I would repeat that the credit of the British Government is to-day, of course, and always will be, beyond question. The best proof of our institution's faith in British Government securities is shown by our holding over £3,400,000 out of £18 millions in securities of, or guaranteed by, the British Government.

The resolution was seconded by the Right Hon. Lord Revelstoke, and carried unanimously.

MAPLE AND COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The forty-first annual general meeting of Maple and Co., Ltd., was held, on the 27th ultimo, at the company's premises, Tottenham Court Road, London, Mr C. C. Regnart (the president) presiding.

The Chairman, in moving the adoption of the report, said he thought he was justified in saying that when he addressed them last year nobody imagined that the trade depression which had set in would have assumed the disastrous and world-wide proportions since experienced, the results of which were reflected in their balance sheet. The main causes of the decline in their profits had been the increasing difficulty of maintaining the turnover, due partly to the restricted spending power of their patrons, but largely to fall in prices, the benefit of which they always passed on to their customers. Further, increased inroads had been made on the pockets of the public to meet the growing burden of taxation, which had been felt especially by that section of the community to whom they looked for the greater part of their trade. As a consequence, the more luxurious side of the business had been hit very hard.

The company had in the past derived a substantial profit from ship decoration and furnishing. Very few ships were being built at the present time, and consequently such work was much more difficult to obtain. Moreover, contract work of every description had been subject to keener competition than ever.

As to their prospects, in the first place, he said, a business such as theirs had to meet fierce competition. On all sides they had competitors who were maintained largely by means of advertising stunts, and who were developing hire-purchase trade. Maples, of course, did a large hire-purchase business, and by comparison the terms offered by their company gave the greatest value to the purchaser.

Their business could not be compared with that of a general store: it dealt exclusively in the manufacture and supply of household furnishings, which came into quite a different category, but the directors were of opinion that the company would be amongst the first to derive benefit from a change in world conditions. The board was determined that the company's reputation as the largest and most attractive furnishing house in the world should remain unchallenged.

The resolution was carried unanimously.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended February 28, 1931, amounted to £24,866,000 against ordinary expenditure of £10,984,800. After allocating £2,620,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £223,771, the week's operations, as shown below, reduced the National Debt by £11,485,000 to £7,648,495,000:—

(000's omitted.)	
Public Department Advances.....	+ 8,250
4% War Loan paid off.....	+ 550
National Savings Certificates.....	+ 8,800
Treasury Bills.....	— 19,385
4% War Loan paid off.....	— 450
P.O. & Telegraph Money.....	— 450
	— 20,285

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

			5	Sovs. for export	Nil
Total		444,139	Total		316,704
					Net arrivals, £127,435.

Messrs Samuel Montagu and Company write on March 4, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £140,816,300 on the 25th ultimo (as compared with £140,442,597 on the previous Wednesday) and represents a decrease of £6,809,322 since December 31, 1930. The shipment of bar gold which arrived from South Africa this week amounted to £1,215,000; none of this was available in the open market yesterday, having all been bought forward on French account. To-day, about £150,000 of bar gold £20,000 from West Africa and £130,000 from an undisclosed source) was offered in the market, and was taken for Belgium at the fixed price of 84s. 10 1/2d. per fine ounce. Movements of gold at the Bank of England during the week have resulted in a net influx of £108,687. Receipts totalled £444,139, of which £250,000 was in sovereigns from South Africa and £192,848 in sovereigns "released"; withdrawals consisted of £250,000 in sovereigns "set aside," £53,000 in sovereigns taken for export, and £52,452 in bar gold.

SILVER.

The market has shown a steadier tone, but for the first half of the week remained rather unsettled pending the announcement of the Indian Budget; it became known on the 28th ultimo that this provided for an increase of 2 annas per fine ounce in the duty on silver imported into India, thus making a total duty of 6 annas per fine ounce. The increase was less than expected, as some quarters had taken the view that the duty would be raised by 4 annas and had already anticipated the event by heavy forward sales. The effect, therefore, appeared to be more than discounted, and in consequence the announcement was not followed by wide movements in prices. China has both bought and sold, and the Indian Bazaars have supported the market by covering bear sales, whilst America has also operated both ways. To-day, further bear covering by India and China on a poorly supplied market caused a rise of 1/4d., prices being quoted at 12 1/2d. for cash and 12 1/4d. for two months' delivery. At the moment the outlook appears fairly steady. The difference between the quotations for cash and two months' delivery varied during the week between 1/4d. and 1/2d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 23rd ultimo to mid-day on the 2nd instant:—

Company News.

REPORTS AND NOTICES.

RAILWAYS.

BUENOS AIRES AND PACIFIC RAILWAY.—A cable received by the Buenos Aires and Pacific Railway Company in London from the company's general manager reports that the crop from the early sown maize, which represents about 80 per cent. of the total maize crop on the company's system, is practically assured. It is expected that the amount available for transport from June or July, when the grain has been conditioned, will be greatly in excess of that of last year.

METROPOLITAN RAILWAY COMPANY.—Gross receipts for 1930 amounted to £1,644,472, as compared with £1,627,470 for 1929. The net revenue for the year was £827,998, as compared with £844,515. The ordinary dividend is 3 1/2 per cent. against 4 per cent. The carry forward is increased from £32,016 to £33,546. The dividend on surplus lands stock is 4 per cent., against 3 1/2 per cent. for 1929.

THE UNDERGROUND DIVIDENDS.—The dividends declared by the Underground Railways group for the year 1930 were declared on February 13th. The dividends and amounts to be carried forward are shown below:—

	1929.	1930.	Carried forward 1929.	Carried forward 1930.
	Final.	Final.	£	£

London Electric Ord.	2 1/2	5	186,784	193,945
London General Omnibus	4 1/2	8	103,036	101,355
Metropolitan District	2 1/2	5	48,108	52,326
Underground Ordinary Shares	5	8	265,950	352,977

* Tax free.
† The special reserve for equalisation of interest on the 6 per cent. first cumulative income debenture stock and 6 per cent. income bonds, viz., £86,242, being no longer required, has been transferred to the profit and loss account, thus increasing the sum carried forward by that amount.

Subject to approval by the respective meetings of the companies the dividends on the stocks and shares of the six companies first named and the interest on the 6 per cent. first cumulative income debenture stock and the 6 per cent. income bonds of the Underground Company will be payable on March 2nd, and the dividend on the ordinary shares of the Underground Company will be payable on March 9th. The holders of the assented stocks of the Central London Railway Company are entitled in respect of the year 1930 to an additional dividend of approximately 0.4 per cent. in excess of the guaranteed dividend of 4 per cent. per annum, compared with 0.4 per cent. for the year 1929.

MISCELLANEOUS.

THE BORDEN COMPANY.—According to the report for the year 1930, sales for the year amounted to \$345,422,778.69 and net income derived was \$21,681,213.55, being 6.28 per cent. of sales and \$5.12 per share on all of the capital stock outstanding December 31, 1930. Sales and net income for 1930 were favourably affected by the inclusion of the operations of 1930 acquisitions, the sales and income of which companies were not included in 1929. The ratio of net to gross was slightly improved over 1929, but net earnings per share showed a decrease, being \$5.12 compared with 1929 net earnings per share of \$5.50, which latter were the largest in the company's history. Net working capital amounted on December 31, 1930, to \$42,231,939.98 as compared with \$35,265,102.48 on December 31, 1929. Current assets at December 31, 1930, amounted to \$2.82 for each \$1.00 of current liabilities, which compares with \$2.22 for each \$1.00 of current liabilities at December 31, 1929. Cash in hand December 31, 1930, of \$9,820,421.50 compares with \$8,750,764.31 on hand at the close of the previous year. Marketable securities on hand December 31, 1930, of \$12,435,435.78 compares with \$11,354,864.09 on hand at the close of the previous year. The market value of these securities exceeds their book value.

HARRODS, LTD.—It is announced that Harrods, Ltd., has purchased the stock and goodwill of James Shoolbred and Company, Tottenham Court Road, W.C. The business will be transferred to Harrods at Knightsbridge on March 9th.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LTD.—The estimated aggregate traffic receipts for the year 1930 was £5,365,561, against £6,146,452 for year 1929.

WILLIAM WHITELEY, LTD.—A net profit of £123,629 is shown in the report for the year ended January 31, 1931, of William Whiteley, Ltd. In the previous year net profit amounted to £124,422. Interest on the 4 per cent. debentures requires £36,000, and interest on the 6 per cent. debenture stock, issued in March, takes a further £22,500, while depreciation of leaseholds, plant, &c., accounts for £18,500. The interim dividend of 10 per cent. on the ordinary shares absorbed £45,000. The sum to be carried forward will remain at £91,070, and Selfridge and Company, Ltd., will, under their guarantee, become liable for the difference, sufficient to pay the full 25 per cent. dividend to the holders of the ordinary shares. The amount required to make up this dividend is £67,500. Meeting, Queen's Road, W.2, March 19th, at 11 a.m.

† Free of income tax.

‡ The total dividend charge was £112,500, the balance of £67,500 being paid by Selfridge and Company under their guarantee.

Mr George Elkington, J.P., F.R.I.B.A., has been re-elected chairman of the National Building Society, which position he has held from 1903. Mr Elkington is also a vice-president of the Metropolitan Building Societies Association. Mr Henry Johnstone late secretary of the society, has been appointed general manager and Mr R. Bruce Wycheley, M.C., F.C.I.S., F.S.S., late assistant secretary, has been appointed secretary.

The Hon. Eric B. Butler-Henderson, a director of the London and North Eastern Railway, has been elected to the boards of the Buenos Ayres Great Southern Railway Company, Ltd., and the Buenos Ayres Western Railway, Ltd.

At a meeting of the Joint Hull Committee, Mr E. L. Jacobs (underwriter of the Alliance Assurance Company, Ltd.) and Mr F. J. L. Fish, of Lloyd's, were unanimously re-elected chairman and deputy-chairman respectively of that committee for 1931.

Mr C. A. Proctor, who has just returned from a business tour to Canada, America and the Far East to take up his duties as overseas director of the Dunlop Rubber Company, Ltd., has been elected to a seat on the board of the company. Mr Proctor was a member of the board from March 10, 1919, to April 29, 1927, when he relinquished his directorship in order to undertake important work with the Associated Dunlop Companies on the continent of Europe.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of February are as follows: Production of oil, 36,900 tons; deliveries, 32,800 tons.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—Production of crude oil by this company for the month of January was 32,298 barrels.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended February 14, 1931, was: Bolivar district, 87,804 m. tons; Maracaibo district, 16,471 m. tons; total, 104,275 m. tons. Production for the week ended February 28th was: Bolivar district, 85,681 m. tons; Maracaibo district, 17,216 m. tons; total, 102,897 m. tons.

Commercial Reports.

MARKET SUMMARY.

The general situation of the coal trade remains unchanged. Industrial demand and exports continued at a low level, and there has not been an increase in forward contracting. The threat of a stoppage in the French collieries has temporarily stimulated demand in Cardiff. Requirements for heating purposes are still satisfactory, but many collieries find it increasingly difficult to dispose of "smalls." There has been a slight improvement in the home demand for iron and steel, but Continental competition is extremely keen, and makers find it difficult to maintain their proportion of the home trade. Non-ferrous metals have been easier. Tin has not maintained its high level because of a sharp increase in visible supplies, and copper, lead and tin which, last week, received support from speculative buyers, reacted when that section of the market became less active. Raw cotton values have been slightly lower than last week, but it is hoped that the improved political situation in India will result in an increased demand for Manchester goods from that country. Wool has again been firmer, and it appears that substantial orders for piece-goods have been placed, which resulted in increased activity in the manufacturing centres. The jute trade remains dull. Foodstuffs have been quiet. Wheat prices show a decline on the week following large offerings from Canada, Argentina and Australia, while the announcement that the Federal Farm Board of the United States intends to sell 35 million bushels before July added further to the depression. Tea has been steadier at this week's auctions, but on Wednesday it became known that the restriction scheme for the 1931 crop has been abandoned owing to the lack of sufficient support. Among miscellaneous commodities, rubber has advanced sharply following the news of the reopening of negotiations between British and Dutch interests. Hides have been steadier this week, and the fall in values seems to have been arrested.

THE COAL TRADE.

Our Sheffield correspondent writes:—A steady demand has developed for best steams for export, with prices firm at from 17s. to 17s. 9d. f.o.b. There is no improvement, however, in forward business, and the industrial demand is disappointing. Demand for house coal is fairly brisk. Best ordinary qualities are quoted at from 20s. 6d. to 21s. 6d. at pits. The excessive supplies of secondary qualities and smalls continues to be a problem. The depression in blast-furnace coke continues, but there is fair demand for gas coke.

Our Glasgow correspondent writes:—The main features of the Scottish market are still a plenitude of washed nuts, a consequent

20 BISHOPSGATE, LONDON, E.C.2.

curtailment of round coal output, and a steady movement of the latter classes, which are none too plentiful after home requirements have been met. Export inquiry remains poor, and although important quantities fall to be tendered to the Swedish and Belgian railways, hopes are not confident that any large share of the business will come to British producers. The Scottish mineworkers' delegate recommend acceptance of the proposals covering the period to the end of June next. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 16s. 9d.; splint second, 16s.; Navigation, 15s. 6d.-15s. 9d.; Navigation second, 15s.-15s. 3d.; Hartley, 15s. 6d.; steam, 14s. 6d.; trebles, 13s.; doubles, 11s. 9d.; singles, 11s.; pearls, 10s. 9d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.-17s.; first-class steam, 13s.-13s. 6d.; third-class steam, 12s.-13s.; trebles, 12s.-12s. 6d.; doubles, 11s.; singles, 10s. 6d.; pearls, 10s. 6d. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 9d.; trebles, 12s.-13s.; doubles, 11s. 9d.; singles, 10s. 6d.; pearls, 10s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 11s. 3d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Weak conditions prevail in the Welsh steam coal trade, and the operation of the minimum schedule alone prevents a setback in quotations. The threatened stoppage at French collieries in the middle of this month has stimulated demand from this direction, but otherwise foreign inquiries are poor, particularly from the bunkering stations. Here and there collieries are comfortably situated for prompt loading, but buyers not tied to particular brands have a wide range of choice at the minimum prices. In spite of the regulation of output under the marketing scheme, supplies of most descriptions are in excess of immediate demand, the most unfavourable feature being a glut of smalls, for which outlets are difficult to find. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 15s. to 15s. 3d.; best anthracite large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 24s. 5d. to 25s.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—There is a little more business doing in Cleveland iron in one or two directions to cover orders for foundry work recently booked, but generally the demand is quiet. It is expected, however, that more buying will take place very shortly to renew contracts that expire at the

end of the month. Meantime producers are getting rid of all the iron that is available from the current make and are also eating into their stocks, which are now reported to be of small dimensions. One would like, however, to see a bigger trade moving and more furnaces put into operation, but there are no indications of this at present. The weekly market on Tuesday presented no new feature and only a small business was reported. Prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The demand for Scotland is still very poor owing to the severe Continental competition, and orders on export account are of little importance. In hematite rather more orders are coming to hand, but only for early delivery. Consumers do not possess the necessary confidence to purchase ahead and are simply buying from hand to mouth. Makers generally quote 69s. for ordinary mixed numbers for prompt and 61s. 6d. up to the end of June, but there are one or two that ask more. On the other hand, these prices have been shaded in special instances. The shipments of pig iron last month were nearly 3,000 tons less than in January, but finished materials showed a loss of only about 500 tons. In the finished trades there is nothing new of importance this week. Some departments are fairly busy, but in others new orders would be specially welcome. It is expected that some orders for rails for home railways will be given out very shortly. The ore market continues lifeless. Best Bilbao rubio is nominally 16s. c.i.f., and the current freight Bilbao-Middlesbrough is rather lower at 4s. 6d. Imports of all kinds of ore into Middlesbrough for February totalled only 56,734 tons, compared with 103,965 tons in January. Coke continues in abundant supply and the price is weak at 16s. per ton for ordinary blast-furnace qualities delivered at works. The number of furnaces in blast in the district is unchanged at 23.

Our Sheffield correspondent writes:—An increasing number of small orders for steel parts indicates more activity at many of the engineering works of the country, but bulk business is still lacking and the position of heavy crude steel is no better. The output of open-hearth steel is being maintained at previous levels. In Lincolnshire this branch is badly depressed. As a result of rationalisation no rails are being rolled at Sheffield. Two mills were stopped long ago, and the third has been scrapped. Tram rails for Sheffield have now to be imported from Middlesbrough. The export trade is weak in most sections, but a regular if small quantity of best tool steels is being supplied to Continental engineers. The market for ferro alloys is flat, and prices favourable to buyers. The small amount of business passing indicates depression in all kinds of alloy steels. A Manchester firm with a branch at Sheffield has acquired a site six miles from Sheffield for the purpose of erecting large steel works thereon, but the full development of the scheme is being postponed on account of the state of trade. Unemployment in Sheffield tends to increase, and the numbers on the register are more than double the figures of a year ago.

Our Cardiff correspondent writes:—Demand on the South Wales tinplate market is at a low ebb, and makers are finding it more profitable to close the mills and draw from the pool. A special meeting of the tinplate Joint Industrial Council on Tuesday discussed inter alia the question of providing work for unemployed operators. The employers left it to the discretion of the various managements of works now in operation in conjunction with the Welsh Plate and Sheet Association to work six hours in mills and tin houses where possible, without impeding efficiency, so as to provide employment for men attached to works now idle. The galvanised sheet market is stagnant.

OTHER METALS.

TIN.—It appears that complete agreement was reached about the international system of control to be adopted at a meeting of delegations representing the various countries affected by the plan, which was held at the Colonial Office on February 27th. The following is a summary of the main points of the scheme:—The scheme, which came into operation on March 1st, will be administered by an International Committee, representing the Governments of Bolivia, Malaya, the Netherlands East Indies, and Nigeria. Its object is to secure a fair and reasonable equilibrium between production and consumption, with the view of preventing repeated and severe oscillations of prices. The basic world tonnage under the scheme was agreed at 145,000 tons (of 2,240 lb.) a year. The initial quotas were agreed as follows:—Malaya, 53,853 tons; Bolivia, 34,260 tons; Netherlands East Indies, 29,910 tons; Nigeria, 7,750 tons. Invariable percentages based on these initial quotas were agreed for each country as the ratios applicable to all alterations of the basic tonnage. It was agreed that (apart from a special agreement arrived at in view of urgent circumstances) these initial quotas should remain fixed for a period of not less than six months. Each Government agrees to allot its national quota among the individual producers and to control effectively in accordance with the scheme production and export. The quotas may be altered from time to time as circumstances may require by the unanimous consent of the participating Governments. They will in no circumstances be altered at shorter intervals than three months. The scheme will remain in force for two years; but if any of the participating Governments demands an alteration of the tonnage quotas, and if within a period of six months a unanimous agreement has not been reached with regard to such a proposal, the Government which made the demand will be at liberty to withdraw from the scheme. It was recognised that in the event of such withdrawal the other participating Governments could immediately abandon the scheme. The representatives of the Governments of Bolivia, Malaya, the Netherlands East Indies, and Nigeria are to submit the details of the scheme as

CORPORATE ORGANISATION AND SCOPE

The business of your company falls into four general divisions. In conformity with this there were created during the year 1929 four major sub-holding companies to conduct and co-ordinate the operations of these four general divisions. (See page 9 of this Report for information regarding Borden's, Ltd.)

The Borden Company owns 100 per cent. of the stock of these major sub-holding companies, each of which companies, in turn, owns 100 per cent. of the stock of the operating companies coming under its control.

These four major sub-holding companies are as follows:—

Borden's Food Products Company, Inc.

Food Products Group—manufacture and sale since 1857 of Eagle Brand as well as other brands of condensed milk; also evaporated, malted and dry milk; casein products, caramels, mince meat, dried fruit juices, etc.

Business of the above nature is conducted throughout the United States, Canada and in Export Markets.

Borden's Dairy Products Company, Inc.

Fluid Milk Group—purchase and distribution by a system of wagon deliveries of milk, cream, butter, eggs, etc.

Business of the above nature is conducted in the States of:—

Arizona	Indiana	New Jersey	Pennsylvania
California	Massachusetts	New York	Texas
Connecticut	Michigan	Ohio	Wisconsin
Illinois	Missouri		

and in the Provinces of Ontario and Quebec in Canada.

Borden's Ice Cream & Milk Company, Inc.

Ice Cream Group—manufacture and sale of ice cream and allied products.

Business of the above nature is conducted in the States of:—

California	Iowa	Missouri	Pennsylvania
Connecticut	Kentucky	New Jersey	Texas
Delaware	Maryland	New York	West Virginia
Illinois	Massachusetts	Ohio	Wisconsin
Indiana	Michigan		

and in the Provinces of Ontario and Quebec in Canada.

Borden's Produce Company, Inc.

Produce Group—purchase, production and sale of farm produce (butter, eggs, etc.) as a source of supply for our own wagon distribution and at wholesale; also manufacture and sale of loaf, soft and fancy cheeses.

Business of the above nature is conducted throughout the United States, Canada and in certain Export Markets.

COMMENT

Although the business conditions obtaining throughout 1930 had their unfavourable effect on the operations of this Company, the year nevertheless was one of marked progress.

Much was accomplished by way of further extension and diversification of company activities.

Territorial and product diversification had a stabilising influence, since all territories were not equally depressed, nor was the profit margin equally affected on all products.

Surplus production of raw milk; smaller per capita consumption of fluid milk and milk products, resulting in a reduced physical volume of sales; continuously falling market values of dairy products and, as to some lines, selling prices that were lower than cost savings justified, were among the unfavourable factors. The effect of these was minimised by generally lower costs of raw materials, although not of labour, and greater efficiency of operations, to which the progress made in the co-ordination of our activities contributed largely.

Sales and Net Income.

Sales for the year amounted to \$345,422,778.69 and net income derived was \$21,681,213.55, being 6.28 per cent. of sales and \$5.12 per share on all of the capital stock outstanding December 31, 1930.

The shares outstanding at the close of the year included all stock issued up to that date in payment for businesses acquired during the year, irrespective of the dates when such stock was issued. The Borden income, however, only reflects the earnings of such businesses subsequent to the dates when they were respectively acquired.

Sales and net income were the largest in our history. The ratio of net to gross was slightly improved over 1929, but net earnings

per share showed a decrease, being \$5.12 compared with 1929 net earnings per share of \$5.50, which latter were the largest in our history. This seeming anomaly suggests the analysis which follows.

Sales and Net Income for 1930 were favourably affected by the inclusion of the operations of our 1930 acquisitions, the sales and income of which companies were not, of course, included in 1929.

Without the inclusion of these in 1930, sales value for the year would have shown a recession from 1929 because of decreased quantity volume and lower selling prices reflecting the lower costs of milk and other raw materials. Net Income would have been similarly affected for the same reasons, despite the fact that the ratio of net to gross was slightly improved over 1929.

Generally speaking, and as to the greater part of our business, we enjoyed the patronage of more customers than in 1929, but the per customer purchases were less. This condition was brought about by the extraordinary economic conditions and is temporary. There is every reason for expecting the recovery of lost sales, together with normal increases at such time as business conditions and purchasing power are restored to normal.

To properly measure the effect of 1930 conditions on sales of that year, it is necessary to make comparison with 1929 of sales for all companies included in this 1930 report, although a considerable number of these companies, now owned, were not owned and operated by this company in 1929. Such a comparison indicates a quantity sales loss for 1930 as compared with 1929 of sufficient volume (without taking into consideration the loss of normal sales increase) which, if enjoyed, would at the 1930 ratio of net to gross have sufficiently increased Net Income to bring about a net earnings per share on all of the 4,233,395 shares outstanding December 31, 1930, at least equivalent to the net earnings of \$5.50 per share on the 3,706,724 shares outstanding December 31, 1929.

The foregoing seems to definitely establish the fact that the smaller earnings per share are attributable to uncontrollable contraction of sales. This being so, and having in mind the many other unfavourable factors in the 1930 situation, we seem to have proof that matters susceptible of control were administered in a manner to minimise the ill effect of those beyond control and that, as previously stated, marked progress was made in the development of greater efficiency and co-ordination of operations.

Net Working Capital.

Net Working Capital amounted on December 31, 1930, to \$42,231,939.98 as compared with \$35,265,102.48 on December 31, 1929. Current Assets at December 31, 1930, amounted to \$2.82 for each \$1.00 of Current Liabilities, which compares with \$2.22 for each \$1.00 of Current Liabilities at December 31, 1929.

Cash on hand December 31, 1930, of \$9,820,421.50 compares with \$8,750,764.31 on hand at the close of the previous year.

Marketable Securities on hand December 31, 1930, of \$12,435,435.78 compares with \$11,354,864.09 on hand at the close of the previous year. The market value of these securities exceeds their book value.

Inventories on hand December 31, 1930, of \$25,363,285.24 compares with \$26,442,624.03 on hand at the close of the previous year. These 1930 figures, while comprehending for the first time the inventories of 1930 acquisitions, are for the most part, and as affecting major items, of smaller physical volume than at the close of 1929. All Inventories were valued at the lower of cost or market. The general inventory position at the beginning of the current year is a good one and better than at the corresponding period a year ago.

Notes Payable of \$4,800,000.00 on December 31, 1930, compares with \$8,548,600.00 of Notes Payable on December 31, 1929, a reduction of \$3,748,600.00.

All Bond, Note and/or Preferred Stock issues of companies acquired during the year were paid off, thereby leaving the Common Stock of The Borden Company without any outstanding securities senior thereto.

Collections have not been as good as usual, but under prevailing conditions most satisfactory. Credit losses, while somewhat in excess of normal, have been more than covered by adequate Reserves created by charges to current operations. Receivables, while naturally showing an increase due to a greater number of companies, are in excellent condition.

Mortgages and Purchase-Money Notes.

Mortgages and Purchase-Money Notes of \$380,582.00 at December 31, 1930, as compared with \$611,157.00 at December 31, 1929, is made up entirely of obligations assumed in connection with businesses acquired and represents the balance of such items after anticipations. These obligations will be paid off on their respective due dates.

It having always been the policy of the Company to carry a mortgage on the Office Building at 350 Madison Avenue, New York City (a non-operating property owned by its subsidiary, the Borden Realty Corporation), thereby reducing its own equity therein, your Board of Directors deemed it wise and consistent to increase the mortgage to a total amount more in keeping with the real value of the property, thus releasing funds for general business purposes. This accounts for the increase of \$1,300,000.00 in the item of "Mortgage—Madison Ave. Office Building Property," which item has in previous reports been treated as a deduction from the asset item of "Property, Plant and Equipment."

Property, Plant and Equipment.

This item stands net after adequate depreciation provision, at \$114,355,389.39 on December 31, 1930, as compared with \$103,132,210.79 on December 31, 1929.

The greater portion of the net increase in this item is due to new acquisitions, although the extension and improvement expenditures on already owned plants, together with new construction and equipment, were very large.

The Company at all times maintains its properties in excellent physical condition and constantly studies their needs, both as to capacity and efficiency.

All property expenditures are controlled by a conservative policy of accounting.

The Budget of Capital Expenditures for 1931, comprehending Extension, Improvements and Replacements, as approved by the Board of Directors, is about 12 per cent. greater than the same class of expenditures for the same companies during 1930.

Expansion.

The acquisitions constituting separate operating units actually made or contracted for since last reporting to our Stockholders on this subject under date of September 12, 1930, are few. These, together with others pending, will be included in the next communication on this subject.

As before stated, our 1930 acquisitions have accomplished further desired diversification and all have had stabilising effect.

Borden Company Stock has been the consideration in practically all transactions, except for the cash involved in the retirement of outstanding Bond, Note and/or Preferred Stock issues and some few comparatively small acquisitions.

Effective January 1, 1931, our Cheese operations became a part of Borden's Produce Company, Inc., into which Company's activities such operations more logically fit.

Borden's Ltd.

Expansion in the Dominion of Canada during the last two years, and more particularly the last year, has been very great.

Twenty years' Canadian experience, coupled with our faith in the future of the Dominion, actuated us in undertaking this development programme.

We enjoy large sales throughout Canada and are now conducting operations at 49 Canadian points, including mostly all of the larger cities of the Dominion.

A very considerable number of our shares (between 300,000 and 400,000) are owned by several thousand Canadian citizens, and our Canadian activities are managed and conducted by Canadians.

All of this, together with our desire to be more positively identified with a part of Canada, has led to the organisation of Borden's Ltd., a Dominion Corporation having its legal residence in Toronto, Ont. Borden's Ltd., owns all of the Capital Stock of all Canadian operating companies.

A dominating majority of its Board of Directors is made up of distinguished Canadians, representatives of all that is best in the business, financial and professional life of the Dominion.

Co-ordination.

Our co-ordination work has steadily progressed throughout the year. The major sub-holding companies reported on particularly a year ago have already proven their value. The formation of Borden's Ltd., referred to above will, undoubtedly, result in further advantages. The studies of the various Co-ordination Bureaux point to greater possibilities by way of further improvement of operating efficiency, much of which we hope to accomplish this year.

The importance of this work is so fully realised and its value so clearly demonstrated that it is receiving constant official consideration.

Trade-Marks, Patents and Good-Will.

Although it is true that the trade-marks and good-will of our 1930 acquisitions are most valuable, and if capitalised would be a very sizable item, this figure remains unchanged at the close of 1930 at \$7,000,000.00. This is brought about by the fact that while in some cases, after adjustment of asset values, the net tangible assets were less than the cost of the businesses acquired, this difference was offset by other acquisitions having net tangibles in excess of their cost.

Capital Stock.

Of the Authorised Capital Stock of 8,000,000 shares of \$25.00 par value each and an aggregate par value of \$200,000,000.00, there was outstanding on December 31, 1930, \$105,834,875.00, represented by 4,233,395 shares, as compared with \$92,668,100.00 represented by 3,706,724 shares on December 31, 1929.

Of the increase in outstanding Capital Stock of the Company for the year amounting to \$13,166,775.00 and 526,671 shares, 111,201 shares were issued in payment of the 3 per cent. stock dividend of January 15, 1930, and 415,470 shares were issued in payment for businesses acquired.

As in 1929, no additional stock was offered to Stockholders for subscription during the year 1930.

The stock outstanding December 31, 1930, was held by 24,383 Stockholders with an average holding of 174 shares, as compared with 17,167 Stockholders with an average holding of 215 shares on December 31, 1929. Employees held on December 31, 1930, an aggregate of 964,166 shares.

The steadily increasing number of Stockholders is very gratifying to the Directors and Officers.

The Organisation.

Too much credit cannot be given the organisation. Their tasks have been approached intelligently and vigorously. Team work, bringing about the application of collective talent and strength, has accomplished much. All of this is gratefully acknowledged.

Respectfully submitted,

ARTHUR W. MILBURN,

President.

Consolidated Balance Sheet, December 31, 1930.

CERTIFICATE OF AUDIT.

The Borden Company:

We have audited your accounts and those of your subsidiary companies for the year ended December 31, 1930, or, as to companies whose businesses were completely acquired during the year, for the periods from the effective dates of acquisition to December 31, 1930.

We have verified the accounts representing cash and securities either by examination of such assets or by obtaining certifications of depositaries.

The charges to property accounts have been controlled by a conservative policy. In our opinion, adequate reserves have been provided for depreciation of property and for possible losses, and full provision has been made for all known liabilities.

The inventories of finished goods and raw materials and supplies represent balances shown by inventory records which are adjusted from time to time to agree with physical inventories. The inventory records were examined by us and appear to be correct. All inventory valuations are based upon cost or market, whichever was lower.

WE HEREBY CERTIFY that in our opinion the accompanying Consolidated Balance Sheet and Statement of Consolidated Income and Profit and Loss correctly set forth, respectively, the financial condition of the companies at December 31, 1930, and the results of their operations for the year (or lesser periods) ended that date.

New York, February 19, 1931.

HASKINS & SELLS.

(Continued from page 536.)

accepted at the meeting for the approval of their Governments. Meanwhile stocks, which have been cleared from the producing countries before the scheme became effective, resulted in an increase in visible supplies, which had the effect of slightly depressing prices. Quotations, which rose to \$123-\$123.59 per ton for standard cash on Monday subsequently reacted to \$121 7s. 6d.-\$121 10s. on Wednesday, which is the price at which the metal changed hands on the corresponding day last week. Visible supplies, including "float" and "carry-over in Straits," amounted to 52,992 tons at the end of February, which shows an increase of 3,692 tons as compared with those of the preceding month.

COPPER.—A slight improvement in the American industrial outlook prompted producers to raise their prices for electrolytic by $\frac{1}{2}$ cent per lb., to 10 $\frac{1}{2}$ cents. This move was immediately followed by Copper Exporters, Inc., who on Monday increased their selling limit for electrolytic from 10-55 cents to 10-80 cents, c.i.f. Continent. In London, however, buying interest subsided and the subsequent reaction in quotations failed to improve the demand. Wednesday's price of standard copper, at £46 7s. 6d. to £46 8s. 9d. per ton, compares with £47 7s. 6d. to £47 10s. on the corresponding day last week. According to the Statistical Department of the Metallgesellschaft at Frankfurt, the world's smelted production for January at 117,632 metric tons, shows a decline of 5,600 tons as compared with December, which is mainly due to a further curtailment of output in the United States.

LEAD.—Last week's improvement in the demand for lead has not been maintained, and prices declined considerably at the beginning of the week. The scarcity of sellers led to a slight recovery on Wednesday, when "soft foreign" changed hands at £14 3s. 9d. to £14 6s. 3d. per ton, as compared with £14 7s. 6d. to £14 10s. on the same day of last week.

SPELTER.—The cessation of speculative buying brought about a slight reaction in quotations, and Wednesday's price for G.O.B. at £12 17s. 6d. to £13 8s. 9d. compares with £13 2s. 6d. to £13 8s. 9d.

OTHER NON-FERROUS METALS.—Among non-ferrous metals, aluminium remained unchanged at \$85 per ton, while nickel sold at last week's price of \$170 to \$175 per ton. Antimony was slightly firmer, being quoted at \$25 to \$25 10s. per ton for "foreign" on Wednesday, as compared with \$24 10s. to \$25 10s. on the corresponding day last week. Quicksilver was quiet and changed hands at £22 7s. 6d. per bottle, which was the price prevailing last week.

TEXTILES.

THE COTTON TRADE.—Liverpool, March 4th.—Spot sales for the week February 26th to March 4th (inclusive) are 35,000 bales, of which 17,600 are American, 1,450 Brazil, 300 Argentine, 8,750 Peru, 3,350 Egyptian, 1,400 African, 1,000 East Indian, and 950 sundries. Imports for the same period are 93,576 bales, of which 5,090 bales are American, 881 Peruvian, 10,984 Egyptian, 457 African, 17,208 East Indian, and 58,956 sundries, of which 58,734 bales are Russian. Quotations to-day are: American Middling, 6-15; Egyptian Sakel, 10-10; Egyptian Uppers, 7-51; Brazil Fair, 6-30; Peru G.F. Smooth, 6-60; West African Mid., 6-15; East African G.F., 7-20.

Manchester, March 4th.—An uncertain feeling has prevailed in the market during the past week. Rather wider fluctuations have occurred in raw material rates. Various rumours have been circulated with regard to developments in the India situation, and official news has been awaited with much interest. The general inquiry in piece goods for India continues more active, but most of the offers have been on a low basis. Some manufacturers, however, continue to sell rather more freely for Calcutta, Karachi and Madras. Reports are being received of better clearances in the bazaars, and if the boycott is definitely lifted a distinct improvement is expected. A few more bids have been mentioned for China in white shirtings and fancies, but not much has been done. Staple makes have attracted some attention for Egypt and the Near East, and a little more activity has shown itself in printed and dyed goods for South America and the Continent. Home trade operations have been more encouraging. Quotations in American and Egyptian yarns continue firmer. Many spinners have recently sold rather more than the output, and there is a little less pressure to sell, but it is still exceedingly difficult to improve prices.

THE WOOL TRADE.—Our Bradford correspondent writes:—A very marked impression has been made in Bradford by the movement of values in Australia and New Zealand. The cost of merino wool in Melbourne and Sydney is distinctly more than can

be realised in this centre for tops, but this cannot be interpreted as indicating any coming reaction. Among importers and top-makers there is a strong belief that the position of wool is sound, and this opinion is not confined to Yorkshire. Foreign buyers are demonstrating their confidence by operating freely, and it is expected that when the second series of London sales commence next Tuesday, values will be about 10 per cent. higher than in January. The quantity announced as being available is 171,500 bales, which is 9,500 bales more than for the corresponding series a year ago. The knowledge that there is a further quantity in the background is not at all likely to operate adversely upon values. It is stated on good authority that the quantity of merino wool turned out of the Australian clip this season by outside buyers is not formidable, and though the bulk of the New Zealand clip is still to lift, values are not likely to suffer. The extensive purchases for Japan this week at Christchurch indicate how unsuspected buying power may develop, and though there will not be any Japanese competition for the 56,800 bales of New Zealand to be offered in London, there is every probability of a very good demand being forthcoming from the home trade and the Continent. Generally speaking, there is an improvement in spinning and manufacturing conditions. Topmakers have been able to sell steadily to botany spinners during the interval, and without getting on to a level with wool, prices have improved considerably. The consumption of fine tops is proceeding at a very encouraging pace, combing machinery being kept busy turning out this description. Wholesale and retail piece-goods houses have recognised the inadvisability of standing out of the market, and, following the placing of substantial orders for piece goods, machinery activity has increased. Crossbred spinners have so far benefited very little indeed, these still needing an improvement in hosiery and export requirements.

THE HEMP TRADE.—The market in hemp opened inactive at the beginning of the week. Subsequently an improvement in demand became noticeable, which was at once met with reserve on the part of sellers, thus driving up values to some extent. Manila J2, March-May, was quoted at £18 5s. on Wednesday, which shows a rise of 15s. on the week. Last week's receipts of "manila" amounted to 26,000 bales, against 33,000 last year. This week's receipts have been estimated at 26,000 bales and at 28,000 for next week.

THE JUTE TRADE.—Dundee: March 4th.—The jute trade continues very quiet and business in all sections is of small volume. The market has not been helped this week by the announcement that the stocks of hessian cloth in Calcutta have increased during the past month by four days' production to 34 days' and stocks of heavy goods by two days' production to 11 days'. The most remarkable feature about this is that stocks have risen, despite a considerable advance in prices during the period. There is every likelihood, however, that the figures of stocks in Calcutta will show

a decrease in future, now that the Indian jute mills have commenced to work under their latest agreement, which provides for 40 hours per week and 24 per cent. of hessian looms sealed up, compared with 54 hours per week for three weeks each month during the past eight months. Evidently consumers are not yet in a position to order large quantities of jute goods and a hand-to-mouth business is still in vogue. Production is still very considerably curtailed in Dundee and on the Continent, and there are no signs of any improvement. The large orders desired by spinners and manufacturers are not forthcoming, and the output is being sold only from week to week. Little news has yet come forward regarding the next crop of jute, beyond the fact that conditions of weather have been favourable for ploughing and sowing, which is proceeding. Sellers of the fibre are rather reserved and show no sign of weakness. Good First Marks are offered at from £18 to £18 10s., and best Lightnings from £16 to £16 10s., while Daisee assortment is quoted at from £14 17s. 6d. for full group to £15 10s. for good single marks; threes at £14 12s. 6d.; and fours at £13 5s., March-April. Tossa 2/3 came back from £16 10s. to £16 5s., and threes quoted at £15 15s., and fours at £14 5s., same shipment. Last week spinners were interested, and bought some fair quantities, but this week there is no further desire to purchase. Jute yarns are quiet and prices are all more or less nominal. While hessian qualities continue at 1s. 11d. for common 8-lb. cops and 2s. for 8-lb. spools as the quoted rates, buyers will not pay more than 1s. 10d. and 1s. 11d. respectively. Twist is quiet at 3½d. to 3¾d. for 3-ply 8-lb., and sacking yarns are bought only in small quantities at from 2½d. for 24-lb. weight and from 3¾d. for 8-lb. chains. Rove is easier at £20 done for 48-lb. and £16 10s. for 200-lb., while the finer yarns are neglected. Jute cloth prices are quotable steady, but it requires actual business to test them. They range from 2½d. for 10½-oz. 40-in. and 1¾d. for 8-oz. Linoleum hessians are dull and inactive, and business is slow in heavy goods, which may result in one or two establishments being closed down.

THE GRAIN MARKETS.

Improved climatic conditions of late over the United Kingdom enabled farmers to resume preparations for spring sowings. In some districts field work has fallen in arrears owing to recent heavy rains, but will soon be made good under a spell of drier weather. Winter wheat is still backward on heavy soils, but otherwise little complaint arises regarding growth and condition for the time of year. Supplies of native wheat at the principal statute markets were in small compass, and best grades sold readily for poultry feed, also milling purposes, but inferior samples were difficult to vend. A quiet and featureless market resulted for imported descriptions, and prices tended in a downward direction following American Farm Board offerings, and reports that part of surplus holdings will be liquidated in the near future. Confirmation of sales already made on Continental account is furnished by orders quoting for freight space from the American Gulf ports for March, April and May loadings, and although there is yet no indication of the stabilisation plan being withdrawn, it is quite possible that United States growers may have to market the new winter crop through usual trade channels. These developments have not been without effect on Canadian sellers, increased selling pressure from the Dominion being prominent of late, with offers generally on a more reasonable basis. Southern Hemisphere countries, however, are meeting the competition, and attractive offers from Australia and Argentina are securing the bulk of what business is available. Shipments are adequate for estimated requirements, but not unduly heavy, a considerable proportion being for non-European destinations, but a much larger movement is anticipated in the near future when Argentine loadings can be actively resumed. Russian clearances are falling off, probably due to the interruption of transport from the interior usual at this period of the year, but a resumption of shipments is anticipated in the spring. Prices were as follows: No. 1 hard Manitoba, ex ship 27s. 9d.-28s. 6d.; No. 1 Northern Manitoba, ex ship 27s. 3d.-27s. 6d.; No. 2 ditto 26s. 3d.-27s. 3d.; No. 3 25s. 3d.; No. 4 Manitoba 24s. 3d.; Barusso, 63 lbs., 22s. 6d.; Rosafe, 63 lbs., 22s. 3d.; Australian, 22s. 6d.-24s. 6d.; Russian on sample, landed, 21s.-24s. 6d.; ex ship, 21s.-25s. per 496 lbs.; English, 4s. 6d.-5s. 6d. per 112 lbs.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Mar. 5, 1930.	Jan. 2, 1931.	Feb. 18, 1931.	Feb. 25, 1931.	Mar. 4, 1931.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	148½	111	56½	63	62½	59½
Chicago (No. 2 Winter) — Cents per 60 lb.	130½	106½	79½	79½	79½	79½

The visible supply of wheat in Canada at 63,480,000 bushels, shows an increase on the week of 821,000 bushels. Supplies a year ago stood at 74,412,000 bushels.

WHEAT FLOUR.—Business in both home milled and imported flour was on quieter lines and trend of prices in buyers' favour, bakers adopting reserved measures in view of the uncertain wheat position. Quotations: London straight run, 24s. per sack for country deliveries and 23s. London area. Of imported, Manitoba patents, 21s. 6d.-25s. 6d.; Buffalo ditto, 22s.-26s.; Australian, 19s.-19s. 6d. ex store, per 280 lbs.

BARLEY.—The market in barley has been firm. Quotations: Californian old, landed, 30s.-35s.; new ex ship, 30s.-41s. as to sample; Chilean, brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, landed, 16s. 3d.; ex ship, 15s. 3d.; Persian, ex ship, 13s. 3d. per

(Continued on p. 542)

THE BALTIMORE & OHIO RAILROAD COMPANY

OFFICE OF THE PRESIDENT.

Baltimore, Md., February 28, 1931.

To the Stockholders of

THE BALTIMORE AND OHIO RAILROAD COMPANY:

The President and Directors submit herewith a preliminary condensed income statement, compared with the preceding year, together with balance sheet, as of December 31, 1930, and certain other general information which it is thought will be of interest.

The Annual Report in the customary form will be prepared and forwarded later to those stockholders who have advised or may advise the Secretary of the Company of their desire to receive a copy.

The net income for the year available for dividends and other corporate purposes, after the payment of interest, rentals, taxes and other fixed charges, was \$21,423,770. This is a decrease of \$7,344,138, compared with 1929.

After paying the 4 per cent. dividend on the Preferred Stock, there remained \$19,069,242 equal to \$7.44 per share on the amount of common stock outstanding during the year. Quarterly dividends at the annual rate of 7 per cent. were declared on the common stock, and amounted to \$17,940,687.

Leaving a surplus from the operations for the year of \$1,128,555.

The total accumulated surplus of your Company on December 31, 1930, was \$109,861,329, a decrease, compared with December 31, 1929, of \$4,607,457, due principally to the charge to this account of the discount and commission on \$63,031,000, Thirty-year 4½ per cent. Convertible Gold Bonds, which were sold on March 11, 1930, through an offering to the holders of the stock of the Company, and to other adjustments.

During the year there was an increase in investment in road and real estate, &c., of \$14,571,408. New equipment was acquired at a cost of \$11,359,733 and old equipment retired in the amount of \$1,700,454.

Resulting in a net increase in Investment in Equipment of \$9,659,279.

Total increased investment in property used in transportation service... \$24,230,687.

The following additional equipment was purchased: five all-steel dining cars, seven all-steel cafe and parlour cars, fifty all-steel coaches, 1,625 all-steel box cars, 300 all-steel hopper cars, 1,300 all-steel gondola cars, and twenty-seven pieces of marine equipment.

Nine passenger-train cars, 1,485 freight-train cars, 176 pieces of work equipment, one piece of floating equipment, and fourteen pieces of miscellaneous equipment, no longer suitable for modern and efficient service, were retired during the year.

Following the policy of your Company to provide greater comfort for its passengers, ten new coaches, with reclining individual seats were put in service during the year, and four additional are under construction. These coaches are an innovation, and have been designed especially for overnight travellers who do not wish to avail themselves of Pullman sleeping-car accommodations, and are so constructed that they afford the greatest possible comfort to patrons. A unique feature is a lunch counter compartment at the end of the car, where light lunches and soft drinks are served at moderate prices under the most sanitary conditions. No extra charge above the regular railroad fare is made for the additional convenience afforded by these cars.

The world-wide economic depression, which began in the latter part of 1929, is reflected in the reduced earnings of business in general, and as the prosperity of the railroads is closely co-related to that of industry, the effect on the operating revenues of the railroads has been severe. The decline in volume of traffic available during the year 1930, as compared with 1929, coupled with increased competition with other forms of transportation, such as the motor buses and trucks and inland waterways, has resulted in decreased revenues, as follows:—

Freight revenue	\$31,783,065
Passenger revenue	3,571,005
Mail revenue	3,324,635
Express revenue	1,245,043
All other revenue	834,532

Total Decrease \$38,758,340

The decrease in Mail Revenue was not because of any diminution in mail handled, but owing to the inclusion in the revenues of 1929 of \$1,331,824, representing additional compensation due by the Government for the period from May 9, 1925, to July 31, 1928, and paid in July, 1929.

Operating expenses were very substantially reduced, but not beyond the point consistent with efficient and safe operation. As shown in the Income Account, the operating revenues decreased 15.79 per cent., while operating expenses were reduced 15.19 per cent.

Notwithstanding the curtailment in maintenance expenses, the property was adequately maintained to meet requirements, and is in good physical condition. Because of the liberal maintenance programme of preceding years, an even greater curtailment might have been realised had it not been the desire to sustain employment so far as practicable under existing conditions.

The ratio of operating expenses to operating revenues in 1930 was 74.10 per cent., as compared with 73.58 per cent. in 1929, which, under the conditions prevailing during 1930, reflects a sound performance. While the revenue ton miles decreased 3,459,787,082, or 15.75 per cent., the tons per train mile were actually increased 20.35 tons, or 2.33 per cent. The average revenue train-load at 892.27 tons established a new record and is reflected in the transportation ratio, which was 35.08 per cent.

In its complete plan for the consolidation of railroads into a limited number of systems issued under date of December 9, 1929, the Interstate Commerce Commission allocated the Chicago and Alton Railroad to the Baltimore and Ohio System. A favourable opportunity offering, your Company acquired all of the \$16,834,000 General Mortgage 20-Year 6 per cent. Gold Bonds, due 1932, and more than 96.50 per cent. of the \$22,000,000 First Lien 50-Year 3½ per cent. Gold Bonds, due 1950, of the Chicago and Alton Railroad at a cost of approximately \$23,000,000. This has placed your Company in a potential position to acquire this property subject to underlying funded indebtedness and claims aggregating about \$50,000,000. This purchase, which is still subject to the approval of the Interstate Commerce Commission, would add something over 1,000 miles to the Baltimore and Ohio System, including lines to Chicago, St. Louis, Peoria and Kansas City, thereby greatly strengthening the System in the West.

During the year the Company concluded the purchase of about 98 per cent. of the stock of the Buffalo, Rochester & Pittsburgh Railway Company, and about 99 per cent. of the stock of the Buffalo and Susquehanna Railroad Corporation. The Company has also enlarged its investment in the Reading Company, so that at December 31st it held about 40 per cent. of the stock of that Company.

These acquisitions are reflected in the Balance Sheet item—"Investment in Other Companies."

The co-operation of the stockholders is earnestly solicited, to the end that your Company may secure as great a volume of traffic as possible especially under prevailing conditions. Your interest and assistance in the past have been very helpful, and a continuance of this effort to even a greater degree is hoped for during the present year.

DANIEL WILLARD, President.

Mar. 1, 1930.....	212,459	193,343	48,105	8 7	7 11	6 2

MAIZE.—Of feeding stuffs, maize sold readily in near positions, and the general tone was firm. Quotations: Plate, landed, 18s. 6d.; ex ship, to arrive, 17s. 3d.; March-April, 17s. 3d.; April-May, new crop, 16s. 9d. per 480 lbs. Yellow maize meal, £5 15s. f.o.r. London per ton.

OTHER FOODS.

SUGAR.—Following the legal measures to enforce restriction already taken by Cuba, the approval by the Governor-General of Java of the Chadbourne scheme, covering 80 per cent. of the world's exports, marks a further step towards the realisation of the plan. The prohibition of exports will be dealt with by the People's Council on March 12th and 13th. It appears that so far only 78.2 per cent. of the Java producers have joined the scheme, while 5.1 per cent. have not yet taken a decision. A small section, representing 15.7 per cent., have decided to refuse co-operation. Owing largely to deterioration due to frost, the estimate of Russian production has been reduced to 1,608,000, which, if home requirements are taken into account, leaves an exportable surplus of only about 100,000 tons. The market has been quiet this week, and quotations for refined sugar were maintained at last week's level. The turnover was comparatively small and buyers continued to restrict their purchases to the satisfaction of immediate requirements. Raw futures were easier following realisations. There was, however, a moderate turnover, and Wednesday's sales included May delivery at 6s. 0½d. to 6s. 0¼d., as compared with 6s. 2d. to 6s. 2½d. on the corresponding day last week; August at 6s. 3½d. to 6s. 3¼d., as against 6s. 6d. to 6s. 5½d.; and December at 6s. 7½d. to 6s. 7¼d., as against 6s. 9½d. to 6s. 9¼d.

COFFEE.—The demand for coffee, both on home and export account, has fallen off to some extent during this week, and the tendency of prices at the auctions was definitely easier. Last week's movements of coffee were as follows: Brazilian, landed in London last week, 78 bags; delivered for home consumption, 31 bags; stocks, 2,852 bags against 6,006 last year. Central American, landed, 7,548 packages; delivered for home consumption, 3,106 bags; exported, 2,019 bags; stocks, 89,209 packages against 81,745 a year ago. Other kinds, landed, 10,676 packages; delivered

for home consumption, 3,568; exported, 2,587; stocks, 93,269 packages against 64,093 last year.

COCOA.—The large shipments from the Gold Coast during the past month had a depressing influence on the market, and Wednesday's price of Accra, fair fermented, March-April, to Continent, c.i.f., at 21s. 9d., shows a fall of 9d. on the week. Futures were also easier, and May delivery sold at 23s. 6d. as against 24s. on Wednesday last week. Last week's movements were as follows: Landed in London, 2,409 bags; delivered for home consumption, 10,137; exported, 160, leaving stocks at 180,620 bags against 185,805 bags last year.

TEA.—The proposed scheme for the restriction of the 1931 crop of Ceylon, India and Java tea-producing companies has been abandoned. Only 60 per cent. of the producers were willing to support the scheme, whereas a majority of 75 per cent. was needed to make the scheme effective. The quantities catalogued for this week's auctions comprised 50,997 packages of Indian, 23,718 packages of Ceylon, and 14,442 packages of Java and Sumatra tea. Both Indian and Ceylon teas, particularly those of good quality, found better support this week, and there was a slight advance in prices.

RICE.—The market in rice has again been quiet, but prices remained unchanged, Burma No. 2, cleaned, spot, being again quoted at 11s. 6d. per cwt.

POTATOES.—The Borough market has been well supplied with potatoes this week. Demand was good, and prices advanced from £6-£7 per ton for best King Edward on Wednesday last week to £6 10s.-£7 10s. on the corresponding day this week.

SPICES.—Pepper has been steady, and forward position received considerable support. Movements of pepper in London during the past week were as follows:—Black, landed, 5 tons; delivered, 33; stocks, 464 tons, against 1,020 last year. White, landed, 21 tons; delivered, 40; stocks, 466 tons, against 1,102 last year.

MEAT.—With the exception of foreign beef, the market in meat has been firmer this week. Wednesday's price of 3s. 6d. to 4s., per 8 lbs., for Argentine chilled hindquarters, compares with 3s. 8d. to 4s. 2d. on the corresponding day last week, while English mutton sold at 5s. 8d. to 6s. 8d. per 8 lbs., against 5s. 4d. to 6s. 4d. last week, and English pork realised from 5s. 4d. to 7s. 8d., as compared with 5s. to 7s. 8d. a week ago. According to the Smithfield official report, supplies of meat during last week amounted to 9,085 tons, as compared with 8,846 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.9 per cent. of the supplies, as against 81.9 per cent. a year ago, and imported mutton, mainly New Zealand, formed 77.3 per cent. of the total supply, as against 79.7 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets have experienced a period of activity, and generally a good trade has been done. Linseed is in demand by crushers here and on the Continent, and Plate, March and April shipment to Hull, has been done up to £9 10s., since when a slightly easier tone appeared, current values being around £9 7s. 6d. for seed on spot and afloat and for shipment. The quantity of linseed afloat for Europe continues to increase, and has now set up another record at 321,500 tons, or 31,400 tons more than last week and comparing with 151,900 tons a year ago. Crushers came into the market and bought heavily of cottonseed in near positions to replenish depleted stocks up to £7 2s. 6d. being paid for black Egyptian on passage and March loadings. Forward positions are entirely neglected, and prices have receded to £6 17s. 6d. for March and April loading. Linseed oil has again been irregular, but demand has been fair and prices are now below the highest. Raw oil on spot at Hull is quoted £19 10s., and for delivery, March to August, £19. Cotton oil is firm, crude Egyptian offering at £19 10s. and common edible at £22 10s. Other seed oils are steadier, and a satisfactory feature is the sustained demand for oil cakes, values of which are firm and in cases dearer. Copra has again been firmer this week, Wednesday's price of S.D. Straits, c.i.f., per ton, at £15 12s. 6d., showing an advance of 5s., as compared with the same day last week.

HIDE, LEATHER AND ALLIED TRADES.—No change in prices occurred at the auctions for hides and skins held at Manchester on Tuesday, the reduced quantities available, particularly of non-warbled hides, having the effect of steadying the market. In addition, there is a feeling in some quarters that values have about touched bottom, and that the future of the market for some time should be rather firmer. Imported hides also present a brighter outlook; prices during the week have taken an upward course, and in some descriptions the turnover has been more satisfactory. Although there has so far not been much expansion of trade in South American wet salted hides, values are very firm, with sales of Argentine ox made on the basis of 5½d., and Uruguay at 6½d., while seconds in both kinds have sold at 4½d. and 5½d. respectively. Dry South American hides have been sold to the Continent at 7½d. for M.V. Americanos, and at 6½d. for B.A. Americanos. Sales of Capes have been larger with drys realising 7d. and 6d. for firsts and seconds, and dry-salted 20.30 lbs. 5½d. and 4½d. A better turnover has also been done in Australians with prices on average more or less unchanged. Transaction of sole leather continues to be confined to small parcels, but at the same time a rather more hopeful feeling prevails regarding the future. In some of the shoe manufacturing centres producers of footwear have been making inquiries regarding purchases a little further ahead, and although up to the present little in the way of actual business has resulted, it is thought that buying will eventually show expansion. At the moment the repairing trade continues to be the best customer for

English and wet-salted hides, and although individual requirements are not large, the aggregate makes for a fair turnover which covers most weights. Dry hide bends appear to be well sold up in the lighter weights, but shoe manufacturers appear to be in no hurry to take up supplies of the medium and heavies. Little change has occurred in the upper leather market except for the fact that sales of box and willow calf are inclined to be smaller, and there has been rather more call for black and brown glaze kid. Patent leather in the cheaper grades continues to make moderate sales, while there is a regular call for reptile skins and novelty leathers for shoe upper purposes.

THE TIMBER TRADE.—The much smaller imports of European sawn and planed woods in January, compared with a year ago, and the steady demand from docks and private yards during the past eight weeks, have left stocks in the country within moderate volume, the position for holders being much more secure than was the case at end February, 1930. F.o.b., c.i.f. and spot traders are buying more cheaply and selling more cheaply, but whilst there is activity in the distribution of the above-mentioned descriptions, consumption can be described as only fair. One reason for this is that the building trade has had a bad time lately. The Russian wood, spot and to come forward, still dominates the market, but this year it is a British and not a Russian domination. It is evident that if the importation of Russian timber were stopped this year it would mean considerably higher prices for manufactures in which softwoods generally are the raw material. The forward market for softwoods other than Russian continues slow, and it is not likely that any activity will be shown in the former just yet. The success of the Russians in allocating the whole of their 1931 export to the United Kingdom to one British corporation, on low levels of prices, has driven the Finnish and Swedish wood exporters into each other's arms. A meeting was held between representatives of these two parties at Helsingfors a fortnight ago, at which it was stated that the curtailment in production would be greater than that calculated previously, and exporters were advised for the time being not to press the British market whilst the Russian timber was such an attraction. It

seems evident that the deficiencies from Sweden and Finland this year will much more than cover the 100,000 standards increase expected from Russia. There will not be over-production as in past years, but on the other hand there may not be such a large consumption in the United Kingdom this year compared with recent years. The hardwood market is still slow, and so far as one can observe the outlook for the next two or three months is not bright. Mahogany is coming into the country very slowly in sympathy with the poor demand; teak, cedar and the "fancy" logs are all in small request, stocks generally being moderate. Imports of plywood so far this year are very small, which is a great help to holders whilst trade is so unsatisfactory.

RUBBER.—The re-opening of negotiations between British and Dutch rubber interests with a view to compulsory restriction of output under Government control has resulted in a sudden change in the outlook of a certain section of the market. It appears that the basis for the negotiations is the scheme advocated by Sir George Maxwell, who, while Chief Secretary to the Federated Malay States Government from 1920-26, was largely responsible for the Stevenson scheme. The plan is based on a pivotal price of 9d. per lb., with 25 per cent. restriction of exports when the price is below that level. This restriction would cover all rubber except that produced by natives in the Dutch East Indies, which would be subject to a duty of 10 per cent. This news resulted in a sharp rise of the commodity on Tuesday, and Wednesday's official spot price per lb. for standard ribbed smoked sheet at 4½d., shows a rise of ½d. as compared with that of the same day last week. Forward positions have also been considerably firmer. Business has been done at 4½d. to 4¾d. for March, at 4½d. to 4¾d. for April-June, at 4½d. to 4¾d. for July-September, at 4½d. to 4¾d. for October-December, and at 4½d. and to 4¾d. for January-March, 1932. The position of stocks in London and Liverpool is slightly less favourable. An increase of 295 tons left them at 126,961 tons at the end of last week as compared with 85,076 a year ago. Deliveries at 1,765 tons during the past week show an increase of 345 tons, as compared with the preceding week, and they are 392 tons above those of the corresponding week last year.

INCREASED ANNUITY RATES

The following are examples of the Rates of Annuity that will be allowed in respect of each £100 of Purchase Money:

Age Attained	Males.	Females.
60	9 8 2	8 4 8
65	10 18 9	9 8 10
70	13 1 11	11 4 2
75	16 5 6	13 17 4

The rates quoted are for Annuities payable by half-yearly instalments, the first payment being made six months after the date of purchase, and the final payment at the half-yearly due date preceding the death of the Annuitant.

Write for Leaflet.

EQUITY & LAW

LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W.C.2.

Established 1844

Funds £9,000,000

Have you covered the depreciation in the value of your Investments?

There is only one sure and certain method by which the depreciation in the capital value of Investments may be covered and that is by Life Assurance. To restore the value of your Estate at an expenditure of a few pounds per cent. is surely purchasing peace of mind at a cheap rate. Under the Distinctive System of this Institution you may obtain at early and middle ages a Whole Life Assurance of about £1,300 with right to bonus for the same premium as is charged elsewhere for £1,000.

Particulars and rates on application.

The Scottish Provident Institution

London (City) Office - - - - - 3 Lombard Street, E.C.3

THE MONEY MARKET.

EARLY in the week money was extremely stringent. At times as much as 3½ per cent. was paid for new money, and, though the market escaped having to borrow at the Bank, it is believed that some special help had to be given in the form of purchases of short-dated bills. In any case, the market on Tuesday had to sell "hot" Treasuries at 2½ per cent., which is clear evidence of stringency. The following day the situation became somewhat easier, and money was obtainable at 2½ per cent. Apparently what is happening is that this month the market is applying

mainly for Treasury bills to be paid for early in the week. The reason is that bills paid for late in the week fall due in June over the week-end, when their holders will experience difficulty in finding immediate employment for the funds so released. Hence, during March money has tended to be tightest at the beginning of the week. When, as this week, heavy revenue payments are made early in the week, the stringency becomes accentuated.

Last week's Treasury bills were issued at an average rate of $2\frac{1}{2}$ per cent., against $2\frac{1}{4}$ the previous week. It is understood that some tenders were lodged upon French account at relatively low rates, and that consequently the market partly missed the issue. This week's bills were expected to go at about the same rate, but next week's bills are a popular maturity, as they fall due just in time for the turn of the half-year. Their average rate should, therefore, be lower. Meanwhile market discount rates this week have ruled around the minimum level of $2\frac{1}{2}$ per cent., which it is now thought desirable to maintain. At times there appeared a risk that they might fall below that level, and on Wednesday it was rumoured that some special selling of bills had taken place to counteract such a tendency. Although the franc exchange has again improved on the week, it is still essential to maintain a market rate of $2\frac{1}{2}$ per cent. in force.

The Bank return shows that the seasonal expansion in the note circulation has been momentarily checked, and as gold movements too were insignificant the Reserve has changed very little, rising, in fact, by only £362,529. There is a big decrease of £8,473,000 in Government Securities, which may be in part due to special selling of bills, but which is more likely to be explained by maturities of Treasury bills in the hands of the Bank. Discounts and Advances are lower by £1,400,000, but Other Securities have risen by £3,166,000. On the other side of the account Public Deposits have increased by £929,800, while Bankers' Deposits have fallen by £7,338,000. On the face of it, it looks as if money had been drawn out of the clearing and other banks in payment of taxes, and as if the Government had used this money to redeem Treasury bills belonging to the Bank. This explanation, however, even if it is correct, is only the resultant of the usual set of cross-currents between the Government, the Bank of England, the joint-stock banks, the money market and the public which are in evidence at this season of the year.

For the first time for many weeks there is no news yet that the Cape gold due next week or the week after has been bought forward on French account, and now that spot francs are Frs. 124.16, while even the forward franc rate is higher than the gold point, it seems very likely that this gold will come into the market. If so, unless an unknown buyer intervenes, it is quite possible that the Bank will secure part of it. In any case, 250,000 sovereigns are due to arrive each week, and these automatically go into the Bank. The Bank's gold stocks now stand at £140.9 millions. This figure is not dangerously or even inordinately low, but it would not be a bad thing if the Bank could secure part of the Cape gold each week, at any rate for the next few months.

The February averages of the nine English clearing banks reveal a fall of £53.9 millions in deposits, presumably due to tax payments, but a very welcome and stimulating increase of £6.5 millions in acceptances. This may be regarded as one more of the faint signs that have

recently become apparent that the turning-point in the depression has been reached.

Declining deposits and the reduction in the number of outstanding Treasury bills have combined to reduce the banks' bill holdings by £28.8 millions. Advances are £0.7 million higher, possibly another faint sign of returning prosperity, though more than likely they reflect pressure by the tax collector. The banks have added £12.4 millions to their investments, but cash is reduced by £10.3 millions and call money by £28.2 millions.

Early this week money in New York was distinctly tighter. The effective call rate rose from $1\frac{1}{2}$ to 2 per cent., and on Tuesday the call loan renewal rate was fixed at 2 per cent. for the first time for many weeks. The reason for this greater stringency lay in preparations by the banks for the heavy turnover of funds due on March 15th, including the payment of the first income tax instalment. By Wednesday the banks had completed their preparations and were disposed to release money temporarily. Consequently the effective call rate relapsed to its old level of $1\frac{1}{2}$ per cent. The bond market has been encouraging, two railroad issues having been heavily over-subscribed.

The foreign exchange market was again inactive, but there was rather more movement in several of the exchanges, notably in the Paris rate, which went sharply in our favour. Some of the South American currencies appreciated considerably. New York moved by $\frac{1}{4}$ in our favour to 4.85 $\frac{1}{2}$. Montreal weakened by $\frac{1}{4}$ to 4.85 $\frac{1}{2}$. Paris rose from 124.02 to 124.16, while Brussels recovered to 34.84 $\frac{1}{2}$, against 34.85 last week. Milan lost three points at 92.75. Madrid improved from 45.20 to 44.60 on the news of the agreement with the Bank for International Settlements on a stabilisation scheme. Amsterdam went from 12.12 $\frac{1}{2}$ to 12.11 $\frac{1}{2}$. Berlin from 20.43 $\frac{1}{2}$ last week recovered by 20.41 after touching 20.39 $\frac{1}{2}$. Switzerland was again weak, and fell from 25.23 $\frac{1}{2}$ to 25.25 $\frac{1}{2}$. Of the Scandinavian currencies, Stockholm was weaker by $\frac{1}{4}$ at 18.13 $\frac{1}{2}$, Oslo lost $\frac{1}{4}$ at 18.16 $\frac{1}{2}$ and Copenhagen $\frac{1}{4}$ at 18.16 $\frac{1}{2}$. The South American currencies were very firm, except Rio, which lost $\frac{1}{2}$ d. on balance at 4 $\frac{1}{2}$ d., after touching 3 $\frac{3}{4}$ d. Buenos Aires improved from 37 $\frac{1}{2}$ d. to 39 $\frac{1}{2}$ d., and Montevideo from 35 $\frac{1}{2}$ d. to 38 $\frac{1}{2}$ d. In the Far East, the rupee was very firm and improved by $\frac{1}{4}$ d. to 1s. 5 $\frac{1}{4}$ d. The yen lost $\frac{1}{4}$ d. at 2s. 0 $\frac{1}{2}$ d. Batavia fell away by $\frac{1}{4}$ to 12.12 $\frac{1}{2}$. In the forward market, one month's dollars remained at a premium of $\frac{3}{8}$ cent, but the quotation for three months' delivery advanced from $\frac{1}{2}$ cent to $\frac{3}{4}$ cent premium. Paris went to considerably wider premium quotations of 14 and 27 centimes, as did Brussels at one and two centimes for the two periods respectively. Milan improved from 11 and 30 centesimi to 7 and 23 centesimi discount. Madrid was also firmer at 5 and 13 centimos premium. Amsterdam moved from 1 $\frac{1}{2}$ and 3 $\frac{1}{2}$ cents to 1 $\frac{1}{2}$ cents and 3 $\frac{1}{2}$ cents premium. Berlin was more on offer at 1 $\frac{1}{2}$ and 2 $\frac{1}{2}$ pfennigs discount. Switzerland was very little changed at 4 and 9 centimes premium. As a result of Indian and Chinese buying and of the political news, silver prices rose by $\frac{1}{4}$ d. for both spot and forward to 13 $\frac{1}{2}$ d. and 13 $\frac{1}{2}$ d. respectively, but the close was weak and uncertain. The Chinese silver exchanges improved in sympathy, Hong Kong advancing by $\frac{1}{4}$ d. to 1s. 0 $\frac{1}{2}$ d., while Shanghai gained a penny at 1s. 3 $\frac{1}{2}$ d.

THE INDIAN TRUCE.

A STUDY of the terms of the agreement reached between Lord Irwin and Mr Gandhi, and initialled respectively by the Viceroy's Council and the Congress Committee, in no way lessens the satisfaction with which the first news of the settlement was received. The main points in the settlement are as follows:—

1. Civil disobedience to be discontinued.
2. Round Table discussions to be continued; essential to such further discussion being a Federal plan and also reservations and safeguards relating to such matters as defence, external affairs, Indian credit, etc.
3. Active boycott of British goods to cease.
4. The police inquiry demanded by Mr. Gandhi not to be granted.
5. Emergency ordinances promulgated in connection with the civil disobedience movement to be withdrawn.
6. Prisoners convicted of non-violent political offences to be released.
7. Confiscated property to be restored where feasible.
8. No substantial modifications in the Salt Acts to be made, but permission to be given to local residents in salt areas to collect or make salt for local consumption or sale.

Where in these terms is there anything that could in any way justify the interpretation of "British surrender", which a section of the London Press has endeavoured to place upon them? What is it that has been surrendered? A surrender over the salt question has been suggested. But in reality the concession is unimportant and was paralleled in the war period. Peaceful picketing is still allowed, it is true. But is it not also allowed in this country? Indians, too, are still permitted to encourage the sale of Indian, in preference to foreign, goods. But that need be little more than the Empire Marketing Board attempts in Britain. Against these concessions what is there to set? A cessation of political and economic strife. Co-operation in place of hostility. In a word, it is an honourable agreement substituting reasoned discussion and negotiation for intransigent resistance and the repressive measures consequential upon it; and we congratulate both Lord Irwin and Mr Gandhi unreservedly on a triumph of commonsense, which has been very widely welcomed not only in Britain and India, but throughout the British Empire and the world.

Nevertheless, great as is the relief at the prevalence of sane counsels and the hopefulness that arises from the promised participation of Congress in the intricate task of constitution-building, it would be foolish to suppose that all difficulties have been removed or that the Anglo-Indian problem will move smoothly and swiftly to a complete and satisfactory solution. In spite of the paeans of rejoicings at what in India has been called the "miracle" of the Gandhi reconciliation, we have had already a sharp reminder that in both countries pessimists and irreconcilables remain who are capable even now of queering the pitch for the long and difficult discussions that lie ahead. India has her Jawaharlal Nehru and Britain her Winston Churchill, both from their entirely different angles distrustful of the work of the Round Table Conference and of the policy which is beginning to take shape, and both ready to fish in the troubled waters, whenever, as must inevitably occur in the next twelve months, the breeze of controversy ruffles the surface of negotiation. Clearly there is urgent reason to waste no time and lose no opportunity to consolidate the improvement in the situation which the Irwin-Gandhi settlement has brought about.

How delicate the situation is and how susceptible to damage by misunderstanding is shown by the effect in India of the publication in this country of the decision of Mr Baldwin that Conservatives would not participate in a resumed Round Table Conference in India. The nature

of this announcement was clumsy and misleading. It was at first assumed that Mr Churchill had won Mr Baldwin over, and that the latter by a complete *volte face* had decided to withdraw his party from co-operation in future Indian negotiations; and this interpretation came upon the Indian scene like a bolt from the newly blue sky. Happily the interpretation was wrong. Mr Baldwin's opinion merely related to procedure, and his "decision" was merely an expression of unwillingness that Conservative representatives should proceed *forthwith* to India for renewed conference *in that country*. (The italics mean much.) It does not in any way revoke Mr Baldwin's promise that his party will continue to play their part and take their share in the great work that lies ahead. Nevertheless, the misunderstanding was as unfortunate as it was unnecessary. Truth takes a long time to overtake falsehood, and subsequent denial never wholly removes the effect of initial misinterpretation.

In trying to establish real understanding and confidence between the people of Britain and of India, we have, in fact, embarked upon one of the most difficult tasks that have ever been attempted; for East and West are still much farther apart than any ship's log ever records. How can we expect Indians to understand British mentality when they read that at the meeting of the Conservative Indian Committee there was prolonged discussion as to whether their now famous resolution (welcoming Mr Baldwin's decision) should be published—not, as might be supposed, from the standpoint of its repercussions on the great Imperial issues still hanging in the balance and with which the future of one-fifth of the human race is vitally bound up—but in view of its effect on the fortunes of the rival Conservative candidates in the by-election in the St. George's Division of Westminster? What, on the other hand, will the British public make of Mr Gandhi's statements regarding the meaning of "Purna Swaraj," commonly translated as "complete independence," but which the Mahatma now translates as "disciplined self-government from within," not excluding association with any nation "much less England," and implying "association on terms of equality and freewill"?

"When I use a word," Humpty Dumpty said in a rather scornful tone, "it means just what I choose it to mean—neither more nor less."

"The question is," said Alice, "whether you can make words mean different things."

"The question is," said Humpty Dumpty, "who is to be master—that's all."

Frankly, Mr Gandhi's explanations sound to British ears remarkably like quibbling. Yet no one who understands India doubts that he is perfectly sincere, or fears that his explanations will seem either far-fetched or absurd to Indian ears. It is the supreme merit of both Lord Irwin and Mr Gandhi that they have tried to understand each other, and in very large measure have succeeded.

But let us return to Mr Baldwin, and the decision which he promulgated so hastily. The reasons which the Conservative leader adduces against an early reassembly of the Conference in India are admittedly intelligible and deserve careful consideration. It is perfectly true that, when the London session broke up, many questions were left only partially considered, and that a large amount of arduous committee work is necessary on many branches of the Anglo-India problem, before final recommendations can be made to the Imperial Parliament by a plenary conference. It would, indeed, appear to be dangerous to court failure by hastening on the reassembly before there has been time for the ground to be thoroughly explored. Moreover, the difficulties of personnel are formidable, and it is a definite drawback that Lord Sankey, the guide, philosopher and friend of the London Conference, would be unable to visit India in the hot weather. Nevertheless, however great the weight accorded to this view, Mr Baldwin, in our opinion, ran a very great risk in announcing an irrevocable refusal to acquiesce in any given line of procedure. For procedure, His Majesty's

Government, in consultation with the Government of India, must bear the sole responsibility. Had they decided that time was the essential factor—in the present position psychology must be carefully studied—and that an early conference in India possessed advantages which outweighed the disadvantages, then it would have been their duty to call an early Indian conference. Nor was there any need for so hasty a public pronouncement. For the new Conference could not have met immediately for many reasons, not the least of which is that a meeting of Congress is pending at Karachi.

Mercifully, this week's bomb-shell will have no lasting effect. In the House of Commons on Thursday Mr Baldwin made it very clear that he approved most heartily of the Irwin-Gandhi agreement, that he had no intention of refusing his collaboration, and that he would do all in his power to prevent the Indian problem becoming a party question. Moreover, with the concurrence apparently both of Lord Irwin and Mr Gandhi, the Government announced that the Conference will meet at the earliest possible moment—not in India but in London. This course of procedure presents many definite attractions, one of which is that it will render possible the participation of Lord Irwin himself, and another is that closer touch will be maintained with the Imperial Parliament and the currents of British public opinion than if the Conference were to be resumed in India. Nevertheless, the whole affair is a sharp lesson to politicians of every party in both countries of the restrained wariness with which they must tread, if the new atmosphere of goodwill, in which alone real success is possible, is not to be poisoned by renewed suspicion and distrust.

THE GENERAL ACT.

THE House of Commons on Monday debated the motion that the Government of the United Kingdom should accede to the General Act for the Pacific Settlement of International Disputes. In asking that Parliament should approve of the accession of the United Kingdom to the General Act, the Government of this country was taking action which had already been agreed upon at the Imperial Conference last year by the representatives of all the self-governing States Members of the British Commonwealth except the South African Government, which asked for more time for consideration. Meanwhile, eight foreign Governments have acceded, six of them without reservations, and the accession of another Power of the first importance, namely France, was assured when, on March 4th, the French Senate unanimously approved a Bill to this effect which had already passed the Chamber. Thus the House of Commons was in good company when it voted in favour of accession.

The genesis of the General Act in the Assembly at Geneva, and its acceptance by France and by all but one of the self-governing Dominions, is sufficient evidence that it expresses the spirit of the times. And this in itself, as the Foreign Secretary pointed out on Monday, is an important consideration in favour of its acceptance by Great Britain at a time when the world is preparing for a General Disarmament Conference. The success or failure of that Conference will turn largely upon the psychological atmosphere in which it meets. This atmosphere will be created, for good or evil, during the present year; and no doubt it will be affected appreciably by the attitude, towards the General Act, of a Power of the calibre of the United Kingdom. Such associations of ideas may be irrational, but that is the kind of way in which public opinion—international as well as national—is apt to work.

The essential feature of the General Act for the Pacific Settlement of International Disputes is indicated in its title. It is an instrument which binds the contracting parties to submit disputes with other parties to certain positive procedures for pacific settlement which cover all disputes without exception. The Act consists of three chapters: one providing for conciliation, which is to be applicable to any kind of dispute but which is to result in findings that will not be binding upon the parties; a second chapter providing for the judicial settlement of "justiciable" disputes by the Permanent Court of Inter-

national Justice or alternatively by an arbitral tribunal; and a third chapter providing for the submission of "non-justiciable" disputes to an arbitral procedure which, like the procedure for the settlement of "justiciable" disputes, is to be binding upon the parties.

These provisions of the General Act raise two quite different questions: first, is it desirable that the sovereign and other fully self-governing States of the world should bind themselves to submit, to certain positive procedures for pacific settlement, all international disputes whatsoever? The second question is this: Supposing that the first question is answered in the affirmative, then are the specific procedures laid down in the General Act really the best for the purpose? The answer to the second question is by no means so clear as the answer to the first. Here the answer is not really in doubt. It has been given in advance by the terms of the Multilateral Treaty of Paris for the Renunciation of War (the "Briand-Kellogg Pact"), according to which

"The High Contracting Parties agree that the settlement or solution of all disputes or conflicts of whatever nature or of whatever origin they may be, which may arise between them, shall never be sought except by pacific means."

By entering into this obligation, the States of the world have renounced the means, formerly at their disposal, of settling by the *ultima ratio* of war disputes which they have failed to settle otherwise. But they cannot leave it at that; for as long as life is lived and things change and grow, disputes will arise; and it is folly to suggest either that disputes will always settle themselves automatically in course of time or that they can be left unsettled for an indefinite time with impunity. If a comprehensive pacific alternative to settlement by war is not provided, then we may be quite sure that, whatever the Pact of Paris may provide, the rising pressure of unsettled disputes will find vent, some day, in war again. If they had subscribed to the Pact of Paris without then providing themselves with an instrument for the comprehensive pacific settlement of international disputes by some positive means, the States of the world would have been simply condemning the Pact to break down and condemning some among their own numbers to become pact-breakers.

We come, now, to the merits of the particular procedure laid down in the Act. The crux is the third chapter, which provides for the compulsory arbitral settlement of "non-justiciable" disputes, and the contentious question is revealed in the second and third of the reservations to which the accession of the United Kingdom to the Act is to be subject according to the Government's intention. The effect of both these reservations is to safeguard, as far as the United Kingdom is concerned, the functions of the Council of the League of Nations under the Covenant. In regard to "justiciable" disputes, which are dealt with in Chapter II. of the General Act, our reservation is to be the same as that which we made when we acceded to "the optional clause" of the statute of the Permanent Court of International Justice. The judicial procedure is to be suspended (subject to certain conditions and limitations) in respect of any dispute of a "justiciable" character which has been submitted to and is under consideration by the Council of the League of Nations. In regard to "non-justiciable" disputes, we make the reservation that the Council shall have an opportunity of performing its functions under the Covenant before recourse is had either to the non-binding conciliation procedure of the General Act, Chapter I., or to the binding arbitral procedure of the General Act, Chapter III. (which comes into operation if no settlement results from the procedure of Chapter I.).

These reservations in favour of action by the Council of the League are not disapproved of by the Government's critics, either in Parliament or among the international lawyers. On the contrary, the critics argue that the reservations expose as unsatisfactory the whole nature of the procedure which the General Act lays down. Except in so far as (*i.e.*, in Chapter II.) the Act refers disputes to the Permanent Court, it refers them, whether for conciliation or for arbitral procedure, to a legion of commissions of private individuals, appointed, either permanently or *ad hoc*, by the States of the World—every State making such arrangements with every other State, *à deux*. The critics argue that this is a move in the wrong

direction. It disperses the work of pacific settlement among many hands instead of concentrating it in a few hands; and it assigns it to a host of irresponsible individuals who carry little weight, instead of retaining it for those international bodies which are the repositories of political power and judicial authority. A better course, they argue, would have been to give the Permanent Court comprehensive powers of judicial settlement and the League Council comprehensive powers of conciliation—and in the last resort, of compulsory settlement—in the case of "non-justiciable" disputes. They point out that, under the General Act, even when read together with the proposed British reservations, disputants can have recourse to an arbitral tribunal in lieu of the Permanent Court, and that disputes which the Council has failed to settle will then be referred to one of those commissions of private individuals for which the Act provides.

On the latter point, which is the more important of the two, the issue can be stated as follows: The powers of the Council, under the Covenant, are far from being comprehensive. It may be taken as common ground that the Pact of Paris makes it imperative that this "gap in the Covenant" should be closed. There are two alternative ways of closing it: either the powers of the Council may be made comprehensive by changes in the Covenant, or, pending such changes, some final instance, beyond the Council, may be established, as the General Act, when read together with the British reservation, provides. Undoubtedly, the Council is the great repository of political power in international affairs (a power which will remain potent, as an economic and cultural and psychological force, even if its traditional manifestation in military force is abolished). Is not the body in which this political power resides better fitted to settle international disputes, in the last instance, than a body of an arbitral character?

Perhaps that question can only be answered in the light of a larger experience than we yet possess. At this stage, we need merely point out that acceptance of the General Act does not prejudice the answer. It will still be open to the States Members of the League, if they find this desirable, to enlarge the powers of the Council by amending the Covenant until they render the relevant provisions of the General Act superfluous. The General Act is only to run for five years in the first instance. Meanwhile, the important thing is to close the gap in the Covenant while the scope of the Covenant is being reconsidered. This the General Act achieves, and on that account we welcome the vote in the House of Commons.

THE INCONSEQUENCES OF MR KEYNES.

A MINOR political and fiscal sensation has been caused by the publication in the *New Statesman and Nation* of an article by Mr J. M. Keynes advocating a revenue tariff. It had been known in political circles that it was Mr Keynes who inspired Mr E. D. Simon's proposal last August of a 10 per cent. revenue tariff; but Mr. Keynes has now let the cat out of the bag in public and propounds a scheme of his own.

The development of this revenue tariff business is highly instructive to students of fiscal policy. Mr Simon's suggestion was for a flat 10 per cent. duty on all imports. Mr Churchill had also been hankering after a low revenue tariff—largely as a means of outflanking what he rightly regards as the danger to Great Britain of high protection—but he, compelled by long experience to pay attention to political possibilities, would not hear of a tax on food (which, indeed, he has recently pilloried in an article in a leading Conservative journal), and has proposed that a revenue tariff should be on manufactures only. Mr Keynes, in his latest proposal, moves still further along the road of differentiation which all protectionist plans inevitably traverse in this country. He would have no "discriminating protective taxes," but proposes a 5 per cent. duty on all foodstuffs and certain raw materials; cotton and wool are to come in free; and all manufactured and semi-manufactured imports are to bear a 15 per cent. duty. By this means Mr. Keynes declares that "the amount of revenue to be aimed at should be substantial, not less than £50 millions and, if possible,

SKANDINAVISKA

with **SWEDEN**

£75 millions." Is there any justification for thinking that anything approaching these figures would be realised? Let us apply the test of rough arithmetic, taking first, for illustrative purposes, the 1930 figures. Net imports of food, drink and tobacco in 1930 were £450 millions, of which nearly £70 millions are already taxed. (We assume the tariff would not be superimposed on articles of consumption already subject to Customs duties.) Under this head, therefore, his 5 per cent. duty would yield less than £20 millions. In the raw materials class, excluding cotton and wool, imports retained were slightly over £140 millions, which (subject to serious qualifications to which we will turn later) would yield £7 millions. Net imports classed as "wholly or mainly manufactured" were £283 millions, of which more than one-fifth were already subject to duty. From the balance the yield at 15 per cent. would be not much over £30 millions, making a maximum gross total of £57 millions.

But from this figure very important deductions must be made. Mr Keynes recognises that he must not tax materials required by exporting industries, and therefore proposes to exempt such raw materials as wool and cotton, "which make up an important proportion of the value of exports." But if wool and cotton, why not jute or iron ore, or that very important ingredient in one of our import and export trades—tin—which the Board of Trade classes as a manufactured commodity? Here we have the old conundrum, "When is a raw material not a raw material?" Mr Keynes, fearful lest he should be compelled to put the great bulk of our imports on the free list, proposes a highly elaborate, and almost certainly unworkable scheme of rebates in respect of imported material entering into exports. But even if such a scheme could be worked, the extent to which such rebates would be required is so great as to affect very seriously the yield of his proposed tariff. Let us see. Mr Keynes, after excluding cotton and wool, has left himself, as we have shown, with some £140 millions of net raw material imports. To avoid injuring exporting industries it would be necessary, on the most conservative calculation, to halve that figure in order to arrive at the taxable mass. Similarly, in the so-called "manufactured" class at least one-fourth of the imports (hitherto untaxed) are raw materials for manufacturing industries. Exemptions and rebates in this category would almost certainly cost Mr Keynes at least £7 millions, reducing his total revenue to, say, £50 millions, less cost of collecting, which we may perhaps put at £3 millions. This would leave £47 millions; but here an important qualification comes into play. Owing to the fall in prices, the 1931 values of our imports look like being at least 25 per cent. below those recorded for 1930, even if trade revives a little. On any reasonable estimate the yield during a time of depression—and the plan is only to apply during the slump—would fall far short of his minimum figure of £50 millions.

But this brings us to the consideration of some of Mr Keynes's very remarkable assertions and assumptions. No one knows better than Mr Keynes the fallacy of supposing that you can raise revenue by taxing goods which come into the country and at the same time by keeping them out give employment to those who make these goods at home. Nevertheless, he comes very near to suggesting it when he states that "this measure is

unique in that it would at the same time relieve the pressing problems of the Budget and restore business confidence. . . . In so far as it leads to the substitution of home-produced goods for goods previously imported, it will increase employment in this country." If the tariff is to provide anything like £50 millions, we must import at least all the goods we are now importing, which means that the effect on the volume of employment at home would be nil. Our own opinion is that whereas a 5 per cent. duty may be regarded—as it has long been in Holland—as having very little effect on the course of trade, 15 per cent. is definitely protective and would have a considerable effect in diminishing trade. A substantial deduction on account of excluded imports must, therefore, be made even from the figures we have indicated above.

Hardly less contradictory and illogical is Mr Keynes's dual aim to create confidence and to make his tariff purely temporary. His plan is definitely intended as an emergency scheme. "It should be the declared intention of the Free Trade parties acquiescing in this decision to remove the duties in the event of world prices recovering to the level of 1929." Not unnaturally, the believers in Protection who have hailed Mr Keynes's proposal with delight have seized on this temporary character of the scheme as its weakest point. For instance, Mr Garvin in the *Observer* asks what confidence can be engendered by a plan which leaves the producer in a greater state of uncertainty than before. He need not be disturbed. The whole world knows that while it is easy to put on tariffs it is desperately difficult to get them off again. The experience of our own country in the last ten years—as well as that of every other country—makes it abundantly clear that those who fondly believe we can introduce a substantial measure of protection to meet a crisis and remove it when the crisis is past are living in a fools' paradise.

Nor can we follow Mr Keynes in his statement of its effect on prices. It was not many months ago that Lord Beaverbrook gave his personal undertaking to the electors of North Norfolk that a tax on foreign food would not raise food prices in this country. Mr Keynes does not go quite as far as this. But he does say:—"I am prepared to maintain that the effect of such duties on the cost of living would be insignificant—no greater than the existing fluctuation between one month and another." This laconic statement invites two questions. Who does Mr Keynes think will pay his tax of one shilling in the pound on imported food? And, is there any ground whatever for doubting that it will raise the food price index by anything from 5 to 10 points—a much greater movement than any recent monthly change?

We are aware that many who will support Mr Keynes's proposal will do so precisely because they wish to see a rise in the cost of living, on the ground that real wages are too high and that, as it is extremely difficult to lower money wages, we must aim at obtaining the same result by raising prices. The trouble about this apparently simple way of getting over the difficulty is that it will not really make the adjustment of wages that is required. One of our troubles is that sheltered wages are high, whereas competitive wages are low. If prices rise, it is the sheltered trades that will be able to get an increase of money wages to compensate them. On the other hand, in the competitive trades either workers will be worse off, or, if they can get some compensation in the shape of higher wages, the competitive position of the industries will be changed for the worse. To the extent that the scheme raised prices, whether of food or of raw material, it would beyond question deal another blow at our export industries. In this connection Mr Keynes observes that "any conceivable remedy for unemployment will have the effect, and, indeed, will be intended to raise prices." We agree that there will be no recovery from the depression until prices recover from their present slump. But the price level that must rise is the international price level. To raise prices and costs artificially in England only, when prices in the rest of the world are stationary or falling, and must be further depressed by any new barrier to trade, would be the height of folly.

We have no space to go further with Mr Keynes in his exposition of the general economic position. He is at pains to classify us all into the rival camps of contrac-

tionists and expansionists. He is for expansion, but he accepts the view that a policy of expansion, sufficiently drastic to be useful, might drive us off the gold standard. And, though he was opposed to the return to gold, he believes that to abandon it now would be disastrous, for it is of paramount importance to restore full confidence in London. His main alternative is to stimulate confidence by this scheme of trade restriction introduced in name as a purely temporary measure, but almost certainly imposing on us for a considerable time to come a substantial measure of general protection with all the disadvantages, political as well as economic, which such a policy would involve for this country. If there were really no alternative solution of the budget problem there would be no more to be said, for this country could not in any circumstances afford to slide down the slope of insolvency. But fortunately we are faced by no such dilemma. It is true that the problem of budget equilibrium, involving, as it must, not merely the raising of revenue, but the pruning of expenditure, is one which will involve sacrifice. It will almost certainly be necessary to foster, not merely the yield of direct, but of indirect taxation. But the way to do this is not by *ad valorem* duties, whose yield falls off when prices are declining and trade is bad, but by specific duties—with countervailing excise on the home-produced article—on commodities which we are fairly certain will continue to come into the country. We shall neither solve our budget difficulty nor cure our economic ills by abandoning the open market policy on which the prosperity of this country depends.

NAVAL ARMAMENTS.

THE bases of the agreement, dated March 1, 1931, concluded between France and Italy, and approved in principle by the other High Contracting Parties to the London Treaty of 1930, have now been published as a White Paper,* together with an explanatory memorandum signed by the Foreign Secretary and the First Lord of the Admiralty. It is too early yet to measure the effect on public opinion in the different countries produced by such detailed terms as are now made available. Indeed, the first impression upon the lay-public is likely to be considerable bewilderment; for the British White Paper at least is a masterpiece of obscurity, and the first task must be to endeavour to elucidate its meaning.

So far as capital ships are concerned, the somewhat disquieting feature emerges that, in the case of France and Italy, the Washington Treaty tonnage is to be raised from 175,000 to 181,000 tons "without prejudice to a general revision of the capital ship tonnages established by the Treaty of Washington, and in order to facilitate the conclusion of the present arrangement." The explanation of the "fairness" of this increase is extremely involved, but the point appears to be as follows:—France desires to build 70,000 tons of capital ships in three units of 23,333 tons each, of which two may be completed before December 31, 1936. Consequent on the loss at sea of the "France," the French "replaceable tonnage" under the terms of the Washington Treaty is 133,134 tons, leaving a margin of 41,866 tons available for new building without scrapping. The only vessels available for scrapping in return for the 70,000 tons of new building are the three French battleships of the "Jean Bart" type, whose standard displacement tonnage is 22,189. If, therefore, two of such vessels were scrapped the French position would eventually be as follows:—

	Tons
Washington Treaty replacement tonnage	133,134
Add new building	70,000
	203,134
Deduct two Jean Bart vessels.....	44,378
Leaving	158,756

This figure would be 16,244 tons less than the Washington figure of 175,000, whereas by increasing the Washington figure to 181,000 tons, France can build her two new

battleships by 1936 without scrapping, and can build a third by scrapping only one of the "Jean Bart" class. In return for this concession, however, France will scrap by 1936 two of her three old "Danton" class battleships built in 1911 and not included in the replaceable tonnage under the Washington Treaty, while Italy, whose Washington figure is similarly raised to 181,000 tons, will scrap 33,640 tons of "first-class over-age" cruisers if she parallels between now and 1936 the French capital ship building programme. In addition, the French and Italian Governments will reduce the calibre of the guns on their projected capital ships from 13 inches to 12 inches.

With regard to aircraft carriers, before December 31, 1936, France and Italy may each complete 34,000 tons. In respect of "Washington Cruisers" (i.e., the large 8-inch gun class) France and Italy agree that there shall be no further construction before 1936 after completion of the 1930 programme. In the smaller cruiser category it is obscurely agreed that "the tonnage of new construction to be completed shall not exceed the tonnage which is replaceable in this category before December 31, 1936." Submarines in commission are not to exceed, up to December 31, 1936, the following figures:—France 81,989 tons, Italy (so far as can be seen) 52,700 tons. In this connection the reservation is made that "the members of the British Commonwealth of Nations maintain that [the French] figure of 81,989 tons is too high . . . but . . . they will not have recourse to Article 21 of the London Treaty [the "Escalator" Clause] pending the general revision of the naval question" at the 1932 Disarmament Conference.

In a written answer to a question asked in Parliament on Wednesday, Mr Alexander gave the following figures to show what the comparative naval strengths, in all categories of war vessels under twenty years of age belonging to the five signatory Powers to the London Treaty, will be in 1936, assuming that they all build up to the full tonnage allowed them by that Treaty, as modified by the Franco-Italian Treaty now concluded:—

UNDER-AGE VESSELS IN 1936 (Tons).

	British Common- wealth.	U.S.A.	Japan.	France.	Italy.
Capital ships.....	138,650	260,600	154,750	46,666	46,666
Aircraft carriers	135,000	135,000	81,000	56,146	34,000
Cruisers:—					
Guns of more than 6.1 in.	146,800	180,000	108,400	70,000	70,000
Guns of 6.1 in. or less	192,200	143,500	100,450	198,233	151,363
Destroyers	150,000	150,000	105,500		
Submarines	52,700	52,700	52,700	81,989	52,700

In considering future strengths it should be borne in mind that unless we revert to the full building programmes which we are now substantially scaling down, a considerable proportion of the British fleet in 1936 will be over-age vessels. We trust, however, that the 1932 Disarmament Conference will lead to results which will obviate, not only in this country, the building of naval

armaments up to the full permitted allowances. The Franco-Italian agreement at least represents a successful effort to avert to-day a violent race in armaments between France and Italy, and, as such, is a welcome interim step forward on the road to further reduction of naval forces.

THE ESTIMATES.

WHILE the latest revenue return, on which we comment on a later page, suggests that, though the position has steadily improved of recent weeks, the financial year will end on March 31st with a deficit exceeding £20 millions, the publication of the estimates for the Defence Forces, the Civil Supply Services and the Revenue Departments enables some measure to be taken of the size of the cost for which Mr Snowden in his next Budget, after providing for Consolidated Fund charges, must find the cloth to cut. Details of the Navy Estimates were given in the *Economist* of last week, and in Notes of the Week in this issue we discuss separately the estimates for the Army and the Air Force. In the following table we show combined net expenditure on the Supply Services for the years 1924-25 and 1927-30, together with the original and final estimates for 1930-31 and the estimates now issued for 1931-32:—

SUPPLY SERVICES NET EXPENDITURE.

	(In millions.)			
	Air.	Nav.	Civil.	Revenue*
	£	£	£	£
1924-25	113.9	228.2	11.0	353.1
1927-28	117.1	230.9	11.8	359.8
1928-29	114.3	223.3	12.1	349.7
1929-30	114.1	246.5	12.0	372.6
1930-31	110.1	295.7	12.1	417.9
1930-31†	110.3	309.4	12.1	431.8
1931-32	109.6	317.8	11.6	439.0

* Excluding Post Office.

† Including Supplementaries.

The foregoing table stands as an eloquent testimony to the urgent need of retrenchment in our national expenditure. As compared with the total for 1928-29, the aggregate cost of the Supply Services in 1931-32, even if Supplementaries can be avoided, shows an increase of nearly £90 millions, notwithstanding a reduction in the same period of over £4½ millions in expenditure on the Defence Forces. That further economies under this head of expenditure can gradually be effected is a hope which may well be entertained. Making all allowance for increases in pay and general costs, it is scarcely a matter for complacent satisfaction that we should still be spending on armaments nearly £34 millions a year more than we did in the last year before the "War to End War." Nevertheless, though we have little doubt that the Retrenchment Committee, which Parliament has decided to set up, may find scope for savings in many details of administration, there is little warrant for assuming that the progress towards economy in naval, military and air expenditure can be greatly accelerated unless the Disarmament Conference of 1932 achieves large and rapid results, or unless we are to embark on a policy of

unilateral disarmament, which would not commend itself to the vast majority of the nation. This being so, attention is naturally attracted to the soaring figure of the Civil Estimates, which now show a six-fold increase on the 1913-14 total of £52.7 millions, and have risen by £94½ millions since 1928-29. Even when allowance is made for the transfer under the Derating Act of £15 millions from the Consolidated Fund to Supply, the increase in the past three years is disquietingly large.

So far only the bare summary of the estimates has been published, and comment on minor items may conveniently await the Financial Secretary's memorandum on the details of each class. It is clear, however, from the figures available, that however heroically the axe may be applied to all the lesser branches of expenditure (and by no means all could be subject to drastic lopping without real sacrifice of national advantage), we must look for the source of the trouble and for possible savings to the five main heads of outgoings, which between them account for over £232 millions of expenditure. We show in the next table, on the same basis as above, the course of expenditure under these five heads, outgoings in respect of Scotland being included in each case:—

	(Million £.)		Pensions		Ministry of Labour.
	Education.	Health.	War.	Others.	
1924-25 ...	46.5	21.8	69.5	25.0	14.1
1927-28 ...	50.8	23.1	59.7	36.9	11.1
1928-29 ...	47.3	23.5	56.7	38.1	11.8
1929-30 ...	47.8	24.5	53.5	39.9	19.5
1930-31 ...	52.7	22.0	51.6	45.5	26.6
1930-31* ...	52.7	22.0	51.9	45.9	37.1
1931-32 ...	55.9	22.3	50.0	49.2	44.9

* Including Supplementary estimates.

Expenditure by the Ministry of Health and the Department of Health in Scotland will be seen to be more or less stabilised at a not unmanageable figure. The mounting cost of education, on the other hand, suggests not only that Parliament should think twice in present circumstances before agreeing to finance, if again asked to do so, an extension of the school age, without first insisting that the Board of Education's present scale of expenditure is keenly scrutinised with a view at least to arresting the rate of increase. With regard to Pensions, the figures under the head of "Others" show how heavily we are paying for democracy's experiments in this form of State philanthropy. Since 1924-25 war pensions have automatically declined by £19½ millions, whereas Old-Age Pensions, supplemented since 1926 by Widows', Orphans' and Old-Age Contributory Pensions (estimated for 1931-32 at £10 millions) have increased by over £24 millions, or nearly 100 per cent. It is, however, the expenditure of the Ministry of Labour which is likely to occasion the greatest disquietude. Its estimate for 1931-32 shows an increase of £18.3 millions over the original estimate for 1930-31 and of £7.8 millions over the final estimate for that year. As compared with 1928-29, i.e., the year before the Exchequer began to assume liability for doles to persons whose covenanted claims to insurance benefit had lapsed, the net expenditure of the Ministry of Labour, after allowing for appropriations-in-aid drawn from the Unemployment Insurance Fund to the order of £6 millions a year, has increased by no less than £33 millions. Moreover, it is by no means certain that the figure of £44.9 millions, estimated for 1931-32, will represent the final liability of the Exchequer under this head. In a memorandum submitted by the Treasury to the Royal Commission on Unemployment Insurance, it was estimated that the cost of transitional benefit in 1931-32 would show an increase over 1930-31 of £13 to £18 millions or more, whereas the Ministry's total expenditure is placed in the estimates at a figure less than £8 millions in excess of the adjusted figure for the current year.

We propose next week to give a survey of probabilities on both sides of the forthcoming Budget account. In any estimate of such probabilities, it is clear that much will turn on the Government's treatment of this "relief" drain upon the Treasury, whose magnitude, as Sir Richard Hopkins pointed out to the Royal Commission, threatens, in conjunction with borrowing for the Unemployment Insurance Fund, to "not merely disturb, but entirely

upset the equilibrium of the Budget on the basis of existing taxation." For if outgoings on transitional benefit, without modification of the scale of payments or the conditions for their receipt, are to be continued throughout the next financial year, it would appear that on Supply Services alone the Exchequer may have to find more nearly £30 millions than £20 millions in excess of the amount provided in last year's Budget.

SHELTERED WAGES.

It has been said, with a modicum of truth, that one of our dominant national characteristics is a genius for compromise. The capacity thus ascribed to us has the defects of its qualities. Accommodatingly to split the difference may be a good, rough and ready way of finding a *modus vivendi*, but it does not always follow that the maximum advantage is thereby attained. The findings of the National Wages Board for the railways are a case in point. Faced with overwhelming arguments for a radical reduction in the railways' swollen labour charges, and called upon to arbitrate as between (a) the companies' admittedly "stiff" proposals for cuts in wages and revision of conditions, and (b) the railwaymen's tactical counter-claims for still higher minimum rates, the Board has found in principle against the Unions, but has in fact awarded the companies rather less than half their demands. To quote from the award: "We have considered the various claims put forward by each side, and while the representatives of the several interests are unable to agree that the terms set out represent an adequate recognition of the respective cases, they are prepared to accept them as a whole as the findings of the Board." Coming from a body in which an independent chairman, supported by a few "neutrals," has to mediate between two sets of "adjudicators" representing actually the disputants, this naively frank pronouncement is at once a testimony to the Board's success as a harmonising influence, and an admission of its shortcomings as an economic-judicial court. Accommodation is reached, terms of settlement are announced; but the public is left without much enlightenment as to the real needs of the situation.

The companies, it may be recalled, had proposed to reduce weekly wages by roughly 6s.; to eliminate overtime for night and Sunday work; to abolish the guaranteed day and guaranteed week; and to institute in all grades, where required, a "spread-over" of the eight-hour day. The Board has decided that wages shall be reduced by 2½ per cent., with a further reduction of 2½ per cent. in earnings in excess of 40s. per week (salaried staff, £100 a year), provided that (i) in no case shall any reduction be more than 6s. per week (salaried staff, £15 a year), and (ii) earnings of male adults whose base rates are under 41s. per week shall not be reduced below such base rates. In addition, extra pay for night duty is to be reduced from "time and a quarter" to "time and an eighth," and for duty on Sunday, Christmas Day and Good Friday from "time and a half" to "time and a third"; overtime rates are to be scaled down—by day from "time and a quarter" to "time and an eighth," by night from "time and a half" to "time and a quarter"; and a "spread-over" up to twelve hours a day may be put into operation, where the companies desire (subject to appeal to the Central Wages Board), for all grades except drivers, firemen, guards and signalmen. This award (the pill is sugared by one or two minor concessions to the railwaymen in points of detail) is to come into operation on March 29.

The effect of these findings on the position of the companies and of the railwaymen obviously cannot be stated with great exactitude. On wages alone the probable saving should be about £3.3½ millions a year, and the economies realisable directly from the scaling-down of overtime rates and, gradually, from the discharge of station staff rendered redundant by the "spread-over" may eventually amount, perhaps, to a further £1½ millions, making a total reduction of £4½-4¾ millions against £9½ millions for which the companies asked. Even on the assumption that wages of railway shopmen, who are not covered by the present award, are subjected to a similar cut, it would certainly

be optimistic to hope that the railway wages bill will be reduced by much more than £5 millions, leaving it still not far short of £110 millions, against £47 millions in 1913. On the other hand, with reductions ranging from 1s. 9d. per week on a 50s. wage to 3s. per week on a wage of 80s., the railwaymen, even allowing for slightly diminished overtime payments, will still be enjoying earnings more than double those ruling on the railways in 1913.

We have no desire to disparage the work of the National Wages Board or to minimise unduly the concessions which the Union's representatives on it have agreed to make. The companies announced in advance that they would abide by the award, but its terms have yet to be accepted by the railwaymen's delegate conferences, and though acceptance—branch meeting protests notwithstanding—is probable, it may well be that on the case as presented (a point to which we shall return) more drastic findings would not have "gone through" without grave risk of a disastrous stoppage of work. Though peace may be bought too dearly, it is no mean thing that the present settlement should to all appearances be peaceable. Further, in rejecting by implication the Union's thesis that wages should be fixed by reference to "the present demands of the individual based upon his economic needs and the requirements of social amenities," the Board has done something at least to dispel the fatal fallacy that any "standard of life" can be maintained regardless of the economic utility of its recipients' contribution to the common pool.

Nevertheless, we are compelled to express grave doubts whether this award meets adequately the full needs of the situation. It represents in terms of weekly earnings no more than a reduction proportionate to the fall in the cost of living which has taken place in the past twelve months, and it leaves the railwaymen still in the privileged position of enjoying remuneration quite disproportionate to that obtainable, on the basis of present commodity values, by workers in the exporting industries or those (e.g., land-workers) exposed to the pressure of world prices. Viewed in its bearing as a significant lead in the essential process of redressing the disparity between "sheltered" and "unsheltered" wage-rates, the award is singularly ineffective, and contrasts glaringly in its terms with the result, for instance, of last week's arbitration on wages payable in the South Wales coalfield.

For this result the representatives of the companies cannot be wholly acquitted from blame. By their insistence on the railways' "right" to a certain standard of net revenue they tended to make the case before the Board a question of "doing something to meet the stockholders' difficulties." This, as we show in an Investment Note on a later page, the award is calculated to do, at least so far as the position of the prior charges and preference stocks is concerned. But neither the disputants nor the Board seem to have attempted to face the real issue of public interest, which is that in the present disequilibrium between world prices of wholesale foodstuffs and raw materials on the one hand, and (i) British manufacturing "finished" prices, and (ii) the British cost of living on the other, a very important element is our excessive costs of every kind of land transport. Even if a measurable recovery in wholesale prices occurs with world trade revival, this unbridged gap bids fair to undermine our whole economy unless the upper blade of the "scissors" can be brought down to meet the lower. The railwaymen do not stand alone; apart from the large numbers of employees of public authorities, there are all those engaged in road transport, portage, etc., and above all, perhaps, there are the workers in the docks, whose casual weekly earnings, supplemented by the dole, are often double and treble those drawn by a miner, steel-worker or cotton operative in full employment.

It is idle to pretend that we can hold our place, much less recover lost ground, as an exporting country or maintain our national standard of well-being, if productive industry, working on the existing or probable price-level, has to carry a £100 million bill for railway wages along with a series of other "sheltered" costs all entering deeply into the cost of manufacture and the prices which the consumer in Great Britain has to pay. No fiscal legerdemain can get us over that crux; and, if those asked to make a temporary sacrifice could be brought to

realise it, no permanent loss of "real" earnings need follow a reduction of nominal wages. If its benefits were passed on to the consumer—we assume that the forcible pressure of public opinion would simultaneously be brought to bear on every monopolist or "sheltered" profit-margin in the chain of distribution—an all-round 10-15 per cent. cut in every "sheltered" wage would give such an impetus to the slow, lagging decline in living costs, and such a stimulus to our exports, that our national productivity, purchasing power and domestic turnover would all benefit on balance, to the ultimate advantage of all concerned. To such swift, successful readjustment the railway Wages Board had an opportunity to point the way; it has not taken it. If the process of half-hearted interim compromise is to be repeated in every other "sheltered" occupation, the restoration of equilibrium and the revival of British prosperity will be tardy. In the railway award the "not too bad" has been the enemy of the good.

THE CANADIAN NEWSPRINT SITUATION.

(BY OUR OTTAWA CORRESPONDENT.)

THE plight of the grain growers of Western Canada has been receiving widespread publicity, but almost equally serious is the condition of Canada's newsprint industry, whose financial difficulties have been increasing for the last three years and are now becoming critical. The physical development of the industry in the last twenty years has been spectacular, and, as the following figures show, since 1928 it has steadily forged ahead of its rival in the United States:—

	NEWSPRINT OUTPUT.	
	U.S.A. Tons.	Canada. Tons.
1913	1,305,000	350,000
1920	1,511,000	875,170
1925	1,530,318	1,522,217
1928	1,414,952	2,381,102
1929	1,392,276	2,728,827
1930	1,282,156	2,498,060

The latest production figures, however, indicate that the recession which began in 1930 threatens to be progressive; and there is looming up the prospect of another price cut. Since the beginning of 1921, when the price of newsprint stood at \$130 per ton, there have been a series of price changes all, with one exception, downward. The following table gives the details of the changes since 1924:—

Date.	Contract Price per Ton.
January 1, 1924.....	73
January 1, 1925.....	70
January 1, 1926.....	65
July 1, 1928	62
February 26, 1929.....	55

Apparently, the newspaper publishers are bent upon forcing a further cut in the price, and a combination of circumstances favour them. It has been demonstrated that Canada does not command any monopoly of pulpwood resources. During the second half of 1930 the International Paper and Power Company and other American companies have imported substantial quantities of Russian pulpwood, delivered at their mills at a cost which compares favourably with that of Canadian pulpwood; and of

excellent quality, clean and free of knots. It is true that the American Government has lately imposed upon importers of Russian pulpwood the onus of showing that it has not been prepared by forced labour, and these imports may, as a result, fall off, but the fact remains that henceforth Russia must be taken into account in estimating the pulpwood resources of the world.

Furthermore, it is now known that Alaska has supplies of pulpwood and adjacent water-power resources which can form the basis of an economically sound newsprint industry, and the Federal Trade Commission of the United States, following its investigation into newsprint prices, has recommended that steps be taken to develop it. Again, Newfoundland has been steadily increasing its output of newsprint during the past five years, until it has now become an important producer; and there is also the possibility of using the Southern pine of the United States for the manufacture of newsprint. This tree has a "regrowth" of 18 years, as compared with 75 years for Canadian spruce, and the cost of pulpwood from it delivered to the mills is \$5-\$6 per cord, which is considerably less than that of Canadian pulpwood. At present this Southern pine is being extensively used in the manufacture of kraft, or wrapping paper, and if industrial chemists succeed in their present efforts to find a method of extracting the resin or gum from this pine, a huge newsprint industry could be established in the Southern States.

The position of the Canadian manufacturers has been further weakened by the fact that fresh machines came into operation last January, and at the end of that month the rated capacity of the Canadian mills stood at 12,376 tons per day, as compared with 11,940 tons at the end of 1930. The following table shows the high and low percentages of operating ratios between 1924 and 1930 and the rated capacity of the machines installed:—

	Operating Ratio.		
	High.	Low.	Rated Tons Capacity.
1924	96.6	85.3	4,871
1925	100.6	89.7	5,317
1926	99.0	92.4	6,818
1927	88.9	80.5	8,500
1928	88.0	78.0	9,897
1929	91.3	77.9	10,748
1930	75.2	59.5	11,940

As the result of the additional machines and the further curtailment of demand, the operating ratio for January has declined to 57.3 per cent., the lowest figure on record in the history of the industry. Furthermore, largely as the result of the imports of Russian pulpwood, the output of American mills for January, at 105,527 tons, showed a gain of approximately 6,300 tons over the December figure and an operating ratio of 69.1 per cent. of the rated capacity. And stocks of newsprint on hand in both countries at the end of January, placed at 71,671 tons (Canada 38,768 tons; U.S. 32,903 tons), were at the highest level ever reported.

Under these circumstances the best that the Canadian newsprint producers could hope for was to hold prices at the level of 1930, but it is now evident that this cannot be done. Forecasts about advertising lineage in the United States indicate that the volume of newsprint consumption in the United States will be lower for the first half of 1931, and no serious improvement can be anticipated until 1932. The Hearst newspaper interests are by far the largest consumers of paper in North America, and of their annual requirements of approximately 540,000 tons, all but some 56,000 tons are secured from Canada. At present the Hearst interests have long-term contracts with the International Paper and Power Company for 140,000 tons of newsprint for five years beginning with 1929, and with the Canada Power and Paper Company for 100,000 tons per annum. But the price in these contracts is on a sliding scale, to be adjusted each year according to the ruling market price, and apparently the Hearst interests have combined with the other American newspapers in forcing down the price in the open market. At any rate, it is announced by the American Newspaper Publishers' Association that its members have now contracted for 400,000 tons of newsprint for 1931 at a price below that prevailing in 1930. The Canadian newsprint companies have not admitted the accuracy of this statement, but the Abitibi

Power and Paper Company has made the significant announcement that, while the 1930 price for its newsprint will continue, it will protect its customers in the event of any decline in the general newsprint market price. The basic contention of the newspaper publishers is that, although the price of newsprint has fallen, it has not yet come into line with the drop in other commodity values.

Now, the Canadian newsprint companies have been able to effect substantial cuts in their costs of production; they have curtailed their staffs and reduced wages and salaries, they have confined operations as much as possible to their low-cost mills, and they have abandoned their own cutting operations to a large extent. They have been buying from settlers or pulpwood operators at prices which the latter declare are scandalously low, and they have also been "eating out of the pile," i.e., taking wood from their storage reserves. But, even with the enforcement of these economies, very few of the Canadian newsprint companies were able to do more than cover their fixed charges during 1930, and some of them even failed to do this; Abitibi Power and Paper, for instance, which is one of the strongest companies, will probably have less than \$1 per share available for common stockholders, as compared with \$1.97 in 1929. The outlook for 1931 is such that the earning even of interest on the fixed charges will be difficult unless tremendous further economies can be effected.

Plainly, one of the best avenues for securing these would be a greater consolidation of the industry, and negotiations have been afoot for some time for a merger of four of the principal newsprint producers, the Abitibi Power and Paper, Canada Power and Paper, Backus-Brooks and the Canadian branch of the International Paper and Power Company. It is claimed that such a merger would make possible the establishment of a single policy for the Canadian newsprint industry and also the reorganisation of its capital structure, which is now regarded as inevitable. Admittedly, the industry has suffered greatly from the operations of stock promoters, who injected a great deal of superfluous water into various newsprint corporations, and, if a reasonable valuation were placed upon mills, pulpwood limits, contracts, etc., the capitalisation of the merger could be reduced to a point where it would bear a closer relationship to earning power than it now does.

The advantages of consolidation are obvious, but negotiations have been going on for months without any definite result. The fundamental obstacle to their success lies in the fact that certain controllers of the industry want everybody but themselves to make the necessary sacrifices. The result has been a complete absence of the co-operative spirit which alone could enable the merger to achieve its real purpose—the diminution of capitalisation to reasonable limits and the readjustment of operations. Accordingly, the *Financial Post* of Toronto, holding the view that the leaders of the industry have shown a "woeful lack of ability" to settle their own troubles, and that the situation has gone beyond the stage when any individual's feelings can be considered, has come forward with the suggestion that the newsprint interests engaged in the merger negotiations should agree upon a single arbitrator or a tribunal to adjudicate upon the valuation of their properties for the purposes of consolidation; and it proposes that the task be entrusted to Mr E. W. Beatty, the President of the Canadian Pacific Railway.

Notes of the Week.

Conservative Policy.—In a speech at Newton Abbot, on Friday of last week, Mr Baldwin gave an outline of the home policy of the Conservative Party, and we may presume that, unless or until mutineers capture the ship, his statement holds the field. The first point in the programme is public economy, in the double sense of "getting money's worth for all you spend" and also of "cutting your coat according to your cloth." The next Government, he thinks, will have to spend its whole life economising, and restricting new expenditure to the purposes of industrial reconstruction and the Navy, which, in Mr Baldwin's view, has

been over-reduced. From economy Mr Baldwin turned to Protection. As soon as he comes into power he will impose a tariff on all manufactured imports, and devise measures to stop dumping, especially from Russia. Agriculture is to be assisted by a guaranteed price for wheat and import control by the "quota system." The production of sugar beet and sugar is to be encouraged; a tax is to be imposed on malting barley, and the dumping of "such things as German oats" is to be prevented. "Maybe it will be by a tariff, or maybe by licence, or maybe by prohibition. Any treaty or international agreement standing in the way will be promptly denounced." As regards the Dominions, Mr Baldwin asks for a "perfectly free hand," even if it involves a tariff against imports of foreign food. Here, then, is the Conservative programme: Economy, but more money for the Navy and a guaranteed price for wheat, which, if it is to help the farmer, must be costly to the State; general and indiscriminate Protection on manufactured goods (no level of duties specified); a blank cheque in Imperial affairs and a mandate to tax foodstuffs if the Dominions wish to make that part of a bargain. We do not believe that in this form it will be endorsed by the country.

The Amenities of St. George's.—One is accustomed to the fairly free employment of general invective in the course of parliamentary elections, especially since the Press Lords began to run candidates of their own. But never in our experience has the method of personal vilification fallen to lower depths than in the campaign of the Rothermere and Beaverbrook newspapers against Mr Baldwin himself and the official Conservative candidate in the St. George's by-election now in progress. We do not care to go deeply into this discreditable chapter in the history of the British Press, nor to quote the oft-repeated Billingsgate of abuse in which these newspapers have indulged. Two instances will suffice to illustrate the methods of attack to which Mr Baldwin's antagonists have descended. Before turning to politics, Mr Baldwin was actively associated with the famous steel firm of Baldwins, Limited; but public service has, of course, claimed him for many years. This firm, in common with so many in the same industry, has fallen into the trough of depression, and its shares stand at a low figure. The blame for this the Rothermere Press imputes to Mr Baldwin, and arguing that since the firm with which he used to be connected has fallen on difficult times, therefore Mr Baldwin has proved himself unfit to lead his party or his country. Unfair argument could go no further. For Mr Duff Cooper the Press Lords have picked up a different rod out of the gutter. Because Mr. Duff Cooper recently lectured in Berlin on the British Empire and gave his lecture the title of "An Apology" (in the classic sense, of course, of "defence") he is ferociously assailed as an anti-patriot. This attack must be born either out of a deliberate intention to hit below the belt, or else out of almost inconceivable ignorance as to the meaning of the King's English. We give the Press Lords their choice. We hold no particular brief for Mr Baldwin or Mr Duff Cooper or for the policies which they are advocating, but we sincerely hope that Sir Ernest Petter, who has lent himself to the use of such discreditable methods, will be roundly defeated. Such defeat would vindicate not merely British repugnance to attempts at Press dictation, but also the average Englishman's preference for fair play and honest controversy.

The F.B.I. and Protection.—On Wednesday night the Federation of British Industries, following a canvass of their members on the subject of fiscal policy, issued a memorandum entitled "Industry and the Nation." A year ago, when Lord Beaverbrook was working up his Empire Free Trade campaign, he prophesied that before very long protagonists would arise who would urge the quite irreconcilable counter propositions either of a general protective tariff to enclose the home market or of a bargaining tariff with the object of beating down tariff walls by force. And so it is happening. But it is no irresponsible politician that comes forward to fill this

role. It has been left to the Federation of British Industries to support all the contradictory forms of protection in one and the same breath. Indeed, the new industrial policy, as set out in their Memorandum, is not only to secure Empire Free Trade, to protect the home market by a tariff wall and to lower tariffs by a bargaining process, but it is to monopolise trade in the hands of import boards and by lowering prices to develop the export industries! The putting forward of such a hotch-potch of absurdities and contradictions by a serious and important organisation is only to be explained by the heterogeneous character of the Federation itself. For years the Federation has kept silent on the fiscal question—not because its members had no definite opinion but because they could not agree. Now that the long-drawn-out depression has induced the majority to ask for a change in our fiscal system, the Federation has attempted to overcome the insuperable difficulty of propounding a protectionist scheme which would not split the Federation from top to bottom by putting all the nostrums at once into the physic—even going the length of pretending that it will prove a panacea for the export trades. The F.B.I. pronouncement is one of the most jumbled protectionist schemes that we have ever seen put forward from any responsible quarter, and its only effect is to make confusion worse confounded.

The Foreign Policy of the U.S.S.R.—Last Sunday the All-Union Congress of Soviets—the nearest thing to an imperial parliament of the Soviet Union—met in Moscow for its sixth session. It had not met previously since the spring of 1929, when it ratified the Five Years' Plan; and now, when it is meeting again, half the five years' period has already elapsed. Meanwhile, the Plan has come to dominate the life and politics of Russia. On the day after the Congress opened the Supreme Court in Moscow passed sentence on a batch of prisoners who were accused of "sabotage." Happily this time there were no death sentences, as there were at the end of the more sensational trial held last year. The accused were sentenced to terms of imprisonment, varying from ten to two years. The truth is that the Soviet Union is striving to fulfil the Five Years' Plan in a spirit of ruthless concentration which is seldom exhibited by nations except in war time. In fact, the Plan might be described as a declaration of war upon Russia's economic predicament; and the Soviet Government is desperately nervous lest its pursuit of victory on this economic battlefield should be frustrated by some declaration of war, in the literal sense, against the U.S.S.R. on the part of an unscrupulous capitalist world. The Soviet Government's outlook on the international landscape is not unlike that of the Fascist Government. Both Governments see

themselves as martyrs for their political faiths, as outlaws in a world of democratic-capitalistic states which are planning their overthrow, first by a campaign of slander and then, when the moment comes, by force of arms. In this spirit, Molotov, the Chairman of the Council of People's Commissars, told the All-Union Congress of Soviets that the utmost exertions must be made to strengthen the military power of the Union, because they must be ready at any moment to repel an armed invasion. In the course of his address, Molotov surveyed the relations of the U.S.S.R. with the other Powers. He pictured France as being the head and front of the Union's enemies, without letting off Great Britain, whose relations with the Union, he said, had gone from bad to worse since 1929. His tone was hostile towards the Vatican, temperate towards Poland, China and the United States, forgiving towards Germany, warm towards Italy and Turkey. He alluded here to the protocol for an agreed limitation of Russian and Turkish naval armaments in the Black Sea and adjacent seas which has just been signed at Angora. This protocol is on the pattern of the Græco-Turkish naval protocol of last November; and the two instruments, between them, ought to make peace on those waters reasonably secure. Incidentally, they form an indirect diplomatic link between the Soviet Union and Italy; for, while Turkey is Russia's ally of ten years' standing, the Turco-Greek *rapprochement* of last year was due to Italian initiative. While France and her allies may spy, in these arrangements, the shadow of a hostile *entente*, there is no reason to suppose either that Greece and Turkey are willing to become pawns in such a game, or that the Soviet Government intends to be a player. With the Five Years' Plan on her hands Russia may have a nervous fear of war, but she certainly has not any present desire for it.

Army Estimates.—The Army Estimates for 1931-32 reach a net total of £39,930,000, as compared with £40,500,000 last year—a reduction of £570,000. In his statement accompanying the estimates, the Secretary of State for War points out that, in view of the fact that £8,750,000 of the total estimates is earmarked for non-effective services, and that reductions amounting to nearly £5,000,000 have been made in effective charges since 1925, "administrative savings become increasingly difficult to secure." In the following table we show estimated expenditure for 1930-31, 1931-32, and actual expenditure (sub-divided into effective and non-effective charges) during the previous five years, as compared with the estimates for the last pre-war year. Numbers of personnel are added for purposes of comparison:—

Year.	Effective Charges.	Non-effective Charges.	Total (a) Justified for War Terminal Charges.		Personnel.*
			(000's omitted.)	(000's omitted.)	
	£	£	£	£	
1913-14	24,888	3,957	28,845	185,600	
1925-26	36,306	8,037	44,343	160,600	
1926-27	35,382	7,866	43,248	159,400	
1927-28	35,480	8,166	43,646	166,500	
1928-29	32,489	8,308	40,797	153,500	
1929-30	32,421	8,435	40,856	150,500	
1930-31	32,120	8,383	40,503	148,900	
1931-32	31,528	8,750	39,930	148,800	

* Establishment, exclusive of India.

At the beginning of the next financial year, the Army, inclusive of troops in India, will be, as was the case a year ago, about 10,000 below establishment. It will be seen that, against the drop of approximately £5 millions in effective charges from 1925-26 to 1931-32, non-effective charges in the present estimates are above the level of 1925. This increase is accounted for mainly by a rise of £282,000 on account of half-pay and retired pay to officers, and by an increase of £437,000 under the heading of pensions. A scrutiny of the accounts further reveals that the pay of the Army is estimated in 1931-32 to be £89,000 lower than it was in 1929-30, and £1,046,000 lower than in 1925-26. As in the case of naval expenditure, it is almost impossible for the non-expert to point to any specific item under which

savings might be made, but the field for possible economy appears to lie in Votes 5 to 12, which cover administration, supplies, stores, etc. Expenditure under these votes is estimated for 1931-32 at approximately £14 millions, as compared with about £19 millions in 1925-26. In view of the tremendous fall in prices which has occurred in the past five years, as well as the reduction in the numbers of personnel, it seems arguable *prima facie* that larger reductions might have been effected under these heads.

The Revenue.—The week's Exchequer return made up to March 7th, and printed in summary form on a later page, shows that revenue continues to flow in at a highly satisfactory rate, receipts for the week being £31.8 millions, against £27.5 millions in the corresponding week last year. The deficiency of revenue against expenditure up to date amounts to £58.1 millions, against £58.7 millions a year ago. Between now and the end of the financial year, Mr Snowden, in order to make up the figure of £360 millions fixed in his Budget for debt interest and sinking fund, must appropriate to debt service £13.7 millions more than he did in the last three weeks of 1929-30, and there may be a moderate increase in expenditure on the Supply Services in the same period. Having regard, however, to the fact that tax revenue between now and March 31st bids fair to exceed by perhaps £9 millions the corresponding receipts a year ago, and that in the last three weeks of 1929-30 some £44 millions of the deficit as on March 8th were caught up, it looks as though the final deficit for the current year may be nearer £20 than £25 millions.

Air Estimates.—The Air Estimates for 1931-32 show, at a net total of £18,100,000, an increase of £250,000, as compared with the 1930-31 estimate of £17,850,000. The gross total has risen by £273,400 to £21,197,200—this somewhat larger increase in gross figures being due to an additional £23,400 on account of Appropriations-in-Aid. The latter, however, include provision for the British entry in the Schneider Trophy contest, without which they would show a reduction. It should also be noted that the gross estimates include the increased sum of £155,000, payable by the Dominion and Colonial Governments on account of the forthcoming African Service. In the following table we show the net estimated expenditure on the Air Force in 1930-31 and 1931-32, as compared with actual expenditure in the previous five years, together with the numbers of personnel:—

Year.	Net Expenditure. Thous. £	Personnel.*
1925-26	15,470	32,642
1926-27	15,530	34,015
1927-28	15,150	30,035
1928-29	16,050	30,467
1929-30	16,750	31,070
1930-31	17,850	32,000
1931-32	18,100	32,000

* Including (except in 1930-31 and 1931-32) about 2,000 paid for by the Government of India.

Vote I, covering the pay of the members of the Force, is estimated at £3,907,000 for 1931-32, and shows an increase of £176,000 on 1930-31, while technical and war stores, works, buildings and lands together account for a rise of £146,000, although expenditure on airships is lower. These increases are partly offset by reductions of £30,000 on civil aviation, £19,000 on the Air Ministry, while non-effective services are responsible for a further saving of £12,000. During the current financial year one squadron of flying boats and two new flights of the Fleet Air Arm will have been added to the regular Air Force, and one new cadre squadron is being formed. On the completion of these developments the strength of the Force will amount to 72 regular squadrons and 13 non-regular squadrons. The provisions for 1931-32 include three new regular squadrons, to be added to the Home Defence Force (bringing the number up to 29), and an addition of one flight to the Fleet Air Arm.

Overseas Trade in February.—Compared with the corresponding month of last year the trade returns for February make an even worse showing than those of January. Imports, exports and re-exports all underwent very heavy declines, as the table below shows:—

MONTH OF FEBRUARY. (000's omitted.)					
	1931.	Increase or Decrease as compared with			
		February, 1930.		February, 1929.	
	£	£	%	£	%
Imports	63,647	-24,565	-27.8	-27,203	-29.9
British exports	31,793	-20,131	-38.8	-23,872	-42.8
Re-exports	5,853	-2,794	-32.4	-4,448	-43.0
Total exports	37,646	-22,925	-37.8	-28,320	-42.9
Excess of imports over total exports	26,001	-1,640	-5.9	+1,117	+4.9

The next table gives the corresponding figures for the year to date:—

FIRST TWO MONTHS. (000's omitted.)					
	1931.	Increase or Decrease as compared with			
		1930.		1929.	
	£	£	%	£	%
Imports	139,217	-50,837	-26.7	-58,182	-32.9
British exports	69,357	-40,830	-37.0	-53,188	-43.5
Re-exports	11,890	-4,930	-29.3	-8,221	-40.8
Total exports	81,247	-45,760	-36.0	-61,409	-43.0
Excess of imports over total exports	57,970	-5,077	-8.0	-6,773	-10.5

Only a part of this uniform decline can be explained by the fall in prices, for an examination of the volume figures shows few commodities of which the quantities imported and exported have not diminished. The main exception is to be found in our imports of food. In the first two months of this year we imported more grain, meat, tea, dried fruits, potatoes and butter than in the corresponding period of 1930. Unhappily the same cannot be said of raw materials, of the more important of which only wool, petroleum, wet hides, oilseeds, and wet chemical wood pulp were imported in larger quantities than in the corresponding period of 1930. Imports of most manufactures decreased; exceptions were pig iron, some copper manufactures, clocks and watches, electric carbons, fabric gloves, silk and artificial silk stockings, fancy hosiery, some petroleum products, some classes of leather, silk yarns and woollen and rayon tissues. The volume of most of our main exports shows a catastrophic decline:—

SOME LEADING EXPORTS.			
	First Two Months		
	1929.	1930.	1931.
Coal	8,362,661	10,229,067	6,803,617
Pig iron and ferro-alloys	98,017	67,310	32,583
Railway material	100,152	80,284	20,356
Total iron and steel	801,266	646,133	310,898
Textile machinery	22,357	18,897	8,179
Total machinery	96,178	89,872	60,743
Cotton yarns	30,530,900	25,382,300	25,597,700
Cotton piece-goods	705,412,100	612,702,300	301,965,900
Wool tops	55,506	46,057	46,639
Woollen tissues	22,414,000	18,577,500	12,273,000
Worsted tissues	10,737,200	8,561,300	6,710,300
Linen piece-goods	11,925,800	12,356,400	10,999,100
Boots and shoes	132,957	143,161	97,382
Leather	50,829	45,299	24,597
Paper and cardboard	794,078	820,121	551,153
Locomotives	5,879	6,628	6,048
Motor cars and chassis	7,345	5,901	4,485

Many have been more than halved, and the only item in the table to show even a slight increase is wool tops. Among exports not included in the table the only bright spot is to be found in an increase both in tonnage and value of the exports of steam and motor vessels.

Gold and the Slump.—In a most interesting address on Thursday to the British Engineers' Association, Sir Henry Strakosch gave his reasons for adhering to the view that the fall in commodity prices is due mainly, though not wholly, to monetary causes, and he was at pains to refute

some of the causes alleged by those who take a contrary view to his own. For example, in reply to those who urge either that there has been over-production of cereals, or that rationalisation has gone so far that it has produced an excess of output of manufactured goods, he quoted the figures produced for many years past by Mr Carl Snyder, of the Federal Reserve Bank of New York, and Mr Joseph Kitchin, which showed over a period of years an annual increase of production of 3 per cent. compound. Since 1925 the increase has been a little less than 3 per cent. In Sir Henry's view there is evidence neither of general over-production in recent years nor of any extraordinary progress of technology or invention. Even as regards cereal production, the League of Nations' figures show that, while in 1928 the increase was 4½ per cent. over 1927, this was less than the increase in 1925, which amounted to nearly 9 per cent. without causing any serious slump in prices. Sir Henry's argument regarding cereals, at all events, may perhaps be open to question, for there is force in the thesis of Mr Loveday that, although, say, 3 per cent. may be a normal rate of increase, it cannot be indefinitely assumed that this applies to everything, or, in particular, that an increase of cereals at this rate is called for. Sir Henry admits that efforts to control production are certainly in part responsible for the situation, but the non-monetary theorists might well urge that unbalanced production is of more importance than Sir Henry attached to it. Most interest, however, attaches to his explanation of how monetary influences produced the crisis. He lays chief blame on the Federal Reserve policy in the autumn of 1928, which permitted the American situation to get out of hand, attracted money which should have been flowing into debtor countries, and caused bank rate increases all through the world in 1929. This compelled debtors to hasten the repayment of their loans by selling the commodities and securities upon which these loans were contracted. World-wide liquidation had the inevitable effect of a world-wide slump in the price of commodities. Given this initial impulse, the downward movement of prices explains all that has followed since—the curtailment of enterprise, increasing unemployment, financial and political difficulties and social unrest—consequences to which Sir Henry himself forcibly called the attention of the League of Nations towards the end of 1927. Sir Henry concluded with a word about what the future may have in store for us. The fall of prices has not only caused a plethora of short-term credit that would ordinarily flow into long-term securities, and thereby create a demand for capital goods, but it has also led to a curtailment of the production of many classes of goods. But this curtailment, in his view, cannot go on for any length of time, and, when prices have once reached bottom, and, he added, "I almost think they have," confidence will return and production for normal needs be resumed. Prices will then react upwards. "That reaction should not be impeded by monetary action, but should be allowed to develop until we regain a level, compatible with ultimate stability, as near as possible to the level at which the slump started, for a level much lower would put upon most of the world an almost intolerable burden in respect of the fixed-money obligations it has to meet. All the efforts of the principal central banks should then be directed towards maintaining that level of prices stable within reasonable limits by co-operative action, and this action should be not merely of a monetary kind, but should also include prudent advice tendered to their respective Governments for the removal of the numerous impediments of one kind or another to the free flow of goods, capital and man-power."

The South Wales Mining Wages Award.—At the end of last week the award was announced of the independent chairman of the South Wales Coal Conciliation Board, to whom the questions of the subsistence wage and of the minimum additional percentage payable on the 1915 standard base rates had been referred. The owners had asked for a reduction in the percentage from 28 to 10 and in the subsistence wage from 7s. 10½d. to 7s. 8d.; the miners sought an increase to 42 in the percentage and to 8s. 3d. in the subsistence wage. Mr Schiller awarded a reduction in the percentage to 20 (thus reducing

earnings per shift by about 6 per cent.) and introduced into the subsistence wage the principle of graduation according to family responsibilities. Married men with dependent children and single men with dependents are to receive 7s. 6d.; men with children working, 7s. 3d.; single men, 7s.; and boys under sixteen who are supporting a family, 6s. A worker who fails without due cause to present himself for work on all the days on which a colliery is open during a given week shall not be entitled to the benefit of the "subsistence wage" minimum for such days as he works during that week, but shall draw simply wages calculated on the 20 per cent. addition to his base rate. These reductions fall a long way short of the owners' demands, but from the point of view of the wage-earners they are distressing indeed, especially in view of the prevalence of short time. Four thousand miners at the Glamorgan and Cambrian collieries struck in protest, but the Cambrian employees almost immediately decided that such a manœuvre was useless, and after passing a vote of "no confidence" in the independent chairman, decided to return to work. As the Executive Council was pledged beforehand to accept the award, its position is somewhat difficult, for the miners are, very understandably, less impressed by the inability of the industry to pay a living wage than by their own undoubted need and by the comparative moderation of the sacrifice which the railwaymen, who have so far borne far less of the burden than the miners, are being asked to make.

The Midland Coal Quota.—Considerable discussion has been occasioned during the last few days, writes a Leeds correspondent, regarding the quota under the Coal Mines Act so far as it relates to the Midland area. Statements have been made that there is a considerable shortage of coal, and that, while miners are standing idle, consumers are clamouring for coal in the spell of severe weather which we have experienced. The National Federation of Coal Merchants have taken up the matter, but an impartial examination of the position shows that it is not nearly so bad as would appear from the publicity which has been accorded to it. On the other hand, a defect in the working of the scheme has been revealed which should receive attention. To some extent, the position has been brought about by those responsible for the Midland scheme. Towards the end of last year the central authority in London issued a tonnage quota which could be raised in the Midland area during the first three months of this year. Those responsible for working the Midland scheme decided to apply for an increased tonnage, and, it seems, relying on the success of this application, issued a quota for January of 90 per cent. of the standard tonnage, and for February of 82½ per cent. This left only a little over 58 per cent. for March. The "standard tonnage" under the present scheme is slightly lower than the "basic tonnage" under the old voluntary organisation of the Central Collieries Commercial Association, but it is interesting to look at the quota percentages under that scheme last year for January, February and March. They were 65, 65 and 60. Even then all the permitted output was not raised, and there were substantial stocks on hand at the end of each month. But, without going further into the rather involved consideration of percentages which are not exactly comparable, the Board of Trade return of weekly output for the two periods gives a fair enough comparison. In Yorkshire, which is the largest district in the Midland area, the output for each week has been as follows:—

	1930. Tons.		1931. Tons.
Jan. 4	437,700	Jan. 3	705,100
" 11	1,050,500	" 10	991,300
" 18	1,030,900	" 17	1,007,900
" 25	1,015,200	" 24	977,100
Feb. 1	961,500	" 31	909,400
" 8	1,002,800	Feb. 7	943,900
" 15	1,011,600	" 14	897,200
" 22	989,800	" 21	927,800

It will be seen that for the first eight weeks the output for 1931 was very little short of that for 1930. For subsequent

weeks there will be a decided drop on account of the small quota, but the shortage so far relates only to the better household and industrial coal. Supplies of gas coal and all other grades are sufficient. The recent severe weather has almost doubled the demand for household coal, and it is the failure of the present scheme under the Coal Mines Act to meet a situation of this sort which has caused resentment. Under the old voluntary scheme of the Central Collieries Commercial Association, when any situation of this sort arose, a meeting could be called within twenty-four or forty-eight hours, and an immediate decision taken to increase the quota ten, fifteen or twenty per cent. to meet the sudden emergency. The suggestion which has greatest support here is that District Committees should have power in special and, may be, localised circumstances, to increase the quota. They might have to justify their action to the central authority, but there should be ample means of checking any abuse of this concession. The quota for the Midland district may have been a little too low, but, apart from the spell of severe weather, it is probable there would have been little or no shortage.

Russian Cotton.—The larger imports of Russian cotton to this country are causing considerable interest in Lancashire. It is reported that since August 1, 1930, about 120,000 bales have been received in this country and the value is estimated at over one million pounds sterling. This Russian cotton, writes our Manchester correspondent, is of good grade and staple, and compares favourably with the best types of Texas varieties, but users state that the price is fully ½d. per lb. cheaper than similar American styles. A feature of the Russian staple is its strength. Substantial quantities have been used during the last few months by the Lancashire Cotton Corporation, Ltd., and it is understood that about fifty firms in Lancashire have experimented in spinning it, the reports being generally satisfactory. This development in the raw cotton trade has caused much comment in certain quarters, and reports are being circulated that Russia is growing this cotton under slavery conditions, but there is no proof for such statements. On behalf of Lancashire spinners it is held that, owing to the severe world competition which now exists, users cannot afford to ignore the opportunity of buying Russian cotton when it is so attractive and more economical than other varieties.

Shipping Freight Index Number.—As a result of slightly greater activity in grain chartering, due to the temporarily steadier tendency of wheat and maize prices, our index number of whole-cargo freight rates rose in February by nearly 1 per cent. The following table summarises recent movements of the various group indices:—

AVERAGE 1898-1913=100.

	Average, 1913.	Feb., 1930.	Dec., 1930.	Jan., 1931.	Feb., 1931.
European Waters	110.0	98.1	89.7	88.0	87.1
North America	113.1	92.6	86.9	90.1	93.4
South America	123.4	95.5	93.8	90.1	94.6
India	105.3	93.4	103.8	101.3	96.9
Far East and Pacific	117.4	78.9	85.2	80.8	90.9
Australia	127.9	75.7	109.5	138.6	108.6
Total	116.3	89.0	94.8	94.5	95.2

Outward coal freights were steady, except for South American discharge; shippers to Rio de Janeiro and the Argentine were able to obtain small concessions from owners. Among the homeward routes, the Plate was most active, but a number of vessels were also chartered for Australian wheat, notably for discharge at Shanghai. The European ore routes were quiet; the North American market had little business to offer, though rates were nominally a little firmer; and Indian inquiry fell away. A few cargoes, however, were offered from the Rice Ports. The month's changes in the index of each group and subgroup are shown in the following table, the figure 100

representing in each case the average rate during the basic period 1898-1913:—

AVERAGE 1898-1913=100.

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	78.5	+ 0.3	South America—out-		
Bay—outwards	100.9	— 3.7	wards	74.9	...
Bay—homewards	91.9	...	South America—		
Mediterranean—out-			homewards	114.3	+ 9.0
wards	85.0	+ 1.6	India—outwards	101.0	+ 4.8
Mediterranean—			India—homewards	93.0	—13.5
homewards	87.8	— 3.8	Far East, &c.	90.9	+ 2.1
North America	93.4	+ 3.3	Australia	108.6	...

Expressed as a percentage of the average for 1913, the total figure of our index number for February works out at 81.9, as compared with 81.2 in January and 76.5 a year ago.

The County Council Elections.—A regrettable feature of the London County Council elections is the small proportion of electors who took the trouble to vote. Out of 1,955,869 voters in constituencies where there was a contest only 541,067, or 28 per cent., thought it worth their while to go to the poll. The smallness of the poll is disconcerting, for it confirms the view already widely held that in the present confused state of politics the average voter is losing interest and even faith in democracy. The actual result of the elections is much as was expected. On balance the Municipal Reformers gained six seats, Labour lost seven, and the Liberals gained one, so that the composition of the new council is 83 Municipal Reformers, 35 Labour and 6 Liberals; and the balance of power remains undisturbed. Compared with 1928, the Municipal Reformers raised their poll from 284,544 to 287,586, while the Labour poll fell from 251,585 to 214,256. The main lesson of these figures is that among London ratepayers at least the stream is running definitely against the party responsible for the national Government in power. Other County Council elections were less determinate in character, mainly because Labour is the only national political party which runs candidates for elections outside London. It is noticeable, however, that Labour lost some seats in Lancashire and the West Riding, and this may be even more ominous than the decline they suffered in their London poll.

The Roumanian Loan.—A good deal of reticence is being observed in France, writes our Paris correspondent, as to the exact cause of the exceptional difficulties which had to be overcome before the agreement for the issue of a new Roumanian loan could be signed, at the head offices of the Banque de Paris et des Pays Bas, on Tuesday evening. All that is generally known appears to be that, after intercepting and stopping transmission on Monday of a telegram from the governor of the Roumanian State Bank to the French negotiators, which would have rendered further progress with the loan impossible, the Roumanian Government felt compelled to dismiss the high official in question before the agreement could be signed. What success the French portion of the loan will have with the native investor, in view of his present unsympathetic attitude towards foreign loans, remains to be seen. The amount of the loan, it is announced, has been fixed at \$53,000,000, or 1,325,000,000 francs, of which 575,000,000 francs are to be offered in Paris in 1,000-franc bonds. The terms are certainly attractive to French investors, however they may appear to the Roumanian taxpayer. The bonds are to bear interest at 7½ per cent. (as from April 1st), and are to be issued at 86½. They will be free of all present or future Roumanian taxation, and interest and reimbursement will be payable, at the option of the bearer, in the local currency at Paris, London, New York, Berlin, Zurich, Stockholm, Vienna, Prague and Bucarest, or in Holland. The bonds are guaranteed by the Roumanian Government and are secured preferentially on the gross receipts from the Roumanian Government monopolies. Outspoken criticisms in Paris suggested recently that only a fraction of the produce of the loan would reach Bucarest. This is confirmed to some extent by the issue here of an apparently

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

inspired statement that \$10,000,000 of the total "will remain abroad in repayment of an advance made by the I.T.T.," which holds the Roumanian telephone concession, \$12,000,000 will go to the Swedish Match Trust, in respect of a contract for road construction, and \$3,500,000 will be applied to the conversion of old debts due to foreign contractors to Roumania. "There will enter Roumania, therefore," the *communiqué* concludes, "only \$27,000,000, of which one-half will be for agricultural mortgage bank purposes and the other will be used to meet the immediate needs of the Roumanian Treasury and for various orders and military purposes."

Australian Foreign Trade in 1930.—Our Melbourne correspondent writes:—A summary of Australian trade for 1930, compiled unofficially from the monthly official statements, compares with the previous year as follows:—

	1929. £	1930. £	Inc. (+) or Dec. (—). £
Imports—			
Merchandise	145,348,557	94,391,090	— 50,957,467
Bullion and specie	324,662	339,422	+ 14,760
Total imports ...	145,673,219	94,730,512	— 50,942,707
Exports—			
Merchandise	123,556,719	90,804,396	— 32,752,323
Bullion and specie	12,722,162	24,128,298	+ 11,406,136
Total exports ...	136,278,881	114,932,694	— 21,346,187

The figures are subject to slight revision. Exports of bullion and specie consist mostly of gold, nearly all of which has been taken from stocks previously held, plus a small amount from current production. The merchandise figures by themselves show an excess of imports over exports of £3½ millions for 1930, against £21½ millions for 1929. The reduction in imports for 1930 has been spread over almost all items. Metals, manufactures and machinery decreased to £23,757,192 in 1930, against £43,119,495 in 1929. Included in these figures are vehicles (motor cars, etc.), which amounted to £4,291,268, against £13,096,070. Imports of apparel and textiles for 1930 were £18,644,242, against £30,855,559 in 1929. Among the principal exports for 1930 were wool, £35,140,319, against £50,242,832 for 1929; wheat and flour £15,302,138, against £24,402,419; butter £6,430,234, against £7,253,886; frozen beef £2,441,015, against £2,729,835; frozen lamb £1,708,667, against £1,581,949; frozen mutton £617,564, against £429,667; and lead £2,767,434, against £3,320,696.

Britannic Assurance Company, Limited.—In his speech at the annual meeting the chairman of this company referred to the passing during 1930 of several more milestones denoting in millions the company's progress. In this sense the ordinary branch passed its first milestone in premium income and the industrial branch its third

milestone. The ordinary branch new business registered a slight increase at just over £2½ millions, and the industrial branch a considerable increase from £7,630,000 to £8,620,000. The ability of the industrial branch to expand its business in times of increased unemployment (as a matter of fact, the industrial business is increasing at a much greater rate than the ordinary business) is at first sight an extraordinary paradox. The chairman's explanation of this is an interesting one. In the first place he quoted an estimate to the effect that the number of persons employed at the present time is some two millions greater than the corresponding figure in 1913. In the second place, wages have increased at a much greater rate than the cost of living, with the result that those in employment have a larger margin available for saving. In addition, the appeal of industrial life assurance has been greatly strengthened by more generous treatment of policyholders in regard to surrender values and free paid-up policies, and in particular by the voluntary concession on the part of the large companies of a share in the profits of the business. The cost of administration (including commission) expressed as a percentage of the premium income, shows little change, the figures being 13.2 per cent. and 36.2 per cent. in the ordinary and industrial branches respectively, compared with 13.4 per cent. and 36.1 per cent. in 1929. Income tax has cost the company £39,000 more in 1930, and the combined net rate of interest earned was £5 1s. 2d. per cent. compared with £5 5s. per cent. The usual annual valuation has been made, and the results are shown below with those of 1929 for comparison:—

	1929.	1930.
Ordinary Branch:—	£	£
Surplus earned during the year	289,602	300,332
Brought forward from previous year	96,073	117,306
	385,675	417,638
Allocations:—		
To Bonuses to policyholders	201,130	219,058
„ Shareholders account	22,239	24,182
„ Investment reserve fund	45,000	40,000
„ Carried forward to next year	117,306	134,398
	385,675	417,638
Industrial Branch:—		
Surplus earned during the year	423,525	493,708
Brought forward from previous year	104,750	113,275
	528,275	606,983
Allocations:—		
To Bonuses to policyholders	50,000	70,000
„ Shareholders account	200,000	210,000
„ Investment reserve fund	90,000	110,000
„ Written off cost of British Legal	75,000	75,000
„ Carried forward to next year	113,275	141,983
	528,275	606,983

In the ordinary branch the reversionary bonus has been maintained at the same rate as before, namely, 42s. per cent., while in the industrial branch the amount allocated will be set aside to augment the sums assured becoming claims by death or maturity during the year. The allocations to investment reserve fund raise the total of the fund to £650,000, which is certainly not too large in relation to total assets of £19½ millions. By the application of the £75,000, the cost of acquiring the British Legal has now been totally extinguished. This company, with a premium income of over £500,000, was acquired in 1927 at a net cost of £320,000, and the Britannic has thus succeeded in completely eliminating a considerable item of goodwill in only four years, while at the same time the valuation basis is being gradually brought into line with the more stringent methods used by the parent company. The dividend on the ordinary capital of £300,000 has been raised from 47½ per cent. tax free to 50 per cent. tax free.

Refuge Assurance.—A Correction.—We regret that two typographical errors crept into our Note on page 494 of last week's *Economist* dealing with the results of this

company. The Industrial Branch Expense Rate for 1929 should have been stated as 37.1 per cent. (not 31.1 per cent.), as compared with 36.5 per cent. in 1930; and the Industrial Branch Surplus in 1928 was £567,024, not £267,024.

At the meeting of the Royal Statistical Society, on the 17th inst., Mr S. P. Vivian, C.B., Registrar-General of England and Wales, will open a discussion on "The Forthcoming Census." The meeting will be held in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C.2, at 5.15 p.m.

Congress — Treasury Financing — Share Market —
Trade — Money — Farm Board.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 28.

SUGAR coating to the Ex-Service Men's Loan Bill, passed this week by both Houses of Congress over President Hoover's veto, was provided by the hope of escaping a further sitting of Congress after March 4th. With the passage of the Soldiers' Bill and other pressing appropriation legislation, no strong reason remains for the holding of a special session, and no extra meeting is anticipated. The country, in spite of the fact that this last Congress has been extraordinarily extravagant, can find some room for congratulation that matters were not worse. Seldom has a Congress sat when more schemes for spending money were presented and when less money was in sight.

Apart from the Soldiers' Loan Bill, and the routine appropriations, the only action of Congress worth noting was the passing of the Mussel Shoals Bill, providing for Government operation or leasing of this great fertiliser plant on the Tennessee River in Alabama, erected during the war as an emergency operation. Presidential approval of this measure is doubtful, and it is equally doubtful if Congress could override a veto. Legislative proposals which fell by the wayside were those for changes in the Federal Reserve and National Bank Acts, railroad regulation and petroleum import restriction. There was no active demand for these measures except for oil restriction, and that only recently. It had the support of small operators in the mid-continent and some business interests there, but oil men generally were opposed to the plan as, at best, futile in the light of heavy potential production in the domestic market and the excess of oil exports over imports for a number of years.

It is estimated that a maximum of \$1,700,000,000 in cash will be needed if all those eligible for loans under the Soldiers' Loan Act apply for the full amount, which the new law fixes at 50 per cent. of the full maturity value, but it is thought that at most no more than 75 per cent. will apply. In any event, the Treasury will need a good deal of cash in the next few weeks. Loan applications are pouring in.

While the shadow of heavy Government financing has been holding back the bond market, new capital issues have been scanty. The month's total new financing, bonds and shares, was approximately \$160,000,000, the smallest for many months. Last year the February volume was nearly \$650,000,000. Investors have been willing enough to take sound issues when offered in moderate amounts. The drying up of activity was mainly due to fears of a big decline in bonds over the next several months because of the Soldiers' Bond Loan financing.

Government borrowing, large as it promises to be, will nevertheless be more moderate than at first supposed, and

the market looks for an early revival of corporate financing. The very considerable improvement in the share market suggests returning confidence in trade, although not much improvement has taken place so far. Business men are inclined to infer from rising share prices that recovery is under way, although not visible to the outside observer, and the rise has had a refreshing effect on sentiment. Yet in spite of the widespread satisfaction which the stronger share market has generated, the permanency of the movement is doubted in most quarters. Accumulation of a large short interest, the natural tendency of the market to rebound after a sharp decline, and the activity stirred up among professionals by the stimulation of extremely easy money, have combined to send prices higher, and once again interest the general public in the market. Prices are now on the average about half-way back up the slope down which they glided in the September to December market. This recovery is regarded as a logical "technical" improvement. Whether it can go much further probably depends, partly, on how willing the public proves to be to buy more shares but, largely, on how soon convincing evidence of trade gains is forthcoming.

So far, the share market has closely followed the pattern of the spring rise of a year ago. Last year's early advance was lost in April and May on realisation that business improvement had not kept pace. March ought to answer the question whether hopes of trade recovery must be deferred until autumn. Possibly professional bullish operators, who have the whip-hand in the market at present, will be able to keep the pot boiling for a while longer in the face of everything. They can borrow all the day-to-day money they wish at 1 per cent. Loans are reported from time to time at much less than that, and the large majority of active shares pay enough dividends to cover such carrying charges with a margin to spare. Proof that the public is beginning to speculate is had in the brokers' loan record. Loans have risen for three consecutive weeks, the total rise being \$82,000,000.

Trade statistics for February are rather disappointing. The steel industry made a steady, but slow, improvement and at the end of the month had reached a rate of slightly above 50 per cent. of capacity. Motor production increased, but by less than the seasonal amount. Railroad traffic fell well behind the usual seasonal improvement. It has been about 20 per cent. under a year ago, and has changed little during the past month. The rate of business failures continues high. Bank clearings are running about 23 per cent. below the level of a year ago, the decline in New York being considerable, in spite of recent activity in the share market. Commodity price declines are still in excess of increases.

The Federal Reserve Bank reports that January sales by wholesale dealers were 25 per cent. under a year ago, and department store sales were nearly 8 per cent. under last year. Stocks of merchandise in the hands of both wholesalers and retailers were, however, substantially smaller than a year ago. The chain store sales dropped 1.3 per cent. in January, the smallest rate of decline since early last autumn. Railroad earnings in January are running between 35 and 40 per cent. lower than a year ago, according to the reports of the first 50 roads to submit statements. This drop, as compared with the previous year, is larger than any so far reported since the beginning of the depression. The reason is that gross revenues have continued to fall, with smaller passenger haulage and freight traffic, and a somewhat lower general level of charges, while the operating economies put into effect last year have exhausted the possibilities of reduction in expenditure.

Money markets are showing no ripple at the month-end, although financing operations of the next fortnight will involve around \$400,000,000, including heavy March 1st dividend and interest payments and the usual settlements of the farm country and the interior. The Federal Reserve Banks are prepared to offset any tendency of money to stiffen appreciably. Virtually no change is shown in the current statement of condition for the system. Government security holdings are intact; the bill portfolio is slightly higher, corresponding to a reduction in member

bank borrowing. In their own weekly statement the reporting member banks in leading cities show a drop of \$117,000,000 in commercial loans. This figure, the largest for any week in a good many months, does not measure accurately the slump in business demand for credit. It includes the total of bankers' bills, and bank holdings of these bills have been running off rapidly.

Handling of the Government's operations in wheat and cotton grows daily more inept. General disapproval is felt toward the latest move to dump wheat in foreign markets, it being announced that 35,000,000 bushels would be sold for export, contrary to the implied promise of the Farm Board not to do so. The fact is, of course, that the Board has reached the end of its financial rope, now that the Soldiers' Loan Bill will require a huge amount of new money, and something has to be done. It holds in storage or under contract for future delivery between 150,000,000 and 200,000,000 bushels of wheat, and within two and a half months the new crop will come to the market. What will happen then nobody knows, but it is feared that the scheme to hold domestic prices far above world market levels will have to be abandoned.

FRANCE.

Budget — Rente Conversion — Iron and Steel Output —
Coal Industry.

(FROM OUR CORRESPONDENT.)

PARIS, March 11.

THE Budget discussion is practically finished, and the passage of the Bill before the beginning of the new financial year is, therefore, now fairly well assured. The main question facing the Chamber is the meeting of the deficit occasioned by expenditure proposed since the draft Estimates were presented. The Government is considering three possible courses: a slight increase in the income tax, the reimposition of part of the reduction of the tax on turnover accorded a year ago, or an increase of one-fifth in the cost of stamped paper and receipt stamps. Any one of these is estimated to yield from 350,000,000 to 385,000,000 francs. For the moment, the last-mentioned is regarded as preferable.

The time and manner of application of the plan for large-scale Rente conversion is the subject of close attention in both Treasury and political circles for several reasons. In the first place, the Budget estimates were only balanced by the Caisse d'Amortissement's consenting to take over a substantial portion of debt service hitherto borne by the General Budget. This consent, the responsible officers of the Caisse insist, was contingent solely on the early application of the Rente conversion plans. The market, as may be expected, is anxious that the Government shall make up its mind on the point as soon as possible, and politicians, with electoral axes to grind, are eagerly awaiting the opportunities that may arise when the Government's plans are revealed. Complaints have been rife for some time past that *démarcheurs* ("share-pushers," employed by the banks) have been alarming Rente holders in many parts of the country with the prospect of a reduction of interest yield, and urging them to replace their holdings with issues offering more attractive yields. Warnings have even been issued that this form of "damaging the credit of the State" may result in criminal proceedings. At the moment of writing, a definite decision as to the conversion scheme seems imminent. In view of the fact that Three per Cent. Rentes stand at 88½-88¾, the 3½ per Cents. at 103, and Bank rate at 2 per cent.; that the average yield from issues with fixed return at the end of January was 3.79 per cent., and in view of the success of *Crédit Foncier* and other 4 per cent. conversion issues, and other present-day factors, the maintenance of three large issues at 5 per cent. and two others at 6 per cent. (all of which stand at over par), borders on the absurd.

A further step—which is of direct interest to British holders of French war Rente issues in London—has been taken towards extending a certain amount of relief to Rente holders who have lost four-fifths of their capital and interest value by the Stabilisation Law, by the inclusion of a clause in the Budget Bill for 1931-32 reading as follows:—

"All conversion of Rente issues by the State shall be authorised by a law, which shall also determine to what extent and under what conditions the economies resulting from the said conversion shall be applied to compensating subscribers to Rente issues who have directly suffered from the Monetary Law."

The inclusion of this clause in a formal *projet de loi* is the first effective recognition of the fact that humble investors who came to the help of the country at the time of her greatest need deserve a better fate than to lose four-fifths of the money they lent. It will be noted that the clause specifically limits potential compensation to original subscribers, thereby quite rightly excluding investors who "bought in" much more cheaply than at issue price, in the open market, both before stabilisation in fact (1926-28), when the franc was already well on the downward road, and afterwards. The cost of any compensation operation, therefore, will not absorb any serious amount of the economies to be secured from the application of the conversion plan. Whether the implied compensation will be extended to large holders of pre-stabilisation issues remains to be seen.

The significance of the clause quoted above for British subscribers to the French war loans issued in London calls for little comment. The recent French Notes, in reply to Mr Snowden's demands that the French Government should find some means to compensate British investors who are in a similar plight to their French fellows, both pointed out that any such step would necessarily involve similar relief being granted to French subscribers to the same issues. By the same reasoning, and by all the canons of ordinary justice, British subscribers should equally benefit if any consideration of the kind in question is to be given to French subscribers as a whole.

Iron and steel production figures for January, which were made public last week-end, show very little change on the month, but are substantially lower than the totals registered a year ago. The total output of pig iron was 803,000 tons, against 800,000 tons in December, 875,000 tons in January last year, and monthly averages of 841,000 tons in 1930, 871,000 tons in 1929 and 841,000 tons in 1928. Crude steel production totalled 746,000 tons, against 756,000 tons in December, 800,000 tons in January, 1930, and averages of 783,000 tons in 1930, 805,000 tons in 1929 and 783,000 tons in 1928. Metallurgical prices continue to drop, mainly owing to the growing practice of giving special discounts to secure firm or large orders. Orders for mechanical construction products are reported to be becoming rare. The representatives of the European Steel Cartel met at Düsseldorf this week to fix production quotas for the second quarter of the year.

As the coalowners' and the miners' delegates have failed to come to agreement on the question of wages, and a conference between Ministers of the Departments concerned has brought no results, the miners' leaders in the Northern field have ordered a general strike in those districts for March 15. Hopes are still entertained of a compromise agreement before that date. Selling prices, although nominally unchanged, are, in fact, falling appreciably. Coalowners are reported to be inducing consumers to lay in stocks by offering handsome discounts and even inviting potential buyers to name their own figures. Foreign competition and large accumulations at the pit-heads are causing increased alarm. Private Members' Bills recently put forward in the Chamber call for (1) the increase of Customs duties and import tax on foreign coal to three times the existing rates, (2) the reduction of transport rates on French coal by 10 per cent., (3) a special tariff for foreign fuel transported on railways and waterways, and (4) reduction of taxation on French coal by 50 per cent. (to 3 francs a ton). French coal consumption in 1930 totalled 87,000,000 tons, against production of 64,858,500 tons from the French pits.

GERMANY.

Politics — Defence Estimates — Continued Depression — Money and Foreign Exchange — Capital Markets.

(FROM OUR CORRESPONDENT.)

BERLIN, March 11.

