. This latter remark applies also to dry hide bends, although the call for medium and heavy weights in this class remains poor and stock tends to accumulate. The offal market is the most unsatisfactory feature of bottom leathers. Prices for all descriptions are low, yet no amount of persuasion on the part of producers will induce buyers to take anything more than is required for immediate needs, and then only certain lines, such as good substantiated shoulders suitable for sole purposes and wetting bellies. Manufacturers and distributors of upper leathers find that the state of the enquiry continues to run on the two staple lines, viz., black and brown glace kid, and willow calf.

THE TIMBER TRADE.—As a result of the cautious policy of British buying this year, writes our correspondent, May receipts of European building and joinery woods were very light, and for the five months were roughly a third less than for the corresponding period last year. Poland excepted (which is making strenuous efforts to clear goods to the United Kingdom in keen competition with Russia, Finland and Sweden), all countries have sent less. London dock statistics show that whilst holdings of the larger sizes—deals and battens—are in increased stock compared with this time last year, the deliveries from docks into consumption have not been so good, hence the smallness of the shipments have proved a great blessing to holders during a period of depression and keen competition in selling. But by this time the Russians will have got well into the swing of their shipping season, and the July volume of imports from the Soviet is likely to be large, to make up for the recent comparatively poor exports to this country. Stocks and deliveries of scantlings, ends, sawn boards, planed and dressed woods, slating battens and plasterers' laths are more in line with

the smaller imports than is the case with the deals. The Russian 1931 shipments are to be in the hands of a British syndicate for distribution, whereas Finland, Poland and Sweden are vying with one another for business on the best terms possible from our cautious importers, which tends to make the forward market unsteady. Hardwood logs are moving very slowly into consumption, and imports are all well down this year. Of mahogany, teak and other hard and fancy woods, fresh supplies can be more or less regulated to meet the demand, whereas with the European building woods above mentioned not only shippers but banks and bankers have to be considered. The sawn hardwoods section is largely under the domination of States shippers, supplies from there comprising from 50 to 60 per cent. of our annual imports. The latter, from all sources, have declined appreciably this year compared with the first half of the past two years, yet stocks of States lumber are still large, with prices weak, but receipts from the U.S.A. are expected to decline still further. Plywood imports last month showed an advance of 1.4 million square feet, bringing the deficiency this year down to 57.5 million square feet. Like soft and hard woods, this new member of the timber family has had a bad time, but the drastic cutting in forward business must have had some effect in strengthening the spot market.

RUBBER.—President Hoover's proposal led to considerable "bear" covering, which drove up prices. There was, however, not much new buying, which was mainly confined to market operators. Wednesday's official closing price for standard ribbed smoked sheet, at 3½d. per lb., shows a rise of ½d. as compared with the corresponding day last week. In forward positions, business has been done at 3d. to 3½d. for June, against 2½d. to 3d. last week; at 3½d. for July-September, against 3½d.; at 3½d. to 3½d. for October-December, against 3½d. to 3½d.; at 3½d. for January-March, 1932, against 3½d.; and at 3½d. for April-June, against 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,173 tons; delivered, 2,387 tons; stocks at the end of last week, at 137,341 tons, show a decrease of 1,327 tons, as compared with the preceding week.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, JANUARY 24, 1931.

No. 92.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

So far, the main distinction of 1931 is that it has opened with a complete absence of the optimistic forecasts with which the advent of a New Year is usually heralded. In one sense, this is healthy, for in previous years a certain amount of harm has been done by the extravagant hopes and promises held out at this season. On the other hand, their absence to-day is evidence of the serious nature of the present situation of the country, and indeed of the whole world; and corroboration of this evidence can be obtained on every side.

Thus, considering this country alone, the December iron and steel production figures beat even the poor record of the previous month. Some allowance must be made for the holidays, it is true, though the fact that in many cases the holidays have been extended is an additional evidence of the depression rather than an explanation of that afforded by the production figures. The unemployment percentage had risen by the end of last year to over 20 per cent., and the latest weekly returns give an absolute figure of 2,636,168. In the field of foreign trade, British exports for December were the worst of any month of the year, while as regards commodity prices, the prediction made in the December "Trade Supplement" that by the end of 1930 wholesale prices would have fallen to below their pre-war level was duly fulfilled.

Again, our series of indices of business activity, printed on a later page, fails to suggest any lightening of the depression. In a few cases the latest figures, e.g., of consumption of coal, iron and steel, and cotton, register a moderate rise from the year's low point reached in August-September; but this purely seasonal upward movement is itself of less than normal dimensions, and comparison between the December figures and those of the corresponding month last year reveals in almost every instance how pronounced the recession has been.

Finally, the pressure of events, and in particular of the present disparity between prices and costs, has involved us after a long period of industrial peace in a succession of labour troubles. The December Scottish coal dispute was followed in January by a stoppage, lasting nearly three weeks, in South Wales. The dispute in the cotton industry over the number of looms to be

worked by each operative has at last come to a head, and there is now a complete lock-out in the weaving section of the industry. The railway wage negotiations are still pursuing their normal course, and there is at present no ground for anticipating that they will not end in an amicable settlement. Yet it must not be ignored that the gap between the managers' and the men's demands is too wide to be bridged without difficulty.

The fundamental fact in the present situation is that

the catastrophic fall in commodity prices during the past two years has left behind it a whole legacy of problems which still await solution. In England, and indeed in all the more industrialised nations, the problem resolves itself mainly into one of reconciling selling prices and costs, and all the labour disputes referred to above find their roots in this issue. Abroad, especially among those countries which are "primary producers," the problem takes the more pressing form of finding a market for their produce at almost any price which will supply them in the aggregate with sufficient foreign money with which to meet their external commitments. This is the pressing problem of Australia, of the Argentine, and of Brazil, and until they have solved it, it is difficult to see how they can be expected to extend their purchases of foreign goods.

This throws the problem back upon the more industrialised nations, and

shows that all nations, both industrial and agricultural, are vitally interested in its solution. The first essential is that the fall in commodity prices should be arrested, and in the middle of January there was little sign of this taking place. There have, however, recently been one or two developments, particularly in the monetary sphere, of a hopeful character. Thus the decision of the Banque de France to accept standard gold is evidence of the desire of the French authorities to co-operate in the world endeavour to stabilise prices, and though its first result was to intensify the flow of gold to Paris, it may accelerate the date at which the flow will finally come to an end.

Important as it is, however, to bring about a more equitable distribution of the world's gold stocks, it is still more important to recognise that on the basis of the present restricted volume of world trade and the present

low level of world prices, there is to-day ample credit available, and that a substantial expansion in trade and recovery in prices could take place before a shortage of credit supervened. In England, the joint-stock bank balance sheets, analysed elsewhere in this issue, provide ample evidence of the surplus of money now available, and the low level of rates and glut of funds in such foreign centres as New York and Switzerland show that London is not alone in possessing an abundance of funds. The fact is that the world is in a vicious circle. Because traders fear that prices are going to fall still lower, they refrain from launching out into fresh commitments beyond the immediate needs of the moment; and because they are afraid to display any enterprise and to buy ahead, there is no demand for the world's commodities, and so prices fall once more.

Thus there is as much a psychological as a monetary cause of the trade depression, or rather the two are interwoven with each other and also with the supreme difficulty—by no means peculiar to Great Britain—of bringing costs into line with the fall of prices that has already taken place. It is clear that 1931 must be a year of re-adjustment and of the restoration of confidence before trade recovery can materialise. It remains to be seen how readily these processes can take place.

HOME INDUSTRIES.

Coal.—Production in South Wales was interrupted for nearly three weeks in January by the labour dispute. Unfortunately, although good clearances of South Wales stocks were effected, other British coalfields failed to benefit as much as had been expected. There is a fair inland demand for house coal.

Iron and Steel.—The December production figures were worse even than those for November, though this was partly due to the holidays. Early this year, a further reduction of 5s. per ton was made in Cleveland pig iron, while steelmakers have added 5s. per ton to the rebate granted to home users of British steel. It is too early to tell if these concessions will stimulate demand.

Engineering.—Little change is noticeable, and the industry as a whole is operating at only 75 per cent. of capacity. There is a fair demand for locomotives and rolling stock, but other branches are relatively quiet.

Electrical Industry.—The following index of production in the electrical industry is copyright by the Economical and Statistical Department of the British Electrical and Allied Manufacturers' Associations. An explanation of the manner in which it has been computed was given on page 888 of the *Economist* of November 28, 1925.

INDEX OF ACTIVITY IN THE ELECTRICITY INDUSTRY. (1920 = 100.)

1929.	Home.	Export.	Total.	1930.	Home.	Export.	Total.

November.....	71	216	109	November.....	61	171	89
December.....	60	228	102	December.....	75	152	95

The home index is the best recorded since 1929, the improvement being mainly due to two large London contracts placed as part of the national electricity scheme.

Motor Industry.—Business is now only of moderate dimensions, the commercial vehicle section being perhaps the most favourably placed. Seasonal improvement, however, is expected, and by Easter the industry should have regained a point nearer to its full working capacity.

Cotton.—Business has been disorganised by the lock-out in the weaving section. Apart from this, however, inquiry from India remains restricted and the low price of silver continues to have an adverse effect upon Far Eastern trade. Some slight improvement is reported from Calcutta and Shanghai.

Wool.—All sections of the industry find demand most disappointing. The break in the Australian exchange was reflected in a decline of 15.20 per cent. in wool prices at the London sales that opened on January 20th, and this has had a further depressing effect upon confidence.

Linen.—Flax sales are slow, and so far the quality of the new crop on sale has not been satisfactory. Some spinners have fixed up large contracts for delivery next summer, but manufacturers as a rule are only buying against actual cloth business. Demand for piece-goods is quiet.

Rayon.—Business at present is slow, as the spring trade has yet to develop; but the yarn market is more confident, and recent price-reductions have stimulated demand for fine

filament viscose yarns. The demand for acetate yarns is also better, though still much below normal.

Boots and Shoes.—Apart from the women's fashion trade, which is displaying considerable enterprise, business is slow in developing. Spring orders are not coming forward well.

Chemical Industries.—Markets have been quiet and largely under the influence of the holidays. The labc;ir troubles in the coal and cotton industries have also restricted demand.

Agriculture.—Cultivation in many districts is less forward than usual, but the condition of autumn sown corn is good. There are indications that this year there will be a smaller acreage under wheat and oats. The open weather has been favourable to livestock, and milk yields are normal.

Shipping.—Freight markets have been generally quiet. The Argentine has chartered a fair volume of tonnage at steady rates, but homeward business in other directions is poor, and the outward trade in coal has been seriously handicapped by the stoppage in the South Wales pits.

Building Trades.—Employment again declined during December and outside work was restricted by bad weather conditions.

Retail Trade.—A London store reports that with the exception of certain departments, December business was below that of the previous year. January, however, opened well; the annual sales led to a good turnover, and there are signs that price-reductions are stimulating purchases.

BRITISH EMPIRE.

Rain has affected the Australian wheat harvest, and the market has been disorganised by the fall in prices. Wool prices are again slightly lower. Butter production prospects and grazing conditions are exceptionally favourable. Business conditions generally show an improvement.

No improvement is reported from Canada, and the low level of wheat prices continues to restrict general business and purchasing power. Still during December surplus stocks of wheat were reduced, and there is now a feeling that the worst is over.

South Africa reports little improvement in business, though some traders are well satisfied, considering the prevailing world depression. Farming conditions remain good in Cape Province and Natal, but rain is badly needed in the Transvaal and Orange Free State.

Bombay commerce was depressed in December by a further sharp break in raw cotton prices. Clearances of Manchester goods are still impeded by political difficulties, and fresh business is almost non-existent. Fair clearances of Indian piece-goods were effected, but demand has fallen away.

UNITED STATES OF AMERICA.

Industrial activity receded during December, mainly as a result of the holidays and stock-taking. Distributive trade was well maintained in comparison with 1929. Steel mill operations fell to as low as 35 per cent. of capacity, and automobile production also reached a low level. Textile mills, however, were slightly more active. Construction contracts were lower.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

AMERICAN TRADE STATISTICS—DECEMBER, 1930.

EUROPE.

The French coal and iron trades are to some extent sharing in the general depression, and there are suggestions that inland steel prices will have to be reduced. The textile trades are very depressed.

Belgian industrial coal prices have been reduced, but trade is still unsatisfactory. The steel trade has lately weakened after its recovery at the end of last year.

Unemployment has again increased in Germany, the number at the end of the year being 4,357,000, against 2,851,000 at the end of 1929. There was a slight improvement in the coal trade during December. The textile industries are very depressed.

There has been little change in Dutch business conditions during the past month, and only a slight increase in unemployment. Most enterprises, however, are only able to work on a very low margin of profit, and reports from home agriculture and from plantations in the East Indies are discouraging.

In Scandinavia, despite the closing of the Baltic, the Norwegian timber trade is held up by uncertainty regarding Russian prices. The Swedish timber and wood pulp industries are depressed, and unemployment has increased in Denmark, where the current low level of prices of agricultural produce makes the outlook very discouraging.

SOUTH AMERICA.

General rains have fallen in Argentina over the whole of the maize zone, and the latest cable advices state that the plants are everywhere in excellent condition. Cutting of wheat, linseed and oats is practically finished, but threshing is hindered by the wet weather. The general business situation in the republic continues dull, owing to the low level both of prices of export products and of the exchange. Trade and credit conditions in Brazil are still depressed, and prices of coffee rule low. The Chilean trade situation is quiet, but the exchange is steady, and an official announcement by the Chilean Minister of Finance states that the negotiations in New York for the financing of the merger in the nitrate of soda industry are nearing completion.

FAR EAST.

Although business with China has been checked by the fall in silver to new record low levels, a better tone is reported to be in evidence in the Shanghai market. Prices at the auctions are firm, and a fair volume of business is taking place.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX OF PRODUCTION OF ELECTRICITY.* (Monthly Average 1923-24 = 100.)

A NEW INDEX OF ELECTRICITY CONSUMPTION.

The difficulties of compiling an index of industrial production or activity are such that they are not easily overcome. The accurate use of such single factors as value or physical volume becomes more doubtful as the period over which the comparison is made becomes longer, and such factors as price changes and technical improvements play an increasing part; and in those composite indices which are based upon a large number of factors such as trade, employment, output, sales, etc., the difficulty is one of synchronisation, particularly in relation to short-period fluctuations. It is extremely difficult, for example, to give an exact measure of the time-lag involved in returns relating to unemployment or import and export trade.

In view of these considerations, the desirability of producing, if possible, an index which, by the fact of its simplicity, would be a quick, sensitive record of industrial activity, led in 1926 to the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association compiling an index of electricity production in the main industrial areas of Great Britain. This index, which has been regularly published in the Monthly Supplements of the *Economist*, represents fairly accurately the consumption of electrical power for industrial purposes, and thus of productive activity within the industries embraced in its scope. As these include coal-mining, iron and steel, shipbuilding, heavy engineering, general engineering, automobile construction, chemicals, marine transport, textiles, cotton and wool, the total index is fairly representative of the whole of the industries of this country. At the same time, not only does it contain a very marked upward trend due to expansion in generating installations and connections, but it is also subject to marked seasonal fluctuations. An attempt has therefore been made to eliminate both these factors from the index, and so arrive at a statistically useful measure of movements not inherent in the conditions of electricity supply, but which are due to alterations in economic factors external to it. Satisfactory "correction" of the index has not been possible in the past owing to the insufficiency of statistical data, but this gap has now been adequately filled.

The compilation of the original index was fully explained in our issue of July 10, 1926. Its base year was taken as March 31, 1923, to March 31, 1924. In the new index now compiled by Beama's Economic and Statistical Department, the base year is 1924-1925. This alteration was made in order that the index might be more readily comparable with the industrial indices published by the London and Cambridge Economic Service and the Board of Trade, both of which are based upon the year 1924.

The actual construction of the index has followed this sequence:—

(1) The conversion of the old index into the base 1924-25.

(2) The elimination of the "trend" due to expansion of generating plant and transmission connections. The method followed here has not been the one commonly used in statistical practice. Instead, a "correction" factor has been obtained which is based upon the increase in the connections of industrial motors in the supply companies covered. Equating the monthly average of connections for the year 1924 to 100, the corresponding indices for subsequent years are as follows:—

INDEX OF CONNECTIONS OF INDUSTRIAL MOTORS.

1924	100.0	1928	135.0
1925	109.2	1929	147.7
1926	115.9	1930	150.0
1927	125.7		

Indices for the individual months have been obtained by a curved graph. It will be seen that "correction" by this method gives a resultant index representing the consumption of units per kw. connected of industrial motors.

(3) From this index of consumption per connection is then obtained a "correction" factor for seasonal fluctuations.

The actual method adopted is the one commonly used for similar purposes, and need not be described here. The year 1926 was omitted in computing this factor, owing to its somewhat abnormal nature due to the coal stoppage.

The seasonal correction factor is as follows:—

January	113.1	May	93.7	September	92.8
February	114.5	June	88.2	October	100.5
March	108.2	July	84.9	November	112.9
April	97.1	August	83.6	December	112.2

The final index is then obtained by correcting the index of consumption per connection by the factor for seasonal fluctuations.

For purposes of record, and in order to illustrate the stages in the composition of the new index number, the following table is given, showing separately the original index converted to a 1924-25 base (see A below); the index corrected for the increase in connections but still containing seasonal fluctuations (see B below) and the final index with the seasonal movements removed:—

ELECTRICAL INDEX OF INDUSTRIAL PRODUCTION

June	111.0	88.6	100.6	December..	170.5	105.4	94.0

It will be seen that from the Final Index two important disturbing causes have been removed. What is left, however, represents variations from the basis in consumption per kw. connected, but should not be regarded as an exact index of industrial activity. When times are good or bad the number of units connected tends to rise or fall, and the extension of electrification gradually brings in smaller concerns whose consumption per kw. connected tends to be lower than that of large undertakings. Thus, from a long-period angle, the new index appears to understate productive activity and should be regarded in conjunction with the figures of total consumption included in our series on the preceding page.

PRODUCTION. (Thousands of Metric Tons.)

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, FEBRUARY 28, 1931.

No. 93.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." Is. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

The year is now practically two months old, and though there is plenty of time for change, we begin to see how 1931—commercially and industrially regarded—is shaping. On the whole, the results of a survey of the present position are still disappointing. It would be wrong to say that the picture is one of unrelieved gloom; as shown below, it does contain one or two bright spots. Still, its more sombre portions are so much the more extensive that its general effect is far from pleasing, especially as there must now be added to the more tangible evidences of the trade depression a rather widespread lack of confidence in business circles that there will be an early recovery.

Although there was a slight improvement in employment during early January, the figures subsequently moved the wrong way, and the latest returns give a total of unemployed still in excess of 2,630,000. Between mid-December and mid-January unemployment increased in the building and allied trades; in the engineering, ship-building and metal industries; in wool and other textile trades; and—most significantly—in the distributive and transport industries. There were, however, several bright spots where an improvement occurred, and it is encouraging that these included such staple industries as steel, tinplates, motors, rayon yarn, linen and boots and shoes.

Current production returns provide varied reading. The coal output figures are not too discouraging when allowance is made for the South Wales stoppage. There is a slight falling-off in pig iron, but this is to some extent compensated for by the fact that on balance seven more furnaces were brought into blast during January. There has been a definite improvement in steel production, though this is somewhat discounted by the fact that it includes the normal expansion after the Christmas holidays. On the other hand, our indices of business activity, given on another page, show that little or no real progress has been made, and that, with the exception of the heavy industries, the volume of employment in January was less than in the preceding month. The foreign trade returns are also discouraging. The sharp fall in imports between December and January is to some extent a natural reaction from the relatively high figure recorded in December, while among exports it is noticeable that those of

British manufactured goods recorded a fractional improvement in January over December. The volume of raw material imports, however, was slightly lower, and, when January, 1929 and 1930, are compared, the results are bad.

Among other important indicators, both railway receipts and shipping freights are lower on the month, and it is significant that rather discouraging reports have been received from the London retail trade. It is now clear

that the general contraction in purchasing power, consequent upon the trade depression, is beginning to tell, and it is by no means certain that the full effects of this factor have yet been experienced.

There are, however, several signs of a more encouraging character. The settlement of the coal and cotton disputes ranks high among these, and it is satisfactory to note that the gesture of the cotton employers, in giving way and terminating the lock-out, has been followed by a slight but definite revival in the industry. Better advances are now coming from India, and there is perhaps firmer ground for hope that the political difficulties in that country may be settled and that this all-important market may be more readily accessible to Lancashire. Commodity prices, also, have become much steadier during the past fortnight, and numerous small increases have been registered.

The real trouble is that confidence is still lacking. At home the forthcoming Budget is beginning to cast its shadows, and the revelations of the state of the national finances, made both in Parliament and before the Unemployment Insurance Commission, have aroused feelings of anxiety in industrial and commercial circles. Stock markets have, however, shown some recovery recently; there are signs of a better understanding in regard to monetary policy and the political sky is less overcast in Europe.

Abroad the trade depression continues to run its course. In the United States there was the normal seasonal revival in business at the opening of the New Year, but, apart from a quickening of activity in Wall Street, it is doubtful if any substantial progress towards recovery has been made. On the Continent unemployment is increasing in Germany; and Belgium, Holland

and Switzerland are all feeling increasingly the effects of the depression. News from France has also become much less cheerful. It is now admitted that there are 350,000 wholly unemployed in the country, and about 1,000,000 partly unemployed; and reports from the chief industrial centres—especially from Lille and Roubaix—have become more despondent.

As regards countries which are usually described as "primary producers," much depends upon the harvest outlook. Several South American countries report damage by rain to wheat and linseed crops, though maize has apparently escaped, and an abundant harvest of that cereal is promised. The size of this year's American cotton crop is a most uncertain factor. The Federal Farm Board are making efforts to reduce acreage, and it is suggested that credit stringency, due to the recent spate of small American bank failures, may also exercise a restrictive influence. If, however, cotton prices rise at all substantially, it is to be feared that acreage will at once increase.

Generally, the question remains to be answered—how far such reduction in the size of crops as takes place will be balanced by an equally problematical improvement in prices; for the purchasing power of the "primary producers" depends upon the product of these factors. It is only necessary to state this question to show how difficult it is to answer it, and this is a fundamental reason why the outlook is so uncertain to-day. Better trade depends upon confidence at home and a restoration of purchasing power abroad, and there is no clear evidence that either condition will be satisfied in the very early future.

HOME INDUSTRIES.

Coal.—Following the resumption of work in South Wales there was a fairly brisk export demand, but this consisted mainly of overtaking arrears, and there is practically no forward business. Industrial fuel is dull, but there is a good demand for anthracite, and the house coal trade is firm.

Iron and Steel.—Demand remains limited, and the improvement shown by the January steel production figures is largely the reflex of the previous holidays. Pig-iron stocks are growing, and Continental steel prices have again fallen.

Engineering.—Locomotive and rolling-stock builders continue to do fairly well, and agricultural engineers are shortly expecting a slight seasonal revival. Marine engineers and boiler-makers are very depressed.

Electrical Industry.—The following index of production in the electrical industry is copyright by the British Electrical and Allied Manufacturers' Associations.

INDEX of ACTIVITY in the ELECTRICITY INDUSTRY.

				1931.			
				Jan.	69	150	90

So far, 1931 has been the worst year for new orders since 1921. Only one order from abroad was placed during January, and none at all the following month. Home trade is equally dull.

Motor Industry.—The private-car trade remains quiet, but exports are well maintained. Commercial vehicle manufacturers are moderately busy, but export orders are scarce. Cycle and motor-cycle makers are only fairly well employed.

Cotton.—Demand for yarn and piece-goods has revived since the conclusion of the lock-out. More encouraging advices have been received from India, and better sales of light bleaching cloths and also of prints and fancies have been effected. Trade with China has been checked by the New Year celebrations and the low price of silver.

Wool.—Raw wool prices have rallied from the low depths touched at the January sales, and a better tone is apparent in most sections of the trade. Top-makers are displaying greater resistance, and even spinners are beginning to press for better prices.

Linen.—Russian flax has recently been selling in bulk at £3 to £5 above the limits current in January. Yarns also are selling more freely, especially in the lower grades. Some forward contracts for cloth have been fixed.

Rayon.—February has witnessed a better demand, both for yarns and fabrics, and the British Industries Fair has further

stimulated business. Prices are steady as regards the better qualities, but price-cutting continues in the lower grades.

Boots and Shoes.—Trade is very slow, demand having been affected by the general depression. Very few forward orders are being placed.

Pottery.—Some manufacturers have noticed a slight improvement in the home market, but demand generally is very limited. Export trade has fallen away, the Australian market now being particularly disappointing.

Chemical Industries.—February witnessed a slight expansion in home demand, especially in the pharmaceutical section. Prices have been steady, and increased orders have been received for various products.

Agriculture.—Outdoor work has been hindered by wet weather, but the delay should not be irretrievable, and early in February the condition of autumn-sown crops was good. Potato disease was fairly prevalent. Prospects for the lambing season were good, but drier weather was needed. Milk yields were about normal.

Shipping.—Apart from a fair demand for grain tonnage from the Plate, the cargo freight market in January was still very quiet. Outward coal business was dull.

Building Trades.—A fair amount of time was lost during January on outside work as a result of bad weather. Unemployment has increased.

Retail Trades.—A London store reports that the improvement noticed in January has not been maintained. Lately business has been very disappointing.

BRITISH EMPIRE.

Australia reports favourable seasonal conditions in the pastoral areas. The wheat market is disorganised by price depression and legislative interference, but export trade in other agricultural produce is being stimulated by the low exchange. Trade generally is depressed and unemployment is increasing.

Canadian farming and business conditions remain depressed. In view of Australian and Argentine competition, no real improvement in wheat prices is expected for some time to come.

The Indian situation remains very uncertain. Mail advices from Bombay state that sales of Manchester goods are still very restricted, but later news is rather more encouraging.

South Africa reports increased seasonal business activity, but adds that the improvement is hardly up to normal. Farming conditions remain good in the coastal areas, but inland weather conditions are unfavourable.

UNITED STATES OF AMERICA.

There was a moderate seasonal expansion in business during January. Steel mill operations improved to 45 per cent. of capacity, and automobile manufacturers increased their production schedules, though demand was still rather uncertain. Building construction was fair, and stocks of cotton goods were reduced. Distributive trade was of fair dimensions, and a fair number of unemployed workers were reabsorbed.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

AMERICAN TRADE STATISTICS—JANUARY, 1931.

EUROPE.

The French coal trade is depressed, and short time is being worked in the Nord and Pas de Calais. The iron and steel trades are also dull, and there are frequent complaints of price-cutting. Lille cotton spinners are curtailing production, and the manufacturing end of the Roubaix wool industry is unsatisfactory. Unemployment is increasing.

The Belgian coal and steel industries are dull and depressed. Stocks of coal at pit-head are increasing.

Unemployment in Germany increased during January from 4,357,000 to 4,894,000. Attempts are being made to introduce a five-day working week, with proportionate wage reductions. The heavy industries are dull, and price reductions have been made by iron and steel manufacturers.

Dutch reports have lately become more disquieting. Unemployment is increasing, and short time is being extended. Shipping is depressed, and sugar factories are working at less than capacity.

Scandinavian news is, in some respects, more encouraging. Swedish pulp manufacturers have lately arranged some fair-sized contracts with America, and newsprint makers have also booked some good orders. Danish farmers have obtained some relief from the recent rally in butter prices, and are now feeling more hopeful.

Home trade and purchasing power in Switzerland is well maintained, but the export industries are very depressed.

SOUTH AMERICA.

Good rains have fallen in the Argentine maize areas, and abundant harvests are now assured. Trade remains dull, but the exchange is firmer. Business in Chile only makes slow progress, but the "Cosach" nitrate scheme is now approaching fruition. Brazilian trade remains depressed, but more movement is reported in the local coffee markets. Political disturbances are reported from Peru, but the Government has the situation well in hand. Colombian coffee prices have improved.

FAR EAST.

Business in China has been interrupted by the New Year holidays and the low level of silver prices is also restricting trade. Japan had in January a small favourable trade balance of Yen 1,800,000. This is the first time for several years that this has been achieved. Raw silk sales remained satisfactory, and there was a better demand for cotton goods. The restrictions on cotton yarn production have been slightly relaxed.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical production in the chief industrial areas of Great Britain. We show below a résumé of the results achieved during recent periods:—

INDEX of PRODUCTION of ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship-building, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

While the "uncorrected" figure given in the table above has risen from 194 to 197, the "corrected" figure, which makes allowance for seasonal fluctuations and for the steady expansion in the use of electricity, was 93.8 for January, as compared with 94.0 in December and 97.3 in January of last year.

COMMODITY PRICES—PRE-WAR AND TO-DAY.

In the winter of 1928 we decided to remodel our index number of wholesale commodity prices. The reasons for our decision, together with a full description of the method of compiling the revised index number, were given at some length in our issue of December 15, 1928. At that time few people, if any, anticipated that wholesale prices would shortly drop to their pre-war level; and for purposes of broad historical comparison we thought it sufficient, after consultation with various statistical experts, to link the new series with 1913 by using as a co-efficient the figure 143.7 (1913 = 100), which represented the average, calculated geometrically, for the year 1927—the pre-war list of commodities serving as a basis for this computation. That is to say, we did not "work back" our revised index number to 1913 by using the new list of articles as a basis.

Now that, as a result of the tremendous decline in prices which has taken place since the autumn of 1929, our post-war index number, expressed by means of the link-computation aforesaid, has actually passed below the 1913 level in its downward sweep, the true relationship between present and pre-war prices has become of greater interest, although we would urge no claim that any index number can establish, with complete accuracy, an absolute ratio between averages separated by such a long period of years. Accordingly, we have taken our post-war list of commodities, have ascertained as closely as circumstances permit the 1913 average price for each article, and have worked out on that basis the average index figure for the year 1927, expressed as a percentage of 1913, both arithmetically and geometrically. In order to obtain comparative results we have also worked out geometric averages of the index numbers published in the form of arithmetic means by the *Statist* and the *Times*, and we have been furnished by the courtesy of the statistical correspondent of the *Financial Times* with the arithmetic mean of the index number published, as a geometric average, by that journal. A summary of the results is given below:—

YEAR 1927. (1913 = 100.)

Arithmetic Averages. Geometric Averages.

	Index Figure.	Deviation from mean.	Index Figure.	Deviation from mean.
Economist (old).....	147.9	+ 3.4	143.7	+ 3.6
Board of Trade.....	(a)	...	141.6	+ 2.1
Statist.....	143.7	+ 0.4	135.8	- 2.1
Times.....	142.1	- 0.7	138.3	- 0.3
Economist (new).....	141.5	- 1.1	137.6	- 0.8
Financial Times.....	140.3	- 2.0	135.5	- 2.3

Mean 143.1

(a) Material for calculation not available.

Consideration of the figures of deviation from the mean recorded by the foregoing list of indices undoubtedly suggests that the "old" *Economist* index, whether calculated arithmetically or geometrically, exaggerated the increase in the average level of prices between 1913 and 1927. Considering only the geometric averages, the cause of the difference between the "old" and the "new" figure in 1927 is to be found mainly in the group of commodities classed in our new index number under the heading "Other Foods." This is due to two reasons. In the first place the quotations for particular commodities used in our new index number show in several instances smaller increases than the quotations for the same commodities used in our old index. This is not surprising, for it is on the whole to be expected that a quotation which represents a standard that is becoming obsolete and is being superseded by a new standard will tend to remain relatively higher than the new quotation. This statistical difficulty inevitably arises in using a single quotation as representative of a market over a series of years in which great changes have occurred. Secondly, the average increase shown by the "new" list was greatly reduced by the inclusion in it of two commodities, cocoa and coconut oil, which did not figure in the "old" list. On the reasonable assumption,

then, that the new list of 58 commodities, selected as being the most representative in post-war usage, forms a better basis to reflect price changes than the pre-war list of forty-four commodities, we are of opinion that the average rise in prices between 1913 and 1927 is more correctly expressed by the figure 137.6, whose deviation from the mean of the six index figures listed above is only 0.8 per cent.

It now remains to examine briefly the movement of prices between the average for the year 1927 and the month of December, 1930. In this connection comparison can be most conveniently made between the "new" *Economist* index and those published by the Board of Trade and by the *Financial Times*, since these three indices are all computed geometrically. The fall, calculated geometrically, in that period has been as follows:—

Board of Trade (a) ... 23.2 per cent.

Financial Times (a) ... 26.5 "*Economist* (b) ... 31.3 "

(a) December average; (b) end December.

The reason for this divergence is explained mainly by the fact that whereas the *Economist* index number comprises 58 articles, that of the *Financial Times* covers 75, and that published by the Board of Trade 150. Now it is a matter of common knowledge that during the past two or three years primary products have fallen in price much more severely than have finished and semi-finished goods. It is also obvious that the more numerous the articles included in an index number, the more of the components must be more or less finished products. Thus it would be natural to expect that between 1927 and the end of 1930 the Board of Trade index would fall considerably less than that of the *Economist*, with the *Financial Times* index mid-way in between; and this is what has occurred.

We give below the figures of our index number recalculated on the basis of the post-war list of commodities.

NEW "ECONOMIST" INDEX.

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Mine-rals.	Miscellaneous.	Complete Index.
Average, 1924	159.9	169.9	210.6	145.2	131.5	159.3

" 1930	113.4	122.9	99.1	101.6	101.5	106.8
End Jan., 1930	124.8	132.3	118.1	112.7	109.6	118.5
" June, "	115.1	124.0	102.4	100.7	104.7	108.5
" Sept., "	111.3	118.7	87.7	96.6	95.5	100.8
" Oct., "	107.4	117.4	86.0	96.2	96.8	97.7
" Nov., "	102.4	111.8	84.8	96.0	96.9	97.6
" Dec., "	98.0	113.2	79.1	94.8	93.7	94.6
Jan., 1931	94.3	110.8	75.8	91.5	90.4	91.3
Do., Old Index	99.5	140.5	77.2	94.2	84.3	95.3

As we have said, the difficulty of measuring changes in prices over a period of seventeen years is considerable, and changes in quality are bound to vitiate to a slight extent the most accurate statistical computation that is possible. Moreover, when it is said that "prices have reverted to their pre-war level," it is important that we should be clear in our minds as to what is meant. For example, in December, 1930, wholesale prices as measured by the Board of Trade index were 8.9 per cent. above the level of 1913, whereas measured by the *Financial Times* index they were 0.9 per cent. below 1913, and according to the "new" *Economist* index (taking the mean of the figures for the end of November and the end of December) 3.9 per cent. below that level. In other words, an average derived mainly from primary products had fallen appreciably below the pre-war datum line, whereas an average more heavily weighted with finished and semi-finished articles was still 9 per cent. above that line. Did an index exist composed exclusively of prices of finished goods, the percentage increase would undoubtedly be very much greater.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, MARCH 28, 1931.

No. 94.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics." 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

WHILE there are still many discouraging factors in the situation, there is on the whole a greater disposition to hope that the bottom of the depression curve has now been reached. These hopes are based chiefly upon three major movements. The first of these is the abatement, temporarily at least, of the decline in wholesale prices. The Economist index number for the end of February recorded a slight increase, and more recent statistics show that in England, France, Germany, Italy and the United States commodity prices have been steadier during the past seven weeks, though the most recent fluctuations are less reassuring in the case of wheat and metals. The cost of living, on the other hand, in this country continues to fall, the decline during February being one of two points. Hence not only are wholesale prices showing signs of greater stability, but the gap between wholesale and retail prices is narrowing. These developments alone are sufficient to justify a somewhat more hopeful view of the outlook than has been possible hitherto.

The second major development has been the détente, in some directions at least, which has occurred in strained political relations in Europe; and though psychologically the situation has been worsened this week by the hostile reactions on the part of France to the suggested Customs Union between Austria and Germany, that pact itself arouses hopes of a gradual freeing of European commerce to the advantage of traders in all parts of the world. In the more purely financial sphere, the foundation of the International Mortgage Bank, and the recent return of French funds to Germany, hold out hopes of a more equitable distribution of capital, not only geographically, but as between short-term and long-term channels. In the East an Indian settlement, though still unrealised, seems nearer, at least, than it was a few months ago, and already Lancashire reports a slightly larger Indian inquiry for some goods. Elsewhere, South America has settled down after her recent series of revolutions, and if the political outlook in Spain is still obscure, it is at least true to say that progress is being made with the plans for stabilising the peseta.

Thirdly, the monetary outlook is much better. The drain of gold to France has been successfully checked, and on March 17th, for the first time for nearly a year, the Bank of England secured the bulk of the new Cape gold on offer in London. Since then, more gold has reached the Bank, and at present the Paris rate stands near par. To some extent all this is due to the deliberate efforts of the Bank of England to attract foreign funds to the London market, and as continual efforts are needed to retain these funds, the situation is still not without an element of artificiality or even of danger. On the other hand, the improvement is also due to the movement of French money to Germany, alluded to above, and in any case there is the assurance that the efforts now being made to promote a more even distribution of the world's available capital are meeting with the most cordial co-operation of the French authorities themselves.

It is still premature to expect factors such as these to be exercising any pronounced effect upon the general situation of industry and commerce. Nevertheless, allowing for the temporary dislocation caused by the coal quota, the rate of increase in the unemployment curve has been definitely retarded. Employment has improved in many important industries, most noticeably of all in the textile trades, including cotton, linen and wool. There has been a seasonal decline in unemployment in the building and allied industries, and more work has become

available in the steel, pottery, boot and shoe and clothing trades. Moreover, apart from actual increases in employment, there is an improvement in the general business tone. The approaching budget seems to be exercising less restrictive apprehension than might have been expected, and in several industries there is a noticeable increase in the number of inquiries coming forward. There is a general feeling that many prices have "bottomed," and that there is little to be gained by much further delay in buying. Minor but more tangible indications include the February rise of £6,500,000 in the clearing banks' acceptances on behalf of their customers, and the slight improvement registered in the same month in steel production.

At the same time, it would be wrong to assume that all current changes are in the right direction, and the increase in unemployment in such staple industries as coal, pig iron, engineering, shipbuilding, motors and dock and

harbour services comes as a sharp reminder of the serious nature of the situation. The damping down of two large North-East Coast furnaces during February, and the stagnation in the shipbuilding industry and its allied trades are equally serious, and while the poor export returns for February can be discounted in that they refer to business past and gone, the equally poor returns of raw material imports for that month are hardly indicative of an imminent trade revival. Again, while it seems likely that the recent wage reduction awards in several important industries will be accepted by those concerned, the risk of labour trouble cannot be altogether dismissed. Finally, the operation of the quotas provided for in the Coal Mines Act has this month caused some dislocation in the coal industry.

A true reading of the present situation may be that its favourable factors, important though they are, serve mainly to create an atmosphere favourable to a trade revival rather than to cause business to pick up at once. If this view is correct, there is nothing inconsistent or disappointing in the failure of business, production or employment to have responded as yet to more than a partial extent. It has always been known that even when the recovery begins, its progress must be slow. The reports of our industries at home and also of business conditions in the Empire and foreign countries show that there are still numerous difficulties to be overcome.

HOME INDUSTRIES

Coal.—Business in certain areas has lately been disturbed by the operations of the quota system, and some orders have been diverted from Yorkshire to Northumberland as a result. The cold spell early in March stimulated a temporary demand for house coal. Export trade has been variable.

Iron and Steel.—Little change is reported, though the February steel production was more encouraging. This was partly due to the fact, however, that production was made abnormally low during January by holidays in Scotland, and a further discouraging event is the recent blowing-out of two large furnaces on the North-East Coast.

Engineering.—A slightly more hopeful undertone is noticeable in the industry, together with some increase in the number of new inquiries coming forward. There is a seasonal improvement in agricultural engineering, and the power house equipment and bridge-building trades are maintaining their ground. Marine engineers and textile machinists are depressed, and there is a lull in the locomotive section.

Electrical Industry.—The following index of new orders received by the electrical industry is copyright by the British Electrical and Allied Manufacturers' Association.

INDEX OF ACTIVITY IN THE ELECTRICAL INDUSTRY. (1920 = 100.)

1929.	Home.	Export.	Total.	1930	Home.	Export.	Total.

November.....	71	216	109	November.....	69	150	90
December.....	60	228	102	December.....	66	123	75

The February results are again disappointing, especially as regards overseas business. Home orders for turbine plant were almost entirely from industrial concerns and not from the Electricity Board. There have been a fair number of small orders for rotary converters.

Motor Industry.—The seasonal revival in the private car section has not yet taken place. Exports too have been disappointing. Commercial vehicle manufacturers are also quiet, though to some extent they have escaped the trade depression. Cycle and motor cycle manufacturers are only fairly well employed, but are receiving good orders from South Africa.

Cotton.—Raw material prices have been steadier, and trade has shown some improvement. Although the political situation is still uncertain, there has been a better inquiry from India, and the outlook for the China trade is also more promising.

Wool.—Raw material prices have advanced sharply since the New Year, mainly under the influence of heavy Japanese buying, but there has been only a limited response in the Bradford industry. There are signs, however, that tops and yarn prices are being brought into line with the higher scale of values, and some manufacturers are now busier.

Linen.—Large quantities of flax have been disposed of at higher prices, and it is anticipated that values will continue to harden. Yarns are selling in bulk at very firm prices and demand for cloth is developing favourably.

Rayon.—Output of both yarns and fabric has expanded and stocks are being reduced. Home demand is satisfactory for the time of year, but overseas business remains quiet.

Boots and Shoes.—There has been a slight seasonal improvement in the industry, but business remains slow.

Pottery.—The most satisfactory news is the settlement of the labour dispute and the avoidance of the threatened lock-out. Business generally is still dull.

Chemical Industries.—The home market is better, with more numerous inquiries and orders, though the latter have mainly been of small dimensions. Exports remain very unsatisfactory.

Agriculture.—Outdoor work was retarded during February by bad weather, and cultivation was hardly as forward as usual. Autumn-sown crops remained in good condition, but growth was slow. Lambing was hardly general except among lowland flocks in a few areas, but the fall indicated an average result for the season. Milk yields, though in general well maintained, were lower in some districts.

Shipping.—Chartering for whole cargoes on nearly every route remains slow; there is little change in rates.

Building Trades.—Employment improved slightly during February, but work was interrupted by bad weather.

Retail Trades.—A London stores reports that retail trade shows distinct signs of improvement. Many sections state that their comparative figures have been more than maintained.

UNITED STATES OF AMERICA.

There was a seasonal expansion in industrial activity during February, and the general business tone is now noticeably better. Steel mill operations have improved appreciably, and now stand at 52 per cent. of capacity, against 35 per cent. at the New Year. There has been a moderate expansion in automobile production, and the textile industry has made further progress. Building and construction are a little more active, and freight movements have expanded seasonally. Distributive trade is fairly good, and employment is better.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

* Preliminary estimates made by Messrs Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureau of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices. § Partly estimated.

BRITISH EMPIRE.

Pastoral and agricultural conditions in Australia are satisfactory in the East, but elsewhere rain is needed. Japan is buying wool heavily, and prices have again advanced. Wheat is moving freely and butter production and exports are increasing. Business is still very difficult.

South African farming prospects have been improved by good rains. Maize is cheaper and demand restricted, but South African wool-growers have benefited from the recent improvement in world markets. Retail trade is a little more active, but wholesale business remains dull.

Canada has shared in the recent seasonal improvement in business, an improvement being noticeable in the automobile and textile industries.

Mail reports from Bombay allude to a definite advance in raw cotton prices, and to a stronger demand for home-made piece-goods. Rainfall has been adequate, except in Bengal and the Punjab, and crop prospects are satisfactory.

EUROPE.

The French coal industry is existing under the shadow of a stoppage threatened on March 30th. Output of iron and steel is declining. The Lille textile trades remain dull, but the Roubaix wool industry is feeling more hopeful as the result of the rise in the raw material.

There is no improvement in the Belgian iron and steel trades, and prices have again weakened. The cold weather early in March improved the demand for house coal, but industrial fuel is still moving very slowly. There has been a slight improvement in the glass industries.

The German heavy industries remain depressed, but the recent influx of French capital has both cheapened money and stimulated a general improvement in confidence. Nevertheless, unemployment by the end of February had risen to nearly 5,000,000.

The Scandinavian timber trades remain depressed. Swedish sales to the middle of March for this year are only 130,000 standards, against 450,000 standards in 1930.

SOUTH AMERICA.

During the past month the ripening maize crop in Argentina has again benefited from good rains, and a very heavy yield is now assured. As regards the trade situation, interest is now centred on the British Empire Exhibition and the prospects for increased sales of British products resulting therefrom. Exchange is firmly maintained, and the outlook appears rather more favourable. Chilean commercial conditions are still dull. In Brazil the coffee markets are firmer, and the first steps have already been taken to bring into operation the comprehensive Government scheme for the purchase of stocks.

FAR EAST.

The recent small advance in silver has stimulated business with China, and Lancashire has noticed a slightly better demand.

In Japan sales of raw silk have continued satisfactory, and stocks are now being gradually disposed of under the guarantee scheme. Production has been curtailed, and it is hoped to realise at least 5,000 bales every month. There is a good demand for cotton yarn and cloth.

ELECTRICAL GENERATION

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a *résumé* of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.* (Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship-building, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

c Provisional figures.																		

PROGRESS OF THE ELECTRICITY BOARD.

THE third annual report of the Central Electricity Board for the year ended December 31, 1930, is the first to be issued since the completion of the preliminary surveys for the electrification of Great Britain. The report covers eight of these surveys; the ninth, for South Scotland, was adopted early this year; and provisions for the tenth and last scheme (covering North Scotland) have, to a certain extent, been made through arrangements with the owners of the Grampian water-power undertaking which supplies that area.

Besides the completion of these preliminary surveys, certain sections of the "grid" were in operation by the end of 1930. These include the Central Scotland scheme, which was officially inaugurated by the Minister of Transport on April 30th, and a number of other sections operating, in the main, under the provision of temporary arrangements in the Act of 1926. The more important of these arrangements include 106 route-miles of 132,000-volt line and seven transformer stations in the South-East England scheme, together with thirteen authorised undertakings working under the provisions of the Act and certain sections of the secondary transmission line in the North-West England scheme.

The effective work of the Board has proceeded very rapidly during the past year. Approximately 1,000 miles of wayleaves were obtained, bringing the total to date for main and secondary transmission lines to 1,746 miles. This represents about two-thirds of the total route surveyed and slightly less than one-half of the total mileage of all lines in the "grid." A more detailed example of what has been done in this sphere is obtained from the following table, which shows the position to date in respect of the main transmission lines in each area:—

MAIN TRANSMISSION LINES AT DECEMBER 31, 1930.

	Approximate Total Mileage.	Routes Surveyed. Miles of Way- leaves obtained.
Central Scotland	240.6	240.6
South East England	547.5	301.9
Central England	399.1	320.4
North West England	302.0	231.2
Mid East England	319.9	198.8
North East England	91.8	70.0
South West England	644.8	14.0
East England	141.0	14.3
Total	2,686.8	1,919.2

The development work in connection with wayleaves has been well maintained; and it is interesting to note that, in only two cases, both in South-East England, was it necessary to apply for special Orders conferring compulsory powers on the Board. Progress was greatly facilitated by the machinery provided by the Public Works Facilities Act, 1930.

The work of construction in connection with the "grid" is already far advanced. During the year new contracts for construction were entered into amounting to £7,368,137, bringing the total to date for these contracts to £18,264,829. Of this total South-East England accounted for £7,054,649; North-West England for £2,694,676; Central England for £2,252,973; Mid-East England for £2,247,756, and Central Scotland for £1,727,447. The actual capital expenditure by December 31, 1930, was £7,477,747 for construction purposes and £1,821,385 on standardisation of frequency. Details of construction include 219 miles of main transmission lines and eleven transforming stations in Central Scotland; 256 miles of main transmission lines and 17 transforming stations, together with 50 miles of secondary transmission lines in South-East England. As for the other areas, the Central England scheme has 92 miles of the main transmission lines complete, while 16 miles of the lower voltage transmission lines are complete and in actual operation. Work on eleven of the transforming stations is well advanced. In the North-West England scheme construction work is proceeding on 25 miles of main transmission and 85 miles of secondary transmission lines, and also on five primary

and seven secondary transforming stations. In the Mid-East England scheme work in progress covers 166 miles of main transmission and 66 secondary transmission lines and eight main transforming stations. In the North-East England scheme the survey of the routes of all transmission lines has been completed, and all contracts in connection with the erection of these lines have been placed. While no erection has yet been started, work on the contracts is proceeding in the shops. Similarly, in the South-West England scheme contracts for the construction of the whole of the 132,000-volt lines and equipment have been placed, and these are now in course of manufacture. Of the remaining two schemes, East England and South Scotland, the contracts for the major equipment have now been placed, and work will begin shortly.

With the progress of electrification it has been found that the original estimates of expenditure have been, in many cases, exceeded. It thus became necessary during the year to increase the original estimated sum of £8,569,000 on account of expenditure for standardisation by supply undertakings to £9,969,550, to be spread over the next few years, bringing the total to date on this account to £18,589,450. It is mainly on account of this that the borrowing powers of the Board were increased by a Special Order from £23,500,000 to £50,000,000. The original sum included £25,000,000 to cover the first five years' expenditure on the construction of the transmission system, the necessary working capital with an allowance for a reserve, and a further net sum of £8,500,000 for standardisation of frequency.

As indicated, the present estimate of the cost of changing the frequency in the country, based upon the experience gained in Central Scotland and Central England, has been put, in round figures, at £19,000,000, or £16,300,000 net. The borrowing powers of the Board were, therefore, increased by that amount. Up to December 31, 1930, the Commissioners had issued consents to the borrowing by the Board of a sum not exceeding £20,500,000 for the purpose of the "grid," and £5,500,000 for the purpose of standardisation of frequency, a total of £26,000,000. By the end of the year the total amount actually borrowed was £15,045,000. The main form of borrowing by the Board is by the issue of "Central Electricity Stock." On December 31, 1930, the amount of stock issued was £16,000,000, divided up as follows:—

- £3,000,000 4 per cent. Stock 1959-1989 on May 24, 1929, at £83;
- £7,000,000 5 per cent. Stock 1950-1970 on January 24, 1930, at £97 10s.;
- £6,000,000 4½ per cent. Stock 1951-1973 on November 21, 1930, at £95 10s.

The terms of issue provide that the stocks will be redeemed by cumulative sinking funds commencing not later than the years 1935, 1936 and 1937 respectively, and sufficient to repay the whole of the stock to which the sinking fund relates by its maturity date.

It is clear from the report that good progress is being made with the development and, equally important, with the standardisation of electric-power production in Great Britain. The electrical engineering industry has directly benefited, for it has received to date orders amounting to £18,000,000 in respect of the different schemes. The benefit to industry in general, though less direct, will in the long run be substantial, for ultimately it should lead to economies in power costs in the widest sense of the word. How far individual factories will be able or willing to transform themselves from steam to electricity as their source of power is open to question, as are also the effects of the development of electric power upon the coal trade, upon the railways and last, but not least, upon the geographical distribution of industry and employment. These questions, however, are not for the Electricity Board to consider, and there is no doubt that they are making steady and commendable progress with their task.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, APRIL 25, 1931.

No. 95.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.*

* "League of Nations Monthly Bulletin of Statistics." 1s. 6d.

THE STATE OF TRADE AT HOME AND ABROAD.

THE general impression made by recent developments is that while the worst of the trade decline has probably been seen, the curve is not yet definitely turning upwards. The absence of clear signs of improvement is causing some despondency; but the situation is not wholly unfavourable. Wholesale prices, after greater stability in February and March, have latterly shown renewed weakness in some direction, but the March trade returns, though poor in themselves, were no worse than those of February.

regards this last industry, Lloyds Register for the first quarter of the year is very gloomy reading. It shows that during the past quarter less than 33,000 tons of new work was put in hand in this country, and that tonnage under construction in British yards amounted at the end of the quarter to only 694,000 tons, against 909,000 tons at the end of 1930, and 1,615,000 tons at the end of March, 1930. About 300,000 tons of the work now in hand consists of tankers, and as this residue of the 1929-30 boom in the

construction of oil-carrying vessels is worked off, total work in progress may be expected to decline still further.