LAST week the political situation once more seemed very critical. The withdrawal of the National Socialists and the Nationalists has brought about an unnatural shifting of balance in the Reichstag, and at present there is a Marxian majority of Social Democrats and Communists. The Social Democrats do not, of course, contemplate making common cause with the Communists, but their tactics are hampered by the present situation. The recent communal elections in Brunswick showed that, for the time being, the Social Democrats have more to fear from the Communists than from the National Socialists, and the Communists are taking advantage of the fact to bring forward very radical proposals in order to be able to saddle the Social Democrats with the odium for their rejection. They demanded, for example, among other things, in the Finance Committee of the Reichstag, a 20 per cent. tax on large properties and a substantial increase in income tax on the larger incomes, and as this is in consonance with their general principles the Social Democrats could not simply reject it out of hand.

The relations of the Social Democrats with the Government are, however, most seriously threatened by the national defence estimates. These estimates contain the first instalment for the construction of the second "pocket battleship." The Social Democrats passionately opposed the building of the first ship, and the conflict threatens to break out again over the second (which is part of a programme for the construction, over a period of years, of four), although the first instalment for which the Government asks this year only amounts to Rm. 6 millions. If the parties of the Right were present there would be a clear majority in favour of the ship, but, in their absence, the Government is dependent on the votes of the Social Democrats, and that places the leaders of the Social Democratic Party in a very awkward position. They know that if the ship were refused there would be a Government crisis, for Dr. Brüning has openly threatened to resign in such an event, in which case the President would probably call a Government of the Right, with consequences that cannot be predicted. Both Dr. Brüning and Herr Herrmann Müller are anxious to avoid this, so the policy of the Social Democrats is principally concentrated on securing social and financial concessions from the Government in return for support for the shipbuilding appropriations, so that they may be able to explain away their complaisance to their supporters.

Among the concessions asked for is a promise that when some 80 per cent. of current wage agreements expire in June there shall be no further general reduction like that of last autumn. The Social Democrats also demand a doubling of the tax on directors' remuneration and some increase in the property tax and in the higher classes of income tax. There are, however, narrow limits to the concessions the Government can make. Practically, these are limited by the circumstance that the whole financial policy of the Government has hitherto been based on the undoubted fact that the income and property taxes cannot stand any further increase, and politically, by the determination of the Right Wing of the Government coalition to make no concession to the Social Democrats. It is difficult to see how this difficulty will be resolved, but the Social Democratic Press is not taking an aggressive line, and the representatives of the party on the Budget Committee are showing great reserve. The decision will probably not be taken until the third reading of the Budget at the end of this month.

The report of the Institut für Konjunkturforschung on conditions at the end of February is very pessimistic. Production and turnover are falling and activity is on the decline. A small volume of orders and declining imports of raw materials are evidence of a continued low level of capital investment. The stagnation of international

markets is making itself increasingly felt in exports, which have been declining since the autumn of 1929. Home market conditions are equally unfavourable. In spite of the process of liquidation to which the depression has led, the stringency of the credit markets is still maintained, and the construction of capital goods, especially building, is severely hampered in consequence. The industries which produce goods for final consumption are depressed by the general reduction in purchasing power.

The only influence in the opposite direction is the accumulation of postponed demand. Declining prices and uncertainty as to future developments have curtailed demand to a greater extent than was warranted by actual requirements, and as the influences weaken which have promoted such reserve these arrears will have to be made up. Perhaps the revival of the share market, and to some extent also of the raw material markets, may be taken as the first sign of this, but the necessary conditions of a rapid recovery are not yet present.

The foundation of the International Mortgage Bank in Basle and the general support promised to it by the directors of the B.I.S. had a prompt effect in the German money and exchange markets. The initiative for the establishment of the bank came from the Gemeinschaftsgruppe Deutscher Hypothekenbanken, the largest group of mortgage banks in Germany, and its activity will, at any rate at first, benefit principally this country. First-class long-term loans and mortgages pay 8 per cent. or more in Germany at present. The International Mortgage Bank hopes to place its bonds, which are covered by the purchase of German mortgages, at 6 per cent. This difference offers an opportunity for very large profits for the new bank at first; but it is hoped that, ultimately, larger issues by the Basle bank will lead to a reduction in long-term rates in Germany. The Gemeinschaftsgruppe has long had business connections with the Kreuger concern, which should be helpful in the placing of the new Swiss mortgage bonds.

The sudden rise in the mark during the last few days was caused not only by the establishment of the new bank, but also by the influx of new foreign capital, due in part to foreign purchases of securities. In the first two months of this year the foreign exchanges in Berlin were near the gold export point, and the Reichsbank had to prevent a further rise by heavy sales of foreign bills. The highest rate for the dollar in Berlin at the end of February was 4.211, and for sterling 20.441. On March 9th the dollar fell to 4.203, and the pound to 20.218, on a heavy demand for marks. The simultaneous fall of short-term money rates in Berlin was partly due to the passing of a relatively difficult month-end. Recently day-to-day money was available to the Berlin Stock Exchange at 4 per cent., against 8 per cent. at the end of February; the market rate of discount was $4\frac{1}{2}$, against $4\frac{3}{4}$ per cent.; and one month money was $6\frac{1}{4}$, against 7 per cent. More important has been the fall in the rates which German banks have to pay their foreign agents for loans of foreign exchange. Three months dollar credits are now $4\frac{1}{2}$ per cent., against $4\frac{3}{4}$ per cent. a fortnight ago. The price of long-term loans, however, has risen hardly at all in Germany. The violent rise in the quotation for the Young Loan on foreign bourses has, on the other hand, been received with the greatest satisfaction, as a sign of increased confidence in the political situation of Germany.

ITALY.

Stock Exchange — Revenue and Expenditure — Railway Traffic — Foreign Trade — Unemployment — Prices.

(FROM OUR CORRESPONDENT.)

TURIN, March 6.

IF Stock Exchanges accurately forecast impending economic developments, Italy is one of the countries in which there is hope that the bottom of the depression has been reached. As usual, fixed interest securities are recovering first: Five per Cent. Consols, which in October, 1929, were as low as 78.09, and in January, 1931, were at 80.38, are to-day 82.50 and are in lively demand. The index number of 14 mortgage and industrial debentures,

compiled by the Milan Economic Council (December, 1925, = 100), rose continuously from 99.30 on December 24, 1929, to 102.10 on January 3, 1931; then, more rapidly, to 103.96 on February 28, 1931. Middle-class and country savers, unwilling to invest in industrial shares, are buying largely state and land credit securities. Postal Saving Certificates, which pay 5 per cent. after the first complete year, slowly rising to 6 per cent. after five years, are enjoying great favour. Net issues amounted to 338.5 million lire in 1926, 871.4 millions in 1929, and 1,178.5 millions in 1930. Variable dividend shares are slowly following suit, but the force of the slump seems to have been spent at the beginning of the year, when (on January 3rd) the general Milan index touched 66.42, as against 81.24 on December 24, 1929 (December, 1925, = 100). On February 28th the index was up to 69.56. The upward movement, though retarded by bull liquidations, was recently aided by the discomfiture of some bear operators. One well-known Milanese business man, for example, was caught with a load of about 417,500 oversold shares of the most miscellaneous description, for which he was obliged to seek cover with a big loss, provisionally said to amount to £100,000 at the February settlement.

In contrast to stock exchange anticipations, economic indices of past events give a mixed impression. The first seven months of the financial year show a Budget deficit of 1,041.2 million lire; but as our system of accounting, which shows figures of income and expenditure *due* to be received or made on the current year appropriations, is too scientific for British minds, I prefer to quote the effective receipts into and payments out of the Exchequer during the same seven months' period, as from July 1, 1930. These show 10,329.4 million lire receipts and 10,506.6 millions payments, with a cash deficit of 177.2 million lire.

If the Exchequer situation may be considered fairly strong, other indices are less encouraging. Passengers carried on State railways decreased from 8,039,355 in January, 1930, to 6,684,832 in January, 1931, and passenger revenue from 113 to 96 million lire. Goods carried in January, 1931, amounted to 3,493,121 tons, against 4,404,171 in January, 1930, and goods traffic only yielded 171, against 220 million lire. Energetic efforts are being made to counteract this decrease by such measures as reduction of personnel expenditure from 184 to 166 million lire, and curtailment of the train service.

Provisional figures of foreign trade for January give imports at 1,028.6 million lire, as against 1,505.5 in January, 1930, and exports at 695.6, against 974.9 millions. The excess of imports over exports has decreased from 773.1 millions in January, 1929, to 530.6 in January, 1930, and to 333 millions in January, 1931; but clearly industry is buying from hand to mouth and drawing on stocks. When trade revives a scramble for raw materials is bound to take place. The number of unemployed reached 722,612 in January, 1931, against the previous maximum of 642,169 for 1930 (December) and 489,347 for 1929 (February). The consumption of electrical energy was 9,930.5 million k.w.h. in 1930, against 9,745.2 k.w.h. in 1929. Only in August, November and December was consumption less in 1930 than in 1929.

Wholesale prices are lower than in 1913. The general index (1913 = 100), which was 526.67 in 1927, was in the last week of February as low as 357.14. As at the same date the gold exchange was 368.48, gold prices are 96.9 per cent. of the 1913 basis. Industrial goods have suffered most; their index is 349.35, while food commodities remain at 376.32. The cost of living (June, 1, 1927 = 100) had remained at about 93 during the years 1927, 1928 and 1929, and decreased in 1930 to an average of 90.72; but after the campaign which began last November the index fell in December, 1930, to 86.56 and in January, 1931, to 84.09; the food index fell in January to 82.59. There is as yet a big gulf between wholesale prices, which have fallen since the middle of 1927 by about 32 per cent., and the cost of living, which is down by only 16 per cent. There, perhaps, lies the greatest hindrance to a new equilibrium between the prices received by industrial and agricultural producers and their costs of production.

AUSTRIA.

Public Finance — Prices and Wages — Industry —
Foreign Trade — Stock Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, March 5.

THE state of current tax revenue and the financial results of 1930 are causing the administration to exercise the greatest economy in order to keep down the deficit in the current year. It was assumed that the year 1930 would show a surplus, whereas there was actually a deficit of 48.9 million schillings, of which 16 millions was met by the reduction of investments. While during the first half of 1930 revenue and expenditure were satisfactory, during the second half of the year expenditure rose and collections dwindled. The raising of the taxes on sugar and beer, for the purpose of alleviating the distress among the farmers, increased revenue, but the proceeds of the other taxes show a decrease of 25.5 million schillings.

The reform of expenditure on social services is becoming more and more urgent, as the burden on merchants, industrialists and banks is becoming insupportable. Measures of compulsion in regard to the collection of social imposts are leading to hundreds of bankruptcies, and, as taxes and social imposts have priority in the case of bankruptcy, any accommodation which the Stock Exchange or the produce exchange might be willing to offer a firm in difficulties would be of no avail.

The Government is now preoccupied with negotiations for two loans; one for the purpose of covering expenditure on housing, which will be met for the most part by a domestic loan estimated at up to 300 million schillings; the other in connection with the second instalment of the investment loan. One of the preliminary conditions is the valorisation of certain guaranteed pre-war rentes. A project is being worked out in the Ministry of Finance, but the Government has not yet settled various essential points. Recommendations are forthcoming from some quarters for the issue of Treasury notes by the Government to strengthen its cash resources.

The reduction in the prices of the necessities of life is having widespread effects. In a number of industries, including the electricity industry and the building trades, the existing collective contracts with the men are to be terminated by the employers, who demand that the workers should submit to a wage cut in view of the reduction in the cost of living. The trade unions will probably be forced to make concessions. The number of unemployed in receipt of benefit is gradually falling, though at present it is about 18 per cent. higher than it was at this time last year. The present level is 336,989, and there is little or no prospect of any permanent reduction of this figure. The Minister for Agriculture, Herr Thaler, has worked out a plan for the creation of an Austrian colony in Paraguay. He himself wants to emigrate with a contingent of Austrian farmers, and he is endeavouring to induce the Government to accord a credit of two million schillings for purposes of emigration, which credit he hopes he would be able to repay within a few years.

The total value of exports and imports in January is lower than that in any other month within the last five years. Imports amounted to 171.2 million schillings and exports to 93.7 millions. Orders for wagons passed by the Federal Railways are also lower than they have been since 1926. It is hoped that the spring will bring an improvement in building activity and in the iron industry. The output of the iron industry for January is only 40 per cent. of that of January, 1930. On the other hand, the output of coal, both hard and soft, shows improvement as a result of the systematic agitation in favour of the use of Austrian coal as against foreign coal in the State industries and on the Federal Railways. In the cotton industry and the paper industry output is still declining, but reports from the leather and boot and shoe industry show improvement. The hope that the development of hydraulic power would have a more perceptible effect on economy this year will, unfortunately, not be fulfilled. The antagonism between the Austrian works and the A.E.G., Berlin, is still

maintained, and, in consequence, no date has yet been fixed for the commencement of operations on the Tauern hydraulic works. It is likely that a hydraulic generating works will first of all be erected in the neighbourhood of Vienna, and the Vienna banks are interested in this, particularly as the Municipality of Vienna seems disposed to draw a certain regular supply of electric energy from this proposed plant.

After the long stagnation the stock and share market is showing signs of recovery. The index of industrial shares has risen between January 15th and February 15th from 73 to 80½ per cent., and the improvement is still continuing. The position on the money and capital market, which is undoubtedly more favourable than it was a year ago, has fostered this movement, but the decisive factor was a strong bear movement which ventured too far in Hungarian coal-mine shares and in the shares of the Alpine Montangesellschaft (iron trust) and several machine and paper factories. In consequence, even the slight purchases of the public and of professional dealers were bound to bring about a marked upward movement. Especially big rises were noticeable in fixed-interest securities. The Federal Loan has risen above par and shows a rise of more than 5 per cent. since summer. The demand for mortgage certificates is strong, and most of the 7 per cent. mortgages are sold out, as the available material is slight. The mortgage institutes have begun to issue 6 per cent. mortgage certificates. A recently issued loan of the Province of Tyrol has now been completely taken up. The easy tone of the domestic money market has led to the repayment of many short-term foreign credits, so that the National Bank's holdings of gold and foreign exchange have fallen considerably. At the end of February they amounted to 842 million schillings, against 930 million schillings at the end of December, 1930. The amount of insolvency is rather alarming, for though the official figures show no great difference from last year, a number of compositions are being made privately. Shops are making great reductions in prices with the object of tempting the public to buy and so getting in money to meet urgent obligations.

ROUMANIA.

National Bank — Syndicalisation of Industry —
Valorisation of Cereals — Taxation — Conference of
Agricultural States.

(FROM OUR CORRESPONDENT.)

BUCHAREST, February 24.

THE report and balance sheet of the National Bank show that the central financial institution of Roumania, in spite of the adverse conditions prevalent, has succeeded in maintaining fully its control over the foreign exchange market. The ratio of its gold to liabilities was 37.2 per cent. on December 31, 1930, while its total holding of gold and foreign exchange amounted to 44.2 per cent. of its liabilities. The reserve was, therefore, well above the legal minimum. The rate of exchange, however, has been near the gold export point during the greater part of the year except towards the end of August and beginning of September, when, owing to grain export, the sterling rate dropped almost to par; it could not be held there for any length of time on account of the fall of the prices of cereals. In order to avoid too great a fluctuation in its holding of foreign bills, the bank created special funds for the State and for the Monopoly Institute for the purpose of buying, at opportune moments, the exchange necessary for the foreign debt service. This explains to some extent the reduction in the holding of foreign exchange. Commercial bills amounted to 7,358 millions on December 31, 1930, compared with 8,765 millions a year ago. The reduction is partly explained by the fact that the State, with the help of funds made available through the issue of the metallic currency, has taken over a portion of the immobilised debts. In a certain measure it is also due to the seasonal movements of agricultural bills; but undoubtedly the principal cause of the diminution is the restriction

in trade, which became more pronounced as the year wore on.

The bank rate was maintained at 9 per cent. throughout the year, and this conservative policy has been much criticised. The bank, however, was undoubtedly right in following a prudent course of action in view of the adverse balance of payments, the failure of foreign capital to enter Roumania, and the constant danger that what little local capital there is might be exported. The State repaid its temporary overdraft of 2,000 millions at the end of the year, as it was obliged to do by the law of stabilisation. It should be noted, however, that already, in the summary statement of the Banca Nationala on January 3, 1931, the State appears with a new temporary advance of 1,300 millions, which has since risen to the maximum allowed of 2,000 millions. The bank holds out hopes of a reduction in the discount rate, and it seems to rely for this on the grain exports of the coming spring. While this would certainly be a welcome step in the general policy of reducing interest, no exaggerated hopes should be entertained as to the effect on current money rates, which for a long time have been quite independent of the official discount rate.

The Industries Syndicalisation Bill is causing widespread discussion in economic circles. It is proposed to make syndicalisation compulsory for any branch of manufacture when undertakings representing at least 50 per cent. of the productive capacity of the factories concerned declare their intention of forming a syndicate. The measure is intended to rationalise industrial production and to finance on a common basis by cheap credits the supply of material and the marketing of the output. The syndicates are to be formed under the auspices of the Ministry of Industry and Commerce, and any factory which refuses to join a syndicate, the formation of which has been decided upon, will be closed. If the total production of a certain article is sufficient to meet internal consumption the syndicate may prevent the foundation of a new factory or even the enlargement of the capacity of the existing factories. If it is well administered, this measure may result in the cheapening of production. On the whole, it has had a fairly favourable press.

Very adverse comments have been passed on the plan of the valorisation of cereals proposed by Mr Madgearu, Minister of Agriculture. Its only redeeming feature is said to be the abolition of the export taxes. It is intended to concentrate the trade in cereals in the hands of a State institution, to be called the National Export Union, for the purpose of securing remunerative prices for the farmer, who is at the mercy of the small dealers. The project is regarded as an unwarranted State interference in the principal trade of the country. In view of the very strong opposition, it is doubtful if the measure will be carried through, at any rate in its present form.

Equally violent opposition has arisen against the Government's new Tax Bill, which is at present under discussion in Parliament. It is proposed to collect income tax on the declarations of last year. The Government is evidently afraid that, owing to the bad economic conditions, the decrease in incomes in general during the year 1930 has been so severe as seriously to threaten the State revenue. The most bitter criticism is directed against the proposed tax of 3 per cent. on the capital of companies that have earned no profit but have made a distribution to the directors. This is rightly considered a tax on capital, and is, therefore, condemned as pernicious. Even if it is eventually dropped, the proposed measure shows to what lengths the Government is prepared to go in its search for revenue.

The Committee of Economic Studies of seven Central and Eastern European States met in Bucharest on February 16th-18th. This committee was formed to devise means of dealing with the difficult agricultural situation created in the States concerned by the general agricultural over production and the drop in world prices. Resolutions were passed recommending common action at the wheat conference to be held in Rome on March 26th. It is evident, however, that the creation of a solid block of agricultural States which was hoped for by enthusiasts last summer is still far from realisation. In accordance with the resolutions of the committee, it is left open to each

GREECE.

Forthcoming Loan — Public Finance — Shipping —
Foreign Trade — Cost of Living — Banking.

(FROM OUR CORRESPONDENT.)

ATHENS, March 5.

GREECE is applying again to foreign markets for a loan to enable her to continue the execution of public works of a productive character. The sum required is about £8,000,000, but the amount to be actually borrowed will be fixed after consultation with the issuing bankers. A portion will be issued in Greece, and it is understood that New York, London and some other European markets will participate in the issue. The French market is occupied with the Roumanian and Yugoslavian loans, and is not likely to take up a Greek loan in addition. Hopes are entertained that the loan will be issued about the end of March.

As the present position of Greek finances is satisfactory, and the country has, since 1898, regularly and completely fulfilled its obligations to foreign bondholders, there is every reason for a Greek loan to meet with a favourable reception on the part of foreign investors. Indeed, Greek credit has risen appreciably during the last few years. The yield on Greek stocks quoted on the London Stock Exchange is now less than 7 per cent., a rate which compares favourably with that for many other foreign stocks. Total receipts from all the revenues assigned for the service of the foreign debt amounted in 1930 to 3,963 million drachmas, as against Drs. 4,231 millions in 1929. The difference is mainly due to the general fall of prices. The balance remaining after the service of the loans secured by these revenues has been effected is paid over to the Greek Government. In 1929 it amounted to Drs. 2,786 millions, covering many times the service of the projected loan. In addition, the country has enjoyed for some years substantial Budget surpluses, and estimates for the coming financial year, drawn up on a most conservative basis and with a strong reserve against contingencies, anticipate as usual a small surplus, which is probably under-estimated.

The plight of Greek shipping has attracted the attention of the Government. A committee set up to consider possible remedies has formulated a series of suggestions, involving subventions, loans and alleviation of taxes, the adoption of which would bring a substantial encouragement to shipping. As regards the insurance of the vessels, which has recently been the subject of much comment in the English and Greek Press, the shipowners have not

accepted the committee's decision. They have, therefore, decided to create, without the participation of the State or the banks, a Greek marine insurance company with an original capital of £100,000, to be taken up by the shipowners proportionately to the tonnage of ships owned by each of them. Part of the risks on each vessel will be covered by that company and the balance insured as usual with underwriters in London. By thus assuming part of the risks the owners hope to show their willingness to collaborate in limiting losses as much as possible.

According to the provisional foreign trade returns for 1930, both imports and exports show a decline in amount, though exports have increased in quantity. The deficit is £3,600,000 lower than in 1929. The decline is due chiefly to the fall of world prices. Remittances from emigrants abroad, which constitute an important item of the invisible exports, amounted in 1930 to £8,359,000, against £7,815,000 in 1929.

The index number of the cost of living at Athens (1914=100) stood in January at 1,798.6, against 1,870.5 in December and 1,940.4 in January, 1930. Bank statements for the past year show the effects of bad trade. Advances and discounts have decreased, funds disposable at home and abroad have increased, while deposits show a corresponding increase. The growth of deposits has forced interest rates to lower levels. On the other hand, owing to the restriction of home business, the banks have sought employment abroad for part of their liquid funds. In these circumstances the net profits for 1930 are, on the whole, lower, and, with some exceptions, the dividends so far declared are either equal to or lower than those for 1929. The banks are still in a good liquid position, the proportion of their cash and other immediately realisable assets being equal to 24.8 per cent. of their sight liabilities. On the whole, their situation is considered to be thoroughly sound.

Letters to the Editor.

THE STANDARD OF LIVING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Gibb's letter expresses ably and tersely the point of view of the sound logical and thoughtful economist of the standard brand. But I, for one, do not think we get very much further by avoiding and ignoring the point of view of the opponents of the standard brand.

Mr Gibb has bought and, I presume, paid for a wireless set which, according to some measure of his own, is too expensive for his means.

But, as I understand the theory of the "new school" economist, the answer is as follows:—

If all the population bought such sets up to the limit of their means—

(a) the cost of such sets would tend downward and not upward;

(b) the workmen making such sets would earn more and would, in turn, buy clothes hitherto beyond their means, and so on, in a widening circle, until Mr Gibb would receive more for his services (but not as a rentier).

If so, how is anyone (except the rentier) any worse off?

If so, you have set up a higher standard of living.

I do not see how this argument, which could, of course, be stated more clearly and with much greater detail, is in any way rebutted by Mr Gibb's letter or by the reiteration of the many "gold" arguments with which you yourselves fill your paper.—Yours faithfully,

NORMAN HOLDEN.

The Stock Exchange.

ARGENTINE GOVERNMENT BONDS.

THE opening of the British Trade Exhibition in Buenos Aires by the Prince of Wales to-day, will be the occasion for helpful comment on the close commercial ties uniting the two countries. The investor has every reason to endorse the hope that the Exhibition may not merely draw these bonds even closer, but may mark the inception of Argentina's recovery from her economic difficulties. British stockholders, who have a very substantial stake in Argentina, have suffered substantial depreciation on their securities during the recent slump.

It is relevant to consider how far the position of the investor has been altered since the *coup d'état* of last September. The following table suggests that the market in Argentine bonds has recovered appreciably from the lowest points touched this year, but that prices have not yet regained the "pre-Revolution" levels:—

	Highest 1929.	Pre-Revolution (Sept. 4) 1930.	Lowest 1931.	Present	Flat Yield (%)	Redemption Yield (%)
Argentine Govt. 5% 1907.....	96	94	87½	90	5 12 0	6 5 0
Argentine Govt. 5% 1909.....	97½	94	88½	91	5 10 0	6 0 0
Port of the Capital 5% of Buenos Ayres 1909*.....	97	94	86½	89	5 13 0	6 2 0
	97	91	89½	94	5 7 0	5 16 0

* Government guarantee.

Two conflicting forces have been at work in the Argentine bond market. The depreciation in the peso has brought in sellers, while the confidence inspired by the Provisional Government, and the financial reforms which it has inaugurated, have attracted buyers. Up to last month the sellers predominated; to-day the buyers are gaining ground.

We propose to deal, in this article, first with the question of the internal financial reforms. There can be no doubt that, under the later administration of ex-President Irigoyen, Argentine Government credit was being seriously impaired. Budgets were not balanced, the floating debt was rapidly increasing, and signs of over-borrowing were being multiplied. The magnitude of the floating debt had become a matter of grave concern. In 1926 it had amounted to 397 million paper pesos, while at the end of last year, according to the Banco de la Nación, it had risen to 698 million paper pesos, made up as follows: Unfunded bonds for public works, \$395 millions; deficit in 1929, \$111 millions; deficit in 1930, \$130 millions; State Railways deficit, \$25 millions; and Education, Posts, etc., deficit \$37 millions.

On its accession, the Provisional Government immediately undertook an investigation into the national finances. The text has recently been published of a report made to the Minister of the Interior by Señor Alejandro Bunge, a well-known economist, who is now Secretary of Finance in the Province of Santa Fé. Some striking figures are given, indicating that the public debt of Argentina has been increasing at a faster rate than the public wealth. It is stated that in the fourteen years between 1902 and 1916 the population increased by 65 per cent., the national wealth by 190 per cent., and Government expenditure and debts (Federal, Provincial and Municipal) by 140 per cent. and 110 per cent. respectively. In the fourteen years between 1916 and 1930 it was found that the population had increased by 40 per cent., national wealth by 50 per cent., and Government expenditure and debts by 216 per cent. and 87 per cent. respectively. These figures, it will be admitted, suggest extravagant administration and excessive borrowing during the last fourteen years. At the same time, the character of the

public debt has changed. In 1916 practically the whole of the public debt (Federal, Provincial and Municipal) of \$2,300 millions was accounted for by reproductive works undertaken on a large scale between 1909 and 1915. "In 1930," to quote from Señor Bunge's report, "we have a total debt of \$4,300 million paper pesos. Only one-third of the increase of \$2,000 million paper pesos is explained by public works and two-thirds by deficits created by squandering under the guise of salaries paid to politically protected employees. The situation is made still worse by the fact that a large part of this debt is floating and payable on demand." Details of the increases in the Federal Government debt since 1916 are shown in the following table:—

	(Paper pesos.) Consolidated Debt.		
	External.	Internal.	Floating Debt.
1916	684,722,500	557,977,200	515,787,000
1917	669,601,800	683,603,700	627,489,000
1918	642,791,600	671,356,100	711,255,000
1919	625,062,900	660,183,100	734,589,000
1920	596,754,700	660,679,200	682,274,000
1921	571,018,300	706,708,100	745,261,000
1922	535,734,700	759,151,300	892,824,000
1923	539,186,400	776,567,300	874,645,000
1924	687,354,400	836,227,500	746,812,100
1925	833,208,242	910,763,680	479,259,091
1926	888,423,800	957,421,000	695,489,000
1927	1,103,820,100	1,051,698,000	448,440,000
1928	1,112,266,000	1,156,407,000	452,099,000
1929	1,118,600,000	1,152,000,000	437,700,000

Fortunately for Argentina, the Provisional Government seems determined to grapple with the unsatisfactory financial position. Its immediate tasks are to balance the Federal Budget and to fund the floating debt. Neither is easy. About 48 per cent. of the revenue in the Federal Budget is ordinarily derived from import duties, which have lately shown a reduced yield, while 21 per cent. is derived from revenue duties and miscellaneous taxes, 21 per cent. from Government enterprises, and only 10 per cent. from direct taxation. About 30 per cent. of the total Budget is absorbed by the service of the national debt. Further, the funding of the floating debt at a time of crisis in the national finances presents considerable difficulties. Nevertheless, it is believed that the administration under General Uriburu will not shirk this essential task.

We may next consider the exchange and the overseas trade position of Argentina—a matter of the utmost importance to the investor in Argentine Government bonds, since prospects of a further market recovery hinge upon the appreciation of the peso. It may be asked why the peso was ever allowed to fall below parity, seeing that the Republic is blessed with ample gold reserves. The value of the metal held in the Conversion Office on December 31st last was as much as \$426,773,917, while \$30 millions of gold was held abroad. The total notes in circulation at the end of last year were \$1,260,686,223 paper, as against \$1,246,753,201 paper on December 31, 1929. In December, 1929, the administration of ex-President Irigoyen suspended the exchange of gold against presentation of paper at the Conversion Office and started the peso on its downward course. There is no doubt that the Government acted precipitately, but an exchange problem had even then begun to present itself, as wheat and wool were being shipped from the Argentine unsold owing to the slump in the European markets. It must be remembered that whenever the trade in merchandise is adverse to Argentina, the exchange problem becomes serious, on account of the large amount of foreign capital invested in the country on which interest and dividends have to be remitted overseas. Estimates of Argentine

payments on international account have been made from time to time by Señor Carlos A. Tornquist, the well-known Argentine banker. We have compiled the following table from his figures for the years ended September, 1928 and 1929:—

ARGENTINE INTERNATIONAL BALANCE OF PAYMENTS.
(Million £.)

DEBITS.			CREDITS.		
	1927-1928.	1928-1929.		1927-1928.	1928-1929.
	£	£		£	£
Interest on external debt	12.7	13.5	Favourable trade balance	40.2	23.6
Railway dividends	15.6	15.9	Unfavourable invisible balance	8.2	25.6
Other dividends	7.5	9.7			
Foreign residents' remittances, travellers, etc.	12.6	10.1			
	£48.4	£49.2		£48.4	£49.2

In 1928-29 there was an adverse balance of £25.6 millions, which was met as to £24.7 millions by the export of gold. Argentina's international balance has, naturally, been adversely affected by the slump in export trade this year. For the eleven months ended November 30, 1930, the total value of exports declined by 40.5 per cent., and, although a heavy drop in imports is to be expected as a result of the depreciated exchange, an unfavourable trade balance for the year is inevitable. Indeed, the official trade figures suggest that Argentina has had an unfavourable "visible" balance in six of the last eleven years, as the next table shows:—

ARGENTINE OVERSEAS TRADE.
(excluding bullion)

	Imports.	Exports.	Balance.
	£	£	£
1920	185,509,464	207,159,795	+ 21,650,331
1921	148,717,000	133,160,599	- 15,556,401
1922	136,834,419	134,128,629	- 2,705,790
1923	172,307,558	153,047,869	- 19,259,689
1924	164,426,585	200,673,528	+ 36,246,943
1925	173,977,711	172,208,309	- 1,769,402
1926	163,193,749	157,178,278	- 6,015,471
1927	170,007,936	200,262,896	+ 30,254,960
1928	179,504,841	204,298,809	+ 24,793,968
1929	171,031,220	189,234,904	+ 18,203,684
1930 (6 months)	76,782,000	69,643,000	- 7,139,000

What steps has the Provisional Government taken to meet the exchange crisis? On its assumption of power last September, it authorised the Banco de la Nación to pay the service on the external debt by means of gold shipments, and to employ \$30,000,000 gold held abroad for the purpose of providing cover against sales of drafts. About \$12 millions gold was exported by the end of last year. The exchange did not, however, immediately respond. As against a par value of 47.577d., the Argentine peso had fallen last year as low as 34½d. In January this year it fell further to 33½d. Since the Provisional Government announced last month that it intended to restore the exchange gradually to parity, the peso has improved to 39½d.

A precipitate return to parity is not, apparently, intended, and would not be desirable. The recent recovery in grain prices may account for the recent improvement in the peso. Argentina is favoured this season with a good wheat and an exceptionally fine maize harvest and a record crop of linseed. The wheat crop is likely to leave a surplus of approximately 5,000,000 tons for export, but a rapid recovery in wheat prices, unfortunately, is out of the question, in view of the world wheat surplus and the competition from Australia and Canada.

All things considered, the investor in Argentine Government bonds would be well advised not to expect a precipitate return to parity in the exchange. At the same time, he may rest assured that the gold reserves are ample to tide the country over this difficult period. The present exchange difficulties would scarcely have occurred in so disastrous a fashion if the country had not been bound by an archaic monetary system, established some forty years ago. We understand that it is the intention of the present administration to modernise the entire credit system of the country, as soon as this is practicable, and to create a separate Central Bank of issue

independent of the Banco de la Nación, and operating on a free gold basis. The export trade of Chile and Colombia has been as seriously affected as that of Argentina, but the exchanges of these two countries have been maintained approximately at parity by the free use of gold reserves. There is no doubt that Argentine exchange would also have been maintained at parity if the Government had been able or prepared to work the gold standard according to its recognised canons. The investor must, therefore, wait patiently for the financial and monetary reforms of the Provisional Government to fructify. This should not cause him any distress, since the service of the external debt of the Republic will be promptly effected and default, as far as the present Government is concerned, is unthinkable.

THE POSITION OF COURTAULDS.

Mr SAMUEL COURTAULD was well advised to take his shareholders fully and frankly into his confidence at the meeting on March 5th last. Courtaulds' balance sheets have never been over-informative, and the company's earnings have recently fluctuated in remarkable fashion. If the 1925 earnings be represented by 100, the succeeding figures are:—

NET EARNINGS (1925 = 100).

	1926	1927	1928	1929	1930
	75	94½	101	73½	44½

Further, disquietude had been aroused by the statement in the 1930 report that, "after allowing for the usual depreciations, no profit was shown in this country," and by the fact that, in the last two years, the company had deemed it prudent to write no less than £2,577,195 off its Continental investments.

Mr Courtauld, at the outset of his review, admitted that the artificial silk industry had encountered the worst depression in its history, partly owing to causes common to all textile trades, and partly to weaknesses in its own structure. Since December, 1928, raw cotton and wool have fallen in price by about 50 per cent., cotton and worsted yarns by about 33 per cent., and real silk by about 50 per cent. The drop in real silk prices has a special cause—the collapse of silver. Its reactions on the rayon industry have been particularly distressing, since real silk is the most direct competitor of rayon, particularly in the United States of America, the world's greatest silk-consuming country.

The rayon industry, however, has contributed to its own undoing, as a result of the eagerness with which, between 1925 and 1929, investors subscribed to capital issues by new bubble companies. Out of twenty-five such companies, Mr Courtauld estimates, thirteen have already closed down. In the case of seventeen concerns for which complete Stock Exchange records are available, a public subscription of £20,733,685 of cash was represented by a market capitalisation of only £3,671,711 at the end of last year. Thus the public has lost 82 per cent. of its money. Such vicious financing, incidentally, has repeatedly been condemned in the *Economist*. Fourteen months ago we showed that investors in nine new artificial silk companies had even then lost 77 per cent. of their capital (see *The Economist*, January 25, 1930, page 177).

The process of eliminating weak concerns recently has not been confined to Great Britain. Some five or six out of fifteen companies have ceased production in America, eight out of twenty-two in France, and five out of seventeen in Germany.

Undoubtedly, the world's artificial silk plant was tending, up to last year, to run far in advance of current demand. The following table shows that actual production nearly doubled between 1926 and 1929:—

WORLD'S RAYON PRODUCTION.

	(Million lbs.)				
Country.	1926.	1927.	1928.	1929.	1930.
Great Britain.....	26	40	54	57	49
U.S.A.....	63	75	98	125	115
World (including other countries)	225	280	350	430	410

The drop of 5 per cent. in world production last year and the fall in consumption (which is estimated at 12½ per cent.) might, in ordinary circumstances, have been regarded as an inevitable phase in a temporary world depression. Its aspect, however, becomes far more serious when the figures are related to a *productive capacity*, in the industry, of at least 600 million lbs. As 7½ to 10 per cent. of last year's production went into stock, it is true to say that the industry had sufficient plant to produce 50 per cent. more rayon last year than the world was willing to take. To-day, Courtaulds claim that, if the company's English plants were running at full capacity, they could meet the total present consumption of this country. Last October the directors of a competitor, British Celanese, declared in their report that, if a relatively small capital expenditure were incurred, their company would have a "potential production capacity corresponding . . . to the highest total consumption of artificial silk in this country." There is thus justification for Mr Courtauld's caution in declaring, in effect, that, while the elimination of bubble companies will ease the rayon trade's difficulties, it cannot in itself solve them.

Courtaulds' shareholders, therefore, have good reason to be thankful that the board, in the past, has consistently maintained a financial policy which only short-sighted proprietors can have regarded as ultra-conservative. That policy is now seen to be an indispensable corollary of the "complete elasticity in the adoption of new methods" which seems likely to stand the company in good stead in the present difficult period. Mr Courtauld's definition of obsolescence—that a machine becomes obsolete at the very moment when somebody, somewhere, discovers a better one—is the only one appropriate to a new industry like rayon.

The company's past policy, again, is the best justification for the chairman's confidence in the future, however lean the months lying immediately ahead. The leaders of the industry throughout the world are meeting depression by endeavouring to afford consumers an increasing inducement to buy their products. Manufacturers, having overcome their initial difficulties in handling rayon, are now concentrating on the more important question of devising the most suitable fabric structures in which to employ the new textile.

Courtaulds itself has regained, in the last eight months, the percentage share of British production which it lost during the preceding 2½ years. Its European investments and affiliations have not so far given satisfactory financial results. Their purchase—which reflected the view that the largest units in the industry should be organised on an international and not on a parochial basis—may eventually justify itself on grounds only partly financial. The chairman's reticence, however, on this point was the most regrettable omission from his speech.

The main conclusion emerging from the survey is that, while it cannot necessarily be assumed that Courtaulds' earnings in 1931 will maintain the level of 1930, the company's position as a leader in the industry appears reasonably assured. Recovery, however, whenever it begins, must needs be a gradual process.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 17.	March 19.

LAST week's appearance of activity was not maintained, dealers being unwilling to take more stock on their books in the absence of sustained public demand. Gilt-edged, however, were sustained by the strength of sterling. Wall Street gave no bullish lead, a lack of interest was shown by Paris, and price movements generally were irregular.

The gilt-edged market was far from active, and prices moved within narrow limits. Improvement was shown, however, by 5 per cent. Conversion Loan and Local Loans, while Funding Loan showed relatively sharp movements

on foreign interest. India loans were weaker following the announcement of Mr Baldwin's attitude towards the Round Table Conference. Following a speech by the Australian High Commissioner at Birmingham and the Nationalist decision against the Theodore inflation measures, Australians strengthened throughout the week under the lead of New South Wales stocks. New Zealand bonds showed fractional improvements on the Government's proposed "earthquake" measures. Home Corporation stocks were quiet.

Among foreign bonds, Peruvians were firm towards the end of the week on reports of an amicable agreement between the forces in the civil war. Chileans were in fair demand, but Brazilians eased despite the relatively satisfactory February coffee figures. Among Argentines, attention was given to Buenos Aires provincial issues. European stocks attracted less attention, with the significant exception of German "Young" bonds.

Home Rails quickly lost the rise induced by first impressions of the wages award. On Wednesday they were further depressed by unsatisfactory traffic returns. In the Argentine rail market disappointment was expressed at the reduced B.A. Great Southern interim dividend. Unsatisfactory traffics, and the passing of the B.A. Great Western dividend, accentuated the "slide" of prices. Canadian Pacific eased slightly on the publication of the earnings figures (dealt with on page 576).

There were few signs of willingness to open up fresh commitments in the industrial market, which was dull and irregular throughout the week. After a firm opening Transatlantic favourites eased owing to lack of interest in Wall Street. Gramophones lost ground, and Brazilian Traction suffered further recession. Cables and Wireless lost the previous week's gains. Engineering shares were easier, Vickers reflecting dividend fears. Electrical shares were uncertain, a rise in Calcutta Electric and London Electric being halted by profit-taking. Textiles were undecided, but declined on the loss disclosed in the annual report of Wm. Hollins and Company. Breweries tended to decline, apart from Taylor Walker, which rose on the report. Harrods were the best feature in the stores group. Unilever recovered after a dull opening. Imperial Chemical were lower, though the 1930 figures (which are dealt with on page 574) were no worse than the market expected. Both bank and insurance shares attracted less attention than last week.

The American situation continued to cause disquietude in the oil market. Shells and Anglo-Dutch came on offer. The improvement in the price of rubber was shortlived, and the shares lost some of last week's speculative rise. Tea shares remained easy, though Dimbula Valley rose on the report.

The Mining market was relatively steady, chiefly on inquiries from Johannesburg and to a smaller extent from Paris. Rand mines were better and "Generals" held their ground. Slight profit-taking occurred in Modders and East Rand. Tin shares were dull, though a rather larger volume of inquiries was reported for Eastern shares. Lake View and Star came on offer.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Market movements have been irregular, prices showing some tendency to establish higher levels, but being held back by unfavourable developments. Among the latter was the reduction in the New York Central Railroad dividend from \$8 to \$6 per share, coupled with the management's statement that they were unable to make sufficient economies to offset the lower traffic—which was regarded as an unfavourable omen for the present year. The volume of new issues has been exceptionally heavy. In addition to the Treasury's new financing and the sale of City of New York bonds, as much as \$191 millions of new money was asked for in a single day by three large borrowers—the Port of New York, the Pennsylvania Railroad and the New York Central. The recovery initiated on Monday under the lead of motors and utilities—a number of which reached new high ground for the year—did not last long, losses of 1 to 7 points being general in mid-week. Stock was not urgently pressed for sale, however, and the principal issues were well taken on the decline. The strength of the bond market aroused favourable comment. No change occurred in general business. Car loadings in the last week of February were 23 per cent. below the corresponding week of 1930. Steel operations are maintained at 54 per cent. of capacity. Automobile sales continue to show moderate improvement, the world output of Ford in February being the highest for the last six months. A scheme has been provisionally announced for reorganisation of the Bank of United States, under which depositors would eventually be repaid by a special corporation formed to take over the bank's liabilities and assets, and to control its liquidation.

* 2-hour session.

BERLIN.

In the first two weeks of February there was a general upward movement on the Berlin Bourse, which was resumed in the last week of February and the first week of March, after a temporary setback. The advance was mainly a reaction from the previous excessive declines. In spite of general depression, the business profits of the majority of German industrial companies have not declined to the extent which the fall in their shares suggested. The quiet progress of the work of the Reichstag has made a favourable impression both at home and abroad and foreign purchases of German shares and investment buying by the German public have been resumed, forcing the bears to cover. Banks and syndicates formed for the support of the market have withdrawn large parcels of shares from the market during the past year and have not yet sold their holdings. The latest rises are partly speculative in origin, due to a more optimistic view of the economic situation. After the successful arrangement of the advance to the Treasury on the security of Reichsbahn shares, the offer of the Belgian company, Sofina, to the Municipality of Berlin seemed to indicate that foreign capital was taking an interest in Germany, and this impression was fortified by the founding of the International Mortgage Bank in Basle. It is noticeable that two important sections of the market—banks, and iron and steel shares—have profited very little from the rise. On the other hand, artificial silk, electricity and some engineering shares have risen sharply. The shares of the Aker group have gained more than 50 per cent.

INVESTMENT NOTES.

Industrial Profits in 1930—A Preliminary Sample.—The current level of industrial profits is a matter of the closest interest not only to the investor but also to the Treasury. The latter, in its Budget calculations, must take account of the probable yield, in 1931-32, of income tax based on earnings which have accrued, for the most part, during 1930. We have therefore made a preliminary computation, in advance of our normal quarterly survey, of the profits earned by a large number of British companies whose reports cover the calendar year to December 31st last. The following table is designed to show the trend of earnings in the "general run of industry." In order to prevent the results being over-weighted by the figures of a few large companies, all concerns with profits of £1,000,000 or over have been omitted :—

"GENERAL RUN OF INDUSTRY."

Group.	No. of Cos.	Net Profit, 1929. £	Net Profit, 1930. £	Inc. or Dec. %
Breweries	12	1,003,202	976,806	-2.5
Iron, coal and steel	12	716,479	524,524	-26.7
Financial, land, &c.	9	527,248	473,946	-10.0
Rubber	4	51,615	1,366	-97.3
Shipping	7	298,221	289,506	-3.0
Electric light, &c.	17	1,863,450	1,923,285	+3.2
Shops and stores	8	1,057,994	1,015,705	-4.0
Trusts	28	1,642,884	1,692,800	+3.0
Waterworks	6	419,521	436,017	+3.8
Gas	34	1,932,492	2,104,481	+8.9
Textiles	16	1,761,942	568,338	-67.7
Miscellaneous	101	6,452,323	6,596,413	+2.2
Total	254	17,727,371	16,603,187	-6.3

The average decline of 6.3 per cent. may be related to the decline of 7.6 per cent. in British industrial activity last year, as estimated by the Board of Trade. The table shows, however, that in the important "Miscellaneous" group (which included 40 per cent. of the companies and the same proportion of the total profits) net earnings actually increased by 2.2 per cent. Among the other groups, the best showing was made by the public utility concerns and the worst by the great export industries, particularly steel and textiles. If the figures for the two last-named groups be omitted, the aggregate profits for the remaining 226 companies actually show a rise of 1.7 per cent. last year. The elasticity of British earnings, as a whole, is distinctly gratifying, though it must be remembered that trading conditions were much more favourable in the first than in the second half of the year. The next table shows the results obtained by five large concerns :—

Name of Company.	Net Profit, 1929. £	Net Profit, 1930. £	Inc. or Dec. %
County of London Electric...	954,493	1,033,855	+8.4
Courtaulds	3,743,827	2,274,409	-39.2
Ford Motor	908,994*	978,603	+7.6
Gas Light and Coke	1,378,330	1,322,057	-4.1
Imperial Chemical	5,780,208	4,473,392	-22.6
Total	12,765,852	10,082,316	-21.0

* Excluding abnormal receipts of £104,512.

The aggregate decline in profits is much more considerable than that shown in the earlier table, but is attributable almost entirely to the figures of two companies, Courtaulds and Imperial Chemical. Outside the range of "industry" proper, our computations show that the earnings of 23 banking companies have fallen from £16,054,939 in 1929 to £14,243,415 in 1930—a decline of 11.3 per cent. The figures compare favourably with those given by an analysis of the net earnings of 744 American corporations, which was made by Moody's Investor's Service, and discussed in our last week's issue (page 509). The decline in American earnings was shown to be 23.2 per cent. last year, while an analysis of the figures of 709 corporations made by the Standard Statistics Company showed a decline of as much as 35 per cent.

Railway Wages and Earnings.—A mild but very short-lived recovery in railway stocks, in which the public participated to a very small extent, followed the publication of the National Wages Board's findings, which are summarised and criticised in a leading article on page 552. The award, so far as it goes, is favourable to the railway stockholder, but its financial effects are difficult to estimate. Apart from the complexity of the various reductions in wage and overtime rates, some months must elapse before any reductions in personnel (limited mainly to passenger and goods stations' staffs) can take effect under the "spread over" of the working day. The railway shopmen do not come within the scope of the Board's findings. From published railway balance sheets, however, it is possible to forecast the effect of the initial 2½ per cent. cut in earnings :—

(000's omitted.)

	London and Midland	London and North Eastern	Great Western	Southern
£	£	£	£	£

Increase in 1930 Wage Bill, due abolition previous 2½% "Cut" (Middle May to end Dec., 1930)...

Proportionate saving on 2½% reduction :—
1931 (March 26th to December 31st).....
Full year, 1932.....

Equal to % on ordinary stock :—
1931
Full year, 1932.....

* Preferred ordinary. † Deferred ordinary.

On this showing the initial 2½ per cent. will reduce the aggregate wages bill on the four group lines by approximately £2 millions in 1931 and £2½ millions in a full year—presuming no modification is made in the terms after March, 1932. The 2½ per cent. "super-cut" on earnings in excess of 40s., with other economies under

the award, may conceivably raise the total "savings" to, say, £34.43½ millions on wages alone and eventually to £44.45 millions, as an outside figure, after all economies in personnel have been made—including possible adjustments in the wages of shopmen. If railway traffic remain at or near their present level, these economies will not bring the railways immediately within sight of their standard revenue under the Act of 1921. They will, however, undoubtedly tend to strengthen the position of those L.M.S. and L.N.E.R. preference stocks whose dividends last year were on the "border line" of earnings. In view, however, of the extent of the further fall in gross receipts since the beginning of this year, totalling £3,395,000, on the four group lines, the prospects for ordinary stockholders will continue to be governed mainly by the course of trade during the next few months.

Ford Motor.—Most commentators appear to have missed the significance of the Ford Motor report for 1930. The directors as usual were economical of words, but it is possible to read much between the lines of the terse statements that "results do not include any dividends from shares held in affiliated companies," that the "investments in affiliated companies in which public issues have taken place have been disposed of to a holding company," and that the reserve account has been increased from £143,412 to £899,621 by the addition of £756,209 "surplus on sale of investments to the holding company." Taken in conjunction, these statements seem to imply that it is not the policy of the Ford Motor Company to take the profits of its European affiliated companies into its own accounts by way of dividends. Such a course of accounting would no doubt render it liable to double taxation. Presumably that is why it formed the holding company registered in Luxemburg, to which it has sold its holdings in the affiliated companies at a profit of £756,209, representing approximately—if we may be excused an intelligent guess—its share of the 1929 profits declared by those companies. The following table shows that these profits amounted last year to £864,946:—

	% of Capital held by English Co.	Proportion of 1929 Profits accruing to English Co.	Sterling equivalent.
Ford Belgium	70	Fr. 34,455,924	£197,795
Ford Denmark	60	Kr. 3,424,277	£188,978
Ford Holland	60	Fl. 1,719,175	£143,157
Ford France	60	Fr. 20,721,679	£167,367
Ford Germany	60	Rm. 2,097,315	£102,860
Ford Italy	60	La. 2,915,507	£64,789
			£864,946

In other words, the policy of Ford Motor seems to be to pay cash dividends to its shareholders only out of the profits of its English and Irish businesses, and to capitalise the profits of its European affiliated companies, which in course of time will probably be distributed to its shareholders by way of share bonuses not subject to British taxation. In this connection it is interesting to see that the shareholders are to be asked at the meeting to increase the capital from £7,000,000 to £9,000,000. It is impossible to calculate the actual earnings of the Ford Motor Company until the accounts of all its affiliated companies are published. Of the latter only the accounts of Danish and Belgian companies have yet been advertised.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

Address.....

but it is interesting to observe that the first reported increase of nearly 11 per cent. in net profits for 1930—the figures being Kr. 6,066,455 as against Kr. 5,467,000 in 1929, while the second showed a decline of 12.8 per cent.—the figures being Frs. 42,890,899, against Frs. 49,222,749. Taking the accounts of the English company as they stand, the net profits, derived entirely from the English and the Irish businesses, showed an increase of 7.6 per cent. at £978,603, the earnings amounting to 14.0 per cent. gross on the ordinary share capital of £7,000,000 to cover dividends of 10 per cent. gross. A comparison of the results of the past two years is shown in the next table:—

	Total Profits after Depreciation.*	Directors' Fees & Sundry Charges.	Earnings subject to Tax.	% Earned.	% Paid.	Taxation.	Carried forward.
1929	918,229	9,235	908,994	12.8	10	195,000	258,507
1930	996,956	18,352	978,603	14.0	10	186,250	506,360

* Depreciation was not shown separately in 1929 accounts, but in 1930 depreciation was £43,556 and obsolescence £13,775.

In 1929, allowing for the company's share of the net profits of the affiliated companies, the total earnings of the English Ford amounted to 25.16 per cent. on the issued capital of £7,000,000. The 1930 results may be no worse, but not much better, and the directors may fairly claim that "in view of the depressed state of industry and agriculture throughout the world, the results achieved are satisfactory." The balance sheet of the company reveals the good progress which has been made with the erection of the new works at Dagenham. Cash has been reduced from £2,204,227 to £894,001, while freehold and leasehold lands and factories have increased from £571,540 to £2,031,856. Investments in affiliated companies amount to £3,106,361, against £3,054,718, while inter-company loans have risen from £1,114,391 to £2,467,273. Goodwill has been entirely written off, and the "break-up" value of the £1 ordinary shares comes to 23s. 6d. The market values them at 3½, as against a high level of 4½ last year.

Imperial Chemical Industries.—In April last year the late chairman of Imperial Chemical Industries somewhat rashly prophesied that 1930 should give results "as favourable if not somewhat better than those of 1929." The trade depression did not, apparently, begin to exert its full force upon industrial profits before May last. The preliminary figures for 1930 now reveal that the company's gross profits declined by 20.2 per cent. from £6,502,341 to £5,129,757, and that after allocating £500,000, against £575,479, to obsolescence reserve and providing £156,365, against £146,654, for income tax, the net profits declined from £5,780,208 to £4,473,392. No allocation is made this year to general reserve and the dividends on the ordinary shares are reduced from 8 per cent. to 6 per cent. Nothing is payable on the deferred shares, which do not rank for dividend until the ordinary shares have received 7 per cent. A comparison of the last three years' profits and distribution are shown in the next table:—

	1928.	1929.	1930
Net profits.....	5,212,703	5,780,205	4,473,392
Reserve	1,000,000	529,000	...
Preference dividend.....	1,194,530	1,407,755	1,554,554
Ordinary dividend	2,812,691	3,383,963	2,615,281
% earned	10.5	9.5	6.7
% paid	8	8	6
Deferred dividend	178,509	217,354	...
Carried forward	109,634	350,923	653,483

On the whole the results disclosed are no worse than was expected. As a result of the industrial depression the company has met with difficult trading conditions in its "heavy" chemicals (caustic soda, soda ash, acids, chlorine, etc.), and the results obtained from the operation of its very large synthetic nitrogen plant have been disappointing. Shareholders will be anxious to learn the extent of the depreciation the company has suffered in certain of its American and Canadian investments and the amount of reserve used to meet this depreciation.

Post-War Investment Trust Company Earnings.—Some confusion has been caused by certain figures in a table given on page 504 of our last issue in the course of an article on "Pre-War Investment Trust Companies." In an earlier article dealing with investment trusts it was pointed out that "it must . . . be remembered that (investment trusts) show their profits after tax, and consequently in some cases the amount earned per cent. is shown as less than the dividend declared; nevertheless, after allocating certain sums to reserves, there is an increase in the sum carried forward, the explanation being that taxation payable on dividends is taken into account before reaching the net profit, though the dividend is shown gross." The same remark applied to the columns showing "Per Cent. Earned" and "Dividend Declared" in our table last week. To obviate misunderstanding, however, we show below the corresponding figures, calculated before deduction of tax in all cases, and the earnings yield of the various shares, at present prices also before tax. Revisions of certain other figures are also indicated:

Company and Date of Balance Sheet.	Year.	Avail-able for Ordinary.	Ordinary. Earned.	% Paid.	Yield on Earnings at pre-sent Price.
English and New York (1) (Dec. 31)	1928	£ 8,042	3.35	2½	...
	1929	15,457	6.44	5	...
	1930	19,916	8.57	5	10.4
Great Northern (Nov. 30)	1928	29,160	9.11	8	...
	1929	37,874	9.15	9	...
	1930	48,978	10.32	9	5.1
London Canadian (Dec. 31)	1929*	\$100,627	10.06	Nil	...
	1930	\$97,133	9.71	Nil	5.7
London Stockholders (2) (Dec. 31)	1929†	14,097	6.53	5½	...
	1930	12,503	5.97	5	6.1
New York and General§ (a) (Jan. 3)	1929	15,200	17.96	15	...
	1930	25,769	11.81†	10½	...
	1931	19,549	10.51	10	7.8

(a) Reorganisation of company formed 1896; general investment trust business now carried on.

* Period May 8, 1928, to Dec. 31, 1929.

† Period Oct. 24, 1928, to Dec. 31, 1929.

** Shown before payment of tax in all cases.

‡ On capital increased by bonus issue of 50 per cent.

§ Valuation of investments: 1930, small deficiency covered by reserve fund; 1931, depreciation, 16.3 per cent.

(1) Distribution of investments, 1930: In U.S.A., 22.2 per cent.; in Great Britain, 28.0 per cent.

(2) Distribution of investments, 1930: In U.S.A., 16.0 per cent.; in Great Britain, 27.1 per cent.

It will be seen that, e.g., the London Stockholders Trust earned 6.53 per cent. in 1929, against 5½ per cent. paid, and 5.97 per cent. in 1930, against 5 per cent. paid—subject to tax in every case. The statement, therefore, that last year "the New York and General, London Stockholders, and Great Northern did not actually earn the amounts they distributed" is not correct.

Halifax Building Society.—The largest of all British building societies—the Halifax—continued to show rapid expansion last year. The progress made since the amalgamation of the Halifax Permanent and the Halifax Equitable Societies may be gathered from the following figures:—

	(Years ended Jan. 31st.)	1928.	1930.	1931.
No. of open accounts		329,224	397,681	438,628
Total assets.....		46,981,482	59,394,342	70,047,399
Surplus profits for year*		359,457	455,339	423,910
Advanced on mortgages during year		10,552,982	12,455,559	16,893,072
Total outstanding on mortgages.....		38,763,191	44,783,385	52,902,783
Amount owing on average mortgage.....		376†	377	391
Reserve fund		1,461,200	2,017,598	2,292,588

* After payment of all expenses and income tax and providing interest to depositors and shareholders.

† Halifax Permanent Society only.

The report for the last twelve months points out that the Society's assets amount to more than one-sixth of the total assets of the whole of the building society movement. New

mortgage borrowers last year totalled 29,543, against 24,064 in the previous year. Some 79 per cent. of the company's advances are in respect of mortgages where the debt does not exceed £500.

Two Electricity Company Reports.—The results of the County of London Electric and the Shropshire, Worcestershire and Staffordshire Electric for the year to December 31st last follow the general trend of profits in the industry. The London company announces receipts from the sale of current amounting to £1,880,558, compared with £1,678,523 in 1929. Expenses are higher at £788,151, against £693,105, and the allocation to depreciation absorbs £381,082, or nearly £100,000 more than last year. Net profit consequently shows a small decline:

	1928.	1929.	1930.
Net profit	£ 665,951	£ 638,849	£ 633,068
Brought forward	204,988	364,210	445,037
Prof. dividend	196,396	199,291	202,687
No. of times covered	3.4	3.2	3.1
Ordinary capital:—			
Earned £	469,551	439,558	430,382
Paid £	310,333	358,731	427,426*
Earned %	16.4	14.1	12.7
Paid %	10	11	11
Carried forward	364,210	445,037	447,992

* Including £56,188 paid as interest on instalments of ordinary shares.

The accounts of the "Three Counties" company reveal an increase in net profit from £180,520 to £204,081, while there is also available £69,125 in premiums on the last

COMMERCIAL SERVICE.
The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

issue of preference and ordinary capital, and £23,815 in contributions in respect of new services and plant:—

	Year to December 31.		
	1928.	1929.	1930.
Net profit	142,993	180,520	204,081
Premiums and contributions	57,644	7,463	92,938
Brought forward	45,628	78,937	80,249
Prof. dividends	34,500	42,000	72,000
No. of times covered	4.1	4.3	2.8
"A" and "B" ordinary:—			
Earned £	108,493	138,520	132,081
Paid £ "A"	24,000	24,000	24,000
Paid £ "B"	37,500	56,625	65,812
Paid % "A"	8	8	8
Paid % "B"	7½	7½	7½
To reserve	50,000	60,000	134,816
Other allocations	21,328	4,047	2,945
Carried forward	78,937	80,249	77,695

The sum of £134,816 is placed to reserve account, compared with £60,000; while £2,945, against £4,047, is written off development expenditure. The carry forward of the reserve appropriation account is £77,695, compared with £80,249 brought in. The flat yield on the County of London ordinary shares is about £4 13s. 6d. per cent.

American Telephone and Telegraph.—This company, which owns the "Bell" system, is the "Great Power" in the system of telephonic communication in the United States. Despite the general depression, further progress was made last year. Some 122,500 installations of new telephones were effected, as compared with 821,400 in 1929. During the year the company offered its stockholders one new share for every six already held, the subscriptions providing the company with \$241.9 millions of new reserves, while a further \$16 millions will be received in 1931. The privilege of conversion was exercised during the year by the holders of \$206.2 millions of Ten Year Convertible Gold Debenture Bonds, resulting in cash premiums of \$164.8 millions. In January, 1930, the company sold \$150 millions of 5 per cent. Thirty-five Year Gold Debentures. In September the Teletype Company was purchased. These additions account in part for the reduction in the percentage earned on the company's capital, which dropped from 12.67 per cent. to 10.44 per cent. The net earnings were \$8,800,000 lower at \$267,874,000, and represented 5.8 per cent. on the cost of plant and other assets. An increase of \$29 millions was recorded in the depreciation charge, and of \$43 millions in operating expenses, including taxes. The report declares that it is impossible for the telephone service to obtain the full benefits of mass production and only by progressive technical development is it possible to balance the cost involved in the ever-increasing number of subscribers.

Automatic Telephone Results.—The accounts of the International Automatic Telephone Company for the year 1930 show that the company has practically maintained its profits:—

	Year to December 31.		
	1928.	1929.	1930.
Net profit	130,816	133,519	131,075
Brought forward	59,592	69,734	82,579
Prof. dividend	11,924	11,924	11,924
No. of times covered	10.9	11.1	10.9
Ordinary and deferred capital:			
Earned £	118,892	121,595	119,151
Paid £	98,750	98,750	98,750
Earned %	15.0	15.4	15.1
Paid %	12½	12½	12½
To reserve	10,000	10,000	10,000
Carried forward	69,734	82,579	92,980

The sum of £10,000 is again allocated to reserve fund, which now stands at £140,000, while the carry forward item is increased from £82,579 to £92,980. The results of the company's subsidiary, Automatic Telephone Manufacturing, are less consistent, net profit having declined

from £118,803 to £96,420. The ordinary dividend of 12½ per cent., absorbing £62,500, is, however, amply covered by earnings, and the allocation to reserve is increased by £500 to £20,000, while the carry forward, at £120,205, exceeds the previous amount by £1,920. The yield on the ordinary shares of the International Automatic is about £7 9s. per cent., and of the Automatic £6 17s. per cent., allowing for final dividend in each case.

Canadian Pacific Railway Company.—In view of the conditions prevailing during 1930, stockholders of the Canadian Pacific Railway should be well satisfied with the year's results. At one time a very considerable decline in net earnings was threatened, but as a result of various economies the fall of \$28,830,151 in gross revenue from railways and lake steamers was very largely offset by reductions of \$23,934,265 in expenditure. "Special revenue" showed a further rise of somewhat unexpectedly large dimensions, the total of \$20,042,923 including \$3,402,369 from investments, \$6,689,324 from other securities, \$7,031,939 from shipping lines, and \$2,919,291 from hotels, etc.:—

	1927.	1928.	1929.	1930.
Gross earnings:				
Railways and lake steamers ..	201,145,751	229,039,297	209,730,955	180,900,804
Working expenses ..	161,630,180	177,344,845	166,586,411	142,652,146
Net earnings	39,515,571	51,694,452	43,144,544	38,248,658
Special income	11,876,560	12,677,683	15,232,220	20,042,923
Total income	51,392,131	64,372,135	58,376,764	58,291,581
Fixed charges	15,378,867	15,308,698	16,149,003	19,159,865
Surplus	36,013,264	49,063,437	42,227,761	39,131,716
To pension fund ..	600,000	750,000	750,000	750,000
Available for dividends	35,413,264	48,313,437	41,477,761	38,381,716

After paying the preference dividend of \$5,005,623 and the usual ordinary distribution of 10 per cent., the sum of \$133,186 was added to the carry forward. On May 6th next a special meeting will be held in Montreal to authorise the issue of \$50,000,000 ordinary stock in such amounts as the directors may consider necessary. In October last, the ordinary stock was split into four shares of \$25 each. At the present price of \$44½ the yield on the ordinary is about 5½ per cent.

Rio Tinto.—The announcement that Rio Tinto shareholders are being asked to sanction a debenture issue of £2,000,000 to enable the company to subscribe for the 7 per cent. debentures of the Rhodesian Congo Border Concession emphasises the far-reaching changes which have taken place in the activities and the finances of the company since the end of 1924, when Sir Auckland Geddes joined the board. Up to that time efforts had been centred on the production of copper, sulphur and iron ore in Spain. Since then lead and zinc have been added to the list of products, and the company "has been drawn out to follow (its) ore into metallurgical and chemical processes"—a development involving the carrying out of operations in many countries. The subsidiary Pyrites Company now operates in Delaware a large extraction plant producing refined copper, lead, zinc and sintered iron ore. Substantial share interests have been acquired in the Davison Chemical Company, of Baltimore, and Silica Gel, and in the early part of 1929 large amounts were invested in the Northern Rhodesian copper field. These developments have naturally been accompanied by significant changes in the balance sheet. Between December 31, 1924, and December 31, 1929, the balance-sheet total has grown from £6,930,841 to £9,449,011, the expansion on the assets side being represented mainly by Subsidiary Companies and Other Investments at £3,334,948, while War Loan valued at £850,714 has disappeared on the liabilities side, the Six per Cent. Peseta Loan has gone, the capital has been increased by £250,000, an investment and general development fund of £2,598,259 has been established (principally out of the

premium realised on the 1929 capital issue at £50), and the reserve has been increased by £500,000. In 1927 the Pyrites Company raised £300,000 on the parent company's guarantee. As a result of the company's previous investments in the Rhodesian Congo Border Concessions, N'Changa and Bwana M'Kubwa, it has the right to subscribe for a considerable proportion of the pending Rhodesian Congo Border (Rhokana) issue of £4,500,000 7 per cent. debentures. The soundness of Rio Tinto's policy in pledging its own assets with a view to exercising this right may be debated. The operation can scarcely be based merely on the difference between the yield offered on the Rhodesian Congo issue and the probable yield on the Rio Tinto issue.

Company Meetings of the Week.—On later pages of this issue will be found reports of the following companies:—Hungarian General Creditbank, Anglo-International Bank, Britannic Assurance, Scottish Life Assurance, Law Land Company, River Plate Trust Loan and Agency, Rhodesian Congo Border Concession, and Metropolitan Electric Supply. At the annual meeting of the Rhodesian Congo Border Concession the chairman, referring to the closing of the Bwana mine, said that since last summer it had been recognised that the mine would be closed down, and consequently no value had been placed upon it in the valuation of the assets of the Bwana M'Kubwa Copper Mining Company upon which the offer resulting in the consolidation had been made. At the meeting of the County of London Electric Supply Company, Mr George Balfour informed shareholders that the output from the company's sub-stations had amounted to 183,240,000 units, of which 132,130,000 had been absorbed in the Western area and 51,110,000 in the London area. The total compared with 166,950,000 units for the previous year, and the increase was accounted for as to 1,410,000 units in the London area and 14,850,000 in the Western area.

CAPITAL ISSUES.

The stagnation of the new issue market in London affords a strong contrast with the activity of its counterpart in New York. The largest London operation this week was an offer of £900,000 of *Gold Coast Government* stock—a trustee issue. Though the yield of £4 11s. 10d. per cent. flat, and £4 12s. 10d. per cent. on redemption in 1970, did not err on the generous side, the lists were closed at 12.30 p.m. on the opening day. An offer for sale was made of 150,000 5½ cumulative £1 preference shares of the *General Consolidated Investment Trust*. This is a pre-war concern which re-organised itself in November, 1928, and changed its business to that of an investment trust. The company, of which Mr Robin E. D'Erlanger is chairman, earned £26,099 last year. Its valuation of investments, at December 31st last, showed the relatively moderate depreciation of 10.14 per cent.

Total to date, 1930	9,494,078	...	9,623,731

Gold Coast Government.—Issue of £1,170,000 4½ per cent. inscribed stock, 1960–1970, at £98 per cent., of which £270,000 was placed in the terms of the prospectus. The stock is a trustee security, and is raised to meet the cost of harbour works and other works in the colony. The loan is secured on the general revenues and assets of the Gold Coast Government, and will be repaid at par on April 15, 1970, but the Government will have the option of redemption at par on or after April 15, 1960, on six months' notice. Half yearly contributions will be made at the rate of one per cent. per annum to a sinking fund for redemption purposes.

General Consolidated Investment Trust.—Issue of 150,000 5½ per cent. cumulative preference shares of £1 each at par, to be converted later into preference stock. No underwriting contracts have been entered into. The company was incorporated in March, 1896, to carry on the business of contractors, and its name and objects were altered in November, 1928. Net profit for the year ended December 31, 1930, totalled £26,099, covering dividend on the preference capital, including the present issue, 2.36 times.

Great Yarmouth Gas Comp. Issue by tender of £14,590 5½ per cent. perpetual debenture stock, minimum price, par. Net revenue for the year 1930 totalled £8,524, covering interest on the loan capital, after redemption of £14,590 mortgage bonds, 3.9 times.

[Other Stock Exchange information, including the latest summary of balance sheets, weekly traffic returns, dividend announcements, profit and loss figures, and reports and notices, will be found on page 488, under the heading "Company News."]

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended February 11th: Venezuela, 34,648 barrels; Trinidad, 20,194 barrels; total, 54,842 barrels. Production for the week ended February 18th: Venezuela, 35,214 barrels; Trinidad, 20,392 barrels; total, 55,606 barrels. Production for the week ended February 25th: Venezuela, 35,706 barrels; Trinidad, 19,753 barrels; total, 55,459 barrels. Production for the week ended March 4th: Venezuela, 35,836 barrels; Trinidad, 19,760 barrels; total, 55,596 barrels. Production for February: Venezuela, 141,247 barrels; Trinidad, 80,802 barrels; total, 222,049 barrels. Deliveries for February: Venezuela, 140,826 barrels; Trinidad, 73,288 barrels; total, 214,114 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Gross production January: Dacia, 7,093 tons; Perimeter X., 6,022 tons.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of February amounted to 99,412 barrels, or approximately 14,202 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended January 24, 1931, was 215,000 barrels. Production for the week ended January 31, 1931, was 215,000 barrels. Production for the week ended February 7, 1931, was 217,000 barrels. Production for the week ended February 14, 1931, was 217,000 barrels. Production for the week ended February 21, 1931, was 213,000 barrels. Production for the week ended February 28, 1931, was 205,000 barrels.

COMPANY MEETINGS, &c.

BRITANNIC ASSURANCE COMPANY, LIMITED.

FURTHER SUBSTANTIAL PROGRESS DESPITE TRADE DEPRESSION.

The sixty-fifth annual ordinary general meeting of the shareholders of the Britannic Assurance Company, Ltd., was held on Friday, March 6th, at the chief offices, Broad Street Corner, Birmingham, Mr J. A. Jefferson, F.I.A. (chairman), presiding. The Assistant Secretary (Mr F. A. Powell, F.C.A.) read the notice convening the meeting and the auditors' report.

Mr Jefferson, in moving the adoption of the report, said:—
Ladies and Gentlemen,—The directors' report and accounts for the year 1930 have been in your hands for the customary period, and I presume, therefore, that I may, as on previous occasions, take them as having been read. (Agreed.)

TRIBUTE TO STAFF.

You will, I think, agree that the figures I have to present to you are very satisfactory from every point of view. The directors are well satisfied with the progress made, bearing in mind the very depressing year the country has passed through. This, I feel, is largely due to the loyal way the whole staff, inside and out, have responded to every call made on them with an enthusiasm that has overcome all difficulties. It has been customary for me to pay my tribute to the staff at the end of my remarks, but I think, and I am sure you will agree with me, that this year they are entitled to pride of place.

In the past, I have been accustomed to use that time-honoured expression "milestones" to denote, in millions, the progress of the company. This year I am proud to be able to report the passing of several milestones. You will see from our accounts that our total income has passed its fifth milestone; our premium income in the ordinary branch its first milestone, and the industrial branch its third milestone.

"WE EXIST TO PAY CLAIMS."

I believe that we are now more and more reaping the fruits of our sowing in past years the seeds of the gospel of thrift, and this, coupled with the not unjustified fears of the small investors as to the safety of their capital, has made the public pay more attention to the great benefits of life assurance. Despite our efforts in the past, however, I would here say that the people, generally speaking, are still under-insured, and, therefore, we have plenty of scope for our energies in the future. I would also claim that another reason for the popularity of life assurance amongst the working classes is the honourable and generous way in which companies such as ours meet their obligations. "We exist to pay claims" is a remark made years ago by my late father.

I have referred already to the increasing numbers of persons unemployed, and one would naturally think that such a state of affairs would have a very detrimental effect on our progress, but so far this has not manifested itself in our figures in the past, and I hope they will not be adversely affected in the future.

FREE POLICY PRIVILEGES.

The directors firmly believe that a factor contributing in a marked degree to the prosperity of the company has been the generous manner in which claims are met and the readiness with which the benefits offered to the insuring public have been increased from time to time whenever the opportunity for so doing has arisen, either as the result of further economies in management or more favourable conditions affecting mortality and finance. In pursuance of this policy a step was taken by the directors during the past year of an epoch-making character by the extension to the holders of industrial policies (other than small infantile whole-life policies) of free policy privileges of a character so generous as to have been regarded but a few years ago as impossible of attainment, and as to compare to-day most favourably with the corresponding conditions usually attaching to the policies for large sums issued by the ordinary life offices.

In short, the holders of such policies who for any reason discontinue the payment of premiums after paying for at least two years are automatically granted a free paid-up policy payable under the same conditions as the original for a reduced sum calculated on an equitable basis. When it is borne in mind that the period of grace allowed to the holders of such policies for the payment of premiums extend to twelve weeks, during which time the company is under liability for the full sum assured, and that at the end of this time, if the premiums remain unpaid, a free policy certificate is delivered to the policyholder, whatever the reason for non-payment of the premiums may have been. I think you will agree with me that

we have reached a stage in the development of industrial life assurance of which we may justly feel proud.

Such generous treatment has only been rendered possible by reason of the perfection of our organisation after years of effort, and by the exercise of the most rigid economy of management. Such a step, I claim, gives the lie to those enemies of our business who allege that we encourage lapses and profit thereby. The very reverse is the true position. We do everything possible to encourage policyholders to retain their policies in force, and thus secure the full provisions they afford, and our latest concession in regard to free policies, which applies to existing as well as to new policies, affords the best possible proof of my statement. The scheme only came into force in September last, and when I tell you that, during the whole year 1930, we issued no fewer than 36,000 free paid-up policies in the industrial branch, you will appreciate that the best interests of our policyholders are not being neglected.

Will you kindly allow me to draw your attention to the more salient features of our accounts?

ORDINARY BRANCH.

Taking the ordinary branch first, I have already pointed out to you that we have passed our first milestone in regard to our premium income, and this income consists practically entirely of annual premiums—the single premiums amounting to £6,339 only. Our new sums assured show a slight increase over the previous year, and this would have been greater had we not adopted a different method of recording the new business under certain option tables. In fact, if we ignore single premium policies we have created a record as regards new sums assured.

Our interest income in this branch shows a fall of approximately 1s. in the gross yield. I refer, in the first place, to the gross yield, because we have some control over this, but regarding the net yield—over which we have no control—there is a drop of 4s. 4d. per cent.; the actual yield being £4 17s. 8d. for 1930, as against £5 2s. for 1929.

Taking the other side of the accounts, the first point I would like to draw your attention to is the fact that, under the heading "claims" we paid out to persons living more than twice the amount paid out on account of death claims. This shows the great popularity of endowment assurances in the past, and the same feature exists to-day, the great bulk of our new business being written under these tables. Naturally, I am a strong advocate of life assurance in any form, but, frankly, I would be more pleased if we could write more new business under our whole-life tables, for preference our whole-life limited premium tables, as I believe these are the most suitable tables for the majority of our clients. They give a much more substantial death cover than do the endowment assurance tables, and also premiums are payable for a limited term only, which term can be so fixed as to coincide with the probable termination of the policyholder's active business life. In 1929 we brought out a whole-life table specially designed for the provision of death duties at rates of premiums strictly competitive and applicable to policies of £1,000 and upwards. We have been gratified by the success of this table, and, in response to numerous applications, we have during the past year brought out another whole-life table with attractive premiums to meet the needs of the young married man for policies of £500 and upwards. By such means we are trying to educate the public to choose the class of policy giving the best advantages afforded by life assurance.

In amount, our claims in this branch are actually less than the preceding year, the death claims being some £11,000 and our claims by maturity being approximately £42,000 less than in 1929. On the other hand, the item of surrenders shows an increase of some £36,000—the increase reflecting somewhat the disturbed times through which the country has been passing.

Our expense ratio in this branch shows a slight reduction, namely, 13.19, as against 13.35. The total funds in this branch show an increase of £569,000 odd, which creates a record as far as this branch is concerned.

INDUSTRIAL BRANCH.

As regards our industrial branch, our premium income shows an increase of over £132,000, and our funds, which have now passed the £10,000,000 mark, show an increase of over £682,000, and, I submit, both these results are very satisfactory.

Our gross interest yield in this branch is slightly up by a few pence, but our net yield is down by no less than 3s. 6d. per cent.

The reduction in our net yield caused by taxation is a serious matter, and I can only hope that the Chancellor of the Exchequer will be a little kinder to us in the future because he is the predominating factor for good or evil. The fact must not be overlooked that after all we are in the main trustees for the thrifty working class section of the community. In this connection I would point out that the increase in income tax has cost us during the year over £30,000.

On the other side of the accounts you will find that our claims by deaths and maturities are actually some £47,000 less than in 1929, but this is somewhat counterbalanced by an increase in cash surrender values of over £35,000.

You will notice that under the heading "Surrenders" we have paid away a very large sum of money during the year. This item has grown enormously, rising from £35,000 in 1927 to £56,000 in 1928, to £165,000 in 1929, and to no less than £200,000 last year.

Our expense ratio shows a slight increase of 13 per cent., and is more than accounted for by an increase in our new business expenses.

You will notice we have written the balance of £75,000 off the cost of acquiring the British Legal, and thus we have extinguished the item that has been standing in our balance sheet since 1927. To have written off a goodwill item of £320,000 in four years is an achievement of which we are naturally proud. At the same time I would like to say that we are perfectly satisfied with the result of the amalgamation. From the directors' report you will see that in regard to the British Legal ordinary branch with-profit policyholders we have been able to increase their reversionary bonus to 30s. per £100 sum assured as against the £1 guaranteed under the agreement, and at the same time we have been able to bring the valuation bases into line with the Britannic. In regard to the industrial branch, we have each year since the amalgamation considerably strengthened the valuation reserves, and in a few years' time we hope to adopt the same valuation bases as used for the Britannic business.

It may be that some of you are wondering why we have written this item of goodwill entirely out of the industrial branch, and in reply I would just like to point out that the British Legal was essentially an industrial assurance company; its ordinary branch business forming a very small portion of the company.

You will notice from the report that we have again transferred the sum of £75,000 to the staff pension fund. This fund now amounts to approximately £515,000, and the annual liability for pension is about £30,000, as against an income of some £23,500, so that you will see we still have to draw on the capital of the fund to meet current expenditure.

GENERAL BRANCH.

Our premium income in the general branch amounted to practically £87,000, being an increase of approximately £22,000 over the previous year.

I think you will agree with me that our youngest branch shows every sign of vitality, and already we are well on the way to the £100,000 mark.

In the development of this branch we are considerably helped by the organisation of the British General, and I should like to take this opportunity of thanking Mr Norman Walker and his staff for the efficient and sympathetic way in which they manage this branch of our business for us.

ANNUAL VALUATION.

In regard to our valuation results, you will see we are able to maintain the very excellent rate of £2 2s. per cent. as a reversionary bonus in the immediate profit class. Mr Laing will no doubt have something to say on this aspect of our business, but I would like to draw your attention to one feature, namely, the increasing cost of maintaining our present rate of bonuses. We first declared a £2 2s. bonus for the year ending December 31, 1926, and the cost at that time was £147,810. To-day you will see from the report that the cost of maintaining the same rate has increased to no less than £217,637, or an increase of £69,827.

As regards the industrial branch, we have allocated the sum of £70,000 to provide bonuses for certain classes of policies. Last year we allocated £50,000 to provide bonuses for a period of fifteen months to take us up to March 31, 1931. The £70,000 mentioned above is for the twelve months ending March 31, 1932, and the increased allocation has permitted us to improve considerably the rates of bonus.

Our work in connection with the National Amalgamated Approved Society has been carried on by the field staff in the usual satisfactory manner, and I am thankful to say that owing to there being no influenza epidemic during the year the number of benefit payments has been considerably reduced, although the magnitude of the work done by our staff will be realised when I tell you that no fewer than 571,841 payments were made during the year. The actual decrease was 70,000 in number, and this will bring vividly

home to you the terrible effect these influenza epidemics have on our national life.

In addition to some £335,000 paid out in sickness and disablement benefit, very large sums of money amounting to over £63,000 were spent in additional or treatment benefits. These latter benefits include amounts paid to hospitals for treatment given to our members, but by far the larger amount is spent on such treatments as dental, optical, surgical, convalescent homes, sanatorium, etc.

ASSETS.

If you will now kindly turn to the balance sheet I would just like quickly to draw your attention to one or two points. This year you will see from the report that we have transferred sums totalling £150,000 to our investment reserve fund—bringing this fund up to the substantial figure of £650,000.

A careful valuation as at December 31st of our Stock Exchange securities and other assets has disclosed a very satisfactory state of affairs when such values are compared with our balance-sheet figures, but with funds amounting to over nineteen millions I am sure you will all agree that an investment reserve fund of £650,000 is not by any means out of the way. Personally, I am of the opinion that however satisfactory may be the position disclosed on the valuation of our securities, it is highly desirable that our investment reserve fund should bear some reasonable ratio to our total funds. This may seem an ultra-cautious policy, but the essence of a life assurance contract is security, and security not only for this and the next year, but for twenty or thirty years ahead when the policy moneys fall to be paid.

As stated at the outset of my remarks, I feel sure you will be pleased at the results we have been able to place before you, and as regards the future I am confident that with a staff such as we have around us we can face whatever trials may come along.

Mr Murray Laing, in seconding the resolution, emphasised the supreme importance of the security behind a policy of life assurance. At a time when all around they were witnessing the disturbing effects on industry of falling prices unaccompanied by corresponding adjustments in production costs, and when capital values in so many directions were crumbling, the investor—small as well as large—could find solid stability in a good life office like the "Britannic."

The value of that feature of life assurance could not well be over-estimated and when, as in their case, it was accompanied by a profitable yield, it was easy to understand why the popularity of life assurance continued to grow, even in time of acute trade depression.

He pointed to the fact that in the ordinary branch the amount of surplus carried forward was rather more than one half of the cost of the bonus of 42s. declared for the past year. He explained that in the case of an office declaring bonuses annually, such a carry forward afforded solid grounds for confidence in the company's ability to maintain the bonus in future.

He said the total sums assured and bonuses in force in both life branches exceeded 70 million pounds, of which over 20 millions is in the ordinary branch.

The report and accounts were unanimously adopted. Mr A. M. Patrick was unanimously re-elected a director of the company and Messrs Flint and Thompson re-elected auditors to the company.

Votes of thanks to the directors, officials, and the inside and outside staffs of the company for their loyal and efficient services throughout the year, and to the Chairman for presiding, terminated the proceedings.

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank)

HEAD OFFICE: HELSINKI
(HELSINGFORS), FINLAND

Established 1859.

HUNGARIAN GENERAL CREDITBANK BUDAPEST

BOARD'S SOUND DIVIDEND POLICY.

At their meeting held on March 3rd, 1931, the board of directors of the HUNGARIAN GENERAL CREDITBANK established the balance for the business year 1930 with net profits of 6,557,647.62 pengő as against 7,496,453.12 pengő in the year 1929.

Dividend and Appropriations.

The board decided to submit to the sixty-third ordinary general meeting of the shareholders, convoked for the 19th March, a motion to allot a dividend of 4.50 pengő per share (against 5.50 pengő for 1929), making 3,726,000 pengő in all. The board is to propose further the following appropriations: 1,200,000 pengő for the strengthening of the reserve funds (against 1,000,000 pengő in the previous year) whereof 1,000,000 pengő free of royalties is to benefit the Ordinary reserve fund and 200,000 pengő to increase the depreciation reserve fund; 300,000 pengő free of royalties for the endowment of the employés' pension institute; 350,000 pengő free of royalties for the pension fund for the retired employés; and finally 620,000 pengő (against 850,000 pengő in the previous year) free of royalties for remunerations to the staff.

The bonuses due to the board of directors under Section 40 of the articles of association will amount, according to the proposal of the board, to 209,647 pengő (against 297,761 pengő in the previous year) so that 151,999 pengő will be carried forward to the accounts for the business year 1931.

Board's Dividend Policy.

The business results attained in the year 1930 would have permitted a dividend equal to that paid for the previous year. While the board propose a reduction of the dividend—while at the same time the allocation to the open reserves is to be raised by 200,000 pengő to 1,200,000 pengő and that to the pension funds to remain unchanged at 650,000 pengő—they believe their respective motions to be duly justified by the continued economic depression.

Their decision is endorsed, moreover, by a similar dividend policy followed by numerous important Western banking institutions having regard to the general economic conditions, and with a view of strengthening inner reserves.

Balance Sheet Items.

The chief items of the balance-sheet show the following changes as compared with the 31st December, 1929:

METROPOLITAN ELECTRIC SUPPLY COMPANY, LIMITED.

STEADY PROGRESS.

The forty-fourth ordinary general meeting of the Metropolitan Electric Supply Company, Ltd., was held, on the 10th instant, at Winchester House, Old Broad Street, London.

Mr George Balfour, M.P. (the chairman), in moving the adoption of the report and accounts, said that the accounts indicated not only that their position had been well maintained, but that steady progress was being made, particularly in their Outer London or Western area.

In continuation of their policy of consolidating the supplies within their sphere of operation, they had just made an offer to the ordinary shareholders of the Egham and Staines Electricity Company, Ltd., to acquire their ordinary shares in exchange for the ordinary shares of the company.

From time to time there was a considerable amount of ill-informed criticism of electricity supply rates in the daily Press. A rate per unit in itself did not convey any real measure of value. It was becoming more and more a question of the cost of getting the electricity to the consumer, and not so much the relatively small cost of producing electricity.

This company's average price had shown a consistent drop every year from 1924, and it was now less than one-half the average of six

The amount of "debtors" increased from 199.1 million to 216.4 million pengő; that of "bills discounted" decreased from 106.5 million to 102.7 million pengő. The item "Government Bonds, Public Loans and other Securities" increased by 0.8 million pengő, whilst the amount of "Investments in Banking Institutions and other undertakings" declined by 1.5 million pengő.

The setback in the quotations of securities is fully taken into account in the balance-sheet.

"Savings deposits" shows an increase of 6 million pengő, "current account deposits" one of 1.3 million pengő, thus, these two items combined have risen by 7.3 million pengő. The amount of "sundry creditors" decreased by 8.7 million pengő, thus, foreign capital entrusted to the custody of the Bank aggregated at December 31st, 1930, 344.7 million pengő.

Mortgage Loans and Mortgage Bonds.

"Mortgage loans serving as security for mortgage bonds" figures at the close of 1930 at 7,397,903 dollars.

Out of these Loans the amount of 11.7 million pengő was transferred to the Banks Co-operative Society for the Issuing of Mortgage Bonds, while the Bank's own mortgage bonds in circulation rose—as a result of 10 million pengő having been placed within the last year—from 18.1 million to 28.1 million pengő. In consequence of the continuous sales in the home market, the Bank's stock of unsold mortgage bonds decreased to 441,000 dollars.

The capital of the pension funds increased (this year's allocation included) from 6.4 million to 7.7 million pengő and that of the employés' relief funds from 508,000 to 553,000 pengő.

Bank's Capital.

The Bank's visible capital, which figured in last year's balance-sheet at 64.5 million pengő, will aggregate—inclusive of the amounts proposed for this year's endowments of the reserve funds—66.7 million pengő, in which amount the assets of the pension and relief funds are not included.

The total of the balance-sheet appears at 466.7 million pengő (as against 457.8 million pengő in the previous year).

The aggregate turn-over amounts to 25,383 million pengő.

years ago. Their "all-in service contract," based upon a fixed charge plus a low unit rate, was rapidly gaining ground. They were, at the end of the current quarter, making reductions in many districts in accordance with their programme, but they were fixing reductions so as to be fair to all consumers.

The output from the company's sub-stations had amounted to 183,240,000 units, of which 132,130,000 had been absorbed in the Western area, and 51,110,000 in the London area. The total compared with 166,950,000 units for the previous year, and the increase was accounted for as to 1,410,000 units in the London area, and 14,850,000 units in the Western area.

The balance on revenue account was £408,669 10s., and, together with the balance of £84,745 brought in from last account, and interest and dividends from subsidiary companies and other investments there was a total at the credit of net revenue account of £550,964 10s. 2d. The directors recommended that a further dividend at the rate of 14 per cent. per annum on the £2,000,000 ordinary share capital should be now paid, absorbing £140,000, making, with the interim dividend already paid, a total dividend at the rate of 10 per cent. for the year, leaving a balance of £111,062 to be carried forward to the next account.

The report and accounts were unanimously adopted, and, at an extra-ordinary general meeting, which followed, the capital of the company was increased to £3,000,000 by the creation of 500,000 additional ordinary shares of £1 each.

ANGLO-INTERNATIONAL BANK, LIMITED.

SATISFACTORY DEVELOPMENT—EUROPEAN CONDITIONS.

The fifth ordinary general meeting of the Anglo-International Bank, Ltd., was held, on the 6th instant, at Winchester House, Old Broad Street, London, General the Hon. Sir Herbert A. Lawrence, G.C.B. (the chairman), presiding.

The Chairman said: Despite the exceedingly unfavourable conditions which existed during the period under review, the business of the bank continued to develop satisfactorily, and the profits for the year amount to £120,474. This amount, together with the sum brought forward from 1929, brings the total standing to the credit of profit and loss account to £148,701. Of this total, your directors propose to place £50,000 to reserve account, £10,000 to premises amortisation, and £65,000 to contingencies, carrying forward the balance of £23,701.

Before proposing the adoption of the accounts, I should like, as in previous years, to refer briefly to those countries in which we are primarily interested.

For Germany the outstanding event was the agreement reached for the readjustment of her Reparation debts, under the arrangement known as the Young Plan, and the flotation, in connection with that Plan, of the German Government International Five and a Half per cent. Loan. Owing to the issue price being relatively high in view of the depressed state of the international money market, the loan did not meet with as much success as had been hoped, and it was further affected by uncertainty as to the political situation, following upon the German elections in September, when the reactionary tendency displayed, although not unexpected, undoubtedly had an unsettling effect on the general public, especially abroad. The careful handling of the situation by Dr. Brüning, however, and the determined stand made by the Government to secure economies and to balance the Budget, resulted in a return of confidence, which enabled the Government to obtain fresh credits from abroad.

The final settlement of Czechoslovakia's reparation debts was most favourable to that country. Under this settlement claims against Czechoslovakia, with the exception of war debts, are reduced to 4 per cent. of the original amount.

In Czechoslovak banking circles interests are being further consolidated, and an important amalgamation took place in April, when our friends, the Anglo-Czechoslovakian Bank, absorbed the Prague Credit Bank and the Bohemian Commercial Bank. The new bank, under the name of Anglo-Czechoslovak and Prague Credit Bank, has a capital of 235 million Czech crowns, and is one of the largest banks in Czechoslovakia. On the whole, Czechoslovakia was affected to a lesser degree than most countries by the prevailing trade depression.

The record harvest in Roumania in 1929, owing to the low prices obtainable for agricultural produce, did not relieve the agricultural situation, which is Roumania's chief problem, but serious efforts are now being made to form a National Agrarian Bank, to provide farmers with long-term loans at low rates of interest. To this end the Government are negotiating for foreign loans, and one such loan has already been arranged. Roumania is actively interested in the movement for the formation of an international pool for the sale of cereals by various grain-producing Eastern European States, and this movement should materially assist in the rationalisation of Roumanian agriculture.

Hungary experienced the same difficulties as her neighbours during 1930, and her foreign trade declined, imports falling by 228.5 million pengő and exports by 125.7 million pengő. The balance of foreign trade, nevertheless, closed with an export surplus of 80.2 million pengő, largely due to the fact that, although Hungary's exports of corn declined in value on account of the fall in prices, her exports of live stock more than doubled.

Government expenditure has been reduced, and the economic situation has been considerably relieved by the final settlement of Reparation Debts, and other outstanding international questions, in a manner satisfactory to Hungary.

As regards Austria, the favourable outcome of The Hague Conference, which I mentioned last year, made it possible for the first part of the long-awaited Government International Loan to be floated in July. The success of this loan, at a time when conditions on the international money market were unusually depressed, is a proof of the credit which Austria enjoys abroad. The loan itself, besides strengthening the position of the State finances, provided work for various branches of industry.

Notwithstanding the general depression and the unfavourable conditions to which I have referred, I see no cause for undue pessimism. There are clear indications that the countries I have mentioned are taking steps to adapt themselves to circumstances, and I consider that further progress has been made during the past year towards the rehabilitation of Central Europe.

Sir Henry Strakosch, G.B.E., seconded the adoption of the report and accounts, which were carried unanimously.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED.

INCREASED BONUS TO POLICYHOLDERS.

STRONG FINANCIAL POSITION.

His Grace the Duke of Atholl, K.T., D.S.O., presided at the annual meeting held, on Tuesday, the 10th instant, in Edinburgh. After paying a warm tribute to the memory of Sir David Paulin, formerly the manager, and latterly a director, of the company, he said that they met to celebrate the completion of the fiftieth year of the company. Happy as the attainment of the Jubilee was, and prosperous as was their record, he would that he could apply these adjectives to the state of the country, but, unfortunately, he questioned whether within living memory there had ever been such a degree of depression in commerce throughout virtually the whole world. In these circumstances such a report as he had to submit had the invigorating effect of a tonic.

YEAR'S RESULTS.

The new assurances granted were £1,217,000. Of that amount £56,000 was reassured, leaving a net new business of £1,161,000. The net premium income was £503,000. As had been foreshadowed in recent reports, the cessation of "single-premium-cum-loan" assurances due to the provisions of the Budget bill had affected both the volume of new assurances and the total premium income; but this was of no real importance, the ordinary annual premium income having increased by over £19,000. The interest earned on the funds after deduction of tax was £4 14s. 7d. per cent., being 1s. 3d. per cent. less than in 1929, on account of the increase in the income tax. Measured by the most correct actuarial method, the ratio of actual claims to expected claims was only 42 per cent.—an evidence of the excellent type of business transacted. The addition to the life funds was £383,000, raising them to £6,359,000. The total income from all sources had been £901,000.

QUINQUENNIAL INVESTIGATION.

The quinquennial investigation showed that the state of the company's investments was satisfactory, and that the total market value of the Stock Exchange securities was well in excess of the value appearing in the balance sheet. So far from there having been any depreciation in the total value of their investments during the year 1930, there was actually at its close some improvement on the values of December 31, 1929. No credit had been taken in the accounts for any realised profits or for any appreciation in the values of the investments. This was in the best interests of policyholders as tending to stabilise bonuses. The valuation of the life contracts was made by the British Offices' Office table at 3 per cent. interest, and on strict net premium principles; the annuity contracts were valued by the British Offices' tables also at 3 per cent. interest; and in addition to the strong reserves brought out by the valuation a further reserve against annuity contracts had been made. The total surplus was £869,000.

INCREASED BONUSES.

The directors had declared a vested bonus addition to all policies, including endowment assurances, with full participation in profits, at the rate of £2 8s. per cent. for each year completed during the quinquennium. Further, in the case of all policies becoming claims prior to the next division of profits, an interim bonus of £2 8s. per cent. would also be paid for each year completed. The balance of the surplus amounted to £60,000, of which £28,000 had been retained in the annuity fund as an additional reserve, leaving £32,000 to be carried forward. They had good reason to believe that this bonus will prove gratifying to the policyholders, more especially as the rate exceeds by 5s. per cent. per annum the normal rate of bonus which was granted five years ago and actually exceeds the rate of special bonus to the older policyholders which was then declared for particular reasons without any expectation being held out of its being repeated, still less exceeded. The company was one of the few offices which had never failed at any quinquennium to declare a bonus. They might have declared an even higher bonus, but the serious state of the country's finances and the unsettled outlook, generally, seemed to call for the exercise of caution. Keeping in mind the recent warning of the President of the Institute of Actuaries, they had no desire to enter the race for unduly big bonuses, preferring to grant a bonus at such a rate that there were reasons for the belief that they will be able to maintain it.

THE FUTURE.

They faced the future full of hope and confidence. They could even turn to good account the adverse state of the country;

for nothing had been clearer of late than the evidence that the public, shaken by the losses they had sustained in investments hitherto favoured, had been turning to the "safety first" grade of security. Among those life assurance ranked as supreme.

Sir John Lorne MacLeod, G.B.E., LL.D., seconded and the report was adopted with the declaration of a dividend of 20 per cent. less tax.

RIVER PLATE TRUST, LOAN AND AGENCY COMPANY, LIMITED.

COMPANY'S JUBILEE YEAR.

The fiftieth ordinary general meeting of the River Plate Trust, Loan and Agency Company, Limited, was held, on the 9th instant, at 52 Moorgate, London.

Mr James Anderson (the chairman), before dealing with the business of the past year, took the occasion of the year marking the jubilee of the company to review the extraordinary development that had taken place in Argentina during the last half-century. Towards this development their company had contributed its little quota to its own advantage, and, they hoped and believed, to the advantage of the country also. The money they had lent had enabled more land to be brought under pasture and cultivation, thereby fostering trade and adding to the wealth of the country. They, on the other hand, had done well out of the business, as was evidenced by the dividends they earned, which, since 1925, had been 24 per cent. on the "A" shares and 9 per cent. on the "B" shares, and, over the whole period, had averaged 17.38 per cent. on the "A" shares and 5.16 per cent. on the "B," without taking into account bonus dividends in fully-paid "B" shares amounting to £480,000. The profits had also enabled the company to accumulate the large reserve fund of £1,225,000.

Dealing with the past year's results, he said:—The shareholders no doubt expected a setback in our profits, in view of the very unfavourable conditions that prevailed during the year, both in London and in the River Plate. The gross profits for the year amounted to £422,658, a reduction as compared with the year preceding of £6,173. This is not a serious falling off, and is a proof that our business was well maintained notwithstanding the bad times that prevailed.

The net profits, however, show a more serious decline, having amounted to £307,546, as against £323,188, a reduction of £15,642. This reduction is entirely due to a new and unexpected item on the debit side of the profit and loss account—namely, £15,740, representing loss sustained in the remittance to London of our dollar income in Argentina.

During the first eleven months of last year Argentina's exports decreased in value by the huge sum of \$341,000,000—roughly £88,000,000—as compared with the same period of the year preceding. This was mainly due to unfavourable harvests, the wheat crop having been to a large extent a failure. The balance of trade, in consequence of this decrease, being turned heavily against the country, the rate of exchange fell from 46½d. to 35½d. The wheat harvest recently reaped has been a good crop, likely to leave the large surplus of approximately 5,000,000 tons for exportation, and the prospects of the maize crop now about to be reaped are excellent, so that we have been all looking for the expected rise in the rate. Unfortunately this has not occurred, and the explanation seems to be that there is a superabundance of wheat at present in the world's markets; prices have fallen to a very low figure, and the new crop is difficult of sale. A slight improvement in the price of wheat has been in evidence of late, and the premium is showing signs of recovery, the present rate being 37½d. as against 35½d. at the close of the year.

It is gratifying to state that, as the result of a valuation made at the close of the year, it was found that the market value of the investments was in excess of the figure at which they appear in the balance sheet.

The net profit amounted to £307,546. This enables us to provide the same dividends as last year—namely, 24 per cent. on the "A" and 9 per cent. on the "B" shares—and, with the help of £2,455 from the carry forward, to place £25,000 to reserve, raising the fund to £1,225,000.

The outlook for the current year is not altogether promising. The present rate of gold premium, although showing signs of improvement, is far below the average of last year, and in consequence the loss on remittance of income is likely to be substantially larger than that shown in the accounts presented to-day. The dividends on certain of our investments will probably be on a lower basis. The shareholders must be prepared for a certain shrinkage of income in the year on which we are now entered and, as a consequence, dividends on a somewhat reduced basis.

The report and accounts were unanimously adopted.

LAW LAND COMPANY, LIMITED.

CONTINUED PROSPERITY.

The forty-eighth annual meeting of the Law Land Company, Ltd., was held, on the 11th instant, at 30, Norfolk Street, Strand, London.

Colonel Sir T. Courtenay T. Warner, Bt., C.B. (the chairman), said:—The report and accounts have been circulated, and no doubt you have all read them with unusual interest in view of the widespread depression and the failure of many undertakings to maintain their dividends. With this state of affairs before me it is with more than usual pleasure that I am able to-day to direct your attention to the continued prosperity and progress of this undertaking. Whilst your directors have been able to lay before you on this occasion a proposal for an even larger distribution than in any previous year in our history, I do not wish to suggest that, if the present depression should continue, it would not at some time before long affect this company. We have also been careful to ask only the most reasonable rents for our premises, and we have done all we can to provide for the requirements and comfort of our tenants, thus maintaining the goodwill which has done so much to enable us to keep up our revenue during the hard times through which we have passed, and, in fact, are still passing.

During the past year, as you know, the quinquennial revaluation of the properties for rating purposes has taken place. Having regard to the general attitude of the rating authorities, we must, I suppose, be content with the assessments as they are fixed, but, in view of the general stagnation of business which is of such long standing, I think that the values based on hypothetical rents are higher than they should be. I may say that we have avoided anything in the nature of levying premiums, a practice which I am sure could bring no lasting benefit to those engaged in a business such as ours.

During the past year we have reduced our mortgage debt by over £20,000, and thus we have added strength and stability to our position. Our office property has continued to be extraordinarily well occupied, and the amount of our bad debts for rentals of both classes—offices and flats—is practically nil.

Now we come to our new venture—the site which we took over as from June 24th last in Lancaster Place and Savoy Street, Strand. I can with every confidence assure you that no effort will be spared to make this beautiful site a success, and an addition to your properties of which each one of us can be justly proud. The building we propose to erect will be known as "Brettenham House." There are to be a number of shops on the pavement level—the upper portions being let for office purposes. We have already dealt with a number of inquiries both for the shop premises and offices, and I am once more able to strike a cheerful note with regard to our hopes of this venture.

GENERAL MANAGER'S REMARKS.

Mr M. E. F. Crealock (general manager), in seconding the motion, said that they had not had to do quite so much work on their buildings during the year under review as in the previous year. Various schemes to which he had referred at the last meeting had been completed. It was particularly gratifying that no complaints had been received regarding their heating installations during the recent severe weather. In Sardinia House they were installing a "Smith Major and Stevens" high-speed lift similar to those recently installed in Imperial House. A certain amount of reconstruction work was being done to lavatories and entrance halls and staircases in their various buildings in order to comply with present-day requirements of tenants.

In view of the fact that some of their tenants had suffered a diminution of income as a result of the depressed times, it was satisfactory to know that they had re-let with only one exception all the accommodation which had had to be vacated by tenants for that reason. During 1930 there had been 130 lettings, of which 72 were renewals. That was particularly gratifying as it showed the good relations existing between their tenants and themselves. He would like to take that opportunity of paying a tribute to the whole of the staff for their loyal services and hard work. (Applause.)

With reference to the new building he was pleased to state that as far as possible they were using British materials in it and they were continuing their policy of engaging the staff for the building from the Brigade of Guards Employment Bureau. As stokers for their furnaces they were, as hitherto, employing ex-Naval men.

He would like to mention the fact that whenever one of their Junior engineering staff showed promise they sent him away for an intensive period of training, and it occurred to him that public money would be better employed in such a direction than in keeping all children an extra year at school, as was suggested.

The resolution was carried unanimously.

RHODESIAN CONGO BORDER CONCESSION, LIMITED.

NAME CHANGED TO "RHOKANA CORPORATION."

SIR AUCLAND GEDDES ON RECENT ACTIVITIES.

An extraordinary general meeting of Rhodesian Congo Border Concession, Ltd., was held, on the 11th instant, at Winchester House, London, E.C., for the purpose of considering resolutions to alter the name of the company to "Rhokana Corporation, Ltd.," and adopting new articles of association, Sir Auckland Geddes (the chairman) presiding.

The Chairman, in the course of his speech, said that he had been elected to the chairmanship of the board with effect from January 1. Mr S. S. Taylor had been appointed managing director of the company with his headquarters in London, and Mr Leslie Pollak as joint managing director with his headquarters in Africa. Mr A. J. McNab had consented to place his great knowledge of copper production in all its phases at the disposal of the company, and with regard to the technical advice which would be given to the board all he could say was that he would not know where to look for a better technical team. They had a blend of mining knowledge specialised in copper with that specialised in African conditions. They had taken the best men they knew of in the Rhodesian Congo Border Concession, N'Changa and Bwana M'Kubwa companies to make the personnel of the new company, the name of which they proposed to change to "Rhokana Corporation, Ltd."

THE BOARD.

Dealing with the alterations that would appear in the proposed new articles of association, the chairman said that it was proposed to increase the number of the board to a possible maximum of 20. Personally he disliked a big board, but he had been forced to the conclusion that they had to do that by the very peculiar nature of their shareholding. He thought they were simply forced by circumstances to have some such board establishment as 20, although he could assure the shareholders he would do his utmost to keep the number of actual directors down. In view of the fact that such a board would be unwieldy they proposed to have an executive committee in this country. Further, there would be an African committee, and they hoped to secure the services of Sir Ernest Oppenheimer as chairman of that committee and also of Sir Drummond Chaplin.

THE BWANA M'KUBWA MINE.

Dealing with the closing down of the mine at Bwana M'Kubwa, the chairman said that it was, perhaps, not surprising to find that persons who were not intimate with the details of the holdings of the Bwana M'Kubwa Copper Mining Company were apt to imagine that the Bwana M'Kubwa mine was the most important, if not the only, asset of the Bwana M'Kubwa Copper Mining Company. That, of course, was far from the truth, and he might say that since last summer he had recognised that the Bwana mine would be closed down some time or other. In consequence, no value had been placed by him, or by the experts who advised him last autumn, upon the mine in the valuation of the assets of the Bwana M'Kubwa Copper Mining Company, upon which the offer resulting in the consolidation had been made. In fact, to it, with all its extensive equipment, they had attached the nominal value of £100.

Various statements had appeared in the press as to the number of men who were to be affected by the closing down. The total number of men discharged or to be discharged from the Bwana property was about 200. Of those a number were being transferred to N'Kana and other properties in Northern Rhodesia, and the company had made every effort to deal generously with the men whom it had become necessary to discharge. Provision had been made for the repatriation of the men and their families who could not be placed elsewhere, on terms which had been discussed with the Governor of Northern Rhodesia, and which they understood had satisfied him as proper and generous terms to be offered by the company.

DEBENTURE ISSUE.

Finally, with regard to the debenture issue which had been authorised at the annual meeting in December, it had then been resolved that £4,500,000 debentures should be offered to shareholders at par, that offer to be made after the allotment of shares to the Bwana M'Kubwa Company and the N'Changa Copper Mines, Ltd. It had been impossible to issue those shares until certain legal formalities had been completed, but he had reason to believe that those would be completed in time for them to make the offer to members soon after Easter at the latest.

The resolutions were carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended March 7, 1931, amounted to £30,840,000 against ordinary expenditure of £18,580,800. After allocating £5,459,500 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £325,454, the week's operations, as shown below, reduced the National Debt by £6,474,000 to £7,642,021,000:—

(000's omitted.)

National Savings Certificates	+ 400	Treasury Bills	£ 5,603
Sundries	+ 29	Public Department Advances ..	1,300
	+ 429		— 6,903

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

† Free of income tax.

The Hon. E. G. Eliot of Messrs Tamplin, Joseph Pensonby, Ryde and Flux, has been elected to a seat on the head office board of directors of the Legal Insurance Company, Ltd.

The directors of Gaumont-British Picture Corporation, Ltd. announce that Mr William Evans has given notice terminating his agreement as joint managing director of the corporation and of Provincial Cinematograph Theatres, Ltd. Mr Evans wishes it to be known that the reason for taking this step is a desire on his part to devote more time to other pursuits. Mr Mark Ostror, vice-chairman, and Mr C. M. Woolf will act as joint managing directors of the corporation.

Captain E. C. Eric Smith, M.C., has been appointed a director of the National Mortgage and Agency Company of New Zealand, Ltd.

Mr A. M. Baer, a managing director of Messrs Henry Gardner and Company, Ltd., and a director of Amalgamated Metal Corporation, Ltd., has been elected to a seat on the board of the British Metal Corporation, Ltd.

The Royal Exchange Assurance announces with regret the sudden death of Mr B. B. Wallace, manager of its branches in Greece and Hungary.

Captain Oliver Lyttelton, D.S.O., a managing director of the British Metal Corporation, Ltd., and a director of Amalgamated Metal Corporation, Ltd., has been elected to a seat on the board of Henry Gardner and Company, Ltd.

The board of the Central Mining and Investment Corporation, Ltd., announce that Mr Felix Heim has resigned his seat on the board of the corporation as from June 30th next.

Lord Linlithgow, K.T., has joined the boards of directors of British Assets Trust, Ltd., and Second British Assets Trust.

Messrs J. A. Wattie and Company, Ltd., of 39 Lombard Street, London, E.C.3, have been appointed secretaries to Verellen, Ltd., and the registered offices have been transferred to 39 Lombard Street, London, E.C.3. Lt.-Col. E. H. Collen has resigned from the board, and it is with pleasure that the directors have to announce that Mr A. Colegate, Mr L. W. Farrow, F.C.A., and Mr J. H. Gold have joined the board of directors. The new board now consists of Messrs A. Colegate, R. Mortimer, G. De B. Brounlie, L. W. Farrow, J. H. Gold, with Messrs T. and J. Verellen as joint managing directors in Belgium. Mr A. Colegate has been elected chairman of directors.

REPORTS AND NOTICES.

BANKS.

BANK FOR RUSSIAN TRADE, LIMITED.—The balance sheet dated December 31, 1930, has just been issued. Comparing it with December 31, 1929, the authorised capital remains the same, and all of it has been issued, but at the end of 1929 only £550,000 was issued. Reserve has increased from £210,000 to £275,000. Current deposit and other accounts are lower at £1,027,643, as compared with £1,490,318. Acceptances are higher at £1,706,042, against £1,659,459. Bills rediscounted are at £2,234,110, against £2,704,231. Loans have increased from £989,738 to £1,104,448. With regard to assets of the bank, the total amounts to £9,500,846, against £9,707,438 at end of 1929. Cash in hand and with bankers in London is lower at £232,476, against £629,600. Cash with bankers abroad amounts to £123,871, against £163,671. Investments in British Government securities amount to £396,578, against £643,942. Shares in European trading banks at cost amount to £174,996, against no item under that head at end of 1929.

THE YOKOHAMA SPECIE BANK, LIMITED.—The accounts for the half-year ended December 31, 1930, as presented at the meeting of the shareholders held in Japan on March 10th, show net profit for the past half-year of Yen 12,936,138.84, including Yen 6,353,666.83 brought forward from the preceding half-year. The amount was distributed as follows:—To reserve fund, Yen 1,500,000; dividend, 10 per cent. per annum, Yen 5,000,000; balance carried forward to next account, Yen 6,436,138.84. The world-wide trade conditions have once more been reflected in the accounts, and there is a slight falling off in the amount of the profits earned. Nevertheless, the dividend has been maintained at 10 per cent. per annum, and a further Yen 1,500,000 has been added to the reserve, which brings the total amount of this fund to the exceptional figure of Yen 115,000,000. The sum carried forward has been slightly increased, and amounts to Yen 6,436,138.84. We are also informed that Mr. Eikichi Tsuyama has been elected a director, and Mr. Nobujiro Matsuo (deceased).

MISCELLANEOUS.

HUDSON'S BAY COMPANY.—The Deputy Governor and Committee of the Hudson's Bay Company announce that Mr Charles V. Sale, Mr Leonard D. Cunliffe, the Rt. Hon. Lord Ebury and the Hon. A. J. P. Howard have resigned their seats on the board. In accordance with the resolution passed at the extraordinary general court of proprietors held on January 16, 1931, and with the approval of the Rt. Hon. Sir Robert Horne, the board have co-opted the following proprietors as members of the Board:—The Rt. Hon. Sir Edward Hilton Young, P.C., B.G.E., D.S.O., D.S.C., M.P., director of the Southern Railway Company and of the English Electric Company, formerly Financial Secretary to the Treasury, Lt. Col. John Burgess Preston Karlake, T.D., M.A., F.S.A., J.P., formerly chairman of the Metropolitan Water Board, Captain Victor Alexander Cazalet, M.C., M.P. The appointment of Governor to fill the remaining vacancy on the board will be made at an early date.

Commercial Reports.

MARKET SUMMARY.

Climatic conditions have resulted in increased requirements of coal and coke for heating purposes, but there has been no improvement in industrial consumption. Exports have slightly increased since January, but they are still considerably below last year's level. The iron and steel industries continue depressed, and exports during February at 144 thousand tons show a decline of 150 thousand tons as compared with the corresponding month a year ago. Among non-ferrous metals tin has been firmer, but copper, lead and spelter, which had recently advanced on speculative buying, relaxed. The outstanding feature as regards textile raw materials was the sharp rise in wool values at the opening of the second series of London sales last Tuesday. Cotton prices have not maintained last week's level, and the demand for Manchester goods in India is still disappointing. Rayon fabrics have enjoyed a better demand during the past week. Foodstuffs have been quiet. Trading in wheat has been slow and prices are scarcely changed on the week. Mr Legge, the chairman of the Federal Farm Board, has resigned, but no radical change in policy is expected from his successor. Tea, coffee and sugar have been steadier this week, and the price of refined sugar has been raised by 3d. Among miscellaneous commodities, hides have again improved in value, while rubber failed to maintain last week's advance.

THE COAL TRADE.

Our Sheffield correspondent reports that, as the result of the curtailment of output of pits under the quota system, supplies of coal have become scarce and certain producers have been unable to give prompt deliveries. The working of the scheme has thrown many workmen out of employment. Prices of house coal have advanced a shilling or more. Best steams are firm at 17s. to 17s. 6d. f.o.b., and there is a steady prompt export demand. Neither producers nor buyers are keen on forward business. Demand for industrial fuel is weak, and there are great surpluses of secondary coals and smalls. Best South Yorkshire house coal is quoted at 21s. 6d. to 22s. 6d., and hand-picked branch at 25s. to 27s. The severe weather has increased the demand for house coal. The furnace coke trade is as depressed as ever, both in the home and export markets. Home consumption remains at a low ebb.

Production is, however, being curtailed by the reduced output of collieries under the quota system, so that there is a prospect of scarcity and higher prices. The present open market price of best brands is 11s. 6d. at ovens, but users under the sliding scale arrangement are paying 13s. 3d.

Our Glasgow correspondent writes:—Export business in the Scottish coal market remains quiet, and the position is well illustrated by the weekly volume of shipments, which varies round about the 190,000 tons mark, compared with 40,000 to 60,000 more a year ago. During the past day or two, however, the larger sizes of washed nuts from Fife and the Lothians have been moving more readily owing, apparently, to a shortage of these classes in Yorkshire. Among steams, Lanarkshire prime splint is well booked, while for inland business demand for house coal has been stimulated by the colder weather. Some collieries are said to be exceeding production quotas of house coal. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 16s. 6d.; splint best, 16s. 3d.-16s. 6d.; splint second, 15s. 9d.; navigation, 15s. 6d.-15s. 9d.; navigation second, 15s.-15s. 3d.; Hartley, 15s. 6d.; steam, 14s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 10s. 6d.; pearls, 10s. 9d.; dross, 10s. 3d. FIRE.—Screened navigation, 16s. 6d.-17s.; first-class steam, 13s.-13s. 6d.; third-class steam, 12s.-13s.; trebles, 12s.-12s. 6d.; doubles, 11s.; singles, 10s.; pearls, 10s. 6d. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 9d.; trebles, 12s.-13s.; doubles, 11s.; singles, 10s.; pearls, 10s. 3d. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 3d.; doubles, 11s. 9d.; singles, 10s. 9d.; pearls, 10s. 9d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The chief event in the South Wales coal trade during the past week has been the award of the independent chairman of the Conciliation Board, under which the minimum and subsistence wages are reduced as from March 1st. Under the old agreement 28 per cent. was paid on the 1915 standard rates, but by the award this percentage has been reduced to 20 per cent., and the subsistence wages, which were 7s. 10½d. in the case of adult workmen, have been reduced to 7s.-7s. 6d. Although these reductions are less than had been claimed and hoped for by the owners, they provide a welcome relief, but it must be remembered that costs have recently been increased as a result of the reduction in working hours. Disappointment has been created among the miners as a result of the award, and this has led to sectional and temporary stoppages as a protest during the past week. A delegate conference of the miners has been convened for next Monday to discuss the award. Disappointment is felt on the market by the loss of the Brazilian Central Railways contract for 130,000 tons of coal and patent fuel, deliveries of which commence next month. Welsh coal prices were undercut by 2s. per ton, and those of patent fuel by a few pence per ton. Supplies of all grades are plentiful at the minimum prices and demand continues very slow. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; best dross, 18s. 6d. to 19s.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 15s. to 15s. 3d.; best anthracite large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubby culm, 8s. 6d. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 24s. to 24s. 3d.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—The market for Cleveland iron continues quiet, but if anything there is a little more doing with local and inland consumers for early delivery due to a few more orders having come to hand for their products. So far no new buying of importance has developed for the second quarter.

Increasing Interest in South American Markets

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branchees in South America, in London, Bradford and Manchester; in France, Belgium, Portugal and U.S.A.; with the concentrated Business of every description. Status reports are supplied on request, and a Monthly Review of Market information is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

Affiliated to Lloyds Bank Limited

but a move in this direction is looked for very shortly. Consumers are keeping a close watch on the market and as soon as they are satisfied that there is not likely to be any reduction in prices more buying will take place. Makers are not likely to make any concessions, as all the iron available from the current make is taken up and reserves have been reduced to such an extent that they are now of small dimensions. Unless, therefore, the make is increased, of which there are no indications at present, there will be no surplus iron to cause selling pressure. Trade with Scotch consumers continues small, and demand for export also very light, with no immediate signs of any change for the better. If any improvement in these directions should, however, develop, the question of increasing the make would be a matter for immediate consideration. The volume of business transacted at Tuesday's weekly market was small and only for early delivery. No change was made in prices, which are: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In hematite moderate orders are being booked for home consumers and also for export, but they are practically all for early delivery, little interest being shown in forward business. Makers are now willing to accept 68s. 6d. for ordinary mixed numbers for prompt, while for delivery up to the end of June sixpence more is asked. Merchants are prepared to shade these prices in some instances. In the finished departments there is no new feature of importance. Steel prices for home under the rebate scheme are unaltered, viz.: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. In other lines heavy steel rails are £8 10s.; iron crown bars, £10 10s.; 24-gauge black sheets, £8 10s.; and 24-gauge galvanised corrugated sheets, £11, all for home use. The ore market is practically stagnant. Best Bilbao rubio is nominally 16s. c.i.f. for early delivery and 16s. 6d. a few months ahead. The rate of freight Bilbao-Middlesbrough for prompt tonnage is about 4s. 6d. Coke is freely offering at 16s. delivered works for ordinary blast-furnace qualities and a trifle less has been accepted for odd prompt lots. The number of furnaces in blast in the district is reduced to 22, one producing hematite having gone out at Consett Works.

Our Sheffield correspondent writes:—A slight improvement in steel trade conditions in South Wales, Scotland and the North East Coast has not yet extended to the Sheffield area, where the position is the same as previously reported, except that output of open-hearth steel has again been curtailed. In the tool and alloy steel branches the large makers are installing the new high-frequency electric crucible furnace which has twelve times the capacity of the old-time coke-fired crucible. The new system is more economical

PLAYER'S

No man lights his pipe with greater expectancy or smokes it with greater satisfaction than the one who regularly fills it with PLAYER'S

N.O.T.S.

110½
PER OUNCE

than the old. The ferro-alloy market is experiencing the lowest consumption for many years accompanied by severe cutting of prices. Makers of finished steel products such as tools report a rather better home demand, but exports continue on a very reduced scale. Cutlery and plate are experiencing none of the usual spring revival, although there are considerable orders on hand from public caterers and in connection with coupon gift schemes. Prices of all steel products tend downward.

Our Cardiff correspondent writes:—A better tendency is displayed in the Welsh tinplate market and prices are a shade firmer. It is felt that prices of tin will advance under the operation of the restriction scheme, and that this will be reflected in future prices of tinplates. The Indian settlement has favourably affected the galvanised sheet industry, but so far business has shown no expansion.

Our Glasgow correspondent writes:—Improvement is slow in the West of Scotland iron and steel trades, and generally speaking conditions are practically unaltered. There is still not sufficient work coming on to keep plants continuously employed. Home trade, with the exception of course of that in shipbuilding materials, is being well maintained and tube makers report a slightly better export demand. Sheet makers have also experienced a better demand for black sheets for export within the past week.

OTHER METALS.

TIN.—A slight increase in demand in the United States caused some improvement in the market at the beginning of the week. Since then the metal has been steady, and Wednesday's price per ton, for standard cash, at £122 2s. 6d. to £122 5s. compares with £121 7s. 6d. to £121 10s. at the corresponding date last week. "Three months" was quoted at £123 12s. 6d. to £123 15s., against £122 17s. 6d. to £123. Stocks in London and Liverpool at the end of last week, at 25,409 tons, show a rise on the week of 435 tons.

COPPER.—Although Copper Exporters, Inc., have not changed their quotation of 10·80 cents for electrolytic, c.i.f. Continent, lower prices have been obtained by American producers following a decline in demand. The situation in America was reflected in the London market, and Wednesday's price per ton for standard cash, at £44 16s. 3d. to £44 17s. 6d., compares with £46 7s. 6d. to £46 8s. 9d. obtained on the same day last week. Stocks of refined copper in official warehouses at the end of last week, at 7,883 tons, show an increase of 233 tons on the week, while stocks of rough copper, at 1,613 tons, were 5 tons below those of last week.

LEAD.—The recent advance in the metal, caused mainly by speculative buying, has not been maintained. Consumption shows no signs of an improvement, and heavy selling, particularly in America, led to a drop in the New York spot price from 4·60 cents to 4·50 cents per lb. In sympathy with the situation in America, London values gave way, and Wednesday's price per ton for "soft foreign," at £13 8s. 9d. to £13 13s. 9d., compares with £14 3s. 9d. to £14 6s. 3d. obtained last week.

SPELLER.—At the beginning of the week spelter attracted little attention, but liberal offerings at lower prices subsequently resulted in an increase in turnover. Quotations were considerably below those of last week, and Wednesday's price per ton for good ordinary brands, at £12 5s. to £12 15s., compares with £12 17s. 6d. to £13 8s. 9d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals no change occurred in the prices of aluminium and nickel, at £85 per ton and at £170 to £175 per ton respectively. Antimony was steady, changing hands at last week's price of £25 to £25 10s. per ton for "foreign," and quicksilver remained unchanged at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool, March 11th.—Spot sales for the week 5th to 11th (inclusive) are 36,000 bales, of which 18,470 bales are American, 3,450 Brazilian, 600 Argentine, 5,700 Peruvian, 3,050 Egyptian, 2,250 African, 1,000 East Indian, and 1,480 sundries. Imports for the same period are 54,216 bales, of which 13,638 bales are American, 8,479 Brazil, 141 Peru, 888 Egyptian, 5,096 African, 1,448 East Indian, and 24,326 sundries, which includes 24,308 bales Russian. Quotations to-day are: American Middling, 5·90; Egyptian Sakel, 9·60; Egyptian Uppers, 7·08; Brazil Fair, 6·05; Peru G.F. Smooth, 6·35; West African Mid., 5·90; East African G.F., 6·95.

Manchester, March 11th.—Spinners and manufacturers continue to experience a larger inquiry. To some extent, however, business has been impeded by the easier tendency of raw cotton rates, there being some nervousness as to future values. Shippers of cloth to India have received many more cables from the other side asking for prices to be wired out. Although more business has been done, the response in the way of orders has been rather disappointing. A little uncertainty exists as to the position of the boycott. Most of the buying has been in light fabrics, white shirtings and printing styles for Calcutta, Karachi and Madras. Dealers in Calcutta and Bombay have fairly heavy stocks of dear goods, and there may be some difficulty in liquidating these supplies. A rather more hopeful feeling prevails with regard to China trade, and owing to the improvement in exchange rates a few more transactions have been put through in standard makes and fancies. A fair miscellaneous

business has been done for Egypt, South America and the Colonies, and steady buying has again taken place in home trade fabrics. On the whole, the prospects for the weaving section are rather brighter. Quotations in American and Egyptian yarns have been slightly irregular when tested. On the whole, however, the output is being better absorbed, and recently the sales have been larger than the production, with the result that some spinners have gained a little ground.

THE WOOL TRADE.—Our Bradford correspondent writes:—The opening of the second series of London sales last Tuesday was very satisfactory to all selling interests. The market kept pace with the development in consumption seen since the end of the January series, and with the upward movement in overseas selling centres. The change which has come about is indeed remarkable, and has fully justified the patience of those who are prepared to wait for a natural recovery of the situation. It will be found that the majority of those who waited in the hope of buying at the lowest point, have missed that opportunity, but those who have not speculated on a further depression in values or on wool still being obtainable at a ridiculously low level, will now be able to follow the course of events without any such financial embarrassment that will restrict their operations during the remainder of this season. It is now quite evident that the demand for fine wool is such that the balance of the wool grown in Australia this season will be transferred to consuming centres earlier than usual. In the meantime there is a very good demand for all classes of wool in Coleman Street, the home trade operating freely in both merinos and cross-breeds. There has been some very keen buying of the latter description, and this is likely to continue right to the end of the series, topmakers still having big contracts to provide for. The opening advance of 10 to 15 per cent. in superior merinos has been maintained, and average wools are still selling at an improvement of about 20 per cent. Fine cross-breeds are 15 per cent. dearer, and medium and coarse 15 to 20 per cent., whilst slipes are easily 15 per cent. above the close of the January auctions. There is a very healthy tone in Bradford. Following the report of higher prices in Australia and New Zealand last week, and the placing of further business in merino and crossbred types, prices for all qualities sharply advanced. Since then the tendency has continued very firm, and now nothing less than 26d. will be accepted for average 64's, and 13d. for 46's carded. Spinning and manufacturing requirements have shown some expansion, both merino and cross-bred yarns being sold at more money.

THE HEMP TRADE.—An increasing number of inquiries, coupled with the absence of sellers, resulted in a firmer tone in the hemp market towards the end of last week. At the beginning of this week sellers' level predominated, and Wednesday's price for manila J2, March-May, at £18 5s., shows no change as compared with that of a week ago. Last week's receipts of manila amounted to 27,000 bales, against 31,000 bales during the corresponding week last year. This week's receipts have been estimated at 31,000 bales and at 27,000 for next week.

THE GRAIN MARKETS.

WHEAT.—Heavy snowfalls and severe frost experienced over the United Kingdom brought field work to a standstill, causing further delay to preparations for spring sowings. The growth of winter wheat has also been checked, but the plant generally has suffered no harm, and presents a satisfactory appearance. Supplies of native wheat continue light at most of the statute markets, though condition marked some improvement, and steady rates were secured for best dry samples. Trading on the import market continues of a spasmodic character, purchases being chiefly confined to afloat and early shipments, available supplies being sufficient to cover the pressing needs of millers. Australian descriptions were chiefly favoured, and fair sales were reported to the United Kingdom, Mediterranean and Oriental countries, while Canadian and Plate wheats also found acceptance. Prices for the most part remained steady, as no undue selling pressure arises in any direction, and Plate shipments have not yet assumed important dimensions. Large quantities, however, remain to come forward from Argentina, and it is generally expected that the movement will be accelerated during the next few months, also in order to meet the Canadian spring campaign. Russian clearances have fallen off considerably of late, but recent arrivals experienced a fair sale on ex store terms. There was no further development in the United States situation, but the report of intended liquidations by the Farm Board resulted in cheaper offers of Canadian grades, showing that Dominion sellers are prepared to meet competition from their near neighbours. Total weekly shipments were below European estimated requirements, a large proportion being taken by outside importers,

and with increased arrivals, floating supplies were lighter. Quotations were as follows: No. 1 hard Manitoba, ex ship, 27 9s.-28s. 6d.; No. 1 Northern Manitoba, ex ship, 27s. 9d.-28s.; No. 2 ditto, 26s. 6d.-27s. 6d.; No. 3, 25s. 3d.; No. 4 Manitoba, 24s. 3d.; Barusso, 63 lbs., 22s. 3d.; Rosafe, 63 lbs., 22s. 3d.; Australian, 22s. 6d.-24s. 6d.; Russian (on sample), landed, 20s. 6d.-24s.; ex ship, 21s.-24s. per 496 lbs. English, 4s. 6d.-5s. 6d. per 112 lbs.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Mar. 12, 1930.	Jan. 2, 1931.	Feb. 25, 1931.	Mar. 4, 1931.	Mar. 11, 1931.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	148½	104½	56½	62½	59½	60½
Chicago (No. 2 Winter) — Cents per 60 lb.	130½	105½	79½	79½	79½	79½

The visible supply of wheat in Canada at 64,498,000 bushels, shows an increase on the week of 1,018,000 bushels. Supplies a year ago stood at 74,139,000 bushels.

WHEAT FLOUR.—Quiet conditions obtain in the flour trade, and prices of home milled were reduced by 6d. per sack. For shipment, Australian ruled steady on scanty offers, but Canadian was obtainable on cheaper terms. Quotations: London, straight run, 23s. 6d. per sack for country deliveries and 22s. 6d. London area. Of imported, Manitoba patents, 21s. 6d.-25s. 6d.; Buffalo ditto, 22s.-25s. 6d.; Australian, 19s.-19s. 6d., ex store, per 280 lbs.

BARLEY.—The market in barley has been steady. Quotations: Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample; Chilean, brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s., per 448 lbs. Black Sea, landed, 16s. 9d.; ex ship, 15s. 9d. per 400 lbs. English, maling, 6s. 3d.-13s. 9d.; feed, 5s. 9d.-6s. per 112 lbs.

OATS.—Oats have again been firm. Quotations: Plate, landed, 11s.; ex ship, 10s.; Chilean, tawny, landed, 13s.; whites, ex ship, 18s. 6d.; landed, 19s. 3d.; North Russian, landed, 12s. 3d.-13s.; South Russian, landed, 13s. 6d.; ex ship, 12s. 6d. per 320 lbs. English, 5s. 8d.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Mar. 7	Cwts. 110,664	Cwts. 178,438	Cwts. 240,677	Cwts. 281,322

Mar. 8, 1930.....	178,438	164,139	39,462	8 4	7 8	6 1

MAIZE.—Demand for feeding stuffs was stimulated by cold weather, and prices advanced sharply for Plate maize on spot and near positions at a substantial premium on new crop offers. Quotations: Plate, landed, 19s. 9d.; ex ship, to arrive, 18s. 6d.; March-April, 18s. 3d.; April-May, new crop, 17s. 3d.; May-June, 17s. per 480 lbs. Yellow maize meal, £6, f.o.r. London, per ton.

OTHER FOODS.

SUGAR.—Confidence in the success of the Chadbourne scheme has recently created a better tone in the sugar market. This week the market has been affected by the news of crop damage in Mauritius and Fiji, and by the possibility of late sowings on the Continent owing to unfavourable climatic conditions. The price for home-refined sugar has been advanced 3d. per cwt. last Wednesday. Turnover was on a larger scale, and it seems that distributors who had hitherto restricted buying to immediate requirements intended to replenish their stocks. Raw futures have been slightly firmer. Wednesday's sales included May delivery at 5s. 11½d. to 6s. 0½d., as compared with 6s. 0½d. to 6s. 0½d. on the corresponding day last week; August, at 6s. 3d. to 6s. 4d., as against 6s. 3½d. to 6s. 3½d.; December, at 6s. 7½d. to 6s. 8d., as against 6s. 7½d. to 6s. 7½d.

COFFEE.—There was a better tone in the market for coffee this week, and good Costa Rica and Kenya qualities found buyers at steady prices. Last week's movements of coffee were as follows:—Brazilian, landed in London, 71 bags; delivered for home consumption, 146 bags; exports, 125 bags; stocks, 3,152 bags, against 6,348 bags last year. Central American, landed, 17,646 packages; delivered for home consumption, 3,059; exported, 2,416; stocks, 96,344, against 80,111 a year ago. Other kinds, landed, 13,890 packages; delivered for home consumption, 3,288; exported, 6,210; stocks, 101,762 packages, against 76,404 last year.

COCOA.—The market in cocoa has been quiet, but there was a slight recovery in prices from the low level to which they had fallen last week. Wednesday's quotation for Acra, fair fermented,

March-April, at 19s. 9d. per cwt., shows a rise of 3d. on the week. Futures were inactive. Last week's movements of cocoa were as follows:—Landed in London, 27,666 bags; delivered for home consumption, 6,134; exported, 56; stocks, 202,096 bags, as compared with 190,753 last year.

TEA.—The quantities catalogued for this week's auctions comprised 52,219 packages of Indian, 24,114 packages of Ceylon, and 15,347 packages of Java and Sumatra tea. The market for Indian on Monday and Wednesday showed an improvement on last week, but there was less demand for Ceylon tea except for first qualities. According to the Tea Brokers' Association of London, stocks at the London tea warehouses at the end of February at 270.4 million lbs., show a reduction of 3.1 million lbs. as compared with those of the previous month.

RICE.—The market in rice has been quiet, but prices have been maintained. Burma No. 2, cleaned, spot was again quoted at 11s. 6d. per cwt.

POTATOES.—Considerable quantities were offered in the Borough market, but demand was quiet and prices receded slightly. The price of "best King Edward" at 26 10s. to 27 compares with 26 10s. to 27 10s. last week.

SPICES.—The "spot" market for pepper has been steady, while forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 137 tons; delivered, 39 tons; stocks, 562 tons against 1,003 last year. White: landed, 55 tons; delivered, 32 tons; stocks, 489 tons against 1,090 a year ago.

THE HALIFAX

THE WORLD'S LARGEST BUILDING SOCIETY.

RECORD INCREASE OF BUSINESS.

TOTAL ASSETS EXCEED - £70,000,000.

ANNUAL REPORT OF THE DIRECTORS

to be presented to the Shareholders at the Annual General Meeting of the Society, to be held at Halifax, on Monday, the 30th day of March, 1931.

The Directors have great pleasure in submitting to the Members the Annual Statement of Accounts showing the operations of the Society during the financial year ended 31st January, 1931.

It is very satisfactory to the Directors to be able to report that, notwithstanding the continued depression in trade and industry which has prevailed generally throughout the year, there have been large increases in all departments of the Society.

The following comparison of the business at the end of last year compared with figures on the 1st February, 1928, being the date of the amalgamation of the Halifax Permanent and the Halifax Equitable Building Societies, indicates how very greatly the business of the united Society has progressed in the last three years, viz.:

	Open Accounts.	Funds.	Assets.
Feb. 1st, 1931...	438,628	£67,754,810	£70,047,398
Feb. 1st, 1928...	329,224	£45,520,281	£46,981,482

Increase

ASSETS.—The Total Assets at the end of the year amounted to £70,047,398, an increase of £10,653,056.

RESERVE FUND.—The Reserve Fund, after providing for all interest and bonus allotted up to the date of the account, stands at £2,292,587, being an increase of £274,989.

INCOME.—The Income for the year, exclusive of investments realised, was £34,720,853.

MORTGAGES.—The amount advanced upon new mortgages during the year was £16,893,072 2s. 6d., an increase of £4,437,512, mainly upon the security of dwellings for the personal occupation of the borrower. It is interesting to note that the amount advanced during the year has averaged over £1,400,000 per month.

The new Borrowers number 29,543, compared with 24,064 in the previous year, and they now show an average of only £572 per new mortgage completed. The total amount now due upon Mortgages is £52,902,783.

MEAT.—The firmer tendency in meat prices has been maintained. Wednesday's price, per 8 lbs., for Argentine chilled hindquarters, at 3s. 8d. to 4s. 4d., compared with 3s. 6d. to 4s. a week ago, and English mutton at from 6s. to 7s. shows a rise of 4d. as compared with the corresponding day last week. Pork has scarcely changed on the week. According to the Smithfield official report, supplies of meat during last week amounted to 9,312 tons, as compared with 8,554 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84 per cent. of the supplies, as against 81.5 per cent. a year ago, and imported mutton, mainly New Zealand, formed 81.2 per cent. of the total supply, as against 78.1 per cent. last year.

MISCELLANEOUS COMMODITIES.

HIDE, LEATHER AND ALLIED TRADES.—A better tone was in evidence at the auctions held in Manchester this week, when all weights in both clear and warbled ox and heifers recorded advances in price of from 1d. to 1 1/2d. per lb. Heavy cows were also 1d. per lb. dearer, while light weights, together with bulls, made last sale figures. Although prices for calf skins were practically unchanged a weaker tendency was observable, and with fairly good supplies available it is possible the market will go yet lower. Improvement has been noticed in the demand for sheepskins, consequent upon the better conditions ruling in the market for wool. Prices as a result are a little firmer, but at the same time sales of de-wolled pelts are difficult to make, even at the low prices which have been ruling for some time. Further advances have been made in quotations for imported hides, and on the whole, turnover has again been better. In the South American market sales of wet salted Frigorifics have been made to the United States and the Continent on the basis of 5 1/2d. for Argentine ox, with 5 1/2d. paid for second ox, 5 1/2d. for lights, and 5 1/2d. for cows. Dry River Plate hides have shown little alteration, quotations for B.A. Americanos being up to 7d. The market for Cape hides has again been fairly active, sales of dry salted being concluded at 6d. and 5d. for firsts and

seconds, 20/30 lbs. Certain other descriptions of African hides have come in for attention to a lesser degree, but the higher prices being asked for Australians has restricted business in these to some extent. Producers and distributors of sole leather have experienced a better turnover on many lines, and the market presents a rather brighter outlook. The call for English and wet salted bonds has been well maintained on account of the recent bad weather, and inquiry has covered most weights in this class. Dry hide bonds have also been inquired for rather more freely, and although for the time being business continues to move along rather restricted lines, there is every possibility of more and larger orders coming to hand in the near future. The offal market continues slow; inquiry for the most part is confined to certain descriptions of pinned bellies and shoulders, with very little call for rough stock. Business in uppers leathers remains of moderate dimensions, with a steady day to day call for most descriptions. Black and brown glaze kid continues to be the line most asked for, but at the same time an increase in the turnover of patent leather is to be noted. Calf leather, both box and willow, shows smaller sales, while the inquiry for semi-chrome upper is confined to very low priced parcels. Suede leather, reptile and other novelty skins are a steady sale in small quantities.

RUBBER.—After a meeting of the British and Dutch Rubber Committees last week, it was decided that the deliberations should be adjourned for a fortnight. Meanwhile, it was stated in the House of Commons that in view of the deplorable results of the depression in the rubber industry the Colonial Secretary will be prepared to give careful attention to a comprehensive scheme of planning aggregate production to which the producers might agree. On Thursday last week the price of the commodity relapsed, but became steadier again on Tuesday last. Wednesday's official spot price per lb. for standard ribbed smoked sheet at 4d. shows a fall of 0 1/2d., as compared with that of the corresponding day last week. Forward positions have also been easier. Business has been done at 3 1/2d. to 4d. for March, against 4 1/2d. to 4 3/4d. last week; at 4 1/2d. to 4 3/4d. for April-June, against 4 1/2d. to 4 3/4d., and at 4 1/2d. to 4 3/4d. for July-September, against 4 1/2d. to 4 3/4d. a week ago.

THE MONEY MARKET.

As has been the usual experience this month, money was extremely stringent early in the week. As much as 3 1/2 per cent. was paid on Tuesday for new money, and it is understood that "special quarters" gave some assistance by buying "hot" Treasury bills, and those issued the previous week, at 2 1/2 per cent. On Wednesday money was distinctly easier, 2 1/2 per cent. being the highest rate

paid. Little calling by the clearing banks was in evidence and it is conceivable that the market had fewer new bills to pay for. By Thursday, conditions became quite comfortable. The news that the Bank had secured the bulk of the market's gold produced, somewhat unfortunately, an easier tone in the discount market. On Thursday 2½ per cent. was the highest effective rate for three months' bills. This was ½ per cent. below the minimum rate of 2½ per cent., which, for reasons discussed below, is still thought desirable.

After allowing for an amount of £200,000 which had been bought forward on French account and then re-sold to Belgium, the gold on offer in the London market amounted to approximately £600,000. Of this last amount, £583,100 was purchased by the Bank at 84s. 10½d. per ounce, or only ¼d. above the Bank's statutory buying price. This is the first time for almost exactly a year that the Bank has succeeded in securing any of the market gold, and its success this week has undoubtedly had a useful psychological effect, particularly upon the New York exchange. Next week £623,000 of bar gold is due (of which £12,000 is unrefined), and £250,000 in sovereigns. The following week £22,000 in bars and £250,000 in sovereigns will arrive. This makes a total of £1,145,000, all of which may very likely be secured by the Bank. It is not thought likely that Belgium will be taking any more gold, for it is known that the Belgian authorities are not anxious to see a gold influx, and, indeed, are already putting practical obstacles in the way of such a movement, for example, by questioning assays. Thus, with all the principal exchanges comfortably above the gold point, there is no reason why the Bank should not add to its own stocks.

	Feb. 26, 1931.	Mar. 5, 1931.	Mar. 12, 1931.	Mar. 19, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate...	1	1	1	1	1½ (May 1, '30)
Discount of Call	1	1	1	1	1½ (May 1, '30)
Houses' Notice ...	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½—1½	2½	2½	2½	...

At the same time, it must be emphasised that the three months' forward Paris exchange rate still hangs round the export gold point, and that each improvement in the spot rate is accompanied by a widening of the margin between spot and forward. Some authorities, indeed, hold that the forward rate is the key to the situation, and that what is really happening is that the spot rate is being forced up by the steadily widening spread between the two. This suggests that the normal forces at work upon the exchange are still operating in favour of France, and that they are only being held in check by the special forces arising from the difference in favour of sterling between London and Paris discount rates. The argument is that the more French short money is drawn to London by these special forces, the bigger is the demand for forward francs to cover these movements, and so the wider becomes the spread between spot and forward, and, with the forward rate kept steady at the gold point, the higher the spot exchange rises. It must be pointed out, however, that this week's improvement in the spot rate is partly explained by transfers of French funds to Germany, the exchange as usual being covered through London. This also accounts for the improvement in the mark. Regarded from another angle, the effective rate at which bills can be bought in Paris to-day is 1½ per cent. Allowing ½ per cent. for covering the exchange, and taking London discount rates at 2½ per cent., this gives a margin in favour of London of ½ per cent. This is not a fixed margin, for the cost of covering the exchange in particular is liable to change suddenly. Hence the difference of ½ per cent. between the two centres is far from being too big to make sure that the French funds now invested in sterling bills are retained in London.

A similar calculation gives London a margin of ¼ to ½ per cent. over New York, and so the danger of the withdrawal of the American funds now in London is less pressing. Were London market discount rates, however, allowed to fall below 2½ per cent., there would arise a real danger that French holders of sterling bills would refuse to replace them upon their maturity. It is advisable to emphasise this point, because the Treasury bills issued next week are the popular end-of-June maturity, and there is sure to be a big demand for them both from the banks and the market who always wish to have funds coming in immediately before the turn of the half-year. It is always doubtful if it is worth buying bills at fancy rates solely for the purpose of making sure that money will be available for window dressing. On this occasion, when it is desirable that foreign countries should not get the impression that London discount rates are about to sag to the low levels current last autumn, it is to be hoped that the banks and the market will be temperate in their demands. Under current conditions, a market rate of 2½ per cent. affords a fairly wide margin of safety, but in view of the instability of the different components of this margin, and of the significance of the present level of the Paris forward exchange, the margin is by no means excessive.

In spite of a huge turnover of Treasury funds, amounting to \$3,100,000,000 and constituting a peace-time record, money in New York has remained easy and abundant. The official call rate has continued at 1½ per cent., and outside money has been freely offered at 1 per cent. The February foreign trade returns were very disappointing. Imports were \$175,000,000, compared with \$183,000,000 in January and \$281,000,000 in February last year. Exports were \$226,000,000, as against \$250,000,000 in January, and \$348,000,000 in February last year. On Monday the arrival of \$2,300,000 gold from the Argentine was reported.

The Foreign Exchange market was rather busier, a fair volume of steady trading being recorded. Several European currencies moved in favour of sterling, but no wide fluctuations occurred. New York rose from 4.85½ to 4.85¾, and Montreal weakened from 4.85½ to 4.86½. Paris lost four points at 124.20, while Brussels depreciated sharply to 34.89. Milan was unchanged at 92.75. The peseta was again erratic, and went from 44.0 to 46.70 after touching 47.30. Amsterdam remained unmoved on balance at 12.11½. Berlin improved sharply from 20.41 to 20.39½. Switzerland, after a slight recovery, relapsed to 25.15½, a loss of ½ on the week. Of the Scandinavian exchanges Stockholm went fairly sharply in our favour to 18.14½ against 18.13½ last week, but Oslo gained ½ at 18.16½, as did Copenhagen at 18.16½. The South American exchanges were again erratic and weak, Rio losing ½d. at 4d. and Buenos Aires ½d. to 39½d., whilst Montevideo fell sharply from 38½d. to 36d. In the Far East the rupee was firm at 1s. 5½d., as was the yen at 2s. 0½d. Batavia improved to 12.12½. In the forward market dollars were at rather enhanced premium quotations of ½ cent and ¾ cent. Paris weakened a little for one month to 13 centimes premium, but was firmer for three months at 29 centimes premium, against 27 last week. Brussels jumped to 2 and 4 centimes premium, against 1 centime and 2 centimes last week. Milan was not much changed at 8 and 22 centesimi discount. Madrid was decidedly firmer at 7 and 19 centimos premium. Silver prices again advanced, cash rising by ¼d. to 14½d. and forward by the same margin to 14½d., as a result chiefly of Chinese buying in connection with local exchange operations. The China silver exchanges rose in sympathy, Hong Kong by ¼d. to 1s. 0½d., and Shanghai by ¼d. to 1s. 4d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Bouverie Street, London, E.C.4.

AS OTHERS SEE US.

*Oh wad some Power the giftie gie us,
To see oursel's as ithers see us.*

If the Bard was right in assuming that it is good for our immortal souls to look at ourselves through other people's spectacles, then the *Times* has given priestly aid to the weary soul of Britain by publishing five candid articles upon Britons and their shortcomings from the pen of the eminent French publicist, M. Siegfried. The mirror into which he invites us to look is not flattering. It reveals us as indolent, complacent, mentally lazy, hide-bound by tradition, content to "muddle along," neglectful of self-help, inclined to impute our difficulties to the faults of others, fatuously hopeful that other countries will mend their ways to suit us, lacking in imagination, believing vaguely in our lucky star, over-given to sport and pleasure—yet with it all, models of patriotism and of an almost quixotic scrupulousness. What are we to make of this mixture of truth and caricature? It is a relief to find that M. Siegfried himself puts no worse an interpretation upon the mystery than this—that there is nothing radically wrong with us, but that we lack the cardinal virtue of vitality.

Let us begin by admitting that M. Siegfried's analysis is one that contains a good deal of superficial accuracy, and that if the deeper traits of English character are overlooked or misunderstood, the fault is ours and not that of foreign observers. For John Bull does not wear his heart on his sleeve; he is self-depreciatory; he has idiosyncrasies not paralleled in other races; and his sense of humour, which defies all the foreigner's efforts to understand, often suggests an indifference to grave affairs, whereas in reality it does no more than cloak a deeper seriousness. All these attributes combine to present an outward appearance of a lazy tolerance, or of an infinite capacity for complacent drifting. Add to them the national passion for sport of every kind and description, and you cannot greatly wonder if the outside world thinks of us very much as M. Siegfried has written. Is it reasonable to expect a foreign visitor to believe that we are in earnest about the big problems of the day, when at a moment of deep economic depression, widespread unemployment, and critical industrial transition, our Press and people devote so large an attention to the Boat Race, the Grand National, the football cup ties, boxing, the loss of a cricket match at Johannesburg, and even the billiards magic of an Australian cousin? In so far as M. Siegfried urges the need for Britain to realise that a national effort is required to face an existing crisis, we agree with all our heart. And when he explains that the country is not yet facing peculiar difficulties with adequate vigour and imagination, we admit the soft impeachment, which has, indeed, been made time and time again in the columns of the *Economist*.

But some of the implications of M. Siegfried's argument fit the caricature better than the real picture. In brief, the impression conveyed by the five articles taken as a whole is that Britain is sliding down hill and has not got the energy and initiative to pull herself back; that she is decadent and is becoming content with decadence through the demoralisation wrought by a policy of *panem et circenses*. In the early years of this century precisely the same allegations of moral, if not material decadence, were freely made by foreign critics, and were certainly believed in Germany. Yet when in 1914 a stirring call for action came, the nation revealed a virility and a staying power which surprised the world. Given the realisation of the existence of crisis and bold leadership in facing it, we believe the country is as capable now as it was in 1914 of giving a convincing demonstration of energy, sacrifice, determination and endurance.

It is not possible to follow M. Siegfried through the whole of his argument; but with one or two of his conclusions (stated or implied) we wish to join issue. He is clearly under the impression that this country's economic

effort since the war is very much smaller than is really the case. He is obsessed, and rightly so, with our 2½ millions of unemployed; but is he aware that in 1929 the numbers actually in employment were 800,000 greater than in the pre-war boom year of 1913, in spite of progressive displacement of labour by rationalisation? The country's industry and commerce was in that year, and despite domestic difficulties and the stress of adverse world influences, maintaining in employment larger numbers at very much higher standards of living. However much we may agree that readjustment of nominal wages is needed if the whole population is to be given employment, we may legitimately claim that, so far at least, we have succeeded, to an extent not achieved—in spite of Protection—by any other European country, in establishing and maintaining for a growing population the high general level of material well-being which is the real aim of all industrial activity.

Again, when it is suggested, as it is equally by M. Siegfried and by British pessimists, that our export trades are waning and will not recover, it must be recalled that, while for inevitable reasons Britain's share in world trade has fallen off, yet the decline is relative and not absolute. In actual fact, British exports increased between 1924 and 1929 by, roughly, 8 per cent., and, provided that costs of production can be adequately reduced, there is no reason why the advance should not be resumed when the trend of the trade cycle changes, always supposing that we are saved from the burden of a tariff. Nor is the growth of the import balance necessarily alarming, for it is at once a reflection of resilient "invisible exports" and of a re-direction of economic effort. Quite clearly, too, M. Siegfried has been misled by justifiable complaints of the inelasticity of our economic system into under-estimating what has been done in the realm of industrial reorganisation. The progress in this sphere has been slow, and much remains to be done; but, considering the special problems of the oldest industrial country, the extent of rationalisation and reconditioning of old industries and of development of new industries which has taken place cannot be dismissed as negligible.

Two years ago M. Siegfried's strictures would have gained more credence than to-day. At that time Britain seemed to be lagging behind in a more or less general advance in economic prosperity. To-day it is seen that Britain, exposed as she is to the full force of world depression, has weathered a year of storm better than many of her rivals, her level of productivity having fallen far less than those of Germany or the United States. That is of good augury for the future, and we are glad to see that M. Siegfried refutes those who believe that in the early future we must face the dilemma of deciding whether to throw in our economic lot with Europe or with the Empire. Closer relations and understandings both with European countries and with the Dominions are possible and desirable and are not mutually exclusive. It is the supreme need of the country to sell her goods anywhere and everywhere that she can. So long as this need, both for foreign and for Imperial markets for British goods, is recognised and restrictive policies of protection and preference are resisted, there will be no reason to despair of the British trade position when the present world cloud passes, nor to revise our ideas of the future limits of this country's economic efforts.

Altogether, there is good reason for asking M. Siegfried and other assiduous purveyors, both at home and abroad, of the popular theory that Britain is a spent force, to look a little further below the surface. You cannot safely judge either Britain or the Briton by superficial appearances nor take them at their own, often depreciatory, valuations. While more voluble nationalities hasten to and fro with more obvious gesticulations of concentrated energy, the Englishman may appear to be idle and indifferent because he stands thinking with his hands in his pocket. But really he has not been idle in the past decade. He has assumed and carried heroic burdens, and has tackled

tasks of readjustment more difficult than those faced in any other country. It may be that the method of performance is unostentatious and the results rather slow in accruing. It may be that progress should be faster, and that the country needs to be awakened by the goad of stimulating leadership. We can at any rate assure our friendly and candid French critic that we have not begun to pull the blinds down yet, and that what he mistakes for coma is but the Englishman's reluctance to become excited until he is quite certain that a crisis is present. If M. Siegfried has contributed towards removing this reluctance, then he has performed for England a service for which she will be duly grateful.

PROSPECTS FOR THE DISARMAMENT CONFERENCE.

THERE has been a distinct turn for the better in the prospects of the Disarmament Conference. The tide may be said to have turned at the January meetings of the League Council and of the Briand Committee for Closer Union in Europe—largely through the initiative, and under the influence of the personality of Mr Henderson. The completion of the Anglo-Franco-Italian naval arrangement has now set the tide running strong. The naval agreement is "a happy beginning of this year of preparation for the General Disarmament Conference." These words are Signor Mussolini's, quoted by the Italian Minister for Foreign Affairs, Signor Grandi, in his speech in the Chamber at Rome last Saturday. And this speech itself is a notable landmark. After pointing out that the effect of the new pact would be to reduce the French and Italian building programmes by no less than one-third down to the end of 1936, Signor Grandi went on to declare that, politically, the arrangement represented "a victory for all, a victory for equity," and that "it did not leave behind it recriminations, regrets and bitterness, but gave birth to a new and mutual confidence between nations." This is as much as to say that the agreement has taken the sting out of Italo-French relations, as as this sting has been felt, all along, on the Italian more sharply than on the French side, Signor Grandi's declaration gives a real assurance that, during this critical year before the Disarmament Conference meets in February, 1932, Franco-Italian relations will be distinctly easier and more cordial than they have been at any time since the Peace Conference of Paris, a dozen years ago.

After this noteworthy evidence of the general direction in which the tide of international feeling has turned, let us examine the movement in detail, as far as it can be followed in the events of the last few days. The most important event, this week, is the meeting of experts in London in order to embody the naval arrangement in treaty form. This is important; for, though there is no assurance that the final document will be any more intelligible than last week's White Paper to the layman, it will presumably be made to mean something quite free from ambiguities—and therefore proof against future misunderstandings and controversies—in the minds of the professionals who have to act upon the agreement in the several countries concerned. The invitation to this meeting, which has been issued by the British Government, has been addressed not only to Paris and Rome but also to Washington and Tokyo. This was obviously the proper course, for the whole object of the laborious negotiations of the past year has been to convert the London Naval Treaty of 1930 into a Five-Power treaty from end to end, instead of leaving it merely a Three-Power treaty in respect of the vital Chapter III, which deals with the comprehensive limitation of naval armaments.

The Japanese Government apparently has accepted the British invitation, and has instructed the Japanese Ambassador in London to appoint a jurist to take part in the work of drafting. As for the American Government, it appears to have taken fright once again at the ancient bogey of European entanglements. Upon receipt of the British invitation, the Secretary of State at Washington,

Mr Stimson, placed himself in communication with Mr Morrow, the distinguished American Ambassador in Mexico who was one of the American delegates at the London Conference last year, and commissioned him to lay the American Government's views before the Government at Westminster. Mr Morrow, who received this communication in mid-Atlantic, has now landed in England. He is apparently to represent that, in the American view, the incorporation of the Anglo-Franco-Italian arrangement of March in the London Naval Treaty of 1930, is unnecessary, or in other words, that, from the American point of view, it is undesirable. It would be possible, of course, for an American jurist to co-operate in the definitive drafting of the new agreement without the two instruments being welded into one; but even this appears to be obnoxious to the cautious statesmanship of the New World. Such excessive caution is a pity; for, even if the two agreements are kept rigidly separate, there are still certain points in the European agreement which have somehow to be made to square with previous agreements to which the United States is a party; for instance, the provision for raising the French and Italian maximum for capital ship tonnage from the Washington figure of 175,000 tons to 181,000. It would clearly be easier to deal with this small, but real, difficulty if the American Government were to lend a hand in finding a solution.

Another small cloud on the horizon is the American insistence on retaining the Washington figure of 35,000 tons as the maximum tonnage for capital ships. American experts insist on retaining the right to build capital ships of this size because, owing to the United States' lack of naval bases distributed conveniently all over the world, they are anxious to endow the units of their fleet, in all categories, with as long a cruising range as possible, and the higher the tonnage the greater the range. On the other hand, France is only concerned to possess battle-ships that, ship for ship, will outclass the new German 10,000-ton armoured cruisers of the *Ersatz-Preussen* type; Italy is only concerned to have the right of possessing as big capital ships, and as many of them, as France; and the British Commonwealth of Nations would like to have the smallest and least expensive standard type of capital ship, provided she may possess it in sufficient numbers to surpass the French and Italian strength in this arm in accordance with the Washington capital ship ratio. The Americans are evidently alarmed lest, at the forthcoming General Disarmament Conference, the three parties to the new agreement may combine to advocate the reduction of the maximum from 35,000 tons to 23,333, the figure prescribed in the new agreement for the two French and two Italian capital ships of which it expressly authorises the construction.

In this matter of capital ships, there is also another awkward question: when the time for the Disarmament Conference arrives, will the French still be content with two new capital ships of the 23,333-ton class? Or will they demand ship for ship, in order to match the German 10,000-ton battle cruisers, of which Germany is entitled to build no less than four, in replacement of four pre-war vessels, by the terms of the Peace Treaty of Versailles? This question is raised by the action of the Reichstag last week in voting the credits for laying down the second of these vessels, the *Ersatz-Lothringen* (an unfortunate name in itself), in succession to the *Ersatz-Preussen*, which is now approaching completion. In a sense, this vote is an incident in the internal politics of Germany rather than a symptom of her foreign policy. By a strange irony, it was carried by the support of the Social-Democrats and this support was extorted from them by the necessity of keeping the middle parties together in order to keep the National Socialists and the Communists out of power. Collaboration requires mutual concessions, and the second "pocket-battleship" was the price demanded by General Groener and his followers. General Groener's policy, in view of the Disarmament Conference, is for Germany to arm herself as effectively as possible up to the treaty limits. It is a misguided policy from every point of view. For the utmost ingenuity on these lines cannot restore to Germany the equality of an armed strength with the victorious Powers that she, not un-

THE ECONOMIST.

601

naturally, desires, while it can give France a good case for insisting upon maintaining her thesis of the priority of security over disarmament.

Nor does it improve matters when the advocates of "pocket-battleship" building in Germany intimate that these new-fangled engines of war are intended for use, not against France, but against Poland. This will not reassure France, who is concerned to protect her ally; and it can hardly fail to exacerbate German-Polish relations, which, next to Franco-Italian relations, have been perhaps the tenderest spot in the body politic of Europe since the war. Thus, this vote in the Reichstag is unfortunate—especially coming, as it does, when the world is waiting to hear what the Polish Government is doing to redress the grievances of the German minority in Poland, in pursuance of the recommendations of the League Council last January. Here, too, however, there is one auspicious event to record. In the small hours of Thursday morning, March 12th, the Polish Diet voted the ratification of the Polish-German Commercial Treaty, which was signed on March 17, 1930. If once this treaty, and the complementary treaty of October 31, 1929, providing for the liquidation of all financial claims by Poland on Germany and by Germany on Poland in respect of the war and the peace settlement, were ratified on both sides, we might hope for a new start in German-Polish relations, as a complement to the new start that has been made in Franco-Italian relations this month.

THE COMING BUDGET.

THE magnitude of the budgetary problem which confronts the Chancellor of the Exchequer, and whose solution Mr Snowden, or (in the event of his regrettable illness being protracted) a colleague deputising for him, must submit to Parliament next month, needs little emphasis. In last week's issue of the *Economist* we noted that the Estimates for the Supply Services and Revenue Departments, at £439 millions, called for over £7 millions more than even the Final Estimates (including £14 millions of Supplementaries) for 1930-31, and that, unless steps were taken during the coming financial year to diminish expenditure on "transitional benefit" to the unemployed, even this increase would probably be insufficient by £5 to £10 millions to cover outgoings. The remainder of the expenditure side of the accounts can be dealt with briefly: payments to the Northern Ireland Exchequer and Miscellaneous Consolidated Fund Services are unlikely to show any important alteration, and the rest consists of the sum to be provided for interest and sinking fund in respect of the national debt. This was fixed by the Finance Act of 1928 at £355 millions, to which there has to be added £5 millions (as in 1930-31), namely, the second instalment of Mr Snowden's programme to make good the deficit of £14½ millions realised in 1929-30. In other words, unless the Chancellor modifies the arrangements made in 1928 by Mr Churchill to deal with the debt, he must find approximately the same amount for Consolidated Fund Services as last year.

When the Chancellor surveys the resources for meeting this increased expenditure, the first outstanding fact is that even in the current year there will be a deficit, as far as can now be estimated (we discuss the latest figures in a Note of the Week) of at least £25 millions. Forecasts of revenue are most difficult to make; but one or two factors are known. For example, the additional yield in 1931-32 (i.e., a full year) of the new taxes imposed in last year's Budget was estimated at roughly £13 millions; but against this, Mr Snowden is left with only £4 millions in the Rating Relief Suspense Account to be appropriated in aid of 1931-32 revenue, as compared with £16 millions appropriated in 1930-31. Many of the sources of tax revenue will probably show comparatively minor changes, for such items as Stamps have already felt the full effect of the slump in trade. In view of the depression, however, the most favourable guess which we are disposed to make under the head of Inland Revenue is that the coming year is likely to see a decline of at least £16 millions below this year's yield, a drop reflecting mainly, of course, a diminished return

WORLD-WIDE LETTERS OF CREDIT AND DRAFTS ISSUED.

from income tax. It is conceivable that the Treasury may be able to reckon on a slightly larger income from the Post Office (net) and the Exchequer share of the motor vehicle duties, but possible gains under these heads or from "windfalls" (there appear to be few cupboards left to raid) may well be left out of account for our present purpose in view of the fairly optimistic estimate we have placed on tax revenue. Thus the position at which we have so far arrived can be summarised as follows:—

Dr.	£ Mn.	Cr.	£ Mn.
Initial prospective deficit ...	25	Additional yield of 1930 taxes	13
Additional "supply" expenditure*	7	Balance—	
Loss of rating suspense aid ...	12	Resulting deficit for 1931-32.....	47
Loss of revenue on existing basis	16		
	£60		£60

* Making no allowance for supplementaries of, say, £8 millions, probably necessary unless "transitional benefit" expenditure is reduced.