The story to-day is thus one of an absence of any real progress, and it is not surprising that, as the course of Stock Exchange prices shows, this is creating a certain amount of uneasiness. Such feelings are only natural immediately before the Budget, especially as the last financial year closed with a deficit of £23,000,000, and the current year opens with the prospect of heavier taxation. Again, company reports now coming to hand reflect the full force of the trade depression, and they will continue to exercise a discouraging effect upon public opinion even after the business curves turns upwards.

In general, it may be well to realise that even if recovery is beginning, its initial progress will be very slow; failure to recognise this fact will cause further

loss of confidence and so retard recovery still more. Progress will be all the slower, because abroad the political and economic outlook is far from clear. The repercussions of the Spanish revolution, both in Spain and in South America, cannot yet be estimated. In Europe, the preparations for the Disarmament Conference have lately made slow and irksome progress. There is no news of any recovery in Belgian industries, and, while German reports are now a shade more encouraging, news from France shows that she is now beginning to feel the full force of the world depression. The American situation at the best only resembles that of Great Britain, namely, stability at a low ebb, while in the Empire, Australian events—such as Mr Lang's attempt at repudiation and the political crisis which has arisen from the Senate's rejection of the Fiduciary Notes Bill—continue to have an unsettling effect. Nor is there much encouragement from develop-

ments in the Far East. There is no finality in the Indian situation, whether political or commercial, and China trade is still retarded by the low price of silver. In all countries who are producers of primary commodities the problem of huge unliquidated stocks remains, and it will take many months of stable prices to reduce them to manageable proportions.

In the monetary and banking sphere the outlook is more hopeful. The foundation of the International Mortgage Bank has been followed by that of L'Union Internationale de Placements, and in both institutions French interests are taking a leading part. While too much importance should not be attached to the rumours arising out of Mr Norman's visit to the States, it may well be that further measures of international co-operation are in contemplation, all designed to divert capital from short-term to long-term channels and to facilitate its more even distribution. The main obstacle in the way is the general lack of confidence, and its deterrent effect upon the private investor. Confidence takes time to re-establish, and this is another reason why recovery must be slow.

HOME INDUSTRIES.

Coal.—The new quotas are now in force, but Northumberland still reports a shortage of certain descriptions. Durham pits, on the other hand, are badly in need of fresh business. Sheffield reports a strong export prompt demand, but deliveries of house coal have fallen considerably. In South Wales there is a fairly steady demand for large coal, and the anthracite market is active and firm.

Iron and Steel.—March production of pig iron, even after making allowance for the difference in the lengths of the two months, was a little better than in February. Two hematite furnaces are shortly to be blown in on the North-East Coast, as their owners have successfully reduced their stocks and have enough business in sight to employ these additional furnaces for at least three months. There was a slight increase in steel production in March, but this was insufficient to correspond to the greater length of the month. The general tone of the industry is still one of despondency.

Engineering.—The new inquiries reported a month ago have failed to yield much fresh business, and order books have become still more depleted. The amount of work in progress has also diminished during the past few weeks, but this is not surprising in view of the existence of a time-lag of several months between the placing and completion of an order. Hence the prevailing inactivity reflects the depressed state of business at the end of last year. There is still a fair demand for boilers and prime movers, but locomotive builders have lately lost ground, as the home railways are cutting down expenditure as far as possible and foreign needs appear to be satisfied. Textile machinists and marine engineers are very depressed, and there is no improvement in the machine tool trades.

Electrical Industry.—The following index of new orders received by the electrical industry is copyright by the British Electrical and Allied Manufacturers' Associations.

INDEX OF ACTIVITY IN THE ELECTRICITY INDUSTRY. (1920 = 100.)

1929.	Home.	Export.	Total.	1930.	Home.	Export.	Total.
January.....	92	122	99	January.....	68	220	107
February.....	92	128	101	February.....	69	240	112

November.....	71	216	109	November.....	61	171	89
December.....	60	228	102	December.....	75	152	95

Although the March figures were disappointing, there have recently been signs of an upward turn. On the export side some useful orders from China have lately been received, while at home a number of small orders for turbines for use in mines have been placed.

Motor Industry.—There is some evidence of increased activity in the private car section, and a further improvement is anticipated during the next few months. March exports were disappointing. Commercial vehicle builders are only moderately well occupied, and new orders are being held back owing to uncertainties arising from the various regulations being issued under the new Road Traffic Act. Cycle and motor cycle manufacturers are only fairly busy.

Cotton.—Demand has fallen away again after the slight improvement that took place in March, and order lists are

lighter than they were a month ago. In India a fair amount of buying of bleaching styles and prints has taken place for Karachi and Bombay, but in Calcutta and some up-country markets the "economic" boycott has lately become more intense. Business with China is still restricted, but a better demand has come from South America, and certain fine fabrics have attracted more attention from the Continent. Little support has been received from Egypt and the Near East, but home trade remains steady. Spinners of American counts have had difficulty of disposing even of their limited output, and demand for Egyptian yarns has been irregular.

Wool.—Raw wool is being steadily absorbed, largely through heavy French and Japanese buying, and the balance of the Australian clip should be readily marketed. Business in Bradford has nevertheless weakened, as top-makers are waiting on spinners, and the market is being disturbed by cheap sales of merinos. At the moment buyers' prices in Bradford are too low to correspond with the new level of raw material prices.

Linen.—Flax prices are firm, and sellers are refusing to make concessions. Arrivals from Russia are being delayed, and in some cases buyers have had to accept substitutes. There is a steady demand for yarns, and contracts have been placed for delivery up to the end of December. Business in cloth now covers a wider range, and production is increasing.

Rayon.—Home demand is more active. There is greater confidence in the yarn market and better prices are being obtained for the cheaper grades. Manufacturers are busy on warps. Export business is still much below normal.

Boots and Shoes.—Demand on the whole is a little better, and some firms are now doing fairly well. Activity, however, is by no means uniform, and at Bristol, which concentrates on the heavy boot trade, most firms are still working short time.

Pottery.—Trade has recently become a little better, but is still very slow.

Chemical Industries.—March witnessed a slight improvement in the general tone of the chemical market. Home orders were more numerous, mainly owing to a better demand from the textile industries. Individual orders, however, were of smaller magnitude than usual, and it is possible that the April setback in the cotton industry will have unfavourable reactions. The general consumption of sulphuric acid also shows little sign of improvement.

Agriculture.—Sowing proceeded rapidly during the latter half of March, and although frosts and cold winds checked autumn-sown crops, they were as a rule of good appearance and made progress towards the end of the month. Preparation of land for potatoes was well in hand, and some earlies were planted. The fall of lambs was up to average. Grass made little growth, but supplies of winter keep were adequate. Livestock did fairly well, and milk yields were average.

Shipping.—The cargo market continues to show little life; business has not expanded appreciably on any routes; and freights in all directions rule round their recent low levels.

Building.—Although there was a further improvement in employment during March, conditions as a whole remained very inactive apart from a few centres, including Hull and Coventry. Outside work was interrupted by bad weather during the early part of the month.

Retail Trade.—A London store reports that business remains satisfactory. Normal figures are now being returned by many more departments than previously, and the outlook is promising.

BRITISH EMPIRE.

Australia reports that recent good rains have ensured favourable pastoral conditions for the coming winter. The butter export season has been extended, and cultivation for the ensuing wheat crop has been facilitated. Wool is realising higher prices, and the outlook for the grower is much improved. In other directions the trade depression is deepening, and, apart from the political situation, no substantial improvement is expected.

In Canada only a seasonal improvement in business has taken place, and unemployment remains serious, with activity below the level of a year ago. Some pulp and paper manufacturers are having to default on their fixed charges, and plans for financial reconstruction are being considered. Agriculture remains depressed by the low level of wheat prices.

In South Africa, good rains fell in February throughout the summer rainfall area, and farming conditions were generally favourable. Wholesale traders reported better business and retail trade was maintained, but it is clear that the public are still spending carefully. The improvement in local wool markets continued during February, and there was also a keen demand for hides and skins.

In India, mail reports from Bombay state that cotton prices were firm with heavy Japanese buying. There has been no

real improvement in the demand for Manchester goods, and, apart from political influences, the increase of 5 per cent. in the Customs duty has had a deterrent effect. Good clearances of Indian-made goods were reported, but inquiries have lately fallen away.

UNITED STATES OF AMERICA.

There was a slow seasonal improvement in business during March, though lately steel operations have receded and the month has closed with mills working at 55 per cent. of capacity. Automobile production is expanding cautiously, the March output being estimated at nearly 300,000. Construction contracts showed a slightly more than seasonal expansion, and the improvement in the textile industries has continued. Freight movements increased seasonably but are still at a low level. There was a small recovery in employment.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

AMERICAN TRADE STATISTICS—MARCH, 1931.

* Preliminary estimates made by Messrs Moody, subject to revision. † Based on reports of U.S. Labour Bureau and of Bureau of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices. § Partly estimated.

SOUTH AMERICA.

In Argentina, the picking and stacking of maize is proceeding slowly, there having been fairly general rains. The weather, however, has been most favourable for ploughing for the next harvest of wheat, linseed and oats, and this work is being more actively undertaken. Reports of the progress of and attendance at the British Empire Trade Exhibition in Buenos Aires are extremely satisfactory. Brazilian trade conditions do not as yet show any marked improvement, but advices regarding the tone of the coffee markets continue to be more favourable. The trade movement in Chile is still slow, due to the poor demand for export products, but the exchange position remains remarkably stable. The bond issue of "Cosach" having now been made, rapid progress is taking place in the reorganisation and consolidation of the Chilean nitrate of soda industry. The general commercial situation in Peru is still depressed. In Mexico, interest is centred in the exchange position, which has been rendered rather more satisfactory by the operations of the Exchange Regulating Commission. Colombian business conditions continue to improve, and the production of coffee in the Republic this season shows an appreciable increase on that of last year. Nicaraguan business has been interrupted by the earthquake in Managua.

EUROPE.

The depression in the French steel industry is becoming accentuated, and the textile markets, apart from wool, are being affected by the weakness of raw material prices. Cotton spinners and weavers have lately lost ground. The wool industry, on the other hand, has improved with the firmer tendency of raw wool prices, the recovery being most noticeable in the combing and spinning sections.

Belgium reports a slight recovery in certain steel prices, but there is no improvement in the number of orders coming to hand. Coal stocks are still increasing in spite of diminished production. Conditions in the textile trades are bad, and much short time is being worked.

The German outlook is, if anything, a shade better. Unemployment decreased slightly during March, though the returns for the end of that month still gave a figure of

4,756,000. Exports amounted to Mks. 822 millions in March, against Mks. 733 millions in the previous month, but current industrial reports are less encouraging. The average daily turnover of the Westphalian Coal Syndicate fell by 2,000 tons as between February and March, and, though the steel trades report a slight improvement in demand since Easter, this is not big enough to possess much significance.

Holland reports a slight seasonal decrease in unemployment, and apparently the reports now being issued by numerous small companies are better than might have been expected. Raw material imports have also expanded slightly.

The Scandinavian timber trade is still very dull. In Norway the most important recent events were the decision of the Norwegian Whalers' Association to suspend operations over the whole of the next season, and the industrial troubles which culminated after Easter in a lock-out embracing 80,000 workers. After its initial shock had passed, the decision to suspend whaling was well received, but the lock-out naturally aroused feelings of greater anxiety. Danish prices of agricultural produce are still very low, and this is ascribed to the competition of Empire produce in the British market.

FAR EAST.

The low price of silver continues to restrict trade with China, and apart from this (to judge from the report of the British cotton mission) Japanese competition is becoming a more and more formidable factor. Chinese purchasing power is much restricted, which means that demand is concentrated upon cheap, low-quality goods, and Japanese goods are as a rule more quickly available.

Japanese cotton spinners, on the other hand, are noticing a greater importation of Chinese cotton yarn, and are, in consequence, in favour of increasing their over-production so as to counteract Chinese imports. In the iron and steel industry a Central Selling Agency has lately been formed by arrangement between the Government and the private interests concerned, and this has introduced more settled conditions into the steel market. The cessation of raw silk production during March has had good results. The disposal of stocks held under the guarantee scheme has been temporarily postponed in view of existing market conditions.

ELECTRICAL GENERATION

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a resume of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.* (Monthly Average 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship- building, Heavy Engin- eering.	General Engin- eering, Auto- mobile Construc- tion.	Chem- icals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association. † Increase due to special causes.

The "corrected" figure, allowing for seasonal fluctuations and the steady expansion in the use of electricity, was 91.7 in March, against 91.0 in February, 93.8 in January, and 96.5 in March last year.

THE WOOL TEXTILE INDUSTRY.

An Analysis of Britain's Decline.

The following review of changes in the distribution since the War of the British overseas trade in wool textiles consists mainly of a summary of a study by Mr G. H. Wood, published in Hamburg, in the April issue of Archiv, together with certain additional matter for which we are also indebted to Mr Wood. The author prefaces his survey with the observation that the changes in British statistics of overseas trade involved by the creation of the Irish Free State in 1923 inevitably produced an element of non-comparability between pre-1923 and post-1923 figures, while strict comparison between pre-war and post-war data is also complicated by the changes resulting from the Treaty of Versailles. Where it has been necessary to convert pre-war linear yards into square yards, the conversion has been made in accordance with the formula worked out by Mr Wood in 1925.

The post-war history of the British wool textile industry falls into two parts. During the war the normal course of the industry was interrupted. Wool supplies became progressively scarcer as the demands for supplies for the armed forces of Great Britain and her Allies increased, while shipping facilities decreased. At the end of 1918 there was ample wool in the world for all visible requirements, while most of the markets were denuded of stocks. These circumstances combined to produce a feverish boom, and British wool textile exports increased rapidly. In May, 1920, prices broke, and exports of wool tissues fell to an almost nominal figure in the winter of 1920-21. During 1920-23 the statistics are confused because, in addition to this boom-and-slump condition, they contain also the exports of civilian cloth (and clothing) to the devastated areas (much of it made with materials diverted from war-service) and of cloth, rugs, and blankets made for war service and sold by the British "Realisation" Department.

Accordingly, though figures for 1920 and 1921-23 are included, for what they are worth, in the following tables, the year 1924 is taken generally as the basis for comparison with subsequent developments. Excluding the minor consideration that British blanket exports in that year included quantities of Army horse rugs shipped to Greece and Turkey, 1924 is a suitable year for comparative purposes since, apart from the fact that the last British census of production was then taken, the world trade in wool textiles in 1924 approximated in volume to that of 1913, and, allowing for European frontier changes, this approximation was not very unevenly distributed.

Raw Material Supplies.

The British domestic supply of wool is not large, but its quality has certain valuable peculiarities which cause it to be preferred for certain purposes by spinners and manufacturers at home and also in Belgium and Germany and the United States of America. In addition, Great Britain is a historical centre of the world's wool trade and her entrepôt trade in this commodity has been a very important and profitable item in her commercial life.

The chief sources of gross British imports of sheep's and lamb's wool in 1913 and in 1929, the latest year for which particulars are available, were as follows:—

Source.	1913. Mn. lbs.	1929. Mn. lbs.
Australia	265.1	270.2
New Zealand	181.2	194.0
British South Africa	133.2	167.5
Other British countries	62.1	66.8
All British countries	641.6	698.5
South America	84.7	78.7
Other foreign countries	74.3	36.6
All foreign countries	159.0	115.3
Total all countries	800.6	813.9

Of the gross imports in 1929, about 330 million lbs. were re-exported.

As to the production of British wool, the proportion exported since the war has ranged between 40 to 50 per cent., until 1930, when exports amounted to only 28 per cent. The quantities of British and foreign wool

retained for use in this country are shown in the following table:—

BRITISH AND FOREIGN WOOL PRODUCTION, GROSS IMPORTS AND RETENTION.

(In millions of lbs.)

Year.	British Wool.		Foreign Wool.*	
	Production.	Retention.	Gross Imports.	Retention.
1913	125.1	96.5	800.6	494.1
1920	107.9	85.7	872.9	648.3
1921-3	102.4	50.9	868.7	470.6
1924	104.6	52.3	760.3	401.5
1925-7	114.3	57.6	786.8	445.4
1928	119.6	71.6	779.3	440.5
1929	117.9	65.9	813.9	483.3
1930	115.0	82.3	783.4	495.0

* Sheep's and lamb's wool only.

In addition to sheep's and lamb's wool Great Britain imports (and re-exports) alpaca, vicuna and llama; camel's hair; mohair; and waste, noils and rags. Wool pulled from sheepskins imported also represents an addition to British wool supplies. Comparative figures for 1913, 1924 and 1930 are given below:—

NET IMPORTS.

	1913.	1924.	1930.
Alpaca, vicuna, llama..... (Lbs. Mn.)	5.5	4.3	2.4
Camel's hair	7.9	4.1	3.6
Mohair	27.8	18.3	13.6
Wool waste and noils..... (Lbs. Mn.)	3.2	6.6	3.5
Wool pulled from sheepskins (Lbs. Mn.)	35.4	22.4	21.2*
† Woollen rags	1,078	795	428

* Figure for 1929.

† Nearly all "not pulled."

Against these supplies there have to be set the exports of British wool waste and rags, for which comparative figures are as under:—

BRITISH EXPORTS.

	1913.	1924.	1930.
Wool waste	13.9	19.7	11.7
Wool noils	20.0	20.8	12.8
Woollen rags—			
Pulled	120.1	122.4	43.4
Not pulled	83.1	134.2	137.4

Great Britain is still a great gathering ground for the world's woollen rags, and the destination of her exports of these valuable waste reclamations throws some light on the trend of wool and spinning in other countries. During the past five years, British imports of rags, pulled and not pulled, have declined considerably, but her exports have increased materially. The following figures, giving the estimated total weight of reclaimed wool fibre content in the rags exported by this country, whether of British production or of foreign origin, are significant:—

Thousands of Cwts.

	1913.	1924.	1929.
Exports to—			
Germany	57.9	58.9	73.8
Holland	8.4	5.2	6.0
Belgium	13.2	4.7	9.6
France	25.1	6.8	14.1
Czechoslovakia.....	Nil	3.8*	10.7

* Figures for 1925-27.

These figures suggest that since 1924 the world-share of low- and medium-quality woollen yarn (and almost certainly tissue) production hitherto enjoyed by Great Britain

is decreasing, whereas that obtained by Czechoslovakia, and, in a lesser degree, Belgium and France is increasing. Germany, too, shows some signs of increase.

The survey of this aspect of the wool textile situation—i.e., raw material supplies—is completed by the following table, which brings into one round figure the estimated weight of wool, mohair, pulled wool, waste, etc., retained in the United Kingdom annually:—

ESTIMATED TOTAL WOOL RETENTION.

Year.	Millions of lbs.	Year.	Millions of lbs.
1913	872.2	1924	637.8
1919	1,225.8	1925	594.4
1920	897.5	1926	657.3
1921	593.9	1927	660.6
1922	822.7	1928	631.7
1923	498.3	1929	695.0

In reading the foregoing table, regard should be had to the fact that a considerable carry-over is always necessary. The consumption of 1929 was not in excess of that of 1928. That for 1930 will assuredly be lower.

Wool Tops.

Great Britain does a small trade in tops of foreign production. Her gross imports in 1923 were almost exactly one-tenth of the exports of tops of her own combing and the bulk of these were purchased from Belgium and France. Re-exports are so small as to be practically negligible, a fact which suggests that the merchandising trade in tops is not large in any country. This is as would be expected, for spinners the world over have a notorious fear of experimenting with tops which they cannot trace back to the top-maker. Retained imports in 1930 amounted to 2.11 million lbs., against 4.69 million lbs. in 1924.

The magnitude of British exports of tops is on a far different scale. Somewhere about one-seventh of her production is exported, Germany, Canada and Sweden being her largest customers in the order named. Foreign and colonial spinners using British tops buy largely direct from the top-maker and have thus the advantage frequently of buying an article which is standardised. British exports of tops have been falling annually since 1927, but the fact that she sells in practically every country in the world where worsted spinning is practised is evidence of their reliability in quality.

EXPORTS OF BRITISH WOOL TOPS.

(Millions of lbs.)

Country of Destination.	1913.	1920.	1921-3.	1924.	1925-7.	1928.	1929.	1930.
Sweden	5.3	1.0	3.8	5.0	3.8	4.2	3.6	4.3
Germany	16.2	9.5	8.3	9.8	8.8	10.2	9.3	4.2
Netherlands	3.6	1.9	2.2	2.3	1.2	1.0	1.4	...
Belgium	2.4	1.2	2.2	2.3	1.7	1.9	1.0	1.1
France	1.1	0.5	0.6	1.0	0.9	1.0	0.7	0.7
Japan	5.1	0.1	3.8	5.5	3.8	0.6	0.3	0.1
United States	0.4	0.4	5.5	0.3	0.2	0.1	0.7	...
Mexico	...	...	0.1	1.0	0.2	0.4	0.5	...
Other foreign countries ..	6.5	4.5	5.4	5.3	7.1	5.3	6.0	...
All foreign countries	40.6	19.5	32.0	33.5	27.8	24.7	23.5	...
Canada	2.8	4.3	6.1	5.1	6.0	7.3	6.6	6.0
Other British countries ..	0.3	...	0.3	2.5	2.1	2.5	2.7	...
All British countries	3.1	4.3	6.4	7.6	8.1	9.8	9.3	...
Total, all countries	43.6	23.8	38.4	41.1	35.9	34.4	32.7	28.8

This table makes clear the steadiness of British exports of tops to Sweden (leading us to infer that that country's domestic spinning industry has been remarkably stable in its employment of machinery during the past nine years), the consistency of the German purchases (until the intense depression of her spinning in 1930 cut them down), and the unreality of the Japanese boom of 1923-25. It fails, however, to exhibit a remarkable trend which has set in during the past three years. We are not yet in a position to isolate all the facts, but we know that in 1928 Sweden, Germany, Belgium, France, Italy, Japan and Canada together took over 75 per cent. of Britain's export of tops. Since 1928 the course of exports has been as follows:—

	1928.	1929.	1930.
British Exports to—			
Seven countries enumerated.....	25.7	22.0	16.7
All other countries.....	8.7	10.7	12.1

Unless some extraordinary international interchange of tops is taking place these statistics mean that each year domestic spinning is developing all over the world and that manufacturers of tissues and hosiery in hitherto backward "spinning" countries are relying increasingly on domestic supplies of yarn.

Yarns.

In 1910-12 Great Britain's exports of all kinds of woollen and worsted yarn of her own spinning averaged 91 million lbs., whereas in the three years 1928-30 they averaged 56 million lbs. Yarn imports in 1928-30 amounted to only 19 million lbs., against 28 million lbs. in 1910-12. Taken together, the changes in the figures of exports and imports suggest that there has been some re-distribution of the world's (and particularly Europe's) yarn trade. The following table gives a general picture of Britain's overseas trade in yarns in 1913, and from 1920 onwards:—

IMPORTS, RE-EXPORTS AND BRITISH EXPORTS OF YARNS.

(Millions of lbs.)

	1913	1920	1921-3	1924	1925-7	1928	1929	1930
Gross imports	33.0	14.9	13.2	17.8	16.8	17.9	20.5	19.1
Imports from—								
Germany	5.0	0.8	0.1	0.2	1.2	2.1	2.1	...
France	12.1	5.8	5.6	8.5	8.6	10.6	12.8	...
Belgium	15.6	6.0	6.1	6.6	6.0	3.8	4.2	...
Netherlands	...	...	0.1	0.4	0.2	0.3	0.3	...
Above countries	32.7	14.6	11.9	15.7	16.0	16.8	19.4	...
Re-exports	0.4	0.1	0.1	0.2	0.2	0.1	0.2	0.2
Net imports	32.6	14.8	13.1	17.6	16.6	17.8	20.3	18.9
Exports of British Yarns—								
Woollen	4.8	6.4	8.3	8.3	6.0	7.5	7.9	5.4
Worsted	49.9	23.6	33.8	45.6	38.6	41.5	38.8	31.9
Alpaca and mohair	17.2	4.3	6.8	8.4	7.8	8.9	7.9	5.9
Hair or wool N.E.S.	8.5	3.4	2.4	3.7	5.5	8.2	9.0	6.4
Total exports	80.4	39.6	51.2	65.9	57.9	66.0	63.6	49.6

* Details not yet available.

† Amount negligible.

From this it will be seen that the imports of yarns have shown an upward tendency since 1922; that the re-exports of imported yarn are negligible; and that the exports have shown a marked tendency to decline, particularly since 1928. Four countries supply Great Britain with 95 per cent. of her imported yarn, and two of these share 85 per cent. between them. While Germany is slowly creeping up, France and Belgium are in fierce competition, in which France is almost continually gaining ground and Belgium losing it. Various reasons have been assigned for this change over, which is largely concerned with yarns for hosiery manufacture, but in the final analysis one reason becomes dominant, namely, cost. It is not a change in the type of yarn required nor any other peculiarity in which French spinners specialise which enables them to overtake all their rivals; the secret lies in the price.

An analysis of Britain's post-war yarn exports according to principal markets is a source of considerable light on some phases of the world's post-war wool textile activities.

DESTINATIONS OF BRITISH YARNS.

(Millions of lbs.)

The large shipments to Japan in 1921-24 are a reflection of the short-lived boom in the Far East in those

years, while the rise in shipments to Canada in 1928-29 is a consequence of the 1928 tariff which admitted yarns for weaving duty free.

The consistent increase in the totals to "Other foreign countries" is eloquent testimony to the determination of countries all over the world to manufacture their tissues and their hosiery for themselves. It has already been shown that the export of tops to "other countries"—namely, to that large number of countries which used not to be regarded as important wool textile producing countries—has been constantly increasing. Proceeding steadily to import tops instead of yarns they are also proceeding, though not to so great an extent, to import yarns instead of piece-goods.

Wool Tissues.

The statistics of the weaving section of the wool textile industry—a section which has hitherto accounted for the preponderating portion of its activities both for export and for the home market—involve at the outset difficulties of classification, e.g., as between "worsted" and "woollens," in regard to whose declaration importers and exporters have been inconsistent. For example, since 1925 the imports of worsteds show successive decreases and of woollens successive increases, despite the fact that it is well known that no such considerable changes in the character of wool textile imports have taken place.

Then again there is no true and proper distinction between "woollens" and flannels. Years ago there doubtless was felt to be a clear distinction, to-day there can be no doubt about the difference between a tweed and a shirt-flannel; but the vogue for grey flannel suits, or trousers, increasing as it does the proportion of the appropriate cloths in the export statistics, destroys the true demarcation because there is no clear line to be drawn between those cloths and woollens proper.

Setting aside these distinctions, the following table gives a clear picture of the course of trade:—

IMPORTS, RE-EXPORTS AND BRITISH EXPORTS OF TISSUES.

(Millions of Square Yards.)

After the activity, exceptional in the post-1920 period, of 1924, exports, until 1929, were relatively steady on a much lower level, whereas there was a substantial increase in imports. In 1929 the export depression was much accentuated, and in 1930 we reached to the lowest post-war point. While Great Britain was experiencing this depression of her exports, her imports of wool tissues continued to increase, and even in 1930 a level was attained almost equal to that of the maximum post-war year. The depression in the exports of British wool textiles measured from the isolated (but by no means extraordinary) year 1924 is roughly as follows:—Tops, 31½ per cent.; yarns, 20½ per cent.; tissues, 50 per cent. The total net British imports of tissues have increased by 30 per cent. since 1924. In the case of woollens, worsteds and flannels a reduction in 1929 of over 6 million square yards in

purchases from France, as compared with 1924, was offset by an increase of over 9 million square yards in imports from Germany, while purchases from Belgium, Holland and Czechoslovakia also showed minor increases.

With regard to exports, British trade records are unfortunately not published with sufficient details to enable a complete analysis of all tissues to be made, but, subject to a small margin of error in respect of alpaca and mohair, the following table, which covers 90 per cent. of British exports of wool tissues, indicates the trend of trade with sufficient accuracy:—

EXPORTS OF WOOLLEN, WORSTED, ALPACA AND MOHAIR AND FLANNEL TISSUES.

(Millions of Square Yards.)

* Austria only.

* Provisional figures.

The table brings out clearly the transient nature of the Far East boom which set in towards the end of 1923 and obscured the depression which had then already commenced in Great Britain, though not on the Continent. Between 1925 and 1928 exports to British countries were declining, while those to foreign countries were increasing. Closer examination reveals that the decline was in the Australasian markets. In 1929 the depression was intensified in the Far East, Australasia, North America, South America, and slightly in the Irish Free State. In Europe, on the whole, there was an expansion of about 10 per cent., but the falling off in the Far East outweighed the European increase threefold. In 1930 the depression became further intensified; in fact, a depression was superimposed on a depression.

The export trade in tissues, other than those already analysed, may be briefly reviewed. Wool and mohair plush exports—an important item in a group of West Riding mills—have steadily declined, and amounted in 1930 to only 519,000 square yards, as compared with 1,042,000 square yards in 1929 and 2,229,000 square yards in 1924. Exports of damasks, tapestry and other furniture stuff, another small corner of the wool textile industry, have recently suffered from the depression in the furnishing trade, and amounted in 1930 to 167,000 square yards, as compared with 306,000 in the previous year, and 325,000 in 1924. Exports of travelling rugs, etc., which totalled 894,000 square yards in 1924 and averaged about 740,000 square yards during the next five years, fell, in 1930, to 551,000 square yards. Blanket exports numbered 596,000 pairs in 1930, against 895,000 pairs in 1929 and 2,146,000 pairs in 1924. Between 1924 and 1929 the largest declines were in the case of the South African, Far East, and Canadian markets.

International Comparisons.

The next stage is to examine as far as possible the relationship of British wool textile exports to those of other great exporting countries. The available information is by no means complete, but as it includes France, Germany, Belgium, Italy and Czechoslovakia, it is possible to form a reliable opinion on the changes in the distribution of the world's international trading in wool products. The large table opposite should be read with the reservation that, except in the case of tops, the vertical comparisons are not absolutely reliable. Alpaca and mohair yarns and "wool and hair yarns not elsewhere specified" are included in the British figures but may be excluded from some or all of the records for the Conti-

mental countries. Similarly, in the case of woollen and worsted tissues, the record for Great Britain contains the weight of blankets, wool and mohair plushes, travelling rugs and, indeed, all wool tissues except carpets. Those for the Continental countries may or may not contain these goods, but owing to differences of classification we cannot be certain. While the vertical comparisons are not exact (i.e., the weights given do not necessarily apply in all countries to the same group of tissues) the tabulation has been compiled year by year in uniform principles.

The following main features emerge. The year 1924 was a year of revival, apart from the boom in the Far East. France in particular improved her exports even apart from her sales to Japan. A depression followed in 1925-6 during which a considerable portion of the total trade was re-distributed. In 1927-8 there was a recovery, mostly marked in the exports of yarns. In 1929 there was a relapse; in 1930 the depression was practically universal.

Over and above all this, the table reveals the pitiful position of Great Britain. The previous tables have traced (1) the decline in our annual average raw wool retention; (2) our increased sale of rags; (3) the decline in our total exports of tops and yarn, together with an increase in exports of these categories to "other countries" which provide only small markets and buy in comparatively small lots; (4) the increase in our retained imports of yarns which, being mainly for hosiery manufacture, are becoming a serious competitor against Yorkshire spindles; (5) the continuous decline in our exports of wool tissues of all classes and in practically all our markets; and (6) the continuous increase in our retained imports of wool tissues, which, after a temporary decrease in 1929, actually increased in 1930—the most depressed year in the modern history of our wool textile industry. It may be true that there are special influences at work, arising out of our great trading connections with the Far East, which have increased our share in the world depression of 1929-30; but the fact remains that our share of the world's markets is constantly diminishing, while that of our European competitors, taken together, is actually expanding.

Measuring the Depression.

In 1924 the average activity of British wool textile machinery was 82.1 per cent., whereas a careful estimation of all the factors involved leads to the conclusion that the industry could then have run its machinery 96 per cent. of a full working week. The industry was, therefore, depressed in 1924 to the extent of $13.9 \div .96 = 14.5$ per

cent. Between 1924 and 1930 approximately 5 per cent. of the whole machine equipment of the industry was destroyed, and, in the latter year, the average activity of the remainder was 65.8 per cent. Thus, in 1930 the depression (or loss of production) may be measured by the figure of 34.9 per cent.

In 1924, of the productive activity of the industry, 42 per cent. was for direct export, and 58 per cent. for home consumption or eventual export as hosiery or made-up garments. In 1930 direct export accounted for only 30 per cent. of the industry's productive efforts. On the basis of the not unreasonable assumption that in 1924 the export trade was fully occupied, the following percentage figures may be taken as representing in 1924, 1929 and 1930 the comparative extent of depression in the industry divided into its home and export branches:—

PERCENTAGES OF DEPRESSION.

	1924.	1929.	1930.
Home	22.7	27.0	28.6
Export	Nil	28.5	42.5
Total	14.5	27.5	34.9

If the statement that the wool textile industry is depressed to the extent of 35 per cent. requires confirmation, this may be found in the numbers employed. A careful investigation of the numbers employed at insurable and non-insurable ages elicits the following results:—

	Number of Persons attached to the Industry.	Per cent. Unemployed.	Total Unemployed.	Remainder Employed.
June, 1924 ..	281,600	7.1	20,079	261,531
June, 1930 ..	265,300	25.3	67,041	198,279
Jan., 1931 ...	265,300	31.3	83,123	182,197

These comparative figures of employment—their validity is little affected by the inclusion as unemployed of the numbers "temporarily stopped"—confirms broadly the conclusions already reached that the industry is operating at no more than two-thirds of its capacity.

Causes of Britain's Decline.

What are the causes of this depression? It is not sufficient to cite the world depression as the explanation: the transference of our export trade to the extent indicated in the large table of international comparisons given above is convincing evidence that particular causes affecting the British wool textile industry have been operating with increasing force for the past six years.

* Provisional Figures. † Without trade with the Irish Free State.

‡ The bracketed figures are estimates.

In reality the causes of the decline in the British wool textile industry are not far to seek. They divide themselves into three parts:—

- The world depression, and a redistribution of personal expenditure in the purchase of alternative amenities;
- Tariff barriers and the development of manufacturing in countries which were formerly content to purchase wool textiles in exchange for their domestic agricultural and raw material produce;
- The fall in the price of silver; and
- Excessive British costs of production.

Of these, the first is a common world-manifestation, and its incidence is only varied by special local circumstances. The second is a barrier or handicap which is common to the wool textile export trades of Europe (accentuated, perhaps, "as far as this country is concerned, by the deliberate tariff attack on its export trade by Australia, Canada, and by conditions peculiar to India). The third affects this country more than any other because of our greater proportion of exports to China, India, Japan, Ceylon, and South America. The fourth is peculiar to ourselves, and is the overwhelmingly important cause of the successive annual transfer of our export trade to our Continental competitors.

World prices are to-day but little over pre-war levels, but British wool textile conversion costs are anything up to 70 per cent. above the corresponding costs of 1914. At the present time direct labour costs form just under 40 per cent. of the selling cost of cloth (and the proportion varies by only a small percentage when almost extreme types of cloths are compared) while labour costs contained in the services purchased by the industry (repairs, renewals, transport, etc.), form nearly another 10 per cent. Thus,

roughly speaking, 50 per cent of the cost of the finished piece is represented by wages, practically all of which have been increased considerably more than the increase in the cost-of-living in this country and quite disproportionately to money wages in the countries in which we formerly sold our products. In the wool textile industry of the West Riding and Lancashire the rates now obtaining are, nominally, for the bulk of the home-workers, pre-war rates plus 5 per cent. increase on base rates, plus 64 per cent. cost-of-living wages, or a total increase of 72 per cent.; and for the piece-workers, pre-war rates plus 5 per cent. on base rates, plus 56.3 per cent. cost-of-living wage, or a total increase of 64 per cent. Actually the increase is much more. A careful and detailed examination of all the advances ("levelling-up" and local advances, etc.), reported to the Employers' Federation, shows that the average increase in time- and piece-rates is to-day 83 per cent., and, in addition, the hours have been reduced from 55½ to 48 per week, with a full compensation of 15.625 per cent. on all piece- and hourly-rates. The increase per unit of labour cost is, therefore, 111.6 per cent. Add to this the vast increase in the cost of social services (Unemployment and Health Insurances, more stringent factory legislation requirements, etc.) and there is no need to wonder why our costs are too high and our industry is dwindling.

Such is the analysis of Mr G. H. Wood, and the conclusions to which it leads are serious enough to demand the immediate attention of all who are engaged in the industry, whether as wage earners, managers, directors, or shareholders. To say that the industry must "rationalise" its costs of production is a truism; but it is doubtful whether all the advantages claimed for large-scale mergers are applicable to the case of wool textiles. What is certain is that, if the industry is to retain any substantial part of its old magnitude, it must succeed in quoting competitive prices in the world market.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, JUNE 27, 1931.

No. 97.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

On this occasion our monthly review of the state of British and world trade has to be issued at a moment when appreciation of the true position and prospects is peculiarly difficult. The immediate effect of the Hoover moratorium proposals, whose political and other implications we discuss in the columns of this week's *Economist*, was to produce, not only on the world's principal Bourses but in most of the chief commodity markets, a sharp rebound from their previous acute depression. The

So far as Great Britain is concerned, May-June saw little or no betterment of conditions. The May figures of overseas trade, due allowance being made for the comparative number of working days per month, repeated more or less the disappointing story of April. In our series of Business Activity Indices the downward trend of net imports of raw materials and of manufactured exports (corrected in both cases to offset price-changes) is shown to have been checked; but here the comparison, it will be

noted, is actually (i.e., because of the three months' average system utilised) between May and the short month of February. The remaining indices in the series point mostly to a further decline, while the trend of the unemployment returns, after a brief pre-Whitsuntide improvement, has been discouraging. Holiday stoppages in the Midlands and the North were frequently prolonged into June, and seasonal improvement in building and the clothing trades was offset by a worsening of employment in the coal mines, engineering, shipbuilding and most of the textile industries. The weakness of commodity prices, which became still more pronounced during May and continued into June, had a generally restrictive effect; and though May witnessed a fractional rise in such indicators as steel output and shipping freights, the improvement was quickly lost. A somewhat brighter feature was the slight expansion noted in the demand for rayon and electrical plant. On the other hand, though the labour negotiations in the engineering industry reached, by compromise, a successful settlement, the critical hours-wages question in the coal mines looming at the beginning of July occasioned growing anxiety.

Conditions abroad, up to mid-June, gave equally little ground for optimism. Apart from the then imminent "confidence crisis" in Germany, whose development has been fully described week by week in our columns, the situation both in North and South America and the East was such as to suggest that the beginning of recovery was yet distant. Will the impetus towards more confident purchasing given by the Hoover proposals (always assuming that the moratorium goes through without hitch) lead quickly to revival, arrest further deterioration, or fail altogether ultimately to reverse the downward curve? All that can safely be said to-day is that there is a break in the clouds, and that a great chance is afforded of earlier recovery than could be looked for a week ago.

HOME TRADE STATISTICS.—MAY, 1931.

	Apr.	May	May, '30.
UNEMPLOYMENT— (State Insurance %)	20.9	20.8	+ 5.8
PRODUCTION—			
Coal (million tons)*	4.3	4.2	- 0.7
Iron (thous. ")	323	347	- 268
Steel (" ")	397	435	- 257
FOREIGN TRADE—			
Imports (million £s)	70.0	69.6	- 21.4
Re-exports (" ")	6.6	5.7	- 3.3
British Exports (" ")	32.5	33.9	- 17.1
TRANSPORT—			
Railway Receipts* (£0,000)	303	297	- 9
Shipping Freights (av. level)*	80.8	81.8	- 5.7
COMMODITY PRICES (" ")	65.4	63.6	- 17.0
TRADE DISPUTES (thous. working days lost)	130	214	- 1,386
SECURITY VALUES (av. level)*	111.9	108.0	- 13.9
FINANCIAL DATA—			
Bnk. of Eng. Notes (mill. £s)*	355	354	- 2
Bank Deposits (" ")	1,736	1,738	- 42
Bank Advances (" ")	940	935	- 37
Banks Cash Ratio (%)	10.3	10.3	- 0.4
Bank Clearings:			
London (million £s)*	909	824	- 52
Manchester (" ")	8.9	8.8	- 1.8
Three months' Bank Drafts (Discount Rate %)*	2½	2½	- ½
Day-to-day Loans (%)	2½	1½	- ½

(*) 1913 = 100. (†) Economist Index No.; 1927 = 100.
(*) Bankers' Magazine Index No. of 365 securities; December, 1921 = 100. (†) Cash in hand and at Bank of England as % of total current, deposit, and other accounts.

* Average weekly figures.

This being so, we would ask readers to bear in mind that the notes in the following pages relate in all cases to "pre-Hoover" conditions, and cover broadly the period May 15th-June 15th. Under these circumstances the survey is in one sense already out of date; yet, in another sense, it has a value greater than that of mere historical record. For the picture which emerges is one of steadily deepening depression, relieved here and there by isolated instances of slight seasonal improvement, but involving with every month of its continuance a progressively greater financial, psychological and political strain, notably in Central Europe. The magnitude of the slump, with its obdurate symptoms of widespread unemployment and curtailed purchasing power, is sufficient to emphasise that the re-establishment of equilibrium and the smooth running again of the economic mechanism is not to be accomplished in a day.

On this occasion our monthly review of the state of British and world trade has to be issued at a moment when appreciation of the true position and prospects is peculiarly difficult. The immediate effect of the Hoover moratorium proposals, whose political and other implications we discuss in the columns of this week's *Economist*, was to produce, not only on the world's principal Bourses but in most of the chief commodity markets, a sharp rebound from their previous acute depression. The beginning of this week saw the quotations for silver, wheat, cotton and metals all rising in such a way as to suggest superficially that the first steps towards definite recovery had been taken. By Tuesday evening the upward movement had been checked, pending assurance that the United States Government's offer would meet with all-round acceptance; and merchants and manufacturers, after the initial burst of optimism (accompanied, naturally, by the closing of "short" positions), were not slow to recognise that for a complete cure from its economic malaise the world would need more than the simple postponement for twelve months of inter-Governmental payments. Nevertheless, it is not too much to say that the psychological revival of confidence last Monday introduced a new factor of prime potential importance in the trade situation; and though it is still much too early to assess the extent of the influence which the Hoover Plan will prove to have on commerce and industry, its mere enunciation has been sufficient to affect considerably any *apercu* of the outlook.

RAILWAY STATISTICS.—(

HOME INDUSTRIES AND TRADE.

The following reports on British industries cover, in most cases, the period to the middle of June; in the remainder they relate to the month of May.

THE COAL TRADE.

During June the position of the British coal trade steadily deteriorated. This was partly the result of such seasonal influences as the normal shrinkage in household requirements for the summer months, and partly a reflection of the further decline in industrial activity at home and abroad; but other factors also entered into the situation. According to the official trade returns, British exports during the first four months of this year showed a decline in quantity of about 24 per cent. as compared with the corresponding period last year. German foreign sales declined by only 15 per cent., and Belgium, Holland and Poland actually showed an increase in their exports. It is thus evident that this country has been steadily losing ground to her competitors. The contention in market circles, that the enforced adherence of collieries to the minimum prices provided under the marketing schemes partly accounts for the loss of trade, is not entirely without foundation. During the past month the situation has been further aggravated by the uncertainty about hours and wages after July 8th, which made it difficult for owners to enter into forward contracts.

IRON AND STEEL.

The improvement which became noticeable during May has not been maintained, and business shows a decrease in most sections. Continental competition is becoming increasingly severe, with the result that British iron and steel makers find it more and more difficult to hold their own, either abroad or at home. Continental pig iron, which is quoted at prices substantially below that of British makers, is entering the country in considerable quantities, and the recent cut in Midland pig iron has had little effect on sales. Despite the low level of production, it appears that stocks are again increasing. Similar conditions prevail in the steel industry. Transactions are few in number and usually small in quantity. The demand from shipbuilders still tends to contract, and business in structural steel has recently diminished. One of the few industries whose demand for steel has shown little reduction is the motor-car manufacturing trade. Generally, new orders placed are for immediate requirements, as a reduction in prices is anticipated at the meeting of the Associated Steel Makers, which is to take place next month.

ENGINEERING.

Little headway has been made by this industry during the past month. Industrialists are delaying both renewals and replacements and the installation of new equipment until there are definite signs of a recovery in trade. An encouraging feature, however, is the satisfactory conclusion arrived at in the wages negotiations. The depression, moreover, is not equally severe in all branches, as can be seen from the unemployment returns compiled by the Ministry of Labour. The percentage unemployed on May 18th was as follows: Marine engineering, 42.5 per cent.; constructional engineering, 25.5 per cent.; general engineering, 27.4 per cent.; and electrical engineering, 14.7 per cent. An interesting feature which may lead to the reorganisation of the Lancashire textile machinery section is the recent announcement of the directors of six leading companies that they will recommend to their shareholders a scheme of amalgamation.

ELECTRICAL INDUSTRY.

After a further sharp fall in May, the downward movement in the activity of the electrical manufacturing industry appears to have been temporarily arrested during this month. The latest indices of new orders, both home and export, which are shown below, suggest that a slight improvement in output may be expected in the near future:—

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*
(1920=100.)

Period.	Home.	Export.	Total.
1926—Monthly Average	84	100	88
1927	87	195	114
1928	75	112	85
1929	83	157	102
1930	66	211	103
1930—May	70	209	105

March	62	126	74
April	60	130	76
May	63	137	79

* Copyright of the British Electrical and Allied Manufacturers' Associations.

The outstanding new orders received for the home market have been placed by two municipal supply undertakings for two turbo-alternator sets of 30,000 kw. and of 15,000 kw. respectively, together with condenser plant. Features among the foreign orders are those received for a 26,000 kw. turbo-alternator and condenser set from Northern Rhodesia and for two smaller plants from South Africa.

PRODUCTION OF ELECTRICITY.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show in the next column a résumé of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Period.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Auto-motive Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.
1926—Monthly average	119	100	138	162	134	120
1927	146	143	158	210	163	139
1928	156	150	177	237	190	147

May	148	124	200‡	178	191	135

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.
† Increase due to special causes.
‡ Provisional.

The "corrected" figure, allowing for seasonal fluctuations and the steady expansion in the use of electricity, was 84.2 in May and 87.7 in April against 91.7 in March and 94.3 in May last year.

MOTOR INDUSTRY.

No marked improvement can be reported in the private car section although factories making lower-priced cars are fairly busy. The latest available statistics of registration of new cars are those for April, which showed a considerable decline on the previous month. Exports are disappointingly low, but an expansion is looked for from the South American market. Commercial goods and passenger vehicle manufacturers maintain a moderate level of activity and a fair number of orders from overseas are reported. Business in motor cycles and cycles continues restricted. It is, however, anticipated that the Budget proposals with regard to motor cycle taxation should have a beneficial effect upon next year's sales.

THE COTTON TRADE.

The depression in the Lancashire cotton industry has become increasingly severe during the past month. Buying of raw cotton has been restricted as a result of the almost continuous fall in prices. Production in both the spinning and weaving sections has declined, and it is estimated that, at the moment, less machinery is working than at any time this year. The turnover in yarn has, however, been so small that, despite the reduced output of spinners, stocks have been increasing. The trade with India has not shown any signs of expansion. Exports to China are still on a small scale, and although there has been a considerable number of inquiries from smaller markets, sales have been negligible. The demand for cotton goods is not expected to expand until there are indications of more stability in cotton prices.

THE WOOL TEXTILE TRADES.

Under the influence of declining raw wool prices, orders have become increasingly scarce since the beginning of June, and they are usually for small quantities only. The outlook for the near future depends largely on the course of raw material prices, which as yet show no signs of an early improvement. Competition in foreign markets is severe, and, as the increasing volume of retained imports shows, Bradford is even losing ground in the home trade. This suggests that British costs are falling more and more out of touch with those of the principal foreign competitors. Manufacturers appear to regard a reduction in wages as a necessary preliminary to any improvement. It is understood that the private meeting of the Employers' Council in Bradford on June 17th had as its main purpose the discussion of the proposed reduction of 15.4 per cent. in the wages in the West Riding wool textile industry.

THE RAYON TRADE.

According to various trade reports the general situation in the rayon trade during the past month has been slightly better. Little encouragement can, however, be derived from this fact, as the increase in demand, which was brought about by seasonal influences, has been for home consumption only. Until an improvement in exports takes place no real revival can be expected. High-class dress fabrics are at the moment the mainstay of the home trade.

THE LINEN TRADE.

Owing to the growing scarcity of flax, prices have remained firm. It is reported that the new crop in Northern Ireland may be expected to be smaller as sowings have been considerably below those of last year. Business in linen goods has been maintained at last month's level. The demand for yarn and piece-goods against existing contracts continues steady, but new cloth business is mainly confined to current requirements. The bulk of the trade in yarns is done at cut prices, but quotations for cloth have been maintained.

BOOTS AND SHOES.

The usual expansion in business during spring has been scarcely noticeable this year, and, although trade at home and for export has not declined further, there is little evidence of a general revival in the near future. The section dealing with medium-priced shoes in Northampton appears to be fairly active, but in most others the three-day working week is still the rule. A slight improvement is recorded in the better-class goods for women, but, on the whole, new orders, though numerous, are disappointingly small in quantity. There is encouragement in the fact that in Northampton the question of piece-rates revision seems likely soon to be settled.

THE POTTERY TRADE.

The outstanding event of the past month is the reduction of 10 per cent. in the wages of operatives following the recent arbitration award. A similar cut has been effected in the United States. Meanwhile, the situation in this country has again deteriorated, and Japan and Germany appear to be able to secure an increasing share in the declining demand. Sales of medium- and low-priced goods have so far been better maintained, but the U.S. is making a great effort to replace British pottery by her own products.

THE CHEMICAL INDUSTRY.

Business in chemical products was only moderate during May-June. Orders for heavy chemicals were small and limited to immediate requirements. Coal tar products showed a small but steady improvement, and business in refined coal tar has been satisfactory, although at lower prices. Pharmaceutical business was only fair. Citric and tartaric acids showed no signs of the expected seasonal improvement, but methyl and sodium salicylates and aspirin enjoyed a satisfactory demand. It is noteworthy that exports in May maintained a slight improvement, while imports were slightly below those of the corresponding period in 1930.

AGRICULTURE.

According to a report published by the Ministry of Agriculture, the cold and wet weather prevailing over most of the country during the latter part of April continued during the first half of May. During this period conditions were unfavourable to the growth of vegetation which, in many parts of the country, was further checked by some sharp night frosts. In the latter half of May there was almost everywhere an improvement in agricultural conditions as a result of warmer and sunnier weather, but although some progress was made, field work was still slightly behind at the end of the month.

SHIPPING.

The slight improvement during May in the whole-cargo freight market, resulting from more active shipments of Argentine grain, was not maintained in June. Chartering generally diminished in volume, and rates from Canada and the United States were particularly weak. Tonnage was offered on all routes beyond the needs of charterers. The passenger liner trades suffered severely from poor demand for the summer season, a number of prospective North Atlantic sailings being cancelled.

BUILDING.

As reflected in the unemployment statistics compiled by the Ministry of Labour, the seasonal improvement in building which began in April continued throughout May. The improvement extended to all administrative divisions of Great Britain, but there was a decline in operations in Northern Ireland. According to the returns furnished to the Ministry of Labour by local authorities, in 143 of the principal urban areas in Great Britain (except the London County Council area), with a total population of 16,279,000, the estimated cost of building plans approved during May amounts to £5,674,000, against £5,838,200 in April and £8,383,400 in May, 1930.

RETAIL TRADE.

According to a London store, retail trade during the first three weeks of this month has been dull. This has been due mainly to the unfavourable weather conditions and to the close proximity of the sales. The statistics relating to retail trade compiled by the Incorporated Association of Retail Distributors and the Bank of England show a decline of 5.4 per cent. in the value of total sales during May as compared with the corresponding month last year. This decline, however, requires to be judged in the light of an appreciable fall in average selling prices per unit.

a. Excluding coal imports.

c. Provisional figures.

STATE OF TRADE ABROAD.

Up to mid-June, reports from the respective countries noted below afforded few indications of relief from the protracted and, in many cases, deepening depression.

BRITISH EMPIRE.

Australia.—Trade still shows no improvement, and the Stock Exchange is weaker. The seasonal outlook shows a further improvement in some sections, but excessive rain is delaying wheat sowings, and the acreage will be less. Wool prices have not been maintained at the recent sales, but an excellent clip is expected. Butter production is still very high. Imports in April, in sterling, were:—Merchandise, £2,827,354; bullion and specie, £24,473. Exports were:—Merchandise, £6,319,990; bullion and specie, £214,265. There are some signs of a more favourable attitude to revision of the tariff with a view to reductions where they would be likely to benefit the revenue.

India.—At the end of May the condition and prospects of the standing crops were reported to be fairly good, and the rainfall had so far been in general satisfactory. The areas under jute and rice respectively are, according to the final estimate, 2 per cent. above those of the preceding year. Foreign trade in April showed an immense drop as compared with April, 1930; imports fell from 17.97 lakhs to 12.44 lakhs and exports from 24.05 lakhs to 13.65 lakhs. A large part of this decline is due to the fall in prices, which has been very marked during the last twelve months.

Canada.—Grain movement from Montreal has been brisker than last season, and the cattle export trade is improving, but there are no signs of improvement in general business, and stock market quotations continue to decline. The wheat area in the Prairie Provinces shows a reduction of about two million acres, and lack of moisture has very considerably reduced the anticipated yield. Prospects in the Central and Eastern Provinces, however, are encouraging. The success of the new conversion issue, besides effecting very substantial economies, is valuable for its psychological effect. Industrial production in the Central Provinces is slack, except in the silk, rayon and woollen industries, which are working almost full time. There is some improvement in trade in British Columbia, but in the Maritime Provinces business is poor.

South Africa.—Good rains have fallen in the greater part of the country, and prospects for production are favourable. Some damage was caused to the maize crop by premature frost in the Western Transvaal, but most of the crop was too far advanced to be seriously affected, and the harvest has already begun in many districts. The preliminary estimate of the new sugar crop amounts to about 365,000 tons. Wheat prices, in the middle of June, were still steady at 21s.22s. per 200 lb. prompt railing; wool prices were slightly easier, with markets becoming quieter owing to the approach of the end of the season. Wholesale and retail trade conditions showed an improvement in April, but the motor trade was less active.

EUROPE.

Germany.—Conditions have been very critical during the past month. Before the drain on the Reichsbank reserves began there were signs of a slightly more than seasonal diminution in the unemployment figures, and the first week of June saw a rise in wholesale prices and an increase in the output of coal. Most of the indices for May, however, showed slight declines as compared with those of April.

France.—Industry remains in a very depressed condition. Producers of iron and steel are contemplating further reductions in output, and operations at the coal mines have been cut down. The Roubaix textile strike has involved large numbers of workers and continued for over a month, but it is hoped that a settlement will soon be reached.

Belgium.—The market for industrial coal was very poor in May, but domestic coal has been meeting with a better demand. The slight revival in the iron and steel industries has not been maintained, and prices are very weak indeed. The position in the glass industry is comparatively satisfactory. The restriction of diamond production has been abandoned, owing to the refusal of the South African producers to join the scheme. An improvement is reported in the textile industries.

Italy.—The financial situation has improved since the beginning of the year, and there has been a seasonal reduction of unemployment. The textile, hatmaking and glass industries of Lombardy are severely depressed, conditions are still deteriorating in the chemical works, and the leather, paper and timber trades are experiencing less favourable conditions. The rubber and pottery industries, however, are still enjoying a fair amount of activity. A trade mission of industrialists is about to visit Russia.

Scandinavia.—Summer stagnation is setting in in Sweden. Sulphate is selling at very low prices, but newsprint has been a comparatively satisfactory market. In Denmark industrial conditions are still fairly good, and a substantial reduction in wages costs has been secured without serious disturbance.

Spain.—Drastic cutting in Government contracts will inevitably intensify unemployment, and the fluctuations of the peseta are a serious discouragement to any revival of trade. The orange and grape crops have been severely damaged by bad weather.

Czechoslovakia.—Crop conditions are promising and the sugar trade is doing fairly well. Unemployment showed a sharp decline in April, owing partly to seasonal causes and partly to the effect of a public works programme. A co-operative agreement has been

reached between the three largest motor-car works, and a lignite cartel is in process of formation. The cotton industry is depressed, but wool and rayon are doing fairly well. The glass and pottery industries are still working very much below capacity.

UNITED STATES OF AMERICA.

There was a seasonal decline in trade during May, and a downward revision of their schedules by automobile manufacturers, conforming to a reduced demand, has brought the estimated output down to 330,000. The decline in steel mill activity has continued, and operations are at 44 per cent. of capacity. The decline in building contracts is slightly more than the usual seasonal fall. Cotton mill activity is responding to a reduction in demand. Railroad gross earnings were 17 per cent. below those of last year. The volume of retail trade is about the same as last year, but the value is lower. Wholesale trade is uneven. Stock prices are the lowest they have been for five years and the turnover is relatively small. Money rates are exceedingly low and commodity prices have fallen to new low levels.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

AMERICAN TRADE STATISTICS—MAY, 1931.

LATIN AMERICA.

Weather conditions in Argentina have been favourable for the conditioning of the maize, and, thanks to a reduction in railway tariffs, this crop should go forward for export as soon as ready. Exports of cereals have recently been heavy, and further large quantities are still available. The worst of the financial situation is thought to be over. Trade in Brazil is still dull, but Sao Paulo reports that the textile situation is more promising. Though stocks of imported goods are barely sufficient to meet local requirements, no import demand is as yet apparent. Colombian trade has shown a slight improvement. A law has been passed by Congress for the creation of a new credit institution, for the granting of loans to agriculturists. The main factor in Mexico has been the exchange situation; rates have been maintained by the banks which have formed themselves into a pool to supply purchases of foreign currency against silver on a *pro rata* basis. Conditions in Peruvian commerce remain very unsettled. Business in Chile is still inactive and very much below normal for the time of year. The increases in taxation which are necessary for the maintenance of financial stability are intensifying the difficulties of the complicated economic situation.

FAR EAST.

The Japanese Government has energetic plans for co-operation with the combined silk interests to clear the heavy stocks which are hampering the market. Restriction of output in the steel industry is to be continued through August. The Government bond issue, floated in May, was heavily over-subscribed.

Buying in North China has been temporarily checked by exchange fluctuations; the fur market has closed for the season after a small but profitable business. There is some business in metals for local manufacturing purposes. The tax situation is growing more and more confused and the burden upon both imports and exports has increased.

PRODUCTION. (Thousands of Metric Tons.)

THE PAST YEAR.

The story of the business year 1930 which the following pages unfold is one of a widening and deepening depression which no country entirely escaped, and from which no industry was wholly immune. Quarter by quarter the economic *malaise* became more and more severe; nor at the close of the year was it possible to see any signs of assurance that the downward trend of the trade cycle was near its end. The past year, then, will live in history as a black period both for Britain and for most of the rest of the world.

A great deal of time and thought has naturally been expended by bankers, economists and other experts on the task of diagnosing the symptoms and searching for the causes of one of the world's most serious depressions. The main and general symptoms have been only too obvious: rising unemployment, a sharp and prolonged fall in commodity prices, decreasing industrial production, dwindling international trade, falling profits and dividends, and budgetary embarrassments. As for the causes, the conclusions reached by investigators have been many and various, as readers of the *Economist* are aware. But on two or three main points there is fairly general agreement. At the root of the trouble is the fact that production had out-run demand in the case of many basic primary commodities, such as wheat, cotton, rubber, oil, sugar, coffee; and abortive attempts at output restriction and artificial price maintenance in many commodities have, by their failure, intensified the price collapse. One of the fundamental facts in the position is undoubtedly the reduced purchasing power of the populations of the vast agricultural territories of the earth. But it is not solely the bounty of nature and man's skill in exploiting it which have to be blamed for our troubles. Contributing to them without doubt is the failure of human wisdom and co-operation in working the machinery of international credit and exchange. Most of the nations have laboriously returned to the gold standard, only to find that that standard is not, for a variety of reasons, working as smoothly as in pre-war days. The striking maldistribution of the world's gold supply, and its increasing concentration in the coffers of two creditor nations, without adequate expansion by those countries of their external credits, cannot be excluded from the list of legitimate scapegoats. When we add to these causes of physical and credit disequilibrium, such phenomena as the peculiar troubles in China and India, the

(Alexr. Brown & Sons.)

comparative isolation of Russia, the persistence of high tariffs and economic nationalism in Europe, the débâcle in the price of silver, the political unrest and insecurity in many countries, we may claim to have covered most of the ground to be explored.

One major influence at work—which is at once an effect and a cause of the depression—is psychological. In the world in general and in Europe in particular the psychology of fear has been prevalent. Progress towards disarmament has been largely frustrated by lack of confidence; but confidence can hardly come without armament restriction. It is a vicious circle, and it remains to be seen just where it can be broken. Fear and suspicion straddle the path that might lead to European co-operation. Fear of Europe's stability prevents the investors of America and France from financing debtor countries. Fear of further price falls and of higher taxation discourages enterprise and dampens initiative.

As regards Britain herself, the coming of what Mr Churchill has called "the economic blizzard" has revealed the existence of certain peculiar disabilities in our economic system. Britain is still more vitally dependent upon export trade than any other country in the world, and success in export trade rests on the ability to place goods on the market at competitive prices; and that entails, in times like these, an ability rapidly to readjust production costs. In that Britain has so far been unsuccessful. The quick fall of wholesale prices to the pre-war level has left a widening gap between the wholesale and retail levels, and this fact has reinforced the strength of trade unionism in resisting wage adjustment. In a word, the British economic system has shown itself too rigid and inelastic to be capable of smooth and speedy readjustment to the needs of a rapidly changing economic scene. Yet, if our export trades are to live, and the unemployment problem is to be conquered, readjustment must be accomplished. That is the country's great task of 1931, and it is one that calls for a national effort and a common sacrifice and facing of facts by every section of the community.

Having said so much, we shall not be accused of facile optimism if we suggest that there is another side to the picture. There is comfort, cold, perhaps, but real, in the reflection that in some respects Britain, in spite of her peculiar vulnerability, has stood up to the strain better than some of her industrial rivals. For instance, the reduction in productivity last year, as measured by official indices, was substantially less here than in either the United States or Germany. The increasingly severe sufferings of other countries have helped to assuage the feeling of "defeatism" in Britain, which threatened to become rampant at a time when Britain appeared to be foundering while other countries maintained a reasonable degree of prosperity. The clear revelation that high tariffs do not shelter countries like America, Germany, Australia or Canada against world-wide depression has checked the impetus of the tariff movement here; while the alluring suggestion that prosperity was easily within our grasp, if we diverted our vast trade to Empire channels, was demolished by its unequivocal refutation by the Dominion Premiers at the Imperial Conference in October. It is of good omen that 1930 has seen the shattering of disturbing economic illusions and a lessening of the inclination to look for short-cuts to prosperity. Nor was the year barren of other welcome features. The result of the Round Table Conference holds out a greater hope of the re-establishment of confidence in India than at one time seemed possible. The handling of foreign policy by Mr Henderson has redounded to the prestige of this country. Mr Snowden's budget in April eschewed Socialist extravaganzas and adhered to sound finance; and although, thanks largely to the effect of new legislation in connection with unemployment insurance, a Budget deficit is threatened in the current financial year, a Royal Commission is endeavouring to grapple with the problem, and the campaign for national retrenchment is gathering force.

We have no wish to minimise the seriousness of the position which the story of 1930 has revealed in the world at large and at home in Britain. It is all to the good that the seriousness should be fully realised; for only if that is so can we look for bold and imaginative effort in facing the tasks of readjustment. We would not suggest that the dawn of economic recovery shows signs of breaking as yet, nor hide our belief that 1931 brings us face to face with a testing ordeal. Yet we would conclude with two notes of comfort. In the first place Britain has withstood the blizzard better than her economic tendencies in the pre-slump years might have led us to expect. Secondly, this great world depression is a crisis not of starvation—in the sense of failing crops, lost human skill, or dwindling resources—but of paradoxical superabundance. As time passes, and the lessons of the slump become plainer, those who guide the economic affairs of the nations can, and must, find ways of adjusting the machinery of international credit, production and exchange in such a way that abundance becomes the blessing, which it should be, instead of the curse, which it was in 1930.

PRODUCTION AND TRADE.

BRITISH INDUSTRY.

The history of British production and commerce during 1930 is the record of a progressive decline in activity, whose effects on the volume of unemployment became more and more marked as the year wore on. Up to March, although the depression had already become acute in the textile industries, many branches of our manufacturing processes maintained a fairly satisfactory rate of output; shipbuilders were engaged on large contracts for tanker tonnage previously placed; the consequent demand for iron and steel was augmented by a moderately good domestic absorption in other directions; and the figures both of net imports of raw materials and of exports of British manufactures were not too discouraging. From April onwards, however, the receding curve turned steeply downwards, and the country as a whole entered the winter in the midst of a profound depression in which few, if any, signs of early improvement could be discerned.

In the following table we have grouped together a number of indices and other data of output and trade for the past three years:—

PRODUCTION AND BUSINESS.			
	1928.	1929.	1930.
Indices of production—			
London and Cambridge Economic Service	102.5	110.6	98.7
Board of Trade	105.5	111.8	(a)
Output of—			
Saleable coal (Mn. tons)	238	257	244
Pig iron (Mn. tons)	6.6	7.6	6.2
Steel (Mn. tons)	8.5	9.6	7.3
Rayon yarn and waste (Mn. lbs.)	54.2	56.9	48.7
Indices (Economist) of Business Activity (1924 = 100) —			
Net imports, raw materials	101	113	101
Exports, British manufactures	108	109	87.5
Total foreign trade turnover	106	112	102
Consumption of—			
Iron and steel	88	103.5	103
Cotton	103	106	76
Coal	99	106	106
Electricity	110	116	112
Provincial clearings	100.5	99	91.5
Volume of employment	105	107	103
Shipping Movement	106.5	111.5	109.5
Indices (Board of Trade; 1924 = 100) —			
Postal receipts	114	116	117
Building plans approved—			
Dwellings	106.5	117.5	124
Others	133	140.5	135.5

(a) For the first nine months of 1930 the figure was 104.5, as compared with 110.8 in the corresponding period of 1929.

The average figures for the year given above necessarily disguise the progressive deterioration which occurred during the twelve months, and which is strikingly illustrated in the diagram on the opposite page.

The situation at the end of the year can be better appreciated by comparing the December figures of certain of the foregoing indicators with those of the corresponding month a year ago. Thus, for example, in December, 1930, our index of exports of British manufactures had fallen to 79, as compared with 110 in December, 1929; that of total employment to 99.5 against 107.5; and the indices of iron and steel and cotton consumption to 91 and 81 respectively as compared with 120 and 122. Again, continuing the comparison between December, 1929, and December, 1930, steel output had declined from 661,000 tons to 337,000; output of rayon from 3.98 to 3.24 million pounds; and shipbuilding begun during the last quarter of the year totalled only 132,000 tons against 499,000 tons in the fourth quarter of 1929.

With the fundamental causes of the world-wide depression and the particular disabilities of British industry, we have dealt briefly in the introduction to our Supplement. The catastrophic decline in commodity prices—at once a cause and symptom of the slump—is dealt with in detail on later pages, and a description of the fortunes of individual industries and trade will be found in Section III. The industries ancillary to production—shipping and railways—naturally suffered from the general decline. Thus shipping freights, as measured by our index number, were 8 per cent. lower

INDUSTRIAL ACTIVITY.

in 1930 than the mean for 1898-1913, and at the end of the year the index number (1898-1913 = 100) stood at 94.8, as compared with 100.3 at the end of 1929 and an average figure of 116.3 for the year 1913.

The figures, available only for the first nine months of the year, relating to railway freight train traffic, are given below:—

Description.	Great Britain. (All Standard-Gauge Railways.)		
	Aggregate, Jan.-Oct., 1930.	Inc. (+) or Dec. (-), compared with the corresponding period of 1929.	
	Tons.	Units. Tons.	Per Cent.
Freight train traffic excluding (free-hauled):			
Merchandise*	46,410,266	- 3,197,365	- 6.45
Minerals and merchandise†	49,748,036	- 4,944,041	- 9.94
Coal, coke and patent fuel	159,395,629	- 11,170,871	- 6.95
Live stock	1,978,608	- 61,764	- 3.03
Total	257,532,539	- 19,374,041	- 7.00

* Excluding Classes 1-6.

† Classes 1-6.

The decline of 7 per cent. in total tonnage compares with an increase of 7.6 per cent. in 1929, but though there is a modicum of satisfaction in noting that the reaction up to October, 1930, had not carried the total below the level of 1928, it must be borne in mind that in 1929 the bulk (16 million tons) of the increase represented larger coal traffic. General merchandise (excluding heavy minerals, etc.) increased in 1929 by less than half-a-million tons, so that this traffic in 1930 was substantially lower than in 1928. Passenger receipts showed a fall on the nine months of 5 per cent.

AGRICULTURE.

The dominating influence in agriculture in 1930 was the over-stocked condition of the world wheat markets and the consequent catastrophic slump in all cereal prices. In the two preceding years the general unsatisfactory trend of British agriculture was relieved to some extent by exceptionally favourable conditions for cultivation and cropping. In 1930, however, these conditions were far from good, and the anxiety caused by the decline in arable acreage was accentuated by the generally disappointing yields. As compared with 1929 there was a loss of agricultural land of about 46,000 acres, a reduction of 57,000 acres in the area under crops and grass being only partly counterbalanced by an increase of 11,000 acres in the area of rough grazings. The arable area declined further by 115,000 acres (1.2 per cent.), this reduction, however, being appreciably less than that shown in 1929. The area under corn crops showed a reduction of about 140,000 acres, a small increase in the acreages under wheat, rye, beans and peas being heavily outbalanced by reductions in the areas under barley, oats and mixed corn. Potatoes and roots were grown on areas reduced by 94,000 acres and 39,000 acres respectively, but the acreage put down to sugar beet was increased by 117,000 acres (over 50 per cent.). The area devoted to vegetables and fruit showed a decrease, and the hop acreage was reduced by about 4,000 acres.

The production of the various crops was on the whole disappointing. The corn harvest was adversely affected by unfavourable weather in August and September. In the result, the average yields of corn crops, except wheat and barley, were slightly above average, but on the reduced acreages the total production of all corn crops, except beans, was well below that of 1929. Potatoes gave a yield per acre slightly above average, but the total production fell short of that of the previous year by 847,000 tons. The crop, moreover, contained a greater proportion of diseased tubers than usual. Roots were affected to an unusual extent by pests and also by lack of sun, and the yields were below average. The hay crop was exceptionally abundant, and notwithstanding the damage caused to a considerable quantity by excessive rain the total production was well over average.

With the exception of sheep, all kinds of live stock showed a reduction. Cattle were reduced by 108,000 (1.8 per cent.) and pigs by 60,000 (2.5 per cent.), while horses showed a reduction of 38,000 (3.8 per cent.). There was an increase of 222,400 (1.4 per cent.) in the total number of sheep.

The most unsatisfactory feature of the year from the producer's point of view was the further marked fall in the price of most commodities. The monthly general index figure varied between 48 and 26 points above that of the base years 1911-13, as compared with a range of 52 and 40 in 1929, while the general index number for the year was 34 points above the base years, a fall of 10 points since 1929. Live stock generally maintained, and in some cases improved, the level of the previous year, but for almost all other commodities the fall in the level of prices was very marked. The following are the principal indices compared with those of 1929:—

1911-13 = 100.

	1929.	1930.		1929.	1930.
Wheat	130	105	Poultry	152	147
Barley	125	100	Eggs	159	136
Oats	125	87	Fruit	159	117
Fat cattle	133	133	Vegetables ..	164	138
Fat sheep	157	160	Potatoes	117	96
Bacon pigs ..	160	153	Wool	126	82
Pork pigs	165	165	Hops	51	47
Milk	169	161	Hay	125	118
Butter	152	128	Feeding stuffs	139	96
Cheese	158	130	Fertilisers ..	100	101

The continued depression in market prices has focussed attention during the year upon the competition arising from the unrestricted importation of foreign agricultural produce. This competition was particularly marked in 1930 in the cereal and soft fruit markets. In the cereal market some alarm was

caused by the re-entry of Russia into the grain-exporting trade. While no doubt accelerating to some extent the decline in prices, the almost unprecedented low level of wheat prices was due to the surplus world production, to which Russia was no more than a contributing factor.

OVERSEAS TRADE.

The overseas trade results for 1930 illustrate not only the intensity of the fall in commodity prices, but also the commercial depression:—

FOREIGN TRADE VALUES.

	1924.	1928.	1929.	1930.
Imports.....	£ mill. 1,277.4	£ mill. 1,195.6	£ mill. 1,220.8	£ mill. 1,044.8
British exports.....	801.0	723.6	729.3	570.5
Re-exports.....	140.0	129.3	109.7	87.0
Total exports.....	941.0	852.9	839.1	657.5
Excess of imports over total exports.....	336.4	351.7	381.7	387.3

Comparing 1929 and 1930, imports have fallen by 14.4 per cent., British exports by 21.8 per cent., and re-exports by 20.6 per cent. There is very little difference between the absolute contraction in imports and total exports, with the result that the adverse visible balance of trade was much the same in 1930 as in the preceding year. The decline of £176.0 millions in imports was mainly accounted for by decreases of £59.9 millions in foodstuffs, of £88.8 millions in raw materials, and of £26.9 millions in articles "wholly or mainly manufactured." British exports of raw materials fell by £15.1 millions, of which coal accounted for £2.9 millions and wool for £4.8 millions. Exports of British foodstuffs fell by £7.4 millions. British manufactures by £134.0 millions. The textile and clothing trades account for no less than £77.5 millions of this decrease and the iron and steel trades for another £16.7 millions.

The next table shows net imports and exports for certain years, sub-divided into their main classes:—

	1929.		1929.		1930.	
	Retained Imports.	Exports.	Retained Imports.	Exports.	Retained Imports.	Exports.
Food, drink and tobacco.....	£ mill. 541.2	£ mill. 57.0	£ mill. 509.5	£ mill. 55.7	£ mill. 451.8	£ mill. 48.3
Raw materials and articles mainly unmanufactured.....	323.8	106.5	285.3	78.9	212.4	63.8
Articles wholly or mainly manufactured.....	266.0	618.9	305.5	573.8	283.3	439.8

It will be seen that the decrease in value between 1929 and 1930 was common to all three classes. On the question how much of this general decrease in the value of our foreign trade is due to the fall in commodity prices, and how much of it represents a physical shrinkage in volume, considerable light is thrown by the quarterly index numbers issued by the Board of Trade, which measure changes in actual volume:—

Year.	Imports.		Exports.	
	Gross.	Retained.	British Produce.	Imported Produce.
1924.....	100.0	100.0	100.0	100.0
1927.....	108.9	111.2	102.3	90.1
1928.....	105.6	107.8	104.7	88.0
1929.....	110.9	114.0	108.3	84.8
1930.....	108.1	111.4	88.7	81.1
1929 1st quarter.....	110.8	113.5	106.7	89.1
2nd ".....	108.0	109.8	106.5	93.1
3rd ".....	105.9	109.5	109.1	76.6
4th ".....	118.9	123.6	110.9	80.4
1930 1st ".....	109.6	112.8	99.9	83.5
2nd ".....	105.6	107.6	87.4	89.5
3rd ".....	100.4	104.2	85.0	69.9
4th ".....	117.0	121.4	82.7	81.3

In interpreting these figures regard must be paid to the pronounced seasonal increase in imports (both net and gross) and in re-exports in the fourth quarter of the year. Still, even when due allowance is made for this, it is clear that while imports in 1930 were

only slightly below their 1929 level, there was a very pronounced fall in exports of British goods.

How serious this fall was is illustrated by the following table:—

SOME LEADING EXPORTS. Quantity (000's omitted).

	1924.	1927.	1928.	1929.	1930.
Coal..... tons	61,651	51,149	50,052	60,267	54,879
Total iron and steel manufactures..... tons	3,851	4,196	4,261	4,379	3,158
Total machinery..... tons	463	512	566	562	481
Cotton yarns..... lbs.	163,056	200,465	169,207	166,637	136,710
Cotton piece-goods..... sq. yds.	4,443,959	4,116,883	3,866,500	3,671,687	2,406,76
Wool tops..... centals	411	420	344	327	288
Woolen tissues..... sq. yds.	164,740	130,914	128,339	108,185	79,042
Worsted tissues..... sq. yds.	56,843	39,980	42,111	47,281	34,711
Linen piece-goods..... sq. yds.	110,786	73,911	66,135	71,540	61,450
Boots and shoes..... doz. pairs	998	990	1,079	1,006	907
Paper and cardboard..... cwts.	4,757	4,317	4,539	5,047	4,259
Locomotives..... tons	24	27	41	40	51
Motor cars and chassis..... No.	15	36	33	42	30

The 1930 coal shipments do not compare very unfavourably with those of previous years, but there is a serious shrinkage in the iron and steel figures, and machinery has lost much of the ground gained between 1924 and 1927. The textile industries, however, make easily the worst showing, in comparison both with 1929 and with earlier years. Vehicles formed the only group in which 1930 showed an increase, and this did not extend to motor cars.

INDUSTRIAL PROFITS.

Our analysis of the profits of joint stock industrial undertakings also reflects, when allowance is made for the time-lag between the close of working periods and the publication of accounts, the increasingly serious effects of the trade recession. Taking the calendar year as a whole, the accounts of 1,932 concerns show a fall in net earnings amounting to 0.6 per cent.

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in		Increase (+) or Decrease (-).	
		1929.	1930.		
First quarter.....	516	£ 69,888,497	£ 62,021,337	+ 1,132,840	+ 1.9
Second quarter.....	578	73,421,411	79,717,393	+ 6,295,982	+ 8.6
Third quarter.....	329	28,232,486	23,626,832	- 4,605,654	- 16.4
Fourth quarter.....	509	39,272,377	32,174,677	- 7,097,700	- 18.1
	1,932	198,817,771	197,539,909	- 1,277,862	- 0.6

The results published in the third and fourth quarters of the year contrasted very unfavourably, as was to be expected, with the figures for the first and second quarters; and the decline in profit in the fourth quarter, as compared with the corresponding period of 1929, amounted to over 18 per cent. With the exception of breweries and iron, coal and steel companies, every group of concerns shared in the progressive decline.

In the following table we show for the post-war decade, in comparison with the figures for the five years preceding the war, the ratio of net profits to preference and ordinary capital, and the average dividend paid on preference and ordinary shares:—

PROFITS AND DIVIDENDS.

	Ratio of Profits to Pref. and Ord. Capital.	Average Dividend on Preference Capital.	Average Dividend on Ordinary Capital.
1909.....	7.4	4.3	6.3
1910.....	8.2	4.5	7.0
1911.....	9.9	4.9	8.5
1912.....	10.2	5.2	8.5
1913.....	11.7	5.1	10.2
1920.....	15.2	5.0	12.6
1921.....	10.3	5.2	10.2
1922.....	7.0	5.2	8.4
1923.....	9.8	5.3	9.3
1924.....	10.3	5.4	9.8
1925.....	10.9	5.5	10.3
1926.....	11.3	5.4	11.1
1927.....	10.5	5.3	10.8
1928.....	11.1	5.4	10.6
1929.....	10.5	5.5	10.5
1930.....	9.8	5.7	9.5

The average rate of interest paid on debenture capital in 1930 was 5.39 per cent., as compared with 5.15 per cent. a year ago, and 5.02 per cent. in 1928, while the ratio to total ordinary and preference capital of the amounts reserved showed a further fall at 1.7 per cent. against 1.9 per cent. in 1929, and 2.5 per cent. in the previous year. In the last quarter of the year the average rate of ordinary dividend had fallen to 8.4 per cent., against 10.6 per cent. in the corresponding quarter of 1929, while the proportion of net profits left in the business was only 15 per cent., as compared with 18 per cent. a year before, and 23 per cent. in the fourth quarter of 1928.

COMMODITY PRICES.

The course of commodity prices in 1913 was uniformly downwards; and whereas the fall in the average level as measured by our index number amounted in 1929 to approximately 7 per cent., the decline last year was over 22 per cent. All the groups of commodities into which our index number is sub-divided participated in the recession. The textiles group, which led the way in 1929 with a fall of 19 per cent., again headed the downward movement with a fall of nearly 38 per cent., followed by cereals and meat with a drop of 24 per cent. The other three groups—"Other Foods," Minerals and "Miscellaneous"—each declined by a little over 15 per cent.

1927 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1925	114.1	101.0	124.0	111.8	108.7	112.0
" 1926	102.8	96.6	97.2	119.8	104.0	104.0
" 1927	100.0	100.0	100.0	100.0	100.0	100.0
" 1928	103.6	93.8	105.1	92.1	95.8	98.1
" 1929	96.9	85.8	92.2	95.6	90.5	92.4
End Dec. 1928	97.6	90.2	101.7	94.1	91.4	95.0
" Dec. 1929	92.3	83.6	82.6	92.4	89.2	88.3
" Jan. 1930	89.2	83.1	76.7	92.6	88.0	86.1
" Feb. "	85.4	83.0	74.7	90.5	87.0	84.2
" Mar. "	84.7	82.7	73.0	89.8	85.5	83.1
" Apr. "	84.9	80.8	72.9	85.6	83.2	81.6
" May "	82.0	79.0	71.1	84.3	84.4	80.6
" June "	82.2	77.8	66.5	82.8	84.1	78.8
" July "	84.2	76.3	63.6	82.1	81.5	77.6
" Aug. "	82.5	75.2	61.7	81.5	79.7	76.1

" Dec. "	70.0	71.0	51.4	78.0	75.2	68.7
Average, 1930	81.0	77.2	64.4	83.6	81.6	77.6

At the end of December the only commodities which were dearer than a year ago were potatoes, tea, household coal and leather. Steel rails, iron bars, cement, fuel oil and soda crystals were unchanged in price, but every other commodity included in the list on which

WHOLESALE AND RETAIL PRICES.

our index number is computed showed a fall. The heaviest declines were those registered by Canadian wheat (56 per cent.), maize (43 per cent.), raw cotton (44 per cent.), Australian wool (33 per cent.), hemp,

flax and jute (35 to 44 per cent.), non-ferrous metals (30 to 35 per cent.), linseed oil (50 per cent.), and rubber (47 per cent.).

In the next table we give the figures of our index number converted to a percentage of the average level of the last pre-war year:—

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1926	151.7	195.3	152.6	149.8	120.7	149.4
" 1927	147.6	202.2	157.0	125.1	116.1	143.7
" 1928	152.9	189.7	165.0	115.2	111.2	140.9
" 1929	143.0	173.5	144.7	119.6	105.0	132.8
End June, 1929	140.3	170.1	145.5	120.4	103.6	131.7
" Dec., 1929	136.2	169.1	129.6	115.6	103.5	126.9
" June, 1930	121.3	157.3	104.4	103.5	97.6	113.2
" Dec., 1930	103.3	143.6	80.7	97.5	87.3	98.7
Average, 1930	119.5	156.1	101.1	104.6	94.7	111.5

It will be seen that though the average for 1930 works out at 111.5, compared with 132.8 in the previous year, by the end of last December wholesale prices had reverted to a point slightly below the average for 1913.

In the following table we show the annual changes which have occurred in each group of prices since 1925:—

YEARLY AVERAGES (1924 = 100).

	1925.	1926.	1927.	1928.	1929.	1930.
Cereals and meat.....	99.9	90.0	87.5	90.7	84.8	70.9
Other foods.....	94.7	90.6	93.8	87.9	80.5	72.3
Textiles.....	90.6	71.1	73.1	76.8	67.4	47.1
Minerals.....	93.6	100.3	83.7	77.1	80.0	70.0
Miscellaneous.....	102.9	98.4	94.7	90.7	85.7	77.3

Complete index... 96.8 89.9 86.4 84.8 79.9 67.0

The final table shows the average percentage increase, as compared with July, 1914, for all the items included in the Ministry of Labour's cost-of-living figure for the past seven years:—

AVERAGE PERCENTAGE INCREASE SINCE JULY, 1914.—All items (Food, Rent, Clothing, Fuel and Light, &c.).

Month (beginning of).	1924.	1925.	1926.	1927.	1928.	1929.	1930.

December.....	81	77	79	69	68	67	55

It will be observed from the foregoing figures that the comparative rigidity in the index number from 1927 to 1929 gave way to a fairly rapid decline in 1930; but, as will be seen from the accompanying chart, the disparity between wholesale and retail prices has greatly increased during the past year.

MONEY AND EXCHANGES.

MONEY MARKET.

If 1929 was a year of tight money, high Bank rate, and a narrow margin between Bank rate and the three months' market discount rate, 1930 proved to be just the reverse. The idle and depressed stock exchanges, falling prices, and bad trade brought about a general contraction in the demand for money. Traders borrowed less, and bankers were more careful in their scrutiny of applications for fresh loans, while they rigorously called in or wrote down outstanding loans, especially those of a doubtful character. There was a pronounced falling off in the supply of bills in the London market, evidence of which is to be found in the huge contractions in the leading banks' acceptances

on behalf of their customers. This was due to the combined effect of the trade depression, which reduced the volume of goods to be financed, and to the fall in prices, which diminished the cost of financing each transaction. Finally, the Government's conversion operations in the spring of 1930 made substantial inroads on the volume of outstanding Treasury bills.

The result was the headlong fall in money rates illustrated in the chart. Time and time again, in the spring of 1930, market rate fell to an abnormal distance below Bank rate, and the latter had to be reduced to bring it into line with market rate. There was nothing abnormal in these movements, for bad trade naturally brings with it cheap money, for the reasons described above. The extent of the decline, which brought Bank rate down from $6\frac{1}{2}$ to 3 per cent. in a little more than six months, is thus in one sense a measure of the intensity of the trade depression, and the contraction in the amount of employment available for short money.

During these three months the French demands for gold were quiescent, and the Bank of England succeeded in adding £18.2 millions to its gold stocks, mainly by acquisitions from Australia and South

GOLD AND MONEY RATES.

America. In May, however, the French gold demand revived, partly because of the concentration of French funds in Paris for the purpose of subscribing to the French quotas of the Bank for International Settlements share issue and the reparations loan. At Whitsun, a few weeks later, the Bank of England let it be known that owing to the depletion of its stock of fine gold bars, henceforward it would exercise its legal right of delivering standard gold against its sales.

As the Banque de France was unwilling to accept other than fine gold, the consequence was that gold withdrawn from the Bank of England for shipment to France had to be refined. This involved shippers in some trouble and delay, and also imposed upon shipments a physical limit of £300,000 a day, this being the largest quantity with which refiners could deal. As a result, the export gold point of the Paris exchange fell from Frs. 123.89 to Frs. 123.65, and a premium was established upon the fine Cape gold arriving each week and sold in the London market. These conditions remained in force until the middle of January, 1931, when the Banque de France agreed to accept standard gold.

The French gold withdrawals continued at this restricted rate during July, and money at that time was fairly tight, though market discount rates, at $2\frac{3}{4}$ per cent., were well below the 3 per cent. Bank rate. During the next three months French gold withdrawals were only of limited dimensions, and as trade became worse and commodity prices continued to fall, money (apart from isolated days of stringency due to special and technical causes) became extremely cheap

and abundant. At times three months' bills were quoted at very little over 2 per cent., or nearly a full point below Bank rate. This margin was an abnormally wide one, and left little or no profit to bill-brokers, who borrowed their weekly money at the customary minimum rate of "one below Bank rate," or 2 per cent.

November witnessed a sudden change in the situation. The French bank failures, caused by the Oustric collapse, forced French banks as a whole to draw upon their foreign balances so as to strengthen their home resources. Thus France once more began to take gold, and continued to do so at the rate of £300,000 a day from November 6th right up to the end of the year, while so soon as the Banque de France agreed to take standard gold, the daily withdrawals rose for a short time to an average of £1,000,000. The closing months of the year also witnessed widespread American bank failures, and latterly there have been signs that American banks have been strengthening their cash resources by drawing upon their foreign funds. Thus money in London gradually tightened as the year drew to its close, and in mid-December, immediately before the annual borrowings from the Bank began, three months' bills were quoted at $2\frac{1}{8}$ per cent.

The most important event of the year in international monetary history was the foundation of the Bank for International Settlements. Although it has been in existence for less than a year, it is already clear that its functions as a regulator and distributor of world credit and as provider of a common meeting ground for representatives of central banks are beginning to outweigh its immediate function of a collector and distributor of reparations. Already it is setting reparations receipts and allied debt payments off against each other so as to keep them clear of the world's exchange markets, and plans are under discussion for establishing a general foreign exchange clearing system.

The year was also notable for the publication of the interim report of the Gold Delegation of the Financial Committee of the League of Nations. This called attention to the extent and imminence of the danger of the potential shortage of monetary gold in the world, and outlined certain steps that could be taken to arrest such a shortage. Detailed consideration of these steps and other matters was left over for subsequent reports. In general, the issue of this document and the world-wide collapse of trade and of commodity prices has served to focus world attention upon the gold problem, without, however, any general measure of agreement yet having been reached.

The course of Bank rate in different countries during 1930 is summarised below:—

INTERNATIONAL COMPARISON OF BANK RATES.

It will be seen that the fall in Bank rates was general, and that in several centres extremely low rates were established. An exception to the down-

ward trend is found in last October's increase in the Reichsbank's rate. This was the direct consequence of the unsettling effect upon international finance of the successes of the extremist parties at the September elections.

We append our usual tables of money rates:—

LONDON RATES.

	Whole Year									
	1921.	1922.	1923.	1924.	1925.	1926.	1927.	1928.	1929.	1930.

Difference										

BANK CLEARINGS.

As was inevitable, London bank clearings in 1930, shown in the following table, fell below the level of the preceding year:—

000's omitted.

	1930.	Decrease in comparison with 1929.	Increase in 1929 in comparison with 1928.
Town Clearings	38,782,577	-1,153,347	+624,807
Metropolitan Clearings	1,812,146	-69,843	+27,599
County (Cheque) Clearings	2,963,631	-115,133	+691,751
Grand total	43,558,354	-1,338,323	+39,342

As commodity prices in 1930 were 15 per cent. below the 1929 level, and as trade was depressed and the stock exchange inactive, it is somewhat surprising that 1930 London clearings were as high as they were. The explanation probably lies in the large number of routine payments that have to be made in good and bad years alike. The provincial clearings reveal the trade depression in all its severity. Bradford clearings for the whole year contracted by as much as 27.2 per cent. against 1929, while if the fourth quarter of each year be compared, the fall was as much as 33.4 per cent. The year's decreases for Liverpool (19.1 per cent.) and for Manchester (17.9 per cent.) were nearly as serious, and at these centres as well the comparison for the fourth quarter of each year revealed a greater decline. These were the three worst centres—as, indeed, would be expected from the depressed state of the textile industries—but results from elsewhere in the provinces were far from encouraging.

FOREIGN EXCHANGES.

The Foreign Exchange market in 1930 was subjected to various extraneous influences which tended to override the usual seasonal factors. To take the movements of the various currencies month by month, and the principal political and economic events by which they were influenced: January saw the signature of the Final Act at The Hague Conference on Reparations, and the opening of the Naval Conference, whilst the Bank rate was reduced on different dates in Berlin, Vienna, Budapest, Paris, and Warsaw. Sterling was very firm against the dollar, and touched the highest level of the year at 4.88½. Paris fell below parity for the first time since stabilisation, and the steady withdrawals from London of foreign, especially French, balances began the movements unfavourable to sterling, which brought several of the gold exchanges to such a premium that gold export point was reached on several occasions. In February, the Argentine peso broke sharply, and a crisis arose in the Chicago and Canadian wheat pools, which began a new fall in wheat, and a recession in the exchanges of the wheat-producing States. This was accentuated later by an extension of the general fall in commodity values, and Australian purchasers of goods abroad were brought eventually almost to a system of barter, and, finding themselves unable to export exchange, paid their debts abroad by buying wool in

Australia and selling it in London. Bank rate was reduced in February in London, New York, Vienna and Budapest. The French Government fell on February 17th and the franc went to a discount. In March, a political crisis in Spain, combined with speculation and a lack of confidence abroad, started the break in the peseta, which was to become worse in June, and continued in aggravated form until the end of the year. The Australian exchange also began to fall away, and grew gradually but steadily worse later. The Bank rate was reduced in Milan, London, Stockholm, Amsterdam, Copenhagen, and Berlin during the first week of March, and, in the third week, in London and Amsterdam for the second time, and also in Oslo and Vienna. In April further commodity price falls occurred, especially in copper, but the exchanges were reasonably steady, with sterling holding its own. The Bank rate was reduced in Stockholm, Milan, Helsingfors and Brussels. May saw the beginning of the heavy drain of gold to France, and the sharp appreciation of the franc, which led later to the marked movement of Amsterdam and Geneva against the £, and the steady depreciation of the Reichsmark. The Bank rate was again reduced in London and New York to 3 per cent., and in Paris from 3 per cent. to $2\frac{1}{2}$ per cent. Other reductions were Copenhagen to 4 per cent., Milan, Vienna and Budapest to $5\frac{1}{2}$ per cent., Berlin to $4\frac{1}{2}$ per cent. The tendency for funds to be withdrawn from the United Kingdom was aggravated in June by the Reparation Loan and the Bank of International Settlements issues. Heavy liquidation in Wall Street preceded an upward movement of sterling, which found its fullest development during July and August, only to fall away steadily after that until the end of the year. The peseta opened another period of depression, which got worse later, and lasted practically until the close. In July the Bank rate was reduced in Calcutta, but the rupee was firm almost throughout the year. The raising of the Bank rate in Madrid induced a slight temporary recovery in the peseta. In Germany the defeat of the German Government brought uncertainty as to the future of the Reichsmark, which came to a head in October with the success of the Hitler party at the elections, and brought the rate to its highest level of the year, 20.44½. The Belgian Bank rate was again reduced, to $2\frac{1}{2}$ per cent. In August the Bank rate was reduced in Helsingfors and Danzig. The peseta again depreciated sharply, and sterling was strong against New York, but Paris was very firm against us. In September a revolution in the Argentine brought the peso down to 38½d., the lowest up till then for the year. October saw a further sharp break in the Argentine exchange, and a renewal of the gold outflow to France. Madrid touched its highest rate for the year at 50.65. Revolution broke out in Brazil on the 6th, but was liquidated by the 24th. An exchange moratorium probably saved the situation in the interval from the exchange point of view. The Bank rate was reduced in Riga and Tokio, and raised in Berlin. The end of the month saw the suspension of the Banque Oustric in France. The franc was little affected, but Berlin touched its highest for the year, 20.44½. November opened with further bank suspensions in France. The peseta recovered, Zurich moved sharply against us, as did Amsterdam. The Bank rate was reduced in Copenhagen and Calcutta.

In December the exchange rate for the mark against sterling reached the lowest for the year, viz., 20.35½. The Tardieu Government fell in France without any effect on the franc, which, as a result of the causes we have outlined, and of end-of-the-year requirements, also touched the lowest rate for the year at 123.54. Milan, which had been at a discount almost all through, also went to the best marking for the year at 92.64. In America the Bank of the United States suspension started a new phase of the crisis there, and this was followed by a fresh slump on Wall Street. Fresh record low levels were touched by wheat and silver, with the result that Rio and Buenos Aires in the first instance, also Hong Kong and Shanghai, touched the lowest for the year at 4½d., 34½d., 1s. 1½d. and 1s. 5d.

respectively. Of the other principal exchanges the Scandinavian currencies were comparatively stable, although Stockholm moved principally against us. Tables illustrating the movements of the more important currencies will be found in an appendix.

The following table is extracted from statistics published by Messrs Samuel Montagu and Company:—

RATE OF EXCHANGE AS COMPARED WITH PRE-WAR PARITY OF THE £ STERLING.

	Pre-war Par Value.	Dec. 31, 1929, Middle Rate.	Dec. 31, 1930, Middle Rate.	Compared with its Pre-war Par Value the £ Sterling is at a Premium of		Present quotation of the £ Sterling as compared with its Pre-war Value

(a) Quotation, 31/7/14. (b) 1 Belg. = 5 Francs. (c) At premium of 100. Comparison cannot be made with pre-war parity for Poland and Austria, as the currency in those countries has been altered in the interval.

GOLD OUTPUT AND MOVEMENTS.

The estimated gold production of 1930 is appreciably greater than that of 1929, and is indeed the largest since 1917. Details are given in the following table compiled by Mr Joseph Kitchin.

GOLD PRODUCTION.

(In millions of pounds at 84s. 11½d. per fine oz.)

Year.	Transvaal.	The Rest of the Empire.	British Empire.	Foreign Countries.	World.	Rise or Fall as compared with 1915 (the Maximum World Output).		
						Transvaal.	British Empire.	World.
1914	35.7	20.8	56.5	34.0	90.5	...	...	...
1915	38.6	22.0	60.6	36.1	96.7	...	...	...
1916	39.5	20.0	59.5	34.0	93.5	+	2	1
1917	38.3	17.8	56.1	30.4	86.5	-	1	-10
1918	35.8	15.2	51.0	28.0	79.0	-	7	-18
1919	35.4	14.7	50.1	25.0	75.1	-	8	-17
1920	34.7	13.4	48.1	20.2	68.3	-	10	-20
1921	34.5	12.9	47.4	20.5	67.9	-	10	-20
1922	29.8	14.8	44.6	21.1	65.7	-	25	-32
1923	38.9	14.5	53.4	22.1	75.5	+	1	-12
1924	40.7	15.3	56.0	24.8	80.8	+	5	-7
1925	40.8	15.3	56.1	24.7	80.8	+	5	-7
1926	42.3	15.3	57.6	24.7	82.3	+	5	-5
1927	43.0	15.6	58.6	24.0	82.6	+	14	-2
1928	44.0	15.4	59.4	24.3	83.7	+	14	-2
1929	44.2	15.5	59.7	25.1	84.5	+	14	-1
1930	45.6	16.3	61.9	25.6	85.3	+	18	+2

* Output temporarily reduced by strike of white miners.

Mr Kitchin writes:—"The British Empire shows an increase of £2,200,000 in 1930, of which £1,300,000 is due to the Transvaal, which shows a record for the seventh year in succession, while Canada has advanced £700,000. Apart from the Transvaal the only country with any important production which shows an advancing output is Canada, though there has been some revival in West Africa. Foreign countries as a whole have shown a stationary output for seven years past." During 1930, the net increase in the monetary gold stocks of the principal countries of the world was approximately £75.0 millions, the difference between this figure and that of the £85.5 millions of new gold produced during the year being explained by the requirements of India and the arts, by the fact that the first figure only relates to fourteen countries, and by minor discrepancies in the dates to which the returns for these fourteen countries relate. The main trend

of gold movements was from Japan and Brazil towards the United States and France, Japan losing £32.0 millions and Brazil £25.0 millions, while the United States and France gained respectively £41.0 and £90.0 millions. Thus France's acquisitions were £15.0 millions in excess of the total world output for the year. Most of the Japanese gold went direct to the United States, which also took some gold from South America. France's gold imports consisted partly of Cape gold, which reached her via the London market, and partly of gold which, though coming immediately from the Bank of England, came ultimately from other countries, such as Spain and South America. London, in fact, acted as a distributive centre for the world's gold, a task which was the natural complement of her function as banker and financial clearing-house to the world at large. The change in the Bank of England's own gold stocks during the year was insignificant.

NEW CAPITAL ISSUES.

Certain economic characteristics of the year were clearly reflected in the record of London's new capital market in 1930. Bad trade, Stock Exchange inactivity, lack of public confidence, and cheap money all played their part. Compared with 1929, there was a big decline in offerings of speculative shares and equities of any class, but this drop was not counterbalanced by the growth in issues of fixed interest bonds which arose from cheaper money. The total amount which the public were asked to subscribe during the year was, therefore, £17,438,700 less, at £267,800,700, than in 1929. The capital for use in the Colonies was £500,000 greater at £61,500,000, and foreign requirements rose by £9,400,000 to £35,600,000, the decline in the total sum being accounted for by the drop of £27,400,000 in the capital for domestic use, which was £170,600,000. The money raised for Home Government purposes during the year remained steady, the falling off being evident among monies required for industrial and other purposes.

Capital raised for employment at home, apart from Government issues, fell from £179,700,000 in 1928 to £136,600,000 in 1929 and £105,000,000 in 1930. There were also sharp declines in non-Governmental requirements, both in the Empire and foreign countries, while advantage was taken by foreign and Colonial Governments of the better terms prevailing in the market. The British Government total of £65,640,000 included proceeds of £37,060,000 from the 4½ per cent. Conversion Loan of February, £19,000,000 from 4 per cent. Treasury Bonds, the Ulster Loan of £1,980,000, and £7,600,000 from National Savings Certificates. Foreign and Dominion Government issues amounted to £50,000,000 more than in 1929. Against these figures is that under the Miscellaneous heading, the most striking of all declines. In 1929 the amount raised was £56,981,800, while last year the figure was £21,361,700. "Trusts" and "Patents" showed heavy declines of £21,556,500 to £6,316,000, and of £6,739,900 to £367,500 respectively. These figures show a clear indication of the lack of enterprise in the market. The rise of £729,200 to £8,050,000 in issues under the heading of "Oil" was attributable to the Shell flotation of £5,000,000 £1 shares in February at a premium of 5s. per share. Cheap money, together with the general strength of the good-class fixed interest securities on the Stock Exchange, is responsible for the fact that most of these 1930 issues are now quoted at a price above that at which they were issued. Of the one or two notable exceptions, the German Reparations Loan and the San Paulo issue have fallen under the pressure of peculiar adverse circumstances.

The figures which have been dealt with above do not include Stock Exchange "introductions" made during the year. The sum which came under this heading in 1929 was £43,641,400, representing nominal capital of £31,519,934, issued at an average premium of £38 9s. 1d. per cent. Last year the sum raised was £23,944,300 at an average premium of £8 1s. 2d. per cent. Of the total sums thus raised, £28,965,200 was obtained in 1929 for employment in the United King-

dom, as compared with £8,292,000 in 1930. The Colonies obtained £3,244,600 by this means in 1930, an increase of £1,045,000, and £12,407,700, representing a decrease of £63,900, was raised in 1930 for use in foreign countries. In issues for public information only there was a great reduction as compared with 1929, but the last quarter of 1930 saw a growth in number in this type of issue.

THE STOCK EXCHANGE.

The year 1930 came and went in an atmosphere of almost unrelieved gloom, and during its passage the misfortunes of the speculative investor were considerably aggravated. Under the influence of cheap money, industrial ordinary shares enjoyed a brief respite during the first week of March, and continued to rise until April in sympathy with American common stocks. In the middle of that month, however, the renewed slump in Wall Street was the signal for a further collapse in London, following upon the realisation that there could be no trade recovery by the summer of 1930. Apart from an insignificant upturn at the end of June, prices continued to decline till the third week in August, when a second mild recovery took place, due partly to the "squeezing" of bear operators. A period of stagnation followed, with a barely perceptible downward trend, and just before the close of the year prices again fell to new low levels.

A gratifying contrast to the widespread depression among ordinary shares was provided in gilt-edged and secondary values ("Investors' Chronicle" Index).

"Gilt-edged" includes British, Dominion and Colonial, and Corporation issues.

"General business" comprises Railway, Banking and Insurance stocks, and representative ordinary shares from eleven industrial groups.

"Speculative" includes representative ordinary shares of gold mining, land, nitrate, oil, rubber, tea, and tin companies.

higher-grade fixed-interest securities. The increase in direct taxation imposed by the Budget, the conversion operations of the Government, and the heavy borrowings by home corporations at rather dear rates in the first half of the year alike failed to prevent rises of from 7½ to 10 points in long-dated British Government stocks, consequent on the reduction in Bank rate in four stages from 5 per cent. to 3 per cent. between February and May. Australian stocks were an unhappy exception to the improved trend of Dominion Government securities. As the financial position of the Commonwealth Government grew more involved the Australian stock market became nominal, and declines of over 15 points were recorded in some cases during the year. India stocks, however, showed a slight recovery, despite the uncertain political outlook.

Owing to a variety of circumstances, including political unrest, with or without revolution, and the deterioration of the Government finances, foreign bonds failed to participate in the "cheap money" boom. The mere suggestion in New York of the possibility of a moratorium for Germany under the Young Plan brought about general liquidation of German bonds, especially the 5½ per cent. Reparations Loan

BANCA COMMERCIALE ITALIANA

(Limited Company incorporated in Italy.)