This prospective deficit of £47 millions is, of course, not the whole story. By his last Finance Act, Mr Snowden bound himself to carry forward to the next Budget any deficit realised in a given year; and to adhere to this self-imposed ordinance would mean raising the prospective deficit to over £70 millions. Is there a case for relaxing this rule? Under the circumstances we think there is. In the first place—and this is a point which we hope will be appreciated by our foreign readers—although both this year and last the Budget will technically have shown a "deficit," this does not mean that we have been running deeper into debt. On the contrary, not only has sound actuarial provision been made since 1928 for the interest accruing on the total of National Savings Certificates outstanding, but we succeeded last year in making a real reduction of £28½ millions in the debt, or, allowing for net borrowing of £3 millions during the year by the Unemployment Insurance Fund (for which no provision was made in the Budget), £25½ millions. In the current year, allowing for such saving as may have been made in interest charges on the floating debt, it looks as though Mr Snowden will have been able to allocate some £30 millions to actual debt redemption, i.e., £55 millions placed to sinking fund (after providing for Savings Certificates' accrued interest), less £25 millions realised deficit. Against this there will have been entirely unprovided-for borrowing amounting to nearly £35 millions for the Unemployment Insurance Fund, but until recently the suggestion has never been made that borrowings by that Fund should be considered necessarily a bad debt, and though the Chancellor, in framing his Sinking Fund policy, must clearly have some regard to these borrowings, we need not yet assume that the whole of the Fund's debt must eventually fall to be repaid by the general taxpayer.

On the presumption, therefore, that Supplementaries on account of "transitional benefit" will be avoided, that a general reform of the Unemployment Insurance system will be carried through before many months of the ensuing financial year have elapsed, and that a special provision, to which we come later, is made in the 1931 Budget, we should not be inclined to criticise Mr Snowden if he felt that he ought to limit fresh tax burdens as far as possible in a time of material and psychological depression, and decided to spread over a term of years the task of making good the deficit realised in 1930-31—or, to put the point more accurately, atoning for our failing to reduce debt in

that year according to plan. In other words, we suggest that he should lump together the £9½ millions outstanding from the deficit of 1929-30 and the £25 millions of the current deficit, and make good this total deficiency of £34½ millions by fixing the total debt charge at £360 millions for the next seven years. Any greater relaxation of effort in Sinking Fund policy would be flagrantly unsound finance.

We are left, then, with the probable gap of £47 millions between revenue and expenditure which the Chancellor has to bridge. To fulfil this task what lines should he follow? In attempting to answer this question we take the following principles as axiomatic: direct taxation is near, if it has not attained, its maximum; there should be no radical departure from our traditional fiscal policy; and the fact that the root trouble in our budgetary position is caused by "transitional benefit" at the expense of the Exchequer should be brought forcibly home to as large a number of the electorate as possible, and treated—both on financial, political and economic grounds—as a special and separate affair. To take the electorally popular, easy way of placing the whole burden once more on the direct taxpayer would not only be politically unjust; its effect on public psychology would certainly be highly prejudicial to industrial development and trade recovery; and we must, therefore, look first to additional sources of revenue from indirect taxation.

With the preliminary observation that over £55 millions a year in indirect taxes have been remitted during the past decade, we suggest that the duties on spirits might be raised from 72s. 6d. to 76s. a gallon; that the beer duty might be increased from 100s. to 106s. per standard barrel, with a moderate upward revision of the various scales of duty on wine; that the duty of 4d. per lb. on tea, which Mr Churchill repealed in 1929, might be restored, and considerably higher duties placed on coffee and cocoa; that the now low scale of sugar duty might revert to the pre-1928 level; that the full duty on tobacco might be raised from 8s. 10d. to 9s. 6d. per lb., and that the duty on petrol, etc., should be raised by 3d. a gallon. This last proposal we make reluctantly, since arguments can be raised against a high tax entering into transport costs; but revenue must be found, and petrol has, after all, been reduced by 4d. in recent months. Finally, we would suggest that a further substantial sum might be obtained by raising minor miscellaneous Excise duties, *e.g.*, on mineral waters, entertainments, various licences, etc. By these means we consider that Mr Snowden could secure, so far as we can estimate, about £35 millions, made up roughly as follows:—

Drink and tobacco.....	£
Tea, sugar, coffee, cocoa	12,000,000
Petrol	11,000,000
Miscellaneous	10,500,000
	1,500,000
	£35,000,000

We have thus bridged all but £12 millions of the prospective gap between revenue and expenditure. But the fact remains that unless the Unemployment Insurance Act is revised, the Exchequer will have to find in 1931-32 some £35 millions for "transitional benefit," or perhaps £8 millions more than Mr Snowden appears to have provided for in his Estimate for the cost of the Ministry of Labour. Although it is satisfactory to be able to infer that Mr Snowden relies upon a reform of that Act in the next financial year, we strongly suggest that the urgency of the need for revision should be brought home to the country by making sufficient provision to cover the whole estimated cost—on the present basis—of £35 millions in 1931-32. This would raise to £20 millions the deficiency still to be made good. Under these circumstances there is a strong case for the imposition of special emergency taxes, " earmarked " for "transitional benefit" and to be taken off when the reform of that aspect of Unemployment Insurance is completed.

Accordingly, we suggest, firstly, that the Chancellor, utilising the machinery of the Unemployment Insurance Fund, should collect from all insured work-people in employment a surcharge of 3d. per week (juveniles 1½d.) on their present contributions. This should yield, on the basis of the figures given in Appendix X of the evidence

submitted by Mr Gatus Bowers to the Royal Commission on Unemployment Insurance, about £6 millions in the coming year.

Secondly, to balance this sacrifice and to raise the remaining £14 millions, we suggest (a) that Mr Snowden should repeal the concession which he made in 1930 (at an estimated cost in a full year of £5 millions) whereby the first £250 of taxable income pays four-ninths of the standard rate instead of £225 paying one-half the standard rate, as previously; and (b) that all individual assessments to income tax (*i.e.*, excluding companies) should be subject to a special levy at 3d. in the £, with a similar surcharge on surtax assessments. (If the proposal to exclude companies were, in the opinion of the Revenue experts, administratively impracticable, the necessity for increasing the already tremendous toll of surtax might not arise.) By these means the gap of £20 millions would be covered with a comfortable margin to spare, and any saving in 1931-32 on account of "transitional benefit" as a result of revising the Unemployment Insurance Act would have the very proper effect of resulting in a surplus to be earmarked against the Insurance Fund's uncovered borrowings. To restore that Fund itself to a condition more nearly approaching solvency—by increasing ordinary contributions and reducing covenanted benefits—is an equally urgent, but quite separate, task.

We do not claim that these suggestions constitute an ideal plan or that they might not with advantage be improved in detail. This, however, we do claim for our proposals: as an interim measure, assuming that revision of the Unemployment Insurance Act will follow, they vitiate no canon of sound finance; no alternative plan for raising additional revenue can be found which will do less damage to our economic structure; in so far as the proposed Customs duties are concerned, articles have been selected which past experience has proved to be sound revenue-producers; and this suggested Budget has the great merit of being calculated, while holding the scale of justice fairly even between particular classes of taxpayers, to bring home to the nation that the cost of financing the "dole" on the present scale, with all its remediable abuses, must fall heavily on all alike.

BRITISH RAILWAY RESULTS.—II.

Our examination a fortnight ago of the gross receipts in 1930 of the four railway groups showed that they were over £11 millions lower than in 1929, and that of this decline nearly £7 millions came under the head of revenue from freight trains. Less than half of this diminution in revenue was balanced by curtailment of expenditure, but it is difficult to present a concise analysis of this side of the accounts owing to the fact that two of the groups treat the 2½ per cent. deduction from railwaymen's earnings, which was in force until May of last year, as revenue, while the other two subtract it from the expenditure side of their balance. In the table below the italicised figures represent the expenditure of the London Midland and Scottish and the Great Western respectively, after the 2½ per cent. has been deducted in order to make their figures comparable with those of the other two groups:—

EXPENDITURE. (000's omitted.)					
	1928.	1929.	1930.	Inc. or Dec. in 1930.	
London Midland & Scottish	£ 67,559	£ 66,907	£ 64,468	— 2,439	— 3.6
Adjusted for wages cut ...	67,140	65,818	64,063	— 1,755	— 2.7
London and North Eastern	50,738	50,896	49,206	— 1,690	— 3.3
Southern	21,143	20,914	20,702	— 212	— 1.0
Great Western	29,408	29,209	28,226	— 983	— 3.4
Adjusted for wages cut ...	29,227	28,736	28,054	— 682	— 2.4
Total	168,848	167,926	162,602	— 5,324	— 3.2
Adjusted total	165,248	166,364	162,055	— 4,339	— 2.6

When the adjusted figures are compared, it will be seen that the London and North-Eastern achieved the largest percentage reduction, and the other two large groups reduced their expenditure by something in the neighbourhood of 2½ per cent. The reduction on the Southern was very much smaller than on any of the other groups, as

was to be expected in view of the smaller decline in the traffic of that company.

As far as railway working alone was concerned, the London Midland and Scottish reduced their expenses by over £2 millions, the London and North-Eastern by nearly £1½ millions, the Southern and Great Western by £247,000 and £692,000 respectively. While these reductions unfortunately owe their existence to some extent to the diminution in the volume of traffic handled, they also reflect in part those economies resulting from amalgamation whose effect could only be felt gradually, and in part they are due to the effects of a rationalisation movement which is still in progress.

The most important categories of expenditure on railway working, comprising between them about 77 per cent. of total expenditure and nearly 90 per cent. of railway expenditure, are maintenance of way and works, maintenance of rolling stock, and locomotive running and traffic expenses. Owing to the fact that the 2½ per cent. is deducted from the labour cost of these by the London and North Eastern and the Southern but not by the other two groups, the figures for all the groups are not strictly comparable, and we have therefore analysed them in two separate tables. The first table reflects all the economies, including those afforded by the 2½ per cent. earnings deduction:—

PRINCIPAL ITEMS OF RAILWAY EXPENDITURE.
(000's omitted.)

	Maintenance of Way and Works.		Maintenance of Rolling Stock.		Locomotive Running and Traffic Expenses.		Total Engine Miles.	
	1929.	1930.	1929.	1930.	1929.	1930.	1929.	1930.
L.N.E.R.	£ 6,015	£ 5,566	£ 8,939	£ 8,344	£ 25,072	£ 24,808	175,339	170,525
S.R.	3,474	3,420	2,917	2,777	9,895	9,872	72,959	74,413

Whereas in 1929 the economies of both groups were effected entirely through reduction in locomotive running and traffic expenses, in 1930, in spite of the smaller volume of traffic handled, this category of expenditure shows the smallest diminution. The reduction in the expenditure of the North Eastern on the maintenance of way and works is more apparent than real, as most of it is accounted for by the fact that in 1929 the expenses were met out of income and a further sum put by to suspense account, whereas in 1929 £156,346 of the expenditure under this head was met by a transfer from suspense account. The Southern, on the other hand, drew less upon its suspense account last year, so that the real curtailment of expenditure on way and works amounted to £421,000. The saving on rolling stock maintenance was no doubt largely due to the progress of rationalisation in the repair shops. Owing to the comparative smallness of the reduction in locomotive running and traffic expenses, this item bore a larger proportion to railway receipts than in the preceding year. The percentage rose from 45.13 to 47.35 on the London and North Eastern and from 43.03 to 44.08 on the Southern.

The corresponding table for the other two groups leaves out of account the effect of the 2½ per cent. cut in both years:—

PRINCIPAL ITEMS OF RAILWAY EXPENDITURE.
(000's omitted.)

	Maintenance of Way and Works.		Maintenance of Rolling Stock.		Locomotive Running and Traffic Expenses.		Total Engine Miles.	
	1929.	1930.	1929.	1930.	1929.	1930.	1929.	1930.
L.M.S.	£ 7,575	£ 7,192	£ 10,289	£ 9,882	£ 34,886	£ 33,909	233,013	227,238
G.W.R.	4,046	3,647	4,116	3,975	13,667	13,546	97,770	96,646

Here, again, savings on maintenance have been very much greater than on operation, and have been especially marked in the case of the Great Western, though, in this case, too, much of the difference is due to a larger transfer from suspense account. These savings on maintenance of way and works represent for the most part postponement

of expenditure which is not urgent, and can be more properly allocated to years of less financial difficulty. The ratio of locomotive running and traffic expenses to railway receipts has risen from 47.67 to 49.62 per cent. on the London Midland and Scottish, and from 44.05 to 45.78 per cent. on the Great Western.

In view of the importance of the part played in the cost of railway working by wages and by the price of fuel, we have shown, for the locomotive running and traffic expenses groups, which form about 53 per cent. of the total railway expenditure, the total outlay on wages, salaries, and on fuel, so far as it is separately distinguished in the accounts. Wages have necessarily been omitted in the case of the London Midland and Scottish and the Great Western for the reasons already given.

LOCOMOTIVE RUNNING AND TRAFFIC EXPENSES—MAIN ITEMS.
(000's omitted.)

	Wages and Salaries.			Fuel.		
	1928.	1929.	1930.	1928.	1929.	1930.
London Midland & Scottish...	£ ...	£ ...	£ ...	£ 5,796	£ 5,797	£ 5,646
Percentage of expenditure ...	16.3	16.3	16.3	16.6	16.6	16.7
London & North Eastern.....	18,739	18,483	18,368	3,973	4,150	4,057
Percentage of expenditure ...	73.9	73.7	74.0	15.7	16.6	16.3
Southern	6,575	6,427	6,456	2,187	2,145	2,127
Percentage of expenditure ...	65.7	64.9	65.4	21.8	21.7	21.5
Great Western	...	...	...	2,065	2,028	1,984
Percentage of expenditure ...	...	...	...	15.1	14.8	14.6

As the 2½ per cent. cut in earnings was only in operation for 4½ months of last year, while it took effect throughout 1929, the reduction in wages was very small on the London and North Eastern, and on the Southern the wage bill for the items comprised in the above table actually increased slightly, owing, presumably, to the increase in traffic on the electrified lines. The London Midland and Scottish figure, on the other hand, which does not reflect the 2½ per cent. deduction, fell from £25,017,000 to £24,476,000, and that of the Great Western, at £10,140,000, against £10,249,000, was almost stationary. In spite of the reduction in engine mileage and the still greater reduction in traffic, the fuel bill shows only a small reduction in all cases, largely owing to the higher price of coal.

The net outcome of these developments in revenue and expenditure respectively is summed up in the following table:—

WORKING RESULTS.
(000's omitted.)

	London Midland and Scottish.	London and North Eastern.	Southern.	Great Western.	Total, Four Groups.
Railway revenue	£ 68,241	£ 52,391	£ 22,396	£ 29,590	£ 172,618
Railway expenditure	55,669*	41,863	17,928	23,445†	139,482
Net railway revenue	12,572	10,528	4,468	6,145	33,136
Profit on ancillary businesses	Dr. 191	92	720	147	768
Other revenue	1,045*	549	946	695†	3,812
Net revenue	13,426	11,169	6,134	6,987	37,716
Brought forward	212	81	162	186	641
Profit on realisation of investments	392	123	...	150	665
From reserves	767	100	...	...	867
Total available	14,797	11,473	6,296	7,323	39,889
Fixed charges	4,418	4,083	1,753	1,550	11,804
Guaranteed and preference dividend	8,474	7,203	2,576	3,348	21,701
Ordinary dividend	1,904	106	1,773	2,361	6,144
Reserve and carry-forward	...	80	94	65	239

* £405,083, representing the 2½ per cent. wages and salaries cut, has been deducted from these figures.

† £171,899 deducted as in the above footnote.

Clearly, the recourse to paying dividends out of reserves can only be a temporary expedient. Net revenue must somehow be increased, and if this cannot be done by increasing traffic it must be done by diminishing expenditure. Conspicuously successful efforts to this end have been made in certain departments, as, for example, the locomotive repair shops, but similar drastic reorganisation will have to be undertaken throughout if the railways are to pay their way and at the same time deal fairly by the public.

FOREIGN LOAN MARKETS.—I. NEW YORK.

(BY A CORRESPONDENT.)

So much attention has recently been drawn to the importance, from the point of view of international monetary equilibrium, of encouraging a large and steady flow of investment in foreign issues by "the creditor countries" that, although at present the activity of the market for new capital is everywhere at a low ebb, it may not be inopportune to survey briefly the absorbing capacity and organisation of the leading foreign centres. A beginning may conveniently be made with New York, whose rise to prominence as a foreign loan market has been a post-war development, but whose potentialities as a buyer of foreign securities are enormously important. The following figures, published by the United States Department of Commerce, show the number and nominal value of foreign securities placed publicly in the New York market since the war:—

Year.	Number of Foreign Issues.	Amount Issued.
		\$
Average 1919-23.....	103	684,808,257
1924	120	1,217,217,937
1925	164	1,316,166,150
1926	230	1,288,459,182
1927	265	1,577,414,260
1928	221	1,488,361,680
1929	148	705,767,681
1930	121	1,085,613,214

It will be seen that, after the five years of vastly increased activity between 1924 and 1928, the foreign issues market in New York underwent in 1929 an abrupt contraction, whose repercussions on the economic situation, both of South America and of Central Europe, are too familiar to need restatement. The question of immediate interest is whether the partial recovery recorded in 1930 (it is significant that the bulk of the new issues took place in the first six months of that year) will be maintained or increased in the future.

The natural resources and productivity of the United States are so great that, when the present acute phase of trade depression has passed, there can be little doubt that New York will normally command ample funds available for investment abroad. The extent to which she will use these funds for granting long-term loans to foreign borrowers depends mainly on two factors: the technical position of the New York foreign bond market and the attitude of the American investing public towards foreign loans. The first is largely determined by the second; for the present congested state of the New York market is due to the reluctance of the American public to buy foreign bonds, and to their desire to get rid of the foreign bonds acquired during 1924-8. So long as there is no revival of interest among investors towards foreign issues there can be no fundamental and lasting improvement in the technical position of the New York market. Although foreign demand for these issues might relieve the situation to some extent, the market would soon become congested again if the investing public remained unwilling to acquire foreign bonds.

American bond-selling houses have every right to be proud of the extent to which they succeeded during 1924 to 1928 in inducing the public to acquire the taste for foreign bonds. Considering the immense investment opportunities in the domestic sphere, which offered far wider scope for capital appreciation than any fixed interest-bearing security can possibly offer, it was, indeed, a remarkable achievement to place milliards of dollars worth of foreign bonds in every part of the United States. The fact that they were successful justifies a good deal of optimism as to the future of the New York bond market. It is true that some of those who acquired foreign bonds during 1924-8 sold them out at a loss during the last two years. But this does not necessarily mean that in future they will be more reluctant to acquire such bonds than they were in the past. The memory of the investing public is short; and, in any case, they have suffered much heavier capital depreciation on their American shares than on their

foreign bonds. On the whole, the short experience of the United States as a lender abroad on a large scale cannot be said to have been unfavourable. In spite of occasionally indiscriminate lending, only a few small loans have so far been defaulted. Thus, notwithstanding campaigns against lending to Europe in general or to Germany in particular, the difficulties of inducing the American investor to take an interest in foreign bonds are by no means insurmountable.

It would be, of course, risky to prophesy when the revival of the demand for foreign bonds will take place. Since the slump, the public has been reluctant to acquire securities of any kind, and the bond-selling houses have considered it inexpedient to press the sale of foreign bonds to any great extent, pending a change in the general attitude of the public. Meanwhile, the technical position has improved as a result of the foreign demand for these bonds brought about by their decline to unexpectedly low levels. The borrowers themselves have taken advantage of the opportunity of repaying part of their debt by means of buying their bonds at low prices. It is reasonable to assume that a great part of the short-term credits obtained by German municipalities and other debtors has been used for this purpose. The flight of capital from various European countries has assumed the shape of buying the dollar bonds of their respective Governments. As it is generally assumed—and not without reason—that a Government is more unlikely to default on its external debt than on its internal debt, many people who would not acquire internal bonds of their Government have invested part of their capital in its dollar bonds. Bonds worth hundreds of millions of dollars have been thus repurchased, at prices varying between 10 and 20 points below the issue price. The profit thus made by Europe as a whole at the expense of the United States as a whole has done something towards counteracting the losses of European investors and speculators caught in the Wall Street slump. It is impossible to ascertain even approximately what proportion of the foreign bonds issued in the United States were repurchased by the borrowers; but it is believed to be an important item.

It is gratifying that the American financial houses have, on the whole, stood the recent strain of the adverse period in the foreign bond market remarkably well. It was an extremely severe test, but most firms emerged from it satisfactorily. Possibly the experience of the last two years may have taught some of them a lesson to be more discriminating in future in dealing with applications for loans, and to abandon the practice of rate-cutting. The fact that the bond-selling houses have to a great extent shifted the weight of their activities to the field of placing shares may prove beneficial from this point of view, for in the past it was largely in order to employ their expensive bond-selling organisations that they were prepared to undertake loans which were open to criticism, and that they quoted terms which left practically no margin for profit. It is reasonable to assume, therefore, that after the revival of the activity of the American market for foreign loans, there will be less cut-throat rivalry both between American issuing houses amongst themselves, and between New York and other loan markets.

From the point of view of London, it is highly desirable that a revival of activity should take place in New York in the near future. Apart from its repercussion upon our exchange and gold position, it would assist the London market to resume lending abroad. While the expansion of a discount market is detrimental to the rival discount markets, as the volume of business is limited, there is ample business for everybody in the market for foreign loans. One of the causes of the complete stagnation of our foreign loan market is that there is at present no foreign market which would or could co-operate with us in the issue of international loans. Co-operation with Paris has proved to be highly difficult, while the absorbing capacity of the minor loan centres is not in itself sufficient to enable us to undertake large issues. Thus, far from regarding with jealousy the revival of issuing activity in New York, this market would welcome it, as it is bound to benefit by it.

EBB-TIDE IN THE RHONDDA.

(BY A CORRESPONDENT.)

THE valley runs north-west from its gateway to the sea, narrowing and deepening as it penetrates the hills. A railway follows the course of the river-bed, and parallel with the railway on either side two dreary, cobbled streets extend indefinitely, each carrying tram-lines and each flanked with monotonously repetitive little houses. In this quadruple chain of mean dwellings there is no important gap. The valley's so-called "mining villages" are mere administrative abstractions. Physically, they are just vertebrae in an infinite spinal column of brick and slate. A more substantial building here and there—florid chapel or assertive public-house—marks the beginning or end of a rateable entity.

By virtue of its geographical seclusion the valley forms—economically, politically and socially—an almost separate little commonwealth within the realm. Its social structure is singular in being almost devoid of class distinctions. There is no resident "territorial" aristocracy, and "the professions"—doctors, clergy, lawyers and the like—are represented locally by men drawn from the households of the mining families who people the valley. And, be it noted, though the hills that flank the river have kept their breasts and foreheads untouched by the physical apparatus of industrialism which has disfigured their lower slopes, the people who inhabit the valley, and have Fortune's leave to contemplate that upper beauty of unscarred bronze and purple mountain, are not country-folk either by descent or way of living. They are townsmen and the descendants of townsmen. For when the tide of coal-mining expansion rose on the flood up the Rhondda and the Taff, men flocked to this isolated El Dorado, not from the countryside but from Cardiff, Bristol and large towns farther afield.

It is a point to be borne in mind; for to-day, when the valley still holds a population of a quarter of a million, all town-minded and all interested, directly or indirectly, in the single occupation of coal-mining, the ebbing tide of the coal industry has left them without resource. Even had they the instinct or aptitude for rural work, little could be done. The hillsides are clothed with a thin layer of moss and peat, which supports a scattering of meagre sheep, above intractable rock. The creation of small holdings is attended with difficulties of labour and expense out of all proportion to the results obtainable; and farming on any substantial scale is out of the question. Coal was the magnet for this artificial population; and to-day, with most of the economically "gettable" seams nearing exhaustion and much of the export trade lost to better-situated mines, the valley has become an over-populated "no man's land," living on sufferance at the expense of the outer world, in the shape of the British Exchequer. In Pontypridd alone over five thousand men—a quarter of the working population—are "on the dole"; and in the valley as a whole there are many more thousands than our present mechanism can ever succeed in "transferring" elsewhere who have little or no hope of ever again finding work in a mine.

In this isolated enclave of "frozen" unemployment the dominant impression which the visitor receives is one of sceptical expectancy. Acute destitution, thanks to "transitional benefit," does not exist. With a wife and a child or two, one does not starve, even if one has no garden-patch, on thirty shillings a week; one exists. The uncomfortable little houses—rented at an average rate of 10s. per week—are bare of everything but the stark essentials. The women-folk seem embittered, but the men are dully quiet and reserved. This reserve is seemingly not based on pride, suspicion or resentment. It is the reserve of apathy—the tacit, reluctant acceptance of a situation which never improves. They sit at home and stare at the floor, or stand in groups at the street corner and stare across the road. Once or twice a week they put on working clothes and go coal-picking among the "tips." In such expeditions, having reverted to the coal-blackness which in their scale of values is the natural aspect of a man, they recover their spirits. Odd commentary on human nature, yet explanatory of the undoubted fact that men in this valley will save their "dole" at the cost of

going foodless in order to bribe a foreman to give them a job in a pit at a wage not much above the pay for idleness—men who spend hours silently at the street corner will whistle and sing as they hunt for burnable lumps among the waste.

These days of mock-labour apart, they are dressed, with some care, in a sort of shabby "second-best." Pathetically, they are trying, one gathers, to suggest that they are enjoying a voluntary holiday rather than an enforced abstention from work. Even though each man's circumstances must be well known in his area, it is noticeable that hands are always kept hidden; the whiter your hands the longer you have been "out." And in that common misfortune there still is individual shame. Shame, but little anger or hope. The valley has not abandoned, perhaps, its traditional political loyalties; but it has lost its faith in politicians, even in revolution. Waiting for "something to happen," because it cannot believe "that things can go on like this," yet unable to see whence aid is to be sought, it watches the ebb-tide with lack-lustre eyes, much as, in kinder country, Rye and Winchelsea must once have watched with ebbing hope the ineluctably retreating sea.

Notes of the Week.

Liberals and the Government.—On Monday the Government was defeated on the proposal contained in their Electoral Reform Bill for the abolition of University representation. The defeat was narrow—the margin being only four votes—and the issue one of minor importance. But the circumstances in which defeat was sustained possess considerable political significance. The abstention of twenty Labour members illustrated the lack of enthusiasm for the Bill in a section of the party, while of the 58 Liberal members, who were expected by the Government to help the Bill through, only nineteen went into the Government lobby and ten actually voted with the Opposition. Monday's division therefore brought to a head two political questions, namely, the leadership and cohesion of the Liberal Party and the co-operation between the Liberals and the Government. The chief Liberal Whip, Sir Archibald Sinclair, resigned as a protest against the failure of Liberal members to follow the party lead; while in Labour circles the view gained ground that, if things remain as they are, Liberal support is a broken reed. Both aspects of the affair were discussed at a Liberal Party meeting on Wednesday, but no definite decisions were taken, and the meeting was adjourned until next Tuesday. The time has clearly arrived for the Liberal members to choose a definite path. If they are to continue to act as a party they must agree to vote together either for or against the Government on certain general principles. On Tuesday Mr Lloyd George is expected to outline the conditions on which he is prepared to support the Government. There need not necessarily be anything alarming to Liberalism in this prospect of a possible pact, on terms, with Labour. It would merely regularise the existing situation, and, provided a satisfactory programme can be agreed in regard to home affairs (especially the overhaul of unemployment insurance), the price, from the point of view of public interest, might not be too high to pay for thus obviating a change of Government during the progress of the Indian and disarmament negotiations. Nor should it be impossible for a programme to be agreed which would satisfy Sir John Simon and his Right Wing followers. Nevertheless Tuesday will be a critical day for the Liberal Party, and the decisions taken at the meeting will go far to determine, not merely the Government's prospects of life, but possibly also the future of political parties in this country.

India.—The debate on India in the House of Lords on Wednesday was satisfactory in that it revealed no disposition, even on the part of those peers who may fairly be regarded as representing the ultra-Conservative view, to dissent actively from Mr Baldwin's policy of co-operation

with the Government in further Round Table negotiations. The note of caution was sounded, as might be expected, in nearly all the Opposition speeches; Lord Sankey was pressed to give, and gave, assurances on the Government's adherence to the need of "safeguards"; but, though obviously not quite easy in mind as to some of the demands that are being made in India, the Upper House was clearly in favour of continued negotiations along the lines enunciated by the Round Table. Meantime, it is satisfactory to note that Mr Baldwin's speech last Friday has made an excellent impression in India. There, as cabled reports of this week's developments clearly show, much work has to be done, both by Mr Gandhi and by such members of the previous Conference as Sir Taj Bahadur Sapru and his associates, before the Round Table can meet in London with fair prospects of smooth or rapid progress. When Congress meets at Karachi the Mahatma may well have to deal with something very like mutiny, led by Pandit Jawaharlal Nehru; and the meeting of the All-India Muslim League, which evinced no inclination to abate Muslim claims to majority representation in the Punjab and Bengal, points to another major unsolved difficulty. On the other hand, though the proceedings in this week's session of the Chamber at Delhi have so far evoked no jarring note of dissent from the Federal plan, it still remains to be seen how far the Princes are being disquieted by some of Mr Gandhi's allusions to the difficulty of reconciling "autocracy and democracy," unless the latter is master in the house. Thus, on all hands the need for better understanding between these various interests in the next few years is obvious. We trust that no partisan ebullition in this country will prejudice the negotiations between Indians in India.

The Economy Committee.—The names have now been announced of the new "axe" Committee which is to examine the whole field of State expenditure and tell the Government how it can cut its coat according to its cloth. The chairman is Sir George May, who has recently retired from the secretaryship of the Prudential Assurance Company, and he will have as colleagues such experienced business leaders as Sir Mark Webster Jenkinson, Sir Thomas Royden, and Mr P. Ashley Cooper. Accountancy is represented by Lord Plender and Mr Charles Latham, and a workmanlike body is completed by the inclusion of a widely respected trade union leader in the person of Mr Arthur Pugh. The only criticism which suggests itself is that a committee of seven is too large for the purpose of a rapid survey. The terms of reference are satisfactorily wide. The Committee is to make recommendations "for effecting forthwith all possible reductions in national expenditure on supply services." Matters of policy, of course, remain for the exclusive decision of the Cabinet, but "it will be open to the Committee to review expenditure and to indicate the economies which might be effected if particular policies were either adopted, abandoned or modified." They are therefore at liberty to range over the whole field of practicable economies, and we trust that they will take full advantage of the opportunity.

End of the Tariff Truce.—The conference at Geneva has this week decided not to proceed further with the Tariff Truce Convention, owing to the small number of States that have ratified it. This result had been foreseen for some time, for the trade slump has made many Parliaments unwilling to undertake general commitments, however modest, in the field of commercial policy. This does not mean that there will be an immediate outbreak of tariff wars; indeed, there are at present no signs of this, and it is not unfair to say that in many countries there is a clearer recognition than hitherto of the dependence of national well-being on general prosperity. But the failure of the particular method which Mr Graham proposed eighteen months ago for giving effect to the principles of the World Economic Conference is disappointing; for, as Mr Colijn recently pointed out to the Council of the League, the present situation leaves the nations free to drift once more into tariff rivalry—the effects of which on the trade of Europe would be disastrous. The collapse of this plan does not, however, mean the definite and

final repudiation of the principles laid down at Geneva. It does mean, it is true, that the difficulties in the way of general agreements—whether as regards tariff rates for particular commodities or in the form of undertakings not to raise tariffs for a period—have proved insurmountable. But other movements are on foot. We recently reported in the *Economist* the agreement reached at Christmas between Holland, Belgium, and the Scandinavian countries to apply the truce principles between themselves; the Agrarian States of Eastern Europe are still endeavouring to reach a common economic policy, both between themselves individually and as a group *vis-à-vis* industrial countries; Great Britain is in negotiation with seven European countries—as a result of the autumn Conference at Geneva—for reductions in tariffs on particular commodities; M. Briand's European Committee must inevitably, and before long, come up against the tariff issue; and, as we write, a meeting of the Central European Economic Council is discussing the basis of a possible agreement among a limited number of countries. Necessity will, in fact, drive the nations towards understandings which will permit of free exchange as the only alternative to war. But behind all these discussions lies the difficulty arising from the strict interpretation of the "most-favoured-nation" clause, which forbids discrimination and compels countries to extend any concessions made to a particular country, not only to others whose tariffs are moderate, but to those whose barriers may be unreasonably high. For years, many countries of Europe have been chafing against this interpretation, which has tended to prevent any concessions being made at all. Before further headway can be made, it is clear that a fresh consideration must be given to this problem with a view to discovering whether it is not possible to evolve a statement of principle which will make possible special and limited agreements without opening the door to unlimited discrimination.

Sir Josiah Stamp's Revenue Tariff.—Hot on the heels of Mr Keynes' article advocating a revenue tariff comes a statement from Sir Josiah Stamp, who, unless rumour lies, sided with Mr Keynes in the committee of economists which reported to the Economic Advisory Council last October. Sir Josiah Stamp's Oldham speech, however, makes it clear that he differs from Mr Keynes both as regards the form and the intent of his proposed tariff. Sir Josiah describes his proposal as a third-rate expedient and puts it forward only because he can think of nothing else to suggest. He takes the view that it is essential to raise prices if trade is to be stimulated, and he therefore proposes a flat rate of 10 per cent. on everything brought into the country, food, raw materials and all. As his sole object is to raise prices and as all the old dangers of tariffs, in his view, still threaten, he supports the suggestion only on the strict understanding that the tariff is to be taken off automatically as soon as the price-level rises to a given figure. We will leave it to Mr Keynes and Sir Josiah Stamp to settle between them whether a moderate revenue tariff will or will not raise prices by any given amount. But assuming that Sir Josiah Stamp is right, we would put to him two questions—one political and the other economic. The political question is whether he really feels satisfied that there could possibly be any guarantee that such a tariff would be removed when the price index number reaches any given figure. Is it conceivable that protected industries, when they had once experienced the advantages of "shelter," would agree to the tariff being taken off in accordance with a figure calculated by some unknown official at the Ministry of Labour or at the Board of Trade? Half the workers in the country have no confidence in the cost-of-living index, and hardly anyone knows, outside a limited group of experts, how the wholesale index is calculated. In any case, which is the index by which Sir Josiah Stamp would have this vital matter of commercial policy determined? Our economic question is even more far-reaching. Does Sir Josiah really think that the situation of this country would be improved by raising our internal price-level by, say, 10 per cent., while international prices remain unchanged? We can

well understand that certain home trades might benefit from such a plan, including British railways, but what comfort has it to offer to our great exporting industries in which the great bulk of our present unemployed are normally occupied? We can understand that such a plan might lead us to abandon the gold standard owing to the disparity of price-levels—with all the disastrous consequences which Mr Keynes now says would follow such a step, including still further unemployment among our commercial classes, our shipping, our export industries and others. What hope is there under Sir Josiah Stamp's plan of bringing back the whole working population into employment, seeing that the only certain thing about his scheme is that the exporting industries of the country would be more seriously handicapped than ever? Now that two members of the committee of economists have made public their point of view, surely there is no reason why the report of that committee and the views of the remaining members should not now be made public. That report would make clear why other economists do not accept the fiscal views either of Mr Keynes or of Sir Josiah Stamp; but even more important, it would no doubt indicate what steps need to be taken in fields other than that of fiscal policy to remedy the grave difficulties with which the nation is beset.

Aristide Briand.—Last Saturday was the twenty-fifth anniversary of Monsieur Briand's first attainment of a ministerial portfolio. Out of this span of twenty-five years he has been in office altogether fifteen years and eight months (a record only beaten in France by the sixteen years of which Monsieur Poincaré can boast). During this time he has been a member of no less than twenty-six Cabinets, and eleven of these have been under his own leadership. In his steady rise from French to European fame some of his greatest successes have been scored, like those of Herr Stresemann, at moments when he was not Prime Minister but Foreign Secretary. It is, indeed, in the conduct of French foreign policy that his political career has culminated; and it is his opportunist but indefatigable activity in the cause of international peace and European reconciliation that has given him his special distinction among French statesmen of his age. In other respects his career has not been out of the way. The passage from the flamboyant Socialism of his youth to the discreet Conservatism of his old age is characteristic of public men in all countries, though the extent of the political gamut which a single politician is expected to traverse in a single lifetime is perhaps greater in France than elsewhere. The anti-clerical who comes to terms with the Church (and Monsieur Briand began to move in that direction at an early stage) is also a well-known figure in French politics; and so is the brilliant extempore orator, who can move mountains by kindling in others a faith which can hardly be supposed to burn in the orator's own sceptical heart. This gift for oratory and improvisation has been a bond of affinity between Monsieur Briand and Mr Lloyd George. The Welsh statesman, no doubt, would be inclined to put this down to a common Celtic origin. Yet Aristide Briand—if we are to trace his roots below and beyond the soil of modern France—hails, surely, not from "the Celtic Fringe," but from that ancient Mediterranean world which is the source and heart of civilisation. If Themistocles, the Athenian, had been permitted by the gods to live his life again in the modern world, assuredly he would have elected to be a politician in France, and assuredly, too, he would have put his political adversaries off their guard by camouflaging himself under the name of his dull and impeccable rival Aristides the Just. Themistocle Briand? It sounds convincing. Yet Aristide may not be a misnomer after all. For is the dullness and the impeccability of the original Aristides altogether above suspicion? Aristides the Athenian founded a Pan-Hellenic confederacy and, lo and behold, it evolved into an Athenian Empire. Aristides the Frenchman is engaged at this moment in founding a Pan-European Union which may be destined to evolve into a French—but that is another story, which we can safely hold over till this veteran statesman celebrates his diamond jubilee, ten years from now.

The Revenue.—An examination of the latest return of the Exchequer's revenue and expenditure up to March 14th leads to the conclusion that our forecast a week ago that the deficit for the current year might be nearer £20 than £25 millions, requires modification. Comparison with the corresponding week of last year is vitiated, of course, by the altered arrangements in connection with debt payments by France and Italy, the last instalment of which for the current year will be shown in next week's return. When due allowance is made for this factor, the fact remains that the expansion of revenue noted in recent weeks, as compared with corresponding receipts in 1929-30, appears to have undergone, temporarily at least, a check. Surtax and estate duties are still coming in well, but the position as regards the yield of income tax has considerably deteriorated. Revenue in the last fortnight of the financial year is apt to play odd tricks on forecasters, but considering the fact (1) that the deficiency at present is £5.8 millions greater than a year ago, (2) that £11 millions more than a year ago remains to be provided on account of the fixed debt charge, and (3) that the final deficit last year was £14.5 millions, it looks as though the deficit on March 31st, even if the inflow of revenue regains the rate attained during the six weeks up to March 7th, will be at least £25 millions. There is a possibility, indeed, that the figure may be nearer £30 millions, but the lower estimate seems on the whole more likely.

The London Traffic Bill.—The London Passenger Transport Bill, whose text was issued last Friday, is a voluminous measure containing 68 clauses and nine schedules. It provides for the appointment of a Board, whose five members, nominated by the Ministry of Transport, shall be "persons who have had wide experience, and have shown capacity in industry, commerce or finance, or in the conduct of public affairs." The Board's functions shall be "to secure the provision of an adequate and properly co-ordinated system of passenger transport in the London Traffic area"; and it is to take over the whole of the Underground Group, the Metropolitan Railway, all the tramways, and the "independent" omnibus undertakings, not the suburban lines of four main-line railway groups. The method of acquisition is to be mainly by exchange of stock on terms to be agreed, subject to appeal to an arbitration tribunal; and the fares to be charged will be open to revision by the Railway Rates Tribunal. The Bill obviously raises, both in principle and in detail, considerations of public interest too important to be discussed in a brief note. The tests which must be applied to its provisions are, firstly, will the Bill promote efficiency of management, and, secondly, will it ensure that the consumer obtains the cheapest possible transport? Both these questions we hope to discuss more fully in a later issue.

International Production in 1930.—The incidence of the almost world-wide trade depression on the main industrial communities during the past year is illustrated by the following table, in which we have converted the indices of the physical volume of production of the various countries to a percentage of the average of 1924:—

INTERNATIONAL PRODUCTION INDICES.
(1924 = 100.)

Period.	United Kingdom.	France.	Germany.	Sweden.	Canada.	United States.
	Board of Trade.	Statistique Générale.	Institut für Konjunkturforschung.	Svensk Finansstatistik.	Monthly Review of Business Statistics.	Federal Reserve Board.
1927 Average	106.8	100.9	145.1	110.6	134.5	111.6
1928 "	105.5	116.6	144.9	*105.8	149.1	116.8
1929 "	111.8	127.5	147.4	129.8	166.4	125.3
1930 "	103.3	129.6	†124.4	126.0	141.4	†102.1
Inc. (+) or Dec. (−):	%	%	%	%	%	%
1928	− 3.2	+ 15.6	− 0.1	− 4.3	+ 10.9	+ 4.7
1929	+ 6.0	+ 9.4	+ 1.7	+ 22.7	+ 11.6	+ 7.3
1930	− 7.6	+ 1.6	− 15.6	− 2.9	− 15.0	− 18.5

* Affected by industrial disputes.

† Preliminary.

A comparison of the past year with 1929 shows that the recession was most pronounced in the United States,

Canada and Germany, but it will be noticed that the indices for the last two countries are still well above the level of 1924. The relatively smaller decline in the volume of production in the United Kingdom and Sweden is partly explained by the fact that in the former country the depression began only in the second quarter, and was not felt before the third quarter in Sweden. France, which shows a rise of 1.6 per cent., seemed at first to be almost immune to outside influences, but since July last a slight decline has been noticeable. It will be seen from the next table that the downward trend in the volume of production, which became generally marked after the second quarter, continued to the end of last year:—

1924 = 100.						
Period.	United Kingdom.	France.	Germany.	Sweden.	Canada.	United States.
1929—Fourth Quarter	114.0	130.9	144.4	128.8	158.9	114.7
1930—First Quarter	110.9	131.9	135.8	143.3	149.2	110.5
Second Quarter	103.1	132.3	130.0	128.8	150.7	109.1
Third Quarter	99.4	128.7	117.0	121.2	135.5	97.2
Fourth Quarter	99.0	125.0	114.7	117.3	129.1	89.1
December.....	...	124.1	114.2	115.4	118.7	86.3

* Quarterly index. † Adjusted for seasonal variations. ‡ Partly adjusted for seasonal variations. § Preliminary.

During the last quarter of 1930 the decline was particularly severe in the United States and Canada, and in December the index for the former country was 13.7 per cent. below the level of 1924. The January indices for France and Sweden, at 123.1 and 108.7, record a further drop as compared with December.

Iron and Steel in February.—A slight improvement in iron and steel production was recorded in February, for although pig-iron production dropped from 337,200 tons to 320,200 tons, as compared with January, the daily rate of production showed an increase of 5 per cent. Unfortunately the number of furnaces in blast declined by two during the month to 81, or exactly half the number in operation at the end of February, 1930. Steel production increased to 486,400 tons from 402,200 tons in January; part of the increase, however, was due to the effect of New Year holidays in Scotland during the previous month. Imports of iron and steel fell from 221,800 tons in January to 177,100 tons in February (the lowest figure recorded for two years), the biggest decline occurring in billets, blooms and slabs. The most disappointing feature of February was the exports. These amounted to only 143,500 tons, and were the lowest of any month since September, 1921. Exports of pig iron fell to 13,300 tons, a figure not reached since February, 1927, and galvanised sheets to 18,100 tons, or less than in any month since August, 1921. The serious decline in exports is explained in a great measure by difficulties in countries which have hitherto been Great Britain's best markets. For instance, in February, 1930, over half the exports of galvanised sheets went to India, Australia and New Zealand, which took 14,460 tons, 6,556 tons and 2,228 tons respectively; in February, 1931, these markets took only 5,067 tons, 13 tons and 1,277 tons respectively. Of all the forms of iron and steel which it is possible to allocate to markets from the monthly Trade Returns, exports fell—to the Argentine from 27,778 tons in February, 1930, to 8,180 tons in February, 1931; to India and Ceylon from 25,017 tons to 11,384 tons; to Australia from 23,171 tons to 2,892 tons; to Japan from 11,063 to 1,684 tons, and to New Zealand from 9,789 tons to 4,437 tons. Very few countries show an increase between the two periods, the most notable being Canada, exports to whom rose from 3,577 tons to 4,562 tons.

International Cotton Statistics.—The International Federation of Master Cotton Spinners and Manufacturers Associations have this week published the usual half-yearly statistics relating to consumption and stocks. A feature of the returns is the further decline in the use of raw cotton, and particularly of American qualities, throughout the world. During the half-year ended January 31st last the world consumption of all kinds of cotton was 11,164,000 bales, of which 5,278,000 bales were

American. In the previous half-year the total was 12,007,000 bales (American 5,940,000 bales), whilst in the half-year before that the total was 13,202,000 bales, of which 7,083,000 bales were American. It is significant that Great Britain during the half-year ended January 31st last consumed only 493,000 bales of American cotton, against 880,000 bales in the same period of the previous year. It may be pointed out that throughout the world the consumption of what are known as outside growths is now larger than the use of American cotton. With regard to stocks, the total at the mills of the world on January 31, 1931, was 4,586,000 bales, against 4,931,000 bales at the same time in 1930, the stocks of American qualities being reduced during the twelve months from 2,742,000 bales to 2,427,000 bales. The Federation has also published information relating to short time. It is stated that with regard to Great Britain the stoppages in the American section amounted to 14.79 weeks, and in the Egyptian section to 10.42 weeks during the half-year ended January 31st last. There were 78 firms with 4,246,700 spindles in the American section, and in the Egyptian section 10 firms with 553,024 spindles, completely stopped during the six months. The Federation confirms recent reports that the cotton industry in India is gradually "going finer," as during the past half-year the number of spindles on Egyptian cotton was 348,000 as compared with 93,000 in the previous six months.

The Cost of Living in February.—On February 28th the Ministry of Labour's index number of the cost of living stood at 50 per cent. above the level of July, 1914. This compares with 52 per cent. at the end of January and 61 per cent. a year ago. For food alone the index recorded a 34 per cent. rise at the end of February, against 36 per cent. a month ago and 50 per cent. a year ago. An examination of the group figures from which this official cost of living index is built up suggests very strongly the need for its revision. Apart altogether from the general consideration that the sample budgets on which the index number is based are now too out-of-date to be representative of present-day consumption, it seems remarkable that the clothing index, which now stands at 200 (July, 1914 = 100) has fallen by only 7½ per cent. since this time last year. In view of the considerable cheapening which has recently taken place in most articles of wearing apparel, the extraordinary rigidity of this component of the index appears to require explanation.

Employment in February.—The fluctuations in the course of employment, which were a noticeable feature of the first month of the year, continued in February, but the position at the end of that month showed a small net increase in the numbers unemployed. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at February 23rd was 21.7. This compares with 21.5 per cent. at January 26th, and 12.9 per cent. at February 24, 1930. It is estimated that approximately 9,224,900 insured persons, aged 16 to 64 years, were in employment on February 23rd, as compared with 9,128,300 a month ago (when the figures were affected by the cotton dispute), and 10,016,700 a year ago. Those registered as "wholly" unemployed at February 23rd amounted to 1,888,716, this being 13,386 more than at January 26th, and 804,821 more than at February 24, 1930. On the same dates the numbers of workpeople temporarily without employment totalled 613,692, 607,443 and 366,844 respectively. Of those normally in casual employment, 115,250 were registered as unemployed on February 23rd, showing an increase of 5,373 over the January figure, and 26,724 over a year ago. The latest return of the Ministry of Labour, dated March 9, gives a figure of 2,691,737 as the total of persons unemployed at that date—an increase on the week of 57,163. This appears to be due mainly to the temporary stoppages in the Yorkshire and Midland coal-mining areas. But the number, included in the total, recorded as "wholly" unemployed has risen ominously to 1,908,867—an increase of 20,000 on the figure for February 23rd.

South Wales Mining Wages.—The delegate conference of the South Wales Miners' Federation held last Monday revealed the depth of the bitterness with which the arbitration award on wages, noted in these columns last week, has been received in that coalfield. Only by a steadfast refusal by the Chairman to accept the motion was the conference prevented from resolving on immediate strike action. In the end a week's adjournment was agreed, to give the lodges an opportunity to consider a resolution, proposed and strongly urged by the Executive, that the Miners' Federation of Great Britain should be asked to call a special national delegate conference, whose business would be to frame amendments to the Minimum Wage Act of 1912, providing that minimum rates payable shall equal those paid in 1914, plus a percentage to cover the increased cost of living. We have every sympathy with the South Wales miners, whose present position is deplorable; but the legislation contemplated in this resolution is neither sound economics nor practical politics. On the other hand, if the resolution is endorsed by the lodges, and acted on by the M.F.G.B., the Government seem likely to have a *mauvais quart d'heure* in explaining to mining supporters their inability to legislate.

The Motor Industry in 1930.—By the courtesy of the Statistical Department of the Society of Motor Manufacturers and Traders we are enabled to supplement the preliminary figures recently published of American motor-car production with a provisional estimate of output in this country during 1930:—

NUMBER PRODUCED.
(000's omitted.)

Period.	United Kingdom.			United States.		Canada.	
	Total.	Private Cars.	Commercial Vehicles.	Total.	Private Cars.	Total.	Private Cars.
1927.....	212	165	47	3,401	2,941	179	147
1928.....	212	165	47	4,359	3,321	242	137
1929.....	239	182	57	5,358	4,586	263	207
1930.....	237	172	65	3,351	2,818	154	125

The number of motor vehicles produced in the United Kingdom during 1930 almost equalled that of the preceding year, a decrease in private cars being largely offset by an increase in commercial vehicles. In the United States, output fell by over 37 per cent., while the number of motor vehicles produced in Canada was 41 per cent. below the level of 1929. As the next table shows, the world depression with its consequent decline in purchasing power proved a severe handicap to export trade in an article for which the demand is highly elastic:—

NUMBER EXPORTED.
(000's omitted.)

Period.	United Kingdom.				United States.		Canada.	
	Total.		Private Cars.	Commercial Vehicles.	Total.	Percentage of Production.	Total.	Percentage of Production.
	Number.	Percentage of Production.						
1927.....	36	16.8	Not available	7	384	11.3	57	32.1
1928.....	33	15.4	26	7	508	11.6	80	32.9
1929.....	42	17.7	34	8	547	10.2	102	38.6
1930.....	30	12.5	23	7	224	*7.0	*43	*29.0

* 11 months, January-November.

In all three countries total exports as well as the ratio of exports to production showed a sharp contraction in 1930. British producers obtained some compensation in securing a larger proportion of the home market, for imports into the United Kingdom declined from 39,100 units in 1929 to 12,400 units in 1930. The total number of motor-cars registered in this country increased from 1,408,700 (including 980,900 private cars) at the end of 1929 to 1,505,700 (including 1,056,200 private cars) at the end of 1930. New registrations of all motor vehicles in 1930 at 222,800 were 16,100 below those of the preceding year, but exceeded those of 1928 by 12,100. The number

of new private cars registered in the most popular horsepower classes are set out below:—

NEW REGISTRATIONS OF PRIVATE CARS.

(000's omitted.)

	1928.	1929.	1930.
8 h.p.	26	40	40
10 h.p.	5	9	11
12 h.p.	34	32	25
15 h.p.	6	11	22
16 h.p.	10	17	18
Others	77	56	39
Total	158	165	155
Percentage enclosed cars...	70.7	83.7	89.1

The above table shows that the "Baby" car has again been in favour, but the outstanding feature is the increasing use made of the medium-powered class.

Vital Statistics 1929-30.—It appears from the final volume of the annual review of the Registrar-General that 1929 was a year of exceptionally low natural increase in the population. Owing partly to the influenza epidemic and partly to the very severe weather of the early months, the death rate, at 13.4 per thousand, was the highest since the influenza epidemic of 1918, while the birth rate at 16.3 was the lowest on record. In consequence, the mean annual rate of increase fell to 2.9, the lowest hitherto recorded except in 1918. The quarterly returns for 1930, on the other hand, show a natural increase of 194,033, against an average in the preceding five years of 191,824, for though the birth rate, according to provisional figures at the middle of the year, was unchanged, the death rate had fallen to 11.4. The marriage rate rose in 1929 from 15.4 to 15.8 per thousand total population, and remained at that level in 1930. The increased mortality rate in 1929, due, as it was, largely to severe weather, affected principally the very young and the very old. The increase over 1928 was 22 per cent. for children under 5 and persons over 75, ranged from 12 to 15 per cent. in the age groups between 45 and 75, and was only 5 or 6 per cent. among children over 5 and young people under 25. Infant mortality rose from 65 to 74 per thousand and, as usual, was highest in the North and in county boroughs, and lowest in the rural districts of the South. According to the provisional figures for 1930, the rate fell again to 60 per thousand live births, the lowest ever recorded. A rise in the rate of mortality from respiratory tuberculosis in 1929 is attributed to the influenza epidemic and should not be taken as a sign of any interruption in the steady decline of the death rate from this disease. An even more marked fall took place in the mortality from non-respiratory tubercle. The number of deaths from cancer is the highest yet recorded. The effect of insulin in 1923 in reducing the death rate from diabetes among persons under 55 has been marked by an increase, which was very sharp in 1929, in the death rate among older persons. Diseases both of the heart and of the respiratory system were very much higher than in previous years, but the increase occurred largely in the first quarter and was presumably mainly due to the hard winter. Puerperal mortality continued its upward movement in 1929.

A Trust Chairman on Germany.—At the annual general meeting of the British and German Trust, Ltd., the chairman, whose speech is reported more fully on a later page, gave an informative review of the position and prospects of Germany. During 1930, he observed, Germany had exhibited, in diminished production and increased unemployment, much the same symptoms of depression as Great Britain and America. On the other hand, her export trade had declined by a much smaller percentage than had been the case with either the United States or this country, partly because the principal British and American export markets were the raw material producing countries whose purchasing power had been most

seriously affected by the fall in commodity prices, whereas between three-fourths and four-fifths of German exports were made to European countries, who had not felt the effect of the general price fall so severely; and partly because the need to meet reparation payments had put a severe pressure on Germany to provide foreign exchange, with the result that she was studying the export market intensively, and, in some instances, selling products abroad at prices which showed no profit. Having noted that money rates in Germany, as a result of the shortage of capital at home and the consequent necessity of attracting foreign short-term money, had ruled high throughout the year, Mr Wagg referred to the estimate of the Institut für Konjunkturforschung that, notwithstanding the constantly recurring reports about heavy withdrawals of funds from Germany, there had been, on balance, an influx of capital in 1930 amounting to approximately one milliard marks, against 2.9 milliards in 1929. With regard to the future, he expressed the opinion:—"It seems, however, clear that if Germany secures a less favourable trade balance this year than last, as seems probable, and if the flow of capital from abroad, either in the form of loans or credits, further diminishes, some adjustment of reparations payments will have to be made." He emphasised the point that the fall in prices which has occurred since the Hague Agreement was signed in January, 1930, has had the effect of already rendering illusory the relief which the Young Plan was to give Germany, and he expressed the hope that the first move in the direction of a permanent adjustment of the conditional reparations payments—there could, of course, be no question of an adjustment affecting the security of the Dawes Loan and the Young Loan—should come from the United States. He added:—"Intelligent financial opinion in that country, I believe, generally recognises the necessity for some revision, and this feeling is gradually being disseminated, together with a realisation that the normal development of trade and international intercourse is greatly hampered by these immense international transfers." Mr Wagg's estimate of the trend of intelligent financial opinion in America is very probably correct; but what is true of Wall Street, or, indeed, of New York, is by no means necessarily true of the Middle West, and, we fear, it may be some time before a move by Washington on the lines desired by Mr Wagg will command the support of the majority of the less well financially informed American electorate.

The Commonwealth Bank.—The report of the Commonwealth Bank of Australia for the six months ending December 31, 1930, covers, in the main, familiar ground. It discusses frankly the relations between the banks and the Government, saying that "the calls made upon the banking resources of Australia to meet the general position have never relaxed, and the very serious aspect of this matter reflects itself in the heavy drain on banking funds to carry over governmental budget deficits. The fact cannot be disguised that this process is of an inflationary nature, and continual indulgence must eventually lead to the undermining of our monetary system. . . . At the end of the year the unfunded debts of the Governments of Australia, represented by overdrafts and Treasury bills in Australia and London, amounted to £53,000,000. In view of the fact that Government Budgets do not make adequate provision for meeting the current expenditure, and, therefore, must add to the floating indebtedness, when liquidation thereof should be in process, it requires no overstatement to indicate how perilous the position is. The internal business of the country shows progressive shrinkage, as was only to be expected in the absence of purchasing capacity. There is a lack of confidence on the part of the community generally and an absence of enterprise. The effect of all this is cumulative and must gather volume as it progresses, increasing unemployment and all attendant evils. No improvement is possible until the whole situation is definitely faced and we return to sound economic principles. There is no escape from the results of unsound methods, and rectification can be achieved only through the adoption of sane and sound procedure. The longer

the reckoning remains unfaced the more difficult and serious it must be." This is the Commonwealth Bank's view of the situation, and it only confirms what has already been said by many other competent authorities. The report contains several other interesting passages. It calls attention to the development of closer relations between the Commonwealth Bank and the Trading Banks, and makes the important point that "to-day the Commonwealth Bank is in reality functioning as a central bank, and the reserves of the Trading Banks deposited with the Commonwealth Bank are fully in accord with the requirements of central banking." This suggests that, in the opinion of the Commonwealth Bank, there is no need for the establishment of a new Reserve Bank as was proposed in the Bill introduced last summer and now in abeyance; and it will be of interest to see what are the political repercussions of the statement of this opinion. The earlier paragraphs of the report take the standpoint of restrained optimism. It is pointed out that Australia's difficulties are by no means unique, but are common to many countries, and it is stated that seasonal conditions, coupled with an absence of drought, to-day favour Australia. Altogether the report takes a sane view of Australia's current difficulties.

Hong Kong and Shanghai Bank.—The accounts of this important Eastern bank during the past three years inevitably reflect the wide fluctuations in the price of silver, or, to be more precise, in the exchange value of the Hong Kong dollar. The salient features in the account are shown below, the sterling exchange rate current at each date being added:—

	Dec. 31, 1928	Dec. 31, 1929	Dec. 31, 1930
	\$ mill.	\$ mill.	\$ mill.
Notes	48.4	64.9	108.2
Current accounts	376.2	434.9	629.4
Fixed deposits	171.8	219.9	295.9
Cash	99.6	125.8	174.6
Securities	117.1	129.4	284.0
Discounts	268.5	335.6	448.9
Acceptances	5.6	6.4	5.0
Net profit for year to date	13.4	14.1	20.7
	£	£	£
Dividend per share	6	6	6
Bonus per share	2	1	1
Sterling exchange rate ..	2s. 0½d.	1s. 7½d.	1s. 1½d.

Several interesting considerations arise from comparisons of fluctuations in the exchange, in sterling commodity prices, and in the various items in the bank's accounts during these two years. From the shareholders' standpoint the fall of 46 per cent. in the exchange has outweighed the increase of 56 per cent. in the bank's dollar profits; hence the reduction in the bonus. From the more general standpoint, the 46 per cent. fall in the exchange outweighs the simultaneous fall of 28 per cent. in wholesale commodity prices measured in sterling, so that in all probability the average price of imported goods subject to world market influences, at least when measured in Hong Kong dollars, is higher to-day than it was two years ago. This explains part of the steady growth during the past two years in the bank's principal assets and liabilities, when expressed in dollars, though as sterling prices have fallen it is only natural that these items, when expressed in sterling, should have contracted during this period. Finally, the disequilibria and mal-adjustments brought into being by these uneven movements are one reason why the Far East has shared in the general trade depression; and the fall in acceptances since a year ago is clear evidence of this. The management of the bank, both in the Far East and in London, have had many difficulties to contend with, both economic and, so far as China is concerned, political. Though in one sense the increases in the bank's assets, when measured in dollars, may have automatically followed the fall in the dollar, they also point to the prudent manner in which the affairs of the bank have been administered and to the progress it is making under very adverse circumstances.

Transvaal Gold Output.—According to the statistics issued by the Transvaal Chamber of Mines output of gold of the mines of the Transvaal during February amounted to 839,937 ounces of fine gold, which compares with 818,188 ounces of fine gold produced during February, 1930. The January, 1931, output was 914,576 ounces of fine gold, which compared with 882,801 ounces in January, 1930. The following table shows the monthly output since the beginning of 1925:—

Months of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	823,692	796,270	839,782	843,857	876,452	882,801	914,576
February	752,925	753,924	779,539	816,133	815,284	818,188	839,937
March	825,479	834,340	860,511	877,380	866,529	889,370	...
April	787,519	803,303	824,014	825,307	872,123	868,606	...
May	813,249	849,214	859,479	886,186	897,598	916,213	...
June	780,251	852,145	855,154	862,363	856,029	887,867	...
July	818,202	860,134	851,861	867,211	889,480	912,652	...

September	797,247	839,939	842,118	857,731	849,563	905,176	...
October	812,832	853,296	855,743	897,720	888,690	926,561	...
November	787,633	840,276	848,059	872,484	861,593	884,753	...
December	791,455	836,157	851,225	859,761	851,134	908,432	...
Total	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	1,754,513

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	June, 1930.	July, 1930.	Aug., 1930.	Sept., 1930.	Oct., 1930.	Nov., 1930.	Dec., 1930.	Jan., 1931.	Feb., 1931.
Gold mines	201,324	201,111	202,257	205,061	206,774	205,030	203,473	209,442	209,777
Coal mines	14,943	14,670	14,788	14,706	14,492	13,973	13,763	13,865	13,740
Diamond mines	5,126	5,490	5,754	5,767	5,032	4,748	4,607	4,325	4,333
Total	221,393	221,271	222,799	225,534	226,292	223,751	221,843	227,632	227,850

The native labour figures show little change on the month.

INSURANCE NOTES.

London Life Association.—There has been a further remarkable expansion of new business during 1930, and the total life business of £8,126,514 constitutes "easily a record for the association." In view of the cessation of single premium (with loan) business this is a considerable achievement for a company which pays no commission and relies entirely on its merits and the loyalty of its connections. Separate figures are furnished for each class of business transacted, and these show that the increase has occurred entirely in without-profits business, the high proportion of which to the total is a powerful aid to the profits available for the with-profits policyholders. New annuity policies were issued during the year providing immediate annuities of £7,697 per annum, and deferred and reversionary annuities (nearly all in connection with pension schemes) for £107,191 per annum. In addition, sinking fund policies were issued for sums assured of £911,955, compared with £611,163 in 1929. Claims by death show a substantial increase in 1930, the total being £882,960, compared with £688,527 in 1929, and expenses are slightly higher at 5.6 per cent. of the premiums. The interest earnings have inevitably been affected by the rise in income tax and the cheapness of money, and the net rate has declined from £4 11s. 11d. per cent. to £4 9s. per cent. The usual annual valuation has been made and the results are as follows:—

	1928.	1929.	1930.
	£	£	£
Surplus earned during the year	128,536	166,438	148,877
Investment profits realised	6,666	23,013	24,863
Brought forward from previous year	7,751	20,438	27,648
	142,953	209,889	201,388
Allocations:—			
Bonuses to policyholders	108,675	122,667	134,426
Strengthening of valuation reserves	...	29,794	...
Written off investments	...	...	33,522
Investment reserve fund	8,972	28,463	15,700
Staff superannuation fund	4,868	1,317	...
Carried forward to next year	20,438	27,648	17,741
	£142,953	£209,889	£201,388

The reversionary bonus has been maintained at the same rate as that to which it was raised two years ago, namely, 40s. per cent. compound. It is stated that an internal valuation on a 4 per cent. basis indicates funds on hand sufficient to provide a 35s. per cent. bonus for the remaining duration of the policies without taking into account any future profits from without-profits business or interest earnings in excess of 4 per cent. :—

	1928.	1929.	1930.
	£	£	£
Surplus earned during the year	153,361	164,551	174,323
Investment profits realised	25,523	77,393	74,805
Brought forward from previous year	33,450	34,076	31,999
	212,334	276,020	281,127
Allocations:—			
Strengthening of valuation reserves	21,244	33,693	32,690
Provision for increase in rates of reduction of premium	121,044	129,060	90,364
Written off investments	...	...	100,856
Investment reserve fund	22,831	77,687	38,400
Staff superannuation fund	13,138	3,581	...
Carried forward to next year	34,077	31,999	18,817
	212,334	276,020	281,127

The profits earned in this fund are allotted in the form of a reduction in the full rates of premium payable and the provision made for this purpose has permitted an increase in the rate of reduction of two, compared with three per cent. in each of the last few years—a precautionary measure in view of investment depreciation since December 31st and unfavourable anticipations about the future rate of interest. The actual rates of reduction now range from 138 per cent. in the oldest series to 48 per cent. in the current series. The value of the assets of £22 millions shows a depreciation during 1930 of £180,000, reduced by the application of realised profits to a net loss of £30,000. A note to the balance sheet indicates that, after taking into account the investment fluctuation fund and other reserves, the actual value of the total assets exceeds the valuation liability by £917,000.

Employers Liability Assurance.—A short time ago the Employers Liability celebrated its jubilee and a note appears in the 1930 report to the effect that "During the half century of its existence the Corporation has paid to its policyholders over £59,000,000; in dividends to its shareholders over £4,500,000, and in taxation throughout the world over £4,600,000." In spite of the universal trade depression the total premium income in 1930 was well maintained, the amount, namely £7,430,000, being only some 3½ per cent. less than the 1929 total. Though transacting all classes of business except life and marine, the company's interests are centred predominantly in U.S.A. casualty insurance, and its fortunes necessarily fluctuate with the ups and downs of what has in recent years been a relatively unprofitable class of insurance. It was hardly to be expected that the results of such a year as 1930 would show improvement over former years, and the following detailed figures must be studied in relation to the general position of trade and industry:—

	1929 Profits.	Percentage of	1930 Profits.	Percentage of
	Amount.	Prems.	Amount.	Prems.
	£	£	£	£
Fire	4,839	1.1	27,385	6.3
Accident	26,521	6.9	23,742	6.0
General	266,603	3.9	156,157	2.4
Investment and exchange profits	19,922	...	49,218	...
Gross surplus	317,885	...	256,502	...
Less taxes	237,332	...	248,573	...
Net trading surplus	80,553	...	7,929	...

Interest earnings show a small increase from £291,291 to £298,327, and now suffice to cover the dividend with a small margin. The 1930 net dividend costs some £10,000 less than formerly owing to the increase in the rate of tax, and is now at the rate of 100 per cent. gross instead of

80 per cent. net. Interest earnings during the next five years will benefit from the increased surplus distributed by the company's subsidiary, the Clerical, Medical and General, as a result of the recent very favourable quinquennial valuation. The company has been unable to avoid a further drain on its resources from the operations of its marine subsidiary, the Merchant Marine, and to meet the 1930 loss has increased the investment reserve fund by £57,000 to £400,000. Leaving this fund out of the calculation the company's total resources, apart from the paid-up capital, are equivalent to 70 per cent. of the total premium income.

National Provident Institution.—Owing to an alteration in the financial year to coincide with the calendar year, the report of the National Provident covers a broken period from November 21, 1929, to December 31, 1930. Accompanying the annual report is a report on a valuation and distribution of profits for the period November 21, 1927, to December 31, 1930, the first to be made under the new regime of triennial valuations. The results of this valuation compared with those of the preceding investigation are summarised below:—

	November 21, 1923, to November 20, 1927. £	November 21, 1927, to December 31, 1930. £
Trading profits earned during valuation period.....	1,571,345	1,105,267
Capital profits taken credit for during valuation period	126,013	...
Brought forward	162,617	392,261
	1,859,975	1,497,528
Allocations:—		
To Bonuses to policyholders	1,249,714	964,608
„ Reserve for interim bonus	160,000	103,225
„ Staff superannuation fund.....	58,000	20,000
„ Carried forward.....	392,261	409,695
	1,859,975	1,497,528

The distribution to the "with profits" policy-holders takes the form of a reversionary bonus calculated on the original sum assured, i.e., a simple reversionary bonus. For whole life assurances an additional bonus is allotted to policies where the life assured has survived the expectation of life, and for endowment assurances the rates vary with the age at maturity and the duration in force. Specimens of the scheme of bonuses (compared with the rates allotted at the 1927 valuation) are as follows:—

	Annual Rates of Reversionary Bonus.		Duration, 15 years or less.	Duration 18 years and over.
	1927 Valuation. %	1930 Valuation. %		
Whole life assurances	50/-	60/-		
Endowment assurances:—				
Age at maturity—50	39/-	39/-	49/-	
55	43/-	43/-	53/-	
60	48/-	48/-	58/-	
65	53/-	53/-	63/-	
	plus 5% payable on survival only.	plus 10% payable on survival only.		

The policy-holders may well be gratified to receive such handsome bonuses in a period covering the greatest slump in economic history. The Institution has set for itself in the future a very high standard to maintain these bonuses, which have probably never been surpassed by any office in the present generation. Apart from the substantial amount carried forward, there is a further hidden reserve in the difference between the market values and the book values in the balance sheet. Discreet reference to this is made in the valuation report, where it is stated that, "although no Stock Exchange security stands in the books at a higher value than that based on the market price as at December 31, 1930, there is in the case of the majority a large margin which will serve as a substantial investment reserve fund." Comparison of the last two balance sheets discloses very little movement in the investments. British

Government securities have been slightly reduced and mortgages (in accordance with the Institution's traditional policy) increased. The bulk of the new money of the year has gone into railway and other debentures. Having regard to the strength now disclosed by the recent valuation, it is not surprising that the new business of the past year has shown a considerable expansion. The net new sums assured underwritten amounted to £1,639,337, compared with £1,215,234, and the premium income has risen from £717,000 to £801,000.

Merchants Marine Insurance.—Once again the annual report of this old marine company has a melancholy tale to tell. A year ago the directors expressed the hope that the underwriting account of 1929 would approximately balance, but in fact there has emerged a further loss, which has gone to swell the profit and loss debit balance, which now amounts to £377,000, in addition to which the difference between the market value and book value of the securities is £20,000 on the wrong side. Taking only the last five underwriting accounts, though the losses extend back farther than that, the results have been as follows:—

Year.	Premium Income. £	Underwriting Loss. £
1925	335,557	96,743
1926	325,939	187,411
1927	396,295	175,776
1928	367,999	40,000
1929	285,659	30,000
Totals	1,711,449	529,930

The series of losses has stripped the company of all its reserves, and has given rise to the large profit and loss debit balance. The company is controlled by the powerful Employers Liability Corporation, which, since 1927, has guaranteed all its contracts. The parent company acquired control in 1921 for £750,000, and since that time has been engaged in writing down its original investment to its present figure of £125,000. Strenuous efforts have been made, and continue to be made, to rehabilitate the company's position by curtailment of the account and elimination of unprofitable risks. As a result the losses of 1928 and 1929 show a considerable reduction on those of former years. The 1930 account has produced a slightly smaller premium income amounting to £279,225 and first year claims are equivalent to 25.4 per cent. of the premium, compared with 25.6 per cent. in 1929 and 25.9 per cent. in 1928, but the reduction is too small to warrant optimistic hopes as to the final outcome. The company operates a small fire and general account, with premiums of £61,000, and this shows a profit of £4,600 in 1930, as compared with a loss of £2,000 in 1929.

Guildhall Insurance Company.—This company has now lost its independence as a result of the recent acquisition by the London Assurance Corporation of its share capital, and a representative of the parent company now appears amongst the Guildhall's list of directors. One underwriting account only is furnished, combining the operations of the company in fire, accident and general insurance. This account indicates a falling off in premium income, which, however, at £760,000, still comfortably exceeds the 1928 figure. The underwriting surplus shows a small improvement, the amount being equivalent to 2 per cent. of the premium, as against 1.4 per cent. in 1929. A distinguishing feature of the company for a long time past has been the large amount of interest income compared with the cost of the dividend, and advantage has now been taken of this to raise the rate of dividend from 5 per cent. to 10 per cent. Even so, the increased rate of dividend absorbs only £9,700, compared with an interest income of £24,046. In each of the last six years the company has succeeded, as a result of each year's operations, in placing to surplus resources a sum substantially in excess of the underwriting profit, and this satisfactory feature is again evident in the 1930 accounts. The augmentation on this occasion amounts to £23,072, compared with an underwriting profit of £15,108.

Provident Association of London, Limited.—New life policies were issued by this company during 1930 for sums assured of £2,023,496, compared with £1,976,075 in 1929; and the fund has grown to £5,201,000. The grant of loans for house property purchases in conjunction with life policies forms the main activity of the company. Apart from the issue of house property investment policies in the life fund, there is a bond investment fund of £3,878,000, which offers sinking fund policies for a similar purpose. From the shareholders' point of view the enterprise is evidently profitable, for the sums transferred from the various funds to profit and loss account in 1930 amounted in all to £124,000, equivalent to approximately 20 per cent. of the premium income, while interest income yielded a further £67,000. A dividend of 10 per cent. free of income tax was paid to the shareholders and £100,000 has been added to reserves. That the facilities offered by the company for the purchase of small house property by the occupier are also attractive and are appreciated, may be judged by the fact that over 60,000 houses have been secured by the company's policyholders. Over £6 millions out of the total assets of nearly £11 millions are invested in house property mortgages, and the number of borrowers exceeds 17,000. The following summary of a number of statistics given in the company's report is interesting:—

- (1) Out of a total of 17,053 mortgages, no less than 14,339, or between 84 and 85 per cent. of the whole, are represented by mortgages not exceeding £500 in amount.
- (2) Only 93 mortgages out of a total of 17,053 exceed £1,000 in amount.
- (3) No single mortgage exceeds £3,000 in amount.
- (4) Out of a total of 17,053 mortgages for £6,160,536, only 19 for £7,177 were represented by properties in hand and unlet at December 31, 1930.

The company is performing a great social service in fostering owner-occupation of small houses.

Treasury — Money Market — Business Conditions — Corporation Profits.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 6.

PROFIT-TAKING in the share markets and increasing reluctance on the part of the public to trade heavily until more convincing signs of business recovery can be seen have not detracted from the all-round better feeling as to general prospects. The adjournment of Congress this week, leaving many Bills which were unpopular with the financial community to die automatically, brought a feeling of relief. The last Congress, many members of which were defeated in last autumn's elections and will consequently not sit in the session which begins next December, was unusually prodigal. Appropriations in large amounts which would not ordinarily have been tolerated were passed and approved by the Administration as emergency measures designed to stimulate trade activity and to relieve those sections of the country which suffered from the drought. The most important piece of legislation was the Bill increasing the amount which ex-service men are entitled to borrow on their adjusted compensation certificates. Applications for loans under this Bill have been taxing the facilities of the Veterans Bureau, have drained the Treasury of most of its cash, and have accounted for new Treasury borrowing.

The Treasury has asked for subscriptions on bonds and certificates for approximately \$1,400,000,000, to refund \$1,109,000,000 in maturing 3½ per cent. notes and to provide cash for other purposes. The offering was largely over-subscribed, and allotments made were about 20 per cent. of applications. The offer corresponded closely with Wall Street's expectations, being about half in long-term bonds and the remainder in one-year and six months' cer-

tificates. A saving in interest will be effected, inasmuch as the long-term bonds allotted, \$593,000,000, will bear 3½ per cent. The twelve months' certificates were sold at 2 per cent. and the shorter terms at 1½ per cent. This operation will provide for the larger and more urgent long-term operations of the Treasury until 1933, when it is expected that the \$6,268,000,000 of Fourth Liberty 4½ per cent. will be called. Short-term financing, however, will be frequently necessary during the remainder of the year. The \$300,000,000 or so obtained above the refunding needs will be by no means sufficient for soldiers' loans, but the Treasury has doubtless calculated that, with the first quarter's income-tax collections, which converge on March 15th, the new borrowing will last it until about the middle of April. It can then rely on non-interest-bearing bill offers until the June tax date. The next Congress, it is feared, will also be a heavy spender, and the Treasury deficit for the fiscal year ending June 30th next is bound to be large. In the circumstances the long-term Government bond market has been rather sluggish, though bonds generally have improved.

A slight stiffening of the money markets is partly seasonal and partly due to a temporary dislocation of funds attending the payment to New York City of a \$100,000,000 new loan and heavy withdrawals of cash by the Treasury from deposit banks. It is expected that the Treasury overdraft at the Federal Reserve Bank at the tax date will be approximately \$200,000,000, but the excessive ease in day-to-day money which ordinarily would accompany such heavy borrowing will probably be offset somewhat by member bank participation in the overdraft. Call money has advanced to 2 per cent., the highest rate since January 2nd, but the underlying tone of the money market continues quite easy. Business demands for cash are not increasing much, and the security markets are making no great drain on short funds. Brokers' loans, after a three weeks' increase of \$82,000,000, in the aggregate, declined this week by \$8,000,000. They are now \$89,000,000 under the total of January 1st, although share prices have risen appreciably in the meantime. It is evident that the position of the market has not been much impaired.

Federal Reserve Bank operations are designed to maintain the money market on an even keel. Total credit outstanding, as shown by this week's statement of the system, was slightly lower, due to smaller holdings of bankers' bills. Discounts and Government security holdings were about the same. Loans at reporting member banks in leading cities are decreasing, as are also commercial loans, and business is not improving much according to the record of bank clearings. Dun's totals for the past week, though a seasonal rise has brought them to the highest level since the beginning of the year, are more than 16 per cent. lower than a year ago.

The flotation of a \$100,000,000 loan by the City of New York raised the week's total, but otherwise the market for new capital issues is as slow as ever. There is a good demand for sound bonds, but the trade outlook does not especially encourage new borrowing. Most of the large issues in sight are refunding loans or borrowings designed to fund short-term corporation debt.

No great change has taken place in business. Commodity prices are far from strong, but the tone is improving. The decline in February, according to the Dun and the Bradstreet indices, was about 1½ per cent., compared with a drop of more than 2 per cent. in January. Production of motor cars is increasing, but not at a rapid pace. Steel output continues to creep ahead, and is now around 53 per cent. of capacity. Talk is heard of higher prices, but the situation does not suggest them. The gain in steel since the beginning of the year has been rather more than seasonal, but the current rate is lower than usual at this time of year. Railroad traffic is disappointing, and shows no increase. Few American railroads are covering their regular dividend rates on their common shares, and this week two railroads—the Rock Island and the Lehigh Valley—reduced their rates, and one, the St. Louis-San Francisco, paid no dividend.

Most corporations have now published their 1930 earning statements. Some 900 industrial concerns, as shown

by a tabulation prepared by the National City Bank, show a drop of 40 per cent. below 1929 and of 28 per cent. below 1928. Taking into consideration capital and surplus employed, industrial earnings were at the rate of 7.2 per cent., compared with a rate of return of 13.3 per cent. in the boom year of 1929 and of 12 per cent. in 1928. Public utility companies as a whole increased their profits last year by nearly 2 per cent. Railroad net operating income was lower by 30.5 per cent., and the earnings available for dividends dropped 44 per cent. as compared with 1929.

FRANCE.

Budget — Conversion Prospects — Capital Issues — Stock Exchange — Production — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, March 18.

THE Chamber, after sitting continuously day and night, completed its discussion of the Budget Bill on Friday afternoon, and the measure was immediately sent up to the Senate. According to present plans, the Upper House expects to finish its work on the Bill on March 28th or 29th, which will leave at least two full days for the two Chambers to come to agreement before the new financial year starts on April 1st.

The Budget has suffered from the fact that it has undergone modification at the hands of three consecutive Ministries since it was first drafted, as well as from the always active Finance Commission of the Chamber. The outstanding comparative totals are as follows:—

	Original Draft. Frs.	As Voted. Frs.
Estimated expenditure	50,145,286,389	50,742,081,650
Estimated revenue	50,251,748,329	50,753,631,435
Estimated surplus	106,461,940	11,549,785

The ultimate balance was arrived at only by the last-moment device of reimposing the old scale of taxation on Bourse operations. This speedy cancellation of last year's relief, which has caused a loud outcry from the stock-brokers in this market, is expected to produce 127,000,000 francs during the coming financial year—if, which appears more than doubtful, the Senate accept the Chamber's decision. By itself, however, this renewed source of revenue would not have been sufficient to balance the Budget had not the majority of the House realised in time the impossibility of satisfying the demand for increased ex-soldiers' pensions and of increasing the pay of the country's school teachers to an extent far beyond the limits fixed by the Government.

A certain amount of revision downwards of proposed expenditure is expected from the Senate, so that exact figures will not be available until after the end of the month. In round figures, public debt charges during the coming year will be about 40 per cent. of the total expenditure. The debt annuity is about 92,000,000 francs more than that for the current year, owing to increased pension scales, in spite of the transfer of 1,900,000,000 francs to the Caisse d'Amortissement. Military and naval expenditure has been further reduced by 128,000,000 francs.

Hopes aroused among British subscribers to French war loans that they may eventually recover at least part of the capital lost by the revaluation of the franc have been strengthened by the actual inclusion in the Budget of a clause which, for all practical purposes amounts to a pledge that some relief of this kind shall be given from the economy resulting to the Budget from the pending conversion scheme. The clause was adopted unanimously, but the Finance Minister, in supporting it, cautiously repudiated all knowledge as to how or when the conversion plans are to be applied, and insisted that the clause must not be regarded as a binding pledge. He admitted, however (in reply to a question as to whether the Government was disposed to favour relief for this class of Rente holders), that he agreed with the possibility of including

in the conversion scheme a system of allowances (*bonifications*) or some other form of compensation. The statement was received with cheers from all parts of the House.

Opinion in general is convinced that application of a massive conversion scheme in the near future is inevitable. The absurdity of the State being obliged to continue to pay 6 per cent. for long-term money (1920 and 1927 Rente issues), at a time when 4 per cent. Crédit Foncier and other large issues are being over-subscribed, is being emphasised daily. The hesitation in taking a definite decision is due, apparently, in this case as in many others, to electoral rather than financial considerations. There are fears as to the effects any application of the conversion loans so near the 1932 general elections may have on the voting of the enormous mass of small *rentiers*, who may place their personal interests above those of the nation. The new Budget provides for a saving of 375,000,000 francs, during the coming year, from buying in for extinction purposes by the Caisse d'Amortissement alone. The Budget Minister, M. Pietri, stated a few days ago, however, that "the present situation of the market has considerably reduced the rhythm of buying in." In other words, Rentes are by far the firmest compartment in the Bourse, and they are being snapped up whenever offered, in the belief that conversion is unlikely until after the elections.

New issues of capital during February (exclusive of railway bonds, which last year averaged 500,000,000 francs a month) totalled 4,228,000,000 francs, as compared with monthly averages (including railway bonds) of 2,258 millions in 1930, 866,000,000 francs in 1929 and 604,000,000 francs in 1928. Of the February total 62,000,000 francs represented share capital of new companies, 153,000,000 francs increases of share capital by old companies and 4,013,000,000 francs new bond issues against 357,000,000 francs in January, and monthly averages of 1,753,000,000 francs in 1930, 521,000,000 francs in 1929 and 298,000,000 francs in 1928. The exceptional February bonds issue was due chiefly to the issues of 2,500,000,000 francs by the Crédit Foncier, 742,900,000 francs by the Grosse Metallurgie groups, and 441,678,000 francs by the Northern coal-fields group—all 4 per cent. conversion issues—during that month. The average rate of interest offered by bond issues last month was 4.10 per cent., as compared with 4.95 per cent. in January, 4.35 per cent. in October, and means of 4.69 per cent. in 1930, 5.36 per cent. in 1929 and 6.3 per cent. in 1928. At the same time, out of fifteen new bond issues announced this week, one offers 4 per cent. interest, three 4½ per cent., six 5 per cent., three 5½ per cent. and two 6 per cent. The flood of new bond issues is being readily absorbed and has had no effect on old bond quotations; which indicates that older issues are not being sold to replace new, and confirms the popularity which this form of investment is enjoying, as compared with shares of variable yield.

The general index figure representing Bourse quotations of 300 French issues of variable yield at the end of February is 373 (1913=100), against 365 at the end of January, 349 for December, 378 for November and means of 437 in 1930, 507 in 1929 and 415 in 1928. The figure issued to-day for March 14 shows, however, a drop of 10 points on the fortnight. The highest individual figure for February is that for insurance shares—835, as against 764 at the end of December, and means of 965, 995 and 650 for 1930, 1929 and 1928 respectively. Banks are returned at 287, against a mean of 324 for 1930 and 365 in 1929.

Industrial production figures for January show surprisingly small change. The general index figure (1913=100), covering nine of the principal industries, is 133, indicating a drop of only a single point per month since August and of seven points from the high record average of 140 for 1930. None of the individual industries have dropped more than two points on the month. The metallurgical and building figures are each a point lower, those for rubber and mining industries are unchanged, while that for leather has advanced two points.

The general index figure of wholesale prices at the end of February (July, 1914 = 100) is returned by the Statistique Générale as 492, against 494 for January, 498 in

December, and means of 543 for 1930 and 623 for 1929. The figure for native products shows a drop of 10 points to 557, against means of 591 and 635 for the previous two years. The figure for imported products is 11 points higher on the month at 375, against means of 458 for 1930 and 602 for 1929.

GERMANY.

Delegation to Russia — Berlin Finance — Public Debt — Stock Exchange — Dresdner Bank Results.

(FROM OUR CORRESPONDENT.)

BERLIN, March 18.

LAST week the delegation of German industrialists returned from their visit to Moscow as guests of the Russian Government. Except for the I.G. Farbenindustrie, nearly all the leading industrial concerns of Germany were represented, and the outcome was a provisional agreement for an increase in Russian orders from German industry. The Russian Government would be prepared to place additional contracts, to the value of some 300 million Reichsmarks, chiefly for products of the iron, engineering and electrical industries, but it would require further long-term credits. These could only be furnished by the banks which finance German industry if the Reich and the States would once more guarantee 40 per cent. and 30 per cent. respectively. It is a difficult decision for the Government, for, while contracts of 300 millions would provide employment for 50,000 workpeople, and the Government can leave no stone unturned to reduced unemployment, there would, on the other hand, be a grave risk to the federal finances if conditions in Russia were to come to a crisis. The Reichsbank will have an influential voice in the final decision.

The withdrawal of Sofina has been followed by a new project for the financing of Berlin by means of the electricity works, this time on a smaller scale. According to the new plan, the control of Bewag would remain entirely in public hands. Bewag would be reconstituted as a joint-stock company with Rm. 240 millions capital, consisting of Rm. 80 millions "A" shares each carrying two votes and 160 million single-vote "B" shares. Of the "A" shares the Municipality of Berlin would take 30 and the Reichselektrowerke and the Preussen-Elektra 25 millions each, thereby securing control of the company. The 160 million "B" shares would be offered to the public, 80 millions in New York, 40 millions in London, and the remaining 40 millions through a German group of banks under the leadership of Seehandlung and Reichskreditgesellschaft.

The new company would take over Bewag's 77 millions debt, so that its total capitalisation would amount to 517 millions. The city, in addition to relief from its debts, would receive an annual franchise fee of 14 million Reichsmarks, which would increase with the growth in the consumption of power. Negotiations on this proposal are expected to develop rapidly.

The statistics just published showing the debt of the Reich, States and municipalities as at December 31, 1930, show that their internal and foreign debt increased even in the second half of last year. The total indebtedness of the Reich, excluding the valorised pre-war and war debts, amounted at the end of 1930 to 6,622 million Reichsmarks compared with 6,200 millions on June 30, 1930. The increase includes the 125 millions two-year transitional credit of November, 1930. There was little change in the debt of the States; their short-term foreign debt only amounted to 125 million Reichsmarks. The debts of the big cities, on the other hand, increased during the year from 4,500 to over 5,000 million Reichsmarks. Of these, 1,645 million Reichsmarks, or about 30 millions more than a year ago, are medium or short-term debt. The funding of a part of this debt, amounting to about 750 million Reichsmarks, is particularly urgent. It is impossible to say how much of the municipal short-term debt is held abroad, but large amounts of foreign capital have been taken up by the German cities through the medium of German banks.

The recovery in the German exchange and share markets which began last week is still maintained. Leading German shares have recovered on the average 20 per cent. of their value in a fortnight, but more important than the level of values are the manifestations which have accompanied the rise. The market is now being enlivened by the purchases of the small capitalists who ever since the elections had been fighting more and more shy of the Stock Exchange. The flight of capital last autumn has been estimated at about 1,000 million Reichsmarks. Now this capital is beginning, though only gradually, to flow back to Germany and seek investment here. The renewed confidence in the political and economic stability of Germany is showing itself in the large number of small orders for German shares and German rentes. The rise in the Young Loan and in German rentes on foreign Stock Exchanges is evidence that a more favourable view of conditions in Germany is being taken abroad. Foreign offers of short-term credit to German banks are increasing sharply, but there is an understanding among the German banks to restrict their acceptance of these offers as far as possible, as Germany's foreign short-term debt is still considered too large. Moreover, the banks hope to bring about the longed-for reduction in interest rates by curtailing their foreign short-term borrowing, and so rendering foreign banks more inclined to take up long-term issues.

The Dresdner Bank, the first of the large German banks to publish its 1930 accounts, is paying a dividend of 6 per cent., against 10 per cent. in each of the preceding four years. It is an open secret that this reduction of 4 per cent. is to be common to all the big banks. The Dresdner Bank shows a gross profit of Rm. 76.6 millions, compared with Rm. 77.8 millions in the preceding year. These figures show that normal bank business was not unfavourable even in 1930; the dividend reduction is only necessary because Rm. 6 millions of the profits, or 6 per cent. of the share capital, was used for writing down investments. It may be assumed that with the aid of these writings down and of the amounts transferred to reserve out of profits, the hidden reserves, which were substantially reduced by the fall in security prices, will be to some extent made good. The dividend reduction is also partly due to the desire to carry forward the reserves undiminished into the new year.

In the last quarter of 1930, after the elections, the Dresdner Bank experienced a reduction of about Rm. 250 millions, or 10 per cent., in the item Creditors. This consequence of the flight of capital did not, however, force the bank to reduce its loans to German industry. In spite of the economic depression the demand for bank credits at the end of 1930 was just as large, if not larger, than at the end of 1929. The Dresdner Bank was obliged, in order to satisfy the credit demands of its customers, to issue its own acceptances and take up documentary credits abroad. The item Debtors was thus maintained at an unchanged level in the last quarter of last year. Not until the current year, when the stringency in the money market had somewhat relaxed, did the German banks attempt a more extensive reduction of their debtors.

HOLLAND.

Government Assistance to Agriculture — Sugar and Tin Restriction — Foreign Trade — Capital Issues.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, March 14.

IN agriculture the depression is making itself felt particularly severely, and in some cases the Government has deemed it necessary to lend assistance, on the grounds that the crisis is temporary and that the interested parties themselves are not in a position to do anything further. This State aid is to be limited to the duration of the crisis. The schemes of support are accordingly purely emergency measures. The levying of higher import duties has therefore been to a great extent

avoided, and support has taken the form of subsidies and other facilities. A Government credit of 4½ million guilders at 2 per cent. has, for example, been placed at the disposal of the sugar-beet growers and the potato flour industry.

In other directions, too, the crisis has compelled the Government to resort to serious measures. Regulations have been introduced for restricting the export of sugar from the Dutch East Indies in pursuance of the Chadbourne scheme; the rubber enterprises are now hoping for some similar measure to their benefit; and a statement was recently issued by the Government in which the fact was stressed that the Dutch East Indies occupy a special position in regard to tin restriction, because they could not share the blame for the enormous increase in the world production of tin in the last eight years. The advantage of enforcing restriction of production there would be limited, as Banka tin always commands a higher price in the market than other sorts, in spite of the low cost of production. As, however, the ore resources are not unlimited, it would be very uneconomic to increase production at these low prices. Such tactics would also tend to the disadvantage of the Billiton enterprise, five-eighths of the profits of which go to the Government as shareholders. In view of the important part played by tin production in the State finances, stable tin prices are of prime importance for the Dutch East Indies. With this object in view, and not with the aim of forcing tin up to the highest possible price, representatives of the Dutch East Indies tin interests, with the co-operation of the Government, have been taking part in the tin restriction negotiations which have been in progress for a very considerable time.

In the Netherlands trade balance the results of the depression are still very evident. According to the official statistics, imports in January, 1931, weighed 2,561,000 tons, with a value of 179 million guilders, against 2,214,000 tons and a value of 165 million guilders in December, 1930, and 2,697,000 tons, valued at 220 millions in January, 1930. Exports in January, 1931, were 1,359,000 tons, with a value of 117 million guilders, compared with 1,321,000 tons and a value of 117 millions in December, 1930, and 1,394,000 tons, valued at 152 millions, in January, 1930. As compared with January, 1930, imports of agricultural products increased in quantity in January, 1931, from 350,000 tons to 539,000 tons. Their value, on the other hand, shows a decline from 52 million guilders to 43.4 millions. The increase in the quantities imported was due principally to the exceptionally large imports of grain from Russia. The boycott which several farmers' co-operative societies declared against Russian grain last spring, has now been abandoned. In other respects, too, there is evidence of a closer commercial intercourse between Russia and the Netherlands, and from the trade returns for January it appears that Russia figured for the first time as a customer for Dutch margarine. The imports for that month included some 8,000 bags of Russian potato flour, much to the disadvantage of the Dutch potato flour industry.

The money market continues to be extraordinarily liquid, and as a result of the very low money rates and the reduced yield on fixed-interest securities a number of conversion loans have been marketed. Activity in the market for new issues has been reduced to a minimum. The flotation of 5 per cent. bonds of the North American Company, of a nominal amount of one million dollars, was by far the largest of all the private issues last month. Industrial undertakings have much reduced their demands not only for capital but also for ready money. The result has been a considerable drop in money rates, but even at that low level a surplus of immediately available funds was left on the market in search of employment. This provided occasion for the favourable conversion of loans, and the municipality of Amsterdam availed itself of the opportunity to convert a 7½ million guilder 5 per cent. loan into a corresponding amount at 4 per cent. The municipality of Rotterdam also came on the market with a 4 per cent. conversion loan of 16,727,000 guilders. It

is a sign of the times, however, that even the very small amount which was offered for subscription last month was not fully absorbed on the open market. Only 85 per cent. of the Amsterdam conversion loan was taken up. The abnormally low activity of the new issues market is well illustrated by the following table:—

(Thousands of guilders.)				
Issues in:—	1928.	1929.	1930.	1931.
January	34,737	68,209	51,037	10,444
February	55,116	101,588	55,845	14,200

The total of 14,200,000 guilders in February, which, except for about 250,000 guilders, was entirely for issues of bonds and debentures, included 2½ million guilders on foreign account.

SWEDEN.

Production — Foreign Trade — Credit — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, March 13.

THE depression has deepened in Sweden, though not yet to an alarming degree. The demand for credit has declined, and the money market continues to show pronounced dullness. The latest available production figures, for January, point to a very marked decline for the time of the year. *Svensk Finanstidning's* index of production shows a decline from 120 to 113 (1923-24=100). A year ago, on the other hand, the index number rose from 130 in December to 151 in January, and two years ago in the same period from 128 to 148. It has long been evident that the output of sawn goods would be considerably reduced during January as a result of steps which had to be taken in consequence of the keen Russian competition. Production in December sank from 93 to only 65, against an average of 108 in 1930. Shipments were reduced in the same month by 34 per cent. compared with last year. At the turn of last month the total Swedish sales were estimated at only 125,000 standards. Under such circumstances the outlook in the timber industry is undoubtedly dark, and it is an open question how long the prices which have so far prevailed will be maintained. Iron ore and iron and steel showed the next greatest reduction of output in January. The index number of production for the latter in December was 115, and fell in January to 97. Parallel with this the mining of iron ore fell from 149 to 119, compared with an average of 187 in 1930.

The serious situation in the export market is clearly reflected in the accounts of the Grängesberg concern for the past year. The net profit, it is true, appears a little greater than in 1929 at 20.41 million kronor, against 20.34 million kronor. This, however, is merely due to the fact that the main part of the company's income is derived from subordinate companies in the form of dividends which represent 1929 profits. This year the company will feel the full weight of the depression, and, even if an improvement should take place in the relatively near future, the accumulation of stocks will necessitate a very marked decrease of deliveries during the whole of the present year. For these reasons the board recommends a lowering of the dividend from 17 per cent. to 12 per cent., though the results for last year would very well permit an unchanged distribution. The board has created a special dividend equalisation fund of 6 million kronor in order to provide for the expected decline in profits. The shipments of recent months show that this measure is justified. Since July last year shipments have continually fallen from about 770,000 tons to 300,000 tons for February, whilst in the corresponding period last year the fall was from 1,130,000 to about 650,000 tons. The totals for these months amounted to 4.14 millions, as against 6.75 millions, a decline of about 39 per cent.

The picture presented by statistics of unemployment is identical with that afforded by the index of production. The number employed in "reserve work" rose during January from 3,500 to about 5,100, whereas the corresponding figure a year ago was only 3,100. At the same time the number of unemployed seeking relief from the

March 21, 1931.]

THE ECONOMIST.

617

unemployment commission rose from 24,800 to 31,900, as compared with only 12,000 a year ago. There are, however, bright spots. Employment was comparatively good in the metal industry, which, like the electrical industry, will receive large orders for the electrification of the Stockholm-Malmö railway which has been decided upon by the Riksdag. Production was also very active during January in the pulp industry. Its output rose from 145 per cent. of the 1923-24 figure in December to 173 per cent. in January, a fairly normal level.

Generally speaking, demand for foreign exchange this year has been more restricted than there was reason to expect. At the same time demand for credit has fallen away in a much higher degree than is normal for the season. Deposits in commercial banks, it is true, increased less than a year ago during January, but, on the other hand, loans also increased much less, for which reason rediscounting with the Riksbank declined to an unusual extent. The total contraction of the volume of credit amounted this year to 169 million kronor, while in January last year it was 108 million kronor.

The rise on the Stock Exchange during February is *prima facie* in strong contrast with the above-described developments. There was a total increase in quotations of 293 million kronor, after a fall in January of 178 million kronor. In fact, however, this improvement only affected Swedish stocks to a very slight extent. The Kreuger stock alone rose by 222 million kronor, and all stocks quoted abroad by 236 million kronor. In other words, it was, as usual, the New York Stock Exchange which was decisive, especially in so far as Kreuger stocks rose in sympathy with the upward tendency there. The majority of the domestic stocks, on the other hand, continue to show an uncertain tendency, even though on particular days they rose a little. Nevertheless, the impression is further strengthened that the bottom was reached in January.

HUNGARY

Public Finance — Agricultural Credit — Money and Banking — Balance of Payments — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BUDAPEST, March 12.

THE economic depression is making itself seriously felt in the falling receipts of the Treasury. In the first six months of the current financial year July-December, 1930, total revenue amounted to 423.3 million pengő only, as against 473.5 millions in the corresponding period of 1929. Expenditure totalled 486.5 million pengő, against 501.5 million in 1929, thus the deficit of the first half of the present financial year amounted to 63.2 million pengő, as compared with 28 millions in 1929-30. The estimates for January, 1931, forecast a deficit of 16.4 million pengő. It is hoped that the budgetary position will be somewhat eased in the coming months, as Parliament has voted additional taxes and carried an Economy Act to take effect in the second half of the current financial year. The Budget for 1931-32, which will be presented to Parliament before the Easter recess, will further curtail expenditure. In view of the fact that no substantial increase of taxes could be reasonably expected in 1931, revenue estimates are conservative and take into account the fact that receipts from both direct and indirect taxes have considerably fallen off in 1930.

In order to relieve the heavily indebted farmers, a Finance Bill was introduced in Parliament providing for the consolidation of the onerous short-term debts into 6½ per cent. interest-bearing internal bonds guaranteed by the State. It is estimated that approximately 100 million pengő of short-term debts will be consolidated. The bonds will be issued by a Financial Syndicate with the collaboration of the creditors and the banks concerned. As the total indebtedness of the agriculturists amounts to more than 1,500 million pengő and only one-fifth of it is consolidated, much still remains to be done to relieve the farmers from the crushing burden of

their short-term debts. Unfortunately, the adverse conditions of the international money markets do not permit the issue of long-term loans secured on mortgages which would be essential for the farmers' relief, and the creation of the International Mortgage Institute under the auspices of the League of Nations to help the agriculturists of Central and Eastern Europe has aroused great interest.

The money market is easy. Short-term loans are abundantly offered by the creditor countries, but there is very little demand for them, even at 3½-4 per cent. In the absence of long-term loans the necessary foreign loans are raised in most cases for the period of one year with the possibility of renewing for another. Several such medium-term loans have been granted by financial institutions in London and New York, and even by French banks. This method of financing the country's requirements was used during the past year and is likely to continue in 1931, as long as no long-term issues can be floated on the principal money markets. Thanks to the good reputation of the Hungarian banks, there is no difficulty in obtaining the necessary foreign funds.

All the major banks and saving banks have published their balance sheets for 1930. In spite of the economic crisis of the past year their statements reveal satisfactory progress. Net profits are only slightly lower than in 1929, which was a very good banking year. Four of the principal banking institutions have maintained and six have reduced their dividends. The Hungarian General Creditbank, which acts as banker to the State, shows net profits of 6,557,647 pengő, as against 7,496,453 pengő in 1929, and a dividend of 4.50 pengő (against 5.50 pengő in 1929) per share is proposed.

The balance of payments improved considerably in 1930 as a consequence of the active balance of merchandise trade. The deficit of the current items of the balance of payments is only 100 million pengő in 1930, as against 200 million pengő in 1929 and about 500 million pengő in 1928. Thanks to the remarkable economic adaptation of the country there was an active trade balance of 77.5 million pengő, as compared with a deficit of 25.2 million pengő in 1929 and 385.4 millions in 1928. Apart from merchandise trade the most important invisible current item is the payment of the interest charges due to foreign creditors amounting to approximately 175 million pengő. As to the other invisible current items, the deficit of the tourist traffic is offset by the remittances of emigrants and railway and shipping trade and revenue. Against the net deficit of 100 million pengő on current items, there is a net increase of 200 million pengő in the foreign indebtedness of the country. According to the annual report of the National Bank the inflow of long-term loans during 1930 amounted to 87 million pengő, that of medium-term loans to 175 million pengő, totalling 262 million pengő. From this sum about 60 million pengő must be deducted for sinking fund payments of foreign debts contracted in former years, so that the net increase is about 200 million pengő. The Treasury Bills discounted in London and in other principal money markets in November, 1930, amounting to 87 million pengő (£3,150,000) are included among the medium-term debts of 175 millions, the remainder represents the net increase of loans for financing exports and agricultural, road and railway schemes. The major part of the long-term loans, totalling 87 million pengő, is the third instalment of the Swedish Match Trust Loan amounting to \$12 millions and the rest consists of mortgage issues in Switzerland and in London.

An analysis of foreign trade in 1930 shows that exports to Italy have increased from 29.2 million pengő in 1928 to 116.4 million pengő, and to Great Britain from 22.7 millions to 49.4 millions. On the other hand exports to Austria, Germany and Czechoslovakia have considerably decreased. Trade with Austria resulted in a favourable balance of 158.7 million pengő, that with Czechoslovakia and Germany in a deficit of 25.8 and 81.8 million pengő respectively. Negotiations to renew and to amend the commercial treaty with Austria are in progress and it is hoped that a solution will be found favourable to both countries.

before June 1, 1931, when the present treaty expires. It is likely that direct negotiations for a new commercial treaty will be resumed before long with Czechoslovakia, with whom Hungary has practically been conducting a Customs war since Czechoslovakia denounced the commercial treaty on December 15, 1930.

IRISH FREE STATE.

Butter Tariff — Dairy Marketing — Foreign Trade.

(FROM OUR CORRESPONDENT.)

DUBLIN, March 17.

THE problems of the dairying industry have been occupying a great deal of public attention in recent months. The slump in butter prices in November placed the industry in a dangerous position, especially as large quantities of butter had been held over in the summer in the hope of better winter prices. A prohibitive emergency tariff was imposed on butter imports pending the hearing of an application for a permanent duty by the Tariff Commission, and steps were taken to develop the existing system of centralised marketing of dairy produce. The Report of the Tariff Commission has since been issued, recommending a permanent duty of fourpence per pound on butter. The alleged justification of this recommendation is that it will stimulate winter dairying in the Free State and will remedy the old evil of irregular production throughout the year. Whether this desirable result will follow remains to be seen, but the immediate effect of the tariff has been to raise the price of butter and to cause much dissatisfaction among consumers in the towns. It is difficult to believe that farmers will be so altruistic as to resist the temptation to store butter during the summer for the higher winter price. The Minister for Agriculture has intimated that any action of this kind would be considered a ground for revising or repealing the duty, but no machinery has been provided to prevent it.

Meanwhile efforts are being made to reorganise the marketing arrangements of the dairying industry. After several unsuccessful attempts had been made to introduce some method of orderly marketing, the Irish Associated Creameries, Ltd., was established in 1928. This organisation was very successful up to a certain point; but it experienced difficulties owing to the refusal of several large creameries to participate in its activities and to the slump in butter prices in the last few months. A tribunal to inquire into the marketing of butter suggested the formation of a new organisation which every creamery in the Free State should be compelled to join. In pursuance of the report of this tribunal, the Minister for Agriculture summoned a meeting representative of the creameries at which a resolution was passed favouring the establishment of a national marketing agency, to be financed by a levy of sevenpence on each hundredweight of butter sold. A few days later the members of the Irish Associated Creameries passed a resolution in favour of considering the winding up of the society, and it seemed as if the way were clear for the formation of the alternative organisation. About a week later, however, a meeting, representing a majority of the co-operative creameries, rejected the tribunal's proposed scheme, and a further meeting of the Irish Associated Creameries has since refused to pass, by the necessary majority, a winding up resolution. The situation is, therefore, very unsatisfactory: the Irish Associated Creameries, which a large number of creameries refuse to join, is still in being, while the new national selling organisation is as far from realisation as ever. The fact is that the farmers, who are crying out for tariffs, subsidies and reductions of taxation, are unwilling to undergo any exertion to help themselves. Instead of coming together to reorganise their own antiquated methods, they wait for the Government to do everything for them, and, when the Government does give them a lead, they refuse to follow. The danger is, that if they cannot be made to agree on some constructive line of action, the Government may be forced in the national interest to provide State assistance for the orderly marketing of butter by means of some subsidised exporting

agency, the cost of which would fall on the home consumer or the general taxpayer.

The external trade figures for 1930 are very satisfactory, as is shown by the following table:—

	(Thousand £'s.)		
	Imports.	Exports.	Balance.
1929	61,302	47,870	—13,432
1930	56,739	45,731	—11,008

The passive trade balance is the smallest in any year since the establishment of the Free State. The invisible imports and exports have not as yet been accurately estimated, but a detailed investigation is now being made by the statistical department, and it is the general opinion among those best qualified to judge that the active balance on invisible account is greater than the passive trade balance shown above. The small fall in the value of exports in 1930, in spite of the general fall in prices, is the result largely of increased exports of cattle and other livestock, porter, beer and ale, and tractors and tractor parts. The price of agricultural imports, especially wheat and feeding stuffs, fell more than that of agricultural exports, so that there is every reason to conclude that 1930 was a comparatively prosperous year for the Free State.

Letters to the Editor.

UNILEVER INQUIRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We have now received a reply from our Continental correspondent, in respect of taxation in Denmark and Norway, and should like to add it to the information given in the letter published in the *Economist* of February 21. He writes that as regards Denmark he has now received the information required from Copenhagen, from which it appears that the taxes paid had not been deducted from the taxable income. Moreover, the municipal taxes in Copenhagen have been reduced by 10 per cent., but this reduction was not shown in the tax-tables which were used for the calculation.

The correct figures of taxes payable on Danish equivalents of English standards of £500, £1,500 and £3,000 a year are £56, £222 and £460; and not, as originally stated, £76, £313 and £690.

As regards Norway, our correspondent writes that the figures so far as the municipal taxes are concerned, related to Aker, a municipality which adjoins Oslo and where many people who work at Oslo live. Foreigners in particular are settled there because it is hardly possible to find a house in Oslo; only when a large amount is paid for the acquisition of so-called shares in a building is it possible to get a flat there. Then, of course, the advantage given by the lower municipal tax scale of Oslo is nullified by the difference of rent and the loss of interest and even very often of capital on those shares. Moreover, though the taxes for Oslo are lower, they are in any case considerably heavier than those calculated by Mr Halford.

We need not add much to the above statements. The result is that in respect of taxation our figures as published last year need correction for Belgium on account of a change in the law, and for Denmark on account of a mistake made by our correspondent.—Yours faithfully,

THE COMPILERS.

Books and Publications.

THE STOCK EXCHANGE YEAR-BOOK FOR 1931.*

IN ITS fifty-seventh year of publication, the Stock Exchange Year-Book records a further improvement, both in its size, scope, and usefulness. Several innovations have been made this year, with a view to facilitating reference, including the provision of "name tabs" for the different sections, and the addition of a new section, "Oil Companies," by transferring the relevant names from the miscellaneous list. Though the editorial matter has expanded, an increase in the size of the pages has actually reduced the bulk of the book. In addition to an exhaustive list of companies, the 1931 volume contains an introductory note on the Companies Act 1929, and an alphabetical list of stockbrokers.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Trusts and Economic Control. By Roy Emerson Curtis. (London) McGraw-Hill Publishing Company, Ltd., 6 and 8, Bouverie Street. 20s. net.

A learned and well-documented treatise on the concentration of control of industry in the United States and other countries. Special emphasis is laid on the legal aspects of the question.

World Minerals and World Politics. By C. K. Leith. (London) McGraw-Hill Publishing Company, Ltd., 6 and 8, Bouverie Street. 10s. net.

A discussion of changes in the geography of mineral sources, the mineral position of industrial countries, the political measures taken by various countries in respect of minerals and probable future developments.

The Giant of the Western World. By Francis Miller and Helen Hill. (London) J. M. Dent and Sons, Ltd., Aldine House, Bedford Street. 10s. 6d. net.

This book shows a refreshing freedom from the self-consciousness which sometimes characterises essays on the United States by Americans. Its thesis is the emergence, as the result of the interaction between the United States and the countries of Europe, of a North Atlantic civilisation. The authors take a grave view of the danger to world peace involved in the economic invasion by the United States of the markets of the world.

Business Leadership. Edited by Henry C. Metcalf. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 10s. 6d. net.

A collection of essays by American experts in business management.

Methods in Social Science. Edited by Stuart A. Rice. (London) Cambridge University Press, Fetter Lane. 21s. net.

Fifty-three essays on the methods employed in more than sixty important contributions to social science. They range from subjects of such general cultural interest as Professor Pirenne's paper on "What are Historians Trying to Do?" to such technical matters as "N. C. Nelson's Stratigraphic Technique in the Reconstruction of Prehistoric Sequences in South-Western America."

Textil-Land und Textil-Leute. By Dr. Nicolas Benckiser. (Frankfurt-am-Main) Frankfurter Zeitung. 1 mark.

The sub-title is "Impressions of a Journey Through Lancashire and Yorkshire," but the essay, furnished as it is with statistical tables, is more substantial than the sub-title might imply.

Elements of Practical Statistics. By F. H. Harper. (London) Macmillan and Company, Ltd., St. Martin's Street. 10s. 6d. net.

A simple manual designed to give a sound grounding to the student who has occasion to handle statistics but possesses no mathematical training.

How to Make the British Railways Pay. By M. F. Farrar. With a Foreword by J. H. Jones. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 3s. 6d. net.

It is impossible for the layman to assess the value of Mr Farrar's suggestions, but as the proposals of a successful business man, who has made railway economics his hobby, they are worth reading.

Review of the Oilseed, Oil and Oil Cake Markets for 1930. (London) Frank Fehr and Company, Holland House, Bury Street.

An exceedingly useful and very well indexed collection of statistics of prices, production, stocks, imports and exports of oil-seeds and their products, lard, butter, tallow, whale oil and fish oil.

Economic Geography of South America. By R. H. Whitbeck. Second Edition. (London) McGraw-Hill Publishing Company, Ltd., 6 and 8, Bouverie Street.

A useful textbook.

International Co-operation, 1927-29. Vol. II. (London) International Co-operative Alliance, 14, Great Smith Street. 7s. 6d.

Reports on the progress of fifty-five national co-operative organisations in thirty-four countries, under each of the main headings into which co-operative activities fall.

Canada, 1931. Compiled and published by the Dominion Bureau of Statistics, Ottawa. 25 cents.

An illustrated handbook containing useful statistics illustrating the recent progress of Canada.

The Stock Exchange.

FIXED TRUSTS.

THE type of investment known as the "Fixed Trust" has recently obtained remarkable popularity in America. Within the last two years, approximately 150 American Fixed Trusts have sold "shares" to a total privately estimated by an experienced American statistician at about \$400 millions, the largest trust claiming itself to have marketed \$145 millions worth of these securities. The Stock Exchange slump appears to have enhanced rather than detracted from the appeal of the Fixed Trusts to investors, and the resulting withdrawal of large quantities of stock from the floating supply in the market has been a not inconsiderable factor in the recent firmer tone of American prices.

The reasons for this "vogue" are not far to seek. The post-war evangelists of the investment trust idea in the United States, such as Mr Leland R. Robinson and Mr Edgar Higgins, writing for a public to whom the whole conception was somewhat novel, may unconsciously have given the impression of stressing the principle of "spreading investment risks," to the exclusion of other features, like generous reserve accumulation, which British practice has shown to be of at least equal importance. During the Wall Street boom, many new American investment trusts of the so-called "management" type, were created, with more zeal than discretion. The ensuing slump caused much dissatisfaction, not with the trust idea in itself, but with the degree of skill, judgment and probity shown by the directors of some companies. The resulting desire to eliminate the "human factor" expressed itself in a demand for a security based on the best available selection of American shares, which, once made, should be known to every subscriber, and should be subsequently unalterable.

The *modus operandi* of the creators of a Fixed Trust may be illustrated from the prospectus of a typical organisation, the North American Trust. The shares of this Trust represent one two-thousandth part of a "unit," held by the Guaranty Trust Company as trustee, and based on four ordinary shares of each of the following 28 companies, together with a "reserve fund" of \$1,200:—

American Telephone and Telegraph Company, Consolidated Gas Company of New York, Western Union Telegraph Company, American Radiator and Standard Sanitary Corporation, American Tobacco Company (Class B), E.I. du Pont de Nemours and Company, Eastman Kodak Company, General Electric Company, Ingersoll-Rand Company, National Biscuit Company, Otis Elevator Company, United Fruit Company, United States Steel Corporation, Westinghouse Electric and Manufacturing Company, F. W. Woolworth Company, Arden, Topeka and Santa Fe Railway Company, Canadian Pacific Railway Company, Illinois Central Railroad Company, Louisville and Nashville Railroad Company, New York Central Railroad Company, Pennsylvania Railroad Company, Southern Pacific Company, Union Pacific Railroad Company, Royal Dutch Company (New York shares), Standard Oil Company of California, Standard Oil Company (New Jersey), Standard Oil Company of New York, The Texas Corporation.

Bearer certificates in coupon form are issued in various denominations ranging from 10 to 10,000 shares (i.e., from 0.005 of a unit to 5 units) and are obtainable by investors at a price based upon current New York Stock Exchange quotations for the component shares, plus (a) Stock Exchange commissions, (b) an arbitrary charge of 18 cents per share for issue and deposit, (c) 60 cents for "reserve fund," with a sum representing the proportionate value of accumulated cash, etc., and (d) 5 per cent. of the total price so calculated, to cover cost of distribution, the final price being adjusted to the next higher one-eighth point. The shares receive semi-annual distributions based on dividends paid on the component stocks, together with the proceeds from "rights," bonus distributions and extra shares from "split-ups," which, under the terms of the Trust Deed, must be sold by the trustees. If the total thus available for any half-yearly dividend falls short of 60 cents per share, the balance may be made up from the cash "reserve fund" (paid by the investor in the original purchase price). That part of the "dividend" which represents return of capital can be re-invested, at the shareholder's option, at a discount of half-a-point below the prevailing price of the trust shares. Though

the shares cannot be dealt in either on the New York or London Stock Exchanges, their sponsors declare that they have consistently maintained a "bid" price half-a-point below the current "asked" price throughout America. Further, holders of a quarter of a unit, or any multiple, may "convert" their holding, and obtain either possession of the underlying stocks, or their value in cash at current market prices. In any event, the trust will be dissolved at the end of 1953.

Most Fixed Trusts have followed this model, though the general idea is capable of many variations. The theoretical advantages of the Fixed Trust can be readily summarised by any competent salesman. The component stocks are the pick of the contemporary market and their combined "statistics" are outwardly imposing. The concerns in the list given above have an average age of 57 years, an unbroken dividend record of 33 years, an average net income (over the last five years) of over £250,000,000, combined assets of over £4,800,000,000, combined surplus and reserves of over £1,300,000,000. Their distributions in the last 18 years would have been sufficient for annual payments to Fixed Trust shareholders of 13.20 per cent. (including 4.75 per cent. "income" and 8.45 per cent. capital receipts). The conduct of the trust being a matter of routine administration, the investor cannot lose his money through speculation, directorial irregularities or management errors.

Against these ostensible advantages, however, must be set certain serious objections. The incidental expenses of acquiring a Fixed Trust holding are high. The trust pays no capital duties, since it is not a company. The saving under this head, however, is more than offset by the fact that the amount of each component stock in its unit is small. It buys its securities retail and, unlike the majority of British investment trusts, does not obtain "underwriting terms" and other advantages of "whole-sale" buying. Though there are no directors' fees, the interests behind the trusts do not go to the trouble of forming them for purely altruistic reasons, or meet the expenses of publicity and distribution out of their own pocket. The prospectus of a typical American concern shows that, on a given day last year, the total market value of the component shares was \$14,150, to which brokerage and commission added \$47.70 (0.34 per cent.), the charge for issue and deposit \$360 (2.45 per cent.), "cost of distribution and profit on sales" price \$840 (5.95 per cent.), and the raising of the price to the nearest higher eighth point \$70 (0.5 per cent.). Thus a purchaser of the Fixed Trust's "unit" paid \$1,270, or 9 per cent. (exclusive of brokerage) more than if he had bought the same shares for himself. The selling price also included \$1,200 "reserve fund" and \$84.16 for accumulations by way of undistributed dividends, etc., on the day in question.

A purchaser of less than a "unit" would, of course, have paid more in brokerage. A very small investor, who bought ten trust shares (equal to one two-hundredth of a unit) for \$83.75 would have "spread his risks" to an extent otherwise impossible in relation to so small a sum. He would, however, have paid a decidedly heavy proportionate price for this privilege, while the larger investor, who could afford to spend approximately \$16,750 on purchasing a whole unit, would have been well advised to buy the shares for himself, and save \$1,270 of non-returnable charges. Some of the expenses incidental to the marketing of Fixed Trust securities would certainly appear to be extravagant. In one recent instance, a firm of London brokers was offered a commission of 2 per cent. for placing the shares of a Fixed Trust, plus an additional 1 per cent. if sales were large. This commission was, in fact, four to six times the normal commission rate of the London Stock Exchange.

An even more serious criticism of the Fixed Trust idea is that it runs counter to all the dynamic theories of investment which have won general acceptance in Great Britain. Shareholders in Scottish or English investment trusts are prepared to pay their directors and managers a considerable remuneration for their services in following the trend of industry and the markets, and getting into or out of particular securities at the right time. To choose a portfolio of securities, at a purely fortuitous moment, and to lock them away in a tin box for anything up to 25 years, is to court disaster in a world in which economic conditions change with disturbing rapidity. Calculations based on "jobbing backwards" on a Fixed Trust holding are altogether illusive. It would have been impossible, say, in 1912, to have picked all the "winners" of 1929-30, and it is dangerous to argue, as the Fixed Trust implicitly argues, that the winners of 1929-30 will be the winners of 1955. This criticism, which is fundamental, may be illustrated by the results of an imaginary Fixed Trust formed at the end of 1912 to include 30 of the best-regarded British stocks of that time. From our past records we have chosen the following 30 concerns, the first ten as being the lowest yielders (i.e., the highest-priced industrial equities) in December, 1912, the next ten as having the highest paid-up ordinary capital, and the final ten as paying the highest rate of dividend per £ of paid-up capital:—

Guinness, Armstrong Whitworth, Bleachers, Fine Cotton Spinners, Furness Withy, Bolckow Vaughan, Maypole Dairy, Babcock and Wilcox, Metropolitan Carriage and Wagon, Bradford Dyers, Linen Thread, Nager, John Thornycroft, Ebbw Vale, Hudson Bay, North British Locomotive, Coltness Iron, F.M.S.P., J. and P. Coats, Cunard, Consett Iron, J. Lyons, Fife Coal, Triumph Cycle, Harrods, British American Tobacco, A.B.C., Liebig's, Crosa and Winkworth, P. and O.

What has been the subsequent history of this imaginary Fixed Trust? Some of the concerns are still in the front rank, but others have been gravely affected by post-war industrial changes. Our computation shows that the purchaser of a "unit" of £100 nominal of each component share at the end of 1912 would have paid £14,102 (excluding commissions, expenses, etc.). His average return over the 17 years to 1929 would have been 3.6 per cent. in income (subject to tax) and 3.45 per cent. by way of "capital" distributions (sale of bonus shares, "rights," etc.). His holding to-day (inclusive of the amounts realised for stock sold on non-payment of dividend) would be worth £6,045, a depreciation of £8,057 (57.1 per cent.), against which he could put (a) the total capital receipts previously mentioned at £8,231 and (b) the interest on the cash received for shares sold during the life of the trust. In other words, whilst, on balance, he would have kept his capital intact (provided he had put his "capital" receipts in the bank) he would have received an average annual income of only about 3½ per cent.—the labours of the mountain thus producing an unsatisfactorily small mouse. The provision that a Fixed Trust must automatically sell, within a fixed period, its holdings in a company which passes its dividend compels the trustees to stand impatiently by whilst a share is going downhill and, finally, to get out at the bottom. As many American Fixed Trusts tend to hold much the same stocks, the passing of a single dividend by a popular "component" concern may be the signal for a disastrous bout of compulsory selling—of which, of course, professional "bears" will be well aware.

Other objections to the Fixed Trust can be briefly summarised. The sale of all bonus shares, rights and other capital accretions, and their return to the investor as "dividends," must tend ultimately to reduce the investor's share in the equity of the component companies, and probably his future cash dividends also. He may re-invest his "capital receipts" in the trust if he wishes, but the onus of doing so lies upon him. It would be far more prudent for the trust to re-invest these monies automatically unless the investor made special application for their cash payment. Even "split-ups" are sold and distributed, so that a Fixed Trust recently sold out three-quarters of its holding of Canadian Pacifics owing to the mere fact that the \$100 shares were split into four shares of \$25, thus reducing its immediate prospective dividend receipts in like proportion. Again, the Fixed Trusts have tended to confine their holding to equity shares, so that they lack the "ballast" resulting from the

British investment trust practice of holding 50 per cent. or more of the total portfolio in the form of bonds, debentures and preference shares. All receipts are divided up to the hilt, no reserves being accumulated other than the initial 5 or 10 per cent. which the investor himself provides at the outset.

Despite their vogue in America, the Fixed Trusts have as yet scarcely passed beyond the experimental stage. At present, they are a bull point for the market, since they are reducing the floating supply of a number of stocks and so tending to sustain market prices. It remains to be seen, however, whether some future period of adversity may not set in motion a reverse process whose unfortunate effects will be in direct proportion to the preceding popularity of the trusts. It is unlikely that in Great Britain, where the Management Trust has had so successful a career, the "new" idea will be taken up on a large scale—at least until it has been possible to ascertain its results in America.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
April 7.

ACCOUNT.
April 9.

THE long account (which includes the Easter holiday) opened with no change in the general atmosphere, the volume of business remaining small, though the undertone of most markets was better than might have been expected in view of unfavourable trade conditions and the proximity of the Budget. Gilt-edged stocks were firm on the strength of sterling. Neither Wall Street nor Paris gave a confident lead to London, demand in all three centres, where it existed, being decidedly selective.

The gilt-edged market was quiet, but improvements were general under the lead of Victory Bonds and Funding Loan. Indian loans improved in sympathy with British Government stocks. Signs of coming disaster to Mr Scullin's Government did not check the improvement in Australian stocks, aided by more satisfactory trade returns from the Commonwealth. New Zealand stocks showed only fractional movements. Little interest was shown in Home Corporation stocks.

The goodwill shown to the Prince of Wales by the South American countries was fittingly reflected in a better tone for many of their stocks. Brazilians and Argentines received attention, but Peruvians dropped back on fears that no payment might be made on the coupon dated April 1st. German bonds were the outstanding feature of the European market.

The recent severe weather, and the worst batch of traffic returns for some weeks, caused further declines in Home Rails. The publication of the text of the London Passenger Transport Bill (described on page 607 of this issue) was the signal for fresh selling of Undergrounds. South American Rails showed further improvement on much more satisfactory traffic returns, Buenos Ayres Great Southern leading the way, closely followed by Central Argentine.

Industrials were steady, but activity was patchy. International stocks showed a firm front. Gramophones and Columbias were in demand on persistent merger talk, though the whole business impressed New York much more than London. Nickels improved on the President's optimism regarding the company's outlook. Cables and Wireless lost ground early in the week, but later staged a recovery. Steel and engineering shares

(Continued on page 624).

The Coming Rise in GOLD SHARES

by L. L. B. Angus.
According to Mr. Angus, Gold shares offer higher yields, and better prospects of capital appreciation, than any other group of securities in time of trade depression. He applies the principles of his work Investment to an analysis of this section of the market.

were steady, Guest Keen receiving attention. Electrical shares ruled moderately firm, but Motors were irregular. Fords improved on the chairman's speech, with its promise of a forthcoming new issue to shareholders. Textile shares did not respond to rather better trade advice, the results disclosed in the first annual report of the Lancashire Cotton Corporation being scarcely calculated to encourage business. Rayons, however, improved under the lead of Courtaulds. Brewery shares were dull. United Molasses had another slump on trepidation over the next report. Imperial Chemical were better on bear closing before the issue of the full report. Bank and Insurance shares showed little change.

The Oil market was firmer than was expected at the opening, though the American situation continued to give rise to concern. The price of Royal Dutch improved on Amsterdam buying. Rubber shares were distinctly "jumpy," the market choosing to put an optimistic construction on the conflicting news regarding negotiations for restriction. Slight "nibbling" caused a modest rise in tea shares.

Firmness obtained in some of the Mining markets. An increasing professional interest was shown in Kaffir, Paris buying International Counters, and Johannesburg demanding a number of favourite shares. Rand Mines were harder. Daggertfontein fell back on news of a new share issue. Rhokuna moved up on the favourable reception of the Rio Tinto debenture issue. Tin shares were unaffected by the slight rise in the price of the commodity, though their general tone was firmer.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets remained resilient, though uneven conditions prevailed and the volume of dealings at times showed a tendency to fall off. Despite the cautious note struck in the U.S. Steel Corporation's annual report, steel shares generally gained ground. The

sharp rise in Steel Corporation on Wednesday was due to the announcement of an advance of \$1 per ton in the price of steel bars, shapes and plates. The whole industry is now reporting better orders, and operations have risen to 50 1/2 per cent. of capacity, the rise of 2 1/2 per cent. last week being the largest for some time past. The unsatisfactory foreign trade figures of the United States induced intermittent selling of railroad stocks, the very considerable decline in exports accounting for an important diminution in railroad freight receipts. Utilities have been a strong feature, but in other sections of the market activity has been mainly professional and highly selective, the public still being disinclined to act upon optimistic declarations from Washington and elsewhere that the bottom of the depression has been passed. Foreign news—including an advance in the price of silver—has been good, but earnings statements by large American companies continue to be adverse. The new issue market, however, remains very active, and a number of important flotations are expected before the end of the month.

AMSTERDAM.

The feature of the Amsterdam Stock Exchange during the past month was the surprise sprung upon the market by the Dutch Ford undertaking, the Nederlandsche Ford Automobielfabrieken, in declaring a dividend of 20 per

cent. for 1930, thus doubling the previous year's percentage. The shares advanced about 50 per cent. in a single day. At the same time, shares in the German undertaking, the Deutsche Ford Motor A.G., were introduced at 202 per cent. For several weeks sentiment has been on the firm side, with trading on a small scale, and no doubt the decidedly firm tendency for German bonds and shares, in which financial circles in the Netherlands are so closely interested, contributed considerably to the improved atmosphere. Thanks to the generally firm undertone, a number of leading stocks, industrials as well as plantations, once more stood well above the low records registered last December. Among industrials, Unie-Lever, Philips Lamp Works, and artificial silks were in good demand, and pronounced advances were scored. The journey to America of several directors of Unie-Lever is believed to bear relation to schemes for fusion with Proctor Gamble. Tobaccos were, if anything, rather more idle, on the unsatisfactory results of the first Sumatra tobacco auctions in Amsterdam. The Besoeeki Tabakmaatschappij sold their entire crop of 52,000 bales at the price of 41 (Dutch) cents per metric pound. Sugar and rubber shares remained fairly steady, with trading quiet. Amongst oils, Royal Dutch were a trifle lower, and shipping shares continued dull.

INVESTMENT NOTES.

The Stock Exchange Year.—The Stock Exchange new financial year begins next Wednesday, March 25th, writes a "House" correspondent. A ballot for the election of thirty members to serve as a General Purposes Committee of the Stock Exchange was held yesterday. The Stock Exchange has no special question before it at the present time, but two candidates, both brokers, came forward to contest the one seat vacated by the resignation of another broker. The number of new candidates for Stock Exchange membership this year is well up to the average, which is a little surprising in view of current depressed conditions. About a couple of years ago, nominations reached practically the peak price of £1,800. Six weeks ago they were offered at £220. To-day the price is about £400. The new Committee will formally take office next week, and it is a foregone conclusion that the present chairman, Mr. Archibald Campbell, will again be re-elected to the position he has occupied for some years past. The newly elected Committee have plenty of work before them. The Committee have not yet taken definite action in respect to a questionnaire they addressed to broker-members last July on the question of the return of commission to agents and others. Recently, certain daily newspapers have endeavoured to revive interest in the question of reopening the Stock Exchange on Satur-

days. This matter, however, has been under the continual survey of the Committee ever since April 28, 1917, when Saturday closing was decided upon. The Trustees and Managers will meet next Wednesday week to decide the final dividend for the year. Though profits are likely to show diminution, it is hoped that the dividend of £13 a share will be maintained. The Stock Exchange now has nearly 3,000 shareholders, out of a total membership of about 4,000. The "House" has suffered loss by the passing this week of Mr. H. W. Henderson, after forty-seven years' membership, of which nearly twenty-three had been spent in the "House's" service as a Trustee and Manager. Mr. Henderson was a recognised authority on Argentine Railways, and his loss will be keenly felt.

Investors and the Traffic Bill.—Shareholders in the Underground Group, the Metropolitan Railway and other concerns, whose future status is affected by the London Passenger Transport Bill, will find that the measure, as at present drafted, leaves many important matters in an uncertain state. For instance, the Bill makes it clear that, as regards the amount of London Traffic Board stock to be given in exchange for any undertaking, "amount of capital" will be the criterion as regards publicly owned concerns and, "return on capital" as regards commercially owned ventures. It is not clear, however, to what extent allowance is to be made for public capital sunk in forms of transport which are no longer competitive. The Arbitration Tribunal, with which the last word will lie as regards the scheme's financial aspects, is directed to pay special regard to the net profits of non-publicly owned undertakings for three financial years prior to the passing of the Act and the probability that such profits would have continued to be earned. The Bill makes no reference to compensation for a prospective increase in profits, which might arise from three different causes: (a) recent capital extensions which, at the time of the Bill's passing, had not reached their optimum earning power; (b) the "equity of good management" and (c) the future growth of London. The only way to compensate existing equity stockholders for (c) would be to offer them, in whole or part, an equity stock of the proposed new Traffic Board. As regards (b), much will depend on the personnel of the five members of the Board, the results of co-ordination, the policy adopted in the matter of the fixing of fares, and the extent to which the "purchase price" paid for the less economic undertakings is a drag on the earning ratio of the Board's stock as a whole. Until these and other questions—such as the method of differentiation between the London and extra-London interests of various concerns—are decided, the Bill will remain merely an outline of a gigantic scheme. The ultimate verdict of the investor will depend entirely upon the manner in which the details are filled in.

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

Industrial Profits.—For the convenience of those of our readers who are accustomed to follow the results of our quarterly computations of British industrial profits, we have arranged to publish from time to time various interim figures in advance of our complete surveys. Accordingly, we show below the total profits of companies whose reports have been received between January 1st and March 14th last, with a comparison of the previous year's figures for the same companies:—

Group.	Number of Companies.	Net Profit (after Payment of Debenture Interest)—All Reports received January 1 to March 14, 1931.		Increase or Decrease.
		1929-30.	1930-31.	
Breweries.....	17	£ 1,157,961	£ 1,139,285	— 1.6
Canals and docks.....	2	523,595	560,544	+ 7.1
Electric Lighting, &c.....	21	4,732,248	5,080,319	+ 7.3
Financial, land and investment.....	18	854,308	754,425	— 11.7
Gas companies.....	39	3,334,054	3,468,971	+ 4.0
Hotels, restaurants, &c.....	4	96,411	79,070	— 17.9
Iron, coal and steel.....	13	710,365	608,886	— 14.3
Motor and cycle.....	6	1,631,531	1,249,059	— 23.4
Nitrate.....	2	64,810	Dr. 154,138	— 337.9
Oil.....	1	300,083	199,347	— 33.6
Rubber, &c.....	30	340,567	Dr. 4,252	— 101.2
Shipping.....	7	298,221	289,506	— 2.9
Shops and stores.....	24	3,911,037	3,664,918	— 6.3
Tea.....	1	201,791	50,827	— 15.0
Telegraphs, &c.....	1	206,611	190,010	— 7.7
Textiles.....	24	5,829,824	2,691,705	— 53.8
Tramways, &c.....	7	547,894	606,542	+ 10.7
Trust companies.....	59	4,711,556	4,834,505	+ 2.5
Waterworks.....	14	646,681	661,004	+ 2.2
Other companies.....	149	21,104,650*	21,151,498*	+ 0.2
Total.....	439	51,057,259	46,931,981	— 8.1

* These figures exclude the results of British Cement Products and Finance.

Of the 439 companies, whose aggregate profits show a decline of 8.1 per cent., 270 presented reports for financial periods ending on December 31st last. Our next table shows similar figures in relation to 66 companies whose reports have been received during the past week:—

Group.	Number of Companies.	Net Profits, after Payment of Debenture Interest—Reports received in week ended March 21, 1931.		Increase or Decrease.
		1929-30.	1930-31.	
Breweries.....	2	£ 275,956	£ 359,914	+ 30.4
Canals and docks.....	1	43,619	48,191	+ 10.5
Electric lighting, &c.....	5	1,047,562	1,107,984	+ 5.7
Gas.....	2	145,857	159,857	+ 9.6
Hotels, restaurants, &c.....	2	202,576	173,444	— 14.4
Iron, coal and steel.....	8	422,961	458,284	+ 8.3
Motor and cycle.....	2	207,989	168,973	— 18.8
Rubber, &c.....	3	15,912	Dr. 27,840	— 274.9
Shops and stores.....	5	259,108	254,750	— 1.7
Telegraphs, &c.....	2	252,319	227,495	— 9.9
Trams.....	6	170,271	158,516	— 6.9
Waterworks.....	1	96,682	93,158	— 3.6
Other companies.....	27	3,399,752	2,916,646	— 14.2
Total.....	66	6,536,564	6,078,772	— 7.0

Of the 66 reports summarised above, 54 relate to the financial year which closed on December 31st last.

Further Electricity Results.—The publication of a further batch of electricity company reports during the past week emphasises our recent conclusions regarding the upward trend of earnings. Of the five companies dealt with in the table printed below, four—all operating in the North—increased their net revenue last year.

Name of Company.	1928.			1929.			1930.		
	Net Profit.	Ordinary.		Net Profit.	Ordinary.		Net Profit.	Ordinary.	
	£	%	Ordinary.	£	%	Ordinary.	£	%	Ordinary.
Mersey Power.....	17,750	5.2	5	57,489	5.1	5	61,028	5.7	5
Newcastle and District.....	27,906	11.6	7.5	22,619	6.8	7	32,865	9.4	7
Newcastle-upon-Tyne Electric.....	404,285	7.5	6	437,784	6.5	6	446,169	6.6	6
Scottish Power.....	102,449	11.7	8	173,940	12.0	8	244,766	10.9	8
South London Electric.....	76,124	16.7	8.5	84,875	18.9	8.5	62,673	13.2	8.5

The South London Electric Supply Company alone announces a decline, sales of current having brought in £254,151, against £259,238, while expenditure is increased from £143,172 to £165,566. After deduction of fixed charges, depreciation and taxation, net profit amounts to £62,673, compared with £84,875 for 1929. In 1928 the aggregate net income of the five companies totalled £628,514, in 1929 £776,707, and in 1930 £847,521. Ordinary dividends are unchanged.

Home and Colonial Offer to Lipton's.—When International Tea blew out the stern of the good ship "Allied Stores" by refusing to consummate the merger with the Unilever interests, it was announced that the remaining concerns would carry out a scheme of closer organisation on their own account. In pursuance of this policy, presumably, what is described as "an authoritative forecast" has appeared in the Press this week of a share exchange offer to be made by Home and Colonial Stores, Ltd., to the shareholders of Lipton, Ltd. The terms are summarised in the following table, which also shows a comparison of the income on £100 of each class of Lipton's shares, (a) at present and (b) under the scheme:—

Lipton Shares.	Home and Colonial to be given in exchange.	Dividends on £100 Lipton's.	
		Present Time.	Under Home and Colonial Offer.
240 5% pref., 10s.	100 6% "A" pref., £1...	£5	£5
200 6% pref., 10s.	100 6% "A" pref., £1...	£6	£6
		{ £10*	{ £42*
238 ord., 1s.	100 ord., 4s.	{ £39.8†	{ £57†

* On last dividend. † On last earnings.

Presuming that the unofficial forecast of the terms is correct, there is an obvious advantage to Lipton's ordinary shareholders, on the basis of the last balance sheets, both as regards immediate yield and as regards earnings' position. It should be remembered, however, that under the scheme of arrangement agreed to in 1929 the then ordinary shareholders of Lipton's had 95 per cent. of the nominal value of their shares written off. Subsequently, under the wing of the Meadow Dairy Company (which controls, or is controlled by, Home and Colonial), Lipton's has rapidly improved its trading position and profits. Presumably, the terms take account of the probability that this increase in earning power will be maintained for some time to come. They doubtless foreshadow a large increase in profits in the Lipton report for 1930, which is due in a few days. In short, the Unilever interests would seem to have recognised that, under sound management, the Lipton business remains an extremely valuable property.

Pinchin, Johnson.—The report for 1930 of this leading concern in the international paint, varnish and enamel trade has been anxiously awaited in view of the recent weakness in the shares. The figures show that, as a result of falls in commodity prices, depressed world trade, and depreciation in certain foreign exchanges, profits declined by £66,456 to £315,076:—

	Year ended December 31.		
	1928.	1929.	1930.
Net profit*.....	£ 354,325	£ 381,532	£ 315,076
Preference dividend.....	26,000	26,000	25,187
No. of times covered.....	13.6	14.7	12.5
Ordinary dividend:			
Amount.....	233,495	331,189	282,554
Earned %†.....	37.9	30.4	26.6
Paid %†.....	30%	30%	22½%
To reserve.....	67,000	20,000	10,000
Inc. or dec. in carry-forward.....	+27,830	+4,343	—2,665

* After deducting tax. † Subject to tax.

During the year the company acquired the balance of the share capital of two subsidiaries, the balance-sheet item

varying by £185,123. Properties are £85,935 higher at £555,874. Cash, British Government securities and other trustee stocks are shown together at £750,780—a decline of £65,501. Liquid assets exceed current liabilities by £1,069,390. At 31s. 3d. the 10s. ordinary shares yield 7½ per cent.

Powell, Duffryn Steam Coal.—Though the ordinary shareholders in this Welsh coal enterprise are not yet in sight of a dividend, the report shows that results for the first nine months of 1930 were more satisfactory than those of the previous year. Earnings, before paying debenture interest and directors' fees, were £61,117 higher at £370,294 and the net profit was £68,219 greater at £112,309. After paying preference dividend, virtually the whole of the remaining £100,176 was applied to "the depreciation of fixed assets and the strengthening of reserves":—

Year ended December 31	1928.	1929.	1930.
Net profit.....	Dr. 231,805	44,090	112,309
Preference dividend.....	...	12,525	12,133
No. of times covered.....	...	3.4	11.8
Ordinary capital:—			
Earned %.....	...	0.8	0.9
Paid %.....	...	...	...
Depreciation and reserves.....	...	...	100,000
Inc. or dec. in carry-fwd.....	—231,805	+31,565*	+176

* Debit balance eliminated by transfer from reserve.

The bank overdraft has been increased by £31,481 to £480,784, while creditors have been reduced by £26,431 to £799,262, of which £484,328 represents trade creditors. The outstanding features of the assets side of the balance sheet are the increase of £92,398, to £864,463, in sums due by subsidiary companies, a decline of £92,265, to £260,976, in debtors, and a rise of £75,470, to £276,282, in stocks and stores. A recent landslide at New Tredegar Colliery damaged two shafts, and no coal is now being raised from this mine. The Albion Colliery has been purchased at a low price. The ordinary shares stand at 6s. 6d.

First Co-operative Investment Trust.—The reform of the financial policy of the Co-operative Investment Trusts was begun in 1929, when the attempt to maintain dividends at the imprudent rate of 7 per cent. was finally abandoned. The report of the First Co-operative for the half-year ended January 31, 1931, shows that, in spite of the conservative dividend policy now adopted and the reorganisation of the portfolio which has been carried through in the last twelve months, the company is still making heavy weather. The depreciation in the book cost of investments, after deducting reserves, is declared to be 26.26 per cent. at January 31st, as compared with a depreciation of 17.75 per cent. as at July 31, 1930. The investments are quoted in the balance sheet at £1,978,419, as against a market value of £1,368,066. Revenue has fallen off, the figure of £50,662 for the half-year comparing with £59,638 and £60,218 respectively for the two previous half-years. This may be attributable in part to a diminution of dividends, but chiefly to the progressive change-over in the portfolio from ordinary and preference shares to bonds:—

	DISTRIBUTION OF HOLDINGS.		
	January 31, 1930.	July 31, 1930.	January 31, 1931.
Bonds and debentures.....	47.29	51.36	55.47
Preference.....	18.94	16.05	14.87
Ordinary and deferred.....	33.77	32.59	29.66

In any case the fall in revenue is not accounted for by any reduction in available funds, for the share capital at January 31, 1931, amounted to £1,652,943 and bank overdrafts and loans to £239,314, as compared with £1,659,006 and £219,892 respectively at July 31, 1930. The directors are wisely restricting the dividend distribution by more than the fall in revenue. An appropriation of £5,000 is made to general reserve, to which £10,000 was allocated in the previous half-year, and £5,802 is

being carried forward. The reserves now total £85,002, including £20,002 entrance fee reserve. The directors appear to be doing their best for the shareholders, but there appears little likelihood of an early restoration of the investments of the First Co-operative Investment Trust to their original cost.

Lancashire Cotton Corporation.—The report of this "rationalising" merger for the year to October 31st last makes, outwardly, a depressing picture. The accounts record a net loss, before allowing for depreciation, of £162,368. Part of the trading loss is attributable to the writing down of stocks by £86,300, from cost to market price. At the date of the balance sheet shares outstanding totalled £1,114,584, and income debenture stock £1,454,507, but by March 4th these figures had increased to £1,895,182 and £2,303,739 respectively. The securities still to be issued to vendors total £3,914,678. Advances from bankers, at £1,024,712, include £710,000 covered by an undertaking to issue debentures giving a first charge on the assets, and £314,712 against cotton. Bills payable amount to £29,039, while sundry creditors and accrued charges amount to £156,165. During the year £95,020 has been spent on improvements in fixed assets, which are now valued at £5,896,124. Costs of acquisition amount to £340,610, investments to £21,370, and stocks on hand to £860,267. The parlous state of the Lancashire cotton industry is emphasised by the fact that out of eighty mills possessed by the corporation, with a spindleage of about 7,500,000, only thirty-seven are working.

International Nickel Report.—The report of International Nickel for 1930 bears out the conclusions suggested by the quarterly statements. Total income declined from \$6,916,939 in the first quarter to \$3,107,325 in the December quarter, and the total for the year amounted to \$19,006,840 as compared with \$31,153,660 for 1929. After making much the same allocations as in 1929 the net profit comes out at \$11,770,060, as against \$22,235,996. Earnings on the common stock total 67½ cents per share, against \$1.47 per share in 1929, the number of shares in issue having increased from 13,758,208 to 14,584,025 as a result of the 1930 issue to shareholders at \$20. As a result of the maintenance of the quarterly dividend rate at 25 cents, the earned surplus declined from \$24,958,970 to \$20,846,169, but the increase in the capital surplus—after the issue of common stock—is reflected in a net increase in the total surplus from \$73,387,700 to \$80,778,814. Though the report expresses the view that this year the downward trend in earnings will be reversed, it appears unlikely that the 1931 earnings on the common stock will greatly exceed the 1930 level, even if an expansion occurs in general business. In our issue of February 2, 1929, we remarked that the future profits of the company depended mainly on the world's

INVESTMENT

by L. L. B. Angas.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- The Business Cycle and its influence on the prices of all securities.
- How to detect the beginnings and endings of booms and slumps in single industries.
- Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- Rules for timing both buying and selling and for taking profits and losses.
- Investment policy to be followed by Trustees at different stages of the Business Cycle.
- Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

ability to absorb nickel and platinum metals. Now that the expansion programme is virtually completed the true force of this is apparent. The company's annual output capacity is now in the region of 107,000 tons of copper, 80,000 tons of nickel and 300,000 ozs. of platinum metals. Last year the world's consumption of nickel in all forms was 44,000 tons, and in the peak year, 1929, it was only 68,000 tons. In 1930 the company's sales of nickel in all forms declined by 50,293,437 lbs. to 75,284,352 lbs., but, by virtue of the higher average copper content of the Froid ore, copper sales increased by 27,909,971 lbs. to 109,743,743 lbs. Even at the present price of copper, production is profitable owing to the exceptional value of the ores, but while a larger proportion of nickel could be produced, any attempt greatly to increase the proportion of copper would necessitate selective mining of the rich lower level Froid ores—a short-sighted policy which is not likely to be adopted. Nickel production in excess of demand was carried on in 1930 to replace normal stocks depleted in 1929, but now the governing factor is nickel sales. The effort to increase nickel sales is being backed up by an extensive research programme. So far the company has succeeded in maintaining its nickel price schedules.

Tin Restriction Criticised.—The suspicion that compulsory tin restriction is not supported, in its present form, by all producers is confirmed by the speech of Mr F. E. Mair at the meeting, on Wednesday, of Gopeng Consolidated, Ltd., whose accounts are dealt with on another page. Mr Mair, who enjoys a high reputation as a pioneer in Malaya and the representative of an important tin-producing group, referred to his approval, some months ago, of the principle of an international tin quota scheme as an experiment, provided that the burden was shared equally by all producers in all the signatory countries. He declared, however, that the present scheme did not provide for equality of treatment. Not only was Malaya to be compelled to restrict her output by 22.36 per cent. of the agreed 1929 figures, as compared with 16.4 per cent. in the case of the Dutch East Indies, but no allowance had been made for new production, etc., in Malaya since 1929, the effect of this omission being to raise the true Malayan restriction percentage possibly by as much as 10 per cent. Mr Mair pointed out that his own group of companies, with its associates, produced annually about the same tonnage as the Billiton interests in the Dutch East Indies, but at a lower cost. It was now being asked to curtail its production by about 32 per cent., while that of Billiton was curtailed by only 16 per cent.—in other words, to forego entirely its competitive advantage, obtained as a result of careful selection, capitalisation and discrimination. Mr Mair further complained that, although he had been informed that the High Commissioner of the Federated Malay States was present at an international meeting last November, when the quota figures were discussed, the companies in his own group had not been consulted and had been left to learn, late in January, that the figures agreed upon in November were fixed and could not be made the subject of negotiations. Mr Mair further declared that at a time when he was cabling to the East urging that the industry should have an opportunity to consider full details of the intended scheme, it was practically impossible to obtain reliable information from "authoritative sources." In the meantime, an intensive propaganda campaign was being carried out by certain interests. Altogether, Mr Mair declared, the interests of Malayan producers had been badly served. In view of the serious character of some of Mr Mair's charges it may be hoped that a comprehensive reply will be forthcoming from those most closely identified with the present scheme.

Restriction of U.S. Oil Imports.—In commenting on the cut in the price of British petrol in the *Economist* of March 7 last, we referred to the serious over-production of crude oil in the United States of America and to the development of the new shallow oilfield in East Central Texas. The output of this new field is steadily rising, and considerable apprehension is felt as to its effect on

the whole structure of American oil prices. According to the Standard Oil Company of New Jersey, at least 25 or 30 wells will be completed in the next six weeks, bringing the potential output of the new field up to 200,000 barrels a day. Four or five major pipe-line companies are in a position to lay short branch lines into this area if they desire to take the oil. The fact that many of the leases are small and are owned by individuals eager to secure a rapid exploitation of their newly-found wealth adds to the difficulties in restraining development, but if restriction is not adopted the Standard Oil Company of New Jersey believes that "there may result such a scramble to sell oil in an over-supplied market as to spell demoralisation of prices." The serious nature of the crisis has led to a conference of the representatives of the governors of all the major oil-producing States. At this conference it was proposed that all the oil States should appoint a consultative committee, outside political control, to act with a general sub-committee for the purpose of allocating the output of oil for each State, and that the Federal Government be asked to sanction a national scheme to prevent over-drilling and its consequent waste. It was also suggested that the governors of the oil States should seek an understanding with the major crude oil purchasing companies with a view to limiting production and imports. Negotiations with the big importing companies have subsequently been carried on, and it is claimed that an agreement has been reached with all except the Standard Oil Company of Indiana. If the voluntary agreement between the various importers fails to curtail the imports of crude oil and refined products, an attempt is to be made to force the control of imports by each State separately. An air of crisis undoubtedly prevails in the American oil industry. A Bill has been introduced into the Oklahoma Legislature to prohibit any corporation from doing business in the State which either directly or through an associated or affiliated company imports crude oil or refined products into the United States. This is one example of the desperate proposals which are now being made to meet a situation which long ago should and could have been countered by a drastic lowering of oil prices. If oil production and drilling are to be stopped in America it has to be made unprofitable.

MINING NOTES.

Robinson Deep.—The statement just issued covers a period of important changes—the modification of the "B" capital and the acquisition of the property of the Village Deep—writes our mining correspondent. The "A" capital remains at £25,000; the "B" now amounts to £686,156 in shares of 7s. 6d. each, against £881,807 in £1 shares; while by the purchase of the Village Deep area of 986 claims the property has been expanded to 1,892 claims. Of these some 686 are intact, including areas lost through dykes and faults. At the annual meeting of the parent company, the Consolidated Gold Fields, the chairman supplied the useful information that the life of the Robinson Deep was estimated at 15 years minimum. We contrast the results of the past three years:—

	Year ends December 31.		
	1928.	1929.	1930.
Tons of ore milled	918,400	919,900	1,339,000
Yield per ton	23/5	23/4	23/2
Costs per ton	19/8	19/7	19/3
Profit per ton	3/9	3/9	3/11
Profit on working.....	£ 173,954	£ 172,830	£ 261,170
Net profit	116,335	135,020	134,480
"A" shares { £	75,000	75,000	75,000
%	300	300	300
"B" shares:—			
Earned £	41,335	60,020	59,480
Paid £	Nil	Nil	57,180
Earned %	4.7	6.8	8.7
Paid %	Nil	Nil	8½
To debenture redemption	35,700	35,700	35,800
Other allocations	1,714	1,714	1,716
Carried forward	76,845	99,452	64,234
Ore reserves, tons	1,407,000	1,357,000	2,397,000
Value, dwt.	6.1	6.0	5.9

The amount disbursed upon the "B" shares corresponded very closely with that earned; hence an increase in the expenditure on capital account entailed a substantial draft upon the carry-forward. The debentures are now completely extinguished. For the current year the distributions are expected to total at least 1s. 9d. per share.

Crown Mines.—The impression that the report for 1930 would make a good showing has been fully confirmed. The consulting engineer declares that during the year the company made exceptional progress. The scale of operations was greatly extended, and future mining prospects were improved by the favourable results of extensive development. A record tonnage was crushed, and the development footage exceeded the 1929 total by no less than 40 per cent. Importance attaches to the disclosure in a new area in the deepest section of the mine of 570,000 tons carrying the high average of 8.5 dwts. The figures relative to three years are contrasted below:—

	Years to December 31.		
	1928.	1929.	1930.
Ore milled, tons	2,611,000	2,643,000	2,905,000
Revenue per ton	27/10	27/7	27/1
Costs per ton	20/5	20/5	20/3
Profit per ton	7/5	7/2	6/10
Working profit.....	£969,090	£947,110	£990,150
Net profit	£978,890	£966,200	£783,960
Earned per cent.	104.1	87.2	83.1
Paid per cent.	55	65	67½
Amount.....	£507,680	£599,990	£636,570
Capital expenditure	£285,310	£207,440	£165,620
Carried forward	£346,170	£358,390	£440,640
Ore reserves (available) tons...	8,799,100	8,896,270	9,974,980
Value, dwt.	6.4	6.4	6.6

At 12,285,210 tons the total ore reserves show an increase of 1,443,750 tons on the year—a highly satisfactory result. Nevertheless, the question arises whether the prospects are not adequately discounted by the recent advance in the 10s. shares to 87s. 6d. It is true that in the near future capital expenditure should be on a much smaller scale than for some time past. But last year's revenue was swollen to the extent of nearly £50,000 by a special declaration arising from a change in the treatment process. Development was exceptionally productive. Nevertheless, the available ore reserves (allowance being made for sorting) represent no more than three years' supply for the mill. On the basis of the increased dividend paid for the second half of 1930 (85 per cent.) the return shown is barely 8 per cent. gross.

Durban Roodepoort Deep.—In the case of this, as of the Robinson Deep Company, financial reorganisation has been attended with highly satisfactory results. By the scaling down of the capital and the provision of additional resources the company was freed from debt and additions were made to the treatment plant. Due to the operation of the latter, the tonnage of ore treated monthly increased from about 42,000 to 46,000, while costs were brought down by 1s. 7d. per ton, thus more than counteracting decline in grade. The operating profit came out at £66,700 in place of £46,600 for 1929 and £19,800 for 1928. The decks being clear, dividends were resumed with 2½ per cent. in respect of the first and 5 per cent. for the second half of 1930. Development opened up 531,100 tons, or rather more than the quantity crushed, the payable proportion being high at 77 per cent. Allowance being made for sorting, the available reserves (2,043,000 tons) represent approximately 3½ years' supply for the mill. The total ore reserves—2,481,200 tons, value 6.94 dwts. over a stopping width of 47.7 inches—show an expansion of 416,300 tons, the value being somewhat less and the width greater than before. The two former features are attributable largely to the inclusion—thanks to the reduction in working costs—of ore previously classed as unpayable. The outlook for the current year is described by the consulting engineers as favourable.

Gopeng Consolidated.—As a result of voluntary curtailment of output the yardage treated in the last financial year was 1,956,000 against 2,097,100 in 1928-29. The average yield also showed some falling off; but a fresh economy in costs brought the ratio down to the very low level of £28 9s. per ton of concentrates. The price of tin, of course, was substantially less than before; and in the end the profit came out at £50,800 in place of £89,800, the sum written off being £10,000 as against £13,000. The dividend total was reduced from 4s. to 2s. 9d. per share, but even so the carry-forward had to be drawn upon to the extent of £3,500. Revenue from the rubber estates, which in 1928-29 brought in an appreciable amount, was last year negligible. Investments "at book values are £5,700 up at £49,650; "investments at cost" figure for £44,800 in contrast with £42,550. On the basis of last year's dividends the yield shown is barely 7 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of Egypt, National Bank of Greece, Eastern Bank, British and German Trust, Equity and Law Life Assurance Society, British Insulated Cables, Midland Electric Corporation for Power Distribution, County of London Electric Supply, Rio Tinto Company, Ford Motor, Dickins and Jones, Joseph Nathan and Company, and Spratts Patent. Presiding at the annual meeting of the County of London Electric Supply Company, Sir Bernard Greenwell said that the number of units sold by the company during the past year constituted a record, being an increase of 19.9 per cent. over the sales of the previous year, compared with an increase in national output of about 5 per cent. At the meeting of the British and German Trust, the chairman stated that, in the case of Germany, the falling off in exports was much smaller than in the case of either England or America, the decrease in value being about 10 per cent. in the case of Germany, compared with about 21 per cent. for Great Britain and

EQUITY & LAW LIFE ASSURANCE SOCIETY

THE MANAGER,
18 Lincoln's Inn Fields, W.C. 2.

25 per cent. for the U.S.A. At the annual meeting of the Eastern Bank, the chairman asserted that in 1930 there was a decline in trade between England and India amounting to £25 millions in imports and £9,300,000 in exports, cotton goods alone being responsible for £13,600,000 of the reduction in British imports into India.

CAPITAL ISSUES.

Three borrowers offered a total of £5,948,806 to the public this week, but the largest issue, that of the *Metropolitan Water Board* (totalling £3,698,806) was entirely a conversion operation. The *Rio Tinto* offer was generously covered by the earnings of a concern whose name is a household word and whose ordinary dividends since 1897 have averaged 57 per cent. per annum. The proceeds of the issue, however, are to be used outside Spain, where the company's main interests lie. A substantial part will be employed in subscribing for debentures in the Rhokana Corporation, whose mines have not yet reached the production stage. The issue, which came out under Rothschild auspices, was over-subscribed. The *Southern Stockholders' Investment Trust* made an issue of £250,000, giving an average yield for an offer of its class.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to March 14, 1931, £32,395,700.
Total, including conversion, recorded January 1 to March 14, 1931, £38,366,843.

National Savings Certificates.

Net sales, week ended March 14, 1931, £250,000.

Metropolitan Water "D" Stock 1946-1966.—Offer of £3,698,806 18s. 5d. stock in exchange for holdings of Metropolitan Water "C" Stock, 1929-1939, due for repayment on June 15, 1931. Trustees are authorised to invest in this stock. The rate of conversion is £101 of the new "D" stock for each £100 nominal of the "C" stock surrendered. The total of "C" stock outstanding is £4,778,755, but of this amount only £3,662,184 will be accepted for conversion under the present offer. The balance of £1,116,571 will be repaid at par on June 15, 1931, together with any part of the "C" stock not surrendered for conversion. Arrangements have been made whereby any part of the £3,698,806 "D" stock, for which applications are not received, will be taken up for cash at £98 17s. 6d. per cent. If not previously redeemed, the "D" stock will be repaid at par on May 15, 1966, but the board reserve the right to redeem at par on or after May 15, 1946, at three months' notice.

Rio Tinto Company.—Offer for sale of £2,000,000 5 per cent Redeemable Debenture Stock at £91½ per cent. The stock is to be redeemed by the operation of a cumulative sinking fund by April 1, 1951, but the company reserves the right to repay at par on any interest date prior to April 1, 1951, on three months' notice. At its price of issue the stock allows a flat yield of just under 5½ per cent. and an average redemption yield of over 6 per cent. Average profits for the three years to December 31, 1929, totalled £1,103,912, covering the service of the present issue more than six times.

Southern Stockholders Investment Trust.—Issue of £250,000 5 per cent. First Debenture Stock at £96 per cent. The stock will be repaid at par on September 15, 1970, but the company reserves the right to repay at par at any time between September 15, 1960, and September 15, 1970. The stock gives a flat yield of 5.21 per cent., or 5.24 per cent. if held to redemption. The company was incorporated in June, 1923, to carry on the business of an investment trust company.

Bedford District Gas Company.—Issue by tender of £20,000 5 per cent. Perpetual Debenture Stock, minimum price of issue £98 per £100, yielding at that price £5 2s. per cent. The net revenue of the company for the year to December 31, 1930, was £12,848, covering interest on the debenture stock, including the present issue, nearly five times.

Bognor Gas and Electricity.—Issue by tender of £30,000 5½ per cent. Redeemable Debenture Stock, redeemable at par on December 31, 1950. Minimum price of issue, par. The net revenue of the company for the year to December 31 last was £16,820, covering interest on debenture stock, including the present issue, more than four times.

[Other Stock Exchange information, including the latest weekly traffic returns, dividend announcements, profit and loss figures, summary of balance sheets, and reports and notices, will be found on page 649, under the heading "Company News."]

OIL OUTPUTS.

THE ATTOCK OIL COMPANY, LTD.—Production for February, 10,447 barrels.

STEARA ROMANA (BRITISH), LTD.—Production of the Steara Romana Company, Bucharest, for the month of February was 80,790 tons.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during February was 19,523 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,464 barrels.