Established in 1894. Head Office: MILAN. Capital: 700 million Lire. Reserves 580 million Lire.

Branches in every centre of commercial and industrial importance in Italy, and in most of the best known tourist resorts; also in London, New York, Istanbul (Constantinople) and Izmir (Smyrna).

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Czecho-Slovakia, Poland, Yugoslavia, Austria, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, U.S.A., Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc. Representative in Berlin.

ALL OF WHOM TRANSACT BANKING BUSINESS IN ALL BRANCHES.

TRAVELLERS' CHEQUES ISSUED, free of charge, in Pounds Sterling, Dollars, Lire and Francs, payable in all parts of the world.

London Office:

32, Threadneedle St., E.C. 2

A. JOEL, Manager.

Correspondents to the Italian Treasury.

issued in June. Brazilians wallowed heavily in a trough of economic depression and political chaos. Chinese bonds, on the other hand, enjoyed a marked recovery, and where securities were held to be free from political risks movements were mostly in favour of holders.

The market in railway stocks was probably the most depressed on the Stock Exchange. Serious declines occurred in home rail ordinary stocks, while wholesale liquidation of South American railway stocks accompanied the heavy declines in traffic receipts, which in turn were due to the prevalent agricultural and mining depression. The fact that United Railways of Havana and Cordoba Central defaulted in their payments of debenture interest served only to deepen the gloom.

In so far as equity shares were concerned, an unbroken decline in market values was registered. From time to time the dwindling confidence of shareholders was seriously disturbed by the publication of disconcerting statements—for instance, by Hudson's Bay, United Molasses, and Guest, Keen and Nettlefolds. Even when current reports were not actually unsatisfactory, shares were often sold on the prospect of inevitable declines in profit figures in 1931. Stocks which are dealt in on the New York market presented an even worse appearance at the close of the year than British industrials confined to the London market. The speculative markets received the full blast of the catastrophic collapse in commodity prices. Dealings in rubber shares became nominal for a time, while tea shares remained comparatively neglected. Oil shares, which had maintained their ground in the first part of the year, collapsed in the second half as a result of extensive cuts in oil prices in America, and the nervousness induced by the final dividend distribution of the leading oil companies. Mining securities shared in the extensive fall, the only exception being found in the Kaffir market, partly as a result of the increase in dividends declared by several Rand mines, and partly due to a growing realisation on the part of speculative investors of the special position enjoyed by gold-producing companies in a period of falling commodity prices. Copper shares came in for heavy liquidation towards the end of the year, while diamond shares presented a depressed appearance throughout.

The year ended, inevitably, in profound gloom, deepened, if anything, by the consciousness that a Stock Exchange revival, though it might to some extent precede a recovery in economic prosperity, must nevertheless depend, as always, on a general trade revival. It looks, however, as though much of the really heavy liquidation has passed, and in so far as London at least is concerned, the technical conditions of the market appear such as to offer favourable ground for renewed activity.

LABOUR CONDITIONS.

Although the number of trade disputes beginning in 1930 was only slightly below the figure for the previous year, the number of workers affected was considerably lower, and the total duration of the stoppages much shorter than in 1929. The Ministry of Labour's figures for several years past are given below:—

Year.	Number of Disputes Beginning in Year.	Number of Workpeople Involved in Disputes Beginning in Year.		Aggregate Duration in Working Days of All Disputes in Progress during Year.
		Directly.	Indirectly.	
1920	1,607	1,779,000	153,000	26,570,000
1921	763	1,770,000	31,000	85,870,000
1922	576	512,000	40,000	19,850,000
1923	678	343,000	62,000	10,670,000
1924	710	558,000	55,000	6,420,000
1925	603	401,000	40,000	7,950,000
1926	333	2,724,000	10,000	162,230,000
1927	308	90,000	18,000	1,170,000
1928	302	80,000	44,000	1,390,000
1929	420	492,000	40,000	8,280,000
1930	415	287,000	21,000	4,400,000

Two disputes, one in the wool textile industry and the other in the coal-mining industry, were responsible for approximately two-thirds of the workpeople involved in disputes during 1930, and the former accounted for nearly three-quarters of the total loss of working days resulting from these disagreements. Employment became progressively worse throughout the year, and the estimated average number of insured persons, aged 16 to 64, in work fell from 10,207,000 in 1929 to 9,764,000 in 1930, the lowest figure recorded since 1926. Unemployment among insured workers during the year averaged 16.1 per cent., against 10.4 per cent. in 1929, and 10.8 per cent. in 1928. The monthly figures of the numbers unemployed during the past two years are as follows:—

NUMBERS (INSURED AND UNINSURED) REGISTERED AT EMPLOYMENT EXCHANGES, &c.

(At date of Ministry of Labour Monthly Returns.)

(000's omitted.)

	1929.	1930.		1929.	1930.
January	1,434	1,534	July	1,188	2,072
February	1,430	1,582	August	1,190	2,106
March	1,168	1,731	September	1,217	2,230
April	1,198	1,752	October	1,270	2,308
May	1,165	1,823	November	1,323	2,359
June	1,176	1,947	December	1,552	2,725

Unemployment was most severe in the textile trades (which accounted for nearly 28 per cent. of the year's increase), in coal and metalliferous mining, in pottery and earthenware manufacture, in the metal trades, and in engineering and shipbuilding. The following table shows the movements of the unemployment percentage in recent years:—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.

	1924.	1925.	1926.	1927.	1928.	1929.	1930.

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

The Ministry of Labour states that a small net reduction in wage rates occurred in 1930. Changes, in the industries and services covered by available statistics, during the year resulted in an aggregate net increase of approximately £57,800 in the weekly full-time rates of 760,000 workers, and in a net decrease of about £115,800 in those of 1,100,000 workpeople. Of those workers whose wages were reduced in 1930, nearly 80 per cent. were in the textile and building industries, while the most important groups affected by increases were railway and shipbuilding employees. The average decrease of all industries together was equal to about 1 per cent. of the wage rates prevailing at the beginning of the year. According to the Ministry, when account is taken of all the available information, it is estimated that the average increase between July, 1914, and the end of 1930 in the weekly full-time rates of those workpeople covered by the statistics was from 70 to 75 per cent. As there has been a general reduction in hours since 1914, this percentage increase indicates a greater increase in hourly rates. Hours of labour were considerably reduced during the year, for against 12,550 workpeople who had their hours increased, 344,000 experienced reductions. The aggregate net decrease was 863,500 hours per week, as compared with 8,750 hours in 1929.

A.—EUROPE.

FRANCE.

In 1930 the general economic depression slowly extended to France, but even then France, the last of the industrial countries to suffer, felt the depression only to a comparatively negligible extent. In the financial world, the year was notable for the throwing back on the French market of enormous quantities of stocks, bought at high record levels in 1928 and 1929 on American, German and other foreign account. These came back into French ownership at bargain prices. Poor crops and decreased consumption made the year difficult in nearly all industries. The outstanding feature, from the business point of view, was that French domestic prices were maintained at a very much higher level than in other countries. This gave the opportunity for increased foreign competition in the French home market, particularly in coal, iron and steel. The political atmosphere was disturbed by repeated Ministerial crises, due to party warfare, which seriously delayed the carrying on of necessary parliamentary business.

Trade and Production.—French exports in 1930 amounted to 42,829,652,000 francs and 36,579,342 tons. Exports of manufactured goods (which formed over 60 per cent. of the whole) were 14½ per cent. lower in value, while those of raw materials fell off 20 per cent. in value and rather under 10 per cent. in tonnage. Imports were 52,344,369,000 francs. Imports of raw materials were nearly 17 per cent. lower in value, but nearly 3 per cent. more in tonnage. Entries of manufactured goods (which represented 21 per cent. of the whole) were nearly 13 per cent. greater. Total imports were 10 per cent. less in value and total exports 13½ per cent. less. The declines were due to the world-wide economic depression and general drop in prices. Exports of iron and steel fell off during the year, and imports increased. Steel output touched a new high record figure in May, with 855,000 tons, but fell off during the rest of the year. Further cuts in output were agreed by the European Steel Cartel during the year and are still in effect. The general index of production (1913 = 100), which averaged 127 in 1928 and 139 in 1929, rose to 144 in January and March-June, but had fallen to 135 in November. Rubber manufactures again took the lead and stood at 891 in November, as compared with a mean of 861 in 1929 and 587 in 1928. The motor-car industry came next and stood at 683 in March, falling with the season to 584 in November, as against means of 657 in 1929 and 610 in 1928. Most of the other industries closed the year with figures still appreciably above the mean for 1929. Textiles, which averaged 99 and 92 in 1928 and 1929, fell to 80 in August and September, but slightly recovered later. Railway receipts during the year totalled 15,399,576,000 francs, or about 14 per cent. below 1929. The year closed with a deficit on working estimated to be about 1,500,000,000 francs, due to enormous increases in wages and other working costs, without compensation in the form of increased traffic rates. The number of wagons loaded daily ranged from 66,700 earlier in the year to 56,720 towards the close. The daily mean in 1929 was 63,800 and in 1929 65,100, but a new system of computation renders exact comparison unsafe. Inward shipping averaged 5,058,000 tons per month,

against means of 4,840,000 tons in 1929 and 4,363,000 tons in 1928. Outward tonnage averaged 4,400,000 tons monthly, against 4,099,000 tons in 1929 and 3,868,000 tons in 1928. Bankruptcies totalled 6,149, with a monthly average of 512, against 508 in 1929 and 474 in 1928.

Labour.—Labour shortage was severely felt at the beginning of the year, particularly in agriculture and mining, and necessitated extensive recruiting of foreign workers. In certain industries, particularly in connection with luxury trades, there was some unemployment and the number in receipt of out-of-work allowances (which averaged 5,067 in 1929 and 909 throughout 1929) was in January 1,484. By November the total in receipt of benefit was 4,893 and in December 11,952. The number of workers unable to find work through the labour exchanges, which averaged 10,192 in 1929, and 15,962 in 1928, rose from 10,000 in July to 26,500 at the end of the year. These figures are admittedly based on insufficient data, as several industries have been working short time for some months past, and in many districts labour has been reduced. Ministry of Labour figures announced on January 31st indicated that the number of totally unemployed in the country was 350,000 (based on figures for concerns employing over 100 workers) and that 1,000,000 people were partly unemployed.

Crops.—The wheat crop, which was expected to exceed the record harvest of 1929, was seriously damaged by the bad weather throughout the summer, and yielded only 63,000,000 quintals. The grain, moreover, was mostly below average quality and weight. The potato crop suffered similarly, although not to the same extent. The wine crop amounted to only 42,000,000 hectolitres, against 63,000,000 hectolitres in 1929, and was the poorest since 1917.

Commodity Prices.—The general index figure of wholesale prices (1914 = 100) fell from 588 at the end of December, 1929, to 498 at the end of 1930, with a mean of 543 for the year (or 110 gold). The outstanding feature of the year in regard to prices was the continued widening of the ratio between those for French and imported products respectively. The index of wholesale prices of French products during the year fell only 55 points (from 620 to 565), while that for imported products dropped 153 points—from 530 to 377. At the end of December the index of French products was 188 points, or almost exactly 50 per cent. higher than that for imported goods. The index of wholesale prices of thirteen common household articles at the end of December was returned as 639, and for retail prices of the same products as 649, against 543 and 549 respectively at the end of 1928 and 586 and 611 at the end of 1929. The cost-of-living index for a Paris working-class family of four persons, at the end of August (food, clothing, rent, lighting, heating and sundries), was 592, against 555 for the corresponding period of 1929, and a mean of 519 in 1928 and 514 in 1927. The question of the effect of the steadily growing volume of the note issue on commodity prices has lately been a subject of sharp controversy.

Money and Stocks.—The past year, like 1929, was marked by a continued abnormal abundance of unemployed capital and a lack of opportunities for short-term investments. The plethora of money was increased by the return to Paris of French balances

unable to find profitable employment abroad. The amount of idle capital was so abundant in the latter half of the year that carrying-over rates on the Paris Bourse dropped to $\frac{1}{2}$ per cent. in the Parquet, the state of the market still leaving large sums unemployable. The Bank of France discount rate, which had stood at $3\frac{1}{2}$ per cent. since January 19, 1928, was brought down to 3 per cent. in January, 1930, and on May 1st following was fixed at $2\frac{1}{2}$, where it remained until January 2nd this year. The rate of interest paid on National Defence Bonds was reduced during the year from $3\frac{1}{2}$ per cent. to $2\frac{1}{2}$ per cent. The average yield from issues with varying return during the year was 3.36 per cent. (4.26 per cent. in December), against 2.72 per cent. in 1928 and 2.70 per cent. in 1929. The average yield offered by bond issues was 4.69 per cent., against a mean of 5.36 per cent. in 1929 and 6.03 per cent. in 1928. The general index figure representing Bourse quotations of 300 French issues of variable yield at the end of 1930 (1913 = 100) was 349, as against 463 a year before and means of 507 in 1929 and 415 in 1928. The figure representing quotations of 35 standard 3 per cent. and 4 per cent. issues (1913=100) at the end of December was 94.1, against means of 85 in 1929 and 81 in 1928. New French capital issues during the year totalled 21,925,000,000 francs (against 18,808,000,000 francs in 1929 and 13,800,000,000 francs in 1928). Mortgage and other bond issues formed, as usual, the great part of the whole, and totalled 17,538,000,000 francs (against 10,492,000,000 francs in 1929 and 13,800,000,000 francs in 1928). Only 622,000,000 francs consisted of issues by new companies (against 996,000,000 francs in 1929 and 1,068,000,000 francs in 1928). Increases of capital by old companies amounted to 3,765,000,000 francs, as compared with 7,320,000,000 francs in 1929 and 5,484,000,000 francs in 1928. The only notable foreign issues during the year were the French portions of the German $5\frac{1}{2}$ per cent. International Loan (Young Plan bonds) and of the Bank for International Settlements capital. The latter, which was offered here in May, was subscribed 158 times over. The French share of the "Young Bonds" issue, in June, totalled 2,215,000,000 francs, and was also a spectacular success.

Public Finance.—Owing to the prolongation of the 1929 financial year to the end of March, 1930, comparative revenue figures are no longer possible. The revenue under the General Budget for the first nine months, ending December 31st, of the current financial period totalled 35,559,648,700 francs, representing a surplus of 1,010,000,000 francs over Budget Estimates, as compared with a surplus of 6,605,000,000 francs at the end of 1929. During the complete year a further total of 7,396,500,000 francs was received by the Caisse d'Amortissement, of which 4,487,000,000 francs was derived from the tobacco monopoly, and the balance from the special taxes now devoted to debt extinction. A large part of the previous year's surplus was utilised as compensation for taxation relief. The Treasury balance at the bank at the end of December was 4,638,750,000 francs, and that of the Caisse d'Amortissement 7,985,500,000 francs. Debt extinction continued systematically throughout the year.

Bank of France.—During the year the Bank of France gold reserve increased from 41,668,000,000 francs to 53,577,000,000 francs. During the same period the note circulation was increased from 68,570,000,000 francs to 76,436,000,000 francs, and holdings of foreign exchange from 26,030,000,000 francs to 26,173,000,000 francs.

GERMANY.

All statistics of production and consumption confirm the conclusion that 1930 was the year of severest depression ever experienced in Germany. This was a disappointment, for in contrast to many other industrial countries, especially the United States, Germany began to feel the depression as early as the end of 1927, and it was expected that 1930 would bring the beginning of a revival. Germany, however, was unable to escape the effects of international influences, and to these were added political complications of purely German origin. Parliamentary conflicts and the success of the revolutionary Hitler Party at the elections produced a violently disturbing effect on economic conditions, and led to a withdrawal of foreign credits and the flight of German capital. The German State and German economy proved, however, stabler and sounder than had been widely assumed both at home and abroad.

Public Finance.—The financial position of the Reich, the States and the Communes became dangerously acute in the course of the year. Even in 1928 and 1929 the Budget closed with a small deficit which was covered by floating debt, and in the autumn of 1929 by the floating of the \$125 million Kreuger Loan. In 1930 the estimates were completely falsified by the depression, and a large deficit will have to be carried forward and covered by short loans. In October a foreign loan of \$125 million for two years was raised by an international consortium of banks under the leadership of Lee Higginson and Company. The most substantial relief to the Budget was given by the raising in October of the unemployment insurance contributions from $4\frac{1}{2}$ to $6\frac{1}{2}$ per cent. of wages.

Money Market and Stock Exchange.—The position of the Reichsbank in the first half of 1930 was very favourable. Discount rate, which had had to be raised to $7\frac{1}{2}$ per cent. in the summer of 1929, in conformity with the high rates abroad, was reduced to 4 per cent. by July. Market rates on short loans also fell rapidly, but the inadequacy of capital accumulation in Germany prevented any relaxation of the long-term capital market. Even in the summer of 1930 long-term industrial and mortgage credits cost 8 per cent. After the failure of the Young Loan and the results of the Reichstag elections, however, a reverse development began. In one month the Reichsbank had to pay out Rm. 1,000 million in gold and foreign exchange, amounting to about one-third of its holdings. The withdrawal of credits by foreign banks, the sales by foreigners of the security holdings in Berlin and the flight of German capital must represent a passive item of some Rm. 1,500 million in the German balance of payments. The Reichsbank was obliged to raise its rate from 4 to 5 per cent. in spite of the low rates abroad, and in spite of the depression, and it looked as though a general credit restriction policy would be necessary in the interest of the currency, when more settled political conditions and the conclusion of the foreign loan brought a check to the weakness of the mark. Since the elections there has been no effective capital market in Germany, and indeed, even before

only very small issues were possible. Apart from the Young Loan, Germany again in 1930 received very little capital from foreign loans, in contrast to the great influx in 1927 and 1928.

After the declines at the end of 1929 the securities market held up relatively well until June. From then onwards, in sympathy with foreign bourses, but principally under the influence of German political developments, a landslide of security values began which is without parallel in German history. In six months they had fallen on an average by more than one-third. Leading securities with a secure yield lost in some instances half their value as the heavy home and foreign offerings met with no demand. At current quotations many shares yield 10 per cent. and more.

Industry.—Industrial production also maintained a satisfactory level until June; the decline in coal and steel production was only 15 per cent., as compared with the exceptionally favourable period January-June, 1929. But in the second half-year the decline as compared with the corresponding period of 1929 was 37 per cent. in steel, and 25 per cent. in coal. The general index of production shows a reduction of about 20 per cent.

An unprecedented increase in unemployment resulted from the decline in production. As early as the winter of 1929-30 the number of unemployed, at 3.4 millions, had reached a new high record, very little of the usual seasonal diminution took place in spring and summer, and from June onwards the numbers increased rapidly, ending the year at $4\frac{1}{2}$ millions.

Foreign Trade.—This is the one cheerful chapter in the history of 1930 in Germany. Imports naturally fell very much, as they consist largely of industrial raw materials, whose prices were very much lower, and which were needed in smaller quantities on account of the falling-off in production. In addition the import of luxuries was curtailed by the depression. But whereas the exports of all industrial countries have declined, in Germany their volume has been maintained, for the diminution of 10 per cent. in value was accompanied by a 9 per cent. reduction in average export prices. Exports to overseas countries have fallen off, but trade with Europe has enabled German industry to strengthen its position even during 1930.

Prices and Wages.—Industrial raw materials and imported foods were 20-25 per cent. cheaper in December, 1930, than on the average of 1929. As wages, taxes, and railway rates have scarcely changed, this reduction only affected the cost of living slowly and to a limited extent, and by December it had fallen 9 per cent. In the autumn the Government took action to reduce wages and prices. The salaries of all Federal and State officials were reduced by 6 per cent., and wages in the most important industries, through compulsory arbitration, by 4-8 per cent. These wage reductions led to serious disputes, but so far it has been possible, after varying degrees of difficulty, to secure a settlement in each case, and there was no prolonged strike during the year.

Agriculture.—In spite of satisfactory harvests, agriculture has been severely injured by the heavy falls in world prices. It was the more necessary for the Government to take steps to protect it in that conditions were worst in the province of East Prussia, which is entirely surrounded by Polish territory. The economic condition of this province is a source of particular anxiety, and on political grounds it must be protected. The measures taken consisted on the one hand of credits on easy terms to farmers, many of whom in Germany are exceptionally burdened with debt, and on the other, of action to support prices. The attempt to maintain prices was successful in the case of wheat, the price of which was kept at a respectable level during most of the year, and is now in Berlin at about twice as high a level as would correspond to the world price. It was much less successful with rye, Germany's most important cereal, but the fall was checked in the end. Almost all the duties on agricultural products were raised during 1930, and severe con-

licts with various exporting countries resulted. The interest of German industry in the export trade leads to serious conflicts of interest in this respect between agriculture and industry.

ITALY.

Foreign Trade.—For the first time since 1921 foreign trade has experienced a severe slump. Imports, which, in present stabilised lire, increased from 13,868 million lire in 1921 to 21,300 in 1929, decreased to 17,351 millions in 1930. Exports, which had increased from 7,487 million lire in 1921 to 14,889 in 1929, decreased to 12,119 millions in 1930. The major part of the slump is owing to the decline in prices. From indices below it appears that between 1929 and 1930 prices of exported goods decreased 96.7 points, while those of imported goods only 67.3 points. According to another set of figures of the Industrial Confederation, however, both indices have varied at about the same rate; so that the comparative bargaining position of Italy should not have been impaired. The fact that, notwithstanding a decrease to about half the 1925 cost, the volume of imported raw materials decreased during the months July-September, 1930, to about 72 to 82 per cent. of the 1925 basis, suggests that a decrease in industrial stocks occurred. When a revival comes, the imports of raw materials should be the first to rise. The excess of imports over exports was only 5,232 million lire in 1930, as against 6,429 in 1929. How this deficit has been covered is difficult to tell. No loans were made in foreign countries, current foreign accounts in Italian banks are not said to be increasing, some Italian securities were repatriated, and the gold reserves of the Bank of Italy increased by 106.7 million lire. The one adverse item known, the decrease by 863.6 millions of the foreign exchange reserve of the Bank of Italy, does not suggest, however, a strong pressure on the liquid resources of the country towards the balancing of foreign trade payments.

Crops.—Wheat had a poor year, while yields of corn, sugar beet, rice, potatoes, raisins, and hemp were

larger or not much smaller than in the past two years. Prices were much lower; and the trend was not stemmed by increases in custom duties. The internal price of wheat at about 100 lire per quintal, and that of raw rice at 45, are the worst that have been seen in the last two generations. No wonder that the consumption of artificial fertilisers in past autumn has alarmingly decreased; so that lower prices are offered to induce agriculturists not to slacken their efforts.

Industry.—The use of electric power, which is a good index of industrial activity, has progressed, taking into account also imported power, from 8,933.7 million Kw. during the first 11 months of 1929 to 9,148.2 Kw. during the corresponding period for 1930. Possibly the increase is due more to an extension of plants than to an increase of production in old plants since, from October, 1929, to October, 1930, the installed power increased from 3,735,000 Kw. to 4,139,000 Kw. Commercial imports of coal decreased from 9,521,000 tons in 1929 (10 months) to 8,594 in 1930 (same period), and imports of reparations coal from 2,546,000 to 2,082,000 tons. Petrol and oil imports were 555,000 tons in the first nine months of 1930, as against 699,000 tons for the whole of 1929. Unemployment increased throughout the year: the lowest figure was 322,291 at the end of June, and the figure of 642,169 reached at the end of December, 1930, is the maximum of the last ten years. Traffic on the State railways is decreasing: 53 million tons of goods were loaded in 1930, as against 60.3 in 1929; 97.6 million passengers were carried in 1930 (11 months), as against 108.0 in 1929 (same period). Navigation, and the output of textiles, cement, superphosphates, rayon, paper, and minor metals have been maintained; but profits are less, or vanishing. Building permits were issued for houses aggregating 129,560 rooms in 1930 (10 months), as against 158,429 in 1929 (same period). The number of bankruptcies is still rising: the monthly average for 1930 was 1,029, against 956 in 1929, and 933 in 1928.

Prices, Wages, Cost of Living.—The usual discrepancy between wholesale prices, the index of which was 368.6 in December, 1930 (1913 = 100), retail prices (482.1), and cost of living (517.6) exists in Italy as elsewhere. A campaign has been organised against the high cost of living, beginning with reductions of salaries and wages and of rents. But the continued fall of wholesale prices has maintained the distance. Wages are beginning to decrease; but, as the lowest wages were exempted from the reduction agreed upon between the employers and the employees' associations, the general average is only slightly affected. Short time and unemployment are reducing the yearly earnings of the workers.

Savings and New Capital Issues.—Diminished incomes necessarily have reacted unfavourably on savings and investments. Saving banks deposits are almost stationary, their increases being limited to capitalisation of interest. The same may be said of the deposits of ordinary banks. Investments in joint-stock companies totalled only 2,641 million lire in 1930 (11 months), as against 4,615 in 1929 (same period). Debentures issued in the first 11 months totalled 1,028 millions in 1930, against 1,421 in 1929. As there were several failures of minor banks, and forced amalgamations of others, there was probably an increase in direct investments, especially in the country, and of the hoarding habit. Active note circulation should therefore be calculated at less than the total issues.

Money and Stocks.—Foreign exchanges were maintained, with very slight variations, near the upper gold point of 19.10 lire to the dollar. The official rate of discount, beginning the year at 7 per cent., was reduced to 6.50 per cent. on March 3, to 6 per cent. on April 24, to 5.50 per cent. on May 19. Market rates for commercial paper were lowered gradually from 6.75-7 to 5.5-5.50 per cent., for financial paper from 8.50 to 6.50-7.50 per cent. Prolongation rates for industrial first-rate securities went down progressively from 6.50-7.25 to 5.25-5.75 per cent. At the end of the year money was to be found in the bourses, on 3.50

per cent. Consols, even at 2.50-3 per cent., and on 5 per cent. Consols, at 4.4-2.5 per cent.

Public Finance.—The financial year 1929-30 closed with a surplus of 151 million lire. During the first six months (July 1st to December 31st) of the present financial year, accounts disclose a deficit of 951 million lire; which was the justification for a reduction of 12 per cent. of all salaries of public employees. Public internal debts increased from 87,134 million lire on June 30, 1929, to 88,102 on June 30, 1930, and to 88,781 on December 31, 1930.

RUSSIA.

Throughout 1930 efforts to realise the ambitious estimates of agricultural and industrial production contained in the Piatiletka, or Five Year Plan, continued with unabated vigour. A decision of considerable importance to the fulfilment of the Plan was arrived at in September, when it was resolved that henceforth the economic year should be identified with the calendar year instead of being reckoned from the beginning of October to the end of the following September. The object of the change was to make sure that before the estimates for the succeeding year were finally adopted the results of the harvest should be known.

Currency and Credit.—During the year a marked increase occurred in the currency in circulation, particularly in the amount of bank notes and treasury notes. In October, 1929, the aggregate currency outstanding totalled 2,642 million roubles. This was increased to 2,773 millions in January, 1930, and advanced steadily throughout the year to 4,172 millions in September. The increase for the twelve months to September 1, 1930, was therefore considerably more than 50 per cent. Of the 4,172 million roubles in circulation in September, 2,162 millions were in the form of bank notes and 1,736 millions in the form of treasury notes. Credit facilities for State and co-operative undertakings were provided on a larger scale than ever, agriculture and the heavy industries again enjoying the lion's share.

Finance.—The State Budget for 1929-30 totalled 11,665 million roubles. The sum of 2,796 millions was received from taxation, 2,589 millions from Excise duties, and 6,118 millions from State activities. The estimates for 1931 anticipate an expenditure of 20,216 million roubles, an increase of over 70 per cent. The total "financial plan" for 1930 amounted to 22,000 million roubles, against 13,000 million roubles for the previous year. Estimates for 1931 envisage a total of 31,755 million roubles, of which national industry will contribute 13,300 millions and taxation 11,000 millions.

Agriculture.—The "socialised sector," which includes the Sovhozi, or State farms, the Kolhozi, or collective farms, and the communes, continued to make headway at the expense of individualist cultivation. An unauthorised "drive" for collectivisation by local Communists in the spring led to renewed peasant resistance, which took the form of destruction of stock and implements. The issue of a pamphlet by Stalin entitled "Giddy with Success," in which he severely reprimanded the party for its deviation from the "Plan," brought about a return of the previous regular "tempo." Considerable successes were scored during the year. The harvest was very good in most districts, and the grain harvest totalled 86.5 million tons, against 71.7 million tons in 1929. The total area under cultivation amounted to 127.7 million hectares, compared with 118 million hectares in 1929. Attention was again devoted to the improvement of "technical" crops, the area under sugar beet increasing by 11.1 per cent. and under cotton by 23 per cent., though in the latter case the harvest was not good. By October 1, 1930, more than a fifth of all peasant farms in Soviet Russia had been brought inside some form of co-operative or collective organisation, while in the grain areas of the Ukraine, Siberia and the Volga basin as much as 43 per cent. of the whole was

"collectivised." The "Socialist sector" now provides over 50 per cent. of the total grain supply, and is concentrating attention on the organisation of livestock along "collective" lines.

Industries.—In spite of difficulties arising from the unsatisfactory nature of the transport system, the fuel supply, and the distribution and shortage of skilled labour, remarkable advances were made in industrial output, which in the aggregate exceeded the total of 1928-29 by 25 per cent. The greatest successes were achieved in the heavy industries, particularly in coal, pig iron and steel, the output of which increased respectively by 20 per cent., 24 per cent. and 18 per cent. The expansion in oil output by 26 per cent. was a noteworthy feature. In the production of finished goods, particularly of textiles, achievements were less satisfactory. The year witnessed the virtual elimination of the private producer from the heavy industries, apart from "concessions," and clearly foreshadowed the disappearance of the few remaining private traders.

HOLLAND.

Though 1930 was a year of depression for the Netherlands, they have not been hit to such a great extent as many other countries. As the statistics show, only relatively slight symptoms of the depression have become perceptible, but the stagnation of trade is making itself felt more and more intensely. Though the extent of unemployment here contrasts favourably with the situation in Germany and England, it is greater than it has been since 1924. Though the unemployment is chiefly industrial, a number of branches of industry, particularly electric lamps and artificial silk, suffered far more through reduced remunerativeness than through actual lack of orders, while in some other lines the depression hardly made itself felt at all. A far more serious aspect was assumed by the crisis in agriculture and dairy farming, as a result of the steep decline in prices.

Trade and Prices.—The trade balance is relatively satisfactory, as the figures below show. There is no decline in actual quantities imported and exported, but in terms of value the exports and imports are lower than in 1929, owing to the lower price level. In shipping and shipbuilding the general depression was severely felt. The drop in wholesale prices has not been arrested yet. It is remarkable that, in spite of this, no changes of importance in wages or conditions of labour have become operative; there have been practically no strikes, and rates of wages have been maintained generally, except in the diamond industry.

Stock Exchange.—The Stock Exchange has undergone an acute crisis, coupled with unprecedented liquidity on the money market. The market for new capital issues was a trifle more active, but only for bond and debenture issues; offers of foreign bonds practically ceased.

Public Finance.—State revenue as well as the position of the National Debt remains satisfactory. The national wealth, as indicated by the increased deposits at the savings banks, continues satisfactory too.

In contrast with the Motherland, the Dutch East Indies, as an exporting country of staple commodities for the world's markets, has felt the world-wide trade depression to an acute extent. The yields of the principal plantation products, such as rubber, sugar, tobacco, tea, coffee, and also tin, etc., are estimated at a much lower figure than in preceding years.

BELGIUM.

Production, Price and Traffic.—In 1930 Belgium felt the consequences of the world crisis fairly acutely. The crisis was felt first in the Antwerp diamond industry, the customers of which live chiefly in America; then it extended to the other branches in the usual successive order. In metallurgy, production decreased by 22 per cent. as compared with the record level of 1929; at the end of the year only 70 per cent. of its working capacity was actively employed. The coal mines, which before were short of labour, attained in 1930 a record output of 28 million tons, one-fourth more than in 1913, but the unsold stocks also reached a record. The "Comptoir des charbons," which was started in 1928, has not proved very effective. Wholesale prices by December, 1930, had fallen 20 per cent. below the average of 1928; this corresponds to general movements abroad. The retail prices, though they show a tendency to fall, are resisting a little more than in other countries; this is a consequence of the low stabilisation rate. Prices and cost of living are still notably below those of other countries. Wages, which had risen in 1928 and 1929, have now a slight tendency to fall, but this reduction is so far not very considerable, and is less than 10 per cent. for the mass of labour. Unemployment has begun to appear; at the end of the year about 25,000 were wholly and 75,000 partially unemployed, but this is partly seasonal.

Foreign trade has declined 15 per cent. owing chiefly to the fall of prices; the deficit will be about 4 milliard francs, against 3,276 millions in 1929 and 1,186 millions in 1928. The deficit of 1930 is normal, considering the large invisible exports.

Money, Exchanges and Stock Markets.—Money became extremely easy during last year. The Banque Nationale, which had already reduced its discount rate from 5 to 4½ per cent. in 1929, brought it down to 3½ at the end of December, to 3 per cent. in May, 1930, and to 2½ per cent. in August. Call money varied between 2.6 and 0.88 per cent. (monthly average); it did not rise above 3 per cent. at the end of December. Rates for longer-term loans have also decreased. At the end of 1930, banks granted no more than 2½ at one month and 1 per cent. at sight; further, the income tax (15 per cent.) is to be deducted from these profits. The State Caisse d'Épargne (Savings Bank), which allowed 4 per cent. to depositors, has reduced this rate first to 3½ per

cent., then at the end of the year to 3 per cent. up to 20,000 francs, and 2 per cent. above this sum. State funds, which yielded about 5½ per cent. at the beginning of the year, have come back to about 5 per cent. Mortgage loans are still very costly, about 7 per cent. The National Bank, which until August operated under a gold exchange standard and was not subject to compulsion in giving or accepting gold, has adopted the gold bullion standard; gold bills still form part of its reserve.

Belgium's balance of payments has been largely favourable; this produced an abundance of gold and bills: 1 milliard francs in gold and 1½ milliards foreign bills. This situation resulted principally from visible and invisible exports, but also from the raising of substantial loans abroad by Belgian establishments. The influx of gold and foreign bills has caused an increase of 18 per cent. in notes in circulation. This increase, which seems unnecessarily large, is wholly covered by gold.

The repayment of the remnant of the inflation advance to the State by the National Bank has been settled by a convention of October 13, 1930. This sum, 1,460 million francs, will be repaid in eighteen annuities. The Stock Exchange has continued depressed under the influence of developments abroad. Compared with the maxima reached in May, 1928, the loss may be estimated at 60 per cent. New issues have been quite unimportant; those of shares are less than one-third of their amount in 1929. As to bonds, a faint awakening of new issues can be noted. Dividends remain satisfactory, and are 15 per cent. higher than in 1929 and 37 per cent. higher than in 1928.

Public Finance.—Fiscal receipts reach only 8,140 million francs, against 9,836 in 1929. This reduction comes partially from the reduction of taxes—1,500 millions—voted by Parliament in the spring of 1930. The economic crisis has resulted so far only in a loss of about 200 millions, but its effects are felt more severely from month to month. Expenditure, on the other hand, is advancing steadily, and will probably cause a serious deficit for the financial year 1930. The Belgian public debt has been reduced by the anticipated payment of the 1920 American loan up to 1,200 millions. On September 30, 1930, the debt totalled 52,246 million francs. Moreover, Belgium is preparing to convert the 8 per cent. dollar loan of 1920, of which 600 millions were still to be paid off; instead of this an external loan at 4½ per cent., issued at 96 per cent., was concluded in November, 1930. This year, telephones and telegraphs have been constituted a separate service, which has immediately raised the rates. The National Railway Company announces that, for 1930, it will pay a superdividend of 1 per cent. (2 per cent. for 1929) over the fixed interest of 6 per cent. Its receipts are slackening, but expenses are also falling.

SPAIN.

Numerous political troubles disturbed the labour market during 1930, but the economic fabric of Spain has not been seriously damaged, though the unchecked fall of the peseta seemed at times almost catastrophic. The depreciation of the currency has acted as a defence against the world-wide depression, bringing Spanish gold prices down to a level which allowed the maintenance of a stable level at home, and helped to improve the balance of foreign trade. If the political unrest could be reduced in the near future Spain would be in a fairly good position to face the issues of the world economic crisis. The unemployment which had been feared after the closing down of the Exhibitions did not prove to be of much importance; a serious lack of work has only been felt in some Southern regions following an exceptionally bad olive crop. The financial position of the State has been strengthened by important curtailments in the expenses, which have permitted a small surplus, and public debt has not increased in 1930. Producers are taking advantage of lower gold prices to regain foreign markets which two or three years ago, with the high value of the peseta, seemed lost for ever.

Production and Trade.—Agricultural conditions were as a whole worse than in 1929. The wheat crop amounted to 3,973,000 metric tons against 4,200,000. The harvest of other cereals was larger at 4,180,000 metric tons, against 3,990,000, but the wine produced showed a decrease with 16,700,000 hectolitres (25,000,000 in 1929), and the olive crop reached only the figure of 6,800,000 metric quintals, one of the lowest registered in many years and only one-fifth of the previous crop (which amounted to 31,100,000 quintals). Mineral production during the first nine months of 1930 was nearly the same as in the same period of 1929, the extraction of ores giving the following figures:—Iron, 4,165,757 tons (against 4,234,609 in 1929); copper, 2,812,113 tons (2,735,594 in 1929); coal, 5,669,254 tons (5,476,075 in 1929); lead, 104,473 tons (107,555 in 1929); zinc, 96,751 tons (75,917 in 1929). A setback occurred in the iron and steel industries during the same nine months' period, the production of pig iron falling from 520,425 tons in 1929 to 478,525 in 1930, and steel from 701,034 tons in 1929 to 677,944 in 1930. The production of other metals showed a decrease in zinc, 7,978 tons in 1930 (nine months), against 8,410 in 1929, but an increase in copper, 18,566 tons (15,831 in 1929), and lead, 98,764 tons (89,533 in 1929). Other industries, like the textiles, and internal trade were pretty busy all over the year, a slight decrease being only noticed in Christmas shopping. The ever-growing imports of cotton, rubber, artificial silk, mineral oils and machinery show clearly that there is no depression to be detected in most industrial activities, and that in some of them production has actually increased. The exports of finished goods during the first eleven months of 1930 amounted to 177,000 tons, against 151,000 in the same period of 1929. Although the real facts do not correspond exactly to the official figures, which put the value of the imports in the

first eleven months of 1930 at £88,500,000 (£97,400,000 in 1929), and the value of exports at £81,100,000 (£73,100,000 in 1929), there must have been an effective improvement of the foreign trade balance. Spain could no longer afford the continuous increase of imports whose index number stood at 240 in 1929 (1913 = 100), while the export index was only 158.5 in the same year.

Finance, Prices and Stock Exchange.—The provisional figures for the public revenue and expenditure during 1930 were more favourable this year than was expected. Revenue amounted to 3,755 million pesetas and expenditure to 3,693 million, leaving a small but real surplus. Expenditure showed a reduction of 258 million compared with 1929. The estimates for 1931 are similar to the actual results of the previous year: 3,754 millions for the revenue and 3,691 for the expenditure. No bonds have been issued by the Government either for their own account or for the railways, whereas in 1929 one milliard pesetas was raised in the market. The total value of securities issued in 1930 was one of the lowest registered during the last ten years, amounting to 908 millions against 2,497 million pesetas in 1929, and although the reduction is due mainly to restriction of expenditure by public bodies it means also a lack of new industrial enterprise as the amount of industrial securities issued in 1930—745 millions against 1,835 in 1929—is exceptionally low. The Stock Exchange has been depressed throughout the year, but no heavy falls of an unusual character occurred in quotations. The monthly index number for wholesale prices during the first ten months of 1930 averaged 171.6 against 171.5 in the same period of 1929. This stability of prices has been achieved by the devaluation of the peseta, which has restored equilibrium between gold prices in Spain and those prevailing in countries with a gold standard. Gold prices in Spain stood at 101 per cent. of the pre-war level in October, 1930, when in England, according to the index number of the *Economist* the corresponding figure was 104. The loss in the exchange has been very heavy, as the average price of the pound in pesetas passed from 37.11 in January to 38.33 in February, 39.48 in March, 38.95 in April, 39.73 in May, 41.38 in June, 42.10 in July, 44.91 in August, 45.33 in September, and 47.12 in October, finishing the year at about the same exchange. The pound was worth 28.52 pesetas in 1927, 29.33 in 1928 and 33.21 in 1929.

SWITZERLAND.

Trade and industrial conditions were most unsatisfactory during 1930 in Switzerland, where the economic depression was deeply felt in all quarters, though not so deeply as in more industrialised countries. Banking was very active as business was facilitated and fostered by an extraordinary influx of foreign capital, which caused all money rates to be lowered by about ½ per cent. in July. Bad weather, and unsettled economic conditions in other countries, had also a depressing influence on the hotel industry, the earnings of which were considerably lower than usual, as well as on the receipts of all transport undertakings. For the same reasons unemployment has been growing since the middle of April, and at the end of December there were about 25,000 unemployed, as against 18,000 at the end of 1929.

Finance.—Federal and municipal finances showed a further improvement. There was a surplus of 23,990,000 francs in the Federal accounts for 1929. The Budget of the Confederation for 1930 showed estimated expenditure at 382,890,000 francs, and revenue at 383,000,000 francs, leaving a surplus estimated at 110,000 francs and likely to be much greater, thanks to the higher yield of Customs duties and Stamp duty. The Public Debt, which stood at 4,901,729,000 francs (including the floating debt) at the end of 1929, that is, 50,000,000 francs less than in the previous year, was again reduced by 18,000,000 francs in 1930. Traffic

receipts were lower than in 1929 owing not only to the smaller number of tourists who visited the country, but also to motor-car competition. The Federal Railways in consequence lowered their transport rates for goods, and offered new advantages and facilities to passengers. It is estimated that the Federal Railways will record a surplus of 146,000,000 francs, and that, after paying the interest on the loans and war debt, and the instalments to the special funds, the net surplus will be about 500,000 francs.

Money.—Bank rate, which was 3½ per cent. until the month of July, was then reduced to 2½ per cent., while the private discount rate was reduced from 3 to 2½ per cent.: call loans commanded between 3 and 3½ per cent., and long-term deposits between 4 and 4½ per cent. The gold reserve of the Swiss National Bank was increased by the new law providing for the supersession of bi-metallism by the gold standard, it was 61.10 per cent. of the bank-notes circulation in March, 69.42 per cent. in November, and reached 71 per cent. in December. The sterling exchange opened at 25.16 francs in January, it reached its highest figure—25.19 francs—in February, and was 25.04 francs at the end of December. Activity on the Swiss Bourses was small during the year, and heavy losses were recorded by many investors, but the slump in securities did not affect the banks very much, and there is no example of a Swiss bank being in difficulty during the past year. While the value of foreign securities dropped on the Swiss market under the influence of foreign Bourses, that of Swiss securities remained comparatively steady, and even increased in some cases. For example, the average value of a group of 109 banking, industrial, transport, etc., securities oscillated between 195.41 and 236.03 per cent., and that of 12 securities of the Federal Government and Railways rose from 98.66 per cent. in January to 114.21 at the end of November.

Foreign Trade.—Imports and exports showed an important drop over the previous year, and all the exporting industries were hit by the slump, particularly the key industries—watchmaking, cotton, silk and machines—which recorded respectively drops of 25.1, 25.0, 19.0, and 7.4 per cent. Commercial exchanges with Great Britain were more active in 1930, when imports from her totalled 231,933,000 francs, compared with 167,821,000 francs in 1929, and exports to her reached 262,689,000 francs, as against 288,099,000 francs in 1929.

CENTRAL EUROPE.

Austria.

The past year brought Austria several political successes, such as the settling of the Relief Debt and the Hague agreement, which cleared up the reparation obligations and the old administration debts. The placing of the first batch of the investment loan may also be regarded as an achievement. On the other hand, there were serious economic losses and dis-

appointments. Industry, which displayed tough resistance to depression, is now in a difficult position. At the end of the year production of crude iron had sunk to 21.6 per cent. of normal output, while rolled iron goods had dropped to 39.9 per cent. Building was temporarily animated by the State housing scheme and also by the housing done by the municipality of Vienna. On the other hand, the electricity and machine-building industries felt keenly the impediments which are everywhere placed in the way of export trade. In eleven months imports of raw materials have receded from 7.5 to 5.7 million tons. The deficit in the balance of foreign trade, about 900 million schillings, has, it is true, been reduced by 200 million schillings, but the chief reason for this is the cutting down of industrial activity and reduced prices of the goods imported.

On the Vienna Stock Exchange the value of shares traded in fell from 1,251 million schillings to 1,076 millions. Machine construction, iron and paper shares in particular suffered depreciation. There was absolutely no capital issue business. For a time the call for mortgages was good, but this was brought to a halt, along with the increase in bank deposits, by the disturbance in domestic politics. Deposits with the banks and savings banks have risen from 2.3 to 2.6 milliard schillings.

Last year bankruptcies rose from 581 to 694, and compositions with creditors from 1,987 to 2,695, while many compositions have been carried through privately without the intervention of the law courts. The official bank rate has been reduced in four stages from 7½ per cent. to 5 per cent., but this circumstance has not made loans or overdrafts any easier for most people to obtain. The National Bank succeeded in increasing its holdings of foreign values by 200 million schillings, aided by the conversion of the proceeds of the investment loan and the augmentation of the gold holdings.

Throughout the year there was no easing of the burden of taxation. The agriculturists managed to get relief at the cost of the rest of the population, but neither this sacrifice nor the special subsidy from the Government has made any essential improvement in the position of the farming class. For this reason agricultural products are to have special tariff protection in the coming year, and in order to keep interests on an equal footing, tariff protection will also be accorded to certain industrial products.

Poland.

The world-wide collapse in the prices of agricultural products and raw materials made 1930 an exceedingly difficult year. With rye, Poland's principal crop, selling as low as 15 zlotys per metric quintal (less than half the average price for the years 1928 and 1929), the purchasing power of the farming community has been annihilated. The farmers, moreover, have had great difficulty in meeting obligations contracted before the collapse of cereal and livestock prices. Their difficulties grew as the year progressed, and 1930 ended with the agrarian community in a very impoverished condition. The reaction of agricultural distress on trade and industry has been marked, with the result that the index of industrial production at the end of 1930 was the lowest recorded during the past four years. It would have gone still lower in 1930 if the Government had not employed public money freely to extend credits to the building industry. With the termination of the building season in November unemployment increased rapidly, the number applying for employment at the State exchanges rising from 180.5 thousand on November 15th to 246.6 thousand on December 13th—a weekly average rise of 16.5 thousand as compared with 12.2 thousand during the same period of 1929. While all the major industries showed a recession in 1930 as compared with 1929, the iron and steel industry was greatly helped by large orders from Soviet Russia, while the operations of the textile industry were helped by the insistence of the Spinners' Cartel on maintaining operating schedules within measurable limits of the market's

requirements. Coal production in 1930 (with December estimated) amounted to 37.6 million tons, as compared with 46.2 millions in 1929 and 40.6 millions in 1928. Crude oil production (December estimated) was 658 thousand tons, which compares with 674.7 thousand in 1929 and 743 thousand in 1928. The average monthly cast steel production in 1930 (based on figures for the first nine months) was 103.2 thousand tons and rolled products 76.6 thousand. The respective figures for 1929 were 114.5 and 80.1 thousand, and, for 1928, 119.7 and 87.1 thousand tons.

Revenue received in the first nine months of 1930 totalled 2,131.9 million zlotys, approximately 5 per cent. less than the amount collected in the same period of 1929, and slightly over 5 per cent. less than the Budget estimates. Expenditure during the same time was 2,103.6 million zlotys, also below the 1929 disbursements and the estimate for 1930. Considering the severity of the depression, and the fact that taxation in 1929 was believed to be crushing, Budget revenue during the first half of the present fiscal year (April to October, 1930) held up surprisingly well. When the full year's figures are available, however, it will probably be found that tax revenue in the second half was much less than in the first half, and that expenditure will have had to be reduced accordingly, since the Government are apparently determined not to allow expenditure to exceed revenue.

The reserve position of the Bank of Poland is showing the effects of the trade depression much more than the Budget position. On December 31, 1929, the bank's bullion reserve amounted to 700.5 million zlotys and its foreign bill holdings comprised in the reserve to 418.5 millions. By the end of 1930 the respective figures were 562.2 and 288.4 million zlotys—a total loss of 268.4 millions. During the year the Treasury balance at the bank also declined from 269.1 to 26.6 million zlotys, owing largely to the extension of credits for agrarian relief and for building. Banknote circulation was contracted from 1,340.3 millions on December 31, 1929, to 1,328.2 million zlotys by the end of 1930, the withdrawal of the Treasury balance having approximately offset the decline in gold cover insofar as the outstanding volume of currency was concerned; but the percentage of cover declined during 1930 from 62 to 55. No foreign loans of any consequence were obtained in 1930, but some will have to be obtained in 1931 or Government aid to agriculture and industry must be greatly reduced.

The foreign trade figures for the past three years have been as follows:—

Year.	Imports.		Exports.	
	Thousand Tons.	Million Zlotys.	Thousand Tons.	Million Zlotys.
1928	5,165.4	3,362.2	21,037.9	2,508.0
1929	5,087.9	3,112.6	20,423.6	2,813.4
1930	3,571.0	2,246.0	18,922.0	2,433.2

There was accordingly a foreign trade deficit of 854.2 million zlotys in 1928, 299.2 millions in 1929 and a favourable balance of 187.2 millions in 1930. The considerable decline in imports has affected virtually all commodities, and has been caused primarily by the inability to finance the purchase of imported merchandise—both raw materials and manufactured goods. The loss of gold and foreign exchange during 1930 resulted largely from the liquidation of commercial credits contracted in former years.

Czechoslovakia.

Czechoslovakia appears to have suffered from the world depression less than was expected in some quarters, and 1930 was a fairly good average year. The total foreign trade was, it is true, £44,000,000 less than in 1929 (imports in 1930 were Cz. Kr. 15,726 millions; in 1929, 19,987; exports in 1930, Cz. Kr. 17,494 millions; in 1929, 20,498), but it is still higher than in 1926 and nearly equal to that of 1925, and both these years were considered favourable. Allowing for the general fall in prices, the decrease in volume

is even smaller than the figures suggest. The exports of finished goods show a decline of a little over £11,000,000, whereas the imports of raw materials declined by £16,200,000, which does not promise well for an early improvement in industry.

The main items of exports and imports for 1930 compared with those for 1929 give the following figures:—

	1929.		1930.	
	Imports.	Exports.	Imports.	Exports.
(In millions of crowns.)				
Live stock	950	35	723	54
Foodstuffs and beverages	2,918	2,341	2,650	1,705
Raw materials	9,777	3,433	7,128	2,792
Finished goods	6,234	14,606	5,149	12,865
Bullion and specie	46	13	34	13
Return merchandise	60	68	45	63
	19,987	20,498	15,726	17,494

The tonnage of goods transported by the Czechoslovak railways in 1930 was 54,860,000 tons, as against 59,550,000 tons in 1929, but it was nearly as high as in 1927, and was actually higher than in 1926 and 1924.

The number of unemployed on December 1, 1930, was 154,615, as compared with 38,295 on December 1, 1929. This is the highest figure since 1922 and 1923, the years of the acute crisis caused by the policy of appreciation of the currency; but considering that the total population of the country is now nearly 15 millions, the number of unemployed is not really alarming.

The output of coal in 1930 was 14,570,000 tons, as compared with 16,521,000 tons in 1929, but it was higher than in any of the other previous years. The output of lignite for the last six years was as follows:

	Tons.
1925	18,789,000
1926	18,799,000
1927	19,620,000
1928	20,451,000
1929	22,560,000
1930	19,129,000

The production of pig iron in 1930 dropped to 1,420,000 tons from 1,619,000 tons in 1929, but again exceeded all other previous years. The production of steel with 1,820,000 tons is lower than in 1929 (2,145,000 tons) and 1928 (2,100,000 tons), but larger than in the years 1925, 1926 and 1927. The exports of iron and iron manufactures in 1930 at Cz. Kr. 1,892 millions exceeded those of all previous years, 1929 included. Agriculture has suffered throughout the year from an acute crisis, and the farmers have been demanding more effective protection against imports of foreign foodstuffs.

The wholesale index number of gold prices (1913 = 100) was 111.1 in December, 1930 (193.3 in December, 1929), the foodstuffs index being 103.3 and the index of raw materials and industrial products 121.1. The Czechoslovak crown remained one of the most stable currencies. The National Bank reduced its discount rate from 5 to 4½ per cent. in May, and in June to 4 per cent., where it remained for the rest of the year. In the 1931 budget, expenditure is estimated at 9,838 million crowns, against a total revenue of 9,843 million crowns; thus for the sixth year in succession the budget shows a surplus. At the end of 1930 the total value of notes in circulation was Cz. Kr. 7,823 millions, the gold and silver reserves of the National Bank 1,545 millions, and the balances abroad and foreign currency 2,447 millions, so that the notes in circulation are covered to the extent of 46.7 per cent.

Savings deposits have increased by Kr. 3,460 millions. New capital issues and increases of capital amounted approximately to 340 million crowns, about the same total as in 1929. The general trade depression is reflected partly in the increased number of bankruptcies (804 in 1930, as compared with 579 in 1929) and of the arrangements with creditors (3,774, as against 2,614). The capital involved was some 646 million crowns.

Hungary.

Hungary experienced, in 1930, her worst year since the League of Nations Reconstruction Scheme began to operate in 1924. The world crisis was particularly reflected in the heavy drop of agricultural prices, and Hungary, predominantly an agricultural country, was faced with immense difficulties. As there were no long-term loans available during 1930, Hungary had to pay in the form of merchandise exports for her needs, and foreign trade figures show an active balance for the first time since the Great War. In the first eleven months exports totalled 841.9 million pengő, as against 919.6 millions in the corresponding period of 1929, and imports amounted to 766.6 million, as against 978.2 million pengő in 1929. Thus the adverse balance of 58.6 million pengő of 1929 was changed into an active balance of 75.3 million pengő.

Foreign debt in 1930 amounted to approximately 260 million pengő, in which amount the £3.15 millions Treasury bills of the Government are also included. This sum, however, was not used in 1930, but is still deposited with the National Bank. Treasury receipts reflect the economic crisis in general and the fall in agricultural prices in particular. It was found necessary to impose new taxes in order to safeguard the equilibrium of the budget, because the huge budgetary surpluses so conspicuous in former years have totally disappeared. The financial year 1929-30 ending on June 30th closed with a small surplus of 0.2 million pengő, thanks to the latent reserves of the Treasury accumulated in the former years. The total revenue amounted to 953.9 million pengő, as against 964.9 millions in 1928-29, but tax receipts proper showed a decrease of 70 million pengő as compared with the previous financial year. The heavy fall of agricultural prices during the past year is mainly responsible for the decrease in the receipts of the Treasury during the first five months of the present financial year, beginning on July 1, 1930. Total revenue in July-November, 1930, amounted to 349.1 million pengő, as against 388.2 millions in the same period of 1929. Expenditure decreased, according to the estimate of the Finance Minister, from 416.9 millions in 1929 to 409 million pengő in 1930. In order to cover the deficit Parliament has voted additional taxes, and an Economy Act was passed, which, if put into effect, will mean savings amounting to 45 million pengő.

The money market was easy compared with the past year, because foreign credits on short term were abundantly offered. The National Bank has gradually reduced its discount rate, which stood at 7½ per cent. at the beginning of the year, to 5½ per cent. Owing to the adverse conditions of the principal money market, the long-expected State Loan was not issued in 1930, and there were no long-term loans to be had for much-needed agricultural purposes. The absence of long-term loans has undoubtedly aggravated the economic crisis. The Stock Exchange was dull throughout the year, quotations have substantially declined, and practically no new issues have taken place. Saving deposits and deposits on current account with the twelve principal Budapest banks show a small increase, amounting to 1,433.6 million pengő on November 30th, as against 1,413.2 million pengő at the end of 1929. The banks have not yet published their balance sheets, but on the whole they had a satisfactory year. Prices have declined. The wholesale index is returned by the Statistical Department at 92 in November, 1930, as against 107 at the end of 1929. The index for agricultural products is 80, that for industrial goods is 120, as against 97 and 132 at the end of 1929. The cost of living index, returned at 100 by the Statistical Department, certainly understates the situation, as living is undoubtedly more expensive than it was before the War.

Roumania.

The indications of an incipient improvement in the economic situation of Roumania which showed at the close of 1929 have disappeared entirely in the course of last year, and the outlook for 1931 is exceedingly

grave. The chief cause for this unfortunate development is the extreme agricultural depression resulting from the fall in the prices of cereals which, amounting in the case of wheat, barley and maize, the most important products, to practically one-third of the prices obtained in 1928, has completely annulled the effect of two years of good harvests. In view of the condition of the world cereal markets there does not appear to be any prospect of improvement. The effect on land values is most serious, and the whole credit system of the country is threatened. Already several provincial banks have had to close their doors. Legislation passed with a view to protecting the debtor has only further imperilled the state of affairs.

The oil industry has had an unsatisfactory year. The price of crude oil fell during the year from £26 15s. per waggon to £8 6s. These prices compare with £22 to £24 in 1929 and £24 to £26 in 1928. Production has increased considerably. The convention for the conservation of crude oil which was concluded in July only survived till November, and the agreement between the refineries also proved impossible to maintain. In addition, the industry is over-taxed. As a result, the prices of the principal petroleum products show substantial reductions; most of the petroleum companies are working at a loss, and the industry gradually is being ruined. Russia's export activities have had no small share in aggravating the situation of the cereal and petroleum producers. The timber trade has also suffered from Russian competition.

The reserve of the Banca Nationala, its holding of bills and its note circulation are all lower than last year. Imports are down by about 15 per cent., as against the previous year; and although exports have risen, they do not represent profitable business as the principal exports, cereals and petroleum products, are effected at a loss as indicated above. Foreign trade for the first nine months of 1930 shows an active balance of 4,344 million lei. This favourable feature is unfortunately offset to some extent by a bad budget for 1931, in which the receipts are over-estimated, the Minister of Finance not having taken sufficiently into account the effects of the trade depression. It is not unlikely, therefore, that 1931 will close with a deficit in the State Budget, unless expenses are greatly reduced below the estimates. The return of King Carol to the throne of Roumania has had a steadying influence on the political situation, and the activities of the parties have become more normal.

Jugoslavia.

After six good months, during which all branches of economic life showed better results than in 1929, Jugoslavia came during the second half of 1930 under the cloud of the general European depression. Agriculture was first to feel the slump of prices, although the effects were to some extent mitigated by the Privileged Export Society, a newly-created semi-State institution. Thanks to its exceptional position, its direct connection with foreign markets, its elimination of middlemen, and its readiness to forego profit, the Society soon established a quasi-monopoly for the export of maize and wheat. Next to feel the slump was industry, hit equally by the reduced purchasing power of the peasant and by Russian competition especially in timber export. The general index of prices (1913 = 100) fell from 1,413 in December, 1929, to 1,175; that of agricultural produce from 1,032 to 808; and that of industrial goods from 1,685 to 1,471. The present index in gold value is 108.

Both internal and foreign trade have diminished. Exports for 11 months at 6,287 million dinars and imports at 6,438 million dinars were below those of 1929, while the balance, last year active by 148 millions, has become passive to the extent of 151 million dinars. Private and Government finance are rather better; State receipts, largely owing to more efficient collection, exceeded those of any post-war year; saving deposits have increased from 12,000 to 13,160 million dinars; foreign capital is still flowing in, though in smaller quantities. At present the withdrawal of money from

business is further accentuating the depression, although the interest rate has declined from 12-16 per cent. to 8-12 per cent., and bankruptcies were only 608, as against 1,063 in 1929. The year was also remarkable for the passing of certain much-needed economic legislation.

Bulgaria.

The steady depreciation of agricultural produce and raw materials has heavily handicapped the process of recovery from the trade congestion and over-lending crisis under which Bulgaria suffered in 1929. In spite of the very unfavourable trend of prices of goods exported, the foreign trade position has considerably improved: the deficiency of Leva 2,100 millions at the beginning of 1930 has been completely made good, and there is, at the year's close, a credit balance of at least Leva 900 millions. A sharp decline of purchasing power on the one hand, and the lack of adjustment between prices of agricultural and of manufactured products, on the other, created an almost unprecedented shrinkage in every branch of economic activity. The position of the Treasury has been considerably affected by this general standstill: receipts as a whole are far under the estimates, and the strain begins to make itself felt in the working of the whole machinery of the State. The general situation, at the close of the year, gives little scope for optimism with regard to the near future.

Greece.

While economic conditions in Greece show no improvement during the past year, the country has so far withstood fairly well the tide of universal depression. Agriculture suffered again from declining prices, inclement weather and foreign competition, and measures of relief had to be taken in many instances. Industry and the merchant marine are deeply affected by the present difficulties. Trade continues dull. As an importing country, however, Greece has partly benefited by the fall of world prices, which considerably reduced the adverse balance of trade as compared with the previous year.

Public finance remains on the whole satisfactory, though signs of exhaustion of the taxable capacity of the people have begun to appear. This is also manifest in a decline of consumption, owing to a lowering of the standard of living and to unemployment. The budget of the current financial year will close with a surplus, and estimates for the financial year 1931-32 anticipate a very small surplus. Nevertheless, the Government has asked for parliamentary authority to make a reduction not exceeding 6 per cent. in the salaries of public servants in case of need. The Stock Exchange has not experienced a flourishing year. Trade depression and a fall in interest rates have helped, however, to raise the prices of Government securities. Some exceptionally good stocks have also risen, but, on the whole, the prices of stocks have touched lower levels. The position of the banks is sound, but the threatened interference of the authorities with a view to lowering interest and commission rates may produce a disagreeable situation for them. With the help of advances from the bankers the Government was enabled to continue the execution of public works. The flotation of the second portion of the foreign loan for public works is expected in February.

Participation of capital from abroad in financing the economic reconstruction of the country has continued unabated during the past year. Thanks partly to the import of foreign capital, the reserve of the Bank of Greece was maintained at the satisfactory level of 44.42 per cent. of its note circulation and sight liabilities, on December 23, 1930, as against 46.35 per cent. at the end of 1929. The official discount rate has been 9 per cent. since December, 1928. Greece is passing through a period of large foreign borrowing, necessitated by her economic reorganisation. It is expected that economic progress will more than counterbalance the burden thus imposed on the

country, but meanwhile, in view of the world economic crisis, it would perhaps be advisable to resort less frequently to borrowing, especially abroad. The same may be said of public expenditure, other than that for the service of debt, which is increasing, as a result, often, of a wrong tendency to enlarge the sphere of intervention of the administration in private economy. Fortunately, political stability at present is a great factor in maintaining public confidence and economic activity. Equally satisfactory and helpful is the foreign policy of friendship and co-operation followed by the authorities.

SCANDINAVIA.**Denmark.**

Though Denmark was affected throughout the year by the world-wide decline in prices, its influence during the first few months was not wholly detrimental, as grain and cattle food declined more rapidly than the prices of farm products. Later in the year this margin diminished and the farmers' position became increasingly difficult. Exports of agricultural products have nevertheless increased; butter, eggs and bacon have all been exported in larger quantities, and the exports of bacon, in consequence of a substantial increase in the pig population, have risen to 310 million kilos. Total exports were valued at Kr. 1,610 millions, of which Kr. 1,518 millions consisted of Danish produce. Imports amounted to Kr. 1,727 millions.

Industrial exports were lower, but in the early part of the year some branches of industry, noticeably building, shipbuilding and engineering, were still enjoying a fair degree of activity. In the last quarter, however, activity began to decline. It was a bad year for shipping, and this accentuated the decline in the share market, which is largely influenced by shipping shares. The bond market was strong.

Norway.

The general depression of world trade and the heavy fall in prices, initiated by the crisis in the United States in the autumn of 1929, did not seriously affect conditions in Norway until the latter half of the past year. The progress in trade and industry during the first seven months was, if not very marked, at any rate promising. A number of tariffs were prolonged in January, and the absence of serious labour conflicts gave a feeling of confidence. Unemployment figures decreased during the first seven months, but then rose rapidly to about 28,000 in December against 22,500 in January. In August a number of industrial concerns were obliged to reduce output, and at the same time the influx of fresh orders diminished. Foreign trade figures showed a favourable development during the first six months, but the later months brought an aggravation of the adverse trade balance, which amounts to 362 million kroner, against 292 million kroner for 1929, the figures representing the first eleven months of the year. The fisheries gave poor results both as regards quantity and profit, while whaling showed large catches, valued at about 128 million kroner, approximately 15 millions more than in the preceding year. It was a very difficult year for shipping; the freight markets collapsed and a great percentage of the tonnage remained unemployed. There was, however, an increase in total tonnage of about 500,000 tons during the year, about 310,000 tons representing tankers. The crops of cereals and hay correspond to those of an average year, while potatoes and other roots gave about 13 per cent. less than the average.

Monetary conditions were governed to a greater extent than usual by the international situation. Bank rate was reduced in the course of the year from 5 to 4 per cent. The Government, as well as municipal and private corporations, have converted a number of high-interest-bearing loans. New companies formed amounted to 207, with total capital of about

75 million kroner. The banks had a quiet year, and have, according to reports hitherto published, maintained their rates of dividend. Deposits, however, decreased by about 7 per cent.

The outstanding political event was the Storting elections in October, resulting in the defeat of the Labour Party, which lost 15 seats in the Storting.

Sweden.

Despite some symptoms of depression as early as the end of 1929, it was not until June that these effects were seriously felt, and even then they were mild compared to those in other countries. The leading industries have undergone a systematic rationalisation since the war, which has enabled them to compete both in production capacity, in quality, in financial strength and sales organisation. Moreover, the previous boom had not given rise to excessive speculation or unsound expansion, but it did bring the accumulation of a very large reserve of orders. For these reasons production has been maintained at a very high level. The *Svensk Finanstidningen's* index of production, which is based on the output of the most important export industries, with 1923-24 as a basis, was 147 for January-May, compared with 139 in 1929. For June-November the average figure fell to 124, compared with 132. The average for the first eleven months was the same in both years, 135. The December figures are not yet available. Most marked is the contraction in iron and steel, and during the later months in iron ore. Of the leading industries, pulp has maintained itself well and the same applies broadly to timber, although the prospects for the latter are seriously darkened by Russian competition.

The effects of the depression are more marked in foreign trade, though not to a disquieting degree. It is remarkable that the mechanical industries have maintained their position so well. Excepting ball bearings all the leading industries in these branches show increased shipments, in spite of the fall in prices. *Svensk Finanstidningen's* average wholesale price index number for 1930 was 115, against 134 for 1929. From December, 1929, to December, 1930, it fell from 128 to 108. As in other countries, the money market has been characterised by an abundance of money and reduced demand for credits. The Riksbank lowered its discount rate at the beginning of the year from 5 per cent. to 4½ per cent., in March to 4 per cent., and in April to 3½ per cent., a rate which has remained unaltered since. It has undoubtedly been too high, with the consequence that the commercial banks rediscounted abnormally little and sold their holdings of foreign exchanges, which yielded a much lower rate, to the Riksbank instead. The result was that the Riksbank reserve of exchanges rose from Kr. 266 to Kr. 391 millions, whilst that of the commercial banks fell from Kr. 318 to Kr. 163 millions. Another marked consequence was that during the greater part of the year the Swedish krona was quoted remarkably high. Despite an increase of exports of capital, the balance of payment was only worse by Kr. 30 millions, and net bank claims abroad were Kr. 554 millions at the end of the year.

The abundance of money and the falling tendency have created great activity in the bond market. New issues amounted to Kr. 878 millions (1928 = 233), but since at the same time debentures for Kr. 758 millions (1929 = 286) were redeemed, the net increase was Kr. 120 millions (a reduction of Kr. 54 millions in 1929). These transactions involved Kr. 445 millions of Government conversions. In the share market, there was a strong recovery at the beginning of the year, after the enormous losses associated with the crash in New York. Subsequently the tendency has been predominantly weak, with signs of improvement at the end of the year. Broadly speaking, the Swedish Stock Exchange has shown considerable resistance. For the whole year the value of "A" list shares fell by only Kr. 188 millions, or 4 per cent., against Kr. 583 millions, or 12 per cent., in 1929.

Finland.

Economic life in Finland was marked in 1930 by the depression of trade that dominates the position throughout the world. The money market grew considerably easier, but owing to the fall in prices and reduced demand, production was restricted in many spheres, which led to unemployment and reduced purchasing power. The harvest was comparatively plentiful and of good quality, but its value was reduced appreciably, as the drop in the prices of agricultural produce was particularly heavy. Butter exports established a new record in quantity, but their value was considerably below that of 1929. The branches of industry supplying the home market experienced difficulties owing to the reduced purchasing power in the country, and complained of ruinous foreign competition. Production was reduced by about 6½ per cent. The exporting industries were forced to make considerably larger restrictions, 19 per cent. on an average, owing to the inability of the markets to absorb larger quantities. Shipments of sawn timber fell from 1,206,800 standards in 1929 to 907,000 standards last year. Exports of plywood, cellulose and mechanical pulp were also reduced, although the productive capacity was increased to some extent. Paper exports alone recorded a slight rise. Total exports dropped from 6,429.7 million marks to 5,398.3 millions, or 16 per cent., the greater part of which was due to the fall in prices. Imports decreased from 7,001.4 million marks to 5,247.9 millions, or 25 per cent. The balance of trade therefore showed a surplus of exports of 150.4 million marks, whereas the preceding years had closed with large import surpluses.

The number of bankruptcies was large. The banks suffered substantial losses, but most of them were able to present satisfactory balance sheets at the end of the year and pay the same dividends as before. The easier state of the money market is seen most clearly in the position of the Bank of Finland; its total credits were reduced by 447 million marks, chiefly owing to the drop in rediscounts. Thanks to the increase in the bank's foreign balances and other circumstances, the ordinary cover rose from 60.8 per cent. to 74.9 per cent. of all liabilities payable on demand. During the year three bond loans were taken up abroad. The Central Bank for the Co-operative Agricultural Credit Societies took up 300 million French francs at a nominal rate of 5 per cent., the City of Helsinki (Helsingfors) 8 million dollars at 6½ per cent. interest, and the Industrial Mortgage Bank of Finland £2,000,000 at a nominal rate of 6 per cent. The greater part of these funds was employed in redeeming foreign short-term borrowing. Thanks to this circumstance and the favourable balance of trade, Finland stabilised its position towards other countries considerably during the past year.

THE BALTIC STATES.

The world depression and the fall in prices were the dominating factors during 1930, and offset to some extent the undoubted advantages the Baltic States had gained from an intensive expansion of agriculture and dairy farming. In spite of this, undoubted progress was made, but the great need in all the Baltic States, as in 1929, is foreign capital, without which the expansion of their resources and further progress are likely to be more than difficult.

Lithuania.

With a population of two and a-quarter million, of which 75 per cent. is engaged in agriculture, Lithuania was inevitably affected by the world slump in commodity prices. Luckily, however, the crop results last year were again favourable, the production of cereals at 1,630,000 tons being rather below that of 1929, when 1,650,000 tons were harvested. Potatoes and flax were, as elsewhere, satisfactory, the yields being, flax 30,000 tons (35,000 tons), potatoes 1,500,000 tons (1,800,000 tons), and linseed 42,000 tons (44,500 tons). The figures given in brackets are those for 1929. The exports

of livestock, meat and dairy produce show a satisfactory increase:—

	FIRST NINE MONTHS.		
	(Million Lits.)		
	1928.	1929.	1930.
Cattle	5.8	10.7	9.8
Pigs	4.2	13.9	27.5
Meat	3.7	9.8	28.2
Butter	16.5	22.3	36.5
Cheese	2.0	1.6	2.3
Eggs	10.9	9.7	8.7

For the first 11 months of 1930 imports were valued at 285,500,000 lits (283,000,000 in the same period in 1929), and exports at 300,850,000 lits (302,800,000 in the same period in 1929). Satisfactory progress was made in the transit trade, which, together with emigrants' remittances from America, is one of Lithuania's great assets, and the recent improvement of communications, railways, port facilities, rolling stock and the like, should lead to satisfactory developments in the future. Industry other than agriculture remains unimportant, and the lack of mineral resources hampers expansion, while recovery from the war is still slow.

Treasury receipts for the first ten months of 1930 are returned at 261,610,000 lits, and expenditure at 249,260,000 lits. The favourable position in the money market which prevailed in 1929 has continued, and there is no stringency comparable with that existing in other Baltic States. This is partly due to the substantial excess of exports, but more especially to a loan of 60,000,000 lits in connection with the Match Monopoly. Largely as a result of these conditions, the Bank of Lithuania's holding of foreign currency had increased to 86,000,000 lits on December 31st last, from 72,000,000 lits a year earlier. Advances made by the Bank have risen by 18,000,000 lits to 103,000,000 lits in the same period. There was a corresponding increase in the note circulation to 117,000,000 lits from 94,000,000 lits, and the issue is still covered to the extent of over 100 per cent. by gold and foreign currency reserves. In view of the greater activity in the trades working up agricultural products for export, some increase of credit was necessary. The Bank of Lithuania was able to lower its discount rate to six per cent. as early as April 1st, and during the year there has been a substantial lowering of rates charged by the banks and private credit institutions.

The question of Vilna remains a stumbling block to really satisfactory relations with Poland, whilst its retention by the latter Power deprives Lithuania of considerable territory and economic wealth. Relations with Poland are, however, rather better, and a trade treaty now in negotiation between Lithuania and Latvia is said to be favourably regarded by the Polish Government.

Estonia.

As 70 per cent. of the population is occupied in agriculture, Estonia could not expect to escape from the effects of the general fall in commodity prices, but she suffered during the past year to a less extent than might have been expected. This was chiefly owing to a plentiful harvest. As in Latvia, the Government intervened in support of the farmers by setting up a grain monopoly, and fixing the price of rye, and a duty on barley and other agricultural produce was introduced with the same object, but it is too early to say whether these expedients will be successful. The fall in the price of butter was compensated for by an increase in exports to 140,000 quintals against 120,000 quintals in 1929, but the future is unpromising with an increase in the German tariff, and the conclusion of the German-Finnish trading agreement. The general outlook of the European butter market as a whole, too, is said to be unfavourable. Timber was, as elsewhere, seriously affected by Russian marketing methods, and it was estimated at the end of November that there were some 10,000 to 15,000 standards of sawn, but unsold, timber in the country. On the industrial side, the textile industry has suffered most; machinery has done better in connection with the projected considerable extension

of the shale industry, and the consequent installation of plant, but this is expected to be merely temporary. Paper and cellulose also have done satisfactorily.

Foreign trade for the last two years, in millions of kronas, was as follows:—

	1929.	1930.
Imports	121.6	98.3
Exports	117.5	96.4

Unfavourable balance — 4.1 — 1.9

The drop in imports is accounted for partly by the fall in world prices, but partly also by re-imposition of high tariffs. Export volume has been in general well maintained, and in some cases even increased.

The Budget again closed with a surplus:—

	(In millions of E. Kr.).			
	1926-7.	1927-8.	1928-9.	1929-30.
Revenue	85.7	89.4	92.2	95.9
Expenditure	83.1	86.9	90.8	95.7
Surplus	2.6	2.5	1.4	0.2

With the loan from the Swedish Match Company taken last year for the nominal amount of Sw. Kr. 7.6 millions, the total foreign debt amounts to approximately E. Kr. 119 millions. Conditions on the money market have not been satisfactory, and the stringency noticed in past years has continued. The Bank of Estonia, however, has carried out a cautious policy, and by curtailing advances has checked any tendency to over-trading. The Bank rate was reduced on October 1st to 7 per cent. Although foreign trade was slightly more favourable, the Bank's holding of foreign currencies continued to fall off, and at the end of the year only totalled Kr. 16.5 millions, as compared with Kr. 20.8 millions on January 1st. On the other hand, gold reserves have risen slightly, and as in addition the note circulation has fallen, the issue is still amply covered.

Latvia.

Over 60 per cent. of the population of Latvia is occupied in agriculture. The fact that the State owns 52 per cent. of the land and practically all the forests, which are considerable, accounts for the efforts to support agriculture by protective legislation designed to restrict the import of foreign corn, and to maintain prices of home produce in the export market, in the face of abnormal depreciation in world values of such products. Temporarily, the first objective appears to have been attained, corn production and the area sown having both increased during the past year, but the success of the second is open to doubt.

Agriculture, but for falling prices, has been satisfactory, and the harvest good. Aggregate crops and average yield per hectare show a considerable gain on the previous year, the comparative figures for the principal crops being as follows:—

	Winter Rye.		Winter Wheat.	
	Average yield quintals per hectare.	Aggregate crop 1,000's of tons.	Average yield quintals per hectare.	Aggregate crop 1,000's of tons.
1926	6.17	153.1	10.79	33.3
1927	10.13	257.1	13.44	57.8
1928	8.37	213.5	11.38	55.2
1929	10.13	238.2	10.93	42.5
1930	13.73	362.6	17.04	88.3

The summer seed harvest was adversely affected by weather. The livestock census shows a gratifying increase, the figures in round numbers being as follows over a period:—

	(In thousands).			
	Cattle.	Sheep.	Pigs.	Horses.
1913	910	995	550	320
1921	800	1,130	480	280
1929	975	900	385	360
1930	1,025	870	525	362

Exports of butter during the first nine months of 1930 totalled 14,000 tons, as against 10,000 tons in 1929. The further increase of the German tariff on butter as from the New Year, however, raises doubts as to whether equally good results can be expected this year. Latvia, like all other Baltic and Scandinavian timber producers, has been hard hit by Russian exports, and exports of timber declined from 77.8 million tons in 1929 to 63 millions in 1930.

Finance.—The accounts for the Commonwealth and States for the year ending June 30, 1930, are set out in the following table:—

State.	Revenue.	Ordinary Expenditure.	Loan Expenditure.	Gross Public Debt.
	£	£	£	£
N.S.W.	*19,601,379	*20,980,642	10,004,328	270,630,848
Victoria	24,609,725	25,782,595	6,467,067	155,719,888
Queensland ...	15,997,869	16,721,055	2,811,967	112,623,979
South Aust. ...	10,551,017	12,176,840	2,488,439	93,986,118
West Aust. ...	9,750,515	10,268,518	3,693,051	71,194,325
Tasmania.....	2,687,414	2,715,133	146,853	22,688,862
Six States.....	83,197,419	88,644,783	25,611,705	727,639,836
Commonwealth	77,143,000	78,614,000	5,291,533	372,957,362
Total.....	160,340,419	167,258,783	30,903,238	1,110,597,198

* Excluding business undertakings.

The Budget speech was delivered on July 9th by Mr J. H. Scullin, Prime Minister and Treasurer, in which he estimated an additional expenditure for the year 1930-31 of £1,094,303. Owing to increasing expenditure and to falling revenue, it is estimated that there will be a shortage of revenue in 1930-31 of £14,038,770. To cover this estimated shortage new taxes and charges amounting to £12,550,000 are to be imposed, and the total is to be made up from liquidation of ex-enemy properties amounting to £1,500,000. The new taxes and charges are to consist of £5,700,000 from new revenue duties under Customs and Excise, £5,000,000 from a sales tax similar to the Canadian tax, £1,000,000 from additional postage charges, and £850,000 from increased income-tax rates.

The Commonwealth raised a loan for £10,000,000 in November, 1929, and in March, 1930, the maturing loan for £10,000,000 was met by a conversion offer. With this offer was associated a conversion offer to holders in 6 per cent. War Loan maturing December 15, 1930. In all, £48,000,000 was covered by this operation. These were the only loans raised by the Commonwealth either in Australia or overseas in the financial year 1929-30.

During 1929-30 the amount applied to Commonwealth debt redemption totalled £6,367,482. State redemption totalled £3,169,777, of which the Commonwealth contributed £994,433. The payment on the combined Commonwealth and State debts amounted to £526,968,664 in Australia and £573,628,534 overseas. The public debt of Australia per head is £170 17s. 6d., compared with £173 4s. 7d. in 1928-29.

Banking.—The net profits of the Commonwealth Bank were £777,751 for the half-year and £1,508,081 for the year ending June 30, 1930. Of these amounts £246,282 and £500,448 respectively accrued from purely banking business. For the Commonwealth Savings Bank the profits were £132,125 for the half-year and £251,332 for the year ending June 30, 1930. The reserve fund amounted to £868,808 for the Commonwealth Bank and £1,411,579 for the Commonwealth Savings Bank.

NEW ZEALAND.

In New Zealand the past calendar year witnessed a considerable progressive increase in the quantities of produce exported in certain important lines, particularly butter, cheese, mutton and lamb, and apples. Low prices on the British market, however, caused a falling away in the total export values. Notwithstanding this the year closed with an excess of exports over imports of £1,914,779.

FOREIGN TRADE OF NEW ZEALAND.
(Millions £'s.)

	1926.	1927.	1928.	1929.	1930.
Imports	49.8	44.7	44.8	48.7	43.0
Exports	45.2	48.4	56.1	55.5	44.9

Public Finance.—The following is a condensed statement of the national balance sheet for the past two financial years. Only the principal items of revenue and expenditure and the respective total units are shown:—

(000's omitted.)					
Revenue.	Year ended March 31st.		Expenditure.	Year ended March 31st.	
	1929.	1930.		1929.	1930.
Customs	£ 7,954	£ 8,897	Interest.....	£ 8,675	£ 9,134
Beer duty	611	620	Sinking fund and funded debt reduction	1,435	1,562
Motor vehicle duties, licences, &c.	1,243	1,510	Pensions	2,657	2,747
Stamp and death duties	3,575	3,405	Education.....	3,092	3,218
Land tax	1,140	1,506			
Income tax	3,533	3,310			
Railways (interest on capital liability) ..	2,331	2,132			
Totals (including other items)...	23,599	25,349	Totals (including other items)...	24,176	25,200

The gross debt at March 31, 1930, was held as under:—

Where held.	Amount.
New Zealand	£ 116,526,091
Australia	4,276,750
London	146,580,502
Total	2,671,383,343

For the year 1930-1931 revenue is estimated at £25,120,000 and expenditure at £24,874,000.

Production.—Output continued to increase, but prices for butter, cheese, mutton and lamb, wool and other chief lines show little improvement. The recent earthquake will also probably make certain demands on the public exchequer. Wise precautions, however, have been taken to meet the situation, and strict economies instituted. The following are the values of the principal exports for the past two calendar years:—

	1929.	1930.
	£	£
Wool.....	15,359,206	7,664,362
Butter	13,227,917	11,854,056
Cheese	7,017,463	6,438,438
Frozen meat	9,245,327	10,644,830

The most serious loss in export revenue has been in wool, but the present outlook in that trade is certainly brighter than last year.

INDIA.

The preliminary figures of India's overseas trade during the calendar year 1930, as compared with 1929, were as follows, in crores of rupees:—

	1929.	1930.
Imports of private merchandise	249	184
Exports, including re-exports	329	257
Net imports of treasure	28	28

Under the joint influence of political unrest and the further fall in prices, both imports and exports have shown a sharp decline, and many years of good crops and prosperous trading will be necessary to compensate for the heavy losses thus occasioned. The year 1929-30, to quote the official trade review, was "a disastrous one, as far as the price level was concerned," but in 1930-31 prices have fallen still further, with effects which can only be described as calamitous. Despite the boycott, imports have not fallen to a very much greater extent than exports, in which the decline is due almost exclusively to world-price movements and the general decline in demand. The decline on both sides of the account has been not only sharp but progressive, each succeeding month, almost without exception, showing a less satisfactory turnover than its predecessor. No interest has escaped scathless. Political feeling has been given a sharper edge, railway revenues have fallen away by between 7 and 8 crores, the yields of most of the principal heads of taxation have fallen to an extent creating large deficits in the Central and Provincial budgets and new taxation will be necessary, which can

hardly fail to be on a scale and in forms tending to further restriction of trade and a lower level of consumption, especially of imported commodities. Higher import duties on a large number of commodities, in view of the present financial outlook, must be regarded as unavoidable, however lamentable from the political, as well as the economic, standpoint.

Trade.—Although the decline in exports is fairly general, the deterioration in jute exports, normally representing over 25 per cent. of India's total exports, stands out as one of the most remarkable features. As 1929-30 was itself a year of "acute depression," to use the official description, the further decline in this year's production and shipment is the more serious. The amount of raw jute rendered available by last year's crop was apparently in excess of world demand, regardless of price; and official propaganda has been initiated directed to inducing the cultivators to reduce the acreage allotted to the crop pending a closer approximation between supply and demand. The following figures refer to the eight months April-November, 1930. In the latter period exports of raw jute totalled 362,103 tons, valued at 8.40 crores, against 538,000 tons, valued at 18.73 crores, in the corresponding months in 1929. In the same period, 568,685 tons of jute manufactures, valued at 24.79 crores, were exported, against 644,013 tons, valued at 36.37 crores. Under jute, raw and manufactured, exported, the amount realised has totalled only 33.19 crores in the eight months, compared with 55.10 crores in the corresponding months in 1929, and 60.80 crores in the same period in 1928. The effect has been not only to curtail the purchasing power of the cultivators, the most prosperous section of the rural community in Bengal in normal times, but to force the mills to revert to the 54-hour week for eighteen months as from July 1st last, and, in addition, to close the mills for one week each month until March 31, 1931. During the same period, 403,207 tons of raw cotton were shipped, valued at 29.40 crores, against 413,940 tons, realising 38.95 crores a year previous. Oilseeds exports point in the same direction, shipments totalling 657,226 tons, being valued at only 12.76 crores, against 844,092 tons, yielding 18.68 crores. The list might be continued almost indefinitely; wheat, which almost disappeared from the export list last year, being one of the few products shipped on a larger scale. The aggregate effect has been a reduction in the purchasing power of India, which would in any event have meant a corresponding reduction of imports, the main effect of the political ban being to subject imports of piece-goods to a sharper reduction than has been experienced in any other section of import business.

The gravity of the position and outlook of the Lancashire trade with this country would be difficult to exaggerate. One hammer-blow has succeeded another. The production of piece-goods in Indian mills in 1929-30 reached 2,419 million yards, against 1,164 million yards in the last pre-war year 1913-14. Meanwhile, the imports, compared with the pre-war year, were less by over 1,278 million yards, including all sources. For instance, in million yards, greys totalled only 925, against 1,534; whites, 473, against 793; and coloured, printed or dyed, 463, against 831. Of this diminished import Lancashire supplied only 65 per cent., against 97.1 in 1913-14; while Japan supplied 29.3, against 0.3 per cent. pre-war. A higher tariff on all imported piece-goods was imposed in the last budget, differentiating in favour of British goods, the preference, however, being more than offset by the political boycott which immediately followed, which undoubtedly derived an additional stimulus from the action of the Government of India in resorting to what was described as a measure of Imperial Preference, despite the strong opposition of the most influential sections of Indian opinion. The effects of the boycott are epitomised in the figures of imports for the eight months April-November:—

	Million Yards.		Value in Crores Rs.	
	1929.	1930.	1929.	1930.
Greys:—				
United Kingdom.....	319	129	7.36	2.55
Japan.....	256	142	5.97	2.73
All sources	583	273	13.51	5.31
Whites:—				
United Kingdom.....	290	172	8.17	4.06
All sources	310	199	8.88	4.73
Coloured, &c.:—				
United Kingdom.....	192	122	6.61	3.72
Japan.....	98	48	2.26	93
All sources	325	189	10.40	5.40
Total piece-goods, all sources	1,244	667	33.42	15.58

In view of the joint effects of the higher tariff in increasing production by encouraging the establishment of new mills outside Bombay, and the additional stimulus imparted to the consumption of Indian goods by the *swadeshi* movement, it is highly improbable that imports, within any calculable period, will revert to their pre-boycott level. The *per capita* consumption of mill-made cotton goods in India, local and imported, in 1929-30 was only 13.10 yards, against 13.33 yards in 1913-14, the quantity estimated as available for consumption last year totalling 4,182.7 million yards, against 4,210.1 million yards in 1913-14. While consumption therefore remains stationary, the figures quoted above indicate the increasing percentage of the Indian demand which is met by Indian mills, and it only remains to add that this percentage is likely to show a very considerable increase in the next few years. Indeed, one expert calculation places the future maximum import, from all sources, at not more than 1,000 million yards, there or thereabouts; the Indian tariff being relied upon, especially under an Indianised Administration, to nullify any reduction in the price-level of imported piece-goods that may result from improved methods of production and distribution.

Finance.—The probable deficit in the Central Budget is estimated unofficially at from 10 to 15 crores, and the aggregate deficits in the various Provincial Budgets at from 6 to 8 crores. Additional taxation will therefore be necessary, and will have to be comprehensive in scope, and heavy in its incidence, in order to restore the balance between revenue and expenditure. Higher levels of income-tax and supertax are forecast, but further recourse to Customs duties is also anticipated, although it is probable that the additional imposts will not be confined to manufactures, but will include a certain number of foodstuffs, especially sugar. One regrettable result of the new taxation, now necessary to meet even existing expenditure, will be the additional obstacle thus placed in the way of providing the additional revenues required by the Provincial Governments in order to finance the "nation-building" departments alluded to in the Report of the Statutory Commission. In such circumstances it is apprehended that the new Provincial Administrations will be subject to the same heavy financial handicap as the Dyarchic Governments shortly to be superseded.

SOUTH AFRICA.

The year 1930 has seen the partial fulfilment of the Prime Minister's famous 1929 slump prophecy. Not only have prices of various primary products (agricultural and other) remained near or below South African cost of production, but as far as the various departments of farming production are concerned the season has so far been on the whole unfortunate. On the other hand, conditions have been favourable to the obtaining by the gold mines of exceptionally good supplies of native labour from British South Africa.

Public Finance.—The Minister of Finance was once again able to greet the House in April last with a surplus, although not a surplus of the magnitude of those which marked his earlier years. The final

estimate was £400,000, but Customs, Excise and Income Tax were all above the original estimates, though exports of farm products showed a drop of £8 millions, or nearly 20 per cent., from the previous year's figures. There will be no surplus to announce in respect of the current financial year, and the Government are already experiencing a good deal of financial and other discomfort.

Trade.—During the year there has been a very heavy fall in imports, which at the end of November stood at about £54.5 millions, against £75 millions in the corresponding eleven months of 1929. The duty is down by some £1,850,000 over the same period. The exports of merchandise up to the end of November amounted to £24.35 millions, as against £29.73 millions in the same period last year. The eleven months' export of bullion and specie in 1930 was £45.04 millions, and in 1929 £43.38 millions. Diamonds worth £14.1, £10.1 and £13.6 millions were exported in the year 1927, 1928 and 1929 respectively. Figures for 1930 are not yet available, but can hardly be good.

Production.—The gold mines, aided by a good supply of labour from British South Africa, have had a good year. Dividends declared by the companies whose results are published by the Chamber of Mines amount to £8,650,000 or thereabouts—an increase of roughly £250,000. The list is noticeable for the fact that the increase is derived from dividends by several of the older and recently unprofitable companies. With a good labour supply and the careful application of up-to-date methods there is still a fair yield on some of our oldest gold mining shares.

South African statistics of industrial production show that the country is progressing rapidly in this respect. The current figures, showing a gross output of £107 millions and value of £52 millions added to materials, indicate a growth at the present time of about six or seven per cent. per annum. It is, however, difficult to export at our manufacturing costs, or from factories on the South African scale of production. The bulk of the Rand engineering business depends so largely on the mines as to be fundamentally a part of the mining industry.

General Hertzog has been speaking on the urgent necessity for a reduction in South African costs of production of farm produce, whilst Mr P. M. Anderson (President of the Chamber of Mines) has lately expressed the view (very unpopular in South Africa outside mining circles) that the fall in prices will be more or less permanent, or at any rate a "long period" effect.

Agriculture.—The position is now showing some promise of improvement, as rain has fallen in most districts. During the spring the dry weather added to low prices combined to cause a bad outlook. It is now hoped that with the aid of a small carry-over from last season there will be no shortage of maize in spite of late planting. The crops will be patchy in quantity, as some districts where frost is early will be unable to plant. The wheat crop has been good in the Transvaal; wheat is attracting more attention in suitable parts of the Union.

IRISH FREE STATE.

The Irish Free State experienced a relatively prosperous year in spite of the general economic depression. The low prices of grain and other feeding stuffs reduced the farmers' costs of production, while the price of cattle and other livestock kept up fairly well. Towards the end of the year a sharp fall in the price of butter caused considerable alarm among dairy farmers. An emergency import duty on a prohibitive scale was imposed pending an inquiry by the Tariff Commission into the general condition of the industry and its need for some measure of permanent protection. The marketing of dairy produce also formed

the subject of investigation by a special tribunal, which recommended in its report the establishment of a central selling organisation composed of all the co-operative creameries in the country without exception. Action on these recommendations has not yet been taken. The difference between the movements of beef and butter prices shows the wisdom of a diversified farming system, and justifies the insistence by the Department of Agriculture on the breeding of dual purpose cattle. The schemes for the improvement of all classes of livestock were extended during the year; 2,493 premium bulls were provided, and 55,212 cows were under test for milk yields.

Production.—The preliminary reports of the Census of Production for 1929 which are now appearing show that a measure of progress has characterised most of the protected industries since 1926, when the last Census was taken. At the same time the protected articles are still imported in large quantities and the duties are making considerable contributions to the revenue. It is noteworthy that the industry which has shown the greatest advance during the period under review is the manufacture of bacon and pork, which has received no protection and produces almost entirely for export. This fact corroborates the opinion of the school of thought which believes that the best line of development of Free State industries lies in the direction of manufacturing specialised high-grade articles for export rather than in attempting to encourage a variety of small industries behind a tariff wall. That the industrial situation is on the whole fairly satisfactory is shown by the fact that it has been found possible to reduce the amount of the contributions to the unemployment insurance fund owing to the small pressure on the fund.

The Shannon scheme is proving a success more rapidly even than was anticipated by its promoters. Practically all the electricity used in the Free State is now supplied from the Shannon, including the lighting of Dublin and other cities and towns, the operation of the Dublin and Cork tramways, and the provision of power in the Ford works. It is generally thought that the next report of the Electricity Supply Board will show that the scheme is already on a paying basis, and the question of undertaking the further development of the river is being discussed. Great interest is being taken in the experiments on the Drumm battery which promises, if successful, a revolution in electric transport.

Finance.—The chief financial event was the flotation of the Third National Loan. £6,000,000 of 4½ per cent. stock was raised at 93. This loan now stands at 98 and the earlier 5 per cent. loans are well above par. The Minister for Finance has redeemed £704,000 of Compensation Stock. Other successful issues were made by the Dublin Corporation and the Agricultural Credit Corporation, both of which were oversubscribed. The very high credit of the Free State indicates a belief by investors in the political and social stability of the country that is perfectly justified.

Emigration is declining substantially. The lower figures for 1930 are no doubt partly the result of American conditions, but the decline has been continuous since 1925 and seems to indicate that the pressure on employment in the Free State is gradually easing. The other figures which are commonly used as "economic barometers" all suggest that the year was relatively prosperous; Dublin bank clearings increased slightly on the previous year; the receipts of the Great Southern Railways were down by less than 5 per cent.; revenue and expenditure (for the first nine months of the financial year 1930-31) showed a decline of less than one per cent.; imports (during the twelve months ending October) decreased by 5 per cent., while exports slightly increased.

C.-OTHER COUNTRIES.

UNITED STATES.

Continuous but orderly deflation in security prices, commodity prices, credit outstanding, and in the manufacture, distribution and sale of goods has been characteristic of the past year. Federal Reserve Bank indices of general business activity (production and trade) put the decline during the year at 14 per cent., while the drop from the peak reached about the middle of 1929 was larger. After a moderate revival in trade during the first three months, when it was thought the setback might be of short duration, fresh weakness appeared and there was little interruption in the decline from early spring until the end of the year. All forms of activity, with the sole exception of retail trade, which was stirred by Christmas shopping, reached the lowest point in the closing two months. Security prices set new low records in December, money interest rates were close to the lowest of the year, and new capital flotations dwindled to negligible proportions. The general forces which made for slack trade throughout the world were accentuated by a severe drought in the Middle Western farming regions.

Agriculture.—Perhaps the most upsetting influence was the severe decline in prices of wheat and cotton, both of which fell to the lowest level since 1915, and the reduced output and low prices of corn, tobacco and other farm products. The Department of Agriculture estimates a decline of \$2,500 millions, or 28 per cent., in value of farm crops in 1930 as compared with 1929. The estimated value of \$6,250 millions was the smallest since 1921. Total output was 5 per cent. lower than the previous year. Corn was down 20 per cent. at 533,000,000 bushels, the smallest output since 1901. Production of wheat and oats were larger at 604,337,000 bushels and 850,965,000 bushels respectively. Cotton output was about 5 per cent. smaller at 14,243,000 bales, but the value was not much greater than half that of the previous year.

Production and Trade.—Steel ingot production, according to the American Iron and Steel Institute, was 39,652,539 tons, the smallest since 1924 and a drop of 27 per cent. from 1929. Pig iron output fell to 31,399,105 tons, 25.7 per cent. under the record production of 1929. Operating rate, which rose to around 90 per cent. early in the year, fell to below 80 per cent. at the close, and averaged around 50 per cent. Motor production was estimated by the Department of Commerce at 3,505,061 vehicles, 33 per cent. under the 1929 level. Railway freight car loadings were reported by the American Railway Association at 45,887,413, a reduction of 13.1 per cent. from 1929 and of 11.1 per cent. from 1928. Coal, ore and miscellaneous freight were the hardest hit.

Merchandise exports for the eleven months were \$1,245 millions lower at \$4,814 millions, and imports were down \$1,286 millions at \$4,089 millions, the excess of exports being \$724.8 millions, compared with \$715.3 millions in 1929. Gold exports for the first eleven months were \$44 millions, against imports of \$283.5 millions, and for the full year the Federal Reserve Bank of New York estimates a net gain of \$275 millions. Business failures in 1930, according to Dun's reports, exclusive of banks, numbered 26,355, compared with 22,109 in 1929. Liabilities were \$668.2 millions, compared with \$483.2 millions. The numerical increase was thus 15 per cent. and the increase in indebtedness was 38.3 per cent. Last year's failures exceeded those in any previous year on record, both in number and extent of liabilities.

Banking and Money.—Credit deflation and the decline in interest rates and loss of deposits made the year a rather indifferent one for the commercial banks. Most of the metropolitan institutions earned their dividends, but a few did not, and the year was marked with a record-breaking number of failures, mostly in the Southern and Western States, where the full weight of the reduction in agricultural income was

felt, and where over-expansion of banking facilities had been carried to the greatest extreme. Failures, according to Dun's, numbered 934, a new high record, and involved \$908.1 millions. These figures compare with 437 and \$218.7 millions in 1929.

Federal Reserve Bank policy was one of consistently cheap money. The decline in the New York discount rate began in the autumn of 1929, and four reductions brought the rate down from 4 to 2 per cent., the lowest in the history of the Reserve system. Others of the twelve regional institutions followed more slowly. At the end of the year nine banks still had a 3½ per cent. rate, one a 3 per cent. and one a 2½ per cent. rate. The principal changes in the Federal Reserve system's position during the year were an increase of \$84 millions in gold reserve, a reduction of \$281 millions in discounts, a drop of \$30 millions in bill holdings and a rise of \$219 millions in the Government security portfolio. Circulation of Reserve notes was \$276 millions smaller at the year end, and the reserve ratio of 73.7 compared with 69.6 per cent. at the end of 1929. The statement of weekly reporting member banks in leading cities showed a reduction on the year of \$1,386 millions in loans (about two-thirds commercial loans) and an increase of \$1,179 in investments (largely second grade bonds). Borrowings from the Federal Reserve Bank dropped \$316 millions. Brokers' loans, according to Federal Reserve Board reports, dropped \$1,498 millions, closing the year at a total of \$1,296 millions. The highest for the year was \$4,274 millions on April 30th. From September 24th there was a decline for thirteen consecutive weeks, bringing a reduction of \$1,802 millions.

New Capital Issues.—Last year was marked by a sharp decline in new capital flotations, but bond issues were larger than in the previous year. New issues were scarce among industrial corporations and investment trusts, which had figured prominently in 1929. On the basis of *Commercial and Financial Chronicle* reports for the eleven months and estimates for December, total financing was \$7,420 millions, the smallest since 1925. This compares with \$11,604 millions in 1929. Capital issues from investment trusts, trading corporations and holding companies contributed only \$222.7 millions to the total. Refunding issues were less than half those of 1929. Foreign borrowing was \$1,130 millions, compared with \$718 millions in 1929.

Public Finance.—Gross public debt, less net balance in the general fund, was \$15,719,283,000 on December 31, 1930, compared with \$16,127,925,000 in the previous year and with \$25,478,592,000 on August 31, 1919, when the war debt was at its peak. The Government closed the first half of the fiscal year (June 30, 1930, to December 31, 1930) with ordinary receipts of \$1,854,207,000, against \$2,077,539,000 in 1929. Excess of receipts over expenditure was \$53,124,000, against \$91,644,000 in the previous year. However, public debt retirement in the first six months of the 1930-31 fiscal year was only \$94,235,000, of which \$65,000,000 was from the sinking fund and the balance from foreign repayments, which compares with a total of \$274,932,000 in the same period of 1929-30. Customs receipts for the six months were \$201,385,000, compared with \$302,214,000, and the income tax collections were \$1,107,307,000, against \$1,185,317,000.

ARGENTINA.

Expectation of an improvement in Argentine exports, both in quantity and prices realised, was general when 1930 opened. Politically, the country appeared to be quiet, and financial circles entertained hopes of a Congressional session devoted to practical legislation, and more particularly to the consolidation of floating debt and the preparation of a balanced budget, based on the Republic's actual revenues. These hopes were vain. Party politics, now seen to have been based only on self-interest, thrust all administrative affairs

aside, current debts were left unpaid, irregularities of every sort were committed, and the country was on the verge of bankruptcy when the Revolution of September 6th called a peremptory halt to a multitude of abuses. Closure of the Conversion Office at the end of 1929 had contributed to the fall in exchange, which from 44½ on January 31, 1930, dropped to 39½ by September 3rd, banks' cable drawing rate; the rate on New York fell from 110.80 to 125.45. Effective control of the finances through the appointment of capable, trustworthy men in the national and provincial administrations; the cessation of all outlay not immediately necessary; and a full, accurate statement of public indebtedness all helped to restore confidence.

Finance.—When the Provisional Government took office it had first to apply to the local banks for a loan to meet current outlay, since there were no funds in the national treasury, only a third of the administrative salaries had been paid, and firms had current accounts with the Government outstanding for over \$140,000,000 paper. A sum of \$100,000,000 paper was at once offered and made use of during September to November, estimates for the 1931 Budget were prepared on the basis of a reduction of \$105,000,000 paper, and the Banco de la Nacion was authorised to use the faculty of paying the service of external debts by means of gold shipments, and, later in the year, by using the sum of \$30,000,000 gold appertaining to the Conversion Fund and held abroad. The total public debt, national, provincial and municipal, was found to be 4,300 million dollars paper, as against 2,300 millions in 1916, and as world conditions were not favourable to further borrowing for the purpose of long-term consolidation, while exports of cereals and wool were small, the exchange fell still lower, until at December 30th it was 35½ and 140.70 on London and New York respectively. Though the use of the \$30,000,000 gold aforesaid for exchange purposes subsequently checked the fall in rates, no substantial improvement can be expected until the Conversion Office is reopened. The Government are averse from taking this course, believing that the low exchange aids producers. *La Prensa*, however, points out that this is erroneous: "An attitude of vacillation aids speculation and contributes to depreciate the peso still further, the apparent benefit to the producer being counterbalanced by the fact that he has to pay more for all that he needs, starting from the seed he sows." Exchange notwithstanding, prices of wheat, maize, and linseed, which were \$8.75, \$5.87 and \$16.80 paper, on September 6th, were \$5.30, \$3.65, \$9.80 paper per 100 kilos at December 29th. And though first official estimates give an exportable surplus of 5,443,000 tons wheat and 2,100,000 tons linseed, implying a production of nearly 3 million tons wheat and 1 million tons seed above last season, at these figures it is probable that much grain will be left unharvested.