TOCUYO OILFIELDS OF VENEZUELA, LTD.—Oil produced during February, 1931, 2,518 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during February, 20,000 tons; oil purchased during February from other companies, 37,500 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended March 7th was: Bolivar district, 83,988 m. tons; Maracaibo district, 18,717 m. tons; total, 102,705 m. tons. Production for the week ended March 14th was: Bolivar district, 83,585 metric tons; Maracaibo district, 17,924 metric tons; total, 101,509 metric tons.

COMPANY MEETINGS, &c.

BANK OF GREECE.

EXTRACTS FROM THE REPORT FOR THE YEAR 1930 OF THE GOVERNOR OF THE BANK OF GREECE, ALEX. N. DIOMEDE, AT THE GENERAL MEETING OF SHAREHOLDERS ON FEBRUARY 14, 1931.

The past year has been one of the most abnormal years that we have so far experienced. The world crisis has of late become accentuated, and we are still very far from attaining equilibrium between production and consumption, which is the only way possible to return to a more normal economic life. The downward trend of prices of commodities still continues, being now 40 per cent. below those of 1920-23. This fall is not merely a transitory phenomenon; it appears to assume a definite character without any parallel movement in the cost of living, which still remains comparatively high; the precipitous and long-continued fall in prices of securities in the great money centres caused abrupt capital transfers and many losses of capital, exhausting to a great extent the consuming capacity of whole classes. Unemployment is not only not being reduced, but on the contrary increases. The distrust of capital towards productive speculative investments continues; hence the increase of capital in the reservoirs of the various banks, with the result that capital, not being able to find a lucrative temporary employment, overburdens the markets and has contributed to the sudden fall of interest on sight deposits to a level never before reached. These facts have exercised an influence upon all countries, and, therefore, have been felt also by us. In our own case, the loss which this year's crop sustained caused a twofold damage, both because it reduced the annual revenue and because it led to the replacement of the loss by an increase in the imports of cereals from abroad. Our country, however, has displayed a fine measure of resistance, due to timely retrenchment, to quick adjustment to the new conditions, to the abandonment of speculation, and to the discretion with which the people have faced the adverse circumstances. Indeed, it is a happy indication that in our case there has been no unemployment among the working classes that, throughout the whole year, the fluctuations in the Athens Stock Exchange in the prices of shares did not, on the average, exceed 20-25 per cent., whereas in foreign Stock Exchanges there were observed successive periods of fluctuations, during each of which the value of securities was reduced by 30-35 per cent. Finally, our public finances did not succumb to the pressure of circumstances, while our national credit, in spite of the prevailing crisis, has displayed a wonderful power of resistance.

CRISIS.

During a period of crisis the only safe measures to cope with the disease are the exclusion of all business that is not based on a secure productive capacity, the reduction to the minimum of all expenses of production, the endeavour to liquidate all past arrears, the restriction of speculation and, generally speaking, the re-orientation of business to the new "tempo" in the economic life. We, too, were taken unawares at the commencement of the crisis. The idea that there would always be a wide field of consumption for our products led to an unreasonable extension of business and to an excessive use of banking credits. The result was that, as soon as the crisis became manifest, the various business undertakings and the banks found themselves with respectively heavy liabilities and immobilised assets. This interdependence between debtor and creditor was really pregnant with dangers. In their impatience many people thought that an increase of the monetary circulation and an extension of the policy of banking credits would have cured the evil. Our practical views, however, fortunately prevented us from adopting methods which would most certainly have aggravated it. Indeed, our hardest endeavours were aimed at a restriction of business and a reduction to a minimum of expenses, and, thanks to the fall of interest, this was at least partly achieved. The result is that we have commenced the new year, without the general crisis being in any way weakened, with a more braced-up organism, because most of our home enterprises that have managed to survive have made their assets for the greater part more healthy, in that their liabilities have become lighter and more mobile, while their restricted activities are being based on reality, as the undertakings are endeavouring to adjust their production strictly to the power of consumption upon which they can really rely.

This phase of our economy is reflected in the statements of the banks. Whereas, during 1929, the advances in general granted by the four big banks showed an increase exceeding 1 billion drs., in 1930 they were cut down by more than 300 million drs.

It is due to this, and the violent fall of the rates of interest in the foreign markets, which in these circumstances did not attract

our capital abroad, that during the whole course of the year an abundance of capital was observed. This plethora of liquid funds led to increased deposits, and contributed towards securing to the banks a high percentage of cash liquidity, which represented an average proportion as against sight liabilities of 15 per cent. The result led the banks to reduce the interest on deposits effected with them. There was also a substantial fall below the official discount rate in the interest both of commercial and on Contango loans.

As regards the official 9 per cent. Bank rate, we did not think fit to reduce it. The substantial fall in interest in the open market brought about both at Athens and in the provinces, under the pressure of circumstances, made the official discount rate a sort of barrier. In these circumstances, we did not think it expedient to exercise any further pressure.

MOVEMENT IN FOREIGN EXCHANGE.

During 1930:	
Purchases	£26,832,113
Sales	£27,110,812
Leaving excess sales of	£278,699

It is by this amount of £278,699, therefore, that our gold cover was reduced during 1930.

That is to say, during the past year, in spite of the fact that the State requirements of exchange, as well as those of the International Financial Commission, were greater by £1,047,610 than during 1929, and whereas the profits accruing from the investment of our foreign exchange holdings abroad were reduced by £167,184, owing to the enormous fall in interest rates, nevertheless our gold cover did not show the same reduction as in 1929, which amounted during that year to £2,999,239.

This is mainly due to two causes: First, to the reduction of the deficit in the balance of trade by £3,600,000, and, secondly, to the fact that about £3,000,000 came in, during this year, to our assistance in the shape of foreign capital funds, viz., part of the proceeds of the loans which were contracted during the previous years, viz., tripartite and public works loans.

These capital fund movements have not been lost to the country which has been burdened with only a part thereof, inasmuch as it results from an examination of the purchases of Greek securities that there were repatriated in the course of 1930 bonds of our external debt of a value exceeding £2,500,000. Everybody, of course, realises the economic meaning of this phenomenon, which, while continuing for a long time, has gradually reduced our obligations towards foreign countries. But at the same time, according to the statements published by the Greek banks, their foreign exchange available funds were increased during the year by more than £1,000,000, the sums having been utilised by them to a great extent in investments of securities and in foreign exchange.

There remained, however, in the country a considerable proportion of the capital funds that came in from abroad, which were productively employed and are creating values which constantly enrich our economy.

An important fact as regards the balance of our transactions with abroad is the remittances of Greek emigrants. One would have thought that the American Stock Exchange and other crises would have affected to a greater degree the economic strength of our emigrants working there. In spite of that, there is an increase in the remittances as compared with those of last year, and, generally speaking, the upward tendency which has continued for some years, has not been checked during 1930. Thus we have:—

1927	£6,923,000
1928	£6,431,000
1929	£7,814,000
1930	£8,034,000

COVER AND CIRCULATION.

	Gold cover.
On December 31, 1929	£8,309,111
Lowest level January 23, 1930	£7,568,013
Highest level September 30, 1930	£9,277,693
And on December 31, 1930	£8,030,412

On an average the cover was £8,623,285, with an average proportion to the total circulation and sight liabilities of 49.18 per cent.

BANK OF GREECE—Cont.

This proportion is rather high and it reveals, regard being had to the period of crisis, an unusual measure of strength and elasticity.

The above cover, however, is not the only power at the disposal of the Bank in order to face the needs of the country.

The duty of banks of issue is to keep behind the cover, which is the first safeguard of the monetary integrity, other forces in reserve which at any moment can be brought to the assistance of the cover in order to face any unforeseen demand.

The Bank of Greece has invested part of its capital in gold securities of a value of £380,000, which, by being converted into foreign exchange, can increase the cover without constituting a corresponding charge upon the dynamic circulation. But, besides this power, there are deposited with the Bank of Greece, and placed at its immediate disposal, the funds of the State in foreign exchange, which, on an average, amounted during 1930 to £2,020,000, and which can at any moment strengthen the position of the cover. These additional resources are perfectly capable of protecting the general economy of the country.

GOLD.

The gold which was transferred to the Bank of Greece at the commencement of its business amounted to £2,336,817. Out of this gold, £985,532 consisted of gold bullion, deposited many years since with the Bank of England, while £1,351,285 consisted of gold coins.

There was no reason why we should keep such a quantity of gold in the form of an unproductive deposit. The basis which most of the issuing banks have adopted has been that of the gold exchange standard, i.e., the system according to which exchange can at any moment and quite easily be converted into exportable gold. Hence, immediately after the commencement of business, the bank sold its gold bullion, having converted it into foreign gold exchange, and realised considerable profit. The bank kept in its tills £1,351,285. The bank, however, has since then had the opportunity, in accordance with its statutes, of effecting purchases and sales of gold and gold coins and has purchased the following amounts:—

1928 coins of a value of ...	£177,038
1929 " " " " " "	£233,990
1930 " " " " " "	£146,414
Total ...	£557,442

Practically the whole of this amount was sold by the bank abroad under most favourable terms. To-day the bank has in its possession the same amount of gold in coins as at the time when it commenced business.

EVOLUTION OF COVER AND CIRCULATION.

The actual note circulation on December 31, 1929, amounted to 5,193 million drs.; on December 31, 1930, it fell to the level of 4,803 million drs.; in other words, the circulation sustained a reduction of 290 million drs.

During the year this circulation fluctuated between a maximum of 5,077 million drs. (April) and a minimum limit of 4,761 million drs. (November), the average for the whole year being 4,895 million drs.

Circulation, therefore, did not fluctuate much.

As compared with 1929, the note circulation shows a considerable reduction. During that year the maximum, the minimum, as well as the average annual circulation, were greater than those of 1930; in particular, the maximum circulation was greater by 540 million drs., the minimum circulation by 412 million drs., and the average by 493 million drs.

This reduction in the note circulation does not represent a corresponding reduction in the means of payment at the disposal of the market. This is explained by the fact that the note circulation has been completed by subsidiary coins, which were issued and put into circulation during last year for account of the State and which amounted at the end of 1930 to about 125 million drs. On the other hand, the more active movement of the Clearing House has necessarily resulted in economising a greater quantity of cash money.

This reduction in the circulation corresponds to the influence of the international economic and financial conditions, which could not but affect the credit activities of our banks and the level of our circulation. As against this tendency the Bank of Issue could have reacted by extending its credit activities through a reduction of its discount rate and through an increase of advances. This step, however, which, fortunately, found only a few advocates, and which could have had as a transient result only the artificial encouragement of production and the artificial rise of prices consequent on the increase in the amount of money, is not only one of the most ineffective measures for facing a crisis, but, what is more important, would in the end have contributed to aggravating

the prevailing crisis and would have thus reacted detrimentally on our economy in general.

The relation of the cover to the sight liabilities in general was:—

During 1930: maximum 51.5 per cent. (June).

minimum 46.1 per cent. (December).

During 1929: maximum 54.1 per cent. (April).

minimum 46.4 per cent. (December).

The relation of the cover to the actual note circulation was:—

During 1930: maximum 70.8 per cent. (August).

minimum 62.7 per cent. (December).

During 1929: maximum 75.5 per cent. (January).

minimum 60.0 per cent. (December).

THE BALANCE OF TRADE.

Imports were reduced both in quantity and value, while exports as a whole showed a reduction only in value.

Thus, while the total of our imports during 1929 amounted to 2,775,000 tons, representing a value of 13,275 million drs., during 1930 the corresponding figure of tons was 2,564,000, representing a value of 10,851 million drs. That is, during the year 1930, the quantity of imports declined by 7.6 per cent., while their value fell by 18.28 per cent. On the other hand, the exports of Greek products abroad were 748,000 tons in 1929, as against 761,000 tons in 1930, but as regards value, this has been reduced from 6,985 million drs. to 5,918 million drs., i.e., by 15.3 per cent.

The result of this relation between imports and exports was that the deficit of our balance of trade was considerably reduced during the year ended. Indeed, while the year 1929 closed with a deficit of 6,291 million drs., during 1930 this deficit fell to 4,933 million drs., that is, there was realised a reduction of 1,358 million drs. (£3,620,000), corresponding to 21.60 per cent.

PUBLIC FINANCES.

A clear indication that the crisis in our country has not assumed the same acute form as in other countries is revealed in its reaction upon our public finances.

Although receipts have recently assumed a milder inflow, and in spite of the exhaustion of the tax arrears due to the State, which during past financial years have been an excellent source of ample receipts, the Budget shows a good power of resistance.

The net results already attained are as follows:—

Financial year 1927-28 ...	+ 624 million drs.
" " 1928-29 ...	+ 540 " "
" " 1929-30 ...	+ 272 " "

The financial year 1930-31, including a category of revenues, which are being exhausted, is anticipated to close with a surplus exceeding 300 million drs.

Of course the period when the actual receipts exceeded the anticipated revenues, that is the period characterised by the last three financial years, must be considered as something of the past, and the general conservative spirit which very wisely rules over business, will necessarily affect the receipts. Nevertheless, it must be considered as an exceptionally good omen that the yield of the revenues still continues to be quite satisfactory, and that the surpluses have not changed into deficits, a phenomenon observed in many other countries.

In our case there has appeared no such sign. On the contrary, during the whole of last year, the ease of the Public Treasury was absolute, as can be deduced by perusing the monthly balances of the current account of the State with the Bank of Greece.

These balances existed even while concurrently the International Financial Commission, though it had secured the service of the loans under its control many months previous to the due date, was keeping to its credit out of the assigned revenues, in conformity with an old practice, an amount far greater than what was necessary to meet the regular service of these loans. Thus, the average monthly balances of the International Financial Commission amounted to 280 millions drs., which represents an amount far greater than what was necessary. At the same time, the International Financial Commission was also maintaining a large reserve fund in foreign exchange, exceeding £1 million, and by so doing was diminishing the amounts remaining at the free disposal of the State.

The prices of our national loans (as well as of all Greek bonds in general) have displayed during the whole year an upward tendency. The improvement, as compared with 1929, on the London Stock Exchange, of our more important external loans, was as follows:—

	Average price.	Average price.
	1929.	1930.
5 per cent. 1881	71.36	73.93
4 " 1910	59.41	61.54
5 " 1914	75.41	78.21
6 " 1928	89.13	91.21

As regards the internal loans, the improvement was still greater.

What one has to bear in mind is that this improvement does not represent an indirect consequence of the general fall of interest in Europe and America. The peculiar result of the latter fall was to bring about a slackness in stock exchange transactions and to keep capital away from all long-dated investments. Now, in spite of this phenomenon, the downward trend still continued throughout the year, and was affecting practically all securities except a few, among which are included the Greek bonds. Thus we find that, while the average yield of Greek securities in the London Stock Exchange fluctuated between 6.40-7.00 per cent., the average yield of the stocks of other countries, whose strength is placed beyond all doubt, amounted to 8.84-9 per cent.

The good impression which our financial order has created, the confidence in the economic vigour of the country and its prospects, and, in addition, the confidence which is inspired by our social and political stability, as compared with the instability prevailing in many other countries, all these factors render possible the issue of Greek loans (not only of public loans) and their absorption by the markets. The opinion which foreign money markets have formed, on the basis of their own experience of our credit, allows us to develop our activities in new money centres. At the present day the successful issue and absorption of Greek bonds, the low or high capitalisation, all these depend more on the general situation of the foreign markets, on the peculiar psychology of capitalists to prefer a long-dated investment to a short-dated one rather than on motives which ought to be attributed to ourselves. That is, facts which lie totally outside our own responsibility, not affecting in the least our credit, which remains absolutely intact, are the main factors which regulate the procuring or not of capital funds.

GENERAL REMARKS.

During this period of transition, which the economy of our country is now passing through, our attention must be diverted to three main points.

1. The first point is the maintenance of a safe equilibrium in the national budget. An incessant endeavour has so far been made to hold the budget not only in equilibrium, but to produce an actual surplus, and there has continuously been maintained an absolutely liquid cash Treasury position, which excludes all danger of creating a floating debt. No one, of course, has failed to observe that, especially under the difficult present-day circumstances, when the sensitiveness of public credit becomes exceptionally delicate, a deficit in the budget would be pregnant with dangers, not only because a deficit inspires in itself the fear of financial entanglements, but also because at present an increase in the public revenues except the automatic increment yield of revenues, does not seem possible. This is all the more so because we are now living under conditions of a more general crisis and of a restriction of revenues in general. As a general rule the gross revenue, as compared with the past, has been reduced. Moreover, if in the past the deduction of a certain proportion of this revenue could be justified, this, under present-day conditions, when the revenue has been substantially reduced, cannot be applied without affecting the general economy of the country.

2. The second point is the restriction of imports in order to reduce the deficit of our balance of trade, and, consequently, of our foreign indebtedness.

Of course, the necessary imports of cereals will always constitute the greatest item of our liabilities, and what is important to remember is that the quantity of the imported cereals cannot be reduced at will. Consequently, part only of the imports is capable of restriction, and it is in this direction that our attention must necessarily be turned in order to avoid spending our own capital, at a most inopportune period, in an unproductive way or for wants which may be put off for a more opportune time. In periods of crises the most effective cure is the restriction of consumption.

3. The third point is the encouragement of production. Greece, in view of its new extension of territory and on account of the sudden increase of its population, which finds no outlet in its own activities, in view of the restless character of its people who, detesting stagnation, are always inclined towards new changes and progress, cannot possibly, in these circumstances, leave this endeavour to increase the wealth entirely to the activities of private initiative. This endeavour must be directed towards two main ends, namely, towards assisting industry and encouraging agriculture, which correspond to the new composition of the population, in which the urban class has been multiplied in a very short period of time. These aims, however, the results of which are attained very slowly, cannot be realised without the disposal of capital funds. At present this is the vital aspect of the question which concerns us mostly. The necessary capital funds can only be procured by foreign assistance. The supply of capital from the home market is at present only auxiliary and without any initiative of its own.

There have already been granted in favour of industry an amount of £1.3 millions by way of long-dated loans with an average

interest of 8.9 per cent. and over and above this amount there have also been found the capital funds of the Greek National Mortgage Bank. That is, the interest which so far constituted a burden upon industry, has been reduced by 4.5 points. Therefore, from this point of view, we can in future regard the fate of Greek industry in a spirit of great tranquillity.

Since the year 1928, when our financial rehabilitation began, it had been recognised that the reconstruction, the sound bases of which were being placed at that time, would be one-sided if there was not considered at the same time a programme of public works, the execution of which would strengthen the economic potentialities of the country. These works, road-making and drainage schemes in Macedonia, in the plains of Salonica, Serrès and Drama (the drainage of the plain of Salonica, in the valley of the Axios, had been decided since 1925) were estimated to necessitate for their completion an expenditure of about £22 millions to be distributed over a period of 6-7 years.

Those who criticise the policy adopted since 1928 look only at the one side of the balance sheet, viz., at the liabilities. But they do not consider also the other side, viz., the assets items, and the advantages accruing to the country by the disposal of capital, as well as the creation of new productive elements which will prove very beneficial to the country.

Since the year 1928, the State has contracted for these productive works (and for assisting the Agricultural Bank with additional capital of £1,040,000) the first issue of the Public Works Loan of £4 millions; and in addition since the exhaustion of that loan, various other advances in London, amounting to £1,500,000, in New York to \$7,500,000, and in Athens, through the National Bank, £600,000, i.e., in all £3,600,000. These additional amounts will be comprised in the loan of £8,000,000, which was authorised by Parliament for continuing during these years the works in the course of execution.

Up to the present time, the accumulated charge upon Greece amounted to £7,600,000, and after the conclusion of the £8 millions loan in the course of the present year, the total charge (after the redemption of the advances) will amount to £12 millions. The remaining expenditure up to the completion of the works will be divided between the following years up to 1935.

Now let us examine the other side, i.e., the assets items. The expenses incurred for the plain of Salonica (£1,888,000 have already been spent), the whole of which suffers from the irregularity observed in the beds of the rivers and of the torrents flowing through it, will give:—

- (1) 492,000 stremmas (=49,200 hectares=123,000 acres) of drained areas.
 - (2) 738,000 stremmas (=73,800 hectares=184,500 acres) of areas protected from inundations.
 - (3) 821,000 stremmas (=82,100 hectares=205,250 acres) of irrigated land,
- i.e., a total area covering 2,051,000 stremmas (205,100 hectares=512,750 acres).

The works in the valley of Struma (£938,000 have already been spent) are going to secure the cultivation of lands covering an area of 1,677,000 stremmas (167,700 hectares=419,250 acres), out of which 576,000 stremmas (57,600 hectares=144,000 acres) represent lands at present over-saturated with water and marshes, which will be completely drained; 325,000 stremmas (32,500 hectares=81,250 acres) will be protected from inundations and 776,000 stremmas (77,600 hectares=194,000 acres) will be irrigated. Consequently, the total area which will be restored to cultivation amounts to 3,728,000 stremmas (372,800 hectares=932,000 acres).

The gross yields of these fertile lands, if cultivated not by exceptional methods of cultivation—which, nevertheless, ought to be applied—but by the usual and common methods, cannot be less than 2,750 million drs., or about £7 million.

Consequently, our national income will be annually increased by that sum, and, by a wise exploitation of the acquired lands, new values will come into being, while the existing individual agricultural installations will be strengthened and thus will be converted into rich sources of production, encouraging the power of consumption of the country and contributing to the increase of disposable funds.

The network of roads, which is going to facilitate the transport of products and thus reduce the present cost of transport, will be increased by 2,150 kilometres. It must be undoubtedly admitted that the cost of living, which at present affects mainly the poorer urban population, will be reduced only when the transport of products will become less expensive through the construction of new roads.

Moreover, the policy which did not hesitate to have recourse to foreign assistance in order to attain a quicker development in production had in view the fact that Greece follows the system of rapid redemptions in repayment of its public debt. Thus, whereas, as a result of the various issues of the Public Works Loan contracted since 1928, and still to be contracted up to 1935, when the loan will

NATIONAL BANK OF EGYPT.

SUCCESSFUL RESULTS IN A DIFFICULT YEAR.

DIVIDEND OF 18 PER CENT. MAINTAINED.

The thirty-first annual general meeting of the shareholders in the National Bank of Egypt was held yesterday (Thursday) at the Head Office of the Bank in Cairo.

Sir Edward Cook, C.S.I., C.I.E. (the Governor), presided.

DIRECTORS' REPORT.

The directors' report was as follows:—

The directors present to the shareholders the balance sheet and profit and loss account for the year ending December 31, 1930.

The gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for doubtful debts, amounts to:

	£	s.	d.
After deducting from this sum:—	1,078,342	19	7
For directors' fees	15,250	0	0
For current expenses	464,054	17	2
there remains	479,304	17	2
In conformity with Article 49 of the Bank's statutes a dividend of 4 per cent. is payable on the share capital	599,038	2	5
After this distribution there remains	120,000	0	0
Adding to this the balance brought forward from last year	479,038	2	5
the amount available is	228,480	17	10
The directors consider it prudent to allocate to special reserve for contingencies a sum of	707,519	0	3
which leaves	50,000	0	0
From this amount the directors recommend the payment of an additional dividend of 14 per cent. on the share capital which will absorb ...	657,519	0	3
and to carry forward the balance of	420,000	0	0
	237,519	0	3

The total dividend for the year will thus be at the rate of 18 per cent., equivalent to £1 16s. 0d. per share. An interim dividend of 8s. having been paid on September 1, 1930, there remains to be distributed the balance of £1 8s. 0d. per share.

BALANCE SHEET, DECEMBER 31ST, 1930.

LIABILITIES.

	£.	MM.	£ST.	s.	d.

B. HORNSBY,

Governor.

REPORT OF THE AUDITORS.

We have examined the books of the National Bank of Egypt and in our opinion the above balance sheet is properly drawn up so as to exhibit a true and correct view of the state of the bank's affairs as shown by the books. We have also verified the cash, notes and securities at the head office and at the Cairo and Alexandria branches, and have found the same correct. The London returns have been audited and certified by Messrs. Deloitte, Plender, Griffiths and Co., chartered accountants.

THE GOVERNOR'S SPEECH.

PAST YEAR'S DIFFICULTIES.

The Governor, addressing the shareholders, said:—Gentlemen,—You will see from the directors' report that the gross profits for 1930 were £1,078,343, after allowing for depreciation of all kinds, and for such debts as your directors think it prudent to regard as bad or doubtful. Deducting the general expenses, which amounted to £479,305, there remains a net profit of £599,038, as compared with £621,686 in the previous year. It is proposed, with your approval, to set aside £50,000 for the reserve and £540,000 for the payment of a dividend of 18 per cent., the balance of £9,038 being added to the carry-forward. Having regard to the difficult character of the year we may regard ourselves as fortunate that the net profits show a decrease of no more than £22,000; the prevailing depression did not in fact begin to affect banking profits until some months after the commencement of the year.

The total of our balance sheet is considerably less than at the end of 1929, due to a decrease of some £14 millions in Government deposits. This decrease is reflected on the assets side in a reduction both of our holding of Government securities, to the extent of £5½ millions, and also of our advances. The reduction in advances has not been brought about by our own action; it is due to the fact that in times like these our customers do not require the same accommodation as when trade is flourishing.

When my predecessor addressed you a year ago he spoke of the repercussions, upon the trade and economic life of this country, of the dramatic collapse in the world's commodity markets which had occurred a few months previously. At that time the full extent of the slump had not declared itself. It has since reached the dimensions of a world catastrophe.

WORLD CONDITIONS.

I make no apology for offering you a few observations upon world conditions, for I believe the public of this country now realises, if it did not before, the dependence of producers and consumers all the world over upon each other's prosperity. It is no exaggeration to say that the prosperity of the Egyptian peasant, working on his field many thousands of miles from the markets where his product, or the finished article made from it, is bought and sold, can be sensibly affected by civil war in China, by political events in India, by labour disputes in England, by a Stock Exchange collapse in New York—in short, by almost any event which affects the purchasing power of any substantial part of the world's consumers.

If one considers what has happened since the autumn of 1929, one finds ample justification for the use of such strong words as "crisis," "catastrophe" and the like. Cycles of falling prices are common enough in the world's economic history, especially after the periods of inflation which accompany or follow great wars. At the best, they are times of trade depression, for they check enterprise and diminish confidence. It would matter little if all prices fell symmetrically, but this they never do. There is always a "lag"; wholesale prices fall quicker than retail, and those of raw commodities than those of manufactured products, while the real burden of fixed charges, such as rent, interest and repayment of debt, is increased. The adjustments that are necessary before symmetry is restored and stability is reached are at all times troublesome—less so when the fall is gradual than when it is rapid. What has chiefly distinguished the present slump from those which have preceded it is the extent and appalling rapidity of the fall. When the post-war inflation collapsed in 1920-21, world prices fell continuously for nine years (save for a temporary recovery in 1923 and a period of comparative stability in 1927), reaching in 1929 a level of about 30 per cent. above that of 1913. That fall was itself sufficient to cause embarrassment and inconvenience, but it was not unexpected in view of the inflated prices which had followed the war, and by 1929 some people were beginning to think that the worst was over. But in the last three months of 1929 and throughout 1930 the fall gathered a terrific momentum, so that by the end of 1930, taking commodities as a whole, the wholesale price level was actually below that of 1913. This last collapse, falling on a world already depressed by a decade of deflation, threw the delicate machinery of international trade out of gear, and has brought with it endless complications, both economic and political.

ADVERSE FACTORS ON PRICES.

A collapse of prices is, of course, only a symptom. As for the causes, the economists and financiers of the world appear agreed that more than one is operating, but they differ profoundly as to which is predominant. One school ascribes the chief influence to the paucity or maldistribution of the world's supply of gold. This view is vigorously opposed by others, who are convinced that monetary factors have played a subordinate part and that the root

of the mischief lies either in over-production, due mainly to the great improvements which have been made in industrial technique, or in under-consumption, aggravated by local conditions in important consuming countries, such as India, China and Russia, and by the fall in the price of silver. Others there are who point to the multiplication of tariff barriers since the war, especially in Europe, impeding the free interchange of goods between country and country. Many, again, attribute much of the evil to the disequilibrium in world trade caused by the enormous volume of international indebtedness arising from the war and from the peace which followed it; the burden of this indebtedness, which was contracted at a time when prices were vastly higher, presses grievously on the debtor countries, whose purchasing power has been so much affected that a vicious circle has been set up, and the creditor countries are now finding it difficult to see their goods.

It would be rash for me to attempt to arrange these factors in order of importance, or to separate real causes from what are merely symptoms. It may be that the divergence of opinion will prevail till long after the present troubles have passed away.

But meanwhile there are certain conclusions which, I suggest, stand beyond argument. The first is this: although all the Governments of the world, working in unison and upon a common plan, might have prevented the crisis, and might even now hasten the solution, there is very little that any one Government could have done to shelter its own country from the general collapse of prices. Where such attempts have been made the results have in no case attained their object. On the contrary, experience has shown, in more countries than one, that State action, designed to maintain prices artificially, either by restriction of output or by intervention in the markets, is predestined to failure in the long run, for while it may produce a temporary alleviation, it ultimately does more harm than good by delaying the operation of those natural processes of adjustment which alone can restore equilibrium and confidence.

EGYPT'S ADVANTAGES.

Secondly, it is certain that the first countries to reap the benefit of a return of stability will be those whose economic life is solidly based and whose finances have been carefully administered. Unless I am greatly mistaken, Egypt is one of those countries. She is endowed with a wonderfully fertile soil, tilled by a hard-working peasantry, and her staple product is one of the world's necessities. Her financial position merits the envy of many other nations. Her public debt is less than £7 per head of the population and little more than two years' normal revenue; it is, moreover, by no means a deadweight debt, for to the extent of about three-quarters we can set against it the capital invested by the State in irrigation works and railways. Finally, she enjoys an advantage which, from the point of view of her commerce, it is difficult to over-rate, viz., a stable exchange, assured by the amount and liquidity of the reserves held against the note issue.

These are most valuable assets, which have stood Egypt in good stead in the past, and will continue to do so in the difficult times in which we now live. Nevertheless I am far from implying that here in Egypt it is merely a question of carrying on as usual. You will remember that in his speech last year Sir Bertram Hornsby remarked, "It can scarcely be doubted that, if the price of cotton becomes stabilised at about the present level, an appreciable readjustment of the economic life of the country will become necessary." The further fall in prices during the past twelve months is an additional justification for that warning. "Deflation" is a word that we have heard much of in the last ten years. What is now needed appears to be a deflation of ideas; in particular among those classes which have adopted standards of expenditure based on incomes realised during the boom. Most prices are now down to pre-war levels. The world will be near the end of its troubles when the ideas of all of us—Governments, classes and individuals—have undergone a similar planing down.

Statements are laid before you giving figures for the note issue and for imports and exports during the twelve months commencing September 1 (corresponding to the cotton season) of each of the past ten years. These figures tell their own story of falling prices and trade depression.

NEW CUSTOMS TARIFF.

As regards the large adverse trade balance of over £14 millions in 1929-30, it has to be remembered that in that year imports were artificially stimulated by the knowledge that the new Customs tariff would come into force in February, 1930. Thus, in the month of February, 1930, imports amounted to £9½ millions, whereas in March they fell to £2½ millions, and it is highly probable that the imports for 1930-31 will prove to be on a considerably reduced scale.

The world depression has hit the Sudan even more than Egypt. The former country is in a much earlier stage of development; it has little accumulated wealth on which to draw and practically no

monied class; as for public finances, the State budget relies for much of its revenue upon the prosperity of certain commercial enterprises. Fortunately, the food crops last year were good and the country can feed itself; but the people's purchasing power is much reduced and trade in consequence is suffering.

You will have heard with regret of the deaths of H.E. Boghos Nubar Pasha and Mr W. Pelizaeus. It is some time since either of them took any active part in the bank's affairs, but they were both members of the original board.

DIRECTORATE.

During the course of the year H.E. Aly Maher Pasha resigned from the board on assuming office as Minister of Justice. The directors who now retire by rotation are Mr E. W. P. Foster, Col. the Hon. Sidney Peel, Sir Victor Harari Pasha, Sir Frederick Rowlatt and Major-General Sir John Davidson. They submit themselves for re-election. Since our last meeting the board has invited H.E. Aly Shamsy Pasha and Sir Bertram Hornsby to become directors, and we submit those nominations for your ratification.

The board is happy to state that your interests are served by a loyal and devoted staff. To the sub-governors in particular, as also to all the senior staff, our thanks are due in the difficult times through which we are passing.

Finally, your directors desire to express their sense of the great loss which they as a board, and the bank as a whole, are suffering by the retirement of Sir Bertram Hornsby after a service of twenty-seven years, for the last ten of which he has filled with brilliant success the office of governor. Sir Bertram is so well known to you all that you do not need to be told what a tower of strength he has been. His untiring energy in the bank's service, his great ability and his personality have contributed in no small degree to the strong position in which the bank now finds itself. It is some consolation to the board that he has yielded to their desire that he should remain with them as a colleague—a desire which they feel confident you will cordially endorse.

SPRATT'S PATENT, LIMITED.

CONTINUED PROGRESS.

The forty-fifth annual ordinary general meeting of Spratt's Patent, Limited, was held, on the 17th instant, at the Cannon Street Hotel, London, E.C., Mr S. T. Lethbridge (chairman and managing director) presiding.

The secretary (Mr A. A. Stow) having read the notice convening the meeting and the report of the auditors, the Chairman said: We are pleased to report that the profits for the year under review are slightly better than those for 1929, and I think you will be satisfied with these results, showing, as they do, continued progress of your business in a year which was exceptionally trying for everyone, irrespective of occupation. The profit and loss account, including £16,576, balance from last account, shows a surplus of £123,320. From this has to be deducted the interim dividend paid on the ordinary shares, £22,500; dividend on the "A" preference shares, £2,500; and dividend on the "B" preference shares, £9,000, leaving a balance of £89,320. We now recommend payment of a final dividend of 1s. 6d. per share on the ordinary shares, making 2s. 6d. for the year, which will absorb £33,750, and also a bonus of 6d. per share on the ordinary shares, which will absorb £11,250, or a total distribution of £45,000.

As we state in the report, the bonus should not be regarded as a permanent increase in the distribution of profits, as the outlook ahead is not sufficiently clear to warrant this, but we shall do our best to maintain it in future years. At the same time, the policy of caution in the distribution of profits will be maintained, as our aim is for increased financial strength for the protection of our investor shareholders.

We propose to place to reserve account £25,000, and to add to pension fund £5,000, leaving to carry forward to next account an amount of £14,320.

In times of depression and when the purchasing power of people is restricted there is always a scramble for what trade is available, which naturally intensifies competition. Therefore, it is the duty of every shareholder to do what he can to assist the company in which he has a direct interest.

When we met last year I stated that in my judgment 1929 was one of the most difficult years any manufacturing concern had to negotiate. To-day, I can safely say that 1930 eclipsed all records within my experience. Under these conditions, the solid foundations on which your company rests must be apparent to you all, if measured by the values in the balance sheet.

The report was unanimously adopted.

A cordial vote of thanks was given to the chairman, directors and staff, and the meeting terminated.

EASTERN BANK, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The twenty-first annual general meeting of the Eastern Bank, Ltd., was held, on the 18th instant, at the office, 2, Crosby Square, London, Mr J. S. Haskell (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Owing to causes of which you are doubtless aware, the working profits for the past year are not quite so favourable as those you have been accustomed to see during the past several years. The whole period under review was marked by a general depression, accentuated by a continual drop in commodity prices, while the resultant accumulation of stocks of all kinds made manufacturers, merchants and dealers reluctant to enter upon commitments for fear of further recessions in values. The decline in commodity prices during 1929 was serious; that during 1930 was even more severe.

Silver being the basis of exchange with China, its decline had a very far-reaching effect in contracting trade with that country. To make matters worse, import duties in China have again been considerably raised, seriously affecting the Lancashire piece-goods trade. On the other hand, China is quietly and steadily developing her manufactures of cotton goods, and, with cheap labour and a depreciated currency, she, like Russia, is in a favourable position to export her goods to this country and capture a substantial portion of our home market. Our competitors on the Continent, particularly Russia, who is ready to sell anything she produces at any price, continue to make further inroads upon both our home and our foreign markets, while the Government are—it seems confessedly—devoid of any policy to meet the situation beyond endeavouring to arrive at agreement with our competitors whereby, in consideration of their undertaking not to increase their tariffs, we should impose no tariffs at all, and thus tie the hands of any future Government from dealing with this deplorable state of affairs. The practical response on the part of many of our important competitors has been to raise their tariffs still further. The political situation in India, coupled with frequent disturbances of the peace and the boycott of British goods, has been another serious adverse factor.

The net profits amount to £116,693 18s. 9d. We recommend the payment of a final dividend of 5s. a share, less income tax at 4s. 1.803d. in the £, after allowing for relief from Indian taxation, which, with the interim dividend of 4s. a share already paid, will amount to 9 per cent. for the year.

The total imports of merchandise into India amounted to £138,580,000, showing a falling off of about £48,000,000, while the exports at £192,800,000, show a drop of £54,000,000. Imports of gold, £11,800,000, and silver, £9,100,000, were, in the aggregate, about equal in value to the imports of specie of the previous year, in spite of the import duty of 20 per cent. imposed upon silver in 1930. The visible balance of trade in favour of India dropped from £38½ millions to £34 millions, not a serious difference in view of the drop of over £100 millions in the whole foreign trade of that country. There was a considerable decline in trade between India and the United Kingdom amounting to £25 millions in imports and £9,300,000 in exports. Cotton goods alone were responsible for £13,600,000 of the reduction of British imports into India.

The contraction of trade, as shown by the above-mentioned figures, was attributable to the drop in prices which took place in regard to all Indian exports, except tea, coupled with the boycott of British goods and the uncertainty of the political situation. This uncertainty, in turn, along with the agitation in favour of altering the rupee exchange from 1s. 6d. to 1s. 4d. led to remittances from India to other countries, estimated at £30,000,000, thereby disorganising the finances of the Government of India. It has been exceedingly difficult for the banks to make any appreciable profit out of exchange.

Iraq, in common with the world in general, has been suffering severely from trade depression. The trade of the United Kingdom in sugar, cotton goods and oil to North Persia through Iraq has practically passed into Russian hands. It can be truly said that Russian trade methods are a positive danger to the whole world, particularly to the United Kingdom, whether in foreign markets or the home market.

The prospects of the current year are very obscure. Much must depend on the policy of the Government and the incidence of the coming budget. One favourable feature is that the decline in the price of commodities seems to have been arrested and some articles show an upward tendency. Further, the situation in India appears to be clearing up on the recent agreement, and should the boycott be entirely removed we may see a little more activity, though I fear the restoration of confidence may be a very slow process.

The report and accounts were unanimously adopted.

BRITISH AND GERMAN TRUST, LIMITED.

MR. A. R. WAGG REVIEWS CONDITIONS IN GERMANY.

The fifth annual general meeting of the British and German Trust, Ltd., was held, on the 17th instant, at the offices of the company, 41, Threadneedle Street, London, E.C.

Mr A. R. Wagg (chairman of the company) presided.

The Secretary (Mr D. H. Scott) having read the notice convening the meeting,

The Chairman said: Gentlemen,—The report and accounts have doubtless already received your consideration, and I will, with your permission, take them as read. The book value of our total investments, loans and syndicate participations amounted as at December 31, 1930, to £2,391,370 7s. 6d. Of this sum £853,349 10s. 8d. was represented by mortgage loans in Germany. The corresponding figure last year was £895,129 19s. 6d., which was reduced to £836,637 0s. 8d. in consequence of sinking fund repayments, and increased to the present figure by a further small loan which was granted, costing £16,712 10s.

We have received satisfactory information from our advisory council in Germany regarding the position of our mortgage loans, on the strength of which the board is satisfied that the borrowing companies, with one exception, are good for their engagements, and, so far as one can anticipate, should be in a position to fulfil their obligations towards the trust.

In the exceptional case referred to above, the amount of the loan has already been reduced from its original figure of £40,000 to £23,240 by various repayments, and the outstanding amount is, in the opinion of our advisory council, fully covered by the available assets, so that the trust need not anticipate any loss thereon.

The various classifications of our investments are set out in the report, from which it will be seen that the trust's investments in Germany, including mortgage loans, amount to 48.6 per cent. of the whole.

VALUE OF INVESTMENTS.

The net revenue, after allowing for all charges, including taxation, is £83,191 5s. 7d., which is equivalent, after allowing for the dividends on the first and second preference stock, to 12.38 per cent., less income tax, on the ordinary stock.

As you will have seen from the report, the valuation of the company's holdings as at December 31, 1930, shows a depreciation of £326,200 17s. 7d., which is equivalent to 13.64 per cent. on the book value of our investments. This depreciation is due to the general fall in security values consequent on the world crisis through which we are now passing, and is an unfortunate factor, which affects all trust companies in a similar way. In view, however, of the fact that the revenue for the year is equivalent to over 12 per cent. on the ordinary stock, your directors feel justified in recommending the maintenance of the dividend at last year's rate of 8 per cent.

As regards the current year, I am not going to attempt to prophesy, but we must anticipate some falling off in revenue, as the dividends we receive this year will reflect the operations of the companies concerned during 1930. I hope, however, that this will only be to a slight extent, and that we shall be able to continue our present dividend policy.

AN UNFORESEEN DEVELOPMENT.

When I had the privilege of addressing you at our annual meeting last year, few of us, I think, realised the extent to which the world depression would develop. A year ago the feeling was prevalent that this slump was little more than a normal though unpleasant phase of the world's economic development. The tide of prosperity was on the ebb, but it would flow again by and by in the normal course of events.

Now the eyes of an increasingly large section the world over are opening to the fact that we are passing through a major crisis which is shaking the foundations of our economic system, and which, unless conscious and collective effort is made to counteract it, may have a long-drawn-out aftermath.

It is a hopeful sign that there is a wider realisation of the nature and gravity of the problems confronting us, because this will make it easier to put into effect the necessary corrective measures. I do not want to devote any more time to the general position, because in the last few months so much has already been said and written about it. In view of our special interest, I propose to-day, therefore, to confine myself to a short review of conditions in Germany.

GERMANY'S DIFFICULTIES.

The year 1930 is noteworthy as marking the opening of the third era of Germany's post-war development. The first was from 1919 to 1923, and covered the period of the struggle of the nation to

combat bankruptcy, revolution, and chaos; the second began with the Dawes Plan, and was a period of financial and economic reorganisation accompanied by a measure of foreign control through the Agent-General for Reparations and foreign occupation of territory. Now, since the introduction of the Young Plan and the final evacuation of the occupied areas, Germany has resumed her economic and political freedom and responsibility, and has been restored to her full status among the nations of the world.

It is unfortunate that the opening of this new era should coincide with a period of intense industrial depression throughout the world, but, in my view, the freedom from foreign control, and consequent irritation, is enabling Germany to handle her problems with far greater efficiency than she would otherwise have been able to do.

During the year 1930 Germany exhibited many of the same symptoms as this country and America—growing difficulty to export, the gradual slowing up of trade, and increasing numbers of unemployed.

PRODUCTION REDUCED.

I will give a few figures to illustrate the decline in trade. The production of coal fell to 142,700,000 tons, compared with 163,400,000 tons in 1929 and 150,900,000 in 1928; 145,900,000 tons of brown coal were mined in 1930, compared with 174,500,000 tons in 1929. The reduction in output was even more serious in the case of the heavy industries, the daily production of raw steel showing an almost continuous decline from 49,057 tons in January to 30,987 tons in December, the total output for the year being only 11,539,000 tons, compared with 16,346,078 tons in the previous year. The figures for pig iron tell the same story, 9,654,000 tons being produced, against 13,401,000 in 1929.

The sales of potash were, on the other hand, comparatively well maintained, total sales showing a fall of only a little over 3 per cent. Exports of potash show a decline of 8 per cent. and a price reduction of 10 per cent., and the export proceeds amounted to Rm. 60,200,000, against Rm. 67,000,000 in 1929 and Rm. 63,700,000 in 1913.

The figures for the German State Railway show that the transport of goods as measured in ton-miles shows a diminution of some 20 per cent., but it must be remembered that the same competition between road and rail is going on in Germany as in other countries, and this index is, therefore, not such a reliable measure of the general state of trade as it used to be. Generally speaking, the fall in production was greater than that in Great Britain, but smaller than that in America. Taking 1928 production at 100, a leading authority in Germany has computed that the figures for the third quarter of 1930 are 89 for Great Britain, 80.8 for Germany and 76.5 in the U.S.A.

A SATISFACTORY FEATURE.

The most striking figures for the year, and from Germany's point of view the most satisfactory, are those relating to her external trade in 1930. Total exports amounted to 12 milliards of Reichsmarks, including 700 millions of reparations deliveries in kind, and imports totalled 10.4 milliards, so that Germany was left with a favourable trade balance of Rm. 1,600,000,000, compared with Rm. 50,000,000 in the previous year.

It is true that exports show a fall of, roughly, 1.5 milliard Reichsmarks and imports a fall of 3 milliard Reichsmarks, but, allowing for the fact that the prices of goods exported were, on the average, 11 per cent. lower than in the previous year, and the price of imports 25 per cent. lower, we find that, in quantity, exports were only 5 per cent. down on the year and imports 10 per cent. down.

This falling off in exports is very much smaller than in the case of either England or America, the decrease in value being about 10 per cent. in the case of Germany, as compared with about 21 per cent. in the case of our exports, and about 25 per cent. in those of the U.S.A. As a result, for the first time in history, Germany's total exports exceeded ours.

The greater decrease in the export trade of England and America is probably due to the fact that their principal markets are in countries which are producers of raw materials, and whose purchasing power was in consequence most severely affected by the disastrous fall in all commodity prices. On the other hand, between three-quarters and four-fifths of the German exports are made to European countries, which did not feel the effect of the general fall in prices so rapidly. Another factor is that the British and American exports of goods are dependent to a greater extent on

exports of capital to the purchasing countries, and were thus much more severely affected by the sharp curtailment of foreign borrowing in the London and New York markets.

AN EFFICIENT ORGANISATION.

The relatively small drop in the German exports was undoubtedly partly due to the pressure on Germany to provide foreign exchange to meet reparations payments and the interest on her foreign loans. For this reason certain products were sold abroad at prices which only covered the fixed charges of manufacture, and showed no profit, but I believe that the quantities so involved are generally exaggerated, and, in fact, represent but a small proportion of the total exports.

I think Germany's relative success in the export market is much more due to the fact that German industrialists have realised the limitations of their own internal market for some time and have studied the requirements and idiosyncrasies of their foreign customers much more systematically and intensively than their confrères in other manufacturing countries.

The exports for 1930 have, in any case, shown the efficiency of the German industrial organism, and that she will be able to take full advantage of any revival in trade.

MONEY MARKET AND FOREIGN BORROWING.

At the beginning of 1930 there were signs of a fundamental improvement in the money market position. Rates have, however, remained at a relatively high level throughout the year, the average rate for one to three months money at the close of the year being 5.90 per cent. The cause of these high rates is to be found in the shortage of capital at home and the consequent necessity for attracting foreign short-term money into the country.

The Reichsbank throughout the year has continued to have complete command of the exchange position. It has been able to meet any demands for foreign currencies, including the unusual requirements during the sudden flight from the mark in the autumn, and the reserve ratio has always been substantially above the statutory minimum.

According to figures recently published by the Government Statistical Bureau, German foreign long-term borrowing during 1930 amounted to Rm. 1,180,000,000, as compared with Rm. 350,000,000 in 1929 and Rm. 1,460,000,000 in 1928. There was, however, an important change in the character of the borrowing, as a large part of this sum consisted of the German Government's share in the proceeds of the Young Loan and the loan from the Kreuger interests for the match monopoly, whereas in previous years the bulk of the loans were for municipal and industrial purposes.

A HOPEFUL FACTOR.

Owing to the unsettled state of affairs the bond markets of the world have been virtually closed for German issues, and of late Germany has only been able to obtain loans abroad in the form of special credits granted by banking groups. In this connection it is of particular interest to note that the French participated in the international syndicate formed to finance the purchase of the block of German Railway Preference shares by the Reichsversicherungsanstalt, and I hope that this will be the forerunner of a series of transactions involving the Paris market.

In is interesting to note that in spite of the constantly recurring reports about heavy withdrawals of funds from Germany preliminary estimates of the Institut für Konjunkturforschung, an official institute for studying economic conditions, compute that during the year there was on balance an influx of capital in one form or another amounting to approximately one milliard marks, compared with 2.9 milliards in 1929.

It seems, however, clear that if Germany secures a less favourable trade balance this year than last, as seems probable, and if the flow of capital from abroad, either in the form of loans or credits, further diminishes, some adjustment of reparations payments will have to be made.

THE REPARATIONS QUESTION.

The fact which I think is not sufficiently recognised, in spite of the repeated assurances given by the German Chancellor, the President of the Reichsbank, and others who are in a position to speak with authority, is that whatever adjustment of reparations is made the security of the Dawes Loan and the Young Loan will not be affected. I should like to lay particular stress on this point, because the expression "moratorium," which is frequently heard in discussions on an adjustment of reparations payments, only applies in the sense in which it is clearly defined in the Young Plan—namely, as affecting the conditional reparations payments.

To my mind, it is greatly to be hoped that the first move in the direction of a permanent adjustment should come from the United

States, who directly or indirectly receive 66 per cent. of the total reparations payments, as thereby many political difficulties may be eliminated. Intelligent financial opinion in that country, I believe, generally recognises the necessity for some revision, and this feeling is gradually being disseminated, together with a realisation that the normal development of trade and international intercourse is greatly hampered by these immense international transfers.

EFFECT OF PRICE FALL.

I do not wish to enlarge further on the reparations question, but I should like to draw your attention to one more point before passing on. It was universally and unreservedly acknowledged when the Hague Agreement was signed in January, 1930, that the object of the Young Plan was to reduce to some extent the burden of reparations on Germany, a burden which time had already shown to be too great for the economic structure supposed to carry it. Quite apart from other factors of a purely financial character, the revised burden has increased very considerably since that date owing to the general fall in prices. Until the price level of the manufactured articles which form the bulk of Germany's exports has ceased to fall, it is impossible to say how much this increase in the burden will amount to, but at the present time, even, it probably is at least 15 per cent. The relief which the Young Plan was to give Germany has, therefore, to this extent proved illusory.

I feel that my review of conditions in Germany would be incomplete without a reference to some of the political developments of the past year which have had an important bearing on the financial situation. The elections in September were followed more closely than usual by observers abroad. The surprising gains registered by the Hitler party resulted in a political situation of some delicacy, accompanied by heavy withdrawals of foreign funds. The considerable political agitation following the elections accentuated the difficulties of the Government, but the energetic way in which the Chancellor has proceeded to carry through a large part of his original programme of financial reform has secured the admiration and respect of large numbers of his own countrymen, as well as that of interested observers abroad. His straightforward utterances on many occasions have gone a long way to restore confidence in the internal political situation in Germany.

ECONOMIES EFFECTED.

The reforms include a determined effort to make the Unemployment Insurance Fund more nearly self-supporting by revising the conditions of benefit and by raising the rate of contribution from 3 per cent. to 6½ per cent. of the basic wage; substantial reductions in Civil Servants' salaries have been effected, and, perhaps most important of all, the financial relationship between the central Government and the various States will be considerably modified. The previous system was frequently the subject of unfavourable comments by the late Agent-General for Reparations during his term of office, as, in essence, it put the States in the happy position of being able to spend public funds while the onus of collecting them was put on the central Government. The change which will be effected will enable the central Government to keep its fingers more closely on the purse strings, and will, I think, prove of great and lasting benefit to Germany.

The success of these financial reforms turns mainly on the course of trade and numbers of unemployed which have to be supported.

While it is impossible to say with any certainty that the bottom of the depression has been reached, I personally incline to the opinion that from now on things will improve gradually but slowly. In any case, Germany has made a determined attempt to tackle her problems in the light of conditions as they are to-day, and the realistic outlook of the German statesmen, which embraces a frank recognition of the gravity of the situation and the necessity for drastic action, is an example which may well be followed by other countries, including ourselves.

As I said above, I think recovery will be slow, but I believe that conditions in Germany are not worse than in other industrial countries. The economic life of every modern industrial country has its own special features which give rise to anxiety under present conditions, but there is a growing realisation in all countries that their larger economic problems are not purely national problems, and that the consequences of a breakdown in any one modern industrial country would have serious repercussions throughout the world.

I now have pleasure in formally moving:—"That the directors' report and accounts for the year ended December 31, 1930, submitted to this meeting be and are hereby received and adopted, and that for the year ended December 31, 1930, a dividend on the ordinary stock of 8 per cent., less tax, be declared and paid."

Lord Ashfield seconded the resolution, which was carried unanimously.

Messrs. Deloitte, Plender, Griffiths and Company were re-appointed auditors, and a cordial vote of thanks to the chairman concluded the proceedings.

BRITISH INSULATED CABLES, LIMITED.

SATISFACTORY RESULTS IN A DIFFICULT YEAR.

15 PER CENT. DIVIDEND.

SIR ALEXANDER ROGER ON "PROFLIGATE LEGISLATION."

Sir Alexander Roger, the chairman, presided at the thirty-fifth annual meeting of the British Insulated Cables, Limited, held, on the 20th instant, at Liverpool.

In moving the adoption of the annual report of the directors and the accounts for the year ending December 31st,

The Chairman first referred to the death, since the last meeting, of Mr. Dane Sinclair, late chairman of the company. The directors, he said, wished to place on record their great appreciation of the long and valued services which Mr. Sinclair rendered to the company. He came to the company as general manager in 1902, and devoted himself unstintingly to its service throughout the entire period. The directors, and many of the shareholders, had lost a great friend, and the company, and, indeed, the industry, had lost a man of outstanding ability who did much to forward the interests of the cable manufacturers throughout the world.

YEAR'S RESULTS.

Adverting to the accounts, the chairman said, although the profit for the year, amounting to £576,593, was less than that of the previous year, which amounted to £685,980, having regard to the general conditions of trade throughout the world, the directors thought the shareholders might be congratulated on the results.

Adding to the profit for the year the amount brought forward, they had a disposable balance of £857,400. From this were to be deducted the usual charges, in all amounting to £191,416. To be further appropriated were £100,000 for depreciation and £120,000 to reserve, and out of the balance the directors recommended a further dividend of 10 per cent. on the ordinary share capital, making, with the interim dividend, a total for the year of 15 per cent.

The carry-forward amounted to the very substantial sum of £279,317, or £1,489 less than was brought in.

Having referred to various items in the balance sheet, the chairman said the shareholders would probably not be surprised at 1930 not showing up so well as 1929, but, having regard to the conditions of world trade, the directors were not dissatisfied with the results obtained. (Hear, hear.)

QUALITY TO BE MAINTAINED DESPITE COMPETITION.

They could not disregard the fact, however, that competition at home and abroad was continually growing, and it was only by the maintenance of a really large turnover that sufficient profits could be earned to enable the company to make adequate provisions and provide satisfactory dividends.

The fact was that the cable manufacturing plant capacity in this country was in excess of the output requirements, and with the average factory working on a low load factor one could easily understand the keenness for orders.

Competition for orders at the same time increased standing charges in the way of sales expenses consequent upon the opening of additional branch offices, employment of additional salesmen, and expenses in connection with advertising, etc. There were many ways to meet competition, but he said at once that the directors set their faces resolutely against a reduction of quality as a means of meeting competition. (Hear, hear.) In their opinion a high-grade product would always fetch its price, and customers could most easily be retained when they had the knowledge that the article supplied was the best that could be made, and that the manufacturer was a responsible firm well known to stand behind its products.

TO MEET NEW CONDITIONS.

The directors and management, however, continued to study the position from all points of view, and felt that the best way to meet the new conditions was to reduce costs and thus be enabled to offer lower prices to their customers. Much could be done in this direction by closer co-operation with other cable manufacturers whereby both manufacturing and administrative cost could be reduced, and in addition they felt that a policy of rationalisation should be followed. In pursuance of this policy the directors, in addition to the joint control they acquired in a large cable manufacturing company in 1929, had during the past year purchased

complete control of two other cable companies, one being of considerable size.

They looked forward with confidence to complete financial justification in the immediate future of the steps they had taken.

PROFLIGATE LEGISLATION.

The Chairman continued: "There is a wider aspect to this question of reduction of costs and economy generally, and I make no apology for touching upon it at this time. The selling price of our products includes the price of raw materials and consequent fluctuations of exchange, wages and trade union restrictions, taxation, largely a result of the war, but more recently a consequence of profligate and ruinous social and other legislation for which all political parties are guilty.

We investors in the business of this country are also electors, and while in our own business we can do our share towards alleviating the troubles that surround the country generally, we must also take a hand in protesting effectively against excessive taxation, imperial, local and municipal, which is crushing the life out of industry."

INCREASED OUTPUT NECESSARY.

"I am not an advocate of reducing wages, but I am an advocate of increasing output per person. The need for this is evident when it is realised that for every 100s. spent in real wages in England, 73 are spent in Germany, 55 in France, 45 in Belgium and 39 in Italy. These figures, of course, take into account the relative costs of living. A calculation has also been made which shows that for every one pound's worth of production in Great Britain between five shillings and six shillings a year is spent in national and local taxation."

We appeared, added the Chairman, to be easily the most highly taxed nation in the world at the present moment. Germany merely carried three-fifths of our tax burden, the American paid only one-half, and the Frenchman less than one-half of the amount borne by the British taxpayer.

It was thus easily seen how difficult the problem was for British manufacturers to reduce costs to such a point as would enable them to compete with freedom in foreign territory, and to maintain their prices in England at a point which compared reasonably with those obtaining elsewhere.

It was quite apparent that this country at the moment was living upon its reserves, which was a position that could not continue indefinitely.

A MAGNIFICENT BUSINESS AND REPUTATION.

"So far as this company is concerned," said the chairman, in conclusion, "we are putting our house in order with a view to reducing costs. We are constantly improving methods and machines, and also extending research. We have a magnificent business and a reputation built up over a long stretch of years which is second to none in our industry both at home and abroad, and, with our able and loyal staff, we shall continue to deserve and, I trust, receive our full share of business that is going.

"In these times this company has much to be thankful for. For the moment our order book is not so good as last year, but, in spite of depression, the demand for electricity grows in almost every direction, and, of course, this demand cannot be met without calling for the products of the cable industry. At the same time, we must recognise that the purchasing power of the world is temporarily diminished, and, until the root causes of this are removed or mitigated, we cannot, nor can any other industry, view the future without some anxiety.

"All these measures, and the constant urge for economy, throws a lot of work upon our loyal staff, and I should not be satisfied to conclude my remarks without expressing the appreciation of the board for their excellent work in the past year. The workers in the various factories, with whom I am glad to say our relationships are of the utmost cordiality, should also not be forgotten in the matter of thanks for good work done." (Loud applause.)

The report and accounts were unanimously approved.

MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION, LIMITED.

SATISFACTORY EXPANSION.

LOCAL SUPPLIES' ORDER.

PROPOSED FORTY YEARS' EXTENSION.

The thirty-third ordinary general meeting of shareholders of the Midland Electric Corporation for Power Distribution, Limited, was held at the Exchange Hotel, Liverpool, on Friday, March 20th.

Mr G. H. Nisbett, M.Eng., J.P. (chairman of directors), presided. Mr C. Heathcock, F.C.I.S. (secretary), having read the notice convening the meeting,

The Chairman said: Before commencing the business of the meeting I regret to have to announce the death on May 6th last of Mr D. Sinclair, our late chairman. Mr Sinclair joined the board in July, 1914, and became chairman in October, 1927, and throughout that long period his services were of the greatest value to the company, and I am sure you will all join with the directors in an expression of our high appreciation and our great regret.

The directors' report and printed accounts have been in your hands for some time, so I assume it is your wish that they be taken as read.

As the accounts are set forth in somewhat greater detail than is usual, I will not go through them seriatim, but will only touch upon those items that show an appreciable change from the year before.

EXTENSION OF SERVICES.

Turning to the capital expenditure account you will see that we have expended during the year the sum of £70,634, nearly all of it upon mains transformers and meters. This outlay is continually necessary for the purpose of making our supply available in streets and areas that hitherto, by reason of the dearth of demand, have been economically unsuppliable.

In this connection I may mention that proposals by the management for extensions of mains are always carefully scrutinised by the board, who satisfy themselves that the additional revenue to be obtained either immediately justifies the expenditure or will probably do so within a reasonable time.

The switchgear shown as written off by £17,710 was for the control of the company's feeder system, leaving the power station at Ocker Hill. It had been in use for a number of years, and was already on the small side when the joint authority purchased the generating station. When the joint authority increased the capacity of the station it would have been dangerous to retain the old switchgear, and this has gradually been replaced during the past three years, and the account adjusted by taking the sum of £8,321 already provided from the depreciation account, and writing off the balance of £9,389 from profits; these entries are clearly shown in the balance sheet and are also referred to in the directors' report.

There is no change on the other side of the balance sheet, the issued capital remaining as before.

INCREASE OF CONSUMERS.

Turning now to the gross revenue account, it will be seen that our total receipts were £408,176, compared with £402,194 for the year before, a small but satisfactory increase.

During the year the power consumers in our district have especially felt the effect of the depression in trade, but by an intensive campaign we have been able to more than replace the revenue so lost by a large addition to the number of lighting consumers.

On the expenditure side of the gross revenue account we see that purchase of current has cost us £188,298, or £9,102 more than the year before, although we have, in fact, purchased slightly less electricity.

It is, of course, most unfortunate that, at a time when heavy additional charges for interest, etc., have to be met, the West Midlands Joint Electricity Authority should be faced with a depression in trade such as the present, with a consequence that the demand for power has fallen far below what reasonable expectations of growth justified provision for. There can be no question that ultimately the formation of the West Midlands Joint Authority and the policy they are following will be amply justified.

An increase of £994 in costs of distribution leaves us with a balance to carry to net revenue account of £195,812, compared with £199,926.

HEAVIER RATES BURDEN.

Now, turning to the net revenue account we see that the balance carried to balance sheet is reduced to £139,656, compared with £151,365 for the previous year, showing a total diminution in profit of £11,709. For local rates alone in the past year we had to bear an increased charge of £3,000, and it does seem inequitable that, while industrial hereditaments are de-rated, our company, partly as a

consequence, had the whole of its assessment increased in April, 1929, by 100 per cent., which represented an increased annual charge of £12,000, three-quarters of this increase falling due in 1929.

On the other side of this account, bank and other interest shows a reduction of just over £2,000, due to the general fall in money rates.

INVESTMENTS AND RESERVES.

With regard to the general balance sheet, I think the figures are all self explanatory, except that attention should be drawn to the fact that cash at the bank has fallen from £151,169 to £49,493, and that investments have increased from £86,704 to £117,354, and other debtors and loans from £1,297 to £73,104. These changes have been made in order to obtain a higher rate of interest than the bank was able to offer. Needless to say, the investments are not intended to be of a permanent character, and we hope the day may soon come when, because of better trade, the money may be required for our own business.

On the liabilities side the reserve account has been further strengthened by the transfer from profit and loss of £30,000—the account now standing at £130,000.

DIVIDEND AND CARRY FORWARD.

Now, turning to the front page, it will be seen that, with £35,589 brought forward from last year, we have a disposable balance of £175,246.

From this we propose to deduct £33,920 for depreciation, £9,389 for scrapped switchgear, and transfer to reserve £30,000.

Again deducting £14,000 for preference dividend and £17,500 for the 2½ per cent. interim dividend already paid on the ordinary shares we have a balance of £70,437. Out of this your directors propose a further dividend on the ordinary shares of 5½ per cent., making 8 per cent. for the year, and to carry forward a balance to next year of £31,937.

PROPOSALS FOR FUTURE LOCAL SUPPLIES.

Reference was made last year to negotiations with the local authorities whose administrative districts form the area supplied by this company.

These negotiations have proceeded throughout the year, and have now reached concrete form and have been submitted to the local authorities in the form of a Draft Special Order.

The proposals in outline are that, in consideration of the extension of the company's franchise from the year 1940 to the year 1980, an initial all-round reduction of 10 per cent. on the basis of costs and revenue for 1928 shall be allowed to consumers from the company's charges for electricity. Thereafter a sliding scale of charges for current, based on the company's actual costs from year to year, comes into force, so that the charges may be raised or lowered annually, depending on the cost at that time. Other things being equal, such costs will decrease as the demand increases. Provision has been made so that the company will benefit equally with the consumer if it is able to reduce any or all of the costs that come within its own control.

The directors have given long and careful consideration to this subject, and, while it is obvious that the suggested arrangement must be to the immediate and almost certain future advantage of the consumer, both of power and light, yet, on the other hand, and taking the long view, it is by reason of the extended tenure well worth while for the company also.

The draft Order is under consideration by the local authorities concerned, but a final decision has not yet been reached by them.

LOYAL SERVICE.

I cannot conclude without expressing on behalf of the board, and I hope the shareholders too, our thanks to the management, the staff and the workers for the loyal service they have given to the company and its affairs throughout the past year.

I now beg to move "That the report and accounts for the year ended December 31st, 1930, as certified by the company's auditors, be received, approved and adopted."

The motion was unanimously adopted.

A resolution authorising the payment of a further dividend of 5½ per cent. on the ordinary shares, making, with the interim dividend, a total of 8 per cent. for the year, was carried.

Mr G. H. Nisbett and Mr J. Arthur Smith, the retiring directors, were re-elected.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

FORD MOTOR COMPANY, LIMITED.

IMPROVED TRADING RESULTS.

SIR PERCIVAL PERRY'S PLEA FOR REVISION OF AUTOMOBILE TAXATION.

The second ordinary general meeting of Ford Motor Company, Ltd., was held, on the 18th instant, at the Café Royal, Regent Street, London.

Sir Percival Perry, K.B.E. (the chairman), in the course of his speech, said: The calendar year of 1930 will probably be famous—or infamous—as a period of the greatest economic difficulty and industrial depression through which modern society has yet passed. Not only Great Britain and Europe, but every organised country in the world has suffered similar experience. It is, therefore, with the more satisfaction that we are able to report to you that our trading profits for the 12 months ended December 31st last are greater than were earned during the previous 14 months. Before arriving at the trading profit of just over one million pounds sterling, we have absorbed against revenue many expense items which are not of a permanently recurring nature.

The directors' report draws attention to the fact that no dividends on the company's holdings in associated companies have been brought into account. The reason for this is the fact that at the present time it is not considered that the company requires such funds as revenue.

COMPANY EXPORT FIGURES.

The total exports of motor cars (other than commercial vehicles) and motor-car parts from the United Kingdom during 1930 was £6,081,280. The exports of our company amounted to £3,302,371, and I think you will agree that this is no insignificant contribution to the enhancement of the international status of the British motor industry.

We, however, have to manufacture a special automobile engine for export, because no intelligent foreign automobilist will purchase an engine designed according to the h.p. formula upon which British automobile taxation is based, and which accordingly governs and prejudices British designers.

THE HORSE-POWER TAX.

Our superior engine costs no more to manufacture. In fact, we charge more for our vehicles when fitted with a less efficient engine, which the British public buys in order to avoid excessive taxation. So long as the present method of calculating horse-power tax prevails no British manufacturer can possibly build up any considerable export business in the vehicles which are made for this market. I appreciate that this is a strong statement to make, but notwithstanding the existence for many years of a heavy preference in Colonial import duties in favour of cars of British origin, even our own Colonies will not purchase British cars in any considerable number.

The vast majority of motorists in Britain are compelled, because of foolishly calculated methods of taxation, to use automobiles which are inferior to those used by automobilists everywhere else. It is not a question of roads, or of cost, or general running expenses. It is not necessary to go to the other end of the world to beat up sentiment among our Colonists. Our neighbours across the Channel in the open markets of Holland and Denmark would much prefer to take British automobiles in payment for the eggs and bacon and butter which we buy from them. They do not do so for one reason only, which is that, in the aggregate, British manufacturers can offer them only an unacceptable article. Holland, which imports all of its motor cars, is an open market in which 23 Continental and American automobile manufacturers each sell 500 or more of their vehicles per annum. Not one of these is a British manufacturer.

RESTRICTION ON USE OF MOTOR CARS.

The taxation in Britain is so high that, unless it can be adjusted, there is little prospect of increasing the per capita use of motor

cars to any large extent. The market is saturated so long as the present high taxation prevails.

The average tax per automobile in Great Britain was £26 18s. 9d., whereas the average tax in the United States was only £7 4s. 4d. This is clear demonstration of the wisdom of the policy of a moderate tax inducing the use of a larger number of automobiles.

"FOOLISH AND UNFAIR BASIS."

May I explain how extremely foolish, as well as unfair, is our existing basis of taxation. It is assumed that the use of public highways should be paid for by motor cars in relation to the power of the engine used, and that the power of an engine is wholly and solely determined by the diameter or width of the cylinder. Every authority, except the tax collector, knows that both of these premises are erroneous.

Clever engineers, in order to avoid the h.p. tax, have designed cars which are so high priced that only the extremely wealthy can afford to buy them, and yet these cars pay only £15 or £16 per annum tax, whilst the humble purchaser of an inexpensive car designed in accordance with the accepted best practice has to pay £24 per annum.

Our Ford car, if it were designed to run upon three wheels only, would pay a tax of £4 per annum instead of £24.

If one was successful in building an acceptable two-stroke engine the revenue derived from motor-car taxation would be automatically and instantaneously reduced by 50 per cent., in accordance with the horse-power formula upon which revenue is now calculated and raised.

"A PREMIUM ON LETHARGY AND NUISANCE."

It is impossible to calculate the many millions of pounds sterling expenditure per annum involved in traffic control, street widening, and other attempts to relieve congestion and speed up traffic, and yet our authorities exorbitantly tax a small tradesman who is enterprising enough to use a motor van for delivering his goods, and at the same time refuse to tax a horse and cart, which occupies much more space upon the road, and requires much more stable accommodation, moves at approximately one-fifth of the speed of motor traffic.

It has been calculated that if horse traffic were taxed in the same way as motor traffic there is a sum of approximately £2,000,000 waiting for the Chancellor to pick up.

Many authorities believe that the only reason why motor traffic has not entirely replaced horse traffic is that the latter pays no taxes.

Upon the general question of taxation there is little doubt that our country can never recover so long as taxes remain at the present high level. Capital in industry is only worth what it will earn, and when profits are taxed beyond reasonable limits, then taxation becomes in effect a capital levy. This means that in order to build a new house we obtain our bricks by pulling down an old house. Unfortunately, in many instances, the new edifice is inferior to the one which has been demolished.

The directors' report, together with the accounts as audited, were adopted unanimously, and a dividend of 10 per cent. was declared.

A resolution increasing the capital to £9,000,000 was approved.

A copy of the Chairman's Speech in full can be obtained on request from—

FORD MOTOR COMPANY, Limited,
88, REGENT STREET, LONDON, W.1.

DICKINS AND JONES, LIMITED.

A SATISFACTORY REPORT.

The thirty-first annual general meeting of Dickins and Jones, Limited, was held, on the 19th instant, at 29 Argyll Street, London.

Sir Woodman Burbidge, Bt., C.B.E. (the chairman), said that the directors were glad to be able to present what must be considered as a satisfactory report on the trading during a year in which they had been faced with many difficulties. It became evident during the early months of the year that the spending power of their customers had been considerably reduced in consequence of the heavy burden of taxation, whilst latterly the constant fall in the prices of raw materials affected the prices of merchandise in like proportion, and the returns showed a shrinkage, which affected the profits.

After charging repairs and renewals, directors' fees and income tax, providing for depreciation on fixtures, furniture, etc., and for bad and doubtful debts, the profit for the year amounted to £115,910, as against £129,367, a decrease of £13,457. With the balance brought forward the amount available was £163,658, and the directors recommended a balance dividend on the ordinary shares at the rate of 14 per cent. per annum for the second half-year, making 12 per cent. for the year, the same as for last year.

Following the announcement that the Government had decided to repay the 4 per cent. War Loan during last January, it became necessary to consider the manner in which the sinking fund should be invested in the future. After due consideration it was decided that the War Stock be sold and the funds accruing be re-invested, half in 3½ per cent. Conversion Loan and half in 4 per cent. Funding Loan. This sale and re-investment were carried through at what was considered a favourable figure, and the interests on each of the parcels of the new stock would be similarly invested in conformity with the original scheme.

The position of the company could be viewed with complete satisfaction. Notwithstanding the reduced earnings and the slightly lower carry forward of £42,908 against £47,748, the reserves remaining amounted to £240,214 against £235,840. Thus it was seen that benefit was being derived from the conservative policy of the board in the past.

With regard to the future, little improvement could be looked for until a general feeling of confidence could be renewed, and until the economic difficulties and the vital question of unemployment showed some improvement. However, he could safely say that with their reputation in Regent Street, which year by year was being enhanced, when the turn of the tide did come Dickins and Jones would undoubtedly be in the front rank of those to reap the benefits.

The report and accounts were unanimously adopted.

JOSEPH NATHAN AND COMPANY, LIMITED.

ORDINARY SHARES RE-ENTER DIVIDEND LIST.

The ordinary general meeting of Joseph Nathan and Company, Ltd., was held, on the 18th instant, at the company's offices, Osnaburgh Street, London, Mr Alec Nathan, chairman of the company, presiding.

The Chairman said: The reserve account now stands at the figure of £40,000 as compared with £25,560. The directors' policy is to continue to build up this reserve account from each year's profits. It is as well to emphasise, however, that in creating this reserve the directors visualise it as a live fund to be used for the purposes of the company should exceptional conditions need exceptional treatment, and not as a sum of money frozen away from all relations to the everyday working of the company. All subsidiary companies show a profit earned for the year. Advances from bankers show a reduction of nearly £10,000. Machinery, plant, etc., is up by £10,000 chiefly on account of expansions in our pharmaceutical business for which we have had to equip a new factory near London. Full depreciation on all these capital items has been provided for and written off their book values. Trade marks, patents and development account remains at the figure of the previous year. The introduction in various markets of a family of new and important pharmaceutical articles is substantially increasing the value of this profit-earning asset. The balance sheet as a whole, I think you will agree, indicates a satisfactory liquid and financial state.

The net profit for the year is £68,066, an increase of £3,000, which enables us to place a larger amount to reserve, to recommend an ordinary dividend of 10 per cent. and to carry forward a slightly larger amount than last year.

The situation created by the earthquake in New Zealand, and the destruction of our Hastings office, will involve a loss of about £5,000.

The effect on our business of the greatly increased rates of exchange between New Zealand and Australia and London is not important, most exchange charges being for account of our customers or principals. On our own manufactures from New Zealand and Australia the exchange becomes an additional return to the local manufacturing organisations. Our business to-day is so widely spread, in character as well as geographically, that adverse events in one country or in one department are usually counter-balanced by more favourable conditions in some other section or country.

Trading as we do in many parts of the world, we have reason to believe that the world conditions of trade are more likely to improve than to get worse, and we view the future prospects of our business with confidence.

The report and accounts were unanimously adopted.

EQUITY AND LAW LIFE ASSURANCE SOCIETY.

SATISFACTORY PROGRESS.

The annual general meeting of the Equity and Law Life Assurance Society was held on the 17th instant at 18, Lincoln's Inn Fields, London, W.C.

Mr L. W. North Hickley (chairman of the society) said that he felt that shareholders would be satisfied with the progress made during the year ending December 31 last. That the net sum assured amounted to nearly £1,900,000, the largest ever completed in one year in the history of the society, was, in itself, proof of the confidence of the public in the society and its policies, and spoke well for the work of their indoor and outdoor staff. It seemed surprising that in a year like 1930, during which the whole world had been suffering from financial troubles, such a result should be obtained, but it must be remembered that their quinquennial report had shown wonderful results, and the assuring public were quick to take advantage of a good thing and recognised the value of their policies as an investment. Their new annual premiums amounted to £14,000, as against £29,000 last year.

The total sums assured by the society now amounted to £19,500,000 gross and over £16,000,000 net. The question which every prospective insurer had to ask himself was not whether one office or another was the safer, but which was the better investment, and he ventured to suggest that the Equity and Law, notwithstanding the intense competition in the insurance world, still showed prospects which were second to none. Every year brought new ideas, and the society had not been behind its competitors in bringing out new tables to meet every class of risk, and they now catered for the need of everyone. The claims in the past year represented about 85 per cent. of the amount expected according to their valuation tables. There had thus been a fair profit from that source. The rate of interest, both gross and net, was a little smaller than in 1929, but that was accounted for in great measure by the fact that in the latter year their valuable subsidiary, the Law Reversionary Interest Society, had declared a bonus on their holding of its stock which they could only hope for quinquennially.

A SATISFACTORY RETURN.

The net rate of interest for the year was £4 7s. 8d. per cent., notwithstanding the increase in income tax, and that, he thought, was a satisfactory return. He would like to see it higher, of course, but not by sacrificing their policy of "safety first."

Their total funds had risen in value during the year from £9,024,000 to £9,333,000 in round figures, or an increase of about £309,000, and that in spite of the fact that during the year £57,000 had been paid as cash bonus, while surrenders, as always in the first year of a quinquennium, had been heavy, with profit policyholders naturally waiting to realise their investment "cum-dividend." Twelve months ago he had referred to the subject of single premium policies and to the Finance Act of 1930. Such policies had been very freely accepted by a large majority of life assurance offices, but had not met with the approval of the Chancellor of the Exchequer.

He had hoped that the Chancellor would have done something to encourage life assurance, so necessary to recoup the huge sums payable in death duties, even on comparatively small estates, which were now used as income. It seemed to him most unjust that sums payable on death in respect of policies which had been effected out of savings, already highly taxed, should be taxed at all, or, at any rate, on the same scale as the general estate. They had meanwhile endeavoured to provide for that by introducing a new scheme for provision of estate duty by means of insurance. They also had a new "family provision scheme" and a new prospectus dealing with deferred assurances for children. The business of the society increased every year, and they were able to report that the expense ratio still remained a great feature of their figures.

The report and accounts were unanimously adopted.

COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED.

REVENUE EXCEEDS £2,000,000.

The thirty-seventh ordinary general meeting of the County of London Electric Supply Company, Ltd., was held, on the 17th instant, at River Plate House, London, E.C., Sir Bernard E. Greenwell, Bart. (vice-chairman), presiding.

The Chairman said: Considering the adverse circumstances which have affected trade in general during the past year it is indeed a happy circumstance to be able to congratulate shareholders in these times. The units sent out from our Barking power house for the year totalled 511,133,700, of which 447,488,860 were sold, and this makes an increase of 72,578,076 units sold for the year. The kilowatts of new business have increased by 50,942, making a total of 384,772 kilowatts connected, while there is an increase of over 40,000 in the number of new consumers supplied directly or indirectly during the year.

The revenue from sale of current, after making provision for bad and doubtful debts, is £1,880,558, while the receipts from other sources amount to £211,187, showing an increase in the total revenue over last year's figure of £217,696. The increase under the head of "Rates" last year alone amounts to £11,473, due to increase in poundage and various new assessments. For last year our total for rates alone was over £147,000, and it will interest you to know that the amount paid by your company, or by you as shareholders, in Government, local authority and other levies over which we have no control, totalled over £310,000, or one-sixth of the revenue we received from sale of current. Summarised, the gross revenue shows an increase of £217,696; expenses show an increase of £90,046, and the amount carried to net revenue account shows an increase of £127,650 compared with the previous year.

Turning now to the net revenue account, it will be seen that there is a total of £1,753,630 on the credit side. To the reserve for taxation we are placing the sum of £10,000, whilst the necessary reserves for depreciation and sinking funds under the No. 1 Act of 1925 absorb the sum of £381,082, as against £284,953 last year. There is left a balance for appropriation of £1,078,105, out of which the interim and final dividends on the preference shares have been paid, together with the interim dividend on the ordinary shares, and the interest on the new ordinary shares. As you know, we are proposing to pay a further 8 per cent. on the ordinary share capital of the company, making 11 per cent. for the year on the 3,374,889 ordinary shares. As you will see, the total on the assets side of the balance sheet is some 17½ million pounds. The reserves for depreciation and sinking funds under the No. 1 Act of 1925 amount to £1,699,791, and are invested in the business. Sundry creditors amount to £802,045.

ENGINEERING ASPECTS.

As to the engineering side of your undertaking, I have now to report that in September, 1930, we received the consent of the Electricity Commissioners to the extension of our Barking power house by the installation of two turbo-alternator sets, each having a maximum continuous rating of 75,000 kw., together with the necessary boiler units, buildings, civil engineering works and auxiliary plant.

The work which the electricity industry has embarked upon has been contrasted, as you know, with the work of that other great industry—the gas industry—and criticism has come from leaders of that industry. The electrical industry is assisting in the re-organisation and equipment of both old and new industries and in the standardisation of such equipment throughout the country, and to an extent which, it is safe to say, that, for reasons outside the control of the gas industry, that industry could not assist.

The number of units sold by your company over last year constitutes a record. It is an increase of 19.9 per cent., or practically 20 per cent. over the sales of the previous year, whereas the national increase in output is in the order of 5 per cent. On what I might call the retail side of our business we have gone ahead in leaps and bounds. We have during the past year deliberately gone out for the domestic load, and we have got it. There are thousands of our domestic consumers obtaining their supplies for lighting, cooking, heating and other domestic purposes at an average rate of approximately 1d. per unit. Experience has taught our consumers that a very low price is obtainable, and particularly by those who have displaced coal and gas, together with dirt and smell, for the cleanliness and healthiness of domestic electrification.

In conclusion, it is my pleasurable duty to pay a tribute of appreciation to our officers and staff for the services they have rendered during the past year, and once again particularly to our manager and secretary, Mr Dalton, and to our engineer-in-chief, Mr Wood.

The report and accounts were adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended March 14, 1931, amounted to £23,194,600 against ordinary expenditure of £6,606,300. After allocating £2,620,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £273,709 the week's operations, as shown below, reduced the National Debt by £14,242,000 to £7,627,779,000:—

(000's omitted.)

National Savings Certificates	+ £ 250	Treasury Bills	£ 9,742
		Public Department Advances ..	£ 4,250
		4½% War Loan	100
		P.O. and Telegraph	400
	+ 250		14,492

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931.	ARRIVALS.	1931.	WITHDRAWALS.
Mar. 13	£ Nil	Mar. 13	£ 15,000
" 14	" Nil	" 14	" 2,000
" 15	" 250,000	" 15	" Nil
" 16	" 583,100	" 16	" 7,000
" 17	" Nil	" 17	" 20,334
" 18	" Nil	" 18	" 19,500
" 19	" 16	" 19	" 15,000
Total	833,116	Total	59,834

Net arrivals £773,282.

Messrs. Samuel Montagu and Company write on March 18, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £140,927,721 on the 11th instant (as compared with £140,925,901 on the previous Wednesday), and represents a decrease of £6,697,901 since December 31, 1930. The shipment of bar gold which arrived from South Africa this week amounted to £867,000, of which £617,000 was available in the open market yesterday, £250,000 having been sold forward. Both the French and Belgian exchanges having moved in favour of sterling, there was little competition, and the price was fixed at 84s. 10 1/2d. per fine ounce. A welcome feature was that the Bank of England was able to secure about £583,000 at this figure; the last time the Bank obtained part of the open market supplies was on March 25, 1930, when, however, only the statutory buying price was paid; the last occasion on which the Bank of England bought gold in the open market at a higher figure was on January 7, 1930, when the price was fixed at 84s. 11d. per fine ounce. The balance of £34,000 available yesterday was disposed of to India and the Home and Continental trade, whilst the £250,000 which had been sold forward was consigned to Belgium.

Movements of gold at the Bank of England during the week have resulted in a net influx of £1,022,266. Receipts consisted of £583,100 bar gold, £250,000 in sovereigns from South Africa, and £250,000 in sovereigns "released." Withdrawals totalled £60,834, of which £40,000 was in sovereigns taken for export and £20,834 in sovereigns "set aside."

SILVER.

Although there was a setback at the beginning of the week a still firmer tendency ensued, and prices rose sharply, the highest quotations reached during the week being 14 1/2d. for cash and 14 3/4d. for two months' on the 16th instant. The rise was in sympathy with the movements in the Shanghai exchange, which hardened considerably, although subject to sharp fluctuations owing to speculative activity. Support has come from India and China, but the rapid upward movement was due more to absence of selling rather than pressure of buying orders. America has been inclined to buy, but the higher level attracted selling from China, and the market eased slightly in consequence.

In view of the rapidity of the present rise, the possibility of some reaction must be considered, although the undertone remains good. The following were the United Kingdom imports and exports of silver registered from mid-day on the 9th instant to mid-day on the 16th instant:—

	IMPORTS.	EXPORTS.
U.S.A.	£ 31,444	£ 53,150
Mexico	49,625	21,964
Australia	8,245	
Other countries	3,822	
Total	£93,136	£75,114

CARDIFF.—A steady demand is passing for South Wales steam coals, but there is no pressure for supplies, and in spite of the recent reduction in output buyers can easily cover requirements in every class on the basis of the minimum prices. The slackness in bunker trade is a conspicuous feature, and this is reflected in marked weakness in small coal prices, supplies of which are much in excess of demand. There is much unrest in connection with the award of the Independent Chairman, under which wages were reduced as from the beginning of this month, but except at one or two pits, where the men are abstaining from work as a protest, the award has been loyally accepted. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 15s. to 15s. 3d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 22s. 6d. to 22s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—Business in Cleveland iron is still confined to small parcels for early delivery. Buying by local and inland founders for the second quarter has not yet developed, but a move in this direction is not expected to be long delayed, and it is understood that there is a fair amount of work, recently booked, to cover. Consumers are evidently waiting to see whether there is going to be any reduction in prices before committing themselves, but makers do not give any encouragement in this direction. Trade with Scotland does not show any signs of expansion on account of the continued keen competition of Continental iron, and export demand is still very light. Only a few transactions for early delivery were reported at the weekly market on Tuesday, and prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.o.t. Orders for hematite are a little more numerous, but they are confined to small quantities for early delivery, consumers

still showing reluctance to treat for important quantities for forward. Makers are now booking early lots of mixed numbers at 67s. 6d. per ton, but for forward 6d. to 1s. per ton more is asked, as indications point to increased prices, both for ore and coke for later delivery. Shipments of pig iron are on a very low scale, the total cleared to 17th inst. being only 4,031 tons against 7,519 tons to February 17th. Very little new business is coming to hand in the finished departments, but some plants are fairly busy on old contracts, and are expecting to receive further orders. The sheet trade continues quiet, and there are no orders for steamers to cause a demand for shipbuilding materials. Prices are generally unchanged. In ore there is practically no new business locally, but dealers report a little more doing in other districts for forward delivery which denotes increasing confidence. Best Bilbao Rubio is nominally 16s. c.i.f., and the rate of freight, Bilbao-Middlesbrough, for early tonnage is 4s. 6d. Coke is still pressed for sale, but requirements are very small. Good furnace qualities are offered at 16s. delivered works, and this price could be shaded for prompt lots. A basic furnace has been put out of operation at the Redcar works of Dorman Long and Company, Ltd., which reduces the number in blast in the district to 21.

SHEFFIELD.—It is difficult to discover instances of improvement in the local steel industry. On the other hand, the tendency in the crude and heavy branches is still in a downward direction, and, speaking generally, there is nothing to indicate a turn in the tide of depression. Makers of the expensive tool and alloy steels report a falling off in exports to most overseas markets, but a moderate home demand. Recent improvements in the efficiency of tool steels tends to restrict the weight of material consumed, as a given tool goes further than formerly. There are further installations in Sheffield of the new high-frequency electric crucible furnace, which is gradually replacing the time-honoured coke-fired crucible for producing the best tool steels. The new furnace has ten or twelve times the capacity of the old one, and reduced the cost of production very materially. The home demand for cutlery is a little more active. Exports keep low and competition increases in severity. The same remark applies to hand tools. The market for ferro-alloys used in special steels is extremely depressed, and prices have never been so favourable to users before.

GLASGOW.—Business on the pig-iron market remains very poor, and there are no noticeable signs of improvement. There is an absence of new work of any importance, and the position at practically all the establishments in the West of Scotland is unchanged, and it is not possible to keep plants fully employed. The demand for "heavies" is on much the same scale as during recent months, purchases being only sufficient to meet immediate requirements. Semis also are in little request on account of the keen Continental competition and the continued quietness in the re-rolling and manufacturing trades. Sheet makers, both black and galvanized, are still finding export business unsatisfactory, and no increase in business is reported from the tube works. Workers in sheet metal are fairly busy and most of the plants are fully employed.

CARDIFF.—In spite of the present low prices, the demand for Welsh tinplates shows no improvement, but makers are holding firmly to recent quotations. There is a limited inquiry from the Continent and South Africa, but business in the home market is slack.

OTHER METALS.

TIN.—Since agreement was reached between the principal producing countries to restrict supplies, the market has been much steadier, and prices have been maintained at the higher level. The turnover has not been large during the week, but values were again higher. Wednesday's price per ton, for standard cash at £123 2s. 6d. to £123 5s. compares with £122 2s. 6d. to £122 5s. on the corresponding day last week, while "three months" was quoted at £124 12s. 6d. to £124 15s., against £123 12s. 6d. to £123 15s. Stocks in London and Liverpool at the end of last week, at 25,860 tons, again show a rise on the week of 451 tons, which is due to the disposal of stocks in the producing countries before the restriction scheme came into operation.

COPPER.—There has not been any improvement in consumption, and prices, which had recently advanced owing to speculative buying, have again been lower. Copper Exporters, Inc., reduced their quotation for electrolytic, c.i.f. Continent from 10·80 cents per lb. to 10·55 cents, but even at the lower level demand failed to expand. Wednesday's official closing quotation in London at £44 11s. 3d. to £44 12s. 6d., compares with £44 10s. 3d. to £44 17s. 6d. a week ago. Stocks of refined copper in official warehouses at the end of last week, at 8,470 tons, show an increase of 587 tons on the week, while stocks of rough copper, at 1,563 tons, were 50 tons lower. The statistical position in America at the end of February was slightly more favourable than in January:—

NORTH AND SOUTH AMERICA				
(Tons).				
	Production.		Stocks (End of Month)	
	Rough.	Refined.	Rough.	Refined.
January	81,100	90,600	188,100	324,800
February	83,000	89,200	181,000	324,700

LEAD.—The market in lead has been quiet, and the metal was again cheaper. On Wednesday "soft foreign" changed hands at £13 to £13 5s., while on the same day last week £13 8s. 9d. to £13 13s. 9d. was obtained.

SPELTER.—The supplies available have been rather heavier than usual, and as demand showed no signs of expansion, the metal

lost ground. Good ordinary brands could be obtained at £12 1s. 3d. to £12 11s. 3d. on Wednesday, while on the corresponding day last week, £12 5s. to £12 15s. was quoted.

OTHER NON-FERROUS METALS.—Little interest has been shown in other non-ferrous metals, and aluminium was again quoted at £85 per ton, while nickel changed hands at last week's price of £170 to £175 per ton. Antimony again sold at £25 to £25 10s. per ton, and there was no change in the price of quicksilver at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool, March 18th.—Business passing has not been extensive; a few hundred bales in excess of either supply or demand affected prices quite appreciably. Three things stand out during the past week. Firstly, the New York Textile Association report. In yardage the figures are as follows:—

	Millions of yards.	
	Feb., 1931.	Feb., 1930.
Production.....	212	267
Sales	327	244
Stocks.....	319	445
Unfilled orders.....	396	361

Secondly, the Federation's figures for the first half-year of the season are very disappointing. Outside growths have been more extensively used than American, and the increase in the production of Russian cotton is causing anxiety in America. Thirdly, the Garside figures, published on Thursday last, show a U.S. February consumption of 431,000 bales, against 454,000 bales in January, and 495,000 bales in February last year. Buyers are deterred from entering the market owing to the knowledge that an enormous amount of cotton owned by the Farm Board and the Co-operative Societies is hanging over the market, and the fact that it has not been offered for sale has led to an advance in price to such a point as will encourage planting, which probably will mean a continuance of low prices. Spot sales for the week 12th to 18th (inclusive) are 35,000 bales, of which 18,350 are American, 2,050 Brazil, 550 Argentine, 3,750 Peru, 3,350 Egyptian, 1,950 African, 1,050 East Indian and 3,950 sundries. Imports for the same period are 26,672 bales, of which 15,575 are American, 152 Peru, 9,306 Egyptian, 893 East Indian and 746 sundries. Quotations to-day: American Middling, 5·90; Egyptian Sakel, 9·65; Uppers, 7·09; Brazil Fair, 6·05; Peru G.F. Smooth, 6·35; West African Middling, 5·90; and East African G.F., 6·95.

Manchester, March 18th.—We continue to experience a rather firmer market. The larger inquiry has been maintained, and although producers in some sections find progress very difficult, the sales have been rather more encouraging. A feature of interest has been the increased demand in piece goods for India. Most of the buying has been in the finer cloths. After being quiet for a long time, a larger turnover has taken place for Calcutta, and a fair amount of activity has shown itself for Karachi and Madras. Dealers in Bombay are displaying more interest in prices. There is still a little uneasiness, however, as to the position of the boycott. Shippers to China have been more hopeful on the further advance in exchange rates and a few more transactions have been put through in white shirtings and fancies. Printing and finishing styles have attracted rather more attention for South America and the Continent, and moderate lots of white shirtings have been sold for Egypt and the Near East. Reports from the home trade continue rather healthier. The movement is not very rapid, but there is a tendency for increased production in some sections of the weaving branch. Most of the demand in American yarns has run on the finer counts, but spinners all round have met with a rather better turnover. Increased activity has also been reported in Egyptian spinnings. Producers, however, complain of prices being very poor.

THE WOOL TRADE.—Our Bradford correspondent writes: Judged by the London auctions the position of all descriptions of wool is remarkably sound and healthy. The competition forthcoming this week has been quite up to the expectations of many of those attending the sales, and prices are now generally 5 per cent. higher than at the opening. This is an extremely good result, even allowing for the fact that values were desperately low at the end of the January series, and that in the interim a decided recovery has been experienced, London contributing a very important quota to the new basis which has been established. No doubt many buyers are realising that even at the present cost, wool is not too dear. This impression still exists both in this country and on the Continent, in spite of the fact that the industry as a whole already had, before the London sales commenced, a substantial weight of wool and tops on its hands. Whilst participating freely in the purchases, and paying some of the best

prices of the series for merinos, the home trade is tackling the crossbreds with real determination, and in spite of the big offerings, prices for these have improved quite as much as for merinos. Wool buyers in this country have been very much impressed by the operations on Japanese account in Australia, and the upward movement in values there, as well as at the Cape. The Japanese buying is undoubtedly indicative of strong competitive forces being at work against spinning and manufacturing interests in the West Riding of Yorkshire. Nevertheless the situation is being faced with real determination, and no one seriously anticipates a reaction in raw material values. There is no evidence at the moment of any big movement in tops in Bradford. The outstanding feature is that prices for yarn are being brought slightly more into harmony with the cost of tops, though quotations for the latter are definitely protective. The present prospect seems to be that prices for both tops and yarns will be raised to a higher level, and wool remain largely stationary. Nothing under 26d. can be accepted for average 64's tops to-day to cover cost, and all crossbred quotations are being revised to fit original cost, which means 13½d. for 46's carded.

THE JUTE TRADE.—Dundee, March 18th.—Conditions in the jute trade remain depressed. Despite the low prices buyers have apparently no incentive to purchase jute cloth owing to the dull state of their own trades. The Indian jute mills are now working only 40 hours per week, divided into 13½ hours on Monday and Tuesday and 13 hours on Wednesday, and the number of hessian looms sealed up in all the mills totals 8,800. This restriction of output is believed to have the effect of bringing about a big reduction in stocks of hessians which have risen to enormous heights throughout the world. Prices of Calcutta goods have declined from their recently raised level, but some of this is attributed to some financial trouble in the Bazaar in Calcutta, where speculators rushed values up in the hope that the agreement of the mills to curtail their production further would have a beneficial effect on the market. The preparations for the next crop of jute are proceeding apace, but it is yet too early to have any idea of the area sown. Sellers of old crop, despite the fact that there are abundant supplies, are very reluctant to reduce their prices, which remained steady recently. Daisee assortment is quoted at from £14 15s., Daisee-3 at £14 10s. and fours at £13 5s. March/April. Tossa-2/3 is from £16, with Motilal at £16 5s., and threes at £15 15s., while fours are from £14 5s., same shipment. Offers of lightnings have been freely made at from £15 for green Birla to £16 10s. for green circle ram and good first marks are named at from £18 to £19, March/April. Heart ram tops have been reduced to £15 and assortment to £14 10s., while Asahi hearts are offered at £14. Spinners have purchased very little raw material, which continues more or less nominal in price on account of the lack of demand for jute yarns. Buyers are not keen to pay even 1s. 10d. for common 8 lb. cops and 1s. 11d. for 8 lb. spools, though supplies could be obtained from some spinners at these rates. The usual quotations are 1d. more in each case. Twist is steady at from 3½d. for 3-ply 8 lb., and sacking yarns are firm enough at 2½d. very lowest for 24 lb. weft and 3½d. for 8 lb. chains. Rove is easy at £20 for 48 lb. and £16 10s. for 200 lb., and the finer yarns are dull and nominal. Jute cloth is bought only in small lots, as a rule. Several good inquiries are in the market, but they seldom come to business to anything like the extent expected. Trade is disappointingly slow at from 2½d. for 10½ oz. 40 in. and from 1½d. for 8 oz. Linoleum hessians and heavy goods are very quiet. The latest prices for Calcutta hessians are 18s. 9d. for 10 oz. and 15s. for 8 oz. 40 in., March shipment, and 18s. 10d. and 15s. 1d. for April/June. Sellers of spot 10 oz. might accept 19s. 6d. and 8 oz. 15s. 3d.

THE GRAIN MARKETS.

WHEAT.—A spell of fine and open weather over the United Kingdom during the past week permitted the resumption of field work on an active scale, and farmers are busy overtaking arrears, spring sowings being possible in the early districts. According to latest official reports, the condition of winter wheat has been generally maintained, apart from some loss of colour on heavy soils. All the better samples of native wheat are selling more freely, and prices incline to harden, but inferior samples are difficult to vend. Subdued conditions prevailed on the import market, and values

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £78,000,000. Annual Income £11,500,000. Full particulars on application.

THE CHATWOOD SAFE

Life is useless without investigation, because investigation means improvement, and therein lies continual progress.

Those who produce work of quality ask for investigation and welcome comparison, fearing nothing in competition.

They build up their business through the ears of the public as well as through their eyes.

The Chatwood Security is work of quality and is exactly what we say it is without any "ifs" or "buts." There is nothing just so good for less money.

Because something costs little money it does not follow that it is cheap. The fundamental principle of purchase is value received for money paid.

The Chatwood Security has always been just the little more that can reasonably be asked for work of quality. It will stand investigation.

inclined easier owing to lack of buying support. Millers operate cautiously in view of heavy visible supplies, and favourable Northern Hemisphere crop prospects, while liberal shipments and arrivals are sufficient to cover current needs. The chief feature was the continued large demand for Australian wheat on Eastern account, which has materially assisted the Commonwealth export movement. Upwards of 70,000 tons was disposed of to China during the week, chiefly for April-May clearance, while forward sales were also made to India up to July shipment. Although European purchases are hampered by import restrictions prevailing in various Continental countries, signs are not wanting of an improved demand, as stocks are running low, and winter crop prospects are by no means satisfactory. Larger quantities will also be required by Mediterranean consumers, so that sellers who refrained from pressing were able to keep prices at a tolerably steady level. On the other hand, buyers refuse to follow any upward trend owing to the superabundance of world's supplies. North American new winter crops are receiving attention, and prospects of a larger yield in the United States compared with last year, together with huge stocks still on hand, renders the position in that country more difficult as the season advances. Quotations were as follows:—No. 1, hard Northern Manitoba, ex ship, 27s. 6d.-28s.; No. 1 Northern Manitoba, ex ship, 27s.-28s.; No. 2 ditto, 25s. 9d.-27s.; No. 3, 24s. 9d.; No. 4 Manitoba, 23s. 9d.; Barusso, 63 lbs., 22s.; Rosafe, 63 lbs., 22s.; Australian, 22s. 3d.-24s. 3d.; Russian, on sample, landed, 20s. 6d.-24s.; ex ship, 21s.-24s. per 496 lbs.; English, 4s. 6d.-5s. 6d. per 112 lbs.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Mar. 19, 1930.	Jan. 2, 1931.	Mar. 4, 1931.	Mar. 11, 1931.	Mar. 18, 1931.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	148½	108½	56½	59½	60½	58½
Chicago (No. 2 Winter) — Cents per 60 lb.	139½	104½	79½	79½	79½	79½

The visible supply of wheat in Canada at 63,700,000 bushels, shows a decrease on the week of 798,000 bushels. Supplies a year ago stood at 75,152,000 bushels.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Mar. 7, 1931.....	Cwts. 110,664	Cwts. 102,378	Cwts. 45,504	s. d. 5 2	s. d. 8 1	s. d. 5 9
Mar. 14, 1931.....	125,212	96,064	42,895	5 2	7 8	5 10
Mar. 12, 1927.....	214,744	146,019	68,567	11 8	11 0	8 1
Mar. 17, 1928.....	285,040	133,515	70,075	9 9	10 8	10 7
Mar. 16, 1929.....	229,446	141,451	64,058	9 8	10 2	9 8
Mar. 15, 1930.....	161,600	174,472	43,496	8 3	7 9	6 0

WHEAT FLOUR.—Home milled flour was in better request at the recent decline, but imported moves off slowly. Canadian offers for shipment being still out of line despite lower quotations. London, straight run, 23s. 6d. per sack for country deliveries, and 22s. 6d. London area. Of imported, Manitoba patents, 21s. 3d.-25s. 9d.; Buffalo ditto, 22s.-26s.; Australian, 19s.-19s. 6d., ex store, per 280 lbs.

BARLEY.—The market has again been steady. Quotations:— Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample. Chilean brewing, landed, 30s.-35s. Chevalier, 38s.-44s. Australian, 32s.-42s. Smyrna, 30s.-32s., per 448 lbs. Black Sea, landed, 17s. 3d.; ex ship, 16s. 3d. per 400 lbs. English, malting, 6s. 3d.-13s. 9d.; feed, 5s. 9d.-6s. per 112 lbs.

OATS.—The market in oats has been firm during the past week and prices show a slight rise. Quotations: Plate, landed, 11s. 6d.; ex ship, 10s. 6d. Chilean tawny, landed, 13s. 6d. Whites, ex ship, 18s. 9d.; landed, 19s. 6d. North Russian, landed, 12s. 9d.-13s. 6d. South Russian, landed, 13s. 9d.; ex ship, 13s. per 320 lbs. English, 5s. 8d.-6s. per 112 lbs.

MAIZE.—Feeding stuffs remain firm, and a good consumptive, demand continues for Plate maize, with a premium obtainable for spot and near at hand supplies owing to light offerings. Quotations were as follows: Plate, landed, 20s. 9d.; ex ship to arrive, 19s. 6d.; March-April, 18s. 3d.; April-May, new crop, 17s. 3d.; May-June, 17s. per 480 lbs. Yellow maize meal, £6, f.o.r. London, per ton.

OTHER FOODS.

SUGAR.—The Chadbourne scheme has now been ratified by the People's Council in Batavia. The measure, which will come into operation on April 1st, provides that the maximum amount to be exported shall be fixed annually for the whole of the Dutch East Indies by Government Decree, and that no sugar shall be exported without written Government permission. The market in London has been steady during the week, and the recent advance in British refined sugar has been maintained. Raw futures advanced on the news of the ratification of the restriction scheme by the Dutch East Indies. Wednesday's sales included May delivery at 6s. 4½d. to 6s. 5d., as compared with 5s. 11½d. to 6s. 0½d. on the corresponding day last week; August, at 6s. 4½d. to 6s. 5½d., against 6s. 3d. to 6s. 4d.; and December, at 6s. 8d. to 6s. 9d., as against 6s. 7½d. to 6s. 8d.

COFFEE.—The market in coffee has been steady. African kinds have been well supported, and good East Indian qualities sold at firm rates. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 108 bags; exported, 59 bags; stocks, 2,985 bags, against 6,111 bags last year. Central American, landed, 9,456 packages; delivered for home consumption, 3,982; exported, 2,205; stocks, 99,613 packages, against 76,654 a year ago. Other kinds, landed, 5,734 packages; delivered for home consumption, 3,535; exported, 3,107; stocks, 100,854 packages, against 84,131 a year ago.

COCOA.—Business in cocoa has been quiet, but there was a further advance in prices, which are, however, still very low. Wednesday's quotation for Acra, fair fermented, April-May, at 20s. 6d. per cwt., shows an advance of 6d. on the week. Futures were inactive. Last week's movements of cocoa in London were as follows:—Landed, 7,330 bags; delivered for home consumption, 5,759 bags; exported, 411 bags; stocks, 293,256 bags, against 190,894 last year.

TEA.—The quantities catalogued for this week's auctions comprised 48,533 packages of Indian, 16,784 packages of Ceylon, and 12,376 packages of Java and Sumatra tea. As compared with last week, the quantities offered for sale were considerably smaller. Competition was keen, with the result that most qualities realised higher prices.

RICE.—The demand for rice has been a little better during the week, and Wednesday's price for Burma No. 2, cleaned, March-April, in singles to U.K. and Continent, at 7s. 10½d. per cwt., shows an advance of 3d. on the week. Movements in London during the past week were as follows:—Landed, 45 tons; delivered, 30 tons; stocks, 516 tons, as against 559 last year.

POTATOES.—The quantities offered in the Borough market were smaller than last week, and, as the result of a slight improvement in demand, last week's prices were maintained. "Best King Edwards" again sold at £6 10s. to £7 per ton.

SPICES.—The spot market in pepper remained steady, and on Wednesday black Singapore was again quoted at 6½d. per lb. Movements of pepper in London during the past week were as follows:—Black, landed, 12 tons; delivered, 38; stocks, 536 tons as against 971 last year. White, landed, 54 tons; delivered, 48; stocks, 495 tons, against 1,033 tons a year ago.

MEAT.—The fall in beef and mutton prices seems to have been arrested. On Wednesday, Argentine chilled hindquarters were again sold at 3s. 8d. to 4s. 4d. per 8 lbs.; while, in mutton, the price of New Zealand wethers, at 2s. 8d. to 3s. 2d. per 8 lbs., compares with 2s. 6d. to 3s. 2d. on the corresponding day last week. According to the Smithfield official report, supplies of meat during last week amounted to 9,862 tons, as compared with 8,344 tons in the corre-

THE FALL IN PRICES

A Statement of Policy by Cadbury Bros. Ltd. of Bournville

BANKERS and economists are emphasising the necessity for a reduction of retail prices as a step towards better trade.

It has always been our policy to pass on to the public any reduction in costs arising from cheaper raw materials or increased productive efficiency. Accordingly during the last twelve months alone we have reduced the price of our Milk and Plain Chocolate Blocks 16 per cent. and 25 per cent. to 10d. and 9d. per half-pound respectively, without any alteration in the quality whatsoever. We shall continue to follow this policy, the success of which was proved in 1930. That year, despite depressed conditions, was a record one in the sales history of our firm.

The chart below shows that the price of Cadburys Milk Chocolate has been falling more rapidly than the Ministry of Labour index of food prices during the post-War period, and is now 16 per cent. below the pre-War selling price.

Issued by Cadbury Bros. Ltd. from Bournville, the Factory in a Garden

ponding week last year. Imported beef, principally Argentine, formed 83.2 per cent. of the supplies, as against 81.6 per cent. a year ago, and imported mutton, mainly New Zealand, formed 78 per cent. of the total supply, as against 79.1 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Rather quieter conditions rule, admitting of only a small volume of business. Consumers of linseed here and on the Continent appear to have covered their present requirements and have not appeared as buyers to any extent. The quantity on passage to Europe is still considerable, at 286,000 tons, or 8,900 tons less than last week, and comparing with 104,800 tons a year ago. Values are somewhat lower. Plate on spot and afloat to Hull and March and July shipment quoting £9 10s. 6d. Calcutta linseed offers at £11 7s. 6d., April-May. Cottonseed, after a good trade in near positions, is quieter, current value of black Egyptian for shipment being around £6 15s. and Bombay £5 7s. 6d. Linseed oil is in only poor demand from consumers and is easier, raw oil on spot ex Hull mill offering at £18 10s., and March-April, £18. Cotton oil is firm and dearer, crude Egyptian, ex Hull, being held for £21 and common edible for £23 10s. Demand for oilcakes and meals continues satisfactory, and prices are steady and generally unchanged.

HIDE, LEATHER AND ALLIED TRADES.—The stronger tone in the hide markets has further developed during the week, and prices for most descriptions of domestic and foreign hides are now on a higher level. At the auctions held at Manchester this week advances of from 1d. to 1 1/2d. per lb. were made on both clear and warbled ox and heifers, while cows were 1/2d. per lb. dearer. The calf-skin market remains neglected, and prices were unchanged except for a reduction on the 9/16-lb. weight. Improvement has been noticed in the inquiry for sheepskins consequent on the better prices now being obtained for wool, and the general tendency of values is upwards. De-woolled pelts, however, are difficult to sell even at the low prices now ruling. Although prices for foreign hides have shown further advances, it is questionable whether they will remain at the present level for any length of time. From their method

of purchasing, tanners appear to hold the view that the upward trend cannot last, with the result that buying continues to be for requirements only or the immediate future; even so, business is by no means easy to conclude. The firmer tone in the South American market for wet-salted hides is mainly due to the interest taken by United States buyers. Prices for Argentine are 6 1/2d. In the River Plate B.A. Americans have changed hands at 7 1/2d. Cape hides are all on a higher level, first and second dries being quoted at 7 1/2d. and 6 1/2d., while dry-salted 20/30 lbs. changed hands at 6 1/2d. and 5 1/2d. for the same selections. Australian hides have followed the upward trend of prices. The turnover in sole leather has been maintained at a fair level, although it is quite possible that sales at the tanneries have not been as satisfactory as of late. Merchants, however, have experienced a fairly good inquiry for English and wet-salted bends for boot-repairing purposes, and this branch of the industry continues to account for quite a respectable consumption of bottom stock. Business on account of the shoe manufacturing side has not been in evidence quite so much, and although there continues to be a day-to-day call for dry hide bends from this quarter, the inquiry is not so strong as a week ago. Steady trade continues to be done in upper leathers, with black and brown glacé kid the chief call. A moderate turnover is also being done in box and willow calf, but the greatest improvement is shown by patent leather, for which there has again been more inquiry.

RUBBER.—There have not been any further developments in the negotiations between the British and Dutch Rubber Committees. The market has been dull during the week. Wednesday's official spot price per lb. for standard ribbed smoked sheet at 3 1/2d. shows a fall of 0 1/2d., as compared with that of the corresponding day last week. Forward positions have again been easier. Business has been done at 4d. to 4 1/2d. for April-June, against 4 1/2d. to 4 1/2d. last week; at 4 1/2d. to 4 3/4d. for July-September, against 4 1/2d. to 4 3/4d.; at 4 1/2d. to 4 1/2d. for October-December, against 4 1/2d.; and at 4 1/2d. to 4 3/4d. for January-March, 1932, against 4 1/2d. a week ago. In spite of the destruction of 1,154 tons by fire, stocks in London and Liverpool have again increased by 1,168 tons, leaving them at 130,106 tons, as compared with 87,734 tons a year ago.

THE MONEY MARKET.

MONEY had been expected to be unusually difficult this week, mainly because of the absence of Treasury bill maturities upon Wednesday and Thursday, which fell three months after the Christmas holidays. These fears, however, were not realised, at least in the early part of

the week. There were fairly heavy maturities on Tuesday, while Lloyds Bank, who usually call on that day, this week failed to do so. Again, in contradistinction to the previous experience of this month, comparatively few Treasury bills fell due for payment early in the week. Apparently, the banks, if not the market, had applied mainly for bills due to be paid for at the end of the week, their motive being that it suited them best to have bills maturing as near the turn of the half-year as possible, rather than on June 25th or 26th when preparatory market borrowings from the Bank would be giving rise to a glut of funds.

As a result of this, money was comfortable at 2½ per cent. until Thursday, when the absence of maturities began to take effect, especially as heavy revenue payments were made on that day. Discount rates have again weakened, and the agreed minimum rate on three months' bills is now no higher than 2½ per cent. Even this lower rate is hardly effective, for there is a ready demand for bills outside the market at about 2½ per cent. As a result, the market failed to get much of last week's Treasury bill issue, and is not expected to be much more successful this week. Though the market have loyally abided by the official request to them not to let the rate fall below 2½ per cent., it can be appreciated that under present conditions they feel a certain sense of grievance that their loyalty renders it difficult for them to secure bills.

	Mar. 5, 1931.	Mar. 12, 1931.	Mar. 19, 1931.	Mar. 26, 1931.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	3½ (May 1, '30)
Banks' Deposit Rate..	1	1	1	1	1½ (May 1, '30)
Discount { Call	1	1	1	1	1½ (May 1, '30)
{ Notice ...	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

The existing position, of course, is entirely ephemeral, being due to the popularity of end of June maturities. As Thursday's trend of money rates showed, money is already beginning to dry up, and the approach of Easter will add to the stringency. Last year Easter fell late in April, with the result that the currency withdrawals for the end of the quarter gradually merged into the currency needs for the holidays. This year the end of the quarter and the holidays practically coincide, and so it is conceivable that a sharp expansion in the note circulation will occur next week. This will deplete both the Bank of England's reserve, and more important still the cash resources of the clearing banks, who may in consequence have to draw upon the market.

If money is likely to be tight until after Easter, the special demand for bills will equally disappear after the end of the month. Moreover, the financial year comes to an end on March 31st, and with it the termination of the seasonal contraction in the Treasury bill issue. This week new issues and maturities balance at £40,000,000, and so soon as April begins issues will once more be as a rule in excess of maturities. Thus it is not too much to say that this week's fall in discount rates is due to a purely temporary combination of circumstances, including unexpectedly easy money and a popular maturity for three months' bills, and that next month the market should not find that the agreed minimum is too high to be effective.

In any case, it was necessary to keep market rates at 2½ per cent. at the lowest. Spot francs are still a shade under par, and three months' forward francs are at a premium of 30 centimes, which means that they still stand at the export gold point. It is true that on Monday the Bank secured £800,000 of gold, believed to have come originally from the Argentine, and which was unexpectedly offered in the market; and the following day, in the absence of any competition from abroad, the Bank bought £578,000 of the Cape Gold at 84s. 10½d., or barely above its statutory buying price. Next week £250,000 in sovereigns and £23,000 in bars are due from the Cape, and the following week £750,000 in sovereigns and £678,000 in

bars, and under present conditions all this gold will go into the Bank. Still, the international monetary situation is no different to what it has been in previous weeks, and fundamentally there is no reason to believe that the balance of payments has grown more favourable to Great Britain. Thus it is as necessary as ever to attract French short money to London and to retain it here, if sterling is to maintain its ground; and any relaxation in London discount rates, even for a short period, is therefore out of the question.

The Bank return reflects the beginning of the Easter expansion in the note issue, but the movement has not yet gathered momentum, for the expansion during the week is only £1,521,000. The Bank's net gold acquisitions amounted to £1,657,000, so that there has been a slight increase in the reserve. The fall of £2,092,000 in Bankers' Deposits to £57,704,000 shows that, despite the ease at the beginning of the week, the market is still not over-supplied with funds. There is an increase of £3,341,000 in Discounts and Advances, presumably due to operations by the Bank's customers, as there has been no market borrowing during the week. Government and other securities in the Banking Department are together £2,793,000 lower.

Little change is noticeable in New York, though the decision of the Federal Farm Board not to support the coming wheat harvest caused considerable disturbance in the stock markets, which may have some repercussions upon money. The inside call rate is still 1½ per cent., but outside money is firmer, and the rate charged for it is creeping up to the official rate. Commercial paper is quoted at 2½-½ per cent. A final deficit of \$700,000,000 on the fiscal year ending June 30th next is estimated, and there is talk of another Government long-term bond issue of \$500,000,000 before that date.

Steady trading again took place in the Foreign Exchange market last week, no great fluctuations being recorded, though several of the principal currencies moved in our favour. New York, after rising at one time above 4.86, lost ½ on balance at 4.85½. Montreal was unchanged at 4.86½, as was Paris at 124.21, after touching 124.16. Brussels again weakened from 34.89 to 34.91½, but Milan remained steady at 92.75. Madrid was erratic, but in the end recovered from 46.70 to 45.35, after rising at one time to 47.50. Amsterdam weakened to 12.12½, but Berlin gained ½ at 20.39. Switzerland recovered from 25.25½ to 25.24½. Of the Scandinavian exchanges Stockholm gained ½ at 18.14½, and Copenhagen ½ at 18.16½, as did Oslo at 18.16. The South American currencies were variable, Rio being weak throughout and losing ½d. at 3½d., after touching 3½d. Buenos Aires was firm, gaining ½d. at 39½d., but Montevideo lost ½d. at 35½d. In the Far East the rupee was firmer at 1s. 5½d., but the yen remained about 2s. 0½d. Batavia lost a point at 12.13½. In the forward market one month's dollars were unchanged at 3½ cent premium, but three months' were weaker by ½ at 1½ cent premium. Paris was firmer at 15 and 30 centimes premium, as was Brussels at 3 and 5 centimes premium. Forward Milan was practically unchanged at 8 and 20 centesimi discount, but Madrid was decidedly weaker at 3 and 9 centimos premium, against 7 and 19 centimos premium last week. Amsterdam stood at 1½ and 3½ cents premium for the two periods. Berlin at 1½ and 3½ pfennigs discount, and Geneva at 3 and 7 centimes premium, were both very little changed from last week. Silver declined by ½d. to 13½d. for both spot and forward quotations. The China silver exchanges were unaffected on balance, Hong Kong remaining at 1s. 0½d. and Shanghai at 1s. 4d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity. Included in our Supplement this month is an article surveying the progress of the Electricity Board.

GERMANY AND AUSTRIA.

THE disclosure last week-end of the fact that Germany and Austria have agreed in principle to negotiate a treaty for the purpose of forming a Customs union has caused a serious flutter in diplomatic circles, and is, indeed, an event of very considerable importance. Properly handled, the situation that is created may quite well be turned to the great advantage of Europe; but it is equally clear that it may prove to be a means of re-awakening suspicion and distrust. The governments chiefly concerned cannot be entirely acquitted of some lack of dexterity in the way these negotiations have been disclosed. It is complained, and not without reason, that at a time when the Foreign Ministers of Europe had frequently been meeting specifically to consider European affairs and, in particular, the economic situation, secret negotiations were bound to give rise to suspicion; while the fact that the disclosure was made only a few hours before the latest meeting of the Foreign Ministers in Paris gives the impression of a desire to present the world with a *fait accompli*.

From the point of view of Austria, at all events, the desire to force the issue can well be understood. Austria, in spite of her protest at Paris in 1919, was forced to start life as a small but independent economic State, with a large industrial population dependent for its living on being able to sell goods to neighbouring countries. Ever since the war, in the interests of finding markets for her goods, Austria has been a protagonist of lower tariffs and commercial treaties, but whenever she has reached the point of making a preferential arrangement with one or other of her neighbours, other countries—including Great Britain—have stepped in to prevent it on the ground that such an arrangement would be an inadmissible discrimination and a breach of the most-favoured-nation clause. She has been a strong advocate of the principles laid down at the World Economic Conference, and in the subsequent committees she has lent her support to various schemes for tariff reductions, tariff truces, abolition of prohibitions on exports and imports, etc. This is for her a necessity, for, as the Layton-Rist Report of 1925 pointed out, wider outlets for her production are necessary if Austria is to live and maintain the standard of her large industrial population. But finding herself blocked at every turn—so much so, indeed, that at last she has herself been compelled by her agrarian and other interests to take a hand in raising her own tariff against her neighbours—she has every inducement to present Europe with a *fait accompli* and to compel the nations of Europe to do something to relieve the situation in which she is placed. Germany, too, with her diminished area and large industrial population, has been disappointed in her search for markets and has had similar, though perhaps not such pressing inducements to take some definite action.

On the other hand, France, Czechoslovakia and other countries have, not unnaturally, taken the view that this particular move on the part of Germany and Austria is a definite step towards the political reunion of those two countries—a conclusion to which the history of the German Zollverein lends plausibility—and there is at least a *prima facie* case for suggesting that the present agreement is contrary to the letter, as well as to the spirit, of the Treaty of St. Germain and of the Protocol which Austria signed in 1922 when the League of Nations undertook her reconstruction scheme. The first clause of the latter document runs as follows:—

The Government of the Federal Republic of Austria, . . . undertakes, in accordance with the terms of Article 88 of the Treaty of St. Germain, not to alienate its independence; it will abstain from any negotiations or from any economic or financial engagement calculated directly or indirectly to compromise this independence.

This undertaking shall not prevent Austria from maintaining, subject to the provisions of the Treaty of St. Germain, her freedom in the matter of Customs tariffs and commercial or financial agreements, and, in general, in all matters relating to her economic regime or her commercial relations, provided always that she shall not violate her economic independence by granting to any State a special regime or exclusive advantages calculated to threaten this independence.

Naturally Austria strenuously denies that the Treaty which she now proposes to negotiate will involve a surrender of either her economic or her political independence, or that it will involve a departure from equal treatment under the most-favoured-nation clause. Before considering these vital questions we must first set out the main features of the agreement which has now been entered into. After recording that the German and Austrian Governments have agreed to negotiate a treaty which shall bring into accord the economic and tariff policies of their respective countries, the document runs substantially as follows:—

"Under full maintenance of the independence of the two countries concerned and with due respect for the obligations entered upon with third Powers, the treaty is destined to mark the beginning of a new order of European economic conditions on lines of regional agreements.

More especially both countries will in the treaty declare their willingness to enter into negotiations of similar agreements with any other country putting forward such a desire.

Germany and Austria will agree on a common tariff which will be put into force in both Customs areas concurrently; this Customs tariff can only be modified by agreement between the two countries. So long as the agreement is in force goods will move from one country to the other free of duty, save that at the outset provisional duties may be imposed to enable the industries of either country to adjust themselves without too violent a change.

The Customs organisations of both countries will remain separate, but steps will be taken to co-ordinate the Customs laws as well as turn-over taxes, Excise duties and other matters which are really the counterpart of the Customs regime. The proceeds of the Customs tariff, after paying expenses, will be distributed according to a quota, but the quota will be so arranged as not to impair any liens on the Customs revenue which exists at present in either country.

Each country will maintain the right to make separate commercial treaties with other nations, but in order to expedite such matters joint negotiations may be undertaken, though the ratification of such treaties must be separately carried out by the respective Parliaments. The necessary modifications will be made in existing treaties in order to bring them into accord with the new scheme."

Let us consider what sort of economic future this plan envisages not only for the parties to it, but also for Europe. There are strong grounds for thinking that the reunion of Austria with Germany, both politically and economically, would be not only good for Austria, but for Europe as a whole. It is arguable that from the political standpoint it would alter the balance of political forces in Germany and introduce a new and moderating element, and that, therefore, the fears which prompted the attitude of the Allies in 1919 are unjustified. Those who hold this view may look with complacency on the present proposals as a first step towards this reunion. But, whatever may be said for or against this view, both Germany and Austria are solemnly pledged not to take this step; and in the present state of opinion in Europe it could not be carried out without creating a grave feeling of suspicion and a general disturbance of international relations. It would in fact be regarded by France as a first step towards the break-up of the system so carefully established at Versailles. Nor is it altogether to the advantage of Austria to have an exclusive Customs union with Germany, for she requires the widest possible outlet for her products and, in particular, needs to gain access not merely to the German market, but to those of her former associates in the old Austro-Hungarian Empire.

That her interests are intimately bound up with a more liberal regime in Europe generally, rather than with exclusive relations with any one country, is illustrated by the fact that the scheme recently put forward by the Austrian section of the International Chamber of Commerce provided for the negotiation of a general agreement, to which any country could be party, under which each country would undertake to make tariff reductions of a specified character to all countries party to the agreement, while countries which did not come within the lower tariff scheme would remain subjected to higher rates by all countries party to it. Those countries which already have a Free Trade or semi-Free Trade regime would be admitted to the lower level provided in the scheme and would be let in on the ground floor. The plan involves some modification of the most-favoured-nation clause for

the countries adopting the scheme, though not for those countries which would be admitted by virtue of their existing low tariff. The official attitude of this country, and of some Scandinavian countries, has hitherto been against any such scheme on the ground that it involves a modification of the most-favoured-nation clause, and that we might be prejudiced in other directions if the old definition in its rigid form were departed from. The proposition, however, shows that the minds of Austrian business men have been directed towards the general amelioration of tariff levels rather than towards Austria finding a place in some single larger economic unit.

The present document, in form at all events, follows the same line of thought by laying down two clear principles, namely, that the two countries concerned retain their economic independence and their separate Customs institutions, and further, that any country can, if it wishes, join in the agreement. So far as declaration of principle goes, there is no new departure. But when one considers it as a practical proposition, grave doubts arise. It is difficult to believe, when Austria and Germany come to negotiate a new tariff which is to be common to both of them, that it will not be substantially the same as the present German tariff which is, according to the only available figures of the League of Nations, distinctly higher than that of Austria. In particular, the duties on agricultural products, and notably those on wheat, have been rising rapidly in recent months. It is unlikely that such a tariff would suit Czechoslovakia or Hungary or, say, Switzerland, or that such countries could readily enter into the new Customs union in the form that it is likely to take at the outset. We have repeatedly expressed in these columns the view, which is shared by many German and other European economists, that if ever a Customs union is to be established among a number of nations, it would only be possible to reconcile widely divergent interests on a low, or at all events, a very moderate tariff basis. If this scheme, therefore, is really to be one into which a number of countries may enter, it will involve the drawing up of a new tariff and one which must have regard to the possible requirements of other nations which may come in. Is this what is intended? If so, the present document gives no indication of it whatever. But until it is clear what kind of a tariff it is intended to impose, it is impossible really to judge whether it is one suitable for a larger group of nations or not. This point is vital, for on the answer to it depends the question whether this move is a step towards freer trade in Europe or merely an Austro-German economic rapprochement.

Here, in fact, is the crux of the matter, and we therefore welcome the suggestion which Mr Henderson has made in Paris, that the parties concerned should hold their hand until the whole matter can be considered by the Council of the League of Nations in Geneva in May. Germany has agreed to do this on condition that the discussion is limited to the juridical aspect of the scheme in relation to her and Austria's international obligations; but Germany can hardly maintain an open invitation to all to participate without admitting at all events unofficial discussions with all interested parties. Perhaps, after all, the true reading of the new document is that it is an ultimatum from Germany and Austria that these two countries cannot wait indefinitely while this question of freer trading conditions is talked about but no action taken. If the effect of this *démarche* is to bring the whole question out of the clouds down to earth and to make it possible for action to be taken now by those who are willing to act, it will be altogether to the good. If a real start can be made in reducing these tariff barriers of Europe it should contribute powerfully to the recovery of trade, and as such should have the support of this country; for we have no doubt that if we play our cards properly any new commercial regime set up in Europe will be one not merely that will not penalise Great Britain, but one which should redound greatly to our advantage.

THE LIBERAL PARTY.

LIKE an atom, of a structure not yet revealed to science, the British party system is succeeding in altering its characteristics, if not its mass, by a rapid increment of electrons revolving round the nucleus. To the Right there are the official Conservative ranks under the banner of Mr Baldwin and—across a none too clearly marked borderline—those Conservatives who follow the oriflamme of a more adventurous Crusade. To the Left there is now a formal breach between the supporters of Mr MacDonald and the New Party led by Sir Oswald Mosley. In the political forces occupying ground mid-way between these extremes the events of the past week have served to reveal lines of cleavage somewhat more definite than had before been recognised. The Liberal Party has not "split" (real anxiety on this score among its members in the constituencies will thereby be relieved), but it now comprises, for all practical purposes, three more or less definite groups; and thus the Speaker is confronted in effect, though not in form, by no less than seven sections in the House.

The *Economist* has never been disposed to apportion blessing or censure among the different elements of the Liberal Party, whose differences have long been overt and now seem irrevocable. The fate, however, of a party which has inherited a great history and traditions, which represents at least five million voters in the constituencies, whose leader is an outstanding international figure, and whose fifty-eight members hold the fate of the present Government in their hands, cannot be a matter of indifference to any intelligent elector in this country; and it is pertinent to inquire precisely where the party now stands and how the latest developments have come about.

Writing a week ago, we suggested that the split over the relatively unimportant question of University representation had evidently brought to a head the question of the leadership and cohesion of the Liberal Party. At the end of last week, if current rumour be correct, Mr Lloyd George was inclined to ask the party for a vote of solidarity on the proposal that there should be "co-operation" on terms between Liberals and the Government, for a more or less guaranteed period ahead. Whether such a policy, on any practicable terms, would have been endorsed by the party, will never be known; for on Tuesday, when the adjourned party meeting was held, Mr Lloyd George appears to have asked for approval to a declaration of policy on the following lines:—

That the party adheres to its policy as enunciated at Yarmouth before the last General Election.

That the party has made no pact and seeks no pact with any other party.

That the party's objectives will continue to be Free Trade, disarmament, electoral reform, economy (including steps to remedy "all proved abuses in the expenditure of public money"), a settlement of the Indian problem on Round Tables lines, agricultural development and the securing of values created by public expenditure, and bold measures, on familiar Liberal lines, to deal with unemployment.

That in pursuit of these objectives the party is ready to support this or any Government that will carry out these measures.

In the last sentence lies the rub; and the proceedings on Tuesday appear to have disclosed the fact that, apart from Sir John Simon and his adherents (apparently three of those present and possibly two of the absentees), whose attitude was that the Government should in general be opposed and, if possible, removed from Office, there was a considerable section of the party which was by no means ready to give the leadership *carte blanche* to act on the basis of so vaguely worded a principle as that of "readiness to support." In the upshot, thirty-three votes were cast in favour of Mr Lloyd George's declaration, as compared with seventeen dissentients. The views of the eight members not present at the meeting are unknown, but a fair conjecture seems to be that in future some thirty-five members of the party will follow Mr Lloyd George in generally giving the Government support; another six or so, led by Sir John Simon, will tend to support the Conservatives on many questions of policy; while the remainder, say, sixteen in number, form a group whose attitude is that, while remaining Liberals, they must preserve complete independence and will decide their alignment on each issue that comes forward according to its merits.

The members of the Simonite group are not only few in the House; they are almost certainly not numerous in the constituencies, for most of those whose trend is in this direction have already drifted from the party. But the position of the "independents" is much more significant. Most members of this middle group recognise the importance of supporting the policy of the Government in many fields and have no immediate intention of voting in such a way as to force an early election, which they recognise would prejudice many great national interests. But they consider that the continued existence of an independent Liberal Party capable of rallying middle opinion which is neither Diehard-Conservative and Protectionist, on the one hand, nor Socialistic and class-conscious on the other, would be gravely prejudiced by any sort of "understanding" with the Government. They hold the view that if the political fight against both these extremes is to be carried on in the constituencies, it is impossible to be pledged in Parliament, and that unless the party contests bye-elections and maintains its fighting organisation, it will fade away or be absorbed into the Labour organisation. This point of view clearly appealed very strongly to the members of the Candidates' Association, who appear, at Thursday's meeting, to have applauded loudly Mr Lloyd George's emphasis on the absence of any "pact."

On the other hand, if, as seems inevitable, the electorate must accustom itself to a modification of the simple but highly undesirable cleavage of the country into the two groups of the "haves" and the "have-nots," it is important that we should evolve some more stable method of carrying on Government than one which leaves the Cabinet in uncertainty and peril from day to day. There are only two ways of doing this when no party has a majority. One is by means of a definite Coalition Government. The other implies an undertaking to give support to the Government in carrying out an agreed programme laid down in more or less detail. It will no doubt, in the latter case, be said that if the policy is a success the Government will always claim the credit, while if it is a failure it will blame its allies. But whether the plan necessarily puts the consenting party into a hopeless position in the constituencies, or not, really depends on three things: (1) The precision with which it defines its policy; (2) its success in securing the adoption of the policy by the minority Government; (3) an electoral system that gives a fair representation to minorities.

Mr Lloyd George's move this week, though the immediate cause was the split on the University Vote and the resignation (now withdrawn) of the Whip, was presumably designed to clarify the whole political situation. Whether it has done so, remains to be seen. We have yet to learn what will be the reaction on the Government's part. Mr Lloyd George has demonstrated that he can carry at least 30 members with him on a Division; and, provided that he and his faithful section interpret the reference to "proved abuses," quoted above, as meaning that they are determined to secure thorough-going reform

of the "dole," there is no reason to foresee any further marked divergence between them and the "independents" on coming issues. But it is clear that when the Royal Commission on Unemployment Insurance has reported and the Government has to lay before Parliament its decisions on this vital question, the real testing time for those who follow Mr Lloyd George's leadership will have arrived.

THE SILVER SITUATION.

In the downhill race of prices during the last eighteen months, most commodities have contented themselves with the creation of new records for the post-war period, but silver has repeatedly broken its own low record for all time, and even fell as low as 12d. per ounce on February 19. The silver market is further distinguished from those for other commodities by the fact that this depreciation problem is some sixty years old. The demonetisation of silver first by Germany and then by a large number of other countries in continuous succession, began in the early seventies of last century, with a resultant steady decline in the ratio of its value to that of gold from approximately 1:16 in 1871-75 to 1:36.6 during the quinquennium 1911-15. After the post-war recovery in silver, which attained the record price of 89½d. per ounce in 1920, the decline was resumed, and the ratio had fallen to 1:76.6 by February, 1931.

The steady decline in the gold price of silver before the war is sufficiently explained by the adoption of the gold standard by one important country after another, for it must be remembered that, owing to the long life of the precious metals and the ease with which their form can be transmogrified, a cessation of their use as currency not only diminishes the demand for them but throws an additional supply on to the market in the shape of demonetised metal. The renewed decline, during the last decade, in the value of silver, which still plays a large part in the commercial transactions of China, British India, Persia, the Dutch East Indies, Siam and Indo-China, is due to more complicated causes, which we propose to examine. It must, however, be borne in mind that a substantial part of the fall in the value of silver in the last few years has been due to causes common to all commodities. The sterling price of silver fell by 48 per cent. between 1924 and 1930, the wholesale price-level by 32.9 per cent., so that the decline of silver as measured in terms of other commodities was 14½ per cent., and it is this 14½ per cent. alone which requires explanation by reference to causes peculiar to the supply and demand of silver.

The position is summarised in the table on the following page, the figures in which are put forward as tentative estimates in an unpublished paper by Mr Joseph Kitchin. The new output from the mines increased almost without interruption during the decade 1920-29, and was supplemented in the years 1928-30 by heavy sales of

* Including countries specified separately.

demonetised silver by the Indian Government, by France and by Indo-China, where the gold standard was adopted early in 1930. Against this average total supply of 269 million ounces per annum in the last eleven years there was an average annual demand for only 262 million ounces, as far as can be estimated from the imperfect data available. Absorption by China has been on the up-grade, but Indian consumption has fluctuated very considerably, and tended downwards from 1926-29, though the private absorption of 114 million ounces in 1930 was a record. The use of silver for industrial purposes outside India and China has not grown very rapidly during the last few years, and the demand for it for coinage purposes has substantially declined. Hence an average annual surplus of supplies over requirements, if these figures are correct, of seven million fine ounces, and a consequent persistent downward trend of price.

The natural expectation in such circumstances would be that the low price would check supply and stimulate demand until equilibrium was restored, but there has been little sign of this happening. The explanation of this is that silver, in certain important respects, is not as other commodities. Something over 70 per cent. of the output of silver is a by-product of the base metals, so that the prices of copper, lead and zinc actually have more effect on its supply than the price of silver itself. This accounts for the failure of the steady decline in the value of silver to prevent the continued expansion in its output. The demonetisation of silver is also entirely independent of its price, and though the principal holder, the Indian Government, has endeavoured to adjust its sales to the condition of the market, the fear of such sales has acted as a depressing influence, so that the existence of these additional supplies, even when withheld, has been a factor to be reckoned with, and at times has been the dominating influence. Recognising the importance of this Sir George Schuster offered in his Budget speech last year to co-operate with other holders and producers of silver to consider the possibility of joint action for the regulation of sales. The only response was a somewhat naive proposal by the United States producing interests that, while new production should remain unrestricted, Governments holding stocks should keep out of the market. To this "astonishing proposition" the Finance Minister very naturally replied that a condition of co-operation must be fair consideration for India's interests and that in the meantime the Government of India must retain a free hand. He added: "The more I study the matter the more convinced I am that the fall in the price of silver is part of a much wider movement and the more doubtful I become whether silver can be dealt with successfully in isolation."

On the demand side also, the relation between the price of silver and its consumption is by no means direct. The coinage demand, being largely for the purpose of token currency, is, up to a point, independent of the price. Industrial consumption, probably for reasons of fashion, has shown itself singularly unresponsive to the stimulus of low prices, though it must be remembered that this has recently been equally true of a similar, though not so profound, decline in the prices of most other industrial raw materials. The relation between the price of silver and its absorption in the biggest section of its market, the Oriental countries, is more complicated. A large part of the Chinese demand is still for currency purposes and, therefore, depends less on the world price of silver than on trade conditions generally. The Indian demand is mainly for purposes of the hoarding which still, to a great extent, does duty for investment among the vast peasant population or for ornaments and adornments by means of which the Indian woman carries the family wealth on her person. Opinions differ as to how far this demand is stimulated by cheapness. Mr Kitchin attributes the record imports of the last few years largely to the low price of silver, pointing out that the average rose from 64·4 million ounces in 1920-24 to 102 million ounces in the following five years. The *Institut für Konjunkturforschung*, on the other hand, in its current series of articles on silver, takes the view that Indian hoarding is governed less by the price of silver than by general economic conditions, and this opinion seems

borne out by a year-by-year comparison of price with imports. Since the early years of the present century, Indian imports of silver have shown a tendency to vary directly, rather than inversely, with its price.

Evidently the reaction of the price of silver upon its output and consumption is not sufficiently direct to produce as rapid a tendency towards equilibrium as in the case of most other commodities. The consequences of this are somewhat serious. The effect on Oriental countries of the persistent depreciation in the value of silver is closely analogous to the effect of post-war inflation on those European countries which indulged in it. The continuous fall in the Chinese exchange makes imports unduly dear and so raises the cost of living in China, while the depreciation in the value of their hoards places the natives of India in a position similar to that of the holder of, say, French rentes. At the same time, the stimulus to their exports makes silver-using countries formidable competitors in foreign markets, just as were the inflationist European countries ten years ago.

Evidently, then, it is a matter of widespread economic interest, and, within the British Empire, a matter of political interest also, to consider the chances of a future recovery in silver. Stabilisation at any level would ultimately check the disturbance to foreign trade and to the cost of living of silver-using countries which is at present brought about by the fluctuations in the gold-silver exchanges, but stabilisation at the present level would wipe out a large part of the private capital of the native population of India and those other Oriental countries a substantial part of whose wealth is locked up in silver.

The production of silver, which, as we have seen, is to a large extent independent of the price, is likely to go on increasing, since the output of copper, lead and zinc will presumably undergo a further expansion when the present trade depression gives place to a revival. Mr Kitchin observes that, if the restoration of normal conditions and a substantial recovery of price were not only to restore the output of 1929, but to result in a renewal of the 1½ per cent. increase of the preceding years, by 1935 production would reach 283 million ounces, which would represent an increase of 8 per cent. over the peak output of 1929, as against an increase of 6½ per cent. between 1923 and 1929. Clearly if this result were achieved, only a substantial increase in demand could restore the price of silver to a level commensurate with that of other commodities. Even if production recovered to a more modest level, a substantial increase in demand would be needed to absorb the world's output.

The prospects of a considerable increase in demand are very variously estimated. Except for a probable small increase in the demand for token currency in the event of trade revival, the coinage demand in Occidental countries is not likely to change much. Nor is the industrial consumption of silver likely to show any marked expansion in the absence of some such revolutionary invention as a process to prevent tarnishing. Mr Kitchin suggests that it may recover to 60 million ounces towards 1935, but he appears to anticipate a further reduction in the interval. As to absorption in India, Mr Kitchin argues that it cannot be expected to continue at the recent high level, especially in view of the projected increase in the duty from 4 to 6 annas per ounce. While an improvement in trade and more settled political conditions should

increase the margin of individual incomes over expenditure, it seems not improbable that this increase will be balanced by the growth of more advanced investment habits and by a development of the preference for gold which has already begun to manifest itself.

The most probable direction from which an increased demand may come is China. There seems to be little likelihood that the Kemmerer Commission's recommendation will be implemented and the gold exchange standard adopted in the near future, and even if it were, the transitional stages might even call for an increased coinage of silver. Meanwhile, every improvement in the Chinese political situation and every extension of the transport system which brings the inhabitants of the interior into closer touch with the commercial sections of the country adds to the volume of business and therefore to the need for silver as a circulating medium. Further, according to an estimate by Mr E. Kann in *Finance and Commerce*, China, with a larger population than India, holds less than one-third as much silver. If it be the case, therefore, as some writers on China hold, that the instinct to hoard is innate in the Chinese as in the Indian peasant, and only the opportunity lacking, an improvement in the economic status of the peasantry, together with a reasonable degree of safety, should open up a large outlet there. On the other hand, the course of silver values during recent years has been such that it would not be surprising if the faith of the Oriental hoarder in the reliability of this means of storing value should prove to have been seriously undermined, in which case the future demand for silver in both India and China would be decidedly problematic.

Unless, therefore, we assume a somewhat unlikely concatenation of favourable circumstances, it is difficult to see anything in the probable future demand for silver which is likely to restore very much of its lost value relatively to commodities in general, though a trade revival would bring about some recovery in its gold price in common with the gold prices of other raw materials. How much of the decline in the general purchasing power of silver can be recovered seems to depend, unless research is successful in opening up new industrial uses, principally upon the unpredictable course of political and economic events in India and China.

THE FIRST QUARTER'S NEW CAPITAL.

A YEAR ago we reported that during the first quarter of 1930 there had been almost no market for new speculative issues, but that cheaper money was improving the market for gilt-edged issues and first-class bonds. During the present year to date the market has been even more inactive, with issues of almost every class well below the level of last year.

The first table shows the geographical distribution of the quarter's issues, with comparative totals for recent years, distinguishing Government from "Other" borrowing:—

	DESTINATION OF NEW CAPITAL.					
	First Quarters of Years.					
	1913.	1927.	1928.	1929.	1930.	1931.
United Kingdom—						
Government	£ Nil	£ 68,253,800	£ 85,761,000	£ 1,900,000	£ 38,360,000	£ 6,150,000
Other	7,542,000	47,651,200	48,646,000	56,220,000	29,933,500	19,781,100
	7,542,000	115,905,000	134,407,000	58,120,000	68,293,500	25,931,100
British Possessions—						
Government	7,626,600	5,380,600	17,930,100	23,590,000	14,625,800	12,786,600
Other	14,327,500	15,135,900	3,672,600	2,801,100	1,453,200	2,547,700
	21,954,100	20,516,500	21,602,700	26,391,100	16,079,000	15,335,300
Foreign countries—						
Government	3,523,600	Nil	4,765,100	3,650,000	Nil	1,740,000
Other	17,325,000	8,466,900	8,262,000	8,791,900	3,360,000	2,217,500
	20,848,600	8,466,900	13,027,100	12,441,900	3,360,000	3,957,500
Grand total	50,344,700	144,883,400	169,043,800	96,953,000	87,732,500	45,223,900

The British Government figure is composed entirely of "net sales" of Savings Certificates, which amounted to £6,150,000, against £1,800,000 in the same period last year. Apart from Government issues, the new capital destined for the United Kingdom was about one-third

lower than a year ago. Colonial issues were also much less numerous, the main item being the £11,640,000 Government of India Loan. The semi-official discouragement of foreign loans has been slightly modified, and the Greek loan of £1,740,000 brings the foreign figure to a level rather higher than last year, though much below that of 1927-29.

In the next table the figures are more fully analysed:—

	CLASSES OF BORROWERS.							
	(£ million.)							
	Total.	British Government.	Foreign and Colonial Govts.	British Colonial and Foreign Corps.	Foreign Railways.	Mines, Finance, and Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1923	271.4	77.7	95.8	4.8	5.4	15.5	7.7	64.5
Total whole year, 1924	209.3	13.7	90.6	18.8	1.0	12.7	2.3	70.2
Total whole year, 1925	232.2	45.6	30.7	25.3	3.8	18.0	19.1	69.7
Total whole year, 1926	230.7	4.7	54.6	49.2	8.2	26.9	6.2	80.9
Total whole year, 1927	355.1	66.0	67.5	37.9	5.4	33.2	11.0	134.1
Total whole year, 1928	369.0	83.8	56.1	26.4	3.1	49.7	8.7	141.2
1929—1st quarter	96.9	1.9	27.2	0.3	3.8	21.2	4.9	37.6
2nd "	77.4	Dr 0.3	Nil	11.4	Nil	12.9	0.1	55.3
3rd "	18.7	0.4	Nil	2.8	Nil	2.4	1.1	13.4
4th "	92.2	65.2	Nil	Nil	4.0	5.0	0.3	17.7
Total whole year, 1929	285.2	65.4	30.0	12.1	7.8	41.5	6.4	122.0
1930—1st quarter	87.7	38.4	14.6	15.9	2.7	1.0	6.7	8.4
2nd "	81.9	1.6	30.9	18.8	Nil	6.3	2.0	22.3
3rd "	22.9	5.8	Nil	0.8	Nil	0.8	0.5	11.8
4th "	75.3	21.8	21.8	10.0	4.1	1.2	0.1	16.3
Total whole year 1930	267.8	65.6	70.3	44.7	7.6	11.5	9.3	58.8
1931—1st quarter	45.2	6.1	14.5	2.7	Nil	5.6	0.1	16.2

Apart from British Government issues the most marked decline, as compared with the first quarter of last year, is shown by corporations; while foreign railways are completely out of the picture. Mines, finance and exploration, and home industry, however, show a slight expansion, the distribution of which appears in more detail from the following table:—

	ANALYSIS OF NEW CAPITAL APPLICATIONS.			
	Total for First Quarters of Years.			
	1928.	1929.	1930.	1931.
British Government loans	£ 85,761,000	£ 1,900,000	£ 38,360,000	£ 6,150,000
Colonial Government loans	17,930,100	23,590,000	14,625,800	12,786,600
Foreign Government loans	4,765,100	3,650,000	Nil	1,740,000
British Corporation, County and Public Board loans	1,010,000	336,000	15,872,700	2,700,300
Colonial Corporations and Public Boards	1,228,700	Nil	Nil	Nil
Foreign Corporations	772,000	Nil	Nil	Nil
British railways	Nil	Nil	1,310,000	Nil
Colonial railways	Nil	Nil	Nil	Nil
Foreign railways	580,000	3,835,600	2,688,000	Nil
Australasian mines	Nil	12,000	Nil	371,900
South African mines	67,000	340,500	162,800	Nil
Other mines	2,770,800	607,500	181,700	3,418,600
Exploration, financial, and investment trust	13,913,200	20,280,600	738,600	1,861,800
Breweries and distilleries	Nil	3,130,500	Nil	112,500
Merchants, importers, &c.	Nil	425,300	Nil	337,500
Stores and trading	4,310,000	2,577,200	798,000	Nil
Estates and land	478,000	1,555,900	215,900	64,200
Rubber	2,239,600	566,500	405,000	85,700
Oil	Nil	4,315,800	6,250,000	Nil
Iron, coal, steel and engineering	1,047,500	712,000	Nil	Nil
Electric light, power, and telegraph	5,275,400	6,389,200	750,000	3,735,800
Tramway and omnibus	583,500	165,000	Nil	98,000
Motor traction & manufacturing	581,900	222,000	356,600	6,000,000
Gas and water	177,700	250,000	Nil	Nil
Hotels, theatres, and entertainments	6,181,700	1,487,200	Nil	Nil
Patents & proprietary articles	2,691,700	5,913,400	237,500	300,000
Docks, harbours and shipping	300,000	Nil	Nil	950,000
Banks and insurance	3,625,900	575,000	50,000	136,400
Manufacturing & miscellaneous	12,351,400	14,116,800	4,282,900	4,374,600
Total	169,043,800	96,953,000	87,732,500	45,223,900

Issues by "other mines," the highest for several years, consist principally of two debenture issues, by Rhodesian Anglo-American and Rio Tinto respectively. As for home industry, the outstanding operation was the issue of two million ordinary £1 shares at £3 to the shareholders of the Ford Motor Company. The price of these came as something of a disappointment to the market, which had hoped for more favourable terms. The increase in electric issues was due to an issue of £3,000,000 in debentures by the London Power Company. In the manufacturing and miscellaneous group one of the principal issues was that of £2,000,000 in first mortgage debentures by the Lancashire Cotton Corporation.

The most striking fact about the figures as a whole, apart from their smallness, is the greatly reduced proportion of issues of ordinary shares. The following table shows the issues classified into debentures, preference shares and ordinary shares:—

	NATURE OF BORROWING.			
	Debentures, Bonds, &c.	Preference Shares.	Ordinary Shares.	Total.
Year 1927	£ 228,958,000	£ 36,836,600	£ 89,371,400	£ 355,166,000
" 1928	212,817,900	45,062,600	111,177,600	369,158,100
" 1929	137,670,300	31,543,400	116,025,700	285,239,400
" 1930	227,658,500	15,548,800	24,593,300	267,800,600
First quarter, 1930	76,368,500	8,145,700	3,218,200	87,732,400
First quarter, 1931	35,879,000	521,500	8,823,400	45,223,900

If the £6 millions Ford issue be left out of account, ordinary shares amount to a smaller aggregate even than the total in the first quarter of last year. Including that issue ordinary shares represent only 19.4 per cent. of the total, against an average of 41 per cent. over the whole of 1929 and 30 per cent. in 1928. Preference shares have, so far this year, formed only a negligible proportion of the total. The marked decline in equity issues during 1930 and 1931 is a significant symptom of the state of industry.

The following table shows the price of issue and present market price of the principal issues made during the first quarter of 1931:—

Month of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, March 26, 1931.
1931.		£		
February	Govt. of India 5½% Stk., 1936-38...	12,000,000†	97	1-11 dis.
March	Gold Coast 4½% Stk., 1930-70...	1,170,000	98	1-11 pm.
February	Surrey County Council 4½% Stk.	1,500,000	99	par-1 pm.
February	Reading Corporation 4½% Stk.	700,000	99½	1-11 dis.
January	London Power 5% Deb., 1952...	3,000,000	100½	1-11 pm.
January	National Shipbuilders Security 5% Deb., 1934...	1,000,000	95	2-1 dis.
March	National Canning Ord. £1	175,083	par	20/3-20/9
March	Rio Tinto Co. 5% Deb. Stk.	2,000,000	91½	1-11 dis-1 pm
March	Greek Govt. 6% Public Works	2,000,000	87	24-2 dis
March	Lancashire Cotton Corporation	2,000,000	97½	...

† Also £25,000,000 for Conversion Purposes.

The fate of these new issues has been very varied, with rises and falls impartially distributed between the respective classes.

In so far as the torpor of the new issues market slightly diminished towards the end of the quarter, it may be hoped that the next few months will see some signs of activity, and, in support of this hope, there are rumours of several impending issues. It is, however, evident from the very conservative character of the new securities offered during the past quarter that the time is not yet ripe for the marketing of speculative issues.

The new capital issues included in our quarterly surveys take no account of Stock Exchange "introductions," an aspect of the capital market which was discussed fully in the *Economist* of July 27, 1929 (page 175). In the following table we show the total amounts involved in these "introductions" during the past nine quarters. "Cash values" are calculated on the assumption that the whole of the nominal value of the stock "introduced" is taken up at the price at which dealings on the Stock Exchange open:—

	TOTAL CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION.			
	United Kingdom.	Colonies.	Abroad.	Total.
Year 1929—				
1st Quarter	£ 15,191,500	£ 393,700	£ 3,094,400	£ 18,679,700
2nd Quarter	9,465,500	1,284,400	2,166,400	12,916,300
3rd Quarter	3,574,700	217,100	5,778,300	9,570,100
4th Quarter	733,400	304,400	1,437,500	2,475,300
Total Year 1929	28,965,200	2,199,600	12,476,600	43,641,400
Year 1930—				
1st Quarter	3,982,300	1,477,000	8,399,900	13,859,200
2nd Quarter	839,600	Nil	2,685,100	3,524,700
3rd Quarter	67,200	100,000	601,500	768,700
4th Quarter	3,402,900	1,667,600	721,200	5,791,700
Total Year 1930	8,292,000	3,244,600	12,407,700	23,944,300
Year 1931—				
1st Quarter	2,174,200	632,900	Nil	2,807,100

† Nominal amount of capital introduced, £31,519,934.

‡ Nominal amount of capital introduced, £22,158,480.

There has been a marked falling off in the number of issues advertised for public information only during the first quarter of the year. The total cash involved amounted to £2,807,100, and the amount of capital introduced to £2,744,400. Activity quickened a little at the end of the quarter, and issues were made by Rio Claro Railway and Investment Company and the Monks Investment Trust.

LONDON PASSENGER TRANSPORT.

In securing a second reading, by the comfortable majority of 271 against 224, for his London Passenger Transport Bill in the House of Commons on Monday night, Mr Herbert Morrison is entitled to congratulation on a considerable personal Parliamentary success; for the opposition evoked by this far-reaching and ingeniously devised measure was neither very forcible nor very convincing, so far as broad issues of principle go, and was concerned in the main with what may be described as "Committee" points. Conservative critics, as might be expected, could not refrain from twitting the Minister of Transport with his conversion from the tenets of "municipalisation" to those of the "public corporation" as a new model form of nationalisation; but the necessity for the co-ordination of London passenger traffic has long been a matter of general agreement, and it is practically common ground that such co-ordination must involve, not only pooled receipts and unified management, but also some form of public control.

Mr Morrison submitted that there were certain essentials in dealing with the problem: co-ordination must not be "a mere phrase covering up a mere deal between existing operators"; the interlocking development of trams, omnibuses and tubes must be envisaged as a whole by a single "transport mind"; consolidated ownership in such a vital public service as this must involve "public ownership for the public service for the public good"; management must be efficient; and the combined concerns must pay their way without any subsidy from the State or municipal funds. None of Mr Morrison's critics ventured roundly to propose that private enterprise should be given monopoly powers over the whole traffic of the Metropolis; thus the issue is really confined to the question of the form which should be given to the authority ultimately responsible for this vast undertaking. Management by a single public authority (the Minister went on to say) had been ruled out by the Government because, apart from the fact that the London County Council had no desire to undertake the task, no single authority could be found to discharge this function. On the other hand, a joint municipal authority would involve grave administrative difficulties and would fail to meet the need of quick decisions. Hence Mr Morrison's final conclusion that the proper authority to be set up is a "business Board" of five members, incorporating what he defined as "an element of public accountability."

With the Minister of Transport's conclusion, in principle, we agree; and the provisions which he puts forward in his Bill to give this principle concrete shape represent at any rate a well-considered attempt at a bold experiment in problems of finance and management whose technique has not yet been developed and whose results experience must necessarily put to the proof. In an article which we print on a later page we discuss in some detail the financial implications of Mr Morrison's scheme, more particularly from the standpoint of the investor in the existing transport undertakings. Here it is sufficient to say that from the point of view of public interest we are not wholly satisfied with the proposed basis for the acquisition of the municipal tramways; there is a case for their transfer on the basis of an agreed number of years' purchase of previous net revenue. This and all the other financial arrangements which will govern the capitalisation of the new joint undertaking are points which will require the most careful scrutiny in Committee, but we can see no reason why the Bill should have been denied a second reading on that account; for the machinery set up by the Bill, whereby terms of transfer are to be settled in the last resort by an arbitration tribunal, proceeding on principles laid down by Parlia-

ment, seems, broadly speaking, to secure fair reconciliation of the interest of existing owners with that of the community.

Instead of dwelling over-much on these relatively minor considerations, the public, whose travelling within the London Traffic Area reached in 1930 the astronomical figure of 4,000 million passenger journeys, will be inclined, and rightly, to focus its attention on what appears to us to be the essential point of controversy in this measure: does the scheme offer a reasonable guarantee of what may be described as optimum management in the general interest? Let us consider in a nutshell what Mr Morrison has endeavoured to do. The system which he proposes to create, on the basis of a water-tight monopoly, is a compact "business Board," whose autocratic powers are to be tempered by certain checks and balances. In the first place, the Traffic Advisory Committee is to be reformed and made more municipal in character, and is to act as a constant liaison between the Board and the local authorities. In the second place, though the Board is enjoined by Parliament to pay its way, fares and charges are to be subject to the ultimate authority of the Railway Rates Tribunal. Finally, the Minister of Transport, who is to appoint the membership of the Board and fix its remuneration, is to be answerable to Parliament for its doings and is to have, particularly in one crucial direction, important powers of intervention. Clause 21 of the Bill provides that the Minister may order the Board not to withdraw, or to restore, services which they desire to suppress or have suppressed, and that he may require the Board to provide new or improved services or facilities, provided that, in his opinion, the Board will not thereby be prevented from carrying out its obligation to be self-supporting.

Here is disclosed an issue which appears to us to go to the root of the whole Bill. We need not necessarily contemplate the alarming vision of a Socialist Minister embarking, *pour encourager les autres*, on an extravagant rabbit-warren of unremunerative tubes for the benefit of London constituencies whose favours he might desire to court. The question obviously cuts two ways, for it might well be that an unimaginative and humdrum Board, concentrating only on obeying the behest that they must pay their own way, would fail to initiate schemes of transport development vitally required in the interest of the community as a whole. In these circumstances, those who agree with us in accepting the thesis that traffic in some areas of London may reasonably be required to contribute to the support of less remunerative but socially desirable facilities in other areas will concur in thinking that powers of initiation should repose with some authority overriding the business Board of management. But, if this be so, it by no means follows that the appropriate authority is necessarily the Ministry of Transport. To place upon the Minister such a responsibility appears to us to be a questionable step, involving the possibility of awkward "dyarchy" between a Government Department possessing Napoleonic powers to insist on facilities and an independent, judicial, non-political body, such as the Railway Rates Tribunal, established with full control over fares.

It is not easy to see how this difficulty, which may or may not have serious consequences for the future of London transport, but which should certainly be faced to-day, is to be circumvented. The fact is that in creating this sort of public corporation, whose management designedly is deprived—for good or ill—of the stimulus of private gain and the pressure of shareholders' desire for profit, we are setting sail on uncharted waters. In the present circumstances the risks of the voyage, we think, must undoubtedly be faced; there is no other alternative. The suggestion has been put forward that a greater measure of direct local government (as opposed to ministerial) control might be imported into the scheme by following lines somewhat analogous to those on which the management of limited liability companies in Germany is commonly organised. That is to say, the London Passenger Transport Board of Mr Morrison's creation might be required to act in the capacity of the *Vorstand*, or primarily managerial board, while the London Advisory Committee (in present practice emphasis has to be laid

upon the word "advisory") might be strengthened and given the functions of an *Aufsichtsrat*, or superior board, with powers (defined by Statute) of veto and initiation on certain specified issues of broad policy. This suggestion admittedly lets in once more an awkward element of "dyarchy," but it is argued that the possibility of conflict between such a *Vorstand* and *Aufsichtsrat* is more remote than that of divergence between the Board and the Minister. The proposal, however, seems to offer no better prospect of completely satisfactory co-ordination between the interests of the public, the managerial task of the Board, and the responsibility of the Rates Tribunal. The problem must ultimately be solved in the light of experience gained in the working of the scheme.

Notes of the Week.

The Outlook at Karachi.—Congress is assembling at Karachi in an atmosphere which bodes ill for the tranquillity, at least, of the proceedings; and Mr Gandhi's progress from Delhi, culminating in an actual assault on his person by excitable members of the New Youth of India League at Malir Station, has been by no means a case of "roses, roses all the way." On Monday evening Bhagat Singh and his two associates, whom the verdict of a special tribunal—confirmed, on appeal, by the Privy Council—had pronounced guilty of the murder of Mr Saunders at Lahore in December, 1928, were duly executed. This was a course which no self-respecting Government, however desirous of promoting conciliation by clemency, could have avoided taking, but the consequences were an immediate ebullition of hysterical emotion which Mr Gandhi—in a somewhat equivocal statement associating himself with "the tributes paid to the young patriots," but warning the Youth of India against "copying their example"—did little enough to allay. On Tuesday, the Nationalists walked out of the Legislative Assembly as a protest against the execution, and there were riotous demonstrations in Lahore and other cities, culminating at Cawnpore in serious Hindu-Moslem conflicts between Congressmen who sought to impose a *hartal*, and shopkeepers who objected to closing their shops. This atmosphere of excited sympathy with the "martyred" assassins of Lahore will, doubtless, be exploited at Karachi by the irreconcilables. The frankly revolutionary New Youth of India League may be relied upon to make such trouble as it can, and to endeavour to stampede the Congress into repudiating the Gandhi-Irwin pact. If Pandit Jawaharlal Nehru, whose attitude this week has been non-committal, comes out strongly on the side of the extremists, the prospects for the Congress are not very reassuring. On the other hand, despite the threatened "Red Shirt" mutiny against the Mahatma's leadership, Mr Gandhi's personal influence over the bulk of the rank and file of the Congress seems likely still to carry great weight. Moreover, he has with him almost every leader of importance, and he has secured from the Working Committee a definite endorsement of his policy in concluding the pact with the Viceroy. The official leaders of Congress may be trusted to recognise that if they are defeated at Karachi, they will be irrevocably swamped by a tide which they are unable to control, and in these circumstances they will, no doubt, fight hard for the Gandhi policy through considerations of personal interest, as well as for the reason that the majority of thoughtful Indians, including the important merchant classes in Calcutta and Bombay, appear visibly to be wearying of the endless succession of riots and communal disturbances.