Foreign Trade.—Exports for the first eleven months of 1930 compare with those of 1929 as follows:—

	Amount in Tons.	Values in \$ Gold.
1929	16,703,430	953,743,919
1930	9,916,706	567,198,132

Imports for the first six months (latest data), taking tariff values, amounted to \$382,473,244 gold, as compared with \$431,516,702 gold for first half of 1929. The trade for this period showed a passive balance of \$36,343,912 gold, as contrasted with an active balance of \$113,990,016 gold for the same period of 1929. United States shipments to Argentina show the heaviest decline; for ten months ending October 31st they are valued at \$112,173,000 U.S., as against \$181,143,000 U.S. to October, 1929. The diminution of imports will be even more marked when figures for the full year are available, luxury goods, motor-cars, and agricultural plant being chiefly affected. There is reason to believe that British goods will not show such a heavy diminution, as markets are short of cotton textiles, prime materials for local manufactures, paints, varnishes and colours generally. Improved exchange would be followed by better trade,

and great hopes are entertained of the British Exhibition, for which preparations are well advanced. Local business was quiet at the year-end and the money market was well supplied with funds owing to the smallness of the demand from sound borrowers. Rates were 6 to 7½ per cent. for advances and discounts, while bank deposits in currency are rising steadily. Gold in the Conversion Office amounted to \$426,773,917 gold, as against \$419,643,387 gold on December 31, 1929. Total notes in circulation on December 31st were \$1,260,686,223 paper, against \$1,246,753,201 paper on December 31, 1929.

BRAZIL.

The outstanding event in Brazilian affairs during the past year was the revolution early in October last. Owing to the vast extent of the Brazilian territories and the lack of communications, there was at first considerable anxiety that the dispute might be protracted, and the uncertainty was not dissipated until it became known that a *coup d'état* had occurred in the capital, and that Dr. Washington Luis had been obliged to resign.

The cause of the revolution was, undoubtedly, popular discontent with economic conditions, arising chiefly from the severe depression in the coffee industry. The reasons for the collapse in the coffee market are too well known to require recapitulation, the principal cause having been over-production, but the immediate effects in Brazil were widespread difficulties, losses in every section of the country's commercial and trading activities, and a general feeling of insecurity. This, indeed, has not yet disappeared, although it is the avowed intention of the present Provisional Government, under President Vargas, to take practical measures to improve the general economic situation of the country. Measures already taken include an official declaration of strict adherence to the terms of the Sao Paulo Coffee Realisation Loan of £20,000,000, which was floated internationally in April, 1930, for the purpose of effecting gradual liquidation of the surplus stocks of Sao Paulo coffee and placing each future crop on the market in regular rotation over a period of ten years. Further, a Decree has been issued inviting coffee-producing countries to take part in an international conference at Sao Paulo on March 31, 1931, for the purpose of studying problems relating to the trade from an international standpoint.

Trade.—The uncertainty in the political situation in Brazil has naturally found reflection in the official trade returns of the country, though, partly by reason of economies and partly as a result of the high import duties, the diminution in the total value of imports has more than counterbalanced the reduction of exports, so that the favourable balance of merchandise trade has actually shown an appreciable increase. The aggregate value of imports during the first ten months of 1930 was equivalent to £47,387,000, as compared with £73,173,000 in the corresponding period of 1929, while exports totalled £58,215,000, against £80,483,000. Another favourable feature of the trade returns has been a distinct tendency towards greater diversification of the country's export products, meat shipments having increased considerably.

Finance.—In October a national holiday was decreed for a period of fifteen days, and afterwards extended by the present Government in the form of a moratorium, which, under the terms of various decrees, was made effective in respect of obligations maturing between October 3 and December 31, 1930. The Government has been punctilious, however, in providing for the service of the external debt of the country, authorising special shipments of gold for this purpose. On November 22nd last, a decree was signed abolishing the Caixa de Estabilisação and transferring its functions to the Banco do Brasil. The exchange of notes for gold is, therefore, in suspense and the currency position as a whole is obscure. Severe

restrictions have been placed upon dealings in foreign exchange, especially so far as concerns the provision of drafts for imports of luxury articles. That the present Government is alive to the inherent difficulties of the situation is evident from the fact that an official invitation has been extended to an English financial expert, Sir Otto Niemeyer, to visit Brazil and advise upon the execution of a plan entailing the prompt reconstruction of the Banco do Brasil as an orthodox Central Bank; upon currency reform and exchange stabilisation; budgetary reform measures; and the limitation of foreign borrowings.

CHILE.

After the scheme for centralised selling of nitrate of soda announced last year, another phase has been reached in the rationalisation of the nitrate industry by the passing of the law authorising the formation of the *Compañía de Salitre de Chile*, known familiarly as "Cosach," in which enterprise over 90 per cent. of the producing companies have signified their intention to participate. Arrangements for the financing of "Cosach" are proceeding in New York and an official pronouncement is expected early in 1931. A marketing agreement has also been reached between the nitrate producers and the European manufacturers of synthetic nitrogen. The Chilean copper industry is seriously affected by the low value of the metal in the world's markets. Until production be more nearly apportioned to consumption requirements, no real hope can be entertained of any permanent satisfactory state of the industry. In the autumn of 1930 discussions were taking place in New York between leading world producers of copper regarding restriction of production. If any such scheme comes into operation, there are certainly better prospects ahead for the Chilean industry.

Trade.—Commercial activity was maintained at a high level throughout the whole of 1929, the total values of both imports and exports for that year showing substantial expansions on those for the preceding year. Towards the end of 1929, however, productive activity tended to decline, and during the current year the depressed economic conditions throughout the world have gradually had their effect upon the situation in Chile, and a reaction from the intensive activity of 1929 has set in. Trade figures so far published for 1930 show a decided falling-off in exports, due to the lower volume of nitrate and copper shipments. Up to and including September, total imports in 1930 were 1,054,041,000 pesos, against 1,125,800,000 pesos in January-September, 1929. Exports amounted to 982,905,000 pesos, as compared with 1,768,700,000 pesos. The value of nitrate shipments during the period was 377,900,000 pesos, and of copper 381,200,000 pesos, against 696,900,000 pesos and 714,400,000 pesos respectively. The cause of Anglo-Chilean trade has been furthered by the raising of the British and Chilean Legations to the status of Embassies.

The scarcity of export bills this year has naturally had its effect on the demand for foreign currency, but the Banco Central de Chile has, by utilising its gold reserves, adequately and efficiently maintained the exchange value of the peso. During the year, the 90-days' sight rate has moved between the narrow limits of 39.57 and 40.02 pesos to the £ sterling. The ratio of gold reserves to deposit and note liabilities of the Banco Central has been maintained much above the legal minimum of 50 per cent., and the latest return available shows gold holdings at home and abroad at 348,060,182 pesos, which represents a proportion of no less than 99 per cent.

The latest estimates of revenue for the 1930 fiscal year are 1,151,650,000 pesos, and expenditure 1,152,538,000 pesos, there being thus a small estimated deficit of 888,000 pesos. Budget figures relating to the 1931 fiscal year have been published wherein revenue is estimated at 1,039,617,000 pesos and expenditure at 1,039,448,000 pesos, thus showing a small surplus. In view of the existing conditions, and of the fact that

practically no funds are available from the ordinary budget, expenditure for public works under the extraordinary budget has been drastically curtailed, and such outgoings as may be considered vital will be met by new internal taxation.

OTHER LATIN AMERICAN STATES.

Colombia.

Colombian affairs were adversely affected in 1930 by the low price obtained for the staple product, coffee, which naturally had a restrictive influence on business. Although the commercial situation was depressed during the greater part of the year, reports dated November state that greater activity was noticeable due to end-of-year sales of merchandise, and to the high prices ruling for Colombian coffee in consuming markets.

By the judicious use of its gold reserves and the operation of the discount rate, the Banco de la República has maintained the exchange value of the peso within very narrow limits around parity level. The latest return of the bank shows the ratio of the gold coin against note circulation as high as 111 per cent. With a view to alleviating the present rather stringent credit conditions, the Banco de la República has resolved, in accordance with its powers, to effect credit operations with the public, and the management may make advances to private persons against the security of deposit certificates and warehouse warrants of agricultural produce, particularly coffee and tobacco.

Recent political events have been of an important and encouraging nature. Dr. Enrique Olaya Herrera took office as President of the Republic on August 7th last, and confidence is widespread in the sincerity and ability of the new administration. Their announced policy of retrenchment in expenditure as well as the adoption of measures in other directions should result in their being able to restore equilibrium between revenue and expenditure, and achieve other results of fundamental benefit to the country.

Ecuador.

The prosperity of Ecuador is largely bound up with its cocoa crop, and the general economic and financial situation of the country is but a reflection of the cocoa situation. Exports of cocoa and coffee in 1929 were both about 30 per cent. lower than in the preceding year, while in the first nine months of 1930 local prices of cocoa fell by 30 per cent., and of coffee 40 per cent., compared with the prices ruling in January. There has, however, been considerable development of other natural resources, rendering the country less dependent upon cocoa, and the Government has taken an active interest in the development of agriculture. The economic development of the country has been materially aided by the progress made during the last few years in the extension of railways and roads.

Peru.

Peru has been no exception to the number of countries on the South American Continent which have experienced a setback in the commercial and economic situation during the past year, coupled with political uncertainties. Shortly before the *coup d'état* in Argentina, a similar event occurred in Peru, when the Government of President Leguía was suddenly deposed and replaced by a military Junta. The change of Government was not wholly unexpected, but, unfortunately, it was followed by the suspension of payment by the Banco del Peru y Londres—an old-established and highly-respected local institution—which took place on October 13th. The moratorium granted to the bank is to continue until January 31, 1931, during which period a decision will be arrived at as to whether arrangements can be made for reconstitution.

Peru has naturally been seriously affected by the collapse of world prices of staple commodities, and,

more especially, by the unfavourable market conditions for her chief export products, namely, cotton, sugar and petroleum. One of the chief difficulties has been the effect of the economic depression upon the exchange position. During 1929, the value of the Peruvian pound tended to depreciate, and, in order to rectify the situation, a Monetary Law was promulgated in the Republic under date February 10, 1930, establishing a new monetary unit, the gold sol, equivalent at parity to four United States cents. In the absence of a free gold market, the rate has since risen to around 16.57 soles to the £ sterling, and the new Government has issued a Decree authorising the constitution of a Monetary Reform Commission to report upon the situation and to suggest steps for definite stabilisation. Moreover, the Kemmerer Commission has been invited to visit Peru and to make recommendations for the amelioration of economic conditions.

The latest returns available of Peruvian foreign trade show that the total value of imports during the first quarter of 1930 was 37,932,000 soles, as compared with 45,528,000 soles in the corresponding period of 1929, while exports were 65,007,000 soles, against 68,580,000 soles. There was thus an import surplus of merchandise trade of 27,075,000 soles, against 23,052,000 soles. It is expected that trade statistics relating to the remainder of 1930 will show an even greater falling off, while stocks of merchandise are reported to be still relatively high, as sales of imported goods have diminished on account of the lower purchasing power of the community.

Owing largely to the depressed state of trade, the Government revenue showed an appreciable falling off during 1930, and the precise position of the national finances is not clear. In all the circumstances, therefore, no rapid recovery from the present difficult trade situation is to be anticipated.

Uruguay.

Latest official figures of the foreign trade of Uruguay for 1930 show that during the period January-September exports (the figures are based on actual market prices) amounted in value to 79,384,098 pesos, and imports (according to Customs valuation) to 66,455,307 pesos. Imports from the United States in the first six months of 1930 decreased from 32 per cent. to 26 per cent., but, on the other hand, those from Great Britain increased from 15 per cent. to 17½ per cent. Of Uruguay's exports, Great Britain heads the list by taking 34 per cent., as compared with the United States' purchases of 9 per cent.

Trade has suffered a material setback by the depreciation of the peso, which has continued since March, 1929, the rate at the end of 1930 being 35½d., as compared with 45d. in December, 1929, a decrease in the value of the peso of no less than 21 per cent. As in the case of Argentina, various factors have contributed to this, the chief being the disastrous slump in commodity values. In May, a 6 per cent. loan of \$17,581,000 (U.S.) was floated in New York for road construction and other public works, but this had no appreciable effect in maintaining exchange.

The total Public Debt in October last was 238,997,290 pesos. Budget estimates for the financial year July, 1930, to June, 1931, show ordinary revenue at 60,495,788 pesos and expenditure corresponding thereto at 64,415,211 pesos. The estimated deficit of 3,919,423 pesos is to be met by increases in taxation on articles of consumption and in import duties.

Bolivia.

The transformation of the Banco de la Nación Boliviana into the Banco Central de Bolivia has enabled that institution to function satisfactorily in supporting exchange, and the value of the boliviano has remained steady during the year. On the other hand, commercial conditions have remained extremely depressed. The main factor in the country's economy is tin, and, while depression overshadows that industry, no relief to the existing critical position can be anticipated.

Paraguay.

The world-wide trade depression of 1930 was not evident to the same degree in Paraguay as in most of the Latin American countries, conditions being comparatively satisfactory. With the possibility of war with Bolivia removed, trade, in general, was able to follow a more normal course. The tobacco crop was not so large as in previous years, but best qualities obtained a higher price. Sugar production has shown expansion, the output in 1929 having been 5,829,000 kilos., while estimates place the 1930 crop at 7,000,000 kilos.

Venezuela.

The production of petroleum in Venezuela in the year 1929 showed further expansion, at 137,472,000 barrels, as compared with 105,523,000 barrels in 1928, and 62,817,000 barrels in 1927. In 1930, however, there appeared to be a movement towards voluntary restriction of output. The 1929-30 coffee crop proved disappointing, and, as regards the 1930-31 crop, prospects in the Panaquiere region are excellent. Around Rio Chico, reports state that rainfall has been irregular, and that it is too early to say how the crop will turn out. In May last, authority was sought from Congress to cancel the foreign debt of the Republic in its entirety, and it is understood that the necessary amount of gold has been shipped to New York.

Mexico.

With the low prices now being obtained for silver, the position of producers—and Mexico is, of course, the world's largest producer—is, to say the least of it, unsatisfactory. Some mines are, it is true, working at a small profit, but a great many are operating at a loss owing to the relatively high wages and taxation, combined with the low grade of their ore. There is a consequent tendency to curtail production, and in the first six months of 1930 the output of silver was 1,689,231 kilos.; the figure for the corresponding period of 1929 was 3,381,276 kilos. The production of copper was 38,520,040 kilos., against 86,553,669 kilos.; of lead, 115,094,005 kilos., against 248,400,858 kilos.; zinc, 64,132,806 kilos., as compared with 174,049,667 kilos.; and gold, 10,498 kilos., against 20,276 kilos.

The tendency of recent years for the production of petroleum in Mexico to be reduced was continued in 1929, the output having been 44,687,879 barrels, a reduction of 5,462,731 barrels, as compared with the figure for 1928. In the first seven months of 1930 production totalled 23,875,054 barrels, against 24,856,874 barrels in the same period of 1929. Many of the wells in the Tampico district—which was formerly the largest producing area—have been dismantled, but exploration and drilling are continuing fairly actively further South of the Isthmus of Tehuantepec.

Home-grown maize is still insufficient for national requirements, and considerable quantities continue to be imported. Owing to the decreased consumption of sugar, a carry-over of 20,000 tons from this season's crop is expected, while estimates place the coming crop at 240,000 tons, or approximately 50,000 tons more than requirements. Endeavours are being made to export 20 per cent. of production so as to maintain local prices. The 1930 crop of cotton is expected to have been about 25 per cent. less than in 1929, and that of wheat to be about the same.

Figures of national revenue and expenditure for 1929 are not yet available. The 1930 budget shows an estimated revenue of 293,206,950 pesos, against an expenditure of 293,773,887 pesos; in the latter figure is included 26,025,490 pesos to meet the service of the National Debt. An agreement was reached in July last between the Mexican Minister of Finance and the International Committee of Bankers in New York respecting the renewal of payments on the Foreign Debt and an adjustment of the debt of the National Railways of Mexico. It is expected that Congress will shortly ratify the agreement.

Exchange during the greater part of 1930 was fairly stable between the limits of 10.20 and 10.40 pesos to

the £ sterling, but in November a sharp slump occurred, and, despite a temporary rally in the same month, December saw the gold peso quoted at 10.96. At the end of the year a recovery occurred to 10.33 pesos to the £ sterling. The chief influences at work were the general lack of confidence, due to the decline in petroleum production and to the silver situation, coupled with the depressed situation of world trade generally. Silver coin has been fluctuating at a considerable discount against gold. However, news of the appointment of an Exchange Regulating Commission has resulted lately in a betterment in exchange and a decline in the discount on silver from 20 per cent. to 10 per cent.

Central America and West Indies.

In Guatemala, Nicaragua and Salvador, good coffee crops were obtained, but prices were unfavourable to producers. Banana production in Guatemala and Nicaragua is going ahead satisfactorily, and efforts are being made to increase the output of cereals. Transport facilities have been improved in Salvador by a link with the Atlantic coast by railway between San Salvador and Puerto Barrios in Guatemala. Conditions in the West Indies are generally depressed owing to the poor prices received for leading products. The situation in Jamaica is, however, brighter and trade and industry are rapidly approaching normal. Prospects for the coming coffee and sugar crops in Trinidad are good, but the cocoa position is unsatisfactory. In Costa Rica the coffee outlook is uncertain, due to dry weather. In several of the above countries there has been a certain amount of political unrest, generally of a short and sharp nature, and in each case tranquil conditions were resumed with the minimum of interruption to commerce.

JAPAN.

Japan's first year of the gold standard, which was restored on January 11, 1930, was marked by the most pronounced form of slack trade and low prices. Despite the heavy drain of gold, the general trend of the money market remained practically unchanged through the greater part of the year. The foreign trade record was altogether discouraging and without any reassuring feature. Many branches of the staple industries have maintained organised short time. The agricultural industry has experienced a year of particularly severe disappointments, with a sharp fall in rice and cocoon prices.

Public Finance.—The revised Budget for 1930-31 estimated expenditure at 1,525,715,000 yen, a saving of 81 millions on the original estimates, and a decrease of 156.6 millions upon the preceding year. The national accounts for the first six months, ended on September 30th last, disclosed revenue amounting to 395,024,000 yen, and expenditure to 493,900,000 yen, as compared with 433,478,000 yen and 600,026,000 yen respectively for the corresponding period of 1929. The decline in revenue is mainly accounted for by tax receipts. Customs and Excise alone being down by 26.9 millions. The Budget estimates for the next fiscal year show estimated expenditure of 1,448 million yen, against estimated revenue of 1,428 millions, with a deficit of some 20 millions to be met by a raid upon the sinking fund to the extent of the German reparations receipts and the shortening of credit allowed to tobacco sellers. The national debt rose by 151.5 millions to 6,057.2 millions during the first eleven months of 1930.

Money.—The year saw the Bank of Japan lose 224 million yen of its gold, but the effects were materially neutralised by slack trade and lower prices. The note circulation fell sometimes below the 1,000 millions level. The Bank rate was reduced to 5.11 per cent. on October 7th. With the approach of winter, however, money became appreciably difficult. But the situation was eased by liberal advances made

by the chartered banks. The new capital market was far less active than in 1929, and issues totalled only 915.8 millions, as against 1,640 millions. The yen exchange fluctuated within very narrow limits after stabilisation. The dollar was quoted at 49½c. and sterling at 2s. 0½d. on December 20, 1930, as compared each with 49c. and 2s. 0½d. at the same date in 1929.

Trade.—From January 1st to December 20th imports were valued at approximately 1,511,394,000 yen and exports at 1,430,173,000 yen. As compared with the corresponding period of 1929, imports and exports contracted respectively by 648 millions, or 30.7 per cent., and 666 millions, or 31.7 per cent., the apparent adverse balance being thus 17.5 millions higher at 81.2 millions. For the first eleven months imports of raw cotton fell in value by 193 millions, iron and steel by 58 millions, raw wool and woollen and worsted manufactures by 40 millions, timber by 33 millions, and wheat by 27.8 millions; while exports of raw silk declined by 344 millions, cotton manufactures by 141 millions, and silk goods by 44 millions. Even allowing for the 21 per cent. fall in prices registered during the year, these changes show that a heavy shrinkage in volume has also taken place.

Production and Prices.—The year's rice crop is officially estimated at 65,305,000 koku, an increase of 5,753,000 koku on the actual yield of the preceding year, and 5,854,000 koku above the five years' average. The wheat crop is placed at 19,304,000 koku, as against 20,763,000 koku in 1929. The output of cocoons totalled 101,881,000 kamme, a slight increase of 211,000 kamme upon the preceding year. The Bank of Japan's index number of wholesale prices (taking the average for July, 1914, as a basis) was 129.0 for November last, as against 167.9 a year ago.

MALAYA AND THE DUTCH EAST INDIES.

In common with the rest of the world, Malaya and the Dutch East Indies have suffered from the results of the economic depression. Rubber and tin, Malaya's chief products, have been in the throes of the slump, and both commodities have registered record low prices. Malaya indulged in a tapping "holiday" throughout May, but the news that the wishes of the planters that some form of restriction should be re-introduced had not been acceded to had disastrous results on the price of the raw commodity. Anglo-Dutch interests had strongly advocated some further measure of restriction, but their recommendations were ignored in the quarters that mattered. Native production has not been so great in Sumatra, but stocks on the western markets have always been well in excess of the demand. Imports of raw rubber last year by Great Britain from Malaya were 1,094,510 tons and from the Dutch East Indies 258,521 tons.

Throughout the year the price of tin, which is mined both in Malaya and the Dutch East Indies, has been abysmally low, though a slight improvement was reported towards the end of the twelve months. Restriction of tin production, as a remedy for the uneconomic price of the metal, has been operated widely by reducing the hours of labour on the plant. Coffee cultivation in Malaya has been creating some interest, but the output is not yet sufficient to meet local demands, and any export trade is for the moment out of the question. Tea is still in the experimental stage in Malaya, but hopes are entertained for its future commercial success. In the Dutch East Indies a joint restriction policy as regards tea output was agreed upon by the various planters' associations, as a result of which the 1930 crop is expected to have yielded 60 million tons less than that of 1929. This should

make the total Dutch East Indies crop in the neighbourhood of 50,000 tons.

In Malaya the import duties on cigarettes have been reduced from 90 to 80 cents per lb., but the duties on unmanufactured and native tobacco, other than cigars, cigarettes and snuff, have been increased from 20 to 40 cents per lb. Import duties on matches have been amended, and the excise tax on matches is now 60 per cent. of the duty on imported matches. Export duties on rubber have also been increased.

Unemployment has been rife in Malaya as a result of the rubber depression, and the purchasing power of the population has been affected by the serious economic position, but the country is weathering the storm as it has overcome previous difficult times. The Dutch East Indies, too, have had their troubles, but no repercussion of the disturbances in neighbouring countries has been felt in either Malaya or the Dutch colonies. During the first nine months of 1930 imports into the Dutch East Indies amounted to Fl. 648,900,000 and exports to Fl. 915,700,000 compared with Fl. 807,500,000 and Fl. 1,091,300,000 in the corresponding period of 1929.

CHINA.

The task of governing China during 1930 has assuredly been no sinecure, and the responsible statesmen in control at Nanking, reviewing their year's achievement, are entitled to congratulate themselves. They have consolidated their position in the country, and earned the respectful attention of the Great Powers. A serious challenge to the Nanking administration arose in the spring, when Feng Yu-hsiang and Yen Hsishan, whose armies aggregated more than half a million bayonets, formed an alliance for its overthrow. After some early successes they set up a rival Government in Peking, and announced the convening of a National Assembly. Nanking organised a punitive expedition against this Northern Alliance, Chiang Kai-shek personally assuming the command-in-chief. Matters, however, were brought to an issue, not by fighting, but by the intervention of the Mukden ruler, Chang Hsueh-liang, commonly termed "the Young Marshal." Chang's declaration was in essence merely for peace. After an interchange of telegrams with the opposing generals, he brought about a truce; Manchurian troops occupied Peking, and Chang eventually accepted *pro forma* high rank in the Nanking Army. The result has been that Yen and Feng have retired into obscurity, and the country has reached another milestone in its long road towards unification. It is not amiss to contrast this wisely-guided move upon the part of Chang Hsueh-liang with the earlier excursions beyond the Great Wall of his famous father, Chang Tso-lin. Both father and son may justly be styled patriots with the good of their country at heart; but, while the former was obsessed with the Red menace, the Bolshevik Bogey as it has been called, the latter has proved himself the mouthpiece of the national will to peace.

The outstanding event of the year in China's foreign relations has been the rendition of Weihaiwei in September. In performing this act of perfunctory justice, Great Britain was heedless of the tenets of self-determination, for there is no doubt that an overwhelming majority of the inhabitants of the leased territory, both British and Chinese, would have preferred to have no change in its administration. It is commonly said that Weihaiwei was seized as a set-off to the occupation of Port Arthur and Kiaochow by other European Powers, but it is often forgotten that Lord Salisbury in 1898 acted at the suggestion, almost at the request, of the Chinese Government of the day. Negotiations with regard to the abolition of extra-territoriality have proceeded but not progressed. The Foreign Minister has

interchanged Notes with both England and America. From the phrasing of these communications, and from his other public utterances, it is to be apprehended that he is desirous of diverting Chinese thought from the unhappy internal conditions of the country to purely theoretical grievances in relation to foreigners. The only change of consequence which has taken place has been the reorganisation of the Provisional Court at Shanghai as established in 1911, which has now become virtually a Chinese District Court. Nothing in the Agreement signed by the Powers directly affects extra-territorial rights, since the new Court will deal with cases between Chinese and cases of foreigners against Chinese. But the withdrawal of Consular Assessors has in it something akin to dropping the pilot, and the experiment will be watched with anxiety as well as goodwill.

No definite improvement in the financial position is to be recorded; military expenditure remains a dead-weight in the balance against the reforms urged by the Finance Minister. Nevertheless, the year has not been unprofitably spent. The Report of the Kemmerer Commission, a body of eminent American financial experts, was published in April. This voluminous document contains the results of much spade-work which will prove of use hereafter when re-construction takes practical shape. Its main theme is the advisability of adopting a gold standard, and, with this end in view, it was resolved to collect Customs duties on imports on a gold basis. A new gold unit for the purpose, equivalent to 19.7265 pence sterling, was adopted from February 1, the Haikwan tael being regarded as equal to 1.50, and later 1.75 of the new unit. By this means the effect of the phenomenal fall in the price of silver has been counteracted in so far as the service of loans secured on the Customs is concerned. The Customs receipts for the year show an advance of 18 per cent. on the previous year's collection, 180,570,000 tls. against 152,760,000 tls.

It is on her communications, and in particular on her railways, that China must depend for any restoration of her credit in foreign markets. Not only are the railways indispensable in bringing new and virgin areas within the industrial field, but, given any measure of political tranquillity, they present under central control very considerable potential revenues as yet unplugged. New railway construction is not feasible, however, until provision has been made for the discharge of the existing railway debts and defaults. It is, if anything, an underestimate to rate these overdue liabilities at £17,000,000. Nevertheless, railway rehabilitation has engaged the attention of the Chinese Government throughout the year, and it is not too much to hope that means will shortly be devised for effecting some amelioration of the situation.

The price of bar silver in London fell during 1930 from 21½ pence to 14½ pence per ounce, and the Hong Kong and China exchanges, in direct consequence, find themselves at their lowest recorded figures. China, as the principal consumer of silver, and the last remaining country using silver as a currency basis, while her foreign debt is in gold, suffers very materially from the fall. The loss of trade does not result wholly from those low prices, but from the uncertainty and risk attaching to their instability. Trade can adapt itself equally well to a low or to a high exchange, but as China's imports exceed her exports in value by 250 million taels, the subsidence of the unit of currency acts as a direct deterrent to foreign trade, and has brought business along many import lines to a standstill. Quack remedies and palliatives of every variety for this condition of affairs have been advanced from time to time, only to be met by the cold truism that silver, like every other commodity, must eventually find its own price level. It is generally realised that over-production and low prices are inseparable, and that neither one nor all of the proposed cures could have more than a temporary or transient effect.

I.—HOME PRODUCE.

THE CORN TRADE.

The miller has bought more freely from Canada since September 1, 1930, when the revised grades of the Canadian Government, which make for better quality, became law. If this had been done on September 1, 1929, as the British Corn Trade Associations desired, some part of Canada's wheat troubles might have been escaped. From September, 1930, the shipments of new-crop Canadian were in healthy request, and a very fair trade has passed, but the intervention of Russia occurred from this very date, and the Soviet was able to offer two sorts of milling wheat—Azima, a medium to strong winter red, which competed both with No. 3 Canadian and with American No. 2 red winter, and the once-famed Odessa Ghirka, which is spring wheat. The Soviet quoted extraordinarily low prices, but these were mostly "rye terms," under which the seller will not be responsible if up to 5 per cent. of the "wheat" shipped is rye. The trouble of cleaning as well as the actual 5 per cent. are naturally allowed for by the miller in his bid, but cleaned and conditioned the Russian wheat, especially that from the "Czerno," or black soils of the South-East, is excellent.

PRODUCTION OF WHEAT.

The home crop, despite a slight increase of area, is about a million cwt. smaller than in 1929. The Government published an optimistic estimate of 22,340,000 cwt. (for England and Wales alone), but on December 12th it issued a pessimistic return per acre of 15.9 cwt. Our figures include estimates for Scotland and Ireland. The U.S.A. crop is probably much over-estimated, as was that of 1929. The production, in millions of cwt., of the eight chief countries in the wheat trade may be estimated roughly as follows:—

	1914.	1925.	1926.	1927.	1928.	1929.	1930.
British Isles ..	33.4	26.0	27.6	29.9	26.0	23.0	22.0
U.S.A.	427.3	356.2	453.6	457.0	480.0	556.0	440.0
Canada	86.0	227.2	219.1	243.0	268.0	160.0	195.0
India	171.2	175.5	174.6	175.0	160.0	173.0	186.3
Argentina	85.6	119.0	117.0	120.0	140.0	112.0	135.0
Australia	20.0	65.0	90.0	68.0	80.0	72.0	115.0
Germany	77.4	59.0	60.0	70.0	75.0	59.4	64.0
France	154.8	177.3	135.0	152.0	160.0	192.0	144.0
	1,095.7	1,215.7	1,276.9	1,316.3	1,389.0	1,347.4	1,301.3

The Russian wheat exports were about 40 million cwt., and those of South-eastern Europe amounted to a further 15 millions.

SUPPLIES OF BREADSTUFFS.

The great and increasing price depression of 1930 has not been due to over-supply of breadstuffs to the markets.

IMPORTS. (Thousands of tons.)	1925.	1926.	1927.	1928.	1929.	1930.
January	409	518	466	382	456	379
February	321	308	427	416	386	320
March	451	435	524	644	502	462
April	421	420	538	521	547	335
May	455	351	523	468	526	464
June	442	501	654	476	420	405
July	512	516	475	494	487	529
August	393	570	565	506	530	461
September	405	480	535	397	650	638
October	440	400	410	380	650	558
November	407	402	519	460	535	554
December	609	456	431	662	369	740
Total	5,265	5,396	6,067	5,696	6,068	5,840

Russia was solely responsible for the unique imports of December, but otherwise the year would have left off in importers' favour. The reduction in consignments from Argentina has more than balanced the increase in supplies from Russia and from India.

The year has been very political in the wheat trade. Not since 1903 has the Exchange been so perturbed by influences from Westminster. Sir Herbert Robson, the great Govern-

ment buyer during the war, Mr. Hugh Rathbone, with his forty-five years' knowledge of Liverpool trade, and, of course, the Conservative advocates of a quota, have been prominent. The Government has intimated a preference for import boards. Conferences with Dominion statesmen have revealed a desire to restrict the choice of the British buyer which needs to be watched.

In 1931 the breadstuff imports of France and Italy will prove much larger than in 1930. France will need quite 10 million quarters, Italy at least five, and, with the Iberian Peninsula, the Latin peoples of Europe may fairly be assigned quite 17 million quarters (nearly 73 million cwt.) more purchases than before. This may naturally relieve the situation.

THE PRODUCTION OF SPRING CORN.

The American producers of maize appear to have little desire to control the world trade, which has passed chiefly to Buenos Aires. The American yield for 1929 was not extraordinary, but it fell in 1930 and a very small export is probable in 1931. Even a good yield per acre nowadays means more pigs and poultry kept rather than more maize exported. Argentina has grown only 225 million cwt., against America's 1,102,400,000 cwt., but, growing mainly for exportation, is already a brisk seller of her April harvest for May shipment at 3s. 6d. per cwt. c.i.f. Other maize producers are eclipsed. Barley in 1930 was a poor home crop; the New World had considerable yields of very poor average quality. Germany has made great efforts to grow good barley, but her brewers see to it that little needs exportation. France had a most disappointing barley crop and is needing imports. France was also unfortunate with oats, which are usually in such a wet year the best of the cereals. The home crop of oats was mediocre, and so was the German. Argentina has a fine new crop. Canada and the U.S.A. devoted vast areas to production of the most superior type; 288 lb. to the quarter is now the average weight.

PRODUCTION (In Millions of Cwts.).

	Maize.			Barley.			Oats.		
	1928.	1929.	1930.	1928.	1929.	1930.	1928.	1929.	1930.

Total	1,580.2	1,421.1	1,346.4	325.5	314.1	330.0	909.0	835.1	878.0

South Africa in 1930 increased its consignments to us of maize, but not to an important extent. Roumania, on the other hand, increased its exports by nearly one million quarters. No new barley-growing region appears, though all south-west Asia, including Anatolia and Syria, is classed as mainly barley soil. Oats are apparently not grown for export by Russia as they were before the war. In the seven years before the war the mean production was over 108,000,000 quarters annually, and rather over seven millions were exported.

MARKET PRICES.

A great change in prices has marked the past year, and in many instances the value in January, 1931, was below the level of January, 1914. The word "pre-war" carries a market weight which is undeniable, and while wheat is "1s. above pre-war" for English, and flour is "3d. above pre-war" for London, the fact that bread is still 2s. 4d. above the 1914 price per cwt. is not currently noted in the same way, so few of us buying bread by the cwt.

The Canadian wheat which even in pre-war days was 1s. 3d. dearer than English and a year ago was 2s. 3d. dearer, is now only 3d. above the home product. All spring corn has declined heavily in price, though malting barley and maple peas have held their own better than lower grades of produce. The recovery in potatoes is exceptional, but the home crop showed a reduction of 847,000 tons, and imports were a little smaller on the year. The extreme cheapness of wheat has prevented this from causing any suffering even in the poorest industrial districts.

The following table shows the quantity and value of our imports of wheat, etc., in 1913, 1929 and 1930:—

	Quantity.			Value.		
	1913.	1929.	1930.	1913.	1929.	1930.

FRUIT AND POTATOES.

With a favourable year for fruit-growing, crops as a general rule being good, it might have been expected that growers would enjoy a year of comparative prosperity. But fruit, and particularly soft fruit, has been subjected to such heavy Continental dumping that the producer has been robbed of the reward of his labours. The summer favoured bush fruit and strawberries, but little or no benefit was reaped either by the grower or the consumer. To the competition which our growers of black currants had to suffer was added the foreign fruit pulp imported by English jam makers, which up to September amounted, in the case of supplies from Holland alone, to 11,704 tons, mostly strawberry. Among the imports of strawberries in 1930 were 1,650 tons from Holland, and, 1,716 tons from France, as against 1,197 tons and 2,753 tons respectively in 1929. Gooseberries to the amount of 1,032 tons were imported from Holland in 1930, or twice what came in 1929. From three Continental countries were received 5,837 tons of currants (red and black), made up of 1,439 tons from Holland, 3,606 tons from France and 792 tons from Belgium. It was revealed in a statement made by Sir William Lobjoit that 1,111 acres of black currants had averaged 2d. per lb. for jam and 2½d. per lb. for chips; 164 acres had been left untouched. On 904 acres of gooseberries, 400 tons were not picked, while the average of produce was 1½d. per lb. on the

market. Hundreds of tons of Pershore plums were never picked.

According to the Ministry of Agriculture returns, the area under fruit in England and Wales at the present time is 313,200 acres, as against 320,466 acres in 1913 and 291,096 acres in 1919. For some years now we have got back to the pre-war acreage, with the difference that the area to-day is producing a better-quality article, that the decrease in orchards which was shown in the returns to have occurred during war-time has been more than made up in the shift from the worn-out plantations in the West to new districts in the East. The decrease shown in the orchard acreage as compared with 1929 was almost made up by the 1,300 acres added to the areas under soft fruit, to which most counties contributed, the largest additions being 334 acres in Lincs (Holland), 185 acres in Essex and 161 acres in Kent.—*The Fruit Grower.*

The following table shows the area and yield of potatoes in the last three seasons for this country and some of the largest of the world's producing areas, as estimated by the International Institute of Agriculture:—

	Area (Thousand Acres).			Yield (Thousand Cwt. of 100 Lbs.).		
	1928.	1929.	1930.	1928.	1929.	1930.
England and Wales	489	519	423	78,699	80,371	61,398
Germany	7,038	7,005	6,927	909,836	883,553	976,750
Poland	6,189	6,513	1	609,811	699,965	638,240
Czechoslovakia	1,800	1,880	1,750	183,435	235,801	180,298
U.S.A.	3,825	3,338	3,394	278,690	215,429	216,654
Totals for 27 countries	17,604*	26,002	25,807	1,917,234*	2,876,367	2,716,288

* Twenty countries.

† Not available.

LIVESTOCK.

By the courtesy of the Ministry of Agriculture we are able to give the following provisional figures, subject to revision, showing the numbers of livestock in England and Wales halfway through 1928, 1929 and 1930 respectively, as compared with the average for the years 1920-29. The figures are collected annually as on June 4th:—

	Average 1920-29.	1928.	1929.	1930.
Horses—	No.	No.	No.	No.
Horses used for agriculture (a)	771,666	732,510	706,765	682,830
Stallions being used for service	4,739	2,955	2,845	3,320
Unbroken horses:				
One year and above	160,861	93,291	89,274	84,780
Under one year	59,643	36,151	37,583	37,910
Other horses on agricultural holdings	204,319	171,503	162,806	152,510
Total of horses	1,201,228	1,038,460	999,273	961,350
Cattle—				
Cows and heifers in milk	1,994,374	2,066,483	2,054,073	2,033,380
Cows in calf, but not in milk	285,083	301,774	293,715	288,770
Heifers in calf	356,879	355,231	364,763	352,690
Bulls being used for service	83,168	82,112	80,271	82,920
Other cattle:				
Two years and above	945,671	925,980	918,878	888,320
One year and under two	1,130,637	1,174,956	1,143,640	1,117,060
Under one year	1,124,107	1,119,897	1,102,254	1,086,540
Total of cattle	5,917,919	6,026,433	5,957,594	5,849,680
Sheep—				
Ewes kept for breeding	6,105,020	6,836,712	6,717,258	6,810,180
Rams and ram lambs to be used for service	174,913	191,491	187,209	192,450
Other sheep:				
One year and above	2,508,834	2,379,277	2,266,762	2,236,670
Under one year	6,365,408	6,981,930	6,934,224	7,056,500
Total of sheep	15,174,175	16,389,610	16,105,453	16,337,800
Pigs—				
Fows kept for breeding	346,249	380,063	307,144	315,230
Fows being used for service	24,591	26,222	21,925	20,770
Other pigs	2,160,333	2,564,758	2,037,474	1,970,940
Total of pigs	2,551,173	2,971,043	2,366,543	2,306,940

(a) Including mares kept for breeding.

The following information is based on articles by Mr Harry Brown in the *Farmers' Red Book*:—

Pedigree Cattle.—While there have been several outstanding prices recorded at sales, the trade for the breed has not been as level as in past years, and, generally speaking, the demand has not been as good as might have been expected. One of the most important home sales was the dispersal of the Stoke Climsland herd belonging to His Royal Highness the Prince of Wales, at which the average for 53 head was £61 19s. 5d. Herefords have been in good demand; 128 head averaged £46 1s. at the March show. At one large dispersal 70 head averaged £24 13s. 6d. Devons and Sussex have also been in good demand. Aberdeen Angus have commanded high prices, while Dairy Shorthorns have met with a level demand. Prices for

British Friesians were lower. Most other breeds have sold well.

Horses.—While there have been no outstanding prices for Shires, a level trade has been experienced at most centres, the demand for commercial purposes being very good. There has been an excellent demand for quality Clydesdale geldings and for mares and fillies for breeding stock. A fair trade has been done in Suffolk Punches and Percherons.

Pigs.—It is several years since there has been such a demand for pigs as that recorded in 1930. Large Whites have enjoyed a very successful year. There have not been such high prices as were made a year ago, but the demand all round has been very good. Middle Whites, Wessex Saddlebacks, and Large Blacks have all enjoyed a very level trade.

Sheep.—There has been a good trade in Oxford Downs, Border Leicesters and South Devons, and a satisfactory export demand for Shropshires, Southdowns, Suffolks, and Cheviots. Ryelands, Kerry Hills, Romney Marsh, and Blackfaced Mountain have not done quite so well.

Fat Stock.—As compared with the preceding year, prices of fat cattle in 1930 showed practically no change. During the first eight months of the year values were remarkably stable, and the general level was rather higher than at the corresponding period of 1929. A decline set in during the closing months, however, and in December the average for second quality cattle was 3s. 6d. per live cwt. lower than in the previous December. Prices of fat sheep in 1930 were fully as high as those ruling in 1929. During the spring and summer months they were higher, but the customary rise in December did not take place, and the average for second quality at the close of December was 11½, against 12½ at the close of 1929. Baconers failed to maintain the comparatively high level of prices ruling in 1929, and average second quality bacon pigs realised 15s. 4d. per score lbs., or about 6d. less than in 1929. The movement of pork pig prices was very similar to that of bacon pigs, but in the last three months of the year prices advanced and the annual average price for second quality was unchanged at 17s. 6d. per score lbs. The percentage increase in prices as compared with the average, 1911-13, was as follows:—

	1923.	1925.	1926.	1927.	1928.	1929.	1930.
Fat Cattle	51	41	27	35	33	33	33
Fat Sheep	87	83	57	50	67	57	60
Pigs, Baconers	57	63	80	44	35	60	53
Pigs, Porkers	71	64	84	55	38	65	65

—*The Agricultural Market Report.*

POULTRY.

The past year has been the most notable and, in many respects, the most prosperous of any previous period, and this branch of production has provided a partial or entire means of livelihood for many who might otherwise have gone under. The census taken by the Ministry of Agriculture on June 4, 1930, shows that on the holdings of an acre and upwards in England and Wales there were increases of 12 per cent. of fowls of all ages over the previous year, and 0.6 per cent. in ducks; geese showed a decrease of 1.6 per cent., and turkeys of 3.3 per cent. The net increase of all poultry was 11 per cent.

In 1930 the number of eggs in shell imported was 26,500,914 great hundreds, against 24,964,393 in 1929. There were substantial increases in the quantities imported from Denmark, Poland, and the Netherlands; and considerable decreases in those from Russia, Belgium, France, Egypt and Canada. Imports of dried and liquid eggs were as follows:

Year.	Quantities.	Values.	Per cwt.
	Cwts.	£	£ d.
1927	640,028	3,066,344	95 9
1928	583,680	2,718,792	95 4
1929	680,086	3,103,403	92 6
1930	760,669	3,006,155	79 0

POULTRY IMPORTS AND EXPORTS.

The imports of live and dead poultry into Great Britain and Northern Ireland in 1930 were:—

Country.	Quantities.	Values.
	No.	£
Alive:		
Irish Free State	971,055	171,327
Other countries	121,241	12,881
Total alive	1,092,306	184,208
Dead:		
Latvia	24,709	135,953
France	37,184	210,538
Austria	53,461	276,498
Hungary	85,666	441,323
United States of America	13,264	75,545
Irish Free State	115,584	631,193
Other countries	256,410	1,201,397
Total dead	586,378	2,973,487
Less re-exports	15,219	71,219
Net total dead	571,159	2,902,268
Gross total poultry	...	3,086,416

The returns show in quantities an increase in imports of dead poultry of 32,213 cwt., or 5.8 per cent., and in total values of £13,951, or 0.5 per cent. The average values of dead poultry were 100s. 11d. per cwt., a reduction from the previous year of 5s. 10d. per cwt., or 5.4 per cent.

Exports of live poultry in 1930 were in number 28,609, and in value £14,422, an increase in number of 6,908, or 31.9 per cent. The increase in values was only £71. On the face of it this is the most disappointing of all branches of the poultry industry, and requires consideration and investigation. The British dead poultry exported were 5,895 cwt., in value £40,796.

Estimates, which have been carefully revised, are submitted as approximately correct, based upon census returns and average values of eggs and poultry for 1930, are:—

	£
Estimated production in England and Wales	26,315,000
Estimated production in Scotland	3,077,000
Estimated production in Northern Ireland	3,569,000
Total production in Britain and Northern Ireland	32,981,000
Imports of eggs and poultry, inclusive of dried and liquid eggs, less re-exports	22,483,304
Total wholesale consumption	55,464,304

It will be seen, therefore, that in respect to values home supplies represent 59.4 per cent. and imports 40.6 per cent. of the total consumption.—*The Poultry Industry in 1930, by Sir Edward Brown.*

FISH.

The official figures giving the total weight of fish handled in Billingsgate Market from January 1st up to November 30th show the arrival, all told, of 174,337 tons, of which 19,032 tons were waterborne. These figures compare very closely with those of 1929, which were 174,804 and 20,317 respectively, but the increased tonnage that is handled outside the market makes the grand total a more impressive figure. Supplies of prime fish have again been short throughout practically the whole of the year, but, to counter-balance this, other classes have been well in evidence. Home-caught fish have shown further signs of the steady decline which became visible last year. Offal grades have continued to find a very good market, and rates for these classes have been far more stable than previously. The developments in the handling of foreign fish have proved a very important point in the general fish trade of Billingsgate Market, and many of the leading firms rely on such foreign fish for their main supplies. The regular arrival of these foreign supplies has had a good tendency towards the stabilisation of the market. Supplies of fresh salmon were on the short side practically the whole of the season and values were fairly high. The demand for all varieties of British-caught salmon was good, and Norwegian fish, too, found a good market. Intensive campaigns to popularise frozen salmon have been undertaken by leading firms handling Canadian and Newfoundland salmon in the Billingsgate Market, and reports show that these campaigns have met with very considerable success.

Grimsby and Hull have enjoyed excellent years and Swansea has done well. Fleetwood has not had such satisfactory trade as was hoped, and the fall in values has made the year disastrous for Aberdeen.—*The Fish Trades Gazette.*

The Board of Trade returns for the landings of sea fish of British taking in 1929 and 1930 include the following:—

TWELVE MONTHS ENDED DECEMBER 31ST.

Kinds of Fish (England and Wales).	Quantity.		Value.	
	1929.	1930.	1929.	1930.
	Cwts.	Cwts.	£	£
Cod	3,052,415	4,333,652	2,890,298	2,966,200
Haddock	2,059,064	2,445,588	2,308,577	2,131,

II.—COLONIAL AND FOREIGN PRODUCE.

TEA.

The year 1930 provided little cause for congratulation, but certainly cause for thankfulness that tea, of all the great agricultural industries, suffered least during the great slump. This is not due to favourable trade conditions, but solely to the fact that the growers are efficiently organised and agreed to a scheme of restriction of crops. The restriction scheme reduced output by about 50 million lbs., and climatic conditions assisted to the extent of a possible further 7 million lbs., or, if we include China tea, 22 million lbs., but, in spite of this, the value of common and medium tea has remained on a low, and to many estates, unremunerative level. The price of common tea throughout the year has been about 8½d.-9½d. per lb., and, save for the support of the large distributors, the price would at one time have gone considerably lower, the whole of the surplus stock being composed of common and low medium teas. Fine tea, on the other hand, has been a consistently strong market throughout the year, owing, in a large measure, to the fact that medium teas for purposes of breaking down the cost have been so plentiful and cheap.

The stock figures published at the end of each month have shown London with a record stock, and the end of the year left us with a stock of 26½ million lbs., or, roughly, seven months' requirements, while but for restriction this stock would have been sufficient for 8½ months. Restriction will be necessary for several years owing to the large area of young tea yet to come into bearing. We estimate that, on a conservative basis, there are 70,000 acres of immature tea, which will yield an addition to the world's tea supplies of 40 million lbs. when in full production in four or five years' time. In addition to the above new areas, a very extensive planting programme is being carried out by the Russian Soviet Government in the Caucasus.

It would appear that consumption in Great Britain has increased by at least 10 million lbs. during 1930, which is satisfactory, but there has been a very heavy increase in the sale of tea at 1s. per lb.—easily the cheapest beverage. Exports to other markets, both from London and from the East, are disappointing and show a decline of, roughly, 1½ million lbs., London exports being down by 6½ million lbs., India by 2 million lbs., Ceylon by 5½ million lbs., while the Netherland East Indies show an increase of 2½ million lbs. This does not necessarily mean decreased consumption; dealers and retailers alike are no doubt buying from hand to mouth owing to difficult trading and financial conditions. Owing to restriction and unfavourable weather, the world's production for the year shows a decrease of 57 million lbs., India, North and South, accounting for 48 million lbs., Ceylon 8 million lbs. and the Netherland East Indies 1 million lbs. The figures for Ceylon and the Netherland East Indies are shipments, production figures not being available.

The following table gives the exports from India during the last two years:—

EXPORTS FROM INDIA TO ALL COUNTRIES.

	1929.	1930.
NORTHERN INDIA:		
U.K. (Calcutta and Chittagong)	273,055,764	259,718,121
All other places	52,534,652	50,400,297
Total	325,570,426	310,118,418
Bombay by Rail	5,902,569	3,565,151
Bombay by Sea	6,627,315	6,029,409
Indian Ports	1,754,595	1,932,080
Burma	3,242,372	3,176,935
Total	343,081,297	324,281,993
SOUTHERN INDIA:		
United Kingdom	33,331,516	28,764,616
Colonbo	2,950,652	3,743,375
All other places	829,929	742,915
Total	36,912,097	33,250,906

The following table gives the exports from Ceylon from January 1st to November 30th:—

	1929.	1930.
United Kingdom	143,744,186	141,181,342
Continent	6,617,032	5,318,319
America	23,491,670	23,749,598
Australia	29,661,221	27,882,531
China	392,012	363,848
All other countries	26,225,349	24,018,202
Total (lbs.)	230,131,510	222,513,640

Ceylon, as usual, has come through this bad time better than the other growing countries, but many of her low-elevation estates have barely paid their way.

The following table give exports from the Netherlands East Indies:—

	1929.	1930.
FROM JAVA (January 1st to November 30th):—		
Holland	22,808,095	23,662,857
Great Britain	60,036,867	56,675,320
Australia	17,362,396	20,223,199
U.S.A.	4,682,176	4,800,871
Canada	696,502	601,724
Singapore	3,801,882	2,037,792
British India	516,054	650,677
South America	1,180,753	1,556,443
China	593,703	812,062
Russia	2,289,208	1,719,454
Mesopotamia	2,984,533	5,145,096
Continent	531,117	755,658
Other Ports	4,310,341	2,861,311
Total	122,032,068	121,532,197

	1929.	1930.
FROM SUMATRA (January 1st to October 31st):—		
Holland	6,809,009	9,931,570
United Kingdom	10,582,224	8,328,261
U.S.A.	64,638	22,176
Australia	375,358	72,103
Other Places	334,419	197,987
Total	18,165,648	18,552,097

Java and Sumatra undertook to restrict crops to the extent of about 10 million lbs., but the above figures show that they have failed to do so. The European-owned estates carried out their contract, but, as with rubber, the native grower is proving a real problem.

The following tables give the exports of China tea—black and green—from the opening of the season to the end of November:—

	1929.	1930.
FROM SHANGHAI:—		
Black.		
Green.		
Great Britain	4,937,976	343,862
Continent	1,347,486	2,177,173
Bombay	1,347,459	2,198,503
Central Asia	55,866	34,111
S. African Ports	1,871,185	15,402,840
U.S.A.	33,732	933
Canada	1,173,043	3,774,242
Russia	126,663	111,597
Australia	5,795,587	2,195,455
Other Ports	62,265	Nil
Total (lb.)	16,751,262	26,238,716
Total — Black and Green	42,989,978 lb.	31,627,991 lb.