The Federated Union of Europe.—The proceedings at Paris this week of the organising committee of the preliminary commission for studying M. Briand's plan for a federated union of Europe have naturally been overshadowed by more sensational developments, which we discuss in a leading article, in the Customs relations

between Germany and Austria. But though the results achieved at the meeting were not spectacular, the outcome has been agreement on lines of procedure which we regard as well-considered and hopeful. The committee has decided that the next meeting should be held at Geneva on May 15; that in the first instance there should be a concentration on the possibility of economic co-operation; that European States non-members of the League should be invited to send observers to participate in all the commission's deliberations (this applies, of course, to the U.S.S.R. and Turkey); and that the commission should, in effect, function as a body ancillary to the League, whose Secretary-General should always act as secretary to the commission. The upshot of all this is clearly the abandonment for the time being of the original idea, which M. Briand appeared to contemplate, of a separate body distinct from the League and charged with the task of examining far-reaching possibilities of political federation. From the point of view of practical realities, it is perhaps as well that we should recognise that the project of a United States of Europe must remain, for the time being, a dream. By working closer to the ground, and aiming at more readily attainable objectives of economic co-operation, the body created at M. Briand's instance may well do more immediately useful work with better augury for the future.

Clemency in Spain.—King Alfonso's Government have shown wisdom and good feeling in dealing gently with the military and civilian prisoners who have been on trial in consequence of the abortive republican revolution of December last. A week ago, when a death sentence was passed on Captain Sediles by the court martial at Jaca (the garrison town where the military revolt occurred), the Cabinet asked the King to commute the sentence, which he promptly did. The act was timely, for already the news of the sentence was arousing dangerous excitement among the university students of Madrid and in the ranks of organised labour throughout the country. On Friday of last week there was opened, in Madrid, the trial by court martial of the civilian members of the republican provisional government. The prosecution asked for a sentence of fifteen years' imprisonment in one case and eight years' imprisonment in the rest; but public feeling, as displayed in court as well as outside it, showed itself so strong in sympathy with the prisoners that, once again, counsels of moderation prevailed. The trial was wound up on Monday, and all the prisoners were set at liberty next day. They received an ovation in the streets; and there was a clash between the medical students and the police in which several civilians were injured. Renewed disturbances occurred on Wednesday, and one member of the Civil Guard was killed. On the whole, however, these trials have gone off more quietly than could have been expected; and for this the present Spanish Government must be given the credit which is its due. The intensity and persistence of the feeling against the present regime indicates that sooner or later a change is inevitable—however many times the coming revolution may misfire. But it may make the whole difference to the future of Spain if, before the final crisis arrives, an understanding has been established on both sides that there is to be no bloodshed.

"Closer Union" in East Africa.—The Joint Parliamentary Committee on East Africa heard some very frank speaking on Tuesday, when it took evidence from Sir Donald Cameron. Sir Donald speaks with authority, for he has been the model governor of the model mandated territory. And he speaks without prejudice, for he has retired from the post which he has occupied with such honour and success, and he has no personal axe to grind. His evidence amounted to a thorough-going criticism of the whole idea of closer union between the mandated territory of Tanganyika and other East African territories under British administration, particularly Kenya Colony. He suggested that behind the various economic and administrative reasons that were commonly

given in favour of "closer union" there lurked the idea of forming in East Africa a great White State; and he submitted that this dream would be shattered if the policy, inaugurated in Tanganyika in 1925, of developing that territory on the lines of indirect rule by the mandatory and direct economic production by the natives, were allowed to develop. He pointed out that the geographical situation which made co-ordination necessary as between Uganda and Kenya did not apply as between Tanganyika and Kenya, since neither of the latter territories lay in the hinterland of the other. He maintained that no prejudice was being done to the public service in Tanganyika by keeping the economic services of this territory separate, as they were now, instead of co-ordinating them with those of Kenya. In answer to a specific question from Lord Passfield in regard to railways, he gave the opinion that all the co-ordination that was necessary could be carried out by governors in consultation. Sir Donald Cameron's evidence is an important event in the history of the "closer union" question. The mandate for Tanganyika does not, of course, exclude the possibility of administrative union with non-mandated territories under the administration of the Mandatory Power for Tanganyika. But it is evident that any such union would complicate the task of the Council of the League in supervising the administration of the mandated territory through the agency of the Permanent Mandates Commission; and the League is therefore unlikely to look with favour upon any proposal for union unless it can be shown that the mandated territory stands to benefit considerably. This is just the contention which Sir Donald Cameron, in his evidence, has traversed with such authority and such vigour. We prophesy that this evidence will be brought up again not once but many times hereafter.

Pure Italian.—Signor Mussolini has taken a leaf out of President Mustafa Kemal's book: he has ordered the enforcement of an already operative, but hitherto dormant, decree, which prohibits the exposure in a public place (which includes the interior of a shop or a hotel) of any notice in a foreign language unless the Italian equivalent is displayed above it. Even the names of hotels must be changed if they contain any foreign element like the ubiquitous "Bristol"; and so must the registered names of firms. In fact, the decree hits not only the tourist traffic, but business in general, for it applies to the labels on articles on show—e.g., the labels on bottles of medicine or on boxes of soap. For the poor apothecary, whose goods come from every quarter of the globe, this is an affliction indeed; and it is difficult to see how either he or his customer will recognise whether the Italianised article which will be passed across the counter to-morrow is an elixir or a poison. Suppose we were to apply this same policy in the English-speaking world, we might arrive at a strange result: for when we had purged our noble language of its French elements and its Latin elements and its Greek elements, we should find ourselves left with a chain of dots and dashes, punctuated at rare intervals by some monosyllabic Gothic particle. In such circumstances the practical man would be inclined to sweep these last miserable remnants of articulate speech away, and display a sky-sign which arrested attention, like the Bellman's chant in "The Hunting of the Snark," by being "a perfect and absolute blank." The enterprising salesman could still advertise his wares in dumb show, without sinning against the light of patriotism, by striking Anglo-Saxon attitudes at his shop door—rejoicing in the certainty that English, having become the simplest language in the world, could no longer fail to supplant all its competitors. Purify every national language to vanishing point and a world-wide international language of pantomime results. But we can hardly suppose that this is Signor Mussolini's intention.

Australian Currency Proposals.—On March 24th Mr Theodore introduced his Commonwealth Bank Amendment Bill. The full text is not available, but, according to cabled reports, this measure provides for the abolition

of the 25 per cent. gold backing now required to the note issue, authorises the Commonwealth Bank to issue notes up to a limit of £60,000,000, and empowers the Federal Treasurer to require the Commonwealth Bank to hand over to him such gold as is necessary to meet the Commonwealth's indebtedness in London, in exchange for Commonwealth securities of an equivalent amount. A further clause makes it illegal to insert in business contracts any clause stipulating for the payments of amounts due in Australia in currencies other than Australian notes. Mr Theodore stated that the note issue would be fiduciary, and he added that Australia was admittedly already off the gold standard. He further hinted that, in the circumstances, it was better to use Australia's gold stocks overseas rather than to retain them at home. In support of this last argument he made an allusion to an amount of £5,000,000 due on March 31st by three States to the Westminster Bank, but, so far as we can judge, Mr Theodore was using this debt as a bugbear to frighten Parliament into passing the clause authorising him to acquire the Commonwealth Bank's gold stocks. As regards the merits of the Bill itself, there is only one possible comment. It flies in the face of all the advice given to Australia by the Niemeyer mission and others, and it is calculated to perpetuate the very difficulties, including that of meeting the service of her external debt, from which Australia is now seeking to escape. Fortunately, in view of the attitude of the Senate, the Bill possesses small chance of becoming law. Meanwhile information has been received of the introduction by the Government of a further Bill designed to limit interest rates allowed by the trading banks on their deposits and charged by them in respect of their discounts and advances. This measure is equally impracticable and equally doomed to extinction in the Senate. It is also stated that Mr Lang, the Prime Minister of New South Wales, has declared to Mr Scullin that he does not intend to meet any external debt interest payable in London. (He is apparently more generously disposed to New York.) According to the Financial Agreement Validation Act of 1929, it would appear that this liability already belongs to the Commonwealth, which is empowered by Section 87 of the Constitution to apply Customs revenue "towards the payment of interest or debts of the several States." Hence, Mr Lang's "repudiation" appears, in practice, to be little more than a senseless gesture so far as the creditors are concerned, though it raises an acute issue between the Commonwealth and the other States, on the one hand, and New South Wales on the other. In any case, his action is to be seriously deplored by all friends of Australia in the City of London and elsewhere, since it is one more impediment to aid being given to Australia in her present, we trust, temporary economic troubles.

Lancashire and India.—The House of Commons on Wednesday night listened to serious apprehensions expressed by several Lancashire members that the proviso in the Irwin-Gandhi settlement with regard to the lifting of the political boycott on British goods may prove to be of much less advantage than has been hoped to the British cotton industry. In this connection, representatives of the cotton trade recently interviewed Mr Wedgwood Benn, and pointed out that as a result of the boycott Lancashire goods to the value of over £1,500,000 are held up in Bengal alone, apart from large quantities in Bombay, Delhi, Amritsar, Karachi and Madras. Moreover, the further increase by a 5 per cent. surcharge in the tariff duties imposed by this year's Indian Budget brings up the duties on cotton goods of plain grey material to 20 per cent., or 3½ annas per pound, whichever is higher. The *ad valorem* rate is fixed by the bazaar price of goods on the day of arrival, and is generally higher than the invoice price, while the alternative rate, 3½ annas per pound, is, at present prices of cotton, very much higher than the 20 per cent. rate on the bulk of goods imported in the grey unbleached state. Thus the duties, to which further reference will be found in a letter from our Calcutta correspondent printed on a later page, are likely to be drastically restrictive of imports.

The Commons on Wednesday also sought information as to the arrangement which, it is reported, is being made in India to establish an agency (financed partly, it would seem, by Indian textile interests) to export foreign cloth already in India. Mr Benn had little enough of positive comfort to give the Lancashire members. The Tariff Autonomy Convention, he very properly emphasised, could not be interfered with by any British Government, but there was at any rate the satisfaction that in future, if the pact were observed, there would be no discrimination against British, as opposed to foreign goods in general. For the rest, given restoration of civil order in India, Indian international trade should flourish to the benefit of both India and this country. With this the Lancashire members had to be content.

Cotton Trade Reorganisation.—In Lancashire trade circles this week, writes our Manchester correspondent, there has naturally been considerable interest in the debenture issue of the Lancashire Cotton Corporation, Ltd., and the details of the offer have been much discussed. The general feeling is that the ultimate success of the corporation will depend upon the state of trade during the next few years. Very shortly all sections of the cotton industry will consider important proposals relating to reconstruction. At the end of last week there was a long meeting in Manchester of the executive of the Joint Committee of Cotton Trade Organisations, and it was decided to place certain resolutions before a full meeting of the Joint Committee to be held on April 9th. Rumours have been circulated during the last few days that the executive of the Joint Committee is inclined to support some measure of Government control, but Mr John H. Grey, the chairman, has stated that the organisation is not in favour of placing the industry under Government control in any way whatever. In the opinion of the executive, whatever policy is eventually adopted there should be the minimum amount of interference and restriction, the chief need being to reduce production costs. It is understood that the question of productive capacity, which at the moment is largely in excess of present demand, is about to be considered. In this connection it may be pointed out that there are practically the same number of spindles in Lancashire to-day as in pre-war times. According to the International Federation, the number is now 54,983,000, as compared with 55,642,000 in 1913. Immediately after the war there was an expansion of machinery, and the spindles in 1927 were 57,325,000. On the other hand, there has been a big decrease since the war in the number of looms. In 1913 the number was 786,000, with an increase in 1917 to 807,000. According to the latest records, however, the looms to-day number 704,000. It is understood that if the Joint Committee of Cotton Trade Organisations can secure unanimity throughout the industry on any scheme, the Government will be willing to give the necessary support. It may be mentioned that in both the American and Egyptian sections of the spinning branch proposals are still under consideration for the purpose of fixing marginal rates for standard counts of yarn, but so far the schemes have not secured adequate support. On several occasions during the last few years attempts have been made to organise short-time working, especially in the spinning section, but the schemes have not been successful. It now remains to be seen whether any proposals will be acceptable to the trade which provide for the elimination of a further amount of machinery. It is significant that, although the Lancashire Cotton Corporation, Ltd., will ultimately absorb mills containing nine to ten million spindles, it is not proposed to operate more than six to seven million spindles; and the redundant machinery is to be scrapped. It is well-known that owing to over-production the competition for orders is very severe, and this state of affairs has resulted in spinners and manufacturers being compelled to accept business at a definite loss. Numerous firms have been willing to accept unremunerative prices owing to the fact that to close down mills is more costly than running at a moderate loss.

The International Wheat Position.—The announcement, last Monday, of the Federal Farm Board's decision not to support the wheat market in the next crop year, owing to the lack of storage capacity and capital, was not unexpected. As the following table shows, the Federal Farm Board, through its subsidiary, the Grain Stabilisation Corporation, has kept values of the last crop considerably above the world price level since November last:—

	Chicago (No. 2 Winter).		Winnipeg (No. 1 Manitoba).
	Nearest Month.*	July, 1931.†	Nearest Month.
1930 End October	79½	83½	72½
End November	75½	74½	61½
End December	76½	62½	51½
1931 End January	80½	65½	57
End February	79½	64½	62½
March 23rd	79½	59½	57½

* Prices up to June, 1931, supported by Federal Farm Board.
† Free market price.

The Federal Farm Board's stabilisation policy was originally designed to help the farmer over what was believed to be a temporary difficulty. It did not reckon with the huge crops harvested in Russia, Argentina and Australia, which subsequently swamped the grain markets. Seeing that the United States farmer was able to sell his last crop at from 10 cents to 20 cents above world prices, the Farm Board's intervention discouraged a reduction in the acreage of winter wheat, which constitutes the larger proportion of the total wheat crop. Anxiety lest a catastrophic slump in wheat prices might be occasioned by the Farm Board's new policy has been allayed to some extent by a further announcement on Tuesday that the board will not "throw its present stocks overboard," but that from April 1st to April 10th its minimum selling price for No. 2 "Hard Winter" f.o.b. Chicago will be 82½ cents per bushel. In order to cover the cost of "carrying" the wheat this price will be increased by ½ cent per bushel every ten days until the end of June. It is expected that the Farm Board's holdings will amount to more than 250,000,000 bushels at the end of the season. Meanwhile, the international outlook is not encouraging, as the following estimate of probable supply and demand during the current season, compiled by Mr G. Broomhall, shows:—

Exporting Countries.	MILLION BUSHELS.			
	Estimated exportable surplus during season August 1, 1930, to July 31, 1931.	Estimated shipments to meet importers' requirements.	Shipments to March 21st.	Remaining to be shipped.
United States.....	240.0	112.0	230.8	137.2
Canada	352.0	256.0		56.0
Argentina	200.0	112.0	56.0	46.4
Australia	152.0	128.0	88.0	32.0
Russia	120.0	116.0	26.8	9.2
Balkans and Hungary	48.0	40.0	3.2	4.8
India	24.0	8.0		
North Africa, Chile, &c.	12.0	12.0	10.4	1.6
Total	1,148.0	784.0	496.8	287.2

It will be seen that supplies exceed probable demand by no less than 364,000,000 bushels, and visible supplies at August 1, 1930, already amounted to 412,000,000 bushels. This is the situation with which the delegates to the International Wheat Conference preparatory to the second World Wheat Conference, which opened this week in Rome, will be confronted. Clearly, even if a policy of concerted action can be evolved, its effects will not be felt for a considerable time, and it is, therefore, clear that no marked improvement in prices in the near future can be expected.

Motor Taxation.—In his chairman's speech at the second annual meeting of the Ford Motor Company, Sir Percival Perry put forward a strong case for the abolition of the horse-power tax on motor-cars, based mainly on the sound argument that "no intelligent foreign automobilist will purchase an engine designed according to the horse-power formula upon which British automobile taxation is

based." The hard fact is that "more power for the same money" gives the American motor manufacturer a commanding advantage in the export market, and the future growth of exports which is indispensable to the building up of a really large-scale motor industry in this country cannot be hoped for, now that saturation point in the home market is not far off, if the British manufacturer is permanently to be forced to offer a less powerful product without any corresponding advantage in economy. Nor is the small, "high efficiency" British engine—tribute though it be to engineering skill—really the most suitable or economical for the average British motorist. Against these arguments for a reform of the present method of taxation may be brought the fact that the system affords a most effective form of protection for the home market and in this connection it is worth noting that a deputation of British motor interests this week urged upon Mr Pethick Lawrence the desirability not of changing the system, but of scaling down the rates of tax. But this "shelter," taking a long view, will certainly not be worth the much larger sacrifice of potential overseas markets which it entails, and the substitution, proposed by Sir Percival Perry some months ago, of a tax based on retail catalogue price, which would penalise luxury rather than power, and conform far more closely to the taxpayer's ability to pay, seems to us not only more equitable, but economically far more sound.

Some Eastern Banking Results.—The reports of three of the great Eastern trading banks, giving their position on December 31st, are now available, and enable some idea to be formed as to how the East has been affected by the trade depression. On the whole, the three banks in question, namely, the Chartered Bank of India, Australia and China, the National Bank of India, and the Mercantile Bank of India, tell the same story. Acceptances have fallen heavily in each instance, while the Mercantile Bank alone records an increase in deposits. Except in the case of the National Bank of India, cash and bullion are together slightly higher than a year ago, while the trade depression and the lack of demand for accommodation for business purposes has apparently driven all three banks to add to their investments. Bill portfolios and advances show a general decline, but inasmuch as these banks are largely engaged in financing the movement of primary commodities, it is fair to assume that these contractions reflect largely the fall in prices. In these circumstances it was inevitable that net profits should have fallen, for, as the accounts of the National Bank of India show, working expenses have remained unchanged. The decline in profits, however, is not a serious one, and the National and Mercantile Banks have declared the same dividends as in recent years. The Chartered Bank, in respect of this year's final dividend and bonus, have withdrawn the concession under which all dividends and bonuses were previously paid free of tax. The rate, however, remains the same.

Elsewhere in this issue will be found an advertisement of the Odney Club at Cookham, run by the John Lewis Partnership. The club, which has facilities for boating, bathing, tennis, dancing, bowls and croquet, offers membership to a limited number of persons not connected with Messrs John Lewis or Peter Jones. We are glad to call attention to it in the belief that the very moderate fees and the extremely attractive opportunities offered will render the scheme of interest to many members of office staffs with whom our readers are in touch.

INSURANCE NOTES.

Equity and Law Life.—By reason of its strong legal flavour, and, recently, owing to devotion to the cultivation of single-premium (with loan) policies, the Equity and Law business has been characterised by the high average sum assured in respect of new policies issued. In 1930, for instance, 554 life policies were issued for an

average sum assured of almost £5,000, and the corresponding average, after deducting the amounts reassured with other offices, is still very high at approximately £3,500. In 1930 single-premium business, some of which, at any rate—judging by the increase in this item in the balance sheet—appears to have been accompanied by loans, again was responsible for a large proportion of the total; the amount of single premiums received was £498,000, compared with £558,000. The total net sums assured under new life policies were £1,868,000, compared with £1,646,000. No doubt a portion of the increase in business has been in consequence of the favourable position disclosed at the quinquennial valuation which took place on December 31, 1929. The structure of the asset side of the balance sheet of the society has always been an unusual one. The legal connections have been exploited with a view to mortgage business and, in turn, life business. The society also has considerable interests in reversionary transactions, both by way of loan and absolute purchase. The salient features are brought out in the following analysis:—

Mortgages	£1,774,000	
Loans on reversionary interests	1,070,000	
Loans on stocks and shares and on personal security	228,000	
Loans on the Society's policies	2,738,000	
		£5,810,000
Stock Exchange securities—		
British Government securities	813,000	
Other Stock Exchange securities	1,186,000	
		1,999,000
Properties	115,000	
Reversions and life interests	805,000	
Investment in subsidiary company—Law		
Reversionary Interest Society:—		
Ordinary stock	498,000	
Debenture stock	68,000	
		565,000
Miscellaneous	130,000	
		£9,424,000

Movements in these items during the past year have been confined almost entirely to mortgages, loans on stocks and shares, and to loans on the society's policies, all of which show substantial increases.

Life Association of Scotland.—New business in 1930 showed a small but satisfactory expansion from £1,133,540 to £1,376,525, the increase being achieved in spite of the cessation of single-premium (with loan) business. The Association's interest earnings in the past year have fallen from £4 12s. 11d. per cent. to £4 12s. 6d. per cent., but the decline in much less than might have been expected from the increase in the rate of tax. On December 31, 1930, a valuation of liabilities was made for the broken period from April 7, 1927. The financial year now coincides with the calendar year, and future valuations are to be made every three years. The results of the last two valuations are as follows:—

	April 6, 1924— April 6, 1927.	April 7, 1927— December 31, 1930.
Trading surplus earned during valuation period	£ 375,738	£ 585,944
Profits from securities	24,563	...
Brought forward	142,772	147,767
	543,073	733,711
Allocations:—		
To bonuses to policyholders	337,176	499,402
" shareholders	38,130	50,000
" staff pension fund	20,000	30,000
" carried forward	147,767	154,309
	543,073	733,711

The distribution to the policyholders has permitted the declaration of an increased reversionary bonus of 44s. per cent. on the sum assured for each year's premium due during the valuation period, compared with 42s. per cent. per annum on the previous valuation period. In addition to policies with immediate participation in profits the Association has a distinctive system of deferred participation, under which the bonus does not vest until the life assured has survived the expectation of life. In that series a reversionary bonus of 60s. per cent. or 44s. per cent. for each year's premium due during the valuation

period has been declared, according as the expectation has not or has been survived, together with a special additional reversionary bonus of 100s. per cent. The shareholders' portion has been utilised as to £12,500 for the purpose of paying up £1 5s. of the uncalled liability on the £40 shares. The paid-up capital now consists of £100,000, made up of 10,000 £40 shares each with £10 paid up. The annual dividend has been raised from 32s. 6d. to 40s. per share, and the price of the shares is now £45, compared with £37 a year ago. This represents an appreciation during the past twelve months of 22 per cent., and there are few ordinary shares that can show so good a result over the same period.

Abstainers' and General Insurance.—The life department of this company, which has headquarters in Birmingham and transacts life and general business amongst the lower middle class, is divided into two sections, the abstainers' section and the general section. Policyholders in the abstainers' section are offered an immediate advantage in the shape of a reduction in the premium payable, "with-profits" policyholders in both branches being allotted the same rate of bonus. This method of treatment, which is that followed by one or two other companies specialising in this class of business, seems rather illogical, for the natural method would surely be to charge the same rate of premium, but to allot such higher rate of bonus to the abstainers section as was justified by the results. The total new life assurance business in 1930 showed a decline from £790,288 to £736,661, and the fund of £2,955,000 has a premium income of £329,000. In the general branch there was a premium income of £45,000, slightly in excess of last year's figure, made up of Fire, Accident, Employers' Liability and General business, and the total underwriting surplus came to nearly £6,000, compared with £2,500 in 1929. The investments are fully set out in the annual report, and a comparison of this year's list with that of previous years shows very little change of importance. Nearly 25 per cent. of the total assets are invested in British Government securities, and of the £760,000 so invested 40 per cent. is held in the form of 5 per Cent. War Loan. In spite of substantial holdings of Australian Government securities and foreign bonds, the Stock Exchange securities showed an appreciation during 1930 of £26,282, which has been transferred direct to the investment reserve fund, now standing at £68,000.

British and Foreign Marine.—This company, having the advantage of the backing of the "Royal," which controls the share capital, has succeeded in wringing a profit from its marine business during the slump in marine insurance. The company's record during the past five years is shown in the following table:—

Year.	1st and 2nd Year Claims		Ex-penses.	Surplus.
	Premium In-come.	and Transfer to Suspense Account.		
	£	£	£	£
1925	489,382	343,807	92,015	53,560
1926	469,493	366,979	96,462	6,052
1927	502,387	385,100	93,152	24,134
1928	611,729	461,141	99,239	51,349
1929	550,408	435,158	95,222	20,028

As was foreshadowed in our review last year, heavy first year settlements are reflected in a profit for the 1929 account reduced to £20,000, compared with £51,000 in the previous year. It can hardly be said that the 1930 account has opened more auspiciously than that for 1929, for first year claims and expenses have absorbed 49 per cent. of the premiums, compared with 47 per cent. in 1929. The company now operates a small fire reinsurance account, and the result of the second year's operations in this account is a profit of £1,286, compared with a loss of £10,274 in the first year. The total trading of the year has resulted in a net surplus of £21,313, compared with £31,979 in 1929. Interest earnings are slightly lower, but are almost sufficient to meet the dividend, which has been raised from 13½ per cent. to 13¾ per cent.

Universal Automobile Insurance Company.—Although founded twenty-one years ago this company remains a small organisation with funds of only £120,000, and its business is almost exclusively devoted to motor-car insurance. From time to time it has strengthened its position, and a year ago it increased its underwriting reserves from 33¼ per cent. to 40 per cent. of the premium income. The premium income itself has shown a steady expansion, and has risen from £73,000 in 1925 to £122,000 in 1930. Moreover, the 1930 results show a considerable improvement over those for 1929, the account having been closed with a profit of 1.3 per cent. of the premiums, compared with a loss of 5.2 per cent. in 1929. The interest income is more than sufficient to enable the company to maintain its dividend at 12 per cent., a rate which has been paid now for several years past, and after bringing into account the balance of interest income and the trading surplus, there remains a sum of £933 with which to augment the company's surplus resources in 1930, compared with a depletion of £5,174 in 1929. A beginning has been made again with the building up of the general reserve fund by a transfer from profit and loss account of £5,000, though an investment reserve fund of £2,000 has been closed and the amount transferred to profit and loss account.

UNITED STATES.

Railroad Results — Capital Issues — Industry — Money Market — Bank Profits.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 13.

It is now clear that the much-hoped-for business improvement of the first quarter was in few cases more than seasonal, and in most instances it was less than that. Sentiment has undoubtedly improved, but it has had nothing very tangible for nourishment and probably has been a result as much as a cause of the decided improvement in investment markets. Shares have been hesitant throughout March, the bull party finding it difficult to attract a growing public following and having little to offer in the way of good news.

A wave of pessimism swept over Wall Street this week largely as the result of the reduction in the New York Central Railroad dividend. Rumours of a cut had been heard, but most people were surprised by the action. New York Central is the first railroad of major importance to reduce its dividend since the Pennsylvania lowered its rate during the post-war depression. Altogether four railroads have omitted or reduced dividends in the past year, but the majority are now not earning enough to cover current payments. Rates were maintained last year largely because of hopes for trade recovery. The first quarter has brought no appreciable gain either in freight movement or in earnings. On the contrary, the February results were about 40 per cent. below those for the same month of last year. Freight traffic is about 14 per cent. lower than a year ago and the railroads have curtailed expenditure about as much as they can without permitting impairment of their property. The results give point to the contention of railway managers that relief is needed from the increasing competition of motor trucks, buses and waterways.

Eastern railroads, which some time ago agreed upon a comprehensive merger plan whereby the territory would be divided among four large trunk line systems, will soon be ready to petition the Inter-state Commerce Commission to revise the Commission's published plan for mergers, which does not conform to the agreed upon plan as announced by President Hoover and the railroads, and to permit a regrouping. Nothing will be said in the first application about finance used or many details which

have been left to arbitration. These will be covered by applications to be presented later by the separate systems.

Revival of new capital flotations on a large scale was a feature of the week. An issue of \$75,000,000 of bonds for New York Central and of \$50,000,000 for the Pennsylvania Railroad came simultaneously with a \$66,000,000 Port of New York Authority issue. Those were the largest railroad financing operations for several years, and they were well taken by the market, as the offering came before the announcement of the New York Central dividend. Total new issues for the week were close to \$280,000,000, the largest for any week since the first of the year. Apart from State of New York borrowing and further large short-term issues of the Federal Treasury, the new issue market will probably not have to absorb excessive amounts.

In some sections of the Press much has been made of approaching foreign borrowing on a large scale. Wall Street is much pleased with the statement of policy of the Bank for International Settlements with regard to aiding long-term borrowing and sees other signs of improvement in the foreign situation, though it considers the market for foreign bonds too dear to permit much borrowing at this time. Expansion of foreign loans will doubtless be a slow process.

The steel industry continues to improve. The operating rate is now estimated at 56 per cent. of capacity, and if the rate of gain during the past three months continues, the industry should be on a 75 per cent. basis by late spring. Prices are still unsatisfactory, and the mills are finding it difficult to cover their dividends. United States Steel Corporation has not earned its common stock dividend in the first quarter. Unfilled orders dropped 167,000 tons last month, but under the prevailing practice of hand-to-mouth ordering that is of no great significance other than indicating the confidence of consumers that no early price advances are likely. The industry regards orders as merely obligations of the mills to supply steel, but not of consumers to take it unless and until specifications are submitted. Steel ingot production last month rose 15 per cent. over January. The current rate is from 50 to 60 per cent. higher than that of last December.

In the motor industry there is also a more cheerful feeling, but progress is slow. General Motors Corporation has probably not covered its dividend in the first quarter. The copper industry is dull, and stocks of refined metal were almost stationary last month. Conditions are, if anything, growing worse in the oil industry. Production from the new East Texas fields is weakening prices, and the vast amount of shut-in production is a constant menace. A voluntary agreement for the reduction of imports has been reached among the leading oil-importing companies at the behest of the Government, legislation to that end having failed to pass the last Congress. No great good is hoped for, and efforts to bring about smaller imports were made to appease the popular clamour in the southwest. This country's exports of crude and refined oils is greatly in excess of imports, and reduction of imports will probably only divert Central and South American oil to foreign markets now reached by oil produced in this country. Moreover, the total imports are negligible in comparison with domestic production, actual and potential.

Preparations to meet quarterly tax payments on March 16th and to meet the Treasury's \$1,517,000,000 refunding and new borrowing programme have eased the money market, after some stiffness a few days ago, when call money ran up to 2 per cent., for the first time since January 2nd. Time rates, which had risen ½ per cent., also came down. Banks have tried to lend greater sums by allowing their reserves at the Federal Reserve Bank to run off, expecting to replenish them next week when the Treasury will have an overdraft of \$200,000,000 or so. Tax collections will, in all probability, be much smaller than a year ago, though the sum paid in during March will be increased by the tendency of those with smaller payments to meet it all at once. Under the law, payments may be made in four instalments on the quarterly tax dates. Total Treasury allotments on its recent offers

were \$1,517,000,000, or \$117,000,000 more than the original offer.

Bank profits this quarter have shown a gratifying rise over the closing months of 1930. Thanks largely to the reduction in clearing house interest rates on deposit money, the banks have been able to make something even at the low rate prevailing for customers' loans and security loans.

Commodity markets are a trifle firmer, and recent rains throughout the country have improved the prospect for farm crops. This has tended to deflate somewhat the political unrest of the interior. Threats by radical members of the Congress to force a special session this summer are not at the moment taken seriously.

FRANCE.

Budget — Revenue — Foreign Trade — Coal Industry — Proposed Increase in Coal Import Duty.

(FROM OUR CORRESPONDENT.)

PARIS, March 25.

THE Senate is making excellent progress with the Budget and setting an admirable example to the Lower House by cutting oratory to the lowest limits, while at the same time thoroughly exercising its constitutional rights to limit proposed expenditure to what is absolutely necessary. M. Abel Gardey, who now occupies the responsible post of Budget Rapporteur, so long held by M. Chéron, shows in his general report that the Senate Finance Commission's recommendations, if adopted, will have the following results taking the Budget as a whole:—

	Voted by Chamber. Francs.	Proposed by Commission. Francs.
Estimated Expenditure	50,742,081,650	50,464,651,491
Estimated Revenue	50,753,631,435	50,648,057,937
Estimated Surplus	11,549,785	183,406,446

The Chamber, in dealing with the Budget proposals submitted by the Government, increased the original expenditure proposed by 596,795,261 francs. The Senate Finance Commission proposes reductions of this extra expenditure by a total of 277,500,000 francs. Of this total, 146,000,000 francs represents proposed cutting down of increased expenditure voted by the Chamber in connection with the departmental Budgets for the War Office (29,500,000 francs), Navy (32,160,000 francs), Air Force (20,560,000 francs), Colonial Defences (25,600,000 francs) and Pensions (38,000,000 francs). The Senate has rejected the Chamber's proposal to annul last year's reduction by 50 per cent. of the tax on Bourse operations for the account. The Senate considers that the replacement of the tax at its former level would be a retrograde step and could only prove harmful to the development of the Paris financial market. The Ministry, although M. Laval did not make the question one of confidence, when the vote was taken in the Chamber, has already expressed doubts as to the advisability of the reimposition of the full rate of these Bourse taxes, and the action of the Senate is regarded as likely to result in the impost being left where it is.

The revenue returns for February—which, with March, is always one of the leanest months of the year—furnishes certain encouraging signs of the economic situation of the country, notwithstanding the general depression. Treasury receipts from all sources totalled 2,890,214,000 francs (against 2,993,903,000 francs in February, 1930, and 2,828,487,000 francs in 1929). This was 56,000,000 francs more than Budget estimates (against a drop of 136,000,000 francs in January), and only 168,500,000 francs below the yield in February last year, notwithstanding the large amount of taxation reduction since then. With the exceptions of Customs (which produced £97,000,000 francs more than in February, 1930),

motor spirit, colonial fruit and vanilla duties, the whole of the "indirect" list showed a decline on the corresponding month last year. The yield from the various turnover taxes was 15 per cent. down, partly due to falling prices and partly to slight reductions in the scale of this impost. Taxes on securities produced 18 per cent. less, while those on Bourse operations (which were reduced last year by 50 per cent., so far as dealings for the account are concerned, in the hope that this would lead to a large increase in international transactions) showed a decline of over 60 per cent. The tax on motor-cars, which was also reduced last April, yielded 7,111,000 francs (or 12 per cent.) more than in February last year. Amusement taxes produced 13 per cent. less, taxes on railway transport 7 per cent. less, and those on transport by water 14 per cent. less. The yield from the sugar taxes, which were substantially lowered over a year ago, was, in February, 39 per cent. more than in the corresponding month last year.

The foreign trade returns for February show appreciable increases on the month in both exports and imports, but indicate that the month's exchanges resulted in a still larger adverse balance than that represented by the new high record figure set up in January. Total exports amounted to 2,757,331,000 francs, against 4,034,704,000 francs in February, 1930, and imports to 4,064,872,000 francs, against 4,813,172,000 francs. Raw materials formed over 80 per cent. of both exports and imports. Imports of foodstuffs were 186,195 tons (262,719,000 francs), or nearly 40 per cent. larger than in February last year, owing to the disappointing French wheat crop in 1930, while exports of French foodstuffs were, for quite different reasons, about 50 per cent. smaller. The heaviest drop in exports was in manufactured goods, which were 769,741,000 francs, or over 30 per cent. less than in February, 1930.

Coal imports during January and February declined from 5,864,310 tons to 4,757,459 tons. The coal situation here is now the subject of close examination. Following their efforts to induce the miners to agree to a cut in wages, in view of the present difficulties of the industry, the coalowners in the Northern field on Friday affixed notices at all their pitheads announcing a lowering of wages equivalent to 10 per cent. of the premium rates paid, which corresponds to a cut of 8 per cent. in the total wage, one-half of this reduction to come into effect last Sunday and the balance on May 1. The standard wage hitherto for skilled miners at the coal face has been 43 francs 75 centimes per day, which, under the cut proposed, would be reduced to 40 francs 25 centimes. The coalowners' notices were posted immediately after the confirmation by the Miners' National Council of their intention to call a general coal strike for the end of March. M. Pierre Laval, the Premier, in his capacity as Minister of Labour, is keeping in close touch with both the coalowners and the miners' representatives, and, apparently, no effort is being spared to arrive at an agreement without a conflict.

Meanwhile, a movement is in progress to excite public opinion in favour of a substantial increase in the present import duties on foreign coal. The present impost is based on a tax of 1 franc 20 centimes pre-war which was established under the Second Empire, in 1860. To-day this tax is represented by one of 2 francs paper, which is substantially lower than the original rate. The French revenue authorities also levy a second tax of 2 francs 50 centimes paper per ton on imported coal. This corresponds to the production tax which is also imposed on all French native coal, and so is not recognised as a hardship on importers. It is pointed out that British coal exports to France have increased from a shade over 9,000,000 tons in 1927 to 13,500,000 tons in 1930; Belgian from 2,397,000 tons to 3,551,000 tons, and Dutch from 653,000 tons to 1,545,000 tons, while Poland is now sending in nearly 800,000 tons a year. Export bounties, preferential railway rates and other forms of dumping, it is alleged, place practically all foreign importers in a position to fix their selling prices at figures with which the French mines cannot compete. An increase of the import duty from 2 francs a ton to 6 francs is being called for.

GERMANY.

Austro-German Agreement — Bank Results — German Banks in South America.

(FROM OUR CORRESPONDENT.)

BERLIN, March 25.

FOR Germany, as well as for the rest of Europe, the sensation of the week has been provided by the preliminary agreement between Austria and Germany, having, as its ultimate object, the conclusion of a Customs union. The announcement came no less as a surprise to Germany than to the rest of the world, for the secret had been carefully kept to the last moment.

The signature and publication of the agreement at this precise moment is due to the collapse of the Tariff Truce Conference at Geneva, and the impending assembly of the preparatory conference for European Union in Paris. The agreement has, however, been in preparation for a long time, for it has its origin in M. Briand's conception of a European Union and in the recommendation of regional agreements which arose out of his proposal. Neither Berlin nor Vienna fails to realise that an Austro-German Customs union has an important bearing on high politics, but what that bearing is to be depends on the attitude of the other European Powers. It depends upon them whether the agreement is to be only the first step towards a reform of European commercial politics or whether it is to remain a matter of the private relations between Austria and Germany.

The legal position of the contracting States seems unassailable. Careful consideration was, of course, given in Vienna, in drawing up the agreement, to the provisions of existing treaties. Not only the peace treaties of Versailles and St. Germain are relevant, but, as far as Austria is concerned, the Geneva Protocol of 1922, which does not, however, concern Germany. Austria adheres to the point of view which she took up in 1922, that the Geneva Protocol does not in any way add to her obligations under the Peace Treaty. Elsewhere, especially in Prague, this attitude is contested. It is true that the Geneva Protocol, which established the League reconstruction programme for Austria was also directed against a scheme for Customs union, but the clause was at that time aimed not at Germany, but at Italy. In the desperate circumstances of the summer of 1922, Austria had been negotiating with Italy on the questions of a customs and currency union, and it was principally the British protest which led to the abandonment of this plan and to the transfer of the reconstruction measures to Geneva.

The difference, however, between the Italian plan of 1922 and the plan for an Austro-German Customs union is juristically of very great importance. The 1922 proposal involved a complete absorption of Austria into the Italian economic system, whereas the Austro-German Customs union would be a contract between two independent sovereign states which would give up none of their independence, and which propose to emphasise this fact by limiting the term of the treaty and providing for denunciation at relatively short notice. Moreover, it is well known that Germany and Austria have invited all European States to join them in the treaty, and the offer is meant perfectly seriously. The invitation is of greatest immediate importance to the agricultural states of South-east Europe, Hungary, Roumania and Yugoslavia. Roumania and Yugoslavia had already, some months ago, formed an alliance for commercial policy, aiming at preferential treaties with Central and Western Europe. On the other side has been formed a Northern bloc, including Holland and Belgium, to which the free trade tendency latent in the Austro-German Customs union can only be welcome. England's decisions in the matter of commercial policy are now anxiously awaited, but the great question is whether and how far the other States will allow their attitude in a matter of commercial policy to be determined by political motives.

Whereas the principal German banks all maintained their dividends for 1929 unchanged, the only reduction

being that from 10 to 8 per cent. by Adca, they have made the following substantial reductions in their dividends for 1930:—

	1929.	1930.		1929.	1930.
D. D. Bank	10	8	Berliner Handelsgesellschaft	12	8
Dresdner Bank	10	6	Reichscreditgesellschaft	8	7
Danat Bank	12	8	Barmer Bankverein	10	8
Commerz Bank	11	7	Adca. Leipzig	8	5

The 4 per cent. reduction in the dividends of the big banks was made by unanimous agreement. Profits were already substantially down in 1929, and losses on outstanding debts had in part to be met from the hidden reserves. In 1930 the profits of normal banking business did not decline very much, but further losses from bad debts had to be written off. The collapse of Stock Exchange prices had a still more serious effect in 1930. All the German banks hold very large quantities of shares of industrial companies with which they have relations, and they have been obliged in addition, during the last two years, to make further purchases in order to support the Stock Exchange. The share index of the Berlin Bourse fell 25 per cent. in 1930 and the banks had to write down the book value of their shares correspondingly. This reduced the current profits of the D. banks by amounts far exceeding Rm. 10 millions. In the case of the D.D. Bank, which is the largest, there was in addition to heavy internal writings off, a special writing-down of securities to the amount of Rm. 21½ millions, whereas the dividend now distributed only amounts to Rm. 17 millions.

In consequence of the general economic crisis and the fall in Stock Exchange values the shares of the large banks also have been sold heavily during the last few months. The D.D. Bank has made use of these sales to reduce its capital to Rm. 250 millions by the purchase of Rm. 35 million shares. The fusion of the Deutsche Bank and the Diskontogesellschaft in September, 1929, could only be effected by a simple addition of their capitals, which raised the total capital to Rs. 285 millions. The D.D. Bank shares then stood at 160; the fall in quotations made possible the purchase of its own shares last month at 115½. This purchase at a premium of 15½ means a small loss to the reserves, but it reduces as from next year the amount of capital on which dividend has to be paid. The capital and reserves now become Rm. 410 millions, which still amounts to 10 per cent. of the item "creditors," a more than adequate proportion. The fusion proved very favourable during 1930 and the expenses of the bank were reduced from Rm. 156 to 134 millions.

The German banks operating in South America have also had to reduce their dividends, principally on account of losses due to the depreciation of the Argentine and Brazil exchanges. The Deutsch-Überseeische Bank, an offspring of the D.D. Bank with a capital of Rm. 36 millions, is paying 5 per cent. for 1930, against 7 per cent. in the preceding year. The Deutsch-Südamerikanische Bank, which is connected with the Dresdner and Danat Banks, is paying 4 per cent., against 6 per cent. last year, on a capital of Rm. 20 millions. These distributions were both very conservative, as in view of the uncertainty of conditions in South America the bank's chief concern was to build up their dividends.

DENMARK.

Agricultural Exports — Industrial Reports for 1930 — Banks — Shipping — Foreign Trade.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, March 22.

THE decline of prices is still continuing in Denmark, although not quite so rapidly as in certain periods of last year. From December, 1930, to February, 1931, the Danish wholesale price index fell from 120 to 117; and export goods, especially agricultural products, showed

the most marked decline in price. In consequence, the agricultural situation is not very satisfactory. Selling prices, especially for export, have declined substantially, while the cost of production has only been slightly reduced. In spite of this, production of butter, bacon and eggs continues to capacity, partly under the stimulus of the very low prices of grain.

The weakened purchasing power of the farmers has reacted upon some sections of industry, which have their main sale in the home market. At the same time, the export industries have experienced increasing difficulties on the world markets. The industrial employment figures, therefore, show a somewhat lower percentage than last year, and the number of unemployed at the end of February was 71,000.

Most branches of Danish industry did not feel the adverse conditions until towards the end of 1930, and the majority of industrial companies are paying their shareholders the same dividend as last year, even though profits, according to the accounts, are somewhat lower for 1930 than for 1929. The most extensive industrial concern of the country, Burmeister and Wain, engineers and shipbuilders, is paying 8 per cent., or the same as last year, but the working profits amount only to about Kr. 5,250,000, against Kr. 7,000,000 a year ago. The Danish Ford Motor Company has paid 10 per cent. (unchanged), and Nordiske Kabel and Traadfabrikker has actually increased its dividend from 7 to 8 per cent., while on the other hand the Nordisk Fjerfabrik has reduced its dividend from 10 to 7 per cent. That the earning power of industry is much below what it was last year is evident. Much now depends upon the possibility of avoiding the labour conflict foreshadowed by the notice of extensive lock-outs on the part of the employers.

The Danish banks have had a fair year in 1930, though profits, especially for the leading banks, have not reached last year's figures. In spite of this, they have declared the same dividends as for last year: Landmandsbanken 5 per cent., Privatbanken 6 per cent., and Handelsbanken 8 per cent. The shipping companies, on the other hand, have, generally speaking, shown very poor results. Many companies have not earned a profit at all and are unable to pay a dividend; others have reduced their dividends very much. An exception to this is the most important shipping concern in the country, the United Steamship Company, which is principally based on a liner trade. Although profits are somewhat below those for last year, the dividend paid is unchanged at 6 per cent.

Foreign trade in 1930 and in January, 1931, was as follows:—

	In million kroner	1930.	January, 1931.
Imports	1,727	126	
Exports	1,610	117	
Excess of imports	117	9	

Danish purchases in Great Britain and Ireland in 1930 amounted to Kr. 251,000,000, against exports to those countries of Kr. 946,000,000.

JUGOSLAVIA.

Industry — Foreign Trade — Unemployment — Money.

(FROM OUR CORRESPONDENT.)

BELGRADE, March 21.

THE annual reports of the various industries of Yugoslavia make anything but cheerful reading. Only the electrical and textile industries have escaped the depression, and even the textile industry encountered difficulties in placing its products towards the close of the year. On the whole, industries working for the home market have fared better than those manufacturing for export, since the latter are much more liable to sudden fluctuations and severe competition. The crisis is particularly acute in timber, the largest industry of the country, where almost a score of the bigger enterprises had either to close down or else reduce output by half, while nearly one hundred sawmills

have ceased work entirely. Almost equally poor are the reports of the sugar, alcohol, milling, cement, leather, paper, heavy metallurgical, starch and oil industries; while glass and artificial fertilisers are only slightly better, the former having been able to export to Turkey and the latter to South America.

Commerce is equally depressed, and here also the slump is greater in foreign than in home trade. In foreign trade a deficit of 180 million dinars in 1930 contrasts with a surplus of 327 millions in 1929. The figures read:—

IMPORTS.			
	Tons.	Mill. dinars (Paper).	Mill. dinars (Gold).
1929	1,671,521	7,594.7	693.0
1930	1,518,583	6,960.1	635.1
Decrease ...	9.45%	8.36%	
EXPORTS.			
	Tons.	Mill. dinars (Paper).	Mill. dinars (Gold).
1929	5,329,866	7,921.7	722.8
1930	4,733,223	6,780.0	618.6
Decrease ...	11.19%	14.41%	

That trade has not yet reached its ebb is evident from the January figures, which read: Imports, 410; exports, 384 million dinars; as against 560 and 616 millions respectively in 1930.

That, in such conditions, Yugoslavia does not show any greater increase in her unemployment figures is entirely due to her agricultural character, as most of the labourers, except in the more skilled industries, are recruited from the peasantry, who drift to the towns after harvest in search of seasonal employment. When unable to find work in the towns they remain on the farms and do not appear in the official figures, but their enforced idleness contributes to the depression, as it entails expenditure of capital, a reduced standard of life, a curtailment of purchases of goods from the towns, and postponement of investment in land improvement. It is argued by economists that if employment could be found for this vast potential labour army, and the circulation of money thus quickened, much would be done to ease the crisis itself. This, they point out, should not be impossible in a relatively undeveloped country, in which as much as 2,000,000,000 dinars (£7,000,000) of home capital lies idle, especially as this money, obtainable at present in business only at 8-12 per cent., is bound to cheapen because of its own pressure, as well as the pressure of cheap international unemployed capital.

The financial trend has recently been in the direction of cheaper credit. The Privileged Agrarian Bank alone has placed 757 million dinars (£2,700,000) in the country at from 8 to 10 per cent., and much of this has been used for the conversion of peasant debts to country banks and usurers (often identical) concluded at 24 per cent. As the Bank has another 600 millions to dispose of by the end of the year, and since the total peasant debts are estimated at 3,000 to 4,000 million dinars (£11-14 millions) the problem, if not entirely solved, will be lightened by at least one-third. It is hoped that, later on, the Bank may be able to place mortgage bonds abroad, and thus extend its sphere of activity still further. Moreover, as the State has foregone the 4 million dinars due to it as dividend from its shares in the bank, the latter has decided to lower its rate of interest to co-operatives from 8 to 7 per cent. The State Mortgage Bank has followed suit by reducing its rate also from 9 to 8 per cent. on mortgages, and from 8 to 7½ per cent. on bills, while relaxing at the same time the terms of repayment. Finally, the National Bank has lowered its discount rate from 6 to 5½ per cent., though even at this rate much of its credit lies unused. Similarly, several of the larger private banks have begun to place money in municipal loans, of which the recent loan of the First Croatian Savings Bank to the Dubrovnik Municipality, viz., 40 million dinars (rate of issue 95, interest 8 per cent.), is the most conspicuous. Thus money is gradually becoming more abundant and cheaper, though neither the rate nor the amount is sufficient to augur a speedy lifting of the depression. It is expected, however, that the proposed new bank law, once it comes into force, may also contribute towards cheaper credit, since it is directed against small local banks with high rates of interest and favours amalgamations.

CANADA.

Weather — Business — Agricultural Prospects — Embargoes — Foreign Trade — Parliament.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 10.

HOPES of an early spring for Eastern Canada faded last week-end in face of the first heavy blizzard of the winter. It did considerable damage, but the snowfall was very welcome to the farmers, as there had been a scarcity of water in many places and the ground was too dry for proper spring cultivation. General business remains in an unsatisfactory condition, with the economic depression in the West still a deterrent to any upward movement. The February business review of the Bureau of Statistics gives the following weighted indices for the physical volume of business for January in Canada (1919-24 = 100), corrected, where necessary, for seasonal variation:—

	January, 1930.	December, 1930.	January, 1931.
Forestry	198.8	162.0	153.6
Mining	187.4	149.8	139.5
Construction	420.0	154.0	246.0
Manufacturing	151.3	127.8	124.0
Employment in trade	137.2	144.4	126.5
Imports	156.0	118.4	115.8
Exports	111.0	82.2	83.8
Carloadings	120.6	92.4	103.1
Shares traded	390.1	210.5	149.1
Bank debits	146.1	117.5	130.1

It is claimed that the protectionist policies of the Bennett Ministry are beginning to show results in increased industrial activity. As the result of the change in motor duties several American corporations are taking steps to establish Canadian branches, and a Quebec company announces that, during 1930, 21 new industries came into operation in the province of Quebec. The latest employment index of the Bureau of Statistics for the beginning of February hardly bears out these claims; with the base 1926 = 100, the index is 100.7, as compared with 101.7 on January 1, and 111.6 a year ago.

Reports from the West continue to be very gloomy, and the relief measures of the Governments are entailing a heavy expenditure. However, the Federal Government has decided to make generous loans for seed grain, and the plans of Mr Beatty's Agricultural Credit Corporation are taking practical shape. Meanwhile the Western farmers are being deluged with exhortations against any concerted attempt to cut their wheat acreage. Of their own accord they have been turning more to mixed farming and feeding their grain to stock. It is forecast that before summer there will be an increase of 300 per cent. in the hog production of Saskatchewan alone, but the problem of marketing the finished product remains to be solved. It was recently discovered that the Danish co-operative bacon factories were able to offer bacon in Montreal, after paying a duty of 1½ cents per pound, at a price of less than 29 cents per pound; and the Bennett Ministry, on the excuse that foot-and-mouth disease was prevalent in Denmark, promptly imposed an embargo upon imports of Danish bacon. But it is clear that, if such a measure is necessary to check Danish competition in the Canadian market, there can be little hope of meeting it successfully in the British and other European markets.

There has also been a rapid increase in butter production, amounting in some of the prairie provinces to more than 60 per cent. in the last four months, and it is predicted that once the spring pastures are available for milch cows, the price of butter, which is now 30 cents, will slide down to an export basis of not much above 20 cents per pound and falsify the hopes raised for the Canadian dairy farmers that the heavy duties imposed upon New Zealand butter would improve prices. The cattle industry has also been disastrously affected by the Smoot-Hawley tariff, and in 1930 the exports of live cattle to the United States declined to 20,000, as compared with a peak of 160,000 head a few years ago. Some trial shipments of Canadian cattle to Britain have realised for the exporters just about the same price as they would have netted in the local markets, and they

claim that the new regulations of the British Ministry of Agriculture, which insist upon better accommodation on shipboard for cattle, will cause a rise in cattle freight rates and wipe out any prospect of a profitable revival of an export trade in cattle to Britain.

Mr Julian Piggott, representing British steel interests, is at present in Canada holding conferences with the Canadian steel manufacturers and the Bennett Government for the purpose of exploring schemes for a plan of Imperial rationalisation in the steel industry. He is reported to be encountering a sympathetic reception for his proposals. Negotiations for the stabilisation of the newsprint industry through a gigantic merger are still proceeding, and the mining industry is receiving a welcome stimulus from the recent advances in the prices of silver, copper and other minerals, but until the problem of an adequate market for the prairie farmers is solved there can be no revival of general prosperity.

The Federal Parliament meets on March 12th, and a lively and highly controversial session is anticipated. The portents still indicate that the Bennett Ministry is going ahead with an upward revision of the tariff, which the Liberals and Progressives will strenuously resist. The Budget problem is still the Government's paramount difficulty, for the fall in revenue continued in February and the total receipts for the first eleven months of the fiscal year, placed at 322½ million dollars, show a decline of 79 millions as compared with the parallel period of the previous year, and in the same period expenditure has mounted by 21 million dollars. There is, therefore, already a deficit of 100 million dollars in sight, and it is understood that the Government, having found that the idea of a turnover tax is unpopular with the business community, is now contemplating an all-round increase in the sales tax.

INDIA.

Budget — Import Duties — Military Expenditure.

(FROM OUR CORRESPONDENT.)

CALCUTTA, March 8.

THE fact that this year's Indian Budget was followed so closely by the announcement of the Irwin-Gandhi agreement had two important consequences. Public attention was diverted sharply from financial to political problems, and such criticism as was forthcoming was softened by the expectation that the cessation of political strife will yield economic compensations offsetting to no slight extent the new taxation imposed. Compared with the reappearance in the sky of the sun of political co-operation, so long obscured by the stormy atmosphere created by the civil disobedience movement, the new fiscal burden seems a very small cloud indeed, casting too insignificant a shadow to arouse much perturbation. It is also realised that all countries are suffering alike, and that, apart from the special losses traceable to political unrest, India has no reason to complain. So far as this country is concerned, as the Finance Member maintained, "the fundamental position is still sound," and a year of political tranquillity and gradually reviving trade should render it still sounder.

It is felt, however, in some quarters that, at a time when Indian cultivators have been hit so hard by the world fall in prices, fiscal measures calculated to raise the price-level of the articles they have to buy, whether manufactured locally or imported, cannot be regarded as well-timed. For example, in the ten months ended January, shipments of raw jute totalled only 518,000 tons, against over 704,411 in the corresponding period last year, realising only 11½ crores against over 24 crores on the larger shipments in the previous year. When the growers of the staple exports of Bengal are thus obtaining only about half the prices paid for their produce a year ago, it does not seem opportune to force them to pay higher prices for cotton piece-goods and other necessities. Only a few weeks ago, under the guise of a protective duty, the Government of India also

imposed a very high tariff on galvanised sheets, which are purchased by these same cultivators. As against the lower value of exports of raw cotton, which yielded 13 crores less than last year on the same tonnage shipped in the ten months ended January, the Finance Member pointed to the increasing world demand for Indian cotton and emphasised that the continuance of this demand depends almost entirely on Indian cotton remaining at its present very low price-level. As an illustration of expanding demand he stated that the Lancashire Cotton Corporation hope shortly to be taking up more than 4,000 bales a week and eventually more than double the quantity. In what way the Lancashire Cotton Corporation will be encouraged to pursue this policy by imposing ever-rising tariffs on Lancashire cotton goods entering India Sir George Schuster did not explain. He emphasised, however, that it was partly in order to keep the price of Indian raw cotton low that the Government refused all assistance to measures designed to maintain prices on an artificially high basis.

It is difficult to understand why, while the Government co-operate in depressing the price of the raw material, they join in assisting the cotton mill-owners to force the prices of piece-goods to progressively higher levels. It is true that the new duty on piece-goods is imposed nominally for revenue purposes, just as the higher duty on galvanised sheets was imposed nominally to assist the Tara Steel Company, although the latter's output is only 25,000 tons maximum against 300,000 tons imported. On the other hand, the Finance Member, while claiming to have distributed fairly the burdens which it is necessary to impose, takes credit for having so manipulated the tariff that the new imposts "may have results not unpropitious for the development of Indian industry." The Congress boycott helped to reduce the imports of Lancashire piece-goods; the new taxation, imposed in two succeeding years, will help to consolidate the situation thus created.

In Calcutta, the European commercial community criticise the Budget as definitely and deliberately anti-European, the criticism being based upon the fact that it is only the European community who pay anything approaching their fair proportion of the income and super-taxes. It is not denied that the yield of these taxes is substantially below the appropriate sum owing to widespread evasion in the Indian community; but to prevent such evasion is not easy and consequently the Government have fallen back on the expedient of raising the rate, thus imposing additional burdens on that part of the community which is honest enough to meet its commitments. Many of the import duties also affect commodities consumed chiefly by the European community. In present conditions the probable effect will be to reduce consumption.

The reduction in military expenditure was not unexpected, for recently the actual outlay of the Army Departments has fallen appreciably below Budget allotments. Further reductions, however, will be necessary in order to give substantial financial relief, and the extent of these will depend upon the decisions reached concerning the future composition of the forces in India and the pace of Indianisation.

It is possible, in view of the fact that the formulation of the Budget programme preceded the completion of the Irwin-Gandhi agreement, that the Finance Member has under-estimated the probable yield of the old taxes, and over-estimated the need of additional sources of revenue. The range of possible improvement in the financial and economic situation in the year 1931-32 may be measured by the losses traceable directly to the incidence of the civil disobedience movement in 1930-31, as detailed in the Finance Member's speech. In that event, the year's operation may yield a fairly substantial surplus, provided that political and commercial conditions reveal the progressive improvement now hoped for. The Finance Member has alluded to some of the new taxes as temporary, but previous experience of similar assurances predisposes to scepticism on this point. It is much more probable that, at a later stage, still further taxation will be imposed in order to reinforce Provincial revenues.

Letters to the Editor.

FIXED TRUSTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with great interest your very excellent article on "Fixed Trusts" and fully agree with your adverse criticisms. But there is one point which, I think, you have to some extent overlooked.

You explain fully how the offered price of a Fixed Trust unit is calculated on the offered price of the components, plus commissions, issue charge, service charge, etc.; and you further state that the sponsors maintain a bid price for the trust units half a point below the current offered price. But all the above is on the assumption that the Fixed Trust is continuing to grow and is therefore continually having to buy components. When the Fixed Trust ceases to grow (which will probably be at the very time when the investor may wish to sell) the bid price, although it may still remain at half a point below the then offered price, will have to be calculated on a totally different and lower basis. This will be on the bid price of the various components less the various selling expenses, and will not include the various special expenses, such as service charge of 5 per cent. and the issuing charge of 18 cents per share, which is now included in the offered price.

Incidentally, have you realised that the present bid price of half a point below the offered price of, say, \$7 represents approximately a 7 per cent. "turn," as against a "turn" of about ½ per cent. to 1 per cent. one probably expects on the shares of the component companies?—Yours faithfully,

London, E.C. 3.

LONDON BROKER.

March 24, 1931.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your valuable article in the *Economist* of March 21, 1931, gives a very fair presentation of this class of investment. It might perhaps be pointed out that, although the loading charge of these fixed trusts is heavy, it is a non-recurring expense and represents only about ¼ of 1 per cent. for the period during which the trust operates.

The collection and cashing of coupons and rights in dollar securities is a tedious and costly matter for the small British investor who is anxious to spread his risk, but who cannot face the tedium and expense of encashing dividend coupons, bonuses, rights, etc., in twenty-eight companies. Your comparison of a list of leading British undertakings with the giant corporations of the U.S.A. is a little misleading. The fortunes of British industrial concerns ebb and flow, and are subject to greater risks than can be the case with the great American concerns, many of which are virtual monopolists in their own field. Such corporations are so bound up with the whole economic life of America that it is difficult to envisage their shrinkage or eventual disappearance. However, the warning you give in regard to jobbing backwards is opportune.—Yours faithfully,

W. TUDOR POLE.

61, St. James's Street, London, S.W.1.

March 25, 1931.

[The points raised in the two letters given above are dealt with in a "Note" on page 683.—Ed., *Econ.*]

Books and Publications.

A CONTRIBUTIVE SOCIETY.

THE main point which the author of this book* wishes to make is that the nature of any economic system ultimately depends on the human motives which keep it going. We can therefore only change the system if we can discover and bring into play hitherto neglected motives. The present system relies chiefly on self-interest (which Mr Bellerby with doubtful psychological accuracy subdivides into natural self-interest concerned with the satisfaction of bodily needs such as hunger, and acquired self-interest comprising such mental urges as love of power or notoriety). These, in turn, are reinforced by subsidiary motives (some of them non-self-regarding) and, above all, by force of habit.

Mr Bellerby goes on to show that while these motives serve, after a fashion, to keep the wheels going round,

* "A Contributive Society." By J. R. Bellerby. Education Services, Ltd. 1931. 7s. 6d.

they also introduce much grit into the machine. Accordingly he restates the familiar failings of an economic system that rests upon unrestrained acquisitiveness. To escape these failings he would have us explore the possibilities of what he has called the contributive society; by which we are to understand a world in which every citizen is moved chiefly to maximise his contribution to the common product; in which, in fact, people think more of what they can put into the pool and less of what they may get out of it. Such an attitude, Mr Bellerby holds, might be greatly developed by an educational system directed to that end. At present most schools are, at the best, concerned to encourage the individual child to develop his individual faculties. For one child even to help another with his homework is actually an offence. Only in sport are children encouraged to look to the result of their corporate activities. If in sport, why not also in class?

Mr Bellerby's reforming zeal, however, does not end with his plans for re-orientating the educational system. He even makes the startling suggestion that those who really believe in the possibilities of the contributive motive might band together to put those proposals into practice here and now, cherishing the hope that in the end they might leaven the whole lump. This proposal may be open to criticism on a hundred points of detail; but it is refreshingly courageous. That any reformer should in these days seriously propose to practise the social faith that he preaches is sufficiently remarkable; that an economist of recognised standing should be afraid neither to practise nor to preach is an event that his colleagues cannot afford to ignore. Mr Bellerby's book is a curious mixture of originality and commonplace, ranging over psychology, economics and educational philosophy without delving very deeply into any; but he deserves to be read at least for his evident sincerity and earnestness of purpose.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

India on the Brink. By A British-India Merchant. (London) P. S. King and Son, Ltd., Orchard House, Great Smith Street. 3s.

The author, who quotes liberally from the Simon Report, has produced a readable little book, well calculated to effect his purpose of acquainting those electors who have not time to read the Report for themselves with the essentials of the Indian problem.

Problems of Peace. Published for the Committee of the Geneva Institute of International Relations. (London) Oxford University Press, Warwick Square. 8s. 6d. net.

A most interesting collection of lectures by such leading experts in international affairs as Professor Gilbert Murray, Professor de Madariaga, M. André Siegfried, and Sir Andrew McFadyen.

Commerce Year Book, 1930. Vol. II. Foreign Countries. (Washington, D.C.). Superintendent of Documents. \$1.

One of the most important collections of world statistics. A very comprehensive section is devoted to each country, giving statistics of population, industry, trade, transport and finance, and there is also a valuable section devoted to comparative world statistics.

Government Control of Crude Rubber. By Charles R. Whittlesey. (London) Oxford University Press, Warwick Square.

An exceedingly full and well-documented account and discussion of the Stevenson Plan.

Regulation of Banks in India. By M. L. Tannan. (Bombay) D. B. Taraporevala, Sons and Company, "Kitab Mahal," Hornby Road. Re. 1.

A short discussion of the necessity and possible methods of bank regulation in India.

Towards Social Equality. By John A. Hobson. (London) Oxford University Press, Warwick Square. 2s. net.

An interesting lecture, given under the auspices of the L. T. Hobhouse Memorial Trust.

Soviet Dumping. By Edouard Luboff. With a Foreword by the Rt. Hon. Lord Newton. (London) Anglo-Russian Press Association, 82, Victoria Street. 1s. A plea for defensive measures.

Unitarismus und Föderalismus. By Dr. Fritz Kleiner. (Jena) Verlag von Gustav Fischer.

A short essay on federalism in Switzerland and the United States.

Les Relations entre Patrons et Ouvriers. By Eugène Schneider. (Paris) Imprimeries Renouard, 19, Rue des Saints-Pères.

Reprint of a lecture in which M. Schneider outlined a scheme of industrial relations designed to maintain in corporations the same opportunities for collaboration as were afforded by the old employer-employee relation.

La Guerre d'Aggression comme Problème de Droit International. By Prof. Uden.

L'Espagne, l'Homme et le Peuple. By Prof. Vossler.

Démocratie française et Démocratie allemande. By Prof. Vermeil.

(Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint-Germain. 4 frs.

Three interesting essays.

Il Mercato del Cotone. By Giorgio Mortara. (Milan) Università Bocconi.

The cotton market survey in the "Prospettive Economiche" series.

Company Law. By Allan Walmsley. (London) Longmans, Green and Co., 39, Paternoster Row. 5s.

A conveniently small and concise handbook with a good index.

Statistics of the Affiliated National Organisations for 1928-29. (London) International Co-operative Alliance, 14, Great Smith Street.

A most valuable collection of statistics which affords a basis for comparison between the national co-operative societies of different countries.

Finland—A Nation of Co-operators. By Thorstein Odhe. Translated by John Downie. (London) Williams and Norgate, 38, Great Ormond Street. 3s. 6d. and 5s.

A study of co-operation in Finland.

International Labour Review, March, 1931. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes an article by Mr H. B. Butler on "The Social Effects of the Economic Depression in North America."

"Fairplay's" Annual Summary of British Shipping. (London) "Fairplay," 51-56, Palmerston House, 51, Bishopsgate. 15s. net.

Contains lists of the directors, managers and principal shareholders of British shipping companies, with their balance sheets; tables of cargo-boat and liner earnings and of shipping share quotations; lists of shipbuilders, ship repairers, engineers and marine insurance companies, information on sales of vessels in 1930, and statistics of coal and oil prices in recent years.

The Stock Exchange.

THE LONDON TRANSPORT BILL AND THE INVESTOR.

IN spite of the strictures of M. Siegfried, Great Britain continues to show vitality and originality in the development of its political institutions. The constitution of the Central Electricity Board, in 1926, was a bold endeavour to co-ordinate private enterprise in an important sphere of economic activity, and to subject it to State control without loss of business management and efficiency. The main outlines of a second application of the same principle are embodied in the London Passenger Transport Bill, which obtained a second reading in the House of Commons on Monday last. With certain of the broader economic issues implicit in this measure we deal in an article on page 665. In the following paragraphs we propose to discuss a number of questions which have more particular relevance to the position of investors in the stocks of those companies coming within the purview of the Bill.

The measure proposes to set up a Board of five, appointed by the Minister of Transport after consultation with the Treasury, to take over the Underground group, the Metropolitan Railway, all the tramways and the independent omnibus undertakings operating in the London area. The Government does not intend to interfere in the commercial conduct of London passenger transport; it gives the Board a free hand. At the same time, it provides for the public ownership of the stocks and shares of the Underground group, the Metropolitan Railway and the 'bus companies, of which nearly £110 millions are issued. The main financial provisions of the Bill are summarised in a "Note" on page 684 of this issue.

It is not within the scope of this article to consider the possible objections to the Bill which may be voiced by the L.C.C. and other municipalities. We are concerned at this stage only with the privately owned railways and 'buses and the position of their debenture and preference stockholders on the one hand and of their equity stockholders on the other. In a letter to the Minister of Transport, Lord Ashfield, Chairman of the "Underground" group, has made it clear that the group do not quarrel with the principle of co-ordination embodied in the Bill, since they have themselves urged the desirability of complete fusion in the past. Incidentally, we may point out that many Underground developments of recent years have been financed at a low rate with Government assistance (by way of the Trade Facilities Acts) which could not be extended indefinitely to purely private interests. The Underground group have reserved the right to press for numerous changes in the details of the Bill on the Committee Stage.

On the whole, existing debenture and preference stockholders would appear to have little cause for apprehension. Apart from the Trade Facilities Stocks, which are specially treated, all fixed-interest stocks will be exchanged for the A and B stocks of the Transport Board—which will be trustee securities—on terms to be finally determined by the Arbitration Tribunal, whose impartiality should be above suspicion. There may, however, be some disappointment on the part of holders of the irredeemable debenture and preference stocks with the clause of the Bill which limits the term of stocks issued as "consideration" to 90 years, but this would appear to be unavoidable. Again, it is desirable that the Act, in its final form, should lay down clearly the position as regards, e.g., debentures which are to be redeemed at a premium at some future date. At present the Bill appears to make no provision for covering the premiums. The current prices of the fixed-interest stocks to be exchanged are shown in the next column, the irredeemable stocks being marked by an asterisk.

The equity stockholders of the Underground group, the Metropolitan Railway and the 'bus companies may be more critical of the Bill than the holders of the fixed

† Allowing for accrued interest and redemption.

stocks. It will be observed that the basis for the transfer to the Board of the various undertakings is the existing capital obligations in the case of the local authorities and past earnings in the case of railways and the 'bus companies. This implies that in so far as money has been unwisely spent by local authorities on unremunerative tramways, the London Transport Board will have to carry the burden of redeeming lost capital. We refer to this question, and the possibility of the adoption of a more advantageous basis for the transfer of local authority undertakings, in an earlier article.

Criticism may also be directed towards the clause in the Bill requiring the Arbitration Tribunal to pay special regard to net profits for the three financial years prior to the passing of the Act and the probability that such profits would continue to be earned if the Act had not been passed. (Clause 11 (i).) Our reading of this clause is that the Arbitration Tribunal is not required to pay attention to the fact that future profits might be expected to be higher than present profits owing to skilful management, the automatic growth of London passenger transport, and the fructification of wisely planned schemes for the construction of new railways or other extensions and improvements. The recent capital expenditures of the Underground group, for example, should eventually give a return in excess of the fixed interest on the debentures issued, which would have gone to increase the equity of the common fund. This consideration has been entirely ignored in the Bill, as we read it.

The treatment of equity shareholders, indeed, involves innumerable difficult problems. What policy will be followed as regards undertakings which have not yet made profits, but are clearly destined to earn them in the

future? Is identical treatment to be meted out to companies which have under-distributed profits, put money consistently back into the business by way of "visible" and "invisible" reserves, and improved the physical condition of their undertakings, and companies which have divided each year's earnings up to the hilt? In the case of the Underground, should the criterion be the contribution made by various component companies to the "pool," or the share of the proceeds which each receives? The distinction is a vital one. The whole undertaking has been run as a joint enterprise, under an Act of Parliament, and if, for example, some traffic has been diverted of recent years from trains to 'buses, in the interest of the general undertaking, it would scarcely be equitable from the railway stockholders' point of view to assign the whole benefit of this policy, on a three-years' profit basis, to the 'buses alone.

Apart from these general criticisms, particular objections may be lodged against the Bill by individual groups whose undertakings are acquired. The Underground Electric Railways Company of London is a holding company, and will, in future, hold London Transport Stock in place of the stocks of the companies mentioned in the first schedule. The schedule to the Bill does not mention certain of the "associated companies," in particular, the Associated Equipment Company, manufacturers of London 'buses and commercial motor vehicles, although Clause 3 (3) (c) empowers the Board to manufacture rolling stock and vehicles.

With regard to the Metropolitan Railway, it must come as a surprise to readers that Schedule I, Part 2, of the Bill includes the acquisition of the "undertaking of its Surplus Lands Committee." The equity stockholders of the Metropolitan may reasonably ask what good purpose is served by the London Transport Board managing country estates in "Metroland" or the Chiltern Court block of flats over Baker Street Station.

As regards Thomas Tillings and Tilling and British Automobile Traction, Ltd., it appears that only the London portion of the vast Tilling and British Automobile Traction group is to be taken over. Clause 5 (2) (b) expressly limits the Board to take over such parts of the undertaking as consist "in the provision of services of stage carriages licensed under the Metropolitan Public Carriage Act, 1869," employed in maintaining regular services on approved routes. The same applies to the independent 'bus companies. The actual drawing of the line between the London services and those branching out of London into the country will not always be easy.

There has been no marked selling of the principal equity stocks of the Underground group, Metropolitan Railway or Thomas Tilling since the publication of the Bill, but a precautionary marking down of prices, except in the case of Tilling, has taken place:—

	March 11.	March 25.	Div.	Yield.
Underground Electric Rly. 23/- ex.	22/-	22/-	8	7.27
Metropolitan Rly. 56½ ex.	55½	55½	3½	6.34
Thomas Tilling 112/6 112/6	112/6	112/6	25*	4.44

*Plus cash bonus 50%

It is, of course, impossible to appraise the values of these equity stocks until the terms of exchange have been agreed upon or determined by the Arbitration Tribunal. Even so, it will be difficult, if not impossible, to estimate the future earning power of the Transport Board, which will depend not only on the combined receipts of the undertakings taken over, but on the economies effected, the greater efficiency secured by the co-ordination of traffic, the future scales of charges, and the general business ability displayed by the five "dictators."

THE "JOHNNIES" GROUP IN 1930.

(BY OUR MINING CORRESPONDENT.)

THERE is certainly ground for satisfaction in the fact that of the six Rand gold-mining subsidiaries of the Johannesburg Consolidated Investment Co., whose annual statements are now available, three show distinctly improved results, while a fourth has virtually maintained its position. An ample supply of native labour has been a contributory factor.

The adverse rumours recently current in regard to the Government A—they were associated with a fall in the price of the shares—prove to have had but a modicum of foundation. The tonnage and value of the ore reserves is virtually the same as that of twelve months ago. It has, however, to be recognised that a substantially increased development footage was performed. The payable percentage averaged 49, as against 56, the value being 14.8 dwts. over a channel width of 44 ins. in place of 12 dwts. over 42 ins. As its share of the profits the Union Government received £1,469,280.

The unexpectedly large increase in the distribution of the New State Areas arose from the favourable effects of growth in average yield as well as in tonnage milled; though costs were somewhat higher than before. The latter feature was chiefly due to the adoption of a policy of intensive sorting—which in some degree accounted for the former. The debenture liability has been reduced to £233,250, and will be entirely extinguished in about three years. Other things being equal, a further expansion in dividends should follow.

With the Van Ryn Deep, results were adversely affected by the decline in grade, which has been in progress for some years. The effect of a fresh diminution in both the quantity and value of the ore reserves must be faced. The consulting engineer states that not much development remains to be done on the main reef leader; results on the upper leaders were well maintained.

We append a five-year contrast of results:—

As regards the companies whose properties are situated elsewhere than the Eastern Rand, special interest attaches to the position of Randfontein. The favourable expectations entertained in regard to the report of this company are not disappointed. The ore reserves display an expansion of nearly 800,000 tons; the value is also higher than before. The consulting engineer supplies confirmation of recent statements as to the flattening of the reef, adding "it would appear that a great proportion, if not all, of the main reef series on your property lies at a workable depth." By the drawing made on March 1st the debenture debt has been reduced to £202,000. This balance should be cleared off during the current year, thus opening the way for dividends. In the case of the Langlaagte the improvement in results arises from higher average yield. Much the same could be said of the Witwatersrand (Knights). The latter company reports a small improvement in the ore reserve position, but the mine obviously cannot last much longer.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 7.	April 9.

A long account is never popular, particularly when it includes the Easter break and precedes the Budget. Throughout the past week the market was dull and spiritless, even mining shares losing their vigour. Neither the Bank's bullion purchases nor the strength of sterling had any appreciable influence on gilt-edged securities, the market being exceptionally quiet. Most stocks closed fractionally lower over the week. Indian loans lost ground on the news of the Cawnpore riots. The progress of Mr Theodore's inflationist adventures at Canberra and the threatened "default" by New South Wales caused heavy declines in Australian stocks, dealers once again quoting ten-point margins, and on Thursday refusing to deal except by negotiation.

Foreign bonds were easier. Brazilians were depressed by the fall of the milreis, by rumours that Sir Otto Niemeyer's financial recommendations would be of a drastic character, and by unconfirmed reports of fresh internal disturbances. European bonds were heavy on evidence that France was anything but enthusiastic as regards the Austro-German Customs agreement.

Home rail stocks, at the outset, were unfavourably affected by the accident to the "Royal Scot" and fears of the attitude of the workers towards the Wages Award, though a modest recovery followed its acceptance by the locomotive men's union. Undergrounds were generally steady. The maintenance of the San Paulo dividend caused a brisk rise in the shares. Despite more satisfactory traffic returns, other South American rails lost ground on dividend fears and currency depreciation. North American rails were erratic.

Industrial prices were steady for the most part, but public interest was conspicuously absent. Brazilian Tractions suffered a sharp setback on reduced February earnings, and the fall in the milreis. Bear closing caused a slight rally in Columbias and Gramophones, which were heavily sold on the news of the merger (the terms of which are discussed on page 684). Cables and Wireless remained dull. Motor shares were easier. Among Engineering issues Vickers receded on the lower earnings shown in the report (see page 686), but Guest Keens and William Cory were harder. Tobacco and Brewery shares were firm, though quiet. Textiles showed fractional losses. No enthusiasm was evinced at the news of the debenture issue by the Lancashire Cotton Corporation. Rayons had an uncertain appearance, but were little changed. Electrical shares were steady with the exception of Calcutta Electric. Liptons rose on reconsideration of the merger terms, but Home and Colonials were dull. Swedish Match and Kreuger and Toll improved, following Continental support.

Oil shares were again out of favour, a rumoured further cut in the price of petrol, though unconfirmed, arousing some anxiety. Wide margins were quoted for some shares. Another unfavourable factor was the in-

creased output of crude oil in America. Bear closing, however, steadied the price of Shells and Royal Dutch. News that the Anglo-Dutch Rubber Committee would not resume negotiations for restriction produced a widespread marking down of rubber shares, further declines being recorded on Thursday, when the commodity reached a new low level. Tea shares were featureless.

The mining market lost its former air of activity, became unresilient, and dealings contracted. Kaffirs, however, were a little better on the publication of the "Johnnies'" annual report, and Randfonteins were firmer. Paris was indifferent, but modest support was forthcoming from Johannesburg. Tin shares were dull and prices moved within narrow limits. Dealings in Australian mines were negligible.

We are officially informed that at the first meeting of the Committee for General Purposes of the Stock Exchange, elected for the year 1931-32, Mr Archibald Henry Campbell was elected chairman, Mr Herbert Francis Chamen deputy-chairman, and Mr Arthur Louis Francis Green secretary.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The week's business was inconclusive as a guide to the probable trend of prices in the near future. At the outset the bears again attempted to exploit weakness in individual stocks, but without much effect, a sharp recovery occurring on subsequent covering operations. An unfavourable factor in market sentiment was the announcement of numerous dividend reductions, 90 concerns having passed their quarterly distributions this year so far, while a further 115 have reduced their rates. A rally from which rails were the chief beneficiaries followed a dull interval on Tuesday, but the market afterwards developed extreme irregularity, with a noticeable contraction in the volume of trading. The announcement that the Farm Board would finally cease its operations in support of the wheat market on July 1st, leaving farmers to reduce their acreage, though not unexpected, had an unfavourable effect. The rumour that further legislation is projected to assist the farmer by other means is generally discounted. General trade continues to show little beyond a seasonal movement. Weekly car loadings have recently had a more favourable trend, and steel operations have reached 55½ per cent. in the case of United States Steel and 57½ per cent. in that of the independent companies. The recent increase of prices, however, has so far failed to bring out important new buying. Among special stocks, Auburn Auto showed a very sharp up-turn, the operation representing a successful bear squeeze. Some selling developed in Chemicals, but American Can and Radio Corporation were harder, the latter benefiting by the news of the Gramophone-Columbia merger. The bond

market showed a disappointing tendency to sag, new issue activity having been overdone.

INVESTMENT NOTES.

"Fixed Trusts"—A Statistical Analysis.—In last week's *Economist*, page 620, we dealt with the results of an imaginary "Fixed Trust" based upon the following thirty concerns, the first ten of which were chosen as being, in 1912, the lowest yielders (*i.e.*, the highest-priced industrial equities), the next ten as having the highest paid-up ordinary capital, and the final ten as paying the highest rate of dividend per £ of paid-up capital :—

Guthrie, Armstrong Whitworth, Bleachers, Fine Cotton Spinners, Furness Withy, Bolckow Vaughan, Maypole Dairy, Babcock and Wilcox, Metropolitan Carriage and Wagon, Bradford Dyeing, Linen Thread, Nigger, John Thornycroft, Ebbw Vale, Hudson Bay, North British Locomotive, Coltness Iron, R.M.S.P., J. and P. Coats, Crompton, Iron, J. Lyons, Five Coal, Triumph Cycle, Harrods, British American Tobacco, A.B.C., Liebig's, Crosses, and Winkworth, P. and O.

Our examination of the subsequent history of this imaginary Fixed Trust showed that a purchaser of £100 nominal of each component share, at the end of 1912, who retained his holding till 1930, would have obtained an average return of about 8½ per cent. per annum in income, and rather less by way of "capital" distributions (sale of bonus shares, rights, etc.). His holding to-day would have shown a depreciation of 57 per cent. on its original

cost of £14,102 (exclusive of commissions, etc.), after allowing for amounts realised on stocks sold on non-payment of dividends, under the terms of the Trust. Actually, of the thirty stocks, eleven fell by the wayside. The details are given below :—

Shares.	Total Purchase Price of £100 Nominal in 1912.	Total for which Sold.	Payments obtained in Interim.	"Income."	"Capital."
R.M.S.P.	135	76	12	Nil	Nil
Niger	360	100	31	113	Nil
Hudson's Bay	1,255	513	95	Nil	Nil
A.B.C.	340	175	78	Nil	Nil
Bolckow Vaughan	110	88	89	Nil	Nil
John Thornycroft	125	81	111	122	Nil
Ebbw Vale	95	6	105	8	Nil
Coltness Iron	275	119	104	156	Nil
Maypole Dairy	3,250	313	1,125	549	Nil
Armstrong Whitworth	240	25	162	52	Nil
Consett Iron	530	97	309	1,171	Nil

The figures are an eloquent commentary on the view that a Fixed Trust can only get out of a share on a bad market. Although the "Trust" had one or two fortunate experiences (it sold its R.M.S.P. stock in 1915, for example, at a much higher price than it could have obtained at a later date), more than a third of its stocks failed to stay the course, and were sold for only £1,593, against an initial purchase price of £6,715. This capital loss of £5,122 was only partially offset by previous "capital" receipts of £2,171. The natural result of the falling out of these stocks was that the annual receipts obtained by the Fixed Trust shareholder tended to decline as the life of the Trust increased. We show below the return on the original investment in the first three, the middle three and the last three years of the period covered by our investigations :—

	1913.	1914.	1915.	1920.	1921.	1922.	1928.	1929.	1930.
"Income" receipts	5.6%	4.7%	3.5%	4.2%	3.1%	2.4%	1.7%	1.8%	1.7%
"Capital" receipts	0.5%	0.8%	Nil	9.8%	2.0%	Nil	Nil	Nil	Nil

The capital receipts were irregular, varying from 20.1 per cent. in 1919 to nil in seven of the eighteen years. Broadly speaking, the longer the investor had held on to his Fixed Trust shares, the worse would have been his position. His experience in this respect has a significant bearing on the point made by a correspondent (whose letter appears on page 676), that the admittedly heavy "loading charge" of most contemporary Fixed Trusts represents a relatively small annual percentage if it be amortised over the whole period of a Trust's life. We do not endorse the same correspondent's view that the fortunes of British industrial concerns are necessarily subject to greater risks than "the great American concerns" which are so bound up with the whole economic life of America that it is difficult to envisage their shrinkage or eventual disappearance. We would point out, firstly, that it is not necessary for them to disappear, but merely to pass an ordinary dividend, for their stocks to be sold by the Trusts; and, secondly, that many of the companies chosen for our imaginary Trust in 1912 were most certainly, at that date, representative of industries "bound up with the economic life" of Great Britain. We also venture to refer our readers to the point made by a London broker correspondent as to the position of Fixed Trust stocks in a sellers' market. We hope, in a future Note, to contrast the figures given above with the results obtained by an investment, in 1912, in the securities of a number of representative British investment trusts run on "management" lines.

Lancashire Cotton Corporation Debentures.—On a later page we summarise the facts given in the prospectus of an offer of £2,000,000 Six-Year 6½ per cent. First Mortgage Debenture Stock by the Lancashire Cotton Corporation, Ltd., under the auspices of the Bankers' Industrial Development Company, Ltd. The views of our Manchester correspondent are set out on page 668. The issue

is the second large operation undertaken by the B.I.D. company—which is “backed” by the Bank of England and the most important financial authorities of the City of London—in pursuance of its rôle of intermediary between depressed major British industries and the investor, whose resources are essential to their rationalisation. The first issue under the B.I.D.’s auspices, comprising £1,000,000 National Shipbuilders’ Security 5 per cent. Debentures at 95, was secured by a species of “turnover tax” on the contract value of orders placed with British shipbuilders. The security in the present instance is the freehold and leasehold property and other earning assets of a concern whose formation represents the most serious effort yet made to rescue Lancashire from her trading difficulties. The corporation may eventually own nearly 10 million spindles, but, as its operations for the year to October 31st last resulted in a net loss of £162,368 before depreciation, it has, unfortunately, no record of past earning power on which to base a direct appeal to the investor in the ordinary way, though the prospectus shows that a reasonable expectation exists for future profits from the new “Indian cotton” yarn which the corporation is now producing. The sponsors of the issue have endeavoured to increase the attractiveness of the issue in five distinct ways. Firstly, they have given the new debenture stock precedence over all other engagements of the corporation—including the bank indebtedness of the mills acquired by the corporation (which has already been converted into income debenture stock), though an appreciable part of the proceeds, in fact, will be used to repay advances made to the corporation by its own bankers. Secondly, the issue is of a short-term character, the assumption clearly being that, in six years’ time, the corporation, having “made good,” may be in a position to fund its liability at a lower rate of interest. Thirdly, the yield offered is high, the flat rate being £6 13s. 4d. per cent. and the redemption rate £7 0s. 6d. per cent. Fourthly, interest is guaranteed for five years by the Sun Insurance Office, Ltd., for a payment of 500 guineas plus £10,000 per annum, covering an annual interest liability of £130,000. Finally, the issue has the backing of the “A” shareholders in the B.I.D.—in other words, of the “powers that be” in the City.

The Gramophone Merger.—The directors of the Gramophone Company and the Columbia Graphophone Company announced last week that they had agreed upon an amalgamation on the following terms. A new company is to be formed to acquire the entire issued capital of both companies on the basis of an exchange of shares. Ordinary shareholders in the Gramophone Company, Limited, are to receive one £1 ordinary share in the new company for each £1 ordinary share held, and preference shareholders one £1 6 per cent. preference share in the new company for each £1 5 per cent. preference share now held. Ordinary shareholders in the Columbia Graphophone Company are to receive one £1 ordinary share in the new company for each 10s. ordinary share held, and preference shareholders six £1 6 per cent. preference shares in the new company for every five £1 7 per cent. preference shares now held. Prior to the merger each company intends to pay a dividend of 3s. per share, less tax, on its ordinary shares, while the Columbia Graphophone will distribute among its shareholders by way of bonus and in the form of voting trust certificates its holding in Columbia Phonograph Co., Inc., of America. The existing capitalisation of the two companies and the capitalisation of the merger company on this basis are shown in the following table:—

	Columbia Graphophone.	Gramophone.	Merger Company.
	£	£	£
Preference ...	300,000 (7%)	100,000 (5%)	660,000 (6%)
Ordinary	1,282,871 (10/-)	3,240,000 (£1)	5,805,742 (£1)
	1,582,871	3,340,000	6,465,742
Debentures ...	Nil	300,000	300,000

It is impossible to give a forecast of the earnings of the merger company until the accounts of the constituent companies are published. The fact that dividends of 8s. per share are being paid by each company on its ordinary

share capital suggests, of course, that Columbia earnings are at approximately double the rate of the Gramophone Company. No explanation was given as to the policy of the merger company or its connection with the Radio Corporation of America. It is understood that on account of the anti-Trust laws in America the Radio Corporation could not figure directly in the merger. The Radio Corporation controls the Victor Talking Machine Company, which in turn controls the Gramophone Company by holding 1,700,000 shares out of a total of 3,240,000 shares. The Columbia Phonograph, Inc., of New York, is controlled by the Columbia International, Ltd. Presumably it is the shareholding of Columbia Graphophone, said to be 81,000 shares of the Phonograph Company, which is to be distributed by Columbia among its shareholders. The ramifications of the merger company will be world-wide. The Gramophone Company, in addition to its English business, has factories in France, Spain, Germany, Italy, Australia, India, and Turkey. The Columbia has factories in France, Germany, Holland, Belgium, Italy, Spain, Switzerland, Argentina, Brazil, Chile, Australia, Turkey, and Japan. Apart from its American business the Columbia International, Ltd., controls Carl Lindström, of Berlin, and through the latter the Trans-Oceanic Trading Company, of Amsterdam. The merger company will obviously be able to effect considerable savings. To take one example, each company is operating in Australia a factory sufficient to supply the whole of the Australian market. Rationalisation should enable the merger company to reduce the prices of its products to levels competitive with those of the cheaper priced products at present being marketed by the “independent” companies. The merger company will now control all the important Radio, Western Electric and Marconi patents in the talking-machine field, for the Gramophone Company acquired in 1929 the right to use Marconi patents in all branches of public entertainment. The merger puts the whole talking-machine world at the feet of the combined sales organisations. Columbia and Gramophone ordinary shares touched 31s. 3d. and 31s. 10d. respectively in December last. They are now quoted 53s. 1½d. and 49s. 6d. respectively, the difference being accounted for by the estimated value of the rights to Columbia Phonograph shares attaching to Columbia Graphophone.

London Traffic Bill Terms.—In a leading article on page 678 we discuss the provisions of the London Passenger Transport Bill from the point of view of stockholders in the companies it is proposed to take over. Our readers may find the following summary of the relevant clauses of the Bill useful for purposes of reference:—

(i) For the purpose of satisfying the consideration to be paid for the undertakings acquired, as well as for raising new money or redeeming existing stock, the Board is empowered to create stock to be called “London Transport Stock” of four classes, “A,” “T.F.A.,” “B” and “C,” to rank in this order of priority (Clause 25 (2) and (3)). Stock issued as consideration for the purchase of undertakings will be redeemed at or before the end of a period of 90 years (Clause 25 (4) (a)). All stock of the same class, although issued at different dates and bearing interest at different rates, will rank *pari passu* (Clause 25 (9)), and all stock other than “C” stock will rank as trustee securities (Clause 25 (11)).

(ii) The “T.F.A.” stock will bear interest at the rate of 4½ per cent., will be guaranteed as to principal and interest by the Treasury, and will be issued in exchange for London Electric 4½ per cent. City and South London 4½ per cent., and Central London 4½ per cent. redeemable debentures, 1942/72, which are guaranteed as to principal and interest by the Government under the Trade Facilities Act (Clause 25 (5)). The “A,” “B” and “C” stock will bear interest at such rates as the Board, with the approval of the Treasury, may determine (Clause 25 (4)). In the case of the Underground and Metropolitan groups, the “A” and “B” stock will be issued in substitution for existing stocks and shares carrying a fixed rate of interest or fixed maximum dividend. (Clause 25 (7) (1)). In the case of Tilling and the independent bus companies, no more than two-thirds of the total stock to be issued as consideration is to take the form of stock other than “C” stock (Clause 25 (7) (ii)).

(iii) The consideration, whether in cash or stock, to be paid for the undertakings acquired by the Board will be determined in relation to

(a) the average net profits earned for the three past financial years in the case of the Underground, Metropolitan, Tilling and bus companies, ignoring possibilities of profit as a result of amalgamation (net earnings being arrived at after meeting all proper charges, including provision

for replacement or renewal of assets subject to depreciation or obsolescence (Clause 6 (i) and 3 and Clause 11 (i) (a) (b) (c)), and (b) the capital obligations in respect of interest and sinking funds in the case of the local authorities (Clause 6 (2)).

(iv) The actual amount of the consideration to be paid by the Board will be agreed as between the companies and the Board, or otherwise determined by arbitration. For this purpose, a Tribunal to be called the London Passenger Transport Arbitration Tribunal is set up, consisting of three Commissioners, of whom one shall be a president “having legal experience,” one a person “of experience in business” and one a person “of experience in finance,” all to be appointed by the Lord Chancellor (Clause 9).

(v) All receipts of the Board are carried to a transport fund and all payments of the Board are made out of that fund. The revenues of the Board are applied in the following order (Clause 31):—

- working and overhead expenses;
- interest on any temporary loan;
- amount to be transferred to the Tramway Debt Liquidation Fund;
- amount of interest payable to local authorities in respect of monies borrowed by them in connection with the transferred undertakings;
- interest on the “A,” “T.F.A.,” “B” and “C” stocks respectively and any arrears of interest thereon in the order specified;
- any sums required to be paid into any redemption fund or sinking fund;
- any sums required or authorised to be paid into the reserve fund, which is to rise up to £4,000,000, and is to be applicable only towards meeting any deficiencies on revenue account.

A criticism of the proposed measure, in its broad economic aspects, will be found on page 665.

Imperial Chemical Industries, Ltd.—It is always necessary to preface our comments on the annual report of Imperial Chemical Industries, Ltd., with the remark that, as the company does not publish a consolidated income account and balance sheet, the accounts are devoid of significance. The profits for 1930 were set out in our issue of March 14th last, page 574. Net profits were reduced from £5,780,208 to £4,473,892, the ordinary dividend from 8 per cent. to 6 per cent., and the deferred dividend from 2 per cent. to nil. The disappointing results of 1930 were attributed by the directors primarily to the reduction in purchasing power of the great producers of primary commodities. The sales of the alkali and general chemical groups fell in volume by about 14 per cent., mainly as a result of the depression in the textile and galvanising industries, while those of explosives were adversely affected by the depression in the coal and mining industries. Abroad, the sales of fertilisers increased, but in Great Britain they declined by nearly 25 per cent. As a result of the slump in the textile trades, the volume of sales of dyestuffs declined by 13 per cent., and that of lime by 12 per cent. as a result of depression in the building trades. In non-ferrous metal goods the trend of sales was also downward. The directors state that the large programme of capital expenditure of the past few years on modernising plant and concentrating manufacture has been practically completed. More than £2,000,000 was spent during last year on maintaining the efficiency of manufacturing facilities. As regards the balance sheet, the directors give the following analysis of investment holdings:—

Class.	Book Value in the Balance Sheet at 31.12.29.	31.12.30.	Increase or Decrease.
	£	£	£
(1) “Subsidiary” companies in which the company holds over 50 per cent. of the shares or control	54,090,970	54,569,212	+ 478,242
(2) “Associated” companies in which the company holds 50 per cent. or less of the shares	6,875,122	6,402,589	- 472,533
(3) Marketable and other investments	7,946,523	9,363,664	+ 1,417,141
	68,912,615	70,335,465	+ 1,422,850

The increase in marketable and other investments is in part attributed to the temporary investment in Australian Commonwealth bonds of cash accumulations in Australia which could not be remitted home at the present time. The total reserves at the end of 1929 amounted to £16,725,000, and, after making the year’s appropriation

A description of the ODNEY CLUB, Cookham, Berkshire.

Telephone: Bourne End 228.

(Cookham Station is thirty-five minutes from Paddington and about ten minutes’ walk from the Club.)

Enquiries for membership, copies of the Rules, etc., or applications to see the Club by appointment should be addressed to the Secretary, Major-General L. A. E. Price-Davies, V.C., C.B., C.M.G., D.S.O., Lollebrook Manor, Cookham, Berkshire (the main Club-house), or to any of the following members of the Election Committee.

Miss C. A. PARTRIDGE, 28 Glebe Place, Chelsea, S.W.3.

Mrs. L. A. E. PRICE-DAVIES, The Odney Club, Cookham, Berkshire.

Mr. G. S. CONWAY, M.C., M.A. (Cantab.), 3 Alberon Gardens, N.W.11.

Mr. O. B. MILLER, B.A. (Oxon), 32 Lansdowne Crescent, W.11.

Mr. T. W. ROBINSON, A.C.A., 35 Redcliffe Gardens, S.W.10.

Mr. M. WATKINS, M.A. (Cantab.), Formosa Place, Cookham, Berkshire.

The Club belongs to the John Lewis Partnership, which is itself a far-reaching experiment in social and industrial reform. The Partnership controls large and profitable companies in London (John Lewis and Company, Limited, of Oxford Street, and Peter Jones, Limited, of Sloane Square). Under a trust-settlement the whole of their profits (apart from interest and dividend at fixed rates upon outside debenture and preference share capital) are distributed to the whole of their workers (already more than two thousand persons) of all grades, in proportion to ordinary pay, as the best measure of individual contribution to the total result. As part of this scheme for securing that all of the material advantage of ownership of an industrial organisation shall belong to those who are for the time being its workers, the Partnership maintains this Club.

The broad policy is to offer to the members and to their friends all the advantages of riverside-country-house life with boats, grounds and club-rooms of genuinely first-class quality and good plain cooking, but with no unnecessarily expensive luxuries. The Club supplies wines, cider and ale, but no spirits.

It is beautifully situated upon the Cliveden Reach of the Thames, immediately under the Cliveden Woods. There is a very long frontage to the main River up to Odney Pool, and a millstream flows through the grounds. The full plan provides for more than thirty hard-courts for lawn tennis (of which eight have been made already), besides croquet courts, bowling greens, etc. There is a large fleet of punts, canoes and other craft, and excellent swimming.

The buildings are of first-rate quality, with central heating and plenty of bathrooms. Concerts and dances are arranged frequently. There is already permanent residential accommodation for forty members, and week-end bedroom accommodation for about twenty more. More rooms will be provided in due course.

The Club is not intended to be more than just barely self-supporting, and it is believed that the rates of subscription mentioned below will prove sufficient. There is no extra charge for boats, tennis, etc., and the charges for meals and for bedroom accommodation are extremely moderate. The total bill for a week-end from Saturday afternoon to Sunday evening need not be more than ten shillings, including, as aforesaid, unlimited tennis, boating, dancing, etc.

Membership of the Club is open, of course, to all members of the Partnership, that is to say, to all grades of the staff, but the grounds (which are finely timbered and cover more than a hundred acres) have proved to be about double their present requirement. It is proposed accordingly to admit “non-partner members” to this extent.

Non-partner members will be asked to pay an entrance fee of ten shillings and sixpence and a subscription of:

Six guineas for the whole year (the Club year begins on the 1st April),
or four guineas for the half-year ending 30th September,
or three guineas for the half-year ending 31st March,
or proportionately for any shorter period down to half a guinea for half a month.

to central obsolescence fund, the reserves now stand at £17,225,000. The total issued capital of the company was increased by £190,070 during the year on account of the exchange of shares for the minority interests in Brunner Mond, United Alkali, British Dyestuffs and four other subsidiary companies. The directors' report did not greatly impress the market, and the shares were slightly easier at 16s. as compared with a high level of 29s. in 1930.

Vickers.—The latest accounts of this leading shipbuilding and engineering concern make less unsatisfactory reading than might have been expected. Trading profit has fallen by 7.8 per cent., and no provision is made for depreciation, but after allowing £212,870, against £144,778, for income tax, and paying prior charges, the dividend of 8 per cent. is still covered by earnings of 11.3 per cent.

	Year to December 31,		
	1928.	1929.	1930.
	£	£	£
Net profit	939,903	941,971	775,926
Brought forward	208,721	217,704	228,755
Preference dividend ...	418,190	418,190	418,190
No. of times covered ...	2.2	2.3	1.8
Ordinary capital:—			
Earned £	521,713	523,781	357,736
Paid £	262,730	262,730	254,520
Earned %	15.9	15.9	11.3
Paid %	8	8	8
Reserve	250,000	250,000	100,000
Carried forward	217,704	228,755	231,971

The strength of the balance sheet lies in the large amount of liquid resources held in the form of cash and Government securities, whose total has increased from £5,437,032 to £5,861,368. The accounts of Vickers-Armstrong, which accompany the parent company's report, show a surplus after all charges of £337,407, against a debit balance of £22,543 in the preceding year. The "A" preference dividend is paid for 1928, absorbing £319,215. Shareholders will await with interest the views of their chairman as to the possibility of maintaining the company's earning power in 1931.

British Insulated Cables.—Though a year of depression has reduced the gross profit of this conservatively managed company from £685,980 to £576,594, it has in no way affected its financial stability. Earnings of 24.2 per cent. per ordinary share compare with 32.2 per cent. last year, but the 10 per cent. dividend is still covered with a large margin:—

	Year to December 31,		
	1928.	1929.	1930.
	£	£	£
Net profit	474,175	536,550	426,012
Brought forward	305,880	250,089	280,806
Preference dividend.....	30,000	57,500	57,500
No. of times covered	15.6	9.3	7.4
Ordinary capital:—			
Earned £	444,175	479,050	368,512
Paid £	200,000	250,000	250,000
Earned %	37.8	32.2	24.2
Paid %	15	15	15
Reserve	299,966	198,333	120,000
Carried forward	250,089	280,806	279,317

The addition of £120,000 raises the total reserve to £1,020,000 on an ordinary capital of £1,666,666. At the annual meeting Sir Alexander Roger referred to the growing competition in the cable industry, which made a really large turnover and more economical processes absolutely imperative. British Insulated Cables in June, 1927, entered into a closer working agreement with two of its former rivals. Further "rationalisation" has followed, and is still proceeding, with the object of reducing costs to meet foreign competition.

Associated Portland Cement.—Under the chairmanship of Mr P. Malcolm Stewart, the Associated Portland Cement, like the London Brick Company and Forders, continues to flourish. The actual trading profits of the company declined from £575,484 to £534,781, but this was more than offset by an increase in interest and dividends from £359,631 to £420,369, with the result that the total net income was 2 per cent. higher at £955,150. The company's subsidiary, the British Portland Cement, maintained its 1929 rate of dividend, and the directors do not disclose what were the investments in associated companies which yielded "a substantial increase in revenue" in spite of "the severe competition in all markets both at home and abroad." Lower selling prices were met by further economies in the cost of production. Fresh extensions are in hand at some of the company's works overseas, which will be completed during the current year. The company's net earnings, after depreciation and debenture sinking funds, amounted to 8.7 per cent. on the £3,000,000 capital, the dividend rate being maintained at 8 per cent. The next table shows the distribution of the net profits over the past three years:—

	Year to December 31,		
	1928.	1929.	1930.
	£	£	£
Net profits (after tax)	934,580	935,115	955,150
Fees	3,400	2,800	2,700
Deb. interest and redemption	297,650	297,650	297,650
Depreciation	267,150	267,150	267,150
Earned for dividend.....	366,330	367,515	387,650
Preference dividend.....	125,660	125,622	127,586
Earned for ordinary dividend	240,720	240,893	260,064
Percentage earned	8.02	8.02	8.7
Percentage paid (gross)	8.0	8.0	8.0
Carry-forward	140,006	140,899	160,964

The Associated Portland Cement is actually earning a much larger percentage return than 8.7 per cent. The debenture stock redemption funds are taking £108,231 a year. Adding back this sum and including the company's share of the undistributed profits of the British Portland Cement, the total net earnings last year amounted to 15.12 per cent. The balance sheet shows that £98,139 debenture stock was redeemed and cancelled last year. The total amount of debenture stocks outstanding is now £3,829,018. A strong financial position is disclosed. The ordinary shares of the company are quoted at 24s. 9d., their high level last year being 27s. 6d.

John Barker.—The 1930-31 results of this large store are eminently satisfactory, net profits showing a negligible decline despite last year's economic depression. The following table gives the results over the past three years:—

	Year ended January 31,		
	1929.	1930.	1931.
	£	£	£
Net profit	444,901	468,686	466,140
Preference dividend.....	46,175	46,175	46,175
No. of times covered	9.63	10.15	10.09
Ordinary dividend:—			
Amount	221,266	221,266	221,266
Earned %	36.04%	38.19%	37.96%
Paid %	20%	20%	20%
To rebuilding and modernisation reserve	100,000	125,000	150,000
To pension fund	10,000	10,000	10,000
Written off fixtures, furniture and fittings	41,268	25,000	35,000
Written off goodwill	25,000	35,000	...
Increase in carry-forward	1,192	6,245	3,699

From the rebuilding and modernisation reserve it is proposed to apply £100,000 to write down the book value of those properties involved in rebuilding. The demolition of the second section of the old buildings of Messrs Derry and Toms has been started. A striking feature of the balance sheet is the increase of £203,910, to £848,098, in cash, while, on the other side, creditors are higher by £145,624 at £1,004,403. Stock has declined by only

£26,135. The arrangements regarding 1894 and 1902 sinking funds have been completed and the sums thus released have been written off the value of leasehold properties. The ordinary shares at 60s. yield £6 19s. 1d. per cent. after allowing for final dividend of 15 per cent.

Snia Viscosa Reconstruction.—The directors of Snia Viscosa are taking a wise course in writing down the balance-sheet valuation of fixed assets and patents to correspond with present-day values. As a result of the reconstruction, the shareholders have the same interest in the equity, but are in a position to profit by way of dividends as soon as the trade revival comes. The capital of the company is being written down from 1,000,000,000 lire to about 333,000,000 lire, by reducing the nominal value of each share from 120 lire to 40 lire. At the same time the Varedo Company, which is now controlled by Snia Viscosa, is also to be reconstructed and its capital reduced from 125,000,000 lire to 50,000,000 lire by writing down the nominal value of the shares from 50 lire to 20 lire. After this writing down it is proposed to carry out a complete fusion of the companies, the shares of the one held by the other being cancelled. On the exchange of the remaining shares of Varedo, the capital of Snia Viscosa will stand at 350,000,000 lire. The company's current financial position remains satisfactory, its cash holdings amounting to 250,000,000 lire. Profits last year, before allowing for depreciation other than the normal wear and tear of buildings and plant, amounted to 20,000,000 lire, as compared with 45,000,000 lire in 1929. Of this amount, general expenses, taxes, amortisation and other charges absorbed all but 1,000,000 lire, which was applied to reserve. It may be hoped that under its new president, Senator Borletti, and under the technical supervision of Courtaulds, Ltd., Snia Viscosa will emerge successfully from the very difficult trading conditions of the time. Indeed, as long as the company continues to make both ends meet in its trading operations—and its working costs are said to be among the lowest in the rayon industry—it can afford to wait for the trade recovery in view of its strong cash position. The shareholders are therefore by no means in a hopeless situation. The ordinary shares are at present around 8s., having been as low as 6s. 3d. early this year, when the company's name was dragged, through no fault of its own, into the Oustric scandal in Paris.

MINING NOTES.

Simmer and Jack.—Last year's operating profit amounted to £106,100, against £70,000 for 1929. The improvement arose mainly from the successful introduction of a changed method of mining, which increased the yield by nearly $\frac{1}{2}$ dwt. per ton. Despite an expansion of 21,600 tons to 916,700 in the ore milled, the working costs averaged 20s. 10d. in place of 19s. 9d., the difference chiefly arising from the performance of a larger amount of development work. That, in face of this feature, the ore reserves have only risen by 44,000 tons to 1,625,000 tons is explained by a relapse in the percentage of payability from 71.3 to 65.2. Capital expenditure was again large at £56,800; still the profits were sufficient to permit the resumption of dividends with a modest 1 $\frac{1}{2}$ d. per 2s. 6d. share. A tube mill has been added to the plant and 177 claims adjoining the southern boundary has been pegged. The accounts again show a small cash deficit.

De Beers Debentures.—Some three months ago, writes our mining correspondent, considerable discussion was aroused in Stock Exchange circles by an announcement on the part of the De Beers Consolidated of the intention to create debentures. At the time the only definite information obtainable was that no immediate issue was intended. It is now announced that the amount to be created will be £2,500,000 in 5 $\frac{1}{2}$ per cents., redeemable in 25 years, the company having the power to

repay after three years at 102 $\frac{1}{2}$. Of the sum named £2,414,700 is to be allotted to the Anglo-American Corporation and to Messrs Barnato Brothers as purchase consideration for large interests in the New Jagersfontein, the Consolidated Diamond Mines of South-West Africa, and the Cape Coast Exploration. In reference to these three undertakings it may be mentioned that the Jagersfontein directors have just intimated that, owing to the continued depression of the diamond market, no dividend can be paid in respect of the year ending March 31st. The Consolidated Diamond disbursed 12 $\frac{1}{2}$ per cent. on its ordinary shares for 1929, but the preference dividend for the second half of 1930 was postponed. The Cape Coast company owns a rich ground in Namaqualand; no dividends have yet been paid. For years past the diamond industry of South Africa has been controlled through the medium of the Diamond Syndicate, varying quotas being allotted to the different producing companies. Naturally, friction arose in this connection. The position became complicated by the entry of the Union Government into the diamond market, but after long negotiations a *modus vivendi* was arrived at. By the acquisitions now to be carried through, the De Beers company will be placed in effective control of the diamond output of South Africa so far as it is in the hands of corporations.

Rose Deep.—Thanks to increase in both tonnage and grade a fresh expansion occurred in last year's profits, the working surplus of £48,500 comparing with £35,500 for 1929 and £28,900 in 1928. In respect of the last-named period, 2 $\frac{1}{2}$ per cent. was paid, but no distribution was made on account of 1929, owing to the cash position. Two dividends, totalling 5 per cent., were disbursed for 1930, leaving the somewhat increased balance of £92,460 to go forward. At 841,900 tons the available ore reserves show an increase of 127,300 tons. Once again the greater portion of the tonnage added was made available by "re-opening old workings and by stoping and exploration in areas of doubtful value." Obviously the mine is nearing the end of its tether. In these circumstances it would seem that the "influential" buying of the shares reported during the last few days may be attributable to liquidation possibilities.

Geldenhuys Deep.—This is another Rand undertaking on its last legs. Last year an increased development footage opened up only 171,300 tons of ore. As 811,900 tons were milled, and the reserves are only 24,500 tons down at 479,700 tons, it is obvious that large quantities of material must have been obtained from reclamation, etc. The consulting engineers report that important development in the South reef is now almost completed; a considerable area of main reef leader remains, but it is of doubtful value. A further expansion in the scale of operations with reduction in costs permitted the raising of the dividend total from 5 to 8 $\frac{1}{2}$ per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Beira Railway, Bank of Australasia, Chartered Bank of India, Australia and China, Scottish Amicable Life Assurance Society, London Life Clergy Mutual and Metropolitan, The Employers' Liability Assurance, Newcastle-upon-Tyne Electric Supply, City of London Electric Lighting, Powell Duffryn Steam Coal, Radiation, International Automatic Telephone, United Glass Bottle Manufacturers, Apollinaris and Presta, and Pinchin, Johnson and Company. At the annual meeting of the International Automatic Telephone Co. the chairman announced that a highly important contract from the South African Government for the installation of Strowger automatic exchange equipment in Johannesburg marked the first introduction of the Strowger system on a large scale into South Africa, and thus added another country to the list of over fifty Strowger-using countries of the world. At the Newcastle-upon-Tyne Electric Supply Co. meeting, Mr R. P. Sloan said that the work in

connection with the standardisation of frequency on the North-East Coast, which formed part of the North-East England Electricity Scheme was well in hand, orders for plant and apparatus having already been placed by the company amounting to approximately £1,650,000.

CAPITAL ISSUES.

The most significant issue of the week was the offer of debenture stock of the *Lancashire Cotton Corporation, Limited*, under the auspices of the Bankers' Industrial Development Company. This offer is discussed in an Investment Note on page 683. Definite interest also attached to the remaining issue, which comprised £2,000,000 of *Greek Government* sterling bonds made by Hambros and Erlangers, this being the first large foreign operation in London for some little time. The financial position of the Greek Government has progressively improved in the last few years, and the loan, which offered a running yield of £6 17s. 11d. per cent., with a lottery chance of a 17-points profit on an early bond-drawing, was a not unattractive foreign bond in the speculative category. The terms, however, were cut somewhat finely for a stock of this description, and 85 per cent. of the total was left with the underwriters.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, January 1 to March 21, 1931, £35,062,064.
Total, including conversion, recorded January 1 to March 21, 1931, £44,732,013.
National Savings Certificates.
Net sales, week ended March 21, 1931, £200,000.
Total receipts April 1, 1930, to March 21, 1931, £12,400,000.

Lancashire Cotton Corporation.—Issue at £97½ per cent. of £2,000,000 Six-Year 6½ per Cent. First Mortgage Debenture Stock, guaranteed as to the first five years' interest by the Sun Insurance Office. The loan, which will be utilised for repaying advances made to the corporation by its bankers, and for reconditioning and modernising the equipment of the mills, is made under the auspices of the Bankers' Industrial Development Co., which was formed in 1930 to assist the rationalisa-

tion of industry. The aim of the corporation is to acquire between nine and ten million spindles, and it is intended that production shall be concentrated in the most efficient mills operating between six and seven million spindles, each mill being set out for a narrow range of products. The mills retained will be reconditioned, and the remaining mills will be scrapped. Of the seventy-two mills acquired by the corporation, eight have been reconditioned, seven are in course of being reconditioned, and thirty-seven are working.

Greek Government Six per Cent. Public Works Sterling Loan.—Issue in London of £2,000,000 6 per cent. sterling bonds at £87 per cent. The service of the loan will constitute a first charge on the surplus of the revenues assigned to or administered by the International Financial Commission, after providing for the service on existing loans. The loan is repayable on or before December 1, 1938, by means of a cumulative sinking fund to be applied by half-yearly drawings at par.

Uxbridge, Maidenhead, Wycombe and District Gas Co.—Issue by tender of £51,557 5 per cent. perpetual debenture stock, at a minimum price of £98 per £100 stock, yielding at that price £5 2s. per cent., and £33,575 ordinary stock, ranking for a standard dividend of 5 per cent., at a minimum price of £105 per £100 stock, yielding at that price £6 13s. 4d. per cent. For the year ended December 31st last the interest on the loan capital, including the present issue, was covered nearly 3½ times.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction:—**Rio Claro Railway and Investment Co.** Particulars of an issue of £970,000 5 per cent. redeemable debenture stock, 1962-72. **The Monks Investment Trust.** Particulars of an issue of £150,000 5 per cent. first debenture stock, due 1980.

[Other Stock Exchange information, including the latest summary of balance sheets, reports and notices, dividend announcements, weekly traffic returns, and profit and loss figures, will be found on page 704, under the heading "Company News."]

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended March 11: Venezuela, 35,159 barrels; Trinidad, 19,834 barrels. Total, 54,993 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended March 7, 1931, was 206,000 barrels. The production for the week ended March 14, 1931, was 200,000 barrels.

SERVICE PETROLEUM COMPANY, LTD.—Cable received from Roumanian manager states that production from the company's oil wells at Gura Ocnitzei, Moreni and Ceptura for the week ended 8th instant, was 4,442 tons (31,094 barrels).

COMPANY MEETINGS, &c.

BANK OF AUSTRALASIA.

REVIEW OF A DIFFICULT YEAR.

OUTLOOK SOMEWHAT BRIGHTER.

CONDITIONS IN THE COMMONWEALTH.

MR GILLIAT'S SPEECH.

The ninety-seventh annual general meeting of the Bank of Australasia was held, on the 26th instant, at the office, 4, Threadneedle Street, London, E.C.

Mr J. F. G. Gilliat presided.

The Manager (Mr Edmund Godward) read the notice calling the meeting and the report of the auditors.

The Chairman: My Lords, Ladies and Gentlemen,—The accounts have now been in your hands for some days, so I presume we can take them as read. (Agreed.)

As is the usual custom, I propose, first, to try to analyse the balance sheet and profit and loss account for the past year, and then to give you a rough sketch of the position in Australia as your directors see it. If the speech is a little longer than usual you must forgive me as so much has happened in the past year which calls for reference in a greater or less degree.

The total assets this year stand at £48,036,386, as against £49,323,596 last year, a shrinkage of a little over 2 per cent., which, I think, may be regarded as satisfactory in view of the difficult times we are living in.

The capital and reserves are unchanged at £4,500,000 and £4,475,000 respectively. The deposits at interest are actually increased by £1,500,000, but current accounts have decreased, roughly, by £1,750,000. This shrinkage in current accounts is, of course, only natural in times of depression, as people have to draw more fully on their bank balances to pay their debts.

Bills payable, drafts in transit and other liabilities, including provision for contingencies, show a decrease of about £700,000, due to the decreased cost of all commodities involving a smaller volume of exchange. It would be well here to make it quite clear that in exchange business banks have only the margin between the buying and selling rates of exchange wherewith to pay expenses and find their profit. A high rate of exchange does not benefit a bank because it invariably leads to a smaller turnover, and, as a result, reduces profits.

THE ASSETS.

Turning to the assets side, specie, bullion, Government notes and cash balances have decreased by £1,000,000 sterling, but loans at call are £445,000 higher, and, while British Government securities remain very much the same, other investments are £1,250,000 more.

Bills receivable and remittances in transit again reflect the lower values of the Australian exports. In times such as these, when our customers tend to lean more heavily upon the bank, it is satisfactory to note that advances, now £33,387,000, had decreased by £1,000,000 at the time of striking the balance sheet, and to-day they are still lower, this having been done, we think, without arbitrary or undue restriction upon our customers.

Bank premises have increased from £278,000 to £400,000, this being chiefly owing to the fact that it became necessary to rebuild our Melbourne office, which, owing to lack of space, has had to have some storeys added to it. I am told that it is now one of the handsomest buildings in Melbourne, and, apart from the greater asset it will be to us to have more accommodation, thereby affording better banking facilities to our customers, a fair amount of office space has already been let, so the outlay has not been entirely unproductive. A few years ago your chairman told you that our premises were valued at over £1,000,000. The valuation is in some cases based on unimproved values, but in nearly every case it is well below the rateable value, and, I think, a conservative estimate of the selling value of our overseas premises, even in such times as we are passing through, would be well over a million.

PROFIT AND LOSS ACCOUNT

We will now turn to the profit and loss account, in which you will see that the total amount of net profit for the year to October 13, 1930, shows a reduction of £62,000, although our gross profit has decreased only £7,000, the reason for this lying in the fact that overhead charges have materially increased. Under the item of charges of management you will note that salaries in Australasia have risen by about £10,500, an item over which this bank, to a great

extent, as you know, has little or no control. General expenses, on the other hand, have decreased by nearly £7,000, thereby making charges of management actually only £3,400 higher than last year.

The most serious item with which we have to contend at the present time is taxation, a bugbear unfortunately not only confined to Australia and New Zealand. The bank's taxation has increased during the year from £320,000 to £372,000—of which £30,000 is Australian and £22,000 British. If we could only think that the peak of taxation has been reached, we should feel comparatively relieved, but we must take it that we must look forward during the next year or so to a further increase, in Australia, in this item.

Reference is made in the balance sheet to the depreciation in the Australian pound, but this depreciation has no real practical importance in so far as our balance sheet is concerned in view of the fact that this bank is established to carry on business in Australia and New Zealand, and, therefore, most of the bank's resources are employed there. It follows, therefore, that only in the event of our having to bring any large proportion back to London, a possibility so remote as to be negligible, would the point become a real factor. In fact, it would only be in a liquidation that such a contingency would arise. You must also remember that, whatever the value of the Australian pound may be compared with the sterling, it is worth a pound in Australia wherewith to pay our Australian liabilities; but, negligible as the point about depreciation is, it may please shareholders to know that the bank has provided for the depreciation in the present balance sheet by earmarking a portion of its inner reserves.

THE DIVIDEND.

Now, with regard to dividends, the proprietors have already received £315,000, in respect of the interim paid on October 3, 1930, and it is now proposed to pay a final dividend which will absorb a further £270,000, leaving £30,083 19s. 11d., with which we propose to increase the carry forward, making the satisfactory figure of £192,027 7s. 4d., as against £161,943 7s. 5d. last year. The bank will, therefore, have paid to its shareholders this year 13 per cent., free of tax, and, I think you will agree with me, that this dividend is a very satisfactory one in view of the unparalleled conditions of the past year. (Hear, hear.) Also, owing to the great disparity between sterling and Australian currency to-day, your directors have decided to pay to those shareholders on the Australian and New Zealand lists their dividends in the equivalent of sterling and I have no doubt that the overseas proprietors will fully appreciate this action upon their part. (Hear, hear.)

And now having, I trust, explained the figures of the past year's working of the bank to you satisfactorily and having, I hope, covered any points that may have been obscure, I propose to try to give you a rough outline, as your directors see it, of the position in Australia.

PREVIOUS SETBACKS.

In order to do that, it will be well to touch lightly upon the previous setbacks in Australian history. Probably the greatest was between the years 1845 and 1849, but the discovery of gold brought her back quickly to prosperity until we reach the sixties, when things were not too good; then we have a period of slow and sure recovery until 1893; when occurred what we may call her great financial crisis, followed by years of drought. Earlier this century we see Australia prosperous again, although just before the war there were signs that she was inclined to over-borrow and allow her cost of production to get unduly high. The war period helped the country to carry her burden owing to the fact that her commodities, being mostly wool and foodstuffs, commanded high prices and were eagerly bought by the outside markets.

Now let us turn for a moment to another aspect of the situation. This great country, Australia, has a white population of just over six million people, three and a half million of whom are living in the cities and two and a half million in the rural districts. You will, therefore, clearly see that the majority vote in Australia lies mainly in the cities and not in the country, and in consequence the Pastoralists are to a great extent in the hands of the Civil Service and industrialists when it comes to a political struggle.

PROTECTION IN AUSTRALIA.

Since protection of industry was first started in Australia, commencing with a mild form, it gradually increased in scope and rate until to-day the country may be described as very highly protected. The effect of this is shown by the fact that in 1907 there were 12,555 factories in Australia and in 1928 22,916; on the face of it, therefore, Protection would appear to have benefited the country, and yet on January 5, 1931, advice from Canberra reported that of 440,000 trade unionists, 100,000 were out of work and a further 100,000 non-unionist men and women were unemployed, a fact which does not point to all being well under this apparent panacea for all troubles, so let us go a little deeper into the matter. If one studies the years from 1908 to the present time and excludes the war period, one notices the constant tendency to raise the tariff wall and at the same time to increase wages, with the result that the manufacturing side attracted labour more and more into the cities and thereby increased the load upon the Pastoralist, who had to pay a competitive wage to his people in order to keep them on the land, quite irrespective as to whether his produce was making a profit or a loss.

The majority of the manufacturers, owing to their heavy overhead charges, had only the internal market for their goods, as their cost of production rendered any competition in world markets impracticable. So long as a boom period existed all was apparently well, but Australia continued to borrow excessively from outside sources.

Now suddenly comes the world slump in all prime commodities, and Australia finds herself producing her wheat and wool at a cost well above the price at which she can sell them, and as a result is thrown back upon her own resources with her avenues for borrowing shut off and the incessant need to find the funds with which to meet her interest payments at their due dates.

STANDARD OF LIVING.

During the past few months we have been reading of various schemes put forward entailing suggestions of repudiation and inflation, which is much the same thing in the end, all with a view to maintaining the standard of living and scale of wages that have prevailed during these past few years of what we may call false prosperity. But, whatever politicians may say or do, a community is made up of individuals, and as with each individual so with a nation, when one has over-spent must economise, and there is only one way to do that, which is to bring expenditure down to within the limits of revenue, whether it be individual or national, and this must mean a general reduction of overhead charges throughout.

The Government of Australia are naturally averse to reducing the standard of living of their people, but, despite their hesitation to make the necessary reductions, the ordinary commercial economic forces are automatically taking charge of the position, as evidenced by the fall in the value of the Australian £. This £ is now worth approximately 23 per cent. less than the £ sterling, which means it is worth about 15s. 4d. when it comes to the question of buying overseas goods. If therefore follows automatically that the slump in currency value is stimulating Australian exports, as consumers are able to deduct the premium they receive in exchange from the cost of their purchase, while imports, on the other hand, are costing more and are therefore checked, with the result that the balance of Australia's overseas trade has considerably improved, as evidenced by the fact that for the six months ended December last exports amounted to £50,305,000 and imports were £38,412,000, a surplus in Australia's favour of £12,000,000, which, however, includes about £7,000,000 of gold, but in any case the balance is a favourable one of over £5,000,000, whereas the adverse trade balance in 1929 stood at the high figure of £16,000,000.

WHEAT AND WOOL.

I will now quote you a few statistics to show how wool and wheat have fared in recent years, with special reference to the effect of the present fall in prices upon these commodities, which, after all, are the fundamental source of Australia's wealth.

The acreage under wheat has steadily grown from about 11,000,000 acres in 1924-25 to 15,000,000 acres in 1929-30. From 1923 to 1929 the average price of wheat was 5s. 7d. per bushel; to-day it is about 2s. 3d. per bushel f.o.b. In the same period, that is to say from 1923 to 1929, the number of sheep has increased from 93,000,000 to 106,000,000, but to-day's price of wool is approximately one-half of the price ruling from 1923 to 1929, and is not much more than one-third of the peak price obtained some ten years ago.

The output of gold in 1929 was less than £2,000,000, whereas from 1901 to 1910 the average output was £14,000,000 per annum. This heavy fall in output must be partly due to the fact that wages and overhead expenses were so heavy as to render the operation

of gold mining an unremunerative business, and therefore mines were shut down even though great quantities of gold are there ready to be won. It is hoped, however, that the bounty recently given will stimulate this highly important industry and serve to increase output to a more representative figure. The immediate outlook for Australia's prime commodities is rather encouraging, as there are hopeful signs of a revival in the price of wool, provided always that it can be produced at a price the world is able to pay.

NEW ZEALAND.

New Zealand has suffered equally with Australia from the fall in the value of her primary products, but the Government's financial position is relatively satisfactory. Revenue for the year to March 31, 1930, was £25,350,000, and expenditure £25,201,000. The gross public debt of the Dominion at the same date was £267,000,000, of which over £150,000,000 were external. Upon arrival of the slump period the Government took immediate steps to reduce expenditure as far as was possible and to increase revenue by means of somewhat drastic taxation, as evidenced by the fact that, insofar as it affects this Bank, income tax at 4s. 6d. in the pound has been increased by 10 per cent., and the tax on our note circulation has been increased from 3 per cent. to 4½ per cent. All males of over 21 years of age have to pay 30s. per head to provide funds for unemployment, and at the same time immigration has been restricted to assist this position. While crops have shown a steady decrease in recent years, sheep and dairy cattle have increased considerably, and the result is an increase in butter exports from 1,500,000 cwt. in 1928 to 1,800,000 cwt. in 1930, an increase in value of £1,700,000. Therefore, one may say that this Dominion is facing the position squarely and dealing with it in a very practical manner.

THE EARTHQUAKE.

You will be relieved to hear that the staffs at our branches in Napier and Hastings escaped injury in the recent disastrous earthquake in this area. We must all deeply deplore the great loss of life and property, and I feel sure you will heartily endorse the action of your directors in having subscribed £1,000 to the Relief Fund. We are still awaiting detailed information, but we do know that the buildings at both Napier and Hastings have been destroyed. Fortunately the Napier building was an old one, and the directors had been considering rebuilding it for some time past. The Hastings building was not our property, but on lease to us. As regards our advances in that area, we are glad to tell you that those against city property in Napier and Hastings are comparatively trifling.

THE FUTURE.

And now as to the future: I think you will agree with me that one can hardly foresee an immediate return to prosperity in view of the many problems to be faced and solved, and therefore we must look to the possibility of decreased earning power on the one side and increased taxation on the other, although overhead expenses may be reduced by a reduction in wages, which would assist to a certain degree. We also have to face the cost of bringing money over to this country, say, for the payment of dividends, which to-day is, to say the least of it, onerous and, therefore, it is only due to you as shareholders that your directors should warn you of the possibility of reduced profits in the current year, and I can only hope that results will prove them wrong in this respect.

When this difficult time is over and one looks back on Australia during these years of travail, I think it will be appreciated by all that the Government and people of Australia owe a deep debt of gratitude to the trading banks. It can never be said that these banks held back in any sense of the word from giving the fullest assistance within their power to enable that great country to weather the biggest financial storm in her history. This bank, while it will not assist in any financial schemes which it believes to be to the detriment of Australia, is prepared to do its utmost in conjunction with other banks to help her to get her house in order. In the annual report of the Commonwealth Bank of Australia, testimony is paid to the co-operation and closer relationship between that bank and the trading banks, thereby giving great assistance in arranging the many difficult problems that have arisen. Indeed, the whole of that report is well worthy of your close attention.

GENERAL OUTLOOK.

The general outlook for Australia seems to be somewhat brighter, as there is in evidence an increasing resistance to all those proposals which are based upon evasion of the country's commitments. There must be a long road yet to travel before one can see clearly the goal to which every sane-thinking Australian sets his eyes, namely, the return to conservative expenditure on the part of the State politic, bringing with it eventually renewed prosperity for

all; but I feel that a start in the right direction has been made and one senses a determination on the part of the people to set matters right in the one and only proper way, to wit, by facing the position fairly and squarely and dealing with it by cutting down expenses and producing at the right price to meet world competition.

There has been of late a great deal of Press correspondence upon Australia dealing with her financial and economic position, and in many cases there has been a certain amount of insidious propaganda in the matter of her national honour. In bad times it is all too easy to be pessimistic and equally difficult to be the reverse, but I think Australia's troubles should be regarded as part of a whole in view of the fact that the whole world is in a rut of depression with production exceeding consumption from the East to the West.

Taken as only a part, her position will improve with the rest of the world and, therefore, adverse criticism should include all or none, and not seek out any one country for special comment. With things as they are, I do not like to think of the responsibility resting upon the shoulders of those in authority in this country when I see Australia and Canada depending greatly upon our market for disposal of their wheat, only to be met with wheat dumped upon us at a cost below that of any competitive civilised nation just because it is the output of a people whose cost of production is not in terms of money, but in those of flesh and blood. (Hear, hear.)

WEATHER REPORT.

I now come to the cabled weather report, which stated "Season's prospects generally favourable in Australia and New Zealand. Good rains have fallen last few days Victoria, New South Wales and large areas Queensland, but further rain needed in parts of North Queensland." This is quite satisfactory and points to Mother Earth doing her best to help these countries in which we have such a deep interest.

I have now come to the end of my speech, and I must apologise for having kept you rather longer than usual, but it is the duty of a chairman to explain as fully as possible all points which may not be perfectly clear to the shareholders, and I think you will agree with me that these points are rather more numerous this year than in more normal years. I can only hope that I have dealt with all matters that call for explanation, but in case I have failed to do so, I will try to answer any question that any shareholder wishes to put, before moving the adoption of the report and accounts, which I shall ask Lord Aldenham to second. (Cheers.) The Rt. Hon. Lord Aldenham seconded the resolution.

SHAREHOLDERS' CONGRATULATIONS.

Mr O. Levy said that he would like to offer his congratulations to the directors and the staff on the balance sheet which they were presenting, and which was very much better than he had anticipated.

Mr F. Tomkinson said that he would like to support the remarks of the previous speaker. He thought that the shareholders were greatly indebted to the chairman for the very lucid and excellent speech which he had made with regard to the accounts and the position in Australasia. He had been a shareholder since 1884 or 1885. Having regard to the difficulties under which they had laboured, he thought that the balance sheet was highly creditable to all those connected with the bank.

The resolution was unanimously adopted.

Lord Aldenham then proposed the re-election of the retiring directors, Mr Charles Gipps Hamilton, Mr Arthur Whitworth and Mr J. F. G. Gilliat.

This resolution was seconded by the Rt. Hon. the Earl of Middleton, K.P., and unanimously approved.

The auditors, Messrs. Deloitte, Plender, Griffiths and Company, were re-appointed.

TRIBUTE TO STAFF.

The Chairman: Ladies and Gentlemen,—Now that the main business of the meeting is concluded, I have the pleasant task of moving a hearty vote of thanks to the officers and staff of the bank, both in Australia and New Zealand and in London. If ever there was a year when the services of our staff should be truly appreciated, it is in this year, when from day to day not only the ordinary routine of banking is carried on tirelessly, but in addition important and vital decisions have to be taken involving endless interviews and correspondence, which in more normal times are far less frequent and less important. To Mr Healy in Australia and to Mr Godward, with their respective staffs, I would ask you to extend your heartiest vote of thanks, as, if you had been in close association with them as your directors have been during the past year, you would realise how much we owe them and how closely the interests of the bank have been safeguarded and watched by them, day in and day out, throughout the year.

I need say no more, as I am confident that you appreciate the work done and being done as fully as your directors do, and I, therefore, have no doubt that one of our shareholders present will be only too glad to second this vote of thanks.

Mr W. A. Welch, in seconding the resolution, said that he heartily endorsed every word which the chairman had said about the staff. The resolution was carried unanimously.

VOTE OF THANKS.

Mr A. J. Waley said that he thought that a more comprehensive mark of appreciation of the work of the directors should be offered than was contained in the few words which had already been uttered. The shareholders had always been in the habit of giving the directors their widest confidence, and he thought that, on the present occasion, they ought also to extend to them their sympathy, realising the great difficulties under which they had laboured in the interests of the bank. He hoped that the qualified optimism of the chairman would be fully justified, and that ultimately the common sense and honesty of the Australian people would prevail over the quack remedies which some politicians sought to use to meet the emergency, which, he fully believed, would prove to be only temporary. He moved a cordial vote of thanks to the chairman and directors. (Applause.)

This vote was seconded by Mr Tomkinson, and accorded amid applause.

A brief acknowledgment by the chairman concluded the proceedings.

BEIRA RAILWAY COMPANY, LIMITED.

SATISFACTORY RESULTS.

The thirtieth ordinary general meeting of the Beira Railway Company, Limited, was held, on the 25th instant, at 2, London Wall Buildings, London Wall, London.

Sir Henry Birchenough, Bt., K.C.M.G. (the chairman), in moving the adoption of the report and accounts, said:—When the difficult times through which we are passing are considered, I think you will agree that our revenue for 1930 of nearly £900,000 was not altogether unsatisfactory.

After bringing in £20,359 from last year, we have to deal with a total credit balance of £137,739. We recommend that £25,000 be placed to the reserve account, making it £125,000, and that a dividend of 1s. 3d. per share, less tax at 2s. 8d. in the pound, be paid, requiring £65,625, and that the balance of £47,114 be carried forward to next account. In view of the period of trade depression through which we are now passing, your directors have thought it prudent to adopt this course in order to conserve the financial resources of the company so as to assist the position if necessary at the end of the current year.

Now you will no doubt like to know something about the financial year we are now in, which began on October 1st last.

At the present moment, traffic, I regret to say, are poor, and I should not be doing my duty if I did not point out to you that I think we are in for a lean year. We have received cables giving our approximate traffic for the first four months of the current financial year, that is, October, 1930, to January, 1931, and they show a considerable decrease—gross receipts being some £70,000 less than in the same four months last year. As you are already only too well aware, there is a universal depression in trade at the present time, and our line is now suffering particularly from a very large falling off in exports of maize, chrome ore, asbestos, copper, zinc, etc. The general manager is carrying out drastic reductions of expenditure, which will relieve the position to some extent, but as it is confidently anticipated that this trade depression is merely temporary, it is impossible to reduce the organisation of highly trained men below a certain level.

We understand that the Northern Rhodesia Copper Mines will begin to ship copper concentrates at the rate of about 4,000 to 5,000 tons per month, starting in May next. These will be the first products from the Northern Rhodesia copper companies, and are, of course, entirely new traffic. Though the next few months are, as I have already said, likely to be lean ones, we hope that a steady revival of trade and the development of these great copper fields in Northern Rhodesia will soon stimulate our traffic considerably. The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

SIR MONTAGU TURNER'S REVIEW OF THE PAST YEAR'S OPERATIONS.

The seventy-seventh ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held, on the 25th instant, on the bank's premises, 38, Bishopsgate, London, E.C. Sir Montagu Cornish Turner (the chairman) presided.

Mr W. E. Preston (chief manager) having read the notice convening the meeting and the auditors' report,

The Chairman said: I need not dwell on the world-wide depression in trade which in extent and severity has, I believe, never been surpassed in modern times. That is a matter of common knowledge. Whatever the causes, and they are numerous, both Eastern and Western Hemispheres have suffered very severely. But it is especially in the East, where our interests mainly lie, and where the prosperity of its millions depends on the ready sale of their crops and products at remunerative prices in the markets of the world, that the effects of this disastrous landslide have been chiefly felt.

Perhaps the most urgent need is some reasonable settlement of war debts and reparations. Above all, however, what is wanted to-day more than anything is a spirit of greater confidence. It must be made worth the while of those who have capacity, brains and accumulated capital to initiate employment, to push invention and enterprise, to go ahead and take risks, and until that is done we shall still have to contemplate the grim spectre of unemployment throughout all the industrial countries of the world.

CONDITIONS IN INDIA.

Referring to India, we have from every one of our managers in that country the same complaint of interferences with normal trade—slump in prices of commodities, political unrest resulting in the boycott of British goods, the pernicious system of picketing, the inability of the masses to purchase foreign goods and, lastly, the fall in the price of silver, which has affected the many millions who have their little hoardings in the white metal.

The boycott of British goods in India has been greatly detrimental not only to the interest of India, as shown by the reduced revenue and the Budget deficit, but also to the Lancashire mills, as is evidenced by the tremendous fall in the import of cotton goods from this country, and this, coupled with internal political troubles, has been greatly prejudicial to the banks in India; in fact, to all who participate in what has been India's salvation in the past from a monetary point of view, her huge export business which has been the means of providing a favourable trade balance for that country. From every point of view we should welcome an early and reasonable solution of the troubles in India, a solution fair to British and Indians alike. Changes in the Government of India are inevitable, and we must be prepared to work wholeheartedly for the welfare of that country and for the good of the Empire. We must maintain those close and friendly relations which we, in commercial circles, have maintained in the past and hope to do so in the future. We must fully appreciate the invaluable services rendered by the Viceroy, Lord Irwin, services valuable not only to India but to the Empire.

GOVERNMENT OF INDIA SECURITIES.

As a result of the resolutions of Congress regarding independence and repudiation of debts, some holders of India Government securities have felt uneasy, and in a few instances, we believe, have disposed of their holdings. India stocks, although not guaranteed by the British Government, are trustee securities, and the mere suggestion of repudiation is enough to weaken the credit of any borrower who enjoys the privileges of the Trustee Acts.

There is no need, in my opinion, for investors to feel uneasy regarding their investments in India stock. The declaration issued by the Secretary of State for India on January 27 last, in which he said, "His Majesty's Government have no intention of allowing a state of things to arise in India in which repudiation of debt could become a practical possibility," is sufficiently definite to reassure the most nervous investor that Parliament will provide the necessary safeguards, should they be needed, against a breach of the conditions under which these loans were issued.

THE RUBBER INDUSTRY.

The rubber market is still overweighted with large stocks. Conditions may improve, but I hardly venture to say that we shall see any material advance in the price in the near future.

Both Ceylon and the Straits have naturally felt the brunt of the storm. In the Straits and Malay States one result has been the reduction of working costs and the paying off of large numbers of Indian labourers. I believe some 70 to 80 thousand men have returned to the coast of India.

The repatriation of these coolies is causing a great deal of anxiety among rubber producers, as they are nearly all skilled workers who have been on the plantations for many years. The planters fear that when the market improves and demand reasserts itself, it will not only be an expensive business to bring back this labour force to the Straits, but it is pointed out with some justice that Ceylon, by virtue of her proximity to Southern India, which is the main source of labour supply for both countries, will be able to recover far more rapidly than the Straits.

In regard to rubber production costs, it is very interesting to learn that as soon as it was realised that all appeals to Government for restrictions were useless, planters concentrated on reduction in costs, and surprising results have been accomplished. Rubber is now being produced in some cases at as low as ten Straits cents per pound (less than 3d.). The idea that this could have been done a few years ago would have appeared fantastic. Of course, my hearers will understand that this is its price on the estate and not the price of the commodity in London.

Malaya has never faced such a prolonged crisis as that through which she is now passing, but the efforts which have been made to meet the situation will produce beneficial and lasting results when world conditions improve.

POSITION IN CHINA.

As regards China, conditions in that country have certainly improved. For the time being, active civil warfare is at an end; the Nanking Government outwardly are on good terms with the young War Lord in Manchuria, and are doing their best to put an end to the devastating activities of the bandits who, apparently, for the most part, are discharged soldiers. But until this has been done and real control of the provinces has been effected, good relationships have been established, and until her Budget has been put on a satisfactory basis, the present Government in China will have difficulty in obtaining the outside assistance she requires financially to put her railways in order, to carry out badly needed improvements in transport, and to recreate favourable conditions for the trade, which should be possible once the political situation has resulted in a firmly established and well-organised Government.

Unfortunately the abnormal and chaotic conditions of the silver market have proved, and will prove until the price can be in some way standardised, most detrimental to foreign trade with China.

SILVER.

No reference to China would be complete without mentioning the catastrophic fall which has taken place in the price of silver. This is not due to overproduction, as in the case of other commodities. The output of silver has kept fairly steady about 250,000,000 ozs. in the last six years. India and China in 1930 took about 210,000,000 ozs.; this, therefore, leaves a comparatively small balance to meet industrial requirements such as subsidiary coinage, the moving picture industry and the hundred and one other uses silver is put to, and as these requirements may easily total some 50,000,000 ozs. per annum, we are left with a potential shortage on production rather than a surplus.

We must therefore look to other causes for the debacle and, briefly, these may be summarised in the accumulation of stores of demonetised silver. China only wants the cessation of civil war and a stable Government to start this industrious and pre-eminently business people on the road to prosperity again, and if only confidence is inspired and undue miscellaneous taxation severely repressed, a prosperous China will soon revive a demand for silver. The other and doubtful way of establishing the value of silver would be through international agreement, such as might be negotiated amicably between America, Great Britain, France and other nations interested in the white metal.

JAPAN.

It is noticeable that, in spite of everything in her favour in the way of wages and long working hours, Japan has a very large number of unemployed, and her mills have to work short time. The fact is, that she is now up against competition with Chinese mills, which have equal advantages of low cost of labour and long

hours. Japan is now seeking for other outlets for her yarn and cloth. We know that she is doing good business in India to the detriment of our own country—Lancashire goods. She is also making a vigorous attack on the Dutch East Indies, and it is indeed difficult for Lancashire to compete when Eastern manufacturers can produce the same goods made by cheap labour with the benefit of longer hours.

THE BANK'S NEW CHARTER.

The new charter, which was ratified at a special meeting of the shareholders last year, is now going the round of the various Government Departments, and I hope to be able to inform you when next we meet that it has been duly approved by the Treasury, as well as by all the Departments concerned, both in this country and overseas.

With reference to the statement of accounts, I would mention that about half the decrease in the total of the balance sheet is due to the change in converting into sterling the values of the tael and the China silver dollar. The decrease in bills of exchange and bills discounted reflects the decrease in business which, we trust, is of an entirely temporary nature.

Our net profit, after fully providing for all bad and doubtful debts, is £634,342, and after setting aside £30,000 for contingencies and providing for dividend and bonus, we carry forward £187,597 9s.

As regards the dividend and bonus, your directors have much pleasure in proposing that this be paid at the same rate as last year, but we are recommending that the dividend for the second half of the year and the bonus for the whole year should be subject to income tax. The general reasons underlying this action on the part of your board, which are dictated by prudence and not by necessity, are fully indicated in what I have said above. What I would like to emphasise is that not only have we the burden of increased taxation at home, such as the last increase in income tax, but at most points in the East we are also faced with heavy local taxation, and as these taxes have been steadily on the increase there comes a time—especially with business in the sad condition that it is to-day—when the question of taxation can no longer be ignored.

Sir Harry Goschen, Bt., K.B.E., seconded the resolution for the adoption of the report and accounts, which was carried unanimously. The formal business having been transacted, a vote of thanks to the directors and staff terminated the proceedings.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED.

SUCCESSFUL RESULTS IN A DIFFICULT YEAR.

The fiftieth ordinary general meeting of The Employers' Liability Assurance Corporation, Limited, was held, on the 25th instant, at Hamilton House, Victoria Embankment, London.

Sir Joseph G. Broodbank (the chairman) said that, in view of the unfavourable conditions with which they had had to contend during the past year, he thought the highest credit was due to their officials everywhere that they should have so maintained the position of the corporation that the premium income of 1930 was £7,430,057, being within 3.3 per cent. of what it was in 1929, when they reached their highest record. Moreover, they were declaring a dividend equal to that paid during the last ten years, and were able to add £21,113 to the general reserve fund. When one saw, day by day, the accounts of trading companies with shrinking gross returns and dropping dividends, these results might be considered a satisfactory achievement. Interest and rents amounted to £381,858 gross, and, for the first time in their fifty years' history, the net interest had provided the amount required for the dividend. The result of the year's operations was that there was a net profit of £319,312, and the directors recommended a final dividend of 3s. per share, making 5s. for the year, less tax.

Referring to their investment in the Clerical, Medical and General Life Assurance Society, the Chairman said that the directors of that society had recently declared a quinquennial bonus of £1,285,990, compared with £1,028,630 in 1926 and £754,850 in 1921, when they acquired the shares. Of this bonus £129,590 would come to the corporation, in addition to the £2,500 dividend which they drew annually.

As to the value of their Stock Exchange investments, latest advices from the United States showed that there had been a further recovery in prices there, and the total depreciation was now only about £79,000 instead of the £157,000 stated in the report, reducing the percentage figure from 2.3 to 1.2. He thought it would be agreed that, with the very large increase in value of the Clerical, Medical shares, the £400,000 to the credit of investment reserve showed an ample surplus of protection against contingencies.

The report and accounts were unanimously adopted.

PINCHIN, JOHNSON AND COMPANY, LIMITED.

CONTINUED EXPANSION.

At the annual general meeting of the shareholders of Pinchin, Johnson and Company, Limited, held on Thursday, March 26th, at the Hotel Metropole, London, Mr Edward Robson (the chairman) presiding.

The Chairman said:—The first half of 1930 was fairly generally good, and had conditions become no worse than existed about the middle of last year, I am of opinion that we should have been able to produce to you a figure of profit equal to, if not exceeding, that of 1929. Unfortunately, contraction in trading in certain markets which had gradually developed during 1930 became accentuated in the latter months of the year, and although this feature was not of any serious consequence, when it is considered in relation to a most exceptional and rapid fall in the values of certain raw material commodities, these conditions together explain the falling off in profits indicated in the report and accounts. As a matter of fact, that decrease is more than accounted for by the single item of depreciation in stocks.

STOCK DEPRECIATION.

This depreciation in stocks applied to this company in an exceptional degree, owing to the fact that this business is the world's largest varnish making unit, a considerable volume of our production consisting of high-grade varnish products which need a considerable period of maturity in order to bring them to the state of quality required. Consequently these varnishes have to be tanked and matured a very considerable period ahead of their selling dates. In that particular class of business, therefore, it has been impossible, even with the exercise of all possible prudence, to avoid the exceptional and extremely rapid depreciation in raw materials contained in this type of product that took place close up to the end of last year.

WORLD-WIDE INTERESTS.

In addition, we have, as you are aware, almost world-wide interests, and in some overseas markets, particularly China, exchange depreciation has been another factor of some consequence. This exchange weakness arises from political and economic conditions in the countries concerned, entirely beyond the control of our own organisation, and we are in a sense merely the incidental victims of such conditions.

These facts explain, definitely and shortly, the inability of the company to obtain a profit figure which a year ago, under conditions then existing, it was reasonable to anticipate.

STRONG LIQUID POSITION.

With regard to the balance-sheet items, there is no material change to report, but I can again confirm that the assets of the company are valued on a very sound and conservative basis. Our liquid position is very satisfactory, cash and trustee securities amounting to over three-quarters of a million pounds, whilst our reserve and carry forward at January 1st amounts to £866,433.

Recently we have acquired a majority holding in a paint and varnish manufacturing undertaking in Buenos Aires. This development has been considered essential in order to preserve and extend our business in South America, and we are fortunate in having acquired this substantial interest in a business that is, in our opinion, the most efficient and up to date of its kind in the Argentine.

ENCOURAGING OUTLOOK.

With regard to the immediate outlook, I think it is extremely necessary to view the future with a great deal of caution. As far as our particular business is concerned, every possible effort is constantly being made to improve our position, to effect all possible economies, and to take advantage of all circumstances that might assist its development.

The fact remains, however, that to a great extent any substantial immediate improvement must depend more or less upon an improvement in world industrial conditions, and although I cannot claim to be particularly optimistic as to the immediate prospect of any real improvement in trade, yet one can perhaps detect some slight signs of a gradual turn-round from the present extremely depressed position.

We have this confidence, however, that we believe in our particular industry, we are more fully, and perhaps better, organised and equipped than any similar undertaking to benefit immediately from any improvement in general trading conditions throughout the world.

LONDON LIFE.

CLERGY MUTUAL AND METROPOLITAN.

CONTINUED PROSPERITY IN A DIFFICULT YEAR.

"STRONG AND HEALTHY CONDITION."

The ordinary general meetings of the above companies were held, on the 25th instant, at 81 King William Street, London, E.C.

Mr Reginald B. Jacomb (president of the London Life Association), in opening the proceedings, referred to the great loss sustained by the death of the Bishop of Worcester.

He went on to say that it was a matter for congratulation that the association had emerged from so difficult and trying a year in a strong and healthy condition.

He said: "In times like the present our chief anxiety is, of course, in connection with our investments of some £22,000,000. We have to consider the safety of the capital invested, and even in the case of redeemable securities, which in normal times would have given us no cause for anxiety, we have in some cases to consider the possibility that obligations will not be met. The main measure we have of the risk is the market price, and we are bound to consider our position in relation to the standard of market values."

"In the aggregate the values of our marketable securities were £202,000 below the amounts at which they stood in the books. Our profits on realisations during the year amounted to £150,000, making a net depreciation of £52,000. Of this, £22,000 was brought forward from the previous year, so that the actual net depreciation in the year 1930 was only £30,000, a result for which we should be profoundly thankful."

He went on to say that in the report and accounts the directors have adopted the principle of "Safety First" in the belief that members would regard the increase in the investment fluctuation fund to £400,000 as prudent, and be satisfied that the margin over actuarial reserves amounts to £917,000.

He referred to the four different funds, which in effect are separate assurance companies, each with problems of its own:—

REDUCTION OF PREMIUM AND GENERAL FUNDS.

He mentioned that an increase of three in the rates of reduction could have been given, as in the case of the last three years, but the directors have felt it wiser only to give an increase of two because it has never been contemplated that an increase of three each year could be maintained indefinitely.

REVERSIONARY BONUS FUND.

For the third year in succession a compound reversionary bonus of 40s. per cent. has, he stated, been declared, a remarkably good bonus when the smallness of the premiums is taken into account. He added that it was expected that this rate could be maintained and that the premiums for new entrants are consistent with such a declaration.

CLERGY MUTUAL.

As foreshadowed in last year's report, in the case of whole life policies a bonus of £4 per cent. had, he mentioned, been declared, increasing by 5 per cent. for each age attained over 65; and for endowment assurances a reversionary bonus of £4 per cent.

METROPOLITAN.

He informed the Metropolitan members that the directors had declared an increase of three in the rates of abatement, which may be considered as a normal increase, although the occasions on which special increases can be given are likely to be frequent.

The President then alluded to the net amount of assurances completed of £3,126,514, which is easily a record for the association. He added that it is a striking indication of the advantages of the non-commission system that, notwithstanding the large new business, the expense ratio is only £5 12s. 7d. per cent. of the premium income.

He mentioned that next month the London Life completes the 125th year of its existence, and that the directors proposed to mark their appreciation of the services of the staff by the grant of a bonus varying with the length of service.

After alluding to the services of Mr Trouncer, and to his appointment as President of the Institute of Actuaries and as a member of the Royal Commission on Unemployment, he paid a tribute to the work of Mr Evans and all their able staff.

The formal resolutions were then put and carried, and the proceedings terminated with a vote of thanks to the President and directors.

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY.

INCREASE IN NEW BUSINESS.

CONTINUOUS RECORD OF HIGH BONUSES.

At the annual meeting of the Scottish Amicable Life Assurance Society, held in Glasgow, on the 25th instant, Mr Peter Rintoul, chairman of the ordinary directors, in moving the adoption of the report, said that one result of the prevalent feeling of uncertainty and the lack of confidence in other fields of investment had been to bring into greater prominence the merits of life assurance as a gilt-edged investment. The life offices generally reported a considerable increase in new assurances during the past year, and the society itself had to report a substantial increase. The net new sums assured—£1,310,000—exceeded the total of the preceding year by nearly £75,000, and the increase was all the more satisfactory in view of the large reduction in the amount of single-premium assurances as a result of the clause in the Finance Act of 1930 which deprived these assurances of the main advantage which had contributed to their popularity. The society, however, had never sought to encourage this form of policy, and the directors welcomed rather than regretted the restrictions imposed by the Act.

The life assurance and annuity funds had increased during the year by £388,000, and now exceeded ten and a half millions.

INCREASE IN THE RATE OF INTEREST.

The rate of interest had increased by 2s. 9d. per cent. to £5 14s. 9d. per cent., and the net rate after deduction of income tax was £4 14s. 3d. per cent., while the average rates for the quinquennial period were £5 11s. 5d. per cent. and £4 13s. 6d. per cent. respectively.

The mortality experience had been exceptionally favourable, the amount paid in claims by death—£283,000—representing only 60 per cent. of the amount expected, as compared with an average of 77 per cent. for the quinquennial period.

The amount paid under claims by survivorship was £268,000, making a total of £1,326,000 for the five years, as compared with only £610,000 for the previous five years, and afforded striking evidence of the increasing popularity of the endowment assurance policy.

QUINQUENNIAL INVESTIGATION.

In connection with the quinquennial investigation as at December 31st last the directors had made a complete investigation of the society's investments. During the quinquennial period the balance of profit on realisation of securities had been applied to write down the value of the remaining assets, and no further provision was considered necessary on this occasion. Indeed, a stringent valuation of the assets—based on market prices at December 31st last with further reductions in the case of the less marketable securities—disclosed that such modified market value was substantially in excess of the amount appearing in the balance sheet. The rate of interest adopted in the valuation of the liabilities under the society's life assurance contracts was 2½ per cent. (as compared with 3 per cent. at the previous valuation), and the net premiums taken credit for left a margin of nearly 20 per cent. to provide for expenses and to contribute to surplus. The valuation, after providing the additional reserves called for by the reduction of the rate of interest in the valuation, disclosed a surplus of £1,251,103, of which £989,417 had been applied to provide bonus additions to full with profit policies at the compound rate of £2 2s. 6d. per cent. per annum (as compared with £2 per cent. per annum at the previous valuation), £100,000 transferred to the general reserve fund, and the balance of £161,868 carried forward.

SOCIETY'S SPLENDID BONUS RECORD.

The members were aware that it had never been the practice of the society to strain its resources. Their policy had been rather to make security their first consideration and to declare bonuses well within their capacity, and he ventured to claim that that policy had been justified by the results. The society could claim a continuous record of high bonuses unbroken by the war, and the bonus additions now declared—ranging from £2 2s. 6d. per cent. to £5 17s. 6d. per cent. on the original sum assured according to the duration of the policy—were the highest in their history. At the same time the society appeared to be in a stronger position than ever for the maintenance of high bonuses in the future, and in these circumstances the directors had declared an interim bonus at the full rate of £2 2s. 2d. 6d. per cent. per annum compound in respect of policies with right to full profits that might become claims by death or survivorship during the quinquennial period.

The report and accounts were unanimously adopted.

NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY COMPANY, LIMITED.

INCREASED OUTPUT AND PROFIT.

AMALGAMATION SCHEME.

MR R. P. SLOAN'S SURVEY.

The annual meeting of the Newcastle-upon-Tyne Electric Supply Company, Limited, was held, on the 24th instant, at the Central Station Hotel, Newcastle, Mr R. P. Sloan (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, referred to the question of the companies' charges for ordinary lighting and domestic supplies, and to the exhaustive inquiry which the Electricity Commissioners held in December, 1929, on behalf of the Minister of Transport. Continuing, he said:—When I last addressed you the Minister had not made his award. This was received in June last and reads as follows:—

"With reference to the application of the Corporation of Newcastle-upon-Tyne and certain other local authorities for the revision of maximum prices and methods of charge of the Newcastle-upon-Tyne Electric Supply Company, Limited, and other companies, I am directed by the Minister of Transport to inform you that he has had before him the report of the two Commissioners who held the inquiry on his behalf. After full consideration of the representations made at that inquiry, the Minister has decided not to make any order on the present application, but he considers that the companies should review their tariffs with a view to modification if the satisfactory results of last year's working are maintained, and has notified them accordingly."

From this you will see that, while the Minister decided not to make any order varying the companies' prices and methods of charges—which was a very satisfactory decision so far as the companies were concerned, as it fully justified their policy—he suggested that the companies should review their charges if the results of the year 1930 proved to be as satisfactory as those of the previous year. The directors have decided to make certain substantial reductions in the prices for lighting and domestic supplies. The extent of these reductions has already been announced.

NEWCASTLE CITY UNDERTAKING.

Referring to the Newcastle Corporation's option to purchase the company's undertaking within the city in 1932, he said the Electricity Commissioners had suggested that the direct current system should now be completely changed over to the alternating current system, and, further, that this change should be carried out concurrently with the standardisation of frequency under the North-East England Electricity Scheme. As the cost involved in changing the remaining portion of the Newcastle network would be considerable, the company could not see its way to comply with the Electricity Commissioners' wishes unless, *inter alia*, an assurance was given by the Newcastle Corporation that it would not exercise its option to purchase the city undertaking in two years' time.

As a result of full consideration of the whole question the Corporation had decided not to exercise its option in 1932, but to postpone this right until some years later. Within that time it was anticipated that both the change from direct current to alternating current, and the standardisation of frequency within the city, would have been completed.

The Chairman referred to the redemption of debenture stocks, which, apart from the annual saving in interest to the combined companies, had considerably simplified the whole financial position, as, when they were completed, the only outstanding debenture stocks would be those of the Newcastle company.

AMALGAMATION OF THE COMPANY AND SUBSIDIARIES.

Proceeding, the Chairman said the directors had from time to time considered the question of an amalgamation of the company and its subsidiaries, and, in view of the coming into operation of the North-East England Electricity Scheme, and for other reasons, they had decided to promote a Bill for this purpose in the autumn session of Parliament.

The amalgamation in view affected eight companies. Apart from the Newcastle company, there were the following:—County of Durham Electrical Power Distribution Company, Limited, Houghton-le-Spring and District Electric Lighting Company, Limited, Tees Power Station Company, Limited, Cleveland and Durham Electric Power Company, Limited, the County of Durham Electric Power Supply Company, the Cleveland and Durham County Electric Power Company, and the Northern Counties Electricity Supply Company, Limited. The Newcastle company held all the issued share capital of the Durham Distribution Company, the Houghton-le-Spring Company, the Tees Company, and also over 99 per cent. of the issued share capital of the Cleveland, Limited, Company. The Newcastle Company and the Durham Distribution Company held all the share capital of the Durham Power Company, while the Newcastle Com-

pany and the Cleveland, Limited, Company held all the share capital of the Cleveland Power Company, and over 90 per cent. of the share capital of the Northern Counties Company. Owing to the redemption of debenture stocks, the financial part of the amalgamation scheme was not likely to present any complications. This being so, he did not anticipate that there should be any great difficulty in obtaining the necessary Parliamentary sanction.

NORTH-EAST ENGLAND ELECTRICITY SCHEME.

The work in connection with the standardisation of frequency on the North-East Coast, which forms part of the North-East England Electricity Scheme, was well in hand, orders for plant and apparatus having already been placed by the company amounting to approximately £1,650,000. In the placing of all orders endeavours had been made to place as much of the work as possible with local firms.

Turning to the results of the year's working, he said that, apart from the reduction of output in respect of electrical energy supplied to chemical works, owing to the closing down of the Tyneside works controlled by the Imperial Chemical Industries, and their transference to Billingham, the company's output showed an increase, which might be regarded as very satisfactory, bearing in mind the state of great depression which prevailed throughout the past year.

Owing to this depression, there was a fall in the amount of electrical energy supplied to shipyards and engineering works, as well as to the iron and steel trades, but supplies to collieries showed a considerable increase, while the sales of electrical energy for lighting and domestic purposes again represented a substantial improvement over those of the previous year.

The profit for the year showed an increase of £37,389, which might be considered very satisfactory, having regard to the particularly depressed state of trade. The transfer from profit to general reserve had been increased by £25,000 to £200,000, while the sum of £30,000 had been transferred to renewals and improvements reserve, as against £75,000 so transferred in 1929. The total sum transferred from profits to these reserves was, therefore, the same as in the previous year.

PROFIT AND DIVIDEND.

The directors recommended the payment of a dividend of 6 per cent. on the ordinary shares—the same rate as was paid last year—and that the balance carried forward be increased by £20,639, to £116,668.

The amount expended on capital account during the year was £110,364. Of this sum, £48,000 represented expenditure on generating station extensions, the balance being attributable to extensions to the cable systems.

The profit derived from the sale of electrical energy, apparatus, and other rentals, etc., showed an increase, as compared with the previous year, of £28,074, and there was also an increase of £9,588 in the amount received in interest and dividends, this being mainly due to increased interest on bank deposit and loans.

The unappropriated sum standing to the credit of general reserve remained at practically the same figure as previously.

THE OUTLOOK.

With regard to the outlook, the most encouraging feature, at the present time, was the continued development of the company's lighting and domestic business. As measured by the number of new consumers of this class, the progress made last year was very gratifying indeed. During that period they connected up over 14,000, a very substantial increase over the number added in 1929. The company had, as shareholders knew, been concentrating for some years past on developing this particular class of business. In order to assist towards this end, the directors of the company and its subsidiaries had decided to make substantial reductions in the ordinary prices for such supplies, as from the commencement of the coming quarter. With the exception of a few districts where special conditions prevailed, it had been decided—throughout the whole area supplied by the group of companies—to reduce the primary and standard charges as ruling to-day for lighting by 1d. per unit. These reductions in charges were estimated to represent a concession to existing consumers of about £49,000 per annum.

The Chairman concluded: From what I have said, I think you will appreciate that our business is being carried on steadily and progressively, and, while I cannot speak with certainty, I feel that, even without any appreciable improvement in the industrial situation, satisfactory results for the present year may be anticipated with a fair degree of confidence.

The adoption of the directors' report and accounts was carried unanimously. Mr. Alfred Bonnin and Sir J. H. B. Noble were re-elected directors, and a dividend of 3½ per cent., making, with the interim dividend of 2½ per cent., 6 per cent. for the year, was moved and carried.

THE UNITED GLASS BOTTLE MANUFACTURERS, LIMITED.

SIR MAX J. BONN'S SPEECH.

STRONG FINANCIAL POSITION.

The eighteenth ordinary general meeting of the United Glass Bottle Manufacturers, Limited, was held, on the 26th instant, at 40-43, Norfolk Street, London, Sir Max J. Bonn, K.B.E. (the chairman), presiding.

The Chairman said: My presence in the chair to-day must recall the very great loss we have suffered by the untimely death after a short illness of our chairman and managing director, Mr George Alexander. To many of you he was personally known, to all of us on this side he was a beloved colleague and friend. Throughout the U.G.B.—whether at head office, the sales organisation or the works—"Mr George" was regarded as the personification of the company, towards whose welfare all co-operated under his genial leadership. The history of the U.G.B. is written around him. In honouring his memory we would wish to pay a grateful tribute to his achievements. In this country he was regarded as the outstanding personality in our trade, and his position of influence amongst our Continental friends and competitors was undisputed. This has been proved by many kind messages of condolence which have reached your board. We particularly appreciated the gracious compliment paid by Herr von Bulow, representing Herr Herman Heye, of the Gerresheimer Glashüttenwerke, as well as the German Association and the Europäischer Verband, and by Dr. Storz, of the Europäischer Verband, in attending our late chairman's funeral. The continued success of the U.G.B. will constitute the best memorial to "Bob Alexander," bottlemaker and lovable man.

The unique position he occupied cannot be duplicated, and now that I have been called upon to take his place as chairman of this important undertaking, I naturally am conscious of many misgivings. I should like proprietors to feel that my promotion from deputy-chairman is not an automatic move or a mere gesture on the part of my colleagues. We discussed the position with great frankness and reviewed the various possibilities, entirely in the interests of the undertaking. The ultimate desire of the board—which met the wishes of our largest shareholders—was that a chairman closely identified with the company and yet somewhat remote from the daily routine should assume responsibility for the wider policy, supported by a board possessing an unusual degree of practical knowledge and enjoying the close co-operation of Mr Gilbert Gilbey as deputy-chairman. Mr Gilbey has very kindly consented to act as the daily link between the board and the actual management, on whom our good fortunes so largely depend. But for my great belief in Mr T. C. Moorshead, our general manager and technical director, and Mr Judd, manager of our sales department, I should not have felt justified in accepting so heavy a responsibility.

I believe we are laying the foundation for a "Structure of Management" which in its gradual development will meet the requirements of the future in the best of your interests. I know I may count on that measure of indulgence and sympathetic goodwill which we in this country always extend to one "on trial." Should it be felt that I cannot devote sufficient time to the problems which constantly arise, the situation will have to be reviewed anew.

Turning to the report and accounts, if you will refer to the balance sheet you will notice that, amongst the assets, buildings, fixed and loose plant and machinery have been increased from £1,334,523 6s. 10d. to £1,344,080 13s. 8d. During the year further capital expenditure has been incurred on additions, alterations and improvements to the equipment, warehouse buildings and loading bays at the St. Helens Factory in conformity with the policy of the board of modernising these works.

LIQUID ASSETS.

Exceptional expenditure has been incurred on packages for the outside warehouses, also on machinery spare parts and general stores, which mainly accounts for the increase in stocks and stores on hand from £429,165 13s. 1d. to £485,429 19s. 8d. As you are aware, the bulk of bottle stocks represents production against definite contracts, pending delivery instructions. It will be seen that, while the debts due to the company have decreased from £261,246 5s. 4d. to £229,988 13s. 8d., sundry creditors, including provision for income tax, etc., have also decreased from £276,242 11s. 5d. to £257,372 5s. 8d.; the total liquid assets, viz., stocks, stores, debtors and cash, less amounts due to creditors, £473,174 16s. 1d., show an increase of £12,386 10s. 5d.

Regarding the profit and loss account, the net aggregate profits of the subsidiary companies, after charging depreciation to the extent of £61,685 0s. 6d. (this sum being in addition to the current maintenance and repairs charged direct to revenue) amount to £209,747 10s. 6d., as compared with the corresponding figure last year of £244,209 13s. 8d. After charging directors' remuneration, income tax, debenture interest and premiums on group life insurance and staff pensions, etc., of the parent company and subsidiary

companies, the balance carried to the balance sheet is £118,654 0s. 10d., as compared with last year's balance of £146,750 15s. 8d. Taking the figure of net profit as above, and adding the sum carried from last year of £44,545 10s.—the total amount with which we have to deal is £163,199 19s. 10d., out of which there have been paid and appropriated (1) preference and preferred ordinary dividends, less tax, for the half-year ended June 30, 1930, and the interim dividend of 2½ per cent. on the ordinary shares, less tax, for the year ended December 31, 1930, £28,426 14s. 2d.; (2) debenture redemption reserve, £8,602 11s.; (3) general reserve, £40,000; (4) special expenditure in respect of factory warehouse reconstruction, £2,500; (5) staff benevolent fund, £4,000; and (6) since December 31st last applied in payment of a dividend for the half-year ended December 31, 1930, on preference shares, £17,430 16s. 4d., and in respect of preferred ordinary shares £2,906 5s., leaving a balance of £59,333 13s. 4d., with which the directors propose dealing as follows:—In payment of a final dividend on the ordinary shares of the company for the year ended December 31, 1930, at 5 per cent., making 7½ per cent. for the year, less income tax, £16,179 5s. 9d., leaving an amount of £43,154 7s. 7d. to be carried forward.

As shareholders will readily appreciate, there has been a contraction in the volume of our business, but it is a pleasure to be able to report the development of substantial new lines. While export markets continue to extend, the sales figures in some territories are a little lower, due to adverse trade conditions, which which you are all conversant.

CURRENT YEAR'S OUTLOOK.

I am naturally most reluctant to venture on any prophecy as to the current year beyond saying that, so far as we have gone this year, your directors are not dissatisfied. As you know, we do not deal direct with the general public; our industry provides one requirement for a multitude of other trades. We are largely dependent on their volume of business, and one is naturally cautious in gauging the likely course of events in the immediate future. Orders are keenly competed for, occasionally at prices which we are satisfied are non-economic, whether proffered by foreign competitors enjoying a highly protected domestic market or by certain members of our own trade at home.

The one thing I wish to emphasise is that we are constantly improving our means of production and are endeavouring to find new outlets. By the end of this year we hope to have practically completed the installation of our self-annealing lehrs, with a satisfactory saving in our fuel costs. The latest type of our "Moorshead" machine—probably the most efficient type of flow machine—has exceeded our expectations and has created great interest amongst potential users abroad. Other important improvements, while still in the experimental stage, hold out great promise, but their full fruition takes time and cannot be measured in terms of months. Thus if the board feel cautious as regards the possible course of events during the current year, they are full of confidence as regards the future of our undertaking—quite apart from any change in our fiscal policy, which would naturally broaden our domestic market and thus reduce our standing charges. We are to some extent obtaining the benefit of lower cost in some of our raw materials, and the board would wish me to pay tribute to the admirable work done by our purchasing committee. But in some of the main items of "cost" we have no appreciable savings to offset the finely cut prices ruling for many of our articles.

I beg to move the adoption of the report and accounts, and that a final dividend of 5 per cent., making 7½ per cent. for the year, less income tax at 4s. 6d. in the £ on the ordinary shares of the company for the year ended December 31, 1930, to be paid.

Mr Gilbert Gilbey (deputy chairman) seconded the resolution.

Mr T. G. Scott, after expressing, on behalf of the shareholders, their sincere sympathy with the directors in the great loss they had sustained by the death of Mr George Alexander, congratulated the board and the management on the result of the past year's working, and said that the figures were really very satisfactory considering that the whole world had been topsy turvy and trade of every description had been exceedingly difficult. He thought the shareholders were very fortunate in having a gentleman of the ability of Sir Max Bonn to succeed Mr George Alexander as chairman of the company. He had known Sir Max Bonn for a great number of years, and he could assure the shareholders that, in assuming the position of chairman, very considerable sacrifice was being made not only by Sir Max as an individual, but also by his firm. He imagined that, in a business of this kind, where practically all the directors were experts in their own particular line, it would be of enormous value to have a chairman who was so tactful and genial as Sir Max Bonn, and he (the speaker) wished them all luck in steering the concern through what he was afraid would be yet another difficult year. (Applause.)

The resolution was then put to the meeting and carried unanimously.

RADIATION, LIMITED.

SOLID PROGRESS IN A DIFFICULT YEAR.

The annual general meeting of Radiation, Limited, was held, on the 23rd instant, at the Cannon Street Hotel, London.

Mr H. James Yates (the chairman) said in the course of his speech: I think few of us regretted the passing of 1930. It was a very trying year for the whole country, and it adversely affected many business concerns. But I am happy to tell you that—due to the vision and foresight of our policy during past years, and to our unceasing strenuous efforts—notwithstanding the many trading difficulties experienced in 1930, the solid progress of your company continues. Our policy all along has been not to "put all our eggs in one basket." We are to a great extent self-contained as regards possessing businesses for the supply of our component parts, and these businesses in themselves have contributed in no small measure to our success.

The net income derived from the subsidiary companies, including transfer fees and bank interest, is £295,292, compared with £295,997 last year, which I think you will agree with me can be considered very satisfactory.

There is an impression in some directions that during the past year there has been a substantial reduction in the cost of materials. This is not the case so far as we are concerned, except in one or two instances of materials of which our consumption is small. The item of greatest consumption among our raw materials is pig-iron, and unfortunately the average cost of this during the past year has exceeded that of the previous year. Notwithstanding the increased cost of materials and the improvements which have been embodied in our goods, we have not increased the prices to our customers. In my opinion a concern which pursues this policy, whenever it can make it possible to do so, is well rewarded in the long run by the increased business it brings, and by its effect in holding the confidence and appreciation of the public.

The present year has opened under greater difficulties than I can remember in my business career, which is by no means a short one, but my confidence in Radiation is as great as it has ever been. We are in the enviable position of being the pioneers of the modern gas cooker, gas fire and domestic hot-water apparatus. The consequence is that the word "Radiation" has become the hall-mark for all goods of the class we make.

THE "NEW WORLD" COOKER.

I have already told you on a number of occasions of the development of our "New World" cooker with the single oven burner and direct bottom-flue-outlet. The "Disc-Bar" hotplate, to which I referred in my address two years ago has still further increased the popularity of the "New World" cooker. In the case of the "Disc-Bar" hotplate, as the name implies, a disc is provided over each burner, thus affording a firm support for even the smallest utensil, and giving protection against chocking of the burner by accidental spilling or boiling over of liquids on the hotplate. The burners are of the "Rado" flame-spreading type, characterised by freedom from smell and by complete combustion of the gas, even should the pressure of the gas supply fluctuate. These advantages are not possessed by cookers fitted with drilled ring burners.

In passing, I would like to refer once again to the "Regulo," which is supplied with all our "New World" cookers, and by means of which the heat in the oven is automatically controlled during all cooking operations. The "Regulo" is a development of the thermostat which was first employed by us some 30 years ago in connection with our hot-water apparatus, and as a result of this prolonged experience we were able to make it in such a form as to ensure reliable heat control in a gas cooker oven. Inevitably the old adage, "Imitation is the sincerest form of flattery," has been exemplified in the attempts of our competitors to copy our "Regulo," but we have evidence daily of the supreme reliability and accuracy of our "Regulo" as compared with all other similar apparatus on the market, and this is borne out by the sales of our "New World" cookers, which last year were greatly in excess of the previous year—a clear evidence of the confidence the public have in our "Regulo" and the "New World" cooker.

THE "BEAM" RADIANT.

There is another invention of ours to which I wish again to make reference, and that is our "Beam" radiant, which is fitted in all our gas fires. Here, again, we have more of the sincere flattery of competitors' imitation than we could wish. The pre-eminence of the "Beam" radiant has been maintained during the past year, and it is gratifying to note the growing appreciation in medical circles of the value, as a therapeutic adjunct, of infra-red energy such as is provided by our gas fires. About the date when last I addressed you, Sir Leonard Hill published, in one of the medical

LOST.—Within the past twelve months, all over the country, much money invested in stocks and shares; owners desirous re-creating estates.

FOUND.—A gilt-edged security liable to appreciate, not depreciate; carries rights to income tax rebates; buyable in a rising market; creates an immediate estate. Apply LIFE DEPT., THE LIVERPOOL AND LONDON AND GLOBE Insurance Company, Ltd., 1, Dale Street, Liverpool.

RE-CREATE YOUR ESTATE THROUGH THE LIVERPOOL AND LONDON AND GLOBE INSURANCE Co., Ltd.

journals, a note dealing with his experiments in the study of the increased resistance to staphylococcal infection afforded by exposure to red and infra-red rays—experiments in which the energy used was obtained from "Beam" gas fires.

The results of later work have shown that treatment by infra-red energy alleviates the ill effects of certain cases of rheumatism and also that the stimulation of the capillary blood flow induced by such treatment removes the unpleasant disfigurement caused by acne. Whereas ultra-violet irradiation by the use of certain electrical appliances may not be undertaken by laymen without the risk of unpleasant after effects, infra-red energy treatment can be carried out, without fear of accidental over-exposure, with the "Beam" Radiant gas fire, by anyone possessing a domestic gas supply. The "Beam" Radiant gas fire is not merely an effective room heater, but is, in addition, an appliance which offers definite advantages as a consequence of the type of energy it provides.

GAS INDUSTRIES HANDICAPPED.

There are heavy handicaps against which our gas industry has to struggle alone. The principal provisions under which gas undertakings operate date back as far as 1847, although some relief was granted in 1920 and 1929. It is the duty of Government to find an opportunity of introducing new legislation that will remove the fetters by which the gas industry is hampered in its working at the present time. Surely Parliament ought to see that the gas industry—particularly in these difficult times—is, in common fairness, granted the same freedom for expansion as that enjoyed by the electrical industry. Not only has the gas industry served the country well for many years past; it continues to be invaluable, if not, indeed, indispensable, to the community to-day.

In my opinion there is room for the proper development, side by side, of both these important industries, without any need for extraneous and partisan support of either at the expense of the other. The comparison between the cost of electricity and that of gas is all in favour of the latter.

Our overseas trade is, as you will appreciate, hampered and restricted by the tariff barriers which we everywhere encounter. Notwithstanding the difficulties which we experience from this cause, we are continuing to maintain our overseas connections, so that should more favourable conditions arise we shall be ready to develop our foreign and Colonial business.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

THE POWELL DUFFRYN STEAM COAL COMPANY, LIMITED.

SUBSTANTIAL IMPROVEMENT.

MR EDMUND L. HANN ON THE COAL MINES ACT.

The annual general meeting of the Powell Duffryn Steam Coal Company, Limited, was held at the Cannon Street Hotel, London, Mr Edmund L. Hann, chairman and managing director of the company, presiding.

The Chairman, after dealing with the various items in the balance sheet, said that although the trading profits for the year—£370,294—show a substantial improvement on last year they must still be regarded as unsatisfactory.

The general depression in world trade has resulted in decreased demand for large coal, and the company has been specially hit by the very acute depression in the iron and steel trades.

In addition, the minimum prices under the Coal Mines Act are an incalculable handicap to trade, since they are known to potential purchasers and, what is more serious, to all foreign producers of coal, who can always undercut our quotations.

Practically the whole of the profits available after the payment of the preference dividend have been placed to depreciation and reserve, which, having regard to the uncertain future, the directors consider is the only prudent course to pursue.

The Chairman mentioned that the officials and staff continue to suffer a reduction in their salaries, and the directors also continue to waive a substantial portion of their fees.

ACQUISITION OF THE ALBION COLLIERY.

The Albion Colliery, which adjoins a portion of the Lewis Merthyr and Great Western properties, has been acquired during the year at a very modest price, and the directors are satisfied that by the expenditure of a quite reasonable sum this property can be made to form a very valuable part of the undertaking. The quality of coal obtained from the colliery ranks amongst the best Admiralty coals and commands a high selling price for both large and small coal.

SMOKE ABATEMENT.

WELSH SMOKELESS COALS.

Continuing, the Chairman referred to the important subject of smoke abatement and the elimination of objectionable fumes from the atmosphere. There is no doubt that the atmosphere of London and other large towns can be much improved by the use, in the large power plants, of Welsh coals, which can be burned without the emission of any smoke.

In the same way, there is no reason why Welsh coals should not be used in London for household purposes, for these give a bright fire which is very effective. Their ash content is far less than in coals normally burned in London, and they have a high calorific value and consequently are very economical.

About a year ago the company placed on the market a smokeless coal, under the registered name of "PhurnoD," for use in domestic hot-water boilers, central heating plants, slow-combustion stoves, kitcheners, etc.

The demand for this coal, which is much cheaper than anthracite, has, considering the short time it has been on the market, been highly gratifying, and they have received excellent reports of the general satisfaction that "PhurnoD" has given in all classes and types of boilers and central-heating plants.

SOUTH WALES WAGES AGREEMENT.

After referring to the strike in January, the Chairman stated that the difficulties in the South Wales coal trade arise largely from the unjustifiably high level at which the wages in sheltered industries have been maintained.

To add to our troubles we have had, firstly, the reduction of the hours of work at a time when the industry was struggling for its existence, and, secondly, the proposal to continue the welfare levy for a further period of five years. The coalowners have fostered and encouraged welfare work in the past, but they consider that, having regard to the conditions of the industry at the present time and the fact that there is a large surplus available in the fund, they should not be called upon to continue to pay this levy, or at any rate not to the same extent.

Referring to the marketing scheme, Mr Hann thought it was unfair to condemn the Act in its early days. The Act has, however, increased the difficulty of the export programme very considerably.

The immediate outlook for the coal trade is far from reassuring, and there can be no prospect of a return to prosperity in the coal trade, or in any of the other heavy exporting trades, until there is some sign of retrenchment in Government expenditure, and until there is some revival of the general trade of the world.

The report and accounts were unanimously adopted.

INTERNATIONAL AUTOMATIC TELEPHONE COMPANY, LIMITED.

WORLD-WIDE ADOPTION OF STROWGER SYSTEM.

The annual meeting of the International Automatic Telephone Company, Limited, was held, on the 23rd instant, at the Incorporated Accountants' Hall, Victoria Embankment, London. Sir Alexander Roger (the chairman), in moving the adoption of the report and accounts, said that the profit for the year was £134,024, compared with £135,849. The directors recommended the transfer of a further £10,000 to general reserve, and the payment of a final dividend of 6½ per cent. per annum on the ordinary shares, making 10 per cent., less tax, for the year. A bonus of 2½ per cent., less tax, on the ordinary shares was also recommended. On the deferred shares they recommended a dividend of 10 per cent., less tax, for the year, and a bonus of 2½ per cent., less tax. It was the third year in which such bonuses had been declared, and he wished again to say that they should be regarded in the light of bonuses.

The company was responsible for overseas selling arrangements for the products of the Automatic Telephone Manufacturing Company, Limited, and contracts so secured were passed to that company for manufacture. The system of telephony sponsored was on the Strowger Automatic basis. Nearly three quarters of the world's automatic telephones were now connected to central offices equipped with this mechanism or modifications based upon its original design.

The Automatic Telephone Manufacturing Company's factory was very efficiently staffed and equipped, while the technical and scientific organisation, coupled with the assistance it received in that direction from associated companies, was second to none.

As he had said a year ago, conditions in the telephone industry during the last few years were changing, and it was necessary to have available considerable capital for the purpose of offering to customers, the telephone operating companies, long-term credit of semi-permanent investment character, in order to secure manufacturing business. With their subsidiary, the Automatic Telephone Manufacturing Company, they were in a position to offer capital in such a way.

AN IMPORTANT ALLIANCE.

Since they last met the position had been still further improved by the combination of powerful British and American telephone operating and manufacturing interests, under the title of "General Telephone and Electric Corporation." On one side, it was an alliance of leading telephone operating and telephone equipment manufacturing interests, and on the other side an introduction into the field of international telephony of the Trans-America Corporation, one of the world's largest financial holding companies. The General Telephone and Electric Corporation controlled and operated more telephones than any other privately owned company in existence, with the exception of the American Bell system.

This combination of financial resources with first-class telephone experience and skill was now available for the further extension and development of the group of companies with which their own company was closely associated.

A highly important contract from the South African Government for the installation of Strowger automatic exchange equipment in Johannesburg marked the first introduction of the Strowger system on a large scale into South Africa, and thus added another country to the list of over fifty Strowger using countries of the world. The subscribers in those countries made use of more than 7,000,000 Strowger dial telephones, being upwards of 20 per cent. of the total telephones in the world. They had also secured contracts for four exchanges in Northern Rhodesia and one in Tanganyika Territory.

In Egypt the Mansoura installation had been duly completed. During the year the Automatic Company's exchange apparatus had been introduced into Canada by the installation of the Strowger exchange at Victoria, to the order of the British Columbia Telephone Company.

The Automatic Company had had a very successful experience in installing their patented all-electric totalisators at Newmarket, Leicester, Cheltenham, Pontefract, Birmingham, Wolverhampton, and now at Ascot. Their company was actively engaged in exploiting that equipment overseas.

While they had not been so seriously affected as many British industries by world trade depression, as was to be expected, they had not been entirely immune; but setbacks did not necessarily mean that business had been definitely lost. They rather signified a postponement until more favourable conditions asserted themselves. Prospects generally could be brighter, but they were prepared to meet the keenest competition to ensure obtaining a fair share of the world's business.

Mr George W. Moore seconded the resolution, which was carried unanimously.

The directors, all of whom retired under the articles of association, were unanimously re-elected, and Messrs Harwood Banner and Son having been reappointed auditors, the proceedings terminated.

CITY OF LONDON ELECTRIC LIGHTING COMPANY, LIMITED.

INCREASED OUTPUT—REDUCED CHARGES.

The ordinary general meeting of the City of London Electric Lighting Company, Limited, was held, on the 25th instant, at Falcon House, Aldersgate Street, London, E.C.

Mr J. B. Braithwaite (the chairman) said that they had had a year which, although it had been a difficult one in many ways, they had come through unscathed, which he thought was rather remarkable in view of the depression in trade that had prevailed during most of the year. With regard to their output, the units sold during the year were 94,538,223, or an increase of about 5½ million units over last year. Of these 36,050,616, or 38.12 per cent., were for lighting; 43,209,237, or 45.7 per cent., were for power; 14,147,277, or 14.97 per cent., were for heating; and the remainder, 1,131,093, had been used for street lighting.

There had been a further fall in the price in all classes of supply. During the year the lighting charges had averaged 3.35d., as compared with 3.5d. last year. Power was down to 1.11d., as compared with 1.15d., and heating was down from 1.35d. to 1.29d., and the three supplies combined had decreased from 2.1d. to 2.02d. That might be thought to be a very small quantity, but it represented over £31,000. The consumers had very much benefited, for it would be seen that the consumers' benefit last year reached a total of £402,519, an increase of over £50,000 as compared with the previous year.

With regard to the increase in the various types of load, the lighting load had increased 5.51 per cent., the power load by 9.18 per cent., and the heating load remained about even. It must be remembered, however, that last year there had been an increase of 34.9 per cent. in the heating load, so that this year they had not only been able to hold the whole of that increase, but to have a few hundreds of units in addition. They might therefore expect that in the current year the heating load would again make new forward strides. The total increase of the various types of load was 6.3 per cent. The company's share of the consumers' benefit was £67,084, which had been transferred to a special reserve, raising the total of that reserve to £310,842. They would be able to add two more annual quotas to that before they had to decide on further capitalisation in preparation for the new standard price which would be fixed in 1933.

FURTHER CAPITALISATION.

They were making preparations, therefore, to capitalise a further £400,000, which would allow of a distribution of one new fully-paid ordinary share for each three shares now held. In 1933 the standard ordinary dividend would be reduced to 7 per cent., but he thought they would have little difficulty in obtaining the additional amount required to maintain the dividend at the present figure.

Turning to the revenue account, shareholders might have received rather a shock, because it showed the profit balance for 1930 at £332,011, whereas for the previous year it stood at £473,972. That apparent drop was due to a slight rearrangement of the revenue account, as they had considered it desirable that the compulsory transfers to sinking funds should be included in the annual expenses. Taking into account the transfers to the "A" and "B" sinking funds, and adding the amount of the carry forward, it showed that their profit was practically the same in spite of two rather adverse facts, namely, a drop in sundry receipts and testing fees, whereas rates and taxes showed an increase of £18,404, which more than wiped out the increase in the gross revenue of £17,856. The net result was that they were able to pay the full standard dividend, put to the special reserve funds the full amount, and to increase the carry-forward by £3,210, which he thought, in the circumstances, was a very satisfactory result.

As to the outlook for the current year, they had entered into a contract with the Southwark Borough Council to supply them in bulk, and he hoped the contract they had entered into would enable the Borough Council to reduce their working costs and facilitate their meeting the increased demands from their consumers. They hoped the supply would commence next autumn, but the company would not feel much benefit until the council was in a position to abandon their generating station. As to their own position, they had no new district to develop, and had to rely entirely on increased consumption in their existing area. There was room for an increase in the heating load, and the new building operations now going on should help them. However, with a really efficient plant and with their up-to-date generating plant and distribution system they were ready to give an increased supply, and were always willing to give a stimulus to demand by a reduction in price when possible.

The report and accounts were unanimously adopted, and a resolution was passed increasing the capital of the company to £2,400,000 by the creation of 400,000 additional ordinary shares of £1 each.

APOLLINARIS AND PRESTA, LIMITED.

CONTINUED SUCCESS OF PRESTA.

The thirty-fourth ordinary general meeting of Apollinaris and Presta, Limited, was held, on March 24th, at the Holborn Restaurant, London.

Mr Alfred R. Holland, chairman of the company, presided, and, in moving the adoption of the report and accounts, said that the profits showed a reduction of some £8,000 only, or about 10 per cent., which gave them reason for gratification at the way in which the company had been able to carry on. The directors felt justified in maintaining the dividend at 1½ per cent., as in the previous year, and the carry-forward, after providing for the appropriations recommended in the report, would remain at the very satisfactory figure of £96,321.

At home the company had practically maintained its position, but the same could not be said with regard to the export trade. The Dutch East Indies showed a heavy falling off, due to the unparalleled fall in rubber prices; while the trade with the Colonies was also unsatisfactory. Among the more encouraging features of the year's business, however, was the satisfactory advance in the sales of Presta.

As far as 1931 was concerned, he did not wish to conceal from them that up to the present the results had been disappointing. However, they could be encouraged by the fact that their business was sound, and its financial position very strong. They also had every reason to believe that the company would be among the first to benefit by the advent of more favourable conditions.

Mr F. J. Schilling, the managing director, referred to the continued success of Presta aerated waters, sweetened beverages, etc. He said that, in spite of the difficult conditions prevailing, sales had been greater and profits higher during 1930. Presta's growing popularity was due to its excellent qualities: it kept well even in hot climates, and they had last week received repeat orders from lands as far away as Iraq and East Africa.

Their new factory near Halifax had been completed in September, and had met with a reception which both justified their choice of locality and augured well for the future. If trade conditions were in any way favourable, he believed Presta would make steadily increasing contributions to their profits and to the further development of the business.

The report and accounts were adopted unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended March 21, 1931, amounted to £28,769,200 against ordinary expenditure of £13,100,000. After allocating £6,352,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £289,193 the week's operations, as shown below, reduced the National Debt by £9,018,000 to £7,618,761,000:—

Messrs. Samuel Montagu and Company write on March 25, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £141,956,734 on the 18th instant (as compared with £140,927,721 on the previous Wednesday), and represents a decrease of £5,668,888 since December 31, 1930. There was little demand for the £623,000 of South African bar gold available in the open market yesterday, and the Bank of England secured about £578,000 at the statutory buying price. Of the balance, £17,000 was taken for India and trade requirements, and £25,000 for Germany, at the fixed price of 84s. 10½d. per fine ounce. A small amount available from other sources was also taken for Germany. In addition to the £578,000 mentioned above, the Bank of England secured on the 23rd instant about £800,000 bar gold, the source of which has not been disclosed.

Movements of gold at the Bank of England during the week have resulted in a net influx of £1,615,691. Receipts totalled £1,637,691 of which £250,000 was in sovereigns from South Africa and £1,382,319 in bar gold, whilst withdrawals consisted of £22,000 in sovereigns.

SILVER.

Prices have ruled considerably lower than last week, the market following a downward trend in the Shanghai exchange. The week under review opened with a sharp fall, prices on the 19th instant being fixed at 13½d. for both deliveries, representing a fall of ½d. in the cash and ¼d. in the two months' quotation; prices were subsequently subject to fluctuation without showing any definite tendency. Selling has been mostly on China account, and the Indian Bazaars, besides supporting the market by covering operations, have also made fresh sales. America has been more inclined to buy than to sell.

In the absence of demand for shipment quotations have, during most of the week, been quoted the same for both the cash and two months' deliveries.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 16th instant to mid-day on the 23rd instant:—

REPORTS AND NOTICES.**MISCELLANEOUS.**

HOME AND COLONIAL STORES (TERMS OF OFFER TO LIPTON, LTD.).—The terms of the offer by Home and Colonial Stores to acquire by a share exchange the entire capital of Lipton, Ltd., were issued on March 26th, together with the annual reports of the two companies, and are as follows: For every 12 five per cent. non-cumulative first preference shares of 10s. each of Lipton, Ltd. (5 six per cent. cumulative "A" preference shares of £1 each of Home and Colonial Stores, Ltd., fully paid); for every 2 six per cent. non-cumulative second preference shares of 10s. each of Lipton, Ltd. (1 six per cent. cumulative "A" preference share of £1 of Home and Colonial Stores, Ltd., fully paid); for every 50 ordinary shares of 1s. each of Lipton, Ltd. (21 ordinary shares of 4s. each of Home and Colonial Stores, Ltd., fully paid). The net profit of Home and Colonial Stores for year ended January 3, 1931, was £588,938, as compared with £576,264. The ordinary shareholders again receive 25 per cent. Lipton's net earnings for same year ended January 4, 1931, amounted to £148,717, as compared with £118,377. The ordinary dividend is 20 per cent., against 10 per cent. for preceding year. For further reference to the merger plan see *The Economist*, March 21, 1931 (page 626).

RECKITT AND SONS, LTD.—Profits for 1930 show a reduction of about £23,000 at £1,254,677. This figure is supplemented by £46,104, appreciation of investments, making a total available of £1,300,781. Last year's figure was reduced by £37,563 investment depreciation. The ordinary distribution, including bonus, is again brought up to 22½ per cent., and the directors recommend the transfer of the investment appreciation to investment reserve fund, contingencies fund receives £100,000, and a like amount is written off goodwill, leaving, after provision for the bonus to staff and workpeople, £181,252 to go forward. Last year, reserve received £200,000 and development fund £100,000, and £178,926 was carried forward.

STEWARTS AND LLOYDS.—Profits for 1930 amounted to £590,645, against £694,770 in 1929, and a dividend of 9d. per share was recommended on the deferred and liaison deferred shares, against 1s. 6d. per share in 1929. The balance sheet shows a drop in creditors from £838,409 to £653,208, while loans from bankers rose from £655,313 to £926,615. Cash and bills receivable are both reduced, while interests in allied and subsidiary companies are up from £2,520,578 to £3,272,343. The company at the end of 1930 established a community of interests with Tube Investments, Ltd., and liaison shares in each company were created and exchanged.

S. T. D. MOTORS, LIMITED.—We are officially informed that Mr James Todd has intimated his desire to retire from the chairmanship, and in order to facilitate the carrying out of the recommendations contained in the report of Price, Waterhouse and Company, the whole of the board have handed in their resignations, which have been accepted. A new board consisting of: Lieut.-Gen. Sir Travers Clarke, G.B.E., K.C.B., K.C.M.G., chairman, Sir Daniel Neylan, C.B.E., and Mr J. Francis Marrian, has been constituted and is considering the appointment of additional members in due course. It is hoped that the annual general meeting will be held in the second or third week of April.

CUNARD STEAM SHIP COMPANY.—The directors of the Cunard Steam Ship Company announce that the profits for the past year are insufficient to enable them to recommend the payment of a dividend on the ordinary shares. The last occasion on which the ordinary dividend was passed was for the year 1909. For the past three years 7½ per cent. has been paid on the £5,570,261 of ordinary capital. Net profits for 1929 amounted to £809,638 after providing for depreciation of steamships, the highest in recent years and an increase of £259,161 over 1928. The reserve was increased by £50,000 to £1,500,000 and the carry forward raised from £188,397 to £195,266. The annual meeting of the company will be held at the Liverpool offices on April 8th and the directors report and accounts will be posted to shareholders on Saturday.

Commercial Reports.

MARKET SUMMARY.

There has been a slight improvement in the demand for coal owing to the approach of the Easter holidays. The general outlook for the coal industry has, however, again become obscure owing to the decision of the miners' delegate conference in London to discontinue the spread-over system after the end of the current month, when the temporary agreements in several districts expire, and because of its instruction to the Executive Council to approach the Government with a view to secure a Minimum Wage Bill for all workers. Little headway has been made by the iron and steel industries. Continental semi-finished steel is still cheaper than the British material, but a slight expansion of business has become noticeable in the "finished" section. In the absence of an increase in consumption the principal non-ferrous metals all lost ground during the week. Among textile raw materials, wool has again been firm, and flax shows a considerable advance on the week, while cotton has been slightly lower. Business in cotton goods has been less active, but rayon fabrics continued to experience a good demand. In foodstuffs, the feature has been the weakness of wheat, which was caused by the Federal Farm Board's announcement of its decision not to support the wheat market in the next crop year. Sugar has been firmer, and the price of "British refined" was advanced 6d. per cwt. Tea, coffee and cocoa have been steady. Among miscellaneous commodities, rubber has been cheaper, and vegetable oils and oilseeds have been quiet.

THE COAL TRADE.

SHEFFIELD.—Supplies of South Yorkshire fuel are still scarce owing to the insufficient quotas and prices are higher in the inland market. Spot demand for export is brisk, but there is little or no forward business. Best steams are firm at 17s. and 17s. 6d. f.o.b. House coal is scarce at most pits, and as much as 22s. at pits is being asked for best ordinary qualities of South Yorkshire and Derbyshire sorts. Coke production has been curtailed owing to the shortage of slacks, but the market is no better, consumption at blast furnaces being abnormally slow.

GLASGOW.—Restriction of output and some diversion of business owing to scarcity of supplies in Yorkshire have produced several firmer features, although with foreign inquiry still limited the outlook is not regarded as definitely more hopeful. Steam coals are firm in Fife and steady in the Lothians, while prime splints are well booked from the Lanarkshire field. The larger sizes of nuts remain strong, and other grades weak. The recommendation to the Scottish miners to disregard the Federation's spread-over decision has given much satisfaction. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 16s. 6d.; splint second, 15s. 6d.; navigation, 15s. 3d.-15s. 6d.; navigation second, 14s. 6d.-15s.; Hartley, 15s. 6d.; steam, 14s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 10s. 6d.; pearls, 10s. 9d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 13s.-13s. 6d.; third-class steam, 12s.-12s. 6d.; trebles, 12s.-13s. 6d.; doubles, 11s.-11s. 6d.; singles, 10s.; pearls, 10s. 6d. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 9d.; trebles, 12s.-13s.; doubles, 11s.-11s. 6d.; singles, 10s.; pearls, 10s. 3d.-10s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s. 6d.; trebles, 13s.; doubles, 11s. 9d.; singles, 10s. 6d.; pearls, 10s. 9d.; dross, 10s. 6d.

CARDIFF.—The approach of the Easter holidays has led to an improvement in the position of colliery stems, and it is anticipated that during the next few days shipments will be more active than they have been for some time past. Some of the large coals have been comparatively scarce for prompt loading, but, generally speaking, the supply of large, as well as of other, grades has been in excess of the current effective demand, and prices for all qualities have remained stationary at the scheduled minimum basis. As the result of the curtailment of output under the regulation scheme, the assured production of the members of the Monmouthshire and South Wales Coalowners' Association for the financial year ended March, 1932, is estimated at 43 million tons compared with 47.8 millions in the financial year ended March 31, 1931. The weakness of smalls continues the most unfavourable feature of the market, and in view of the continued severely depressed state of the pig-iron industry little improvement is expected in the immediate future. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 15s. to 15s. 3d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. 9d. to 24s.

WORKINGTON.—March is closing well for the coal trade. Irish merchants are ordering freely on account of the approach of the Easter holiday period, and some of the collieries are booked to the middle of April. Production is larger because of the resumption of winding at the Haig and Wellington pits at Whitehaven. Local landsale is steady, and there is a fair demand for industrial fuel. Prices are firm. Best round is 22s. 6d.; washed doubles, 21s.;

IRON AND STEEL.

MIDDLESBROUGH.—Buying of Cleveland iron for the second quarter has not yet matured to any appreciable extent and most consumers for the present are content to cover their requirements just as needs arise. They seem to have made up their minds that they will lose nothing by waiting and prefer to continue a hand-to-mouth policy of purchasing. The outlet for Cleveland iron is confined principally to local and inland foundries, the demand for Scotland and export being seriously affected by the competition of Continental and Indian iron, but stocks held by makers are light and the production for the open market so small that any little improvement would quickly affect the market position. Already a somewhat more confident feeling is beginning to show itself and better trade is looked for by many people before long. Very little improvement, however, was noticeable at Tuesday's weekly market and business in Cleveland was limited to moderate lots for early delivery. Official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In hematite there is still a hesitancy to enter into contracts for forward supplies on the part of consumers, but they are keeping in close touch with the market and may decide at any time that the right moment has arrived to make purchases as economic conditions do not hold out encouragement to expect lower prices. In the meantime the transactions passing are for early delivery, for which makers are accepting 67s. 6d. for mixed numbers. For forward, 68s. to 68s. 6d. is named according to quantity and period of delivery. In the finished trades there is very little new business coming to hand just now. Rails and structural materials against old contracts are providing a fair amount of work and foundries are not badly placed, but the sheet trade continues very quiet. There is no change in prices. The ore market remains almost idle. Best Bilbao rubio is nominally 16s. c.i.f. for early delivery and the rate of freight Bilbao/Middlesbrough for prompt boats is about 4s. 6d. Coke continues to be freely offered, supply being much in excess

CARDIFF.—There has been no material change this week in the condition of the South Wales iron and steel industries, all branches of which continue in a state of severe depression. Tinplate prices have ruled between 15s. and 16s. per basis box, while Welsh tinplate bars are unchanged at £5 per ton, foreign bars at £4 5s. per ton, and galvanised sheets at £11 per ton. Shipments at Swansea last week were slightly larger than in previous weeks, but stocks were hardly affected and totalled 233,187 boxes, compared with 204,347 boxes at the corresponding period last year.

OTHER METALS.

TIN.—The advance in tin recorded last week has not been maintained owing to considerable selling pressure. Wednesday's price per ton, for standard cash at £121 10s. to £121 12s. 6d. compares with £123 2s. 6d. to £123 5s. on the corresponding day last week, while "three months" was quoted at £123 to £123 2s. 6d. against £124 12s. 6d. to £124 15s. a week ago. Stocks in London and Liverpool at the end of last week at 26,409 tons show a rise of 549 tons as compared with the previous week. According to the Statistical Department of the Metallgesellschaft A.G. the world's mine production of tin in February amounted to 14,320 metric tons against 13,840 metric tons in January.

COPPER.—In the absence of an improvement in consumption the reaction in prices following the recent speculative buying continued this week and the metal was again easier. Copper Exporters, Inc., reduced their quotation for electrolytic, c.i.f. Continent from 10.55 cents to 10.30 cents, and Wednesday's official closing quotation for standard cash at £43 16s. 3d. to £43 17s. 6d. compares with £44 11s. 3d. to £44 12s. 6d. a week ago. Stocks of refined copper in official warehouses at the end of last week, at 8,684 tons, show an increase of 214 tons, while stocks of rough copper, at 1,538 tons, were 25 tons lower. The Statistical Department of the Metallgesellschaft A.G. has estimated the world's smelter production of copper at 117,566 metric tons, which shows an increase of 762 metric tons on January.

LEAD.—No fresh measures to improve the situation were taken at the meeting of the Producers' Association. This resulted in a sharp fall in prices on Tuesday. On Wednesday, however, there was some recovery, mainly owing to reserve of sellers, and "soft foreign" changed hands at £12 12s. 6d. to £12 17s. 6d., which compares with £13 to £13 5s. a week ago.

SPELTER.—Considerable liquidation early this week resulted in a sharp decline in values, but on Wednesday the metal advanced under "bear" covering, and "good ordinary brands" recovered to £11 16s. 3d.-£12 5s., which compares with £12 1s. 3d.-£12 11s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, the prices of aluminium and nickel remained unchanged at £85 per ton and at £170 to £175 per ton respectively. Antimony changed hands at last week's price of £25 to £25 10s. per ton for "foreign," and quicksilver remained unchanged at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool, March 25th.—There is very little change in the prices of cotton from those current a week ago, and fluctuations are unimportant. There has been a diminution in the volume of business passing, and manufacturers' returns the world over are disappointing. The final ginning report issued on the 20th instant was 13,754,000 running bales, equal to 13,930,000 bales of 500 lbs., against 14,548,000 running bales in 1930 and 14,297,000 running bales for 1929. The report indicates an over-estimate by the Bureau of some 313,000 bales. Various rumours are afloat in connection with the Farm Board regarding the next crop, but a statement has been issued by the Chairman of the Farm Board that no decision regarding the 1931 crop has yet been reached by the Board. There is still a great deal of uncertainty regarding acreage cut, but a 10 per cent. reduction seems more or less a general idea. Work in the fields is reported to be well in hand. Fertiliser sales, however, are still considerably less than the same time last season, perhaps due to the financial difficulties of the farmers and small banks. Spot sales for the week 19th to 25th (inclusive) are 34,000 bales, of which 13,650 bales are American, 2,900 Brazilian, 600 Argentine, 3,050 Peru, 7,650 Egyptian, 3,900 African, 1,100 East Indian, and 1,150 sundries. Imports for the same period are 57,796 bales, of which 19,858 bales are American, 5,692 Brazil, 1,054 Peru, 2,885 Egyptian, 1,726 African, 2,173 East Indian, and 24,408 sundries. Quotations to-day are: American Middling, 5-85; Egyptian Sakel, 9-60; Uppers, 7-01; Brazil Fair, 5-93; Peru G.F. Smooth, 6-33; West African Middling, 5-88, and East African G.F., 6-93.

Manchester, March 25th.—Inquiry throughout the market has continued fairly extensive, but on the whole rather less business has been done than in recent previous weeks. A little more uncertainty has prevailed with regard to future prices, and the attitude of merchants has been affected by rather less satisfactory news from some foreign outlets. In piece goods for India a persistent inquiry has been met with, and a fair amount of buying has taken place in light goods and fancies, chiefly for Calcutta. There are indications, however, of dealers in Bombay being more interested in Manchester rates. Further trade expansion with India is dependent upon political developments. Only occasional transactions have been put through for China, chiefly in fancies, and auction news from Shanghai at the moment is not encouraging. Producers of printing and finishing styles continue to sell rather more freely for the West Coast of Africa, South America and the Continent, but operations for Egypt and the Near East remain restricted. A steady demand has again been reported in home trade fabrics. American yarns for home consumption have moved off rather slowly, but on the whole rates continue to be more firmly held, especially in the finer counts. A moderate turnover has taken place in export yarns, chiefly for India. In Egyptian spinnings most of the demand has run on the higher numbers in combed descriptions, and it is still difficult to secure bulk orders in the commoner sorts.

THE WOOL TRADE.—Our Bradford correspondent writes:—Some very gratifying results have followed the offering of wool in London and overseas selling centres this week. On the whole, prices are keeping firm, and where any average to superior wools are offered prices are in sellers' favour. Only when anything of faulty style is offered can even the slightest trace of irregularity be seen, and the only evidence of this forthcoming at this juncture is in Wanganue sale, held last Monday. Even there a slight ease in prices is quite insignificant, considering that a big proportion of the wools were of faulty and seedy style. The descriptions of raw material on which buyers and sellers can much more safely base their conclusions, are the standard offerings in Sydney and other Australian selling centres, as well as Coleman Street. Especially in the last named, there has been this week some very attractive merino wool. Several big well-known clips have been catalogued which have afforded every facility for sound conclusions to be drawn as to the movement of values. Anyone closely following the sales has had abundant evidence of the encouraging position of merinos, and there is no justification for any uneasiness about the future of this description. This statement is made on the strength of the fact that supplies are no more than adequate for all machinery requirements. Crossbreds as well as merinos are continuing to sell at fully five per cent.

advance on the opening rates, and there is no small measure of confidence in these. Trading conditions in Bradford do not present any outstanding feature. Generally speaking, business is perhaps rather quieter, but a good tone is seen all round, and further sales of tops are reported. Quotations for all qualities are quite firm, leading makers taking up a protective attitude in view of the cost in London and overseas.

THE GRAIN MARKETS.

WHEAT.—A spell of mild and open weather over the United Kingdom during the past week facilitated agricultural operations, and farmers were busily engaged in overtaking arrears of ploughing and other field work. The saturated condition of heavy lands, however, militates against spring seeding, which will probably be delayed this season. The condition of winter wheat has improved considerably from warmth and sunshine, and now presents a healthy appearance. Offerings of native wheat at the principal statute markets continue on a light scale, and the small business passing was mostly on former terms. Dull conditions prevailed on the import market, and prices generally moved in buyers' favour. Australian grades were mostly in request, both here and on Oriental account, but the quality of recent arrivals leaves much to be desired, and compares unfavourably with last year's crop, except shipments from the Western State, which are fairly satisfactory. Canada and Argentina also participated in the general trade, although in a lesser degree, but larger offerings from the Dominion may be expected, now that Montreal will shortly be open for navigation, and shipments resumed direct. A feature was the continued large demand from China, the recent improvement in the silver exchange encouraging increased purchases up to July shipment. In the Northern Hemisphere the chief item of interest was the announcement that the United States Government would not support the 1931 crop, which must therefore be marketed through the usual trade channels. This may intensify competition by Canada and Argentina for European custom, though, so far, offers are above international parity. Quotations were as follows:—No. 1 hard Northern Manitoba, ex-ship, 27s.-27s. 9d.; No. 1 Northern Manitoba, ex-ship, 26s. 9d.-27s.; No. 2 ditto, 25s. 6d.-26s. 9d.; No. 3, 24s. 3d.; No. 4 Manitoba, 23s. 6d.; Barusso, 63 lb., 21s. 6d.; Rosafe, 63 lb., 21s. 6d.; Australian, 22s. 3d.-23s. 6d.; Russian on sample, landed, 20s.-22s.; ex-ship, 21s.-24s. per 496 lb.; English, 4s. 6d.-5s. 6d. per 112 lb.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Mar. 25, 1930.	Jan. 2, 1931.	Mar. 11, 1931.	Mar. 18, 1931.	Mar. 25, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148 1/2	108 1/2	56 1/2	60 1/2	58 1/2	58
Chicago (No. 2 Winter) —Cents per 60 lb.	130 1/2	105 1/2	79 1/2	79 1/2	79 1/2	80 1/2

The visible supply of wheat in Canada at 65,087,000 bushels, shows an increase on the week of 1,387,000 bushels. Supplies a year ago stood at 75,037,000 bushels.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

Mar. 22, 1930.	157,079	149,076	35,560	8 3	7 8	6 0

WHEAT FLOUR.—Home milled flour was reduced by 1s. per sack following the decline in wheat, but demand is chiefly measured by immediate wants. Imported descriptions were also lower for shipment, though still above the parity of native milled. Quotations:—London straight run, 22s. 6d. per sack for country deliveries and 21s. 6d. London area. Of imported, Manitoba patents, 21s. 6d.-25s.; Buffalo, ditto, 22s.-26s.; Australian, 19s.-19s. 6d. ex-store per 280 lb.

BARLEY.—The market in barley has been dull. Quotations were as follows:—Californian old, landed, 30s.-35s.; new, ex-ship, 30s.-41s., as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lb.; Black Sea, landed, 17s. 3d.; ex-ship, 16s. per 400 lb.; English malting, 6s. 3d.-13s. 9d.; feed, 5s. 9d.-6s. per 112 lb.

OATS.—The market in oats has been quiet and barely steady. Quotations:—Plate, landed, 11s. 3d.; ex-ship, 10s. 3d.; Chilean tawny, landed, 13s. 6d.; whites, ex-ship, 18s. 9d.; landed, 19s. 6d.; North Russian, landed, 12s. 9d.; South Russian, landed, 13s. 9d.; ex-ship, 13s. per 320 lb.; English, 5s. 8d.-6s. per 112 lb.

OVER ONE HUNDRED YEARS OF SERVICE.

INSURANCE COMPANY.
ASSETS EXCEED - £15,500,000
FIRE. LIFE. ACCIDENT. MARINE.
Edinburgh: 35, St. Andrew Square.
London: 5, Welbeck, E.C.4, and 4, St. James's Street, S.W.1

MAIZE.—All feeding stuffs experienced a quieter movement, and prices declined sharply for maize under liberal offerings, but towards the close rather more interest was shown in new crop La Plata, and cargo sales resulted at 16s. April, 15s. 6d. to 15s. 9d. May-June shipment c.i.f. Quotations were as follows:—Plate, landed, 20s. 6d.; ex-ship to arrive, 19s. 6d.; March-April, 17s. 6d.; new April-May, 16s. 9d.; May-June, 16s. 6d.; June-July, 16s. 6d. per 480 lb.; yellow maize meal, £6 5s. f.o.r. London per ton.

OTHER FOODS.

SUGAR.—The ratification of the Chadbourne Plan by the Java People's Council provided a decided stimulus to the sugar market. British refined sugar was advanced 3d. per cwt. on Thursday last week, and as the demand remained brisk at the higher level, a further advance of 3d. was decided upon on Tuesday. Raw futures advanced in New York and London. Wednesday's sales included May delivery at 6s. 4 1/2d. to 6s. 5d., as against 6s. 1 1/2d. to 6s. 1 1/4d. on the corresponding day last week; August, at 6s. 7 1/2d. to 6s. 8d., against 6s. 4 1/2d. to 6s. 5 1/2d.; and December, at 6s. 11 1/2d. to 6s. 11 1/4d., against 6s. 8d. to 6s. 9d.

COFFEE.—Good qualities continue to be well supported at the London auctions, and even medium qualities sell at moderate rates. Last week's movements of coffee in London were as follows: Brazilian, landed, 4 bags; delivered for home consumption, 155 bags; exported, nil; stocks, 2,834 bags, against 6,021 bags last year. Central American, landed, 8,380 packages; delivered for home consumption, 4,024; exported, 2,304; stocks, 101,665 packages, against 85,809 a year ago. Other kinds, landed, 7,464 packages; delivered for home consumption, 3,260; exported, 6,238; stocks, 98,820 packages, against 93,022 a year ago.

COCOA.—The market in cocoa has been less active during the past week, and prices moved downwards. Wednesday's quotation for Acra, fair fermented, April-May, at 20s. per cent., f.o.b., shows a decline of 6d. on the week. Little interest was shown in futures. Last week's movements of cocoa in London were as follows:—Landed, 8,426 bags; delivered for home consumption, 10,144 bags; exported, 27 bags; stocks, 201,511 bags, against 192,074 last year.

TEA.—The quantities catalogued for this week's auctions comprised 54,511 packages of Indian, 24,105 packages of Ceylon, and 19,378 packages of Java and Sumatra tea. Although the quantities offered for sale were considerably larger than last week, the demand was again active and prices remained firm, particularly for finest qualities.

RICE.—The market in rice has again been better, and Wednesday's price for Burma No. 2, cleaned, March-April, in singles to the United Kingdom and to the Continent, at 8s. per cent., shows a rise of 1 1/4d. on the week. Movements in London during the past week were as follows:—Landed, 13 tons; delivered, 46 tons; stocks, 483 tons, as against 2,520 last year.

POTATOES.—There was an improvement in the demand for potatoes at the Borough Market this week, and prices were generally higher. "Best King Edward" realised from £7 to £7 10s. as against £6 10s. to £7 a week ago.

SPICES.—The spot pepper market has been easier during the week, and Wednesday's price for "Black Singapore," at 6 1/2d. per lb. shows a decline of 1/4d., as compared with that of the corresponding day last week. Movements of pepper in London during the past week were as follows:—Black, landed, 38 tons; delivered, 25; stocks, 549 tons as against 990 last year. White, landed, 35 tons; delivered, 46; stocks, 484 tons, against 974 tons a year ago.

MEAT.—There has been no further downward tendency in meat prices. On Wednesday, Argentine chilled hindquarters were sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 3s. 8d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton again realised from 2s. 8d. to 3s. 2d. per 8 lbs. English pork was easier at 5s. to 7s. per 8 lbs., against 5s. 4d. to 7s. 4d. last week. According to the Smithfield official report, supplies of meat during last week amounted to 9,671 tons, as compared with 9,241 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.9 per cent. of the supplies, as against 82 per cent. a year ago, and imported mutton, mainly New Zealand, formed 80.8 per cent. of the total supply, as against 79 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Quiet conditions again rule, and in some sections there is an easing of values. Linseed is not in much demand either from crushers in this country or on the Continent, and values have declined. Plate on spot now quoting around £9 2s. 6d., and afloat and March-April £9, later positions being slightly above this figure. Indian linseed hardly offers with Calcutta, April-May, quoted £11. The quantity of linseed afloat for Europe has undergone further diminution, but at 254,600 tons, is still very heavy, and compares with only 96,500 tons a year ago. Cottonseed is in fair demand in near positions, which are firm. Black Egyptian afloat is held for £6 17s. 6d., and white, March and

The prices in the following list are revised with the assistance of an eminent firm in each department.

A BINDING-CASE for The Economist.

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are now able to offer our readers a new

PRICE 5/- each, post free (Lettered Back & Front) from

THE ECONOMIST, 8 Bouverie St., London, E.C. 4.

binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen. It holds three months' issues and index, its special cork spine does away with tags, laces, and metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

THE MONEY MARKET.

LAST week-end the market experienced one of the most uncomfortable periods they have had for a long time. As had been expected, the clearing banks and others had applied heavily for Treasury bills due to be paid for during the final three days of March, and, therefore, maturing just in time for the turn of the half-year. The close of the Exchequer's financial year brought with it further wide movements of funds, and the recent influx of foreign short

money to London, covered for the most part by forward sales of sterling, meant that on March 31st there was a very heavy foreign exchange settlement. The fact that the Easter holidays follow hard upon the end of the quarter involved an unusual concentration of the currency demands made by the public for both purposes, and this further depleted the joint-stock banks' cash resources, already denuded by their heavy payments for bills.

The coincidence of these different factors produced an abnormal shortage of money, which reached its culminating point on Tuesday, when as much as 4 per cent. was paid for new day-to-day money, and up to 3 per cent. charged for renewals. Some banks, it was reported, even had to call part of their weekly loans to the market, and early this week 3½ per cent. was charged outside the clearing banks for money into April. The market was unwilling to take bills to the Bank either for sale or discount, as brokers had already let their books run down. Consequently, from Friday to Tuesday inclusive, the market borrowed each day from the Bank, and there is little doubt that, in the aggregate, it is now "in the Bank" for a large amount. In fact, totals of £20,000,000 or even £25,000,000 have been freely mentioned, and it has also been stated that the market is in debt to the Bank until the end of next week. These figures, however, are probably on the high side, just as it is not certain that loans from the Bank now run beyond Tuesday or Wednesday.

On Wednesday about £10,000,000 net, after deducting income tax, was paid out in dividends, mainly on Conversion Loan, and, though these take a few days to penetrate to the market, by the afternoon money had become easier, with rates down to 2½ and even 2 per cent. There was, in fact, some disposition to look for greater ease until Saturday, when repayments to the Bank are due to begin. It must be remembered, however, that currency withdrawals for the holidays are still in progress, and, while fairly general motives of retrenchment may mean that less currency is required this year, the total amount withdrawn for Easter may run up to about £8,000,000. Some indication of the true figure will be afforded by this week's Bank return, which was not available when the *Economist* went to press.

Currency withdrawals deplete not only the Bank's Reserve but also the banks' cash resources as represented by Bankers' Deposits at the Bank of England. On the other hand, this week's Treasury bill maturities are believed to be concentrated towards the end of the week, so that new funds will become available by Saturday, when repayments to the Bank begin. Besides, we are now at the beginning of a new financial year, when normally money grows easier. Still, the market has a large amount to repay the Bank, and the Easter currency will not have returned from the country at least until the end of next week. Thus, while the long view is to look for easier money, a short view suggests that the market may not entirely succeed in getting out of the Bank next week. Much depends, however, on how far brokers in need of funds are willing to part with their bills.

	Mar. 12, 1931.	Mar. 19, 1931.	Mar. 26, 1931.	Apr. 1, 1931.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	3½ (May 1, '30)
Bankers' Deposit Rate...	1	1	1	1	1½ (May 1, '30)
Discount { Call	1	1	1	1	1½ (May 1, '30)
House { Notice ...	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½-1	...

Discount rates were inclined to harden in sympathy with the monetary stringency, and 2½-3 per cent. has been quoted for three months' bills. Last Friday's Treasury bills were issued at a shade under 2½ per cent., but this week's issue is a July maturity, and so possesses relatively few attractions. The rate may, therefore, rise to 2½ per cent., especially if money is difficult at the end of the week. The gold outlook is encouraging. On Tuesday the

market price fell to the Bank's statutory buying price for the first time since November, 1926. Next week £678,000 in bars and £750,000 in sovereigns are due, and the following week £985,000 in bars and £250,000 in sovereigns. This makes a total of £2,663,000, most of which, under present conditions, will go into the Bank. The Bank is also obtaining certain small quantities of gold which come into the market from time to time. Their origin is uncertain, but it is possible that now that the Spanish stabilisation credit in New York has been successfully arranged, some of the Spanish gold shipped to London in recent months is being marketed.

Yet it is still necessary to maintain high discount rates in London. This week's fall in the Paris rate was due to the repatriation of funds released by the maturity of sterling bills in the hands of French holders who had not covered themselves forward, and in general the fact that the forward rate is still at the export gold point shows that the spot rate is still held up by the flow of French short money to London. Elsewhere in this issue a correspondent doubts whether there is such a thing as a forward gold point, but inasmuch as a forward rate represents business just as does a spot rate—the only distinction being one of time—it is clear that in normal circumstances it should, equally with the spot rate, be confined within the gold points. Our correspondent is correct in suggesting that the recent tendency of the forward Paris rate to fall below the gold point is due to operators concentrating upon the relative level of money rates in London and Paris and on the cost of covering exchange forward, just as he is right in also saying that it is a legacy of the artificially low gold point of last year. Even so, it is necessary to show that London is still able to attract and to retain gold, and so it is hoped that the market will co-operate in maintaining discount rates at a level high enough for this purpose.

The end of March made money firmer in New York as well, though there was none of the stringency experienced in London. Call money remained at 1½ per cent. over the week-end, but the undertone was harder, and it was no longer possible to obtain "outside" money at lower rates. On March 31st the call rate rose to 2 per cent. Late last week an arrival of \$3,800,000 gold from the Argentine was reported.

Business was rather dull in the Foreign Exchange market last week, and fluctuations were narrow, with sterling holding its own except against the franc and the dollar. New York went from 4.85½ to 4.85½, and Montreal was unchanged at 4.86½. Paris, after touching 124.22, gained two points on balance at 124.18. Brussels weakened sharply to 34.94½, and Milan lost three points at 92.78. News of the stabilisation credit steadied the peseta, which improved from 45.35 to 44.45. Berlin, after touching 20.38½, lost a point at 20.40. Switzerland lost ½ at 25.25½. Stockholm moved in our favour, losing ½ at 18.15, but Oslo and Copenhagen were unchanged at 18.16 and 18.16½ respectively. The South American exchanges were steadier. Rio gained ½d. at 3½d., but Buenos Aires lost ½d. at 39½d., and Montevideo ½d. at 35½d. In the Far East the rupee, after some hesitation, was unmoved at 1s. 5½d., as was the yen at 2s. 0½d. Batavia was firm at 12.13½. In the forward market dollars for one month's delivery was at 1½ cent premium against ¾ cent last week. Three months' New York remained at 1½ cent premium. One month's Paris weakened by two points to 13 centimes premium, three months' remaining at 30 centimes premium. Brussels was unchanged for one month at 3 centimes premium, but the three months' rate was weaker by a point at 4 centimes premium. Milan was at 7 and 21 centesimi discount for the two periods, against 8 and 20 centesimi last week. Madrid was weaker at 1 and 2 centimos premium, against 3 and 9 centimos last week. Amsterdam was unchanged at 1½ and 3½ cents premium, but Berlin was fractionally better at 1 and 3 pfennigs discount. Switzerland was unchanged at 3 and 7 centimes premium. Silver was weaker by ½d. for cash and by ¼d. for forward at 13½d. and 13½d. respectively. The China silver exchanges weakened in sympathy. Hong Kong lost ¼d. at 1s. 0½d., and Shanghai ¼d. at 1s. 3½d.

THE CONSERVATIVE CONCORDAT.

Concordat reached between Lord Beaverbrook and Conservative Central Office has been received with satisfaction by the Tory Party, the whole country (perhaps, Labour and Liberal political partisans) had to be free of a squabble which had assumed aasant and unedifying personal character. The agreement proves to be durable (a question we return later) His Majesty's Opposition be free to concentrate upon grave national without the constant distraction of interference. It appears from his newspapers that hermere acquiesces in the truce, and indeed as a victory for his own policy. On the other "orthodox" organs, while awarding the victory dwin (a view which will be widely shared), are let bygones be bygones. So it may be claimed, at any rate, that the Conservative Party once nts a united front to the country. At bye-election a general election, should it take place, only vative candidate will be in the field in each con- and the Party clearly offers to the country the of forming an alternative Government.

less, the more closely the terms of the at are examined, the more obvious does it become he ambiguities regarding Conservative policy, lly in the fiscal sphere, have not been cleared up. rue that Lord Beaverbrook has evacuated his al positions. In place of his own, oft-expounded of Empire Free Trade, he is now content to co- in promoting "the greatest attainable measure ire Free Trade, or, if you prefer, Empire economic The specific has given way to the vague, and ne is true in the sphere of home policy for the ice of agriculture. Lord Beaverbrook drops his ce upon duties on foreign foodstuffs, and is willing velop a policy of increasing not only manufact- duction but also of increasing wheat and general tural production at home by the most efficient and ble method; that is to say, by quotas, prohibi- or duties on, foreign foodstuffs." This has in some s been interpreted as leaving Mr Baldwin free to he quota system for which he has shown a pre- n, in negotiating trade agreements with the ons.

is this the correct interpretation? Serious doubts gested by the echo and re-echo, in the correspond- formula. Lord Beaverbrook having enumerated rent methods (quoted above) of protecting British ure, continues:—

f the Conservative Party is prepared, at the next tion, to ask for a mandate to put all, or any, of e methods into operation in the interests of ish agriculture, I, for my part, will do everything n to help to carry the programme to fulfilment.

ich Mr Neville Chamberlain replies:— is his (i.e., Mr Baldwin's) intention to employ he development of home agricultural production, or any of the methods you enumerate, as they best effect the object aimed at; and to ask the ors for a mandate for that purpose.

ve italicised the formula, and we suggest that by ndence Mr Baldwin has definitely committed posing food taxes, if he is unable to get the agree upon a quota system. Certainly it eaverbrook free to campaign for food taxes, ady announced his intention of doing so. whatever the meaning which may be read la by the Conservative Central Office, by ok or by outside observers, the terms of clearly leave open many questions Baldwin, now restored to mastership ouse, may reasonably be expected to answers. In a word, what is the ative fiscal policy? We have heard nue tariff from Mr Churchill, of an

"all-round emergency" tariff from Mr Chamberlain, and, from Mr Baldwin, of a wide extension of "safe-guarding" and a tariff for the main purpose of bargaining. In fact, from various sections of the Party comes the advocacy of almost every conceivable type of protective policy. It is high time for Mr Baldwin to explain much more clearly than he has so far done, precisely where he stands in this medley of confused counsels. An early general election is not so unthinkable (especially since the closing up of the Conservative ranks) that the electorate can fairly be left in the dark as to the approximate shape and form of the fiscal policy which it is asked to endorse. Mr Baldwin is shortly to make a series of speeches in various parts of the country. This campaign will afford him abundant opportunity to state an unambiguous fiscal policy and to state it with the authority of a newly-confirmed leadership.

While awaiting official enlightenment on this burning question, we would further venture to suggest that justifiable Conservative satisfaction over the Baldwin-Beaverbrook rapprochement should not lead anyone to suppose that harmony of view on major issues has been completely re-established within the Party. Conflicting views on tariffs and their application may or may not be easily composed; but a divergence which is certainly not susceptible of easy composition has been revealed by Mr Churchill's campaign on Indian policy. Mr Churchill has few followers at Westminster, and he can have little hope of winning over any substantial body of opinion to his Indian platform. Yet his challenge has served as a rallying point for "Die-hards" within the Conservative Party, and has shown that there is a real cleavage between the archaists and the realists, between the "last ditchers" and the main body of moderate opinion. These differences go deep enough to provoke the reflection that the Crusade-Conservative merger may not lead, so certainly as is sometimes supposed, to unified policy and management. The agreement certainly raises substantially the estimate of seats which the Party might win at a general election. But does it give real assurance that the Conservative members in the next Parliament will be a really cohesive body with harmony of outlook upon the great Imperial and international questions of the day?

Two further possible consequences of the concordat, minor though they may be, deserve consideration. The Press Lords have returned to what we might describe as a limited partnership in the affairs of the Party. But it is in the nature of neither of them to play for any length of time the rôles of sleeping partners. To put it another way, they have abandoned their pirating privateer and boarded the Party ship. But will they not expect a free run of the bridge, with the right to place at least a finger on the wheel and to have a seat in the chart room? Will it, under these circumstances, be easier for Mr Baldwin to plot and steer a straight course? To this question time alone will provide the answer; but to another question, arising out of the agreement, the answer is clear. The return of the Press Lords to the Conservative fold can hardly fail to check the incipient drift towards the Party of right-wing Liberal opinion; and thus, indirectly, Conservative reunion may in due course contribute towards consolidation of the much-harassed Liberal Party.

Finally, it is only human, if unkind, to remember that this is not the first time that a reconciliation between the Press Lords and the Conservative leader has been announced with a flourish of trumpets. Only a few months ago a truce was struck on the terms that certain fiscal proposals should be submitted to the people of this country by a referendum. That truce was very short-lived, as we all know. The latest agreement appears to give the promise of greater durability. But the considerations which we have passed in brief review would seem to justify us in asking: Is it, in the real sense of the word, Peace?

THE CONGRESS DECISION.

MAHATMA GANDHI has become so invested with the characteristics of a legendary figure—recipient of veneration from *khaddar*-clad multitudes and subject of inevitable if friendly caricature by the Western cartoonist—that many people are apt to overlook the fact that this seemingly visionary ascetic is, at one and the same time, a political strategist of no mean order. Striking testimony to Mr Gandhi's qualities in one branch at least of statecraft is afforded by his signal success this week in imposing his will on the Congress, which met at Karachi in an atmosphere of excitement inflamed by emotional protests against the execution of Bhagat Singh, and which might have been stampeded by its extremists either into repudiating the Irwin-Gandhi Pact *in toto*, or, at least, into voting against it in such numbers that the Mahatma would not have secured the authority which he desired, to pursue negotiations with His Majesty's Government, or would have been tied by restrictions and conditions that would have made his task impossible. In the event, the Delhi Pact was approved with only two dissentients out of the three hundred odd members of the Subjects Committee, and was enthusiastically endorsed by Congress in plenary session. Opposition, voiced principally by Mr Bose as spokesman for the New Youth of India League, was swept away by Mr Gandhi's advocacy of his policy, and the conclusive proof of the ascendancy of the Mahatma's influence and of his unqualified victory at Karachi was the decision to appoint him sole selector of the Congress delegation to the Round Table Conference.

This result is one which should occasion satisfaction to all who cherish the hope that a peaceful solution to the constitutional problems of India may be achieved on the lines which the Round Table Conference has in principle laid down. It will, doubtless, be objected by that section of the Conservative Party which saw in the Viceroy's agreement with Mr Gandhi nothing but a weak-kneed concession to subversive forces, that the speeches which both Mr Gandhi and the President, Mr Vallabhai Patel, delivered to Congress had an unpleasantly uncompromising ring in their reference to the objectives at which Congress would continue to aim. When due weight, however, is given to the consideration that Mr Gandhi has got to deal with "irreconcilables" considerably more numerous and potentially more dangerous than the "Die-hards" with whom Mr Baldwin has to reckon, undue importance need not be attached to *ad hoc* flights of oratory. After all, "face-saving" is common form in the politics of every country, and when Mr Gandhi referred to "our intact demand for complete independence" and when Mr Patel spoke of his readiness to receive "British advice but never dictation"—while asseverating that Congress could never let defence be controlled by the British nor divide financial control with the British Government—it must be remembered that the Congress leaders were engaged in endeavouring to secure authority to negotiate from a body which had kicked over the traces, repudiated Dominion status, and demanded "independence" only fifteen months ago. Moreover, they were seeking to "put through" a resolution endorsing the Delhi Pact in terms which they had good reason to fear might prove extremely unpalatable to a considerable section of their supporters.

The text of the resolution is important and merits quotation. It ran:—

"The Congress, having considered the provisional settlement between the Working Committee and the Government of India, endorses it, and desires to make clear that the Congress goal of *Purna Swaraj* (complete independence) remains intact. In the event of the way being otherwise open to the Congress being represented at any conference with representatives of the British Government, the delegation will work for this goal, and, in particular, to give the nation control over the Army, external affairs, finance, fiscal policy and economic policy; to have a scrutiny by an impartial tribunal of the financial transactions of the British Government in India; to examine and assess the obligations undertaken by India or England; and the right of either party to end the partnership at will.

"Provided, however, that the Congress delegates will be free to accept such adjustments as may be demonstrably necessary in the interests of India.

"The Congress appoints and authorises Mahatma G. represent it at the Conference, with the addition of such of gates as the Working Committee may appoint to act in leadership."

In this resolution the essential phrase is that while the Congress delegates a free hand to accept adjustments as may be demonstrably necessary interests of India." In other words, the delegates given plenary powers in the matter of safeguard as they are "necessary" in India's interests, significant that in his speech to Congress Mr Gandhi frankly stated that the views of the delegative matter of safeguards and independence "might from those held by some Congress men."

In this connection Lord Irwin, in his farewell the Chelmsford Club, at Delhi, last week, words to say:—

"I have never been particularly impressed," he remarks the reality of the distinction that it is sometimes sought many of these matters between the interests of India and Great Britain, for it would be clean contrary if the result of the long relationship between the two had most of the things that matter to create a community divergence of interest."

Indian opinion, the Viceroy suggested, would be less anxious than opinion in Great Britain to security provided, where necessary, for the go in the sphere of credit and finance. In the matter safeguards His Majesty's Government had reached a conclusion that the provisos discussed at the Round Conference were essential, but they would be prepared to give careful consideration to any alternative conditions and would accept them if those proposing were able to convince His Majesty's Government that would be equally effective.

The plain fact is—and Mr Gandhi, we are confident as aware of this as any other man—no alternatives effective can be substituted for the safeguards which Round Table Conference last winter indicated as necessary. They are insisted on by the Princes, by the community, and by the depressed classes; and Mr Gandhi's great influence could not inaugurate a new constitution without them. But we do not on that despair in the least of the success of the Round negotiations when they are resumed in the autumn, progress has moved far from its original attitude of in-cilable non-co-operation. For the first time since Reforms were initiated, the Left Wing in India is into the Conference Chamber to negotiate a new action. We are approaching a decisive moment. Imperial history, and Mr Gandhi knows it well. That a settlement to-day by intransigence in the most precautionary "checks and balances" in a period of Indian must recognise are bound in any case extreme, would be a responsibility so terrible that not believe that Mr Gandhi or any of his chosen from Congress would find it in their conscience to it. A free hand to accept "demonstrably necessary adjustments" ought to mark a vital stage forward working out by consent of India's new constitution.

Obstacles, of course, remain. First and foremost is the still unsolved problem of communal differences much depends on whether Mr Gandhi comes to with the terms of a Hindu-Moslem concordat pocket. In every point of constitutional detail there be need for patient negotiation, calm though will; and much again depends on the ability delegates to the Conference from all three parties to convince the Congress members of the desire to co-operate in the establishment of with a maximum degree of responsible self. Of this, at least, we are convinced: whatever in this vast experiment in constitution-making must be undergone; and even if "the manner which Mr Churchill claims as his "grimly" mately to prove that the policy of entrusting far-reaching powers of self-government should still say that the supporters of the right to-day.

THE NATIONAL ACCOUNTS.

DURING the last eight working days of the financial year the Treasury enjoyed a satisfactory inflow of revenue; and, when the accounts were made up on the evening of March 31st, the deficit disclosed was only £23,276,000, a result which conforms fairly closely to the forecast of a £25 millions deficit made in these columns a few weeks ago. In comparison with the financial year 1929-30, and leaving out of account for the moment sinking fund operations, "ordinary" expenditure, apart from the self-balancing Post Office and Road Fund accounts, amounted to £732,341,000, an increase of £31,377,000. Civil and Revenue Votes were £61 millions higher (this includes £29 millions *gross* on derating account; the balance represents increased expenditure on pensions and unemployment benefit), whereas the expenditure on defence was £2½ millions lower, and Consolidated Fund charges show a fall of £27 millions, including a transfer to Civil Votes of £15 millions in connection with derating. Interest and management on the national debt required approximately £14 millions less than a year ago. On the other side of the account, "ordinary" revenue, excluding self-balancing items, shows a net increase of £41,706,000. Of this figure, £16 millions is accounted for by the non-recurring appropriation from the Rating Relief Suspense Account; but tax revenue was £26½ millions higher, Inland Revenue being up by £28½ millions, and the yield from Customs and Excise down by £2 millions. Even allowing for the fact that increased taxes, estimated to yield £33.8 millions in 1930-31, were imposed by last year's Finance Act, the comparative buoyancy of revenue in a year of profound trade depression is remarkable.

In the following table we show Exchequer receipts and issues for 1930-31, the results being compared with the Budget estimates made last April:—

REVENUE AND EXPENDITURE 1930-31.
(000's omitted.)

REVENUE.	Exchequer Receipts.	Larger (+) or Smaller (-) than Budget Estimates.	EXPENDITURE.	Exchequer Issues.	Larger (+) or Smaller (-) than Budget Estimates.
Customs	£ 121,461	- 1,309	National Debt Services: Interest and Management	£ 293,170	- 11,430
Excise	124,000	- 5,860	New Sinking Fund (1928)	66,830	+ 11,430

Deficit	23,276	+ 25,512			
Grand Total	881,037		Grand Total	881,037	

* Including Corporation Profits Tax.

Thanks to the resilience of the yield from surtax, Mr Snowden has realised to a million his anticipations of revenue from the three main heads of direct taxation, and he has apparently had unexpected success in collecting sums realisable from the now defunct E.P.D. and Corporation Profits taxes. On the other hand, there has

The MERCANTILE BANK of INDIA

LIMITED.

BILLS OF EXCHANGE accepted for collection or advance.

Enquiries from merchants regarding shipments to the East and the special facilities available are invited.

been a short-fall of over £7 millions from Customs and Excise, while the yield from Stamps—a natural reflection of the slowing up of commercial and financial activity—has failed to reach the estimated figure by nearly £6½ millions. On the other side of the ledger, the growing cost to the Exchequer of paying transitional benefit to the unemployed is reflected in a net excess of £11½ millions in Civil Service expenditure. The total contribution to the Unemployment Fund, including both the Exchequer's ordinary contribution and the cost of transitional benefit, was estimated at only £26½ millions, whereas the cost has probably been at least £37 millions. Apart from the debt charge, the Consolidated Fund Services show little deviation on balance from the Budget estimate; defence expenditure records an excess of less than half a million; and we thus arrive at the position that, instead of an estimated surplus of £2,236,000, there is a deficit of £23,276,000.

We now come to the question of the sinking fund. The total debt charge was fixed by Mr Snowden at £360 millions for 1930-31, namely, the aggregate charge of £355 millions enacted in 1928, plus £5 millions towards meeting the deficit realised in 1929-30. The Chancellor estimated that interest and management, including £17½ millions for the floating debt and £23 millions as a proper actuarial provision for interest paid out on encashed and accruing on outstanding Savings Certificates, would amount to £304,600,000. This was to leave a margin (including the estimated surplus of £2,236,000) of £57,636,000, out of which to meet specific sinking fund obligations of £50,400,000, the remainder being a "free" balance. As will be seen from the foregoing table, interest and management required £11,430,000 less than the estimate, and this sum was automatically added to the sinking fund allocation, which (omitting the anticipated but unrealised surplus) was to be £55,400,000. *Prima facie*, this might appear to be an extremely satisfactory provision for debt redemption in a year of depression, but it is important to realise that the budget deficit must be deducted from this figure, and that certain other qualifications have to be taken into account before we can arrive at the true amount of debt redemption achieved during the year. In the first place, it would appear that in the revenue returns only the amount of accrued interest actually paid out on Savings Certificates encashed is debited to the item "Interest and Management." Now, in 1930-31 encashments of Savings Certificates were nearly £8½ millions lower than in the previous year. The exact position cannot at present be elucidated, but we are disposed to think that at least £3 millions of the apparent saving on debt interest must be offset by the corresponding increase in accrued interest outstanding; this was provided for by Mr Snowden in his aggregate debt charge of £360 millions, but must be deducted by "earmark" from the nominal sinking fund, in order to ascertain the real debt redemption achieved in the year now ended. In the next place, the revenue return, complete details of which will be found on a later page, contains the unpleasant reminder that unprovided-for borrowing on behalf of the Unemployment Insurance Fund (apart altogether from the direct cost of transitional benefit to the Exchequer), amounted in the past year to £36,440,000, against £2,990,000 in 1929-30. We are not prepared readily to accept the thesis that this borrowing for unemployment benefit is necessarily irrecoverable, but the fact remains that so far no provision has been made for it.

So much will depend in the next Budget on the policy which the Chancellor adopts with regard to this vital question of debt redemption that we have endeavoured to analyse in summary form the real operations of the past three years:—

DEBT REDUCTION, 1928-29.	
Specific Sinking Funds.....	£'000. 50,102
"Free" balance	7,407
Nominal total Sinking Fund	57,509
Deduct—	
Capital asset used for revenue (Currency Note Account Balance)	13,423
Net borrowing Unemployment Fund	11,430
Real debt reduction	32,656
DEBT REDUCTION, 1929-30.	
Specific Sinking Funds.....	£'000. 47,748
"Free" balance	...
Nominal total Sinking Fund	47,748
Deduct—	
Budget deficit.....	14,524
Borrowing for Savings Certificate interest not covered by Debt Charge	4,819
Net borrowing Unemployment Fund	2,990
Real debt reduction	25,415
DEBT REDUCTION, 1930-31.	
Nominal total Sinking Fund	£'000. 66,830
Deduct—	
Budget deficit	23,276
Increase in accrued interest Savings Certificates, say.....	3,000
Net borrowing Unemployment Fund	36,440
Real debt reduction	4,114

From these figures we may at least draw the grain of comfort that, as a result of heroic efforts on the part of the direct taxpayer, we have not only succeeded in covering all our effective expenditure during the past three years, but we have made a real reduction of debt by way of sinking fund to the amount of £62 millions. Viewed in the light of the optimism which attended the establishment by Mr Churchill of the "New, 1928," fixed debt charge arrangement, the achievement is far from spectacular, but at least we have avoided, in the usually accepted sense of the word, an "unbalanced" budget. As we have said in a recent article,* we should not be inclined to criticise Mr Snowden if he were to decide that the task of atoning for our failure to live up to our debt redemption programme might be spread over the next few years, instead of being concentrated on a period of great economic strain. At the same time, the fact remains that, even if we exclude Unemployment Fund borrowing, Mr Snowden has failed by a considerable amount in the past year to cover even his specific sinking fund obligations. Irresponsible suggestions have been made in some sections of the Press that, rather than add to the tax burden next year, Mr Snowden should relax, even abandon altogether, the idea of redeeming debt. In view of the analysis of real debt reduction which we have given above, and considering the paramount need to bring about a reduction in the cost of the debt by means of conversions to a lower rate of interest, we should regard any such policy as a disastrous error.

PRICES: THE QUARTER'S MOVEMENT.

HOPEFUL anticipations, encouraged by signs of greater stability in many commodity prices during February, are to some extent disappointed by the course of wholesale markets during the past month. On March 31st our index number worked out at 66.2 (1927 = 100), a decline of approximately one-half of 1 per cent., as compared with a rise of one-third of 1 per cent. recorded on February 28th. Thus, though the movements of the index on balance since the end of January have shown no decided

tendency, as compared with the almost uniformly precipitate decline registered in the previous seventeen months, the level reached at the end of March was nevertheless the lowest point touched since the war. Changes in the indices of each price group in the last quarter are summarised in the following table, the figures for the end of March, 1930, being added for purposes of comparison:—

AVERAGE, 1927 = 100.					
	Mar., 1930.	Dec., 1930.	Jan., 1931.	Feb., 1931.	Mar., 1931.
Cereals and meat	84.7	70.0	67.4	66.4	66.9
Other foods	82.7	71.0	69.5	68.0	67.0
Textiles	73.0	51.4	49.2	50.6	53.7
Minerals	89.8	78.0	75.3	76.9	74.5
Miscellaneous	85.5	75.2	72.6	72.7	69.9
Complete Index	83.1	68.7	66.3	66.5	66.2

Fluctuations in the price of individual commodities during February were irregular. Out of the fifty-eight articles comprised in our index number, 16 showed a rise, 22 a fall, and 16 no alteration. Percentage changes, as compared with a month ago and a year ago, are summarised below:—

	Inc. (+) or Dec. (−) per cent. compared with			Inc. (+) or Dec. (−) per cent. compared with	
	Month ago.	Year ago.		Month ago.	Year ago.
Wheat, Foreign	− 8.1	− 41.7	Flax	+ 16.1	− 40.0
Wheat, English	+ 1.8	− 37.3	Hemp	+ 11.4	− 35.0
Flour	− 8.7	− 38.2	Jute	...	− 39.4
Barley	− 10.3	− 7.4	Textiles	+ 6.1	− 26.4
Oats	+ 10.8	− 1.5	Pig iron	...	− 13.3
Maize	+ 4.8	− 29.3	Steel rails	...	− 2.3
Potatoes	+ 7.7	+ 115.4	Iron bars	...	− 16.4
Rice	+ 3.5	− 16.7	Tinplates	...	− 7.6
Beef, Argentine	+ 6.5	− 15.5	Coal, Welsh exp.	...	− 13.9
Mutton, English	+ 5.3	− 9.3	Coal, Durham gas	...	− 2.1
Mutton, New Zealand	− 2.7	− 35.1	Coal, household	...	− 7.5

Sugar, refined	− 1.3	− 21.9	Timber, Swedish	...	− 2.8
Cheese, Canadian	− 11.3	− 15.4	Cement	...	...
Butter, Danish	+ 1.9	− 19.1	Hides	...	− 15.7
Cocoon oil	...	− 6.7	Leather	...	− 12.9
Tobacco	...	− 19.0	Petrol No. 1	...	− 12.5
Other foods	...	...	Petroleum oil	...	− 3.7
Cotton A.	− 3.2	− 32.0	Fuel oil	...	− 10.8
Cotton E.	− 4.6	− 34.0	Linseed oil	...	− 54.3
Cotton yarn	− 2.6	− 23.2	Tallow	...	− 40.1
Cotton cloth	+ 7.7	− 17.6	Rubber	...	− 54.9
Wool, English	+ 27.8	− 4.2	Soda, crystals	...	...
Wool, Australian	+ 18.2	...	Sulphate of ammonia	...	− 6.7
Wool tops	...	− 38.0	Cresote	...	...
Silk	...	...	Miscellaneous	...	− 18.2

Among grain stuffs, maize recovered in price during February; on the other hand, as a consequence of the Federal Farm Board's announcement that it would not buy the 1931 United States crop, imported wheat fell further in price, with a corresponding cheapening in the case of flour. Meat prices had a firmer tendency, but, in view of the frequent fluctuations in this market, the movement is not of great significance. Among "other" food-stuffs the most pronounced feature was a heavy fall in the price of butter. The textile group recorded a further marked recovery from the extreme point of depression reached in January. Cotton prices, after last month's firmness, reacted slightly, but there was a striking upward movement in the price of Australian wool, while flax and hemp were both substantially dearer. On the other hand, non-ferrous metals lost on balance rather more than the extent of the ground regained a month ago; and in the miscellaneous group, which recorded the largest fall, namely, 3.9 per cent., the reduction in petroleum prices was accompanied by appreciable declines in the price of hides, linseed oil and rubber.

As a result of these movements the latest figure of our index number, expressed as a percentage of the average for 1913, points to a level of wholesale prices (this applies, of course, to a group of prices relating predominantly

to primary products) approximately 9 per cent. lower than in the last pre-war year:—

AVERAGE, 1913 = 100.						
Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	149.9	169.9	210.6	145.2	131.5	159.3
" 1928	145.0	149.4	161.7	111.9	119.3	135.1
" 1929	135.6	136.8	141.9	116.2	112.7	127.2
" 1930	113.4	122.9	99.1	101.6	101.5	106.8
End Jan., 1931	94.3	110.8	75.8	91.5	90.4	91.3
Feb., 1931	92.9	108.4	78.0	93.5	90.5	91.6
Mar., 1931	93.6	106.8	82.7	90.6	87.1	91.1

It will be seen that, with the single exception of "Other Foods," each group now stands substantially below the 1913 level. The weighted average for foodstuffs as a whole works out at 99.0, and that for materials at 86.8.

The question of greatest immediate interest is whether the fact that since the end of January the headlong fall in commodity prices, notwithstanding last month's decline, has been more or less arrested, may be regarded as presaging greater stability in the near future. In the next table we show actual price quotations of a list of typical commodities at the end of last month in comparison with their prices at the end of 1930, a year ago, and at the end of 1929 and 1928:—

	End 1928.	End 1929.	1930.		1931.
			End March.	End December.	End March.
Wheat, Canadian, per qr...	49/3	55/6	43/9	24/6	25/6
Potatoes, per ton	26	£3/15/-	£3/5/-	£6	£7
Beef, English sides, per 8 lbs.	5/4	5/8	6/-	5/3	5/-
Mutton, New Zealand, per 8 lbs.	5/-	4/10	4/6	3/11	2/11
Tea, Indian auction average, per lb.	1/5½	1/1½	1/4½	1/2	10½d.
Sugar, granulated, per cwt.	24/1½	22/9	22/-	19/6	20/6
Cotton, American middling, per lb.	10.59d.	9.42d.	8.57d.	5.34d.	5.83d.
Cotton yarn, 32's twist, per lb.	15.50d.	13.87d.	12.37d.	9.00d.	9.50d.
Wool, Australian, per lb.	44d.	33d.	24d.	22d.	23d.
Jute, per ton	£32/5/-	£27/15/-	£24/15/-	£19/10/-	£19/-
Pig iron, Cleveland No. 3, per ton	66/-	72/6	67/6	63/6	58/6
Coal, best Welsh, per ton...	19/4½	20/1½	20/-	20/-	20/-
Tin, standard, per ton	£225/15/-	£178/2/6	£170/10/-	£116/10/-	£119/5/-
Copper, per ton	£74	£58	£71	£45/10/-	£43/-
Linseed oil, per ton	£29	£45	£40/10/-	£22/10/-	£18/10/-
Rubber, plant, sheet, per lb.	8.69d.	7.82d.	7.82d.	4.25d.	3.44d.
Cement, Portland, per ton.	47/-	47/-	47/-	47/-	47/-

In contradistinction to the violent slump which occurred in almost every case between the end of March and the end of December, 1930, following an almost uniform recession in the first quarter of last year, the movements during the past three months certainly suggest that prices have now reached a point at which they seem inclined to show considerable resistance even to a continuance of the depressing influences of restricted demand and heavy stocks. On the other hand, when the course of prices in the past five quarters is viewed broadly as a whole, it is difficult to be definitely confident that the bottom has yet been reached. Below we summarise, quarter by quarter, the percentage movements recorded by each of the groups of our index number:—

Group.	1930.				1931.
	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	1st Quarter.
Cereals & meat	− 8.2	− 3.0	− 3.3	− 11.9	− 4.4
Other food	− 1.1	− 5.9	− 4.2	− 4.7	− 5.6
Textiles	− 11.6	− 8.9	− 14.4	− 9.7	− 4.5
Minerals	− 2.8	− 7.8	− 4.0	− 1.9	− 4.5
Miscellaneous	− 4.1	− 1.6	− 8.8	− 2.0	− 7.0
Total Index	− 5.9	− 5.2	− 7.1	− 6.1	− 3.6

Admittedly, quarterly comparison of prices conceals the possible significance of the slight upward fluctuation—the first since July, 1929—witnessed a month ago; but, making due allowance for this consideration, it must nevertheless be recognised that, in the first three-months' periods analysed above, the only group which showed in January-March, 1931, a definite reversal of its previous trend was textiles. The rate at which the cereal and

meat group declined was slower than in the last quarter of 1930, but exceeded the rate of the second and third quarters of that year; and the minerals and miscellaneous groups both fell by a larger percentage amount than in the previous three months. Having regard to the fact that in many cases present prices do not cover production costs, and that in consequence curtailment of output is likely to be progressive, we find it difficult to believe that the average level of commodity prices, which has fallen since a year ago by 20.3 per cent., and since 1924 by no less than 42.8 per cent., can fall much further; but though the flattening of the curve during the past quarter affords a modicum of encouragement, it would be premature yet to conclude that a definite upward movement is within sight.

THE SIGNIFICANCE OF LEIPZIG.

(BY A CORRESPONDENT.)

In 1929 the value of the goods which Germany exported was £69 millions less than that of Great Britain's exports. In 1930 the relative positions were reversed, and German exports were £19 millions higher than the British. To this remarkable achievement by Germany in reaching second place in the list of exporting countries much has been contributed by the Leipzig Fair, which every year attracts more and more buyers from abroad. It is not that the sales actively effected at the Fair represent such a striking proportion of Germany's exports. The importance of this great annual Spring Exhibition of German goods is that it reflects at once the determination and adaptability of German industry in its endeavour to capture a growing share of export trade even in conditions of world-wide depression.

Furthermore, what gives the Fair perhaps its greatest significance is the fact that it enables business men in Germany clearly to see what direction the whole course of economic development is taking. For, under the unrelenting pressure of reparation payments, German production is undergoing profound changes of a unique character. Heavy taxation has lowered the buying power of the home market to a minimum. Only articles of prime necessity are in constant domestic demand. For all other manufactures the requirements of the foreign market are far more important than those of the home consumer. This represents a radical change in German economy. In pre-war days, when Germany was a lending and investing country, it was estimated that about 10 per cent. of the total production was exported; and, even then, through the discipline of the cartels, the home market was forced to pay a little more in order that the foreign buyer could be served for substantially less. But, according to recent investigations by the Institut für Konjunkturforschung, the share that export now bears to total sales varies as a rule between 20 and 50 per cent. Even in 1929 nearly half the firms exhibiting at Leipzig stated that more than one-third of their total production went abroad, while many firms gave the export percentage as 50, 60, 70 and even 90 per cent. Only 17 per cent. of the exhibitors exported less than 25 per cent., and since 1929 the export percentage has certainly increased.

These figures reveal the gradual conquest by German industry of foreign markets. To accomplish this Germany

* See *Economist*, March 21.

started the rationalisation movement in 1925, acting on the assumption that, by adopting American methods, she could defeat her rivals by cheapening output while maintaining superlative quality. Incidentally, it was the Leipzig Fair that gave the movement such acceleration, because all these methods were ocularly demonstrated to Germany's producers at each Technical Fair. Had the wave of speculation in New York not assumed such dimensions in 1929, resulting in the withdrawal of the short-term money with which rationalisation was being financed, the German calculation might have proved correct. Large numbers of workers would have been temporarily thrown out of work, but, as cheapened production enabled German goods to sweep foreign markets, output would have had to be increased and the idle workers would have been absorbed again. The plan failed for want of money and brought the whole idea of rationalisation into disfavour. In its place the principle has been adopted of quickening the rate of technical advance sufficiently to keep German goods always a little ahead of all rivals, so that, despite tariff walls, they will command a wide market. Never has there been such a bewildering multitude of new designs, models and patents at Leipzig as at the Spring Fair, 1931.

More subtle, however, is the task of the Fair in coping with the problem of industrial over-production. The more completely representative of the world's buying power the gathering at Leipzig becomes, the more completely will waste production in Germany be eliminated. The millions of samples exhibited do not represent existing stocks. In the great majority of cases they are life-size working models of things not yet on the market at all. Criticism from prospective buyers enables faults to be corrected and production in quantity adapted to true needs. Many articles never pass the exhibition stage; the majority undergo modification. The hope is that one day each German factory will be able to sell its entire output for six months ahead with the certainty that the whole production will be absorbed.

Quite as essential a part of the plan is the systematic search for new markets. How this is done is best illustrated by the continued success of the German electro-technical industry even in the world depression. In 1929 Germany exported electro-technical ware to the value of Rm. 579,000,000. In 1930 sales abroad amounted to Rm. 573,000,000. This was largely due to exploitation of new markets. For example, the Federation of German Industries recently circulated an expert analysis of the possibilities of the Chinese market, where the consumption of electrical power is only 1 per cent. of that in Germany. Hitherto Germany has only supplied 11.5 per cent. of China's imports of electro-technical ware, and this report was widely discussed at the present Fair. In short, the Leipzig Fair as a form of salesmanship owes its chief power to the fact that each display lifts the whole process of production in Germany to a higher level. More than anything else it is a clearing house of ideas. Without it, the ceaseless development and amazing expansion of German export would not be possible.

Notes of the Week.

The R 101 Report.—Exhaustive thoroughness and skilful handling of a mass of complicated evidence mark the report on the R 101 disaster, issued on Tuesday evening by the Court of Enquiry, consisting of Sir John Simon sitting with Colonel Moore-Brabazon and Professor Inglis as expert assessors. The result is that the sudden and mysterious fate of the world's greatest airship at a lonely spot in France in the depths of the night will no longer be a mystery. The evidence of experts and survivors has been supplemented and checked by elaborate laboratory experiments with a model airship, and it has been established, first, that the fall of the ship to ground was due to substantial leakage of gas during very bumpy weather, and, secondly, that the fire, to which was due the death of nearly all the crew and the distinguished passengers, was caused by the ignition of a mixture

of air and hydrogen by an electric spark. The value of these findings is considerable. For instance, they may well mean that hydrogen will be abandoned for gasbag inflation. But the public, perhaps, are more interested in the circumstances surrounding the hurried start upon a long flight. Here the report, though it does not fix responsibility upon individuals (perhaps because some of the possible candidates for responsibility perished in the accident) is not a mere whitewashing document, and the opinion of the Court, though not categorically expressed, is clear. Evidence at the enquiry clearly brought out the eagerness of both the late Lord Thomson and other air officials that the flight to India should be accomplished before the conclusion of the Imperial Conference. The report admits that tests had been insufficient, and that, had it not been for "reasons of public policy," the flight would have been postponed. The "general conclusion was that R 101 was fit to fly"; nevertheless, the report leaves us in no doubt that a big risk was run, which would not have been run had time been no object. The Court reveal this view in several comments. They mention, for instance, that the coxswain on duty at the moment of emergency had not had the opportunity to learn the "feel" of the ship; and they record that the "specific misfortune" which caused the sudden loss of gas—namely, a rip in the envelope—was one which had occurred before when the ship was at the masthead. The country owes Sir John Simon and his assessors a debt of gratitude for solving, as far as human skill and assiduity can ever solve it, a difficult riddle of outstanding public interest; and it must not chide them because the report does not solve the problem whether speed and carrying power and safety can be adequately combined in an airship. That question was not before the Court, but there can be little doubt that both the findings and the mass of expert evidence contained in the R 101 report will play no small part in the ultimate decision of this problem.

The Consumers' Council Bill.—Last Monday the President of the Board of Trade moved the second reading of the Consumers' Council Bill, which, after being dropped last May owing to pressure of business, has now been revived with one important modification. The Bill, as before, provides for the setting up by the Board of Trade of a Council of seven members to investigate all questions relating to the production, distribution, supply and price of any article of general consumption with which the Board of Trade, subject to confirmation by a resolution of both Houses of Parliament, shall direct them to concern themselves. They are to have power to examine witnesses on oath and to compel the production of information, the secrecy of which is strictly safeguarded. The one substantial difference between this and the original Bill is that whereas in its first form the Bill empowered the Board of Trade, if it saw no other possibility of enforcing the conclusions of the Council, to make an Order fixing a maximum price or maximum charge, this power is conferred by the present Bill only in cases where the Council report "that conditions exist which restrict the free play of competition." While this renders the power *pro tanto* less dangerous, we adhere to the view we expressed last May that price fixing, even where there is an element of monopoly, should be regarded only as a last resort. Though the Consumers' Council Bill now limits strictly the exercise of this power, we should prefer to see a provision that it should not be used until time has shown whether the compulsory powers, the lack of which has rendered the work of the Food Council largely nugatory, will not, when reinforced by the damaging light of publicity, produce the desired effect.

Monsieur Briand.—The chief difficulty in the international situation of Europe is that statesmen in Germany and France, who are anxious to pursue a reasonable and conciliatory policy as far as they have a free hand, are perpetually on the defensive against nationalism—of the nervous or the militant order—at home, which is ready to take every opportunity to lift its head. At this moment

the same necessities of internal politics are embarrassing Dr. Curtius, when he is being asked for an explanation of the Austro-German agreement by foreign Powers, and Monsieur Briand, when he is being asked for an explanation by his own countrymen. The matter was raised in the Senate at Paris last Saturday on the estimates of the Ministry of Foreign Affairs; and Monsieur Briand's critics took occasion to throw cold water on his whole policy of European reconciliation, including his recent action in favour of "closer union" in Europe. Monsieur Briand showed his consciousness of the difficulties of his position by the nature of his reply. Instead of taking the offensive and vindicating his policy on its merits as something so urgently demanded by the plight of Europe that there should be no question of his being deflected from his course by a clumsy Austro-German gesture, Monsieur Briand was at pains to prove that he had taken as energetic action against the Austro-German agreement as his critics could desire. France, he declared, had knowledge of Austro-German intentions at least forty-eight hours before any other Power, and he had at once telegraphed to the French representatives at Berlin and Vienna to make a *démarche* setting forth the French attitude, while at the same time he had obtained an assurance that other parties to the Austrian Reconstruction Protocol No. 1 would take action likewise. In fact, as the French Ambassador in London informed Mr Henderson before he left London for Paris on Monday, March 23rd, the French Government informed the German and Austrian Governments that it considered the proposed agreement to be a violation by Austria of Protocol No. 1, and by both Germany and Austria of the commercial treaties in force between France and those two countries respectively. The Czechoslovak and Italian Governments, as parties to the Protocol, also made representations at Vienna—though it may be conjectured that the Italian Government's action was taken rather with a view to reserving its rights under the Protocol than to supporting the policy of France and her allies. In his speech to the Senate Monsieur Briand did not mention, in so many words, that the fifth party to Protocol No. 1, that is, Great Britain, had not joined France in making the assumption that, in the proposed Austro-German agreement, the Protocol would be violated. As a matter of fact, as we now know from Mr Henderson's statement in the House of Commons on Monday, Monsieur Briand had already expressed his contentment with the different action which the British Government had taken. Monsieur Briand's main concern in the Senate was to see that nothing should be done to hinder the course of action which Mr Henderson had put in train. In this Monsieur Briand was successful, at the price of a defence which was pitched throughout on an apologetic note.

—and Mr Henderson.—Mr Henderson is more fortunate than either Monsieur Briand or Dr. Curtius in having behind him a public opinion which is neither nervous nor militant in regard to the European situation, but is as anxious as the statesmen themselves to promote the cause of conciliation and co-operation. This British attitude of mind came out very clearly in the unanimous support for his policy which Mr Henderson received from all parties in the House on Monday, when he gave an account of the action which he had taken in regard to the Austro-German agreement. In this serious affair of the Austro-German agreement, it is evident that Mr Henderson has acted with great wisdom and with a strong sense of international responsibility. He requested the German and Austrian Governments not to proceed further until an opportunity had been given to the Council of the League, under whose auspices the Protocol No. 1 of 1922 had been negotiated, to assure itself that the proposed Austro-German treaty was not contrary to the obligations undertaken by Austria in that instrument. The answers which Mr Henderson received from the two Governments were not equally satisfactory. The Austrian Government declared explicitly that it did not object to the legal aspect of the proposed agreement being examined by the Governments which were parties to the Protocol of 1922 (merely adding that there could be no question of examining the agreement from the

political standpoint in view of its economic character). The German Government's reply was less clear. While maintaining, as the Austrian Government had done, that the proposed agreement was entirely consonant with the Protocol, and rejecting the idea of a political examination of the agreement, the German Government declared that there was no reason, in their opinion, why the Council should take the matter up, and that the Austro-German negotiations "would naturally have to take their course." Thereupon Mr Henderson repeated his suggestion to Berlin, in order to make sure that there had been no mistake about his meaning, and he added that if the Council were inclined to refer the question, as a legal matter, to the Permanent Court of International Justice, he would support that procedure. The German Government replied that there had been no misunderstanding, and they repeated their contention that there was no reason to refer the matter to the Council. They added, however, "that the Powers signatory to the Protocol were, of course, at liberty to refer the Treaty to the Council, but that the German Government must reserve complete liberty of action in regard to any procedure which "might" be suggested by the Council." There the matter stands. Mr Henderson is going to give notice of his intention to raise the question at the next Council meeting. What will the German Government do? Will it take the statesmanlike course of co-operating with a good grace, or will Nationalist pressure force it to put itself in the wrong by deciding upon abstention? As Mr Henderson reminded the German and Austrian Governments in his original communication of March 25th, the prospects of the Disarmament Conference are at stake.

Uneasiness in Spain.—The Spanish volcano never quite erupts and never quite calms down. The latest incident is the punishment of General Buruete, the President of the Supreme Court of Military Justice. On Friday, March 27th, the General gave to the Press a Note which was ostensibly concerned with the sentence recently pronounced on the signatories of the Republican Manifesto, but which broadened out into an indictment of the late Dictatorship and a promise that the Army would henceforth abstain from interference in politics. Next day General Buruete was dismissed from his post and was placed under two months' arrest for breach of discipline. The Government have also decided, in view of the part played by the students in Madrid in the recent anti-monarchical demonstrations, to override the privilege which the University enjoys of policing its own premises. Meanwhile, another court-martial has opened its sittings at Jaca in order to try sixty-four officers and men of the Spanish Army on the charge of having neglected their duties at the time of the military revolt in that garrison town last December. General Berenguer has a difficult task. He has to assert the Government's authority and at the same time to avoid arousing passions which might wreck the forthcoming elections. Election meetings were held all over Spain last Sunday; and it is a good sign that they gave rise to very few disturbances. It remains to be seen whether the Government will be brave enough to live up to its professed intentions of allowing the elections to be really free.

The German Emergency Decree.—After the Reichstag had adjourned for six months, President von Hindenburg signed, last Saturday, a decree investing the public authorities of the *Reich* and the *Länder* with far-reaching powers for combating political violence. One justification for this step is the appalling figure of casualties arising from encounters between armed political organisations in the streets. Latterly there has been a regular toll of deaths from this cause in Germany every week-end—as regular, indeed, as the week-end toll of deaths from motor accidents in this country or from communal conflicts in India. Since the Revolution of 1919, Germany's record in political crimes has been very bad—much worse than in any other great civilised country. A consciousness of this evil and a desire to find a remedy for it are shown in

the approval with which the new decree has been received by all the moderate elements in German public opinion. On the other hand, the decree has aroused equally violent protests from the extremists of both Left and Right; and this is perhaps the best justification of all. At the same time, this measure of defence against political extremism, necessary though it may be, is being paid for dearly in the sacrifice of civil liberties. The freedom of assembly, of association, and of the Press, which was fully secured in Germany, for the first time, by the Weimar Constitution, goes by the board; and the power which is being placed in the hands of the police (who, in Germany, are apt to be high-handed) is really very formidable. Some provisions commend themselves beyond question—for example, the minimum penalty of six months' imprisonment which is prescribed for the offence of being illegally in possession of firearms. More dubious are the powers given to the police to suppress anti-religious demonstrations, even if held indoors. This, of course, is aimed at the Communists, who are carrying on an "anti-God" campaign in Germany on the Russian model and were intending to launch an "anti-Easter" offensive. In the German Government's opinion, the feelings aroused by this campaign are evidently so dangerous that no risks must be run.

Mr Keynes and Tariffs.—Mr Keynes' proposals for a revenue tariff, which were discussed in the *Economist* of March 14th, have raised a chorus of criticism from economists and others, and Mr Keynes has his hands very full in answering them in the columns of the *New Statesman and Nation* and the *Times*. In one of these replies Mr Keynes refers to our comments, but, with all respect, he presents our arguments in a form which we cannot possibly accept. For instance, he complains that the *Economist* is inconsistent in that it criticises his proposal "on the ground that it will raise the cost of living," and then proceeds to put forth proposals for the next Budget, which include taxes on tea, sugar, beer, petrol and tobacco. It is true that a tax on tea or sugar would affect slightly the budget of the ordinary household; but "beer and 'baccy" are "optional" forms of expenditure, taxes on which are likely to be paid by the consumer and would not give an occasion to an increase of wages. A general duty on all foodstuffs, including bread and meat, involves an increase in the cost of essentials of life which cannot be evaded even by the poorest. Such taxes would tend to a raising of money wages where they are governed by the cost-of-living index, or, in sheltered trades, where the organisation of the workers is strong; or at all events to prevent a fall which might otherwise occur. Our contention is that this tendency, together with duties ranging over wide classes of raw materials and semi-finished goods, would add seriously to the total costs of British production, thereby putting fresh obstacles in the way of our export trades. Mr Keynes does not controvert this, but admits that "a general tariff . . . will probably tend to increase manufacturing costs rather than otherwise," though without giving reasons he expects the increase to be "small and almost negligible compared with the other factors of costs." Also he agrees that he overestimated the revenue obtainable under his proposals. From the age-long dilemma of the Protectionist, that of securing revenue on goods coming in and increasing employment by shutting them out, Mr Keynes attempts a most ingenious escape. "The saving on the dole and the gains from income tax, etc.," he writes, "resulting from the substitution of home-produced goods for goods now imported will much outweigh the loss of tariff revenue" resulting from the exclusion of goods by the tariff. This is a daring assertion based on a number of highly controversial assumptions and questionable arithmetic. But, after all, controversy over individual points is far less important than the discussion of the fundamental difference between Mr Keynes and ourselves. Mr Keynes is not fond of tariffs, and would not make his proposals if he saw any hope of stimulating our export trades. He does not, and hence his advocacy of a scheme for restricting Britain's foreign trade and making the country rely more on the home market. We, on the other

hand, refuse to take this defeatist view, and believe that with necessary measures of rationalisation and readjustment Britain's export trade can and must gain a fair share of world commerce when it revives. It is curious that Mr Keynes should have chosen the epithet "contractionist" to apply to some of his critics—ourselves included. That epithet, coupled with the word "restrictionist," seems to us to apply more appositely to his proposals, which envisage a more narrowly nationalist function for British economy and a lower standard of living for our people.

Australia's Good Name.—As was generally anticipated, the Australian Commonwealth Government have refused to allow Mr Lang to tarnish the good name of the Dominion. On Monday, March 30th, Mr Thomas was able to inform the House of Commons that the Commonwealth Government had taken counsel's opinion as to their position under the financial agreement in relation to New South Wales interest falling due in London on April 1st, but which the State had declared it would not pay, and that the advice received showed that the Commonwealth Government was both legally bound to make good the threatened default and also had the legal right to apply Commonwealth funds to this purpose. As a result, the sums due on April 1st were duly paid by the Commonwealth Government to the London agents responsible for the service of the New South Wales sterling loans. Thus, as far as the British investor is concerned, Mr Lang's irresponsible action has had no ill effect, while it has evoked a significant volume of protest in all quarters in Australia, including the Federal Labour Conference. It remains to be seen what action Mr Scullin will take against Mr Lang. The suggestion is made that an action lies against New South Wales and its Government in the Australian courts, and that in the almost certain event of judgment going in favour of the Dominion Government, the Governor of New South Wales may have the constitutional right and duty to dismiss his ministers. These points, however, remain to be determined. What is far more satisfactory is to know that Mr Lang is almost universally disowned in Australia, and that even in her present difficulties, the Dominion is deeply concerned at the recent threat to her credit.

Railway Wages Settlement.—Though by no means without protest, the three railway unions have accepted the findings of the National Wages Board. The Railway Clerks' Association accepted fairly promptly; the Associated Society of Locomotive Engineers and Firemen came to a decision last week, but recorded at the same time their disappointment with the terms of the award. As the members of this union are not affected by the "spreadover," the decision was less difficult for them than for the National Union of Railwaymen, among whose members objections to the "spreadover" appear to have been as strong as the feelings of resentment at the wage-cut. The meeting of the N.U.R. had to be postponed for a week; on the eve of its original date it was announced that the National Railway Shopmen's Council had signed an agreement for a 4.6 per cent. reduction in wages, with a counter-concession of a guaranteed week of not less than five days and a minimum of 40s. When the meeting finally took place, the executive had no easy task in inducing the delegates to accept the award, but recognition of the stark fact that refusal would mean a stoppage in circumstances offering no hope of success finally led to a favourable vote of 49 to 31. Meanwhile, the Central Wages Board has formally agreed to a reduction of 1s. in the weekly wages of those grades which have a cost-of-living sliding scale bonus. The total saving from all these reductions is estimated at about £5,000,000 in the coming year. Peace has thus, apparently, been achieved, though a handful of malcontents at two or three of the London goods depots adopted, for a few days, in defiance of their unions, a "go-slow" policy as a protest. But these sporadic protests have now ceased.

Coal Hours and Wages.—The last Coal Mines Act gave legal force to the veto which, as a culmination to a series of "marches and countermarches," the last delegate conference of the Miners' Federation reimposed on the "spread-over" of working hours. This veto took effect on April 1st, and a curious position has been created by the decision both of the Scottish and the North Wales miners to ignore the veto and to carry on with the arrangement as regards "spread-over" reached with the employers in these areas, both of which from April 1st onwards are working under conditions not sanctioned by the law. The Government is thereby placed in an awkward position, and what the *dénouement* will be is by no means clear. Meanwhile Leicestershire coalowners and men have reached an agreement for the working of a 7½-hour day with a reduction of 8 per cent. in wages, while in the Lancashire field peace for three months has been secured by an arrangement which technically conforms both with the Miners' Federation veto and with the 7½-hour day, the expedient including a short Saturday shift and the reduction of "snap"—time for rest and refreshment—from 30 to 20 minutes. In South Wales, although immediate strike danger has been averted, the Executive Council of the South Wales Miners' Federation is endeavouring to persuade the Government to amend the Minimum Wage Act of 1912, so as to enact as a statutory minimum the 1914 minimum wage plus an increase calculated in proportion to the increase in the cost of living. We may be grateful that the country has been spared the shadow of a coal strike at Eastertide, but apart from the immediate problem created by the undisguised breach of statute law in Scotland and North Wales, the difficulties which have attended the reduction of hours to 7½ per day suggest forcibly the dangers that surround next July, when the working day—failing legislation to the contrary—reverts to 7 hours.

Cotton Trade Reorganisation.—Our Manchester correspondent writes:—Although the details in connection with the new scheme for reconstruction of the cotton industry will not be announced until the special meeting of the Joint Committee of Cotton Trade Organisations, which is to be held in Manchester on April 9th, further particulars of the proposals are now available. The scheme revolves round the question of surplus capacity. It is realised that the total output of the machinery in Lancashire is much in excess of present demand, and the suggestion is that a cartel of the whole of the spinning and manufacturing industry should be formed. It is proposed that an expert authority or a committee should carry out an investigation and determine the amount of excess machinery. The scheme will apply to the spinning and manufacturing sections only and it will be on a voluntary basis. It is rumoured, however, that if employers are not willing to fall in with the proposals it may be necessary to obtain statutory authority from the Government in order to enforce the scheme. It is understood that when the amount of excess machinery has been decided upon the owners will be asked who is prepared to scrap existing plant. There are many firms which are either unable to work at a profit or are what might be termed inefficient, and it is suggested that if this excess production were eliminated it would be possible for the remainder of the machinery to work full time. Under such conditions, production costs would be reduced; at present it is expensive for firms to be running only part machinery. It is understood that under the scheme a fund would be raised by those desiring to remain in business and the funds secured would be available to compensate the firms whose machinery would be scrapped. The excess capacity would then be reduced and retiring firms would be compensated on a fixed scale. It is recognised that the scheme will mean a further displacement of labour, but it is understood that the Government will be prepared to pledge itself to maintain the increased number of unemployed operatives. If the proposals are approved on April 9th, the scheme will then be considered by the Master Cotton Spinners' Federation and the Cotton Spinners' and Manufacturers' Association. It is important to point out that the reconstruction (it really means rationalisation) will not

FOR BETTER OR WORSE?

It's a gamble, but your widow must invest the capital you leave her to secure an income.

Why not invest it for her now?

in any way affect the wages and hours of the workers and there is no intention to raise the question of more looms per weaver or double shifts. Sir Kenneth Stewart, at the shareholders' meeting in Manchester on Tuesday last of the Lancashire Cotton Corporation, Ltd., said: "After very serious consideration your directors have made up their minds that the way to progress, not only for ourselves, but for Lancashire, lies not in the curtailment of output or in the fixing of prices, but in concentrating on the most efficient mills, bringing these up to the highest point of modern practice and ruthlessly scrapping the remainder." These remarks are obviously significant in view of next Thursday's meeting.

Defaulting States.—The fact that New South Wales bondholders have been saved from the consequences of her default, and that rumours of other repudiations have been current, explains why more than usual attention has been paid to the annual report of the Council of the Corporation of Foreign Bondholders. The year covered by the report has, as a matter of fact, been void of outstanding events. The Central American Republics have, for the most part, maintained payments under their various settlements. But the negotiations which promised to put an end to the default of Ecuador have broken down. An *ad referendum* arrangement for the resumption of the service of Mexico's external debts was reached by the International Bankers' Committee last July, but still awaits ratification. Turkey has made only fractional remittances under the arrangement of 1928. The position of Austria-Hungary under the Hague agreements is discussed at length and a number of minor events are recorded. But the feature of this year's, as of previous years, reports is the very large space given to the defaults, not of war-ravished European countries, but of eight Southern States of America. Since some of these American State defaults are nearly a century old, it might be thought that the time was long passed when the Corporation of Foreign Bondholders could hope to serve any useful purpose by an annual recapitulation of a well-worn chapter in financial history. Nevertheless, the pertinacity of the Corporation knows no limits, and even at this late date, buoyed up by opinions of distinguished international lawyers, they return to the attack in an apparently hopeful spirit. The United States Government has disavowed Federal responsibility for these old State debts, and into the legal technicalities involved in that decision we need not enter. But at least some psychological interest attaches to the argument that a gesture by the great creditor nation in favour of the sacredness of international obligations might be productive of salutary effects in proportion to which the total sum involved, namely \$75 millions, might appear trivial.

United States Fiscal Policy.—Though it would be idle to expect the rapid conversion of public opinion in the United States to a belief in the advantage to that country of freer trade, there is no question that, even in political circles at Washington, there is growing disillusionment as to the fruits of the high tariff extravagances of 1929. Nor does the United States lack counsellors of weight and wisdom in this issue. In an address delivered a fortnight ago to the Foreign Policy Association at Philadelphia, Mr Benjamin M. Anderson, the economist of the Chase

National Bank, voiced a reasoned, powerful plea for a saner tariff policy. Agreeing with Sir Arthur Salter that general over-production is impossible in view of the fact that human wants are unlimited and insatiable, Mr Anderson submitted that, though there were other causes contributory to present economic difficulties, the root cause of the world-wide depression was to be found in the fact that purchasing power and international commerce were being restricted all over the world by the existing regime of high and rising tariffs. Under this regime every country in its endeavour to become more self-sufficing was confronted by problems of painful readjustment. It would be possible, he admitted, for America to forgo export trade and, by shifting a very substantial proportion of her activities from production for export to production for the domestic market, to continue to exist behind an insurmountable tariff wall. But even for the United States, with its huge domestic market and its great internal resources, such a process would be as painful as it would be unnecessary. The United States, Mr Anderson urged, "must learn to receive and welcome an import surplus." That was the natural and normal position for a creditor country; and the idea that, by taking up year after year an ever-increasing amount of foreign bonds, America could keep up her exports while holding imports down, was a complete illusion. The objective at which the United States should aim was not to sweep away her whole tariff at the cost of a somewhat violent readjustment in her economic life, but to avoid the necessity of readjustment in the opposite direction by reducing her tariff sufficiently to enable her customers abroad to sell in America a sufficient quantity of goods to pay for those they desired to buy from America's exporting industries. All of which has been said before, but cannot be said too often.

A German Banking View.—In addition to presenting the bank's own results, the annual report of the Darmstädter und Nationalbank gives a very complete and critical summary of German economic conditions during the past year. Its main thesis is that Germany is still dependent upon foreign capital, and that the trade depression was intensified towards the close of 1930 by adverse political developments, which "caused capital, both foreign and domestic, suddenly to lose confidence in the possibility of national reconstruction." This "spiritual depression," as the report so graphically describes it, brought the country to the brink of a political and economic catastrophe, and led to the failure of many business firms and a heavy increase in unemployment. So far, the worst has been averted; and for Germany to have overcome the difficulties and dangers of 1930—after those of defeat in the field in 1918 and of the collapse of the currency in 1923—is no mean testimony to her innate strength. The bank, however, points out that the troubles of 1930 have left behind them the legacy of a definite inferiority complex, and the concluding passages of the report are rightly devoted to an attempt to dispel this feeling. Thus it emphasises the extent to which Germany's present troubles are shared by other countries, and points to such common adverse factors as the aftermath of the war, unbalanced distribution of capital, high tariffs, the artificial maintenance of prices and wages, and reparations payments, all of which are beyond Germany's control. Incidentally, the report pays a tribute to "leading English and American bankers" for their endeavours to rectify the situation. As regards the bank's own results, gross profits from commissions have fallen from mks. 38.0 to mks. 36.5 millions, while discounts and interest yielded mks. 34.9, against mks. 34.7 millions. Expenses were reduced from mks. 56.7 to mks. 53.1 millions, and tax requirements from mks. 7.3 to mks. 3.2 millions. Unfortunately, a special allocation of mks. 10.0 millions was required for writing down securities and joint syndicate holdings, and, after making this provision, the net profit for the year was only mks. 5.0 millions, against mks. 8.7 millions in 1929. The balance sheet records an increase in acceptance credits granted by foreign banks, but a decline in total deposits. The bank's own acceptances are higher, as are also its cash and short-term credits secured by commodities. Loans against securities have

fallen by approximately 50 per cent. The general impression given by the accounts is that the bank is making every effort to keep genuine business, as opposed to speculation, moving under the difficult circumstances that now prevail.

Polish Coal Exports.—Our Warsaw correspondent writes:—Official announcements state that negotiations with a French financial group for a loan to complete and operate the new railway line for the transport of coal from Upper Silesia to the port of Gdynia are proceeding satisfactorily, and it is intimated that a successful outcome is near. The amount under discussion is said to be one milliard francs, to complete and equip the line and to reimburse the Polish Treasury for the sections already completed. It has, nevertheless, been freely reported that there is a sharp difference of opinion on this matter between the Minister of Finance and the Minister of Communications, with the former eager to secure the loan and the latter desiring to protect the coal trade against the imposition of a freight rate that might seriously affect coal exports to the northern markets. The French lenders, it is safe to assume, would not be disposed to agree to the transport of coal over the new line at an unremunerative rate, such as the Ministry of Communications now grants to the coal exporters. The coal people expect, however, that a compromise will be reached by guaranteeing the lenders a certain return on their investment, with a share in any profit over and above such a guarantee. An unremunerative rate could then be made a continued charge on the Treasury and an indirect subsidy to the coal exporters. A further indirect subsidy is exacted from the home consumer, for the coal producers, in common with other primary producers, have only given a very limited response to the Government's appeal for a reduction of prices, on the ground that their ability to compete abroad is dependent upon the maintenance of high prices at home. When allowance is made for the inclusion in the export price f.o.b. Scandinavian ports of the cost of 400 miles rail transport, the price received by producers from coal exported to Scandinavia is only about half the home price.

Eagle Star and British Dominions.—The high bonuses declared by the closed life funds of the companies in the Eagle Star and British Dominions group have long been an object lesson in the internal strength of British life offices. Life offices are conducted necessarily on the assumption that they are a continuing entity, with the result that new entrants on a with-profits basis acquire automatically a share in the accumulated funds of the company towards which they have contributed little or nothing. They in their turn when their policies have been many years in force, will sacrifice something for the sake of future generations, and there is thus always a continual striving to adjust the equitable needs of young and old entrants. When the "Eagle" and "English and Scottish" were acquired by the Eagle Star and British Dominions, the funds were closed to new entrants, and the strain, as it were, from new business automatically ceased. The result has been seen in a remarkable increase in the rate of reversionary bonus declared on with-profits policies at each successive valuation. The figures relating to the quinquennial valuations of each of these two closed funds at December 31, 1930, have now been made public, and the results are as follows:—

Net decrease

* Includes £32,000 the proceeds of which were not carried to the Exchequer within the period of the account.

For the quinquennium just ended the reversionary bonus has been raised to £10 per cent. per annum simple, compared with £6 per cent. per annum simple in the preceding quinquennium, and it is intended that the interim bonus during the quinquennium now current should be at the same high rate. This splendid result has been achieved in spite of the halving of profits from securities brought into account, and after increasing the carry-forward by over 50 per cent.

ENGLISH AND SCOTTISH FUND.

	1920-25. £	1926-30. £
Trading surplus earned during valuation period	309,939	399,791
Profits from securities	217,647	109,823
Brought forward	12,586	151,102
	540,172	660,716
Allocations :—		
To Bonuses to policyholders	344,322	526,662
„ Shareholders account	44,748	63,518
„ Carried forward	151,002	70,536
	540,172	660,716

In this fund the reversionary bonus for the quinquennium is to be at the rate of £7 per cent. per annum compound, compared with £4 per cent. per annum compound in the preceding quinquennium, though this distribution has necessitated a diminution in the carry-forward. As, however, it is considered that the profits in the quinquennium just ended are on an exceptional scale and cannot be expected to recur, the interim bonus for the quinquennium now current has been limited to £3 per cent. per annum compound. In both funds it is stated that the book values of the securities include a hidden margin of reserve. The allocation to shareholders represents in each case a payment to the Eagle Star, and in addition to the amounts shown in the table, the parent company will receive the sum of £12,000 from the capital redemption fund of the English and Scottish.

Provincial Insurance Company.—The chief office of this company is situated at Kendal, an odd place to choose as the centre of administration for an insurance company transacting fire and accident business on non-tariff lines with an organisation spread over England and Scotland. Yet this is a company which shows year by year a continuous advance in premium income and underwriting results which are a challenge to many of its much larger competitors. The total premium income of 1930 was £893,000, compared with £833,000 in 1929, and was derived as to £176,000 from fire business, as to £621,000 from employers' liability and accident business, and as to the balance of £96,000 from marine business. The total underwriting results are shown below for the last two years :—

	1929. Amount. £	Percentage of Premiums.	1930. Amount. £	Percentage of Premiums.
Fire	12,458	7.6	18,631	10.6
Employers' liability, accident and general	26,947	4.9	41,454	6.7
Marine	-14,902	-12.6	-4,991	-5.2
	24,503		55,094	
Less income tax, etc.	10,580		12,751	
Less allocation to staff pensions and profit sharing ...			18,096	
Total net underwriting surplus	13,923		24,247	

These satisfactory results have been achieved, be it noted, at rates of premium which, in the aggregate, are substantially lower than those charged by the tariff offices, and in respect of business which is wholly derived from this country. The allocation to staff pensions and profit-sharing appears for the first time, and includes £10,000 towards liquidation of the liability for past service pensions. It is stated in the report that the company has

suffered a total depreciation over the last two years on its Stock Exchange securities equal to 5 per cent. on the value of the investments, a figure which compares favourably with the general experience. To meet this, £10,000 has been added to contingency reserve in addition to the £25,000 set aside for this purpose a year ago. The net interest earnings, owing to the rise in income tax, have shown a smaller increase than hitherto, and, after deducting the cost of the preference dividend, amount to £26,187. The ordinary dividend has been maintained at 20 per cent., which costs only £13,950; and it is clear that a further increase in the rate of ordinary dividend cannot be long delayed.

Scottish Life Assurance.—The past year was the occasion of a quinquennial valuation and distribution of profits, and marked also the jubilee of this company. The results of the quinquennial valuation show that the company has never before been in so prosperous a condition, and this circumstance has provided a fitting atmosphere for the jubilee celebrations. Quantitatively the company maintains a steady, if slow, rate of progress, which may be judged by reference to the following table showing the averages during each of the last two quinquennia :—

Years.	Average New Business per annum. £	Average Premium Income. £	Average Net Rate of Interest. Per cent. £ s. d.	Average adjusted Expense Ratio. Per cent.
1921-25 ...	852,257	413,705	4 14 1	15.5
1926-30 ...	1,555,455	540,753	4 15 3	15.7

The new business and the average premium income during the second period of five years has, of course, been assisted greatly by the boom in single-premium business, but it is clear that interest profits, at any rate, have been on a higher scale. So far as the assets position is concerned, it is disclosed that the total market value of the Stock Exchange securities is well in excess of the value appearing in the balance sheet, and that, so far from there having been any depreciation during 1930, there was actually some improvement on the values at the end of 1929. The valuation itself, made on the same stringent basis as formerly, brought out the following results compared with those relating to the valuation five years earlier :—

	1921-25. £	1926-30. £
Trading surplus earned during quinquennium	606,404	861,455
Profits from securities	23,712	...
Brought forward	11,550	25,376
	641,666	886,831
Allocations :—		
To Bonuses to policyholders	560,837	769,057
„ Strengthening of actuarial reserves ..	25,935	28,313
„ Shareholders	29,518	40,471
„ Staff pension fund	...	17,000
„ Carried forward	25,376	31,990
	641,666	886,831

The reversionary bonus allotted to "with-profits" policies for the quinquennium is at the rate of 48s. per cent. per annum on the sums assured. This rate compares with the normal rate declared five years earlier of 43s. per cent., and the increased bonus now declared has cost a smaller proportion of the trading surplus and yet has permitted of a small increase in the carry-forward and in a strengthening of actuarial reserves. The larger allocation to shareholders has permitted an increase in the rate of dividend from 18 per cent. to 20 per cent. and has justified the directors in expressing the hope that for the remainder of the current quinquennium the dividend will be increased still further to 25 per cent. Moreover, the sum of £12,500 has been applied to reduce the uncalled liability on the shares from £4 to £3 15s. per share. The reconstituted capital will then consist of 50,000 shares of £5 each with £1 5s. paid up. At the present price of £5½ the yield on a dividend of 25 per cent. is 4½ per cent. gross.

Overseas Correspondence.

UNITED STATES.

Public Finance — Industry — Foreign Trade — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 19.

News of the week over the state of Government finance has met with a mixed reception. In more speculative quarters much is made of the obvious immediate advantage to trade of the huge inflation now taking place. Borrowing by ex-service men under the new law (providing for loans to be made up to 50 per cent. of the maturity value of the compensation certificate) has been more active than had been anticipated. The Veterans' Bureau, which handles the matter, estimates that as many as 75 per cent. of those eligible for loans will make them, and that upwards of \$1,000 millions will have to be found by the Treasury to meet the demand.

It had been thought by the Treasury that approximately \$300,000,000 would be needed for bonus loans by the end of the fiscal year, June 30th. It is now estimated that that amount will be exceeded early in April and that at least \$700,000,000 will have been lent by June 30th. To meet these heavier requirements the Treasury is planning to offer a new discount bill loan of \$200,000,000 for April 11th, and Government officials expect that between now and the end of the year additional Treasury borrowing of about \$1,300,000,000 will have to be made. Rising demands on the Treasury along with falling revenues fore-shadow higher taxes. Senator Smoot, chairman of the Senate Finance Committee, asserts that either the level of taxation must be raised or a reduction must be made in the sinking fund for retirement of public debt.

Estimates of the Treasury deficit for this fiscal year have been raised to \$750,000,000. Up to March 17th income tax collections were \$106,254,000, compared with \$99,666,000 in the same period of last year, but more individuals have paid the year's assessment in full than is usually the case. Total receipts for the first quarter are expected to fall short of last year's by a large amount, and the June 15th collections will probably fall still further below the level of a year ago.

Industrially some encouragement is found in the announcement of a United States Steel Corporation subsidiary that prices of certain products have been raised \$1 a ton for second quarter delivery. This is the second price advance to be announced in recent weeks, but whether it can be maintained is uncertain. The steel mills claim that present prices are unremunerative and that no additional consumption would follow lower quotations or even maintenance of the current levels. Production rate has risen again, and is now around 56 per cent. of capacity. Buying by the motor and building construction industries has been especially marked. Progress in steel since the beginning of the year has been fairly steady, perhaps even slightly more than seasonal; and some people think the peak will not be reached until next month. Operating rate a year ago was about 80 per cent. If steel mill activity can be maintained around the present rate much encouragement will be given to other industries.

Some improvement is also noted in the textile trades. Cotton exports of 432,996 bales in February were higher than a year ago, though merchandise shipments in general were considerably lower. February exports totalled \$226,000,000, a drop of about 35 per cent. from a year ago, while imports, at \$175,000,000, were nearly 40 per cent. lower than last year. Exports were the lowest for any February since 1914, and the smallest for any month since June, 1924. Imports were the poorest for any February since 1915, and for any month since September, 1916. The export excess of \$51,000,000 was only slightly less than the average for recent months. Movement of gold also slowed down appreciably last month, and little metal has come in or gone out during March. February imports were \$16,145,000 and exports were negligible.

Employment improved slightly in February, according to the Bureau of Labour Statistics, which reports a rise of nearly 1 per cent. in 15 selected industries and an increase in pay rolls of about 7½ per cent. in manufacturing trades. Motor manufacturers are taking on more men, and the warmer weather will, as usual, stimulate building construction. Motor output is expanding slowly, a production of 300,000 units being estimated for March. The trade expects to produce 400,000 vehicles in April, which is the month for the real test of selling.

Meanwhile, the distribution of goods over the railroads is showing no signs of improvement. Freight car loadings are not expanding as much as is usual at this season and are still as low as in 1921. Little buying of steel and other supplies will be done by the railroads until a decided improvement in earnings takes place. No reduction in railroad wages is likely, but sporadic cuts in other industries are taking place, with very little said about the matter in public. Corporation executives hold that to maintain the old scale of wages is in effect an unwarrantable increase, in view of the drop in living costs. The National Industrial Conference Board estimates the fall in the cost of living between October, 1929, and January, 1931, at 10 per cent. Numerous corporations have reduced wages and salaries all round by 10 per cent. In its annual report for 1930 the General Electric Company shows that average annual earnings per employee dropped 3.1 per cent., while the cost of living fell 4.1 per cent.

Money markets were unruffled by the \$3,000,000,000 turnover at the tax date. The Treasury borrowed between \$150,000,000 and \$200,000,000 at the Federal Reserve Bank, but participation in the overdraft was sold to member banks to such an extent that the supply of day money was not greatly increased. Time loan quotations have receded slightly and call money is overabundant at 1 per cent. or less outside the Stock Exchange, where the rate is pegged at 1½ per cent.

FRANCE.

Budget — Debt Extinction — Railway Rationalisation — Wages and Cost of Living.

(FROM OUR CORRESPONDENT.)

PARIS, March 31.

The Senate, by dint of all-day and all-night sittings on Sunday, completed its revision of the Budget Bill at five o'clock on Monday morning, and sent the measure back to the Chamber showing an estimated surplus of 175,613,000 francs, compared with 11,549,000 francs in the Bill as voted by the Chamber, and 106,461,000 francs in the Government's original draft. The Upper House succeeded in cutting down proposed expenditure by about 275,000,000 francs, and were thus able to leave the tax on Bourse operations at the reduced level fixed last year, and to give other small relief to the taxpayers. Some of these modifications will undoubtedly be accepted by the Chamber, but others are likely to be refused. It has been decided that any return to the wasteful system of *douzièmes provisoires* shall be avoided at any cost. It is a deplorable reflection on French parliamentarianism that, in spite of the heroic device adopted last year of arbitrarily lengthening the financial year by three months, in order to provide ample time for dealing with the annual Finance Bill, the Budget has again this year had to be hastily pushed through at the last moment, and then only by the aid of distinctly undignified methods.

The report of the Senate Finance Commission shows that during the year ending December 31, 1930, the Perpetual Debt was reduced by 2,339,000,000 francs, principally through buying in on the Bourse by the Caisse d'Amortissement. The 1916 Five per Cents. were reduced by 1,010,000,000 francs, and the 1927 Six per Cents. by 1,081,000,000 francs. Redeemable debt was similarly reduced by a capital value of 814,000,000 francs. The short-term debt was brought down by 101,000,000 to 22,075,000,000 francs, while the floating debt was left at the end of the year practically unchanged. Postal cheque account balances increased from 1,686,000,000 francs to

2,038,000,000 francs. This is a debt which yields no interest to depositors, so that it would appear to be advantageous to the Treasury. It has, however, the inconvenience of being a sight engagement, and thus constitutes a mortgage on the Treasury balances. The total Treasury Bonds in charge of the Caisse d'Amortissement varied little during the year (28,209,000,000 francs at the end of 1930, against 28,492,000,000 francs in 1929), the total being approximately near to the legal maximum of 28,211,000,000 francs (leaving out of account the marginal tolerance of 6 per cent.). The Budget for 1931-32 provides for internal debt extinction amounting to 3,341,000,000 francs; but this, it should be pointed out, includes the transfer of debt representing a capital of 1,787,817,492 francs to the Caisse d'Amortissement, which will make itself responsible for its redemption, though the Budget will be chargeable meanwhile with the interest service. Other adjustments provided for, the net saving in interest to the Budget during the coming year is estimated at 231,612,000 francs.

The foreign debt was reduced last year by 1,975,000,000 francs (representing a saving in interest of 102,880,000 francs), by the reimbursement in anticipation of the Krueger and Toll loan and repayment of Argentine credits. The only important items of foreign commercial debt now left are the 1921 and 1924 foreign 7 per cent. loans, and the outstanding $7\frac{1}{2}$ per cent. loans to Bordeaux and two other French cities. These five issues all stand well above par, which renders buying in on the Bourse impracticable. The 1921 loan is not reimbursable before 1941, and the loans to the three cities only in 1934. The 1924 loan is being paid off by annuities. No lightening of the burden, therefore, seems possible at present so far as these five issues are concerned.

The problem of restoring the French railways to a paying basis and removing the danger of further heavy deficits on working is being vigorously taken in hand, and already several possible remedies have been put forward. M. Albert Mahieu, the chairman of the Superior Railway Council, who was asked some weeks ago by the Minister for Public Works to report on the demands made by the companies for an increase of tariffs, for the purpose of meeting the deficit in the common fund, insists that such a policy would be dangerous in the present economic situation of the country, and that the end in view can be attained by a policy of judicious but radical economies in working. He proposes that some fifteen lines, which carry practically no traffic, should be suppressed entirely; that about 3,000 miles of other lines, which have very little traffic, should be replaced by motor services for both passenger and mail purposes, as has already been done in some parts of the country, and used only for intermittent goods traffic, as and when required. These measures, he estimates, would permit an immediate saving of 200,000,000 francs a year. Further, the companies are obliged, under their agreements, to run three trains daily in many districts where two would be sufficient, while a certain proportion of the *trains de luxe* might reasonably be suppressed. Massive loan conversion operations and a rigid limitation of fresh capital expenditure to absolutely necessary works are also recommended. Finally, M. Mahieu advises that the huge Paris suburban traffic lines, which are at present "ruinous for the companies," should be radically transformed and joined up with the Paris Metro system.

The Government statistical department has just made known a mass of valuable data, collected from the *mairies* and other reliable sources throughout France, which reveal the remarkable improvement that has taken place in the situation of the French wage-earners since the war. These data cover 38 masculine and 7 feminine occupations in the provinces, and 19 occupations (men only) in Paris, and are designed to show the average wage rates prevailing in each trade during 1930. The inquiry shows that, so far as the French towns (other than Paris) are concerned, wage rates in 1930, for the 38 trades followed by men, were equivalent to a general index figure (1911 = 100) of 891 for pay by the hour and of 732 for pay by the day. For the seven selected trades followed by women (ironers, dressmakers, linen-workers, waistcoat-

makers, lacemakers, embroiderers and milliners) the comparative index figures are 1,045 for pay by the hour and 866 for day wages. In the Paris area the average general index figure for the 19 men's trades covered is returned for 1930 as 744 for pay by the hour and 668 for day wages.

The inquiry concerned only the ratio of increase in wages paid since 1911, and had nothing to do with the relative amounts of pay in different regions or different trades. Paris wage rates have always been much higher than provincial ones, and continue to be so. The index figures show that the increase in wage rates since the war has been considerably larger in the provinces than in the Paris district. Similarly, the increase in the pay of women workers in the provinces has largely exceeded that experienced by men in the same regions. The figures cover the period down to the end of October, 1930. The fact that men's wages in the 38 trades increased on the average by 7.1 per cent. (from 31 francs 34 centimes per day to 33 francs 56 centimes) during the twelve months, as compared with the preceding year, while the general average of women's pay rose by 8.1 per cent., shows that the slow process of levelling up is still proceeding. In 24 out of the 38 trades covered by the provincial portion of the inquiry, the average daily wages ranged from 30 to 35 francs, and exceeded 35 francs in ten trades. The earnings of women workers in the provinces were in all cases in the neighbourhood of 20 francs a day. In Paris and the surrounding district the daily wage paid in 16 out of the 19 trades covered ranged from 50 to 55 francs. The average increase in wages in the Paris area during the year, in the trades covered, was 9 per cent. Women's wages, in the dress-making and kindred industries, increased about 5 per cent. during the year.

The relation between increased wages and increased cost of living may be gauged to some extent by the foregoing index figures and those representing the cost of living for a Paris working-class family of four persons. The latter was returned for the three months ending with November as 597 (1914 = 100), while the average daily wage in the Paris area (19 trades) at the end of October last is represented by an index figure of 695 (1911 = 100). The average wage per day in 1911 was 8.12 francs, and is now returned as 53.76 francs. The conclusion that, in spite of the increased cost of living, the average Paris worker is now in receipt of real wages which place him in a substantially better position than he occupied before the war, appears to be confirmed by many other factors, not the least significant of which is that, notwithstanding the continued loud outcry concerning high commodity prices, there is no sign of popular discontent in this country among the class that is usually the first to feel the pinch of economic depression.

GERMANY.

Reichstag Recess — Osthilfe — Land Settlement — Tariff Modification — Berlin Finance.

(BY A CORRESPONDENT.)

BERLIN, March 31.

THE Reichstag has adjourned until the autumn, provided no unforeseen emergency arises. The Government needed an interval for uninterrupted work without the distractions of parliamentary business, and Parliament now has sufficient confidence in the Brüning Cabinet to contemplate this long recess without anxiety, especially as those Socialists who are not members of the Government will be able to exercise a direct influence upon it through their position in the State Government of Prussia.

The Reichstag was only able to take this long recess because it had passed all the most pressing laws very expeditiously after the withdrawal of the Radicals of the Right. Apart from the Budget, the most important of these were the *Osthilfe* Act and the Tariff Enabling Act. The *Osthilfe* programme remains in essentials as outlined some weeks ago in these columns. The credits are to be granted out of a fund to be raised by the continuance of the special tax on industry originally imposed by the Dawes Plan. The tax is to be levied, though at a diminishing rate, until

1936, and the fund is to remain the property of industry which thus becomes the direct creditor of agriculture.

The substantial burden which this scheme will throw on the Exchequer and on the capital market, however, has only just become evident. The credits are to amount to Rm. 830 millions, of which 500 are to be provided by the fund and 200 millions are to be raised by borrowing on the fund. The remainder will be derived partly from other credit operations and partly from the State. The recipients of these credits are to pay annuities for 33 years, rising from $4\frac{1}{2}$ to 5 per cent. Annuities of only $1\frac{1}{2}$ per cent. are needed to replenish the fund within the period of currency of the credits, but the remaining $2\frac{1}{2}$ — $3\frac{1}{2}$ per cent. is not enough to meet the full interest burden and the Reich will have to contribute 36 millions for eight years.

The fund will have to have recourse to the credit market both to make up the difference between 500 and 830 millions and also to discount the proceeds of the industry tax, which are spread over five years. The success of these operations, of course, depends on the state of the market, and the Government included in the scheme a proviso that in certain circumstances recourse must be had to other means, but it is not clear what these are to be. For the purpose of discounting the proceeds of the tax, an issue of "redemption vouchers" to cover part of the amount is contemplated. These would be I.O.U.'s of five years' maturity which would be given to the present creditors of the farmers, in so far as they are savings banks or co-operative societies, so that they could raise funds by the sale of the vouchers (under strictly circumscribed conditions) instead of pressing their claims immediately. The vouchers would be met out of the proceeds of the industry tax or from long-term loans. It is also hoped that some of the creditors whose demands are to be met out of these relief credits may be persuaded to wait a few more years, as they are now offered full security for the future, whereas immediate pressure of their claims would involve them in heavy losses. The great difficulty is that the creditors themselves, especially those who supply goods to the farmers, badly need the money.

The Reich and Prussia together are acting as guarantors to the fund in respect of 25 per cent. of the credits, and the farmers themselves are to bear 10 per cent. of the risk. For this purpose a fund is to be built up by the addition of $\frac{1}{2}$ per cent. to the annuity. Some of the farmers' societies would have liked a corporate guarantee by the farmers of each province to give them more influence in the selection of the recipients of credit. The Act provides for this at the option of the farmers in each province, but where such a corporate guarantee is given, the annuity is to be 1 per cent. higher so that there should be no great inducement to the formation of such guarantee associations. Moreover, only large farmers are eligible. Though the principle is thus maintained that the distribution of credit is mainly a matter for the State and for industry, who supply the money, the representatives of the farmers are given opportunity to express their views, and serious attention is paid to them.

The Osthilfe scheme is completed by an Act for the promotion of agricultural settlement, which empowers the Government to spend substantial sums in the purchase of land on which to settle agricultural labourers and peasants.

The farmers' demands for further increases in Customs have not achieved their full object. An Act has been passed empowering the Government "in case of urgent economic necessity" to alter the relevant import duties, in so far as they are not bound by commercial treaties, and to put into force commercial agreements. The Government is, however, required so to exercise these powers that the food index, which is now 131, shall not exceed 133. This might have the effect of forcing the Government, not merely to abstain from increasing the duties, but actually to lower them.

The municipality of Berlin has been relieved from its acute financial embarrassment by a temporary credit of Rm. 75 millions, to be followed by a larger financial transaction, the essentials of which were outlined in the *Economist* of March 21st, involving the reconstitution of

Bewag. The new company, control of which remains with public authorities, is to take over the debts of the old Bewag and a debt of Rm. 42 millions owing by the city to Bewag is to be cancelled. The city receives about $\frac{1}{4}$ milliard Reichsmarks from the transaction, of which the 75 millions just paid are to be considered an advance instalment at $7\frac{1}{2}$ per cent. If the major transaction is not completed this advance is to be repaid in June at 8 per cent.

The basis of profit distribution in the new company is to be as follows: the A and B shares are first entitled to dividends up to 10 per cent. If the profits exceed this the city receives a franchise fee up to Rm. 16 millions. The remainder is divisible between the A and B shares. It may be assumed that this device for raising capital for a German commune will be imitated on a smaller scale in many other instances. Many German municipalities have on the one hand an asset in their electricity and gas works which enables them to offer security of unimpeachable soundness, and on the other hand, a pressing need for money, and they have hitherto been restrained from pledging their property by the fear that it might lead to the transfer of their public utilities to private hands.

ROUMANIA.

The Loan — Agricultural Credit Bank — Usury Bill.

(FROM OUR CORRESPONDENT.)

BUCHAREST, March 21.

THE long-expected loan has at last been realised. The first effect of this news is one of undoubted relief in financial circles. The repeated adjournments which had occurred in the negotiations and the diversity of rumours favourable and unfavourable which preceded its ultimate conclusion had created a feeling of nervousness in the country, which translated itself into a gradual but very marked expatriation of such capital and savings as existed. Fears were entertained concerning the stability of the currency, and they appeared all the more founded as they seemed to be shared by some prominent people of the Opposition parties, and as in certain circles the devaluation of the currency was, and is still, looked upon as the only means of relieving the indebtedness of the population in general and the agriculturists in particular. The money now secured by the Government should put the stabilisation of the currency on a safe footing for some time to come, even in the face of the very adverse economic conditions prevailing. It may therefore not be unreasonable to expect an early reduction in the discount rate of the National Bank.

The loan is the second issue of a total of about 300 million dollars which the Roumanian Monopoly Institute is authorised to contract, and as such it is guaranteed by the State. It is expected to be launched at the beginning of April after the assent of Parliament has been obtained. Unfortunately, the end of the negotiations was marred by an unsavoury political event, the dismissal, by Royal Decree, of the Governor of the National Bank, Monsieur Burilianu, who held his office as nominee of the Liberal Party and who was accused of intriguing against the loan in the hope of bringing about the fall of the Government. Scandals of this kind are a penalty which this country has to pay for making the post of Governor of the National Bank one of the political plums given to the supporters of the party. The position has now been filled by another politician, Monsieur Angelesco. On the whole one can endorse the comment of Monsieur Duca, the Liberal leader, on the dismissal when he said in Parliament that the action of the Government created a very dangerous precedent, but it is generally assumed that the Government comes out of the whole ordeal with enhanced prestige. It has proved that it has the confidence of the King by obtaining his signature to the decree of dismissal, and it has successfully contracted the loan, thus obtaining funds not only for some urgently needed reforms, but also for the replenishment of the empty coffers of the State and for safeguarding the stabilisation.

While a portion of the proceeds of the loan is to be used for the repayment of temporary advances to the State and the strengthening of the cash reserves of the Treasury, it is intended to employ the greater part productively. About 1,500 million lei will go to the railways; a slightly smaller amount will be used for agricultural purposes, while 1,600 million lei are earmarked for road construction and repairs, the contract for which is placed in the hands of a Swedish syndicate; the bonds for this amount will be placed only if the road contract is signed before April 30th next.

The most important project, however, in connection with this loan is the creation of the Agricultural Mortgage Bank, which will have a capital of 330 million lei. This bank will be created with the help of important foreign financial institutions, the Banque de Paris et des Pays-Bas, Hambros Bank, the National City Bank, and others. Of the capital, 51 per cent. is to be Roumanian. The bank will begin its operations with the comparatively small capital obtained from the loan, but it is hoped that its principal resources will be derived from debentures placed with the assistance of its powerful financial connections. It is intended to provide the cheap credit facilities which are so badly needed by agriculturists, but how far it will be of assistance to the farmer in his present desperately indebted condition remains to be seen.

The Usury Bill has been passed in the Lower House. If it passes the Senate, and obtains the Royal Assent, the Government will have added another mischievous law to its list of measures which are dangerously interfering with the credit of the country. In its present form the Bill fixes the maximum rate of interest at 6 per cent. above the official bank rate. It is generally agreed that this maximum rate does not take into account the large element of risk involved at present in credit transactions in Roumania. As regards the smaller banks of Bucharest and the majority of the provincial banks, who do not enjoy the same financial facilities as the principal banks, it does not even allow them sufficient margin to cover their working expenses. A particularly objectionable feature of the Bill is that it is made retroactive for a maximum rate of 18 per cent. as from February 7, 1929, the date of stabilisation. All interest above 18 per cent. charged from this date and remaining unpaid will have to be returned to the debtor even if it has meanwhile been added to the capital. The measure will certainly give rise to all manner of evasion, and while it is very unlikely that the law will prove a good remedy against the evil of usury, its effect, like that of all the Government's devices for the protection of the debtor, will be a further contraction of credit.

ARGENTINA.

Improved Cereal Position — Tariff Increases — Foreign Trade — Money — Political Situation.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, February 26.

CURRENT conditions throughout Argentina at the close of February warrant the belief that the worst is over and that the country as a whole is steadily improving its position both in import and export trade. For all official measures, individually effective though they may be, are subordinate to mercantile considerations, which in their turn govern the state of the national finances at the present time. Exports for the current year to February 21st show decided improvement in volume and a slight increase in price. Quotations for March delivery in Buenos Aires are \$5.65 paper per 100 kilogs. for wheat, \$3.90 for maize, \$11.60 for linseed, notwithstanding that exchange has improved to 37d. banks' cable drawing rate on London and 133.60 on New York.

The prospects for maize are remarkably good, and it is possible that the yield will be such as to leave an exportable surplus of 10,000,000 tons, while costs of harvesting are certain to be well under the average of recent years. It is also probable that local consumption for fattening stock will be largely increased, since, as far as can be

seen, next season will see a great increase in cattle breeding and pig raising by those larger owners of rural property who are in a position to make the change, as it is generally expected that the area sown to wheat and linseed will be considerably reduced. The second official estimate for this year's production has brought down the original quantities of wheat by 886,000 tons, linseed 394,000 tons, oats 333,000 tons, and barley 122,000 tons. This still leaves Argentina with an estimated exportable surplus of wheat as at January 1st of 4,489,000 tons, while for linseed the figure is now put at 1,639,000 tons, which members of the trade consider far too low. Not only cereals but also other produce, notably wool, have reached prices at which business can be done, and this better movement has been reflected in the market for ocean freights, now 21s. for prompt loading on the San Lorenzo range for U.K.-Continent.

The imposition by the Provisional Government of various revenue-producing charges has been favourably received as giving evidence of its determination to make ends meet. Internal postal and telegraph charges have been practically doubled, and the 5 cent postal rate to countries in the Pan-American Union has been raised to 10 cents. Certain imported items formerly duty free are now to pay between 5 per cent. and 25 per cent. *ad valorem*. Fuel oil, printed books, machinery and spare parts, certain heavy chemicals, special industrial sewing machines, eggs, dried beans and pulse, and pleasure boats are in this list. There is a long list of goods which are expressly declared free of duty, and such articles as do not figure thereon, yet are not included in the list of specific percentages, will be charged 25 per cent. *ad valorem*. Doubt may reasonably be expressed as to the ultimate benefit to Argentina of any tariff increase, but at the moment the principle at stake has passed almost without comment.

Import and export figures for the first nine months of 1930 show that the former fell by \$83,075,000 gold, as compared with the same period of 1929, a reduction of 12.8 per cent. Exports fell by \$292,470,000 gold, or 37.7 per cent. Complete figures for 1930 are promised next month, and thereafter current statistics for imports and exports will be kept more nearly up to date. The reduction in imports continues, Buenos Aires custom-house returns to date being some twelve million dollars paper under the 1930 receipts for the same period. It is quite on the cards that the visible trade balance of Argentina will this year be once more in her favour; the difficulty that faces the Government is to find some immediate means of replacing in the Treasury receipts the shortage that reduced imports must mean when Customs charges normally provide some 70 per cent. of the ordinary revenue. The possibility of an income tax was raised at a Cabinet Council, but it is generally understood, both within and without the official world, that such a measure cannot be hastily applied.

The local money market has ample funds wherewith to handle such business as is passing. Banks, indeed, carry more deposits than they can profitably employ, and therefore offer but 2½ to 3½ per cent. for long-term deposits. The national Government is not in immediate need of ready money, and is therefore in a position to consider with deliberation the various loan proposals that it has undoubtedly received during the last three weeks. Nor has it been necessary for the Banco de la Nacion to ship any great quantity of gold, in order to support exchange or meet the service of foreign obligations. The Conversion Office at present holds \$404,930,224 gold, as against \$414,953,000 at the end of January. It is therefore self-evident that improved exchange has been due to natural causes, even if one admits that its stability, or freedom from any danger of a relapse, derives from the knowledge that at will the Banco de la Nacion could and would increase its export of specie, and that without notice.

Last but not least in the chain of favourable factors may be accounted the unquestionably strong and popular position of the present Government. It may be emphatically stated that there is not the slightest danger of a subversion of order even coming to a head.

HONG KONG.

Foreign Trade — British Economic Mission — Development of Canton.

(FROM OUR CORRESPONDENT.)

HONG KONG, January 28.

AFTER a lapse of six years it is again possible to measure the external trade of Hong Kong. The collection of statistics by the Government has been resumed, and the figures for the last nine months of 1930 show an increase over the corresponding period of 1924 of about 2½ per cent. in the local currency value of imports and a decrease of about 6 per cent. in exports. The sterling values, however, show a very heavy decrease, which is accounted for by the disparity between the average exchange rate of 2s. 4½d. for April to December, 1924, and 1s. 3½d. for the same period in 1930, coupled with the drop in world prices. The following table gives some idea of the big diminution in the figures as regards sterling values:—

	(000's omitted.)			
	IMPORTS.		EXPORTS.	
	1924.	1930.	1924.	1930.
Total	\$443,078	\$455,464	\$380,153	\$356,824
	(£52,846)	(£29,889)	(£45,341)	(£23,416)
British Empire	\$104,686	\$78,602	\$37,851	\$43,135
	(£12,486)	(£5,158)	(£4,514)	(£2,830)
United Kingdom ...	\$62,539	\$43,197	\$4,579	\$2,971
	(£7,459)	(£2,834)	(£546)	(£195)

It will be noted that the proportion of imports from the British Empire and the United Kingdom shows a marked falling off. In 1924 the percentages were 26.63 per cent. and 14.11 per cent. respectively, whereas for the corresponding period of 1930 they have dropped to 17.26 per cent. and 9.48 per cent. The tremendous slump in silver following upon the exhaustion of civil warfare has reduced the purchasing power of the country to a very low ebb, and further reduction is inevitable with the introduction of the new Customs tariff, which places a heavy penalty on most lines imported from gold countries. These conditions must undoubtedly have brought home to the British Economic Mission the reason why price is now the first consideration with the Chinese consumer, for no amount of argument as to the lasting qualities of British goods will overcome the consumer's inability to meet high costs.

The Sub-Mission, which is particularly concerned with the piece-goods trade, made inquiries in Shanghai as to the possibility of amalgamating the present selling organisations there with a view to their working in co-operation with a similar combine at home. The present system of numerous individual import firms competing for business and selling to individual dealers does appear on the surface to be wasteful. The Mission had in mind the creation of a distribution system on similar lines to that of the tobacco, oil and chemical interests, who have covered the hinterland with a network of selling agencies and have penetrated far into the interior. The idea is attractive, but there is a wide difference between the marketing of a small number of standardised products, such as cigarettes or oil, and that of numerous descriptions and varieties of cotton and woollen piece-goods. It is evident that textiles could not be distributed by European organisations on the narrow margin of profit which contents the Chinese dealer in the Treaty Ports, and the Mission heard from the head of one of the leading Shanghai foreign firms his woeful experience in regard to such an enterprise, which resulted in a loss of nearly two million taels. In any case Europeans are debarred from trading outside the Treaty Ports, so that it would be necessary to entrust the main work of a distributing organisation to Chinese. It seems, therefore, that the Mission cannot recommend any change in the present system of up-country sales. There is certainly room for improvement in regard to the negotiation of business between Manchester and Bradford shippers and the foreign importer on this side, and any scheme for the elimination of wasteful competition would be welcomed here.

Meantime, the development of Canton progresses. The old city, with its narrow thoroughfares and ancient court-

yards, is being gradually enveloped by modern streets with substantial buildings, and motor roads are opening up the surrounding country. Many of the two million inhabitants formerly packed into the narrow confines of ancient city walls are now migrating to the suburban districts, which are well served by motor-buses. Less than twenty years ago Canton had practically no wheeled transport, except for a limited number of rickshaws, whereas to-day there are motor-cars and buses in abundance. A daily air service between Hong Kong and Canton is being inaugurated, and recently a trial trip was accomplished in thirty-five minutes, a remarkably quick journey compared with the 4½ hours by train and 8 hours by steamer. This aeroplane service is being managed by a Hong Kong company, but the Chinese authorities in Canton have already opened up a regular service with Wuchow and are about to organise a line to Swatow.

Aircraft is destined to play a big part in connecting up the big centres in China, but for the inhabitants as a whole the construction of motor roads is of paramount importance. Much has already been done in this direction, despite numerous obstacles, but there is tremendous scope for development, and no doubt during the years immediately ahead much more will be accomplished. It is a matter for regret that Britain has had so small a share in the progress made so far. Practically all the motor vehicles seen in Canton are of American manufacture, chiefly discards from Hong Kong. While British motor buses of an up-to-date pattern have to a large extent replaced the more primitive type of American bus which formerly served the colony, the majority of private cars are American. The consequence is that, as the market for second-hand motor vehicles in Hong Kong is almost entirely confined to American models, British cars are unknown in the interior of South China. There is at present little demand for brand new cars, but light lorries have been sold by American manufacturers on a big scale. There is no reason why British motor concerns should not make a bid for a share of the huge business which will, before long, be offering; but it will require much more enterprise than has been shown hitherto and greater readiness to share the financial responsibility of the importer.

NORTHERN IRELAND.

Parliament — Fruit Marketing — Public Finance — Linen Industry.

(FROM OUR CORRESPONDENT.)

BELFAST, March 21.

THE programme outlined in the King's speech for the present session of Parliament is lengthy, but it can hardly be described as contentious. A large number of new Bills are being introduced, but the majority deal with reforms upon which there is general agreement in principle. Such measures as the consolidation of the law relating to joint stock companies, the amending and modernising of the law in respect of lunacy, and the amendment of the Children Act of 1908 (to put an end to evils connected with the placing out at nurse of children for reward) should command the support of all parties. A Town and Country Planning Bill and an Electricity Development Bill are also being introduced, as well as amending measures in connection with unemployment and health insurance.

Since the establishment of the Northern Ireland Parliament a considerable body of legislation has been passed in connection with the grading and marketing of agricultural produce. A further extension to this legislation is promised in a Marketing of Fruit Bill. A similar measure was introduced in the last session of Parliament, but had to be withdrawn on account of the opposition which it aroused from one section of fruit growers in the country. In the interval, an attempt has been made to allay misgivings and misconceptions which had apparently been created by the terms of the Bill. In view of the recog-

nised benefits which have been experienced from similar legislation passed in respect of other classes of agricultural produce, the opposition which has been aroused by the proposals in regard to the Fruit Marketing Bill is difficult to understand.

The principal market for a large proportion of the agricultural produce raised in Northern Ireland—especially eggs, butter, bacon, potatoes, store cattle and fruit—is Great Britain. During the war years, Irish produce of this class enjoyed a virtual monopoly of the British market, and the absence of competition undoubtedly led to a lowering of the general standard of quality. Upon the restoration of normal trading conditions after the war, Northern Ireland produce was in danger of being driven off the market by the superior produce which could be imported from Denmark, Holland, Canada, the Antipodes and other overseas countries. It was in face of this necessity of effecting a radical improvement in the quality of Ulster farm produce sent to Great Britain that steps were taken by the Government to pass marketing legislation. At first some difficulty was experienced owing to the constitutional position under the Government of Ireland Act, 1920, by which the Northern Ireland Parliament was prevented from making laws in regard to trade with any place outside its own area. The export trade benefited, however, by the improvement in the marketing conditions at home. By the Northern Ireland (Miscellaneous Provisions) Act of 1928, this difficulty was removed. The agricultural commodities in respect of which legislation has now been passed to improve the quality of the produce marketed already include eggs, butter, potatoes and meat (including bacon), and it is hoped shortly to add fruit to this list.

As in Great Britain, the question of public economy has recently received widespread attention. The financial position of Northern Ireland in 1930-31 was such that when the Budget was introduced the balance available for contribution to Imperial services was small. In a recent speech, however, the Prime Minister (Lord Craigavon) announced that he anticipated the year's revenue and expenditure would turn out almost exactly as had been budgeted for a year ago; but in regard to 1931-32 there was no doubt that a loss of revenue would have to be faced. The Government was determined, he added, that the estimates to be presented to Parliament in respect of the forthcoming year would be such that they could reasonably be expected to be met by the revenue of the country.

During the past few years an important item of expenditure has been the housing subsidy. The shortage of houses in the province has been in large measure made good, and the Government has decided to reduce the amount of subsidy per house. At present the figure is £100, while in the City of Belfast, the Corporation has hitherto paid a subsidy of £40 per house in addition to the subsidy granted by the Government. At a recent meeting of the City Council it was decided to reduce this figure to £20 per house.

The linen trade shows some slight improvement, and there appears to be an undercurrent of greater confidence in regard to the future. The number of unemployed persons in the industry declined from 25,790 (or 38.4 per cent.) to 24,126 (or 35.9 per cent.) during February. It is felt that a revival of orders must come soon, as stocks in the hands of merchants and retailers are believed to be low. Prices of flax continue below 5s. per stone, and a considerable reduction in acreage seems inevitable.

Letters to the Editor.

FORWARD EXCHANGE FALLACIES.

TO THE EDITOR OF THE ECONOMIST.