	1929.	1930.
FROM FOOCOW:—		
London	1,242,585	1,042,106
France	409,095	171,174
Germany	916,485	738,111
Holland	852,105	505,182
Russia	1,843,368	857,030
U.S.A. and Canada	37,535	36,012
Australia and N. Zealand	258,070	563,911
S. Africa	8,145	11,863
S. America	66,300	48,114
Italy	114,920	57,482
Other Countries	98,490	119,029
Total (lb.)	5,847,098	4,150,014
To all Countries:—		
Shanghai—Black and Green	42,989,978	31,627,991
Foocow	5,847,098	4,150,014
Total (lb.)	48,837,076	35,778,005

Exports from Formosa from commencement of the season to the end of November, 1930:—

	1930.	1929.
U.S.A.	6,173,949	4,333,156
London	1,206,282	1,568,787
Various	164,365	139,236
Total	7,544,596	6,041,179

The past season has been one of the most trying and unsatisfactory ones on record. The crop was small and poor; the fine Keemuns were mostly rain damaged, but, being in short supply, sold at high prices. Green teas sold at much lower prices, but here again quality and make were poor.—Messrs Brooke Bond and Company, Ltd.

The Board of Trade figures for the United Kingdom for 1913, 1929 and 1930 are as follows:—

	1913.	1929.	1930.
Imports:—			
British India	203,459,657	306,734,835	289,997,494
Ceylon	110,936,427	153,095,061	152,668,213
China (including Hong Kong and Macao)	16,272,548	9,209,619	8,744,808
Java, Sumatra, and other Dutch possessions in the Indian Seas, and Netherlands	32,052,717	85,404,476	84,612,747
Other countries	2,322,115	4,723,767	5,419,883
Total imports	365,043,464	559,167,758	541,443,145
Stocks of all kinds at December 31st.	138,005,000	...	...
Re-exports total	57,555,651	95,022,790	88,402,300

COFFEE.

The troubles which the Brazilian Government experienced late in 1929, with which the fortunes of the coffee industry were so intimately connected, were followed by far greater anxiety in 1930. Then, owing to financial stress and the difficulty the Government encountered in its endeavour to raise foreign loans, the question as to its ability to continue to carry heavy accumulated stocks caused considerable apprehension. The huge crop of the 1927-28 season of over 25,000,000 bags was a severe strain on the Government, and, although the 1928-29 crop was small, that of 1929-30 was, and the one now being gathered promises to be, again in excess of requirements. At the end of 1929 the up-country stocks totalled 17,250,000 bags, and have now reached a total of over 22,000,000 bags. This quantity is not far short of the world's consumption for a year. Even under normal conditions the question of holding and financing such immense supplies would have given rise to some misgivings, but with the internal affairs of the country so long disturbed by civil war a heavy decline in prices was inevitable. Things are now settling down under the new Government, which is carrying on the policy of the old one so far as coffee is concerned. Superior Santos, c. and f., opened the year at 57s. 6d. a cwt. and closed it at 44s., while Rio No. 7 was quoted at 44s. in January and at about 30s. a cwt. in December.

The growth in production in mild coffee during recent years has naturally been an embarrassment to Brazil. About 10,000,000 bags are now produced apart from the South American crop. This is freely thrown on the markets of the world, and growers in the various countries indirectly benefit by the Brazilian policy. Central America and Africa are notably to the fore as producing countries, the latter finding a good market in the United Kingdom. Production and consumption during the year amounted to about 23,000,000 bags; this is, of course, leaving the surplus held by the Brazilian Government out of account. Shipments to America for the year totalled 11,600,000 bags, while about 11,000,000 bags were sent to Europe. The world's visible supply on December 31st stood at 5,054,000 bags, compared with 4,969,000 bags a year ago.—The Times Annual Financial and Commercial Review.

COCOA.

Production has maintained its upward trend. A somewhat severe drop in American consumption during 1930, especially during the latter months, forced down prices to a considerable extent. Fair fermented Accra, f.o.b., opened at 39s. 3d. per cwt., and, after remaining fairly steady for a month or so, the price gradually gave way until 24s. per cwt. was touched in the autumn, while spot Accra, f.f., declined from 44s. to 29s. per cwt. The fall in the value of the commodity caused Gold Coast native producers to store the beans pending an improvement in price. Harvesting of the new main crop began in October, and only about 26,280 tons had been shipped up to the end of November. The crop is estimated at about 200,000 tons, and, as two-thirds is said to have been gathered, there must be between 90,000 tons and 100,000 tons stored up country. This policy made business exceedingly difficult, but, largely as a result of it, quotations were 2s. per cwt. above the lowest at the close of the year. Other descriptions fell in sympathy with the general movement of the market. Trinidad, good to fine, on the spot London, opened at from 62s. to 65s., and finished at from 48s. to 52s. per cwt., while fine Ceylon closed at 77s. 6d., after opening at 95s. per cwt.

World production for the year is estimated at 547,000 tons, against 537,500 tons in 1929. Of this quantity the Gold Coast produced about 260,000 tons, against 236,000 tons a year ago, and Africa as a whole about 359,000 tons, compared with 353,000 tons in 1929. Countries outside Africa contributed about 188,000 tons, which is about equal to that of the previous year. World consumption is down by about 70,000 tons as compared with 1929. This drop is almost entirely due to the decline in the quantity taken by America, from 224,000 tons in 1929 to 165,000 tons in 1930. The European total, at 284,000 tons, is only slightly below the previous year's level. Germany took 75,000 tons, against 77,000 tons, Great Britain 56,000 tons, against 58,000 tons, Holland 50,000 tons, against 49,000 tons, and France 34,000 tons, against 35,000 tons. At the close of the year the industry was handicapped by heavy visible supplies. The stock at London and Liverpool was about 240,000 bags, and 350,000 bags were held by America. Hamburg and Havre held some 270,000 bags, beside which there were the unsold stocks in West Africa.—The Times Annual Financial and Commercial Review.

The Board of Trade returns for 1913, 1929 and 1930 are as follows:—

IMPORTS, CONSUMPTION AND STOCKS.						
	Quantity.			Value.		
	1913.	1929.	1930.	1913.	1929.	1930.
Raw cocoa—						
Imports	669,639	1,542,076	1,189,561	2,282,573	3,810,844	2,649,340
Home consumption	543,227	1,149,931	1,139,869	...	...	...
Re-exports	135,560	213,051	98,891	475,013	524,105	175,468

SUGAR.

Production, which had already overtaken consumption, continued to make strides in all growing centres of the world, and it is estimated that the huge total of 28,500,000 tons was reached. Against this figure there is a consumption total of roughly 26,500,000 tons. This constant weight of unwanted supplies had a detrimental effect upon prices. Cuban raw sugar (96 per cent.) at the opening of the year was about 8s. 6d. a cwt. c.i.f., and fell to as low as 4s. 8½d. in October, a price which is about equal to half the cost of production.

Cuba made isolated attempts to steady the market by returning to its previous policy of central selling, but such ample quantities were always forthcoming from other growing countries that it was felt that, unless the principal exporters of sugar would mutually agree to some scheme of universal restriction, there was little hope of achieving the object in view. From this there emerged what is known as the Chadbourne plan, the object of which is to limit exports, based on a system of quotas, during the next five years and, in the case of Java and Cuba, to segregate existing stocks and so prevent any undue flooding of the markets with unwanted supplies. The scheme seemed to be well on the way to success when the various interests met at the recent Brussels Conference, but Germany took exception to the amount allocated to her for export purposes, and it was owing to this point of disagreement that the conference had to be adjourned until the New Year, when the outstanding differences with Germany were settled at further conferences held in January.

Prices had advanced on general optimism with regard to the outcome of the conference. Cuban 96 per cent. rose to 6s. 6d. a cwt. c.i.f., but at the close of the year was 5s. 7½d. The importance of obtaining general European concurrence in any restriction movement is apparent, as the estimate for the crop now being harvested is 10,255,000 tons, including about 2,000,000 tons from Russia.

With the aid of the Government subsidy and the rebate allowed on raw sugar, sugar-growing in this country continues to flourish, and some 460,000 tons will be harvested this season, compared with about 330,000 tons last season. The balance of internal requirements, which amounts to about 2,000,000 tons, is provided mainly by the British refining industry, as the rebate on raw sugar prevents foreign refined from finding a market here, except in comparatively small quantities. Tate and Lyle's granulated closed at 19s. 3d. a cwt., having opened at 22s. 3d.—The Times Annual Financial and Commercial Review.

Licht's latest estimates of European crops are as follows:—

	1928-29.	1929-30.	1930-31.
Germany	1,851,351	1,566,782	2,500,000
Czechoslovakia	1,042,948	1,022,116	1,175,000
Austria	107,321	120,391	150,000
Hungary	220,062	246,831	225,000
France	903,075	909,622	1,160,000
Belgium	279,290	252,048	275,000
Holland	319,937	126,871	300,000
Denmark	170,000	134,300	165,000
Sweden	160,860	121,404	180,000
Poland	756,889	928,776	770,000
Italy	391,684	415,169	415,000
Spain	266,246	273,955	310,000
Yugo-Slavia	128,840	131,639	100,000
Roumania	133,890	82,230	150,000
United Kingdom	222,590	331,116	480,000
Russia	1,446,000	950,000	2,000,000
Other countries	97,977	109,880	145,000
Grand total, Europe	8,498,960	8,261,860	10,500,000

* Including 10,000 tons of sugar from Dutch beets.
† Excluding 10,000 tons of sugar from beets exported to France.

Visible supplies at December 31, 1930, were 7,018,000 tons, as compared with 5,614,000 tons a year before. According to Messrs. C. Czarnikow, Ltd., the preliminary result shows the cane crop of 1929-30 at 19,128,000 metric tons raw value and beet crop at 9,332,000 metric tons, against 19,286,000 and 9,584,000 metric tons in the preceding season.

300,000 barrels over the course of the year. Such intelligent co-operation would have been considered impossible a few years ago. Outside the American oil industry the restriction of crude-oil output was inconsiderable. The operating companies in Venezuela have now agreed to cut their production to 10 per cent. below the 1929 level, but this decision was only arrived at towards the end of the year. The only countries which increased their output considerably were Russia and Roumania, the first in accordance with Government plans, the second in accord with private inclinations. In Mexico the decline in output was due to natural causes. The next table gives the estimated world production for the year as compared with 1929:—

WORLD PRODUCTION OF OIL. (In 1,000 Barrels.)			
Country.	1929.	1930 (est.)*	
U.S.A.	1,007,323	900,000	
Venezuela	137,472	139,000	
Russia	99,507	126,000	
Mexico	44,658	40,000	
Persia	42,145	44,000	
Roumania	34,689	40,000	
D. E. Indies	38,072	36,000	
Others	80,555	78,500	
Total	1,484,451	1,403,500	

* Estimates of Mr. Garfias, Foreign Oil Department of Henry L. Doherty and Company.

No figures are published of world oil consumption, but some idea of the state of demand and supply may be obtained from the figures of American domestic production and imports as against American domestic consumption and exports, which cover nearly 80 per cent. of the world's oil trade. Estimating from the actual figures for the eleven months ending November 30th, published by the U.S. Bureau of Mines, we arrive at the following comparisons:—

U.S. SUPPLY AND DEMAND OF ALL OILS. (In Thousands of Barrels.)			
	12 months, 1929.	12 months (est.), 1930.	
Supply—			
Domestic production	1,062,649	959,262	
Imports	108,710	106,449	
Total new supply	1,171,359	1,065,711	
Demand—			
Domestic consumption	940,083	924,724	
Exports	153,120	158,834	
Total demand	1,103,203	1,083,558	
Stocks (at end of period)	682,069	672,806*	
Day's supply (at rate of consumption for period)	228	226*	

* Stocks at November 30, 1930.

Instead of an over-supply of 68,156,000 barrels, which was the unfortunate record of 1929, supply was brought down below the level of demand in 1930 by no less than 18,000,000 barrels. It will be observed that domestic consumption showed only a very slight decline. Actually, the consumption of gasoline, which is the most important product, showed an increase last year of 5.7 per cent. over that of 1929.

In spite of the restriction of output, crude-oil prices were not maintained. Mid-Continent crude oil of gravity 36° was reduced from \$1.45 to \$1.20 per barrel in February, was raised to \$1.29 in April, and was reduced to 95 cents per barrel in October, at which price it is still quoted. In California, Sante Fé Springs crude of 29° gravity was raised from \$1.15 to \$1.37 per barrel in March, and was reduced to \$1.28 in September, at which level it remained for the rest of the year. Gasoline prices weakened steadily from April. Taking the "U.S. motor" grade of petrol ex Oklahoma refinery, there was an advance of 1 cent to 7½ cents per gallon in the first four months of the year, but thereafter the price fell month by month until it was no more than 4 cents per gallon in December. Thus there was a fall of 45 per cent. from the peak level. The average price for the year worked out at 5.85 cents per gallon, as compared with 7.43 cents in 1929, a decline of 21.3 per cent. The prices of gasoline (petrol) in the markets outside America also found lower levels. The American Oil Exporters' Association endeavoured for seven months to maintain its export price at 8 cents for the "U.S. motor" grade of gasoline, but this struggle against economic laws was finally abandoned in September, when each member of the association was left free to fix individual export prices. In Great Britain the retail price of petrol was cut by 2d. a gallon in September as a result of the failure of the American Oil Exporters' Association, and the 4d. discount in favour of the London and Home Counties zone was later applied to the rest of England and Wales, so that the retail price to the motorist south of the border is now 1s. 4½d. per gallon. On the Continent prices were cut even more severely, and in Germany the price-fixing agreement between the leading distributors was abandoned. The slump in tanker freight rates

was, of course, a contributory factor in forcing down the market prices of oil products in the export markets. At the beginning of the year the rate for carrying petrol from the Gulf to U.K. or Continental ports was 30s. to 31s. per long ton, but from March it declined sharply, until at the end of the year it was no more than 10s. per ton. Similarly, rates for "dirty" tankers fell from 22s. 6d. per ton at the beginning of the year to 10s. per ton at the close. Consumption of refined oil products in European markets was, however, satisfactory, the imports into Great Britain showing the normal increase, as the next table reveals:—

U.K. OIL IMPORTS AND EXPORTS FOR 1929 AND 1930.			
	1929. Gallons.	1930. Gallons.	
Imports—			
Crude oil	487,348,477	460,964,202	
Motor spirit	810,084,428	954,609,176	
Fuel oil	405,610,933	491,059,299	
Others	492,314,528	498,278,155	
Total	2,195,358,366	2,404,910,832	
Total value	£43,392,774	£46,486,337	
Re-exports—			
Motor spirit	78,936,245	45,889,477	
Fuel oil	3,063,020	5,719,326	
Others	20,228,144	20,440,324	
Total	102,227,409	72,049,127	
Total value re-exports	£2,989,387	£2,042,867	
Exports—			
Motor spirit	28,857,063	32,104,557	
Fuel oil	38,380,131	37,182,797	
Others	50,460,901	42,157,039	
Total	117,698,095	111,444,393	
Total value exports	£3,583,498	£3,499,214	

Earnings of oil companies which have so far been published reflect the difficult trading conditions ruling last year. For example, the Shell Union Corporation, the American subsidiary of the Royal Dutch-Shell group, was forced to pass its common stock dividends after June. Economies in operating expenditures were the order of the day. The Standard Oil Company of New Jersey reabsorbed the Anglo-American Oil Company, its distributing subsidiary in Great Britain. The Standard Oil Company of New York and the Vacuum Oil Company sought the permission of the Government authorities to merge. So critical did the situation become in the American oil industry that the Washington Government entirely changed its attitude towards restriction of output. No longer is it considered a crime for American oil companies to co-operate to keep oil off the market. Over-production is now deemed a waste of natural resources. Nevertheless, apart from California, where a Conservation Law has been passed, it is doubtful whether restriction can be legally enforced in the oil-producing States; and there were signs already at the close of the year that the independent producers were becoming restive under a restriction scheme which did not even give them the benefit of stable prices.

III.—BEER, WINES AND SPIRITS.

The two outstanding features in the year 1930 were the increase in the beer duty and the Royal Commission on Licensing. The Chancellor of the Exchequer proposed to raise the beer duty, as from April 15th, by 3s. per standard barrel, leaving the rebate of £1 per barrel unaltered. That was an increase of 1d. per gallon, too small to justify any alteration in retail prices and on the question of a possible reduction in gravities the Chancellor had received assurances from the brewers. The estimated yield of the additional duty was £3,100,000 in a full year and £2,750,000 in the current year.

The number of barrels brewed has risen slightly, but the average gravity in the fiscal year preceding the imposition of the duty underwent the first reduction for many years, as the following table shows:—

Year to Mar. 31.	Duty. s. d.	Standard Barrels.	Bulk Great Britain and all Ireland.	Average Gravity.
1914	7 9	36,057,913	37,558,767	1,052.80
1920	7 0	25,115,196	35,047,947	1,039.41
1921	100 0	26,729,835	34,504,570	1,042.61
1922	100 0	23,513,774	30,178,751	1,042.88
1923	*100 0	18,564,212	23,948,651	1,042.72
1924	*100 0	19,890,033	25,425,017	1,043.04
1925	*100 0	20,954,392	26,734,825	1,043.12
1926	*100 0	21,034,419	26,765,610	1,043.23
1927	*100 0	19,745,199	25,100,461	1,043.28
1928	*100 0	19,962,997	25,359,154	1,043.31
1929	*100 0	19,252,986	24,530,155	1,043.31
1930	*100 0	19,523,732	24,984,168	1,042.52

* Less a rebate of 20/- per bulk barrel.

The yield of beer duty in 1929-30 was £77,155,000, against £76,114,703 in 1928-29. For the year ended March 31, 1931, the estimate is £80,750,000. The acreage, estimated yield and average price of hops are shown below:—

Year.	Acreage.	Produce. Cwts.	Yield per Acre. Cwts.	Average Price. £ s. d.
1900	51,308	347,894	6.7	5 18 8
1914	33,661	507,258	13.8	4 3 9
1920*	21,002	258,042	11.7	19 10 0
1921*	25,133	256,172	9.5	19 10 0
1922*	26,452	312,000	11.4	12 0 0

1930	19,997	253,000	13.1	

* Hop Controllers' figures.

—Messrs White, Tomkins and Courage, Ltd.

Wines and Spirits.—Despite the lower statistical levels to which the wine and spirit trades have descended during the last year, there is reason for satisfaction that the condition is no worse. Mr Snowden's Budget in April left the trade in *statu quo* so far as the duty rates were concerned, although he disturbed what equanimity was remaining by adding to the income tax. The fear that the Chancellor was preparing to increase the wine duties, however, was well exemplified by the trade returns. Whereas during the three months January-March, an increase was shown of 1,032,553 gallons of foreign and Empire wines cleared for consumption compared with the corresponding quarter of 1929, in April-June there was a decline of 393,886 gallons. For the whole year there was a decrease in clearances amounting to 674,242 gallons. This reveals the uneven spread of activity, and, what is more important, of financing to which the trade has to submit, owing to the annual meddling which is esteemed necessary to safeguard the national interest. Orders which retailers issued were chiefly for small quantities, for they are wary of assuming any part of the taxation burden if they cannot immediately realise. Thus, most wholesale firms of any size, in order to be able to ensure quick delivery, and for various other reasons, have had to maintain a fair stock in hand, thereby suffering the burden of heavy financial outlay to the Exchequer. During the summer months it was very difficult to stimulate fresh business in any section of the trade, but towards Christmas there was a spate of stock-filling orders, though not of such dimensions as would in past years have been deemed satisfactory. It would appear that the distributing branch is still understocked, and it is hoped that there will be greater activity in buying during the early weeks of the New Year.

The following table shows the imports and clearances of wines and spirits for the past two years:—

	1929.		1930.	
	Imports. Gallons.	Clearances. Gallons.	Imports. Gallons.	Clearances. Gallons.
French (still)	2,084,880	2,024,503	1,848,995	1,802,131
Do. (sparkling)	720,233	654,755	593,950	610,354
Portuguese	5,943,501	5,716,320	5,098,550	5,072,227
Spanish (red)	1,144,137	871,491	977,681	925,099
Do. (white)	1,540,023	1,349,350	1,636,721	1,516,185
Italy	706,769	677,535	725,542	683,397
Germany	263,990	238,699	230,434	235,615
Madeira	42,273	27,115	37,728	27,088
Empire wines	2,717,686	2,762,854	2,643,671	2,784,011
Other countries	76,619	99,857	71,647	92,130
Total	15,240,111	14,422,479	13,864,919	13,748,237
Brandy	509,638	540,663	459,599	487,757
Rum	1,542,518	830,265	1,729,337	651,456
Other sorts	1,099,837	323,673	743,465	294,065
Total	3,151,993	1,694,601	2,932,401	1,433,278

The complete statistics of British wines on which excise duty was paid are not yet available; the nine months' total was 1,865,860 gallons, compared with 1,774,842 gallons in 1929. Home consumption of spirits during 1930 amounted to 1,433,278 gallons, a decline of 261,323 gallons from the preceding year. Imports fell by 219,592 gallons. The excise statistics of home consumption of British spirits are not yet available, but an estimate made by adding the figure of the last quarter of 1929 to that for the first three quarters of 1930 shows a total of 10,292,498 gallons against 10,969,962 gallons in 1929.—*Ridley's Wine and Spirit Trade Circular.*

IV.—RAW MATERIALS.

COTTON.

The following is taken in part from the Annual Review of Messrs Robert Barbour and Brothers, Ltd.:—

American cotton from the beginning of the year has steadily declined in value. From 9.42 at the close of 1929 middling spot by the end of March was 8.57, and a further 1d. had been dropped by the time the first six months was concluded. At the end of the September quarter the quotation stood at 5.70. During October there was a recovery to over 6½d. per lb., but fresh weakness developed later, and on December 15th the lowest point of the year was touched at 5.12d. The difference between the top and bottom rates has been 4.48d. per lb., compared with 1.92 last year. The average price of middling American cotton at Liverpool during the year was 7.42d., against 10.28d. in 1929 and 10.9d. in 1928. The 1929-30 crop was given as 14,821,000 bales, against a first estimate of 15,543,000 and a final one of 14,919,000.

In Egyptian cotton F. G. F. Sakellaridis—14.15 when the year opened—was slightly higher than this at the end of March, but a decline of nearly 2d. per lb. was recorded by the time June was out. The close of the September quarter found the price further reduced to 9.75 and the lowest quotation of the year—7.60 in December—has not previously been touched since 1915. The average for the year was 11.95d., against 17.02d. in 1929 and 19.2d. in 1928. The current season started with expectations of a bumper crop, but ideas of the probable outturn began to be reduced as the season progressed, and under the circumstances the somewhat surprising decline can only be put down to the markets having discounted in advance the reduction in the official estimates and to the influence which is generally found to be reflected by whatever movements take place in the American growth.

International Cotton Statistics.—The International Federation of Master Cotton Spinners report the world consumption of American cotton in 1929-30 at 13,023,000 bales, against 15,076,000 bales in the preceding season and

15,407,000 in 1927-28. Total world's mill stocks of American cotton were, at July 31, 1930, 1,985,000 bales, against 2,129,000 at July 31, 1929. Stocks of all kinds of cotton were 4,437,000 bales, against 4,863,000 bales at the end of July, 1929. Probable consumption in 1930-31 has been estimated at 11,400,000 bales.

American Cotton.—The following table shows the production and consumption of American cotton during a number of years, and is based on the annual statements of the Liverpool Cotton Association, Ltd.:—

* Not shown separately.

WOOL.

The year 1930 opened with a slump of unexpected severity, and was productive throughout of anxiety, disappointment and uncertainty. The interval after

the December close was marked by heavy accumulations of wool due to the restricted offerings in Australia, and this, added to the increasing stocks of tops on the Continent, especially in France, induced a lack of confidence in prices. The actual decline far exceeded expectations, and the January series opened with merinos 15 to 20 per cent. and crossbreds fully 20 per cent. below last year's close. A reduction of offerings led to a firmer tone, and the sales closed with an appreciation of 5 per cent. on opening rates. In the interval top prices fell, due to forced realisations, and this improvement was not maintained when the March series opened, though the fall was less than anticipated. Merinos opened 5 per cent. lower and sold with a hardening tendency throughout: crossbreds 10 per cent. down at the opening closed only 5 per cent. lower. The home trade, in spite of the threat of a strike in Yorkshire, was particularly active, encouraged by the reduction of the Bank rate to 4 per cent. and later to 3½ per cent. This strength went far to re-establish confidence, a marked improvement in trade was apparent on the Continent, and stocks of tops were much reduced. The home trade, owing to the strike, was able to reduce stocks of semi-manufactures considerably, and, in consequence, when the May series opened, showed an unexpected buying power. The sales closed at their best point, with good merinos 10 per cent. and inferior often 15 to 20 per cent. higher than in March. Crossbreds had regained the March fall.

This satisfactory state of affairs proved to be but transitory. The long duration of the strike had lost to home manufacturers part of their season's orders. In June top prices again declined, and the activity on the Continent gradually died down, and, when the July series opened, the demand was insufficient to hold May levels. Combing wools were well competed for at a decline of 5 to 7½ per cent., but carding wools, as throughout the year, were difficult to sell. Broadhaired merinos, in the absence of Yorkshire demand, fell 10 per cent., but at this level found support from Continental spinners, and some of the fall was regained. Crossbreds were in small supply, but in spite of this fell 7½ to 10 per cent., as the cheapness of merinos was beginning to make itself felt. In September a heavy offering following on an exceptionally quiet interval proved to be too much for the market. Good wools, suitable for the Continent, though well competed for, opened in buyers' favour and closed 7½ per cent. lower. Ordinary merinos, 5 per cent. lower at the opening, slipped away, and were quite 10 per cent., and in some cases 15 per cent. down by the close. Crossbreds, 10 per cent. lower at the opening, eased further, and, by the close, were 15 per cent. lower for fine and as much as 20 per cent. for medium and coarse. Following this series there was a considerable turnover both at home and on the Continent, due partly to rush deliveries to Canada before the imposition of the new tariff, but at prices below London parity. Consequently, prices in the November series were expected to conform and the sales again opened with a fall. Merinos were 5 to 7½ per cent., and crossbreds (influenced by competing wools from South America, where the exchange position favoured the buyer to the extent of 20 per cent.) were 10 to 15 per cent. lower. Merinos failed to maintain this level, and eased a further 5 per cent. Crossbreds, of which a considerable quantity was withheld, continued on about opening level and closed in sellers' favour.

Thus the year closes with prices at their lowest point. Compared with this time last year, spinners' and topmakers' merinos are 35 per cent., good and medium pieces 35 to 40 per cent., faulty pieces 45 per cent., fine crossbreds 40 per cent., medium 50 per cent., and coarse 55 per cent. lower.

Compared with July, 1914, spinners' merinos are 25 per cent., topmaking 30 to 35 per cent., good pieces 30 per cent., faulty pieces 40 per cent., fine crossbreds 45 per cent., medium 50 per cent. and coarse 45 to 50 per cent. lower.

We give below our usual statement of the value per lb. clean of a few representative descriptions in July, 1914, and in December in recent years:—

	N.S.W. Good.	Q'land. Good.	Victorian Good.	South Aust. Average.	Cape N.Z. Washing.	Australian & N.Z. Crossbred.			
						Fine (Super).	Fairly Fine.	Med.	Coarse
July, 1914	d. 32	d. 30	d. 31	d. 29	d. 23½	d. 27	d. 25	d. 17	d. 15½
Dec., 1919	135	110	138	108	68	95	70	40	29
" 1921	46	39	43	31	23	35	21	10½	8½
" 1923	65	63	65	58	48	52	42	23	19
" 1924	82	78	80	68	60	65	58	37	33
" 1926	52	49	48	42	34	42	33	19½	17½
" 1927	57	55	55	47	38	44	35	23½	21½
" 1928	50	49	48	43	34	41	35	25	22½
" 1929	35	34	34	27	27	23½	19½	9	18
" 1930	23	22½	22	18	15	18½	14½	9	8½

Average value of the Colonial bale:—1914, £17; 1920, £52; 1921, £18; 1923, £28; 1924, £39; 1925, £29; 1926, £26; 1927, £27; 1928, £30; 1929, £23; 1930, £14½.—Messrs Schwartz, Buchanan and Company.

The following table, compiled by *The Weekly Wool Chart*, shows the amount of wool retained in the United Kingdom in the years stated, the figures for 1930 being for the twelve months ending November:

	(In million lb.)			
Imports, foreign and colonial wool	1913.	1928.	1929.	1930.
Re-exports, ditto.....	801	779	814	786
Retained.....	307	339	331	300
British clip retained	494	440	483	486
Total retained by trade.....	95	72	66	82
	589	512	549	568

The quantity of wool retained was larger than in 1929, but consumption obviously must have been less, even allowing for a more extended use of virgin wool in place of re-worked wool. The balance has to be accounted for by increased stocks, mainly in crossbred and particularly clothing wools. The actual consumption in 1930 would probably be about 500 million lb., which compares with an estimate of 515 million lb. for 1929, 525 million lb. for 1928, 555 million lb. for 1927, and 580 million lb. for 1924.

FLAX, HEMP AND JUTE.

Hard fibres have experienced a severe decline as the result of the culmination of developments initiated three years ago in East Africa and in the Dutch East Indies. Undoubtedly the check to long-range buying is responsible for the strain at the producing end, and a balance will not be reached until consumers resume a normal buying policy.

Italian Hemp.—A restricted demand for hemp goods and relatively cheaper flax combined to reduce consumption and trading was from hand to mouth throughout the year. From the beginning of the year until the second half of March the market was dull and the price of SB fell from the opening figure of £54 in January to £48 at the beginning of March. Later in March a sudden burst of buying took place which advanced prices £4 to £5 a ton from the lowest point, but the higher level was not maintained. The market at the end of the year was quiet and the value of SB was £32 10s. per ton c.i.f. United Kingdom.

Russian Hemp.—Trading in Russian Siretz hemp during the year was of a spasmodic nature, and as a general rule this material was only purchased by consumers when offered at prices relatively lower than those of other soft hems. Good medium Siretz was obtainable at £40 per ton in January, but no transactions of note were recorded until the end of March, when the Soviet organisations reduced prices drastically, and succeeded in clearing a large part of their stock in Riga. About a month later, other sales were carried through, at a further reduction in price, and from then until the end of the year a retail business was carried on by those merchants who held stocks. In the summer and autumn months considerable quantities of lower-grade Siretz were purchased in substitution for Indian hems, but later in the year many consumers changed over to Italian Strappatura and tows. The value of good medium Siretz at the close of the year was £25 per ton.

Indian Hemp.—There was a sharp fall from the end of January until a level was reached competitive with other fibres, but from the spring onwards the market remained

very steady at basis £20 to £21 per ton for fine Jubblepore. The prospects of business in new crops are not encouraging. Quotations in London have been steadily falling to keep pace with the decline in other fibres, and are now at the lowest level on record, £14 per ton for fine Jubblepore. On the whole the season's quantities show a marked improvement.

Flax.—In January the price of BKKO was £64, basis 1, and of Livonian flax £65 basis R, and sales in the early part of the season totalled fully 25,000 tons. During the month of March there was a certain amount of activity and important yarn business was transacted on the Continent and in the United Kingdom. Unfortunately this improvement was short-lived and the market continued to sag until the end of the year, when the price of BKKO stood at £35, and Livonian R at £38.

Jute.—This market has been overshadowed throughout the year by the accumulation of stocks of hessian in Calcutta. From an opening figure of £28 per ton for Firsts marks the price fell to £22 10s. in March. There was a temporary recovery in April, but this revival was short-lived, and the promise of a bumper crop and reduction of working hours in the Calcutta mills, coinciding with one of the worst periods of trade in history, brought about a violent reaction. The director's estimate of 11,231,000 bales against 9,767,270 bales last season, precipitated a débâcle and a low record of £15 per ton has been reached for Firsts marks—a fall of over 46 per cent. The year closed with a very weak market, an absence of support and pressure to sell.

Manila.—January opened with the higher grades S1's at £49, "G" at £37, J2 at £36, "K" at £32 10s. and M1's at £27 10s., but with intermittent reactions prices continued to droop until the seasonal demand in September arrested the fall. Since then the market has dragged along the bottom and the above-mentioned grades closed the year at £36, £23 10s., £23, £22 and £21 10s., representing in the worst case a depreciation of about 37 per cent. Consumption shows a decrease in Japan and America. Stocks are undoubtedly low in both hemispheres, but until improved conditions and confidence are restored supplies seem ample for the existing demand. European consumption, however, shows an expansion.

SILK.

In spite of the conservative policy to which the industry had adhered for some months past, the world crisis affected silk together with all other commodities. It is now cheaper than it has ever been, 40 per cent. lower than in January, 1930, and only one-seventh of its record value in 1920. The trade has kept its head remarkably well in the circumstances.

Last winter had been rather encouraging, but depressing news came from the primary markets: the Chinese exchange was declining and stocks of silk were accumulating in Japan. Reelers began to make concessions in Europe as well as in the East, and the decline in value made buyers cautious. At June 30th there remained 128,000 bales unsold in Yokohama and Kobe, against 6,000 bales on June 30, 1929. Purchases by short sellers strengthened the market in July, but manufacturers relied on hand-to-mouth purchases, and in September Japan filatures No. 1 to 1½ fell to 555 yen. In October the United States realised how cheap real silk was

and their purchases, which have continued in substantial quantities, together with the bear covering induced by this revival of interest, advanced Japan quotations by 10 per cent. In Lyons also more interest is being shown in natural silk.

HIDES AND LEATHER.

Few if any firms engaged in the hide and leather trades will have cause for satisfaction with their trading results for last year, as, although prices for many descriptions of raw hides and skins were below the pre-war level, the price of the finished product offset any benefit from that. The only reason why the trade as a whole has not been involved in any great financial difficulties is the conservative policy adopted in past years. Prices for raw hides from domestic cattle were on a low level during most of 1930, and, with anything like a normal inquiry for leather, this would have proved of very material advantage to the tanning trade. Demand for the finished product was, however, very much less than the producing capacity of the industry. Merchants and dealers in hides in consequence had to face not only lower prices and less profits, but also smaller turnovers.

Although a real comparison with pre-war prices is rather difficult in regard to certain classes of hides, owing to an alteration in the method of classification, the following will, to some extent, indicate the position. During the last week of December, 1913, Manchester best ox hides, which are looked upon as a standard for the English product, were realising from 7½d. to 6½d. per lb., while for the equivalent week of last year best hides, free from warble holes, were selling at from 6½d. to 5½d. per lb. Foreign raw hides show a similar state of affairs; Frigorificos, at the end of 1913, were changing hands at about 9½d. per lb., while at the end of last December 6½d. was the most that could be obtained. Packer hides in the United States appear to have fared worse than South American hides, native steers commanding only 10 cents at the end of last year, whereas at the same time in 1913 they were fetching as much as 19½ cents. It can, therefore, be safely assumed that world supplies of hides are more than sufficient to meet the needs of the tanning industry, and that at any rate for the time being there is little prospect of any startling upward trend in values.

Although reduced prices obtained for practically all classes of heavy and light leathers, sales on the whole were confined to very narrow limits for the first six to nine months of the year. A noticeable incident in connection with sole leather was the launching of a national advertising campaign by the United Tanners' Federation: this was done with the object of counteracting the use of substitutes for soleing purposes. That the campaign met with a considerable measure of success is indicated by the fact that sales of bottom leather improved considerably during the last quarter of the year, and, although no definite information is available as to what extent sales of substitutes have fallen off, boot repairers report a much smaller enquiry from the public for this class of material.

Tanners experienced most difficulty in regard to disposing of their offal—shoulders and bellies. The market for home products had to face the competition of foreign imports practically throughout the year, and as these were offered at low figures turnover was restricted, with the result that stocks accumulated and low prices prevailed for the best part of the time. Sales of dry hide leathers suffered as a result of the poor orders received by shoe manufacturers, and the only demand which could be considered as reaching anything like a fair level was that for English and wet-salted bends in the better tannages. It can be safely assumed that producers of footwear have had to face a set of conditions similar to those which have confronted the tanner, and the only section of the industry which is likely to be satisfied with its profits for the past year is the shoe-retailing section, particularly the large multiple concerns.

Definite steps were taken during the course of the year to deal with the damage caused by the warble fly. This pest is responsible for a large annual loss to farmers, butchers and tanners on account of the destruction it causes to cattle hides. The Worshipful Company of Leathersellers took an active part in the various conferences that have been held on the subject, and, from the progress already achieved, it would appear that a determined effort is being made on the part of the trade of this country to stamp out the pest.

Producers and distributors of upper leathers have perhaps done slightly better than their colleagues in the heavy section, but even so trade for the major part of the year was dull and uninteresting. With orders for footwear confined to small quantities the requirements of the shoe manufacturer for leather were restricted to immediate needs, and, although the aggregate number of small purchases made for a fair turnover, the trouble met with in fulfilling them was often far greater than would be associated with bulk purchases. The main demand was concentrated on a few particular lines for which a moderate inquiry was experienced. Producers of novelty skins for shoe-upper purposes, however, had a very quiet year, and some considerable sacrifices had to be made in order to negotiate sales. The imposition of a tariff on leather imported into the United States was responsible for some dislocation, and certain firms who in the past had done quite a respectable turnover with that country found this business cut off. So far there has been no indication of a revival of this export trade, but this is possibly more due to the wave of depression that has of late been experienced in the United States than it is to the tariff. For the present year everyone is hoping for a better turnover at more remunerative prices. Trade at the moment, however, does not show much prospect of this, but, on the other hand, there is the feeling that values for raw material have touched bottom, and that we have reached the trough of the wave of depression which has for so long existed in the hide, tanning, leather and allied industries.

The following is a statement of imports and exports of hides and leather during 1913, 1929 and 1930:—

of superphosphate in Great Britain and Ireland for the fertiliser year 1929-30, which was 575,600 tons as against 556,400 tons in 1928-9. The increased production of sulphuric acid by the zinc-smelting companies, together with the lower total production, has naturally reacted unfavourably on the other producers. Further large additions have been made to the contact plants operating in England.

Owing to the slackness in the galvanising trade the total demand for hydrochloric acid has fallen off. The development of the synthetic nitrogen industry has rendered available cheap ammonia in large quantities, and the proportion of nitric acid produced by the old method of treating natural nitrate of soda with sulphuric acid has therefore declined with the development of ammonia oxidation. Owing to the general agricultural depression the rate of increase in the total consumption of nitrogen throughout the world (except in the case of Spain and Portugal) fell off compared with previous years, but as synthetic nitrogen gained relatively at the expense of Chilean nitrate there was still an absolute increase in the consumption of synthetic nitrogen.

The decline in the chlorine products group has been relatively slight, though in bleaching powder severe competition was experienced in certain overseas markets. The depression in the cellulose acetate silk section of the rayon industry is almost entirely responsible for the decline in home deliveries.

The consumption of glycol in explosive manufacture continues to expand. The market for crude glycerine has been consistently dull throughout the year, with very low prices. Production in consequence has been further curtailed. European stocks have been practically cleared, and those in America substantially decreased. The demand for refined qualities has been good generally, and new channels of consumption for these grades have developed.

Two large plants have been brought into production this year by Imperial Chemical Industries at Billingham and the Distillers Company at Hull, in which acetic acid is produced by the oxidation of acetaldehyde. A plant has also been erected for the production of ethyl and methyl chlorides. There is now sufficient capacity in the United Kingdom for all requirements for these substances, and the quality is of a very high order. The main outlet for ethyl chloride is in dyestuffs manufacture.—*From an article in The Manchester Guardian Commercial Annual Review.*

Nitrates.—Towards the end of the fertiliser year 1929-30 a number of new synthetic plants came into operation, and there was considerable pressure to sell in those markets which are capable of absorbing nitrogen in the summer months. If indiscriminate selling had been allowed to persist a general break in nitrogen prices would undoubtedly have occurred. A one year's agreement was reached in the summer between the organised producing groups in Belgium, Czechoslovakia, France, Germany, Great Britain, Holland, Italy, Norway and Poland. This agreement led to an arrangement with the Chilean Government and producers, and the breathing space thus secured will be used to endeavour to secure a more permanent basis of co-operation for the future. The following table shows estimates, for which strict accuracy is not claimed, of production and consumption during recent years:—

WORLD PRODUCTION AND CONSUMPTION OF PURE NITROGEN.
(In Metric Tons.)

Production:—	1927-8.	1928 9.	1929-30.
By-product sulphate of ammonia	368,000	376,000	380,000
Synthetic sulphate of ammonia	367,000	485,000	455,000
Cyanamide*	735,000	861,000	835,000
Nitrate of lime	204,000	210,000	263,000
Other forms of synthetic nitrogen	105,000	136,000	135,500
Other forms of by-product nitrogen	236,000	365,000	423,000
Chilean nitrate of soda	54,000	51,000	62,300
Total production	1,724,000	2,113,000	2,178,400
Consumption:—			
Manufactured nitrogen	1,249,605	1,452,630	1,596,330
Consumption of Chilean nitrate of soda	392,722	419,450	362,390
Total consumption	1,642,327	1,872,080	1,958,720
Agricultural consumption about	1,490,000	1,684,000	1,721,000

* Excluding part of the cyanamide made in Japan, which is included under synthetic sulphate of ammonia.

† Including ammonia liquor used for industrial purposes.

In view of the fall in the prices of agricultural produce and the unfavourable financial position of farmers in many countries, it appears doubtful whether any considerable increase in the consumption of nitrogen can be looked for during 1930-31.—*Annual Report of the British Sulphate of Ammonia Federation, Ltd.*

VEGETABLE OILS AND OILSEEDS.

The oilseed crushing and vegetable oil industry of the United Kingdom experienced a very trying and disappointing year. Supplies of oil-bearing materials were abundant and again emphasised the fact that production is much greater than the capacity to consume, a position made worse by the unsettled financial and economic conditions and the rapid fall in prices which were the ruling characteristics of the trade over almost the entire period. In the circumstances oilseed crushing has been carried on under serious disadvantages and, owing to the poor prices obtained for the products, very often at an absolute loss. It is therefore not surprising to learn that the quantity of oilseeds, nuts and kernels imported into the United Kingdom during 1930 showed a substantial decline. The gross receipts of oilseeds were 924,482 tons, against 1,153,988 tons in 1929, and nuts and kernels 327,790 tons, against 385,620 tons. The re-exports were very small, viz., 17,243 tons, against 30,648 tons, and for the most part consisted of copra. The most notable feature, perhaps, was the small import of linseed, which at 224,563 tons was 60,000 tons behind the previous year, and only about three-fifths of the annual requirements of this country. Cottonseed at 519,812 tons was 50,000 tons down and soya beans at 105,560 tons showed a decline of nearly 100,000 tons. Castorseed was rather a larger total, but rapeseed at 9,935 tons was less than one-third of the quantity imported in 1929, owing to the failure of the usual sources of supply. Palm kernels, ground nuts and copra together gave a total of 327,790 tons, or 57,830 tons less.

The fears of a shortage of linseed, arising out of the small yield of the Argentine crop, were not realised. Demand accommodated itself so effectively to supply that at the end of the season Argentine shippers were left with a considerable balance unsold and had to face a record new crop pressing on the market. World shipments of linseed in 1930 were 1,537,600 tons, against 2,034,500 tons in 1929, to which Argentina contributed 1,242,500 tons, against 1,750,000 tons. The proportion destined for Europe (including 246,000 tons from India) was 1,230,300 tons, against 1,410,200 tons, while the United States took only 275,400 tons, against 560,000 tons. In the latter part of the year the well-defined prospects of a record new crop in South America had an important influence over prices and as the growth proceeded the estimated yield was officially stated to be such as to leave an exportable surplus of over two million tons. In view of the tight position regarding supplies, Plate linseed on spot at Hull opened the year at £21 per ton, but when the new seed began to arrive the price dropped to £17. It subsequently recovered to £18 15s. in April for "spot" seed and £18 2s. 6d. for "shipment." From that point onward the downward trend again became marked and £14 10s. was touched in July. There was a recovery to £16 15s., but in later months when it became evident that a large balance remained unsold and a big new crop was at hand there was a further decline to £10 7s. 6d. on spot in November and £9 12s. 6d. for November-December shipment. Prices temporarily recovered, but the fall could not be resisted and down to £8 was actually accepted for January-February shipment—the lowest level recorded for very many years.

Egyptian cottonseed (black), which in the first four months ranged between £8 5s. and £7 5s. per ton on spot at Hull, gradually declined until £5 5s. was touched at the end of September, this marking the close of the old crop; and new seed for shipment was quoted at £5 12s. 6d. at the end of the year.

Prices of vegetable oils moved largely in sympathy with seed. Thus raw linseed oil ex Hull mill declined from £44 10s. per ton in January to £18 15s. in December, the monthly average ranging from £44 3s. (January) to £22 2s. 6d. (December), the average for the twelve months being £35 10s. 8d., against £34 13s. in 1929. Linseed oil has since further declined and has not been so low for fifteen or twenty years past. Cotton oil prices also were on the down grade and, with slight fluctuations, crude Egyptians ex Hull dropped from £29 10s. (in April) to £19 (in December).

In varying degrees all other seed oils declined in value as the year progressed and very low and unremunerative levels were recorded at the close. Generally there was a poor market for oilcakes and meals, farmers being well supplied with alternative feeding stuffs, and this had an important effect upon the trade position.

A feature of the imports was the preponderance of seed oils. Palm, coconut and olive oils accounted for only 43.7 per cent., as against 50 per cent. and more in previous years. Linseed oil, however, bulked unusually large, a total of 43,501 tons comparing with 31,046 tons in 1929 and

22,472 tons in 1928. Soya and rape oils also showed big increases, though imports of vegetable oils in the aggregate were about 10,000 tons down on the year. The export trade suffered badly against keen competition in foreign markets, the shipments abroad being 35,698 tons less than in 1929. The following is a summary of the Board of Trade returns of exports (produce or manufacture of the United Kingdom):—

	1927. Tons.	1928. Tons.	1929. Tons.	1930. Tons.
Unrefined oils	50,024	96,193	93,463	60,633
Refined oils	16,645	16,370	20,460	17,612

The production of oil in the mills of the United Kingdom, estimated from the commercial yield of oil from the net imports of oilseeds, nuts and kernels, was 346,406 tons, a decrease of 68,090 tons as compared with the previous year and much below average. The comparative figures are as under:—

	1927. Tons.	1928. Tons.	1929. Tons.	1930. Tons.
Linseed oil	117,388	115,774	94,322	74,710
Cottonseed oil	89,441	95,576	94,906	86,635
Other seed oils	31,758	44,549	60,844	40,651
Palm kernel oil	82,593	72,186	67,883	56,608
Ground nut oil	18,626	47,908	52,734	45,532
Coconut, &c.	22,375	24,424	41,137	42,270
Total	362,181	400,597	414,496	346,406

The approximate position of the vegetable oil supply of the United Kingdom is indicated by the following summary:—

	1927. Tons.	1928. Tons.	1929. Tons.	1930. Tons.
Home production	362,181	400,597	414,496	346,406
Deduct British exports	106,669	112,923	113,943	78,245
Net remaining	255,512	287,674	300,553	268,161
Add net imports	224,568	208,080	241,639	231,580
Total remaining in U.K.	480,100	495,754	542,192	499,741

Although there was a reduction of 42,000 tons as compared with 1929 it will be seen that last year's total was not below the two preceding years. Exports of oilcakes at 75,110 tons compared with 105,108 tons in 1929—a decline of 30,000 tons. Imports of oilcakes and meals from abroad were again substantial, the net imports being 442,893 tons against 480,459 tons in 1929. The supply of oilcakes for the United Kingdom may be put at 1,250,000 tons, against 1,475,000 tons in 1929 and 1,350,000 tons in 1928. The c.i.f. value of the gross imports of oilseeds, nuts and

kernels, vegetable oils and oilcakes in 1930 was £25,680,265, against £35,348,557 in 1929; and the f.o.b. value of British exports of oil and cakes £3,568,246, against £5,638,149. Re-exports of all kinds had a value of £548,785, against £978,248, equal to just over two per cent. of the value of the imports.

TIMBER.

In all branches of the timber trade the past year proved one of extreme difficulty. During the first six months a moderate demand for most classes of material was maintained, but during the latter half of the year the consumption continued to fall away steadily. In addition, pronounced weakness developed in the prices of certain classes of material, particularly those of American origin, while the uncertainty with regard to the Russian position seriously upset the softwood market. Throughout the greater part of the year the teak market remained firm, with decks, large average squares, and long specifications of planks none too plentiful, but with the falling off in the demand from this and other countries supplies became more plentiful and prices tended to ease. Pitch pine continued a firm market throughout the year, the supply of large-sized timber becoming increasingly scarce, while manufactured deck planks were almost unobtainable. In common with other woods the demand fell off considerably during the later months.

Among Pacific Coast woods, the shipyard demand for Oregon pine decks was of fair extent, while clear spruce and Californian yellow pine were also in request. The general tendency of prices of these woods was in a downward direction, extremely low levels being reached, especially on Oregon pine and clear spruce. In the engineering trades a limited demand occurred for yellow pine for patternmaking requirements, and prices remained fairly steady. Among other outlets, railway, waggon-building, and colliery requirements were only of limited extent. American waggon oak planks were contracted for on a reduced scale, the building of new waggons going more largely to the South, but repair work absorbed a fair quantity of standard-sized specifications. During the last quarter of the year prices of American oak dropped to some extent, owing to the fall in freight rates and the slump in the United States generally. Throughout the year the railway companies were moderate buyers of pitch

pine and other material. The building trades provided the market with the steadiest outlet, but prices generally were keenly cut. It is hoped, however, that the arrangements arrived at with regard to the Russian production will help to stabilise prices.—*Glasgow Herald*.

From the statistics below, which are taken from the Board of Trade Returns, it will be seen that the total wood imports last year compared with 1929 fell by about £3 millions, though slightly above the figure of 1928:—

* Exclusive of those who ceased work on account of the dispute which commenced on May 1, 1926.
† Trade Union figures.
‡ Coal strike.
(a) May–December figures entirely unrepresentative.

The following information is extracted from the *Iron and Coal Trades Review*:—At the close of the year the industry is not only seriously affected by trading conditions due to lost markets abroad, but surrounded with difficulties due to legislation and the continuance of political interference. There has been a falling off both in the output and the workers employed since the beginning of the year. The year was marked by very good relationship between the employer and the employee, and willingness has been strikingly shown on both sides to interchange ideas and do all possible to further operations in the various districts and to overcome the difficulties arising therein. Unfortunately the close of the year was marked by an interruption of work in South Wales and threatened stoppages in other districts. The output per worker has fallen to approximately 263 tons, against 278 tons in 1929.

One of the most important events of the year was the passing of the Coal Mines Act (1930). Part I of the Act is divided under two heads: (a) Regulation of production, and (b) Control of sale. Part II provides for the setting up of a Commission to promote amalgamations. Part III repeals the Act which restored the eight hours day. Part IV deals with the establishment of an Industrial Board. The coal industry has kept in close touch with all work going forward with a view to furthering the use of coal and enabling consumers to utilise it with the maximum efficiency.

South Wales.—The world depression and the undercutting abroad resulted in a heavy shrinkage of trade, which was

most acute in the second half of the year. Following the inclusion of the collieries previously outside the Association, there was a slight levelling-up of the prices of such collieries to the minimum schedule prices, but the difference to be made up was rarely more than 3d. per ton. There were seasonal changes in house coals. Cokes, with the exception of special foundry classes, slumped owing to the closing of the iron and steel works and the necessity to bring down prices to sell abroad. Patent fuel, as well as small coals, had to be lowered in price. Sized coals, extracted by washing and treatment of small coals, became scarcer with the general reduction in output, and these realised rather above the scheduled minimum levels. The trade depression has been probably deeper than in any previous year, and Northumberland has felt it to the full extent. Little Northumberland coal now goes to Scandinavia owing to the severe competition of Polish coal, which can be exported at roughly 2s. per ton less than Northumberland coal of similar type. Under the new quota and minimum price schemes, production is to be restricted and prices maintained at about the present level, so that there is little prospect of this competition being overcome in the near future. Some other markets have been found, but these are chiefly in the home trade and are quite inadequate to absorb the normal production of the county, with the result that for the greater part of the year pits have been working short time.

Durham.—The Durham markets have suffered in a lesser degree than those of Northumberland, although conditions throughout the county have been exceedingly bad, the state of trade necessitating the closing of many pits and considerable idle time at most of the others. One redeeming feature, from the point of view of the colliery owners, was that during the busy period in 1929, when prices were high, they were able to obtain contracts for 1930 at values which have been considerably above the average for the year. There have been no other good features in the position, and the year has been probably the worst within living memory.

South Yorkshire.—The long anticipated improvement in the South Yorkshire coal trade did not materialise in 1930, and another difficult year has been experienced. Speaking generally, the collieries have worked only four or five days per week, but the output of all classes of fuel has been sufficient to meet the demand, which, during most of the year, was erratic. In the first half of the year some progress was made towards recapturing trade with foreign countries, but owing to the stoppage of the subsidy at the end of September the exports were adversely affected.

The following tables, compiled from figures published by the Mines Department of the Board of Trade, covering about 96 per cent. of the industry, show output, costs and proceeds for the first three quarters of 1930, as compared with recent periods:—

Great Britain.	1929.		1930.		
	First Quarter.	First Quarter.	Second Quarter.	Third Quarter.	Third Quarter.

where the production of pig iron fell by 28 per cent. and of steel by 31 per cent. In France and Belgium the decline was not nearly so marked; in fact, French production declined by no more than 4 per cent. But the demoralisation caused by a declining market was so great that the very existence of the Continental Steel Cartel itself was threatened. Just when conditions might have been mitigated by a resolute price policy, the syndicates collapsed and a period of internecine competition ensued. In spite, therefore, of the low demand in Great Britain, both on home and export markets, imports continued at a fairly high rate, and amounted for the whole year to 2,908,000, or 86,000 tons more than in 1929. British makers realised that price reductions, which were not the result of production economies, but of unregulated competition, could only have the effect of still further destroying confidence, and kept prices as stable as possible throughout the year, although some price concessions were granted in the case of pig iron. For iron and steel prices as a whole, the Board of Trade price index, which stood at 15 per cent. above pre-war at the beginning of the year, declined by only six points throughout the year to 108.9.

During the past year further steps were taken in the direction of rationalisation. The amalgamation of Dorman Long and Bolekew Vaughan was a *fait accompli* before the end of 1929, but the long negotiations for the amalgamation of the Wigan Coal and Iron Company, the Pearson and Knowles Company and the Partington Iron and Steel Company were concluded in the early part of the year, leading to the formation of the Wigan Coal Corporation, with a nominal capital of approximately £1½ millions, and the Lancashire Steel Corporation with a nominal capital of £5½ millions. As from January 1st the heavy-steel departments of Messrs Guest, Keen and Nettlefolds and Messrs Baldwins, Ltd., were taken over by a new company, known as the British (Guest Keen Baldwins) Iron and Steel Company, while in Scotland Messrs Colvilles, who had already taken over Messrs Beardmore's business in plates, sections and rails, amalgamated with James Dunlop and Company; the new company is to be known as Colvilles, Ltd., with a capitalisation of £4½ millions.

The following tables show world production and British prices of iron and steel:—

SILVER.

The following information is taken from the *Annual Bullion Letter* of Messrs Samuel Montagu and Company:—

The year under review was marked by a continuation of the fall in silver prices and the establishment of the lowest quotations ever recorded hitherto. The continued state of saturation in China, due to the unsettled conditions in that country, the existence of supplies in excess of requirements, and the forsaking of silver for monetary purposes, have again been the chief contributory factors to the loss of confidence demonstrated during the past year.

The highest price of the year was 21½d. for both cash and two months' delivery quoted on January 2nd, and the lowest recorded were 14½d. and 14½d. for the respective deliveries quoted on the last day of the year. For purposes of comparison we give the following table showing the variation between the highest and lowest quotations for the last ten years:—

	Cash Delivery.	Two Months' Delivery.
1921	12½d.	13d.
1922	7½d.	7½d.
1923	3½d.	2½d.
1924	4½d.	4½d.
1925	2½d.	2½d.
1926	7½d.	7½d.
1927	3½d.	3½d.
1928	2½d.	2½d.
1929	5½d.	5½d.
1930	7½d.	7½d.

At the beginning of the year Indo-China was still selling silver in anticipation of her adoption of the gold standard, which became effective in February, and the effect of this was reinforced by a lack of demand for silver in China, where stocks were already excessive. During most of the year China and the Continent were sellers of silver, but during the first three months the market was, to some extent, supported by purchases on Indian account in anticipation of the duty on the import of silver, which was imposed in the Budget. Demand from Hong Kong also helped the market during the first few months of the year.

A rapid decline was witnessed in May, which month showed the largest variation in prices of any month in the year. The highest quotations of the month were 19½d. and 19½d. for cash and two months' delivery respectively on May 5, and the lowest 17½d. for cash quoted on the 29th and 31st, and 17½d. for two months' quoted on the 29th. The demand of the Indian Bazaars, which had been the main source of support, showed signs of slackening, and heavy selling from China, owing to weakness in Shanghai, had a depressing effect on an ill-supported market. In addition, the Indian Bazaars, taking a weak view following the trend in China, made substantial bear sales. On May 15th the export of gold from China and the import of foreign silver coin was prohibited, the latter provision being directed against the dumping of silver from Indo-China. A continued decline, with very brief rallies, throughout June was chiefly the result of constant selling pressure from China, and was aggravated by the disturbed political conditions in India. Conditions in July, August and most of September were quieter, but there was a further fall at the end of September owing to the operations of speculators in China. October and November were again fairly quiet, but in December there was a very rapid decline. Weakness of the Shanghai exchange, mainly due to an excess of imports, led to loss of confidence and heavy selling, with little support from any quarter, and the year closed with quotations the lowest on record.

It is estimated that imports of silver into India and China during 1930 amounted to 85 million and 135 million fine ounces respectively. Coinage for Hong Kong is believed to have absorbed 10 million ounces. The amount of demounted silver which reached the market is estimated at 30 million fine ounces from the Government of India, 23 million from France and 18.3 million from Indo-China. Estimates of silver production are as follows:—

SILVER PRODUCTION (in millions of fine ounces).

THE AUSTRALIAN BANKING AND CREDIT SYSTEM.

By A. L. GORDON MACKAY, Lecturer in Economics at the University of Adelaide, South Australia. 12s. 6d.

This book has been written to make available to investigators and others the facts that underlie the development of the banking and credit system of Australia, and its relation to the "City" of London and to "Wall Street." Particular stress has been laid by the author upon the importance of understanding financial facts and the function of financial institutions before any attempt is made to reorganise the old nineteenth-century British Empire so that it may become a suitable instrument of progress in a twentieth-century world.

ECONOMIC FRAGMENTS.

By D. H. ROBERTSON, M.A. 10s. 6d.

This volume consists of essays, addresses and reviews of books of special interest or importance. The items were written at various times between 1913 and 1930, and deal with matters of economic and social concern. While a few of them were written primarily for students of economics, it is hoped that the bulk of the book will be intelligible and interesting to the general reader as well.

P. S. KING & SON, LTD.,
14 Great Smith Street, Westminster.

Youth and Age

Youth is the time of courageous experiment and creative work, whilst age has experience and is ripe with practical knowledge and wise judgment.

Youth held in rein by age, and age tempered with the spirit of youth, give industry its greatest achievements.

The Chatwood organisation is a combination of youth and age, and throughout the firm is an atmosphere of growth, new knowledge and new ideas.

Those with treasure to protect entrust it to The Chatwood Security with contented confidence, for it has withstood the greatest of all tests—the test of time.

JOHN MURRAY: LONDON

in July in favour of retaining the present currency as long as the Chinese currency remained on a silver basis. The committee, however, expressed the view that, though China's adoption of the gold standard was likely to remain for some time only a pious hope, it was most important that when the change came Hong Kong should be in a position to anticipate it.

COPPER.

Both copper production and consumption showed an appreciable falling off during the past year, as the table below shows:—

WORLD'S MINING PRODUCTION OF COPPER.
(Thousands of Long Tons.)

	1900.	1913.	1928.	1929.	1930.
Africa	7	23	135	168	183

United States	263	555	832	900	695
Totals*	479	989	1,714	1,920	1,608

* Including countries not shown above.

This is the first interruption of a continued rapid rise since 1921.

WORLD'S COPPER CONSUMPTION.
(Thousands of Long Tons.)

	1900.	1913.	1925.	1928.	1929.	1930.
Great Britain	108	140	135	152	155	140
France	46	104	116	125	135	122
Germany	110	260	230	253	215	155
United States	172	362	730	892	1,000	710
Totals*	503	1,052	1,512	1,830	1,890	1,461

* Including countries not shown above.

Consumption of copper last year fell below the level of 1925, and both 1925 and 1930 compare closely with 1913 for the chief copper-consuming countries, with the exception of the United States, whose consumption in both years was practically double that of 1913. *Per contra* the three principal European countries last year did not even reach their 1913 tonnage, mainly due to the severe drop in German consumption. The unparalleled expansion in America should be looked upon as a post-war phenomenon and not as a basis from which conclusions for future development and expansion can be drawn, while any large increase in European consumption must come from an expansion in the automobile industry, or further electrification of industry and a vastly greater use of electrical appliances for household and industrial purposes, as well as a great increase in telephone and telegraph equipment. General economic and social conditions in Europe certainly do not point towards greatly increased activities in most of the above fields, although there is still ample room for further electrification of industry in many of the large industrial centres of Europe. We are, therefore, led to the conclusion that world's requirements for the next few years will not exceed the figures of 1928 and 1929, on the contrary, we believe that industrial activity everywhere must be on a large scale to reach these figures again within the reasonably near future.

At the beginning of the year the Copper Exporters, Inc., were quoting a price of 18.30c. c.i.f. Continent and £84 5s. c.i.f. United Kingdom for electrolytic copper. This price had already been maintained for about nine months, no account having been taken of the complete change which had taken place in the world's industrial condition and in the greatly changed level of prices of other commodities. In view of the large proportion of the total world's production controlled by the Copper Exporters, consumers were forced at times to buy some copper at this artificial price, but these purchases were naturally kept to as small a figure as possible. That the Copper Exporters' price at this time was largely artificial is very clearly shown by the price of standard copper, which at the beginning of the year was about £15 below the electro price.

Stocks in America rose very rapidly despite a certain restriction of output by the larger producers. The increase was caused primarily by a heavy decline in the rate of consumption, but was aggravated by the high price, which encouraged smaller independent mines to increase their production to the utmost, whilst holders of scrap materials delivered every ounce that they could collect to the refineries. In the meantime standard copper had also been shipped to America for refining, as was only to be expected with so large a margin prevailing. These shipments led to the creation of a heavy backwardation in standard, which at one time reached £5 per ton. The position was, however, relieved by considerable shipments of rough copper from Germany and elsewhere.

In the middle of April the producers had to bow to the inevitable and reduced their price in one day by 4 cents

per lb., which is equivalent to £18 5s. per ton. The market was, however, by now so demoralised that even this reduction failed to bring in any volume of buying, and very soon afterwards the price fell further to 12.80c. c.i.f. Continent and £59 c.i.f. United Kingdom. At this level consumers bought fairly large quantities, as they had depleted their stocks as much as they safely could. The producers foolishly took this opportunity immediately to raise the price again by ½c., but the improvement was short-lived. For some time the domestic market was below the Copper Exporters' price for Europe, which was much resented by European consumers. This position has often arisen since, but each time a buyers' strike has ensued, and has usually resulted in further reductions in the export price. The lowest point was reached at the end of October, when the price of the exporters was reduced to 9.80c. c.i.f. Continent and £45 3s. 9d. c.i.f. United Kingdom. This reduction was the signal for a heavy outbreak of buying, not only by consumers but also by speculators, who recognised that this figure was reasonable. At the same time a meeting of producers, including representatives of African interests, was assembled in New York and a decision was eventually arrived at to reduce the production still further by 23,000 short tons per month. The excited buying was further stimulated by the fact that producers only offered a limited tonnage each day, despite the fact that by this time stocks in their hands had risen to about 350,000 tons of refined. After being maintained for some days nominally at 9.80c., despite the heavy buying, the quotation was suddenly raised within a few days to 12.30c., an advance which quite effectually put an end to the buying movement. Little of interest occurred between this movement and the end of the year. The price gradually slipped away again to 10.30c. c.i.f., followed by a small rally to 10.80c. c.i.f. just before the close of the year.—*Messrs Brandeis, Goldschmidt and Company.*

LEAD.

At the beginning of the year the price of lead stood at £21 10s. per ton, to which it had fallen from higher levels, and was then regarded as a reasonable price for this metal. The price was very well maintained for quite a long time, owing to a considerable extent to market control being carried out in an efficient and reasonable manner. The slump in commodities, however, lasted too long and was too severe to allow of the programme of stabilisation being carried through successfully, and the position in lead has been somewhat analogous to that in copper, with an excess of supplies becoming available as time went on.

In order to effect its purpose the lead group was frequently compelled to keep London lead arrivals off the market by putting the metal into warehouse, thus lessening the supplies available on the market and delivering from warehouse as occasion arose. One result of these tactics was that instead of there being—as there otherwise would have been during the greater part of the time—a fairly large contango, there was often even a backwardation, especially towards the ends of months when contracts had to be settled. The stocks of lead in official warehouses in England are of no large size, amounting to 8,321 tons, but it is impossible to say how much more has been placed in unofficial warehouses or delivered in advance to consumers for future purchase. We imagine that invisible stocks of this kind amount to no small figure. At the same time the consumption of lead has, on the whole, been comparatively good. The statistical position has undoubtedly deteriorated both in America and in Europe during the later months of the year. The price in London was maintained around £21 10s. for both the prompt and forward position until about the middle of February, and on February 15th the quotations were £21 13s. 9d. February shipment and £21 11s. 3d. May shipment. A week later quotations were 10s. lower. The lead group at this juncture no doubt itself came to the conclusion that the price was no longer justified by prevailing conditions, and very sensibly cut its price to accord with the open market. At the same time the backwardation gave way to a contango, and on March 8th prices stood at £18 10s. March shipment and £18 15s. June shipment. The quotation remained around this figure until near the end of April, at which point a further fall took place, carrying the price at the beginning of May down to £17 5s. May shipment and £17 7s. 6d. August shipment. Support was then forthcoming and consumers bought more freely, stiffening the price again to about £18 per ton. The market then settled down to a value of between £17 15s. and £18 per ton, with alternating small contangos and backwardations until August, when, owing to temporarily smaller arrivals and purchases by Russia, the price was carried a few shillings higher, and a

larger backwardation was established. At the end of August quotations stood at £18 13s. 9d. August shipment and £18 3s. 9d. November shipment, but with the turn of the month the backwardation, as usual, disappeared. Then followed a period of quiet trading, with practically no alteration in values until well into September. Evidence that the statistical position in America was deteriorating, and recognition that the artificial withholding of supplies and the creation of invisible stocks by the pool was producing an unhealthy state of affairs, caused successive falls and heavy sales in the forward position. On October 11th, and in spite of half-hearted attempts to support the market, the price had fallen to £14 18s. 9d. per ton for both prompt and forward. This heavy fall brought buyers into the market, which recovered again to about £15 15s. per ton, and remained around this level with minor fluctuations until about the middle of December, when the price fell to £14 10s. per ton. A slight recovery took place subsequently and the year closed at £15 December shipment and £14 15s. March shipment. While consumption of lead has kept up fairly well in all the circumstances, production, in face of the very severe fall in price, has continued surprisingly high. According to the figures given below, the aggregate reduction amounts to only about 5 per cent. against 1929; whereas we estimate that consumption has fallen away by about 15 per cent. for the whole year and even more during the later months:—

WORLD'S PRODUCTION OF LEAD.

(Thousands of long tons.)	(American Bureau of Metal Statistics figures.)	1913.	1928.	1929.	1930.*
United States	398	580	618	556	
Mexico	62	232	245	238	
Spain	198	121	131	94	
Australia	123	163	174	163	
Canada	16	78	80	80	
Germany and Polish Silesia	195	121	131	115	
Belgium	53	63	61	61	
Other countries	162	136	144	184	
Totals	1,207	1,645	1,726	1,634	

* Our estimate.

In the United States consumption has fallen off very materially and very quickly after the first quarter of the

year, so that the stocks which at the beginning of the year amounted to 47,756 tons had increased by the end of June to 55,501 tons, and on December 31st stood at nearly 100,000 tons.—*Messrs. Brandeis, Goldschmidt and Company.*

SPELTER.

The decline in the price of spelter continued throughout the year until in December the figure of £13 5s. was reached. This is equal to the lowest price ever recorded and has only once before been quoted, forty-five years ago. The metal has not been within £3 of its present level for nearly thirty years. The total fall in price during 1930 amounts to over £6, and has been more or less evenly distributed over the whole year. As the price of £26 15s. ruling on January 1, 1928, was less than £3 higher than the average price ruling during the ten years prior to 1914, the fall may be considered severe.

The production in 1930 is estimated at about 1,292,000 tons, a decrease of about 130,000 tons as compared with 1929. Consumption, however, declined by a still greater amount, with a resulting increase in stocks. At the end of the year the stocks are estimated to have been as follows:—U.S.A., 128,000 tons; Continent of Europe, 94,000 tons; England, 12,000 tons. These figures represent increases of 62,000 tons in the United States, 49,000 tons on the Continent and 7,500 tons in the United Kingdom. Thus the increases amount to over 9 per cent. of the total production, and this despite a decrease in production of nearly 9 per cent. as compared with 1929. While these figures may not be very encouraging, the total of the stocks only represents about 2½ months' consumption, and it looks as if the world were taking an unduly pessimistic view so far as spelter is concerned. This may be prompted by certain special features in the situation. The price of spelter stands at a figure which can show little or no margin of profit over the cost of winning ore and producing the metal. In the ordinary way, such a price level should have its natural effect in the elimination of the production from those mines which lose money at this price. If the situation had been governed by natural factors, it is more than probable that the price of the metal would never have reached so low a figure, and that there would months ago have been an adjustment in production which would, in the natural course of events, have led to a rise in price. TOTAL RESOURCES EXCEED £400,000,000

year, however, has seen the continuance of the efforts to form a cartel, and as long as those producers who cannot work at a profit have had the hope of a combine for the maintenance of the price, they have been reluctant to close down. Indeed, it can be said that the efforts to make a cartel have been a very disturbing factor in the whole situation. Another important factor is the improved methods of treating lead zinc ores, which has had the effect of making zinc concentrates, to a considerable extent, by-products of the lead industry. As long as producers of the latter metal can obtain a margin over their freight and handling charges for their zinc concentrates, it is in their interest to dispose of them. Equally, as long as they go on producing lead concentrates, so must they produce a certain amount of zinc concentrates. In this way a portion of the world's spelter production is inevitably controlled by a factor which has really nothing to do with the spelter situation.

If the consumption of spelter were on the increase, the production of zinc concentrates from this source might be viewed with equanimity. It is a recognised fact, however, that the consumption is, if not actually decreasing, at any rate at a standstill. There are certain definite and well-known factors which account for this, such as the changes in building practice resulting in the use of concrete where zinc was used before, and in the replacement of galvanised sheets by other materials such as asbestos compositions. In support of this reference has only to be made to the sheet and galvanised sheet statistics. The American exports of sheets and plates, for as much of 1930 as is reported at the time of writing, is only about 63½ per cent. of the corresponding period in 1929. The United Kingdom export of galvanised sheets is, similarly, only 64 per cent. of the corresponding period in 1929, but the last months to be reported are only 50 per cent. of the early months of the former year, while the amount of zinc used for galvanising is only 72 per cent. of the 1929 figure. This position is aggravated, temporarily at any rate, by the increase in the tariff on galvanised sheets into India and the prohibition of the importation of galvanised iron into Australia. In the meantime, it has to be recognised that the price of spelter remains at what can only be considered an uneconomic figure, and it seems certain that if all suggestion of artificial restriction were removed, the production would readily adjust itself to consumption with a corresponding improvement in price.—*Messrs. Brandeis, Goldschmidt and Company.*

TIN.

The year 1930 opened with tin at £180 7s. 6d. cash and £183 15s. three months. This was practically the highest point, and the subsequent course of the market was an almost uninterrupted fall, such recoveries as took place being relatively small and of short duration. The lowest price touched was £104 2s. 6d. cash and £105 7s. 6d. three months on December 17th. Subsequently a recovery took place on rumours of restriction, and on December 31, 1930, the quotation was £116 12s. 6d. cash and £118 2s. 6d. three months.

In January and February, the policy of restriction was definitely put into operation, and it was announced that mines in Malaya, as well as in Bolivia and Nigeria, had agreed to fall in line with the curtailment of production. How far this programme was actually effective it is difficult to say, and there is no doubt that it was impossible to include most of the mines worked by the Chinese in the Malayan Peninsula, who, as they usually do in a period of falling prices, undoubtedly increased their output. In spite of the constant recession in price, the supplies of tin during 1930 have been little less than in the record year 1929. On the other hand, while according to published statistics deliveries, which are presumed to be deliveries to consumers, show a greater falling off than the supplies, yet the published deliveries still make a very good showing taking all the factors into consideration. There is reason to suspect, however, that the published figures of deliveries are probably a good deal in excess of actual consumption.

Towards the end of the year it was rumoured that fresh schemes were afoot to restrict and control the quantity of tin reaching the market. This new scheme apparently is to be operated in collaboration with the Governments of the producing countries concerned, with a view to allotting to each a certain quantity of tin which may be exported within a fixed period.—*Messrs. Brandeis, Goldschmidt and Company.*

Tinplate.—During the first six months of the year the output of the tinplate trade was the greatest in history, but the last few months have shown a distinct falling off, an experience shared to the full by our overseas competitors. In Wales the works operated at about 80 per cent. of capacity during the early part of the year; the figure was only about 60 per cent. in September and 50 per cent. at the close of the year. The tendency towards self-supply is shown in an increasing number of countries—at least eight in Europe, as well as Japan and the United States, where a recently established factory now looks towards supplying the export demand for the Far East.

Prices.—The year opened with 18s. 9d. as the market price for cokes f.o.b. Wales. In September, owing to the paucity of business, the official minimum price was reduced from 18s. to 17s., but this concession failed to produce any marked improvement in demand, as buyers continued to hold off and many mills had to stand idle. Makers therefore decided on November 22nd to abandon fixed prices and leave the market open. Efforts have recently been made to bring the few outside works into the "Pool" and a new scheme for controlling sales has also been considered. The year closed with the price somewhere in the neighbourhood of 15s. 3d.

Bars.—Welsh bars were quoted at £6 10s. in January. The prices were reduced in February to about £6 3s. 9d., where it remained till June. In July it fell to £6, in September to £5 15s. and in November to £5, at which level bars were quoted till the end of the year. Foreign bars started the year at £5 2s. 6d., fell gradually to £3 17s. 6d. in November and recovered to £4 5s. at the end of the year. Imports of foreign bars were 527,348 tons, against 418,838 tons in 1929 and 540,167 tons in 1928.—*Messrs. Sim and Coventry's Annual Report.*

† According to "Fairplay."

§ Average for four quarters.

Although the annual returns of shipbuilding in 1930, recently issued by *Lloyd's Register*, do not disclose the full effects of the trade depression on this industry during the past twelve months, it is significant that, whereas the total tonnage launched in the world last year showed, at 2,889,472 tons, an increase of 96,262 tons as compared with 1929, the launchings in British yards declined by 44,000 tons to 1,478,563 tons, while the tonnage launched abroad amounted to 1,410,909 tons, as compared with 1,270,587

tons in 1929. In this country the year opened with a satisfactory volume of new work, while the tonnage under construction in the first quarter showed a considerable increase over the quarterly average for 1929. But from the spring of the year onwards the effect of the depression became more marked, and in each of the last three quarters of the year the amount of work commenced fell far below the rate of launching. The fairly satisfactory position of the industry during the early part of 1930 was to a great extent due to the large contracts for tankers which were placed with British shipbuilders during the latter part of 1929. Indeed, the amount of tanker tonnage under construction resulting from these contracts did not reach its maximum of 634,000 tons until June, 1930. Work in hand on other vessels, however, steadily decreased from 1,221,000 tons in September, 1929, to 520,000 tons at the end of 1930—the lowest figure recorded for the end of any quarter since the war. The lack of orders for new vessels has been sharply reflected in the amount of unemployment in the industry, the percentage of insured workers unemployed at the end of December, 1930, having risen to 45.4 per cent., as compared with 23.3 per cent. at the end of 1929.

Foreign shipbuilding does not appear to have suffered from the world-wide trade depression as severely as that of this country. The following table compares the total tonnage output in Great Britain and foreign countries during the past two years with the average figures for 1909-13, 1922-25 and 1926-28:—

Period.	Tons launched. (000's omitted.)			British Percentage.	Output as Percentage of 1909-13.		
	U.K.	Abroad.	World.		British.	Foreign.	World.
Average—							
1909-13.....	1,522	967	2,489	61	100	100	100
1922-25.....	1,050	1,087	2,137	49	69	112	86
1926-28.....	1,104	1,116	2,220	49.5	72.5	115	89
1929	1,523	1,270	2,793	54.5	100	131	108
1930	1,478	1,411	2,889	51	97	146	116

The most striking feature brought out by the foregoing table is that while the position in British yards since the war has tended to fluctuate—and to experience a severe setback in 1930—foreign shipbuilding has steadily increased

during post-war years, and in 1930 was 46 per cent. above the level of 1909-13. The following table of launchings in various foreign countries during the past four years shows that in only a few cases was the output of 1930 below that of 1927:—

TONNAGE LAUNCHED ABROAD (Thousand Tons).

	High Record.	1927.	1928.	1929.	1930.
Denmark	since 1920.	139	72	139	111
France	139	72	139	111	137
Germany	211	44	81	82	101
Holland	526	290	376	249	246
Italy	232	120	167	187	153
Japan	220	101	59	71	88
Sweden	227	42	104	164	151
U.S.A. (coast)	132	67	107	107	132
U.S.A. (total)	995	124	86	101	214

The outputs of Denmark, France, the United States and Sweden in 1930 all showed considerable increases as compared with 1929—Sweden recording her highest figure since 1920. As regards the volumes of work in hand at the end of December, 1930, as compared with previous years, it will be seen that the trade recession has not affected the shipbuilding of all overseas countries to the same extent:—

WORK IN HAND DECEMBER 31.

(Thousand Tons.)

	1925.	1927.	1928.	1929.	1930.
United Kingdom	885	1,580	1,243	1,560	909
Germany	234	472	382	253	218
Italy	310	183	95	78	180
France	167	115	161	167	174
Holland	109	175	182	232	160
Denmark	61	98	83	105	108
Japan	52	69	119	184	86
Sweden	55	101	99	98	146
U.S.A.	105	97	48	179	232
World total	2,069	3,119	2,618	3,111	2,326

Apart from Germany, Holland and Japan, all the foreign countries in the above table had more work in hand at the end of 1930 than they had at the end of 1929, and only in the case of Japan was the percentage decline in tonnage under construction comparable with that of Great Britain. Thus at the end of December, 1930, 39 per cent. of the tonnage under construction was building in yards in the United Kingdom, a figure which compares unfavourably with 50 per cent. at the end of 1929 and 57 per cent. on the average of the last twelve months before the war.

The serious position of the shipbuilding industry in this country is again emphasised by the fact that the percentage of available berths in British yards had fallen from

55 per cent. in 1929 to barely 25 per cent. at the present time, and the returns of idle shipbuilding indicate such a vast surplus of carrying space under present conditions that it is obvious that any recovery in trade will have to be of considerable dimensions before shipowners are likely to place orders other than for the minimum of replacements. Even after allowing for the large proportion of the total represented by tankers, it is obvious that the output of 5.7 million tons of new shipping during the past two years, at a time of extreme trade depression, was bound to result in a severe tonnage glut which cannot be worked off for a considerable time. Although quotations of British builders are not unfavourable as compared with those of other countries, it is evident that shipowners in many countries, who before the war gave large orders to British yards, are now placing their contracts at home.

* This figure, being based, in part, on averages for May to November, when no coal freights were obtainable, and homeward freights consequently at an abnormal level, is not comparable with the figures for preceding years.

In face of the severe all-round contraction of trade, it would be natural to expect that the activity of shipping traffic (leaving out of account for the moment the question of the average "load factor" per voyage) should also have undergone a substantial diminution. The available statistical evidence bearing on this point requires to be read with several considerations in mind. In the first place there are the returns of laid-up tonnage in the principal ports of Great Britain and Ireland, given below:—

Laid up on—	Thousand Tons net Average	1925-28.	1929.	1930.
January 1st.....	408	330	353	
April 1st.....	359	236	892	
July 1st.....	638	381	919	
October 1st.....	408	266	885	

A definite "peak" was reached on October 1, 1929, immediately before the world depression set in. Between that date and the beginning of 1930—a quarter in which there is a strong seasonal tendency for improvement to be registered—the increase in unemployed tonnage was of moderate dimensions; but six months later the figure had risen to nearly one million tons net; and the following quarter, in which a seasonal improvement is again usually recorded, brought a very minor betterment in the situation.

In the next place, there are the returns of tonnage entered and cleared with cargoes at British ports. The trade with the Irish Free State is eliminated throughout, and the figures for 1930 are calculated on the basis of the Trade and Navigation Returns for the first ten months of the year:—

ENTRANCES AND CLEARANCES.		Monthly Average	
Tons net entered (in thousands)—	1928.	1929.	1930.
British	3,078	3,121	3,156
Foreign	1,671	1,824	1,915
Total	4,749	4,945	5,071
Percentage British	64.8	63.1	62.2
Tons net cleared (in thousands)—	1928.	1929.	1930.
British	3,269	3,427	3,274
Foreign	1,753	1,43	1,944
Total	5,022	5,370	5,218
Percentage British	65.1	63.8	62.7

† On basis of first ten months.

Somewhat surprisingly, the conclusion to be drawn from the foregoing table (and the traffic returns of other

European ports point in the same direction) is that notwithstanding the recession in production and trade during 1930, the physical activity of shipping was little less than in the previous years.

The explanation which reconciles the apparent conflict between these returns of idle tonnage and of shipping in movement reveals the two features which, apart from the general price-fall and trade depression, have contributed to the difficulties of the past shipping year. Not only did acute competition between liner concerns with super-abundant tonnage at their disposal lead to traffic being maintained, notwithstanding the fact that the capacity of ships officially returned as "entered or cleared laden" was far from fully utilised, but a sudden change in the balance of the world's grain trade shortened the average length of voyage of vessels carrying this commodity, and so produced an unreal apparent expansion in the traffic returns. Further, in the autumn of 1930, Russia reappeared in the world market as a large-scale exporter of wheat, and her requirements were for handy-sized tonnage (whereas the whole decade 1919-29 had seemed to point to the "inevitability" of the large carrier suitable primarily for the Plate trade). Her exports were the last straw on the breaking "camel's back" of the world price for wheat, and no market succeeded in making any headway against the general downward trend of freights.—*Mr. Aylmer Vallance, in Lloyd's List Annual Review.*

* End of year.

General Engineering.—A fair amount of structural work has been done during the year. Not very many railway contracts were placed. Toolmaking reports vary: some branches, especially those concerned with the heavier classes of machines, were fairly well occupied, but on the whole it was not a good year for business, though technical progress has been maintained. Printing machine makers have enjoyed a fair business, but the position and prospects of the textile machinery industry are very unsatisfactory. The aeroplane industry has obtained a number of good contracts during the year. The past year has been one of the worst on record for agricultural engineering.

Electrical Engineering.—This branch of the industry has been better occupied than most, as extensive contracts have been placed in connection with the national scheme for railway electrification and from the application of electricity to marine propulsion. While the total value of electrical exports is down, some important export contracts for large plant were received. The following is an index of activity in the electrical industry of Great Britain, and is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association:—

For private and commercial accounts

LLOYDS BANK endeavours to give private customers all possible help in the management of their money, and to provide for every sort of business a banking service as complete as it is discreet.

Its success is shown by its great and consistent growth since its foundation. The Bank now has more than 1900 offices in England and Wales.

LLOYDS BANK LIMITED

Head Office: 71 Lombard Street, London, E.C.3.

Colonial & Foreign Department: 80 Gracechurch Street, E.C.3.

Trustee Department: 39 Threadneedle Street, E.C.2.

BARCLAYS BANK LIMITED.

Head Office - 54, Lombard Street, London, E.C.3,

and over 2,100 Branches in England and Wales, and Agents and Correspondents in all the principal towns throughout the World.

THE UNION BANK OF MANCHESTER LIMITED.

Head Office: MANCHESTER. 165 Branches in Lancashire, Cheshire and the West Riding of Yorkshire.

The home index for December was the best of the year, largely owing to the placing of two large London contracts as part of the national scheme. The following average figures of electricity production are based on the index numbers which are regularly published in the monthly supplement to the *Economist*:—

INDEX OF PRODUCTION OF ELECTRICITY.*
(Monthly average, 1923-24 = 100.)

Date.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, &c.	Textiles, Cotton and Wool.

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

Motor Vehicle Manufacture.—An encouraging development has been the increasing tendency to the purchase of British cars for the home market, but the export trade has been disappointing, though the growing popularity abroad of baby cars is a hopeful sign. Exports of touring cars amounted to only 19,226, against 23,891 in 1929, and exports of chassis fell from 15,484 to 7,041, Australia having taken over 6,000 fewer. The commercial section was more successful and increased its exports from 2,636 in 1929 to 3,486 in 1930. The motor-cycle industry had a difficult year, especially in foreign markets.

Marine Engineering.—In spite of a decrease in tonnage constructed, the output of marine engineering shops in 1930 was slightly greater than in 1929. Interest in the question of the utilisation of high pressure steam continues very keen.

BUILDING TRADES.

The building industry has suffered a 2½ per cent. reduction on the wage rates for all trades during the past year. This was the outcome of the pre-arranged wages agreement between employers and operatives, and was effected without giving rise to any serious trouble. Unemployment during 1930 has slightly increased, the percentage of unemployed throughout the industry being 16.3, as compared with 12.99 at the close of 1929. In London—almost, if not quite, alone—extensive building activity has continued during the year. The unemployment is most manifest in the large industrial centres of the United Kingdom, and the slackness in the building trade in these is due to general trade conditions.

For the past ten years housing has occupied the premier position in all building undertakings, and 1930 has been no exception to this rule. The returns of plans passed by local authorities show that housing has represented 63 per cent. of the total of building work approved during the year. This preponderance of housing over general building, inevitable although it may be under present conditions, cannot be regarded as a healthy state of affairs. When the Estimates were laid before the House of Commons at the beginning of the financial year 1930-31, the general housing position up to that time was that there had been completed since the Armistice in connection with State-aided schemes 939,000 houses. Private building of houses without assistance of any kind accounted for 520,000 houses; so that since the war the total number of houses actually completed in England and Wales amounted to 1,459,000. The total expenditure by the Government since the war to cope with the housing problem was £45,000,000—to which must be added the £4,950,000 provided for the current financial year. In many parts of the country, particularly on the outskirts of London, the supply of houses of higher value appears to have caught up with the demand; but the demand for working-class houses shows little sign of falling off.

During the International Builders' Congress the principle of rationalisation was discussed in all its bearings. As the result of the trend in this direction, considerable advance is being made by contractors in this country, as well as on the Continent, in the standardisation of building units, and the increased mechanisation of processes. A system of team work affecting all concerned on the job is introduced, which brings about a greater efficiency, and must inevitably result in the speeding up of the work.—*Chamber of Commerce Journal*.

SOAP AND GLYCERINE.

As will be seen from the table below, the total exports of soap for 1930 show a fairly considerable decline over the previous year, especially in hard and laundry soaps. Unfortunately there is no corresponding decline in imports, which, on the contrary, continued to increase. The imports, however, are not large compared with the large export or with the home market. It is difficult to say precisely what the home consumption is, and it may not come up to the export figure. If it does, then the average consumption of soap per head of the population in this country, assuming a population of 50,000,000, amounts to 3.36 lbs. per annum, which is undoubtedly on the lower side. In any case it is evident that the home manufacturers have the lion's share of the home market, but it is only by constant effort and ceaseless vigilance that they do so, and foreign competition becomes more and more severe both at home and abroad.

One bright feature in the soap trade is the success of the home manufacturers in maintaining their position in regard to toilet soaps. A short time ago there was an invasion of the home market by cheap foreign toilet soaps, but this was quickly countered by some of the leading English makers, with the result that the imports of foreign toilet soaps have declined. From the technical point of view research in many directions is being steadily pursued, but without any outstanding results. In fact, British research in the soap and allied trades, as carried out by the largest concern in the country, has not been distinguished by any very brilliant successes, and such improvements as have been made have been largely of foreign origin.

In regard to glycerine, there is little to report. The market has remained in the same dull and quiescent condition reported for the previous year, and, despite the almost desperate attempts to find fresh uses and markets, there has been little if any recovery. Ethylene glycol, which at one time appeared to threaten the very existence of the glycerine trade, has not proved so formidable as was at one time anticipated; but it has now been tried in various forms, as a soap constituent, for example, ethanalamines and glycol ethers. The use of these ethers, as polyglycol or otherwise, is now commercially possible, and hard, soft, transparent or liquid soaps can be made therewith, having very good cleansing properties and unobjectionable odours. It is possible they may be suitable also for toilet soaps; experiments have shown that they are indeed superior to some toilet soaps in that they do not extract fat from the skin.

It is doubtful, however, if these or any other synthesised materials can be looked upon as constituting a serious source of cheaper material for the soapmaker, and the usual oils and fats will remain as the chief ingredients of his fat charge as they always have been. There may be changes from time to time in the relative importance of the different oils and fats, from the soapmaker's point of view, but this does not affect the main position.

The BRITISH OVERSEAS BANK LIMITED

CAPITAL AUTHORISED £5,000,000 ISSUED AND PAID UP £2,000,000
RESERVE FUND £225,000

THROUGH its world-wide connections and agencies the Bank is able to offer to its clients at home and abroad exceptional facilities in foreign exchange and in the financing of every form of foreign trade, and also to provide up-to-date credit reports and information as to international business conditions. Correspondence invited.

* Million linear yards. † End of year.
‡ Trade Union figure; other figures are Unemployment Insurance returns.

The year 1930 for cotton spinners and manufacturers in Lancashire was a disastrous year, in which output varied between 55 and 65 per cent. of full capacity. There were many reasons for the continuance of the depression, but outstanding events during the year were the fall in raw cotton prices and the decline in the price of silver.

Cloth manufacturers experienced the worst year since the depression began in 1920. Demand from abroad was on a smaller scale than ever, and a number of employers closed their sheds for an indefinite period. The wretched state of affairs is reflected in the falling off in export trade, the shipments of cloth in square yards being 34 per cent. smaller than in 1929. There was a remarkable decline in the exports of India of 43 per cent. A feature of interest, however, was the increased activity for Hong Kong in poplins and similar goods, and some substantial contracts were arranged. Japanese competition in the Far East, however, tends to increase. There was no general activity for Egypt and the Near East. Operations for South America were patchy. As an outlet for Lancashire goods the West Coast of Africa tended to improve, but latterly business has been checked by the poor prices ruling for agricultural produce. The off-take for Canada and New Zealand kept up fairly well, but the unfavourable developments in Australia checked business. The home demand for cotton fabrics did not give much satisfaction, and less favourable results were reported by producers of artificial silk. Distributors were severely hit by the falling tendency of prices. The following is a comparative table of cloth shipments from the United Kingdom:—

	Linear Yards	£
1913.....	7,075,252,000	97,775,855
1928.....	3,968,198,300	107,228,462
1929.....	3,044,851,400	92,263,997
1930.....	2,490,449,400	61,505,421

It was a deplorable year for spinners of yarn. The owners of more mills were compelled to close down for an indefinite period. In other factories there was a tendency for short time to increase, and the average output was smaller than at any period since the slump began in 1920. It was impossible during the year for spinners of Egyptian yarns to obtain any relief, and many mills during the last few months have worked only alternate weeks. As a result of the limited demand there was increased internal competition, while the demand for yarns suitable for shipment abroad was disappointing, and exports show a decline of 18 per cent. compared with 1929. Firms engaged in the Egyptian spinning branch made an attempt to rationalise that section, but the proposals did not receive adequate support. A scheme on similar lines is now being considered by spinners in the American section. For this to be put into operation, however, compulsory powers will be necessary.

The following is a comparative table of yarn exports from the United Kingdom for 1913 and the last three years:—

	Lb.	£
1913.....	210,099,000	15,006,291
1928.....	169,206,900	22,566,494
1929.....	168,635,700	20,753,279
1930.....	136,710,100	14,455,407

The following table gives cotton and yarn prices for the year:—

1929.	Cotton Middling American.	American Yarns.		Cotton F.G. Fair Sakellaridis Egyptian.	Egyptian Yarn. 60's Twist.
		32's Twist.	40's Twist.

* Queensland scoured, super combing. † End of year. a Thousand linear yards.

In addition to the adverse trade conditions throughout the world, there have been difficulties peculiar to the wool trade which have accentuated its problems. Wool values have fallen to a greater extent than commodity prices generally, and although at the beginning of the year quotations for tops at Bradford were considered to be on a reasonable basis, they have in the meantime shown a decline ranging from 25 per cent. in merinos to 40 per cent. in the lower crossbreds. The prevailing policy in all sections of the industry of keeping stocks as light as possible has modified the losses, but they were the more serious because they followed upon the adverse results of preceding years. Any hopes of improvement were shattered by the prolonged wages dis-

pute. Economies were effected in every possible way. Staffs were reduced, salaries revised, the woolcombing tariff was lowered, and local taxation was relieved by the operation of the Derating Act; but the members of the various trade unions concerned strongly resisted a substantial cut in wages. Although in some districts varying terms were arranged for the continuance of work, there was a fairly general stoppage. When the strike collapsed, the industry was left without any general wages agreement, and varying rates of reduction were made in accordance with local circumstances, but the majority of firms came into line with the Macmillan Award. Although there was no evidence of any notable transfer of business to the Continent in consequence of the strike, heavy losses were sustained through the stoppage of machinery and the general dislocation of trade.

The Influence of Tariffs.—As a result of wage reductions and other economies, the cost of production in the United Kingdom was brought appreciably nearer to the Continental standard and from that point of view the industry was put in a more favourable position for competing with foreign producers in home and overseas markets. There remained, however, the important influence of tariffs. The financial position of the Commonwealth of Australia caused an unexpected increase in tariffs and restrictions on imports which involved a further curtailment of shipments of wool textiles from the United Kingdom to that market, and this was followed by the adoption of higher tariffs in the United States. Then the Canadian tariff barrier was raised, and although this caused a temporary spurt of activity to get goods through under the old rates, the ultimate effect must be to curtail business in one of our best overseas markets.

Raw Material Situation.—For the wool grower it has been a disastrous year. Wool values fell below the cost of production at all the sources of supply, and heavy losses had to be faced. During the season 1929-30 the Australian clip realised in round figures £34,000,000 in comparison with £57,000,000 in the previous season, while the New Zealand clip made £5,000,000 (excluding the unsold balance at the end of the season) as compared with £12,000,000. The monetary receipts for the 1930-31 season will show a

further drastic reduction. The position was so serious that conferences of growers and brokers were held in Australia, South Africa, and New Zealand in February to consider what steps might be taken to stabilise values. The only immediate result was the extension of the selling season in Australia to the middle of July. There was, however, an upward turn in values at the end of March, but a further decline set in after the middle of the year, and in the last quarter prices reached the lowest point since the pre-war slump year of 1908. A remarkable feature of the year was the manner in which an abundant production of merino wool was taken off the market, in spite of adverse trading conditions throughout the world. There are two main factors which have put merinos in a more favourable position than crossbreds. Low values have a natural tendency to cause the finer qualities to be used, whilst the trend of fashion has been definitely in favour of the fine, soft-handling fabrics made from merino wools. In December 64's tops changed hands at as low as 22d., whereas less than two years ago more than that had to be paid for 40's prepared. Fine and medium crossbreds were comparatively neglected, and in the later months of the year, when crossbred prices were slumping, merinos declined very gradually. In fact, the trend of demand was so marked that some firms were taking steps to change over their machinery equipment from crossbreds to merinos.

The following table shows the prices of tops on the dates given:—

AVERAGE PRICES OF TOPS.

Drafts upon the Branches are issued by Head Office, and may be obtained from the Bank's Agents throughout England, Scotland and Ireland.
Commercial and Circular Travelling Credits issued—available throughout the world.
Telegraphic Remittances are also made.
Bills on the Australian States and Dominion of New Zealand are purchased or sent for collection.
Deposits are received at Head Office at rates of interest and for periods which may be ascertained on application.

CONQUISTADORES!

It is a far cry since the adventurous days of the Spanish Conquistadores and their pioneer expeditions to the ancient American civilisations.

To-day, a great and growing volume of overseas trade is transacted annually by the Republics of the New World, and unrivalled facilities for every description of modern banking business are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, E.C.2

The following table shows the trend of prices for certain qualities of yarns:—

AVERAGE PRICES OF YARNS.					
Per Lb.	July, 1914.	Dec. 27, 1928.	Dec. 23, 1929.	Dec. 22, 1930.	Dec. 22, 1930, as % of July, 1914.
1/16's super.....	s. d. 1 7	s. d. 2 5½	s. d. 2 0	s. d. 1 2½	77
*1/60's botany (70's/80's).....	8 1½	14 6	11 9	9 4½	115
2/16's worsted, med. (44's card) ...	1 8	2 5½	2 1½	1 3½	76
2/21's worsted, low (40's crossbred) ...	1 8	2 7	2 3	1 4½	82
2/32's worsted, med. (46's/48's) ...	1 10	3 0	2 7	1 7½	89
2/40's (56's super).....	2 10½	4 1	3 3	2 3	78
2/48's botany (64's).....	3 3	5 3	3 11	3 1	92
2/60's botany (super 70's).....	3 5	6 9	5 3	4 0	114

Yarns generally are below the pre-war level. So far as can be judged, comparable qualities of plain cloth are a little dearer than in July, 1914, while the Ministry of Labour estimates that the cost of clothing as purchased by the working classes is still double the pre-war level.—Extracted from the *Annual Review of the Weekly Wool Chart*, Bradford.

THE RAYON INDUSTRY.

While in many respects the year 1930 was an unfortunate period for rayon, the industry certainly did not fare as badly as the older textile trades, and progress made from a technical standpoint has been exceedingly important. The most interesting feature has been the general improvement in rayon fabrics, largely resulting from the lowering of the prices of the higher-quality yarns. This process of continual price reduction has made matters hard for the consuming industries, whose stocks have continuously depreciated. It has also increased the difficulties of the smaller rayon producers, and no fewer than seven of these have gone into liquidation or closed their factories indefinitely through lack of cash resources. The elimination of the weaker element on the yarn-producing side is probably in the best interests of the industry. Those remaining will doubtless reap the advantage of a more rational state of affairs in the market, though during the year the liquidation of stocks held by factories whose plants have been closed down at very low prices has proved a menace. When consumption figures for the whole year are available, they are certain to show a marked decline compared with the previous year. Apart from the first quarter, however, when there was a lack of buying on account of uncertainty about the duties, production has never seriously exceeded demand. The fact that there have been fewer firms in the market has probably helped to keep production and consumption more in line with each other. During the summer months consumption reached a high level on the home account, but the general trade depression seriously affected business during the later months of the year. The export trade in cotton and rayon mixture fabrics has shown a further serious decline, due in the main to the general trade depression and low level of commodity prices throughout the world, and particularly to such factors as the Australian financial crisis, which diminished one of the largest markets for high-quality fabrics. There is no doubt that Japanese all-rayon fabrics, which are being turned out at very low prices, are displacing our trade in mixture goods in the East.

Very substantial development has taken place with fine filament viscose yarns, and these are now obtainable at prices lower than the prices of standard yarns a year ago. This means that fine filament yarns are displacing the standard types for a great many purposes, and largely accounts for the improvement in quality referred to above. The leading firm is probably doing a larger percentage of the total trade than it has done for several years, and the remaining viscose companies are having to concentrate more and more on special qualities to keep running. Though prices have been vastly lowered, considerable progress has been made in the reduction of costs, which will tend to make the cut in profit margins less severe. The demand for acetate yarns was at a high level during the busiest period of the year, but for the last four months the leading producers by this process have found demand at a very low level. To what extent this is but a temporary phase is difficult to tell, as is also the extent to which fine filament viscose is displacing acetate. With regard to the current year, we cannot anticipate any sudden spurt in rayon demand, but, taking a long view, with rayon at lower prices and a higher standard of quality, we can only look forward to the future with optimism, and the number of new ways in which rayon is gradually permanently establishing itself in the textile trades is steadily growing.

LINEN TRADE.

There was a further slight fall in the average price of imported flax for last year, the figure being about £81½ per ton, as against £91½ in 1929 and £99½ in 1928. The price, nevertheless, contrasted very unfavourably with the £50 which was about the average figure for the three or four years prior to the war. Considering the heavy handicap of this still excessive price for the raw material, overseas trade, which is shown below, was not so bad as might reasonably have been feared:—

EXPORTS AND IMPORTS OF LINEN MANUFACTURES. (Not including Yarns.)

	1913.	1926.	1927.	1928.	1929.	1930.

* Not recorded. † Linear yards in 1913. ‡ Linen-lace, and embroidery has been added to imports in 1920 and after. § Included in "All Other Goods." ¶ Net in the piece.

The fall in value of exports for the year was £1,795,000, of which £1,003,000 was accounted for by piece goods, £294,000 by handkerchiefs, £109,000 by thread, £229,000 by table linen and only £160,000 by "all other goods." Traders are relieved at getting through a difficult year with no greater damage, and are looking forward confidently to a marked revival in the current year, for during the latter

S. JAPHET & CO., LTD.,
60, LONDON WALL,
LONDON - E.C.2.

MERCHANT BANKERS.

part of last year there was a heavy fall in the price of flax, so that it is now selling around 5s. per stone, or 4½d. per lb., which is well below, not only its pre-war value, but the present price of its competitor cotton. Prospects are, therefore, bright. The chief aim of the trade is to be able to compete in price with cotton goods, for the public would be only too glad to adhere to genuine British linen goods, instead of being driven to buying cotton substitutes because of their decidedly lower prices.

JUTE TRADE.

For the jute trade this was the worst year for half a century. Once more stocks had to be written down, though the prices had already been regarded as low enough to prevent any further serious depreciation. There was a bountiful supply of jute grown in 1929 to furnish the greater part of requirements in 1930, and the crop proved to be 10,500,000 bales. The growth of 1930 is expected to give 12,000,000 bales, one of the largest crops ever grown, and coming at a time when the wants of the world have greatly diminished. In the long chain of adverse circumstances, the extent of the raw material supply made buyers exercise great restraint during the second half of the year. From January to September the decline went on unchecked, best first marks falling from £32 10s. to £10 and Daisiee-2/3 from £26 to £14, the lowest points for a great many years. No matter how cheaply raw jute was bought, spinners could not earn a profit. They had heavy depreciation on their stocks of old crop jute, and any new crop bought before September involved a loss. Even when jute touched the very lowest of the year, spinners were still using up stocks that cost a great many pounds per ton more. During the closing three months raw material value kept very much steadier at, say, about 20s. of an average over the lowest points in September. Yarns fell from 2s. 10d. in January for common cops to 1s. 10d. in September, a drop of £14 per ton; since when, chiefly as the result of

greatly curtailed production, spinners were enabled to raise the price and maintain it at 2s., though they were unable to employ more machinery.

The almost entire absence of orders from the United States for linoleum hessians was seriously felt, and less of this fabric was bought than ever before. There was no opportunity of supplying the River Plate with anything, as this market was overstocked with supplies of Calcutta hessians, and there was a similar situation in New York as regards all standard widths and weights. Even for home-trade orders there was surprisingly keen competition from the Continent. Over the first nine months of the year 10½ oz. 40 in. hessian fell from 3½d. to 2½d., and 8 oz. from 2½d. to 1½d., since when prices have ruled a degree firmer, but the same difficulty in obtaining a moderate amount of orders has still remained.

The course of events has been a matter of great anxiety, and concern is not yet lessened in regard to the Calcutta position, which has proved such a serious menace on account of production greatly in excess of the world's reduced consumption. Calcutta hessians in the course of the year fell from 25s. 6d. to 17s. for 10 oz. 40 in., and from 20s. 6d. to 13s. 2d. for 8 oz. 40 in.—*Glasgow Herald*.