SIR.—In connection with the discount ruling for forward sterling against most of the leading exchanges the view is often expressed that such a discount denotes a lack of confidence in sterling. As a matter of fact, nothing could be

further from the truth. To start with, the rate of forward exchange does not arise from speculative transactions, at least not originally so, but from quite legitimate requirements of trade and finance. If an exporter or importer has closed a deal, in the course of which he has to dispose of or to provide for a given exchange in three months' time, he has to "secure" such exchange, unless he wants to take the risk of having his calculations upset at the time of settlement by any movement in the quotation of the exchange. In the same way, a profit which could be made by borrowing, say, three months' dollars or francs in order to convert them into sterling for relending on the London market, might be wiped out or even changed into a loss unless the cost of repayment of the foreign exchange has been fixed beforehand.

How is the forward exchange being provided? Again, brought down to its simplest form, there is no need for speculation. The arbitrageur, faced with a demand for three months' francs, will buy these "spot," which means that, at the present time, he will receive, for three months, interest on his current franc account at 1 per cent. per annum and lose 2 per cent. per annum on his sterling balances, which he has depleted to the corresponding amount, so that, to cover the loss, he has to provide the forward francs at a premium of 1 per cent. per annum. Equally, if for his client he has to sell forward francs, the prospective gain of interest on his sale of spot francs against sterling allows him to take over from his client the forward francs at 1 per cent. premium, or, in other words, content himself with the sterling equivalent at 1 per cent. discount. In the relative position of two money markets, it is thus the market with the cheaper money whose currency will automatically establish a forward premium. Seeing, however, that three months' forward francs against sterling could command a premium of 36 centimes, while the actual premium is only about 29 centimes, the question of any lack of confidence in sterling appears to be wholly beside the point.

The fact that the premium is smaller than actually warranted by the difference of interest rates is explained on the one hand by the arbitrageurs' endeavour to make a profit, while on the other hand the respective gold points act as buffers in the forward movements. Generally speaking, between two centres that are both on an unfettered gold standard, the movements of forward exchange should not exceed much the limits set by the ruling upper and lower gold points for spot. In this connection it is interesting to note that while the 25 centimes premium on three months francs almost brings down the quotation to the gold export point of 123.89 for sterling, the premium for longer periods is only slightly higher, being 34 centimes for six months and 39 centimes for nine months. This shows that, notwithstanding interest considerations, the actual forward quotation is rather disinclined to move away from the gold point, which, by the way, also accounts for the fact that the market is always narrowing with the length of the forward period.

The reason is plain, and here it is that speculation enters. Nowadays, with aeroplane services to the Continent and four-day boats to America, the spot gold point should be subject only to minor modifications in case of a rise in money values, which would entail a somewhat greater loss of interest during the time occupied by the transport of the metal. Therefore the arbitrageur who has to provide forward francs for a client can do so without any great risk by selling short at or near gold point, because, when the time for settlement arrives, he can either ship gold without loss to create the francs balance necessary for delivery, or—if the spot franc exchange, as likely as not, is then in his favour—he can cover himself by buying-in spot. The position would, of course, be altered if there were interference with the free working of the gold standard, such as obtained some little while ago, when the Bank of England had to restrict itself to the sale of standard gold and the Bank of France would only accept fine gold, while the refining capacity for converting the former into the latter was limited to some £200,000 per day, so that the settlement in gold was in reality partly suspended. It is probably on account of the after-effects of these conditions that the quotation of forward sterling against francs for longer periods is still somewhat under spot gold point. In any case, it is clear from the foregoing that there is only a spot gold point, but no such thing as a forward gold point, and any conclusion drawn from a forward quotation below gold point would seem to miss the mark.—Yours, etc.,

28, Basinghall Street, E.C. 2.

INVESTMENT PRINCIPLES.

MR H. COPE WEST has chosen an imposing title for his book,* and the reader's appetite is further whetted by a statement on the cover, which promises the investor's El Dorado—"securities that afford a satisfactory yield with capital appreciation." The author attempts to reach this goal by seeking a method of valuing ordinary shares "which will allow one to have at least as unshaken faith in its reliability as we know is placed in the calculated values of bonds." Alas, the only solution which Mr Cope West can offer to this problem depends on the basic fallacy that the results of five past years provide sufficient data for the prediction of the dividend five years hence. He does not attempt to justify this strange assertion—which can be disproved by reference to the published figures of many well-known British companies for recent years—but proceeds immediately to an involved dissertation on the "system" of ascertaining the present value of a share, given the dividend rate in five years' time and the yield it will then offer. With these two latter facts established, very few investors will require even a pencil and paper to decide their policy. They will certainly have little use for Mr Cope West's complicated tables and valuation method.

* "The Root Principles of Investment." By H. Cope West. London: Pitman. 15s.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Health and Social Evolution. By Sir George Newman. (London) George Allen and Unwin, Ltd., 40, Museum Street. 4s. 6d. net.

Nobody is better qualified than Sir George Newman to write on the evolution of the public sense of responsibility in matters of health. In this collection of lectures much learning is compressed and moulded into a most attractive readable form.

Reducing Seasonal Unemployment. By Edwin S. Smith. (London) McGraw-Hill Publishing Company, Ltd., Aldwych House. 15s. net.

An elaborate study of the attempts made by American manufacturers to regularise production and employment.

Das Französische Bankwesen. By Friedrich Schaum. (Stuttgart) C. E. Poeschel Verlag, Calwer Strasse 18. Rm. 8.75.

A German monograph on the permanent changes in the French banking system wrought by war-time and post-war developments.

Die deutsch-französischen Wirtschaftsverhandlungen der Nachkriegszeit. By Erich Dittrich. (Berlin and Leipzig) Walter de Gruyter and Company. Rm. 9.

A detailed study of Franco-German commercial relations since the war.

The German Submarine War, 1914-1918. By R. H. Gibson and Maurice Prendergast. With a Foreword by Earl Jellicoe. (London) Constable and Company, Ltd., 10-12, Orange Street. 36s. net.

An exceedingly detailed history, illustrated by numerous maps, diagrams and photographs.

The Black Worker. By Sterling D. Spero and Abram L. Harris. (London) Oxford University Press, Warwick Square. 22s. 6d. net.

An interesting study of the relation of the dominant section of the working class in the United States to the negro minority.

Food Supply and Raw Materials in Japan. By E. F. Penrose. (London) Cambridge University Press, Fetter Lane. 9s. net.

Contains a wealth of statistical information with regard to food production, food imports, and agricultural and mineral production.

Applicazione della teoria del valore al salario Corporativo. By Prof. Filippo Carli. (Pisa) Arti Grafiche Nistri-Lischi.

An interesting essay in economic theory.

Theories of Population from Raleigh to Arthur Young. By James Bonar. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. 6d. net.

The 1929 Newmarch Lectures are here supplemented by two chapters on Richard Price and Arthur Young respectively.

Elements of Industrial Pension Plans. (New York) National Industrial Conference Board, 247, Park Avenue. \$1.00.

This monograph aims at giving the essential information required by industrial concerns contemplating the establishment of a pension scheme, or the readjustment of an existing scheme.

A Study of the Prices of Chain and Independent Grocers in Chicago. By E. Bjorklund and J. L. Palmer. (London) Cambridge University Press, Fetter Lane. 4s. 6d. net.

Valuation of Real Property. By C. A. Webb and M. A. Webb. (London) Crosby, Lockwood and Son, Stationers' Hall, Ludgate Hill. 21s. net.

A revised edition, brought up to date, of a very useful book of reference.

Stock Watering. By David L. Dodd. (London) Oxford University Press, Warwick Square. 24s.

A heavily documented volume on the judicial valuation of property.

Lectures and Transactions of the Incorporated Accountants' Students' Society of London, 1929-30. (London) Published by the Society, Incorporated Accountants' Hall, Victoria Embankment.

Contains a number of lectures by prominent accountants and City men, both on general economic subjects and on special problems of accountancy.

City of Birmingham Official Handbook, 1930-1931. (Birmingham) The Council House.

Gives an interesting account of the City's history, administration, its social services and civic undertakings.

The Latvian Economist. Compiled by J. Bokalders. (Riga) Ministry of Finance.

A collection of articles on those aspects of the economics of the Baltic States which are of most international interest.

La Concurrence croissante de Gdingen contre Danzig. By Dr. Ernst Albert. (Danzig) Danziger Verlags-Gesellschaft m.b.H.

Contains some statistics of the trade of the ports of Gdingen and Danzig.

Die Rechtslage im Danzig-polnischen Gdingenkonflikt. By Dr. Th. Rudolph. (Danzig) Danziger Verlags-Gesellschaft. m.p.H.

An essay on the legal aspects of the Gdingen controversy.

Les Valeurs de l'Afrique du Nord, 1930-1931. (London) Crédit Foncier d'Algérie et de Tunisie, 18, Saint Swithin's Lane. 60 frs.

Contains detailed information about all North African securities.

What We Saw in Russia. By Aneurin Bevan, E. J. Strachey and George Strauss. (London) The Hogarth Press, 32, Tavistock Square, 52 Tavistock Square. 1s. net.

A very brief pamphlet containing the impressions of three Members of Parliament of a visit to Russia last summer.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

CANADA AND THE INVESTOR.

THOUGH Canadian stock markets have recently shown signs of revival after the severe shake-out of 1930, their course remains irregular, and the public is still indisposed to come in on an appreciable scale. That investors should maintain a cautious attitude is readily comprehensible. Confidence has been rudely shaken, partly by reason of the severity of the depression which continues to afflict Canada's major industries, and partly because the trade recession has revealed many weak points in Canadian company finance during the boom period. Canada, indeed, has been among the worst sufferers from the world *malaise*. The value of her exports declined last year as compared with 1929 by 25 per cent., and her imports by 22½ per cent. Though her wheat crop was 30 per cent. above the short crop of 1929, the aggregate value of all her grain crops was put at only \$632 millions, against \$949 millions in 1929—thanks mainly to the disastrous fall in market prices. The value of building contracts awarded last year declined by 21 per cent., the output of steel by 26½ per cent., and automobile production by 42 per cent. Certain of the "extractive" industries, like copper, zinc and lead mining, it is true, appreciably increased their production, and the output of newsprint was only 8 per cent. below the 1930 figures. In all these cases, however, heavy price declines reduced the value of the national output below the 1929 level. Though the output of electrical energy showed a further expansion of 1½ per cent., this was the smallest rate of increase for many years.

In short, Canada remains essentially a primary producer despite the rapid post-war growth of certain of her manufacturing industries, and it is upon the world's primary producers that the depression of 1930-31 has chiefly fallen. The resulting decline in Canadian company earnings, coming hard upon the inflationary finance of the boom, has been reflected in a drop in Canadian equity share values (according to the Bureau of Statistics index of 98 securities) from an average of 267 in 1929 (base, 1926 = 100) to 126 in the middle of March, 1931.

The depression of 1930-31, however, has had at least one salutary consequence. It has compelled investors in Canadian stocks to abandon extravagant expectations of speedy capital appreciation, and to fall back on the sounder criterion of long-term economic prospects. How far, in fact, is the exploitation of Canada's natural resources calculated to afford profitable opportunities for the employment of large amounts of new capital during the next ten, twenty or thirty years?

From the investor's viewpoint, two main features emerge from the history of Canada since the war. The first is the enormous expansion in the national productivity; the second, the negligible rôle played in this process by capital of non-American origin. It is computed by Mr R. H. Coats, the Dominion statistician, that, in the ten years ended 1929, the "physical volume of business" in Canada increased by no less than 80 per cent.

This enormous growth in productive activity, however, was financed without recourse to London. In the fourteen years preceding the war, Great Britain supplied \$1,500 millions (net) of new capital to Canada, raising her total stake in that country to \$2,500 millions. In the subsequent sixteen years the total has not merely shown no increase, but has actually declined, on balance, by about \$300 millions. During the same period the total United States capital holdings in Canada have risen by \$2,820 millions to a grand total of \$5,904 millions. Simultaneously, Canada has been financing an increasing share of her own development from within. To-day outside capital investments are believed to represent not much more than 20 per cent. of the national wealth, while Canadian subjects hold investments estimated at \$1,745 millions in other countries.

These facts have a vital bearing on the question of future British investment in Canada. They reveal, firstly, that Canada has passed from the initial stage of development, in which a new country is "colonised" almost entirely by capital drawn from older countries (invested mainly in Government and railway stock) to the "intermediate" stage when individual industries are able to obtain the wherewithal for rapid "pioneering" development on their own security, and an increasing proportion of the necessary resources can be financed out of the country's own national income. In Canada's case, however, economic development in this secondary stage has been profoundly influenced by the fact that, in the last analysis, the North American continent forms a single economic unit. Given a political frontier, which, for some thousands of miles is merely a line of latitude, the overflow of capital from the United States to its richly-endowed northern neighbour is inevitable, both now and in the future.

These conditions suggest that British investment in Canada is unlikely to increase, in the future, at anything like its pre-war rate. They do not, however, exclude the possibility that such investment may be substantial and profitable. Of all the self-governing Dominions of the Empire, Canada is nearest, geographically, to the Mother Country. The last decade, despite its phenomenally rapid progress, has left Canada still on the fringe of development of many of her material resources, and their exploitation will be accompanied by a higher average return on capital than is normally obtainable in an "old" country. The area of Canada, as revised on the basis of recent explorations, is nearly as large as the Continent of Europe, and although many thousand square miles lie within the Arctic Circle, or are otherwise unsuitable for permanent habitation, it is estimated that, in the nine provinces south of the sixtieth parallel of latitude, the total area available for agricultural production is two and a half times the present occupied area and five times the present improved area of farm lands. The timber area of the Dominion is estimated at 1,151,000 square miles, Canada being second only to Asiatic Russia in this respect. The great "Laurentian Shield" surrounding Hudson Bay and comprising over one-third of Canada's territory is a veritable treasure house of silver, gold, nickel, copper and baser metals, and only its southern fringe has as yet been developed. Canada, incidentally, is estimated to possess about one-sixth of the world's total coal resources, 85 per cent. of her deposits being in a single province, Alberta. The extent of her oil and gas fields, particularly in the Western Provinces, cannot as yet be assessed. She has enormous potentialities for the generation of hydro-electric energy, the most densely populated areas, in Ontario and Quebec, being particularly well favoured. Her fishery resources extend over 5,000 miles of coastline on the Atlantic and 7,000 miles on the Pacific, with inland and inshore waters of more than 50,000 square miles. The intensive development of resources provided by nature on so lavish a scale must occupy the energy of her people and provide potentially remunerative employment for British as well as Canadian and American capital for many years to come.

Since the war the visits to the London market of Canadian Governments and municipalities, unlike the appearances of certain other Dominions, have resembled those of the angels. Given Canada's present stage of development, it is unlikely that borrowing will ever be resumed on anything like the pre-war scale under "official" auspices, quite apart from any dregs of bitterness which the Grand Trunk controversy may have left behind. The chief avenue for future British investment, in other words, will be Canadian "business."

According to the last Canadian Production Census

(taken in 1928), agriculture accounted for 35.8 per cent. of the total net output of the country, other primary industries (forestry, fisheries, trapping, mining and electric power) for 18.6 per cent., and manufacturing industries (including the constructional trades) for 45.6 per cent. Agriculture in Canada, as almost everywhere else, is mainly carried on by private proprietors, but in other industries a number of large public companies have been formed, or have largely extended their scope in recent years. The following table includes a number of such concerns, together with a pioneer company in national development—the Canadian Pacific Railway:—

Company.	Earnings per Common Share.			Stock Exchange Prices.

Apart from the power companies, which, with certain exceptions, have so far withstood the depression comparatively well, the earnings of most of the concerns shown above show unmistakable evidence of last year's setback in Canadian progress. In every case, the fall in share values from the boom levels of 1929 has been severe. All companies, indeed, have not been financed with equal soundness, and all industries have not, at the moment, an equally promising outlook.

The Canadian Pacific Railway has not quite fulfilled its President's prophecy by earning as well as paying its traditional 10 per cent. dividend last year, since approximately 2 per cent. of its ordinary "earnings" for 1930 were represented by a windfall of \$6,500,000 from the liquidation of the Allan Line. Nevertheless, the showing made by this company was practically unique among the world's railways last year, though, in fact, "special income" from other than railway sources—including the C.P.R.'s large holdings of outside investments—accounted for over half of the amount available for ordinary stockholders. Indeed, a purchase of C.P.R. ordinary stock can now best be regarded as a convenient means of obtaining a share in the equity of future North American progress.

The experience of other Canadian concerns, however, has been less satisfactory. The important agricultural implement-manufacturing business of Massey Harris, for example, has proved decidedly sensitive to the decline in agricultural purchasing power the world over. Last year its amounts showed a net debit of \$3,603,000, allowing for reserves against inventory losses, etc. The present position of the Canadian newsprint industry, after its recent hectic rise in production, is decidedly unsatisfactory. Reports have been current of negotiations for a comprehensive merger involving about \$500 millions of capital, to achieve the rationalisation of which the industry stands badly in need.

The great International Nickel enterprise, again, which is based on the Frodo Mine, one of the richest proved nickel and copper areas in the world, has now practically completed its initial programme of capital expenditure. The fall in metal prices, however, in conjunction with the prospect that large new copper areas will shortly come into production in Rhodesia, has already falsified many of the optimistic earnings' figures forecasts current a couple of years ago. Finally, events will shortly provide an acid test of the assertion that the development of hydro-electric

power in Canada (based, to an appreciable extent, on capital resources obtained during the share market boom) has for the time being outstripped potential commercial demand.

There is, in short, a striking contrast between the ultimate possibilities and the present position of many important Canadian industries. The conclusion suggested by the figures given in this article is that investors who have a sound belief in Canada's ultimate destiny would be well advised closely to follow economic indications in the next few months for the first reliable signs of the passing of contemporary depression. Subsequently, they should examine the position of individual industries and companies with the utmost care before placing their investments. Judicious discrimination will return as high a future yield in the Canadian market as in any other sphere.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
 April 7. April 9.

THE holiday account dragged its slow length along; but though the volume of dealings continued to decline, the tone was if anything a shade firmer than last week. Gilt-edged showed up particularly well, the deficit on the Budget being much more moderate than many people had feared, while, on Wednesday, a strong rumour went round the "House" that the Budget to be presented on April 27th would include a definite War Loan Conversion scheme. The industrial markets bore up well in the face of numerous discouraging reports by large British companies, but public interest was still as conspicuously absent as ever. Apart from a certain firmness in gold-mining stocks, which had little effect on prices, movements in mining shares lacked interest. The market was not greatly upset by the failure of certain large new issues, particularly those of the Lancashire Cotton Corporation and "Cosach," the lack of an adequate response in these cases being attributed rather to the unattractive nature of the security offered than to real "stickiness" in the market itself.

Though gilt-edged business was by no means brisk, appreciable strength was shown, particularly on Wednesday, after the publication of the national accounts for 1930-31. Funding Loan was markedly in evidence, and War Loan, Three and a-Half per Cent. Conversion and Four per Cent. Consols all showed substantial gains. India loans strengthened on the relatively favourable *dénouement* of the Karachi Congress. It was known early on Tuesday that the Commonwealth would remit the interest on New South Wales stocks, and a general marking up of quotations of Australian issues ensued.

Interest in foreign bonds was less conspicuous than in earlier weeks. Japanese issues claimed a certain amount

INVESTMENT

by L. L. B. Angas.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit: no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- (i) The Business Cycle and its influence on the prices of all securities.
- (ii) How to detect the beginnings and endings of booms and slumps in single industries.
- (iii) Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- (iv) Rules for timing both buying and selling and for taking profits and losses.
- (v) Investment policy to be followed by Trustees at different stages of the Business Cycle.
- (vi) Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, 20/- London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

of special attention; while European bonds, including those of Germany, had a firmer appearance. The Peruvian default (discussed on page 738) was not unexpected, quotations remaining largely nominal.

Home rails were irregular, with dealings at a low ebb. The unauthorised semi-strike at certain London goods depots was not seriously regarded. The traffic figures continued the relatively favourable trend of last week's returns, but failed to quicken interest in a market which, if it has few enemies, has certainly no friends to-day. Among foreign rails a sharp reaction occurred in San Paulos, and Argentines failed to hold their recent gains. Americans were scaled down early in the week on Wall Street liquidation, and Canadian Pacifics tended to sag on a less favourable February earnings' statement.

A heavy tone pervaded the industrial markets at the outset, but no selling ensued, and the tendency became somewhat dull on irregular advices from Wall Street. The leading tobacco shares were depressed on the news that the Government was restricting clearances from bond, and breweries had a dull appearance on less tangible fears of higher taxation. Motor shares attracted moderate interest on the favourable showing made by the Morris figures (set out on page 739), which stood out against the dismal background formed by the reports of Cunard and United Molasses. The Cunard statement, however, had been foreshadowed by the passing of the ordinary dividend, and the shares, after an initial reaction, finished with little change. Other shipping concerns, however, were marked down. United Molasses lost their following in the "House" many months ago, and the most noteworthy result of the disastrous tidings contained in the report was a drop in Distillers, which has a share-holding interest in Molasses. Textiles were heavy on the failure of the Lancashire Cotton Corporation issue, 96 per cent. of which was left with underwriters. Transatlantic stocks were in demand in mid-week, chiefly on American account, Gramophones and Columbias making an irregular showing, while Brazilian Traction staged a moderate recovery. Despite a few buying orders, electrical shares were dull. Bank shares, as always, were favourably affected by the firm tone of gilt-edged stocks; but insurance shares had no definite trend.

Rubber reached 3½d. on Wednesday, a new low "record." Though few rubber shares changed hands, selling by tired holders caused a drooping tendency in quotations, Rubber Trusts being weaker after showing fair activity at the outset. Despite the stronger tone of the tea auctions, interest in tea shares remained negligible. Oil share prices were governed almost entirely by New York sentiment, a dull opening being succeeded by rather more satisfactory conditions in mid-week followed by further weakness, particularly in Shell and Royal Dutch.

The mining markets attracted less than normal attention. Kaffirs remained firm, but few net price gains were recorded. Randfontein, however, were temporarily active on rumours of favourable developments in No. 2 Deep Shaft, and Sub Nigel improved on reports that the liquidation of a large foreign account had been completed. Diamonds remained dull on lack of public confidence in the immediate outlook. Movements in base metal prices were insufficient to change prices of shares either way, though Rio Tinto showed a slight improvement on Tuesday.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock markets continue to show the inevitable effects of a lack of confidence in early recovery. At the end of last week, sweeping declines occurred in numerous stocks, and the markets further lost ground early this week, many railroads declining to new low levels for the year. Nevertheless, the selling came mostly from professional bears, liquidation by the public being less than had been expected. The trend subsequently became more favourable, but the short interest remained aggressive. The earnings of 65 railroads in February, showed a decline in net income of 51 per cent. as compared with February, 1930. It has been announced that the business of the General Motors Corporation has this year run about 20 per cent. below 1930, but that large savings in overhead expenses continue to be made. A conference of the legal experts of four groups involved in the railroad merger plan has resulted in agreement on procedure in the matter of the formal submission of the plan to the Interstate Commercial Commission. President Hoover has issued a statement on the tax outlook, declaring that an increase may be avoided if Congress proves impermeable to sectional appeals for special treatment.

* 2-hour session.

PARIS.

In spite of a very meagre volume of business, the general tendency on the Paris Bourse proved fairly firm during the first week of the month. In the middle of the second week, however, the failure of the Bouilloux-Lafont group, brought on by the collapse of the Aéropostale, led to a perceptible decline. The settlement of the 15th was extremely quiet, contango rate being ½ per cent. The following week brought little change in the aspect of the market, apart from a certain liveliness among gold mining shares in the unofficial market, due to a growing realisation of the special position of this industry at the moment. The end of the month brought an almost complete lack of activity, while the publication of the scheme for a Customs union between Austria and Germany provided a fresh cause for

depression. On the settlement of the 31st, money was firm at ½ per cent. *au Parquet* and 4½ per cent. *en coulisse*.

CANADA.

The Canadian stock markets have recently shown a livelier tendency, but their course has been irregular. Business conditions are too unsatisfactory to encourage any real "bull" movement, and the public is still very chary of indulging in any serious speculative activities. The chief favourites have been the power stocks, notably Montreal Light, Heat and Power, while a number of industrial stocks have appreciated in anticipation of a fresh upward tariff revision during the present Parliamentary session. The stocks of companies with heavy Western commitments, however, are still under a cloud. A sombre view has been taken of the situation of the Canada Power and Paper Corporation and its constituent companies, whose difficulties have resulted in the formation of a security holders' protective committee headed by Mr Dunning, lately Minister of Finance at Ottawa. Oil stocks have also been in disfavour. There has been greater liveliness in the mining market, where gold shares have been popular.

INVESTMENT NOTES.

"Fixed" or "Management" Trusts?—in recent articles on the subject of "Fixed Trusts" (see the *Economist*, March 21, 1931, page 620, and March 28, 1931, page 683), we have shown that a holding in an imaginary "fixed trust," based on the ordinary shares of 30 leading British concerns in 1912, would have yielded, over the 18 years to 1930, an average annual return in "income" of about 3½ per cent., and a slightly lower figure by way of "capital" distributions from the sale of bonus shares, "rights," etc. We showed also that 11 of the 30 shares would have been sold for non-payment of dividends, and that the present value of the holding (including amounts obtained from these realisations) would have been 57 per cent. below the original purchase price. In view of the uninspiring showing made by this hypothetical Fixed Trust, we proceeded to ascertain the experience of an investor who, at the end of 1912, decided instead to put his money into a British investment trust of the "management" type. We began by taking, at random, the first company appearing in our list of quota-

tions for trust shares, published in that year. We found that an investor who purchased £100 nominal of the ordinary capital of African City Properties in 1912 for £72 and retained his holding until the present time, would have obtained an average annual income in the interim of 9.9 per cent., while the current market price of his security would show an appreciation of 135 per cent. Lest a single result should be non-representative, we proceeded to compile figures on similar lines for nine other investment trusts. To ensure a random selection, we chose every sixth stock on our 1912 list (i.e., numbers 1—7—13, etc.). This gave us the following companies:—

African City Properties, Army and Navy, British Steamship, Edinburgh, Globe Telegraph, International, Mercantile and General, Omnium, River Plate, Second Industrial.

Applying fixed trust procedure in the matter of "cashing in" all bonus shares, "rights," etc., we found that a purchase of £100 nominal of the ordinary stock of each company, at the end of 1912, would have cost the investor £1314 (exclusive of commissions). Between 1913 and 1930 the investor would have received £1,935 in "income" and £1,177 in "capital" receipts, while the present value of his holding would be £2,117. In brief, he would have received: (a) an annual average income of 8.2 per cent.; (b) average annual "capital" receipts of 4.9 per cent.; and (c) an appreciation in the present value of his holdings, over book cost, of 61.2 per cent. His actual yearly "income" receipts would have steadily increased, as is shown by the following figures for the first three, the middle three, and the last three years:—

	1913.	1914.	1915.	1920.	1921.	1922.	1928.	1929.	1930.
Income	6.5	6.6	6.5	8.0	7.3	7.2	9.4	9.6	9.7
"Capital" receipts	Nil	Nil	Nil	40.9	Nil	Nil	0.6	14.4	Nil

Readers may be left to draw their own conclusions from the figures given in these articles.

"Over-Subscription" Announcements.—The Advertising Association has taken a decisive step to prevent the *mala-fide* publication of "over-subscription" announcements in the Press. During the bubble company boom of 1928-29 such notices were notorious factors in the market manipulation of worthless shares. In many cases it was subsequently shown that, the public response having been poor, the underwriters' and sub-underwriters' engagements had been counted as "subscriptions." Not infrequently, the public learned that weak underwriters had failed to meet their commitments on issues alleged to have been "over-subscribed." Under the new arrangements the Press can no longer be an innocent medium in the rigging of the market. It is proposed that, in future, editors should not accept announcements of share "over-subscription" unless they are attested by a Statutory Declaration filed with the Advertising Association and the secre-

tary of the Issuing Department of the Stock Exchange. The Declaration must be signed by one director and the secretary of the company making the issue. It must give the name of the issuing house, and must state that, apart from applications from insiders (whose identity is carefully defined), the applications received exceeded the number of shares available for allotment, and were accompanied by the appropriate remittances. A wilful misstatement will involve the danger of proceedings at the instance of the Director of Public Prosecutions. The arrangements came into force as from Monday, March 30th, but the real test of their efficacy in checking a notorious abuse will come only with the next new issue boom.

Industrial Profits.—Preliminary Figures.—We publish below the preliminary results of our survey of the earnings of 597 British companies whose reports have been issued during the past quarter. Of these, 382 reports cover the twelve months ended December 31st last, so that the total may be taken as broadly representative of the trend of profits in British industry last year:—

Group.	Number of Companies.	Net Profit (after Payment of Debenture Interest)—All Reports received January 1 to March 31, 1931.		Increase or Decrease.
		1929-30.	1930-31.

Total reports received first quarter	597	77,879,773	67,812,487	- 12.9

* These figures exclude results of British Cement Products and Finance.

Although a few groups of companies—particularly the public utilities and investment trusts—show an increase of profits as compared with 1929, the majority of concerns have reported an appreciable falling off, the worst sufferers, among home industries, being the shipping and textile trades. The total figures have been appreciably affected by the publication, during the last fortnight, of the reports of three considerable concerns—Cunard, United Molasses and Imperial Chemical Industries—all of which showed a heavy fall in earnings. The average decline of 14.2 per cent. in the earnings of the 597 companies compares with a drop of 18.1 per cent. in the reports of 509 companies received during the three months ended December 31st last, and a rise of 1.9 per cent. in the profits of 516 companies received in the January-March quarter of last year—the comparison in each case being made with the earnings of the same companies in the preceding twelve months.

Peruvian Default.—The failure of the Peruvian Government to pay the interest due on April 1st on the Peruvian National Loan, Second Series, recalls the case of the lady who revoked because she had a good reason. After six months of political disturbances, the present Government of Peru, on assuming office on March 11th last, found empty coffers at the Treasury, while subsequent economic events have resulted in heavy declines in revenue. Consequently the Government declares itself unable to honour its debt at the present time, while recognising its obligations. Steps are being taken to improve the national finances. The report of the Kemmerer Commission of Financial Advisers is expected during April. During the transition period every attempt will be made to pay, in full, the service charges on the

outstanding loans of the Republic. On receiving the Kemmerer Report, the Government will be in a position to state exactly how long the transition period will last. The recent movements of the various Peruvian stocks listed in London are shown:—

	Mar. 20.	Mar. 27.	Mar. 30.
7½% Guano Loan	80	80	80
6% National Loan	40	40	35
Peruvian Corp. (Ord. Stock)	4	4	4
(5% Pref. Stock)	22	22	20
(6% Deb. Stock)	75½	75½	74½
Lima Light and Power, 6% Debs.	87½	87½	87½
City of Lima, 5% Bonds	44½	44½	44½

The Government expects to pay, in full, the interest due on the 7½ per cent. Guano Loan and the 7½ per cent. Tobacco Loan, when these payments fall due.

Cunard Steamship.—In view of the vital part played by world trade conditions in the prosperity of the shipping companies, the present depression had doubtless prepared shareholders in Cunard—which ranks as one of the most progressive British concerns—for some falling off in revenue. The report came, however, as an unpleasant surprise, since it showed that the preference dividend had not been earned, and could be paid only by means of a heavy draft on the amount brought forward. Gross income, in fact, has fallen by nearly a million, from £3,628,905 to £2,662,396, against which can be set a saving of only £154,640 in expenditure:—

Year to December 31.	1928.	1929.	1930.
Gross income	3,213,601	3,628,905	2,662,396
Expenditure	2,408,071	2,566,385	2,411,745

Carried forward	188,397	395,266	278,867

The causes of the company's misfortunes are not far to seek. First-class passenger business and freights have alike been detrimentally affected in the North Atlantic by the depression in the United States and Canada; while the Australian services of the C. & D. Line have suffered with the Australian shipping trade generally. At the same time, the earnings of the twenty-eight ships employed by T. and J. Brocklebank on the Indian routes have been affected by political and economic disturbances in the East. Though the immediate outlook remains uncertain, by comparison with many of its competitors the Cunard Company is not unfavourably placed. Once again the directors have followed a conservative financial policy. The sum of £861,304 has been taken from reserve to write down the book values of shares in subsidiary and other companies. The increasing demand for tourist third cabin accommodation promises to offset to some extent the decline in first- and third-class passengers. It seems clear, however, that the precarious position of the shipping trade generally may be traced to more permanent causes than mere depression, not the least significant being the fierce competition which exists, and is likely to increase, on the more popular ocean routes. So long as two half-empty vessels are plying on a route where one would suffice, earnings must necessarily suffer. Whether the Cunard has lost traffic by its unwillingness, until this year, to build new vessels, on the North Atlantic route, of more than 20,000 tons, is a question which can only be satisfactorily answered when the first of its future 73,000-ton vessels comes into commission.

United Molasses.—Few company reports have presented a more dismal picture than that of the United Molasses Company for the year 1930. This company was so convinced, some years ago, that the supplies of molasses

from the sugar canes of the West Indies would be insufficient to meet the steadily growing consumption in America and Europe, that it embarked upon an ambitious development programme calling for 1,000,000 tons of new supplies from Africa and the Far East, a £3½ millions fleet of tankers to carry the produce from the producers to the centres of consumption and over £1 million worth of tank storage to hold the necessary stocks. By June, 1930, the directors of the company began to realise that their plans were endangered. By that time the trade slump in America was falling heavily upon the biggest consumers of molasses—the manufacturers of industrial alcohol—many of whom were unable to implement their purchase contracts. Simultaneously, the sale of molasses for cattle feeding purposes showed a serious contraction, partly on account of the farming depression and partly on account of the competition of cheap grain. The company found that the new sources of supply which it had opened up in Africa and the Far East had for the time being become superfluous. The situation was aggravated by the failure of the Continental trade, for it had become impossible to import cane molasses into Europe at prices which could compete with the local beet molasses. Finally, this collapse in the world's molasses markets coincided with the most serious depression the tanker market had ever experienced, so that the company had to lay up many ships which it could not employ in its own trade. The consequent fall in the price of molasses was so severe that the company had to write no less than £1,364,420 off its stocks. This has entirely exhausted the capital reserve of £1,364,412, as well as the general reserve of £350,000 and has left a debit balance of £64,260 to be carried forward. The following table shows the results for the past three years:—

	1928.	1929.	1930.
Ordinary share capital	1,793,250	2,984,087	4,851,251

* Before providing for £1,059,022 losses in subsidiary and associated companies.

† Net appropriation from reserves to meet losses in subsidiary and associated companies.

The directors declare that "the financial position of the company is strong, there being no debentures or mortgages outstanding," but this pious expression of opinion is hardly borne out by the balance sheet, which shows cash and sundry debtors at £10,569, against £181,513 creditors and £623,250 bank loan secured by the deposit of certain investments. The consolidated balance sheet discloses a deficiency of quick assets (excluding stocks) against current liabilities of £437,794, stocks being quoted at £1,559,892. The fleet of motor vessels and steamships, after depreciation, stands in the consolidated balance sheet at £3,427,302, as compared with £2,540,990 in the previous year, and storage tanks, plant, etc., at £1,705,414, against £3,120,297. In the parent company's balance sheet, investments in subsidiaries and associated companies are quoted at £5,277,129 (as against £5,160,645) before providing for losses of £1,113,850. It is difficult to account for the former optimism of the directors, who in their report, a year ago, declared: "We have every reason to believe that the net profits for 1930 will show further expansion." This extraordinary optimism was the occasion last year of the issue of a 50 per cent. capital bonus to

ordinary shareholders, which depleted the capital reserve by no less than £1,492,044. The £1 ordinary shares were as high as £8½ in 1929 and are now quoted at 8s. 6d. As compared with the market valuation of over £27,000,000 in the boom period of 1929 the market to-day values the company at only £3,300,000, which is nevertheless discounting earnings in the future.

Morris Motors.—The increasing popularity of the low-powered car is again reflected in the profits of this company. Before deducting income tax, trading profit was £3,389 higher at £1,166,689, to which must be added £146,026 interest on Government securities, bank interest, and profit on sales of investments. After setting aside £257,314 for income tax (£11,251 more than in 1929), the net profit was £1,055,402, an increase of £16,284. A dividend of 10 per cent. is again paid on the ordinary shares (which are privately held) out of 41.52 per cent. earned:—

	Years ended December 31.		
	1928.	1929.	1930.
	£	£	£
Net profit	1,054,853	1,039,118	1,055,402
Preference dividend	225,000	225,000	225,000
No. of times covered	4.69	4.62	4.69
Ordinary dividend:—			
Amount	...	200,000	200,000
Earned %	11.49	40.71	41.52
Paid %	...	10	10

Written off goodwill, patents, and trade marks	...	650,000	391,043
To reserve fund	900,000	...	...
To income-tax reserve	...	...	100,000
Inc. or dec. in carry-forward	- 70,147	- 35,882	+ 139,359

The balance sheet shows an extremely liquid position. Cash is increased by £178,087 to £545,863, while debtors have risen by £91,250 to £285,643. Government securities are £471,733 higher at £2,802,625, and creditors are reduced by £298,251 to £332,746. The surplus of liquid assets over current liabilities has risen by £1,001,411 to £3,087,241. The £1 preference shares are secured by tangible "book" assets of £2 8s. 6d., and at 22s. 3d. yield about £6 15s. per cent., less income tax.

Lancashire Steel Corporation.—The first report of this merger (formed last August to take over the iron and steel assets of Pearson and Knowles, Moss Hall Coal, Wigan Junction Colliery, Wigan Coal and Iron, and Partington Steel and Iron) gives little guidance as to the possibility of ultimate success. Out of a gross income of £47,938 to December 31, 1930, £1,250 goes in directors' fees, £1,976 in interest on loans, £9,145 in income tax reserve, and £16,000 to cover shrinkage in stock values. Net profit before depreciation was £19,567, of which £15,563 was applicable to the period before incorporation. This amount has been used to write off a portion of preliminary expenses, leaving £3,913 to be carried forward. Active steps have been taken to give effect to concentration of operations. The blast furnaces and steel works at Wigan have been closed down. No dividends were received from Rylands Bros. or the Wigan Coal Corporation, though the latter made a small profit. Provision has been made for an issue of £1,250,000 7 per cent. first

cumulative convertible and redeemable preference shares, but nothing said as to the date of the offer. Meanwhile, development is proceeding according to plan, and important contracts—including orders for new coke ovens and the dock on the Manchester Ship Canal—have been placed with the Corporation.

Boot and Shoe Profits.—An analysis of the results of boot and shoe companies which have published their accounts this year reveals a gratifying stability in earnings and dividends. Of the fifteen companies which appear in the table below, one—J. Darnell and Sons—recorded a profit of £35,283 in its first year and paid sixteen per cent. on its ordinary capital. The aggregate profit of the other fourteen companies totalled £1,173,139 in 1930, compared with £1,111,695 in 1929.

* Tax free. † 10s. shares. ‡ 5s. shares.

Eight of the companies reported a decline in profits, though only that shown by Lennards (who have been reorganising a recent acquisition) was of sizeable dimensions. Six companies increased their earnings, Greenlees and Sons turning a deficit of £2,371 into a profit of £19,097. In two cases—W. Abbott and Lennards—dividends were reduced, and in two others—Public Benefit Boot and William Timpson—they were increased.

Canadian Pacific Railway.—The figures in the 1930 report are distinctly creditable to the management. In spite of Canada's difficult economic experience the C.P.R. earnings were equal to 10.2 per cent. on the ordinary capital at the end of the year, more than covering the traditional 10 per cent. dividend. Gross earnings dropped by \$28,830,151, but the decline was substantially offset by a reduction of \$23,934,266 in working expenses—a creditable achievement. "Special income" was \$4,810,703 greater at \$20,042,923, but the latter figure included \$6,500,000 representing part of the credit balance of the deposit account in respect of the Allan Line Steamship Company which was liquidated during the year. Had this sum, which is a non-recurring item, been excluded, "special income" would in fact have been \$1,689,297 lower than in 1929, and the amount earned, after payment of the preference dividend, would have represented 8.24 per cent. on the ordinary capital. Prevailing conditions affected not only the railway but other ventures of the company, including its hotels, whose earnings fell by \$919,658, while Canadian Pacific Steamships suffered a decrease of \$1,887,719 in net earnings. Tracks, rolling stock, lake and river steamers, and hotels are valued at a figure \$38,840,691 greater than a year ago, while part of the increase of \$13,132,898 in ocean and coastal steamships may be due to expenditure on the "Empress of Britain," which is to enter the service in May next. At \$42 the ordinary shares yield just under 6 per cent.

The "Cosach" Issue.—"Cosach" has now come to birth, after a prolonged labour and frequent headshaking by the doctors round the bedside. The Compania de Salitre de Chile ("Cosach") was organised last month under a Special Act of the Chilean Congress, with an

authorised share and loan capital of 1,500,000,000 pesos in Series "A" shares of 100 gold pesos, 1,500,000,000 pesos in Series "B" shares of the same amount, \$50,456,500 U.S. (or its equivalent in other gold currencies) of Prior Secured 7 per cent. bonds, \$70,000,000 U.S. in Secured Sinking Fund 7 per cent. gold bonds and \$79,650,000 U.S. Unsecured Funded Debt, including that of subsidiaries. This gives a total share and loan capitalisation, expressed in sterling, of £116,119,182. Of the Series "B" shares of 100 gold pesos not more than 5,000,000 may be issued as 7 per cent. cumulative preferred shares. Of the 7 per cent. Secured bonds, the National City Company of New York has purchased \$19,000,000, while £2,000,000 were issued in London this week at 96, and £500,000 have been issued in Holland, £400,000 placed in Switzerland and £100,000 in Sweden. The issue is analysed and criticised on a later page. Presumably, the new company, which may eventually embrace 36 companies and firms representing over 95 per cent. of the nitrate productive capacity of Chile, will proceed to rationalise the whole industry. Eventually, it may be expected, the Guggenheim process will become "standard," and only the most profitable fields will be worked. Clearly, however, an appreciable time must elapse before the maximum economies of the Guggenheim process (which is a mass-production process) have been reaped, and a first desideratum must be the passing of world trade depression. This was partly responsible for the drop in the nitrate exports from Chile from 2,960,931 metric tons in the twelve months ended June 30, 1929, to 2,199,078 metric tons in the year to June, 1930. Meanwhile, certain of the companies to be taken over have received offers of shares in Cosach, shareholders having the option of taking either Series "B" ordinary shares or Series "B" 7 per cent. cumulative deferred shares (the Series "A" shares are to be issued to the Government of Chile). As the following table shows, the amount of Cosach stock offered is, in many cases, substantially greater than the present Stock Exchange quotations for the respective company shares. The immediate earning power of the Cosach stock, however, is difficult to estimate at the moment:—

Company.	Nominal Value Shares.	Dividend last Year. %	Present Stock Exchange Quotation. s. d.	Amount of "Cosach" Stock offered in Exchange. s. d.

* Plus cash payment 11s. 6d. if action by Ossio Brothers successful. † Paid as an interim dividend. ‡ Plus cash payment out of unsold assets.

The largest company, Lautaro, will not be taken over in its entirety. Its ordinary share capital will be acquired by Cosach, but no change will be made in the status of its preference or debenture capital. It remains to be seen, when Cosach is in working order, whether its plans will embrace the possibility of closer co-operation with the synthetic producers.

Centrale Suiker.—This company's operating revenue suffered a sharp decline last year, writes our Amsterdam correspondent. The company is the largest Dutch producer of beet sugar, and acts as a holding company for the Ely and Ipswich beet-sugar factories and the Sankey Sugar Company, of Liverpool. Last year's operations resulted in a loss of 538,000 florins, due mainly to the drop in sugar prices from 13½ florins at the

beginning to 7 florins at the end of the year. The dividend is again passed:—

	1928	1929	1930
Capital	29,600	29,600	29,600
Reserve	6,171	4,671	3,466
Gross profit	4,569	1,700	Dr. 538
Net profit	1,589	16	Dr. 1,204,477
Dividend	5%	...	...

The accounts of the company's foreign interests make a less unfavourable showing. The Centrale Suiker has some 10,970,000 florins of bonds outstanding.

Geduld Proprietary.—The attainment of a record in tonnage milled, with small improvements in the averages, was responsible for a recovery in last year's profits to very near the 1928 level. Owing to the increase which has meanwhile taken place in the issued capital, the dividend rate, although higher in amount, is less in percentage than that of two years ago. As will be seen from the appended table, the net earnings and the distributions for 1930 correspond very closely:—

	1928.	1929.	1930.
Ore crushed	979,000 tons	1,008,100	1,011,000
Yield per ton	26/6	26/10	27/1

Value	6-5 dwts.	6-7	6-6

* After deduction of directors' percentages.

Despite the performance of a somewhat lessened development footage the ore reserves display a small expansion in quantity. If allowance be made for sorting, the latter represents about five years' supply for the mill. An important feature of the company's position is its interest in the East Geduld, whose affairs are commented upon below. In the balance sheet this holding, taken at cost less credits, figures at £154,800, or less than half the current market value. The balance of capital available for investment in East Geduld and other concerns is £248,500, or just about equal to the uncalled liability. When account is taken of this item, the net cash assets just about correspond to the carry-forward.

East Geduld.—This property adjoins the Geduld, and at the outset valuable information was obtained by the continuation of the workings of the last-named company. Such good progress was made in development that in April last year the consulting engineer was able to advise the erection of a reduction plant. The latter, designed to treat 60,000 tons monthly, is expected to be completed next autumn. Last year's capital expenditure amounted to £409,800, raising the total to £931,000. It is anticipated that the funds in hand will "approximately suffice" to bring the mine to the producing stage. At the date of the accounts there were in issue 1,500,000 shares, 923,320 being fully paid and the balance, 2s. called up. Any additional capital, if required, would doubtless be readily forthcoming from the company's sponsors—the Geduld Proprietary and the Union Corporation. At the end of last year the ore reserves totalled 3,900,000 tons, having an average value of 7 dwts. over a stopping width of 58 ins. Taking these factors to represent a profit of 10s. per ton, we arrive at a maximum divisible profit equal to 20 per cent. On the prospect of such returns, commencing in a year or eighteen months' time, the shares at the current quotation of £2 15s. 9d. appear at least fully valued.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Hong Kong and Shanghai Banking, Mercantile Bank of India, National Bank of India, National Provident Institution, Norwich Union Life Insurance Society, Norwich Union Fire Insurance Society, Imperial Chemical Industries, Vickers, Consolidated Mines Selection, Associated Portland Cement Manufacturers, Argentine Estates of Bovril, Odhams Press and British Aluminium. Presiding at the annual meeting of the Hong Kong and Shanghai Bank, Mr J. A. Plummer said that the total excess of silver production over consumption for the year might be estimated at 95 million ounces, which, taken in conjunction with trade depression and falling commodity prices, amply accounted for the phenomenal weakness of the metal. At the annual meeting of the Mercantile Bank of India, the chairman referred to the position of Ceylon, and said that it was from the serious decline in the price of rubber that the island had suffered most, shipments having fallen off from 80,000 tons in 1929 to 75,000 tons last year, while in value there was an enormous decline from £7 millions to little more than £3½ millions.

CAPITAL ISSUES.

Although two comparatively large capital issues were made this week, the market remained in unreceptive mood. It was learned early in the week that the Lancashire Cotton Corporation debenture issue had been a failure, the public subscribing only £80,000 of the £2,000,000 offered, leaving 96 per cent. with the underwriters. Market dealings opened at 5 discount and fell at one time to nearly 8 discount. This week's offers included £1,000,000 of 4½ per cent. redeemable stock of the Corporation of Derby, issued at 98 and giving a flat yield of just under £4 12s. per cent. The issue was a well secured trustee stock, but was regarded as somewhat highly priced. The Cosach offer of £2,000,000 prior secured bonds giving a yield of over 7½ per cent., is referred to in an Investment Note on page 740. The service of the bond is secured by a levy of 30s. per ton of nitrate extracted, charged each year until sufficient funds have been accumulated to cover requirements. Figures were given showing that in a normal year, the tonnage exported would, in fact, cover these requirements more than three times. Unless the Guggenheim and Lautaro companies, and 75 per cent. of the smaller companies in the Chilean industry have been acquired by November 30th next, the whole of the present issue is to be repaid at par, plus accrued interest. The market tended to regard the high yield as a fair index of the "risk" involved by reason of the present depression in the nitrate industry, but was somewhat critical of the fact that an appreciable share of the total issue of the company's prior secured bonds was to be used for a non-productive purpose, i.e., for payments to the Chilean Government. Some 90 per cent. of the issue was left with the underwriters.

Compania de Salitre de Chile (Cosach).—Issue of £2,000,000 prior secured 7 per cent. sterling bonds at £96 per cent. The company has undertaken that when they become available the net proceeds of this offer will be retained in London to meet accrued and accruing obligations of the company in this country. Cosach has been incorporated for the purpose of consolidating in one enterprise the nitrate industry of Chile. The Chilean Government has exempted from the export duty all nitrate exported by the company and its subsidiaries and has made available to the company Government-owned nitrate deposits up to 150,000,000 metric tons of recoverable nitrate. Thirty-six companies and firms, representing 95 per cent. of nitrate productive capacity in Chile have expressed their intention of adhering to Cosach. The payment of sinking fund and interest on these bonds will be secured by a prior claim upon a charge of 60 pesos gold (equivalent to about 30s.), which the Government of Chile has imposed upon each metric ton of nitrate extracted from nitrate deposits of the company or its subsidiaries.

Liverpool Corporation.—Issue by tender of Liverpool Corporation Bills to the amount of £1,000,000, in replacement of bills falling due on April 11th. The bills will be in amounts of £1,000, £5,000 and £10,000, and will be payable on April 4, 1932.

Derby Corporation.—Issue of £1,000,000 Derby Corporation 4½ per cent. redeemable stock 1931-61 at £98 per cent. Trustees are authorised to invest in this stock. The rateable value of the Borough of Derby is £781,890, and a rate of one penny in the pound produces £3,100.

South Essex Waterworks Company.—Issue of £200,000 5 per cent. preference stock at £103 per cent. and £200,000 ordinary (1928) 6 per cent. maximum stock at £111½ per cent. Trustees are authorised to invest in the 5 per cent. preference stock. The total net revenue of the company for the year 1931 was £124,293. Dividend on the preference stocks, including the present issue, requires £26,425, and maximum dividends on the ordinary stocks, including the present issue, requires £67,195.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction. **Central America Exploration (Consolidated), Limited.** Issued capital £250,000 £1 fully paid ordinary shares. The company was incorporated in March, 1926, to acquire mining properties

Grace National Bank

Hanover Square, New York, U.S.A.

A thoroughly organized international bank, giving special attention to the requirements of European banking correspondents.

COMPANY MEETINGS, &c.

HONG KONG AND SHANGHAI BANKING CORPORATION.

(Incorporated in the Colony of Hong Kong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

EXCELLENT SHOWING IN A DIFFICULT YEAR.

DIVIDEND AND BONUS MAINTAINED.

CONDITIONS IN THE EAST—THE SILVER DEBACLE.

MR J. A. PLUMMER ON POLITICAL AND TRADE CONDITIONS IN CHINA.

The ordinary yearly general meeting of the shareholders of the Hong Kong and Shanghai Banking Corporation was held on February 28th last at the City Hall, Hong Kong.

Mr J. A. Plummer (chairman) presided.

The Chief Manager read the notice convening the meeting.

The Chairman said: Gentlemen,—The report and statement of accounts having been in your hands for some time, I will, with your permission, take them as read. (Agreed.)

After making full provision for losses and contingencies, the net profits for the year amount to \$20,726,730, or some six and a half million dollars more than in 1929, while expressed in gold they show only a decrease of about £16,000, in spite of the fact that the conversion rate of exchange has dropped by 32.69 per cent. The substantial increase in the silver revenue is, of course, largely due to the conversion of our gold earnings at the low rate of 1/1.1/8; it would have been even greater but for the fact that, owing to adverse circumstances, we have not had the assistance from some of our gold-earning branches which we might reasonably have expected.

A DIFFICULT YEAR.

I say with little fear of contradiction that the past year proved itself to be one of the most difficult in the annals of banking, not only in the Far East, but throughout the world. In Hong Kong and China we were faced with the catastrophic collapse of silver. It, therefore, gives me the greatest satisfaction to be able to come before you to-day with such an excellent showing, reflecting as it does the highest credit upon our chief manager, managers and agents. (Cheers.)

Although fully warranted by the figures before you, I may say that, in view of the still critical state of the world's trade, and the many dangers and difficulties which still confront us, we considered very carefully as to whether we were justified in recommending the same dividend and bonus as last year. We retain, however, a sufficient degree of confidence in the future, and I trust that you will approve of our recommendations. Let me mention here that our investments stand in our books at below market prices.

I think we have every reason to congratulate ourselves upon the choice which we made some twelve months ago in appointing Mr Grayburn acting chief manager. He has already proved his exceptional capacity for the post, and we had no hesitation in confirming him in his appointment some six months ago. (Cheers.)

ALLOCATIONS.

As shown in the profit and loss account, the amount available, after deducting the interim dividend and directors' remuneration, is \$16,631,950.52, which it is proposed to deal with as follows:—

To pay a final dividend of £3 per share with a bonus of £1 per share (subject to income-tax deduction)	\$11,702,857.14
Transfer to Bank Premises Account	\$1,000,000.00
Transfer to Silver Reserve	\$500,000.00
Balance carried forward to the new Account	\$3,429,093.38
	\$16,631,950.52

When my predecessor addressed you last year there was much discussion about the premium which then existed on our exchange, over the laying-down cost of British dollars. This premium, I am glad to say, has now disappeared, but the process of getting rid of it was somewhat protracted, by reason of the weakness in silver, and by an optimistic feeling among importers that exchange must rise.

In the early part of the year a committee was appointed to look into the currency question of the colony, but though the report has not so far been made public, it is doubtful if any useful discoveries

were made; the original cause of the committee's appointment—namely, the above-mentioned high premium on our exchange—having soon been lost sight of in the heavy falls in sterling quotations, which followed each other with alarming rapidity. The question which took its place, "How low can the dollar go?" it is, of course, impossible for me to answer.

THE SILVER MARKET.

In commencing my survey of the past year, as usual, with a review of the silver market, I am conscious of dealing with a subject which, from being the field of the specialist, has lately become a matter of universal interest and concern. This state of affairs is due to the fact that the rapid decline, and, still more, the constant uncertainty, in the sterling value of silver has gravely dislocated that section of the world's trade, which is based on an exchange between silver and gold currencies, and so has added materially to the present causes of general economic depression.

Let us glance first at the fundamental facts. Silver has fallen nearly 40 per cent. in price during the past 12 months and remains on the down-grade. Regarded as part of a general price movement, in which all the metals have shared, this decline is nothing extraordinary, and, other things being equal, we might count on a corresponding reaction when commodity prices improve; but silver is not merely a commodity: it is also a medium of exchange, and looked at in this light its prospects are less reassuring.

The silver-using countries have rapidly diminished in number, and now China remains the only important one on a silver currency basis. Still, the outlook is not so desperate, if the exchange value of silver can regain a degree of stability. Experience happily shows that adjustments to price variations are made with greater ease by Oriental countries than by the more highly developed countries of the West. It is also comforting to remember that trade is, in the last analysis, barter, and is bound, in the long run, to recover its equilibrium, whatever the level of monetary exchange. We may find consolation in the fact that China's real purchasing power resides not in her silver, but in her surplus merchandise—her tea, silk, cotton, hides, and other exportable products.

Such is the long view. In the meantime we cannot disguise from ourselves that during the past year the fall of silver has been a calamity for the Eastern trade.

OUTLOOK FOR SILVER EXCHANGE.

This being so, merchants are naturally asking, what is the outlook ahead in regard to the silver exchange? It is difficult, as I have already intimated, even to hazard a guess, but let us examine a few of the more encouraging factors in the present situation. The low price of silver must tend to increase the consumptive demand, since it stands to reason that when a currency falls in value a greater amount is required to meet current requirements. This fact has already made itself visible in the large increase in the circulation of bank notes in China and, to a still greater degree, in this Colony. Low prices must also, in course of time, discourage production. There is lastly the effect of restored peace in China, which, if it continues, is a factor in the upward direction, since, by stimulating the movement of goods in the country and so necessitating an expansion of China's currency, it offers a strong pillar of support to the silver market.

These are some of what may be called the natural forces in operation in regard to the price of silver. Governmental action is also, of course, a very important factor. As to this last, we can only hope that the obvious damage to the world as a whole caused by the collapse of silver will induce the Governments concerned to stay their hand from any measures calculated to make

the position worse. Of the various schemes for international action to stabilise the market, of which we have heard so much lately, none would appear to have reached, as yet, the practical stage. All such schemes involve a sacrifice to be made in the general interest, and present a difficult problem in finding how to provide for a fair apportionment of loss among the countries concerned and to avoid that any one sectional interest should obtain the lion's share of the profit.

PRODUCTION AND CONSUMPTION FIGURES.

I will now give a few estimated figures showing the silver situation for 1930. On the production side we had 244,000,000 fine ounces of new output, 29,000,000 ozs. from sales by the Indian Government, 22,000,000 from sales by France of demonetised coin, and 20,000,000 ozs. from similar sales by Indo-China. This gives a grand total of about 315,000,000 fine ounces put on the market. On the consumption side, India imported 90,000,000 ozs., and China and Hong Kong 130,000,000 (showing an increase over the previous year of 20,000,000 ozs. in the case of India, and a decrease of 13,000,000 in the case of China). The total excess of production for the year may be estimated at 95,000,000 ozs., amply sufficient—when taken in conjunction with trade depression and falling commodity prices—to account for the phenomenal weakness of the metal. The measure of this weakness is given by the more or less steady drop during the course of the year, from a maximum figure of 2½d. an ounce to 1½d. an ounce, a fall of 7½d. The Shanghai exchange declined correspondingly, from 2s. 1½d. to the tael to 1s. 4½d., these being, it is curious to note, actually the first and last official rates quoted in the year.

CONDITIONS IN INDIA AND JAPAN.

Turning now to Eastern trading conditions during the past year, it is superfluous to mention that the countries with which we are connected have shared without exception in the general world depression, besides having, in some cases, experienced particular troubles of their own of a political or economic nature which have placed an additional check on trade and enterprise. In these circumstances I do not propose to dwell on the individual misfortunes of the various markets. In India, of course, the economic situation has been largely overshadowed by political developments. Of these I will only say that I think we should add our voice to the tribute paid to the work of the Round Table Conference. I sincerely hope that the conciliatory spirit which came to the fore in the delegates' discussions will find a reflection in India, and provide the foundation for a friendly and lasting solution of the problem of India's future government.

In regard to Japan, there are two financial operations of considerable moment to record—the return to a free gold basis of currency, and the floating last May of conversion bonds in London and New York to provide for the final redemption of the 1905 Four per Cent. Loan, which matured on January 1st last. The successful accomplishment of these two operations redounds to the credit of the Japanese Government, and our congratulations are due to the Minister of Finance, whose skilful handling of the situation made them possible. Our corporation participated as one of the issuing banks in the London flotation, which met with great success. The credit of the Japanese Government is reflected in the fact that these bonds now stand at a 4 per cent. premium.

TRADE OF THE COLONY.

The monotonous story of lack of markets for raw materials exported, and lack of purchasing power for imported goods, which repeated itself in India, Malaya, the Philippines and Japan, applied also—with the further burden of a disorganised exchange—to the case of China, and was reflected in the trade of Hong Kong. Our local merchants, it is true, found some compensating advantage from the drop in exchange, which, by putting up silver values, assisted those who had stocks to liquidate, and the trade of the Colony as a whole survived the adverse conditions of the year with a good measure of success. China, on the other hand—especially in the northern provinces—had to cope with an additional hindrance to trade in the form of civil war and all its attendant evils.

TRADE CONDITIONS IN CHINA.

Judged by the Customs revenue totals for the year, there was a further decline in the gold value, if not in the bulk, of China's exports and imports, though of no very serious proportions. The British piece-goods trade for the year in cottons and woollens, through Shanghai, largely consisted in the liquidation of stocks, the divergence between home manufacturing costs and the prices obtainable for the finished goods in China being such as to discourage replacements. With the demand for cheap-priced materials

British manufacturers are feeling ever more keenly the competition from Japan and from native mills.

In engineering products there has been a certain demand for textile and electrical equipment, in the supply of which British manufacturers appear, I am glad to say, to be holding their own, in spite of the difficulty of meeting foreign prices. Industrial development as a whole is receiving close attention in China in both official and private circles, and I think it is safe to say that, given the benefits of peace, it will go ahead rapidly, carrying with it a steady demand for imported machinery and equipment. The same applies to the railways, which are crying out for rehabilitation of the existing lines and for constructional progress. (I shall refer shortly to the plans for devoting the British Boxer Indemnity funds to this purpose.) Aviation, meanwhile, is progressing, and a substantial number of aeroplanes, for both civil and military use, were imported in the course of the year. The Shanghai-Nanking and Hankow services have functioned regularly, and plans are said to be complete for the operation of an air line to Berlin via Siberia, under Sino-German management. In the supply of aircraft, as of motor cars, American firms retain a decided lead.

The export trade from the Yangtze, instead of thriving from the favourable exchange, showed an exceptionally bad record. This was partly owing to civil disturbance and partly to the decline in selling values abroad, which outstripped the fall in exchange. The Manchurian bean crop was found to be almost unsaleable, and silk fell by almost half its value in spite of a poor harvest.

THE ECONOMIC MISSION.

The trade depression at home has centred attention on the trading possibilities of China. This, combined with the special distress in the Lancashire cotton trade, led to the dispatch of an Economic Mission sent by the British Government to inquire into trading conditions in the Far East, and the best means of advancing the British share. After four months of most thorough and pains-taking investigation, Sir Ernest Thompson and his colleagues are at present in this Colony engaged in preparing their report. We welcome the Mission's visit, first because of the valuable personal contact between British merchants in the Far East and these representatives of the manufacturing interests, including both management and labour, and secondly, because it is leading to a thorough re-survey of the machinery of production and distribution of British goods for China, and will, no doubt, bring to light whatever weak points the present system contains, both at home and in the East.

Foreign trade with China, after having proceeded on somewhat stereotyped lines during the past century, is now experiencing rapidly changing conditions. There is a call for adaptation all along the line to meet these new conditions and to cope with the daily increasing competition with which we are faced. In these circumstances, a general overhaul of the position should greatly assist. Efforts are, we know, being made at home to rationalise export industries, and I trust that the Mission's report will, among other things, lend impetus to this very desirable process. We shall await it with much interest!

POLITICAL SITUATION IN CHINA.

I will now review shortly the political situation in China. After another year of civil fighting, the country is now enjoying a fresh period of peace. This welcome state of affairs is interpreted by some as merely a lull between storms, by others, as marking the culminating point of the National Government's struggle to establish its supremacy. Experience of the past makes one slow to accept the latter view too unreservedly, but I think there is more room for optimism than for some years past, and fair reason to hope that the lifting of the clouds is more than temporary. There is no need to burden you with a detailed account of last year's struggle, which, though on a larger scale, resembled the previous trials of strength between Nanking and the provinces. At one period of the fighting, the rebellious leaders were so successful that China appeared likely to split in two, and plans were actually made for setting up a rival Government in the old capital. By September, however, the tide had turned, and soon the war was brought to an end by the intervention of Marshal Chang Hsueh-liang, the Manchurian ruler, who descended on Peking (or Peiping as I should now call it) and forced the allies to retire. Generals Yen and Feng quickly gave up the struggle, and their troops are being disbanded or incorporated into the "national" forces.

CONSEQUENCES OF THE CIVIL WAR.

At this point let me interpolate a remark concerning a certain view, which I not infrequently see repeated in the Press. It is to the effect that foreigners exaggerate the importance of wars in China, which, it is alleged, are really not so vitally important, be-

cause they affect a few provinces at a time, and only a small minority of the total population. This is a view with which I find it quite impossible to agree. The proportion of China's millions directly touched by the clash of contending armies may be comparatively small, but that is only part of the story. What must be remembered is that vastly greater numbers are ruined by the indirect consequences of the war—the crushing military taxation, wrecked communications, the stimulus given to banditry, and the destruction of confidence generally. More than this, the reconstruction of the country is held up by the diverting to purposes of war of the Government's resources and energies and by the check imposed on all public enterprises.

To return to the situation: as soon as the war was over Marshal Chang Hsueh-liang visited Nanking, where a general agreement was effected between him and the National Government. A real understanding between Nanking and Mukden is the best guarantee against the renewal of civil war on the north side of the Yangtze. Whether the present agreement will stand the strain inherent in such compacts, particularly on the financial side, it is somewhat early to say, but the signs on the whole are favourable, and if China survives this spring without a fresh breach of the peace we may hope that the corner is turned, and that the phase of civil warfare which has now lasted for two whole decades will at last be at an end.

Such confidence is strengthened by the results of the Plenary Session of the Kuomintang Central Executive, which met at Nanking last autumn. It was there decided to convoke a National Convention to meet on May 5th. The calling of this Convention (or People's Conference, as it is also called) answers the charge made by their opponents against the Nanking Party of monopolising power and of opposing popular control. If the decision is honestly carried out it should do much to remove the causes of friction and jealousy which have kept nationalist China in a state of disunion during the past two years.

COMMUNIST MENACE.

There remains a formidable problem, calling for all the energy and determination which President Chiang-Kai Shek has shown himself to possess in ample measure. I refer to the Communist menace.

For the last two or three years large parts of Central and Southern China have been ravaged and held in terror by so-called "Red" armies, consisting of bandits, disbanded soldiery, and ruined and desperate peasants, organised more or less under Communist leadership. In certain areas the Civil Government is said to have been superseded by Soviet organs, which have set up their own system, and even established schools and banks on the Communist pattern. The movement reached its height last summer, when Changsha was seized and looted and Hankow seriously threatened. The cessation of civil war having freed the hands of the Government, military measures are now on foot, the outcome of which we await with considerable anxiety. Early reports of the success of the operations have not been too encouraging.

The movement is largely a natural outcome of the misery wrought on the people by militarism and war. In so far as this is the case, the only effective cure lies in bettering local conditions by the establishment of peace and good government. If these should not be forthcoming there is ground for the gravest fears as to what may eventually happen.

With the fall in silver and the world slump in prices, added to the internal dissensions of which I have been speaking, any radical improvement in the finances and economic state of the country has naturally been impossible.

NATIONAL EXCHEQUER.

As regards the national exchequer, the current needs of the Government required the issue during the year of new loans—on the security chiefly of the Customs—amounting to \$174,000,000, and making a net increase in the internal national debt of slightly over \$90,000,000. The introduction of a budgeting system is still being awaited, but a step in the right direction was taken by the Minister of Finance, who published a general financial statement early in the year. A series of reports by the Kemmerer Mission has been published, containing schemes, *inter alia*, for the adoption of a gold standard for China's currency. An initial move in this direction was made in the month of January, when the collection of import duties was placed on a gold basis. This arrangement furnishes the Government with substantial gold funds, of great value in present conditions for meeting their overseas debts.

The Maritime Customs duties, now greatly augmented under the new tariff, continue to provide the main source of national revenue. The interests alike of the Government and of commerce and shipping are closely bound up with the integrity of the Customs service, and the gravest misgivings were caused by the seizure last summer of the Tientsin Customs by the Northern faction, in whose hands it remained for four months. Happily

Marshal Chang on obtaining control in Tientsin restored the central Customs authority.

CUSTOMS COLLECTION FOR 1930—THE NEW TARIFF.

The Customs collection for 1930 of Haikwan Taels 180,000,000 shows an increase of 28,000,000 over 1929. This represents an 18 per cent. increase, though translated into terms of gold the value of the collection was 12 per cent. less than in the previous year. To the increased revenue the port of Shanghai contributed 17,000,000 taels and Canton 3,500,000. Tientsin, on the other hand, showed a decrease of 2,000,000, while Hankow and Dairen also registered a decline.

Although falling outside the period under review, I must make mention of the introduction, on the first day of the current year, of a new Customs tariff replacing the provisional schedule, which itself had succeeded to the flat 5 per cent. The new tariff—which, I may mention, is calculated to produce an increase of revenue of some 100,000,000 taels—has been, on the whole, not unfavourably received by mercantile interests. Simultaneously with the change of tariff the Government has ordered the abolition of likin and other irregular taxes. The new substitute taxes should, at least, have the advantage for merchants of being a fixed and determinable charge.

SALT REVENUE.

The salt revenue has now, in the main, returned to the control of the central authorities, from whose hands it had almost entirely escaped a few years ago. Last year it approached \$150,000,000, making a good second to the Customs. Deficiencies in the quotas remitted by the districts for the service of foreign loans secured on the salt revenue have been made up, and the liquidation of accumulated arrears has proceeded in punctual observance of the Finance Minister's plan. Recognition is due to Mr T. V. Soong, whose concern for China's foreign credit—and, if one may venture to add, able tenure of his very difficult office—has earned high opinions in financial circles abroad.

In contrast to the Customs and salt obligations, the defaults on the railway loans continue to mount up, the amount overdue on three loans alone, issued wholly or partly in Great Britain, amounting now to almost £6,750,000! Private foreign creditors for railway material are also still awaiting the payments due to them, but we are glad to learn from a recent statement in the House of Commons in connection with the remission of the British Boxer Indemnity that our Government have received a promise from the Chinese Government that the outstanding debts due to British merchants for railway material will be settled at an early date.

QUESTION OF DEBT SETTLEMENT.

Debt settlement as a whole is coming to the fore. In November the Government invited representatives of the foreign Governments concerned to a preliminary conference. I understand that little has yet been proposed in the way of a definite plan, but the British Legation has taken in hand the collection of British statements of claims, and it is some satisfaction to know that the Chinese authorities have at last made a start in tackling the problem. I trust that they will soon find the occasion to prove the sincerity of their intentions. Of course the settlement of their overdue obligations, on terms acceptable to the creditors, must depend on peace in China and on the degree of the Government's success in reordering the national finances, a task in dealing with which Mr Soong and his colleagues have our sincerest good wishes.

RAILWAYS.

The rehabilitation of the railways, which the Chinese Government have rightly put in the forefront of their programme of national reconstruction, advanced little under the conditions prevailing last year. New construction was confined to the pioneer lines in Manchuria, which are being slowly but steadily pushed forward. As regards the depleted rolling stock, replacements have probably, at most, kept pace with the wastage due to military usage. The British Boxer Indemnity settlement promises, however, substantial benefits to China's railways. According to the terms of the Bill awaiting the final sanction of Parliament, some £7,000,000—half of it ready money—will be spent in the United Kingdom for the purchase, mainly, of railway material, while most of the balance of £4,000,000 will be free to be used for railways and other public works, though the whole amount is regarded as an investment, eventually recoverable from profits, to be used as a fund for education and similar purposes. This solution—providing as it does for China's most urgent needs on both the physical and intellectual planes, while at the same time helping our own country in dealing with unemployment—deserves to be warmly welcomed in both the countries concerned. I will only add a word

of congratulation to our Hongkong University on receiving a grant of £265,000 from that part of the accumulated fund which is being applied forthwith to educational objects.

LINKING UP OF THE CANTON-HANKOW LINE.

The portion investable in railways is likely to be devoted—we are given to understand—to the linking up of the Canton-Hankow railway. The completion of this trunk line, of great benefit to China, on political, no less than economic, grounds, will bring to fruition the plans taken in hand more than 20 years ago by our bank and its associates in the Hukuang Railways Loan. Unfortunately the part of the country through which the line must run is in the heart of the Communist trouble, and little can be accomplished until the latter has been dealt with and the districts restored to order.

Looking at things as a whole, if China can now maintain peace and political stability she should soon be able, with international assistance, to tackle effectively her three major and inter-related problems: the consolidation of debt, the disbandment of excess soldiery, and the reconstruction of railways and other means of transport. The "if" hinges not a little on the outcome of the forthcoming People's Conference.

ABOLITION OF EXTRATERRITORIAL RIGHTS.

I must now pass on to the subject of the abolition of extraterritorial rights. This vital subject has for several years past been faced fully and frankly in speeches from this chair, and I shall follow the precedent set by my predecessors. To burke discussion of the question on account of its manifold difficulties is, I think, a mistake. Our general attitude towards abolition was defined by your chairman last year, and I need not repeat his remarks. The past twelve months have brought us, however, much closer to the issue. Negotiations between China and the principal foreign Governments are proceeding, the Chinese Government have declared their intention of settling the question in the early part of this year, and there is not a little reason to expect that the matter may come to a head before the date of the People's Conference in May.

The need for revision of the treaties, and the determination of the Chinese people to see it effected, are facts which we recognise, and the problem, from our point of view, is one of securing fair and reasonable safeguards to carry foreign firms and nationals over the dangers of the transitional period, which jurisdiction and administrative control are passing into Chinese hands.

VIEWS OF H.M. GOVERNMENT'S SPOKESMAN.

There are sections in China impatient for an abrupt termination of all special privileges and rights. The demand for this was answered by the spokesman of His Majesty's Government at the last annual dinner of the China Association, and I cannot do better than quote the words then used. Foreign jurisdiction (the speaker said) was always an anomaly, but an anomaly corresponding to an anomalous state of affairs, and its sudden removal would be a worse and more dangerous anomaly still, both for the Chinese and for British subjects in China. The ultimate goal, he remarked, is complete reciprocity—China protecting our nationals and assuring them justice equally full and complete as that given by the British Government to Chinese citizens under their jurisdiction. But (he added) this can only come by a process of evolution, and the immediate task is to discover a progressive solution of the problem which can be embarked on without delay with mutual good will and satisfaction to both parties.

The need of the moment is, as these words imply, to bridge over the time while the Chinese Government is still engaged in consolidating its control throughout the provinces of China and of establishing an unquestioned authority which will justify it in assuming the full responsibilities of a sovereign Government towards foreigners living in its territories. It will greatly help to reduce to a minimum the risks of international friction—a matter surely of equal interest to both parties—if Nanking will take a similar view to that quoted above and will shape their demands accordingly.

The rendition of Wei-hai-wei on October 1st of last year and the agreement for handing back the British Concession at Amoy marked a further stage in China's recovery of foreign-controlled territories. A demand is reported to be already on foot for the rendition of the remaining foreign concessions at Hankow.

STATUS OF SHANGHAI.

As regards the supreme question of the status of Shanghai, the only event to record is the addition of two more Chinese members to the Municipal Council of the International Settlement, bringing their numbers from three to five. The report under prepara-

tion by Mr Justice Feetham, who has devoted the past year to his study of the conditions, will no doubt greatly assist the council in attacking the serious problems which the rapid growth of Shanghai and the political developments of the last few years have brought into being, and will also, we may hope, help in bringing into accord Chinese and foreign views. I think that I should not be wrong in saying that during the last year or so the state of feeling has become increasingly propitious for an amicable agreement.

PROSPECTS FOR CHINA'S TRADE DEVELOPMENT.

I have deferred till the end of my speech a few remarks which I have to make about the prospects for China's trade development in the years immediately ahead. The outlook depends so entirely on internal political conditions that it seemed best to deal with the latter first. If we agree, as I personally think we may, that the record of last year strengthens the chances of peace and order in China and of a stable Government able to take in hand the work of reconstruction the trade prospects are immense. No part of the world compares with China in the virgin fields which it offers for growth of trade. Szechuan province alone, rich in natural resources and with a population of at least 80,000,000, has hardly begun to trade with the outside world. Restoration of the railways and some few hundred miles of new railway construction would have enormous results. It is true that China may quickly develop industries to supply much that she now imports from abroad, but other examples show that this process has the effect of expanding overseas trade, though, naturally, altering its character. A ready adaptability to the changes of the times is one of the greatest needs for the foreign trader with China. Meantime, among the threatened changes there is one which, I think, deserves special mention.

MENACE OF SOVIET DUMPING.

The china markets are not exempt from a danger which is looming up in many parts of the world—namely, Soviet dumping. (I use the word in its loose sense of landing goods to be sold at under-cut prices.) The process has started already, and I fear we must be prepared for a possible rapid development. How to deal with this danger of having the markets of the world flooded by Soviet goods, produced and marketed under conditions utterly alien from the standards of other countries, is a question which I cannot undertake to discuss, but it is one which, I feel, deserves close study and thought by all those affected, and there are few, indeed, to whom this does not apply.

In conclusion, I have to ask your confirmation of the grant to our staff, as voted by the directors, of a 5 per cent. bonus on their salaries, being at the same rate as last year.

I now beg to propose the adoption of the report and statement of accounts, and after this has been seconded I shall be pleased to answer to the best of my ability any questions which shareholders may have to ask. (Cheers.)

MR MOXON ON THE DEBACLE IN VALUE OF SILVER.

Mr Moxon, seconding the motion, said: Gentlemen,—In the world to-day, and particularly in China, there is one topic that absorbs and interests all thinking men and women, and that is the debacle in the value of silver.

Here in the Far East it affects everything we do, or buy, or sell, or eat, or wear—small wonder that from the poorest coolie to the Great Taipan it is the subject of much speculation, much argument and much worry.

Half the population of the world still uses silver as its money metal—a metal which "neither moth nor rust can corrupt" and suitable in every way for metallic tokens.

In India the savings of a lifetime frequently take the form of articles made of silver. In China silver has been used as a measure of value for some 2,000 years.

It was a dangerous step to legislate for the elimination of the white metal, and thereby help to cause its debasement in price.

The consequences of that policy are not yet fully apparent, but the trade balance of the world must be altered, and that not in favour of the West, I should say.

I believe I am correct in stating that the price of silver, for many years, has fluctuated slightly in advance of commodity prices—and, therefore, it seems in some measure to be a trade barometer.

All these facts must be well known to those who control our mortal destinies—and, for my own part, I can only hope that what I should call the silver catastrophe may yet be ameliorated by prompt and wise international action.

That it is possible to rise superior to circumstance is evidenced by the report now before you, and I would most heartily congratulate Mr Grayburn and his staff on the excellent achievement of his first year of office—a most difficult and trying year it must have been.

COMPARISON OF BALANCE-SHEET FIGURES.

I would commend to the attention of shareholders the following remarkable comparison of figures connected with the balance sheets of this bank.

In 1881, the net profit for the half-year ended December 31st was \$485,645.48; \$200,000.00 of this sum was placed to reserve fund, and a balance of \$8,580.59 was carried forward to credit of a new profit and loss account.

Fifty years later, in 1931, the net profit for the whole year ended December 31st is, as you see, \$24,114,208.58, and \$3,429,093.38 is carried forward.

After making due allowance for increased capital and depreciation in the value of the dollar, I think you will all agree that the bank has a record to be proud of and that its progress during the last half-century is a fine monument to its management and a happy augury for the future.

With these few remarks, sir, I have great pleasure in seconding the adoption of the report and statement of accounts now before this meeting.

The report and accounts were unanimously adopted.

Mr G. H. Potts proposed that the appointments of the Hon. Mr J. J. Paterson and Mr G. Miskin be confirmed, and that Messrs J. A. Plummer, B. Lander Lewis, and T. E. Pearce be re-elected directors.

Mr Fung Kong Un seconded the proposal, which was carried unanimously.

Mr K. S. Morrison proposed that Mr C. Bernard Brown and Mr John Fleming be reappointed auditors.

Mr Wong Ping Sun seconded the proposal, which was carried unanimously.

Mr C. E. H. Beavis said: Gentlemen,—In view of the favourable report of the past year's working of the bank, which has been presented to us to-day, I feel convinced that the resolution I now rise to make, in regard to the payment of the directors' fees, will meet with your approval.

DIRECTORS' FEES.

The resolution which I am now proposing is that the fees of the directors of this bank shall be the sum of £5,000 sterling or its equivalent in Hong Kong currency at the date of payment instead of the existing fees of \$50,000.00.

In moving this resolution I may remind you that the fees of the directors were originally \$20,000.00 per annum, and in the year 1894 these fees were raised to \$30,000.00. In 1921 the fees were increased to \$50,000.00 per annum, and when the motion for such further increase was passed it was pointed out that the capital of the bank had been doubled and that its liabilities had increased nearly four-fold, and since that date there has, in spite of the difficult times through which we have passed, been a further substantial increase in the bank's activities, as we are all aware.

I beg, therefore, to move the following resolution:—"That the annual fee of the directors of the Hong Kong and Shanghai Banking Corporation be the sum of £5,000 instead of the existing fee of \$50,000.00."

Mr J. H. Seth seconded the resolution, which was carried unanimously.

The proceedings then terminated.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

NATIONAL PROVIDENT INSTITUTION.

RECORD NEW BUSINESS—INCREASED BONUSES.

The ninety-fifth annual meeting of the National Provident Institution was held, on the 27th ultimo, in London.

The Hon. Vicary Gibbs (the chairman) said that their new business had again been very satisfactory, policies of over £1,700,000 gross having been issued during the period. The actual net new business completed during the year ended December 31st last was £1,555,400, a figure which had never previously been reached in the history of the institution. Their mortality experience had been favourable; the amount of claims for rather more than thirteen months being £350,453, as compared with £393,536 for the preceding twelve months.

The gross rate of interest earned had increased from £5 12s. 9d. per cent. to £5 13s. 9d. per cent., but owing to the increase in income tax the net rate had fallen from £4 14s. 6d. to £4 12s. 1d. per cent.

Referring to the progress of the institution since the last valuation was made as at November 20, 1927, and the results of the present valuation, the chairman said that their funds continued to expand, an increase of over £750,000 being shown during the period under review. The interest income had expanded correspondingly, and the permanent premium income also showed healthy growth.

The valuation balance sheet revealed a surplus of no less than £1,374,303, of which the directors had decided to divide £964,608, and, after doing this, they will still be able to carry forward £409,695, which was more than was carried forward three years ago. The amount now available for distribution enabled them to declare bonuses at increased rates all round, which was a matter for congratulation to all concerned.

In the case of whole-life policies the basic rate of bonus was increased by 20 per cent. as compared with the 1927 rate, and they had maintained the principle of giving an additional bonus to all those who had survived the expectation allotted to them. In the case of endowment insurances the basic rates of 1927 remained unchanged, but the rate of "survival" bonus payable only if the full term of the policy was completed had been doubled and a new feature introduced of an additional bonus payable either at death or on survival to maturity of the policy in every case where more than fifteen years' premiums had been paid.

The report and accounts were unanimously adopted.

BRITISH ALUMINIUM COMPANY, LIMITED.

EXTENSIONS AT LOCHABER.

The annual meeting of the British Aluminium Company, Limited, was held, on the 31st ultimo, at Winchester House, London, Mr R. W. Cooper, O.B.E., M.C. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit, £387,685, showed a decline of £55,417, partly through the transfer of Government and other investments into their industrial enterprises, with consequent decrease in interest and dividends received, and partly through the industrial depression. In the current year they must be prepared for some diminution of business, in which case the conservative policy of the past would stand them in good stead, but they hoped that a revival of the world's trade, fostered by a wiser economic policy for this country, would benefit the industry. If the home industry were adequately safeguarded, they saw no reason why the large imports of products similar to those manufactured by the company should not be supplied by the efforts of British workpeople without increased cost to the user.

Their subsidiary, the North British Aluminium Company, Limited, which commenced production of aluminium in December, 1929, reached maximum output last July. In spite of the partial output and the difficulties attendant on the first year's operations of a large and new works, that company in 1930 made a profit only a few thousand pounds short of the year's interest charge. The Lochaber Power Company had been granted an extension to July, 1933, for the completion of its works. The next stage of the civil engineering work had commenced. The power plant extensions, when completed, would materially reduce the capital cost per unit of power available; and they would then possess, through the subsidiary company, by far the largest hydro-electric installation in this country. The works already completed operated satisfactorily during the year. The efficiency and economy already realised would be further increased when the extended works were finished. They had again allocated £50,000 to depreciation reserve, making it £1,000,000; and £50,000 to reserve account, which now also was £1,000,000; and for the eighth successive year £10,000 was transferred to the staff benefit fund. The proposed final dividend of 6 per cent. on the ordinary shares (making 10 per cent. for the year) would leave £47,496 to be carried forward. The company was in a strong position, and they had every confidence in the future.

The report and accounts were unanimously adopted.

THE NATIONAL BANK OF INDIA, LIMITED.

DIFFICULT BUSINESS CONDITIONS.

STRONG LIQUID POSITION.

SIR CHARLES McLEOD'S REVIEW OF THE YEAR.

The ordinary general meeting of shareholders of the National Bank of India, Limited, was held, on the 31st ultimo, at the Wesleyan Hall, Bishopsgate, London, E.C.

Sir Charles C. McLeod, Bart. (the chairman), presided.

The General Manager (Mr Ross Munro) read the notice convening the meeting and also the report of the auditors.

The Chairman—Gentlemen,—The report of the directors and the accounts to December 31, 1930, have been in your hands for some days, and I presume you will allow me as usual to take them as read.

To begin with, I should like to express our regret at the loss we have sustained in the death of our friend and colleague Mr Robert Miller, who died on November 20th last. Mr Miller was appointed to the board on May 23, 1897, and served in the capacity of director for thirty-three years. Keenly interested as he was in all matters connected with India, his counsel was always of great service to the bank, and as a good friend his loss is much felt alike by the board and his many friends who are shareholders.

In Mr Miller's place we have appointed Mr J. A. Swan, chairman of Messrs Steel Brothers and Company, Limited, to fill the vacancy on our board, and it will be necessary for you to confirm his appointment and to re-elect him.

PROFIT AND DIVIDENDS.

The result of our year's operations is a net profit of £480,329, as compared with £511,132 for the previous year. This, together with the amount brought forward from the previous year, shows an available balance of £758,791 to be dealt with. Out of this sum we have already paid an interim dividend at the rate of 20 per cent. per annum, free of income tax, for the half-year ended June 30th last, absorbing £200,000, and we propose to pay a further dividend at the same rate, also free of income tax, for the half-year ended December 31st; to add £50,000 to officers' pension fund; to transfer £30,000 to contingency account, and to carry forward a balance of £278,791.

All bad and doubtful debts have been fully provided for before arriving at the foregoing results.

The question of continuing to pay our dividends tax free, as we have been doing, was carefully considered by your directors, and looking to the figures I have given you they did not consider it necessary to make any change at present. Naturally we hope it may not be necessary to do so in future, but you will recognise that the general trade depression is being felt acutely in the territories we serve, and the present trend of events in India is not such as to lead us to look for an early return to more prosperous times.

BALANCE SHEET FIGURES.

The total of the balance sheet is slightly less than that for the previous year—namely, by £844,297. The largest item—current, fixed deposits, and other accounts—shows a total of £30,860,471, or a reduction of £606,851 as compared with the total at the end of December, 1929, and I think that you will agree with me that this is a very modest reduction in view of the conditions which have prevailed in India and the keen competition by Government for money by way of Treasury Bills. Of the latter, Government issued during the year Rs. 138 crores, and the balance outstanding at December 31st was Rs. 57 crores, as against Rs. 35 crores at the end of the previous year.

The most notable changes in the other accounts are a net increase of £2,089,997 in our securities, a reduction in bills of exchange, including Treasury Bills, of £1,666,818 and a reduction of £771,275 in advances.

Considering the difficult times which we have been passing through I think you will agree that the results and the figures put before you are eminently satisfactory.

All our securities are gilt-edged and stand in our books at or under market value, and the total thereof, together with our cash and bullion on hand and in transit amounting to £4,555,755, shows a very liquid position and a very handsome security to our depositors.

Our house property account has been so largely written down in the past that we have not deemed it in any way necessary to write it down further at present.

THE RUPEE RATIO.

A subject which has given rise to much apprehension during the past year has been the maintenance of the 1s. 6d. ratio. The fear of an alteration induced many to remit money out of India, and this was done notwithstanding assurances given on different occasions by the Finance Member to the effect that the ratio would be upheld. Recently the Secretary of State for India stated, in reply to a question in Parliament, that it was the intention of Government to maintain the price of the rupee at the figure of 1s. 6d., and that the Government regard the rupee ratio question as having been settled in 1927, when the Indian Legislative passed the Currency Act by which the rupee was fixed at 1s. 6d., and that the Government would use all the means in their power to maintain this rate in accordance with their statutory obligations. This pronouncement has created a much better feeling, which is evidenced by the higher rates of exchange now ruling in India. The fluctuations during the year have not been material.

POLITICAL SITUATION AND TRADE POSITION.

When I addressed you last year I stated that we did not consider the falling off in trade attributable to political conditions in India, but rather to the general depression in trading conditions. I cannot repeat this view, I am sorry to say, as there is no doubt that Congress propaganda has caused a serious restriction in imports by boycotting British goods—particularly cloth goods. It is quite impossible to compute in figures even approximately what that loss amounted to, but we do know it is enormous, besides seriously disturbing the legitimate course of import business. The present position is obscure. It was understood that the outcome of the recent agreement between the Viceroy and Mr Gandhi would be the cessation of the active boycott of British goods, though a preference for Indian-made goods was recognised as legitimate. In effect, this meant a recommendation to "Buy Indian" just as we in this country employ the slogan "Buy British." Actually, however, the Bombay extremists in the Congress Party appear to be resenting the Irwin-Gandhi pact, and, so far as we can appreciate the situation, the boycott does not appear to have been abated in that city. Whatever may be the outcome, it will undoubtedly take a long time to get business going again on normal lines.

The balance of trade in favour of India has come down from 53 crores in 1929 to 45 crores in 1930. I will, as usual, give you some interesting comparative figures of some of the principal commodities. The total exports from India (including re-exports) in value have fallen from 328 crores in 1929 to 257 crores in 1930. Imports show a heavy decline from 248 crores to 184 crores. Cotton, raw and manufactured, is once more at the top of exports, with a total value of 60 crores, but lower by 14 crores from 1929. She imported over four crores' worth of raw cotton, of which nearly three crores' worth came from East Africa. The imports of cotton goods fell from 61 crores in 1929 to 36 crores in 1930, and of this the United Kingdom contributed 21 crores, against 38 crores in 1929, and Japan imports were 9 crores, against 13 crores in 1929. The value of jute exports (raw and manufactured) fell from 82 crores in 1929 to 53 crores in 1930. The wheat figures are interesting, exports having risen to 193,690 tons, as against 14,204 tons in 1929, while imports have fallen from 706,331 tons in 1929 to 190,999 tons in 1930. The rice crop in Burma was a heavy one, and in 1930 3,431,000 tons were exported, on much the same lines as the previous year, except that China took a much larger quantity than usual. The price of paddy in Rangoon fell from Rs. 147 to Rs. 80.

There has been little fluctuation in the Imperial Bank rate, which averaged 5.837 per cent., as against 6.323 per cent. the previous year. The net imports of gold into India were down to £11,850,000, as against £13,375,000 the previous year, while silver showed a substantial increase, being £9,180,000, as against £5,480,000 in 1929. This latter commodity has touched record low levels. It stood at 14½d. on December 31, 1930, and since then has at one time been as low as 12d. The lowest figure before the war was 21½d.

SURVEY OF INDUSTRIES.

In Bombay the cotton trade has not yet shown any substantial recovery, but it is natural to expect that before long the mills will be reaping the benefit of the smaller imports of cotton goods, and, with the raw material standing at its present low price, the prospects before the industry are better.

The jute manufacturing industry in Bengal has received rather a severe check, and mills have had recourse to a curtailment of manufacture by sealing down 15 per cent. of looms and working four days a week only, while the price of the raw material has come down to about Rs. 26 per bale of 400 lb. The manufactured article has fallen even more in proportion and margins of profit have shrunk to a very low ebb.

The tea crop in India and Ceylon was smaller owing to a system of restriction agreed to by producers in India, Ceylon and Java, but it does not appear to have had the desired effect of reducing the large stock in the United Kingdom or increasing the price of the commodity; indeed, the stocks have increased and prices are lower than has been the case since 1920. The industry is suffering from a surfeit of medium and common teas attributable principally to an abnormal extension of planting in the Dutch East Indies during the past few years. Indian and Ceylon interests have petitioned the Chancellor of the Exchequer to reimpose discriminating duties, and the introduction of these would appear to be desirable in the interest of Empire-grown teas.

The coal industry in India continues to improve.

Conditions in East Africa have been very unfavourable, the fall in the prices of sisal, maize and coffee contributing to a period of leanness. If we take sisal as an example—a year ago the price was about £35 per ton—to-day it is £16; and quite £4 or £5 under cost of production. The Uganda cotton crop last year has only turned out some 126,000 bales, as against 204,000 bales the previous year. Let us hope conditions will improve during the current year.

CONDITIONS IN INDIA.

Having recently been to India you will expect me to give you some idea of conditions out there. The political position is obscure and the Press gives you more than I can on that subject. We can only deal with it as regards its effect on our trade with India, and in that particular aspect I am not very happy about it. Apart from the fact that the price of almost every commodity has fallen to low levels, engendering a want of confidence in buyers, the financial position is far from satisfactory. Income and other taxes have been substantially increased in order to balance the deficit in the Budget and meet an ever-increasing revenue expenditure. The result of the Round Table Conference appears to have pleased certain sections of the Indian community, but whatever Constitution is eventually agreed upon will take some years to materialise, and meantime the uncertainty makes business increasingly difficult. We can only wait and watch events. Our concern must be that adequate safeguards will be provided for all classes. In case the picture of India which any of you may have conjured up from what you read in the Press may be such that you are led to conclude a state of general antipathy between Indian and Britisher, I am happy to be able to inform you that such is not the case. Although the small but exceedingly vocal section of the community, generally known as the extremists, have made some attempt to stir up feeling against British banks, they have made but little impression on the shrewd common sense of the Indian business man, and the relations between the bank and its Indian constituents remain as friendly and as satisfactory as ever.

Before closing I would like to add how much we are indebted to the continued efficiency and loyalty of our managers and staff, whose efforts contribute so materially to the satisfactory results we are able to attain.

After this resolution has been seconded by Mr Langford James, and before I ask you to vote upon it, I will be glad to answer any questions to the best of my ability.

I now beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1930, be received and adopted, and that a dividend for the six months to December 31, 1930, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after April 1, 1931."

Mr R. Langford James (deputy-chairman):—Mr Chairman and gentlemen,—It gives me great pleasure to second that resolution. After remarks by Mr Frederick Tomkinson and Mr Evan MacRury, the resolution was put to the meeting, and carried unanimously.

The Chairman: I rise with pleasure to propose:—"That the appointment of Mr J. A. Swan as a director of the bank be confirmed and that he be re-elected."

The Hon. E. Julian Hawke: I have much pleasure in seconding that.

The resolution was unanimously adopted.

Mr R. Langford James: Gentlemen,—I rise to propose the re-election of the retiring directors—the Chairman and Mr Julian Hawke. There was recently in London a director of a very large foreign bank, and I was interested to hear that he had expressed

the greatest astonishment that the directors of British banks did so much work for the institutions which they serve. I gathered from remarks made by this gentleman that the services rendered by himself and his 74 co-directors to the bank of which they constitute the board were of an extremely perfunctory nature, and that they are not called upon to render anything else. It may be some satisfaction to the shareholders to know—particularly in these very hard times—that, with regard to the National Bank of India, the converse holds good. We all do, I think, what we can for the bank, but more particularly the services rendered to the National Bank in the past and still being rendered by the chairman are quite outstanding. (Hear, hear.) I must confess that it is a temptation to me to elaborate this speech and to become more eulogistic, but I will content myself with saying that Sir Charles is a chairman of whom we are all extremely proud. (Hear, hear.) It gives me the greatest pleasure, gentlemen, to propose:—"That Sir Charles C. McLeod, Bt., and the Hon. E. Julian Hawke be re-elected directors of the bank."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E: Gentlemen,—I have much pleasure in seconding the resolution.

The resolution was unanimously agreed to.

Mr Alderman P. W. Greenaway: Mr Chairman and gentlemen,—I have pleasure in proposing:—"That Messrs Cooper Brothers and Company and Messrs W. A. Browne and Company be re-appointed auditors of the bank for the ensuing year, at the remuneration of 400 guineas per annum each, free of income tax."

Mr J. Mitchell: I beg to second that motion.

The resolution was passed unanimously.

Mr J. Irwin Davis: On behalf of the shareholders, I have the privilege of proposing a very hearty vote of thanks to the chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and also to the general manager, managers, and staff for their valuable services.

We have listened with very great interest to the able speech of our chairman, who has told us something of the many difficulties which have beset the bank during the past year. Considering the disturbed state of India, and the greatly reduced volume of business in consequence, our directors are entitled to regard the results with every satisfaction. By judicious management they have withstood a sea of economic troubles, which has caused the wreck of some of our oldest and most important industries.

Apart from the inevitable decrease in profits, the bank has weathered the storm without hurt or damage, its stability unimpaired and ready, when peace and normal conditions have been restored, to take advantage of the tide, which we hope may lead to an era of still greater prosperity than hitherto. Whatever else India may be able to do without, the British Bank is indispensable. Britain holds the records for land, sea and air, but, as recent events have proved, she has added yet another record of far greater importance than either of these—our chairman, I think, was too modest to mention it—British banking leads the world.

We have been informed by an eminent statesman that the depression in trade throughout the world is due to the mishandling of monetary matters by the City of London. That sort of thing may serve as an exhibition of political fireworks, but neither the City nor the country can be run on schemes of reckless finance. Happily the City of London is not dependent on the financial judgment of the House of Commons. The future prosperity of the Empire depends on the solidity of its credit.

The structure of this bank has been built up in a period of many years, during which our directors have pursued a policy of safety first, each year adding something to the strength of the building. Most important of all, they have been supported by a loyal and united party, a hard-working staff, who through dangers and difficulties have served the bank faithfully and well, and to whom our best thanks are due.

For many years this resolution has always received our unanimous support. If it were possible for us to give it a warmer and more hearty reception to-day, certainly the present occasion demands it.

Mr D. C. Lee: Gentlemen,—I should like to second the resolution.

The resolution was passed unanimously.

The Chairman: Mr Irwin Davis,—I am sure that my colleagues on the board and I are very much obliged to you for the kind remarks you have made, and to you, gentlemen, for the way you have received them. It is very encouraging to us, and we much appreciate it. Mr Munro is too shy to reply on behalf of the staff, and I am instructed by him to do it for him. I am sure they also will appreciate what has been said about them, and those who are abroad will be equally glad to see the reception that has been accorded to their services in this room to-day.

The proceedings terminated with a hearty vote of thanks to the chairman.

THE MERCANTILE BANK OF INDIA, LIMITED.

SATISFACTORY RESULTS—USUAL DIVIDENDS MAINTAINED.

WORLD DEPRESSION AND ITS CAUSES.

MR J. M. RYRIE REVIEWS CONDITIONS IN INDIA.

The thirty-eighth annual general meeting of the shareholders of the Mercantile Bank of India, Limited, was held, on the 31st ultimo, at Winchester House, Old Broad Street, London, E.C., Mr J. M. Ryrie (the chairman) presiding.

Mr J. Steuart (the chief manager) read the notice convening the meeting and the auditors' certificate.

Mr Ryrie said: Gentlemen.—I expect you will, as usual, permit me to take the directors' report and the accounts as read.

The absence of Mr Robinson to-day is, I regret to say, due to the fact that, having gone to New Zealand for a health trip, he is detained there by illness, but I am sure you will join me in expressing the hope that he will soon be with us again and quite restored to health.

You will be asked to confirm the election of Sir Charles Coupar Barrie to fill a vacancy on the board, and I need not say how fortunate we consider ourselves in having secured the services of a director with such a wide experience of banking and commerce generally.

FALL IN PRICES—OVER-PRODUCTION.

It is not necessary for me to remind you of the acute and world-wide depression of the past year, as we are all feeling the effects of this, and no doubt you have studied the views, both practical and theoretical, as to the causes to which this depression is attributed by the chairmen of the big banks and other eminent economists, but perhaps you will expect me to express my views on the situation. It is, I think, to the catastrophic fall in prices that we must look for the cause of this depression, and it is in their efforts to account for the decline in prices that our leading authorities differ so much, but, while no doubt other factors have contributed, the fact is that supply has overtaken demand. I do not believe that a scarcity or the maldistribution of gold is necessarily responsible for the fall, nor do I believe that a different monetary policy would have altered the situation; indeed, I think that, beginning with the boom after the war, and again during a more recent period, credit was granted too freely and with the result that inflation and over-production followed. The various vain attempts to hold up prices in the face of over-production by means of pools and schemes to restrict supplies have also proved a source of weakness. The maldistribution of gold is the effect rather than the cause of the fall in the price level and due to the difficulty debtor countries, particularly those producing primary products, have in discharging their obligations owing to low prices and high tariff walls, while, of course, the purchasing power of such countries has been reduced. Then, in spite of her large holding of gold, the United States is suffering equally with other countries from low prices, depression in trade and unemployment, while, if there were any real scarcity of gold, money would not be so cheap as it is to-day, and this being the position we must attribute the fall in prices and the consequent depression to causes other than a lack of credit.

WHOLESALE AND RETAIL PRICES.

There is disequilibrium between production and consumption as the result of the low prices ruling for primary products and the comparatively high prices demanded for manufactured articles, and until this loss of balance is adjusted we are not likely to see any improvement in trade generally, and as prices of raw materials are already so low the adjustment must come from a reduction in the cost of manufactured goods, into which wages, in this country particularly, enter so largely. The disequilibrium to which I have referred is illustrated by the fact that, while we are buying our raw materials at more or less pre-war prices, we are demanding about 50 per cent. above the pre-war level for the goods we export, this being due to the disparity between wholesale and retail prices, the latter of which are responsible for the still high cost of living and which in turn stands in the way of a reduction in wages. There is evidence of all this in the figures published by the Board of Trade relating to our imports and exports last year, the imports being £1,140,000,000 and the visible exports only £748,000,000, the excess of imports over exports being therefore £392,000,000. But from this, of course, invisible exports such as income from shipping and overseas investments—both of which compare unfavourably with the previous year—amounting to £431,000,000, have to be deducted, leaving a balance of payments in favour of this country of only £39,000,000, which compares

with £138,000,000 in 1929, and does not leave very much margin for overseas loans. Then according to a preliminary computation made by the *Economist* of industrial profits in 1930 for the purpose of showing the trend of earnings, and which includes the results of 439 companies, there was an average decline in profits of over 8 per cent., when comparison is made with the previous year. The earnings of twenty-three banking companies declined by 11 per cent., those of thirty rubber companies by over 100 per cent., and of twenty-four textile companies by 53 per cent.

INDIA.

On this occasion last year I had to report unfavourably upon the conditions in India and to-day, I regret to say, I can only describe the course of events during the past year as depressing and deplorable. It was to be expected, of course, that India would participate in the world-wide depression and, like other countries producing primary products, would suffer as the result of the further severe fall in prices of cotton, jute, tea and other produce, but to this, unfortunately, has been added the ill effects of Congress activities in the shape of a civil disobedience campaign and the boycott of British goods, which have proved disastrous to the general trade of the country and brought suffering to the people. The damming effects of this political agitation upon trade and finance are to be seen in every direction and particularly in the recently published Indian Budget figures. The deficit for the year just closing is over £10,000,000, and to meet the estimated deficit of nearly £11,000,000 in the coming year it is necessary to impose increased taxation, which includes an increase in the rates of income tax and a further addition of 5 per cent. to the Import Duty on cotton goods, which had been raised from 11 per cent. to 15 per cent. on March 1st last year, and is, therefore, now 20 per cent., the import duty on silver being also increased. Then in both the Bengal and Bombay Presidency Budgets deficits have to be met, while the railway budget discloses a working loss of £3,840,000 for the year ending to-day.

FINANCIAL DIFFICULTIES FOR INDIAN GOVERNMENT.

I need hardly say this unfortunate position of affairs has created great difficulties for the Government of India, if only in the field of finance, and in order to maintain exchange the Government raised the internal price of money by large issues of Treasury bills, thus contracting credit, and at the same time contracted currency, while to meet their obligations in London they issued sterling loans at high rates of interest. The relative value of money in India to that in London attracted foreign money to that country for temporary investment in Treasury bills and caused an unusual disparity between ready and forward rates of exchange. As a result of this and a lack of confidence on the part of the mercantile community, due to rumours as to the future of the ratio, the banks were unable to obtain cover to meet the demand for forward remittance, and for a time at least forward operations were difficult to arrange, and this weakness in exchange made it not only difficult for the Government of India to effect the required remittances to London, but obliged them to sell sterling at the statutory rate. But it is satisfactory to learn from both the Secretary of State for India and the Indian Finance Minister that the Government of India will use all the means in their power to maintain the 1s. 6d. ratio in accordance with their statutory obligations, while Sir George Schuster has issued a warning to the effect that a change from 1s. 6d. to 1s. 4d. would be harmful to the financial welfare of India.

INDIA'S FOREIGN TRADE.

The restrictive effects on the foreign trade of India of not only the world-wide depression and fall in prices, but the civil disobedience movement and the boycott, come out clearly in the figures relating to imports and exports in the past year. The value of imports of merchandise in round figures declined from £186,000,000 in 1929 to £138,000,000, while the corresponding figures relating to exports of merchandise are £241,000,000 and £189,000,000. The imports of gold last year amounted to £11,750,000, which compares with the £13,250,000 of 1929, the net imports of silver, on the other hand, increasing from £5,500,000 to £7,000,000. The total visible balance of trade in favour of India, therefore, was about £34,000,000, against about £36,000,000 in the previous year, which,

under the conditions prevailing, is not unsatisfactory. But as the result of the boycott particularly the British share of the imports of cotton goods declined in both volume and value by almost a half, the comparative figures being 1,374,000,000 square yards and £26,000,000 in 1929, against 778,000,000 square yards and £13,750,000 last year. But the Bombay cotton mills have also suffered from the depression in India and dictation on the part of Congress, with the result that, while the position of these mills improved last year, the losses of 76 mills in 1929 are estimated at about Rs. 3½ crores, or £2,500,000. The Calcutta jute mills also experienced another lean year as the result of the serious fall in the price of raw jute and over-production, the value of the shipments of jute goods being only £28,000,000, as compared with £40,000,000 in 1929. But in the days of prosperity the jute mills established substantial reserves and, therefore, are in a better position to tide over bad times than the Bombay cotton mills, though, with a view to placing the industry upon a more competitive basis, there is a movement on foot to bring about a large merger of the latter mills.

POLITICAL SITUATION.

It is, however, the political situation in India that is causing most anxiety at present, and much as I would like to do so I cannot avoid referring to this, particularly as, of course, the political situation is reflected in the economic position. But in the first place I wish to say that we, as a bank with a large Indian clientele, are not partisans, and whatever happens we shall be prepared to continue our policy of not discriminating between British and Indian interests. The very able, exhaustive and statesmanlike report of the Indian Statutory Commission was published in due course, and in the first volume set out a clear survey of the situation and then, in the second volume, a unanimous opinion as to the manner in which the problems should be dealt with. Then followed the Round Table Conference, at which a great deal of distrust and suspicion was removed, and at which the Princes and all the other parties concerned were represented, with unfortunately the exception of the Congress, the party, of course, whose claims will be the most difficult to satisfy. But, naturally, it was not possible at this Conference to proceed further than sketch the outline of a proposed new Constitution based upon a Federated India, leaving many important details to be worked out in India pending a further conference in London, at which it is hoped the Congress party will be represented.

A PROVISIONAL PEACE.

In the meantime Mr Gandhi has been set free and, after prolonged conversations with the Viceroy, a provisional peace, at which there was no real surrender on either side, has been established, and for this I feel we are indebted to the courage and patience of Lord Irwin in a very difficult situation. Before any new Constitution of the kind proposed can be set up, there must be not only such co-operation between Indians themselves as will settle the problem of minorities, but co-operation between Indians and British, while British rights and responsibilities in India will require to be recognised and suitably safeguarded. There must be no unfair discrimination against or restriction upon British trade in and with India. On the other hand we must remember that India has not been standing still during the last twenty years, and certainly not since 1917, when we promised her the grant of self governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire, and we cannot turn back, even if we wished to do so. It is unnecessary to say that, at present, India presents a problem of immense importance and difficulty, which it will take time to solve, but it is necessary to say that, if, as is unfortunately the case at the moment in a certain section of the Press, India is made a party issue in this country, the problem will be made all the more difficult of solution.

THE BANKING INQUIRY.

There is only one other matter relative to India to which I feel I must refer as it may prove of great importance to us, and that is the Banking Inquiry set up by the Government of India to inquire into the questions of banking and credit. A Central Banking Inquiry Committee, presided over by Sir Bhupendra Nath Mitra, who is shortly succeeding Sir Atul Chatterjee as High Commissioner for India in London, has been taking evidence for some time and receiving reports from the several Provincial Committees, who have been collecting information as to local conditions. The report of this Central Committee is expected to be published shortly and we await this with interest, hoping that, as the result of the report, no action of a political nature will be taken to interfere with the services the British Exchange Banks have rendered to the trade of India for more than half a century. I do not know if the report to which I refer will deal in any way with the question of a Reserve Bank, but no doubt the proposed new Constitution will provide for such a bank to take over the

control of currency and credit and thus free Government from much unfair criticism, though of course the bank must function entirely as a reserve or central bank and be free from all political influence if it is to be of advantage to India.

Now, I have taken up so much of your time in dealing with conditions in India, a country in which, of course, we are very largely interested, that I must refer briefly to the other spheres in which our operations are carried on, and as every other country has suffered just as much as India from the effects of falling prices, I am sorry to say we have been faced with depression everywhere and a contraction of business at most of our branches.

In Ceylon there was no boycott or civil disobedience, but none the less the island has participated in the world-wide depression. There was no serious decline in the average price of Ceylon tea during the past year, but with reduced shipments the value of these fell from about £20,000,000 to £17,000,000. It is from the serious decline in the price of rubber that Ceylon has suffered most, the shipments having fallen off from 80,000 tons in 1929 to 75,000 tons last year, while in value there is the enormous decline from say £7,000,000 to not much more than £3,500,000.

BRITISH MALAYA.

British Malaya, of course, has felt the effects of not only the disastrous decline in rubber, but also the heavy fall in tin, and the condition of affairs there has been even more serious than elsewhere, with many failures of dealers in both exports and imports. The average price of rubber last year was only 5½d. as compared with 10d. in 1929, while the corresponding averages for tin are about £142 and £204. The gross shipments of rubber, which include imports from the Dutch East Indies, were 547,000 tons, against 579,000 tons in 1929, but it is the comparative values of these that bring the position home, as while the latter quantity is entered at over £50,000,000, the value of the shipments last year was not much in excess of £27,000,000. The shipments of tin, at about 97,000 tons, compare with 102,000 tons in 1929, the relative values being say £14,000,000 and £21,000,000. Then to show the loss of balance between the prices of primary products and manufactured goods, I may mention that, while the total imports into British Malaya last year are valued at £82,000,000, the exports are put down as worth only £76,000,000, the figures for 1929 being £102,000,000 and £107,000,000 respectively.

As both Burma and Siam depend chiefly upon rice, the decline in the price of this commodity hit both countries, and naturally affected their purchasing power. In Burma, business was interfered with by not only riots and disturbances of a political nature, but by an earthquake. The tranquillity of Siam was not disturbed in this manner, but none the less she is feeling the effects of the general economic depression.

The very low price of sugar has been a serious matter for Java and Mauritius, while, of course, like British Malaya, the Dutch East Indies have also suffered from the drop in the price of rubber, the shipments of which were only 14,000 tons less than in 1929, but in value only about half at £12,500,000. In view of the large stocks and in spite of the recently formed scheme to restrict output, I am afraid we cannot look for any improvement in the price of sugar in the near future, and the Government of Mauritius have again been called upon to assist the planters with a loan repayable out of the export duty, which has been substantially reduced. Then I am sorry to say that, to add to the troubles of the planters, Mauritius has recently been visited by a hurricane which has done considerable damage to the growing crop.

CHINA AND THE FALL IN SILVER.

In speaking of China, in which perhaps I may include Hong Kong, the worst and most disturbing feature of the past year was the perpendicular drop in silver from 21½d. to 14½d., with a more or less corresponding decline in the sterling value of the Shanghai tael from 2s. 1½d. to 1s. 4½d., and in the Hong Kong dollar from 1s. 8½d. to 1s. 1½d. This, of course, had a disastrous effect upon imports and, owing to lack of demand from consuming countries, exports have not benefited, while at times China, like India, has been a seller instead of a buyer of silver, which, as is the case with other commodities, suffers from over-production. The fall in silver, of course, does not only affect China and Lancashire, but other countries exporting to China, such as Burma and Siam, from which sources China draws large supplies of rice. Then a further result of the low price of silver is not only to keep foreign goods out of China, but to encourage the manufacture in China of cotton goods which, in addition to Japanese goods, are now competing with British goods in Eastern markets. Otherwise, conditions in China appear to be settling down, and more under the control of the present Government. The receipts of the Chinese Maritime Customs last year show a further increase at taels 180,000,000, and the duties are now levied in the form of gold units, but it will not

be surprising if in the current year these receipts show a decline as the result of reduced imports.

THE ACCOUNTS.

I will now turn to the accounts before us, and which, after all I have said about the fall in prices, resulting naturally in a reduction of the figures relating to our transactions, I hope you will consider satisfactory. The profit, it is true, is less by £44,000, but you will not be surprised to hear that we have been called upon to provide for unusually heavy bad and doubtful debts in addition to further substantial depreciation in our Indian Government rupee paper. On this occasion we have made the usual contribution of £15,000 to the Officers' Pension Fund, but, as an addition of £20,000 to the reserve fund brings that fund up to the round figure of £1,500,000, we have not considered it necessary to add more at present, while, as we have been very conservative in the past when dealing with freehold banking premises, we are satisfied that, by allocating £10,000 for the purpose of writing down these premises, we are not departing from our usual prudent policy. We are thus able to recommend the usual final dividend of 8 per cent., less tax, on each class of shares and, in these days of reduced dividends, I am sure this will give satisfaction to all concerned. The balance carried forward to the current year is practically the same as the balance brought in. The balance sheet, while reflecting the depression prevailing last year, does not embody any material changes from the previous year, and certainly presents a liquid state of affairs. The total figures at £17,643,000 show a reduction of only £213,000. The item, current fixed deposit and other accounts, is £1,301,000 higher, but while this affords us a measure of satisfaction, it means that, like us, our friends have not been able to employ their funds profitably in trade. The figures relating to loans payable, £1,350,000, which appeared last year, now disappears entirely. The fact that cash in hand and at bankers is £514,000 higher and that our investments have increased by £966,000 is largely explained by the reduction of £410,000 in bills receivable and the decrease of £1,270,000 in loans receivable and advances, all these items indicating that our funds were not fully employed in our banking operations.

TRIBUTE TO STAFF.

In concluding my comments upon the past year, which, as I have indicated, has presented difficulties of every kind in all directions, I wish, on behalf of the board, to express our appreciation of the work done by the staff in the interests of the bank. In the first place our thanks are due to Mr. Steuart, the chief manager, while I need not say he has been ably assisted by Mr. Crichton, the London manager, Mr. Linton, the sub-manager, the accountants and the heads of the other departments in London. Then to the work of our managers in the East and those serving under them a tribute is deserved, and I apply this particularly to the staff in India, where conditions have been peculiarly trying.

OUTLOOK FOR THE CURRENT YEAR.

In referring last year to the outlook for the then current year I said it was obscure, and it is more than ever difficult to-day to forecast what is in store for us this year. The losses sustained in the past year, as the result of the unprecedented fall in prices of every commodity, has created a want of confidence which must be restored before we can hope to see any real improvement, and we cannot expect this until there is clear evidence of some stability in the price level and the many necessary adjustments to the new conditions are affected. So far as this country is concerned, the constantly increasing national expenditure, and the resulting heavy burden of taxation, requires to be taken in hand vigorously, and we must hope the Royal Commission appointed to report upon unemployment insurance and the more recently appointed Economy Committee will point the way to less extravagant spending. In the meantime the coming Budget is awaited with apprehension and until the means to be adopted for the purpose of meeting the large deficit are disclosed there is not likely to be any activity in trade or confidence in the future. The feeling in favour of a tariff on imports of manufactured articles is growing and so far as this is intended for revenue purposes and to avoid any further increase in direct taxation I would welcome it, but to suggest the imposition of a tariff temporarily for the purpose of raising prices seems to me a most disturbing proposal. At the moment, therefore, I see no definite signs of any distinct revival in trade and the fact that so much shipping is unemployed and railway traffic receipts show no upward movement is not encouraging. But as the selling prices of so many primary products are now below the cost of production it is difficult to believe that a position of this kind can continue indefinitely, and I think it is not too much to say that we have at least arrived at a convalescent stage, though some means of adjusting the cost of manufactured goods to the price of materials we import, by a re-adjustment of money wages

or otherwise, is required to bring about a normal exchange of commodities. The prospects of Indian trade depend largely upon some early change for the better in the political situation and the coming Monsoon, both uncertain factors, but with an improvement in the economic position as the result of better prices for cotton, jute and tea, I would look for less interference with the trade and finance of the country. To refer in detail to the outlook in other Eastern markets would be taking up your time unnecessarily, as this will depend almost entirely upon whether or not there is an improvement in the demand for and prices of rubber, tin, rice and sugar, though so far as China is concerned the trade in and with that country will be influenced by the course of silver. From all I have said you will understand. I do not take a very optimistic view of our prospects this year, but you may rely that we are not only watching the situation closely but alive to the necessity of exercising caution, and I can only hope that at our next meeting we may be able to render a satisfactory account of our operations.

I have now to propose: "That the report of the directors with the audited statement of accounts and balance sheet at December 31, 1930, presented to this meeting, be and the same are hereby received, approved, and adopted, and that a final dividend on the 'A,' 'B,' and 'C' shares of this bank of 8 per cent. be paid, making 16 per cent. for the year, less income tax, as recommended in the report, and the same is hereby confirmed."

I will ask the deputy chairman, Sir T. S. Catto, to second that, but before I put it to the meeting I shall be happy to answer any questions anybody may wish to ask.

Sir T. S. Catto, Bt. (deputy chairman), seconded the resolution, and no questions being asked, it was put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS.

The Chairman: I have now great pleasure in proposing "That Sir C. C. Barrie, K.B.E., and Mr. P. R. Chalmers, the directors retiring from the board in rotation, be and are hereby re-elected directors of this bank."

As I have already said, we are fortunate in having secured the services of Sir Charles Barrie, and Mr. P. R. Chalmers, who you all know, has rendered good service to the bank for some years.

Mr C. J. Hambro seconded the motion, which was unanimously approved.

On the proposition of Mr R. G. Bamford, seconded by Mr A. P. V. Cogar, Messrs. Cooper Brothers and Company, and Messrs. W. A. Browne and Company, were reappointed auditors of the bank.

Mr C. C. Barlow: Gentlemen,—I have much pleasure in proposing a vote of thanks to our chairman, and I hope that next year the outlook for the bank will be more favourable.

Mr J. A. Duthie: I have much pleasure in seconding that. The vote was unanimously accorded.

The Chairman: I have no doubt that the proposer of that vote of thanks intended to include the staff, and on behalf of the board and the staff I have great pleasure in thanking you for your kind proposal. It is always gratifying to the board and to the staff when shareholders express their appreciation of the work done for them, and I need only assure you that, so long as we enjoy your confidence, we shall do all in our power to promote the interests of the bank.

The proceedings then terminated.

VICKERS, LIMITED.

YEAR'S RESULT NOT UNSATISFACTORY.

The annual general meeting of Vickers, Limited, was held, on the 30th ultimo, at the Hotel Victoria, London.

General the Hon. Sir Herbert A. Lawrence, G.C.B. (the chairman), in the course of his speech, said: Although, compared with 1929, the net profit shows a reduction of £166,046, the result of the year's working is not unsatisfactory having regard to the very difficult times through which we are passing.

The reduction in armaments, following the Washington Pact, has resulted in a serious decrease in warship construction, the present output being about one-fifteenth of the pre-war tonnage. As, prior to the war, the shipyards of your company were mainly engaged on naval shipbuilding, this change has had a particularly adverse effect. Through the strenuous efforts of the management of our shipyards, we have established ourselves as one of the leading builders of passenger liners in the country, and when the tide turns the company should be one of the first to benefit.

The exclusion of armaments from the British Export Credits Scheme has lost work to the value of millions of pounds which would otherwise have been secured for this country, and has thrown on the dole thousands of men who would have found employment if the orders had been obtained, not only in the

armament works, but in the shops which supply the steel and other materials required, in the collieries from which we obtain our coal, and in the smaller concerns from whom we purchase our engineering stores.

The 1930 results of the English Steel Corporation show a considerable improvement compared with those of 1929—the first year of the merger. A trading profit—excluding depreciation—was earned, but after writing off special expenditure, including expenses and other losses due to the closing down of works, a loss was incurred.

Our aviation works at Weybridge and Southampton have been largely engaged during the past year in the production of new models to replace the "Victoria," "Virginia," and "Southampton," which have rendered such good service to the Air Force for several years. We have also devoted considerable attention to the potentialities of commercial aircraft, and believe that our new machines are as good, if not better, as regards performance, payload, and price, than any on the market.

Apart from the general trade depression which has reduced the demand for engineering products, the high cost of manufacture—in part attributable to the accumulated burden of charges in other industries which supply the materials used—has placed the engineering trades at a disadvantage in connection with foreign orders.

In part, the trade depression can be attributed to over-production and under-consumption, and to the fact that retail prices, and, consequently, wage rates, have not fallen proportionately to the drop in commodity values.

It is time that we faced facts. Production costs are of two kinds—controllable and non-controllable—and it is hopeless for manufacturers, by rationalisation, by the installation of new plant, by reduction in administrative costs, to attempt to bring down the cost of the product to a competitive price if the non-controllable costs, such as taxes, rates and transport, are to continue at exorbitant levels.

The report was unanimously adopted.

ODHAMS PRESS, LIMITED.

GROWTH OF BUSINESS.

The eleventh annual general meeting of Odhams Press, Limited, was held, on the 31st ultimo, at the Connaught Rooms, Great Queen Street, London.

Mr W. J. B. Odhams (the chairman) said that if he had to take a text for his remarks, it would be the single word—growth: proportionate growth, that was; first, growth of business, involving additional employment of labour and additional machinery and plant, necessitating in turn additional capital with adequate return, in due course, upon that capital. That underlying principle of growth was evident when he compared 1930 with 1929. It was still more striking if the comparison was carried back year by year. The net profit had now reached the very satisfactory figure of £261,268. That warranted them, even at a time of such uncertainty as the present, in continuing to pay a dividend at the same rate as last year—namely, 17½ per cent. on the ordinary shares of the company.

Referring to the *Daily Herald*, he said that they had already had two successful experiences in large circulation journals—*John Bull* and *The People*. In 1922 the net weekly sale of *John Bull* had fallen to under 300,000, but by the intelligent employment of capital it had been re-established as a highly profitable journal, with a net sale of over a million and a quarter a week. In 1924 the net sale of *The People* had also been under 300,000 weekly, but last year the net sales had been increased to well over 2½ millions weekly. With regard to the *Daily Herald*, in March last year the circulation was 300,000, and now it was over 1,150,000 copies per day, and was still growing. Considering the business conditions which had prevailed since they had taken over the paper, the progress that had been achieved, both from the points of view of circulation and advertisements, must be considered satisfactory.

The opening of the new works in Manchester enabled them to cope with the ever-increasing sales of *The People*, and to print a Northern edition of the *Daily Herald*.

As to the future, all the indications of good progress were most favourable. In the billposting business the results so far this year and the prospects were as good as in 1930. The progress in their weekly newspapers and journals had been excellent, and there appeared to be every sign of even better results during the present year. With regard to the *Daily Herald*, they were arranging for additional capital, which they had every reason to believe would show excellent results to the company.

The report was unanimously adopted.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED.

The thirty-fifth ordinary general meeting of the Consolidated Mines Selection Company, Limited, was held, on the 31st ultimo, at River Plate House, Finsbury Circus, London.

Mr Walter McDermott, the chairman of the company, presided, and in moving the adoption of the report and accounts, said that the continuous depreciation which had been going on since their last annual meeting in all metal mining, except the extraction of gold, would have prepared the shareholders for disappointing figures such as he had to present on that occasion, owing to the nature of the mining business in which the company was known to be concerned. It had been customary for many years when making up the balance sheet to take the value of their investments at a price much below the market valuation, and this provided an undeclared appreciation which had been recognised as a required safeguard against the fluctuations in metal prices and in mine operating, always existent in the very nature of the mining industry. On the present occasion, in order to meet depreciation of investments, income tax and other expenses of the year, there had been transferred from general reserve £100,000 and from dividend equalisation reserve £10,000, thus reducing the total reserve to £20,000.

For several years past an important profit had accrued from dividends on their large holdings in the Anglo-American Corporation of South Africa; that corporation, heavily interested in the copper and diamond industries, had been adversely affected, like all similar companies, and its operations for 1930 had not permitted the payment of the dividend on which they formerly counted. Unfavourable conditions had also prevented advantageous share realisations, while dividends from other investments than the Anglo-American Corporation had been lower than in preceding years. The heavy decline in the price of tin and wolfram, moreover, had adversely affected their investment in the Mawchi Tin Mines. With regard to their African investments, they could look forward with confidence to these as being the basis on which expectations of future improved results could be built. The diamond trade had been temporarily injured by the generally diminishing purchasing power, but he was informed that partly by exhaustion and partly by rationalising the exploitation of new fields a normal condition had now been established so far as production was concerned. A new development had occurred in the detail of marketing the annual diamond production.

Mr J. S. Wetzlar seconded the motion, which was unanimously carried.

ARGENTINE ESTATES OF BOVRIL, LIMITED.

50,000 ACRES UNDER AGRICULTURE.

Lord Luke, presiding at the twenty-third annual general meeting of this company, held on Wednesday, the 1st instant, at 160 Old Street, London, said that the directors had pleasure in putting before the shareholders a satisfactory set of accounts. The issued capital was now 500,000 6 per cent. preference, 517,500 8 per cent. preferred ordinary, and 482,028 ordinary shares. "Stocks and stores in South America," at £853,031, showed an increase of £84,925, which was almost entirely attributable to an increased cattle-holding. "Sundry debtors" stood at £263,721, against £115,053 last year. In this increase was included £134,314, instalments due on land recently sold. "Cash balance" was £147,719 against £208,576 in 1929.

On the debtor side of the profit and loss account, after putting to reserve for depreciation £22,457, as against £12,500 in 1929, and meeting the debenture stock interest, they showed a net profit of £77,699. The whole of the original £450,000 debentures having been redeemed, there was for the first time no interest charge on that account.

Argentina, that great producer of beef and cereals for the world's markets, was suffering severely from the lack of purchasing power on the part of America and Europe. The United States, whilst shipping such enormous numbers of motor-cars and quantities of manufactured goods into Argentina, had been taking a very small share of the Argentine exports in return, and this, he believed, had done more than any other single factor to lower the exchange rate for Argentine currency. Part of their land under agriculture was sold, or at any rate being paid for by instalments, and the bulk of the rest was rented to colonists on sharing terms. On this portion they received from the colonists from 5 per cent. to 15 per cent. of the crops as rent, the lower percentage being for the first year. They thus shared the luck of the harvest with their tenants.

There was in all over 50,000 acres on the Entre Rios portion of their estates under agriculture, and the crops were mostly linseed and maize. He had never encouraged the growing of wheat.

The proceeds of their percentage of the harvest for the season 1929-30 on their Entre Rios Estancias was 179,000 Argentine dollars, and, in addition, they had a harvest from their own experimental farm.

The report and accounts were unanimously adopted.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED.

ASSETS EXCEED £6,000,000.

EFFECT OF WORLD-WIDE DEPRESSION.

The annual general meeting of the Norwich Union Fire Insurance Society, Limited, was held, on the 30th ultimo, at Norwich.

Mr Michael Falcon (the chairman) expressed regret that health considerations had necessitated the retirement of Sir George Morse from the chairmanship, but stated that that gentleman retained his seat on the board.

Proceeding, he said that the results of the society's activities for 1930 were not up to the standard of previous years, but it would be too much to expect that, in a period such as had been experienced, the society could have escaped some reflection in its accounts of the world-wide trade depression. They did business in practically every important country in the world, and he felt justified in being proud of their well-established connections, which enabled him to say that, with the exception of North America, they had maintained in the aggregate their volume of business and in a large measure their profit-earning capacity.

GOOD HOME RESULTS.

The fact that fire insurance business was directly related to the values of commodities, and these having continually fallen during 1930, would in itself adequately explain the diminished volume of the fire account. The volume of their business in the British Isles had been maintained, and the experience was substantially better than in the previous year, but in the foreign field the generally difficult situation was overshadowed by the commercial crisis through which the United States had gone, and it was here that the loss of income had been most marked. The premium income of £2,075,667 was £103,408 less than in the previous year, while the profit had fallen to £66,247, or 3.19 per cent. as compared with 4.6 per cent.

RESERVE POSITION STRENGTHENED.

In the accident department the premium income, which aggregated £1,871,896, fell below that of 1929 by £40,608, entirely accounted for by a shrinkage in the business of the Norwich Union Indemnity Company, their United States casualty company. Elsewhere, both at home and in many places abroad, there had been a gratifying expansion. The profit realised was £61,676, being 3.3 per cent., as against 4.25 per cent. last year, a result which they could not regard as a sufficient return, but they had further strengthened the reserves, which, if their anticipations were fulfilled, would materially benefit future years.

The personal accident account showed a premium income of £127,573, being £2,642 less, and the profit realised was no more than £582. The employers' liability account, which included business of that class in Great Britain and Ireland only, was directly related to wages paid, and, in view of the trade depression, the fact that their premiums were reduced by only £1,381 was rather a matter for congratulation than otherwise. In view of the difficulties created by the dearth of employment, they had thought it wise to strengthen somewhat their reserve position, and consequently the profit shown was considerably less, and stood at £4,479, being 1.79 per cent. of the premium income.

The general account included all classes of casualty business other than those mentioned, both at home and abroad, and contributed the largest percentage of profit, the transfer being £56,614, or 3.79 per cent. of the premiums, totalling £1,493,628, a reduction of £36,585. Motor business was by far the largest section of this account, and at home, although its handling required considerable underwriting care, they had made a profit on a substantially increased volume. They would watch this account with particular care in the current year, in view of insurance now being compulsory in Great Britain. In the general foreign field the business was also increasing, and the results were not unsatisfactory.

IMPROVEMENT IN MARINE.

In the marine account the premium income was slightly increased, and, for the first time for quite a long period, they were able to report an underwriting profit. The 1929 underwriting year had been closed, and, in taking £7,500 from this account as realised profit, they left the fund at £174,298, which was 102.4 per cent. of the year's income of £170,175, and this was more than enough to provide for the running off of all liabilities.

The transfers from revenue account to profit and loss account totalled £135,422, and the interest received was £200,394 net. The dividend was at the same rate as hitherto, and they were carrying forward £413,900.

The assets now totalled £6,337,053, and the Norwich Union was in a strong position to take advantage of improved conditions when they came, as they certainly would.

The report and accounts were adopted, and a dividend of £6 per share, less income tax, in respect of the year 1930 was declared.

NORWICH UNION LIFE INSURANCE SOCIETY.

INCREASED NEW BUSINESS.

The annual general meeting of the Norwich Union Life Insurance Society was held, on the 31st ultimo, at Norwich.

Mr. Michael Falcon (the president) said that discussions had taken place periodically in insurance and other journals as to what amount of new business relative to population should be written by British life offices, and rough estimates were deduced from the aggregate new business of all offices to show that there was a serious lack of adequate cover. Up to a point the discussion had been beneficial in creating more energy on the part of the offices in educating the public on the basic principle that a responsibility shared with a good office by full insurance created a sense of independence essential to the young parent in establishing his career. As a mutual society, it had been the aim of the Norwich Union to work along these lines, and they had met with a substantial measure of success, so much so that, if they omitted the boom years 1919-20 they had established a new high record of business written in the United Kingdom at £4,677,475, being £429,694 over the corresponding figure of 1929.

Overseas their business in the Irish Free State and the Dominions had fallen off slightly, and in foreign countries it was less than in 1929 by £227,946. Part of this decrease might be attributed to the constant flow of articles belittling our own country, which, though really only intended for home consumption, could not but create uneasiness when copied in foreign journals, and it would be beneficial now if attention were directed to the advantages this country provided and its ability to finance other countries to the mutual benefit of all concerned. These advantages might well form the subject of an optimistic campaign.

The total new business was £8,033,634, an increase of £141,973. It was with pleasure that they could say once more that the cost of writing their large new business was most moderate, being only 63.42 per cent. of the new premiums, while the level ratio on their total premiums of £3,432,635 was only 14.05 per cent., a reduction of 2s. 2d. per cent. on the previous year.

With regard to the assets of the society, the test of their stability was that in the aggregate the Stock Exchange valuation had shown improvement during 1930, but, in order to be able to say that each security was at least of market value, they had only had to write off £353,538. On the other hand, no credit had been taken for appreciation of securities where the market values exceeded book values, and this constituted a very substantial reserve. An investor who took his own risks by investing his savings in Stock Exchange securities had not a sufficient average to stand the test of a shrinking market; consequently he might lose heavily, but a policyholder of this society knew that, without any anxiety on his part, his contributions, with those of all other policyholders, were distributed in such a way that in the aggregate the society produced the steady investment results shown to-day. Another test was the rate of interest earned on the mean fund. During the quinquennial period the net rate of interest earned on the mean fund had averaged over 5 per cent., and last year, allowing for increased taxation, it came out at £4 19s. 7d. per cent.

RECORD BONUSES.

The quinquennial valuation of the life insurance society showed the handsome profit in the five years of £4,442,389, a figure unprecedented in the society's existence over a period of 122 years, and which had been arrived at after making provision for every possible liability, and thus not only were there whole life and endowment assurance contracts provided for on a 2½ per cent. basis, but material additions had been made to the reserves to safeguard the policyholders' interests in such a way as to discount during the quinquennium upon which they were entering the effect of any possible extension of adverse trading conditions. The bonuses under whole life and endowment assurances were the largest in the long history of the society, the percentage of increase on what they were able to do in 1925 being, in the main, from 10 to 15 per cent., depending upon age and class of policy, which would provide a welcome addition to the policies of their members.

The work of this great office now pressed very heavily on the management and members of the staff, especially during the quinquennial valuation period, and he wished to take this opportunity of telling his co-directors and the policyholders how greatly he considered they were indebted to the general manager and all the staff for the able and indefatigable way they had managed and worked to produce the magnificent report which had been submitted.

Whole-life bonuses now ranged from £2 14s. per cent. to £4 15s. per cent., according to age attained. Endowment assurances ranged from £2 2s. per cent. at maturity age 50 to £3 per cent. at maturity age 76.

The report and accounts were unanimously adopted.

IMPERIAL CHEMICAL INDUSTRIES, LIMITED.

SATISFACTORY RESULTS DESPITE WORLD CONDITIONS. THE DYESTUFFS AND FERTILISER INDUSTRIES.

The fourth annual general meeting of Imperial Chemical Industries, Limited, was held, on the 31st ultimo, at the Central Hall, Westminster, London.

Sir Harry McGowan, K.B.E. (the chairman), after referring to the loss they had sustained through the deaths of Lord Melchett (the late chairman) and the Earl of Birkenhead, and the appointment of himself as chairman of the company, said that during the past few months there had been so much discussion of the present depression that one might be inclined to take it as read. Their trading results, however, were but a reflection of the conditions of trade which they had experienced, and he must, therefore, ask shareholders to bear with him while he laid before them one or two figures which marked out the severity of the present industrial crisis. Comparing 1930 with 1929, the volume of physical production showed a decrease in the United Kingdom of 8 per cent., in Germany 16 per cent., Canada 14 per cent., and the United States of 17 per cent., while most other industrial countries had had similar falls. The major part of that slowing down of industrial activity was due to a diminution in the export trades. Expressed in monetary values, the United Kingdom showed a fall of 22 per cent., France 15 per cent., Germany 11 per cent., Italy 19 per cent., and the United States nearly 26 per cent. Even eliminating the effects of the change in the price level, British exports had fallen by over 18 per cent. So long as Great Britain was dependent upon her export trade, any given percentage fall in its volume was much more damaging to her than a similar percentage fall was to France or Germany or the United States.

DECLINE IN EMPLOYMENT.

The shrinkage in the volume of production had necessarily brought with it a decline in the volume of employment. Taking the latest figures and comparing them with the position twelve months before, unemployment had increased in this country by 72 per cent., in Germany by 48 per cent., in Italy by 55 per cent., in Canada by 49 per cent., in Australia by 81 per cent. and in the United States by 149 per cent. Those figures proved without question how world-wide the depression was. It had been accompanied by a rapid fall in the wholesale price level of primary commodities.

The products which their companies manufactured were largely what might be termed secondary commodities. That was to say, they were not consumed by the general public as such, but formed part of the raw materials of a large number of other industries. Their chief effort was devoted to the dual task of ensuring that their products were of the highest quality thoroughly fitted to perform the specific services required of them, and that in their production the utmost economy and efficiency were practised.

THE DYESTUFFS INDUSTRY.

Since they met last year the Dyestuffs Act had been renewed until December 31, 1931. He felt that in taking that action Parliament had acted very wisely. The dyestuffs industry, although neither large in respect of its turnover nor particularly remunerative to those engaged in it, rendered a great national service, and he hoped that nothing would be done to hinder its continued development in this country. For that reason he regretted that the suggestion of the further inquiry proposed in Parliament had not been adopted by H.M. Government. It was a step they would have welcomed; one from which they had nothing to fear. When State protection or direct encouragement was given to a particular industry, the fullest disclosure of the essential facts was in every way desirable.

World competition last year had been very severe, but he believed that insane price-cutting was ceasing, so that producers all over the world were beginning to co-operate more with one another to their mutual benefit. The quality of their dyestuffs was now unquestioned, and their prices continued to be steadily reduced *pari passu* with the development of research and the growing efficiency of production. They were not unmindful of the difficulties of the textile trades, and they felt a responsibility for keeping prices as low as possible in order that they might contribute to their revival.

THE FERTILISER INDUSTRY.

In 1930 the index of prices for agricultural products showed a drop of 22 per cent. in the principal countries of the world. The farmers' purchasing power had fallen away, and the great increase

in the use of nitrogen fertilisers of recent years had been arrested. For that reason their output of sulphate of ammonia at Billingham had been considerably below capacity in recent months. That situation had been accentuated by the sulphate made as a by-product by gas, coke oven, and other undertakings necessarily having the first claim on the impaired markets.

BASELESS RUMOURS DENIED.

The condition of the nitrogen industry appeared to have given rise to many baseless rumours about their factory at Billingham. It was said, for instance, that the works there were about to be closed down entirely, that only a trifling use was being made of the existing capacity, and that that large plant was already out of date. Allegations of that kind were equally untrue. Naturally, they were much concerned to see some of their most modern plant operating on a scale of merely partial production, but it must be remembered that, when they had embarked nearly three years ago upon the extension of their nitrogen plant, that action had been fully supported by the study of the market situation which was then made. The additional manufacturing capacity created would have been in full operation to-day had not the balance between supply and demand for agricultural products been abruptly broken by a great increase in agricultural productivity leading to an unprecedented fall in market price. The situation had been aggravated by the absurd lengths to which economic nationalism had been pushed by the erection of new plants in many of the smaller European countries, on the ground that they must be self-contained in that branch of production.

RELATIONS WITH GERMAN SYNDICATE.

Their relations with the largest makers in the world—the I.G. Farbenindustrie and the German Nitrogen Syndicate—continued to be satisfactory. As a direct result of the friendly co-operation between their companies an agreement had been arrived at last summer between the principal European nitrogen producers. That agreement, known as the Nitrogen Industry Convention, to which the Chilean producers were also parties, had been entered into for a preliminary period of one year, with a view to arriving at a more permanent basis for the future. The agreement had had the effect of regulating synthetic production to demand, of stabilising prices for nitrogen at a rather lower level than obtained during the previous fertiliser year, and of providing orderly marketing arrangements. The interests of both consumers and producers had thus been safeguarded. Discussions were now proceeding for the future regulation of the industry, which, he trusted, would prove successful.

BILLINGHAM AS A PRODUCER OF GENERAL CHEMICALS.

Their own nitrogen works were equipped with absolutely modern plant of the highest efficiency, capable of production at a cost which they believed to be lower than that of any other world producer. In speaking of Billingham, it was essential that he should realise that those works were much more than a producer of fertilisers. They were the home of their latest and most modern plants for the manufacture of nitrogenous products for other than agricultural purposes, and of a variety of other chemicals, notably metallic sodium, sodium cyanide, methanol, electrolytic caustic and chlorine and acetic acid. The demand for those products formed part of their general chemical business, and was not affected by the depression in the fertiliser industry.

FOREIGN AND EMPIRE EXPORT MARKETS.

Over the past four or five years the companies' export trade had shown a marked expansion. The secret had lain in the establishment of their own widespread selling organisations in the respective markets. During the past two years their interests in Australia had been entirely reorganised and consolidated. Provision had been made for joint development for the manufacture of nitrogenous fertilisers when the demand for that product reached a level which would justify domestic manufacture. 1930 had been the first complete year in which I.C.I. fertilisers had been available in the Commonwealth, and sales had been well up to estimates. Similar steps had also been taken to consolidate the various interests in Australia for the manufacture and sale of ammonia for various

industrial uses. Imperial Chemical Industries of Australia and New Zealand had earned profits in excess of the previous year. He had every confidence that Australia would, in due course, emerge from her present economic difficulties and regain sound financial conditions. When recovery had been made, there was no doubt that their Australian business would continue to expand.

In Canada the depression had extended throughout the year. Gross sales by Canadian Industries, Limited, had fallen very little short of the preceding year, and its dividend had only been slightly less than that for 1929. The profits of the South African company, African Explosives and Industries, Limited, jointly owned by the De Beers company and themselves, had shown an increase for the year 1930, due mainly to increased manufacturing efficiency, as the volume done had only been a little larger. The net profit for 1930 had touched a new high record, and they had benefited by a larger dividend. A new fertiliser mixing factory had been opened at Salisbury, Rhodesia, and the trade in that territory showed a gratifying increase.

At the Natal factory a further superphosphate unit was now being added. A synthetic ammonia plant, sufficient for local demands, was being built at the factory at Modderfontein, outside Johannesburg, and plants for the oxidation to nitric acid of the resulting ammonia were being erected at the same works as well as at Somerset West, Capetown. The use of those modern processes would greatly reduce cost. When the present agricultural depression passed, a resumption of the steady increase in the demand for fertilisers in South Africa might be looked for. Close connections had been established with the development of mining in Northern Rhodesia. The day would come when that development would necessitate the erection of a new factory in Northern Rhodesia for explosives and other products required by the mines.

THE YEAR'S PROFITS.

The net profit for the year 1930 amounted to £4,473,392, as compared with a profit of £5,780,208 for the previous year, or a decrease of 22½ per cent. With the appropriation this year of £500,000, the Central Obsolescence Fund would amount to £4,500,000. The manufacturing subsidiary companies had certain obsolescence reserves of their own, which exceeded £8,000,000. Over £2,000,000 had been spent out of revenue in maintaining plants in up-to-date condition. The general reserve account stood at £12,725,000. The dividend on the preference shares for the two half-years and an interim dividend on the ordinary shares had been paid, and the directors now recommended a final dividend on the ordinary shares of 3 per cent., making a total dividend on those shares of 6 per cent. for the year.

A SPECIFIC DECLARATION CONCERNING PROFITS.

Although it had been stated at previous annual meetings by the late Lord Melchett, he (the chairman) regretted the necessity to repeat, as he did with all emphasis he could command, that no part of the profits of their company, either for the current year or for any of the preceding years, had been drawn from profits on the sale of investments or securities. Such profits had, indeed, been made, both by their company and by various subsidiary companies. In the latter case, under their policy of centralising all finance, such profits had been transferred to the balance sheet of Imperial Chemical Industries in the only manner in which they could be transferred, that was, by way of dividend. Notwithstanding that method of transfer, those profits had never been credited to their profit and loss account. The published annual profits of the company had thus never been inflated by fortuitous profits of that nature. On the contrary, in every case they had been dealt with as capital profits available only for capital purposes. As such they had either been openly carried to the credit of the general reserve, as in 1928, or applied in writing down the capital value of one or other of the assets of their company. He trusted that that specific declaration would serve once and for all to put an end to statements or suggestions that any part of the profits of the company had been derived from speculation or dealings in securities.

RESEARCH ESSENTIAL.

Their annual expenditure upon research work was heavy. Research, however, was an essential activity of the chemical industry, and, unless it was pursued unceasingly, they could not hope to maintain their position in the forefront of world enterprise. Research expenditure was mainly directed to the four following objects:—(1) Controlling and directing of the modernisation and concentration of manufacture; (2) improving the quality and reducing the cost of their numerous products; (3) developing analogous manufactures and manufacturing methods; and (4) investigating allied processes offered by outside interests.

LABOUR RELATIONS.

Their relations with all their employees and workers continued to be of the most friendly description. The works councils were functioning admirably. Representatives of the management and of the workers met at regular intervals in order to discuss problems common to their respective parts and to seek solutions which were mutually acceptable and beneficial.

OIL FROM COAL.

The late Lord Melchett had told them last year that a pilot plant for the conversion of coal into petrol and fuel oil by hydrogenation had been put into operation. As a result of their research work during the past year they had secured a marked fall in the working costs of the coal-oil process. The quality of the petrol produced was beyond question. It was equal in its anti-knock qualities, for instance, to the finest grades at present on the market. So far as they were aware, they were the only company in this country or the Empire which had brought to a successful conclusion the difficult technical operation of hydrogenating coal into petrol with but a small residue of waste product of no value. Their process had nothing in common with low-temperature carbonisation processes, which produced small quantities of liquid fuel as a by-product only. The eventual establishment of that industry in Great Britain, he need hardly add, would be of immense significance in the protection of the national economic and strategic positions.

FUTURE PROSPECTS OF I.C.I.

In conclusion, the Chairman said:—All experience proves that the process of emergence from a period of industrial depression is normally longer than that occupied by the descent therein. It is, however, equally certain that industry does at length recover, although no one seems able to forecast the moment at which convalescent will begin. Stocks of commodities form the great shock absorbers of depressions. Without stocks ready to be put either into the processes of manufacture as raw materials or into consumption as immediately available for use, ordinary business cannot be carried on. Stocks are, therefore, an essential ingredient in modern production.

Whatever their nature—raw materials, stores and spares, or finished goods—they should, however, be kept at a minimum. There is no outlet through which capital can be more wastefully employed. I may add that in our case the merger has permitted of permanent economies in this direction which are consistently maintained through a strict and continuous scrutiny of all stocks. But stability in the volume of stocks cannot be obtained without a fairly stable price level. A fall in prices is the signal for the consumption of stocks and their reduction to a minimum level, not only by every class of manufacture, but by merchants, retailers and even consumers. Everyone works within narrower limits. The moving force is an anticipation, when the price level is falling, that it will move still lower. Only by this contraction of stocks can the consequential losses be minimised. On the other hand, when the turn comes from depression to revival, there is a precisely contrary movement. Rising prices hold out hopes of rising profits, which lead to a restoration of stocks.

Recent months have afforded some evidence that the fall in the price level has slowed down. Within a short period an upward trend may appear. Prospects in 1931 depend upon this movement. For the first two months, our volume of business compares favourably with the average of the later months of 1930. The curves of industrial activity in 1931 will reflect the degree of confidence in the stability of prices at home and abroad. Political movements and the readjustment of adverse budgetary positions, the possibility of co-operation in the control of the world's currency systems, the forced development of German and Russian competition and other clouds on the industrial horizon present such inscrutable problems as make forecast hazardous.

You will, therefore, understand if I refuse to prophesy the results that we shall show this year. It will be sufficient to assure you that we shall continue to search for efficiency and economy. The dividend for 1931 depends almost entirely on the volume of business secured and the movement of prices. The products that our companies manufacture lie close to the core of the world's manufacturing and consumption needs. Few, if any, of them are luxury articles. On the contrary, they are essential ingredients of the necessities of civilised life. Our structure was never sounder. Our organisation is elastic and virile. It is served by plants of the highest efficiency, by the most skilled and loyal body of workers that any industrial unit can wish for and by an administrative staff—technical, commercial, financial and otherwise—which is hard-working, full of initiative and enthusiasm and devoted to its work of upholding the high reputation of British products at home, in the Empire and in every international market. (Applause.)

The report and accounts were unanimously adopted.

THE ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED.

DIVIDEND MAINTAINED DESPITE COMPETITION.

MR. P. M. STEWART ON NEED FOR A NATIONAL POLICY.

The thirty-second ordinary general meeting of the Associated Portland Cement Manufacturers, Limited, was held, on the 31st ultimo, at River Plate House, Finsbury Circus, London, E.C.

Mr P. Malcolm Stewart (chairman and one of the managing directors of the company) presided.

The Chairman, in moving the adoption of the report and accounts, said: The profit on trading for the year is down by £40,704; on the other hand, the interest and dividends received are up by £81,133. The total revenue for the year, at £955,150, shows an increase on last year's figure of £20,035. We are thus able, after making increased reserves for taxation and providing £375,380 for depreciation reserves and debenture stock sinking funds, and the payment of the 5½ per cent. dividend on the preference shares amounting to £127,584, to recommend to you the payment of a dividend of 8 per cent. on the ordinary shares, which will absorb £240,000, leaving a balance of £20,065 to be added to the carry forward, which will then stand at £160,964.

That we have been able to maintain our dividend despite the severe competition met with during the year, resulting in a lower range of selling prices, is due to the satisfactory reductions in the costs of production which have been achieved as a result of the expenditure on the complete reconstruction of our largest manufacturing plants, to the successful efforts of the Cement Marketing Company, our sole selling organisation, and to the improved returns received from our investments. The aggregate deliveries during the past year of our group constitute a record. The relative prosperity of our company is largely due to the fact that our operations have been founded on a definite policy, consistently carried out over a number of years.

Our policy has been to substitute as far as practicable direct responsibility for committee control; then we have succeeded in substituting live for dead fixed assets through the provision during the past six years of some £1,600,000 for depreciation, the whole of which sum has been expended in modernising and extending our works. In the same period we have reduced our indebtedness in respect of debenture stocks by well over £500,000 and improved our liquid assets by approximately £250,000. (Cheers.)

INDUSTRIAL OUTLOOK: A GRAVE SITUATION.

I view with grave apprehension the general industrial position of this country, which is becoming increasingly weakened by the continued depression of our basic industries. This country is losing its export trade. The relative advantages enjoyed by our foreign competitors are such that it is too late to expect that the pooling of resources to bolster up the less efficient can regain it. Running a number of units on part time will never give low costs of production. They cannot be obtained by the spreading of a poor demand proportionately over producers with high and low costs. This is being proved in the coal trade, but it should never have needed demonstration.

PENALISING EFFICIENCY.

The ill effects of Government interference are not confined to the production side of the coal industry; the sales side is disorganised owing to the uncertainty created. The quota is unsound; it defies the elementary laws governing economic production; it is astounding that there should have been found sufficient members of the House of Commons to pass a Bill to establish it.

If industrial efficiency is thus to be fettered and robbed of the results of enterprise, there is no prospect of progress, of encouragement to youth waiting for opportunity, or of the maintenance of the proud position won by our forefathers in the markets of the world. Industrial success is essential to the life of the nation. (Cheers.)

Much legislation has been enacted regardless of its effect on industry. Our electorate has been demoralised by these bribes, made blind to the true facts as to the conditions required to restore prosperity to the country. It has been brought up in an atmosphere of false security which it will prove difficult to disperse. Nevertheless, the black fact of growing unemployment stands out like a danger sign, which cannot be ignored if safety is to be secured. Hard times and bitter experience are driving us to find a belated solution, which should have been forthcoming earlier as the result of foresight and courage.

THE REMEDY.

The working classes are gradually realising that they cannot expect to continue to earn high wages and enjoy the finest social

services in the world while our factories are idle through the dumping of foreign goods into this country. One cannot get a quart out of a pint pot.

I believe the country, conscious of the dangerous position into which we have drifted, is eager for a clear lead and is waiting for the tariff problems to be focussed to a simple issue capable of being more readily understood. (Hear, hear.) A wonderful opportunity of achieving this is at hand. The Federation of British Industries, representing the vast majority of the manufacturers of this country, has issued a report entitled "Industry and the Nation"; this offers a carefully reasoned and practical solution of the tariff question. It argues in effect that as our immediate difficulties are pressing, therefore let us at once impose a general tariff measure to meet them, at the same time proceeding to work out a scientific tariff to meet the special requirements of each industry.

A PIECE OF TRUE STATESMANSHIP.

It is in the recommendation as to who shall decide on the nature and extent of each tariff that statesmanship is shown. The responsibility is removed from the realms of party politics, as it should be. It is proposed that an independent tariff board should be set up with a status similar to that held by our judges. Now, this is a cardinal point which will give assurance to many who have dreaded the political pull of any self-interested manufacturers. It avoids the lobbying which otherwise would be inevitable. The whole scheme is placed on a national basis devised to serve the common interest as against the furthering of particular interest. Manufacturers realise that no tariff should create injustice or be used for sheltering inefficiency. Apart from the necessity of a tariff for protection of the home markets, a change in our fiscal system is required, first, in order to enable reciprocal agreements to be made with other parts of the Empire upon a basis of mutual advantage, and, secondly, to enable us, if necessary, to have a weapon which can be used in the case of foreign countries whose tariff treatment of British goods is inequitable. (Cheers.)

A CLEAR-CUT SCHEME.

Here is a scheme backed by experienced, practical men of every industry. It forms a nucleus of opinion. Why should not such of our politicians who are prepared to consider the application of any form of tariffs get together and discuss it? It gives a point of contact, an opportunity for united action and founds a sure stepping-stone for the development in detail of a comprehensive scheme by an independent tribunal. Thus a great opportunity presents itself for all those who think the time is come for a change in our fiscal policy to combine in advocating a common cause. Nothing less can overcome our innate objection to change. The case will never yield successfully to treatment while there are so many doctors offering different prescriptions. Is not the situation so grave that we are entitled to look to political leaders to sink party interests, forget personal animosities, and to unite in the formation of a National Government? (Hear, hear.) I have confidence in the common sense of the people of this country; they are beginning to realise the dangerous position into which we have drifted during a long period of extravagance and indecision. They will rise in support of any agreed proposals. How else can we deal successfully with the problems of unemployment, the practical application of tariffs, or settle the future Government of India? These problems transcend party politics. (Hear, hear.) Nothing less than unity can forge sound acceptable solutions. Now, I hope you will forgive me if I have trespassed on the domain of politics. My justification is that they are so closely interlocked with the industrial position that it would be impossible to attempt an honest survey and ignore them. (Cheers.) May I ask you to understand that the views expressed are those held by me personally?

"FERROCRETE" AND "SNOWCRETE"—TWO OUTSTANDING SUCCESSES.

With regard to the prospects of the company, the bright feature is the continued good home demand which our reputation and service secure for our products. The deliveries of "Ferrocrete," the original rapid hardening cement, and "Snowcrete," our white cement most successfully introduced last year, continue to expand steadily and we are still working to effect some further reductions in the costs of production. On the other hand, selling prices are low and the export trade has fallen off owing to the world-wide decline in the price of commodities. It is difficult to say when these tendencies will be checked, but it is certain that the sound position of the company, financial as well as in respect of its efficient productive capacity and marketing organisation, places it in a position to reap readily the benefit of any improvement in trading conditions.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the ten days ended March 31, 1931, amounted to £37,114,500 against ordinary expenditure of £10,752,100. After allocating £4,820,300 to Sinking Fund and having allowed for an increase in Exchequer Balances of £2,896,200 the week's operations, as shown below, reduced the National Debt by £8,646,000 to £7,606,000,000* :—

(000's omitted.)	
Treasury Bills	4,661
Public Department Advances	15,550

Total.....	1,873,524	Total.....	1,024,000

Net arrivals, £849,524

Messrs Samuel Montagu and Company write on April 1, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £143,614,006 on the 25th ultimo (as compared with £141,956,734 on the previous Wednesday), and represents a decrease of £4,011,616 since December 31, 1930. The exchanges remaining favourable to sterling, there was little demand for the bar gold which was available in the open market during the week from sources other than South Africa. The Bank of England therefore obtained about £677,000 from an undisclosed source on the 27th ultimo, and £84,000 of gold from India yesterday at the statutory buying price. £112,000, mostly West African, available to-day, was secured by the Bank at the fixed price of 84s. 10½d. per fine ounce. Only about £22,000 of South African gold arrived this week and this was used for trade requirements. The price yesterday was 84s. 9½d. per fine ounce; the last time the price was fixed at this figure was on November 16,

1926. Movements of gold at the Bank of England during the week have resulted in a net influx of £844,524. Receipts consisted of £250,000 in sovereigns from South Africa, £750,000 in sovereigns "released," and £873,524 in bar gold. Withdrawals totalled £1,029,000, of which £1,000,000 was in sovereigns "set aside" and £29,000 in sovereigns taken for export.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 23rd ultimo to mid-day on the 30th ultimo:—

IMPORTS.	£	EXPORTS.	£
British South Africa.....	873,679	Germany.....	122,570
Straits Settlements and Dependencies.....	64,892	France.....	29,031
Other countries.....	12,276	Switzerland.....	13,700
		Austria.....	6,150
		Other countries.....	10,944
	£950,847		£182,395

SILVER.

The market has shown a decidedly weaker tendency, especially during the latter part of the week. There has been re-selling on China account and the Indian bazaars have made fresh forward sales, but the weakness is attributable also to a lack of support. There has been little fresh buying and demand came mostly from bears who, in the circumstances, have shown no disposition to exert pressure. America has given small support on some afternoons but has also been a seller. Owing to the poor demand for spot supplies the price of silver for cash delivery has been at a discount of ½d. as compared with the two months' quotation.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 23rd ultimo to mid-day on the 30th ultimo:—

IMPORTS.	£	EXPORTS.	£
Mexico.....	110,269	British India.....	34,713

REPORTS AND NOTICES.

At a meeting of the directors of Parson's Marine Steam Turbine Company, Ltd., Mr. S. F. Prest was appointed chairman of the company, in succession to the late Hon. Sir Charles A. Parsons, O.M., and Mr. R. J. Walker, C.B.E., vice-chairman and managing director.

BANKS.

ANGLO-PORTUGUESE COLONIAL AND OVERSEAS BANK, LTD.—The first report, dated January 31, 1931, shows that the net profit amounted to £21,447. The directors propose that the preliminary expenses of £17,638 be written off, and that the balance of £3,809 be carried forward. The report states that notwithstanding the world-wide business depression, the operations of the bank during its first financial period have developed in a satisfactory manner. Total assets are £2,420,318. Goodwill at cost stands at £95,000. Total investments amount to £342,696, of which £137,266 is invested in British Government and Indian Securities. Cash stands at £303,486. Acceptances stand at £651,612. Advances are at £228,863. Banco Nacional Ultramarino accounts stand at £467,174. Deposits stand at £551,759. The issued capital is £1,000,000, in ordinary shares of £1 each, fully paid.

CANADIAN BANK OF COMMERCE.—The Canadian Bank of Commerce announce the appointment of Mr. Crawford Gordon, of Ottawa, as manager of the London office of the bank in succession to Mr. C. Cambie, who is retiring on pension. Mr. Crawford Gordon who is at present manager of the main Ottawa branch of the Canadian Bank of Commerce has had a distinguished career in the bank, occupying successively the posts of assistant inspector at Winnipeg during the superintendency of Sir John Aird, now president of the bank, who played an important part in building up the bank's prestige in the west, assistant manager at the Winnipeg branch, manager at Kingston, Jamaica, from 1920 to 1925, assistant manager at the main Toronto office, and from 1926 to the present time manager at Ottawa. The London office of the Canadian Bank of Commerce has been established for a considerable period, being at one time the head office of the Bank of British Columbia, which was amalgamated with the Canadian Bank of Commerce in 1901.

MISCELLANEOUS.

ARGENTINE NAVIGATION CO. (NICOLÁS MIHANOVICH).—A controlling interest in the Argentine Navigation Company (Nicolás Mihanovich) having been acquired by an Anglo-Argentine syndicate, it is proposed that the company be wound up voluntarily and that Sir William McIntock be appointed liquidator. The directors have entered into a provisional agreement with the Compania Argentina de Navegación Mihanovich, which has been formed in the Argentine, for the sale of the company's assets (except a sum of £300,000 in cash) for £2,200,000 on the basis that the new concern takes over the business as at January 1, 1930, including any profits made since that date. At an extraordinary general meeting held March 31st, a resolution approving the provisional sale agreement, for the liquidation of the Company and for the appointment of Sir William McIntock as Liquidator, was duly passed.

THE LANCASHIRE STEEL CORPORATION, LIMITED.—The Lancashire Steel Corporation, Ltd., announce that, at the instance of the Securities Management Trust, Ltd., who hold the controlling interest in the corporation, Mr. John E. James of the Cargo Fleet Iron Company Ltd., has been nominated by the Securities Management Trust to be chairman and managing director of the Lancashire Steel Corporation, Ltd. These appointments have been duly made. The Earl of Crawford and Balcarres has accordingly resigned the acting-chairmanship of the corporation which he has held since the resignation of Mr. J. Frater Taylor in September, 1930.

LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES LIMITED.—The twenty-first annual report for year ended March 31, 1931, has been issued. It shows a net revenue for the year (excluding £5,295 unappropriated by subsidiaries) of £216,511, which is equivalent to over 13 per cent. per annum on the share capital. This compares with a net revenue of £175,025 for preceding year. Adding £63,282 unappropriated at March 31, 1930, there is £279,793 available. The ordinary dividend is 10 per cent., and a bonus of 1 per cent. is paid, making 11 per cent. for the year, absorbing £171,600. For the year ended March 31, 1930, 10 per cent. was paid as a dividend, but no bonus distribution was made. The directors recommend transferring £15,000 to debenture stock and loans redemption account and £5,000 to contingencies account, also £12,000 to repairs and maintenance reserve account and £1,000 to staff welfare account. The carry-forward is £75,193. (In addition, there is £25,701 unappropriated by the subsidiaries.) The directors propose to pay three quarterly dividends of 2 per cent. each less tax (August 1st, November 1st, February 1st), and to recommend a fourth and final dividend of whatever the accounts may appear to warrant. The balance sheet contains several new and interesting departures, and is issued with commendable celerity.

VICKERS, LTD.—In the course of a Note on the 1930 accounts of Vickers, in our last week's issue, it was stated that no provision had been made for depreciation. We are officially asked to point out that Vickers, Ltd., is now a holding company and consequently its assets, other than outside securities, consist of investments in and loans to subsidiary and associated companies. The balance sheet of Vickers-Armstrong, Ltd.—the principal subsidiary—shows that depreciation has been written off in the case of all the other subsidiary companies, with the exception of the English Steel Corporation, which is a subsidiary of Vickers-Armstrong, Ltd., and respecting which a special note appears on the balance sheet of that company.

Commercial Reports.

MARKET SUMMARY.

Most commodity markets have been quiet under the influence of the approaching Easter holidays. The scarcity of some classes of coal in Yorkshire, besides raising prices there, caused the diversion of orders to other districts where as a consequence the situation has shown a slight improvement. A general coal strike in France has been averted by the intervention of M. Laval, the French Prime Minister. In Germany, the Ruhr Coal Syndicate has decided to terminate the existing wage agreements with miners on May 31st, and with the staff on June 30th. The iron and steel industries have experienced a slight increase in activity which is partly due to higher prices quoted by Continental makers and partly by an increase in demand. Non-ferrous metals have all lost further ground owing to the absence of an improvement in consumption. Among textile raw materials the recent improvement in wool and flax values has been maintained. Business in finished cotton and wool goods has been less active, but sales of rayon fabrics continue satisfactory. Jute has been firmer, and it is expected that the restriction of output by the Indian jute mills will result in a decrease of stocks of manufactured goods and eventually in better prices. In foodstuffs, wheat and other grains have been dull. Cocoa and tea have been firm, and British refined sugar has again been advanced 4½d. per cwt. Among miscellaneous commodities, little interest was shown in vegetable oils and oilseeds, and rubber at 3½d. per lb. for standard smoked sheet established a new low record. Hides have again been firm, but the demand for leather has slackened off.

THE COAL TRADE.

SHEFFIELD.—A shortage of supplies has brought about an all round hardening of prices, best steams and house coal having gone up a shilling per ton on the week. Demand for house coal continues strong. Best ordinary house coal is quoted at 22s. to 22s. 6d. at pits, and best hand-picked branch at 25s. 6d. to 27s. Best steams are in short supply for export with values firm at 18s. to 18s. 6d., f.o.b. Humber ports. Small fuels are less plentiful and command better prices. Some of the coke ovens are unable to obtain adequate supplies of slack, and this is reducing coke surpluses. Blast-furnace coke is firm at about 12s. at ovens.

GLASGOW.—A slight improvement has occurred in export demand within the past few days, and this has tended to counteract the falling off in home requirements as a result of the lengthening day. Inquiries are, however, mostly for early business, and although, partly for this reason and partly owing to output restriction, values are upheld, the outlook cannot be said to be definitely brighter. Lanarkshire prime splint is well booked, and steam coal moves readily in Fife, but the smaller sizes of nuts are still in plentiful supply. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 16s. 6d.; splint second, 15s. 6d.; navigation, 15s. 3d.-15s. 6d.; navigation second, 14s. 6d.-15s.; Hartley, 15s. 6d.; steam, 14s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 10s.; pearls, 10s. 3d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 13s.-13s. 6d.; third-class steam, 12s.-12s. 6d.; trebles, 12s.-13s. 6d.; doubles, 11s.-11s. 6d.; singles, 10s.; pearls, 10s. 6d. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 9d.; trebles, 12s.-13s.; doubles, 11s.-11s. 6d.; singles 10s.; pearls 10s. 3d.-10s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s. 6d.; trebles, 13s.; doubles, 11s. 9d.; singles, 10s. 6d.; pearls, 10s. 9d.; dross, 10s. 6d.

CARDIFF.—The pressure of shipments at the South Wales docks this week has not been as great as was anticipated. A few of the collieries are fully stemmed and are disposing easily of their authorised outputs, but there is very little new business in the market, and on Tuesday ten of the tips at the Great Western Company's docks were idle. The most favourably situated are some of the Monmouthshire and second-class steam collieries, while sized coals are all well supported; but for other small grades demand has been very inactive, and coke and patent fuel continue very depressed. The Great Western Company's returns for the four weeks ended March 15th last show a decrease in the exports of coal and coke to 1½ million tons, compared with 2.3 millions in the corresponding period last year, and in patent fuel from 70,000 tons to 34,000 tons. Prices have shown very little fluctuation, and for most grades they have ruled at the scheduled minima. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drays, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 14s. 9d. to 15s.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 20s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 23s. 6d. to 23s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—There is a little more business doing in Cleveland iron with local consumers for delivery over the next few weeks, but they are mostly holding back from making purchases ahead. A few small lots are reported to have been sold to Scotland, but any great expansion in business in that direction cannot be expected so long as Continental and Indian iron can be obtained very much cheaper. Export business is also very detrimentally affected by the lower prices of competing irons, which has reduced shipments from the Tees to a minimum. The weekly market on Tuesday was not largely attended, but pessimism was somewhat relieved. A few transactions were reported for early delivery, and also one or two for forward at unchanged official prices, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; No. 4 forge, 57s. f.o.b. or f.o.t. In hematite the position is similar to that of Cleveland. Consumers are delaying making forward purchases of any importance so far, but are watching the market very closely as they have business to place when they think the right time has arrived. In the meantime, orders for small parcels for prompt are rather more numerous, both on home account and for export. Makers are generally quoting 67s. 6d. for mixed numbers for early delivery, and are obtaining this figure, though in odd cases slightly less has been accepted. For forward, higher prices are quoted according to period required. The shipments of all kinds of pig iron this month are very poor. The steel trade is a little better. Some new orders have come to hand recently, and it is now reported that Cargo Fleet Co. are to share, along with two other firms outside the district, in an order for 32,000 tons heavy steel rails for the Southern Railway Co., also that an order has been placed of the value of about £60,000 for heavy steel rails by the L.M.S. between the three local firms of Dorman Long, Cargo Fleet, and Peases (Skinningrove). The L.N.E.R. order is expected to be placed shortly in which local mills expect to participate substantially. Prices for home, under the rebate scheme, are unchanged, viz.:—Steel plates, £8 15s.; steel angles, £8 7s. 6d.; steel joists, £8 15s. Other home quotations are: heavy steel rails, £8 10s.; iron crown bars, £10 10s.; 24-gauge black sheets, £8 10s.; 24-gauge galvanized corrugated sheets, £11. There is no expansion of business in ore, consumers' requirements being fully covered for early delivery by stocks on hand and quantities to receive under old contracts. Best rubio is nominally 16s. c.i.f. for prompt, and the rate of freight Bilbao/Middlesbrough for early loading is about 4s. 6d. Supplies of coke continue much in excess of demand, and the price is weak at 16s. delivered works for good furnace qualities. The number of furnaces in blast in the district is unchanged at 21.

SHEFFIELD.—The acuteness of the depression in the open-hearth steel department is evidenced by the arrangements for the Easter holiday. This will be considerably longer than in the past, and some producers are adopting the unusual course of closing their melting furnaces. Demand for billets continues to taper off. The British railways are showing a disposition to give out orders for material on a more liberal scale. Demand from overseas, however, shows no sign of expansion, and the requirements of the shipbuilding

industry show a progressive decline as the year progresses. Special steels command a limited but steady market, with reduced buying for overseas. Consumption of foundry pig iron keeps at a low level, and forward buying is still in abeyance. Prices of scrap are low and irregular. Less is going into consumption, and sellers are refusing low offers for fresh business, and several branches of the lighter and finished departments, such as tools, strip, and stainless steels are moderately employed, but cutlery and plate makers are experiencing very lean times, and many have been running their business at a loss since the beginning of the year.

GLASGOW.—The pig iron market remains quiet, and there is still no need to increase the number of furnaces in blast. Conditions in the Clyde shipbuilding yards show no improvement, and the absence of specifications from the shipbuilders makes business increasingly difficult at the steel plants. Structural engineers are not quite so busy as they were some little time ago, but British material is being used for the bulk of their contracts. In the sheet trade there has been some improvement in the bookings of black sheets for export, while home trade both in black and galvanized, is well maintained. Tube makers, like other branches of the iron and steel trades, are still only able to keep plants partially employed.

CARDIFF.—The position in the South Wales iron and steel trades shows no improvement. The scheme for increased co-operation in the control of output and for more centralized selling methods is not making the progress hoped for, and one important firm has given official notice of its intention to withdraw from the proposed new arrangements. Prices of tinplates, galvanized sheets and steel bars are nominally unchanged.

OTHER METALS.

TIN.—Although the restriction scheme is now in force, it has been realised that no immediate improvement can be expected in the statistical position. In addition, there has been no increase in the demand, with the result that the metal weakened further at the beginning of this week. Tuesday's price per ton, for "standard cash" at £119 5s. to £119 7s. 6d., compared with £121 5s. to £121 7s. 6d. on the corresponding day last week, while "three months" was quoted at £120 15s. to £120 17s. 6d., as against £122 15s. to £122 17s. 6d. a week ago. Stocks in London and Liverpool at the end of last week, at 26,834 tons, show an increase of 425 tons on the week.

COPPER.—The downward tendency in copper has not yet been arrested, and Tuesday's official closing quotation, per ton, for "standard cash," at £42 18s. 9d. to £43 1s. 3d., compared with £44 2s. 6d. to £44 5s. on the corresponding day last week. The minimum price quoted by Copper Exporters, Inc., for "electrolytic," c.i.f. Continent, remained unchanged at 10.30 cents per lb. Stocks of refined copper in official warehouses at the end of last week, at 8,616 tons, show a decrease of 68 tons, while stocks of rough copper remained unchanged at 1,538 tons.

LEAD.—Reports of the lack of agreement among producers about their future policy, coupled with a poor demand for the metal, had a depressing effect on the market. Tuesday's official closing quotation, per ton, for "soft foreign," at £12 1s. 3d. to £12 6s. 3d. compares with £12 12s. 6d. to £12 17s. 6d. on Wednesday last week.

SPELTER.—No improvement has become noticeable in the consumption of spelter, and as supplies have been heavy, prices slumped considerably at the end of last week. Early this week, however, sellers were more reserved, and quotations showed a slight recovery. Tuesday's official closing quotation, per ton, for "good ordinary brands" at £11 12s. 6d. to £12 1s. 3d. compares with £11 10s. to £11 17s. 6d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively have been maintained at last week's level. Antimony again changed hands at £25 to £25 10s. per ton for "foreign," while quicksilver remained unchanged at £22 7s. 6d. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool, March 31st.—During the last six days the market has continued in its dull and lethargic state, supply and demand about balancing each other, and fluctuations have been within a range of 10 points. The U.S. Farm Board is non-committal with regard to its cotton policy, but it is generally expected that the Farm Board will not support prices of the new crop, preparations of which are well advanced. Shortage of moisture in some sections is claimed and the bulk of the planting is yet to be completed. No definite trend of improvement in trade in any of the manufacturing countries is being shown at present. Spot sales for the period 26th to 31st (inclusive) are 30,000 bales, of which 10,350 bales are American, 3,850 Brazil, 2,750 Peru, 7,250 Egyptian, 1,250 African, 650 East Indian, and 3,900 sundries. Imports for the same days are 49,599 bales, of which 13,067 are American, 106 Argentine, 869 Peru, 10,289 Egyptian, 331 African, 24,184 East Indian, and 753 sundries. Quotations to-day are: American Middling, 5-83; Egyptian Sakel, 9-40; Uppers, 6-88; Brazil Fair, 5-88; Peru G.F. Smooth, 6-28; West African Middling, 5-88; and East African G.F., 6-88.

Manchester, March 31st.—Trading in the market during the past week has been on a reduced scale. Buyers have been more disposed to adopt a waiting policy. Conditions in outlets abroad are slow in improving and there are indications of rather lower raw cotton values. Inquiry in piece-goods for India has fallen off. A scattered business has been done in light whites and prints, chiefly for Calcutta, Karachi and Madras. The agitation against foreign goods and the higher import duties is very adversely affecting

trade. Some advices from China are slightly better, but staple cloths remain slow and the limited business done has been chiefly in fancies. Restricted operations have occurred in a variety of fabrics for South America, the West Coast of Africa and the Continent, but very little has been done for Egypt and the Near East. Rather less activity has been reported in the home trade section. Curtailment of production in the weaving branch remains on a large scale. A slower demand has been experienced in the yarn market, there being a smaller turnover in American and Egyptian counts for home use and export.

THE WOOL TRADE.—Bradford.—Since last writing the second series of London sales have closed, and taken altogether the results must be described as very satisfactory. After the home trade had set things going, Continental buyers came in with sufficient force to lift prices about five per cent. above the opening level. Under the combined influence of buyers a big weight of wool has been lifted, and there is not now an unreasonable weight of either merinos or crossbreds to be carried forward. Certain foreign buyers have relaxed their operations during the latter part of the series, and this has prevented the highest point being maintained. Some of the buyers evidently have other heavy obligations, but the home trade, along with French and Belgian buyers, have supported the series very well right to its close, and it is patent to impartial observers of the situation that all descriptions of wool are still in a sound and encouraging position. Comparing prices with that of the last series, average to superior greasy merinos are 1½d. to 2d. dearer, and scoured about 2d. for average to good wools, and 3d. for superior. Greasy merino lambs show an improvement of 1d. to 2d., and greasy, scoured, and slip crossbreds are 1½d. to 2d. higher. There is also an improvement of 1½d. to 2d. in Cape scoureds, and 1d. to 1½d. in greasies. A good interval between now and the opening of the next series will fully justify the basis of values now seen. Business has become quieter in Bradford, but prices for tops and yarns are steady. The great majority of firms have sold in sufficient quantities to make it unnecessary for them to consider any new business for the time being, and the most important consideration is for current contracts to be moved out of hand with reasonable facility. A very big weight of yarns having been sold at prices which represent little if any margin on current cost, is compelling spinners to present a very firm attitude to their manufacturing clients, and though it may be that here and there slight concessions are obtainable in tops, there is no probability of this being any more than a passing phase. The outlook points very definitely to values for the raw material and tops holding their own.

THE JUTE TRADE.—Dundee, March 31st.—Unfavourable crop reports have been the cause of a stiffening up in prices of raw jute. It is stated that there is a lack of rain, which is impeding sowings, while it is also reported that where sowings have been completed in the low lands there is a considerable decrease in the area covered compared with last year. A good deal of speculative buying and selling has been going on, but actual consumers of the fibre have shown very little interest, knowing that there is a plentiful supply of raw jute for the needs of the trade for at least another season. The consumption of the fibre at all centres is very greatly curtailed and trade in manufactured goods shows little sign of improvement. Buyers are quite interested and are making a good inquiry, but the actual results are still very disappointing. Prices of yarns and cloth have ruled round about their present level for months past, the drastic extent of curtailment of output helping spinners and manufacturers to maintain their quotations. The restriction by the Indian Jute Mills is expected to have its effect on reducing stocks of goods all over the world, and the enormous heights to which these have risen are the real reason for the stagnation in the industry. Sellers of the raw material have shown much reserve and prices during the past week gained from 10s. to 15s. per ton. The value of Daisee assortment rose to £15 15s., with threes at £15 10s. and fours quoted at £14. April/May. Tossa assortment is offered now at £16 15s. for good marks, while threes are from £16 10s. and fours at £15 5s., same shipment. Lightnings are variously named at from £16 10s. to £17, Red H quality ruling at £16 15s., while good First Marks are nominal at £18 10s. to £19, April-May. Hearts vary from £14 10s. to £16, according to quality. Spinners have shown little concern about further purchases, owing to the small demand for yarns. The imports of raw jute into Dundee this season from August 1st to date are only 434,000 bales, compared with 792,000 bales for corresponding period last season. A few trifling sales of jute yarns are being made. The very lowest possible for common 8-lb. cops is 1s. 10d. for 8-lb. spools and 1s. 11d. The supply of these hessian yarns is now very much restricted. Twist has been sold for 3½d. for 3-ply 8-lb., and 3½d. seems to be the most obtainable. Sacking yarns are steady at 2½d. for 24-lb.

weft and 3½d. for 8-lb. chains, while rove is quiet at from £19 10s. for 48-lb. and £16 5s. for 200-lb. Fine yarns are practically idle, and are nominally unchanged, while carpet yarns are only of moderate interest. A better inquiry is noticeable in the jute cloth market, and there has been rather more doing during the past few days, but manufacturers would like to see a bigger improvement. Prices are steadily held at from 2½d. for 10½-oz. 40-in. hessians, and from 1½d. for 8-oz. Linoleum hessians are quiet and heavy goods continue dull, even though prices have been further reduced. The prices quoted for Calcutta goods are 19s. 9d. for 10-oz. and 16s. for 8-oz., April/June, and 20s. and 16s. 3d. respectively, July-September. On spot sellers are offering 10-oz. at 19s. 6d. and 8-oz. at 15s., without finding many buyers.

THE GRAIN MARKETS.

WHEAT.—The continued spell of fine and open weather enabled farmers to push ahead with field work, and spring sowings are proceeding actively in most parts of the country. Growing crops are making satisfactory progress, and for the most part have recovered from adverse climatic conditions during the early months of the year. There is no change in the position of native wheat, offerings being small at most of the statute markets. There is not much inquiry on milling account, the small business passing being chiefly for poultry feed. Quiet and rather featureless conditions on the import market have been accentuated by the close approach of Easter, and, with little support from overseas markets, prices manifested a downward tendency. Liberal shipments and large arrivals at European ports ensure adequate supplies, and in view of the heavy statistical situation there is little inducement for millers to operate beyond immediate wants. Supplies will soon be supplemented by increased quantities available from Canada, now that navigation on the St. Lawrence will shortly be resumed, and already some anxiety is shown by Dominion sellers to lighten the May position. Russia has again been prominent of late as a grain shipper, and quantities in store at United Kingdom ports are being steadily absorbed. Australia is marketing her crop freely, while assisted by a good Oriental demand, and shipments so far show an increase of 3½ million quarters compared with that of the corresponding period in 1930. Argentine sellers refrain from pressing, but are willing to grant price concessions where business is possible. Quotations: No. 1 hard Northern Manitoba (Vancouver), ex ship, 27s.; No. 1 Northern Manitoba, ex ship, 26s. 9d.-27s. 3d.; No. 2 ditto, 25s. 3d.-27s.; No. 3, 24s. 3d.; No. 4 Manitoba, 23s. 3d.-23s. 9d.; Barusso, 63 lbs., 21s. 3d.; Rosafe, 63 lbs., 21s.; ditto, 62 lbs., 20s. 6d.; Australian, 22s. 3d.-23s. 3d. Russian, on sample landed, 20s.-22s.; ex ship, 21s.-24s. f 496 lbs. English, 4s. 6d.-5s. 6d. per 112 lbs.

AMERICAN WHEAT MARKETS.—The following table shows quotations in recent weeks with comparative figures for 1930

NEAREST FUTURE.	Jan. 2, 1930.	Apr. 3, 1930.	Jan. 2, 1931.	Mar. 18, 1931.	Mar 25, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	110½	56½	58½	f
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	111½	79½	79½	

The visible supply of wheat in Canada at 64,989,000 ¹ a decrease on the week of 98,000 bushels. Supp' stood at 75,266,000 bushels.

COMPARATIVE AVERAGES OF GRAIN.—This gives the estimated sales of home-grown wheat years 1930-31, 1929-30, 1928-29, 1927-28:—

Mar. 29, 1930.....	182,769	125,678	29,852	8 3	7 10	5 11

WHEAT FLOUR.—Home-milled flour continued in moderate demand, and tone weak in sympathy with wheat, while imported descriptions were difficult to vend, both spot and forward offers being easier inclined. Quotations: London straight run, 22s. 6d. per sack for country deliveries, and 21s. 6d. London area. Of imported, Manitoba patents, 21s.-24s. 6d.; Buffalo ditto, 21s. 6d.-26s.; Australian, 18s. 9d.-19s. ex store per 280 lbs.

BARLEY.—The market in barley has been inactive. Quotations: Californian old, landed, 30s.-35s.; new, ex ship, 30s.-41s. as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, landed, 17s. 3d.; ex ship, 16s. 3d.; March-April, 15s. 9d. per 400 lbs.; English malting, 6s. 3d.-13s. 9d.; feed, 6s. 9d.-6s. per 112 lbs.

OATS.—The demand for oats remained quiet. Quotations: Plate, landed, 11s.; ex ship, 10s.; Chilean tawny, landed, 13s. 6d.; whites, ex ship, 18s. 9d.; landed, 19s. 6d.; North Russian, landed, 13s.; South Russian, landed, 14s.; ex ship, 13s. per 320 lbs. English, 5s. 8d.-6s. per 112 lbs.

MAIZE.—Feeding stuffs experienced a quieter movement, and prices for new crop Plate maize have been slightly easier on favourable harvesting conditions and liberal clearances. Quotations: Plate, landed, 20s. 9d.; ex ship to arrive, 19s. 9d.; March-April, 17s.; new, April-May, 16s. 6d.; May-June, 16s. 3d.; June-July, 10s. 3d. per 480 lbs. Yellow maize meal, £6 5s. f.o.r. London per ton.

OTHER FOODS.

SUGAR.—An international conference of sugar producers has met in Paris last Monday, with the object of discussing the "Chadbourne plan" of export restriction. The market has been firm, and quotations for British refined sugar were advanced 3d. per cwt. on Friday last week, and by a further 1½d. per cwt. last Monday. It will be remembered that prices had already been raised ½d. per cwt. during the previous week. Raw futures have been easier, and Tuesday's sales included "May delivery" at 4d. to 6s. 4½d., as against 6s. 3½d. to 6s. 5d. on the corresponding day last week; August, at 6s. 7½d. to 6s. 7½d., against 6s. 7½d. to 6s. 8½d.; and December, at 6s. 11d. to 6s. 11½d., against 6s. 11½d. to 7s.

COFFEE.—The demand for coffee was quieter at the final auctions before Easter, at which 4,484 packages were offered; good qualities, however, did not lack support. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 72 bags; exported, 46; stocks, 2,716 bags, against 6,050 bags last year. Central American, landed, 7,616 packages; delivered for home consumption, 3,970; exported, 2,532; stocks, 102,779 packages, against 101,152 a year ago. Other kinds, landed, 9,627 packages; delivered for home consumption, 4,881; exported, 7,096; stocks, 96,570 packages, against 105,753 a year ago.

COCOA.—The market in cocoa has been slightly more active towards the end of last week. On Monday and Tuesday, however, demand was again quiet, and prices, though better than early last week, showed a slight decline. Wednesday's quotation for Accra, fair fermented, April-May, at 20s. 6d. per cwt., f.o.b., London contract, shows a rise of 6d. on the week. Last week's movements of cocoa in London were as follows:—Landed, 2,635 bags; delivered for home consumption, 9,501 bags; exported, 196 bags; stocks, 194,449 bags, against 191,575 last year.

TEA.—The quantities catalogued for this week's auctions comprised 31,254 packages of Indian, and 24,968 packages of Ceylon tea. Competition for all fine qualities was again keen, and some of the best qualities were dearer than last week.

RICE.—The demand for rice has been quieter, and Tuesday's price, for Burma No. 2, cleaned, March-April, in singles to Continent and United Kingdom, at 7s. 9d. per cwt., show a fall of 3d. per cwt. on the week. Movements in London during the past week were as follows:—Landed, 77 tons; delivered, 34 tons; stocks, 526 tons, as against 2,504 last year.

POTATOES.—The demand for potatoes showed a further improvement this week at the Borough Market, and prices were firm. "Best King Edward" sold at £7 10s. to £8 10s., as against £7 to £7 10s. a week ago.

SPICES.—The spot pepper market has been easier at the end of last week, but on Tuesday prices recovered following renewed inquiry and reserve of sellers. Tuesday's price for "Black Singapore," at 6d. per lb., shows a decline of ½d. on the week. Movements of pepper in London during the past week were as follows:—Black, landed, 12 tons; delivered, 29; stocks, 522 tons, as against 981 last year. White, landed, 58 tons; delivered, 43; stocks, 499 tons, against 878 tons a year ago.

MEAT.—Meat has been steady, and quotations for Argentine chilled hindquarters remained unchanged, while, in mutton, New Zealand frozen also sold at last week's price. Pork was dearer, and "English pork," per 8 lbs., realised from 5s. 4d. to 7s. 8d., as against from 5s. to 7s. a week ago. According to the Smithfield official

report, supplies of meat during last week amounted to 8,686 tons, as compared with 9,635 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.1 per cent. of the supplies, as against 83.4 per cent. a year ago, and imported mutton, mainly New Zealand, formed 81 per cent. of the total supply, as against 84 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—A much quieter feeling is in evidence in almost all sections. Demand for linseed is only small, notwithstanding a decline in values, though some business to Hull is reported in Plate on passage at £9 and £8 18s. 9d., current value for March-April shipment being around £9, with later positions at a small premium—indeed, September has been done at £9 5s. Indian linseed is neglected, and offerings are restricted. The quantity of linseed on passage to Europe has further diminished, and at 244,200 tons is 10,400 less than last week, but compares with only 97,100 tons a year ago. Cottonseed is easier, and black Egyptian to Hull alone being shipped, and April loading is reported at £6 10s., which about represents current price afloat to May. Bombay cottonseed on spot offers at £5 7s. 6d. There is only a moderate demand for linseed oil, which has further declined. Raw oil on spot is now quoted ex Hull mill £17 10s.; April, £17; with May-August, £17 5s.; and September-December, £18. Cotton oil is not so firm. Crude Egyptian ex Hull is held for £21, and common edible £24. Oilcakes and meals are in good demand, and prices are fully steady.

HIDE, LEATHER AND ALLIED TRADES.—Prices for hides from domestic cattle were fairly steady at the sales held at Manchester this week, the only alteration being an advance of 1d. per lb. on 70 lbs. and upwards, for second warbled ox and heifers. Cows and bulls changed hands at last week's figures, while the market for calf and sheepskins remains steady. In keeping with expectations, sales of foreign hides have fallen off with the approach of the holidays, but prices have ruled firm for most classes, and the turnover during the earlier part of the period under review has been quite good. South American wet salted hides have been taken up in respectable quantities. Argentine ox changed hands at the equivalent of from

6½d. to 6½d., and light ox at just under 5½d. Little business has been done for this country in dry South American hides, but the Continent has bought B.A. Americans at 7½d. and B.A. Inservibles at 4½d. Moderate inquiry has been encountered for African hides, and business has been done in first and second dry-salted Capes at 7d. and 6d., with one penny more paid for drys. Australian hides are a rather poor market, with only a few sales made in Queensland and N.S. Wales. Although orders for leather became less numerous and for smaller quantities as the holiday drew nearer, turnover was maintained at a fair level, and the general tone of the market gives the impression that the resumption of work will find the position unchanged. In English and wet-salted bends moderate sales have been made, but not quite up to the standard of recent weeks. More inquiry, however, has been met with from manufacturers of footwear for dry hide bends, and substantial orders have been accepted for light and medium weights. Similar conditions have prevailed in the market for upper stock. Black and brown glacé kid continues to receive regular attention, and sales, although not for bulk quantities, are frequent. Patent leather has made further headway, but supplies of the most-wanted sorts—cheap lines—have been considerably depleted, and the difficulty is to be able to satisfy customers' wants in this direction. Calf leathers, both box and willow, are still asked for, but business is confined to immediate needs only, and these are relatively small.

RUBBER.—There has not been any further progress in the negotiations between British and Dutch interests in connection with a scheme to restrict the supply of the commodity. Prices have been extremely weak, and Tuesday's official closing price per lb. of standard ribbed smoked sheet at 3½d., as against 3½d. on the corresponding day last week, was the lowest on record. Forward positions also declined. Business has been done at 3½d. for July-September, as against 3½d. last week; at 3½d. to 3½d. for October-December, against 4½d. to 4½d., and at 3½d. to 3½d. for January-March, 1932, as against 4½d. to 4½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows:—Landed, 2,419 tons; delivered, 1,701 tons; stocks at the end of last week at 132,183 tons, show an increase of 718 tons, as compared with the preceding week.

THE MONEY MARKET.

As had been anticipated, money remained stringent over the holidays. The market had had to borrow largely from the Bank at the end of the March quarter, and these loans fell due for repayment on Saturday, Tuesday and Wednesday. Treasury bill maturities put the market in sufficient funds to repay Saturday's loans, but Tuesday proved a more difficult day, and part of the money due to the Bank had to be reborrowed. Assistance was also

Correspondents to the Italian Treasury.

rendered to the market by some special buying of early June bills at $2\frac{1}{2}$ per cent. On Wednesday conditions became a little more comfortable, and the money due on that day was easily repaid. Money rates naturally ruled high during this stringency. On Tuesday $2\frac{1}{2}$ per cent. was charged for renewals, and $3\frac{1}{2}$ and even 4 per cent. for new money. The following day, when conditions were easier, 3 per cent. was the usual rate for new money, and on Thursday money was again easier.

Discount rates hardened in sympathy with dearer money. Last week's Treasury bill rate was all but $2\frac{1}{2}$ per cent., against a shade over $2\frac{1}{2}$ per cent. the week before. It is significant that, although tenders were originally invited for £40,000,000 of bills, in the end only £36,000,000 were allotted, and this looks as though tenders were at rather too high a rate from the Treasury's point of view. It must be remembered that these bills are July maturities, and therefore are unpopular in the market. Discount rates were firm again this week. On Wednesday the three months' market rate was a full $2\frac{1}{2}$ per cent., and in one quarter it was suggested that $2\frac{3}{4}$ per cent. was nearer the mark. A clearing bank was buying May bills at $2\frac{1}{2}$ per cent., with the object, it is believed, of providing the market with funds. The same day the result was announced of an offer of £1,000,000 Liverpool yearling bills. Applications amounted to £4,219,000, and the bills were allotted at an average rate of just over $3\frac{1}{2}$ per cent. The market did not apply heavily for these bills, and it is believed that they all went to a special quarter. Discount rates generally were easier on Thursday.

	Mar. 19, 1931.	Mar. 26, 1931.	Apr. 1, 1931.	Apr. 8, 1931.	Previous Rate and Date Changed.

Last week's Bank return showed that holiday and end-of-quarter demands had between them drawn an additional £8.2 millions of notes into circulation, and allowing for gold acquisitions by the Bank, had reduced the reserve by £7.4 millions. Discrepancies between Treasury bill payments and maturities caused an increase of £7.7 in public deposits, and it was these two factors between them which were largely responsible for the market borrowings at the Bank. These, to judge from last week's increase in discounts and advances, amounted to £13.3 millions. This week's return shows a further increase of £1.8 in the note circulation. This is not unusual, for notes continue to be withdrawn right up to the end of the holidays, and Wednesday was far too early for any appreciable number to have returned from circulation. Gold acquisitions, however, by the Bank during the most recent week amounted to £1.6 millions, and so only an insignificant contraction took place in the reserve. Treasury bill maturities at the end of last week probably explain a reduction of £7.4 millions in public deposits, while the increase of £5.3 millions in Government securities may reflect special buying of bills. Curiously enough, discounts and advances are down by £13.7 millions, or by more than the total amount apparently borrowed the preceding week. This suggests that Tuesday's borrowings were not on so large a scale as at the time was generally believed.

This week's bar gold from the Cape again went to the Bank of England, but the Bank had to bid 84s. 10 $\frac{1}{2}$ d. per ounce, or slightly over its statutory buying price. It is believed that otherwise there was danger of the gold being bought for shipment to America. The amount secured by the Bank was £744,400, while, during the past week, the Bank also received £750,000 in sovereigns from the Cape, and a further £200,000 in sovereigns which came, according to one report, from the Argentine. These acquisitions bring the Bank's gold stocks in the Issue Department up to £146.1 millions, against a minimum for the year of

£139.5 millions at the end of last January. Next week £985,000 is due in bars, and £250,000 in sovereigns, and with further gold in sight the Bank is on its way to recover much of its autumn losses.

This has imparted a more hopeful feature to the discount market, and there is some disposition to hold that it is unnecessary to maintain a minimum market rate of $2\frac{1}{2}$ per cent., especially as that rate is proving too high to bring bills into the market. If, however, it is true that American competition forced the Bank to bid for this week's market gold, there is some danger in letting discount rates slide. Bills bought on French and American account early in the year are now beginning to mature, and it has already been reported that some American funds released by the maturing of sterling bills have been re-transferred to New York. Again, even though the Paris spot rate of exchange is now above par, the premium on three months' forward francs is still big enough to make the forward rate coincide with the export gold point. Thus the time has hardly yet arrived for any relaxation of rates.

Early this week, New York banks were calling heavily, as, among other needs, they had to arrange to meet Treasury demands amounting to some \$70,000,000 in connection with Soldiers' Bonus payments. Money, consequently, became tight, call rate rising to $2\frac{1}{2}$ per cent. This stringency, however, did not last, and by the middle of the week the ruling rate was once more $1\frac{1}{2}$ per cent. According to the New York Stock Exchange estimate, brokers' loans at the end of March totalled \$1,908,000,000. This represents an increase of \$69,000,000 during March, and compares with a low record of \$1,720,000,000 at the end of last January. Gold imports for last week were returned at \$6,222,000 at New York, including \$3,951,000 from Buenos Aires and \$1,981,000 from Mexico; and \$2,510,000 at San Francisco, comprising \$1,962,000 from China and \$548,000 from Japan. The New York Reserve Bank gives the net March gold influx as \$26,000,000 and the net gold gain for the quarter as \$100,000,000. It estimates America's present gold stocks at \$4,600,000,000, which constitutes a new high record.

The foreign exchange market was quiet, with business restricted by the holidays. The New York rate went slightly in our favour to 4.85 $\frac{1}{2}$, and Montreal was also a little weaker at 4.86 $\frac{1}{2}$. Paris declined from 124.18 to 124.25, but Brussels improved from 34.94 $\frac{1}{2}$ to 34.92 $\frac{1}{2}$. Milan was considerably weaker at 92.93, or a loss of 15 points on the week. Madrid again improved to 44.15. Amsterdam moved fractionally to 12.11 $\frac{1}{2}$, but Berlin was unchanged at 20.40. Switzerland improved to 25.22 $\frac{1}{2}$. Stockholm lost $\frac{1}{2}$ at 18.15 $\frac{1}{2}$, Oslo $\frac{1}{2}$ at 18.16 $\frac{1}{2}$ and Copenhagen $\frac{1}{2}$ at 18.16 $\frac{1}{2}$. The South American currencies were steady on the whole, Rio being unchanged at 33 $\frac{1}{2}$ d., and Buenos Aires at 39 $\frac{1}{2}$ d. Montevideo lost one penny at 34 $\frac{1}{2}$ d. In the Far East the rupee lost $\frac{1}{2}$ d. at 1s. 5 $\frac{1}{2}$ d. The yen was unchanged at 2s. 0 $\frac{1}{2}$ d., and Batavia improved to 12.12 $\frac{1}{2}$. In the forward market New York was rather weaker at $\frac{1}{4}$ cent and $\frac{1}{2}$ cent premium. Forward Paris appreciated by one centime to 14 centimes premium for one month and by 5 centimes to 35 centimes for three. One month Brussels was rather weaker at 2 $\frac{1}{2}$ centimes premium, against 3 last week, but the three months' quotation advanced by 1 $\frac{1}{2}$ centimes to 5 $\frac{1}{2}$ centimes premium. Milan for one month's delivery lost two points at 9 centesimi discount, the three months' quotations being unchanged at 21 centesimi discount. Madrid went from one and 2 centimos premium to par and 2 centimos discount. One month's Amsterdam lost $\frac{1}{2}$ at 1 $\frac{1}{2}$ cents premium, but three months' remained at 3 $\frac{1}{2}$ cents premium. Switzerland weakened appreciably to 1 $\frac{1}{2}$ and 5 centimes premium. Silver declined by $\frac{1}{2}$ d. for both cash and forward to 12 $\frac{1}{2}$ d. and 12 $\frac{1}{2}$ d. respectively, as a result of Chinese and Indian selling and only moderate speculative support. The China silver exchanges declined in sympathy, Hong Kong losing $\frac{1}{2}$ d. at 11 $\frac{1}{2}$ d. and Shanghai $\frac{1}{2}$ d. at 1s. 3 $\frac{1}{2}$ d.

TARIFFS, WAGES AND EXPORTS.

THE customary crop of Easter political speeches has, with one exception, added little to current discussion on political and economic problems. The one exception was a speech delivered by Mr A. V. Alexander, First Lord of the Admiralty, at the Co-operative Party Conference at Blackpool, last Saturday. This speech was interpreted to mean that the Economic Advisory Council had reported to the Cabinet that the costs of British industry must be reduced, and that the tariff method of lowering real wages was preferable to a direct attack upon wage levels by industrial negotiation. Mr Alexander afterwards explained that he was not referring to any report by the Council to the Cabinet, but continued, "I think, however, it is common knowledge that certain economists, as well as leaders of industry and commerce, have indicated their views as being in that direction, and some of them are connected with the Economic Advisory Council." Thus watered down, Mr Alexander's speech becomes nothing more significant than a reference to the recent revenue tariff proposals of Mr J. M. Keynes and Sir Josiah Stamp, though we suggest, in passing, that if reports in various senses have been made to the Cabinet by individual economists who are members of the Economic Advisory Council, it would seem to be desirable that they should be published.

Mr Alexander apparently concurs with the general view shared both by Protectionist and Free Trade economists that British costs of production are too high; but he sees the remedy not in a reduction of the wages of the workers, but in measures of industrial reorganisation, which he rather vaguely describes with such phrases as "putting our industrial house in order," and "a much bigger effort in salesmanship." In this respect his speech harmonises in tone with the manifesto of the General Council of the Trades Union Congress, which was issued towards the end of March in reply to the demand for wage reductions by the National Federation of Employers' Organisations. This manifesto describes the method of wage reductions as an "obsolete expedient" and argues that the application of such a policy "can only intensify the slump by reducing the purchasing power of the community, thereby leading to further unemployment."

We do not dissent from the view of the T.U.C. that a policy which consists merely of an attack on *real wages* cannot hope to bring economic salvation to this country; and if the capitalist system could produce no more constructive idea than to "grind the faces of the poor," then we should feel that the time had come to enrol ourselves among the Socialist ranks. But the whole problem of wages and costs is so conducive to loose phraseology and confused thinking, that we are inclined to believe that the gulf between those who, like Mr Alexander, deprecate the lowering of living standards, and those who, like ourselves, maintain that, in all the circumstances of the time, *money wage* levels, especially in the sheltered industries, are higher than the country can bear, is by no means so unbridgeable as it may appear at first sight. For it need not by any means be assumed that Mr Alexander, in his desire to maintain real standards, would rule out the expedient of reductions in money wages where such reductions would do no more than balance reductions in the actual cost of living. Moreover, it is by no means clear that his school of thought would repudiate our belief that reductions in money wages in the huge range of transport and distributive trades should lead to a fall in retail prices which would go far towards balancing the nominal wage reductions effected.

Indeed, we are inclined to think that the gulf between Mr Alexander, and even between the Trades Union Congress, and ourselves, is less wide than that between the Free Trade School and the neo-Protectionist economists. The latter, apparently, start from the same common ground as ourselves, namely, that the costs of British production must be lowered, but they frankly confess their refusal to believe that money wages can be reduced by negotiation or that it is possible to break the rigidity

which our wage system has recently evinced, or that there is any way of restoring to effective practice the just and honest theory that no one should take more out of the national pool than he puts in. They are, therefore, impelled to search for a backdoor method of achieving what they despair of effecting by frontal attack, and the most alluring device for attacking the workers' standard of living is, of course, and always has been, a tariff. That is the first divergence between the neo-Protectionists and ourselves. The second divergence is, if we may accept Mr Keynes as the spokesman of the new school, that they have given up hope of re-vitalising our export trades, and being therefore compelled to concentrate on the possibilities of the home market, are led inevitably into proposals of tariff methods which are none the less stark Protection because they masquerade under more euphemistic titles, such as that of a "revenue tariff." We therefore part company with them on the two vital assumptions which underlie their new policy.

But deep though the divergency is in these matters, it becomes deeper still when we examine the results which they hope to achieve if their policy is adopted. Their main object, we must assume, is the common object of all good citizens, namely, to put workless British workers into remunerative production. It is common knowledge that the great unwieldy mass of unemployment is concentrated in a few leading export industries. Such unemployment exists in part, of course, because of the diminished purchasing power of our customers all over the world, but also in large part because of the fact that British costs are too high to admit of successful competition in world markets. Mr Keynes does not deny that his revenue tariff would tend to increase manufacturing costs, although he is at pains to minimise the effect in this direction. Admittedly, therefore, his policy would tend in the first place to aggravate the unemployment problem at its most acute point. He hopes, no doubt, to counteract this tendency and substantially outweigh it by putting workers into employment in other industries. But if any substantial success is to be achieved along those lines, it would first be necessary to solve the problem which has so far baffled every industrial country since the war, namely, the rapid large-scale transference of workers from one industry to another. Again, if we may add one more to the list of questions which we have put, without reply, to the neo-Protectionists in recent issues of the *Economist*, why are they so confident that the tariff method would really effect adequate wage reductions and obviate resort to other methods? In view of the fact that protectionist nations, like Germany and Italy, are finding themselves compelled to take drastic measures to reduce nominal wages, this question is neither unimportant nor irrelevant.

Frankly, then, we find in the latest utterances of our new Protectionists no hope, light or guidance for British economic policy at this critical time. Let us rather turn elsewhere for straws at which to clutch. We are optimistic enough to think that considerable hope lies in the development of opinion which is clearly taking place in the keenest minds of the Labour Party. The T.U.C. memorandum cannot be dismissed merely as a militant reply to an extremely provocative report by the National Federation of Employers' Organisations. The T.U.C. asserts itself, as in duty bound, in defence of the workers' standards, but it is not a little significant that the memorandum proceeds to emphasise the vital necessity of endeavouring to maintain and increase our export trade:—"In our own case it is hopeless to imagine that our large population can be maintained even at the existing standards of living unless we are able to carry on a large foreign trade, and it must be remembered that as our population increases so correspondingly we must obtain a greater and greater volume of increase in such world trade if we are to maintain twentieth century standards." If that really is a fundamental clause in the trade union economic creed, as it is in ours, then it

surely follows that the leaders of organised labour should be willing to examine impartially any method of restoring the prosperity of our export trades. If labour must be asked to contribute to national recovery, either by more intense effort or by temporarily surrendering the increment to real wages which the recent fall in prices has produced, then we are convinced that the most hopeful chance to secure agreement is for the extent of sacrifice demanded to be stated in plain intelligible terms. The worst method of endeavouring to improve our competitive efficiency is to foist upon the country a tariff which, while raising instead of lowering our manufacturing costs, would be rightly resented by the workers as an insidious attack on their standard of life.

AFRICA VIEW.

WHAT makes a view? Perhaps two things are needed in order to make it: a light to display the landscape, and an eye to discern what the light has to show. When Africa was still the Dark Continent (as it was until less than half-a-century ago), the heart of that darkness was impenetrable even to the most discerning eye; and, now that the cloud has lifted a little, there are still plenty of eyes that are blind to the light. Are not the shelves of our lending libraries stacked with books on African travel which leave the reader no wiser than he was before he opened them? But here is a book—Mr Julian Huxley's "Africa View"—which bears witness that, for once in a way, light and eye have entered into a fruitful partnership.

This is not a book of travels, though it contains travel sketches as fresh and vivid as any that one is likely to meet in books wholly devoted to this genre. Mr Huxley's travel sketches, however, are subordinate to a larger plan. Their function, in "Africa View," is to make this distant and exotic part of the world "stand out solid" before the mental vision of an English reader, and to put him *en rapport* with the African—living and extinct, native and immigrant. It is when he uses his eye to look at Homo Africanus that the breadth and depth of Mr Huxley's vision tell with most effect. He sees the African, first and foremost, with the eye of a biologist, as the most interesting item in a local fauna which ranges from the Tsetse Fly to the Elephant. With the eye of the geologist, he projects African Man's racial history back into the Upper Palaeolithic Age; and with the eye of the anthropologist he places him in his present social setting and introduces us, therewith, to the major African problems of to-day: government, land, labour, production, immigration, education, religion. These questions are nearly all of them by nature complicated, and by convention controversial; and here we see the value of Mr Huxley's scientific line of approach. It enables him to handle the controversial questions frankly, yet without animus, and to illuminate the complicated questions by throwing the essential features into relief.

And what view does this remarkable book call up in the reader's mind? In the foreground of the mental picture, huge and still and mysterious, stands Homo Africanus himself. Huge, as he is, his features are indistinct. Read, for instance, the chapter on "Early Man in East Africa." You will find that the earliest known human history of Africa runs parallel with that of Europe. On both continents, Neanderthal Man—or subman—with his "Monstorian" flint implements is first in the field, with Homo Sapiens, armed with "Aurignacian" implements, following at his heels. Whence did these two races find their way successively to both continents? From some Garden of Eden rendered uninhabitable by the desiccation of what has now become the Sahara? And what happened after their arrival? In Europe, the better-armed late-comer drove or killed out his predecessor. In the Rift Valley, where Professor Leakey's excavations have brought the African relics of the two races to light, Aurignacian Man seems to have contented himself with taking the eligible place in the shadow of the rift side and leaving Neanderthalensis to

broil, unextirpated, in the sun. And what happened in Africa then? For neither of the two prehistoric Eurafian races can be identified with the modern African negro. Neanderthal Man, in both Africa and Europe, was something more primitive than any race that survives in any part of the world to-day. Aurignacian Man, in Africa, seems to have been of the breed that has not ceased to inhabit Europe from the Upper Palaeolithic Age to this day. Is the negro a child of mercy—the result of Aurignacian Man interbreeding with Neanderthalensis in Africa instead of giving him the short shrift which he gave the same unfortunate predecessor in Europe? Or are we to suppose that neither of the two prehistoric races has left any progeny in Africa, and that the negro is a third and comparatively recent immigrant from elsewhere?

Whence the negro? Perhaps that is an idle question, for the solid fact is that he is there. Little though we know about him yet, we can be pretty sure already that he is not doomed to extinction under the impact of civilisation, like so many primitive peoples—Polynesians and Melanesians, Tasmanians and Australian aborigines and North American Indians. He may be decimated by civilised warfare and civilised diseases and, above all, by a civilised economic system which uproots him from his family and his village and sends him to labour far away under unnatural conditions. But, after all, a race which has survived the slave trade in sufficient strength to become the preponderant element in the population of tropical and sub-tropical America is likely to survive the lesser ordeal to which it is being subjected in its homelands to-day; and so far from dying under the shock of contact with Western civilisation, it shows signs of being stimulated to enlarge its domain. Mr Huxley points out that the French colonial empire constitutes a kind of bridge between the heart of Africa and the heart of Europe. Along this bridge, government and trade and culture have travelled first from Europe into Africa. Will it always be a one-way street, or will the bridge be used one day by an African race in search of new worlds to populate in Europe?

Whether the negro? That indeed is a question worth pondering. For the Black Race, so far as we know, is the only one among the principal races of Man that has not yet taken a hand in the very recent human experiment called civilisation, in which the White Race and the Brown Race and the Yellow Race have already shown their mettle. This does not mean that the Black Race is not in the running. To infer that, one must believe that the world was created in 4004 B.C. and that the African is afflicted by Noah's curse on Ham. Certain other beliefs as primeval as these do seem still to be held by some of the European missionaries whom Mr Huxley found at work in Africa, labouring to convert the African to a Fundamentalist kind of Christianity from a paganism of much the same order. But at least this is no longer the commonly accepted view nowadays in the White Man's world. The accepted view is that civilisation goes back to about the date at which the Creation was placed in the chronology of our grandfathers, and that the intervening six thousand years are an insignificant period compared to the total life-span, up to date, of the human race, and a mere twinkling of an eye compared with the antiquity of the planet, not to speak of the universe. The African, as we see him on Mr Huxley's view, stands poised at the starting-line of civilisation, with one foot already lifted to run an instant after his fellow-runners have started on the race. So far from being out of the running, the African is the dark horse. And who can tell what his place in the procession will be when the next six thousand years have passed in a flash? Perhaps, by then, he will be leading. And even the next century or so may have surprises in store. Suppose the African were to beat us hollow at our own game—turning out, under our tuition, to be the ideal mechanic, or the ideal robot (if robotism is the winning card in this round of the game of racial competition)? Fortunately for us—or should we say, fortunately for the African?—this possibility is rendered rather improbable by the strong æsthetic vein which the African, like the Russian, displays. Perhaps the African's destiny is to be reserved by Evolution or Nature or whatever goddess it is that presides over human affairs

in order to carry on her work when the tyranny of the present "machine age" is overpast.

Meanwhile, to-day, as in the Lower Palaeolithic Age some 20,000 years ago, two races confront each other in Africa: this time, the negro *vis-à-vis* the intrusive progeny of the European branch of the Aurignacian Man. This encounter is taking place all over the continent, which the modern European intruder has now succeeded in penetrating and opening up and linking on to his own worldwide system of economic operations. At the same time, the crucial point is precisely that part of East Africa in which the author of "Africa View" spent his four months; for this is a Black Man's country containing enclaves of territory in which the White Man hopes to settle permanently and reproduce his kind. Mr Huxley comes to grips with this thorny problem of racial relations in East Africa in his last four chapters. The wealth of scientific knowledge and human insight which he brings to his task give authority to the view which he puts forward; and the moderation with which he expresses himself enables him to be clear and frank without offence. Broadly, he expects the European in Africa to play a secondary part to the negro; and he rejects decisively General Smuts' vision of a chain of White Settlements extending up the highlands of East Africa from the Cape of Good Hope to the Equator and controlling the means of production of the whole region, including its negro inhabitants. Mr Huxley's Africa of the future is an Africa substantially civilised without having ceased to be preponderantly Black in race.

White versus Black in Africa: to the humanist this seems a titanic, all-absorbing struggle. But we must not forget, just because Mr Huxley is so good a humanist, that he is a biologist as well. And, for all we know, the biologist in him sees this human drama as something petty and ephemeral, like the Homeric Battle of Frogs and Mice. If we ask the biologist how he visualises his view of Africa, perhaps he will confess that the image which occupies the foreground of his mental vision is not a human figure of any colour, but the figure of an insect, the tsetse fly. African insect versus European science: possibly that is the most important of all the battles that are being fought on African soil to-day. And this, too, may be one of the decisive battles of the world.

THE WHEAT CONFERENCE.

(BY A CORRESPONDENT.)

THE Wheat Conference which has just terminated in Rome differed from the numerous other international conferences that have discussed the wheat crisis in recent months in that its agenda was expressly limited to this problem and that it was representative of all the interests involved. The principal result of the discussions was the formation of a committee representing the exporting countries, which will meet again in London on May 18th to formulate a

plan for the regulation of wheat exports in 1931-32 and the disposal of the accumulated stocks.

Wheat prices have fallen since 1925-26 about twice as much as general wholesale prices. Australian wheat at London and Liverpool in 1925-26 averaged 57s. 9d. a quarter, and in February, 1931, it was only 21s. 10d. The quantity of wheat on the world market (including for the U.S.S.R. exports only) in 1925-29 was only 10 per cent. greater than that in 1909-13, but demand had not kept pace with supply, *per capita* consumption in many countries having apparently diminished. The resulting disequilibrium gave rise to a record end-of-season carry-over in 1928-29. The practical disappearance of Russia as a wheat exporter in the war and post-war years stimulated the overseas countries to fill the gap. With the current season Russia has made a dramatic return to the ranks of the great wheat exporters.

It is expected that the cereal year 1931-32 will begin with a carry-over of at least 115 million quintals from the estimated exportable surplus of 345 million available in the current season. How much of this carry-over will be absorbed in 1931-32 depends on the trend of consumption and, assuming the normal compensatory action of favourable and unfavourable weather conditions throughout the world, on the area sown. As regards consumption, the Rome conference recommended intensive propaganda, especially in countries where wheat is at present comparatively little used, suggesting that part of the surplus stocks should be sold in these countries at low prices. The fact, however, that the market for rice (the great foodstuff of many of the countries that the conference had in mind) is, for reasons similar to those affecting the wheat market, experiencing a very severe depression, prevents a very optimistic view being taken of this possibility. As regards production, there is no sign of diminution in current sowings of autumn wheat in the Northern Hemisphere; and in the U.S.S.R. there has been a great extension.

The Conference, faced with the obvious impracticability of securing obligatory reduction in the area sown to wheat, since the crop is produced by a multitude of growers under very diverse conditions in each country, and is marketed for the most part without the effective control of any national organisations, could only recommend that "in countries which consider it advisable" the influence of market conditions should be reinforced by educational propaganda amongst the growers. That this, as the phrasing suggests, is only a pious hope is apparent when the attitude of the three main groups of countries concerned is considered. For the great exporters, the overseas countries and the Soviet Union, wheat plays a very great and in some cases a predominant part in paying for imports, and in addition there are vast areas ideally suited for wheat cultivation where no other crop is practicable. Among European countries all but a few are determined to maintain the crop in a predominant place in their agricultural system because of its supposed social and political advantages. Their attitude found, perhaps, its most highly sublimated expression in the words of a French delegate:

"Le pain, pour nous, comme pour tous les latins, est un aliment sacré." The great importing countries fear that a reduction of the wheat area in any of their chief sources of supply might, by coinciding with an unfavourable season, bring about a scarcity.

When the conference of exporting countries meets in London next month, the part played by wheat in their national finances may be expected to present one of the most serious obstacles to limitation of exports. To take two outstanding examples, Australia and the Soviet Union, the vital necessity, for purposes of national credit, of increasing exports of primary products may well cause hesitation in adopting a policy of regulation. The development of Russian exports in the near future is probably the most critical factor in the situation. The Soviet Union possesses at least 200 million hectares of the remarkably fertile black earth, the largest area of first-class wheat soils in the world, lying in a climatic belt more suitable for wheat than for any other crop; to carry out the Five-Year Plan a large volume of imports is necessary; and the export of wheat is one of the most important means of paying for these. Thus the stimulus to develop these lands is a very strong one. In 1930 the area sown to wheat exceeded that before the war; this year it is expected to be 41 million hectares, and in 1932 46 million hectares, producing over 400 million quintals. Mechanisation and the collectivisation of small uneconomic holdings are proceeding rapidly.

The financing of wheat growers by means of short-term credits as a means of encouraging orderly marketing was recognised at Rome to be a more urgent problem than that of medium- and long-term credits, though it was hoped that these would be specially studied by the proposed international mortgage credit institute. It was agreed that short-term credits must be organised on an international basis, in order to enable capital to be transferred easily from countries where it is plentiful to those where it is scarce, and the needs of growers in the northern and southern hemispheres to be balanced to some extent. The International Institute of Agriculture was requested to draw up a scheme. The further discussion of this problem will be one of the most important functions of the London conference, which will endeavour to regulate the marketing of wheat in the coming season.

The remaining subject of discussion before the Rome conference was the proposal put forward by Bulgaria, Hungary, Poland, Roumania, and Yugoslavia and supported by Austria, Czechoslovakia and Germany, for the establishment of preferential reciprocity for a limited period and for limited quantities between the wheat-exporting countries of Europe and those European importing countries having duties on cereals, in order to enable the former countries to maintain their wheat area in face of the severe competition from the low-cost wheat lands of the Soviet Union and overseas. The discussions on this question threw into relief the contrasts of background between the two groups of exporters, the large exporters being on the whole indisposed to favour special measures in favour of the European bloc. The chief technical obstacle to the adoption of this plan is the fact that it could be applied only with the consent on either side of countries enjoying most-favoured-nation treatment, while the delegates of several of the large exporting countries declared that it was impossible for them to assess the balance of gain and loss they might experience, were the plan adopted. The European exporters thus remain under the necessity of negotiating preferential treatment by the normal method of the commercial treaty.

The Rome conference has made suggestions; it remains for the exporters meeting in London next month to devise ways and means of putting them into practice. The nature of the problem has been precisely defined, but it is no less perplexing. Failing generally unfavourable weather conditions or increased world consumption of wheat in the course of the coming season, neither of which is likely, stocks will certainly accumulate. Reduced production is unlikely. Two special factors of uncertainty in the situation at the present time are the development of production in the Soviet Union and the disposal of the Federal Farm Board's great holdings. The Soviet delegates at Rome have reiterated their Government's determination to in-

crease production; the United States Government, by its refusal of the invitation to send representatives to the Rome conference, showed itself unwilling to participate in international co-operation. The depressing effect on the world market of large stocks and increasing production is likely to continue, and it is difficult to see what the London Conference can do to relieve the situation.

INDUSTRIAL PROFITS.

THE results disclosed by an analysis of the profit and loss accounts of British industrial joint-stock undertakings, published in the first three months of 1931, are, in the aggregate, less adverse than might reasonably have been feared in view of the marked decline recorded in the fourth quarter of last year. The profits of 596 companies, included in our weekly summaries during the past three months, amounted to £67,736,226, as compared with corresponding earnings of £75,816,474 a year ago. This represents a fall of 10.6 per cent., against 18.1 per cent. in the previous quarter:—

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in		Increase (+) or Decrease (—).	
		1929.	1930.		
First quarter.....	516	£ 60,888,497	£ 62,021,337	+1,132,840	+ 1.9
Second quarter.....	578	73,424,411	79,717,393	+6,292,982	+ 8.6
Third quarter.....	529	25,232,486	23,626,502	-1,605,984	- 6.4
Fourth quarter.....	509	39,272,377	32,174,677	-7,097,700	-18.1
	1,932	198,817,771	197,539,909	-1,277,862	- 0.6
First quarter.....	596	£ 75,816,474	£ 67,736,226	-8,080,248	-10.6

The next table shows quarterly fluctuations in net profits since the beginning of 1925. Although the present setback in profits is substantial, the effect of the trade depression on net earnings has so far not been nearly so pronounced as was the case in the slump of 1921-22, for on that occasion the maximum quarterly decrease in profits (registered six months after the downward turn was first apparent) amounted to no less than 53 per cent. In the present instance, the recession recorded for the first quarter of 1931 still leaves the curve of earnings at a point higher than in the first quarter of 1927:—

	1925.	1926.	1927.	1928.	1929.	1930.	1931.
First quarter.....	+ 0.1	+ 0.6	+ 0.0	+ 15.2	+ 1.5	+ 1.9	+ 10.6
Second quarter.....	+ 11.1	+ 8.3	- 5.7	+ 1.3	- 0.7	+ 8.6	...
Third quarter.....	+ 4.8	+ 2.8	+ 2.4	+ 9.7	- 3.0	- 6.4	...
Fourth quarter.....	+ 6.4	+ 3.8	+ 0.3	+ 3.1	+ 1.4	- 18.1	...
Year.....	+ 8.7	+ 6.3	- 3.0	+ 7.2	+ 0.0	- 0.6	...

In view of the relative resilience of total net profits in a period of declining export trade and acute unemployment, it is of interest to examine the results disclosed by analysing the aggregate figures in greater detail. This we do in the next table:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

Turning to earnings on capital, we show in the next table the ratio of net profits and of amounts reserved to total share capital in each of the past five quarters:—

	Total Ordinary and Preference Capital.	Net Profits.	Carried to Reserve, &c.	
1930.	£	£	%	
First quarter	595,281,227	62,021,337	10.4	
Second quarter	751,909,913	79,717,393	10.6	
Third quarter	268,078,042	23,626,502	8.8	
Fourth quarter	392,547,450	32,174,677	8.2	
	2,007,816,632	197,539,909	9.8	
1931.	£	£	%	
First quarter	756,871,719	67,736,226	8.9	
			10,960,617	1.4

Two years ago the ratio of net earnings to capital was 11.1 per cent. and the reserved proportion 2.3 per cent., as compared with 2.7 per cent. in the first quarter of 1928. Thus the decline in the percentage reserved has proceeded steadily during the past three years.

Our next table summarises for each quarter since the beginning of 1928 the average rates of interest and dividend paid on debenture, preference and ordinary share capital.

AVERAGE RATES PAID.												
	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1928.	1929.	1930.	1931.	1928.	1929.	1930.	1931.	1928.	1929.	1930.	1931.
1st quarter	4.78	4.89	4.89	4.82	5.3	5.4	5.8	5.6	9.3	10.9	10.0	8.5
2nd "	5.43	5.10	4.94	...	6.0	5.9	6.3	...	10.0	9.8	10.3	...
3rd "	4.90	4.88	5.36	...	5.4	6.0	5.0	...	10.7	10.3	8.3	...
4th "	5.04	5.29	5.19	...	4.9	4.7	4.5	...	10.3	10.6	8.4	...
Year	5.02	5.15	5.39	...	5.4	5.5	5.7	...	10.6	10.5	9.5	...

It will be seen that there has been an increasingly rapid rate of fall in average ordinary dividends distributed in the first quarter of the year from 1928 onwards. Changes, as compared with a year ago, are shown in detail in the final table:—

	Debenture Capital.	Rate of Int.	Preference Capital.	Rate of Int.	Ordinary Capital.	Rate of Div.	Rate of Div. a Year Ago.
Breweries.....	£ 8,350,618	4.9	£ 6,805,015	5.4	£ 8,836,307	11.4	13.1
Electric Lighting, &c.....	34,013,227	5.1	20,057,617	5.6	35,254,952	7.7	7.0
Financial, Land, &c.....	2,997,940	4.5	5,325,447	4.7	8,081,425	7.2	10.0
Gas.....	23,152,850	4.3	9,005,907	4.1	51,877,926	5.8	5.9
Hotels, restaurants, &c.....	1,369,000	4.4	1,878,594	1.3	1,371,740	9.7	8.7
Iron, coal & steel.....	11,579,532	5.9	17,909,755	4.6	3,080,033	3.3	3.5
Motor and cycle.....	70,000	4.5	4,592,000	8.9	11,406,755	8.6	9.3
Rubber.....	143,752	7.0	53,349	1.3	6,943,714	0.4	5.8
Shipping.....	4,500,000	5.0	2,875,000	5.3	9,508,324	1.3	3.2

The only groups in which an increase in the average rate of dividend is shown are electric lighting, hotels and restaurants, shops, and tramways. In the miscellaneous group the average rate of 10.5 per cent. compares with

With the exception of the rubber group, the brunt of the decline, it will be seen, fell upon shipping and textiles. The only group which showed an increase of a substantial amount was that of the electric lighting companies, though it will be observed that tramways, waterworks, gas undertakings and breweries, all catering for the domestic user and consumer, succeeded in slightly improving upon last year's results. Trust companies also made a good showing, though it should be borne in mind that in this case there is apt to be a natural time-lag before diminished revenue from investments is reflected in the profits declared by the holding company. Among the list of decreases, other than those already mentioned, the results of the hotels and restaurants group point apparently to lessened purchasing power, which is also reflected, though to a very moderate extent, in the net earnings of the shops and stores group. The final group of 222 miscellaneous companies, whose profits represent half the total, shows a much smaller decrease comparatively than was the case last quarter, when the decline in net earnings amounted to 18.2 per cent. In this group comparisons with a year ago are rendered somewhat unduly favourable by the fact that in the first quarter of 1930 a loss of over £2 millions was recorded by British Cement Products, as compared with a loss of under £3,000 in the present year. But, allowing for this special factor, the fact remains that a large number of undertakings engaged in a wide variety of industrial processes have succeeded in maintaining their net earnings relatively well. To some extent this result is due to the large net profits derived from tobacco, which represent a considerable proportion of the total, and it is also true that, so far as can be judged, the bulk of the net earnings of this group represents domestic, as opposed to export, trade. None the less, the Chancellor of the Exchequer may be able to take some comfort to his soul from the fact that the diminution of profits is not greater.

In the next table we set out the distribution of profits during each of the past five quarters:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1930.	£	£	£	£
First quarter.....	62,021,337	38,408,282	61.9	12,233,520
Second quarter.....	79,717,393	45,045,105	56.5	19,848,375
Third quarter.....	23,626,502	14,830,457	62.8	4,469,225
Fourth quarter.....	32,174,677	20,766,299	64.5	6,564,790
	197,539,909	119,050,143	60.2	43,115,910
1931.	£	£	£	£
First quarter.....	67,736,226	42,043,943	62.1	14,731,666
				21.7
				10,960,617

Once again there has to be recorded a somewhat disquieting decline in the percentage of total profits placed to reserve, which, at 16.2 per cent., compares with 18.4 per cent. a year ago and 21.1 per cent. in the first quarter of 1929. The next table shows in detail the apportionment of profits by individual groups:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Breweries.....	£ 1,804,196	£ 1,004,048	55.7	£ 368,886
Electric lighting, &c.....	6,500,511	2,715,288	41.8	1,117,345
Financial, land, &c.....	954,145	578,492	60.6	250,732
Gas.....	3,608,228	3,011,496	83.5	365,007
Hotels, restaurants, &c.....	252,514	133,301	52.8	25,000
Iron, coal and steel.....	2,760,764	1,019,867	36.9	829,967
Motor and cycle.....	2,473,444	984,150	39.8	410,216
Rubber.....	Dr. 66,617	25,561	45.1	668
Shipping.....	304,548	126,354	41.5	153,769
Shops and stores.....	5,503,419	3,051,870	55.5	1,536,095
Tea.....	80,995	53,032	65.5	9,204
Textiles.....	2,560,023	2,348,881	91.8	1,011,868
Tramways.....	606,542	353,830	58.3	86,600
Trust.....	5,315,307	2,791,308	52.5	1,626,083
Waterworks.....	766,764	486,699	63.5	240,092
Miscellaneous.....	34,316,852	23,359,766	68.1	6,700,142
Total.....	£ 67,736,226	£ 42,043,943	62.1	£ 14,731,666

It will be seen that in the rubber and textiles groups considerably more was distributed to shareholders than was earned. As compared with a year ago the reserved proportion has fallen from 41 per cent. to 8 per cent. in the case of shipping and from 14.6 per cent. to 12.4 per cent. in the miscellaneous group. The iron, coal and steel and motor and cycle groups continue to display highly conservative finance.

14.6 per cent. a year ago and 15 per cent. in the corresponding quarter of 1929. The setback from 10 per cent. to 8.5 per cent. in the average rate of ordinary dividend for the whole of the 596 companies included in the list may seem a small reduction in view of the acuteness of the general trade depression, but, as we have pointed out above, even this result has been attained only at the price of making more slender provision than in past years for reserves. The tendency to leave progressively less "in the business" is perhaps the least satisfactory feature which our analysis has recently revealed.

THE POLITICAL OMENS IN THE UNITED STATES.

(BY A CORRESPONDENT.)

THE muddled confusion of American politics still persists. On March 4th the troubled life of the Seventy-first Congress, whose chief feature was its bitter dissensions, by no means restricted to the normal party warfare, came to an end. Consisting of a Senate under the control of a Democratic-Progressive Coalition and a House of Representatives dominated by a Republican majority of 100, the two Houses were continuously at odds, with the Senate almost invariably antagonistic to the Hoover policies. Its most important legislative achievements were the Smoot-Hawley Tariff Act, the Agricultural Marketing Act, and the Veterans' Relief measure; and estimates which reached the stupendous total of ten billion dollars, the largest sum ever voted by any Congress, were passed during its life. Between the two Houses acute differences developed over both the Tariff Bill and the Agricultural Marketing Act. In the former case the Senate wanted a more moderate scale of duties than the Lower House, but in most cases failed to make its views prevail; in regard to farm relief policy, the Senate's export debenture scheme was blocked by the House of Representatives, but the latter had to give way in regard to plans for the relief of drought-stricken farmers. There was also a bitter fight over the Bill for governmental operation of the great power plant at Muscle Shoals in Tennessee, but, although the Bill secured a substantial majority in both Houses, President Hoover vetoed it on the closing days of the session on the ground that he could not countenance the Federal Government entering into the power business, and his veto was sustained. The one outstanding issue upon which the two Houses agreed was the Veterans' Relief legislation, which was carried by a two-thirds majority over-riding Mr Hoover's veto.

The demise of the late Congress caused no mourning on the part of the public, and more than one cartoonist struck a popular note by depicting Uncle Sam gleefully speeding its exit with a large and vicious boot. Both the Hoover administration and the business community are deeply relieved that the danger of the special session which Senator Borah and his friends demanded has now vanished. But the Republican party, which two short years ago was on the crest of the wave, emerges from the session in a very bedraggled state, and with its leaders in a mood of bewildered anxiety about the party's future. It is torn by internal fissures which scarcely admit of repair, for Progressive Republicans like Senators Borah and Norris do not pretend to offer even lip-service to the Hoover administration and are poles apart in their views and policies from eastern Conservatives like Senator Moses of New Hampshire and Senator Hale of Maine.

President Hoover still commands the fidelity of a substantial body of admirers, who regard him as a liberal-minded politician and an honest administrator, but he has lost a multitude of former supporters who feel that the special abilities of economic statesmanship and courageous vigour which his friends claimed for him have not so far been displayed in alleviating the unparalleled economic depression which has befallen the United States. He has evidently made up his mind to run again, and should have no difficulty in securing renomination, but the Republican politicians, who have never loved him, are coldly unenthusiastic about him as the party champion. He has committed himself to the cause of the

"Drys" in very definite terms, and has thereby finally alienated thousands of Republican "Wets," who have now reached the point when they are ready to break with their party for the sake of destroying the prohibitionist system.

It is the Democrats who, to-day, are in a cheerful mood. At the last Congressional election they wiped out the huge Republican majority in the House of Representatives, acquired for all practical purposes control of the Senate in the next Congress, and elected Democratic Governors for more than half the States. Yet this sudden revival of the party's fortunes, which were at their nadir after the electoral disaster of 1928, was achieved without the possession of any definite programme of really constructive policies. The Democratic leaders, while directing a steady barrage of aggressive criticism at the Hoover administration, have not ventured to propose any alternative plans for the solution of the country's troubles. The position is simply that the economic depression, following upon lavish Republican promises of continued prosperity, has given the Democratic party an unexpected windfall. They might be robbed of it by a sudden revival of business prosperity, which would restore popular confidence in Hoover and his party, but if the depression is only partially relieved by election day, the cry "Time for a change" will operate powerfully against a party which has been in power for twelve years.

Other contingencies which might ruin the Democratic prospects are either some major blunder in strategy, for which the party in the past has shown an uncanny talent, or the development of a bitter domestic feud. At present, the policy of Mr Raskob, the multimillionaire motor magnate, who is Chairman of the Democratic National Committee, and his allies, is to keep the party on strictly conservative paths and to persuade "Big Business," whose support has in recent elections been overwhelmingly thrown to the Republicans, that it has nothing to fear from a Democratic victory. They want, if possible, to make prohibition the leading issue of the 1932 campaign, and to get the party committed to a drastic anti-prohibitionist policy. But this has aroused the wrath of the Democratic "Drys" of the Solid South, like Senator Robinson, and other elements of the party, headed by Senator Cordell Hull, of Tennessee, also object to any idea of the Democratic party abandoning its traditional low-tariff attitude. Again, Governor Franklin Roosevelt, of New York, and his friends believe that, while an anti-prohibitionist plank in the Democratic platform is inevitable, an equally effective card will be a campaign against the "Power Trust," as the rates exacted by power corporations are regarded as extortionate by many communities.

Involved in the question of policies is the choice of a candidate for the Presidency. Mr Raskob is credited with designs to secure the renomination of his intimate friend and fellow Catholic "Al" Smith, and the latter has recently begun to evince a lively interest in politics after a long period of quiescence. But the Democratic leaders have unhappy recollections of the ease with which the Republicans were able in 1928 to stir up Protestant prejudice against "Al" Smith even in Democratic strongholds like Virginia, and they are unlikely to give their opponents an opportunity to repeat these tactics. Mr Smith, if he cannot get the nomination himself, is now understood to be ready to promote the candidature of Mr Owen Young. From the viewpoint of Mr Raskob and his friends this would be an admirable nomination, as no leading Democrat enjoys the confidence of "Big Business" in the same degree as does Mr Young, and on the Prohibition issue he is classified as cautiously "wet." But he has one great handicap in the shape of his very intimate connection with the "Power Trust," of which the General Electric Company and its subsidiaries are regarded as the head centre, and with Mr Young as its presidential candidate it would obviously be difficult for the Democrats to make the "Power Trust" and its misdeeds a campaign issue.

Thus, at present, the prospects are that the Democratic convention will live up to its traditions of being always the scene of a lively battle between the conservative

forces of the party and its more radical elements supporting Governor Roosevelt. But the possibility of the emergence of a third party cannot be dismissed. Senator Norris, of Nebraska, and Senator Borah, who persist in retaining the Republican label, although they differ from the leaders of their party on every possible issue, have summoned a non-partisan conference of Progressives to meet at Washington in the near future and discuss ways and means of saving the country from the economic morass into which it is now plunged. The politicians invited to the Conference belong nominally to both parties and include Republican senators like La Follette and Frazier, and Democratic senators like Costigan and Wheeler. It remains to be seen whether Senator Norris and his allies will go to the length of launching a third party. Third parties which have taken the field in the United States at recurring intervals have not had a very happy or successful history; but beyond the Mississippi, where they invariably have their origin, conditions seem to be ripe for another political revolt, and, if it develops, the chief sufferers will be the Republicans; for the Democrats have little or nothing to lose in those Western States in which a third party with radical leanings would have its greatest strength.

Notes of the Week.

The German Chancellor's Visit.—Mr Henderson has invited the Chancellor and Foreign Minister of the German Reich, Herren Brüning and Curtius, to visit London as the guests of the British Government. The date originally contemplated appears to have been some time early in May, before the meeting of the League Council; but, after conversations between London and Berlin, the visit has been fixed for the first week of June. The first motive which has inspired this invitation is a general consideration of courtesy and friendship. Owing mainly to the London Naval Conference of last year, leading representatives of all the Great Powers except Germany have been entertained by the British Government in London fairly recently. The non-representation of Germany at the Naval Conference was a consequence of the Versailles Treaty. Yet, though the terms of that Treaty still stand (and, indeed, remain to be implemented in respect of the promised reduction of armaments on the part of the Allied Powers), the spirit in which the treaty was dictated in 1919 is already dead and buried—at any rate, as far as Anglo-German relations are concerned. The relations of this country with Germany to-day are on the same footing of friendship as our relations with France, Italy, Japan and the United States; and, this being so, Mr Henderson's solicitude that one friendly Power should not be conspicuously passed over, when it is a question of courtesies all round, becomes almost a matter of course. It is also particularly timely and appropriate that Mr Henderson should make this gesture towards Germany immediately after he had taken the initiative in proposing that the League Council, at its forthcoming session, should examine the legality of the proposed Austro-German Customs Union. Each of these two steps is right in itself, and the combination of the two is an act of statesmanship. It must be added that Dr. Curtius assisted Mr Henderson by his conciliatory speech in the Reichsrat on March 31st, when he made it plain that Mr Henderson's proposal would not meet with opposition from the German Government. The Austro-German question will not necessarily be the most important subject of conversation when the two German Ministers come here. A greater matter is the now fast-approaching World Disarmament Conference, in which Germany's power, for good or evil, will not be less than that of any other participant. In regard to the Austro-German proposal, it may be mentioned, in passing, that the invitation to other countries to come into the proposed union appears to have set people thinking in Poland. Politically, the Polish Government would tend, on first thoughts, to follow the French lead. Yet, on second thoughts, the Poles cannot overlook the fact that a Polish-German Customs Union would be certain to weaken and might even ex-

tinguish Germany's demand for an eventual revision of her eastern frontiers, while, economically, it would be pure gain to agrarian Poland to obtain access to the Austro-German industrial market. Dare we hope that the European deadlock will relax? That is a reward which Mr Henderson indisputably deserves.

The "Nazis" in Trouble.—The National Socialist Movement in Germany has suffered two set-backs in rapid succession. It has lost control of Thuringia, the one State in the Reich where National Socialism has been more or less in power; and it has seen a rift open between its adherents in the South and the North. Thuringia was held for the "Nazis" by Dr. Frick, who became Minister of the Interior in that State last year, and made the most of his position by a campaign of serious high-handedness after the manner of State Governors in Texas or Mississippi. He introduced compulsory school prayers, garnished with "Nazi" sentiments; he made war on jazz music as something negroid and un-Aryan; and, in the name of Thuringia, he repudiated the Young Plan after it had been accepted by the Government of the Reich. Dr. Frick's ambition, and his fellow Nazis' hope, was to make Thuringia a "jumping off ground" for a "Nazi" conquest of the Reich at large. The German State in which the Weimar Constitution had been brought to birth was also to be the mother of the Fascist regime, by which the brief and inglorious reign of parliamentary democracy in Germany was to be superseded. Such was Dr. Frick's dream. The reality, however, was that he only came into power through the support of other parties, who, a year ago, took the "Nazi" movement so light-heartedly that they preferred a "Nazi" Minister of the Interior in Thuringia to the representative of a party with which they themselves had far more in common. The "Nazi" gains in the general election for the Reichstag last autumn appear to have caused Dr. Frick's benefactors some searching of heart. Accordingly, on April Fool's Day, the representatives of the People's Party cast their suffrages against Dr. Frick on a vote of no-confidence, and there forced him to resign. But the elimination of Dr. Frick is not so serious for the prospects of National Socialism in Germany as the rift between North and South. Hitherto, one of the remarkable features of the "Nazi" movement has been an apparent reversal of the historic relations between the two great divisions of the German nation. For the first time since 1866, we had the spectacle of a political movement in Germany in which the South led and the North followed. Herr Hitler himself is an Austrian; the scene of his first abortive Putsch in 1923 was Munich; and Munich is still the "Nazi" movement's general headquarters. In its flood tide last year, which reached its high-water mark at the September elections, the move-

BUDGET SUPPLEMENT

With The Economist of April 18th there will be published a special Supplement dealing with the National Finances. It will include an analysis of the accounts for the year ended March 31st, and the course of Revenue and Expenditure in recent years. As a handy form of reference, the Supplement will be of the greatest value to all those interested in Mr. Snowden's forthcoming Budget.

ment carried away with it a North-German movement of a fundamentally different character and temperament: the "Die-hardism" of the Junkers east of the Elbe. It was, perhaps, only a matter of time before the old masters of Prussia or Germany would rebel against an Austro-Bavarian leadership, and now the revolt has come at the first touch of adversity. It has come, moreover, on an issue of first-class importance. Herr Hitler, to his credit, has committed himself to a policy of strictly constitutional action. He pledged himself to this in the course of giving evidence at the Leipzig trial of Reichswehr officers on a charge of conspiracy last September; and now, again, he has instructed his followers to conform strictly to the German Government's emergency decree, to which we referred last week. The Commander of the North-German group of the Nazi Storm Detachments has now revolted against Herr Hitler's constitutionalism, on the ground that the "Nazi" movement stands for "direct action" or for nothing. The recalcitrant Captain Stennes has been officially dismissed, but he has refused to vacate his quarters in order to make way for the successor who has been appointed from Munich. Without malice, we may hope that during the months ahead, which will be so critical for the future of Europe, the "Nazis" will be pre-occupied with their own affairs.

The Hitch in the Naval Arrangement.—It is bad news that the Anglo-Franco-Italian Naval Arrangement is in jeopardy. When the drafting committee was appointed to translate the terms of the written understanding between the statesmen into a text which would pass muster with the legal and the naval experts, we assumed that this was a mere technicality, and we made our minds easy. Nor were we seriously disturbed when, just before Easter, it was announced that "difficulties of interpretation" had arisen and that the work of the drafting committee was being suspended for the Easter holidays. The real seriousness of the hitch is now indicated—unfortunately beyond a doubt—by the hurried conference between Monsieur Briand, Monsieur Dumont, the French Minister of Marine, and Monsieur Doumergue, the President of the Republic, on the first stage of the President's journey from Paris to Tunis. On the present showing, it looks as though the hitch were of French making. In fact, it looks as though the French Ministry of Marine were putting pressure upon the French Government to go back upon the arrangement which was definitely entered into by the responsible representatives of the French, British and Italian Governments on March 1st. The point at issue is what the proportion of new and old vessels is to be in the French Navy at the end of 1936. At the present moment, according to French figures, France has a superiority over Italy of 172,295 tons in up-to-date ships and 61,306 in over-age ships, making a total superiority of 233,601 tons. The effect of the March arrangement will be that, on December 31, 1936, France will have a total superiority of 229,467 tons, 158,441 of which will be in up-to-date vessels and 71,026 in over-age vessels. In other words, the margin of French superiority will be almost as great as now; and the small diminution both in the total and in the contingent of up-to-date vessels is not a high price to pay for Italy's consent to suspend her claim to parity with France for five years. Now, however, the French Ministry of Marine is apparently demanding that France shall be allowed to have in hand, by the end of the period for which the arrangement is to be in force, 66,000 more tons of up-to-date vessels than the arrangement allots to her. They propose to keep within the letter of the arrangement by promising not to float these 66,000 additional tons before January 1, 1937, and presumably they are prepared to scrap 66,000 tons of their over-age vessels as an offset. Even so, this change in the terms of the arrangement, if it were accepted by the other parties, would completely upset the proportions of naval strength, as at the close of 1936, which the arrangement contemplates. The French defend their demand by pointing out that the arrangement will give Italy, at that date, as much as 426,925 tons of up-to-date vessels out of a total Italian tonnage of 441,256 tons; but this is hardly to the point, since the French margin of superiority in up-to-date

vessels is only to be diminished by 13,854 tons (*i.e.*, reduced from 172,295 tons to 158,441). The new French demand would actually give France a much greater superiority over Italy on January 1, 1937, than now. On the face of it, this is not reasonable. Will the French Government really destroy the results of so much diplomatic labour by persisting in a demand which the British and Italian Governments cannot be expected to accept?

Mr Gandhi and the Moslems.—The hope that Mr Gandhi might come to London with a Hindu-Moslem concordat in his pocket is, unfortunately, fading away. The proceedings at the All-India Moslem Conference, held at Delhi during the last few days, were satisfactory up to a point, especially in that the Moslem delegation to the renewed Round Table Conference was, in the matter of safeguards, left a free hand to negotiate. But most disappointing results followed from Mr Gandhi's address to the Delhi Conference, which has provoked increased embitterment. The chief cause of the resentment aroused in Moslem circles was that Mr Gandhi countered the resolutions of the Delhi Conference by quoting against them, as though of equally representative authority, the views of the few Nationalist Moslems who are followers of his own and members of Congress. Stressing this conflict of views, Mr Gandhi made it his reason for refusing to negotiate with the All-India Moslem Conference on the question of communal safeguards. The Moslem reply was sharp and angry, and expressed refusal to submit to Mr Gandhi's "dictatorship." "What Moslem India is seeking is human brotherhood and equality. There is no room for either idols or dictators in the Islamic conception of *swaraj*. Dictatorship is not the rule of the people by the people for the people." Moslem leaders are protesting that Mr Gandhi is trying to play a political trick upon them, and for the time being it is unfortunately clear that communal animosities have been exacerbated by Mr Gandhi's visit to Delhi, from which so much in the way of appeasement had been hoped.

The Wheat Quota.—According to rumour, which may or may not be well-founded, but which has received some encouragement from a statement published this week by the Labour Party's official organ, the Cabinet is shortly to make up its mind on the wheat quota project for assisting the British farmer. Precise details of the plan which the Government is said to be examining have not been vouchsafed but there is talk of an enactment whereby the millers would be required to grind a specified percentage (10-15 per cent. is mentioned) of British wheat, for which the farmer would receive a guaranteed minimum price of 50s. per quarter. We hesitate to credit the Government with the intention of giving serious consideration to such a crude, unworkable scheme. Apart from the important consideration whether there is any justification for subsidising this tiny fraction of British agriculture at the cost of either a substantial charge on the Treasury or a rise of something between $\frac{1}{4}$ d. and $\frac{3}{4}$ d. in the price of the 4-lb. loaf, the questions at once arise: (1) To satisfy the quota, is wheat to be wastefully hauled from East Anglia to Glasgow mills? (2) What safeguards are to be devised against British farmers holding up supplies for 60s. or 70s. a quarter? (3) What is to be done to prevent a flood of imports of flour milled abroad from wheat obtained at the world price? The only certainty about this clumsy nostrum is that it would inevitably lead to a tariff on bread supplies, with a heavy bill for the consumer to foot.

Spending the National Income.—In the March *Economic Journal* an interesting, though of necessity very rough and tentative attempt is made by Mr A. E. Feavearyear to estimate the way in which the national income was spent during the years 1924-27, the latest for which data are available. He divides expenditure into the thirteen classes shown in the table below, and uses the figures of

the Census of Production, the Ministry of Agriculture pamphlet on food supplies published in 1929, the Inland Revenue returns, the railway returns, and other authoritative statistics, with an allowance where necessary for retail distribution charges, to compute the expenditure under each head. The result is shown below:—

ANALYSIS OF THE AVERAGE ANNUAL NATIONAL EXPENDITURE, 1924-27.		£ million.
Food	1,217	
Maintenance of the home	513	
Clothes	436	
Direct taxation	375	
Liquor	308	
Travel	240	
Smoking	116	
Entertainments and sport	85	
Sickness, accidents, and State Insurance	83	
Religion	42	
Reading	37½	
Miscellaneous	150	
Saving (including new houses and furniture, £96 million)	400	
Balance unaccounted for	185½	
Total	4,188	

The total of £4,188 millions represents the national income for 1924 as computed by Dr. Bowley and Sir Josiah Stamp, and Mr Feavearyear's estimates of the way in which it is spent only fails to account for 4.4 per cent. of this, which, in view of the many approximations involved in both computations, is a very small margin. Lest the very high place occupied by expenditure in liquor unduly alarms our readers we append Mr Feavearyear's estimate of the distribution of indirect taxation among the other totals:—

	£ million.
Food	26
Liquor	136
Smoking	57
Entertainments and sport	6
Diffused throughout the whole	171
Total	396

Thus 44 per cent. of the national drink bill is money transferred to the Exchequer, as is nearly half the expenditure on tobacco. We are inclined to think that the travel item is underrated, as not only does it include no estimate for expenditure on foreign travel, but the expenses of motor-ing are calculated on a basis which the average motorist will probably regard as optimistic. After all that has been said recently about the Englishman's preoccupation with amusement and sport to the exclusion of more serious matters, it appears that we only spend about 2 per cent. of the national income in that way. If similar budgets were available for other countries a comparison would be highly instructive.

Co-operative Wholesale Society.—Delegates to the half-yearly meetings of the Co-operative Wholesale Society in April will have before them the record of the six months' trade which ended on January 10th. This shows (writes a correspondent) that total sales for 1930 were £85,313,018, a decrease of 4½ per cent. Supplies from the society's own productive works amounted to £25,825,426, so that more than two-thirds of the business is in handling the commodities produced outside the movement. For the last half of the year the sales were £42,293,262, a decrease of 7½ per cent. After providing for all expenses of production and distribution, interest on capital and depreciation of property, there was a trading surplus of £715,429. This is recommended for division by allowing society members £485,428 as dividend at the rate of 3d. in the £ on their purchases, while £154,114 is to be allocated in writing off the buildings, fixtures, etc.; £24,988 is to be transferred to the reserve fund, which now stands at over £1,000,000; and £50,000 is to be placed to the dividend equalisation fund. While the money value of the sales has dropped the volume by quantities has advanced, and the turnover of the Co-operative Wholesale Society in flour, margarine and many foodstuffs has substantially increased. Owing to the amalgamation of several distributive societies, the number of co-operative societies

banking with the Co-operative Wholesale Society is steadily declining. There are now 947 co-operative societies with banking accounts, while altogether the bank has now 27,835 active current accounts with various organisations. Whereas the trading departments have shown steady advance on profitable lines, the farms of the society continue to show losses. Of the eleven farms at work, eight had losses and three small profits, the aggregate deficit being £19,523, after providing £2,392 for depreciation and £2,133 for interest. The total acreage under cultivation is 16,618, and the supplies of live stock, produce, etc., were £219,909. Connected with the Co-operative Wholesale Society is a Health Insurance Section, which is receiving about 750 new members every week, the present membership being 290,000.

German Shipping Results.—The Hamburg-Amerika and the North-German Lloyd lines have published their first balance sheet since the establishment of joint administration, writes our Berlin correspondent. The two companies were practically amalgamated a year ago under an agreement which is to run for fifty years, and their first year of common working coincided with a most critical year for shipping. In spite of this they are distributing a 6 per cent. dividend, against 7 per cent. for Hapag and 8 per cent. for Lloyds last year, but this has only been made possible by the inclusion in the gross profits of each company of Rm. 16.73 millions of the American compensation payments. This is, however, only a small proportion of the total American payments, for the arbitration awarded Hapag \$41.8 millions and Lloyds \$27.25 millions, and the bulk of the payments will not be made until next year. This affords the companies a certain reserve, but it must be borne in mind that the large construction programmes which have now been completed by both companies were undertaken on the strength of these prospective payments. The effect of these programmes on the respective companies was very different: the giant passenger vessels *Bremen* and *Europa* did very well, and the Lloyd succeeded by this means in attracting so much of the transatlantic passenger traffic that, in addition to meeting depreciation, it was able to earn a moderate rate of interest on the capital invested in these ships. Hapag, on the other hand, concentrated on cargo vessels, for which there was no possibility of extensive employment during the world depression, so that Hapag was much more severely hit by the depression than the Lloyd. This does not appear from the profit and loss accounts as the profits are pooled, and the equalisation payments are already included in the gross profits. It may be assumed that the North-German Lloyd must have had to pay Hapag some 5-6 million reichsmarks. At the end of 1930 the gross tonnage of Hapag was 1,098,000 tons; that of the North-German Lloyd 955,000 tons.

U.S. Railway Consolidation.—A correspondent writes:—When President Hoover first announced that an agreement had been reached with regard to the grouping of the Eastern railways into four large systems, it was hailed somewhat unwisely as a useful step towards providing for unemployment. It is clear, however, that consummation of the plan, involving a long investigation by the Interstate Commerce Commission, will take at least twelve months. Moreover, the opposition to the proposal, at any rate in the Middle West and Western States, has tended to increase. Indeed, under present conditions on the American railways—faced as they are by road, water, air and pipe-line competition—it would seem that the most important aspect of consolidation is on the side of reduced expenditure rather than the creation of employment. As was pointed out recently by one of the most eminent of transportation economists, Professor Howard C. Kidd, in the *Pittsburgh Record*, consolidation will not add one ton to the volume of freight moved. British experience of railway grouping, and German experience of railway amalgamation, go to prove that such a policy permits important reductions in expenditure. In Great Britain it has amounted to well over £16,000,000 during eight years, but

such economies create redundancy of staff and unemployment, rather than increased employment. Figures relative to capital expenditure by American railroads during the last eight years do not suggest that such expenditure has been held up in any way owing to uncertainty as to the future policy:—

	\$		\$
1923	1,059,149,000	1927	771,552,000
1924	874,744,000	1928	676,665,000
1925	748,191,000	1929	853,721,000
1926	885,086,000	1930*	875,000,000

* Estimated.

An important event in the present consolidation situation was the publication in February of a study of Railroad Consolidations and Unifications, by the Special Counsel to the Committee of Interstate Commerce. This interesting survey states that there is no definite evidence that consolidations will result in substantial economies, nor will they produce any reductions in rates, although other minor benefits will probably result. Contrary to generally accepted views, it is claimed that financially strong lines benefit most from consolidation, whilst labour is generally a loser, unless protected by legislation. It is clear that the publication of this report is likely to delay progress on the four-system plan, a curious feature of which is its suggestion to make several important lines, like the Delaware and Hudson, joint to four companies, a policy which is strongly deprecated by our own Royal Commission on Transport. In brief, it would seem that for the moment the four-system plan is likely to provide added employment for politicians and lawyers only, and not for the unemployed it was intended to benefit.

Oil From Coal.—During the last few years prophecies have occasionally been heard that ultimate salvation awaits the British coalmining industry in the shape of the development on a commercial basis of the process of deriving liquid fuel from coal. Moreover, many scientific experts are convinced that the difficulties in the way of this development are in a fair way to be solved. No small interest, therefore, attaches to the announcement made this week that a new company, called the International Hydrogenation Patents Company, has been formed to acquire the interests in coal liquefaction processes owned by Standard I.G., the Royal Dutch-Shell Group, and the Imperial Chemical Industries. The announcement does not mean that a big output on a commercial basis is a certainty of the near future, especially if petrol prices remain at their present low level. Its importance lies in the fact that the patents and research work of these three big interests will be pooled, and that the perfecting of the necessary processes will be actively pursued under a single control and with the promise of unstinted resources for effective development. The question is often asked whether the twentieth century has in store for us any revolutionary invention, comparable in its effects on the economic world to the harnessing of steam in the nineteenth. Is it possible that the beginnings of an affirmative answer lie in this week's announcement?

Kreuger and Toll.—By its enterprise in originating and developing a system of international financing based on the security of match concessions, the Kreuger and Toll Company has made its operations one of the major factors influencing the economic development of the world. Hence the annual report of the directors, printed in full on a later page, is of exceptional interest. With the financial results disclosed for the past year we deal in an Investment Note; but the directors preface their survey of recent activities of their undertaking with an incisive analysis of the causes of the present economic depression; and their observations will repay careful study. Having remarked that the year 1930 closed without any clear sign of improvement in the general economic situation, they suggest that there are two causes of dominating importance underlying the world crisis. The first is described as disequilibrium in the international balance of payments. For various causes, countries which were previously large foreign lenders (and this particularly applies

to Great Britain) are no longer in a position to take their normal part in the financing of debtor countries, while those countries, i.e., the United States and France, which are now in a position to use their increased economic power as a basis for a considerable amount of international financing, have not so far utilised that power, though in both the countries named widening circles are beginning to realise that it is to their own advantage to assist in the re-establishment of better international equilibrium. So far the report covers ground common to most economists in all countries. But it proceeds to define as the second dominating cause of the crisis a factor to which perhaps insufficient attention has been given. It is suggested that the disappearance of the great merchant houses and private bankers, who had a wide latitude in the choice of their investments, and the substitution for them of industrial corporations, large deposit banks and insurance companies, more restricted in the use of their funds to clearly specified investments, has tended to make the whole economic structure more rigid than previously. In other words, there is at present a defect in our financial machinery which has had the result that, instead of savings being employed for the provision of "new articles of consumption corresponding to the needs of a population with an increasing standard of living," loanable resources are apt to be utilised simply for increasing the volume of existing commodities. That is to say, that while rationalisation has been decreasing the demand for labour in proportion to a given level of output, and hence throwing man-power back upon agriculture in many countries, "over-production" during the present depression has been intensified by our failure to stimulate variety of output. There is a great deal of truth in this thesis, and though the present economic difficulties cannot be fully appreciated without reference also to the influence of restriction schemes and artificial maintenance of prices in many markets, we should be inclined to agree that the need for greater variety of production is a paramount consideration which should govern the policy of the various new institutions, such as the Compagnie Centrale de Prêts Foncier, which are being set up, and in which the Kreuger and Toll Company are participating, for the purpose of increasing the scope of international financing.

An International Investment Trust.—The foundation is announced in Luxemburg of a new company to be called L'Union Internationale de Placements. It is understood that it will operate on the usual lines of a British investment trust company and among its subscribers are numbered many big French commercial and financial houses, and also important British, Dutch, Austrian and American interests. The chairman is M. Paul Tirard, and the board includes M. Edgar Bonnet, Dr. Carl Melchior, M. Max Hermant, M. van der Bengel, and M. Robert Wolff. It is understood that the last-named will act as managing director. Among French subscribers to the new company are mentioned the Suez Canal Company, the Compagnie d'Assurances Générales, the Compagnie le Phénix, the Société Lebon et Cie., the Banque de l'Union Parisienne and Messrs Maurice Rueff et Cie. Foreign subscribers include Messrs Helbert, Wagg and Company, of London, Messrs. Labouchere and Company, of Amsterdam, Messrs M. M. Warburg and Company, of Hamburg, the International Manhattan Company, of New York, and the Credit Anstalt, of Vienna. The foundation of this company clearly marks another important move towards the mobilisation and transfer of capital from centres where it is redundant to those where it is badly needed, and inasmuch as the subscribers mentioned above are presumably regarding the new company as a means of finding employment for their liquid funds, it should also mean a further diversion of capital from short-term to long-term channels. All this is definitely to the good, and it is particularly encouraging to see how important and influential is the part French interests are playing. French law renders it difficult to found investment trust companies in France itself, and apart from this it might not be easy to make the small

French investor regard this form of activity with favour. Thus it is a great gain that a way round any legal difficulties should have been discovered by domiciling the new company in Luxemburg, and it is a further gain that important French undertakings should have given so definite a lead. Looking back upon this and several similar events, it is becoming clear that France is making successful efforts to occupy her due place in the financial world and to make her contribution towards the more even distribution of the world's available funds.

Shipping Freight Index Number.—Following somewhat closely the trend of commodity prices, shipping freights—as measured by our index number of whole-cargo charter rates—lost in February the ground gained during the previous month. The March index figure was 0.7 per cent. lower than that for February, but was 7.6 per cent. higher than the corresponding figure a year ago. The following table summarises recent movements of the six group indices and of the total:—

AVERAGE 1898-1913=100.

	Average, 1913.	Mar., 1930.	Jan., 1931.	Feb., 1931.	Mar., 1931.
European Waters	110.0	96.3	88.0	87.1	86.5
North America	113.1	87.7	90.1	93.4	94.0
South America	123.4	91.2	90.1	94.6	90.5
India	106.3	94.2	101.3	96.9	99.2
Far East and Pacific	117.4	77.8	88.8	90.9	91.9
Australia	127.9	79.2	108.6	108.6	105.0
Total	116.3	87.9	94.5	95.2	94.5

Homeward freights from the East had a better tendency in March, partly as a consequence of the diminution of ready tonnage and partly in response to a fair inquiry from the Rice Ports; and Australia chartered a number of vessels, though the business was mostly grain for Far Eastern discharge, and rates to Europe were not fully maintained. The Plate market weakened again towards the end of the month, the Federal Farm Board's statement with reference to the 1931 wheat crop acting as a depressing influence on the grain market. The North American section was featureless, and outward coal rates, except for Southern Europe discharge, were dull. Individual fluctuations in the components of the index are shown below:—

AVERAGE 1898-1913=100.

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	79.1	+ 0.6	South America—out-		
Bay—outwards	99.1	— 1.8	wards	73.0	— 1.9
Bay—homewards	87.1	— 4.8	South America—		
Mediterranean—out-			homewards	108.0	— 6.3
wards	89.3	+ 4.3	India—outwards	98.3	— 2.7
Mediterranean—			India—homewards	100.2	+ 7.5
homewards	85.6	— 2.2	Far East, &c.	91.9	— 1.0
North America	94.0	+ 0.6	Australia	105.0	— 3.6

Expressed as a percentage of the average for 1913, the total figure of our index number for March works out at 81.3, compared with 81.9 in February and 75.5 a year ago.

Norwich Union Life Insurance.—Two features which characterise the operations of this, the largest British mutual life office, may be singled out for special remark, namely, the world-wide nature of the business and the unusual distribution of the assets. With regard to the former, the total new life assurance business and its source is shown below:—

	1929. £	1930. £
United Kingdom	4,247,781	4,677,475
Irish Free State	384,078	378,346
Dominions	2,052,329	1,998,286
Foreign	1,207,473	979,527
	£7,891,661	£8,033,634

The increase in the total is thus entirely due to more intensive cultivation of home business, every other source showing a falling off. Part of the decrease in foreign business was attributed by the chairman in his speech at the annual meeting to "the constant flow of articles belittling

our own country, which, though really only intended for home consumption, cannot but create uneasiness when copied in foreign journals." "It would be beneficial," he went on to say, "if attention were directed to the advantages this country provides and its ability to finance other countries to the mutual benefit of all concerned." The other feature, namely, the unusual distribution of the assets is exemplified by the following classification of the investments in the 1929 and 1930 balance sheets:—

	1929. %	1930. %
Mortgages and loans	43	44
British Government securities	8	7
Other Stock Exchange securities	24	23
Norwich Union Fire Insurance Society shares	19	18
Properties and other miscellaneous assets	6	8
	100	100

The first item in this table is represented by an unusually high percentage, the average for the mutual offices in this class of investment being only 25 per cent. The society follows its own traditional policy in dividing its attention more or less equally between mortgages and Stock Exchange securities, and this preference has had an important effect in two directions. In the first place, the mortgage business has been a considerable aid in the transaction of life assurance and sinking fund business, and, in the second place, the yield on the foreign mortgages, which account for one-third of the total mortgages and loans, is mainly responsible for the high rate earned on the total funds, equal to an average of £5 0s. 4d. per cent. net during the last five years. The most remarkable item is the investment of 18 per cent. of the total assets in the Norwich Union Fire Insurance Society, which was acquired in 1925, to conserve and consolidate the business of the life office. Since that time the capital of the fire company has been entirely paid up out of profits, and the company's free assets have been augmented by a sum of £624,000. So far, the yield to the parent company on the dividend received has only been 4½ per cent. gross, but the way is now clear for an advance in the dividend, and the investment should hereafter be more directly remunerative. Embodied in the 1930 report is a brief explanation of the results of a quinquennial valuation of assets and liabilities on December 31, 1930. These results are as follows:—

	1921-25. £	1926-30. £
Trading surplus earned during quinquennium	2,787,769	4,526,338
Profit or loss on securities	37,361	— 338,334
Brought forward	21,087	254,385
	2,846,217	4,442,389
Allocations:—		
To Bonuses to policyholders	2,591,832	3,991,370
„ Carried forward	254,385	451,019
	£2,846,217	£4,442,389

The surplus is distributed in the form of a reversionary bonus at rates varying according both to age at entry, to duration and to class of assurance, and exact comparison with the rates declared five years previously is difficult. It is stated, however, that the actual rates work out at an average of from 10 per cent. to 15 per cent. in excess of the 1925 bonuses. For whole-life policies the rate ranges from 54s. per cent. per annum to 95s. per cent., and for endowment assurances from 38s. per cent. to 60s. per cent.

Scottish Amicable Life Assurance.—The 1930 report contains a resume of the results of a quinquennial valuation of assets and liabilities on December 31, 1930. It is stated that, during the quinquennium, the balance of profit realised from the sale of securities has been applied, in accordance with previous practice, to writing down the value of the remaining assets. The whole of the assets have been revalued, the Stock Exchange securities at market prices, with further reductions in the case of relatively less marketable securities, and the aggregate of these values "is substantially in excess of the amount appearing in the balance sheet." Moreover, the chairman stated in his speech that, since the date of the balance

sheet, there has been a "considerable appreciation" in market values. It is a comfort and a pleasure in these days of crumbling values to point to the great financial strength of this and other old-established life offices, achieved as a result of generations of careful husbanding of resources. The following table shows the comparative figures relating to the last two quinquennial valuations:—

	1921-25. £	1926-30. £
Trading surplus earned during quinquennium	978,257	1,144,498
Brought forward	101,443	189,024
	£1,079,700	£1,333,522
Allocations:		
To Bonuses to policyholders	790,676	1,071,836
„ General reserve	100,000	100,000
„ Carried forward	189,024	161,686
	£1,079,700	£1,333,522

The real increase in the trading surplus is much greater than is apparent, since the 1926-1930 figure is arrived at after valuing the life assurance contracts on a 2½ per cent. basis instead of the 3 per cent. basis previously adopted. The amount allocated as bonus to the with-profit policyholders leaves, therefore, a real undistributed margin of trading surplus probably fully as large as was the case five years earlier. The same method of distribution of profits, namely, a compound reversionary bonus, has been followed, and the rate of bonus for the five years just ended is to be 42s. 6d. per cent. per annum, compared with 40s. per cent. per annum for the five years 1921-1925. So far as the operations of the year 1930 are concerned there has been an increase in new business from net sums assured of £1,235,527 to £1,309,849, assisted, no doubt, by anticipation of the favourable results now disclosed. Gross interest earnings have risen, but the increase in the rate of income tax has neutralised the increase, with the result that the net rate of £4 14s. 3d. per cent. remains the same as before. The society's total assets now stand at £10,801,091.

Overseas Correspondence.

UNITED STATES.

Corporation Dividends — Revenue — Public Finance — Money Market — Industry — Unemployment — Prices.
(FROM OUR CORRESPONDENT.)

NEW YORK, March 28.

THE long-continued strain of dividend reductions and omissions by industrial and railroad corporations, publication of poor earning statements and renewed weakness in commodity prices has proved too much for security prices. The share market has lost more of its winter rise and, while still moderately optimistic, is slightly less cheerful than it was.

There had for some time been talk of reduced dividend payments, but many people had hoped some of the more important companies would be able to hold out until business improved. Among the important companies to cut or omit dividends this year were the Baltimore and Ohio Railroad, the Anaconda Copper Mining Company, the Westinghouse Manufacturing and Electric Company, and the Delaware, Lackawanna and Western Railroad. Few companies have been able to earn their regular dividend rates in the first quarter, but many of them will maintain their dividend rates at least for a time. In this class may be placed the United States Steel Corporation and the General Motors Corporation. As yet no important public utility company has reduced its rate, and earnings in that group are down only moderately.

First-quarter earning statements in the coming month will be decidedly unfavourable, and at the same time the market will not have much to feed upon in the way of trade progress. These considerations are making for caution. Railroad net operating income in February, as shown by statements for about half the roads, was nearly

50 per cent. less than for the same month of a year ago—the worst for any month since the beginning of the depression. Freight car loadings are rising slightly, and the second quarter, it is hoped, will prove better than the first; but it will fall far short of a year ago. It is estimated that no more than half a dozen of the 40 or more important railroads earned their regular common share dividend rates in the first quarter.

As collection of first-quarter income taxes goes on, it is becoming increasingly apparent that the Government cannot continue its present rate of expenditure without an increase in income-tax rates, unless it finds new sources of revenue. Income-tax collections in March fell below estimates. For the first 26 days they amounted to \$327,265,000, compared with \$547,155,000 a year ago, and for the fiscal year since July 1st receipts were \$1,498,696,000, compared with \$1,799,789,000 last year. The present Treasury deficit is approximately \$600,000,000, and it is expected to reach fully \$800,000,000 by June 30th.

Collections for the March tax date will doubtless prove to be the high point of the year, since many pay in full at that time on 1930 income. For the remainder of this year collections will represent the poor 1930 earnings. Next year the Treasury will have to consider revenues from 1931 incomes, and present indications are that they will be less than those of 1930. Still, political leaders believe that no increase in taxation will be voted by the next Congress, to become effective in 1932. Obviously the politicians do not care to go into the presidential election in the autumn of 1932 under the necessity of explaining an increase in taxation. Whether they will have the good sense and the courage to reduce expenditure remains to be seen.

The most encouraging indication that something will be done to relieve the taxpayer and to bring the country back to sound economic policy is the announcement that the Farm Board will no longer buy wheat. The inference is that it will also cease to support the cotton market. Holdings of wheat and future contracts are estimated at 250,000,000 bushels, and the Board has given assurance that it will not dispose of this wheat in such manner as to depress the market. Its cotton holdings are estimated at around 1,500,000 bales, and this commodity also will be held off weak markets. It is doubtful whether the Farm Board will ever get its money back, but the half billion squandered in the price-fixing experiment will be written off cheerfully enough by the country if the lesson learned be not forgotten. However, there is some anxiety lest the Western radical element in Congress attempt to force Congress into some new scheme for farm relief, such as a bounty on wheat and cotton. The best safeguard against such schemes is the emaciated condition of the Treasury.

While Treasury revenues have fallen, demands for cash have increased, particularly on the part of the Veterans' Bureau for the loans under the new soldiers' bonus law. These loans already have been running at the rate of nearly \$100,000,000 a week. They will probably reach \$500,000,000 by the end of the fiscal year and \$800,000,000 in the calendar year. The combined result of falling tax collections and increased payments on the bonus and other heavy appropriations by the last Congress is to upset Treasury financing plans, and a new bill issue of \$100,000,000 will be sold at the end of this month. Another issue of equal amount will probably follow shortly. In May bills of \$214,281,000 will mature. Corporate security flotations in March were about \$700,000,000, the largest since last July.

Money markets have been somewhat firmer, and on two days the call rate rose to 2 per cent, but there was some window dressing by the banks, and fundamentally money is about as easy as ever. Gold continues to come in, though in small amounts, and borrowing for commercial purposes has not increased to speak of. The sharp rise in brokers' loans over the tax date, due to tax payments, was followed this week by a small reduction. This week's Federal Reserve statement shows a reduction in total credit outstanding of \$55,000,000, mostly the result of repayment of the Treasury overdraft and a drop in the bankers' acceptance portfolio.

The final week of the quarter has brought little encouragement over the trade outlook. Commodity prices have fallen again. The steady increase in rate of output for the steel industry came to an end, and this week's operations remained at around 56 to 57 per cent. of capacity, but the position of the principal consuming industries suggests little if any decline in steel production in the near future. Steel prices have turned more irregular. Motor output and sales continue to gain moderately, but such indices of business activity as bank clearings, electric power production and railroad traffic are not very encouraging.

Employment is rising slowly with the coming of warmer weather. A special survey conducted at the instance of the Government confirms private estimates and tends to discredit the optimistic stand taken on unemployment by Government officials. The new survey indicates that approximately 8,000,000 were unemployed last February.

Commodity prices in February, according to the Bureau of Labour, were 2 per cent. lower. Farm products dropped 4½ per cent.

INDEX NUMBER OF WHOLESALE PRICES. (1926 = 100.0.)

	February, 1930.	January, 1931.	February, 1931.
All commodities	92.1	77.0	75.5
Farm products	98.0	73.5	70.1
Foods	95.5	80.1	77.1
Hides and leather products	103.9	88.6	86.6
Textile products	88.3	71.0	70.4
Fuel and lighting materials	78.8	69.8	69.6
Metals and metal products	100.9	89.3	88.9
Building materials	95.7	82.9	81.8
Chemicals and drugs	92.3	83.6	82.2
House furnishing goods	97.0	91.1	90.8
Miscellaneous	78.5	64.7	63.9
Raw materials	91.8	72.9	70.6
Semi-manufactured articles	92.1	73.4	72.3
Finished products	92.6	80.5	79.3

Announcement of the Spanish credit, of which \$38,000,000 is to be taken here by a banking syndicate headed by J. P. Morgan and Company, was received with satisfaction. The Australian situation is viewed with anxiety, but there is a good deal of sympathy for the country, and hope is held that default may be avoided.

FRANCE.

Politics — Unemployment — Iron and Steel Output — Coal Industry — Protection.

(FROM OUR CORRESPONDENT.)

PARIS, April 8.

POLITICAL party preparations for the pending General Elections, which are due next spring, and which may have a strong influence on everything connected with the peace of Europe, are now proceeding apace. On the initiative of the Radical-Socialist Party, conversations have been begun between that group and the French National Socialists, the Radical Left (or Loucheur group), and other adjacent minor parties towards the Right, with a view to the formation of an "intergroup" for mutual benefit in connection with the coming contest at the polls. Aggressive action by the Socialists at Lyons, who have taken advantage of the fact that they hold 24 seats (or a majority of one) on the municipal council there, to nominate 24 Socialists as delegates to represent that body at the forthcoming senatorial bye-election, has resulted in M. Herriot's resignation of the post he has held for 25 years as mayor of the silk metropolis. This has apparently brought about a state of open warfare between his party and the followers of M. Léon Blum which may render impossible any revival of the Cartel des Gauches in connection with the "great national consultation" in 1932. The possibility of this Socialist aggression had already, before it actually took place, rendered the National Socialists and the other *socialisant* groups somewhat coy in accepting the Herriotist suggestion that it might be of mutual advantage to fight on a common platform, and this hesitation seems to have been accentuated as the result of the Lyons developments.

Westminster Bank Leaflets

¶ Points before Travelling, *Notes on the Protection of Travellers from Loss.* ¶ Thirty-nine Advantages of an Account with the Bank. ¶ The Saving Habit, an outline of the Home Safe system. ¶ The Postal Account, a service for those living in outlying rural districts. ¶ The Financial Machinery of the Export and Import Trade, or the function of the Documentary Credit. ¶ Foreign Exchange, with particular reference to Forward Exchange. ¶ Safeguards for Travellers, a warning against carrying foreign notes. ¶ Securities, their Custody and Supervision. ¶ Wills, Trusts, and Settlements, the Bank as an Executor.

41 LOMBURY, London, E.C.2

M. Herriot has resigned his own seat on the council in order to challenge, at a pending municipal bye-election, Socialist domination in another of the wards of the silk city. The result of this contest will probably bring the question of Socialist and Radical co-operation at the next General Elections to a definite solution. The situation, as it has existed for some time past, may be summed up as this: the Socialists, rightly or wrongly, estimate that they have nothing to gain by allying themselves with the Radicals, as they consider (in the light of recent bye-elections) that the replacement of the Radicals by themselves as the largest party in the Chamber, is merely a question of time; while the Radical Party appears to have good ground for fearing this view may be the correct one, and that only an accession of strength from the direction of the Right can save them from disaster. Meanwhile, the idea of a regrouping of some of the parties of the Poincaré-Tardieu-Laval majority, as one big coherent single group, has been mooted as a means of defeating both Radicals and Socialists at one and the same time. It is to be doubted, however, whether such a move would be practicable.

Unemployment returns for the week ending March 28th suggest that the economic crisis has reached its climax, and that a turn for the better may now be expected. The total number of workless in receipt of relief from the various municipal and departmental funds is returned for the end of March as 50,815, or only 71 units more than in the previous week; whereas the increase previously had been at the rate of from 2,000 to 4,000 a week. The number in Paris itself actually showed a drop of 10 units on the week. Whether this check to the increase of unemployment actually represents the situation it is impossible to say, as confirmatory evidence from other statistics is not yet available.

Iron and steel production figures for February show an appreciable fall. The total output of pig iron was 726,000 tons, against 803,000 tons in the previous month and 815,000 tons in February, 1930. Crude steel output was 693,000 tons, against 746,000 tons in the previous month and 772,000 tons in February, 1930. The home market remains unchanged, with a moderate amount of activity, although the slight improvement registered latterly in certain products is continuing. Export prices remain firmer, but activity is still limited. Consuming industries continue calm, with short time in several districts. Motor-car construction is slightly more active with the advance in the season. In other departments of constructive engineering it is complained that orders are lacking, especially from abroad.

Coal production figures for February show a total output of 4,331,323 tons (24 working days), against 4,637,440 tons in the previous month (26 days) and 4,578,460 tons

in February, 1930. The output of metallurgical coke from the colliery plants during February was 397,964 tons, or over 10,000 tons less than in the previous month. The recent wage reduction agreement, in its final form, works out as equivalent to a cut of approximately 6 per cent., as compared with reductions of 6½ per cent. in the Saar district, and 6 to 8 per cent. in Germany and Great Britain, and (since July) 20 per cent. in Belgium, where a new reduction of 5 per cent. came into operation on April 1st. Communist agitators succeeded last week in bringing out on strike about one-third of the miners in the Nord department as a protest against the wage cut, but the movement has now dwindled to negligible proportions. In the adjacent Pas de Calais department the strike received only nominal support. Numerous price cuts came into effect on April 1st, with the object of moving off the large stocks at the pit heads and supporting French competition against imported fuel.

The annual report of the French collieries' central committee states that the average output per French miner works out at 694 kilos. per day (against 650 kilos. in 1928), as compared with 1,100 kilos. per labour unit in Great Britain, 1,200 kilos. in Holland, 1,356 kilos. in the Ruhr coalfield, and 1,460 kilos. in Polish Silesia, these differences being due to the varying natural conditions of the respective mines and to legislative variations. Shareholders in French colliery companies, the report says, last year received on an average 8 francs 95 centimes net per ton of coal sold, against 7 francs 45 centimes in 1928. Fiscal charges, which amounted to 9 francs 25 centimes per ton sold in 1928, rose last year to 10 francs 47 centimes per ton, or at least 25 per cent. more than the amount of taxation imposed in the Ruhr, which is the next heaviest.

M. de Laverne, in his annual report to the members of the Confédération Générale de la Production Française, urgently advocates a radical revision of the protective policy followed by this country during recent years. "Since we had, in 1927," he says, "under the pressure of certain Free Trade States, to agree to the insertion in all our commercial treaties of a general and unconditional most-favoured-nation clause, we have had to extend to numerous countries, without sufficient compensation, tariff advantages which should have justified the bestowal of better facilities for our exports to the countries concerned. The reductions of import dues to which we have agreed have had serious repercussions on our home market without giving us a sufficient corresponding extension of our foreign outlets." The most-favoured-nation clause, M. de Laverne remarks, has been aggravated, so far as France is concerned, by the recent consolidation of tariffs. He asserts that so far as 72 per cent. of the items in her tariff are concerned, France is now pledged not to increase her import duties without previous negotiations. This pledge M. de Laverne regards as "peculiarly dangerous," in view of the fact that economic conditions now undergo very rapid modification, that the French tariff is "very moderate in comparison with those of the other countries," and that it does not permit of even the most indispensable readjustment for the protection of certain French industries.

GERMANY.

Austro-German Agreement — Unemployment Commission — National Socialist Party — Mortgage Banks.

(FROM OUR CORRESPONDENT.)

BERLIN, April 8.

THE German public has welcomed the invitation of two of its statesmen to Chequers, in the hope that a private discussion in England may help to remove the difficulties which have unhappily arisen from the differences between the German and the French attitudes to the Austro-German customs union. In the European discussions of the past week the vitally important point has not been appreciated that both in Germany and in Austria it is precisely the most liberty-loving sections of the population

which have most warmly welcomed the idea of economic reciprocity and which most firmly hold that it is strictly consistent with national independence.

There are very few opponents to the plan in Austria, and those few are to be found in the camp which until recently was led by Dr. Seipel, that is to say, among the small minority which still clings to the memory of the Hapsburgs and would like to find the solution of the Austrian question in a rapprochement with Hungary. In Germany the staunchest advocates of any movement towards co-operation with Austria are the workers. The collaboration of the political organisations, the trade unions and the various cultural societies (some of the sports and educational clubs which are active in Germany even have their headquarters in Austria) has created a very strong sense of solidarity, and it is no accident that the Socialist President of the Reichstag, Herr Loebe, is the head of the Austro-German Society, which has as its object the promotion of cultural and economic co-operation between the two German States.

To Conservatives of the old Prussian school, closer economic association with Austria is a task which they have taken up for well-considered reasons and which they cannot and will not lay down. For the middle-class apostles of freedom and for the workers, however, this new economic unity with the Germans on the Danube is a fundamental emotional demand, a symbol of the beginning of the reorganisation of Europe for peace. Nobody who knows German history will be surprised at this difference in political temperatures. It provides, on the one hand, a guarantee that the movement for economic union between Germany and Austria will gladly agree to every step which conduces to greater freedom in the framing of a common European trade policy. On the other hand, however, it contains the serious danger that opposition to the idea of a customs union may bring about a most terrible discouragement to those sections of the German people who are bringing their influence to bear on the side of peace and of conciliatory foreign policy.

A few months ago the Government appointed a commission of experts, under the chairmanship of the former Minister of Labour, Dr. Braun, to frame proposals for the combating of unemployment and for the mitigation of its effects. An interim report has now been published. The Commission does not consider projects for creating work—which indeed its composition scarcely qualifies it to do, as most of the members are Government officials—but confines itself to proposals for the more even distribution of the work that is available. It recommends short time without any increase in hourly wages, to take effect in the first place among public employees, but to be extended to private industry, through the influence of the Government arbitrators, as wage agreements come up for renewal. In addition, the Commission has drafted the outlines of a Bill by which the Government will be empowered, with the consent of the Reichsrat, to reduce the weekly hours in individual industries to 40. The issue of such decrees by the Government would override any clauses in wage agreements having a contrary sense.

The Landtag of Thuringia has passed a vote of no-confidence against the National Socialist Minister of the Interior, Dr. Frick, in spite of desperate attempts by Herr Hitler in person to maintain the participation of the National Socialists in the Thuringian Government. The German People's Party wished to put an end to an experiment which had been growing steadily more unsatisfactory to itself, and therefore placed its votes at the disposal of the Social Democrats for the purpose. The National Socialists are now represented in only one Government, that of the small State of Brunswick, and even there the prestige of their Minister has worn very thin, and it is doubtful how long he will be able to maintain his position. Herr Frick's fall is a serious blow to the status of the Hitler Party, and even more serious is the failure of the Thuringian group of the German People's Party, which is very far to the Right, to come to any lasting agreement with the Hitlerites on important matters of policy. It is unlikely that anybody in the middle-class camp, with the exception of Herr

Hugenberg, will now consider co-operation with the National Socialists.

At the same time, the internal difficulties of the National Socialist Party have grown more acute. It suffers permanently from the rift between its radical wing, which takes the conception of "Socialism" seriously and would like to maintain the revolutionary character of the party, and the moderate group, which wishes to ally itself with the employers to combat "Marxism" and lays great stress on its own constitutional character. Such differences of opinion completely broke up the small "Strasser group" almost immediately after the elections, and even Lieutenant von Mücke, the leader of the "Ayesha" in the war, broke away from Hitler on similar grounds. The two officers, Scheringer and Wendt, who were found guilty of high treason in Ulm a few months ago and were hailed as martyrs by the National Socialists, have also left the party because it had become too "bourgeois" for them, and Scheringer has even joined the Communists. Now the commander of the Berlin "storm section," Herr Stennes, has rebelled and found many supporters in Northern Germany. He reproaches Herr Hitler, and still more his immediate entourage, with a complete betrayal of the party's socialist principles, and deplores the magniloquent gestures which have become habitual with the party leaders in Munich, especially the building of the large committee house in one of the most elegant quarters of the city, to be paid for at a time of acute economic hardship by members of the party, many of whom have not enough to eat.

These are, of course, all signs of disintegration in the ranks of the National Socialists. Herr Hitler is no longer master of the extremist sentiments which he himself has bred, but it must not be assumed that all these developments will soon bring about the decline of the National Socialist movement. It may even profit at first from the fact that Herr Hitler has repelled the most radical section of his followers and has thereby drawn closer to the middle-class Right. The break-up of the coalition in Thuringia will, however, have the opposite effect, as Herr Frick was one of Herr Hitler's closest colleagues and had nothing to do with the communistic section. In time the propagandist effectiveness of the Party among the proletarian and semi-proletarian sections of the populace must suffer from its excessively "bourgeois" tendencies.

The split between Herr Hitler and Herr Stennes has brought to light the interesting fact that the long-promised economic programme of the National Socialist Party has been ready for weeks but was not published because it implied a breach with every kind of Socialism, and resistance within the Party was in consequence feared. The decisive question is whether the disagreements in the Hitler camp will cripple the propagandist power of the Party at the next elections, of which the Bavarian Landtag elections are the first, followed by the Prussian Landtag elections next spring, and in due course the election of the President of the Reich.

Unlike the credit banks, the mortgage banks did very well in 1930, which was for them a year of amalgamations. From the fusion of numerous banks of some decades' standing was evolved the "Gemeinschaftsgruppe deutscher Hypothekenbanken," which has more than Rm. 3,000 millions mortgage bonds in circulation, or about half the total in circulation in Germany. This group was able to declare for 1930 a dividend of 12 per cent. on its Rm. 90 millions capital. The German mortgage banks use the funds raised by the issue of mortgage bonds for the granting of loans on prior mortgages to the communes. These have not been affected by the crisis and even the interest has been punctually paid. The policy of the banks has proved very sound: the mortgage bond issues are always offered only in small sums, so that repurchases by the banks even in times of crisis remain very small, and in consequence the German mortgage bond is relatively steady at a price which is high in comparison with that of other securities.

POLAND.

Budget Deficit — Prices — Agricultural Situation — Foreign Trade.

(FROM OUR CORRESPONDENT.)

WARSAW, March 25.

BEFORE adjourning the special Budget session on March 21st, Parliament voted the Finance Bill for the fiscal year beginning April 1, 1931, in the amount of 2,866,711,474 zlotys (approximately £66 millions) on the revenue side, and 2,865,879,797 zlotys for expenditure. When submitted to Parliament the estimates were 2,890 and 2,886 million zlotys respectively. In a speech before the Senate a few days ago the Finance Minister found it necessary to raise to "over 50 million zlotys" his estimate made in January of a 25 million zloty Budget deficit for the present fiscal year. The figures now available, he pointed out, indicate a total revenue of 2,700 millions and expenditures of 2,760 millions. The Budget voted for the current year estimated revenue at 2,943 millions and expenditure at 2,934 millions.

Taking what he claims to be the most pessimistic view of revenue prospects for the year beginning April 1st, the Finance Minister feels certain that he can count on an income of not less than 2,500 millions. At the same time, while he expresses determination that next year's Budget must balance, he does not foresee any possibility of keeping expenditure below 2,850 millions on the basis of current commitments. He can realise a saving of 200 millions, however, by applying the authority recently granted by Parliament to reduce State salaries by 15 per cent., with perhaps 50 millions of trifling economies here and there. The remaining 100 millions (if the worst expectations as to minimum revenue are realised) will presumably have to come from increased taxation, although it is very difficult to imagine that any possible source of tax revenue has thus far been overlooked, and equally unlikely that greater revenue could be secured by raising existing tax rates.

There appears to be a real danger, on the other hand, that the Finance Minister's worst expectations may be exceeded, and tax revenue in 1931-32 be less than 2,500 million zlotys. Only one-third of Poland's Budget income is raised by direct taxes whose yield is predictable with a reasonable degree of accuracy. Two-thirds come from State monopolies, Government-owned enterprises, Customs revenue and other forms of indirect taxation that are very difficult to estimate a year ahead. Such trade figures as are at present available do not suggest that the corner has been turned, while the important factor of public psychology seems to point definitely in the opposite direction.

The Government campaign to force down the price of manufactured goods, if possible without adversely affecting wages, has met with a certain amount of success during the past month, despite vigorous resistance on the part of the highly "cartelised" primary producers. The first move made by the Government was to approach manufacturing industries, but they met with the prompt response that any lowering of the price of manufactured goods must be preceded by lower coal, iron and oil costs, as well as by reduced taxation and social service charges. The Government thereupon began pressure on the producing Cartels, with the result that reductions have been announced in coal, iron and steel, zinc, cement and oil prices. In each case, however, the reductions made are of trifling amounts, these primary producers insisting that their ability to continue to sell in export markets is wholly dependent upon the maintenance of a relatively high price level in the home market.

An encouraging symptom during recent weeks has been a decided improvement in the price of rye, Poland's principal crop. Last autumn the peasants were reported to be selling rye for as low as 14.00 zlotys per metric quintal. The present price is in the neighbourhood of 22.00 zlotys. This seems to indicate that grain stocks are nothing like as large as had been reported, and it is certainly true that the farmers have been feeding grain lavishly to livestock

during the past six months. Unfortunately, cattle and poultry prices have fallen steadily throughout the winter, so that farmers who have been fattening up stock in preference to selling their grain at what were ruinous prices now find themselves in a more uncomfortable position than ever.

In general, the financial condition of the farmers is understood to be precarious. Not only are their implement and fertiliser purchases much less than in previous years, but they appear to be experiencing increasing difficulty in meeting maturing financial obligations. The soil now needs extensive fertilisation, and any serious diminution in its use would be quickly reflected in crop yields and quality. As Poland is not much more than self-sufficient in grain, it would be a very disturbing matter if the present financial distress of the peasants led to a serious crop curtailment this year. To help the farmers the Government-owned works have reduced the price of artificial fertilisers by from 12 to 20 per cent.

The following figures show the drastic decline which has taken place in Poland's foreign trade:—

	Imports.			Exports.		
	(In millions of zlotys.)					
	1929.	1930.	1931.	1929.	1930.	1931.
January...	294.0	216.7	153.4	215.8	218.6	152.5
February	264.9	181.7	116.6	167.5	218.1	134.9

Exports this year have been adversely affected by the refusal of Germany to renew the timber agreement which expired on December 31, 1930, by the considerable increase in the Czechoslovakian import duty on pigs, and by decreased coal shipments to Central European countries. They have been further restricted by the completion in January of important Russian contracts placed in 1928 and 1929 for iron and steel products, Poland having supplied to the Soviets more than 300,000 tons of structural materials last year. A further order from this source for about 80,000 tons has recently been announced, and this will help the Upper Silesian mills for a month or two until building operations in Poland are resumed.

CZECHOSLOVAKIA.

Economic Crisis — Government Measures — Commercial Policy — National Bank of Czechoslovakia.

(FROM OUR CORRESPONDENT.)

PRAGUE, March 26.

THE economic depression in Czechoslovakia has not yet decreased in intensity. Though there has been a slight rise in the prices of foodstuffs, those of industrial products have declined further, and unemployment has increased in the last few months. Speaking in the Chamber of Deputies of the economic crisis, the Prime Minister stated that its course in Czechoslovakia was more moderate than elsewhere, and indicated the steps which were being taken by the Government to alleviate it by originating new works, supporting the unemployed, and procuring the means for new public investments. At the beginning of March Parliament carried a Bill sanctioning a State investment loan amounting to kr. 1,300 millions. Of this amount, kr. 600 millions is to go to railway investments, kr. 150 millions to cover the credits already sanctioned for alleviating the effects of the economic crisis, and the rest almost entirely to advances for the Road Fund and similar State investment funds, or to balance the State investments in excess of current revenue.

Foreign trade declined further in January and February; imports were kr. 1,727 millions, 867 millions less than in the previous year, and exports kr. 2,002 millions, 818 millions less than in 1930. The negotiations for the commercial agreement with Yugoslavia have been completed, those with Austria for the revision of the commercial agreement resumed. Preparations have been started for a new commercial agreement with Hungary.

The general annual meeting of the National Bank of Czechoslovakia took place at the end of February on completion of its five years' existence. The gold reserve at the end of 1930 was kr. 1,544.6 millions, other metallic cover kr. 2,504.4 millions, note circulation kr. 7,823.7

millions. In his report to the general annual meeting, the Governor of the National Bank, Dr. Pospisil, referred to the economic crisis and its causes. He drew attention to the political disturbances as a factor in the economic depression, especially through their effect on credit, and emphasised the international interdependence of the economic situation and the consequent necessity for a scheme of national and international co-operation. In connection with the work of the Gold Delegation of the League of Nations, he laid great stress on the co-operation of the issue banks.

NEW ZEALAND.

Trade — Banking — Business — Napier Earthquake.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, February 12.

OVERSEAS trade returns for 1930 afford striking evidence of the effects of the decline in export prices. Total exports for the year were valued at £44,940,692, compared with £55,579,063 for 1929. Imports fell mainly in response to the reduction in available purchasing power, and were valued at £43,025,114 compared with £48,797,977 in the previous year. The balance of trade remains favourable and has improved during the last few months, but is reduced from £6,781,086 for 1929 to £1,914,778 for 1930. The greatest decline has been in wool. About 100,000 bales were withheld from sale, and 581,000 bales were exported in 1930 against 688,000 in 1929, but the value of wool exports fell 50 per cent. to £7,664,362 in 1930, against £15,359,206 in the previous year. Increases in quantities exported were associated with considerable declines in value in the case of the other important exports, butter and cheese, hides, skins and tallow, while frozen lamb increased both in quantity and in value. The decreases in imports were widely spread, but the heaviest fall was in motor vehicles, from £4,278,924 to £2,448,781, while the value of motor spirit imported fell slightly despite an appreciable increase in quantity.

Some change is also noticeable in the direction of trade. In 1930 the United Kingdom took 80.2 per cent., and all British countries 91 per cent., of the total exports, compared with 73.7 and 85.4 per cent. respectively in 1929, while the United Kingdom supplied 47.3 per cent., and all British countries 69 per cent., of the imports, against 46.3 and 67.8 per cent. respectively in the preceding year. These changes, however, are due largely to the reduced value of wool exports and to the contraction in imports of motor vehicles and semi-luxury goods.

The fall in export prices has been very heavy. Official indices of all export prices are now 40 per cent. below the level ruling for 1928 and 8½ per cent. below the level of 1914. At a recent Auckland sale the average price realised for wool was 4d. per bale, just one-fourth of the average price at the corresponding sale in 1928, and it is anticipated that the season's wool exports, which brought more than £15,000,000 two years ago, will bring little more than £5,000,000 this year. Dairy produce, too, has fallen heavily, and the price index for December is slightly below the 1914 figure. Most dairy factory suppliers received 1s. 6d. per lb. for butter-fat last season; this season they are receiving 9d. per lb., with the possibility of some further payment at the end of the season. The average farm produces 4,800 lbs., and the average cow 200 lbs. of butter-fat, which means that the average dairy farmer is at present keeping and milking twenty-four cows for little more than £180 a year, of which half at least may go in interest and rates.

The situation of the sheep farmer is probably worse. Estimates published by the farm economist of Lincoln Agricultural College suggest that most sheep farmers have been losing money on the average of the past five years, and that, at present prices, receipts will in some cases cover little more than half the costs of production. In these circumstances many farmers are finding it difficult, even impossible, either to meet payments now due for taxes, interest, etc., or to finance production for the

coming season. It is widely recognised as essential that farmers should be kept on their holdings as far as possible and production maintained or increased, and many suggestions have been made to secure this end. Some are asking for State assistance, but the Government has difficulties enough with finance, unemployment, etc.; and there is a strong general objection to a moratorium or to any compulsory scheme applying equally to all cases, since the circumstances of individuals vary so widely. Where the need is greatest, however, it is possible that, by agreement amongst the parties concerned, fresh credit may be advanced to finance production during the coming year and, given priority of claim against that product over all other indebtedness.

Banking returns for the December quarter of 1930 show total deposits amounting to £53,230,000, about £1,800,000 less than for the same quarter in 1929, and total advances of £56,380,000, or £2,600,000 more than for the same period in 1929. There has been a marked increase during recent years in fixed deposits, accompanied by a decline in free deposits, and in December last free deposits were only 56 per cent. of fixed deposits. This fact, together with the large volume and the recent increases of advances, the 7 per cent. overdraft rate, and the known difficulties of farmers in meeting indebtedness, suggests that a large proportion of existing credit is frozen, and it is likely to remain frozen until the farmers' position improves. Weekly average bank debits for December are 17 per cent. below their level for the same month of 1929, while land transfers, building permits, mortgages registered and discharged, and railway revenue have all declined appreciably. Recent rises in wool prices, however, amounting to about 10 per cent. at the local sales, are very welcome, and give some hope of better market conditions for next season's produce.

It has been announced that Parliament, which usually meets in June, will be called together to discuss the situation much earlier; but this early meeting of Parliament is due partly to the disastrous earthquake which shook Hawkes Bay on February 3rd. The full severity of the shock was felt only within a small area; the rest of the Dominion suffered nothing more than slight tremors. But Napier, the port (19,000 population), and Hastings (16,000), a few miles inland, were badly shattered. In both towns practically the whole of the business areas were destroyed, either by the earthquake or by the fires which followed the breakdown of the water supply, and in all more than 200 lives were lost, besides many injuries. No reasoned estimate has yet been made of the cost of reconstruction, but the land and capital valuation of the two towns principally concerned totalled about £8,000,000. Meanwhile relief funds are being collected and are mounting rapidly, and the whole Dominion has been touched by the spontaneous sympathy and generosity of messages and contributions from other parts of the Empire.

JAPAN.

Trade Union Bill — Bank Results — Foreign Trade — Prices.

(FROM OUR CORRESPONDENT.)

Tokyo, March 10.

CONSIDERABLE attention is centred at the moment on the Trade Union Bill, which is now in the Committee stage in the House of Representatives. In compliance with the employers' protest against the original draft, the Bill was redrafted largely in the terms they required. One of the most controversial provisions, which granted trade unions immunity from civil liability for acts done in contemplation or furtherance of a trade dispute, was struck out, and certain provisions for the restriction of the unions' political action and the exclusion of Socialist agitators were newly added, while another no less controversial section which guarantees the workers' right to combine for trade purposes against the employers was retained.

The employers are not satisfied with the revisions, and their organisations throughout the country have mustered

all their forces to bring pressure to bear upon the House to prevent the passage of the Bill. Organised Labour, on its part, also takes strong exception to this "unfair and repressive" measure, averring that it was designed under capitalist influence to cripple the activities of trade unions. A very bitter struggle between employers and employees is being waged.

The earnings statements of the Japanese joint-stock banks for the December half-year make a decidedly poor showing. The general shrinkage in bank earnings is obviously explained by the increasing trade depression and lower level of money rates, which affected practically every source of banking revenue. The combined net profit of the five leading banks in the latter half of last year totalled 17.1 million yen, as compared with 15.6 millions in the preceding half-year, and 19 millions in the corresponding half-year of 1929. The past half-year's increase, moreover, is mainly accounted for by the Yasuda, whose earnings in the preceding half-year declined substantially owing to the writing down of its investment holdings. The declared earnings of the Mitsui were lower by 36 per cent., and those of the Daiichi declined by 12.5 per cent. The customary rates of dividends were generally maintained, excepting the Mitsui, which reduced its dividend from 10 per cent. to 8 per cent. On the other hand, the earnings of the two colonial banks show only slight decreases. The Bank of Chosen earned a profit of 902,000 yen and paid its usual 4 per cent. dividend, while the net profit of the Bank of Taiwan amounted to 431,000 yen.

Imports last month totalled 98,650,000 yen, and exports 91,787,000 yen. In comparison with February, 1930, imports declined by 61.6 millions, or 38.4 per cent., and exports fell by 27 millions, or 22.8 per cent. These figures are rather disquieting, though some individual items are less unfavourable than the totals. Imports of raw cotton, iron and steel, machinery, oil cake and beans decreased heavily, but raw wool and rubber were imported in substantially larger quantities. On the export side, cotton manufactures and silk goods disclose a sharp decline; whereas raw silk, though slightly lower in value, increased considerably in volume. Among less important exports, rice, wheat flour, tea, and tinned and bottled provisions have done better than a year ago.

The year-end, observed in the rural districts according to the lunar calendar, was negotiated without much difficulty, despite apprehensions, and with the return flow of funds from the interior section of the country, the ease in the money market has been further accentuated. Day-to-day loans are obtainable at as low as 1½ per cent. The capital market shows signs of vitality, and new issues have been oversubscribed in many cases. The effect of monetary ease has naturally been in evidence in the stock market, and there has been a steady rise in shares all round. The downward movement in commodity prices was appreciably slower last month. The wholesale index number of the Bank of Japan for February registered a drop of only fractionally more than a quarter of 1 per cent. on the month, the smallest change for many months. The fall in sugar, silk, and coal is largely neutralised by the rise in timber, cotton yarn, iron and steel, wheat and paper.

Letters to the Editor.

THE COMING BUDGET.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article, "The Coming Budget" (March 21st), you suggest that Mr Snowden should draw an additional £33½ millions from three sources in roughly equal shares, i.e. (1) drink and tobacco; (2) tea, sugar, coffee, cocoa, and (3) petrol. May I suggest that there is another great source of revenue (*magnum vectigal*), i.e., economy, which would render (1) and (2) unnecessary. Moreover, unlike most critics of expenditure, I am prepared to say where I would apply the axe. According to the final report of the Royal Commission on Transport we are spending £60 millions a year on our roads.

I submit that, after all the structural improvements of the last twelve years, we can do very well with an expenditure of £30 millions a year.

There is another point suggested by the Royal Commission. Most of the wear and tear of our roads is due to heavy and fast commercial vehicles and to the motor bus. The Royal Commission suggests that the use of lorries weighing more than four tons unladen should be discouraged by a sharp addition to the licence duty for every additional ton; and it would prohibit lorries weighing more than nine tons. But the Royal Commission, which was very badly served by the Ministry of Transport, overlooked one anomaly, viz., that three trailers, each as big as a lorry, may be attached to a tractor for the insignificant payment of £2 each. Moreover, your suggestion of an extra 3d. on petrol, with which I agree, would stimulate the use of tractors driven by steam or heavy oil. So far as these are not ruled out by the proposed maximum weight limit, I suggest that they should pay an extra licence duty of 50 per cent.

At present there is a maximum licence duty (£48 for pneumatic and £60 for hard tyres) on a five-ton lorry, but no maximum weight—like an income tax which exempted millionaires! A sharp increase in the licence duty payable for heavy vehicles, the motor bus included, is desirable, like taxes on intoxicants, apart from the needs of the Exchequer.—Yours, etc.

J. E. ALLEN.

"PURE ITALIAN."

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have seen in your paper reference made to the use of foreign words in Italy. There is no restriction at all in this connection, but a small revenue tax on public signs in foreign languages has existed for some years.

In principle this is much the same as a tax on posters which I believe many would like to see introduced in this country and which for a long time past has been in force in some Continental countries. There is no obligation whatever on those exhibiting a notice in a foreign language to show also the Italian equivalent, nor is there any question of hotels bearing foreign names being obliged to change them.

The Italian authorities realise the utility of foreign terms in facilitating matters for visitors from abroad.—Yours faithfully,

16, Waterloo Place,
London, S.W.1.

W. STORMONT, Major,
British Representative, Italian
State Tourist Dept. (E.N.I.T.).

FIXED TRUSTS?

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest your article on Fixed Trusts, and the correspondence following thereupon.

As I have been studying the proposition pretty thoroughly, may I give you the benefit of my researches, having particular regard to the last paragraph of the letter signed by "London Broker," where he says, quite correctly, that the "turn" between the bid and asked price is about 7 per cent., but states that the "turn" which one would probably expect on the shares of the component companies would only amount to 1 per cent. to 1 per cent.

In order to prove this point, I asked my broker to get me the buying prices, including all commissions and contract stamps, of the four shares each of twenty-eight companies which make up a unit of one of the well-known Fixed Trusts.

I found that, as compared with the listed prices which are for 100 share lots, one has to pay odd lot prices, New York brokerage, commission to the London broker, and contract stamp.

On again selling, all these charges have to be met a second time.

The result was very interesting. The total cost of purchasing the 112 shares worked out at £2,203 17s. 6d. The net receipt from the sale of these shares came to £2,104 2s. 6d. The "turn," therefore, was just on £100 on 2,200, or 4.550 per cent.

Of course, it may be objected that the ordinary buyer would not spread £2,000 odd over twenty-eight companies, but would pick two or three of them, and, therefore, as he would not be dealing with minimum commissions, the cost of buying and selling would not be so great.

It seems to me, however, that if one picks three or four companies one is speculating. But a very close examination of these companies, included in this Fixed Trust, brings out

the fact that an investment spread over these companies seems to be an investment in practically every supply or service necessary to modern civilisation.

One is, therefore, investing in a cross-section of the world's activities, instead of picking out one or two likely industries.—Yours faithfully,

Norcott,
Teddington,
Mddx., England.

CALLCOTT REILLY.

Books and Publications.

AN INTRODUCTION TO FINANCE.

MR NORMAN CRUMP describes his small text-book* as "an attempt to explain in brief though general terms how things work in the business and financial world. The reader will find in it comparatively little pure economic theory. . . . It is, he says, "based mainly on experience of the City and its ways." This explanation is a far better indication of the book's scope than its rather general title, for it is not, as far as the student of economics is concerned, a "first book" which will successfully introduce him to the field of thought in which he will have to move and have his being. Yet within its own defined scope it is an admirable piece of work, lucid, impartial, economical of phrase; and perhaps the best part of it is its simply told tale, in Chapter xxxiii, of how a balance sheet is constructed. The captious critic can, of course, find gaps in its analysis. For instance, the general reader will probably find himself hankering for an explanation of where his familiar pound notes come from and by what process they get into circulation; and this is, unfortunately, not vouchsafed to him. On page 148 the author's reference to de-rating is so compressed as to produce a somewhat misleading simplification of the reform of Exchequer grants. The percentage system cannot be said to have "disappeared" in the 1928-29 legislation. And on page 235 the suggestive and provocative phrase "there is grave ground for doubting if taxes on profits . . . are really a burden on industry at all," whets the modern reader's appetite for a further reference to the incidence of taxation, and an indication of the large issues which hang upon the turn of that grave doubt.

BANKING AND INDUSTRY.

It was a timely idea on the part of Mr Thomas to bring together into one place† the known facts and opinions about the industrial aspects of British banking: but its execution would have been happier if he had confined himself more strictly to his theme, and supplemented his diligent use of paste and scissors by a few personal inquiries which would have really added to the sum of accessible knowledge. As it is, he has written a book of which the best that can be said is that it is quite useful for reference. Even in using it for this purpose, the reader must be on his guard: he will find an account of German banking which he will do well to check by that given in Mr Whale's recent authoritative work, a strangely worded statement about the amount of our foreign investment on page 258 (note), a tendency to cite Mr Appleton as representative of Trade Union opinion, a reliance on the Board of Trade wholesale index-number as a measure of the prices obtained by British manufacturers for their wares. He will find discussions of monetary policy, rationalisation, tariff policy and unemployment which are not saved from flatness and superficiality by a commendable attempt to be open-minded. But he will be disappointed if he hopes to find much detailed light shed on such important matters as the increased activity of London financial houses in placing and "introducing" industrial issues, or the degree to which the short-term credit facilities at the disposal of farmers have really been increased by the new device of chattel-mortgage.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Law Relating to Trade Combinations. By A. L. Haslam. With a Foreword by W. T. S. Stallybrass. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. net.

A most valuable and scholarly study of the legal liability of combinations of employers and workmen. It includes a critical comparison of the methods of trust control obtaining in various countries.

The Marketing of Wool. By A. F. Du Plessis. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 12s. 6d. net.

A most comprehensive account of the wool trade, from the breeding of the sheep to the conditions which determine the market price of the fibre.

The History of Trade Union Organisation in the North Staffordshire Potteries. By W. H. Warburton. With an Introduction by R. H. Tawney. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. 6d. net.

This book, besides contributing to the history of trade union development, gives an interesting account of past and present conditions of work in one of our minor industries.

China. The Collapse of a Civilization. By Nathaniel Peffer. (London) George Routledge, 68-74, Carter Lane. 12s. 6d. net.

The author, to use his own words, seeks "to analyse what happens when one civilisation is struck by another of greater force and vitality, as China has been struck by the impact of the West."

The Federal Reserve System and the Control of Credit. By Walter E. Spahr. (London) Macmillan and Co., Ltd., St. Martin's Street. 7s. 6d. net.

A thousand-dollar prize essay on central banking policy.

Principes de la Politique Allemande dans l'Europe du Centre et de l'Est. By M. André Tibal. (Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint-Germain. 4 francs.

A brief historical study of Germany's central European policy.

Exchange, Prices and Production in Hyper-Inflation: Germany, 1920-1923. By Frank D. Graham. (Princeton) Princeton University Press. \$3.50.

An attempt to resolve the confused impression left by the economic events of the inflation period in Germany into a rational estimate of the effects of the depreciation upon German national economy.

The Law Relating to Industry. By H. Samuels. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 15s. net.

A well-documented but somewhat compressed account of the law governing the relations between employer and employee.

Mexico and Her Foreign Creditors. By Edgar Turlington. (London) Oxford University Press, Warwick Square. 25s. net.

A diplomatic and financial history extending over more than a century.

Back Duty. By Ronald Staples. (London) Gee and Company (Publishers), Ltd., 8, Kirby Street. 10s. 6d. net.

A consideration of the law and practice of the settlement of liability to income tax, etc., which escaped assessment at the proper time.

The Industrial Development of India. By Nalini Mohan Pal. (Calcutta) The Book Company, College Square. Rs. 5.

A descriptive account of the economic development of India.

How to Compete with Foreign Cloth. By M. P. Gandhi. Published by the author at the Indian Chamber of Commerce, 135, Canning Street, Calcutta. 8s.

An Indian monograph by an author who stresses the importance of hand weaving and hand spinning as a means of rendering India self-sufficient in respect of textiles.

Memorandum on Indian National Policy, with Note to Rt. Hon. Ramsay MacDonald. By Ram Rai (Admedabad) "The Khedut" Office.

Anleihetechnik. By Dr. Wilhelm Dieben. (Berlin) Wilhelm Christians Verlag, Unterwasserstr. 8. Rm. 6.40.

A study of the technique of public loans.

Notiziario demografico. (Rome) Istituto Centrale di Statistica del Regno d'Italia.

A bi-monthly publication containing population statistics of various countries.

Silicosis. Records of the International Conference held in Johannesburg, August, 1930. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 16s.

An International Labour Office publication.

The Annals of the American Academy of Political and Social Science. March, 1931. (London) P. S. King and Son, Ltd., 14, Great Smith Street, Westminster.

A collection of papers by American economists, business men, social workers and trade union leaders on unemployment and the possibilities of stabilising employment.

The Banker. April, 1931. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Includes, *inter alia*, articles on "Australian Banks and the Government," and "The Policy of the Bank for International Settlements."

The Crown Colonist. Preliminary number. (London) The Crown Colonist, 33, Tothill Street. 1s.

A new non-political periodical which is to concern itself particularly with colonial trade and development. It has a generous number of excellent photographic illustrations.

The 100 Best Investments, 1931. Compiled and published by the British, Foreign and Colonial Corporation, Ltd., B.F.C. House, Gresham Street. 2s. net.

A conveniently classified list of high-quality investments, both trustee and speculative, with the essential particulars of each.

Histoire Internationale des Universités. By Stephan D'Ixsay.

La Cité Universitaire de Paris. By Camille Bloch. (Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint Germain. 3 fr.

Two short lectures.

The Outline of the Reconstruction Work in Tokyo and Yokohama. Compiled and published by the Bureau of Reconstruction, Home Office, Tokyo.

The First Annual of the Pure Rivers Society, 1930. (London) Pure Rivers Society, 1, Lincoln's Inn Fields. 1s.

Annual Report of the Smithsonian Institution, 1929. (Washington, D.C.) Superintendent of Documents. \$1.75.

Report of the Superintendent of Insurance, Dominion of Canada, Vol. II. Life Companies. (Ottawa) F. A. Acland.

Report of the Superintendent of Insurance for the Year ended December 31, 1929. Part IV. Assessment Life and Casualty Associations, Fraternal Benefit Orders or Societies, Co-operative Fire Insurance. Insurance Department, Albany, N.Y.

Four Place Tables. By E. V. Huntington. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. net.

A useful set of tables of logarithms and trigonometric functions.

L. T. Hobhouse: His Life and Work. By J. A. Hobson and Morris Ginsberg. (London) George Allen and Unwin, Ltd., 40, Museum Street. 12s. 6d. net.

A brief biography, supplemented by the personal recollections of friends, is followed by an appreciation of Professor Hobhouse's philosophy.

The Stock Exchange.

FORD AND THE BRITISH MOTOR INDUSTRY.

WITH the completion, early in 1932, of the Dagenham factory, the prospects of the Ford Motor Company, Ltd., will be a matter of increasing interest to the investor on both sides of the Atlantic. The new plant is designed for an output of 200,000 vehicles a year, of which the distribution is generally assumed to be 50,000 in Great Britain and 150,000 on the Continent. What effect will the realisation of this programme have, first, on the earnings of the Ford Motor Company, and secondly on the earnings and activity of the British motor industry?

It is first of all necessary to obtain a clear idea of how the Ford Motor Company is operating in this interim period. The company acquired the Ford Motor Company of England with its plant in Manchester, Henry Ford and Son of Cork, which is manufacturing Fordson tractors, and a controlling interest in Ford companies in France, Belgium, Germany, Italy, Holland, Spain, Denmark, Sweden and Finland. The company also acquired from the Ford Company of Detroit the exclusive right to manufacture, assemble and market Ford cars and other products in Great Britain, Ireland, the Continent of Europe (excepting Soviet Russia), Asia Minor, Egypt and other parts of Africa and Afghanistan, together with all the patents and inventions in respect of Ford cars and products. It has also acquired the world rights in the manufacture of Fordson tractors. While the Dagenham plant is under construction the Ford Motor Company has been assembling, and in large part manufacturing, Ford cars at Manchester, while the Continental associated companies have been purchasing their import requirements from Detroit and England. The Continental Ford imports from Detroit in 1930 amounted to approximately £7,000,000, and as soon as the Dagenham plant is finished most of this business will be transferred to the British company. In fact, the chairman in his speech to the British shareholders on March 18th declared that their export business would be much larger than £7,000,000 if the company's plans for expansion materialised as they hoped.

The profits of the British company last year were derived entirely from the English and Irish businesses, or rather from the English alone, for the Irish business made a loss. No credit was taken for dividends declared by the affiliated companies on the Continent. The British earnings amounted to £978,603, as compared with £908,994 in 1929, and were equivalent to 14 per cent. against 12.8 per cent. on the then issued capital of £7,000,000, as the following table shows:—

	Total Profit after Deprecia- tion.*	Directors' Fees and Sundry Charges.	Earnings subject to Tax.	Per cent. Earned.	Per cent. Paid.	Taxa- tion.	Carried Forward.
1929...	£ 918,229	£ 9,235	£ 908,994	12.8	10	£ 195,000	£ 258,507
1930...	996,956	18,352	978,603	14.0	10	188,250	506,360

* Depreciation was not shown separately in 1929 accounts, but in 1930 depreciation was £43,556 and obsolescence £13,775.

An increase of 7.6 per cent. in the earnings last year of the British company was highly creditable, seeing that Henry Ford and Son of Cork was seriously affected by the trade depression.

As regards the earnings of the British Ford outside Great Britain, the profits of the European affiliated companies have been excluded from the accounts in order to avoid double taxation. For this purpose the company formed a holding company registered in Luxembourg, of which it owns all the share capital. The company sold to the Luxembourg company its holdings in the Continental affiliated companies at a profit of £756,209, representing approximately its proportion of the 1929 profits declared

by those companies. This profit was carried to reserve in the balance sheet of the British company. The saving in taxation effected by this transaction was at least £100,000. Presumably the future profits of the affiliated companies on the Continent will continue to be brought into the accounts of the Luxembourg company, so that the British company will benefit only by way of capital profit if and when it writes up its holding of the Luxembourg company's shares. However, in order to ascertain the real earnings of the British company, we have disregarded the existence of the Luxembourg company and have compiled the following table showing the total net profits of the affiliated Continental companies in 1929 and 1930, and the proportion accruing to the British company on the basis of its original share holding.

(In thousands.)					
	Net Profits.		Percentage of Capital held by British Co.	Proportion accruing to British Co. in 1930.	Sterling Equivalent.
	1929.	1930.			
Ford:—			%		£
Belgium .. Fr.	49,223	42,891	60	25,735	147.7
Denmark .. Kr.	5,467	6,066	60	3,674†	273.9†
Holland .. Fl.	2,865	3,280‡	60	1,968	162.5
France .. Fr.	34,536	35,289	60	21,173	170.4
Germany .. Rm.	3,495	4,515	60	2,709	132.6
Spain .. Ps.	4,859	6,031	60	3,619	78.1
					965.2

* Denmark company holds 60 per cent. of Swedish company, which in turn holds 60 per cent. of Finnish company.
† Includes Kr. 1,333,888, or £73,453, being 60 per cent. of Swedish net profits which were £109,831 plus £12,590, being 60 per cent. of Finnish profits.
‡ 12 months calculated from 14 months' figures.

It will be seen that the proportion of the total earnings of the affiliated Continental companies in 1930 amounted to £965,200, which was equivalent to 13.8 per cent. on the then issued capital of the British company.

The actual distribution of profits by the Continental companies is shown below:—

CONTINENTAL FORD COMPANIES—DISTRIBUTION OF PROFITS. †									
	France (Thous. frs.)		Germany (Thous. Rms.)		Holland (Thous. fls.)		Belgium (Thous. Frs.)		Percentage of Production.

* Plus stock bonus of 25 per cent.

To what extent will the profits of the British company be increased when the Dagenham plant is exporting to the affiliated companies on the Continent a further £7,000,000 of materials? It would be reasonable to assume a gross profit of at least 10 per cent. on this business, and we have the chairman's statement that the additional

export business will be "very much larger" than £7,000,000 if the plans for expansion materialise. In that event it follows that it will be impossible for the Ford Company to avoid taking a gross profit of less than £700,000 into its accounts, seeing that these profits will have been earned directly by the Dagenham plant. As the exports from the Manchester plant last year were £3,302,371, it appears that the total exports from England on the completion of Dagenham will be in the neighbourhood of £10,500,000.

Disregarding altogether the prospect of increased profits arising out of the more intensive sale of Ford cars in Great Britain and the Continent from the Dagenham factory, the total actual and estimated earnings of the British company on the completion of the Dagenham plant may now be tabulated as follows:—

	Amount.	Per Cent. on £7,000,000.
English and Irish Business (1930).....	£978,603	14.0
Gross profit on export business to Con- tinental Companies (estimated)	£700,000	10.0
Proportion of affiliated companies' earnings (1930).....	£965,200	13.8
	£2,643,803	37.8

The British company has now increased its issued capital from £7,000,000 to £9,000,000 by the issue of 2,000,000 ordinary £1 shares at £3 per share. The estimated earnings of £2,643,803, which are based on results achieved in a year of trade depression, would be equivalent to 29.38 per cent. on the increased capital. The shareholders, however, will not look for the distribution of cash dividends commensurate with these earnings, for more than a third of the profits will accrue to the holding company in Luxembourg and will not directly appear in the British company's accounts. Nor must they expect to see such earnings until the 1933 accounts.

Finally, what effect is the completion of the Dagenham plant likely to have upon the domestic and export business of rival British motor manufacturers? The production and exports of the British motor industry in the last four years are shown in the following table, which is based on data provided by the Society of Motor Manufacturers and Traders:—

BRITISH MOTOR INDUSTRY. (000's omitted.)							
	PRODUCTION.			EXPORTS.			
	Private Cars.	Commercial Vehicles.	Total.	Private Cars.	Commercial Vehicles.	Total.	Percentage of Production.
1927 ...	165	47	212	Not available.			16.8
1928 ...	165	47	212	26	7	33	15.4
1929 ...	182	57	239	34	8	42	17.7
1930 ...	172	65	237	23	7	30	12.5

It will be seen that the output of private cars last year declined by 5½ per cent. (as against a decline in American production of 38½ per cent.), and that exports declined from 17.7 per cent. of the total production to 12½ per cent.

Approximately five firms—Morris, Austin, Singer, Humber and Rover—are responsible for about three-fourths of the total private cars produced in Great Britain. Approximately thirty other companies turn out the balance. It is obvious that the incursion of the Ford Motor Company on a large scale into the British market will intensify the precarious struggle for existence of the thirty firms now responsible for only about 40,000 cars. To some extent new business will be created, for it is unlikely that saturation point has yet been reached in the British private car business. As regards the export business, the British exporting companies are already faced with the competition of the Continental Ford companies, which will be accentuated when the Continental companies obtain their supplies from Dagenham instead of Detroit. The Ford Company already has more than 50 per cent. of the British export trade. If the completion of the new plant at Dagenham leads to a more intensive export sales campaign and more efficient manufacturing methods on the part of the British motor industry the incursion of Mr Henry Ford into the British field will have a great national value as well as an increasing interest to the British and American investor.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 21.	April 23.

A lack of enthusiasm was evident after the Easter holiday. Prices as a whole, however, tended to become more rather than less firm, though the volume of business remained restricted. The week's most gratifying feature was the strength of gilt-edged stocks on home and foreign buying, the receipt of further gold by the Bank of England more than counteracting pre-Budget apprehensions. While high-yielding foreign bonds continued to attract some interest, the fresh slide in Brazilians was an unwelcome indication of the continued existence of political risks. The further weakness of base metal prices, similarly, served to remind the more speculative sections of the market that world economic depression had still to be reckoned with.

Although Victory Bonds were affected by profit-taking after a sharp advance, Funding Loan was again in demand, and 3½ per Cent. Conversion was favoured. India loans attracted moderate attention, but Australian stocks showed slight change on a very limited turnover. Among foreign bonds, Brazilians were afflicted by a fresh bout of weakness, American holders sending over numerous enquiries for bids on large blocks of stock, on the rumour that Sir Otto Niemeyer's recommendations would cover the temporary suspension of sinking fund arrangements. A noteworthy feature was the movement away from unsecured into secured issues. Among Europeans, German bonds were firm on the announcement of the British Government's invitation of German statesmen to Chequers.

Home rail stocks were entirely neglected, the traffic returns for Good Friday week making an unsatisfactory showing against those for the holiday period of last year. Dealings in Argentine rails were also restricted, quotations declining on the less favourable traffic figures and the dullness of the peso. Leopoldinas were lower in sympathy with the general trend of Brazilians.

Industrial shares held their ground in not unsatisfactory fashion, having regard to the general atmosphere of "stalemate" in industry, politics and finance. Considerable importance was attached by holders of Imperial Chemical shares to the published details of a hydrogenation process for the liquefaction of coal. Provincial investors showed an increasing interest in Cables and Wireless. Textile shares remained out of favour, but brewery and tobacco issues recovered on the feeling that fears regarding increased taxation in the forthcoming Budget had been overdone. International stocks were an uncertain quantity, New York giving only intermittent support. The chief exception was provided by Kreuger and Toll, the 1930 report being very well received (see pages 780 and 798). Electrical shares were steady on a limited investment demand, and bear closing resulted in higher prices for certain of the more "depressed" steel and engineering shares. Cunard shareholders found little concrete evidence of early trade improvement in the chairman's speech (discussed on page 796), but the shares improved on the announcement that the new 73,000-ton liner would be financed without a share issue. A few fractional rises occurred in insurance shares, but banks were dull, where changed, following the reduction in the interim dividend of the Anglo-South American Bank.

Rubber declined to a new low record, and the shares were easier on a meagre turnover. Rubber Plantations Trust touched the lowest level for some years. Tea shares were heavy, though very little stock came on the market. A slight improvement was noted in oil shares, Paris being a tentative buyer. A slightly more rosy view was taken of the American position, following the decrease in crude production last week.

Public interest in mining shares was less than before the holiday. Despite the generally favourable character of the monthly returns, gold-mining shares failed to advance, the inactivity of Johannesburg and Paris coinciding with incipient profit-taking on this side. Randfontein,

(Continued on page 794.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount; and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 791.)

however, were well in the picture on reported good developments; while among the finance concerns, Rand Mines improved slightly on the publication of the report (dealt with on page 799). Diamond shares were again depressed. Base metal prices showed an unexpected and unwelcome return of weakness, which was reflected in the dullness of share values. The Rio Tinto report (see page 799) was disappointing, but the shares recovered slightly on the partial closing of a somewhat extensive bear account.
